persons in the dialogue:

SOCRATES of Alopecce, son of Sophroniscus

ALCIBIADES a famous and notorious politician and general

scene: somewhere in Athens, unspecified

103a

Socrates: Son of Clinias, I think you are amazed that, being your first lover, I alone have not departed now that the others have gone, and although the others conversed with you in droves, I, in contrast, have not addressed you for so many years. The cause of this was nothing human. No, it was a spiritual opposition, and later you will learn about its power. But now, since it is no longer opposing me, I have come to you in this way and I have good hopes that it will not oppose me again in future. In the meantime, I have, in a sense, been observing you and noticing how you related to those lovers, for despite being numerous and high-minded there is not one of them who has not fled, outdone by your superiority. But I wish to explain the reason for your exalted notions. You claim not to need a single other person for any purpose, for you have great qualities so that you lack nothing, beginning with the body and ending with the soul. Of course you believe, firstly, that you are supreme in beauty and greatness and it is plain for all to see that you are not lying. What is more, you belong to the most powerful family in your own city which is the greatest in Greece, and within that city you have, through your father, numerous excellent friends and kindred who would serve your every need; and those on your mother's side are in no way inferior or less numerous. But you think you possess a greater power than all of those I have mentioned, in the person of Pericles¹, the son of Xanthippos, whom your father left as guardian of yourself and your brother, a man who may act as he pleases, not only in this city, but throughout all Greece and among the many great tribes of non-Greeks. I shall also mention your wealth, but it seems to me

that you are much less proud of that. On account of all these factors you are boastful, and you have prevailed over your lovers while they, in their inferiority, have been dominated. None of this has escaped your notice. And so I know quite well that you are wondering what exactly I have in mind when I do not give up the love, and what sort of hope I am retaining when I remain after the others have gone.

104d

Alcibiades: But Socrates, you probably do not know that you are just a little ahead of me. For I already intended going to you to ask you these very questions: what exactly do you want and what hope do you entertain in pestering me, always anxious to be present wherever I might be? Yes, I really do wonder what precisely your objective is and I would like you to tell me.

Socrates: Then it is likely that you will listen to me eagerly since, as you say, you wish to know what I have in mind. And I presume I am speaking to someone who will stay and listen.

Alcibiades: Yes, certainly, just speak.

104e

Socrates: Be careful though, for it would be no surprise if I were to prove just as reluctant to stop speaking as I was to start.

Alcibiades: Excellent man, speak. I shall listen!

105a

Socrates: I must speak, then. Now, although it is difficult for a lover to approach a man who does not give way to lovers, I must nevertheless dare to speak my mind. Indeed Alcibiades, if I had seen you being delighted with what I have been describing just now and believing that you must live your life in their possession, I would have given up the love long ago, or so I convince myself anyway. But now I shall point out to you different notions of yours, and from this you will realise that you have been constantly on my mind. For I believe that if some

god were to say, “Alcibiades, would you prefer to live on, possessing what you now possess, or die on the spot if you were going to be unable to acquire more?” I think you would choose to die. And I shall tell you the very hope for which you are now living. You think that if you appear before the Athenian people, something which will happen in just a few days, you will stand before them and prove to the Athenians that you are worthy of more honour than Pericles, or anyone who has ever been born, and once you prove this you will be supremely powerful in the city, and if you are the greatest man here you will be greatest among the Greeks, and not only among the Greeks, but among the non-Greeks who live on the same continent as us. And if this same god were to go on and say that you must exercise power in Europe, but will not be allowed to go across into Asia or interfere in the affairs of her people, I do not think you would wish to live under those strictures either, if you could not also, in some sense, fill the whole world with your name and your power. And I think that apart from Cyrus and Xerxes², you believe that no one worthy of note has been born. Now, I know very well that this is the hope you entertain. I am not guessing. Therefore, since you realise that I am speaking the truth, perhaps you might say, “Well now, Socrates, what has this to do with the explanation you promised as to why you will not leave me?” So I shall tell you, dear son of Clinias and Deinomache, for without me it is impossible to bring all these plans of yours to completion, such power do I believe I have over you and your affairs. Yes, I think that is why the god would not allow me to converse with you in the past, and I have been waiting for the moment when I would be allowed. Indeed, you have hopes in the city of proving that you are more valuable to it than anyone, and of exercising immediate power over everything. So do I hope to exercise great power over you in just the same way, by proving that I am more valuable to you than anyone, and that neither guardian, nor kinsman, nor anyone else is up to the task

of granting you the power you desire except me, with the help of the god, of course. Now, when you were younger, before you were full of such aspirations, I think the god allowed no conversation in case I might have discoursed in vain. But he has now relented, for you may listen to me at this stage.

Alcibiades: Socrates, you seem even stranger to me now since you began to speak, than when you were following me in silence, although you were a strange sight even then. Now, it seems you have made up your mind about whether I have these intentions or not, and if I deny it, that will not do much to dissuade you. So be it, but if I really do have these intentions, how shall I attain them through you, and why will they not happen without you? Can you tell me?

106b

Socrates: So are you asking if I can deliver a long speech, the kind you are obviously accustomed to hearing? But that is not my way. However, I shall, I believe, be able to prove to you that this is how matters stand if you are willing to perform only one small service for me.

Alcibiades: Well, yes, I am willing, if the service you refer to is not a difficult one.

Socrates: Does it seem difficult to answer questions?

Alcibiades: No, it does not seem difficult.

Socrates: So answer then.

Alcibiades: Just ask.

Socrates: Should I ask questions on the basis that you do have the intentions I say you have?

106c

Alcibiades: Proceed on that basis if you wish, so that I may know what else you will say.

Socrates: Very well. Now, you intend, quite soon, to appear before the Athenians as an adviser. So if I were to take hold of you when you were about to ascend the platform and ask, “Alcibiades, what do the Athenians intend to deliberate about that you are standing up as an adviser? Is it about issues which you know better than they do?” What response would you make?

106d

Alcibiades: I would say that, of course. It is about issues I know better than they do.

Socrates: So you are a good adviser about issues you happen to know.

Alcibiades: How could I not be?

Socrates: Don’t you only know what you have learned from others or discovered yourself?

Alcibiades: What else could I know?

Socrates: Now, is there any way that you would ever have learned or discovered anything without wanting to learn it or investigate it yourself?

Alcibiades: There is not.

Socrates: What about this? Did you ever want to investigate or learn anything you thought you knew?

Alcibiades: Certainly not.

106e

Socrates: So was there a time when you did not think you knew whatever you now happen to know?

Alcibiades: There must have been.

Socrates: Well then, I know fairly well what it is that you have learned. If I omit anything you should tell me. Indeed, as I recall, you learned writing, lyre-playing and wrestling. And you

certainly had no desire to learn to play the flute³. These are the subjects you know, unless you have somehow been learning something without my noticing.

Alcibiades: No. I have not attended any classes other than those.

107a

Socrates: Well, will you stand forth as adviser to the Athenians when they are deliberating about writing and how they may write properly?

Alcibiades: By Zeus, I shall not.

Socrates: Or when they deliberate about sounds on the lyre?

Alcibiades: Not at all.

Socrates: Nor indeed are they in the habit of deliberating on wrestling in the assembly.

Alcibiades: No indeed.

Socrates: So what will they be deliberating about when you advise them, presumably not about house-building?

Alcibiades: Of course not.

Socrates: Because on these matters anyway, a housebuilder will give better advice than you.

107b

Alcibiades: Yes.

Socrates: Nor indeed when they are deliberating about a prophecy.

Socrates: For in those situations a soothsayer will advise better than you.

Alcibiades: Yes.

Socrates: Whether he is short or tall, beautiful or ugly, noble or base.

Alcibiades: That makes no difference.

Socrates: For counsel, I presume, belongs to the one who knows about the issue and not to the one who is wealthy.

Alcibiades: How could it be otherwise?

107c

Socrates: Then it makes no difference to the Athenians whether the adviser is poor or rich when they are deliberating on how the people of the city may enjoy health. No, they seek out a doctor to be the adviser.

Alcibiades: Quite likely.

Socrates: Now, what subject would they be considering when you would be justified in coming forward as their adviser?

Alcibiades: Whenever they are considering their own affairs, Socrates.

Socrates: Do you mean issues related to shipbuilding and what sort of ships they should get built?

Alcibiades: No, Socrates, I do not.

Socrates: And I think that is because you do not know how to build ships. Is this the reason or is there another?

Alcibiades: No, that is the reason.

Socrates: Then what aspect of their own affairs do you say they would be considering at the time?

107d

Alcibiades: When they are considering war, Socrates, or peace, or some other aspect of civic affairs.

Socrates: Do you mean when they are considering with whom they should make peace, and against whom they should wage

war, and in what manner?

Alcibiades: Yes.

Socrates: And shouldn't they attack whomever it is better to attack?

Alcibiades: Yes.

Socrates: And at the time when it is better to do so?

107e

Alcibiades: Yes, certainly.

Socrates: And for as long a time as is better?

Alcibiades: Yes.

Socrates: Now, if the Athenians were deciding with whom they should wrestle or spar, and in what manner, would you give better advice or would the trainer?

Alcibiades: The trainer, of course.

Socrates: Now, can you say what the trainer looks to when he is advising with whom they should wrestle or not, and when they should do so, and in what manner? What I am asking is this. Ought a person wrestle with those with whom it is better to wrestle, or not?

Alcibiades: Yes.

Socrates: And to the extent that is better?

108a

Alcibiades: To that extent.

Socrates: And also at the time when it is better?

Alcibiades: Yes, certainly.

Socrates: What is more, when singing, one must on occasion play the lyre, or dance in accompaniment to the song.

Alcibiades: One must indeed.

Socrates: At the time when it is better to do so?

Alcibiades: Yes.

Socrates: And to the extent that is better?

Alcibiades: I agree.

108b

Socrates: What about this? Since, in fact, you applied the term 'better' both to the lyre-playing in accompaniment to a song, and also to wrestling, what do you refer to as better in lyreplaying, just as I refer to what is better in wrestling, as gymnastical? What do you call it in lyre-playing?

Alcibiades: I do not understand.

Socrates: Then try to copy me. For in a way, the answer I gave is correct in general, and presumably, whatever happens in accord with a skill is correct. Is that so?

Alcibiades: Yes.

Socrates: And wasn't the skill gymnastics?

Alcibiades: Of course.

108c

Socrates: And I said that in wrestling the better is the gymnastical.

Alcibiades: Yes, you said that.

Socrates: Was I not right in saying so?

Alcibiades: Well, I think so anyway.

Socrates: Then you should do this too, for right discourse is somehow particularly appropriate for you. Tell me first what skill includes lyre-playing, singing and dancing correctly? What is the collective skill called? Are you not yet able to say?

Alcibiades: Certainly not.

Socrates: Then try this. To which goddesses does the skill belong?

Alcibiades: Do you mean the Muses, Socrates?

108d

Socrates: I do indeed. Now, think. What skill derives its name from them?

Alcibiades: I think you mean music.

Socrates: Yes, that is what I mean. Now, what is the correct manner of proceeding based upon this skill? Just as in the previous example I told you the correct manner of proceeding based upon the skill of gymnastics, now I am asking you what you say in this case. How does the activity proceed?

Alcibiades: Musically, I suppose.

108e

Socrates: Well said. So come on, what do you call the better in the case of making war and in bringing peace? Just as in the previous example, you said that in one case the better was the more musical, and in the other case it was the more gymnastical, try also to say what is better in this example of war and peace.

Alcibiades: But I am not really able to say.

109a

Socrates: And yet, it would be somewhat shameful if someone you were advising about food, saying one is better than the other at this time and to this extent, were to ask, “Well now, Alcibiades, what do you mean by ‘better’?” And although you do not profess to be a doctor you were able to reply, on these matters, that you mean healthier. And yet, by contrast, in matters where you do profess to be knowledgeable and will come forward to give advice as though you had knowledge, wouldn’t you be ashamed if, as is likely, you were unable to respond when questioned about them? Or does this not appear

shameful?

Alcibiades: Very much so.

Socrates: Well, consider it and try to say, in the case of bringing peace and making war with the appropriate parties, what 'better' do they aim for?

Alcibiades: Well, I am considering it but I am unable to think of an answer.

Socrates: Do you not even know, in cases where we wage war, what accusations we make against one another as we go to war, and what we call this as we proceed?

109b

Alcibiades: Well, I do know that we claim to have been deceived or suffered violence or deprivation.

Socrates: That will do. In what way do we suffer each of these? Try to state the difference between this treatment and some other.

Alcibiades: Socrates, are you referring to whether it is done justly or unjustly?

Socrates: The very thing.

Alcibiades: Well then, they are completely and entirely different.

Socrates: In that case, whom will you advise the Athenians to wage war against, against those who are acting unjustly or those who are behaving justly?

109c

Alcibiades: You are asking a challenging question, Socrates, for even if someone did decide that he ought to wage war against those who are behaving justly, he would not admit this.

Socrates: Because this apparently is not lawful.

Alcibiades: Certainly not, nor does it seem to be noble.

Socrates: So will you also make speeches dealing with these issues?

Alcibiades: I must.

Socrates: With regard to waging war or not, those we should fight against and those we should not, when we should do so and when we should not, does ‘the better’ I was asking about turn out to be nothing but the more just? Or is this not so?

Alcibiades: It appears so anyway.

109d

Socrates: How can this be, dear Alcibiades? Have you forgotten that you yourself do not know this, or have you been learning without my noticing it and going to a teacher who taught you to distinguish the more just and the more unjust? Well, who is he? Tell me too, so that you may recommend me to him as a pupil.

Alcibiades: You are mocking me, Socrates.

Socrates: No I swear this by our common friendship⁴, and I would never break that oath. So if you can do so, tell me who he is.

109e

Alcibiades: But what if I can’t? Don’t you think I could know about the just and unjust in some other way?

Socrates: Yes, if you were to discover it.

Alcibiades: But don’t you think I could have discovered it?

Socrates: Yes, indeed, if you were to search for it.

Alcibiades: Oh! Do you not think I would have searched?

Socrates: I do indeed, if you thought you did not know.

Alcibiades: Well, was I not in that situation at some time?

110a

Socrates: That is well expressed. So are you able to say when it was that you did not know the just and the unjust? Come on, a year ago were you searching for them and did you think you did not know them? Or did you think you knew them then? And let your answer be the truth so that our discussions may not be conducted in vain.

Alcibiades: Well, I thought that I knew.

Socrates: And three, four or five years ago, was the situation not the same?

Alcibiades: I think so.

Socrates: And before that you were a child, is that so?

Alcibiades: Yes.

Socrates: And yet, I know very well that you thought you knew then.

Alcibiades: How do you know so well?

110b

Socrates: As a child, either with your teachers or elsewhere and when you were playing dice or some other game, you did not act as if you were in doubt about the just and the unjust. No, I often heard you proclaiming loudly and boldly about one of the children that he was bad and unfair and that he was cheating. Or am I not speaking the truth?

Alcibiades: But what else was I to do, Socrates, when someone was cheating me?

Socrates: But if you were unaware at the time whether you were being cheated or not, would you ask what you ought to do?

110c

Alcibiades: But by Zeus, I was not unaware. No, I was fully aware that I was being treated unjustly.

Socrates: So apparently you thought you knew the just and the unjust even as a child.

Alcibiades: I thought I knew and I did actually know.

Socrates: Well, when exactly was it that you found this out? For obviously it was not during the time that you thought you knew, anyway.

Alcibiades: Of course not.

Socrates: Well, when was it that you thought you did not know? In fact, you will not discover when this was.

Alcibiades: Yes, by Zeus, Socrates, I really cannot say.

110d

Socrates: So you do not know them through discovering them for yourself.

Alcibiades: It certainly appears that way.

Socrates: And, indeed, you said earlier that you do not know from having learned either. Now, if you neither discovered this nor learned it, how do you know it and from what source?

Alcibiades: But perhaps I did not give you the right answer when I said that I know because I discovered them for myself.

Socrates: Then how did it happen?

Alcibiades: I think that I learned in the same way that everyone else learns.

Socrates: We have returned again to the same question. From whom? Please tell me.

110e

Alcibiades: From the multitude.

Socrates: You are not resorting to serious teachers when you have recourse to the multitude.

Alcibiades: But why? Are they not up to the task of teaching?

Socrates: Not even about how to play draughts and how not to! And yet, I believe these matters are more trivial than justice. What about you? Do you think so too?

Alcibiades: Yes.

Socrates: Well, if they are unable to teach more trivial matters, could they teach more serious matters?

Alcibiades: Well, I think so. At any rate, they can teach numerous subjects more serious than draughts-playing.

Socrates: What are they?

111a

Alcibiades: For instance, I also learned to speak Greek from them and I would not be able to say who my own teacher was. Instead, I attribute this to the very people who you say are not serious teachers.

Socrates: Yes, noble friend, the multitude are good teachers of this subject and they may rightly be praised for their instruction in these matters.

Alcibiades: Why is that?

Socrates: Because in these matters they possess what good teachers ought to possess.

Alcibiades: What are you referring to?

111b

Socrates: Do you not appreciate that those who are going to teach anything at all must first know it themselves? Is this not so?

Alcibiades: How could it be otherwise?

Socrates: Shouldn't those who know agree with one another and not differ?

Alcibiades: Yes.

Socrates: Would you say they have knowledge of subjects on which they disagree?

Alcibiades: Certainly not.

Socrates: So how could they be teachers of these subjects?

Alcibiades: In no way whatsoever.

111c

Socrates: Well now, do you think the multitude would differ about what wood and stone are like? And if you ask anyone, will they not agree on the same answer and reach for the same things when they wish to get wood or stone? And the same applies to everything else of that sort. Indeed, in general, that is what I understand you to mean by knowing how to speak Greek. Is this so?

Alcibiades: Yes.

Socrates: Now, as we were saying, they agree with one another and with themselves individually on these issues, and the cities do not dispute with one another publicly, some saying one thing, others saying something else.

Alcibiades: They do not.

Socrates: So it is likely they would be good teachers of these matters anyway.

Alcibiades: Yes.

111d

Socrates: In that case, if we wanted to make someone knowledgeable about them, wouldn't we be right to send him for instruction by the 'multitude'?

Alcibiades: Entirely so.

Socrates: What if we wanted to know, not only what men are like and what horses are like, but also which of them are good at running and which are not, would the multitude still be competent to teach this?

Alcibiades: Not at all.

111e

Socrates: And you have sufficient evidence that they do not know and are not real teachers of these matters from the fact that they do not agree with themselves about them at all.

Alcibiades: I do indeed.

Socrates: What if we wanted to know, not only what men are like but also what healthy men or sick men are like, would the multitude be acceptable to us as teachers?

Alcibiades: Not at all.

Socrates: And you would have evidence that they are poor teachers of these matters if you had seen them disagreeing.

Alcibiades: I would.

Socrates: Well, what about this? Does it seem to you nowadays that the multitude agree with themselves and one another about just and unjust men and actions?

112a

Alcibiades: By Zeus, Socrates, not in the least.

Socrates: Do they, in fact, differ most about these matters?

Alcibiades: Very much so.

Socrates: Now, I am sure you have never seen or heard people disputing intensely in this way about health or its absence, so that they fought and killed one another because of it.

Alcibiades: Certainly not.

112b

Socrates: But when the issue is the just and the unjust, I know that even if you have not seen this, at least you have heard of it from many others, and from Homer, for you have heard the Iliad and the Odyssey.

Alcibiades: Yes of course, Socrates.

Socrates: Aren't those poems about a dispute over the just and unjust?

Alcibiades: Yes.

Socrates: And the conflicts and the slayings took place because of this dispute between both Achaians and Trojans alike, and Odysseus and the suitors of Penelope too.

112c

Alcibiades: What you say is true.

Socrates: And I also think that a dispute about no other issue than the just and unjust gave rise to the slayings and conflicts of those Athenians, Spartans and Boeotians who died at Tanagra and later at Coronea, among whom your own father met his end. Is this so?

Alcibiades: What you say is true.

112d

Socrates: Now, should we say that these people have knowledge of matters on which they disagree so intensely that they dispute with one another and inflict these misfortunes on themselves?

Alcibiades: Apparently not.

Socrates: In that case, are you having recourse to teachers whom you agree are not knowledgeable?

Alcibiades: Quite likely.

Socrates: Then how are you likely to know the just and the unjust, a matter on which you are in such confusion and, as it

turns out, have neither learned from someone else nor discovered for yourself?

Alcibiades: Well, from what you are saying I am not likely to.

112e

Socrates: Do you also realise that you are not expressing this in the right way, Alcibiades?

Alcibiades: In what sense?

Socrates: You are claiming that I said these things.

Alcibiades: But are you not saying that I know nothing about the just and the unjust?

Socrates: Indeed not.

Alcibiades: Was it me?

Socrates: Yes.

Alcibiades: How so?

Socrates: You may know this in the following way. If I were to ask you which is greater, one or two, would you say two?

Alcibiades: I would.

Socrates: By how much is it greater?

Alcibiades: By one.

Socrates: Now, which of us is saying that two is greater than one, by one?

Alcibiades: I am.

Socrates: Did I not ask you and did you not answer?

Alcibiades: Yes.

113a

Socrates: Well then, is it I, the questioner, who turns out to be speaking about these matters or is it you, the answerer?

Alcibiades: It is I.

Socrates: What if I were to ask what letters spell ‘Socrates’ and you were to tell me, which of us would be the speaker?

Alcibiades: I would.

Socrates: So come on, to sum up, whenever there is questioning and answering, who is the speaker: the questioner or the answerer?

Alcibiades: It seems to me, anyway, that it is the answerer, Socrates.

113b

Socrates: Now, haven’t I been the questioner throughout?

Alcibiades: Yes.

Socrates: And you were the answerer?

Alcibiades: Certainly.

Socrates: Well then, which of us said whatever was said?

Alcibiades: Apparently, Socrates, based on what has been agreed, I said it.

Socrates: Was it not said that Alcibiades the fair, the son of Clinias, did not know about the just and the unjust but thought that he did, and was about to go to the Assembly and advise the Athenians on matters he knows nothing about? Is this not the case?

Alcibiades: So it appears.

113c

Socrates: So the phrase from Euripides is applicable, Alcibiades. You have quite likely ‘heard this from yourself and not from me’⁵, and I am not the person making these statements. No, it is you, and you are blaming me without reason. Yet what you are saying is actually to the point. Indeed, you are planning to

embark on a mad undertaking, my friend, teaching what you do not know and have not bothered to learn.

113d

Alcibiades: Yet, Socrates, I believe that the Athenians and the other Greeks seldom deliberate upon whether something is more just or more unjust for they regard such questions as obvious. So they ignore this and consider whether the policies will have beneficial outcomes. In fact, I do not believe that the just and the beneficial are the same. No, many people have profited by performing great injustices, and others have, I believe, performed just actions and not benefited.

113e

Socrates: Well then, if the just is one thing and the beneficial happens to be something completely different, surely you do not believe that you also know what is beneficial to humanity and why it is so?

Alcibiades: What is to prevent me believing that, Socrates, unless you are going to go on and ask from whom I learned it or how I discovered it myself?

114a

Socrates: What a way to behave! If you say something incorrect and it happens to be capable of refutation by the very argument used before, you decide you need to hear some new and different refutations because the previous ones are like worn out garments which you would never wear. Instead, someone must provide you with a fresh and pristine proof. So I shall pay no attention to your attacks upon the argument and I shall ask you nonetheless. Where did you learn whatever you know about what is beneficial and who is your teacher? And I shall ask all those previous questions in a single question, otherwise you will obviously be in the same predicament and be unable to show that you know the beneficial either through discovering it or through learning it. But since you are being fastidious and

would not be pleased to taste the same argument once more, I shall bid farewell to the question of whether or not you know what is beneficial for the Athenians. Instead, why don't you explain whether the just and the beneficial are the same or different? If you prefer, you could question me just as I questioned you, or alternatively, just go through the argument by yourself.

Alcibiades: Well, Socrates, I do not know if I would be able to set out an argument for you.

Socrates: Then good fellow, regard me as the Assembly and the populace, for even in the Assembly you will need to convince each one. Is that so?

Alcibiades: Yes.

114c

Socrates: Isn't the same speaker able to convince one person, both individually and in gatherings, about whatever he knows, just as a schoolteacher, for instance, convinces one pupil about writing and also many pupils?

Alcibiades: Yes.

Socrates: And in the case of arithmetic, won't the same person convince both one and many?

Alcibiades: Yes.

Socrates: And will that be the person who knows, namely the arithmetician?

Alcibiades: Certainly.

Socrates: And is it not also the case that on the very issues on which you can convince many people, you can also convince one person?

Alcibiades: Quite likely.

Socrates: And obviously these are issues that you know.

Alcibiades: Yes.

114d

Socrates: Then someone in a gathering like this differs from a public speaker only insofar as one persuades groups about the same things, while the other does it individually.

Alcibiades: Probably.

Socrates: Well then, since it turns out that the same speaker convinces both many and one, practise on me and attempt to prove that the just is sometimes not beneficial.

Alcibiades: You are overbearing, Socrates!

Socrates: Then perhaps overbearingly, I am going to convince you of the opposite of what you do not want to prove to me.

Alcibiades: Please proceed.

Socrates: You need only answer the questions.

114e

Alcibiades: No, you yourself should be the speaker.

Socrates: What is this! Don't you want to be completely convinced?

Alcibiades: Entirely so, of course.

Socrates: Well, if you yourself say that these things are so, won't you be completely convinced?

Alcibiades: I think so anyway.

Socrates: Then please answer, and if you yourself do not hear from yourself that whatever is just is also beneficial, you should not believe it from any other speaker either.

Alcibiades: No indeed, but I must answer, and, in fact, I do not think I can come to any harm.

115a

Socrates: How prophetic you are! Now, tell me, are you saying that some just actions are beneficial while others are not?

Alcibiades: Yes.

Socrates: And are some of them noble while others are not?

Alcibiades: What are you asking me?

Socrates: I am asking if you ever thought that someone acted ignobly and yet justly?

Alcibiades: No, I did not.

Socrates: Then all that is just is also noble?

Alcibiades: Yes.

Socrates: But what about noble actions? Are they all good or are some good while others are not?

Alcibiades: Well, Socrates, I think that some noble actions are bad.

Socrates: And some that are ignoble are also good?

Alcibiades: Yes.

115b

Socrates: Do you mean something like this? In war, for instance, many people have come to the rescue of a companion or kinsman and have sustained injuries or been killed, while those who did not come to the rescue, but should have, came away safe and sound.

Alcibiades: Yes, entirely so.

Socrates: Do you call such a rescue noble on account of the attempt to save those whom one should save, and is this, in turn, courage? Is that it?

Alcibiades: Yes.

Socrates: Then the rescue is bad on account of the deaths and the injuries, is it?

Alcibiades: Yes.

115c

Socrates: Now, is not courage one thing and death another?

Alcibiades: Of course.

Socrates: So the rescue of friends is not noble and bad on account of the same thing at any rate.

Alcibiades: Apparently not.

Socrates: Then consider whether in these particular examples it is also good, at least to the extent that it is noble. We agree that the rescue is noble on account of the courage. Now, consider this courage itself, is it good or bad? Think about it as follows: which would you rather have, what is good or what is bad?

Alcibiades: What is good.

Socrates: Especially the greatest goods?

115d

Alcibiades: Yes.

Socrates: And you would be most reluctant to be deprived of such things.

Alcibiades: Of course.

Socrates: Now, what do you say about courage? At what price would you accept being deprived of this?

Alcibiades: I would not even be prepared to go on living if I were a coward.

Socrates: Then you think cowardice is the worst of evils.

Alcibiades: I do.

Socrates: Equal to death, so it seems.

Alcibiades: I agree.

Socrates: Now, are not life and courage the direct opposites of death and cowardice?

Alcibiades: Yes.

Socrates: And would you most like to have the first two and least like to have the other two?

115e

Alcibiades: Yes.

Socrates: Is that because you regard one pair as the best and the other as the worst?

Alcibiades: Entirely so.

Socrates: Then you count courage among the best and death among the worst.

Alcibiades: I do.

Socrates: Then you refer to the rescue of friends in battle as noble in so far as it is noble based upon the good outcome, the courageous outcome.

Alcibiades: Apparently I do.

Socrates: But on the other hand, based upon the bad outcome, death, you say it is bad.

Alcibiades: Yes.

116a

Socrates: Accordingly, it is right to describe each of the outcomes as follows. If, in fact, you call it bad in so far as it gives rise to badness, you must also call it good in so far as it gives rise to goodness.

Alcibiades: I think so anyway.

Socrates: In that case, is it noble in so far as it is good and ignoble in so far as it is bad?

Alcibiades: Yes.

Socrates: So saying that the rescue of friends in battle is noble and yet bad is not at all different from saying that it is good and yet bad.

Alcibiades: I think what you say is true, Socrates.

116b

Socrates: Then nothing that is noble, in so far as it is noble, is bad; nor is anything that is ignoble, in so far as it is ignoble, good.

Alcibiades: Apparently not.

Socrates: Then you also need to consider this. Does not anyone who acts nobly also act well?

Alcibiades: Yes.

Socrates: And those who act well are happy?

Alcibiades: Of course.

Socrates: Are they not happy due to the acquisition of whatever is good?

Alcibiades: Definitely.

Socrates: And do they acquire this by acting well and nobly?

Alcibiades: Yes.

Socrates: So acting well is good?

Alcibiades: Of course.

Socrates: Is not acting well noble?

Alcibiades: Yes.

116c

Socrates: So, once again, the same thing appears to us to be both noble and good.

Alcibiades: It appears so.

Socrates: So, on the basis of this argument anyway, that which we find to be noble we shall also find to be good.

Alcibiades: We must.

Socrates: What about this? Are good things beneficial or not?

Alcibiades: They are beneficial.

Socrates: Now, do you recall what we agreed concerning just actions?

Alcibiades: Well, I think we agreed that those who act justly must also be acting nobly.

Socrates: And also, that those performing noble actions are also performing good actions?

Alcibiades: Yes.

116d

Socrates: And whatever is good is beneficial?

Alcibiades: Yes.

Socrates: Then just actions are beneficial, Alcibiades.

Alcibiades: So it seems.

Socrates: Well now, have you not been the speaker and I the questioner throughout this?

Alcibiades: Apparently I am, or so it seems.

116e

Socrates: Now, if anyone who thinks he knows the just and the unjust stands up to advise the Athenians or Peperethians⁶, but goes on to say that the just is sometimes bad, what could you do but laugh at him, especially since you yourself happen to be

asserting that the just and the beneficial are the same?

Alcibiades: But by the gods, Socrates, I do not even know what I am saying myself. No, I really do not know where I stand. For under your questioning, I think one thing at one moment and a different thing the next.

Socrates: Are you unaware then, my friend, of what this predicament is?

Alcibiades: Yes.

Socrates: Well, if someone were to ask you if you have two eyes or three, two hands or four, or another question of that sort, do you imagine you would answer in one way at one moment and a different way the next, or would it always be the same?

117a

Alcibiades: Well, I am anxious about myself at the moment. Nevertheless, I think I would give the same answer.

Socrates: And that is because you know. Is that not the reason?

Alcibiades: I think so anyway.

Socrates: So when it comes to issues on which you cannot help giving contradictory answers, it is obvious that you do not know about these.

117b

Alcibiades: So it seems anyway.

Socrates: Now, do you not say that you are confused when answering questions concerning the just and the unjust, the noble and the ignoble, the bad and the good, and what is beneficial and what is not? Is it not obvious then that you are confused on these issues because you do not know about them?

Alcibiades: I think so.

Socrates: Well, is it indeed the case that when someone does not know something his soul must be confused about this?

Alcibiades: Inevitably.

Socrates: What about this? Do you know any means whereby you could go up into the sky?

Alcibiades: By Zeus, I do not.

Socrates: And is your thinking confused about these matters?

Alcibiades: Certainly not.

Socrates: And do you know the reason or shall I tell you?

Alcibiades: Tell me.

Socrates: Because, my friend, you do not think that you know this when you do not know this.

Alcibiades: Again, what do you mean?

117c

Socrates: Let us look at this together. There are things you do not know and realise that you do not know, but are you confused about such matters? For instance, surely you know that you do not know about food preparation?

Alcibiades: Entirely so.

Socrates: Now, in such matters do you yourself think about how it should be prepared and get confused, or do you hand over to someone who knows?

Alcibiades: I hand over.

117d

Socrates: And what if you were in a ship, would you think about whether the tiller should be drawn in or out and get confused since you do not know, or would you stay quiet and hand over to the helmsman?

Alcibiades: To the helmsman.

Socrates: So you are not confused over what you do not know provided you know that you do not know.

Alcibiades: It seems I am not.

Socrates: Now, do you appreciate that errors in action are also due to this ignorance whereby you think you know when you do not know?

Alcibiades: Once more, what do you mean by this?

Socrates: When we undertake an action, presumably we think, at the time, that we know what we are doing?

Alcibiades: Yes.

117e

Socrates: Yes, and I suppose that people who think that they do not know entrust the matter to others?

Alcibiades: Of course.

Socrates: Now, do not people of this sort live free from error even though they do not know, because they turn to other people in dealing with these matters?

Alcibiades: Yes.

Socrates: So who are the people who make the errors? For I presume it is not the people who know.

Alcibiades: Of course not.

118a

Socrates: And since it is neither those who know, nor those who do not know and know that they do not know, who else is left except those who do not know but think that they know?

Alcibiades: No one but these.

Socrates: So, is the ignorance itself the cause of the evils and is this stupidity a matter of reproach?

Alcibiades: Yes.

Socrates: And when it involves the most important matters, is it then productive of the greatest evil and is it most dishonourable?

Alcibiades: Very much so.

Socrates: Well then, can you name anything more important than what is just, noble, good and beneficial?

Alcibiades: Certainly not.

Socrates: And are you saying that you are confused about these?

Alcibiades: Yes.

118b

Socrates: But if you are confused, is it not evident from the previous discussion that not only are you ignorant of the most important matters, but you also think that you know about them when you do not know?

Alcibiades: There is that danger.

118c

Socrates: My, oh my, Alcibiades, what a predicament you are in! I am reluctant to name it, and yet since we are alone, it has to be said. Best of men, you are wedded to the most extreme ignorance. The argument convicts you and you convict yourself. Because of this, you rush into politics before you have been educated. And you are not the only one in this plight, so also are most of those who engage in the affairs of this city, save but a few, and perhaps your guardian, Pericles.

Alcibiades: You know, Socrates, they say he did not become wise by mere chance, but from association with numerous wise men including Pythoclides and Anaxagoras⁷. And now that he is older, he still consorts with Damon for this very purpose.

Socrates: Well now, have you ever seen anyone who was in any way wise, being incapable of making another person wise in the same things as himself? Just as the man who taught you writing was himself wise and he made you, and anyone else he wanted to, wise – is this so?

Alcibiades: Yes.

118d

Socrates: And now that you have learned from him, will you not be able to teach someone else?

Alcibiades: Yes.

Socrates: And does the same apply to the lyre player and the trainer?

Alcibiades: Entirely so.

Socrates: For it surely constitutes good evidence that those who know anything, do actually know it when they are also able to make another person knowledgeable.

Alcibiades: Yes, I think so.

Socrates: Well now, can you say of Pericles that he made someone wise? Let us begin with his own sons.

118e

Alcibiades: But, Socrates, what if both Pericles' sons were born stupid?

Socrates: Then what about your brother Clinias?

Alcibiades: Again why do you mention Clinias when the man is insane?

Socrates: Well, since Clinias is insane and both Pericles' sons were born stupid, what blame might we assign in your case? How did he overlook the condition you are in?

Alcibiades: I think I am to blame for not being interested.

119a

Socrates: But can you name anyone, citizen or stranger, slave or free man, who is reputed to have become wiser due to his association with Pericles, just as I can name Pythodorus, the son of Isolochus, and Callias, the son of Calliades⁸, each of whom has become both wise and famous through association with Zeno, having paid him one hundred minae?

Alcibiades: By Zeus, I cannot.

Socrates: So be it. In that case, what have you in mind for yourself? Do you intend to remain as you are or take some care?

119b

Alcibiades: Let us take counsel together, Socrates! And yet, I do understand what you are saying and I agree. Indeed, it does seem to me that those who conduct the affairs of this city, with a few exceptions, are uneducated.

Socrates: What are the consequences of this?

Alcibiades: Well, if they had been educated, I suppose that anyone trying to compete against them would need to go about it after learning and having practised as though he were competing with athletes. But now, since these people embark upon civic affairs in the character of common folk, what need is there to practise or to take the trouble to learn? In fact, I know very well that by nature I shall be far superior to them.

119c

Socrates: My, oh my! What a thing to say, best of men, and how unworthy of your character and your other endowments.

Alcibiades: Why exactly are you saying this, Socrates, and what are you referring to?

Socrates: I am troubled for you and for my own love.

Alcibiades: Tell me why.

Socrates: Troubled that you regard the men of this city as worthy competition.

Alcibiades: But who am I competing against?

Socrates: A man who believes he has a great intellect deserves to ask this question.

119d

Alcibiades: What do you mean? Am I not in competition with these people?

119e

Socrates: But if you were intending to steer a trireme about to go into battle, would you be content to be the best of your fellow sailors at steering? Or would you assume that this must be the case and look instead to your true adversaries, rather than, as now, to your comrades in arms? Indeed, if you really intend to exhibit some noble action worthy of yourself and the city, you will of course need to be superior to these fellows, so that although they are unworthy to compete against you, they will fight with you against the enemy in spite of your contempt.

Alcibiades: Well, yes, that is my intention anyway.

Socrates: So, is it really worth your while to rest content when you are better than the soldiers, rather than looking to the leaders on the opposing side, once you have become better than the soldiers by planning and exercising with them?

Alcibiades: Who are these leaders you are referring to, Socrates?

120a

Socrates: Do you not know that our city wages war on occasion against the Spartans and the Great King?

Alcibiades: That is true.

Socrates: Well, if you really intend to be a ruler of this city, would it not be right to consider yourself in competition with

the kings of Sparta and Persia?

Alcibiades: What you are saying is probably true.

120b

Socrates: Goodness no! You should look instead to Meidias⁹, the quail-fighter, and others of that sort who attempt to manage the affairs of the city still bearing the mark of the slave in their soul; the servile haircut, as the women say. This is due to their ill-education, and before they have cast this off whilst still in their barbarous ways, they come to the city as flatterers rather than rulers. If you look to these people, the ones I am describing, you must perforce neglect yourself and neither learn whatever there is to learn in preparation for so great a contest, nor practise what needs to be practised, and embark upon civic affairs having undergone comprehensive preparation.

120c

Alcibiades: Yes, Socrates, I think you are speaking the truth. However, I believe the Spartan generals and the Persian King are no better than the rest.

Socrates: Best of men, consider the nature of this belief you are holding.

Alcibiades: In what respect?

120d

Socrates: Firstly, do you think you would show better care for yourself through fearing them and regarding them as formidable, or through not doing so?

Alcibiades: Obviously, if I were to regard them as formidable.

Socrates: Now, you surely do not think that any harm will come from caring for yourself?

Alcibiades: Not at all, I shall be greatly benefited.

Socrates: Well, to this extent, is there not one problem with this belief of yours?

Alcibiades: What you say is true.

Socrates: And secondly, you should consider the likelihood that the belief is also false.

Alcibiades: How so?

120e

Socrates: Are better natures likely to arise among high-born families or not?

Alcibiades: Obviously among the high-born.

Socrates: Now, would these good natures also become completely excellent once they receive a good upbringing?

Alcibiades: They must.

Socrates: Well, let us consider this. Firstly, comparing our own lineage to theirs, do the kings of Sparta and Persia seem to come from ordinary families? Or do we not know that one is descended from Heracles, the other from Achaemenes, both of whom trace their lineage back to Perseus, son of Zeus?

121a

Alcibiades: Yes, Socrates, and ours goes back to Eurysaces¹⁰, and the line of Eurysaces goes back to Zeus.

121b

Socrates: And, indeed, high-born Alcibiades, mine goes back to Daedalus¹¹, and Daedalus to Hephaestus, son of Zeus. But the lineage of these people, starting with themselves, is a line of kings back as far as Zeus, kings of Argos and Sparta on the one hand, perpetual kings of Persia on the other and indeed sometime kings of Asia just as they are at present, while we ourselves are but common folk and so were our fathers too. And if you had to place the ancestry of Eurysaces and his fatherland, Salamis, on display before Artaxerxes, son of Xerxes, or show

him Aegina, the fatherland of the more ancient Aeacus¹², think how much laughter you would provoke. Yes, behold how inferior we are to these men in pride of family and general development. Or have you not observed the endowments of the Spartan kings, kings whose wives are guarded in public by the Ephors as best they can, lest a king be born unwittingly of someone not belonging to the Heraclidae? While the Persian King is so superior that no one suspects that he could have been born from anyone but a king, and so the king's wife is protected by nothing apart from fear. When the eldest son is born, the one who will rule, first of all, everyone in the city where the king rules has a celebration. Then, in the following year on the same day, all Asia sacrifices and celebrates the birthday of the king. But when you and I were born, Alcibiades, as the comic poet says, not even the neighbours were really aware of it¹³. The child is reared subsequently, not by a female nurse of little importance, but by those eunuchs in the king's service who are deemed most excellent. The overall care of the newborn child is assigned to these men, and they must ensure that he will be as handsome as possible by shaping and straightening the child's limbs. And the eunuchs who do this are held in high regard. Once the children reach seven years of age, they spend time with horses and with riding instructors and they begin to go hunting. And at fourteen years of age, they hand the child over to men whom they call 'the royal educators'. These are four men of the right age selected from Persians with the best reputations: the wisest, the most just, the most sound-minded and the bravest. The first teaches the magic of Zoroaster¹⁴, the son of Horomazus, and this is the worship of gods, but he also teaches the business of a king. The most just teaches him to speak the truth throughout his entire life. The most sound-minded teaches him never to be ruled by a single pleasure so that he may get used to being free and truly a king, ruling first of all over whatever is within himself, without being

enslaved. The bravest renders him fearless and confident, telling him that he is a slave whenever he is afraid. However, in your case, Alcibiades, Pericles placed you under an instructor, Zopyrus of Thrace, one of his household slaves who was utterly useless on account of his old age. I would also have described the general development and education of your adversaries were it not a major task. Anyway, these details are sufficient to demonstrate any other aspects that follow from them. But you could say, Alcibiades, that no one, unless he happens to be a lover of yours, cares about your birth or development or education or that of any other Athenian. What is more, if you wish to cast an eye on the wealth and luxury, the clothes and flowing garments, the scented unguents, the vast retinue of servants and the general refinement of the Persians, you will be ashamed of yourself, realising how far we lag behind them. And if you were to go on and look at the self-restraint and orderliness, the dexterity and agility, high-mindedness, discipline, courage and endurance of the Spartans and their love for work, victory and honour, you would think yourself but a child in all such matters. And if you also turn your mind to wealth and believe that you are significant in that regard, we should not let that go without a mention either, if you are somehow to be aware of where you stand. Yes, in this case, if you cared to look at the wealth of the Spartans, you would realise that ours falls far short of theirs. For the amount of land they possess, their own and that of the Messenians, and the vastness and excellence of what is there, would never be disputed by anyone at all; nor again would their ownership of slaves in general and of helots, horses too, and whatever herds of animals graze around Messene. But let us leave all these details aside, yet there is not as much gold and silver in all Greece as there is in private hands in Sparta. For over many generations, gold and silver have flowed into Sparta from all of the Greeks and often from non-Greeks too, but they never flow

out again. So it really accords with the story of Aesop where the fox speaks to the lion; the footprints of the money going in to Sparta go in a direction which is plain to see, but nowhere may they be seen coming out. So we should be well aware that the people there are the wealthiest of the Greeks in gold and silver, and among themselves the king is the richest, for the largest and most numerous allocations of such funds belong to the kings, and yet the royal grant which the Spartans pay to their kings is not insignificant either. And although Spartan wealth is enormous compared to that of the Greeks, it is nothing in comparison to the wealth of Persia and their king. I once heard a trustworthy man, one of those who travelled up to the king, who said that he traversed a very extensive tract of good land, almost a day's journey, which the locals call 'the girdle of the king's wife'; and there is also another tract which they, in this case, call 'her veil', and numerous other beautiful and good places have been selected for the adornment of the woman, and each of the places bears the name of the particular adornments. So I believe that if someone were to say to the king's mother, Amestris, the wife of Xerxes, "The son of Dinomache¹⁵ intends to pit himself against your son; her raiment is worth perhaps fifty minae or somewhat more, and her son owns three hundred acre¹⁶s or so at Erchia", she would wonder what precisely this Alcibiades trusts in when he proposes to compete against Artaxerxes. And I think she would say this man is making his attempt trusting in nothing else except care and wisdom, for that is all the Greeks have that is worth mentioning. What if she were then to find out that this Alcibiades is now making his attempt, firstly, when he is not yet fully twenty years of age; secondly, when he is entirely uneducated; and furthermore, although his lover tells him that he should go into competition against the king after he has learned, cared for himself and practised, he does not want to do this, but says that he is satisfied as he is? I think she would be amazed and would ask,

“Well, what on earth is it that this young man trusts in?” And if we were to say that it is beauty, strength, family, wealth and the natural endowments of his soul, she would think we were mad, Alcibiades, when she looked at all these qualities in comparison with what they themselves possess. But I also think that Lampido, the daughter of Leotychides, wife of Archidamus and mother of Agis¹⁷, all of whom have been kings, would indeed be amazed when she looked at the endowments which they have, amazed that you intend to compete against her son when you have been so badly brought up. What is more, do you not think it is a disgrace that the wives of our enemies have a better understanding of us and the sort of people we need to be in order to take them on, than we have of our own selves? So, blessed man, be persuaded by me and by the inscription at Delphi, ‘Know thyself’, and know that our adversaries are these kings and not those whom you regard as such. And we shall never prevail over them in any other way save through care and skill, and if you are found wanting in these you will be found wanting in reputation among the Greeks and non-Greeks, and I think you love that more than anyone else loves anything.

Alcibiades: Well, Socrates, what attention is required? Can you elaborate? Indeed, what you have said seems to be entirely true.

124c

Socrates: Yes, but we really should deliberate together as to the way in which we may become as good as possible. For when I say that it is necessary to be educated, I am not just referring to you and excluding myself. Indeed, I am better than you in no way save one.

Alcibiades: In what way?

Socrates: My guardian is better and wiser than your Pericles.

Alcibiades: Who is he, Socrates?

Socrates: A god, Alcibiades, the very one who would not allow me to converse with you until today, the god in whom I trust when I say that you will never become illustrious except through me.

124d

Alcibiades: You are joking, Socrates!

Socrates: Perhaps, but I am speaking the truth when I say that we do require care, or more to the point, all men do but we two need it very much.

Alcibiades: You are not lying when you say that I need it.

Socrates: Nor in my own case either.

Alcibiades: What should we do now?

Socrates: We should neither give up nor prove cowards, my friend.

Alcibiades: No, that would not be appropriate, Socrates.

124e

Socrates: No indeed. Instead we should consider this together. So tell me, we say that we wish to become as excellent as possible, do we not?

Alcibiades: Yes.

Socrates: What is that excellence?

Alcibiades: The very excellence by which men are good men, of course.

Socrates: Men who are good in what?

Alcibiades: Obviously in performing actions.

Socrates: What sort of actions? Those related to horses?

Alcibiades: Of course not.

Socrates: In that case we would be compared with horse trainers.

Alcibiades: Yes.

Socrates: Then are you referring to nautical affairs?

Socrates: In that case we would be compared with seamen.

Alcibiades: Yes.

Socrates: What sort of actions then? Actions performed by whom?

Alcibiades: Those performed by the noble and good among the Athenians.

Socrates: And do you refer to people with understanding, or people without it, as noble and good?

125a

Alcibiades: Those with understanding.

Socrates: Isn't each person good at whatever he understands?

Alcibiades: Yes.

Socrates: And bad at what he does not understand?

Alcibiades: He must be.

Socrates: Now, does the cobbler have understanding about making shoes?

Alcibiades: Certainly.

Socrates: So, is he good in this respect?

Alcibiades: Yes, good.

Socrates: What about this? Is not the cobbler devoid of understanding about making clothes?

Alcibiades: Yes.

Socrates: So is he bad in this respect?

125b

Alcibiades: Yes.

Socrates: So by this argument anyway, the same person is bad and also good.

Alcibiades: So it appears.

Socrates: Now, are you really saying that good men are also bad?

Alcibiades: Indeed not.

Socrates: Then who precisely do you call ‘the good’?

Alcibiades: I mean those who are able to rule in the city.

Socrates: Not over horses, I presume?

Alcibiades: Indeed not.

Socrates: But over men?

Alcibiades: Yes.

Socrates: When they are ill?

Socrates: When they are at sea then?

Alcibiades: I am not saying that either.

Socrates: When they are harvesting?

Socrates: Well, is it when they are doing something, or doing nothing?

125c

Alcibiades: I mean when they are doing something.

Socrates: Doing what? Try to give me an example.

Alcibiades: Well, he rules over those who are co-operating among themselves and dealing with one another, just as we do when we are living in the cities.

Socrates: Are you saying then that he rules over people who are dealing with people?

Alcibiades: Yes.

Socrates: Is it over boatswains who are dealing with rowers?

Alcibiades: Not at all.

Socrates: Indeed, that excellence is helmsmanship itself.

Alcibiades: Yes.

125d

Socrates: Then do you mean he rules over men who are playing pipes, who are leading people in song and dealing with choristers?

Alcibiades: Not at all.

Socrates: Yes. That for its part is the choirmaster's skill itself, is it not?

Alcibiades: Certainly.

Socrates: Then what precisely do you mean by being able to rule over people who are dealing with people?

Alcibiades: I mean they rule over people in the city who are sharing in civic life and co-operating with one another.

Socrates: And what is the actual skill? It is as if I were repeating the question I asked just now. What skill enables him to know how to rule over men who are sharing a sea voyage?

Alcibiades: Helmsmanship.

125e

Socrates: And in the example we have just given, what knowledge enables him to rule over those who are sharing in song?

Alcibiades: Exactly what you just said, the choirmaster's skill.

Socrates: What about this? What do you call the knowledge of ruling over those who share in civic life?

Alcibiades: I would call it sound judgement, Socrates.

Socrates: Yes, but is the knowledge of the helmsman poor judgement?

Alcibiades: Not at all.

Socrates: Is it sound judgement, then?

126a

Alcibiades: I think so, in relation to preserving the sea-farers anyway.

Socrates: Well said! What about this? The sound judgement you are referring to, to what is it directed?

Alcibiades: To better manage and preserve the city.

Socrates: And it is better managed and preserved through the presence or absence of what? It is as if you were to ask me, “The body is better managed and preserved through the presence or absence of what?” I would reply that it is through the presence of health and the absence of disease. Do you not also think the same way?

126b

Alcibiades: Yes.

Socrates: And if you were to go on and ask, “Through the presence of what are the eyes better?” I would answer in the same way, that it is through the presence of sight and the absence of blindness. And the ears become better and are better served through the absence of deafness and the operation of hearing within them.

Alcibiades: And rightly so.

Socrates: Yes, and a city becomes better and is better served and managed through the presence or absence of what?

126c

Alcibiades: Well, it seems to me, Socrates, that this happens when they have friendship towards one another, and hatred and strife are absent.

Socrates: Now, by friendship do you mean agreement or disagreement?

Alcibiades: Agreement.

Socrates: Now, through what skill do the cities agree about number?

Alcibiades: Through arithmetic.

Socrates: And in the case of individuals, do they not agree through the same skill?

Alcibiades: Yes.

Socrates: And does not each person also agree with himself through this?

Alcibiades: Yes.

Socrates: And through what skill does each person agree with himself as to which is greater, a span or a cubit¹⁸? Is it not through measurement?

126d

Alcibiades: Of course.

Socrates: And do not the individuals and the cities agree with one another through this skill?

Alcibiades: Yes.

Socrates: Yes, and does not the same also apply to weighing?

Alcibiades: I agree.

Socrates: Well then, what is the agreement you refer to, what is it about and what skill brings it about? And is agreement in a

city and in an individual the very same, both in relation to itself and in relation to another?

Alcibiades: Yes, that is likely anyway.

Socrates: Well, what is it? Do not be reluctant to answer. Be eager to speak.

126e

Alcibiades: Well, I think I am referring to friendship and agreement whereby a father and mother agree in loving a son, or brother agrees with brother, or a woman with a man.

Socrates: Now, Alcibiades, do you think a man would be able to agree with a woman about woolspinning when he is not knowledgeable and she is knowledgeable?

Alcibiades: Of course not.

Socrates: Nor is it necessary either, for this is a feminine branch of learning.

Alcibiades: Yes.

127a

Socrates: What about this, would a woman be able to agree with a man about soldiering when she has not learned this?

Alcibiades: Of course not.

Socrates: For you would probably say that this, in turn, is a masculine pursuit.

Alcibiades: I would.

Socrates: So according to your argument, there are manly and womanly subjects.

Alcibiades: How could there not be?

Socrates: So, in these cases anyway, there is no agreement between women and men.

Socrates: Nor is there friendship either, if, in fact, friendship is agreement.

Alcibiades: Apparently not.

Socrates: So, to the extent that women do what belongs to themselves, they are not loved by men.

Alcibiades: It seems not.

127b

Socrates: So, men are not loved by women either, to the extent that they do what belongs to themselves.

Socrates: And are cities not well organised either, whenever each person does what belongs to himself?

Alcibiades: I think they are, Socrates.

Socrates: Do you mean when friendship is absent? Did we not say that cities are well organised when friendship arises within them, and not otherwise?

Alcibiades: But it seems to me, on this basis, that friendship arises between them because both are doing what belongs to themselves.

127c

Socrates: This was not so a moment ago! What are you saying now? When agreement is not in place does friendship arise? Or can agreement be in place on matters which some people know about while others do not?

Alcibiades: That is impossible.

Socrates: But when each person does what belongs to himself, do they perform just actions or unjust actions?

Alcibiades: Just actions, how could they not?

Socrates: Now, when the citizens of a city are performing just actions, doesn't friendship towards one another arise?

Alcibiades: Again I think this is inevitable, Socrates.

127d

Socrates: Now, what precisely do you mean by the friendship and agreement about which we must be wise and judge soundly so that we may be good men? Indeed, I have been unable to understand either what it is or who has it, for according to your argument, it seems to be present one moment and absent the next moment in the same people.

Alcibiades: Well, by the gods, Socrates, I do not even know what I mean myself, and, in fact, I have probably been in an utterly shameful condition for some time without being aware of this myself.

127e

Socrates: But you must take courage! If you had noticed this predicament at the age of fifty it would have been difficult for you to care for yourself. But now you are at the right age, the very age at which you should be aware of this.

Alcibiades: And what should someone who is aware of this do, Socrates?

Socrates: Answer the questions you are asked, Alcibiades. And if you do this and God wills it and you trust in my prophecy when necessary, you and I shall fare better.

Alcibiades: As far as my answering is concerned anyway, this will happen.

128a

Socrates: Come on then, let us ask what ‘care for yourself’ is, and when a person does this, in case we are unwittingly not caring for our own selves whilst thinking that we are. Whenever he cares for what belongs to himself, does he also care for himself?

Alcibiades: Well, I think so anyway.

Socrates: What about this? When is a person caring for his feet? Is it when he cares for those things that belong to his feet?

Alcibiades: I do not understand.

Socrates: But do you refer to anything as belonging to the hand? A ring, for instance, would you say that it belongs to any part of a man except his finger?

Alcibiades: Certainly not.

Socrates: Does not a shoe belong to the foot in the same way?

Alcibiades: Yes.

128b

Socrates: Now, whenever we are caring for our shoes, are we at that time caring for our feet?

Alcibiades: I do not fully understand, Socrates.

Socrates: What about this, Alcibiades? Do you refer to any matter as ‘properly cared for’?

Alcibiades: I do.

Socrates: Now, whenever something is made better, do you call this ‘proper care’?

Alcibiades: Yes.

Socrates: Well, what skill makes shoes better?

Alcibiades: Cobbling.

Socrates: So we attend to shoes through cobbling?

Alcibiades: Yes.

128c

Socrates: Do we care for our feet also through cobbling or through that skill by which we make our feet better?

Alcibiades: By that skill.

Socrates: And are not feet made better by that which also makes the rest of the body better?

Alcibiades: I think so anyway.

Socrates: And is that not gymnastics?

Alcibiades: Definitely.

Socrates: So do we care for the feet through gymnastics, and to what belongs to the feet through cobbling?

Alcibiades: Certainly.

Socrates: And do we care for the hands by gymnastics, and to what belongs to the hand by ringmaking?

Alcibiades: Yes.

Socrates: And do we care for the body by gymnastics, and to what belongs to the body by weaving and the other skills?

128d

Alcibiades: Entirely so.

Socrates: So we care for the thing itself by one skill, and to what belongs to it by a different skill.

Alcibiades: So it appears.

Socrates: Then you would not be caring for yourself whenever you are caring for what belongs to yourself.

Alcibiades: Not at all.

Socrates: For it seems that the skill whereby someone may care for himself, and to what belongs to himself, is not the same.

Alcibiades: It appears not.

Socrates: Come on then, by what kind of skill could we ever care for our own selves?

Alcibiades: I am unable to say.

128e

Socrates: Well, have we agreed this much anyway, that this is not a skill by which we could make anything that belongs to us better, but one whereby we could make ourselves better?

Alcibiades: What you say is true.

Socrates: Now, could we ever recognise what skill makes a shoe better, without knowing a shoe?

Alcibiades: Impossible.

Socrates: Nor what skill makes a finger better, without recognising a finger?

Alcibiades: True.

Socrates: What about this? Could we ever know what skill makes ourselves better, if we did not recognise what precisely we ourselves are?

Alcibiades: Impossible.

129a

Socrates: Now, is it the case that to 'know thyself' is easy, and was it some ordinary person who set up this inscription in the temple at Delphi, or is it difficult and not for everybody?

Alcibiades: Socrates, I have often thought that it is for everybody, and often that it is extremely difficult.

Socrates: Well, Alcibiades, whether it is easy or difficult, here is where we stand anyway. If we know it, we would be likely to know this 'care for ourselves', but without knowing it, we could never do so.

Alcibiades: That is so.

129b

Socrates: Come then, by what means might we find the self itself? For in this way we may likely find what precisely we ourselves are, but while we are still in ignorance of this, we

would presumably be unable to do so.

Alcibiades: What you are saying is correct.

Socrates: Stop there, by Zeus! To whom are you talking now?
To no one except me?

Alcibiades: Yes.

Socrates: Am I not also talking to you?

Alcibiades: Yes.

Socrates: So, is Socrates the one who is talking?

Alcibiades: Definitely.

Socrates: And is Alcibiades the listener?

Alcibiades: Yes.

Socrates: Does not Socrates talk using speech?

129c

Alcibiades: Of course.

Socrates: And I suppose you call talking and using speech the same thing.

Alcibiades: Definitely.

Socrates: And is not the user different from that which is used?

Alcibiades: What do you mean?

Socrates: For example, a cobbler presumably cuts leather with a curved blade, a knife and other instruments.

Alcibiades: Yes.

Socrates: So on the one hand, there is the person who uses the instruments and cuts the leather, and on the other hand there are the instruments with which he does the cutting.

Alcibiades: Of course.

Socrates: In the same way, the instruments with which the lyre player plays the lyre would be different from the lyre player himself, would they not?

Alcibiades: Yes.

129d

Socrates: That is what I was asking you just now. Does the user always seem to be different from what he uses?

Alcibiades: So it seems.

Socrates: Now, what else can we say about the cobbler? Does he cut using the instruments alone or using his hands too?

Alcibiades: His hands too.

Socrates: So, he also uses these?

Alcibiades: Yes.

Socrates: And does he also cut leather using his eyes?

Alcibiades: Yes.

Socrates: And we agree that the user is different from that which is used?

Alcibiades: Yes.

129e

Socrates: So, are the cobbler and lyre player different from the hands and eyes with which they perform actions?

Alcibiades: It appears so.

Socrates: Does not a person actually make use of the entire body?

Alcibiades: Certainly.

Socrates: Did we say the user is different from what is used?

Alcibiades: Yes.

Socrates: So, is a person different from his own body?

Alcibiades: So it seems.

Socrates: Then what precisely is the person?

Alcibiades: I cannot say.

Socrates: Well, you can say, at any rate, that he is the user of the body.

Alcibiades: Yes.

Socrates: Now, does anything else use it except the soul?

130a

Alcibiades: Nothing else.

Socrates: In that case, does the soul rule?

Alcibiades: Yes.

Socrates: And, indeed, I think no one could come to any conclusion except the following.

Alcibiades: What conclusion?

Socrates: That the person is one of three things.

Alcibiades: What are they?

Socrates: Soul or body or both together, the whole.

Alcibiades: Of course.

Socrates: Well then, did we agree that the actual ruler of the body is the person?

Alcibiades: We agreed.

130b

Socrates: Now, does the body itself rule itself?

Alcibiades: Not at all.

Socrates: In fact, we said that it is ruled.

Alcibiades: Yes.

Socrates: In that case this would not be what we are looking for.

Alcibiades: It seems not.

Socrates: Well then, do both together rule the body and is that what the person is?

Alcibiades: Perhaps this is so.

Socrates: It is the least likely of all! For if one element has no share in ruling, I presume there is no way that both together can rule.

Alcibiades: Correct.

130c

Socrates: But since neither the body nor the two together are the person, I think we are left with the conclusion that either he is nothing, or if he is something, the person is nothing else but soul.

Alcibiades: Precisely so.

Socrates: Now, is it necessary to prove to you even more clearly that the soul is the person?

Alcibiades: By Zeus, no! I think that is quite enough.

130d

Socrates: Yes, and if it is proven, not precisely but in good measure, that is sufficient for us. For once we find what we have just passed over because it involves a lot of investigation, we shall then know precisely.

Alcibiades: What was that?

Socrates: It was stated earlier in a general way that we should first investigate the self itself. But now, instead of the self, we have considered what the person himself is. And perhaps this

will suffice, for I presume we would say that nothing more properly belongs to ourselves than the soul?

Alcibiades: Of course.

Socrates: Wouldn't it be right to think of it as follows: you and I are conversing with one another, using words by means of soul, directed to soul?

Alcibiades: Entirely so.

130e

Socrates: So this is what we said a little earlier, that Socrates is talking to Alcibiades using speech, directing the words, as it seems, not to the outward person but to Alcibiades, and he is the soul.

Alcibiades: I think so anyway.

Socrates: So whoever is commanding us to 'know thyself' is calling upon us to know the soul.

Alcibiades: So it seems.

131a

Socrates: So whoever knows anything that belongs to the body has known what belongs to himself, but has not known himself.

Alcibiades: So he has.

Socrates: Then to the extent that he is a doctor, no doctor knows himself, nor to the extent that he is a trainer, does any trainer.

Alcibiades: It seems not.

131b

Socrates: So farmers and other craftsmen fall far short of knowing themselves. For it seems these people, at any rate, do not even know what belongs to themselves. Instead they are further from themselves on account of the skills they possess. For they know what belongs to the body, the things with which

the body is cared for.

Alcibiades: What you say is true.

Socrates: So, if sound-mindedness is knowing thyself, none of them are sound-minded on account of their skill.

Alcibiades: I think not.

Socrates: For that reason, of course, these skills themselves seem to be lowly and not subjects for a good man.

Alcibiades: That is certainly the case.

Socrates: Is it not the case once more, that whoever, for his part, cares for the body, cares for what belongs to himself, but not for himself?

Alcibiades: Very likely.

131c

Socrates: Yes, but whoever cares for money cares neither for himself nor for what belongs to himself, but for something even more remote than what belongs to himself. Does he not?

Alcibiades: I think so.

Socrates: So the money-maker is no longer engaging in what belongs to himself.

Alcibiades: Correct.

Socrates: So, if someone has become the lover of the body of Alcibiades, he has not actually loved Alcibiades but something belonging to Alcibiades.

Alcibiades: What you say is true.

Socrates: But does anyone who loves your soul, love you?

Alcibiades: From this argument it appears that he must.

Socrates: Would not the lover of your body depart and be gone once the bloom of youth had ceased?

Alcibiades: Apparently.

131d

Socrates: Yes, but the lover of your soul will not go away as long as it goes to the better.

Alcibiades: Quite likely.

Socrates: Well then, I am the lover who goes not away but remains with you when your bodily beauty is fading and all of the others have gone.

Alcibiades: You do well, Socrates. May you never leave me.

Socrates: Then you should yearn to be as beautiful as possible.

Alcibiades: I shall yearn for this.

131e

Socrates: So, this is where you stand. There is not, it seems, nor has there been, a lover of Alcibiades, the son of Clinias, save one only, a person worthy of love, Socrates, the son of Sophroniscus and Phaenarete.

Alcibiades: True.

Socrates: Did you not say that my approach to you was just a little early since you would have approached me before then, wishing to find out why I was the only one who was not going away?

Alcibiades: Yes, that is what happened.

132a

Socrates: Well then, this is the reason. I was the only lover of you, the others loved what belongs to you, but what belongs to you is passing its prime while you are beginning to blossom. And now I shall never leave you, unless you are corrupted by the Athenian populace and become ignoble. In fact, this is what I fear most, that you may become a lover of the populace and get corrupted by them, for many good Athenians have suffered

this fate before you. Indeed, the populace ‘descended from the great-hearted Erechtheus’²⁰ has handsome features but you need to see it naked. So be sure to take the care I am speaking of.

Alcibiades: What care?

132b

Socrates: Bless you! Embark upon civic affairs having first exercised and learned what needs to be learned, but not before then. Thus you may proceed in possession of an antidote and nothing terrible will happen to you.

Alcibiades: What you are saying sounds good to me, Socrates, but try to explain in what way we may care for ourselves.

Socrates: Well, to an extent we have reached a conclusion from our previous discussion, for we are fairly well agreed as to what we are. However, we were afraid in case we might get this wrong and unwittingly care for something else and not to ourselves.

Alcibiades: That is it.

132c

Socrates: And after this, of course, we concluded that we should care for the soul and look to that.

Alcibiades: Obviously.

Socrates: While care for our bodies and our money should be handed over to others.

Alcibiades: Of course.

Socrates: So in what way may we know it with the utmost clarity? Since once we know this, it seems we shall also know ourselves. By the gods, do we not understand the well formulated Delphic inscription which we have just mentioned?

Alcibiades: Have you anything in particular in mind when you say this, Socrates?

132d

Socrates: I shall tell you what I suspect that this inscription is saying and what it means to us. Indeed, there are not likely to be numerous examples of this, only the example based upon sight.

Alcibiades: What do you mean by this?

Socrates: Think about this yourself. If it was advising one of our eyes, just as if the eye was a person, and it said 'see thyself', what would we understand by the exhortation? Would it not mean that the eye should look at something in which it would see itself when it looked there?

Alcibiades: Obviously.

132e

Socrates: Well, can we think of anything we might look at and see both the object and ourselves at the same time?

Alcibiades: Yes, obviously, Socrates, when we look at mirrors and the like.

Socrates: That is right. Now, is there anything of this kind present also in the eye with which we are seeing?

Alcibiades: Definitely.

133a

Socrates: So you have noticed that the features of the person looking into the eye appear in the pupil of the person opposite, as though in a mirror, and we actually call the pupil 'a doll'²¹ because it is an image of the person who is looking in.

Alcibiades: What you say is true.

Socrates: Then an eye beholding an eye and looking into the best part of it, the part with which it too is seeing, would see itself in this way.

Alcibiades: Apparently.

Socrates: Yes, and if it looks into any other part of the person, or into anything else except what resembles this part, it will not see itself.

133b

Alcibiades: What you say is true.

Socrates: So if an eye is going to see itself, must it not look into an eye and into the region of the eye where the excellence of the eye happens to reside? And that excellence presumably is sight?

Alcibiades: It is.

Socrates: Now, dear Alcibiades, if the soul too is going to know itself, must it not look into soul, and especially to that region of soul in which the excellence of soul, wisdom, resides, and to anything else that happens to resemble this?

Alcibiades: I think so, Socrates.

133c

Socrates: Can we say that there is any region of soul more divine than this²², the region associated with knowing and being wise?

Alcibiades: We cannot.

Socrates: So this part of the soul is most like a god, and anyone looking to this, having known all that is divine, both god and wisdom, would also come to know himself with certainty in this way.

Alcibiades: So it appears.

Socrates: Well, just as a mirror is clearer than the reflector in the eye and also purer and brighter, does a god, in like manner, happen to be purer and brighter than what is best in our soul?

Alcibiades: So it seems anyway, Socrates.

Socrates: Then in looking to a god we would also make use of that most beautiful reflector for human purposes, in furthering the excellence of the soul, and in this way we would certainly see and know our own selves.

Alcibiades: Yes.

Socrates: Did we agree that to ‘know thyself’ is sound-mindedness?

Alcibiades: Definitely.

Socrates: In that case, without knowing ourselves or being sound-minded, would we be able to know what belongs to us, be it bad or good?

Alcibiades: How could that actually happen, Socrates?

133d

Socrates: Yes, to you it probably seems impossible to know that what belongs to Alcibiades is his, without knowing Alcibiades.

Alcibiades: Of course it is impossible, by Zeus.

Socrates: Then neither can we know that what belongs to us is ours, unless we know ourselves.

Alcibiades: How could we?

Socrates: So if we do not know what belongs to us, we do not know what belongs to our belongings either, do we?

Alcibiades: Apparently not.

133e

Socrates: So we were not entirely correct when we agreed earlier that there are people who do not know themselves and yet know what belongs to themselves, and others who do not even know what belongs to their belongings. For it seems that it is one person and a single skill that beholds himself, what belongs to himself, and what belongs to the belongings of himself.

Alcibiades: Very likely.

Socrates: But whoever is ignorant of what belongs to himself would also, on the same basis, be ignorant of what belongs to others, I suppose.

Alcibiades: Of course.

Socrates: And if he is ignorant of what belongs to others, he will also be ignorant of what belongs to cities.

Alcibiades: He must.

Socrates: Then a man like this could never become a statesman.

Alcibiades: Of course not.

Socrates: Nor run a household either.

Alcibiades: Of course not.

134a

Socrates: Nor will he even know what he is doing.

Alcibiades: No, not at all.

Socrates: But will not a person who does not know fall into error?

Alcibiades: Definitely.

Socrates: And will not a person who falls into error act badly, both in private and public affairs?

Alcibiades: How could he avoid it?

Socrates: And in acting badly will he not be wretched?

Alcibiades: Very much so.

Socrates: What about the people he acts for?

Alcibiades: They will be wretched too.

Socrates: So a person would not be able to be happy unless he were sound-minded and good.

Alcibiades: He would not.

134b

Socrates: So the bad people are wretched.

Alcibiades: Very much so.

Socrates: Then the man who has become rich is not yet free from wretchedness, but the soundminded man is.

Alcibiades: Apparently.

Socrates: So, Alcibiades, the cities need neither walls nor triremes nor dockyards if they wish to be happy, neither do they need numbers or size, without excellence.

Alcibiades: Indeed not.

134c

Socrates: In that case, if you do intend to engage in civic affairs properly and nobly, you must bestow excellence upon the citizens.

Alcibiades: There is not another way.

Socrates: But could anyone bestow what he does not possess?

Alcibiades: No, how could he?

Socrates: Then you should first acquire excellence yourself, and so should anyone else who is about to rule and attend to the city and to its affairs, and not just to himself and to his own affairs in private.

Alcibiades: What you say is true.

Socrates: Then you should make justice and sound-mindedness available, rather than the power or the authority for yourself or the city to do as they please.

Alcibiades: So it appears.

134d

Socrates: And by acting in a just and sound-minded way, both you and the city will be acting in a manner beloved of God.

Alcibiades: Quite likely.

Socrates: And as we said before, you will act whilst looking to what is divine and bright.

Alcibiades: So it appears.

Socrates: And, indeed, once you look there you will behold and come to know yourselves, and also the goods that are your own.

Alcibiades: Yes.

Socrates: In that case, will you not act rightly and well?

Alcibiades: Yes.

134e

Socrates: Well then, if you act in this way, I am prepared to guarantee that you simply must be happy.

Alcibiades: You are indeed a secure guarantor.

Socrates: But if you act unjustly, looking to what is godless and dark, you will in all likelihood act in a manner resembling these because of your ignorance of yourselves.

Alcibiades: So it seems.

135a

Socrates: Yes, my dear Alcibiades, for what is likely to happen to someone in private or in public who has power to act as he pleases, but is lacking in intelligence? Take, for instance, a sick person with the power to do what he wishes but without having any medical intelligence, and who is so tyrannical that no one dares rebuke him. What will the outcome be? Is it not likely that his body will be ruined?

Alcibiades: What you say is true.

Socrates: And in a ship, if someone has power to do what seems best, but is devoid of intelligence and excellence in helmsmanship, do you see what would happen to him and to his fellow sailors?

Alcibiades: I think they would all perish.

135b

Socrates: And similarly, in a city and in every position of power and authority, does not bad action follow once excellence is forsaken?

Alcibiades: It must.

Socrates: So if there is to be happiness, excellent Alcibiades, it is not tyranny that must be provided either for yourself or the city, but excellence.

Alcibiades: What you say is true.

Socrates: But before they possess excellence it is better, not just for a child but also for a man, to be ruled by someone better rather than exercising rule.

Alcibiades: So it appears.

Socrates: And is not the better also more noble?

Alcibiades: Yes.

Socrates: And is the more noble, more fitting?

135c

Alcibiades: What else could it be?

Socrates: So it is fitting that someone bad be a slave, since it is better.

Alcibiades: Yes.

Socrates: Then badness befits a slave.

Alcibiades: Apparently.

Socrates: But excellence befits the free.

Alcibiades: Yes.

Socrates: In that case, my friend, should we not flee from the slavish spirit?

Alcibiades: More than anything, Socrates.

Socrates: And are you now aware of your own condition? Does this befit a free man or not?

Alcibiades: I think that I am very well aware of it.

Socrates: Well, do you know how to escape this present predicament of yours? Let us not name it in the case of a noble man.

135d

Alcibiades: I do indeed.

Socrates: How?

Alcibiades: If it be your will, Socrates.

Socrates: That is not the right thing to say, Alcibiades.

Alcibiades: What should I say?

Socrates: If God wills it.

Alcibiades: Those are my words then. And as well as this, I also declare that we are likely to exchange roles, Socrates, so that I take yours and you take mine. Indeed, from this day forth, there is no alternative but that I shall follow you and you will be followed by me.

135e

Socrates: How noble! So my love will turn out to be just like a stork²³ if it, in turn, will now be cared for by the winged love it hatched within you.

Alcibiades: Well, that is how matters stand, and I shall begin henceforth to care for justice.

Socrates: And it is my wish that you may accomplish your objective. Yet, I have a foreboding, not from any lack of faith in your nature, but beholding the might of the city, I fear that it may overpower both me and you.

NOTES

1. Pericles was the most famous Athenian politician and orator of the mid 5th century.
2. Two early kings of the vast Persian (Achaemenid) Empire.
3. Flute-playing distorts the facial features in a comic manner. According to legend, Athena threw the instrument away, having seen a reflection of her altered face.
4. This is essentially an oath to Zeus, since he was regarded as the god of friendship.
5. Euripides, Hippolytus 350-353.
6. A tiny Aegean island off the coast of Thessaly, which serves as a contrast to the much larger city of Athens.
7. Pythoclides of Ceos and Damon of Athens were musicians and musicologists. Anaxagoras of Clazomenae was a natural philosopher. They all taught in Athens in the 5th century.
8. Pythodorus and Callias were prominent Athenian politicians. Zeno of Elea was a philosopher and student of Parmenides. Plato, Parmenides 126e-128e.
9. A politician and figure of fun in Athens about whom little else is known.
10. According to legend, Eurysaces was the son of the hero Ajax. He was celebrated in Athens.
11. Socrates' father, Sophroniscus, was a sculptor. Ancient sculptors regarded Daedalus as the father of their trade.
12. Aeacus was a legendary king of Aegina, a small island in the Saronic Gulf.
13. This line is thought to have come from one of the lost plays of Plato the comic poet.
14. Zoroaster, also known as Zarathustra, was the founder of Zoroastrianism, which became the official religion of the Achaemenid Empire in Persia.
15. Dinomache was Alcibiades' mother.
16. The Attic acre was equivalent to 874 square metres.
17. Leotyichides, Archidamus and Agis were all kings of Sparta.

18. A 'span' is the distance from thumb to little finger of the outstretched palm; a cubit is the distance from the elbow to the end of the little finger.

19. *Odyssey* ii.365.

20. A Homeric phrase used to describe Athenians. *Iliad* ii.547.

21. In addition to 'pupil', the Greek word *korē* and the Latin word *pupilla* both also meant 'little girl' or 'doll'.

22. The passage from 133c8-17 is not in the main manuscripts (B & T).

23. This analogy is based upon the story that storks, in old age, were fed by younger birds which they had previously hatched and reared.

Alcibiades II

persons in the dialogue:

SOCRATES of Alopecce, son of Sophroniscus

ALCIBIADES a famous and notorious politician and general

scene: on the way to an unknown temple

138a

Socrates: Alcibiades, are you on your way to pray to the god?

Alcibiades: Certainly, Socrates.

Socrates: I must say that you look sullen and downcast as if you were preoccupied with something.

Alcibiades: And what might preoccupy someone, Socrates?

138b

Socrates: What I regard as the greatest preoccupation, Alcibiades. Come on, by Zeus, don't you think that the gods to whom we pray, in public and private, sometimes grant our requests and sometimes do not, and favour some people and not others?

Alcibiades: Entirely so.

Socrates: Don't you think it requires great foresight to avoid praying unwittingly for great evils, thinking them to be good when the gods happen to be disposed to grant whatever one happens to pray for? Just as Oedipus¹ is said to have prayed impetuously that his sons would divide their inheritance by the sword, and although it was open to him to pray for some means of averting the evils he was facing, he called down further curses in addition. Consequently, all these developments came to pass, and from these came many more terrible events which we need not recount in detail.

Alcibiades: But, Socrates, you have described a man who was mad, for who do you think would dare utter such prayers whilst sane?

Socrates: And do you think being mad is the opposite of being wise?

Alcibiades: I certainly do.

138d

Socrates: And do you think some people are unwise while others are wise?

Alcibiades: They are indeed.

Socrates: Come on then, let's consider who precisely these people are. We have agreed that there are the unwise and the wise, and others who are mad.

Alcibiades: Yes, we have agreed.

Socrates: And what's more, there are some who are healthy?

Alcibiades: There are.

Socrates: Aren't there others who are unhealthy?

139a

Alcibiades: Certainly.

Socrates: And they are not the same?

Alcibiades: Indeed not.

Socrates: Now, are there any others who are in neither of these conditions?

Alcibiades: Of course not.

Socrates: For it is necessary that a person be either ill or not ill.

Alcibiades: I think so.

Socrates: Well then, when it comes to wisdom and unwisdom, do you hold the same view?

Alcibiades: How do you mean?

Socrates: Do you think it is only possible to be wise or unwise, or is there a third condition in between which makes a person neither wise nor unwise?

139b

Alcibiades: No, there is not.

Socrates: So, it is necessary to be in one or the other of these conditions.

Alcibiades: So it seems to me, at any rate.

Socrates: Don't you remember agreeing that madness is opposite to wisdom?

Alcibiades: I do.

Socrates: And also that there is no third condition in between which makes a person neither wise nor unwise?

Alcibiades: Yes, I agreed.

Socrates: Now, can there possibly be two opposites of one thing?

Alcibiades: Not at all.

Socrates: So it seems that unwisdom and madness are the same.

139c

Alcibiades: Apparently.

Socrates: So, we would be right to say that all unwise people are mad, Alcibiades, and this applies not just to any of your peers who happen to be unwise, as some are, but even to your elders. Indeed, by Zeus, don't you think that in our city the wise are few while most people are unwise, and these people you refer to as mad?

Alcibiades: I do.

139d

Socrates: Now, do you think we could live happily as fellow citizens alongside so many mad people for so long without paying the penalty of being assailed or assaulted and suffering under the familiar behaviour of mad people? No, look for yourself, blessed man, this is not the situation we find ourselves in.

Alcibiades: No, how could it be, Socrates? It looks as if the situation is not as I had thought.

Socrates: I don't think so either. But consider the matter carefully in another way.

Alcibiades: What way do you mean?

Socrates: I shall tell you. We understand that some people are ill, do we not?

Alcibiades: We certainly do.

139e

Socrates: Now, do you think that a sick person necessarily has gout or fever or eye inflammation, or don't you think that someone suffering from none of these may be sick with some other illness? For there are presumably many illnesses and not just these three.

Alcibiades: I agree.

Socrates: Now, do you think that every eye inflammation is a disease?

Alcibiades: Yes.

Socrates: And is every disease an eye inflammation?

Alcibiades: I certainly don't think so, although I am at a loss as to what I am saying.

140a

Socrates: But if you give me your attention, the two of us, seeking together, may find what we are looking for.

Alcibiades: Well, I am paying attention, Socrates, to the best of my ability.

140b

Socrates: Did we not agree that although every eye inflammation is a disease, not every disease is an eye inflammation? contrast, not all who are ill have fever or gout or an eye inflammation, I presume. Rather, although everything of this sort is a disease, according to those whom we call physicians they differ in the effect they have. For they are not all alike, nor do they operate in like manner, but each acts in accordance with its own capacity even though they are all diseases. In the same way, we understand some people to be artisans, do we not?

Alcibiades: We certainly do.

140c

Socrates: Aren't there cobblers and carpenters and sculptors, and a whole host of others whom we need not mention individually? They have their own particular parts of craftsmanship, and they are all craftsmen, but they are not all carpenters or cobblers or sculptors, even though all of them are craftsmen.

Alcibiades: Indeed not.

Socrates: Well, people have also been allocated unwisdom in this way too. Some who possess the largest portion of this we refer to as mad, while those who have the least portion are called stupid, although those who prefer to use nice-sounding names refer to them as great d hearted or simple, or again as innocent, inexperienced or senseless. And you will, on investigation, discover many other names, though these are all unwisdom, but the names differ, just as it was evident to us that a skill differs from a skill and a disease from a disease. Or how does it seem to you?

Alcibiades: As you say.

Socrates: Then we should go back over the argument again from this point. For it was said, presumably, at the outset that it was necessary to consider who precisely the wise and the unwise people are, since we agreed that there are such people. Did we not?

Alcibiades: Yes, this was agreed.

140e

Socrates: Now, do you understand the wise to be those who know what to do and what to say?

Alcibiades: I do.

Socrates: Who then are the unwise? Are they the people who know neither of these?

Alcibiades: They are.

Socrates: Will those who do not know either of these unwittingly do and say things they shouldn't?

Alcibiades: Apparently.

141a

Socrates: I spoke of these people, Alcibiades, and I said that Oedipus was an example. But nowadays you will still find many such people, not acting in anger as Oedipus did, nor believing that they are praying for bad things, but for good things. That man neither prayed so nor thought so, but there are others who are in the opposite predicament. For I imagine that if the god, to whom you are on your way, were to make himself manifest to you first, before you prayed for anything, and were to ask you if you would be content with becoming tyrant of the city of Athens, and you were to regard this as mean and insignificant, he might then add tyranny over all the Greeks. But what if he saw that this still seemed inadequate unless he also promised all of Europe, and he promised not only that, but the recognition

by everyone, there and then, if you so desired, that Alcibiades, the son of Clinias, is their tyrant? I think you would depart in delight as though you had obtained the greatest possible goods.

Alcibiades: And so, I believe, Socrates, would anyone else if advantages of this sort were to come their way.

141c

Socrates: And yet you would have no desire to trade your own life even for the territory and tyranny of all the Greeks and non-Greeks.

Alcibiades: I think not. How could I when I'm not going to make any use of these advantages?

Socrates: And what if you were going to use them, but harmfully and badly? You would have no such desire under these circumstances either, would you?

Alcibiades: Indeed not.

141d

Socrates: So, you see that it is not safe either to unthinkingly accept what is given, or to pray for some outcome if one is going to be harmed by this or lose one's life entirely. We could speak of so many people who, at some stage, set their hearts upon tyranny and made it their business to attain it, as if they were achieving something good, but whose life was then lost through conspiracies because of the tyranny. And I presume you are not unaware of certain events of today or yesterday, when Archelaus, the tyrant of Macedon, had a lover who loved tyranny just as much as Archelaus loved him, and who killed his lover, Archelaus, so as to become tyrant and a happy man. But having held the role of tyrant for three or four days, he in turn was the victim of a plot by some others and was slain. You also see examples among our own citizens which we have not heard from other sources. Indeed, we know first-hand of those who set their hearts upon military command, but having acquired

this, some still remain exiles from this city while others have lost their lives. But even those who seem to have done best have faced many dangers and terrors, not just in their military command, but when they returned to their own homeplace where they have been constantly besieged by informers, just as much as they were by the enemy. As a result, some of them prayed to have no military command rather than being a general. Now, if these dangers and troubles were of some advantage, this might make sense, but the situation is the very opposite. And you will also find that the situation is the same in relation to offspring. Some people have prayed that children might be born to them, but once they have been born, the parents had been subjected to the greatest misfortunes and tribulations. For some whose children were degenerate in the extreme have spent their entire lives in tribulation, while others had good children who met with disaster. So they were deprived of their children, and were thus subjected to just as much bad luck as the others, and wished that no children had ever been born to them. But, nevertheless, although these people and many others like them are so very plain to be seen, it is hard to find anyone who would refuse to accept what is given, or who would stop praying when the object of their prayers was about to be attained. But most people would not refuse the grant of a tyranny, or of military command, or lots of other things whose possession would do them more harm than good. They would, rather, pray for those things if they did not already have them. But a little later they sometimes recant, taking back their prayers for whatever they initially prayed for. So, I question whether we humans are blaming the gods without reason, when we ourselves, by our own recklessness and unwisdom, you might say, incur more sorrows than fate decreed. It is quite likely then, Alcibiades, that a certain poet was wise, despite having stupid friends whom he saw working and praying for things that were not good, although they

thought they were. He uttered a prayer in common, on all their behalf, saying: King Zeus, give us what is good whether we pray for it or not, Avert what is bad for us even if we pray for it. Now, I believe the poet is making a good, sound point here, but if you have any views to the contrary, please don't keep them quiet.

143b

Alcibiades: It is difficult, Socrates, to contradict a good point. But this much I am aware of: just how much evil is caused to humanity by ignorance, when it seems we forget ourselves because of this, and enact, or, worst of all, pray to be granted the greatest evils. Now, this is something no one believes about themselves. Each believes, rather, that they are well are not speaking correctly when we criticise ignorance in this offhand way if we don't also mention what the ignorance is of, and that it is good for some people in certain situations, just as it is bad for those others.

Alcibiades: How do you mean? Is there anything at all that it is better for anyone at all, in any situation, to have ignorance of rather than knowledge?

Socrates: Well, I for one think so, don't you?

Alcibiades: By Zeus, I do not.

143d

Socrates: But surely I am not to form this unfavourable view of you, that you would wish to behave towards your own mother just as Orestes⁴ and Alcmaeon did, and some others too who behaved in the same way towards their own mothers.

Alcibiades: Mind what you say, by Zeus, Socrates.

Socrates: But, Alcibiades, it is not the person who says that you would not wish to behave like this whom you should bid to mind what he says, but rather anyone who says the opposite. For the deed seems so very awful to you that it should not even be mentioned in such a casual manner. But do you think that

Orestes, if he happened to be wise and had known what was best for himself to do, would have dared to behave in such a manner?

Alcibiades: Indeed not.

143e

Socrates: Nor, I believe, would anyone else.

Socrates: So, ignorance of what is best and to ignore what is best are, it seems, bad?

Alcibiades: I think so.

Socrates: Both for that person and all others?

Alcibiades: I agree.

144a

Socrates: Well, let's consider the following case. What if it were suddenly to occur to you that it was a good idea to go to the door of Pericles⁵, your own guardian and friend, carrying a dagger, and ask if he was at home with the intention of killing that man himself and no one else, and they told you that he was at home? Now, I am not saying that you would actually wish to do any of this, unless you were ever to get an idea which could, of course, easily occur to someone who is ignorant of what is best, thinking that what is actually worst is, at the time, best. Or don't you think so?

Alcibiades: Entirely so.

144b

Socrates: Now, if you arrived, entered, and saw that man, but did not recognise him and thought he was someone else, would you still dare to kill him?

Alcibiades: No, by Zeus, I should think not.

Socrates: For the person you wished to kill was presumably that man and not some random person. Is this so?

Alcibiades: Yes.

Socrates: Well, if you were to make the attempt many times, always failing to recognise Pericles when you were about to do the deed, you would never lay a hand on him.

Alcibiades: Indeed not.

Socrates: What about this? Do you think Orestes would ever have laid hands upon his mother if he, in like manner, had failed to recognise her?

144c

Alcibiades: No, I don't think so.

Socrates: For he did not, presumably, intend to kill any random woman, or the mother of anyone at all, but only his own mother.

Alcibiades: This is so.

Socrates: So, it is better for those with such dispositions, possessed of such intentions, to be ignorant of these things.

Alcibiades: So it appears.

Socrates: Do you see that for some people, in some situations, there are things which it is good to be ignorant of. It is not bad, as you thought previously.

Alcibiades: So it seems.

Socrates: Yet if you care to consider the consequence of this, you are likely to think it most strange.

144d

Alcibiades: What precisely, Socrates?

Socrates: That it is likely, in a sense, that the acquisition of other kinds of knowledge, if they are acquired without knowledge of what is best, are seldom of benefit, and in most cases do harm to the possessor. Think of it this way. Don't you

think it necessary that whenever we are about to do or say anything, we must actually know about or think that we know about whatever it is we are going to say or do?

144e

Alcibiades: I think so.

145a

Socrates: Don't the rhetoricians, for example, either know how to advise us, or think they know how to advise us from time to time, sometimes about war and peace, sometimes about the construction of walls or the equipping of harbours. In short, whatever the city does in its internal or external dealings is all done on the advice of the rhetoricians.

Alcibiades: True.

Socrates: See what follows.

Alcibiades: If I am able.

Socrates: You surely refer to people as wise and unwise?

Alcibiades: I do.

Socrates: Don't you call most people unwise and a few people wise?

Alcibiades: Quite so.

Socrates: In both cases, don't you look to some criterion?

Alcibiades: Yes.

145b

Socrates: Now, do you call someone wise who knows how to give such advice without knowing whether it is best or when it is best?

Alcibiades: Of course not.

Socrates: Nor, I believe, is someone who knows about warfare itself without knowing when it is best and for how long a time it

is best. Is this so?

Alcibiades: Yes.

Socrates: Nor again is someone who knows how to kill another, or take away his money, or make him an exile from his homeland without knowing when this is best and to whom this is best done?

Alcibiades: Indeed not.

145c

Socrates: Then there is the person who knows about things of this sort and also has knowledge of what is best, which is presumably the same as knowledge of what is beneficial. Is this so?

Alcibiades: Yes.

Socrates: This person we shall call wise, and a competent adviser both to the city and to himself, while someone who is not like this we shall call the opposite of these. What do you think?

145d

Alcibiades: I agree. other sport, or anything else of that sort that we know by means of a skill? What do you call someone who knows what is done better by that particular skill? In the case of the skill of horse riding, isn't he a horse rider?

Alcibiades: I agree.

Socrates: And in the case of the skill of boxing, I imagine, he is a boxer, and in the case of the skill of flute playing, he is a flute player, and the same holds for the other skills. Or do you think they are somehow different?

Alcibiades: No, that's it.

145e

Socrates: Now, do you think it is necessarily the case that someone who is knowledgeable about any of these is also a wise man, or shall we maintain that much more is required?

Alcibiades: Much more, by Zeus.

146a

Socrates: Suppose there was a state consisting of good archers and flute players, athletes too, and other skilled people, mixed in with the people we mentioned earlier who know about warfare itself and about slaughter itself, and with rhetoricians puffed up with political conceit, all of whom were devoid of the knowledge of what is best and knew not when and towards whom it was better to employ their particular skills. What kind of a state do you think that would be?

Alcibiades: A bad one, Socrates, in my view.

146b

Socrates: You would indeed say so, I believe, once you saw each of them competing to allocate influence in civic affairs to the part 'wherein he happens to do best'. And I mean what is best by the standard of his particular skill, which is far wide of the mark of what is best for the city and for himself, since I believe he puts his faith in opinion devoid of reason. And this being the case, wouldn't we be right to say that we should expect such a state to be full of upheaval and lawlessness?

Alcibiades: Right indeed, by Zeus.

Socrates: Didn't we believe it necessary that we either think that we know about, or actually know about, whatever we are just about to do or say?

Alcibiades: We did.

146c

Socrates: What if someone does what he knows about, or thinks he knows about, and, in addition, knows what is beneficial? Won't we maintain that he is an asset to the city and to himself?

Alcibiades: Of course.

Socrates: But I imagine under the opposite circumstances, he is an asset neither to the city nor to himself.

Alcibiades: Indeed not.

Socrates: Now then, do you still hold the same view as before or is it somehow different?

Alcibiades: No, it is the same.

Socrates: Did you say that you refer to most people as unwise and to a few as wise?

Alcibiades: I did.

Socrates: And now we are saying once more that most people are far wide of the mark of what is best because, I believe, they put their faith in opinion devoid of reason.

146d

Alcibiades: So we say.

Socrates: So, it is to the advantage of most people neither to know, nor think that they know, if they are going to be emboldened to engage in certain actions they are knowledgeable about, or think they are knowledgeable about, when such actions will, in general, be more harmful than beneficial.

Alcibiades: Very true.

146e

Socrates: Do you see then that I was apparently right when I said that it is likely that the acquisition of various kinds of knowledge – if someone acquires them without acquiring the knowledge of what is best – is seldom of benefit and for the most part does harm to their possessor?

Alcibiades: Well, if I didn't think so at the time, I do now, Socrates.

147a

Socrates: It is necessary, then, for a city or a soul to cleave to this knowledge, exactly as a sick person cleaves to a physician, or someone who is going to sail in safety cleaves to a helmsman. For in the absence of this knowledge, the more brightly the breeze of chance wafts them, either towards the acquisition of wealth or physical strength, or anything else of that sort, the greater the error, it seems, that naturally arises from these things. And someone who has acquired a reputation for being very learned or highly skilled, while being bereft of this knowledge and led by one or other of the various kinds of knowledge, will rightly end up in very stormy waters indeed, will he not, since he is, I believe, embarking upon the ocean without a helmsman, with but a short span of life to run? And so, the words of the poet seem to me to apply to this case, where he accuses someone, saying, “He knows many works, but he knows them all badly.”⁷

Alcibiades: But why exactly is the line from the poet applicable, Socrates? Indeed, it does not seem at all relevant to me.

147c

Socrates: And yet it is highly relevant, but this poet speaks in riddles, best of men, like almost all poets. For all poetry naturally uses riddles, and it is not just anyone who can understand. And in addition to this natural tendency, whenever it takes hold of a possessive person who is reluctant to display his own wisdom to us and wishes to conceal it as much as possible, it proves exceedingly difficult to understand what each of them has in mind. For you surely don’t think that Homer, the most divine and the wisest of poets, was unaware that it is not possible to ‘know badly’. For he was the one who said that Margites, although he knew many things, knew them all badly. But he was, I believe, speaking in riddles, and used ‘badly’ in place of ‘bad’, and ‘knew’ in place of ‘to know’. Now, if we put this together, ignoring the metre, what he means turns

out to be that “he knew many works, but it was bad for him to know all these”. Of course, if it was indeed bad for him to know a great deal, he proves to be a degenerate person if we are to believe our previous arguments.

147e

Alcibiades: And I think we should, Socrates. Yes, if I were to have difficulty in accepting these arguments, it would be hard for me to be convinced by any arguments.

Socrates: And you are right to think so.

Alcibiades: But I am having second thoughts about this.

148a

Socrates: But come on, by Zeus, you surely see the nature and extent of the difficulty in which, I believe, you have shared. You are incessantly changing your position this way and that, and whatever seems certain to you is forgotten and you no longer hold that view at all. And even now, if the god to whom you are presently proceeding were to make himself manifest and ask you, before you had uttered a single prayer, if it would be enough for you to have any of those things that were mentioned at the outset, or whether he should leave you to pray just by yourself, which do you think would yield the best outcome – accepting what the god offers, or praying on your own?

148b

Alcibiades: But by the gods, Socrates, I would not be able to respond to you offhand. I believe, rather, that your question is impetuous, and I believe that, in truth, this requires a great deal of care lest a person unwittingly prays for what is bad for himself thinking it to be good, then a little later, as you said, he recants and takes back all the prayers he first uttered.

Socrates: Didn't that poet I mentioned at the beginning of our discussion know better than us ^{148c} Well the Spartans too,

Alcibiades, either in admiration for this poet or because they had worked it out for themselves, frequently utter a similar prayer in private and in public, calling upon the gods to grant them the beautiful and the good. No one would ever hear them praying for more than this. Consequently, to this very day they are no less fortunate than any other people. And so, even if everything does not turn out fortunately for them, it is not because of this prayer of theirs. It is up to the gods, I believe, either to grant whatever someone happens to pray for, or the very opposite of this. And I would like to tell you another story that I once heard from one of our elders. A conflict had arisen between the Athenians and the Spartans, but whenever there was a battle by sea or by land, it always turned out that our city met with misfortune and was unable ever to prevail. Now, the Athenians, being troubled by this development and being at a loss to find any means of averting their ongoing difficulties, decided among themselves that the best course was to send a question to Ammon, and enquire further as to why exactly the gods grant victory to the Spartans rather than to themselves. “We”, they said, “bring them more sacrifices than the rest of the Greeks, more perfect too, and like no other peoples we have embellished their temples with offerings, and have bestowed expensive, solemn processions upon the gods every single year, and have spent more money than all other Greek peoples put together. None of these matters is a concern to the Spartans, and their attitude towards the gods is so demeaning that they consistently sacrifice defective animals, and, in general, their respect falls considerably short of ours even though they have accumulated just as much wealth as our city.” Once they had said all this and asked what they needed to do to find deliverance from their present evils, the prophet called them to him and gave this response, and nothing more, for it was obviously all the god would allow. “Athenians,” said he, “the god Ammon says ‘I prefer the reverent utterance of the

Spartans to all the sacrifices of the Greeks.” This is as much as he said, and not one word further. Now, I think that the reverent utterance that the god refers to is nothing other than their prayer, for it really is very different from the prayers of others. As for the rest of the Greeks, some present the gods with golden horned oxen, while others bestow offerings, praying for whatever occurs to them to pray for, be it good or be it bad. And as they utter their irreverent words, the gods hear them but refuse to accept these expensive processions and sacrifices. But I believe that great vigilance is required, and deliberation too, as to what precisely should be said and what should not. And in Homer you will also find other accounts similar to these. For he says that the Trojans, setting up their camp: They accomplished likewise full sacrifices before the Immortals, and the winds wafted the savour aloft from the plain to the heavens in its fragrance; and yet the blessed gods took no part of it. They would not; so hateful to them was sacred Ilion, and Priam, and the city of Priam of the strong ash spear. And so it was not to their advantage to offer sacrifices and pay tribute in vain with their gifts since they were hated by the gods. For I don’t think the way of the gods is such that they are influenced by gifts, like some base profiteer. And our argument is indeed absurd if we claim to be superior to the Spartans in this respect. For it would surely be terrible if the gods were looking at our sacrifices and gifts rather than the soul, and whether any happens to be holy and just. I believe that they look at this much more than at those costly processions and sacrifices that a city or an individual may well offer on an annual basis, even though they have done great wrong to the gods or their fellow man. But the gods, since they are not corrupt, despise all these gifts, as the gods and the prophet of the gods declare. And so it is likely that in the eyes of the gods and of reasonable people, justice and wisdom are especially honoured, and the wise and the just people are none other than those who know what to do and

what to say, both to gods and humans. But I would also like to find out what you think about these matters.

Alcibiades: Well, Socrates, my view does not differ from yours or from the god's, for it would not be reasonable for me to cast my vote against the god.

150c

Socrates: Don't you remember saying that you were in great perplexity lest you might unwittingly pray for evils, thinking them to be good?

Alcibiades: I do.

150d

Socrates: You now see how unsafe it is for you to go to the god in prayer, in case it turns out that he, hearing your irreverent words, declines to accept this sacrifice, and you perhaps reap something else in addition. So I think it best that you keep quiet, for I don't think you are willing to use the Spartan prayer due to your great-heartedness, which is our nicest word for folly. So it is necessary to wait until one has learned how one should behave towards gods and men.

Alcibiades: How long will that take, Socrates, and who will be my educator? I think I would be pleased to see who that person is.

150e

Socrates: The one who cares about you, but it seems to me that just as Homer recounts that Athena removed the mist from the eyes of Diomedes, That he might well recognise both God and man so you too should first have the mist that currently envelops your soul removed. Only then will you acquire the ability to recognise both good and evil. For at the moment I don't think you're able to do this.

Alcibiades: Let him remove the mist or whatever else he wishes to call it. For whoever this person may be, I am prepared to

comply, without evasion, with anything he commands, provided I am going to become better.

Socrates: And he too is wonderfully well disposed towards you.

151a

Alcibiades: Well, I think it best to defer the sacrifice until then.

Socrates: And you are right to think so, for it is safer than taking a risk when there is such a danger.

151b

Alcibiades: What about this Socrates? I shall crown you with this garland, since I believe you have advised me so well, and later, when I behold the arrival of that day, we shall bestow garlands and all other traditional gifts upon the gods. And if they are willing, that day will not be long in coming.

151c

Socrates: And I shall accept this too, and I gladly anticipate any other gifts you may give me. And just as Euripides⁶ makes Creon say, upon seeing Tiresias wearing garlands and hearing that he obtained them from the enemy as offerings because of his skill, I take your garlands of victory as a good omen, For we are tossed upon the waves as you well know. so too do I take this opinion of yours as an omen. For I think that I too am tossed upon the waves, just as much as Creon, and I would like to win a victory over your lovers.

NOTES

1. The reference here is to an epic poem, *The Thebans*. The result of Oedipus's prayer was that his sons killed each other.
2. *Odyssey* i.32-34.
3. A modified epigram, X.108, from the *Palatine Anthology*.
4. Orestes and Alcmaeon, according to legend, both committed matricide to avenge the deaths of their fathers.
5. After the death of Alcibiades' father at the battle of Coronea, Pericles and his brother Ariphon became the guardians of Alcibiades.
6. Euripides, *Antiope*, Fragment 183, Nauck.
7. The line quoted here is from *Margites*, Fragment 3, Allen. In antiquity, this work was erroneously believed to have been by Homer.
8. Ammon was an Egyptian god who was worshipped in Greece. He had important shrines in Thebes, Sparta, and an important oracle at Siwa in the Libyan desert. In Greece, Ammon was sometimes associated with Zeus.
9. *Iliad*, viii.548-552, Lattimore.
10. *Iliad*, v.128.
11. Euripides, *Phoenicians* 858-859.

SOCRATES *of Alopecce, son of Sophroniscus*

MELETUS *Socrates' prosecutor*

scene: a court in or near the Athenian Agora

SOCRATES SPEAKING AT HIS TRIAL IN 399

17a

How you, men of Athens¹, have been affected by my accusers, I do not know. As for me, they spoke so persuasively that they almost made me forget myself, and yet they have hardly spoken one word of truth. But of the many lies they told, there was one that amazed me more than any, when they ^{17b} said that you must be on your guard lest you be deceived by me because I am a formidable speaker. The fact that they were not ashamed of being immediately refuted by me once I actually show myself to be no formidable speaker at all, this I thought utterly disgraceful of them, unless they are calling the person who speaks the truth a formidable speaker. For if that is what they mean, I would accept that I am an orator, but not after their fashion. These men, as I say, have said little or ^{17c} nothing that is true, but from me you shall hear the complete truth, without ornate speeches, beautifully adorned in every word and phrase, like the ones you heard from my accusers. No, men of Athens, by Zeus, you shall hear me say whatever occurs to me to say, in a random manner, and none of you should expect anything else since I am convinced of the justice of what I am saying. For it certainly would not be appropriate, at my age, to appear before you, men of Athens, with ^{17d} contrived arguments like some juvenile orator. What is more, men of Athens, I ask this of you, indeed I implore you, neither to be surprised nor to cause a commotion if you hear me defending myself using the same arguments I am also accustomed to using at the tables in the

Agora, where so many of you have heard me, and elsewhere too. For the fact of the matter is that I am appearing before the court now, for the first time, at seventy years of age, so the language of the place is simply foreign to me. Now, if in fact I happened to be a foreigner, you would surely have forgiven me ^{18a} if I spoke in my own dialect and in the way I had been brought up to speak. And so I am now making a request of you, a just request in my view, that for better or worse you accept my manner of speaking, and consider and apply your minds to this alone: if what I am saying is just, or not. For this is the very excellence of a judge, while the excellence of an orator is to speak the truth. Now, it is only right that I first defend myself, men of Athens, against the first false accusations laid against me and my first accusers, and then deal with the later ones and the later accusers. For many of my accusers came to you a long time ago, many years ago, speaking not a word of truth, and I am more afraid of these accusers than of Anytus² and his associates, although they too are formidable. But these are more formidable people, who got control of most of you, gentlemen, in childhood, gaining your trust and making accusations against me with no regard for the truth: that there is this Socrates, a wise man, who is preoccupied with the heavens above, has investigated everything beneath the earth, and who makes the weaker argument stronger.

^{18c}

The people, men of Athens, who put this story about are my most formidable accusers, since those who hear this tend to believe that whoever investigates such matters does not believe in the gods either. What is more, these accusers are numerous, and they have been making their accusations for a long time now; indeed, they were speaking to you at an age when you were most easily convinced – some of you were just children or youths – making unanswered accusations to which no defence was offered. But what is most unreasonable of all is that it is not

even possible to be sure of their names and state them, unless one of them happens to be a certain ^{18d} comic poet. Yet those who convinced you by recourse to malice and slander, or those who convinced others too when they themselves had been convinced, all these people present a formidable challenge. For it is impossible to bring them here or to cross-examine any of them. So I must simply fight with shadows in my own defence, and conduct a cross-examination to which no one responds. So you really should accept, as I say, that there have been two groups of accusers – those who accused me recently, and the earlier ones whom I am now describing. And please accept that ^{18e} I must defend myself against these first. For these were the first accusers you heard, and you heard them for longer than my recent accusers. So be it. I must make a defence then, men of Athens, and attempt in such a short time to undo a slander you have picked up over many years. Now, this is ^{19a} the outcome I would prefer if it were somehow better for you and for me, and I would like to succeed in my defence, but I think this is difficult, and the sort of task it is has not entirely escaped my notice. In any case, let this unfold in whatever way the god pleases, yet the law must be obeyed so I must present a defence. What, in fact, is the allegation that has given rise to this slander against me? Presumably the ^{19b} one Meletus relied upon when he brought this charge against me. Let us take up this question, from the beginning. Well, when the slanderers slandered me, what did they say? Well, I should read out their charge as if they were the accusers. “Socrates acts unjustly and is excessively curious, investigating things beneath the earth and in the heavens, making the weaker argument stronger, and ^{19c} teaching these same things to others.” It goes something like that. And, indeed, you yourselves have seen a Socrates, in Aristophanes’³⁷ comedy, being carried about the place, claiming to walk on air, and blabbering a lot of other nonsense about which I have no knowledge, great or small. And I am not speaking out of

disrespect for this sort of knowledge, if anyone is wise in such matters. I hope that Meletus' charges are never so numerous as to make me do that. But the fact is, men of Athens, I have no involvement with these matters. And I am calling you, the majority of you, as witnesses, ^{19d} and I think those of you who have ever heard me engaging in discourse, as so many of you have, should instruct one another and inform one another. Yes, you should tell one another if any of you have ever heard me discoursing on such matters to any extent, great or small. And from this you will realise that the other things that most people say about me are just like these accusations. In fact, not one of them is true, and if you have heard from anyone that I undertake to educate people and charge money for doing so, that is not true either, although I would regard this too as a ^{19e} fine accomplishment, if someone were able to educate people, as Gorgias⁴ of Leontini does, Prodicus ^{20a} please, and persuade the young to abandon the company of their own people, consort with them, pay their fees, and feel grateful besides. And I have become aware that there is also another wise man, a Parian, who has arrived here in town, for I happened to visit a man who has spent more money on sophists than everyone put together, Callias, the son of Hipponicus. So, I asked him about his two sons. "Callias," said I, "if your two sons happened to be colts or calves, we would be able to acquire ^{20b} an overseer for them, and pay someone likely to make them noble and good in their appropriate excellence, and that person would be a horse-trainer or a farmer. But now, since they are two human beings, whom do you intend to acquire as their overseer? Who is there who is knowledgeable in excellence of this kind, human and civic excellence? For I presume you have considered this, since you have two sons. Is there such a person or is there not?" I asked. "There certainly is," he replied. "Who is it?" I asked, "and where is he from, and how much does he charge to teach this?" "He is Evenus⁵, ^{5a} Parian," he replied, "and he charges five

minae.” And I would congratulate Evenus, if he ^{20c} were truly to possess this skill and teach it for such a modest fee. I, for my part, would have been proud and given myself airs if I had this knowledge. But the fact is, men of Athens, I do not have this knowledge. Now, one of you may perhaps object, “But, Socrates, what is it that you do? What is the origin of these slanders against you? Yes, surely this rumour and talk would not have arisen unless, by your conduct, you stood out from everyone else, unless you were behaving differently from ^{20d} most people. So tell us what it is so that we do not make rash judgements about you.” I think that whoever says this is raising some fair questions, and I shall try to show you what exactly it is that has given rise to this reputation of mine, and the slander too. Listen then, and some of you will probably think that I am joking, but mark my words, I shall tell you the whole truth. For I have acquired this reputation, men of Athens, only because of a particular kind of wisdom. What kind of wisdom is this? The particular wisdom that is, perhaps, human wisdom. In fact, I probably am ^{20e} wise in that wisdom, and perhaps those men whom I mentioned earlier may be wise with a wisdom that is greater than human wisdom. Otherwise I do not know what to say, for I myself have no knowledge of it, and anyone who says so is lying and is out to slander me. And do not raise a clamour against me, men of Athens, even if you think I am speaking boastfully. In fact, the word I shall speak is not my own; rather, I shall refer to a trustworthy speaker. For I shall provide you with the god of Delphi⁶ as witness of my own wisdom – if, indeed, it is wisdom – and of the sort of wisdom ^{21a} it is. Indeed, I presume you knew Chaerophon. He was my friend from my youngest years, and a friend of your democracy too, and he joined you in your recent exile and returned along with you. Well, you also know what Chaerophon was like and how impulsive he was in anything he took on. And, in fact, he once went to Delphi and dared to consult the oracle about this, and, as I said, please do

not raise a clamour, gentlemen – yes, he asked if anyone was wiser than me. So the Pythia⁸ answered that no one was wiser. And his brother, who is here, will be your witness of this, since the man himself is dead.

21b

Now, consider my reasons for saying all this, for I am going to set out for you the origin of the slander against me. Indeed, when I heard this, I reflected upon it as follows. “What exactly does the god mean, and what on earth is the riddle he poses? For I myself am aware of being wise in nothing great or small, so what precisely does he mean when he says I am the wisest? Of course he cannot be lying, since that is not lawful for him.” And I was perplexed for a considerable time as to what precisely he meant. Then, with much reluctance, I turned to a process of enquiry that went something like this. I went to one of the people who seemed to be wise on the assumption ^{21c} that there, if anywhere, I could refute the oracular utterance and show the oracle, “This person is wiser than me, but you said I was the wisest.” Now, I need not name the man, but it was one of our politicians I was examining, and my experience, men of Athens, was somewhat as follows. As I engaged him in discourse, it seemed to me that, although this man was thought wise by many other people and most of all by himself, he was not wise. So, I then attempted to show him that, although he believed himself to be wise, he was not wise. As a result, I was hated by him, and by ^{21d} many of those present. I reckoned as I was going that I am wiser than this man, for it is likely that neither of us knows anything noble and good, but he thinks he knows something, when he does not know, while I do not actually know. I do not even think that I know. So perhaps in this one minor respect, I am wiser than he is, because I do not think I know what I do not know. I then went to someone else, to one of the people who seemed wiser than that man, and I came to the very same conclusions, and in this case too I was hated by him,

and by many others. No, after this I kept on going, aware that I was hated, grieving and fearful, but it seemed ^{21e} necessary nevertheless to set the work of the god above all else. In considering the meaning of the oracle, I had to go to all those who seemed to know something. And by the dog, men of Athens, ^{22a} for I must speak the truth to you, my experience was something like this. When it came to being wise, those with the most exalted reputations seemed to me, as I searched at the god's behest, well nigh worst-off, while other men, of lower repute, were better off. So I must recount my wanderings to you, and the labours I undertook, only to find the oracle irrefutable. For after the politicians I went to the poets – the tragedians, the dithyrambists and the ^{22b} rest – expecting in this case to show myself up, blatantly, as being more ignorant than they. So, selecting poems of theirs that in my opinion they had crafted most intricately, I would question them as to what they meant in order to learn something from them in the process. Now, gentlemen, I am ashamed to recount the truth to you, but it must be spoken nevertheless. For in a sense, almost anyone who was present might have spoken better than the poets about the poems they themselves had composed. So in the case of the poets too, I quickly realised that it is not by wisdom that they compose their works, but by nature, and by being inspired, just like the prophets and deliverers of ^{22c} oracles. For these people also say a great deal, and it is beautiful too, but they know nothing about what they are saying. It was evident to me that the poets were in a similar predicament, and I became aware at the same time that because of their poetry they also thought themselves the wisest of men in general, when they were not. So I left their company too, thinking I was better off than they are, in the same way that I was better off than the politicians. Then finally I came to the craftsmen, for I myself was aware that I, in a sense, had no knowl- ^{22d} edge, and yet I knew I would find that their knowledge was extensive and beautiful. Well, I was

not deceived in this. They did know things I did not know, and in this respect they were wiser than me. But, men of Athens, it seemed to me that the pre-eminent craftsmen also had the same failing as the poets. Because they exercised their skill so beautifully, they each deemed themselves extremely wise in other matters too, matters of great importance, and this error of theirs obscured that wisdom. So I asked myself, on behalf of the oracle, whether I should accept my present con- ^{22e} dition, neither wise in any of their wisdom nor foolish in their folly, or possess their wisdom and their folly. So I responded to myself and the oracle that it was better for me to remain as I was. From this process of investigation, men of Athens, I have incurred a great deal of hatred of ^{23b} Socrates. And what is more, he is using my name, using me as an example, as if he were to say, "He among you, O humans, is wisest who has realised, like Socrates, that he is in truth worth nothing when it comes to wisdom." So to this very day I go about conducting these investigations, seeking out at the god's behest anyone, either citizen or stranger, whom I think to be wise, and once he seems not so to me, to assist the god I show that he is not wise. And because of this occupation I have no time for any involvement in civic affairs worth mentioning, or for any private concerns either, but I am in ^{23c} utter poverty because of my servitude to the god. As well as this, the young people follow me about of their own accord, those with the most free time who belong to the wealthiest families. They enjoy hearing people being examined, and they often imitate me themselves when, in turn, they attempt to examine others. And they then find, I am sure, a whole host of people who think they know something, when they know little or ^{23d} nothing. So as a result, those whom they cross-examine get angry with me rather than themselves, and they say that Socrates is a pestilence who corrupts the young. And whenever anyone asks them what I do and what I teach, they have nothing to say. They have no idea, and so that they do

not seem to be at a loss, they repeat the convenient charges made against all philosophers that ‘they investigate the heavens above and the earth beneath’, and that ‘they do not believe in the gods’, and that ‘they make the weaker argument stronger’. For in my view, they are reluctant to speak the truth and admit that they are being exposed, pretending to know when they know nothing.

23e

Now, because, as I see it, these influential people are ambitious, forceful and numerous, and because they speak about me assertively and persuasively, they have assailed your ears over many years with their comprehensive slanders. On this basis, Meletus has proceeded against me – Anytus too and Lycon – Meletus being ^{24a} angry on the poets’ behalf, Anytus on behalf of the craftsmen and politicians, Lycon on behalf of the rhetoricians. And so, as I said at the outset, I would be surprised if I were able, in the short time available, to rid you of this slander when it has become so pervasive. There you have the truth, men of Athens. I have concealed nothing, significant or insignificant, and I am speaking without any restraint. And yet, I know quite well that these are the very reasons I am hated, which ^{24b} proves that I am speaking the truth. This is the slander against me, and these are its causes, and if you investigate these matters, either now or in the future, you shall find that it is so. Now, this defence that I offer you against the accusations made by my first accusers should be sufficient. I shall attempt to follow this with a defence against Meletus – that good man and friend of the city, so he proclaims – and the later accusers too. Well then, we should take their affidavit in turn as if they were a different set of accusers. It goes somewhat as follows: it says that Socrates acts ^{24c} unjustly by corrupting the young and believing not in the gods the city believes in, but in other novel divine forces. That is the sort of charge it is, and we should scrutinise every detail of this charge. Well then, the charge

states that I am acting unjustly by corrupting the young. And yet I state, men of Athens, that Meletus is acting unjustly because he is making a joke of a serious matter by blithely bringing people to trial, pretending to be serious and concerned about matters that he has never cared about at all. But I shall also attempt to demonstrate to you that this is the case.

24d

“Come Meletus, tell me. Do you not attach great importance to the younger generation being in the best condition possible?” “I do.” “Come on then, tell these people: who is it who makes them better? Yes, you obviously know who it is, since you care. For you claim to have discovered their corrupter – me – and you are bringing me before these men, and making an accusation. So come on, tell them who makes young people better, tell them who this is. Do you see, Meletus, that you are silent and have nothing to say? But do you not think this is shameful and enough to prove what I am saying: you do not care. But speak, good man, who makes them better?” “The laws.” “But, best of men, I did not ask you that. No, I asked who the person is who knows this in the first ^{24e} place, who knows the laws.” “These people, Socrates, the jurors.” “What are you saying, Meletus? Are the jurors here able to educate the young and make them better?” “Very much so.” “All the jurors, or just some of them?” “All of them.” “By Hera, that is good news. You are saying that there is a whole host of people who benefit the young. And what about those who are listening in, do they make them better or not?” “Those people too.”

25a

“What about those who sit on the Council?” “Those who sit on the Council too.” “Well, Meletus, perhaps those in the Assembly, the assemblymen, corrupt the young? Or do they all make them better too?” “They do too.” “So it seems that all the Athenians make them noble and good, except me. I alone corrupt them. Is this what you are saying?” “That is what I am saying most

emphatically.” “Then you have laid great misfortune at my door. Now, answer this question for me. Do you think this is also the case with horses, that everyone makes them better while there is one person who ^{25b} corrupts them? Or is it completely the other way around? There is one person, or very few – the horse-trainers – who can make them better, while most people corrupt the horses if they deal with them or use them? Isn’t this the case, Meletus, both with horses and all animals? It is of course entirely so, whether yourself and Anytus confirm it or deny it. Indeed, it would be a great blessing to the young people if only one person corrupted them while everyone else benefited them. But in ^{25c} fact, Meletus, you are demonstrating quite adequately that you have not given a moment’s thought to the young people, and you are blatantly exposing your own uncaring attitude. You do not care about the issues on which you are prosecuting me. And, by Zeus, Meletus, tell us this besides. Is it better to dwell among good citizens or wicked ones? Answer, my man, for I have not asked you a difficult question. Do not the wicked do some harm to those who are always closest to them, while the good do some good?” “Yes, certainly.” “Now, is there anyone who prefers to be harmed by his associates rather than benefited? Answer, ^{25d} good man. In fact, the law demands that you answer. Is there anyone who wishes to be harmed?” “No, of course not.” “Come then, are you prosecuting me here for corrupting the young and making them more wicked intentionally or unintentionally?” “I say intentionally.” “What is this, Meletus? Are you, at your age, so much wiser than I am at my age that you have recognised that the bad people always do some harm to those closest to themselves, and the good ^{25e} do some good, while I am in such depths of ignorance that I do not even realise that if I make any of my fellows wicked, I run the risk of being harmed by him? And so, according to you, I perform such an evil deed as this intentionally? No, Meletus, you do not convince me of any of

this, and I ^{26a} do not think anyone is convinced either. Well then, either I do not corrupt them or, if I corrupt them, I do so unintentionally, and so in either case you are speaking falsely. But if I corrupt them unintentionally, you should not, by law, bring me to court over a mistake like this. Instead, you should instruct me and rebuke me in private. For it is obvious that if I am given instruction, I shall stop whatever I am doing unintentionally. Yet, although you have avoided my company and been reluctant to instruct me, you nevertheless bring me here to court, where, by law you should bring those who are in need of punishment rather than instruction.”

^{26b}

In any case, men of Athens, it is obvious at this stage, as I said, that Meletus has never shown any great concern for these matters, not in the least. “Nevertheless, Meletus, tell us in what way do I corrupt the young, according to you? Or is it quite obvious from the charge you have brought against me that I do so by teaching them not to believe in the gods the city believes in, but in other novel divine forces? Don’t you say that I corrupt them by teaching them this?” “Yes certainly, that is what I am saying, emphatically.” “Well, Meletus, by those very gods we are now talking about, speak more clearly, both to myself ^{26c} and to these gentlemen here, for I cannot understand you. Are you saying that I teach them to believe in some gods, and that I myself actually believe in gods, and am not a total atheist, and unjust in that sense? Is your charge against me that the gods I believe in are not the gods of the city, but different? Or are you claiming that I myself do not believe in gods at all, and I teach these doctrines to others?” “That is what I am saying, that you do not believe in gods at all.”

^{26d}

“You surprise me, Meletus. What makes you say this? Do I not actually believe that the sun and the moon are gods, as other men do?” “No, by Zeus, gentlemen of the jury, since he declares

that the sun is stone and the moon is earth.” “Dear Meletus, do you think that you are accusing Anaxagoras? And do you have such contempt for these men, and think them so unlettered as not to know that the books of Anaxagoras of Clazomenae are full of these doctrines? And do the young really learn these doctrines from me, ^{26e} when they can sometimes buy them in the market for a drachma at most, and laugh at Socrates if he pretends they are his own, especially when they are so strange? But, by Zeus, is this really what you think? Do I not believe in a single god?” “By Zeus, you do not, not at all.” “You have no credibility, Meletus, and I do not think that even you believe this yourself.” Indeed, in my opinion, men of Athens, this man is extremely arrogant and unrestrained, and has ^{27a} simply brought this charge in a spirit of arrogance, unrestraint and impetuosity. Yes, he is like someone posing a riddle as a test: “So, will Socrates the wise recognise that I am making a joke and contradicting myself, or will I deceive him and everyone else who hears me?” In fact, the man appears to me to contradict himself in the charge, as if he were saying, “Socrates is acting unjustly by not believing in gods, yet believing in gods.” But this is a joke. Join with me then, gentlemen, and consider in detail how, in my view, he is saying this. You should answer our questions, Meletus, ^{27b} while you gentlemen should recall the favour I asked of you at the beginning. Do not cause a commotion if I conduct the discussion in my accustomed manner. “Is there anyone, Meletus, who believes that there are human affairs but does not believe there are human beings? Let him answer, and, gentlemen, do not make one commotion after another. Is there anyone who does not believe in horses, yet believes in equestrian affairs, or who does not believe there are flute players, but does believe in matters concerned with flute-playing? Best of men, there is not. Since you do not wish to respond, I am telling you, and everyone else here. But you must at least answer my next question. Is there anyone who believes

that there are divine ^{27c} forces, but does not believe in divinities?" "There is not." "How good of you to answer, reluctantly, under compulsion from these men here. Now, you claim that I believe in, and teach, divine forces, never mind if they are novel or ancient. According to you I believe in divine forces anyway, and you have even sworn this in your indictment. But if I believe in divine forces it really is necessary, of course, that I believe in divinities. Isn't this the case? Yes, it is. Well, I am presuming you agree since you won't answer. And do we not hold that the divinities are either gods or the children of gods. Do you agree or not?"

^{27d}

"Very much so." "Therefore, if in fact, as you say, I hold that there are divinities, and the divinities are gods, this would constitute what I refer to as your riddling and jesting, saying that I do not believe in gods and then again that I believe in gods, since I do actually believe in divinities. Yet if, on the other hand, the divinities are illegitimate children of gods, born of nymphs or anyone else who is said to be their mother, is there any man who could believe that there are children of gods, but not believe there are gods? Yes, that would be just as strange as someone believing that there is off- ^{27e} spring of horses and asses, namely mules, and not believing that there are horses and asses. But Meletus, you really must have been testing us out here when you brought this charge, or else you were at a loss for a genuine injustice to charge me with. But you could never persuade anyone possessed of even a little intelligence that the same person can believe in divine forces and matters divine, and yet at the same time believe neither in divinities, nor gods, nor heroes. You simply ^{28a} could not do it." Well then, men of Athens, I do not think much defence is needed to show that I am not acting unjustly, based upon Meletus' charge. Even this should suffice. But mark my words, what I said earlier is true. I have attracted a lot of hatred from a lot of people, and this is

what will convict me, if I am convicted, not Meletus, not Anytus, but the slander and malice of the multitude. This indeed has convicted many other good men, and I think it will continue to do so. There is no fear it will ^{28b} stop with me. Now, someone might perhaps say, “Are you not ashamed, Socrates, that you have followed such a course as this and now risk being executed as a result?” To him I would respond, justifiably, “What you are saying is not right, sir, if you think a man of any merit at all should reckon his chances of living or dying whenever he engages in action, and not consider this alone: whether he is acting justly or unjustly, doing the work of a good man or a bad man.” For, according to your ^{28c} argument, all of the demi-gods who met their death at Troy would be worthless, including the son of Thetis, who was so contemptuous of danger once the alternative was disgrace. Thus, when his mother, a goddess, said to him when he was eager to slay Hector – she said something like this I think – “My son, if you are going to avenge the murder of your friend Patroclus and slay Hector, you yourself shall be slain,” she said, “for straightaway after Hector’s death, destiny awaits you ^{28d} as a bad man who does not avenge his friends, so he said, “May I die straightaway, as soon as I have inflicted justice upon this unjust man, so that I remain not here by the curved ships, a laughing stock and a burden to the earth.”¹⁰ Do you imagine that he thought about death or danger? For in truth, men of Athens, this is how matters stand. Wherever a man may position himself, thinking it best to be there, or wherever he is positioned by his commander, there in my view he should remain facing danger, reckoning nothing, neither death nor anything else, as worse than ^{28e} disgrace. Now, I would have been acting terribly, men of Athens, if I had remained at my post, just like anyone else, running the risk of being killed, when my commanders, chosen by yourselves, ^{29a} placed me in the ranks at Potidaea¹¹, Amphipolis and Delium, yet deserted my post for fear of death or for any other reason,

when the god, as I believed and understood, positioned me where I had to live, practising philosophy and examining myself and others. Yes, that would be terrible, and in truth anyone might justly haul me into court for not believing there are gods, disobeying the oracle, being afraid of death, and thinking I am wise when I am not. For I tell you, gentlemen, fearing death is no different from thinking you are wise when you are not, for it is thinking you know what you do not know. In fact, no one actually knows whether death may not turn out to be the greatest good of all for man, and yet they fear it, as if they know quite well it is the greatest of ^{29b} evils. And is this not the most disgraceful ignorance, thinking you know what you do not know? And to this extent, in this case too, gentlemen, I am perhaps different from most people, and if I were to claim to be wiser than anyone, in any respect, it would be in this: I do not know enough about what is in Hades, so I do not presume that I know either. But I do know that it is bad, and a ^{29c} disgrace, to act unjustly and to disobey a superior, be he god or human. So I shall fear and flee from the evils I know to be evils, and not from what might, for all I know, actually be good. And so, even if you let me go now, ignoring Anytus, who said that either I should not have been brought to court at all, or since I have been brought to court I must be put to death, warning you that if I get off your sons will be soon totally corrupted, all of them, by practising what Socrates teaches; if in response to this you were to say to me, “Socrates, on this occasion we shall not heed Anytus. Instead we shall let you go, but on this condition: that you no longer spend your time in this enquiry, ^{29d} nor engage in philosophy, and should you ever be caught doing so again, you shall die,” now if, as I said, you were to let me go on these conditions, I would say to you, “Men of Athens, I embrace you and I love you, but I shall heed the god rather than you, and as long as I am alive, and able to do so, I shall not cease engaging in philosophy, exhorting you, and pointing out to any one of you

whom I ever meet, saying in my usual manner, ‘best of men, you are Athenians, citizens of the greatest city, most renowned for her wisdom and power. Are you not ashamed that you care about ^{29e} piling up as much money, reputation and honour as you can, while giving no care or thought to wisdom and truth and how your soul may be as good as it can be?’ And if one of you disputes this, and says that he does care, I will not let him go immediately, nor shall I depart. No, I shall question, ^{30a} examine and cross-examine him, and if I think he has not acquired excellence, but he says that he has, I shall rebuke him for attaching the least value to what is most valuable, and considerable value to things of lesser worth. And I shall do this to anyone I come across, old or young, stranger or fellow citizen, but especially to you, my fellow citizens, as you are my closest kin. For mark my words, the god commands this, and I think no greater good has yet come to you in this city than my service to the god. For my only occupation is to go about persuading you, old and young, ^{30b} to care neither for your bodies nor for your money more or with more intensity than your soul, so that it may be as excellent as it can be. So I say, ‘Excellence does not come from money; but from excellence, money, and everything else that is good, comes to mankind, in private or in public.’ Now, if I corrupt the young by saying all this, this would be harmful. But if anyone claims that I say anything else apart from this, he is talking nonsense. And so I would say, “Men of Athens, whether you obey Anytus or not, whether you let me go or not, I shall never change my ways, not ^{30c} even if I am to die many times over.” Men of Athens, do not create a commotion. I asked you not to make a commotion over what I said, so please abide by my request and listen. And in fact I think you will profit from listening, for I am now going to tell you something else at which you will probably make an outcry, but please do not do so, not at all. For mark my words, if you put me to death, being the sort of person I say that I am, you will

harm yourselves more than you harm me. In fact, neither Meletus nor Anytus could harm me, for that would not be possible, because I do not think it permissible ^{30d} that a better man be harmed by a worse. Yes, he may perhaps put me to death, exile me, or deprive me of my rights, and although he probably thinks these are great evils, and others presumably think so too, I do not think so. No, it is a far greater evil to do what he is now doing: attempting to put a man to death in an unjust manner. So, men of Athens, I am not making my defence on my own behalf, as someone might presume, but on behalf of you, lest you make a mistake concerning the gift God gave you by condemning me. For if you kill me, you will not easily find someone else like me, who literally – ^{30e} even if it sounds comical to say so – is attached to the city by god, as though it were a great, thoroughbred steed, sluggish due to its size, that needs to be woken up by a sort of gadfly. Well, I am like that gadfly whom the god has attached to the city, the sort of person who never stops rousing, persuading, and censuring each one of you, alighting upon you all day long, wherever you go.

^{31a}

Now, you will not easily get someone else like me, gentlemen, so if you take my advice you will spare me. But you may perhaps be angry with me, like people woken from their slumbers, and swat me on Anytus' advice, and kill me without giving it a second thought. But then you would live out the rest of your lives in slumber, unless the god, out of concern for you, were to send you someone else like me. And from this you may recognise that I am such a person, given to the city by the god, for ^{31b} it seems scarcely human that I have neglected all business of my own and suffered the neglect of my family affairs for so many years now, constantly busy with your concerns, coming to you like a father or elder brother, urging you to care for excellence. Now, if I derived any advantage from all this, or was paid for these exhortations of mine, I might have some motive. But now you

surely see for yourselves that my accusers, although they make all these other accusations without a hint of shame, were not so shameless as to bring witnesses to say that I ever charged a fee or asked for ^{31c} one. Indeed, I think I am providing sufficient evidence that I am speaking the truth, by my poverty. Now, you may perhaps think it strange that I go around giving this advice and meddling in your affairs in private, and dare not appear before your assembly in public and give advice to the city. You have heard me describing the reason for this on many occasions, in many places. Something divine and miraculous comes to me, which Meletus makes a joke of in the charge that ^{31d} he brought. I have had it from childhood. It is a sort of voice that arises, and whenever it arises it always turns me away from doing something I am about to do, but it never urges me on. This is what opposes my engagement in civic affairs, and I think it is absolutely right to oppose. For mark my words, men of Athens, if, in times gone by, I had attempted to engage in civic affairs, I would have been put to death long ago, and would have benefited neither yourselves nor myself. And ^{31e} you should not be angry with me for speaking the truth, for no one who genuinely opposes yourselves, or any other multitude at all, preventing numerous injustices and illegalities from taking place in a city, will be safe. Rather, anyone who is actually fighting on the side of justice and who ^{32a} intends to be safe, even for a short time, must act privately rather than publicly.

^{32b} men of Athens, I have never yet held any other office in the city, I did serve on the Council, and, as it happened, our tribe, Antiochis, made up the commission when you decided to judge, as a single group, the ten generals who failed to recover the casualties of the naval battle, which was contrary to the law, as you all accepted afterwards. On that occasion, I was the only Council member who opposed your doing anything contrary to the laws, and I voted against you. And while the orators were

ready to charge and arrest me, and you were all encouraging them and shouting at ^{32c} me, I thought that I should side with law and justice, in spite of the danger, rather than side with yourselves in making an unjust decision for fear of imprisonment or death. This all happened while the city was still under democratic rule, but once the oligarchy was established, the Thirty¹³, for their part, sent for me and four others to the Tholos and ordered us to bring Leon¹⁴ the Salaminian from Salamis to be executed. In fact, they often gave orders like this to many others as well, wishing to implicate as many people as possible in their actions. Here ^{32d} again, I demonstrated, not in word but in deed, that I really do not care about death at all, if it is not too blunt to say so, yet I am extremely careful to perform no unjust or unholy deed. Indeed, that regime, powerful and all as it was, did not intimidate me into performing an unjust act. No, once we had come out of the Tholos, the other four left for Salamis and fetched Leon¹⁵ while I left and went home. For this I would probably have been executed had the regime not fallen so quickly.

^{32e}

Of these events you will have numerous witnesses. Well then, do you think I would have survived all these years had I taken to public life and, acting as befits a good man, had sided with the just and set that above all else, as one should? Far ^{33a} from it, men of Athens, nor indeed would anyone else. But throughout my entire life, both in public, if I ever engaged in such activities, and also in private, you will see that I am the very same. I have never gone along with anyone in anything contrary to justice, not even with those whom my slanderers proclaim to be my pupils. Yet although I have never been any man's teacher, if anyone wishes to listen to me as I speak and go about my business, I begrudge that to no one, old or young.

^{33b}

Neither do I engage in discourse only when I am paid, and not otherwise. No, I submit myself to questioning by rich and poor alike, and anyone who wishes may hear what I say in reply. And if any of them happens to become a good person or a bad one, I may not properly be held responsible since I neither taught nor promised to teach them anything. And if anyone says he has ever learned or heard something from me in private, which everyone else has not, I assure you that he is not speaking the truth.

33c

But why exactly is it that some people enjoy spending so much time with me? Listen, men of Athens, for I have told you the whole truth already. They enjoy hearing me examine people who think they are wise when they are not. It is not an unpleasant pastime. But, as I say, I have been ordered by the god to do this, through prophecies, dreams and any other means whereby a divine portion has ever ordered a human being to do anything at all.

33d

All of this is true, men of Athens, and easily tested. For if I am indeed corrupting some young people, and have already corrupted others, surely some of them now grown older, realising that I once gave them evil counsel when they were young, should come forward at this stage to accuse me and get their revenge. And if they did not wish to do this themselves, some of their own relatives, their fathers, brothers or other family members, should now remember any evil their kinfolk may have suffered at my hands, if there was any, and take their revenge. In any case, I can see 33e a lot of them here. First and foremost is Crito, a man of my own age and deme, the father of Critoboulus here; then Lysanias of Sphettos, the father of this man, Aeschines; Antiphon of Cephissus too, the father of Epigenes. Then there are others whose brothers have been involved in this occupation of mine, Nicostratus the son of

Theozotidus, the brother of Theodotus, and since Theodotus is dead, he for one could not have implored his brother not to make the accusation. I see Paralus, son of Demodocus, whose brother was Theages; and here is Adimantus, the son of ^{34a} Ariston, and this is his brother, Plato; and there is Aeantodorus and his brother, Apollodorus. And I could also mention many others to you, any one of whom Meletus really should have introduced as a witness in the course of his own speech. But if he forgot at the time, let him introduce them now. I shall yield my place to him, and if he has such a witness, let him say so. But you will find the complete opposite, gentlemen. They are all ready to side with me, the corrupter, the man who, according to Meletus and Anytus, inflicts harm upon their own kindred. Now, those who have ^{34b} been corrupted might perhaps have reason to side with me, but what reason would their uncorrupted, older relatives have for siding with me, apart from the right and just reason that they are aware that Meletus is speaking falsely, while I am speaking the truth? There it is, gentlemen. This is more or less all I have to say in my defence. But some of you may well take offence when he recalls how he himself, while contesting a lesser charge than ^{34c} this one, begged and implored the jurors, in floods of tears, parading his own children before them, other members of his household too and lots of his friends, just to arouse as much pity as he could. And now he finds that I do nothing of the sort even though I am apparently facing the utmost peril. So someone might perhaps think like this, be hardened against me, and enraged by these very issues may cast his vote in anger. Well, if any of you are in this situation, and I am not ^{34d} actually maintaining that you are, but if you are, I think it would be reasonable for me to speak to this person and say, “Best of men, I too have some family members, for, as Homer puts it, ‘I am not born of oak and rock’, but of men, and so I have kinfolk and sons too, men of Athens, three of them, one already a young man, two still children. Nevertheless,

I shall not parade any of them here before you and beg you to vote for my acquittal.” Well then, why won’t I do any of this? It is not out of defiance, men of Athens, or any disrespect for you. Whether or not I am ^{34e} courageous in the face of death is another matter, but in view of my own reputation and that of yourselves and the entire city, I do not think it good that I do anything like this at my age and with the name I have. For whether this is true or false, it has been decided that Socrates is some- ^{35a} how superior to most people. Now, if those of you who are reputed to be superior in wisdom or courage, or in any other excellence, were to behave in this way, that would be a disgrace, like people I have seen on trial on a number of occasions, reputable people indeed, yet behaving in an extraordinary manner, as if they thought something awful would befall them if they were executed, as if they were actually going to live forever if you did not execute them. To me they seem to bring shame upon the city, so that any visitor would presume that the Athenians, superior in ^{35b} excellence, whom they select from among themselves to hold high office and other positions of honour, are no better than women. Indeed, men of Athens, these are actions which you should not perform if you have any worthy reputation at all, and you should not allow us to perform them either. Instead, you should demonstrate that you would much rather vote to convict someone who puts on such a pitiful performance, and makes a laughing stock of the city, than someone who holds his peace.

^{35c}

Quite apart from reputation, gentlemen, it does not seem right to me either to implore a juror or to get acquitted by begging. It should be done through instruction and persuasion. For a juror is not there to bestow favours in matters of justice, but to give judgements, and he has sworn not to show favour to people he prefers, but to deliver justice in accordance with the laws. Therefore, you should not make a habit of breaking your oaths,

nor should we get you into that habit either, for neither of us would be acting with due reverence. So, men of Athens, do not expect ^{35d} me to behave towards you in a manner I regard as neither noble nor just nor holy, most especially, by Zeus, when I am actually being charged with impiety by Meletus over there. For it is clear that if I were to persuade and compel you by begging you, when you have sworn this oath, I would be teaching you not to believe there are gods, and would, in effect, whilst defending myself, accuse myself of not believing in gods. But this is not how matters stand. Far from it, for I believe in them, men of Athens, as none of my accusers believes, and I commit to you and to the god my cause to be judged, in whatever way may be best for me and for you.

AFTER THE GUILTY VERDICT

^{35e}

There are many reasons, men of Athens, why I am not troubled by this outcome, that you voted to ^{36a} convict me, and what has happened is not unexpected. But I am much more surprised at the number of votes on each side. For I never thought the difference in the votes was going to be so small, I thought it would be larger. But now, it seems, if a mere thirty votes had gone the other way, I would have been acquitted. In fact, even as it stands, I think I have escaped Meletus, and not only escaped him, but it is obvious to anyone that if Anytus and Lycon had not come forward to accuse me too, ^{36b} he would even have been fined a thousand drachmas for not securing one fifth of the votes. So, this man proposes the death penalty for me. So be it. What alternative penalty shall I propose to you, men of Athens? Obviously, it should be a penalty I deserve. What, then? What do I deserve to suffer or pay out, all because I did not live a quiet life, and cared not for what most people care for – money making, affairs of the household, military rank, political status, public ^{36c} office in general, and the alliances and factions that

arise in the city? In fact, I thought myself too fair-minded to survive any involvement in any of this, so I did not go where I was to be of no benefit to yourselves or to myself. I went instead to each person individually, where I was going to confer the greatest benefit possible as I declare, by trying to persuade each of you to care, first and foremost, for himself rather than anything that belongs to himself, so that he might be as good and as wise as possible, to care for the city itself before anything that belongs to the city, and to ^{36d} care for everything else in like manner. So what should happen to me for being this sort of person? What do I deserve? Something good, men of Athens, if I must propose a penalty based upon what I truly deserve, and it should be good in a way that is appropriate for me. Well, what is appropriate for a poor man, a benefactor, who needs leisure in order to exhort you? There is nothing more appropriate, men of Athens, than free meals in the Prytaneum¹⁶. That is far more appropriate for me than it is for anyone who wins at the Olympic Games with a horse, or two horses or four horses. For while he makes you seem to be blessed, I make you blessed in reality, and while he has no ^{36e} need of sustenance, I need it. So, if I must propose a penalty I justly deserve, this is what I propose, ^{37a} free meals in the Prytaneum. Now, perhaps, when I say this, you think I am speaking defiantly, in much the same way as I spoke about recourse to pity and to pleading, but this is not the case, men of Athens. Rather, I am convinced that I have never intentionally wronged anyone. But I am not convincing you of this because we have had such a short time to discuss it, since, in my opinion, if you had a law, as other peoples do when a death penalty is involved, not to judge the case in a single day but over several days, you would be convinced. But it is not easy now to dispel these mighty slanders in ^{37b} such a short time. So, being convinced that I have not wronged anyone else, I cannot possibly wrong myself and say that I deserve something bad and propose such a penalty for myself. Why should I? For fear of

suffering the penalty Meletus proposes when I said I do not know if it is good or bad? Or should I select an alternative that I know quite well to be bad, and propose that instead? What about imprisonment? But why should I live in prison, in slavery to the officials who hold office at ^{37c} the time, the Eleven? Or what about a fine, and imprisonment until I pay it? But in my case, this is the same as the other suggestion, for I do not have money with which to pay the fine. Well then, shall I propose exile as the penalty? Indeed, you might well accept that for me. Yet I would be gripped by an intense love of life, men of Athens, if I were so irrational that I could not figure out that while you, my fellow citizens, proved unable to tolerate my behaviour and my arguments, ^{37d} and they became so burdensome and detestable to you that you are now seeking to be quit of them, other people ... well, would they tolerate them more readily? Far from it, men of Athens. And what a nice life I would have in exile, a man of my age, moving from city to city, constantly being banished. For I know full well that wherever I go, the young people will listen to what I say, just as they do here, and if I drive them away they themselves will persuade their elders to banish me, ^{37e} and if I do not drive them away, their fathers and relations will banish me for their sakes. Now, someone might perhaps say, "Socrates, if you kept quiet and lived a quiet life, wouldn't you be able to live on, once we had cast you out?" The most difficult thing of all is to convince some of you on this issue, for if I say that this would constitute disobedience to the god and that is why I cannot hold my peace, you do not believe me as you think I am being ironical.

^{38a}

And if I also go on to say the highest good for a man is to engage in discourse every day about excellence, and the other issues on which you have heard me discoursing, and examining myself and others, and that for a human being an unexamined life is not worth living, you are even less convinced by what I say. But

although that is how matters stand, as I declare, gentlemen, it is not easy to convince you. Besides, I am not used to the idea that I deserve anything bad. If I had money, ^{38b} I might have proposed as large a fine as I could afford to pay, for that would have done me no harm. But at the moment I do not have the money, unless of course you propose as much of a fine as I am able to pay. I might perhaps be able to pay you one mina of silver, so I am proposing this amount. But, men of Athens, Plato here, Crito and Critoboulus and Apollodorus are encouraging me to propose thirty minae. They will act as sureties. So I propose that amount, and they will be your sureties for the money. They are trustworthy.

AFTER THE DEATH SENTENCE

Men of Athens, all to save a little time, you will be notorious, and be accused of killing Socrates, ^{38c} a wise man, by those who wish to reproach this city. For people who wish to revile you will indeed say I am wise, even if I am not. In any case, if you had waited a short while you would have obtained this result of its own accord, for you surely see my age, that I am now at a late stage of life and close to death. I am saying this, not to all of you, but to those who voted for my execution.

^{38d}

And I also say to these very people, perhaps you think, gentlemen, I have been convicted by being at a loss for the sort of words that would have persuaded you, had I believed I should do and say ^{39b} escape death. No, it is much more difficult to escape wickedness, for that runs faster than death. And now, since I am slow and old, I have been caught by the slower runner, while my accusers, being clever and sharp, have been caught by the faster one, evil. And I shall now depart, sentenced by you to death, while they will depart, sentenced by truth to degeneracy and injustice. And I abide by my penalty, and so do

they. Perhaps, too, this is somehow the way things had to be, and I think it is all in due measure.

39c

Next, I wish to make a prophecy to those of you who voted to condemn me, for I am now at the stage where men prophesy most of all, when they are going to die. For I declare, you gentlemen who have slain me, that immediately after my death you shall meet with a far more grievous punishment, by Zeus, than the death sentence you imposed upon me. For you have done this now, believing that you will avoid giving an account of your life, but I am telling you the very opposite ^{39d} will happen. You will have far more people holding you to account, people whom I restrained until now, although you have been unaware of this. And as they are younger, they will be more severe, and you will be more troubled. For if you think that by killing people you will prevent anyone from reproaching you for not living aright, your thinking is flawed. For this particular means of escape is neither entirely effective nor is it noble, but the noblest and easiest way is not to put other people down, but to make yourself as good as you can possibly be. With these prophetic words I take my leave of those of you who have voted to condemn me.

39e

But I would love to converse about what has happened with those who voted to acquit me, whilst the officials are busy, and before I go to the place where I must die. Please wait with me, ^{40a} gentlemen, for as much time as we are allowed, since there is nothing to prevent us from talking to one another. To you who are my friends, I wish to explain the exact significance of what has happened to me just now. In fact, gentlemen, judges, for you may properly be called judges, something extraordinary has happened to me. For the familiar prophecy of the daimon has always been completely constant throughout my entire life, opposing me even on the most trivial issues, if I was about to do

anything incorrectly. But now, as you yourselves see, something has happened to ^{40b} me which may be thought, and is generally believed, to be the worst of evils. Yet the god's sign did not oppose me as I left my home this morning, nor as I was coming up here to the court, nor in anything I was going to say in my speech. And yet in other discussions, it has stopped me in many places whilst I was still speaking. But now it has not opposed me at all in this matter, not in a single word, or deed. So, what do I suppose is the explanation for this? I shall tell you. In fact it is likely that what has happened to me is actually something good, and those of us who suppose ^{40c} that death is something bad cannot be right to think so. I have strong evidence for this, for the familiar sign would undoubtedly have opposed me unless I was embarking upon a good course of action. But we may also consider, as follows, how great is the hope that death is good? For death is one of two things: either it is like being nothing, and the dead have no awareness of anything or, as we are told, it is a change, and relocation of the soul from this place here to another place. And if it is indeed an absence of awareness, like a sleep in which the sleeper does not even behold a ^{40d} dream, then death would be a wonderful boon. Suppose someone had to select that night wherein he slept beholding no dream, and compare the other days and nights of his own life to this one and say, on reflection, how many days and nights more pleasant than this one he had lived through during his life. There would, I believe, be so few that a common citizen, or even the Great King himself, would find the calculation difficult. And indeed if death is like this, I say it is a boon, for ^{40e} in that case its entire duration is apparently no longer than a single night. But if, on the other hand, death is like making a journey from here to another place, and what is said is true, that all those who have died are actually there, what greater good could there be than this, gentlemen, my judges? For, if anyone arriving in Hades is quit of those self-proclaimed ^{41a} judges, and finds the true judges

who are said to give judgement there – Minos, Rhadamanthus, Aeacus and Triptolemus, and any other demi-gods who were righteous throughout their own lives – would that be an ordinary journey? Or again, wouldn't any of you give anything to meet with Orpheus, Musaeus, Hesiod and Homer? Indeed, I am willing to die again and again repeatedly if all this is true. For I myself would have a wonderful time there comparing my own experiences ^{41b} with theirs, whenever I met up with Palamedes and Ajax, the son of Telamon, and any other men of old who died because of an unjust judgement. I think that would be enjoyable. And, indeed, most important would be to examine the people there, just like the people here, and find out who among them is wise, and who thinks that he is when he is not. Gentlemen, judges, wouldn't anyone give anything to examine the man who led the massive army at Troy, or Odysseus or Sisyphus or ^{41c} countless others one could mention, men and women alike? To engage in discourse with them, associate with them, and examine them, would be an absolute blessing. At any rate, the people there certainly do not execute people for such behaviour. For in general, they are more blessed than those here, and they are already immortal for all time, if what is said is actually true. But you too, gentlemen, judges, should be hopeful in the face of death, and hold this one precept as true: nothing bad comes to a good man either during his life or after death, nor are his ^{41d} affairs neglected by the gods. Nor have my present circumstances come about by accident. Rather, it is obvious to me that at this stage it is better for me to die and be quit of troubles. That is why the sign did not deter me, and I am not at all angered by those who voted against me, or by my accusers. And yet, this was not what they had in mind when they voted to condemn me or accused me. No, their intention was to harm me. For this they deserve censure. Well, I ask this much of ^{41e} them: when my sons are of age, punish them, gentlemen, with the same afflictions as I inflicted upon you, if

you think they are caring for money, or anything else, before excellence, or if they think they are something when they are nothing. Reproach them as I have reproached you, because they care not for what they ought, and think they amount to something when they are worth nothing- ^{42a} ing. And if you do this, myself and my sons will have received just treatment at your hands. But now, it is time to depart, I to die, you to live. Which of us goes to the better lot is unknown to anyone but God.

NOTES

1. The Agora was the civic centre of Athens, where administrative, judicial, commercial, social and religious activities and much more took place. The tables referred to are those set up by bankers and money-changers.
2. Anytus, son of Anthemion (5th/4th century) was an Athenian politician and supporter of the Athenian democracy. He appears as an interlocutor in Plato's *Meno*, where he is antagonistic and threatening towards Socrates.
3. This is a reference to Aristophanes' play, *Clouds*. Aristophanes features as an interlocutor in Plato's *Symposium*.
4. These are three notable Greek sophists of the 5th/4th century. Gorgias and Hippias each have their own eponymous Platonic dialogue. Prodicus and Hippias both appear in Plato's *Protagoras*.
5. Evenus was a late 5th-century sophist and teacher. He is also mentioned in Plato's *Phaedo* and *Phaedrus*.
6. The 'god of Delphi' refers to Apollo, who was believed to speak prophetically through an oracle at his temple in the sacred precinct of Delphi, north-west of Athens.
7. Chaerephon was an Athenian and a loyal friend of Socrates. He also appears in Plato's *Charmides* and *Gorgias*, and in Aristophanes' *Clouds*.
8. The Pythia was the priestess through whom Apollo spoke oracular responses.
9. Anaxagoras was a 5th-century philosopher, born in Clazomenae in Ionia, who spent most of his life in Athens. He was known for his scientific accounts of celestial bodies and phenomena. He is also mentioned in Plato's *Phaedo*, *Cratylus*, *Phaedrus*, *Alcibiades I*, *Gorgias* and *Greater Hippias*.
10. *Iliad* xviii.94 ff.
11. Potidaea, Amphipolis and Delium were sites of battles in the Peloponnesian War, 431-404.
12. This refers to the battle of Arginusae, 406, in the Peloponnesian War, after which the victorious Athenian generals failed to remove the bodies of their fellow comrades from the water because of a storm.
13. The Thirty Tyrants was a brutal oligarchy established in Athens in 404, after its defeat in the Peloponnesian War. The tyranny reigned for nine months before democracy was restored.

14. Leon of Salamis was a general of good reputation who was executed at the behest of the Thirty Tyrants although he had committed no crime.

15. The Leon affair is also recounted by Xenophon in Book II of his *Hellenica*.

16. The Prytaneum was a seat of government and the religious centre of the city. The privilege of dining at the state's expense in the Prytaneum was ordinarily granted to the benefactors of the state, including Olympic victors.

17. One mina was equal to 100 drachmas. A skilled labourer might earn one drachma per day.

20. e wise in that wisdom, and perhaps those men whom I mentioned earlier may be wise with a wisdom that is greater than human wisdom. Otherwise I do not know what to say, for I myself have no knowledge of it, and anyone who says so is lying and is out to slander me. And do not raise a clam- our against me, men of Athens, even if you think I am speaking boastfully. In fact, the word I shall speak is not my own; rather, I shall refer to a trustworthy speaker. For I shall provide you with the god of Delphi⁶ as witness of my own wisdom – if, indeed, it is wisdom – and of the sort of wisdom

Charmides

narrator: SOCRATES of Alopece, son of Sophroniscus

persons in the dialogue:

CHAEREPHON *a close friend of Socrates*

CRITIAS *related to Plato, associated with Socrates*

CHARMIDES *related to Plato, associated with Socrates*

scene: Palaestra of Taureus, near the Royal Stoa

153a

We arrived back yesterday evening from the camp at Potidaea¹, and as I was returning after a long absence, I was delighted to go to my familiar haunts. I went especially to the wrestling school of Taureus, the one opposite the Queen's Shrine, and I came across a lot of people there, most of whom were familiar to me, but there were also some whom I did not know. When they saw me ^{153b} coming in so unexpectedly, they immediately greeted me from all sides, and Chaerephon², being the mad person he is, jumped up in their midst, ran toward me, took me by the hand and said, "Socrates, how did you survive the battle?" A little before we left, there had been a battle at Potidaea which the people here had just heard about. And in reply to him, I said, "Like this, just as you see me."

153c

"Well, it was reported here", said he, "that there had been an extremely fierce battle in which many people we know had died." "And for the most part, that report is true," said I. "Were you actually there in the battle?" he asked. "I was there." "Then sit down here," said he, "and tell us all about it, for we have not yet found out all the details with any clarity." And as he spoke, he led me over and seated me beside Critias³, the son of Callaeschrus. So I sat beside him, greeted Critias and the others, and then gave them a full account of the news from the ^{153d} camp, answering the various questions that each of them asked. Once we had had enough of such stories, I in turn questioned them about the state of affairs here, about the status of

philosophy, and about the young people and whether any of them had proved to be especially notable for wisdom or beauty, or both. Critias glanced over at the door and saw some young men coming in engaged in mutual banter and another group following behind. "Socrates," said he, "as far as the beautiful ones are concerned, I think you will get your answer straight away. Yes, those fellows who are coming in at the moment are leading the way, and they are lovers of the fellow who is regarded, nowadays at any rate, as the most beautiful of them all, and it looks to me as if the lad himself is already nearby." "Who is he," I asked, "and whose son is he?" "I presume you know him," he replied, "although he was not yet of age before you went away. He is Charmides, the son of Glaucon, my uncle, so he is my cousin."

154b

"I know him indeed, by Zeus," said I, "since he was remarkable even when he was still a boy, and I presume at this stage he is already quite a fine young man." "You will know soon enough", said he, "how grown up he is and what he is like." And as he was saying all this, Charmides entered. Now, my friend, do not use me as the measure, for I am a white line on a white surface when it comes to beautiful people, since almost anyone who has come of age looks beautiful to me. Nevertheless, at that moment, the young man looked amazing to me, in stature and in beauty, and ^{154c} all the others seemed to be in love with him, they were so astounded and excited when he entered, and there were lots more lovers following behind too. Now, for men of our age, this response was no great surprise, but I also paid attention to the young boys, and not one of them, not even the smallest of them, so much as glanced at anyone else. No, they all looked at him as though he were a statue. And Chaerephon called out to me, "Socrates, how does this young man look to you," he ^{154d} said, "isn't he fair of face?" "Exceedingly so," said I. "Yet if this fellow were willing to strip," said he, "you would

think he had no face, so utterly beautiful is his physique.” Now, the others all said the same thing as Chaerephon, and I said, “By Heracles, what an indomitable man you are describing if he happens to possess one additional quality, a minor one.” “What?” asked Critias. “If he happens to have a well-developed soul,” said I. “And since he belongs to your family, Critias, ^{154e} that is the sort of person he should presumably be.” “Yes,” said he, “he is very noble and good in that sense too.” “Well, why don’t we strip this particular part of him and look at that, before we look at his body? For I am quite sure that he is now at an age when he is willing to engage in discourse.” “Very much so,” said Critias, “and mark my words, he is also a lover of wisdom, and in the ^{155a} opinion of others, and of himself, quite a poet.” “This, Critias, my friend, is a beauty that belongs in your family from the past through your ancestral connection with Solon. But why don’t you call the young man over and show him to me? For presumably, even if he happened to be younger still, it would not embarrass him to converse with us in your presence, you who are both his guardian and his cousin.” “Yes, that’s a good suggestion, Socrates,” said he, “we will call him.” And with that he said ^{155b} to his attendant, “Boy, call Charmides and say that I want to introduce him to a physician in relation to that ailment he told me he was suffering from yesterday. Then Critias turned to me and explained, “In fact, he said recently that he has a headache when he gets up in the morning, so what is to stop you from pretending to him that you know a remedy for a headache?” “Nothing,” said I, “just let him come over.”

^{155c}

Well, that is what actually happened. Indeed, he arrived and caused a great deal of laughter. For in order to make room for Charmides to sit beside him, each of us who were already seated pushed eagerly against his neighbour until the fellow seated at one end had to stand up, and we knocked the fellow at the other end off sideways. Then Charmides came and sat between myself

and Critias. There and then, my friend, I was already at a loss, and my former confidence was knocked out of me, the confidence that I could converse with him quite easily. But when Critias was explaining ^{155d} that I was the one who knew the remedy, the lad looked into my eyes in a manner that defies description, sat up as if to ask me a question, and everyone in the Palaestra surged all around us in a circle. Then indeed, my noble friend, I beheld the inside of his garment and I was inflamed, and was no longer in myself, and I decided that when it came to love, Cydias was the wisest poet. When speaking of a beautiful boy, he advised someone that ‘the fawn should be careful when he ^{155e} arrives in front of a lion, lest he be seized as a piece of meat.’ Indeed, I thought that I myself had been captured by a creature of this sort. Nevertheless, when he asked if I knew the remedy for the headache, I somehow replied with difficulty that I knew it. “Well, what is it?” he asked. And I replied that it was a certain leaf, but in addition to the remedy there was also a certain incantation, and if a person were to chant this at the same time as he used the remedy, the remedy would make him completely healthy, but without the incantation, the leaf would be of no benefit.

^{156a}

“Then I will write down the incantation. Call it out.” “Shall I do it only if you persuade me,” said I, “or even if you do not?” So he laughed and said, “If I persuade you, Socrates.” “So be it,” said I, “and are you certain of my name?” “Unless I am doing you wrong,” said he, “for amongst my own age group you are talked about quite a lot, and I also remember you associating with Critias here, even when I was a child.”

^{156b}

“Well done,” said I. “Yes, I shall speak more openly to you about the kind of incantation it happens to be. I was at a loss just now as to how I might show you its power, Charmides, for this sort of incantation is unable to make the head alone healthy. Rather,

just as you may already have heard from the good physicians, whenever someone comes to them with sore eyes, they say, somehow, that they cannot attempt to treat the eyes on their own, but it would also be necessary to treat the ^{156c} head at the same time, if the eyes are to be in good condition. And what is more, it is highly irrational to think the head could ever be treated just by itself without treating the whole body. So based on this principle, they endeavour to treat and to cure the part, along with the whole, by regimens applicable to the entire body. Aren't you aware that this is what they say and that this is how matters stand?" "Entirely so," he replied. "In that case, do you think I am expressing this well, and do you accept the principle?" "Without reservation," he replied.

^{156d}

When I heard his approval I recovered my confidence, my courage gradually revived once more, and my spirit was rekindled. I said, "Well, that is the sort of incantation this is, Charmides. I learned it up there on campaign from one of the Thracian physicians of Zalmoxis, who are also said to confer immortality. The Thracian said that Greek physicians who say what I just told you are right ^{156e} to say so. 'But,' said he, 'Zalmoxis, our king, who is a god, says that just as one should not attempt to cure eyes without head, or head without body, so one should not attempt to cure body without curing soul. This is the reason why so many diseases evade the Greek physicians; it is because they disregard the whole, which needs to be cared for, because if the whole is not in good condition it is impossible for the part to be well. For,' said he, 'everything comes forth from the soul, both what is good and what is bad for the body, and for the entire person. These flow from there, just as they flow from the head to the eyes. So it is necessary to treat that first and foremost, if any part ^{157a} of the head or of the rest of the body is to be in a good condition.' And he said, 'Blessed man, the soul is treated with certain incantations, and these incantations

are beautiful words. From such words as these, sound-mindedness is engendered in our souls, and once it has been engendered, and is present, it is easy at that stage to provide health to the head and to the rest of the body too.'

157b

So when teaching me about the remedy and the incantations, he said, 'Let no one who has not first submitted his soul to be treated by you with the incantation, persuade you to treat his head. And, indeed,' said he, 'this is the mistake some physicians make in treating people nowadays; they endeavour to be physicians of sound-mindedness, and of bodily health, separately.' And he commanded me, quite forcibly, to allow no one, no matter how wealthy, well born or handsome he might be, to persuade me to do otherwise. So since I have sworn an oath and it is necessary that I ^{157c} obey it, I shall obey it. As for you, if you wish to follow the orders of the stranger, and first submit your soul to be enchanted by the Thracian charms, I shall then apply the leaf to your head. If not, we do not know what we should do with you, dear Charmides." Now, when Critias heard me saying this, he said, "This headache could turn out to be a godsend for the young man, Socrates, if he will be compelled to improve his thinking because of his head. But, I tell you, Charmides is not regarded as superior to the rest of his age group ^{157d} for his looks alone, but also for the quality for which you claim to have the incantation. You say it is for sound-mindedness, don't you?" "Very much so," I replied. "Well, mark my words," he said, "he is regarded, far and away, as the most sound-minded lad there is nowadays, and in all other respects he is as good as anyone else of that age." "And, indeed, Charmides," said I, "it is only right that you should be superior to the others in all ^{157e} qualities of this sort. Indeed, I do not think anyone else here could so easily point to two families in Athens that, united and combined, are likely to beget more noble and exalted offspring than the families you were born

from. Indeed, your father's family, the family of Critias, son of Dropides, eulogised by Anacreon, Solon and many other poets, has been presented to us as superior in nobility and excellence, and in anything else that counts as happiness. And the same goes for ^{158a} your mother's family, since it is said that no one on the continent was reputed to be a more noble and influential man than your uncle Pyrilampes, when he went on embassies to the Great King or to anyone else on the continent. And this side of your family, in its entirety, is not at all inferior to the other. "So, sprung from such families as these, it is likely that you are foremost in everything. Now, from what we can see of your physique, dear son of Glaucon, I do not think you have fallen ^{158b} below the standard of any of your forebears in any respect, and if you really are naturally endowed with enough sound-mindedness too, and the other qualities our friend here mentioned, then your mother bore a blessed son indeed, dear Charmides. "So this is how matters stand. If, as Critias here says, sound-mindedness is already present in you, and you are sufficiently sound-minded, you no longer have need of the incantations of Zalmoxis or of Abaris the Hyperborean, and you should be given the head remedy straightaway.

^{158c}

But if you seem, as yet, to be deficient in these, you should chant the incantation before you are ^{158d} situation either to admit or deny what he had been asked. "Indeed," said he, "if I say I am not sound-minded, this is not just a strange thing to say against oneself, but at the same time I would be proving Critias here a liar, and many others too who regard me as sound-minded because this man says so. Then again, if I say that I am sound-minded and sing my own praises, that will surely appear offensive. So I do not know how I am to answer you." And I said, "That sounds reasonable to me, Charmides. And in my opinion we should jointly consider whether or not you have acquired what I am asking you about, so that you are not

forced to say what you do not wish to say, nor shall I, for my part, turn my hand to medical treatment without due deliberation. So if it is acceptable to you, I want to consider this along with you. If not, let us leave it.” “Well,” said he, “nothing could be more acceptable. So to that end let’s consider this in whatever manner you yourself think better.” “Then,” said I, “I think our investigation into this is best conducted as follows. Indeed, it is obvious ^{159a} that if sound-mindedness is present in you, you are able to form some opinion about it. For once sound-mindedness is in you, if it is actually in you, it must, I presume, produce a certain awareness from which you would have some opinion about it, as to what sound-mindedness is and what sort of thing it is. Don’t you think so?” “Yes, I think so,” he replied. “In that case,” said I, “since, in fact, you know how to speak Greek, I am sure you could also say what this appears to you to be.” “Perhaps,” said he. “Well, then,” said I, “so that we may hazard a guess as to whether sound-mindedness is in you, or not, you should tell us what you say sound-mindedness is in your opinion.”

^{159b}

Initially he was reluctant and did not really want to answer, but then he said that in his opinion, sound-mindedness is doing everything in an orderly manner and quietly: in walking on the streets, in conversation and doing everything else in a similar fashion. “And in my opinion,” said he, “what you are asking me about is, in short, a certain quietness.” “Well now,” said I, “is this right? People do say, at any rate, that those who are quiet are sound minded, so let us see if they have a point. Tell me then, wouldn’t you say sound-mindedness is something good?” “Entirely so,” he replied. “Well, for the writing teacher, is it best to write similar letters quickly or quietly?” “Quickly.” “And what about reading? Is it good to do so quickly or quietly?” “Quickly.” “Yes, and are playing the harp quickly, and wrestling⁵ nimbly, much better than doing so quietly and

slowly?” “Yes.” “What about boxing and the pankration? Isn’t the situation the same?” “Entirely so.”

159d

“In running and jumping too, and in all activities of the body, aren’t those that occur nimbly and quickly the good ones, while those that are done with difficulty and quietly the bad ones?” “Apparently.” “Then it is apparent to us that what is best, in the case of the body at any rate, is not what is quietest but what is quickest and nimblest. Is this so?” “Entirely so.” “And was sound-mindedness something good?” “Yes.” “Then, in the case of the body at least, not quietness but quickness would be more sound-minded, since sound-mindedness is something good.” “So it seems,” said he. “What about this?” said I. “Which is better, ease of learning or difficulty in learning?”

159e

“Ease of learning.” “And does ease of learning involve learning quickly, while difficulty in learning involves learning quietly and slowly?” “Yes.” “And isn’t it better to teach someone else quickly and energetically rather than quietly and slowly?” “Yes.” “What about this? Is it better to recollect and to remember quietly and slowly or energetically and quickly?” “Energetically and quickly,” he replied. “And isn’t quick-wittedness a certain nimbleness of the soul, rather than a quietness?”

160a

“True.” “And for the writing teacher and harp teacher or anyone else, isn’t it best to understand what is said, not as quietly as possible but as quickly as possible?” “Yes.” “Then again, in the investigations of the soul and in deliberation, it is not the quietest person, I think, or the one who deliberates and makes discoveries with difficulty, who seems to be worthy of praise, but the one who does this most easily and quickly.”

160b

“This is so,” he said. “Therefore, Charmides,” said I, “in actions, whether they concern the soul or the body, do those that are quickest and nimblest appear nobler to us than those that are slowest and quietest?” “Quite likely,” said he. “So sound-mindedness would not be quietness, nor would the sound-minded life be quiet, at least on the basis of this argument, since it must be good if it is sound-minded. And so, there are two possibilities: either there are no circumstances where quiet actions in life are better than quick and ^{160c} vigorous ones, or there are very few. But, my friend, even if it is the case that just as many quiet actions as vigorous and quick ones happen to be good, not even on this basis would sound-mindedness consist more in acting quietly than in acting energetically and quickly, either in walking, in talking, or in anything else. Nor would the quiet orderly life be more sound-minded than the ^{160d} one that is not quiet. This is because, in our argument, we included sound-mindedness with the good, yet the quick actions have turned out to be no less good than the quiet ones.” “I think, Socrates,” said he, “that what you have said is correct.” “Then, Charmides,” said I, “once again, pay even closer attention to yourself, look into yourself, reflect upon the sort of person sound-mindedness makes you by its presence, and what it must be like in order to produce such an effect, and once you have drawn your conclusions from all this, declare nicely and courageously what does it appear to you to be?”

^{160e}

And he paused, scrutinised himself very courageously and said, “Well, it seems to me that sound-mindedness makes a person ashamed and produces modesty, and modesty is what sound-mindedness actually is.” “Well,” said I, “didn’t we agree just now that sound-mindedness is something good?” “Entirely so,” he replied. “And aren’t the sound-minded men also good?” “Yes.” “Now, could something that does not produce good men

be good?" "Of course not." "So sound-mindedness is not only noble, it is also good."

161a

"Yes, I think so." "What is this?" said I. "Don't you believe Homer when he says 'Modesty is not a good companion for a needy man'?"¹⁰ "I do," said he. "So modesty is, it seems, both not good and good." "Apparently." "And yet, sound-mindedness is good if its presence really does make people good and not bad." "Why, yes, I think that is how matters stand, just as you say."

161b

"Then sound-mindedness would not be modesty since it actually happens to be good, while modesty is no more good than bad." "Well, Socrates, it seems to me that what you are saying is correct, but consider this, what do you think of the following statement about sound-mindedness? Indeed, I have just remembered hearing someone say that sound-mindedness would be 'doing what belongs to yourself'. Now, consider whether the person who said this was correct in saying so, in your opinion."

161c

"You wretch," said I, "you have heard this from Critias here, or from someone else who is wise." "It seems he heard it from someone else," said Critias, "since it certainly was not from me." "Socrates, what difference does it make from whom I heard it?" said Charmides. "None," I replied, "for we should not really consider who said this, but whether what is being said is true or not." "Now you are speaking aright," said he. "Yes, by Zeus," said I, "but if we find out what it means I would be surprised, for it seems like some sort of riddle." "Why is that?" he asked.

161d

"Because the speaker," said I, "in saying that sound-mindedness is doing what belongs to you, did not intend the words in the way that he expressed them. Or do you think the writing

teacher does nothing whenever he writes or reads?” “No,” he replied, “I think he does something.” “So, do you think the grammar teacher only writes and reads his own name or teaches you boys to do this too? Or did you write the names of your enemies no less than those of yourselves and your friends?” “No less.” “Well, in this respect, were you being a busybody and not being sound-minded in doing so?”

161e

“Not at all.” “And yet, you were not doing what belongs to yourselves if writing and reading is ‘doing something’.” “And so they are.” “And, indeed, my friend, healing, housebuilding, weaving, or performing any of the tasks of a skill, by any skill whatsoever, is presumably ‘doing something’.” “Entirely so.” “What about this? Do you think a city would be well administered under this law, calling upon each person to weave and wash his own garment, to cobble his own shoes, make his own oil-flask and scraper, and everything else, on the same principle: that each person should not touch what belongs to others but work at, and do, what belongs to himself?”

162a

“No, I do not think so,” he replied. “And yet,” said I, “the city that is administered sound-mindedly would be well administered.” “How could it not be?” said he. “So, performing actions of this sort, and doing what belongs to you in this way, would not be sound-mindedness,” said I. “Apparently not.” “So, the person who said that doing what belongs to yourself is sound-mindedness was, it seems, speaking a riddle, as I said just now. For I presume he was not quite so simple-minded. Or did you ^{162b} hear some foolish fellow saying this, Charmides?” “Far from it,” he replied. “In fact, he seemed to be extremely wise.” “Well then, I am of the opinion, to an even greater extent, that he posed a riddle as to the difficulty of recognising what exactly ‘doing what belongs to yourself’ is.” “Perhaps,” said he. “Well, what exactly would ‘doing what belongs to yourself’ be? Can

you say?" "By Zeus, I do not know," he replied, "but perhaps even the person who said this did not know what he intended." And as he said this he smiled and glanced over at Critias. Now, Critias had obviously been quite agitated for some time, and, being eager to impress ^{162c} Charmides and the company, he had restrained himself with difficulty in the previous discussion, but at this stage he was unable to do so. Indeed, the suspicion I held now seemed to be all the more true, that Charmides had heard this answer about sound-mindedness from Critias. So Charmides, who did not wish to furnish an account of the answer himself, but wanted Critias to do so instead, kept stirring up Critias, and pointing out that he himself had been refuted. But Critias could not ^{162d} bear this. Rather, he seemed to me to be angry with Charmides, just like a poet with an actor who recites his compositions badly. So he looked at him and said, "Charmides, do you really think that if you do not know what exactly the person who said that sound-mindedness is 'doing what belongs to yourself' intended, the man himself did not know either?" "But Critias, best of men," said I, "it is no surprise that he does not understand this at his ^{162e} age. But I expect you are likely to know on account of your age and your experience. So if you concur that sound-mindedness is what this fellow says it is, and you take over the argument, I would much prefer to investigate along with you whether the statement is true or not." "Yes, I concur, emphatically, and I am taking over," he said. "Well, you are acting quite nobly," said I. "Tell me then, do you also concur about what I was asking just now, that all craftsmen make something?" "I do." "Now, do they seem to you to make only what belongs to themselves, or also what belongs to ^{163a} others?" "What belongs to others too." "So are they being sound-minded, even though they are not making only what belongs to themselves?" "Is there any reason why not?" he replied. "None, for me at least," said I. "But look, there may be one for the man who proposes that soundmindedness is

‘doing what belongs to oneself’, and then says there is no reason why those who ^{163b} “Tell me,” said I, “don’t you call making and doing the same?” “I certainly do not,” he replied. “Nor working and making either, for I learned from Hesiod who said that ‘work is no disgrace’. But do you actually think that if he called the sort of works you referred to just now, ‘working’ and ‘doing’, he could accept that there is no disgrace in someone being a cobbler, a fishmonger or a prostitute? Don’t you believe it, ^{163c} Socrates. No, this man too, in my opinion, considered ‘making’ as other than ‘doing’ and ‘working’, and although something one makes is sometimes a disgrace whenever it is not accompanied by nobility, no work is ever a disgrace. For whatever is made nobly and beneficially, these he called works, and he referred to ‘makings’ of this sort as ‘workings’ and ‘doings’. And we should say that he believed that the like of these alone are kindred to us, while those that are harmful are all alien. And so we should presume that Hesiod, and any other man of understanding, calls the person doing what belongs to himself, sound-minded.”

^{163d}

“Critias,” said I, “I understood your argument almost as soon as you began, that you call what is kindred to us and what belongs to ourselves, good, and you call the ‘makings’ of the good people, ‘doings.’ And, indeed, I have heard Prodicus drawing thousands of such distinctions about words. Well, I allow you to employ each of the words in any way you wish, only please make clear in every case what you are applying the name to. So now, once more, from the beginning, define this ^{163e} more clearly. The doing or making, or however you wish to name it, of what is good, is this what you say sound-mindedness is?” “I do,” he replied. “So, the person who does what is bad is not sound-minded, but the person who does what is good, is.” “Best of men,” said he, “isn’t this how it seems to you?” “Never mind that,” said I. “Let us not consider my opinion at this stage, but

what you are now saying.” “Well then, I deny,” said he, “that someone who makes what is not good, but bad, is soundminded. Rather, someone who makes what is good, but not bad, is sound-minded. For I am defining sound-mindedness in plain terms for you, as doing what is good.”

164a

“And there is, perhaps,” said I, “no reason why you should not be speaking the truth. Yet I am wondering if you think sound-minded people are unaware of being sound-minded.” “No, I do not think so,” he replied. “Didn’t you say a little earlier,” I asked, “that there is no reason why craftsmen, even those who make what belongs to others, cannot be sound-minded?” “Yes, I said so,” he replied. “What of it?”

164b

“Nothing, but please tell me whether you think a physician, when making someone healthy, makes something that is beneficial both to himself and to the person he treats?” “I think so.” “Isn’t someone who is doing this, doing what is needed?” “Yes.” “Isn’t someone who is doing what is needed, sound-minded?” “Sound-minded, indeed.” “Now, is it also necessary for the physician to recognise when he is applying the treatment beneficially and when he is not, and for each of the craftsmen to recognise when he is going to gain an advantage from the work he is doing, and when not?” “Perhaps not.” “In that case,” said I, “having done something beneficially, or harmfully, the physician sometimes 164c does not recognise, himself, how he has done it, even though according to your argument, in doing it beneficially he has done it sound-mindedly. Isn’t this how you put it?” “I did.” “And so it seems, in doing something beneficially, even though he does it sound-mindedly and is sound-minded, he is sometimes unaware, himself, of being sound-minded.” “But, Socrates,” said he, “this could never happen, and if you think that anything I accepted earlier leads necessarily to this conclusion, I would

rather retract anything, and I would ^{164d} not be ashamed to say I had been wrong, rather than ever concede that a person who is, himself, unaware of himself, is sound-minded. Indeed, I would almost declare that this is just what sound-mindedness is, recognising oneself, and I go along with whomsoever set up such an inscription in Delphi. In fact, I think this inscription was set up in this way as an actual salutation by the god to those who enter, instead of 'Hail', because this saluta- ^{164e} tion, 'Hail', is not right, nor should we exhort one another to this, but to 'Be soundminded.' So the god addresses those who enter the temple in this way somewhat differently from the way we humans do, and whoever set up the inscription had this in mind, in my opinion. And to anyone who ever enters, he says just one thing, 'Be sound-minded'. And, indeed, he speaks somewhat enigmatically, like a seer, for 'Know Thyself' and 'be sound-minded' are the same as the inscription declares, and so do I. But someone could ^{165a} presume that they are different, and I think that is what happened to those who dedicated the later inscriptions 'Nothing in Excess' and 'Give a Pledge and Ruin is Nigh'. In fact, these men thought that 'Know Thyself' was a piece of advice rather than a salutation by the god for the sake of those who enter the temple. Accordingly, they dedicated these inscriptions so that they could offer advice that was every bit as useful. "Now then, Socrates, the reason why I am saying all this is as follows. I am retracting everything that was said previously; perhaps you said something on these issues that was ^{165b} more correct, perhaps I did, but nothing we were saying was particularly clear. Yet I am prepared now to present you with an argument for this, if you still do not accept that soundmindedness is recognising your own self." "But Critias," said I, "you are addressing me as if I profess to have knowledge of the issues I am asking you about, and could agree with you if I wanted to, but that is not how matters stand. No, in fact, I am investigating anything that is ever put forward, along with you,

because I myself do not know. So I am prepared to say whether I accept, or do not accept, once I have considered this, ^{165c} but please wait until I consider it.” “Consider it then,” said he. “Yes, indeed,” said I, “I am considering it. Well, if sound-mindedness is recognising something, it would obviously be a knowledge, and a knowledge of something, wouldn’t it?” “It would,” said he. “Of yourself.” “Isn’t medicine knowledge of health?” I asked. “Entirely so.” “Then,” said I, “if you were to ask me, ‘since medicine is knowledge of health, what use is it to us and what does it bring about?’ I would reply that it is a considerable benefit, since it brings about ^{165d} health, a good outcome for us, if you accept this.” “I accept this.” “Then if you should also ask me, ‘since housebuilding is the knowledge of building houses, what outcome do I say it produces?’, I would say, ‘houses’, and the same goes for the other skills. Now, ^{166a} products of various skills that one could point to? Well, are you also able to point out an outcome of this kind to me in these two cases? No, you will not be able to do so.” “And,” I replied, “what you say is true, but I am able to point out to you something that each of these knowledges is knowledge of, something that happens to be other than the knowledge itself. For example, calculation is presumably of the even and the odd, how they relate to themselves and to one another in quantity. Is this so?” “Very much so,” he replied. “Aren’t the even and the odd different from calculation itself?” “How could they not be?”

^{166b}

“Then again, although weighing is weighing of the heavier and lighter weight, the heavy and the light are different from weighing itself. Do you agree?” “I do.” “Then state what it is that sound-mindedness is knowledge of, something that happens to be different from sound-mindedness itself.” “That is my point, Socrates,” said he. “You arrive in your enquiry at the very thing that distinguishes sound-mindedness from all the knowledges, but now you are investigating some ^{166c} likeness to

the others. But that is not how matters stand. Rather, although all the others are knowledge of another, but not of themselves, this one, alone, is knowledge of the other knowledges and of itself. And this has not escaped your notice, far from it. No, I think you are now doing what you denied you were doing just now; you are just trying to refute me, and you have abandoned the issue that the argument is concerned with.” “What an assumption to make,” said I, “that if I am refuting you, as best I can, I am refuting you ^{166d} from any other motive than the very motive from which I would also scrutinise what I myself am saying, for fear that I might ever, unwittingly, be thinking I know something when I do not know. And so I now declare that this is what I am doing: considering the argument, most of all for the sake of myself, but also perhaps for my other companions. Or don’t you think it is a good, common to almost all of humanity, that each of the things that are comes to be seen clearly just as it is?” “I do, Socrates,” said he, “very much so.” “Then, blessed man, be bold in answering the question, based on how it appears to you, and never ^{166e} mind whether it is Critias or Socrates who is being refuted. Just apply your mind to the argument itself and consider how exactly it turns out under scrutiny.” “Yes,” said he, “that’s what I’ll do, since what you are saying sounds reasonable to me.” “Then,” said I, “explain. What are you saying about sound-mindedness?” “Well,” said he, “I am saying that of all the other knowledges, it alone is knowledge, both of itself and the other knowledges.” “In that case,” said I, “wouldn’t it also be knowledge of lack of knowledge, if it is indeed knowledge of knowledge?” “Entirely so,” he said.

^{167a}

“So only the sound-minded man will, himself, recognise himself, and will be able to examine what he happens to know, and not know. And, in like manner, he will have the power to determine what other people know and think they know, and what he himself thinks he knows but does not know. No one else

will be able to do this. And this is what being sound-minded and sound-mindedness, and recognising one's own self, actually are – knowing what one knows and what one does not know. So, is this what you mean?" "I do," he replied. "Then, once more," said I, 'the third time for the Saviour', as if we were starting anew, let us first ^{167b} consider whether something like this is possible or not: knowing that one knows, and that one does not know, what one knows and what one does not know. And secondly, if this is at all possible, let us consider what benefit we would derive from knowing this." "Yes," said he, "we should consider this." "Come on then, Critias," said I, "let us see if you turn out to be more resourceful than I am in dealing with these matters. For I am actually perplexed. Shall I tell you why I am perplexed?" "Yes, certainly," he said. "Well," said I, "if it is as you were just saying it is, wouldn't all these be a single knowledge, which is not knowledge of anything else except itself and the other knowledges? And what is more, this ^{167c} same knowledge is knowledge of lack of knowledge." "Entirely so." "Do you see, my friend, how strange the assertion we are trying to make actually is? For in other cases, if you consider them, the same situation will, I think, surely seem impossible to you." "In what way and in what cases?" "In the following cases. Indeed, you need to decide if, in your opinion, there is some seeing which is not a seeing of whatever the other seeings are seeings of, but is, rather, a seeing of itself and the other seeings, and of lack of seeing too, in like manner. And even though it is a seeing, it sees no colour, just itself and the other seeings. Does there seem to you to be such a seeing?"

^{167d}

"By Zeus, not to me." "And what about hearing that does not hear a single sound, but does hear itself, and the other hearings, and lack of hearing?" "No, not this either." "Then, to sum up, in the case of all the sense perceptions, consider whether in your opinion there is any perception that is perception of

perceptions and of itself, whilst perceiving nothing of what the other perceptions perceive.” “It doesn’t seem so to me, at any rate.” “Well, do you think there is any desire that is not a desire for any pleasure at all, but for itself and ^{167e} the other desires?” “Of course not.” “Nor indeed, I presume, is there a wish that wishes for nothing good, but does wish for itself and the other wishes.” “Indeed not.” “And would you say that there is a kind of love that happens to be a love of nothing noble, but is love of itself and the other loves?” “Not I,” he replied. “And have you ever observed any fear that fears itself and the other fears, but does not fear anything ^{168a} dreadful at all?” “I have not observed one,” he replied. “Or an opinion that is an opinion of opinions and of itself, but forms an opinion of nothing that the others form opinions of?” “Not at all.” “But we are saying, it seems, that there is some knowledge that is of this kind, one that although it is knowledge of nothing that is learned, is yet a knowledge of itself and the other knowledges.” “We are saying so, indeed.” “But if it turns out that there really is such a knowledge, isn’t it strange? Indeed, we should not yet affirm, definitely, that there is not, rather we should still consider whether there is such knowledge.”

^{168b}

“Correct.” “Come on then, this knowledge is knowledge of something, and it possesses a power of this kind so as to be ‘of something’. Isn’t this so?” “Entirely so.” “And, indeed, we say the greater possesses a power of this kind, so as to be greater ‘than something’.” “It possesses it, indeed.” “If indeed it is to be greater, won’t it be greater than something lesser?” “Necessarily.” “Now, if we were to discover some greater that is greater than the ‘greater’ and than itself, but ^{168c} greater than nothing that the other ‘greater’ are greater than, presumably it would be entirely in the situation whereby if it were indeed greater than itself, it would also be less than itself, wouldn’t it?” “Necessarily, Socrates, very much so.” “What is more, if

something is a double of the other doubles, and of itself, then being a double of the others, and of itself, it would then of course be a half, for a double is presumably double of nothing other than a half.” “True.” “Won’t, then, what is more than itself also be less than itself; what is heavier, lighter; what is older, ^{168d} younger; and in the same way in all other cases, won’t whatever has the power of itself, directed towards itself, also possess the being towards which its power was directed? I mean something like the following: we say that hearing, for instance, would be hearing of nothing else except sound. Is this so?” “Yes.” “In that case, if hearing is indeed to hear itself, it will hear itself as possessing sound, for otherwise it would not hear.” “Most necessarily.” “Seeing too, I presume, best of men, if it is indeed to see itself, needs itself to possess some colour, ^{168e} for seeing could never see anything devoid of colour.” “Indeed it could not.” “Well, Critias, do you see that so far, in working through this, in some cases it appears absolutely impossible to us, and in other cases barely credible that they have the power of themselves directed towards themselves? In fact, in the case of magnitude and quantity and the like, it is absolutely impossible, isn’t it?” “Entirely so.” “Then again, hearing and seeing, and even motion itself moving itself, and heat burning itself, and ^{169a} all other cases of this sort, would be met with incredulity by some, but perhaps not by others. So, my friend, there is a need for some great man who will determine satisfactorily, in all cases, whether none of the things that are, have by nature the power of themselves directed towards themselves rather than something else, or whether some do and others do not. And if there are cases where their power is directed towards themselves, is there among them a knowledge which we declare to be sound-mindedness? Therefore, I do not trust myself to be up to the task of affirming any of ^{169b} this, either that this can happen that there is a knowledge of knowledge or, even if there really is, I cannot accept that this is

sound-mindedness until I consider whether something like this would benefit us or not, for I actually have a presentiment that sound-mindedness is something beneficial and good. So, son of Callaeschrus, since you propose that sound-mindedness is knowledge of knowledge, and indeed of lack of knowledge, you should first show that what I was just speaking of is possible, and then, that as well as being possible, is also beneficial, and you will, perhaps, ^{169c} satisfy me that what you are saying about what sound-mindedness is is correct.” Well, when Critias had heard all this and saw how perplexed I was, then, like people who see others yawning in front of them and do the same thing themselves, he seemed to me to have been forced by my perplexity and been overcome by perplexity himself. Now, since he was a man with an enduring reputation, he felt ashamed before the company and was unwilling to accept my point that he was incapable of making the distinctions I was asking him to make, and to hide his per- ^{169d} plexity he did not say anything definite. So in order that our argument might proceed, I said, “But, Critias, if you like, let us accept for now that there can be a knowledge of knowledge, and we shall consider on another occasion whether this is indeed the case or not. Come on then, if this is entirely possible, is it any more possible to know what one knows, and does not know? Since surely, according to us, this is recognising yourself, and being sound-minded. Is this so?” “Entirely so,” said he. “I presume that follows at least. For if someone has knowledge that ^{169e} itself recognises itself, such a person would be just like what he possesses; just as when someone possesses speed, he is fast; when someone possesses beauty, he is beautiful; and when he possesses recognition, he recognises; and when someone possesses recognition of recognition itself, he will then, presumably, be recognising his own self.” “I am not”, said I, “disputing the contention that whenever someone possesses that which recognises itself, he himself will recognise his own self, but why it is necessary for

someone who possesses this to know what he knows and what he does not know.” “Because, Socrates, this is the same as that.”

170a

“Perhaps,” said I, “but I am afraid I am still as confused as ever, for I do not understand how knowing what one knows, and knowing what someone does not know, are the same as self-knowledge.” “What do you mean?” he asked. “As follows,” I replied. “Assuming that there is knowledge of knowledge, will it be able to do anything more than make a distinction whereby, of these two, this is knowledge and this is not knowledge?” “No, that is the extent of it.” “Now, are knowledge and lack of knowledge of health, and knowledge and lack of knowledge of 170b justice, the same?” “Not at all.” “No. One, I believe, is medicine, the other is statesmanship, while knowledge is nothing other than knowledge.” “How could it not be?” “What if someone were not to have the additional knowledge of health and justice, but recognised knowledge alone? Since he had knowledge of this alone, he would be likely to recognise merely that he has knowledge of something, and that he has some knowledge concerning himself and concerning the others too. Is this so?” “Yes.” “But how will he recognise what he knows by means of this knowledge? For he recognises what 170c is healthy by medicine, but not by sound-mindedness, and what is harmonious by music, but not by sound-mindedness, and housebuilding by construction, but not by sound-mindedness, and the same goes for them all. Isn’t this so?”

170d

“So being sound-minded would not be this – knowing what one knows and what one does not know – but only, it seems, knowing that one knows and that one does not know.” “Quite likely.” “Nor will this person be able to examine whether someone else who claims to know something, knows or does not know what he claims to know. Rather, it seems, he will only recognise that the man has some knowledge, but

sound-mindedness will not enable him to recognise what the knowledge is knowledge of.” “Apparently not.”

170e

“So he will not be able to judge who is pretending to be a physician when he is not, and who is truly so, nor who else is knowledgeable and who is not. Let us consider it as follows: if the soundminded person or anyone else at all is going to recognise who truly is a physician and who is not, there is something he will not do, he will surely not discuss medicine with him, for the physician as we said has knowledge of nothing except health and disease. Isn’t that so?” “Yes, just so.” “And yet he knows nothing about knowledge, since we assigned this to sound-mindedness alone.” “Yes.”

171a

“Then the physician knows nothing about medicine, since medicine happens to be knowledge.” “True.” “So the sound-minded person will recognise that the physician has some knowledge, but if it is necessary to apprehend what it is, won’t he need to consider what it is knowledge of? Or isn’t each knowledge defined by this, not only as knowledge, but also as a particular knowledge, by being knowledge of certain things?” “By this. Yes, indeed.” “And medicine, then, is defined as different from other knowledges by being knowledge of health and disease.” “Yes.”

171b

“Doesn’t someone who wishes to consider medicine need to consider it in respect of the things it is concerned with, not of course in respect of the things it is not concerned with, that is, in respect of what is external to it?” “Of course not.” “So anyone considering this aright will investigate how the physician is a physician in relation to cases of health and disease.” “So it seems.” “Won’t he do so by considering whether what is said or done in these cases is spoken truly, and done correctly?” “Necessarily.” “Now, would someone without medical

knowledge be able to follow up on either of these?” “Not at all.”

171c

“Then it seems no one else, except the physician, could do so, certainly not the sound-minded man, for in that case, in addition to his sound-mindedness, he would be a physician.” “That is the case.” “So it is all the more evident that if sound-mindedness is knowledge only of knowledge and of lack of knowledge, it will be unable to distinguish between a physician who is knowledgeable in respect of that skill, and one who is not knowledgeable, yet pretends to be such, or thinks he is such, nor anyone else who is knowledgeable in any matter at all, apart from someone with a similar skill to his own, as in the case with other practitioners.” “Apparently so,” he said. “Well then, Critias,” said I, “if sound-mindedness is like this, what benefit might we still derive 171d from it? For if, as we have been proposing all along, the sound-minded person knows what he knows and knows that he knows this, and knows what he does not know and knows that he does not know this, and he is able to investigate this same state of affairs in someone else, then we affirm that it would be of enormous benefit for us to be sound-minded. For we would live out our life free from error; we, and those who possess sound-mindedness, and anyone else who comes under our rule. Nor indeed would we attempt to do things we did not have knowledge of. Rather 171e we would find people who were knowledgeable and hand matters over to them. Nor would we trust others who had come under our rule to do anything else, apart from what they were going to do in the right way, and this would be something they had knowledge of. And in this way, under sound-mindedness a household will be nobly managed, a city nobly governed, and so on for anything else that sound-mindedness might rule over. For with error eliminated and correctness in the 172a ascendant, people in this situation necessarily fare nobly and well in everything they do, and those who fare well are blessed. Well, isn’t this how we

were speaking about sound-mindedness, Critias, when explaining the extent to which knowing what one knows and does not know would be good?" "Yes, certainly, that is how." "But now you see," said I, "that no knowledge anywhere has proved to be like this." "I see," he said. "Well, then," I asked, "does sound-mindedness, which we are now discovering to be knowledge ^{172b} of knowledge and its absence, possess this good? Will someone who possesses this learn whatever else he learns more easily, and will everything appear to him in greater clarity, since in addition to the particular thing he learns, he will also behold the knowledge? And will he better scrutinise others about what he himself has learned, while those who conduct the scrutiny in the absence of this will do so in a less effective and inferior manner? So, my friend, are these the sorts of benefits we ^{172c} shall derive from sound-mindedness, or are we looking upon it as something greater, and requiring it to be something greater than it actually is?" "That may very well be the situation," he replied. "Perhaps," said I, "and perhaps we investigated nothing useful. My evidence is the fact that if it is like this, some strange things about sound-mindedness are becoming plain to me. Indeed, let us look at it, if you wish, by conceding that it is possible to have knowledge of knowledge, and let us not withdraw what we proposed at the outset, that sound-mindedness is knowing what one knows, ^{172d} and what one does not know. Let us accept this. And having accepted all this, let us consider, even better, whether it will actually benefit us at all, if it is like this. For I do not think we were right in agreeing just now that sound-mindedness would be a great good when presiding over the management of households and cities, if it were like this." "How so?" he asked. "Because," said I, "we agreed quite readily that it would be an enormous good for humanity if each of us were to do what he knows, and were to hand over what he does not know to others who are knowledgeable." "Well," said he, "were we not right to agree to

this?”

172e

“I do not think we were,” said I. “What you are saying is truly strange, Socrates,” said he. “Yes, by the dog,” said I, “that is how it seems to me too. And when I noticed this at the time, and just now, I said that strange things were dawning upon me and that I was afraid that we might not ^{173a} be considering this aright. For in truth, if sound-mindedness really is like this, it is not at all obvious to me that it produces any good for us.” “How so?” said he. “Speak, so that we too may understand what you mean.” “Although I think I am talking nonsense,” said I, “nevertheless it is necessary at least to consider what is dawning upon us and not pass on aimlessly, if one cares about oneself even a little.” “Yes, well expressed,” said he. “Then hear my dream,” said I, “whether it has come through horn or through ivory. For if soundmindedness, being as we are now defining it, were to rule us as much as possible, everything would ^{173b} surely be done based upon knowledge, and no one claiming to be a pilot when he is not could deceive us, nor could a physician, a general, or anyone else pretending to know something he does not know, go undetected. Then under these circumstances, what other outcome could there be for us except that our bodies be healthy, more so than now, that we be safe amid the perils of the sea ^{173c} and of warfare, and that all our equipment, our clothes, our shoes, and everything we make use of, and much else besides, be made for us in a more skilful manner through recourse to true practitioners? And if you wish, let us also concede that divination is knowledge of what is to come, and that sound-mindedness, when presiding over this, will turn away the pretenders and install the true diviners for us as prophets of what is to come. I accept that the human race, equipped in this way, ^{173d} would act and live knowledgeably, since sound-mindedness, acting as guardian, would not allow lack of knowledge to creep in and work alongside us. But we are

not yet able to understand that by acting knowledgeably, we would act well and would be blessed, my friend, Critias.” “And yet,” said he, “you will not easily find some other end of acting well if you reject acting knowledgeably.” “Well,” said I, “besides this, teach me a little more. ‘Knowledgeably’ of what? Do you mean of shoemaking?”

173e

“By Zeus! No!” “Of brassworking then?” “Not at all.” “Of wool then, or of wood, or something else of this sort?” “Of course not.” “In that case,” said I, “we are no longer abiding by the statement that someone living knowledgeably is happy. For you do not accept that these people, although they live knowledgeably, are happy. No, you seem to me to define the man who is happy as living knowledgeably in particular respects. And perhaps you are referring to the man I just spoke of, the one who knows all that is ^{174a} to come, the diviner. Are you referring to this man, or to someone else?” “I am referring,” said he, “both to this man and to someone else.” “To whom?” I asked. “Isn’t it someone like this, someone who, in addition to all that is to come and all that has come to be, might also know all that now is, and might be ignorant of nothing? Let us propose that there is such a man. Indeed, I do not think you would say that anyone alive is more knowledgeable than this.” “Of course not.” “Well, I am longing to know this besides: which of the knowledges makes him happy, or are they all alike in this respect?” “No, they are not at all alike,” he replied.

174b

“Then what particular sort of knowledge is it? Among things that are, and things that have come to be, and things that will come to be, this is the knowledge by which we know what? Well, is it the knowledge by which I know draughts-playing?” “What? Draughts-playing!” said he. “Is it calculation then?” “Not at all.” “Is it health then?” “More so,” he replied. “The particular knowledge I am referring to is the one by which we

know what?" "That by which we know the good and the bad," said he. "You wretch!" said I. "You have been dragging me around in a circle all the time, concealing the fact that it is not living knowledgeably that makes us do well and be happy, not even knowledge ^{174c} of all the other knowledges together, but this one knowledge alone, the one concerned with the good and the bad. So, Critias, if you are prepared to take this knowledge away from the other knowledges, will medicine make us healthy any the less, or shoe-making make shoes, or weaving make clothes any the less, or piloting prevent us from dying at sea, or generalship from dying in battle, any the less?" "No less," said he. "But, friend Critias, in the absence of this knowledge, we lose out on having each of these tasks done well and beneficially."

^{174d}

"That is true." "And yet this knowledge, it seems, is not sound-mindedness, but a knowledge whose function is to benefit us. For it is not the knowledge of knowledges and their lack, but of good and bad, and so, if this is beneficial, then sound-mindedness would be something else for us." "But why would this knowledge not be beneficial? For if sound-mindedness really is knowledge of knowledges, it also presides over the other knowledges, and would surely be of ^{174e} benefit to us by ruling over this knowledge concerning the good." "And would this knowledge make us healthy," said I, "and would medicine not do so? And would this perform the other functions belonging to the other skills, and would each of them not perform its own function? Or didn't we affirm some time ago that it is the knowledge of knowledges and of lack of knowledge alone, and of nothing else? Isn't this so?" "Yes, apparently." "Then it will not be an artificer of health, will it?" "Of course not." "For health belonged to a different skill, didn't it?"

^{175a}

“To a different one, yes.” “Nor is it an artificer of benefit, my friend, for again we assigned this function to another skill just now, didn’t we?” “Yes, certainly.” “How then will sound-mindedness be beneficial when it is not the artificer of a single benefit?” “It is not beneficial at all, Socrates, so it seems at least.” “Do you see, Critias, that I had good reason for my fears a while ago, and that I was justified in accusing myself of not considering anything useful in relation to sound-mindedness? For presumably, what is agreed to be the noblest thing of all would not have appeared to be devoid of benefit ^{175b} to us, if I had been of any use in conducting a proper investigation. But now we have the worst of it in every way, and we are not able to discover to which of the things that are, the lawgiver ever gave this name, sound-mindedness. “What is more, much of what we have conceded does not follow from our argument. In fact, we conceded that there is knowledge of knowledge, even though the argument does not allow ^{175c} conceded that this knowledge also recognises the functions of the other knowledges so that our sound-minded person might be knowledgeable of what he knows and what he does not know, that he knew the one and did not know the other. And although we conceded this in an altogether highminded manner, just because our own agreement states that he knows the things that he does not know, we did not investigate the impossibility of someone, somehow or other, knowing what he does not know at all, and yet I think nothing could appear more irrational than this. But nevertheless, the investigation, having found us so simplistic and malleable, is still no more capable of discovering the truth. Rather, it laughs at truth to such an extent that although we have for some time been coming to an agreement and developing a proposition that this is what sound-mindedness is, it revealed to us, very contemptuously, that this is of no benefit. “Now, although I am less concerned for myself, I am very concerned for you,

Charmides,”

175e

said I, “if you, with a body like this and a very sound-minded soul besides, will not profit from this sound-mindedness, and its presence will be of no benefit to you in life. And I am even more concerned for the incantation I learned from the Thracian, if I have learned it with great eagerness when it is something of no value. Now, I do not think this is actually how matters stand. I think, rather, that I am a poor investigator, since sound-mindedness is a great good, and if you do indeed 176a possess it, you are fortunate. But see if you do possess it and have no need of the incantation. For if you possess it, I should advise you rather to presume that I am a babbler, unable to investigate any argument whatsoever, while you yourself, being more sound-minded, are also happier to that extent.” And Charmides said, “By Zeus, Socrates, I do not know whether I possess this or not.

176b

Indeed, how could I know when you say the two of you are unable to discover what precisely it is? However, I am not entirely persuaded by you, Socrates, and I think I myself am much in need of the incantation, and for my own part there is no reason why I should not hear the incantation from you, day after day, until you say I have had enough.” “So be it,” said Critias, “but Charmides, if you do this it will prove, at least to me, that you are sound-minded if you submit to Socrates to hear the incantation, and are not found wanting in this to any extent whatsoever.”

176c

“You may presume that I shall follow him,” he said, “and not be found wanting. For I would be acting terribly if I were to disregard you, my guardian, and not do what you told me to do.” “Well, then,” said Critias, “I am telling you to do so.” “Then I shall do so,” he said, “beginning this very day.” “What are you

two planning to do?" I asked. "Nothing," said Charmides, "we have done our planning." "So are you going to use force and not grant me a preliminary hearing?" I asked. "You may presume that I shall use force since this man here has ordered me to. You, for your part, should plan what you will do in response to this."

176d

"But that leaves no room for any plan at all," said I, "for when the two of you undertake a course of action and do so by force, there is no man alive who will be able to oppose you." "Then you should not oppose us either," said he. "Then," said I, "I shall not oppose you."

NOTES

1. Potidaea was the site of a famous battle during the Peloponnesian War.
2. Chaerephon was Socrates' close friend, who famously asked the oracle at Delphi whether there was anyone wiser than Socrates (Apology 21a). He appears in a number of Plato's dialogues.
3. Critias, a first cousin of Plato's mother, was a figure in Athenian life and eventually became a member of the Thirty Tyrants who assumed power in Athens after its defeat to Sparta in the Peloponnesian War.
4. Charmides was an Athenian politician. He was Plato's uncle, and eventually became associated with the Thirty Tyrants, though it is unclear if he was actually a member of the Thirty. He is also mentioned in Plato's Symposium (222b), and Protagoras (315a).
5. A palaestra was a wrestling school.
6. Zalmoxis was a man who was worshipped as a deity by the Getae people in Thrace in northern Greece.
7. This is the grandfather of the Critias in this dialogue.
8. Pyrilampes was an Athenian statesman and stepfather of Plato. He served as ambassador to the Persian Empire.
9. Abaris the Hyperborean was a legendary sage and priest of Apollo who was endowed with the gift of prophecy.
10. Odyssey xvii.347.
11. Hesiod, Works and Days 311.
12. Following Schleiermacher.
13. Odyssey xix.562-567, where it is said of dreams that true ones come through the horn gate, while deceitful ones come through the ivory gate.

Clitophon

narrator: SOCRATES of Alopece, son of Sophroniscus

persons in the dialogue:

CLITOPHON *oligarchic political leader*

scene: no setting indicated

406a

Socrates: Someone told us recently that Clitophon¹, the son of Aristonymus, in conversation with Lysias², was critical of Socrates' discourses, while his praise of the instruction of Thrasymachus³ knew no bounds.

Clitophon: Whoever said so, Socrates, misinformed you about the discussion I had with Lysias concerning yourself. For although in some respects I did not praise you, in other respects I did. But since you are obviously rebuking me, while pretending to be unconcerned, I would be glad to recount these discussions to you myself now that we are on our own, so that you may be less inclined to believe that I think badly of you. Indeed, at the moment what you have heard is probably incorrect, and so you seem to be somewhat harder on me than I deserve. But if you allow me to speak freely, I'll do so gladly as I wish to explain myself.

407a

Socrates: Well, it would indeed be a shame for me to be intolerant when you are so eager to benefit me. For obviously, having recognised in what way I am good or bad, I shall practise and pursue the one and flee from the other as best I can.

407b

Clitophon: Listen then, for, while in your company, I was often amazed at what I was hearing, and I thought that in comparison with other speakers your discourse was the most exalted, as you rebuked the people like a god descending upon the tragic stage chanting your words: "People, whither are you being carried, ignorant of the fact that you are doing nothing you should do,

you who are so utterly serious about money and acquiring it for yourselves? Yet in the case of your sons to whom you will bequeath all this, you seek out no teachers of justice so that they will know how to use the wealth in a just manner, if this is actually teachable. But even if this is a matter of practice and exercise, you don't look for anyone who is up to the task of training them thoroughly and guiding them carefully, nor have you looked after yourselves in this way. Rather, when you see that yourselves and your children still prove to fare no better when it comes to using your wealth, despite being adequately instructed in writing, music and gymnastics, which you regard as a complete education in excel- that brother behaves towards brother and cities towards cities in an unmeasured and discordant manner, through conflict and warfare in which they carry out and suffer extremes of depravity. Yet you maintain that unjust people are unjust not because of a lack of education or because of ignorance, but intentionally, and again you dare to say further that injustice is shameful and detested by the gods. Now, how could anyone intentionally choose such an evil as this? Because, you reply, he is overcome by pleasures. But this is also unintentional, is it not, since to prevail is intentional? In any case, the argument proves that doing injustice is unintentional, and every man privately, and likewise all cities publicly, should exercise more care about this than they do at present." Now, Socrates, whenever I hear you saying all this, as you frequently do, I am much pleased, and I praise you wondrously; and also whenever you go on after this to say that those who develop their bodies but neglect souls are doing something else of this sort by being neglectful of the part that should rule, while attending to the part that should be ruled; and also when you say that it is better for someone to refrain from using whatever he knows not how to use. As, for instance, when someone knows not how to use eyes, ears or body as a whole, it is better for him neither to hear nor see nor use his

body for any other purpose rather than using it in any way whatsoever. And, indeed, the same holds for skill, since whoever does not know how to use his own lyre obviously does not know how to use his neighbour's lyre either, nor does anyone who does not know how to use other people's lyres know how to use his own lyre, nor any other instrument or possession at all. And this argument of yours then beautifully concludes that whoever knows not how to use soul is better off keeping his soul quiescent and not living at all, rather than being alive and acting according to his own whims. And if it is necessary for such a person to be alive, it is better that he spend his life as a slave rather than a free man, entrusting the rudder of his mind, just like a ship, to someone else who had learned the skill of steering humanity, which you, Socrates, often call statesmanship, saying that this is the same as jurisprudence and justice. Now, I have nothing to say against these arguments, and very many others of this sort, wonderfully expressed, stating that excellence is teachable and that we should care most of all for our own self. I do not really have anything to say against these, and I don't think I ever will, and I believe that they are exhortative in the extreme, and beneficial too, as if we are simply asleep and these are waking us up. So, I paid attention in order to hear what was to follow this, putting my questions, initially, not to yourself, Socrates, but to your like-minded comrades or companions, or whatever such associates of yours should be called. I first questioned those whom you held in the highest regard, asking them what argument would come next, and somewhat after your manner, I made a suggestion to them. "Best of men," said I, "how are we now to take Socrates' exhortation that we turn towards excellence? Is this all there is to say, and is it not possible to pursue the matter further and understand it completely? Is it to be our lifelong task to exhort those who have not yet been exhorted, and are they in turn to exhort others? Or should we ask Socrates, and one another, a

further question; having agreed that this is exactly what a human being is to do, what follows? How, according to us, should we start learning about justice? It's as if someone exhorted us to care for the body, having observed that we, like children, were unaware that there is such a thing as gymnastics and medicine. What if he were to reproach us on this basis, saying that it is a disgrace to care totally for wheat and barley and vines and whatever else we work for and acquire for the sake of the body, while searching neither for a skill nor a means whereby the body might be in as good a condition as possible, even though there are such skills? And what if we were to question the person who exhorted us in this way by asking him what these skills are? He would probably reply that these are gymnastics and medicine. In the present case then, what, according to us, is the skill concerned with the excellence of the soul? What do you say?" The one among them who was regarded as the most formidable in these matters replied to me. He told me what this skill was. "It is," said he, "the very one you hear Socrates speaking of, none other than justice." I replied by saying, "Don't just tell me its name. No, proceed as follows. Medicine is, presumably, a skill of which there are two outcomes, the first being ongoing production of additional physicians, the second being health. But the second of these is not yet a skill; it is rather the result of the skill of teaching and being taught, a result we call health. Similarly, in the case of the carpenter's skill, there is the house and there is carpentry, one being a result, the other being a subject that is taught. And the same applies to justice; one outcome is the production of just people in the same way that the other skills produce people with those particular skills. But what is its other outcome, the result that the just man can produce for us? What do we say this is? Tell me." That man replied, I believe, that it is 'the advantageous', another said that it is 'the appropriate', someone else suggested 'the beneficial', another 'the profitable'. So, I

returned to the question and said, “In the other realm too, these terms such as acting correctly, being profitable, beneficial, and so on, are applicable to any of the skills. But to what are these all directed? Each skill will give its own reply, and so carpentry, for instance, will say that what is good, beautiful, and necessary, is directed to the provision of wooden objects, which are, of course, not the skill itself. So, describe the result of justice in like manner.” Finally, Socrates, one of your companions replied with what seemed like the most ingenious response, saying that the particular result of justice, which belongs to none of the other skills, is to produce friendship in cities. This man, when questioned further, said that friendship is good and is never bad, and as the questioning continued, he would not accept that what we refer to as the friendship of children and beasts is indeed friendship. For he had to conclude that such friendships are, for the most part, harmful rather than good. So to avoid such a conclusion, he said that such friendships are not friendships at all, and that anyone who refers to them in this way is naming them falsely. And he said that real and true friendship is, precisely, like-mindedness. When asked whether he would say that the like-mindedness is likeness of opinion or of knowledge, he did not favour likeness of opinion because it is unavoidable that many instances of harmful likeness of opinion occur among people, while he had agreed that friendship is entirely good and is a result of justice. And so, he said like-mindedness was the same, being knowledge and not opinion. Now, at this stage in the argument we were getting nowhere. But those present were well able to take him to task and say that the argument had come full circle back to where we began and they said, “Medicine too is a sort of like-mindedness, and so are all of the skills and they are all able to say what they are concerned with. But what you call justice or like-mindedness has completely forgotten what it is directed towards, and there is no clarity as to what precisely the result of

justice is.” That’s why, Socrates, in the end, I also put the question to you, and you told me that justice is doing harm to enemies and good to friends. But later it turned out that a just person never harms anyone, since everything he does to anyone is for their benefit. Having been patient with this process, not once or twice but over a considerable time, my persistence failed me, and although I believe you are better than anyone at exhorting people to care for excellence, there are two possibilities; either this is as much as you can do and you can do no more, as if someone, without being a helmsman, were to teach himself to praise this skill as being of great value to humanity. And the same analogy applies to any of the skills, and so, in relation to justice, someone might accuse you of being none the more knowledgeable about justice simply because you are good at praising it. Now, I myself don’t think that this is the case, but there are two possibilities: either you are not knowledgeable or you are unwilling to share your knowledge with me. I think that’s why, in my perplexity, I go to Thrasymachus and to anyone else I can. But if you are prepared at this stage to stop giving me these exhortatory speeches, that’s what should happen now. Act as if I had been exhorted, in respect of gymnastics, not to neglect my body. Following your exhortatory speech, you would then explain the nature of my body and the sort of care it needs. Take it then that Clitophon agrees that it is laughable to care for other things while neglecting the soul for whose sake we work so hard at everything else. And at this stage you should also presume that I have, in this way, said whatever follows those arguments that I have gone through just now. So, I am saying, please just do as I ask so that I won’t do what I am now doing, praising you before Lysias, and before others in some respects, while criticising you in other respects. Indeed, Socrates, I declare that you are worth everything to a person who has not yet been exhorted, but to someone who has already been exhorted, you almost get in the

way of their attaining happiness by arriving at complete excellence.

NOTES

1. Clitophon was an Athenian statesman and thinker. He was involved in a coup that overthrew the democratic Athenian government and installed a short-lived oligarchy during the Peloponnesian War. He is an interlocutor of Socrates in Book I of the Republic 340a-d.
2. Lysias was an influential Athenian orator, Phaedrus 277a ff. He is present at the discussion in Book I of the Republic.
3. Thrasymachus was a sophist who is famously depicted conversing with Socrates in Book I of the Republic 336b ff.

Cratylus

ΚΡΑΤΥΛΟΣ

Plato

translated by David Horan

plato-scroll.com/s/crat/

persons in the dialogue:

SOCRATES of Alopecce, son of Sophroniscus

HERMOGENES of Alopecce, son of Hipponicus

CRATYLUS of Athens, Heraclitean philosopher

scene: no dramatic setting

383a

Hermogenes: Well then, would you like to include Socrates here in our discussion?

Cratylus: If you wish.

Hermogenes: Socrates, Cratylus here maintains that there is a correctness of names that belongs, by nature, to each of the things that are, and what people conventionally call something when uttering some part of their own language is not this name. There is, rather, a natural correctness of names, the same for everyone, Greeks and non-Greeks alike. When I ask him if his own name is, in truth, Cratylus, he agrees that it is. “And what is Socrates’ name?” I ask. “Socrates,” says he. “Is this also the case with everyone else; whatever particular name we call them is their name in each case?” “Well,” says he, “your name is not Hermogenes, even if everyone calls you so.” And although I pursue the question and am keen to know what exactly he means, he clarifies nothing and hides his intention from me by pretending to be in possession of some personal understanding of his own about this matter, which, if he deigned to express it fully, would force me to agree with him and say exactly what he says. Now, if you can somehow interpret the oracular utterance of Cratylus, I would be pleased to hear you. But I would be even more pleased to find out from you, if you please, what you yourself think about the correctness of names.

384a

Socrates: Hermogenes, son of Hipponicus, there is an ancient saying that whatever is noble is difficult to understand, and

indeed the subject of names happens to be no small matter. Now, if I had already heard Prodicus' fifty-drachma course of lectures, which, according to the man himself, provides a comprehensive education in the subject, there would be nothing to stop you from learning the full truth about the correctness of names here and now. But as it happens, I have only heard his one-drachma course, so I don't really know where the truth about such matters lies. I am, however, prepared to join in the search together with yourself and Cratylus. But when he denies that Hermogenes is, in truth, your name, I suspect that he is mocking you, for he believes perhaps that every time you set out to make some money, you fail. In any case, as I said just now, although such matters are difficult to understand, we should make them the subject of a joint enquiry as to whether yourself or Cratylus is right.

384c

Hermogenes: Well, Socrates, for my part, although I have often been involved in discussions with this man and with many others, I cannot be persuaded that there is any correctness of a name apart from convention and agreement. Indeed, it seems to me that whatever name you give to something is the correct name, and if you change the name for a different one and no longer use the original name, the new name is just as correct as the previous one. It is just like changing the names of your household slaves, for no name naturally belongs to any particular thing by nature, but by convention and custom on the part of those who create the custom and use the name. If this is not the case, I myself am quite prepared to listen and learn, not only from Cratylus, but from anyone else at all.

385a

Socrates: Perhaps you have a point, Hermogenes, but let's see. According to you, whatever someone calls something is the name of that thing.

Hermogenes: That's what I think anyway.

Socrates: Whether an individual or, indeed, a city calls it so?

Hermogenes: Yes.

Socrates: What about this? Suppose I call any of the things that are, for instance, what we currently call a man, suppose I refer to this as a horse, and what we now call a horse as a man, will the same thing have the name 'man' for the general public, and 'horse' for me personally? And in the other case, will the same thing have the name 'man' for me, and 'horse' for the public? Is that what you are saying?

385b

Hermogenes: That's what I think, anyway.

Socrates: Come on then and tell me this. Is there something you call speaking the truth and something you call speaking falsehood?

Hermogenes: There is.

Socrates: So there can be a true statement and a false statement?

Hermogenes: Certainly.

Socrates: Is the statement that states things that are as they are, true, while the one that states them as they are not, is false?

Hermogenes: Yes.

Socrates: So, is it possible in a statement to state things that are and things that are not?

Hermogenes: Certainly.

385c

Socrates: But is a true statement true as a whole, while parts of it are not true?

Hermogenes: No, the parts are also true.

Socrates: But are the large parts true while the small parts are not, or are they all true?

Hermogenes: I think they are all true.

Socrates: Now, is there any part of a spoken statement that is smaller than a name?

Hermogenes: No, that is the smallest.

Socrates: And is this name spoken as part of a true statement?

Hermogenes: Yes.

Socrates: And according to you at least, this part is true.

Hermogenes: Yes.

Socrates: While part of a false statement is false, is it not?

Hermogenes: I agree.

Socrates: So, since it is possible to utter a true and false statement, is it also possible to utter a true and a false name?

385d

Hermogenes: Of course.

Socrates: So, whatever a person says is the name of something, this name is its name for that person?

Hermogenes: Yes.

Socrates: And however many names someone says that a particular thing has, it will indeed have that many names then, whenever he says so?

Hermogenes: Yes, Socrates, I can conceive no other correctness of names apart from this: I call something by one name, the name I gave it, and you call it something else, the name you, for your part, gave it. And, in the same way, I notice that various cities have different set names of their own for the same things; Greeks differ from other Greeks, as do Greeks from non-Greeks.

385e

Socrates: Come on now, Hermogenes, let's see whether, in your view, this is also the case with things that are. Is it the case that their being is private to each person, and so, as Protagoras said, the measure of all things is man, and consequently, as things appear to me, so they are for me, and as they appear to you, so they are for you? Or do you think that things have some fixity of being of their own?

386a

Hermogenes: On occasion, Socrates, out of sheer perplexity, I have ended up saying just what Protagoras says, even though I don't entirely believe that this is the case.

386b

Socrates: What about this, then? Have you ever ended up not entirely believing that there is such a thing as a bad person?

Hermogenes: No, by Zeus, I have often come to the conclusion that some people are entirely bad, a very large number actually.

Socrates: Well, have you ever thought that some are very good?

Hermogenes: Very few indeed.

Socrates: But you do think so?

Hermogenes: I do.

Socrates: And where do you stand on the following question? Are those who are very good also very wise, while the very bad are very foolish?

386c

Hermogenes: Yes, I think that this is so.

Socrates: Now, if Protagoras spoke the truth and it is actually true that, for each person, as things seem so things are, is it possible that some people are wise while others are foolish?

Hermogenes: No, it is not.

Socrates: Then I believe you are strongly of the view that since there is wisdom and there is folly, Protagoras cannot possibly be speaking the truth. For presumably no one could be wiser than anyone else, if whatever seems true for each person is true for that person.

386d

Hermogenes: Indeed so.

Socrates: Nor indeed, I believe, do you hold to the opinion of Euthydemus, that everything is always simultaneously so for everyone in like manner, since if excellence and vice always belong to everyone in like manner, some people could not be good while others were bad.

Hermogenes: That's true.

Socrates: Therefore, if everything is not always simultaneously so for everyone in like manner, nor does each thing belong to each individual person, it is obvious that things are possessed of some definite being of their own, not relative to us, nor dragged hither and thither by how they appear to us. Rather, they hold, of themselves, to their own being which is natural to them.

386e

Hermogenes: Yes, Socrates, I believe that this is so.

Socrates: Now, could things be so by nature, while the same is not so for the actions belonging to the things? Or do the actions themselves also constitute a species among things that are?

Hermogenes: They do, indeed.

387a

Socrates: So, the actions are enacted according to their own nature and not in accordance with our opinion. For instance, what if we try to cut anything at all, may we cut this as we please, with whatever we please, or if we wish to cut this in accordance with the nature of cutting and being cut, and with what is natural, will we make the cut and succeed in doing so

correctly, but go awry and achieve nothing if we act contrary to nature?

387b

Hermogenes: Yes, I think this is the case.

Socrates: And if we attempt to burn something, we should not burn it in accordance with every opinion, but in accordance with the correct one which corresponds to the way in which this is naturally burned or burns, and with what is natural.

Hermogenes: Quite so.

Socrates: Does the same hold for other activities?

Hermogenes: Certainly.

Socrates: Now, speaking is one of these activities, is it not?

Hermogenes: Yes.

387c

Socrates: What if someone speaks as he thinks he should speak? Will he be speaking correctly when he speaks in this way, or will he be successful in speaking only if he speaks of matters in a way that is natural for him to speak of them and for them to be spoken of? Otherwise, won't he go awry and achieve nothing?

Hermogenes: I think that's how matters stand.

Socrates: Now, naming is part of speaking, for we speak what we speak, I presume, by making distinctions based upon names.

Hermogenes: Certainly.

Socrates: And naming is indeed an activity, since speaking is also an activity in relation to things, is it not?

Hermogenes: Yes.

387d

Socrates: And activities, we saw, are not relative to us, but have a particular nature of their own?

Hermogenes: Quite so.

Socrates: Then, if we are not to contradict our previous conclusions, should things be named in the way that is natural to name them, and for them to be named with what is natural and not as we wish? And shall we meet with success in naming things in this way and no other?

Hermogenes: Apparently so.

Socrates: Come on then, are we saying that something that has to be cut, has to be cut with something?

Hermogenes: Yes.

387e

Socrates: And does something that has to be woven have to be woven with something, and does whatever has to be bored have to be bored with something?

Hermogenes: Certainly.

Socrates: And does whatever has to be named have to be named with something?

388a

Hermogenes: It does.

Socrates: With what should something be bored?

Hermogenes: A drill.

Socrates: With what should something be woven?

Hermogenes: A shuttle.

Socrates: And with what should something be named?

Hermogenes: A name.

Socrates: Well said. So the name is also an instrument.

Hermogenes: Certainly.

Socrates: Now, suppose I were to ask what instrument is the shuttle. Isn't it the one with which we weave?

Hermogenes: Yes.

388b

Socrates: And when we are weaving what do we do? Don't we separate the commingled warp and woof threads?

Hermogenes: Yes.

Socrates: Wouldn't you answer in the same way about a drill and about the other instruments?

Hermogenes: Certainly.

Socrates: Can you answer then in the same way about a name? When naming with the name, which is an instrument, what are we doing?

Hermogenes: I cannot answer.

Socrates: Are we not instructing one another about something, and separating things as they are?

Hermogenes: Certainly.

388c

Socrates: So a name is an instrument of instruction and it divides being, just as a shuttle does for woven fabric.

Hermogenes: Yes.

Socrates: So a shuttle is for weaving?

Hermogenes: Of course.

Socrates: So a weaver will use a shuttle well, and well means after the manner of a weaver, while an instructor will use a name well, and well means after the manner of an instructor.

Hermogenes: Yes.

Socrates: When a weaver uses a shuttle well, whose work does he use?

Hermogenes: The work of the carpenter.

Socrates: And is everyone a carpenter, or the person who has that skill?

Hermogenes: The person with the skill.

388d

Socrates: When a borer uses a drill well, whose work does he use?

Hermogenes: The work of the blacksmith.

Socrates: And is everyone a blacksmith, or the person who has the skill?

Hermogenes: The person with the skill.

Socrates: Very well. And when an instructor uses a name, whose work does he use?

Hermogenes: I can't say.

Socrates: Well, can you answer this question? Who has given us the names that we make use of?

Hermogenes: I cannot.

Socrates: Don't you think that convention has given these to us?

Hermogenes: So it seems.

388e

Socrates: So when an instructor makes use of a name, is he using the work of the conventionsetter?

Hermogenes: I think so.

Socrates: And do you think everyone is a convention-setter, or the person who has the skill?

Hermogenes: The person with the skill.

389a

Socrates: So, Hermogenes, it is not for everyone to give names, but for some fashioner of names who is, it seems, the convention-setter, the rarest of artificers to arise among us humans.

Hermogenes: So it seems.

Socrates: Come on then, let's investigate where the convention-setter looks when giving names. Let us consider this based upon the previous examples. Where does the carpenter look when making a shuttle? Does he not look to the sort of thing whose nature is to weave?

Hermogenes: Certainly.

389b

Socrates: What about this? If the shuttle breaks while he is making it, will he make another one by looking to the broken one, or to that form towards which he was looking when he made the one that broke?

Hermogenes: Yes, I think he would look to that form.

Socrates: Isn't that what we would rightly call "what a shuttle is"?

Hermogenes: I think so.

Socrates: And whether he needs to make a shuttle for a light or heavy garment, for linen or for wool or for any sort at all, it should indeed possess the form of the shuttle, but in each case mustn't he give it the nature that is naturally best for its particular function?

389c

Hermogenes: Yes.

Socrates: And the same holds for the other instruments. On discovering the natural instrument for each particular task, he should impose that upon whatever it is to be made from, not as he pleases but as is natural. So he must, it seems, know how to impose upon the iron the drill that is natural for each particular task.

Hermogenes: Certainly.

Socrates: And impose upon the wood the natural shuttle for each particular task.

Hermogenes: Indeed.

389d

Socrates: Then each shuttle, it seems, is for a particular kind of weaving, and the same applies to the other instruments.

Hermogenes: Yes.

Socrates: So, best of men, does the convention-setter need to know how to impose that natural name for each thing upon the sounds and syllables, and make and impose all names by looking to what name itself is if he is to be an authoritative giver of names? And if a particular convention-setter does not impose the name upon the same syllables, this name should not be doubted. For neither does every smith, making the same instrument for the same task, impose it upon the same iron, but, nevertheless, as long as he bestows the same form, even on the different iron, the instrument retains its correctness, whether it is made here or in non-Greek cities. Is this so?

390a

Hermogenes: Certainly.

Socrates: Won't you evaluate the convention-setter, either here or among non-Greek peoples, in this way too? As long as he imposes the appropriate form of the name upon each thing, in syllables of any sort, isn't he just as good a convention-setter,

here or anywhere else?

Hermogenes: Certainly.

390b

Socrates: Now, who is the one who knows whether the appropriate form of shuttle is embodied in wood of any kind? Is it the carpenter who has made it, or the weaver who uses it?

Hermogenes: The user, Socrates, is more likely to know this.

Socrates: Now, who is the person who uses the product of the lyre maker? Isn't he the one who knows how best to supervise its manufacture, and would recognise whether or not it had been well made, once it had been made?

Hermogenes: Certainly.

Socrates: And who is this person?

Hermogenes: The lyre player.

Socrates: And what about the work of a shipbuilder?

390c

Hermogenes: A ship's captain is best.

Socrates: And who would best supervise the work of the convention-setter, and pass judgement when it is complete, in this country or abroad? Won't it be the person who uses his work?

Hermogenes: Yes.

Socrates: Is this not the person who knows how to ask questions?

Hermogenes: Certainly.

Socrates: Does the same person know how to respond?

Hermogenes: Yes.

Socrates: Do you call the person who knows how to ask questions and respond a dialectician?

Hermogenes: Yes, a dialectician.

390d

Socrates: So the work of the carpenter is to make a rudder under the supervision of the ship's captain, if the rudder is to be a good one.

Hermogenes: Apparently.

Socrates: And the work of the convention-setter, it seems, is to make a name, with the dialectical person as supervisor, if names are to be properly given.

Hermogenes: Indeed so.

Socrates: It seems then, Hermogenes, that the giving of a name is not, as you imagine, an ordinary matter for ordinary random persons. And Cratylus is speaking the truth when he says that the names belong to the things by their nature, and not everyone is an artificer of names, but only the person who looks to the natural name for each and is able to impose its form upon the letters and syllables.

391a

Hermogenes: I don't know how to oppose your arguments, Socrates, and yet it is not easy for me to be persuaded so suddenly, and I think I would be better persuaded if you were to show me what, according to you, this natural correctness of names is.

Socrates: Bless you, Hermogenes, I am not saying that there is any such thing. No, you have forgotten what I said a little earlier, that I don't know about this, but I could enquire along with you. And as we now investigate this, you and I, this much progress is already apparent; a name does have some natural correctness and it is not every man who knows how to give this

to anything at all. Isn't this so?

391b

Hermogenes: Certainly.

Socrates: Therefore, if you have a desire to know, the next thing we should do is to investigate what precisely the correctness of name is.

Hermogenes: But of course I want to know.

Socrates: Then enquire.

Hermogenes: How should I enquire?

Socrates: The correct way to enquire, my friend, is in the company of those who know, but you pay money to them and you owe them a debt of gratitude. These people are the sophists from whom your brother Callias has acquired his reputation for wisdom, having paid them a great deal of money. But since you are not in control of your own inheritance, you must implore your brother and ask him to teach you what he learned from Protagoras about the correctness applicable to such matters as these.

391c

Hermogenes: Socrates, coming from me such a request would be strange indeed – that I, who do not accept Protagoras' truth at all, should place any value upon the details of such a truth as this.

391d

Socrates: Well, if that does not please you, then you should learn from Homer and the other poets.

Hermogenes: And what does Homer say about names, Socrates, and where?

Socrates: There are many places where he makes significant, fine distinctions between the names that humans and the gods call the same things. Don't you agree that there are places

where he says something wonderfully important about the correctness of names? For it is surely obvious that the gods call things by names that are correct by nature. Don't you think so?

391e

Hermogenes: I fully understand that if the gods call things by names, they do so correctly. But what passages are you referring to?

Socrates: Don't you know that he says that the Trojan river that fought one on one with Hephaestus is called Xanthos by the gods, but Scamander by humans?

Hermogenes: I do.

392a

Socrates: What about this? Don't you think this is something special, to know that this river is more correctly called Xanthos rather than Scamander? Or take, if you like, the example of the bird which he says: the gods have called Chalcis but humans call Cymnidis. Do you think it is an ordinary matter to learn how much more correct it is to call the same bird Chalcis rather than Cymindis? Or what about the hill that is called both Batieia and Myrina, and many other examples from this poet and various others? But perhaps these matters are too exalted for you and I to understand, whereas Scamandrius and Astyanax are more amenable to human investigation, as, in my opinion, it is easier to investigate what he maintains are the names of Hector's son and what precisely he means by the correctness of these. I am sure that you know the lines that include these references.

392b

Hermogenes: Certainly.

Socrates: Well, which name do you think Homer believed to be the more correct name for the boy – Astyanax or Scamandrius?

392c

Hermogenes: I cannot say.

Socrates: Think about this, then. Suppose someone were to ask you, “Do you think that the more intelligent person or the more unintelligent person calls things by the more correct names?”

Hermogenes: I would say that it is obviously the more intelligent person.

Socrates: Now in your opinion, on the whole, are the women in a city, or the men, the more intelligent group?

Hermogenes: The men.

Socrates: Now, you know, don’t you, that Homer says that Hector’s child was called Astyanax by the men of Troy. And since the men called him Astyanax, he was obviously called Scamandrius by the women?

392d

Hermogenes: Well, so it seems.

Socrates: Didn’t Homer too believe that the Trojan men were wiser than their women?

Hermogenes: I think so.

Socrates: So, he thought that Astyanax was a more correct name for the boy than Scamandrius.

Hermogenes: Apparently.

Socrates: Then, let’s look at the precise reason for this. Or does he himself explain the reason very nicely? Indeed, he says: ^{392e} he alone defended their city and long walls For this reason, then, it seems it is only right to call the son of the defender, Astyanax, the astu-anax, the lord of the city, which his father defended, as Homer says.

392e

Hermogenes: I see.

Socrates: But why, exactly? Indeed, I myself do not yet understand. Do you understand, Hermogenes?

Hermogenes: By Zeus, I do not.

393a

Socrates: But, good man, did Homer himself not give Hector this name?

Hermogenes: What of it?

Socrates: Well, this name seems to me to be much the same as Astyanax. Indeed, both seem to be Greek, for anax (lord) and hector (possessor) seem to indicate the same thing since both are names for a king, for surely a person is also the possessor of whatever he is lord of since he is obviously in control of this, and has acquired it and possesses it. Or do you think I am talking nonsense in the deluded belief that I have found some clue to Homer's opinion about the correctness of names?

393b

Hermogenes: By Zeus, you are not deluded. No, you have probably found something.

Socrates: At any rate, it is right, as I see it, to call the offspring of a lion, a lion, and the offspring of a horse, a horse. I am not speaking of a case where something other than a horse is born from a horse, a sort of aberration. I am referring, rather, to the natural offspring of its kind. If a horse, contrary to nature, were to give birth to a calf, the natural offspring of a cow, it should not be called a foal but a calf. Nor, in my opinion, if non-human offspring is born from a human being, should that offspring be called a human being. And the same applies to trees and to everything else. Don't you agree?

393c

Hermogenes: I do.

Socrates: Good, but be on your guard lest I somehow lead you astray, since, according to the same argument, any offspring born from a king should be called a king. But whether the same thing is indicated by one set of syllables or by another set does

not matter. Nor does it matter if a letter is added or subtracted as long as the essence of the thing is in control and is revealed in the name.

393d

Hermogenes: How do you mean?

Socrates: Nothing complicated. No, this is something you already know. We speak the names of the letters but not the letters themselves, with four exceptions: e, u, o and ō. And you know that we attach additional spoken letters to the other vowels and consonants in order to make names for them. But as long as we include the demonstrative power of the letter, we are right to call it by that name, and for us, that will indicate it. Take beta for example. You see that adding 'b' and 't' and 'a' does no harm and does not prevent the nature of the consonant from being indicated by the whole name of the letter that the convention-setter wished to name, and so he knew quite well how to give names to the letters.

393e

Hermogenes: Yes, I think that's true.

394a

Socrates: Doesn't the same argument hold in relation to a king? For a king will usually be born from a king, good from good, noble from noble, and the same holds for all other cases; from each kind, another one like that is born unless some aberration arises. So they should be called by the same names, but it is permissible to vary the syllables so that to those without the expertise, names seem different even though they are the same, just like drugs prepared by physicians, which vary in colour and smell and appear different although they are the same. And yet, to the physician who discerns the power of the drugs, they appear the same and he is not misled by the additions. And so, in like manner, someone who is knowledgeable about names sees the power they possess and is not misled if a letter is added,

transposed or removed, or indeed if the power of the name is conveyed by completely different letters. For instance, in the case we have just described, 'Astyanax' and 'Hector' have no letters the same except 't', but they indicate the same thing. And what letters does 'Archepolis' (ruler of the city) have in common with these? Yet it signifies the same thing nevertheless, and there are many other names which simply indicate 'king'.

394c

Socrates: And again, there are others that indicate 'general', such as 'Agis' (leader), 'Polemarchus' (battle leader) and 'Eupolemus' (good in battle), and indeed such names as 'Iatrocles' (famous healer) and 'Acesimbrotus' (healer of mortals) indicate 'physician'. And we might find lots of others differing in their syllables and letters but having the same power when uttered. Is this so?

394d

Hermogenes: Yes, certainly.

Socrates: In that case, those that come into being in accordance with nature should be assigned the same names.

Hermogenes: Certainly.

Socrates: What about those that have come into being, contrary to nature, in the form of some aberration? For instance, when a disrespectful child is born to a good man who respects the gods – as in our previous example of a horse giving birth to a calf – it should not, of course, bear the name of the parent, but of the sort of thing that it is.

Hermogenes: Certainly.

394e

Socrates: Then a disrespectful child born to a respectful person should be given the name of the disrespectful kind.

Hermogenes: Indeed so.

Socrates: So he should not, it seems, be called ‘Theophilus’ (beloved of God) or ‘Mnēsitheos’ (mindful of God) or anything of that sort, but by a name that indicates the opposite of these, if names are to be correct.

Hermogenes: Very much so, Socrates.

Socrates: Yes, Hermogenes, just as the name ‘Orestēs’ (mountain-man) is likely to be correct, whether it was given to him by chance or by a poet to point out with this name the wildness, coarseness and ruggedness of his nature.

395a

Hermogenes: Apparently so, Socrates.

Socrates: And it seems that his father’s name is also in accord with nature.

Hermogenes: Apparently.

Socrates: Indeed, it is quite likely that Agamemnon is the sort of person who would work hard at whatever he decided upon, and persevere, bringing his plans to completion through his excellence, and an indication of this is the length of his stay at Troy and his endurance. So, the name ‘Agamemnon’ indicates that this man was admirable (agastos) for standing his ground (epimonē). And the name ‘Atreus’ is probably correct too, for his murder of Chrysippus and his cruel treatment of Thyestēs were all destructive and ruinous (atēra) to his excellence. Now, the significance of the name is slightly altered and obscured so that the nature of the man is not obvious to everyone. But to those with an understanding of names, it adequately demonstrates what Atreus means. Indeed, whether in respect of his stubbornness (ateires), his fearlessness (atrestos), or his ruinousness (atēros), the name is correctly applied in any case. And I think that Pelops also has an appropriate name, for this name indicates someone who sees what is close at hand.

395c

Hermogenes: How do you mean?

Socrates: We are told, for instance, that in murdering Myrtilus he proved unable to anticipate or foresee the far-reaching consequences for his entire family, and the extent of the misfortune that would befall them. In his eagerness to secure his marriage to Hippodameia by any means, he saw only what was close at hand and immediate or near (pelas). And if what we are told about Tantalus is true, then everyone would agree that his name too has been correctly given, in accordance with his nature.

395d

Hermogenes: What are you referring to?

Socrates: To the many terrible misfortunes that happened to him during his life, culminating in the overthrow of his own fatherland, and, after death in Hades, in amazing concord with his name, a stone was suspended (talanteia) over his head. And it really seems as if someone, wishing to call him ‘Talantatos’ (weighed down completely), has disguised this intention and named him by saying ‘Tantalus’ instead. The circumstances of the legend seem to have provided this name for him in some such manner as this. And it appears that his father, who is said to be Zeus, also had an excellent name, although it is not easy to understand. For the name of Zeus is really like a phrase consisting of two parts, some people using one part, others using the other. For some call him Zēn, others Dia, and combining the two into one demonstrates the nature of the god, which, according to us, is what a name should be able to do. For there is no one who is more responsible for the life of us humans, and all other creatures, than the ruler and king of all. Consequently, this god through whom (di hon) all living creatures always have life (zēn) has been named correctly (di hon zēn). And as I said, the name, being one, is divided into two parts, Dia and Zēn. To suggest that he is the son of Cronus might

seem disrespectful on first hearing, and to say that Zeus is the offspring of some huge intellect might sound preferable. For *koros* (representing Cronus) does not indicate a child, but the pure (*kathoros*) and unblemished nature of reason (*nous*).

396b

Socrates: And he, the story goes, is the son of Uranus, and the upward vision is rightly called ‘*ourania*’, looking upwards (*horōsa* – looking, *ta anō* – above), and those who study the heavens, Hermogenes, say that this results in pure reason and Uranus has the correct name. And if I could have remembered the genealogy of Hesiod, where he describes even earlier ancestors of these gods, I could have continued explaining that they too had correct names, until I had tested this wisdom that has suddenly come upon me like this, I know not from where, to see whether or not it will ebb away.

396d

Hermogenes: Yes, indeed, Socrates, you really do seem to me, suddenly, to be making prophetic utterances, just like inspired people.

Socrates: Well, Hermogenes, for the most part I blame what has happened to me on Euthyphro of Prospaltia. Indeed, I was with him for a long time this morning and I was listening to him, and it is quite likely that he was so inspired that he not only filled my ears with his godly wisdom but has taken possession of my soul too. So, I think this is what we need to do. For today, let’s make use of this wisdom and continue our investigation into the remaining names, and tomorrow, if you agree, we shall send it on its way and be purified, having found someone, either a priest or a sophist, who is adept in such purifications.

397a

Hermogenes: Yes, I agree. And I would be very glad to listen to whatever remains to be said about names.

Socrates: Well, that is what we should do then. Now, since we have hit upon this general approach, where would you like us to begin our investigation so that we may see whether the names themselves shall act as witnesses and tell us whether each name is merely given at random, or actually possesses a certain correctness? Now, the names in use for heroes and humans may perhaps be deceiving us, for many of them are based on the names of ancestors, and in some cases, as we said at the outset, they are quite inappropriate, while many such as Eutychides (fortunate), Sosias (saviour) and Theophilus (beloved of God) are given in a spirit of prayer. Now, in my opinion, we should leave names of that sort aside as we are most likely to find those that are correctly given when dealing with whatever is eternal and natural. For in such cases, it was most appropriate that the assignment of names be taken seriously. And perhaps some of them were given by a power more divine than any human power.

397c

Hermogenes: I think that's well expressed, Socrates.

Socrates: Now, wouldn't it be right to begin with the gods and consider the way in which the 'gods' (theoi) are correctly called by this particular name?

Hermogenes: Quite likely.

Socrates: Well, my guess is as follows. As I see it, the first humans to settle in Greece believed only in those gods that many non-Greeks still believe in today – sun, moon, stars and sky. Now, since they saw that these are always following a course, and running (theonta), they named them 'gods' (theous) because their nature is to run (thein). Later, recognising the other gods, they called them all by this same name. Is this likely to be true or am I talking nonsense?

397d

Hermogenes: It is very likely.

Socrates: What should we look at after this?

^{397e}

Hermogenes: Daimōnes (divine beings), of course.

Socrates: And what exactly does the name ‘daimōnes’ mean in truth, Hermogenes? You may decide whether there is anything in what I am about to say.

Hermogenes: Speak on.

Socrates: Do you know what daimōnes are, according to Hesiod?

Hermogenes: I cannot recall.

Socrates: Don’t you recall that he says that the first race of humans to be born was a golden race?

Hermogenes: Yes, I know that much anyway.

Socrates: Well, what he says about it is: But since this race has been concealed by fate, ^{398a} they are called sacred daimōnes who dwell beneath the earth, ^{398a} noble, averters of evil, guardians of mortal men.

^{398a}

Hermogenes: Yes, what of it?

Socrates: Well, I think he means not that this race is golden by nature, but that it is good and noble for me, the fact that he refers to ourselves as an iron race is proof of this.

Hermogenes: That’s true.

Socrates: And if anyone nowadays happened to be good, don’t you think he would say that he belonged to that golden race?

^{398b}

Hermogenes: Quite likely.

Socrates: And are the good also wise?

Hermogenes: Yes, wise.

Socrates: Well this, I believe, is what he really means. Because the daimōnes were wise and knowledgeable (daimonēs), he called them daimōnes, and in our ancient language this very name is found. So, Hesiod and many other poets are right when they say that once a good person dies, a great and honourable destiny is theirs, and the person becomes a daimōn in accordance with the wisdom associated with that title. And, accordingly, I too maintain that anyone who is good is daimōnic, whether they be living or deceased, and is correctly called a daimōn.

398c

Hermogenes: Yes, Socrates, I think I am in complete agreement with you on this. But what about the word ‘hero’? What would it be?

Socrates: This is not particularly difficult to understand, for their name is little altered and it indicates their birth from love (erōs).

Hermogenes: How do you mean?

Socrates: Don’t you know that heroes are demigods?

Hermogenes: What of it?

398d

Socrates: They have all been born from the love (erōs) of a god or a goddess for a mortal. And if you look at this based upon the old Attic tongue, you will understand better. For it will show you that ‘hero’ is a slight alteration of the name of ‘love’ (erōs) from which heroes are born. So they are called heroes either for this reason or because they are sophists, clever speakers, dialecticians who are well able to ask questions (erōtan). For ‘erein’ is the same as ‘legein’ (to speak). And so, as we have just said, heroes, when spoken of in the Attic tongue, turn out to be rhetoricians and questioners, and our tribe of heroes becomes a

race of rhetoricians and sophists. Now, this is not difficult to understand, but it is harder to understand why exactly members of the human race are called humans. Can you say?

398e

Hermogenes: How could I, my friend? Even if I were able to find out, I wouldn't make the effort because I believe you are more likely to make the discovery than I am.

399a

Socrates: It seems that you believe in the inspiration of Euthyphro.

Hermogenes: Of course.

Socrates: Well, you are right to believe in it. Indeed, I myself apparently have come up with such an ingenious notion just now that if I am not careful I am in danger this very day of becoming wiser than I need to be. Consider this. In the first place it is necessary to recognise that when it comes to names, we often insert letters or remove them, departing from our intention in naming, and we sometimes change the accents. For example, in order to turn the phrase 'dii philos' (friend of Zeus) into a name, we removed the second 'i' and pronounced the middle syllable with a grave rather than an acute accent (diphilus). In other cases, by contrast, we insert letters and pronounce grave accents as acute.

399b

Hermogenes: True.

Socrates: Well, it seems to me that the name for human beings has also undergone such a process. One letter, 'a', has been removed and the final syllable has become grave, turning a phrase into a name.

Hermogenes: How do you mean?

399c

Socrates: As follows. This name, ‘human’ (anthrōpos), indicates that the other creatures do not consider or reflect upon or scrutinise anything they see, while a human being sees (opōpe) and simultaneously scrutinises and reflects upon whatever has been seen. And so, of all creatures, a human being is rightly named ‘human’ (anthrōpos) for scrutinising (anathrōn) whatever is seen (opōpe).

Hermogenes: Well, what next? May I ask about the next thing I would like to find out?

Socrates: Certainly.

399d

Hermogenes: After these examples, there is, I think, something that follows naturally. Indeed, we speak, I presume, of the body and the soul of a human being.

Socrates: Of course.

Hermogenes: Then let’s analyse these names too, just as we did with the previous ones.

Socrates: Do you mean that we should consider how soul reasonably comes by that name, and do the same too for body?

Hermogenes: Yes.

Socrates: Well, speaking off-hand, I think that those who gave soul its name had something as follows in mind. They observed that when soul is present it is the cause of the body being alive, providing its ability to draw breath and be revived, and when the reviving (anapsuchon) power departs, the body is destroyed and dies. And that, I believe, is why they called it ‘soul’ (psychē). But, quiet please. I think I can discern something more persuasive to Euthyphro and his followers who, in my opinion, would despise this interpretation and regard it as commonplace. Let’s see if you like this.

400a

Hermogenes: Speak on.

Socrates: Do you think that there is anything besides soul that sustains the nature of every single body, so that it lives and moves?

Hermogenes: There is nothing else.

Socrates: What about this? Don't you also believe, with Anaxagoras, that nous and soul are what order and hold the nature of everything else too?

Hermogenes: I do.

400b

Socrates: So, it would be only right to give to this power, which holds and sustains (orchei, echei) nature (phusis), this particular name, 'phusechei' (nature-holder). And it is possible to pronounce this more elegantly as 'psuchē' (soul).

Hermogenes: Entirely so, and I think this explanation is more skilful than the first one.

Socrates: Indeed so, although to give it its true name (phusechei) certainly sounds odd.

Hermogenes: Yes, but what should we say about the next word?

Socrates: Do you mean 'body'?

Hermogenes: Yes.

400c

Socrates: There is, I think, much to say, and if the word is altered slightly there is even more to say. And indeed, some maintain that the body (sōma) is a tomb (sēma) for the soul, as though it was, at present, entombed. Or again, because body indicates (sēmainei) whatever the soul would indicate (sēmainēi), it is accordingly correctly called an 'indication' (sēma). But it seems to me for the most part that this name was

given by the adherents of Orpheus as if the soul was paying a penalty for some offences, and the body was an enclosure like a prison to keep the soul safe. So the body (sōma) is a safe (sōma) for the soul until such time as it has paid for its offences in full, and body is named accordingly and there is no need to alter a single letter.

400d

Hermogenes: Well, Socrates, I think that enough has been said on these names. But what about the names of the gods – Zeus for instance, whom you spoke of just now? Should we conduct an enquiry in the same way as to where precisely the correctness of their names lies?

Socrates: Yes, by Zeus, Hermogenes, if we are possessed of any intelligence, the very best approach is to admit that we know nothing about the gods themselves, nor about the precise names they call themselves, which are of course true names. But, in terms of correctness, a second approach would be to call them by the names they love to be called by in our conventional prayers, since we know nothing else. In fact, this custom seems good to me, so if you like, let's conduct our investigation by first announcing to the gods that, because we are unworthy to do so, we shall not be investigating them, but human beings and the opinions they held when they gave the gods those names. For this approach will avoid divine retribution.

401a

Hermogenes: Yes, Socrates, that sounds reasonable to me. Let's do as you suggest.

401b

Socrates: Should we begin in the customary manner with Hestia?

Hermogenes: Right.

Socrates: Well, what would you say was in the mind of whoever gave Hestia her name?

Hermogenes: By Zeus, I don't think that's an easy question to answer either.

Socrates: It is quite likely, Hermogenes, that the first name givers were not ordinary folk but lofty thinkers with much to say.

Hermogenes: What of it?

401c

Socrates: It is obvious to me that people of this sort gave the names, and if names in foreign languages are investigated, the meaning of each will be discovered just as well. For instance, in the case of what we call 'ousia' (being), there are some who call this 'essia' and others who call it 'ōsia'. Now, taking the first of these alternatives, essia, it is reasonable to call the being of things 'Hestia', and furthermore, we also say that whatever partakes of being 'is' (estin), and on this basis could be correctly named Hestia. For we seem, in ancient times, to have called 'ousia' (being), 'essia'. But someone, thinking of sacrifices, might also conclude that the name-givers had this in mind, for those who call the being of everything 'essia' are likely to sacrifice to Hestia first before any other gods. Those, on the other hand, who called being 'ōsia' would agree, more or less, with Heraclitus that all of the things that are are in motion, and nothing remains as it is. So, their cause and ruler is that which pushes (ōthoun), and it was right therefore to name it 'ōsia'. And that is as much as we who know nothing should say. After Hestia, it is only right to investigate 'Rhea' and 'Cronus'. The name of Cronus we have already dealt with. But perhaps I talk nonsense.

401e

Hermogenes: Why so, Socrates?

Socrates: A swarm of wisdom has come into my mind, my friend.

Hermogenes: What sort of a swarm?

402a

Socrates: Well, it is most odd to recount, but I think it does carry a certain conviction.

Hermogenes: Which is?

Socrates: I seem to picture Heraclitus uttering ancient words of wisdom from the era of Cronus and Rhea, spoken also by Homer.

Hermogenes: What do you mean?

Socrates: Heraclitus says, I presume, that everything is in motion and nothing remains as it is, and he compares things that are to the flow of a river, saying that “you cannot step twice into the same river”.

Hermogenes: So he does.

402b

Socrates: Now, do you think that whoever gave the names Rhea and Cronus to the ancestors of the other gods thought differently from Heraclitus? Do you think he gave the names of streams to both of them just by chance? Just as Homer for his part refers to “Ocean the origin of the gods, and mother Tethys”, as I believe does Hesiod. Orpheus too says, I believe, that: 402c First to wed was fair flowing Ocean. 402c Who took to wife his sister, Tethys, his mother’s child. Notice that they are in agreement with one another, and they all incline towards the doctrines of Heraclitus.

402c

Hermogenes: What you are saying makes sense to me, Socrates. But I do not understand what the name ‘Tethys’ means.

Socrates: But the name itself is almost stating that it is a disguised name for a spring. For that which sifts (diattomenon)

and filters (ēthoumenon) represents a spring and the name Tethys combines both of these words.

402d

Hermogenes: That is elegant, Socrates.

Socrates: It certainly is. But what is next? Zeus, we have already explained.

Hermogenes: Yes.

Socrates: Then let's speak about his brothers, Poseidon and Pluto, and the other name he goes by.

Hermogenes: Certainly.

402e

Socrates: Well, it seems to me that Poseidon is so named because the nature of the sea hindered him as he proceeded and would not allow him to advance, acting as a sort of bond for his feet. So, the god with dominion over the power of the sea was named Poseidon because he was foot-bound (posi-desmon) and the 'e' was probably added to improve the sound. But perhaps it does not mean this, and it was spoken initially with a double 'l' in place of the 's' because the god knows (eidota) a great deal (polla). Or perhaps he was named 'the Shaker' (ho seiōn) because of his shaking activity, and the 'p' and the 'd' are additions. Pluto is named as the giver of wealth (ploutos) because wealth comes up from beneath the earth. It seems to me that most people assume that his name refers to the unseen (aides), so out of fear they call him Pluto.

403b

Hermogenes: And what is your view of the matter, Socrates?

Socrates: Well, it seems to me that people have been misled in many ways about the power of this god and are unjustifiably afraid of him. They are afraid because once any of us dies we remain forever in his realm, and because our soul arrives before him bereft of a body, they are also fearful on that account. But

in my opinion, all of this, and the dominion and name of the god, point to the same conclusion.

Hermogenes: How so?

403c

Socrates: I shall explain to you how I see all this. Tell me, then, what is the strongest bond for any living creature in order to ensure that it remains in some particular place – necessity or desire?

Hermogenes: Desire is a much stronger bond, Socrates.

Socrates: Now, don't you think that lots of people would escape from Hades if he did not bind those who go there with the strongest bond?

Hermogenes: Of course.

Socrates: So he binds them, it seems, by desire and not by necessity, since he binds them by the strongest bond.

Hermogenes: Apparently.

Socrates: Now, there are many desires, are there not?

Hermogenes: Yes.

403d

Socrates: So he binds them with the greatest desire of all if he is indeed to restrain people with the greatest bond.

Hermogenes: Yes.

Socrates: Now, when someone believes they will become a better person by being with someone else, is there any greater desire than this?

Hermogenes: No, not at all, by Zeus, Socrates.

Socrates: So that's why we should maintain, Hermogenes, that none of the people who dwell there has any desire to leave, not even the Sirens themselves, for they too are under his spell, just

like all the others. This, it seems, is because Hades knows how to utter beautiful words, and, on account of this, the god is a perfect sophist and a great benefactor of those who are with him there, and he is also the cause of so much good to ourselves here. Because he is surrounded by so much in his own realm, he bears the name Pluto (wealth) for this reason.

403e

Socrates: Furthermore, he has no desire to be with us humans while we still hold onto our bodies, but he does associate with us once the soul is purified of all the badness and desires associated with the body. Don't you think then that he is a philosopher who appreciates that he may restrain people under these circumstances, having bound them with the desire for excellence? But while they are possessed of the excitement and madness of the body, not even his father, Cronus, would be able to hold them to himself by binding them with his famous shackles.

404a

Hermogenes: There seems to be something in what you are saying, Socrates.

404b

Socrates: So, Hermogenes, the name Hades is not really derived from the unseen (*aides*), but it is much more likely that the convention-setter called him Hades because of the fact that he knows (*eidenai*) all that is good.

Hermogenes: Very well. But what have we to say about *Dēmēter*, *Hēra*, *Apollo*, *Athena*, *Hephaestus*, *Ares*, and the other gods?

Socrates: *Dēmēter* is apparently so called because, like a mother (*mētēr*), she gives (*didousa*) the gift of food. *Hēra* is the lovely one (*eratē*) because Zeus is said to have married her for love. But perhaps the convention-setter, speaking in exalted terms, called the air (*aera*) *Hēra*, placing the beginning at the

end to conceal his intention. You would recognise this if you were to repeat the name Hera over and over. As for Pherephatta, this name is feared by many, and so too is the name Apollo because, it seems, of a lack of experience of the correctness of names. For they change Persephone to Phersephone (bringer of slaughter, pherein phonon), and this apparently terrifies them, although it points out the fact that the goddess is wise. For since things are in motion, wisdom would be that which fixes upon, or is in touch with, or has the ability to follow. So the goddess may rightly be called Pherephapa, or the like, because of her wisdom and her contact (epaphē) with that which is moving (pheromenon). That's why Hades, who is wise, associates with her, because she is a goddess of this sort. But nowadays people distort her name by assigning more importance to nice sound than to the truth, and so they call her Pherephatta. And as I say, in the case of Apollo, many people are fearful on account of the name of the god as though it discloses something terrible. Have you noticed this?

404e

Hermogenes: I have indeed, and what you are saying is true.

Socrates: But in my opinion the name is most beautifully suited to the power of the god.

Hermogenes: How so?

405a

Socrates: I shall try to explain my view on the matter. Indeed, there is no single name better suited to the four powers of the god so that it somehow encompasses them all and shows his musical, prophetic and medical power, and his skill in archery too.

Hermogenes: Please continue. Yes, you seem to be saying that the name is unusual.

Socrates: On the contrary, it harmonises well with the musical nature of the god. For in the first place, the purifications and purgations, both in medicine and in prophecy, and the fumigations with medicinal or oracular remedies, and the ablutions associated with these, and the sprinklings too, would all have one function – to render the person pure in body and in soul. Is this so?

405b

Hermogenes: It certainly is.

Socrates: Now, wouldn't Apollo be the god who purifies, cleanses (apolouōn) and delivers us (apoluōn) from such evils as these?

Hermogenes: Certainly.

Socrates: In that case, in respect of the deliverances and cleansings, he may correctly be called 'Aploun' (he who cleanses), being a physician of maladies of this sort. In respect of prophecy, and what's true and what's simple (aplous), which are indeed the same, it would be correct to call him by the name that the people of Thessaly use, for they all call this god 'Aploun'. And because he is a master archer who is ever-darting (aei-bolōn), he is 'Aeiballōn' (everthrowing). And in respect of music, we need to understand that the letter 'a' often indicates 'together', and in this case it refers to movement together around the sky, around the poles as they are called, and also to harmony in song, which is called concord, because all these, as the experts in music and in astronomy tell us, move together at the same time, by a certain harmony. And this god Apollo supervises the harmony by moving them all together, for gods and for humans. So, just as our words for 'following' (akolouthon) and 'lying together' (akoitin) substitute the prefix 'a' for the prefix 'homo', so too, although he was called 'Omopolōn', we called him 'Apollo', adding an extra 'l' because the other name can mean something distressing. And even now

some people are still suspicious, and because they don't consider the power of the name in the correct manner, they are afraid that it is indicating some sort of destruction. In fact, as was said earlier, the name encompasses all the powers of the god – simplicity, ever-throwing, cleansing and moving together.

406a

Socrates: The Muses, and the realm of music in general, seem to derive their name from the word 'mōsthai' (to seek after) and from philosophic enquiry. Leto is so called because of the meekness of the god, as evidenced by her willingness (ethelēmona) to grant whatever anyone asks for. Or perhaps her name is Lētho, which is what many foreigners call her, because it seems her character is not harsh, but gentle and smooth (leion), and that's why they call her 'Lētho'. Artemis appears to be so called because of her soundness (artemes) and orderliness (kosmion) and her preference for virginity (parthenia), but it is just as likely that those who gave the goddess that name called her 'she who knows excellence' (aretēs histora). Or perhaps it was because of her hatred of procreation (aroton misēsasēs) involving a man and a woman. Or whoever gave the god her name did so for one of these reasons, or for all of them.

406b

Hermogenes: What about Dionysus and Aphrodite?

Socrates: My dear Hermogenes, you are asking me a big question. In fact, there is a serious way of explaining the names of these gods, and a playful one. You had best ask others for the serious account, but there is nothing to prevent us going over the playful one, for the gods are quite fond of playing. Indeed, Dionysus would be the one who gives (didous) wine (oinos), being playfully called 'Didoinysos'. As for wine, since most people who drink it believe (oieithai) that they are possessed of intelligence (nous) when they are not, it may correctly be called 'oionous'. There is no need to contradict Hesiod about

Aphrodite, and we can accept that she was so called because of her birth from foam (afrou).

406d

Hermogenes: But surely Socrates, you, an Athenian, won't forget about Athena, or indeed Hephaestus or Ares.

Socrates: That is hardly likely.

Hermogenes: Indeed not.

Socrates: Now, it is not difficult to explain the origin of her other name.

Hermogenes: Which is?

Socrates: We do call her 'Pallas', I presume?

Hermogenes: Of course.

406e

Socrates: Well, those who believe that this name was given because of her dancing in armour, would, in my opinion, be correct in their belief, for to raise oneself up from the ground or to lift something else in one's hands is to shake (pallein) or be shaken (palleisthai), to dance or be danced.

407a

Hermogenes: Yes, certainly.

Socrates: Well, she is called Pallas because of this.

Hermogenes: And rightly so. But what about her other name?

Socrates: You mean Athena?

Hermogenes: Yes.

Socrates: This, my friend, is a weightier matter. The ancients seem to have thought about Athena in much the same way as experts on Homer do nowadays. Indeed, most such commentators say that he represents Athena as 'nous' or thought (dianoia), while the person who devised her name

seems to have thought about her in much the same way, but he spoke of her in even more elevated terms as the intellect (noesis) of God (theou). He seems to say that she is ‘a theonoea’, using the letter ‘a’ in place of ‘e’, as foreigners do, also omitting the ‘i’ and the ‘s’. But perhaps this was not the reason, and perhaps he called her ‘Theonoēn’ (divine apprehension) because she apprehends (noousēs) the divine (theia) better than the others. And we cannot rule out the possibility that, wishing to say that this god was the embodiment of intellect (ēthēi noēsin), he called her ‘Ēthonoēn’, but he himself, or others afterwards, made a change to make the name prettier and called her ‘Athēnaa’.

407c

Hermogenes: What do you say about Hephaestus?

Socrates: Are you asking about the noble ‘knower of light’ (phaeos histora)?

Hermogenes: Probably.

Socrates: Isn’t it obvious to everyone then that this god is Phaistos with the letter ‘e’ added on?

Hermogenes: Quite likely, unless some further suggestion occurs to you, as it probably will.

Socrates: Well, so that I don’t suggest it, ask me about Ares.

Hermogenes: I’m asking.

407d

Socrates: Well, if you like, he could be ‘Ares’ in respect of his vigour (arren) and courage (andreion), or again, if you prefer, because he is hard and unbending, in other words ‘tough’ (arraton). Accordingly, ‘Ares’ would be an entirely appropriate name to call the god of war.

Hermogenes: Very much so.

Socrates: But, by the gods, let's leave the gods aside as I have become afraid of discussing them. Question me about anything else you like "so that we may see how" the horses of Euthyphro behave.

407e

Hermogenes: Yes, I shall do so, yet I have one more request of you about Hermes, since Cratylus says that I am no Hermogenes (offspring of Hermes). So let's try to investigate Hermes and understand this name, so that we may decide if Cratylus has a point.

Socrates: Well then, this name, 'Hermes', seems to be concerned with speech, and he seems to be an interpreter (hermēnea), a messenger, a thief, deceptive in his arguments, and a dealer, and all such activity involves the power of speech. Now, as we said previously, to speak (eirein) is to use words, and Homer often uses the word 'emēsato' which means to contrive. So, from both these usages, the convention-setter imposed upon us this name for the god who contrived (emēsato) speaking, which is 'eirein', and speech, as if to say "people, it is only right that you should call the god who contrived (emēsato) speech (eirein), Eirmēs." But nowadays we beautify the name, or so we think, and call him 'Hermes'. And Iris too seems to be named after speech (eirein) because she is a messenger.

408b

Hermogenes: Well, by Zeus, in that case I think Cratylus did well to say that I am no Hermogenes (offspring of Hermes), since when it comes to contriving speech, I am not up to much.

Socrates: And it is also reasonable, my friend, that Pan, with his twofold nature, is the son of Hermes.

408c

Hermogenes: How so?

Socrates: You know that speech indicates all things and keeps them circulating and moving, and it is twofold, true and false.

Hermogenes: Certainly.

Socrates: Now, the true speech is smooth and divine, dwelling on high among the gods, while the false speech dwells down here among the broad mass of humanity, and it is coarse and tragic, for most of the stories and falsehoods are based here and concern the tragic life.

Hermogenes: Indeed so.

Socrates: So it is only right that the one who reveals and is constantly (aei) moving (polōn) everything (pan) would be Pan, the goatherd (aipolos), the two-fold son of Hermes, with his upper parts smooth and his lower parts coarse and goat-like (tragoeidēs). And Pan, if he is indeed the son of Hermes, is either speech or the brother of speech, and it is no surprise that brother resembles brother. But as I said let's get away from discussion of the gods.

408d

Hermogenes: Yes, if you wish, Socrates, of gods of this sort at any rate. But is there any reason not to explain those of another sort, such as sun, moon, and stars, earth, ether, air, fire and water and the seasons and the year?

408e

Socrates: Well, you are asking a lot of me. Nevertheless, since it will please you, I am willing.

Hermogenes: It would please me, indeed.

Socrates: Well then, what would you like to deal with first? Or should we deal with the sun, the first one you mentioned?

Hermogenes: Certainly.

409a

Socrates: Well, I think the answer would become more obvious if we were to use the Doric version of the name. For they call the sun (helios) ‘Halios’. Now, it could be called Halios because it gathers (holizein) human beings together whenever it rises, or because it is constantly revolving (aei heilein) about the earth, or it could be because it seems to be responsible for the variegation (poikillein) of whatever arises from the earth, and ‘poikillein’ (to variegate) and ‘aioilein’ have the same meaning.

Hermogenes: What about the moon (selēnē)?

Socrates: It looks as if this name puts Anaxagoras under some pressure.

Hermogenes: Why is that?

409b

Socrates: It seems to be pointing out that his recent pronouncement that the moon gets its light from the sun is of more ancient date.

Hermogenes: How so?

Socrates: Selas (brightness) and phōs (light) presumably have the same meaning.

Hermogenes: Yes.

Socrates: And if what Anaxagoras’ followers say is true, the light associated with the moon is presumably always both new (neon) and old (henon), for as the sun revolves about the moon, it constantly casts new (neon) light upon it, and there is also the old (henon) light of the previous month.

Hermogenes: Certainly.

Socrates: And many people call the moon ‘selanaia’.

Hermogenes: Indeed so.

Socrates: Because the moon always possesses new and old brightness, the most appropriate name by which to call it would be ‘selanoneoaeia’ (selon neon kai henon echei aei), but this is condensed down to ‘selanaia’.

409c

Hermogenes: Well, at least the name is poetic, Socrates, but what do you say about ‘month’ and ‘stars’?

Socrates: Month (mois) would correctly be called ‘meiēs’ from ‘meiousthai’ (to decrease). The stars (astra) seem to get their name from lightning (astrapēs), but because lightning turns our gaze upwards (anastrephei) it should be ‘anastrōpē’, which we call ‘astrapē’ nowadays to make it prettier.

Hermogenes: What about fire and water?

409d

Socrates: The word ‘pur’ (fire) perplexes me. Perhaps the Muse of Euthyphro has deserted me, or perhaps this word is just too difficult. Note the device I introduce in all situations like this where I am perplexed.

Hermogenes: Which is?

Socrates: I’ll tell you. Answer me this. Can you say how fire (pur) came to be so called?

Hermogenes: By Zeus, I cannot.

Socrates: Well, here is what I suspect; think about this. I notice that Greeks, especially those who live among non-Greeks, have adopted many names from them.

409e

Hermogenes: What of it?

Socrates: If someone were to investigate the reasonableness of these names by referring to the Greek language rather than the language from which they happen to derive, you know that they would be perplexed.

Hermogenes: Quite likely.

410a

Socrates: Look at this name ‘fire’ (pur), and decide whether or not it is non-Greek. Indeed, it is not easy to connect this word to the Greek language, and the Phrygians obviously use a slightly altered version, as they do also in the case of ‘water’ and ‘dog’ and many other names.

Hermogenes: Indeed so.

Socrates: Now, although something could be said about these words, we should not press this too far. So, on this basis, I am leaving ‘fire’ and ‘water’ aside. As for ‘air’ (aēr), Hermogenes, is it so called because it raises (airei) things up from the ground, or because it is always flowing (aei rei), or because wind arises when air flows? Indeed, the poets presumably refer to the winds as ‘blasts’ (aētai), so perhaps a poet says ‘blast-flow’ (aētorroun) as if he is saying ‘wind-flow’ (pneumatorroun). As for ‘ether’ (aithēr), my understanding is that it may rightly be called ‘aetheēr’ because it is always running (aei thei) and flowing (rei) about the air (aēr). Earth (gē) would better indicate its meaning if it were named ‘gaia’. Indeed, it would be correct to call ‘gaia’ a mother, as Homer does, for he uses ‘gegaasin’ to mean ‘to be born’ (gegenēsthai). Very well, what is next?

410c

Hermogenes: The seasons (hōrai), Socrates, and the two names for year, ‘eniautos’ and ‘etos’.

Socrates: If you wish to understand ‘the seasons’ (hōrai), the word should be spoken in the ancient Attic dialect as (horai), for they are seasons (horai) because they demarcate (horizein) winter and summer, the winds and the fruits of the earth. So they would rightly be called ‘horai’ because they demarcate (horizousai). The two words ‘eniautos’ and ‘etos’ for year are more than likely a single word. For that which leads whatever

grows or is born, in their turn, into the light, and scrutinises them within itself (en hautōi exetazei) is called 'eniautos' by some because this occurs in itself (en hautōi), and 'etos' by others because it scrutinises (etazei). This is just like the division of the name Zeus, as discussed previously, whom some call 'Zen', others 'Dia'. Although the account as a whole is 'that which scrutinises within itself' (en heautōi etazon), this single account, when spoken, is divided so that two names arise from the one account, 'eniautos' and 'etos'.

410e

Hermogenes: Well, Socrates, you are making great progress indeed.

Socrates: At this stage, I think I am apparently forging ahead in wisdom.

Hermogenes: Yes, certainly.

Socrates: You will say so even more in a moment.

411a

Hermogenes: Well, after this class of names I would gladly look at where precisely the correctness lies in the case of the noble names associated with excellence, such as 'wisdom' (phronēsis), 'comprehension' (sunesis) and 'justice' (dikaiosunē), and any others of that sort.

Socrates: Well, my friend you are stirring up a significant class of names. Nevertheless, since I have donned the lion's skin, I should not turn coward, but get on with the enquiry, it seems, into wisdom, comprehension, understanding and knowledge, and all those other noble names you speak of.

411b

Hermogenes: We certainly shouldn't quit before the job is done.

Socrates: And indeed, by the dog, I think that the intuition that occurred to me just now was not a bad one, and those ancient

personages who gave us these names were very much like most wise folk these days, who get dizzy because they perform so many about-turns in their search for the nature of things that are. And consequently, the actual things seem to them to be turning around and moving in every possible way. However, they do not blame this opinion upon their own internal condition. They believe, rather, that the actual things themselves are like this by nature, never stable or certain, constantly flowing and moving, always full of every sort of motion and change. This is what occurred to me in relation to all the names we are now considering.

411c

Hermogenes: How is that, Socrates?

Socrates: Perhaps you have not noticed the names just mentioned are applied as if the things named are moving, flowing, and changing in every way.

Hermogenes: No, that did not occur to me.

411d

Socrates: Well, to start with, the first one we mentioned is certainly named on the basis of such considerations as these.

Hermogenes: What name?

Socrates: ‘Wisdom’ (phronēsis) is intelligence (noēsis) of motion (phoras) and flow (rou). Or it may be interpreted as the advantage (onēsis) of motion (phoras), but in any case it is concerned with motion. Or, if you like, take ‘understanding’ (gnōme), which indicates enquiry (skepsis) and observation (nōmēsis) of generation (gonē), since ‘to enquire’ is the same as ‘to observe’. Or, if you prefer, the name ‘intelligence’ (noēsis) itself is the aspiration (hesis) for the new (neon), and the fact that things are new (neon) indicates that they are everchanging, and whoever gave us the name reveals this aspiration of the soul (neon hesis) to be neoesis (intelligence).

For *noēsis* was not originally so called; rather, two ‘e’s had to be spoken in place of the ‘ē’ to form ‘*noeesis*’. Sound-mindedness (*sōphrosunē*) is the preservation (*sōtēria*) of wisdom (*phronēsis*), which we have just looked at. And indeed, ‘knowledge’ (*epistēmē*) implies that the worthy soul follows (*hepei*) the moving things, without falling behind or running ahead, and so, having inserted an ‘e’, it should be called ‘*hepeistēmē*’. Accordingly, comprehension (*sunesis*), for its part, seems to be a sort of working out, for whenever someone is said ‘to comprehend’, it is really the same as being said ‘to know’, for ‘to comprehend’ means that the soul proceeds along with or goes along with (*sun iēmi*) things. Then again, ‘*sophia*’ (wisdom) indicates contact with motion.

412b

Socrates: The word is somewhat obscure and foreign, but we must remember that the poets often say of whatever proceeds quickly from its starting point that it rushes (*esuthē*). Indeed, one of the famous men of Sparta went by the name ‘*Sous*’ (rush), for that is what the Spartans call a rapid onslaught. So, ‘*sophia*’ indicates contact with this motion, as the motion of things that are. As for the word ‘good’ (*agathon*), this is supposed to apply to that which is admirable in all of nature. For since things that are in motion, some move rapidly while others move slowly. Now, not all that is fast is admirable, but part of it is admirable. So the designation ‘good’ (*agathon*) is given to the admirable (*agastos*) part of the fast (*thoos*).

412c

Socrates: Now, it is easy to conclude that justice (*dikaiosunē*) is the comprehension (*sunesis*) of what’s just (*dikaioi*), but the actual word ‘just’ (*dikaion*) presents a difficulty. For it seems, indeed, that most people agree up to a point but thereafter there is conflict. For those who believe that the universe is in motion assume that it is the sort of thing that can, for the most part, do nothing but provide space. But there is something

passing through all this on account of which everything that comes into being arises. This, they maintain, is extremely fast and subtle, for it would not be able to pass through everything without being repelled unless it was the subtlest, and so fast relative to the others that they appear to stand still.

412e

Socrates: Now, since it governs all the others by passing through (diaïon) them, it is correct to call it by this name, 'dikaion' (just), with the 'k' added for ease of pronunciation. So, up to this point, as I said just now, it is agreed by many people that this is what the just (dikaion) is. But I, Hermogenes, being persistent about this, have found out about all these matters in secret teachings; that this is what's just, and the cause, for the cause is that through which (di ho) anything arises, and someone stated that it is correct to call it Zeus (Dia) for that reason. But when, having heard this, I nevertheless ask gently, "If this is the case, my friend, what precisely is just?", they think, at that stage, that I am asking too many questions and going beyond all bounds. They tell me that I have done enough enquiring and then, wishing to satisfy me, they try a variety of arguments, but agree with one another no longer.

413b

Socrates: One says that the sun is the just, for this governs things by passing through (diaïonta) them and burning (kaonta) them. Yet, when I tell this to someone else, because I am delighted at hearing something so good, he laughs at me and asks if I believe there is no justice among us humans once the sun has set. So I persist, and ask him what he himself has to say, and he replies that the just is 'fire'. But this is not easy to understand. Another says that it is not the fire itself but the actual heat that is in the fire. But someone else says that all these suggestions are laughable, and that the just is what Anaxagoras says it is – namely, reason (nous). For reason, he says, is self-ruling, mixes with nothing, and orders all things as

it passes through everything. By then, my friend, I'm even more perplexed than I was when I set out to learn about the just and what precisely it is. In any case, the name appears to have been given for the reasons mentioned, and that's what our enquiry was about.

413d

Hermogenes: It seems to me, Socrates, that you have heard these suggestions from someone else and have not come up with them just now.

Socrates: What about the other names?

Hermogenes: You certainly did not hear those suggestions from someone else.

Socrates: Listen then, for perhaps I might actually mislead you into believing that the remaining suggestions are not something I have heard. So, what is left after justice? We have not yet dealt with courage. Now, it is obvious that injustice (adikia) is an impediment to that which passes through (diaion), whereas courage indicates that the name 'courage' is given in battle. Since what is flowing, a battle in what is would simply be the opposite flow, and if we omit the 'd' from the word 'andreia' (courage), the name 'anreia' (opposite flow) reveals this activity. Of course, courage is not a flow that is opposed to every other flow. It is, rather, opposed only to the flow that is contrary to what's just, otherwise courage would not be praiseworthy. And the words 'male' (arren) and 'man' (anēr) mean much the same as courage (andreia) in respect of upward flow (anō rhoē). It looks to me as if the word 'woman' (gunē) is intended to be 'birth' (gonē), while 'female' (thēlu) appears to be named from 'nipple' (thēlē), which in turn, Hermogenes, is so called because it makes things flourish (tethēlenai), like watered plants.

414a

Hermogenes: So it seems, Socrates.

Socrates: And, indeed, the word ‘flourish’ (thallein) itself seems to me to resemble the rapid sudden growth in the young. It is as if the name-giver has imitated this process in the name, which he forms by combining ‘to run’ (thein) and ‘to jump’ (hallesthai). But do you notice how I go off course once I come across smooth ground? And we do have many seemingly important matters left.

414b

Hermogenes: That’s true.

Socrates: One of which is to see what precisely the word ‘skill’ (technē) means.

Hermogenes: Very much so.

414c

Socrates: Doesn’t it indicate the possession (hexis) of reason (nous), once you remove the initial ‘t’ and insert an ‘o’ between the ‘ch’ and the ‘n’ and between the ‘n’ and the ‘ē’ to form ‘echonoē’?

Hermogenes: With some difficulty, Socrates.

Socrates: Heavens, don’t you know that the names that were originally given have, by now, been submerged by people who wish to make them more dramatic, attaching extra letters and taking them away for ease of pronunciation, twisting them this way and that, both to embellish them and because of the passage of time? Otherwise, don’t you think that the insertion of the letter ‘r’ into the word ‘katoptron’ (mirror) is unusual? I believe rather that this sort of thing is done by people who think nothing of the truth, but only of the shape of the mouth. And so they make lots of additions to the original names, finally making it impossible for anyone at all to understand what precisely the name means. So the Sphinx is called by that name rather than ‘phix’, and there are many other examples.

414d

Hermogenes: Yes, Socrates, that is how matters stand.

Socrates: Now, once anyone is allowed to add or delete whatever letters they wish from the names, the process becomes very easy, and any name may be associated with any activity.

414e

Hermogenes: That's true.

Socrates: True indeed, but I think you, a wise overseer, should protect measure and likelihood.

Hermogenes: I would like to do so.

415a

Socrates: And so would I, Hermogenes, but do not carry the verbal precision too far, blessed man, lest you “weaken my strength”. For I am approaching the summit that I spoke of, once, after ‘skill’, we have investigated ‘mechanism’. Indeed, ‘mechanism’ seems to me to indicate ‘extensive achievement’ (anein epi polu), for ‘mēkos’ (extent) somehow indicates the same thing as ‘epi polu’ (much). So, the word mechanism (mechanē) is composed of these two words, ‘anein’ (to accomplish) and ‘mēkos’ (extent) combined.

Socrates: But, as I said just now, we need to get to the summit of these deliberations, so we should investigate what the words ‘excellence’ and ‘badness’ actually mean. One of them is not yet clear to me, while the other seems to be obvious since it concurs with the previous examples. Indeed, since things are in motion, all that moves (ion) badly (kakōs) would constitute ‘badness’ (kakia). But when this happens in soul, and soul goes badly to things, this, for the most part, is what is generally called ‘badness’. But I think that what ‘going badly’ actually means is also clear from the word ‘cowardice’ (deilia), which we have overlooked and not yet dealt with, although we should have

dealt with it along with courage. I think we have also overlooked many others. Now, cowardice indicates a strong bond of the soul, for 'lian' (excess) is a sort of strength. So cowardice (deilia) would be the excessively great bond (desmos) of the soul, and it is bad, just as aporia (not proceeding) is bad, and so too, it seems, is anything that impedes movement and progress. So it appears that this 'going badly' is obviously a hindered and impeded motion, and any soul that possesses it becomes filled with badness. Now, if the name 'badness' is applied to this sort of thing, then excellence (aretē) would be the opposite of this, indicating, in the first place, 'proceeding easily' (euporia), and secondly that the flow of the good soul is always free. And so the unchecked and unimpeded flow has taken this name, it seems, but this name should really be 'aeireitēn' (ever flowing), but it has been condensed down and is called 'aretē'. Now, perhaps you may say that I am making this up, but I maintain that if what I said previously about badness is correct, then this suggestion about the name 'excellence' is correct too.

416a

Hermogenes: What then about the word 'bad', which was the basis of much of what you said previously? What does that word mean?

Socrates: I think, by Zeus, this word is somewhat strange and hard to understand, so in this case too I shall use that approach of mine.

Hermogenes: What approach?

Socrates: The approach whereby I declare that this word too is of non-Greek origin.

Hermogenes: Yes, you're probably right. So let's leave these words and try to look at 'noble' (kalon) and 'base' (aischron) and their reasonableness.

416b

Socrates: Well, what ‘base’ means seems quite obvious to me, and indeed this concurs with previous examples. For to me it looks as if whoever gave us the names is consistently censuring whatever impedes or restrains things in their flow. So, in this case, he has given this name ‘aischoroun’ to that which always (aei) restricts (ischei) the flow (roun), but nowadays it is condensed down and called ‘aischron’ (base).

Hermogenes: What about ‘beautiful’ (kalon)?

Socrates: This is more difficult to understand. Yet it does speak for itself, except that the letter ‘ō’ has been altered in accent and length.

Hermogenes: How so?

Socrates: This name seems to designate ‘thought’.

Hermogenes: How do you mean?

416c

Socrates: Come on, what do you think is responsible for calling by name each of the things that are? Is it not that which gave the names?

Hermogenes: Entirely so.

Socrates: And this would be thought, would it not, either of gods or of humans or both?

Hermogenes: Yes.

Socrates: And is not that which called things by name the same as that which calls them now, namely thought?

Hermogenes: Apparently.

Socrates: Isn’t it also the case that whatever nous and thought bring about is praiseworthy, while anything they do not bring about is blameworthy?

Hermogenes: Certainly.

416d

Socrates: Does the practice of medicine bring about medical accomplishments, and the practice of carpentry the accomplishments of carpentry? What do you say?

Hermogenes: I think that this is so.

Socrates: Then, does the practice of naming (to kaloun) bring about beautiful accomplishments?

Hermogenes: Yes, it must.

Socrates: And, according to us, thought (dianoia) is that which names?

Hermogenes: Certainly.

Socrates: So, this designation 'beautiful' (kalon) is, correctly, the name for wisdom (phronēseōs), which brings about the sort of accomplishments which we describe as beautiful, and which we welcome.

Hermogenes: Apparently.

416e

Socrates: Now, what names of this sort are still left?

417a

Hermogenes: Those that are related to the good and noble, such as 'beneficial', 'profitable', 'useful' and 'advantageous', and their opposites.

Socrates: Well, at this stage, I think you should be able to work out the word 'beneficial' for yourself, for it appears to be closely related to knowledge. Indeed, it is simply indicating the movement of the soul along with things, and whatever is enacted by such movement has, it seems, been called 'beneficial' and 'a benefit' (sumphora) because it moves (pheresthai) about (peri) with (sum) (summeripheresthai) things. The word

‘advantageous’ (kerdaleon) comes from ‘kerdos’ (gain), and restoring the ‘n’ instead of the ‘d’ in the word ‘kerdos’ to form ‘kernos’ reveals what it means, for it is ‘the good’, but in a different form. Indeed, because the good mingles with (kerannutai) and passes through everything, it was given a name (kernos) expressing this power, but a ‘d’ was inserted in place of the ‘n’ and it was spoken as ‘kerdos’ (gain).

417b

Hermogenes: What about ‘profitable’ (lusitelon)?

Socrates: It seems, Hermogenes, the name-giver does not use this word as traders do when their investment is released. I don’t think that this is what he means by profitable. Rather, because the good is the swiftest of all, it does not allow things to stand still, nor allow motion to come to an end, stop or pause. It continually sets the motion free, if there is any attempt to bring it to an end, and thus renders the motion unceasing and undying. It is in this sense, I think, that the good is declared to be profitable, for that which releases (luon) the end (telos) of motion is called ‘lusiteloun’ (profitable). ‘Beneficial’ (ōphelimon) is a foreign word which is often used by Homer in the form ‘ophellein’, and this designates ‘increasing’ or ‘making’.

417d

Hermogenes: What have we to say about the opposites of these?

Socrates: Those that are simple negations of these words do not, in my opinion, require an explanation.

Hermogenes: What are those?

Socrates: ‘Unbeneficial’, ‘useless’, ‘unprofitable’ and ‘disadvantageous’.

Hermogenes: That’s true.

Socrates: But ‘harmful’ and ‘hurtful’ do require an explanation.

Hermogenes: Yes.

Socrates: Well, ‘harmful’ (blaberon) means that which harms (blapton) the flow (roun), while ‘harm’ (blapton), for its part, indicates wanting (boulomenon) to grasp (haptein), and ‘to grasp’ is actually the same as ‘to bind’, which the name-giver consistently censures. Now, that which wishes (boulomenon) to grasp (haptein) the flow (roun) would most correctly be ‘boulapteroun’, but it looks to me as if this has been called ‘blaberon’ to make it sound nicer.

Hermogenes: Socrates, what elaborate names you come up with! In fact, you seemed to me to be using your mouth just now as a flute to render the prelude to the hymn of Athena as you pronounced ‘boulapteroun’.

418a

Socrates: Those who gave us the name are responsible for this, Hermogenes, not I.

Hermogenes: That’s true, but what about ‘hurtful’? What would this be?

Socrates: Yes, ‘hurtful’, what precisely would that be? Observe, Hermogenes, how true my statement was when I said that by adding and removing letters people significantly alter the intentions of words, so that by making very minor alterations they sometimes make words indicate their direct opposites. Take for instance the word ‘deon’ (obligation).

418b

Socrates: Indeed, I had this in mind just now, and I was reminded of it by what I was just about to say to you. Our lovely modern language has actually distorted the words ‘deon’ (obligation) and ‘zēmiōdes’ (harmful) to indicate their direct opposites, thus concealing what the word intends, whereas the ancient language reveals what both words intend.

Hermogenes: How so?

Socrates: I'll tell you. You know that our ancestors made much use of the letters 'i' and 'd', especially the women, who are most protective of the ancient language. But nowadays people turn 'i' and the 'e' into 'ē', and the 'd' into 'z', as these give a loftier sound.

418c

Hermogenes: How so?

Socrates: For example, people nowadays call 'day' 'hēmera', whereas ancient speakers called it 'himera' in some cases, and 'hemera' in others.

Hermogenes: Quite so.

Socrates: Now, are you aware that only the ancient name reveals the thinking of the name-giver? For when, from darkness, light has arisen, people are glad and they long (himeirousin) for this, and so they call it 'himera'.

418d

Hermogenes: Apparently so.

Socrates: But nowadays the name is so dramatised that you would not understand what this word means. In fact, some people think that day (hēmera) makes things gentle (hēmera) and has this name for this reason.

Hermogenes: I believe so.

Socrates: And you also realise that the people of old called a yoke 'duogon' rather than 'zugon'.

Hermogenes: Certainly.

418e

Socrates: And although the word 'zugon' reveals nothing, that which binds a pair together for the purposes of drawing something is correctly given the name 'duogon'. But now it is

just 'zugon'. Indeed, there are very many more instances of this.

Hermogenes: Apparently.

Socrates: In the same way, the word 'deon' (obligation), thus spoken, indicates initially the direct opposite of all the other words associated with the good. For although obligation is a form of good, it appears to be a shackle or an impediment to motion as if it is actually akin to harm.

Hermogenes: Very much so, Socrates, it does appear that way.

419a

Socrates: Not if you make use of the ancient name, which is much more likely to be correct than the modern one. In fact, it will be in agreement with our previous words for good if, in place of the 'e', you restore the 'i', as in the ancient word. For the word 'diion' (going through) indicates the good that the name-giver praises, whereas 'deon' (shackle) does not. Accordingly, whoever gave us the names does not contradict himself, and 'obligation', 'useful', 'profitable', 'advantageous', 'good', 'beneficial' and 'easy' all appear the same. They are indicating, with different names, that which brings order and that which moves, which is consistently praised, while that which restricts and binds is censured. And indeed, in the case of 'harmful' (zēmiōdes), if you restore the 'd' in place of the 'z', as in the ancient word, it will be evident that this name (dēmiōdes) applies to that which binds (dounti) motion (ion).

419b

Hermogenes: What about 'pleasure' and 'pain' and 'desire' and names of that sort, Socrates?

Socrates: These don't look particularly difficult, Hermogenes. For pleasure (hēdonē) has this name because it is the activity that tends to our advantage (hē onēsis), but a 'd' is inserted so that it is called 'hēdonē' (pleasure) rather than 'hēonē'. Pain (lupē) seems to get its name from the breakdown (dialusis)

which the body undergoes when experiencing pain.

419c

Socrates: ‘Grief’ (ania) is that which impedes motion (ienai). ‘Suffering’ (algēdōn) looks to me like a foreign word which comes from the word ‘grieving’ (algeinos). ‘Distress’ (odunē) seems to be so called from the entering in (endusis) of pain. In the case of ‘vexation’ (achthēdōn), it is evident to all that the word bears a resemblance to a weight (achtos or baros) imposed upon motion. ‘Joy’ (chara) seems to have been so called from the relaxed and easy motion of the soul. The word ‘delight’ comes from ‘delightful’ (terpnon), which is so called from the gradual motion (herpsis) of the soul, which resembles breath (pnoē) and is rightly called ‘herpnoun’, but over time this has been called ‘terpnon’. The word ‘euphrosunē’ (cheerfulness) requires no further explanation since it is obvious to all that this name derives from the good disposition (eu sumpheresthai) of the soul towards things. Although the right name is ‘euphrosunē’, we call it ‘euphrosunē’ (cheerfulness).

419d

Socrates: ‘Desire’ (epithumia) presents no difficulty either, for this name was obviously given to the power that enters into (epi) the heart (thumos), while ‘thumos’ would get this name from the raging (thusis) and seething (zesis) of the soul. The name ‘himeros’ (longing) is given to the flow (rous) which draws the soul most of all, for it rushes (hiemenos) forth (rhei) and is sent towards (ephiemenos) things, and in so doing it draws the soul forcibly due to the intent of the flow, and because of all this power it is called ‘himeros’ (longing). Now, ‘yearning’ (pothos) indicates that it is not a desire or flow for that which is present, but for that which is elsewhere (allothi pou ontos) or absent (apontos), and so it is then called ‘pothos’ (yearning). So, when someone desires that which is present, this is called ‘longing’, but the same desire is called ‘yearning’ (pothos) when it is for that which is not present.

420b

Socrates: ‘Love’ (erōs) has this name because it flows in from outside, and the flow itself is not native to the person who has it, but is brought in from outside through the eyes. That is why in ancient times it was called ‘esros’ (influx), from the inflowing (esrein), for we used the short ‘o’ then rather than a long ‘ō’, but nowadays it is called ‘erōs’ because of the substitution of these letters. Are there any other names you think we should consider?

Hermogenes: What about ‘opinion’ and words of that sort? How do these appear to you?

Socrates: ‘Opinion’ (doxa) is either named after the pursuit (diōxis) in which the soul engages when pursuing the knowledge of how things are, or, as is more likely, the shooting (bolē) of the bow (toxon). At any rate, the word ‘thought’ (oiēsis) concurs with this word, for this seems to be pointing to the motion (oisis) of the soul towards all things, as each of the things that are, actually is. Similarly, ‘deliberation’ (boulē) is somehow ‘shooting’ (bolē), while ‘wishing’ (boulesthai) indicates being sent towards (ephiesthai) something, as does ‘deliberating’ (bouleuesthai). All these words appear to follow from ‘opinion’ (doxa) and to bear a resemblance to ‘shooting’ (bolē), as do their opposites. And so ‘lack of deliberation’ (aboulia) seems to be ‘missing the mark’ (atuchia), as if someone failed to shoot or hit whatever was meant, intended or desired.

420d

Hermogenes: At this stage, Socrates, you seem to be quickening the pace.

Socrates: Yes, because the end is now in sight. But I would still like to explain ‘compulsory’ and ‘willing’ because these come next. Now ‘willing’ (hekousion), by this name, would be indicating that which yields and does not resist, but, as I say, is yielding to motion (eikon toi ionti) that accords with our will.

On the other hand, that which is compulsory and which resists, being contrary to our will, would be associated with error and ignorance and would be like proceeding through a ravine (agkē) which is hard to traverse, rough and overgrown, so that it impedes motion. Accordingly, it may have been called ‘compulsory’ (anagkaion), because it is like a journey through a ravine (agkē). So, as long as the strength is still available to us, let’s keep using it, and you should not give up your questioning.

421a

Hermogenes: I’ll ask then about the most important and exalted words, ‘truth’, ‘falsehood’ and ‘being’, and ‘name’, the very word with which our present argument is concerned, and why it has this name.

Socrates: Do you use the word ‘maiesthai’?

Hermogenes: I do, it means ‘to enquire’.

Socrates: Well, ‘name’ seems to be a combined word, coming from a phrase that says that “this is being which is the subject of enquiry”. You would recognise this better from the adjective ‘named’ (onomaston), for in that case the word clearly says that this is being (on) about which (hou) there is enquiry (masma). The word ‘truth’ is like the others, for the divine motion of being seems to be referred to by the word ‘truth’ (alētheia), which indicates ‘divine wandering’ (theia alē). ‘Falsehood’ (pseudos) is the opposite of motion, for once again that which is restrained and compelled to be still is censured and likened to people who are asleep (katheudos), but the insertion of the ‘ps’ hides the intention of the name.

421b

Socrates: ‘Being’ (on) and ‘existence’ (ousia) are in agreement with ‘truth’ (alēthes), but the letter ‘i’ has been removed, for ‘being’ (on) indicates ‘moving’ (ion) and ‘not being’ (ouk on) indicates ‘not moving’ (ouk ion), and that indeed is what some

people call it.

421c

Hermogenes: I think, Socrates, that you have split these words apart most courageously, but what if someone were to ask you about this word ‘ion’ (moving) and also ‘rheon’ (flowing) and ‘doun’ (binding), and the correctness of these names?

Socrates: What answer would we give? Is that what you mean?

Hermogenes: Very much so.

Socrates: Well, we adopted one approach to answering such a question earlier, and it seemed to make sense.

Hermogenes: What approach?

421d

Socrates: Saying that any word we do not recognise must be of non-Greek origin. Now it may well be true that some of these words are indeed of this sort, but on the other hand it could also be the case that our first words are so old they are undiscovered. Indeed, because words are distorted in all sorts of ways, it would be no surprise if our ancient language did not differ at all from the modern foreign tongue.

Hermogenes: Yes, that’s a reasonable suggestion.

Socrates: Yes, quite likely. However, “once the game is on, no excuses are accepted”, so we should press on eagerly with our enquiry. But we should reflect that if someone repeatedly asks what a name is composed of, and then goes on to ask what the components themselves are composed of, and keeps on doing this without stopping, won’t the person who has to answer eventually be forced to give up?

421e

Hermogenes: I think so.

422a

Socrates: So, when would it be right to give up and stop? Would it not be when we arrive at those names that are like elements of the other words and names? For if they are indeed elements, it is presumably no longer right to suppose they are constituted from other names. For example, we said just now that ‘agathon’ (good) was a combination of ‘agastos’ (admirable) and ‘thoos’ (fast). And we might say that ‘thoos’ is, in turn, composed of some other words. But if we ever get to a word that is not composed of other words, we would be right to maintain at that stage that this word is already an element, and we should no longer refer this back to other words.

422b

Hermogenes: Yes, I think you’re right.

Socrates: So is it perhaps the case that those very names you are asking about are elements, and it is therefore necessary to consider where the correctness lies by some other means?

Hermogenes: Quite likely.

422c

Socrates: Likely indeed, Hermogenes. At any rate, all our previous names appear to have been broken down into these elements. And if this is the case, as I think it is, then please continue the joint investigation along with me, in case I start talking nonsense as I explain the correctness of the first names.

Hermogenes: Speak on and I shall join you in the enquiry to the best of my ability.

Socrates: I think you agree with me that there is but one kind of correctness belonging to any name, first or subsequent, and that names do not differ in being names.

Hermogenes: Very much so.

422d

Socrates: But at least in the case of the names we have gone through, the correctness consisted, more or less, in the

intention to show what some particular thing is like.

Hermogenes: Of course.

Socrates: And this must be the case for the first names and for the subsequent names too, if they are indeed to be names.

Hermogenes: Certainly.

Socrates: But the subsequent names, it seems, were able to accomplish this through the first ones.

Hermogenes: Apparently.

Socrates: Well then, in the case of the first names which are no longer based upon other names, if they are to be names, how can they, as best they can, make things as apparent to us as possible? Answer this question for me. If we had neither voice nor tongue, but we wished to indicate things to one another, would we not act like people who cannot speak and try to make signs with our hands and head and the rest of our body?

422e

Hermogenes: What else could we do, Socrates?

423a

Socrates: So, if we wished to indicate something above or light, I think we might raise a hand to the heavens indicating the nature of that thing; and in the case of something below or heavy, we might gesture towards the earth. If we wished to indicate a running horse or some other animal, I am sure we would make our bodies and our behaviour resemble theirs as much as we possibly could.

Hermogenes: Yes, I think this must be so.

Socrates: For this, I believe, is how any indication of anything would arise. It would, it seems, occur by bodily imitation of whatever we wish to indicate.

423b

Hermogenes: Yes.

Socrates: But when we wish to give an indication with our voice, tongue and mouth, won't something that emerges from these be an indication of the thing for us, once an indication of anything has been produced by means of these three?

Hermogenes: That seems necessary to me.

Socrates: So a name, it seems, is an imitation, by voice, of that which is imitated, and whoever is imitating with the voice is naming whatever is being imitated.

Hermogenes: I think so.

423c

Socrates: But, by Zeus, my friend, I don't think I am yet expressing this correctly.

Hermogenes: Why not?

Socrates: Because we could be forced to accept that those who imitate sheep and cocks and other animals are naming whatever creatures they are imitating.

Hermogenes: That's true.

Socrates: Now, do you think it is correct to accept this?

Hermogenes: No, I do not. But, Socrates, what sort of an imitation would a name be?

423d

Socrates: Well, firstly, when imitating things just as we do when using music, I don't think we are imitating them by using names, even though we are in that case imitating them by using our voice. Secondly, when we imitate the things that music imitates, I don't think we are naming them. What I am saying is this. Does each thing have sound and shape, and in many cases, colour too?

Hermogenes: Certainly.

Socrates: Well, no skill in naming seems to be involved in imitating these properties. In fact, the relevant skill for these is either music or painting. Is this so?

Hermogenes: Yes.

423e

Socrates: What about this, then? Does it not seem to you that each thing also has an essence, just as it has colour and the other properties we just mentioned? Firstly, in the case of colour and sound, is there not an essence of each, and also of anything else to which being may properly be attributed?

Hermogenes: I think so.

Socrates: Well then, if someone were able to imitate this very essence belonging to each thing by means of letters and syllables, wouldn't he be indicating what each thing is? Isn't this so?

424a

Hermogenes: It certainly is.

Socrates: And what about the person who is able to do this? What would you say this person is, just as you said the previous two were the musician and the painter?

Hermogenes: I think, Socrates, that this is the very person we have been looking for all along, the namer.

Socrates: So, if this is true, we should, it seems, enquire at this stage into those names you asked about, 'flow' (rhoē), 'going' (ienai), 'holding' (schesis), and whether or not the namer grasps the being of these by means of the letters and syllables, so as to imitate the essence.

424b

Hermogenes: Yes, certainly.

Socrates: Come on then, let's see whether these are the only first names or whether there are many others too.

Hermogenes: Well, I think that there are others.

Socrates: Quite likely. But what would be the manner of division from which the imitator sets about imitating? Or, since the imitation of the essence happens to consist of syllables and letters, would it not be most correct to divide off the elements first, just as those who deal with rhythms first separate off the powers of the elements, then the powers of the syllables, and only at that stage do they investigate the rhythms?

424c

Hermogenes: Yes.

Socrates: Accordingly, should we too first separate off the vowels, then, on the basis of their different kinds, the consonants and the mutes, as the experts on these matters presumably call them?

Socrates: Should we also do the same for those that are neither vowels nor mutes, and for the vowels themselves that differ in kind from one another? Once we have properly separated these off, we should proceed to give names to everything that needs to be named, provided there are names to which they are all referred back, just as words are referred back to letters. From these names it is possible to look at the things and see where these come from, and whether there are kinds among the things in the same way that there are among the letters.

424d

Socrates: Once we have examined all these aright, we shall know how to apply each letter based upon likeness, whether one letter should be applied to one thing, or many should be combined. In this we are like painters, who, wishing to create a likeness, sometimes apply purple just by itself, sometimes some other pigment, and on occasion they mix many pigments – as when, for instance, they wish to produce a flesh-coloured pigment or something of that sort, presumably applying the

particular pigment that the relevant image seems to require.

424e

Socrates: We too shall apply the letters to the things in this way, one letter to one thing when that's what seems to be required, or combining many letters to form what are called syllables, or indeed combining syllables to form nouns and verbs. Or again, we might construct a great and noble whole from the nouns and verbs, forming a sentence by means of the skill of naming or rhetoric, or whatever the skill may be, just as in the other example we constructed the animal by means of artistic skill. Of course, I am not speaking of ourselves; I got carried away by the argument. The ancients combined the letters in the way in which they are now combined, while we, for our part, if we are to arrive at a systematic understanding of all this, should, once the words have been divided in this way, see whether or not the first names and the subsequent ones too are correctly assigned.

425b

Socrates: Otherwise, my dear Hermogenes, the connection of words to things will be poor and unsystematic.

Hermogenes: By Zeus, Socrates, you may well be right.

Socrates: What about this? Do you believe that you could divide these words in this way yourself? I know I could not.

Hermogenes: In that case, I certainly couldn't do it.

Socrates: So, should we leave it at that, or would you prefer that we do the best we can, make an effort, and see if we can get even a little insight into these matters? Earlier we announced to the gods that we knew nothing of the truth and were really presenting the opinions of us humans about them. Should we do the same thing now and proceed by telling ourselves that if we, or anyone else at all, are to divide these words, they should be divided as we have described, while we now need to apply

ourselves to these matters to the best of our so-called ability? Do you agree, or what do you say?

425c

Hermogenes: I couldn't agree more, Socrates.

425d

Socrates: Although it may appear absurd, Hermogenes, that things become manifest by being imitated with letters and syllables, this must nevertheless be so. For we do not have any better principle upon which we may base the truth of the first names, unless you would prefer the method adopted by tragedians when they get into difficulties and use stage machinery to introduce the gods. We could act similarly and solve our problem by saying that the gods gave us the first names, and they are correct for this reason. So, is this the best argument we have? Or is our argument that we have acquired these names from some non-Greek peoples, and non-Greeks are more ancient peoples than ourselves? Or is it impossible to investigate these words because they are so ancient, and does the same hold for the foreign words?

426a

Socrates: Indeed, these would all be very elegant evasions by someone who was unwilling to present an argument as to where the correctness of the first names lies. And it is presumably impossible for someone, who for whatever reason knows nothing about the correctness of the first names, to know about the subsequent names which are explained by first names which he knows nothing about. It is obvious, rather, that anyone who claims to be knowledgeable about the subsequent names, must first and foremost be able to explain the first names, or rest assured he will already be talking nonsense about the subsequent ones. Do you disagree?

426b

Hermogenes: Not at all, Socrates.

Socrates: Well, any observations of mine about the first names really seem presumptuous and absurd. Now, although I am prepared to share them with you, if you wish, you should also make an effort to share with me if you have anything better.

Hermogenes: I shall do so, but you should take courage and speak on.

426c

Socrates: Well, in the first place, the letter 'r' appears to me like an instrument of all motion, although we have not explained why 'motion' (kinēsis) has this name. Now 'kinēsis' (motion) should obviously be 'hesis' (going toward), for in ancient times we did not use the letter 'ē' but the letter 'e'. And this word 'kinēsis' (motion) starts with 'kiein', a foreign word that means 'to go'. So we would find that the ancient word corresponding to the modern word would more correctly be 'hesis'. But nowadays, from the foreign word 'kiein' and from the change of 'e' to 'ē' and the insertion of 'n', it has been called 'kinēsis', although the word should be 'kieinēsis'. The word rest (stasis) means the negation of motion, but to make it sound nicer, it has been called 'stasis'. The letter 'r', as I was saying, seemed to the name-giver to be a good instrument of motion for the purposes of imitating movement, and he often uses it accordingly. Firstly, in the words flowing (rhein) and flow (rhoē), themselves, he imitates their movement by means of this letter. Then, in the word 'tromos' (trembling), 'trechein' (running) and in such verbs as 'krouein' (striking), 'thrauein' (breaking), 'ereikein' (tearing), 'thruptein' (crushing), 'kermatizein' (crumbling), 'rhumbein' (whirling), he gives expression to all these, for the most part, by means of the letter 'r'. For I think he observed that with this letter, the tongue is least at rest and most agitated, which seems to be the reason why he used this letter for these words. Again, he uses the letter 'i' for everything subtle that passes through all things. That is why he imitates 'ienai' (going)

and 'hiesthai' (rushing) by the letter 'i', just as he uses 'ph' and 'ps' and 's' and 'z', which involve a lot of breath, to imitate everything of this sort, in words such as 'psuchron' (cold), 'zeon' (boiling), 'seiesthai' (shaking) and 'seismos' (shock). Indeed, the giver of names, whenever he imitates anything that involves wind, always appears to introduce letters of this sort. Then again, it looks as if he regarded the force of the compression and pressure of the tongue associated with 'd' and 't' as useful for imitating 'binding' (desmos) and 'stopping' (stasis). Noticing that the tongue glides most of all in pronouncing 'l', he imitated this in the words 'leia' (smooth), in the word 'gliding' (olisthanein) itself, and the words 'liparon' (sleek) and 'kollōdes' (viscous), and various other words like these. By the force of the letter 'g', which opposes the gliding of the tongue, he imitated 'glischros' (sticky), 'glukus' (sweet) and 'gloiōdes' (glutinous).

427c

Socrates: Again, observing that the letter 'n' is sounded within, he gave us the words 'endon' (inside) and 'entos' (within), producing a likeness to these by means of the letters, and again he used 'a' for the word 'mega' (large) and 'ē' for 'mēkos' (length) because these letters are long. Because he needed the letter 'o' to indicate roundness, he mixed a lot of this letter into the word 'gongulos' (round). In this way, the convention-setter, it appears, made the other letters into resemblances, making an indication or a name for each of the things that are with letters and syllables, and from these he then compounded the rest of the names by a process of imitation using these names. This, as I see it, Hermogenes, is what it means for names to be correct, unless Cratylus has an alternative suggestion.

427d

Hermogenes: Well, Socrates, as I said at the outset, Cratylus often bothers me quite a lot, maintaining that there is a correctness of names without clarifying what it is, and so I'm unable to decide whether his lack of clarity when speaking

about them is intentional or unintentional. So, Cratylus, tell me now, with Socrates present, if you accept what he says about names or do you have something better to offer? And if you have, do please tell us so that you may either learn from Socrates, or else instruct both of us.

427e

Cratylus: What's this Hermogenes? Do you think it is easy to learn any subject so quickly, or to teach it either, especially a subject like this which seems to be one of the most important?

428a

Hermogenes: By Zeus, I do not. But I think that Hesiod put it well when he said that “even a little added to a little is worthwhile”. So if you are able to make even a little progress, please make the effort and be kind to Socrates, as you should, and to me too.

Socrates: What is more, Cratylus, I myself would not be insistent upon anything I have said. I have only expressed what occurred to me in the enquiry with Hermogenes, and so you should take heart, and if you have something better to suggest then rest assured I shall accept it. In fact, I would not be surprised if you had a better suggestion. I believe you have investigated such matters yourself and have learned from others too. Indeed, if you do have a better suggestion, please enrol me too as one of your pupils in the subject of the correctness of names.

428b

Cratylus: Well, Socrates, as you say, I certainly have studied these matters, and I might well make a student of you. But I fear that the exact opposite is the case, and it occurs to me to address you as Achilles addressed Ajax in the Prayers, where he says: ^{428c} Son of Telamon, seed of Zeus, Aias, lord of the people: ^{428c} all that you have said seems spoken after my own mind. Indeed, Socrates, you seem to be delivering prophetic

utterances that are more or less after my own mind, whether you have been inspired by Euthyphro or some other Muse who has long dwelt unnoticed within you.

428d

Socrates: My dear Cratylus, I myself have long been amazed at my own wisdom, and doubtful of it too. So I think it is necessary to reconsider anything I have said. Indeed, the most grievous deception of all is self-deception. For when the deceiver is never far away but is everpresent, what could be more terrible? We should then, it seems, constantly revisit what has been said previously, and attempt, as the poet says, “to look forwards and backwards simultaneously”. And so we should now look at what we ourselves have said.

428e

Socrates: We maintain that the correctness of a name consists in the fact that it indicates the sort of thing it names. Should we declare that this is an adequate statement?

Cratylus: Very much so, Socrates, in my opinion.

Socrates: So names are spoken for the purposes of instruction?

Cratylus: Certainly.

Socrates: And should we say that this is a skill and that there are exponents of this skill?

Cratylus: Certainly.

Socrates: Who are they?

429a

Cratylus: The very people you spoke of at the outset – the convention-setters.

Socrates: Now, does this skill arise in people in the same way as the other skills, or does it not? What I mean to ask is, in the case of painters, some are better while others are worse, are they not?

Cratylus: Of course.

Socrates: Don't the better painters produce better works of art while the others produce inferior works? And doesn't the same hold for builders; some construct fine houses, others poorer ones?

Cratylus: Yes.

429b

Socrates: Now, do some convention-setters produce fine products, others inferior products?

Cratylus: No, I don't think this is still the case here.

Socrates: So you don't think that some conventions are better, while others are inferior?

Cratylus: Indeed not.

Socrates: Neither then do you accept, it seems, that one name is worse while another is better?

Cratylus: Indeed not.

Socrates: So all names are given correctly?

Cratylus: Well, those that are, really are names, at any rate.

429c

Socrates: What about the question that was asked earlier about our friend Hermogenes here? Is this not his name, unless he happens to have been born of Hermes, or does he have that name although it is incorrect?

Cratylus: In my opinion, Socrates, he does not have that name, although it seems that he has. This name belongs to someone else who possesses the appropriate nature.

Socrates: When someone says that this is Hermogenes, is he not even lying? Indeed, could there even be a statement that "this is Hermogenes" if he is not Hermogenes?

Cratylus: How do you mean?

429d

Socrates: Is it totally impossible to speak falsehood? Is this the point of your argument? For there are lots of people, nowadays and of old, who say this, my dear Cratylus.

Cratylus: Indeed so, Socrates. How could anyone, saying whatever is said, not speak what is? But to speak falsehood is not to speak what is. Is this not the case?

429e

Socrates: Your argument is too clever for me at my age, my friend. Nevertheless, answer me this. Do you think it is impossible to speak falsehood but possible to state it?

Hermogenes: No, I don't think it is possible to state it either.

Socrates: Is it possible, then, to say or declare it? For instance, if someone who met you abroad were to take you by the hand and say, "Greetings stranger from Athens, Hermogenes, son of Smikrion", would that person be speaking all this, or stating it, or saying it, or declaring it to Hermogenes here and not to you, or to nobody?

Cratylus: In my opinion, Socrates, the person would be uttering all this at random.

430a

Socrates: A welcome response indeed. Now, would whatever is uttered be true or false, or would some of it be true, some of it false? A response to this would suffice.

Cratylus: As I see it, such a person is making noises, acting in vain, like someone banging a brass pot.

Socrates: Well, let's see if we can somehow come to an agreement, Cratylus. Would you maintain that the name is one thing, while that of which it is the name is something else?

Cratylus: I would.

430b

Socrates: Would you agree that the name is an imitation of the thing?

Cratylus: Most emphatically.

Socrates: Wouldn't you also say that paintings, in a different way, are also imitations of certain things?

Cratylus: Yes.

Socrates: Bear with me then, for I may well be misunderstanding what you are saying, although you may perhaps be right. Is it possible to allocate or apply both these imitations, the paintings and those names, to the things of which they are imitations?

430c

Cratylus: It is.

Socrates: Consider this question first. Is it possible to assign the image of a man to a man, and that of a woman to a woman, and so on?

Cratylus: Certainly.

Socrates: Isn't it also possible to do the opposite and assign the image of the man to the woman, and that of the woman to the man?

Cratylus: Indeed so.

Socrates: And are both these allocations correct, or only the first?

Cratylus: Only the first.

Socrates: The one that presumably assigns to each the image that is appropriate to it, or is like it.

Cratylus: I think so.

430d

Socrates: Well, since you and I are friends, to avoid a dispute over words I'll explain what I mean. I call the first example of both imitations, with paintings or with names, correct, my friend, while in the case of names I call it both correct and true. In the second example, I call the unlike assignment and application incorrect, and I call it false too when it involves names.

430e

Cratylus: That may well be so, Socrates, in the case of paintings but not in the case of names; they are always of necessity correctly assigned.

Socrates: How do you mean? What's the difference between the two? Is it not possible for me to meet a man, say to him, "This is your portrait", and show him what happens to be his own image, or what happens to be that of a woman? And by 'show' I mean bring to his visual awareness.

Cratylus: Certainly.

Socrates: Why, then, is it not possible for me to meet the same man once more and say, "This is your name"? The name is also presumably an image, as is the painting. So my question is, why can't I say to him, "This is your name", and after this, again, bring before his sense of hearing what happens to be his own image and say 'man', and then an image of what happens to be a female human being, and say 'woman'? Don't you think this is possible, and sometimes happens?

431a

Cratylus: I am prepared to agree with you, Socrates. Let it be so.

Socrates: You are doing well, my friend, if this is indeed so, for there is no longer any need to argue over this. If there is an allocation of this sort, in this case too we might wish to call the first of these examples 'speaking the truth', and the second 'speaking falsehood'.

431b

Socrates: But if this is how matters stand and it is possible to allocate names incorrectly, or not assign appropriate names to each object, or sometimes assign inappropriate names, then the same argument would apply also to verbs. And if verbs and nouns can be applied in this way, the same must hold for sentences, since sentences are, I presume, a combination of these two. What do you say, Cratylus?

431c

Cratylus: Just that. I think you are right.

Socrates: Now if we liken the first names to sketches, then it is possible, as in paintings, to assign all of the appropriate colours and shapes, or then again, not all of them, for some may be omitted, or some may be added in, or be excessive or overdone. Isn't this so?

Cratylus: It is.

Socrates: Now whoever assigns all of them assigns good sketches and images, while anyone who adds anything in or subtracts anything still produces sketches and images, but they are inferior. Isn't this so?

431d

Cratylus: Yes.

Socrates: What about the person who imitates the being of things by means of syllables and letters? By the same argument, won't the image, which is the name, be good provided he assigns everything that is appropriate? But if he ever omits something or adds something in, an image will be produced but it will not be good. So, won't some of the names be well produced, while others will be badly produced?

Cratylus: Perhaps so.

431e

Socrates: So perhaps one artificer of names will be good, while another will be bad?

Cratylus: Yes.

Socrates: And the name of this artificer is 'convention-setter'.

Cratylus: Yes.

Socrates: So perhaps, by Zeus, as with other skills, one convention-setter will be good, another bad, if we accept those previous conclusions.

Cratylus: Quite so. But you see, Socrates, whenever we assign these letters, 'a' or 'b', or any of the elements, to the names by means of the skill of grammar, and we omit or add in or transpose anything, we do not write the name incorrectly; rather, we do not even write it at all. Once it undergoes any of these alterations it is immediately different.

432a

Socrates: Well, Cratylus, are we perhaps not conducting this enquiry in the right way?

Cratylus: How so?

Socrates: Perhaps, whatever must of necessity be some number, or not be anything, might be characterised as you describe, just as ten itself, or any other number you please, immediately becomes a different number once you subtract anything or add anything.

432b

Socrates: But this, I suspect, is not the actual correctness of something qualitative, or of image in general. Rather, on the contrary, if the image is to be an image, it absolutely must not assign all the qualities of whatever it is imitating. You decide if this makes sense. Would there be two things – Cratylus, and an image of Cratylus – if some god were to imitate not only your complexion and form as painters do, but made all that is inside

it just as it is within you, assigned the same softness and bodily warmth, and imparted to all this the motion and soul and intelligence that you have, and in short, placed something else alongside you possessing all the qualities you possess? Would there then be Cratylus and his image, or would there be two Cratyluses?

432c

Cratylus: I think there would be two Cratyluses, Socrates.

Socrates: Now do you see, my friend, that we need to look for another correctness of image and of whatever we spoke of just now, and should not insist that if anything is omitted or added in, it is no longer an image? Or are you unaware of the extent to which images fall short of possessing the same properties as whatever they are images of?

432d

Cratylus: I am aware.

Socrates: Well, Cratylus, the consequences arising from names, for the things they name, would be absurd if they resembled them entirely in every respect. For everything would presumably become double, and it would not be possible to say which of them was the thing itself, and which was the name.

Cratylus: That's true.

Socrates: Then be courageous enough, my noble friend, to accept that a name can be well given or not well given, and do not insist that it must include all the letters in order to be exactly like whatever it names, but allow an inappropriate letter to be brought in. And if this is so for a letter, then let it be so for the name in a phrase, and if for a phrase, then accept that an inappropriate phrase may be brought into a sentence and that the thing is no less named and spoken of provided the impression of the thing the sentence is concerned with is included. This, if you recall, is what happens with the names of

the letters as Hermogenes and I explained earlier.

433a

Cratylus: Yes, I remember.

Socrates: Very well. Indeed, once this impression is included, even if everything appropriate is not present, the thing will still be described well when all are present, badly when few are present. Now, we should accept this, my friend, so that we don't get caught like people who roam the streets of Aegina late at night. Indeed, we too may seem, in truth, to have come to these matters later than we should, but the alternative is to search for another correctness of a name, and not accept that a name is an indication of the thing by means of syllables and letters. For if you make both of these assertions, you will be unable to be consistent with yourself.

433b

Cratylus: Well, Socrates, what you are saying sounds reasonable to me and I accept it.

Socrates: Well, since we are agreed on these matters, let's consider the following question. Do we maintain that a name should contain the appropriate letters in order to be well given?

Cratylus: Yes.

433c

Socrates: Are the appropriate letters those that are like the things that are named?

Cratylus: Certainly.

Socrates: So, those that are well given are given in this way. But if some name is not well given, it may still be composed mostly of appropriate letters that are like the things named, if it is indeed to be an image, but it may also contain something inappropriate because of which the name would be neither good, nor well made. Is this our position, or is it otherwise?

Cratylus: I don't think there is any point in arguing, Socrates. Yet I am still not satisfied with the claim that it is a name although it is not well given.

433d

Socrates: Are you satisfied that the name is an indication of the thing named?

Cratylus: I am.

Socrates: Don't you think it is right to say that some names are composed of prior names, while others are first?

Cratylus: I do.

Socrates: If the first ones are to become indications of things, do you know any better manner of them becoming indications besides making them, as much as possible, like the things they should indicate? Or do you prefer the manner suggested by Hermogenes, and many others too, whereby names are conventions and they indicate things to those who agreed the conventions having had prior knowledge of the things. They say that this convention constitutes the correctness of names and it makes no difference whether we adopt a convention based upon current usage or the opposite, and call what is now called small, large, and what is now called large, small. So which of the two manners do you prefer?

434a

Cratylus: To indicate whatever we are to indicate by means of likenesses, Socrates, is completely better in every way than proceeding at random.

Socrates: Very good. Now, if the name is to be like the thing, mustn't the letters from which the first names are composed necessarily be, by their nature, like the things? I am asking, using a previous example; if there were no naturally occurring pigments, similar to those from which the painted items which the painter's skill imitates are constituted, could anyone paint a

painting like any of the things that are? Or would that be impossible?

434b

Cratylus: Impossible.

Socrates: Now, similarly, could names ever be like anything at all, unless, in the first place, those elements from which the names are composed possessed some likeness to the things of which the names are imitations? And the names are composed of letters, are they not?

Cratylus: Yes.

Socrates: Well, at this stage, you should involve yourself in the discussion I had earlier with Hermogenes. So, do you think we are right in saying that the letter ‘r’ bears a resemblance to motion, moving and hardness? Or is this not right?

434c

Cratylus: I think it is right.

Socrates: And does the letter ‘l’ resemble smoothness, softness, and the other qualities we mentioned?

Cratylus: Yes.

Socrates: Now, you know that, speaking of the same thing (hardness), we say ‘sklērotēs’, while the Eritreans say ‘sklērotēr’?

Cratylus: Certainly.

Socrates: So, are both the ‘r’ and the ‘s’ like the same thing, and does the name ending in ‘r’ indicate the same thing to them, as the name ending in ‘s’ does to us? Or does the name fail as an indicator in one case or the other?

434d

Cratylus: No, it indicates the same thing to both of us.

Socrates: Is that because ‘r’ and ‘s’ happen to be alike, or because they are not?

Cratylus: Because they are alike.

Socrates: Are they alike in every respect?

Cratylus: Insofar as they equally indicate motion.

Socrates: What about the ‘l’ that is included in the name? Doesn’t this indicate the opposite of hardness?

Cratylus: Perhaps it has been included in error, Socrates, like the examples you gave to Hermogenes just now when you subtracted or added letters that were required. I think you were right to do so, and in this case perhaps an ‘r’ should be used rather than the ‘l’.

434e

Socrates: Very good. Well then, speaking as we are right now, don’t we understand one another when one of us says ‘sklēron’, and don’t you know what I am now saying?

Cratylus: I do, but because of custom, my friend.

Socrates: When referring to ‘custom’, do you think you are speaking of something distinct from convention? Or when you say ‘custom’, do you simply mean that when I utter this word I have hardness in mind, and you recognise that I have it in mind? Isn’t this what you mean?

435a

Cratylus: Yes.

Socrates: Now, if you recognise what I am uttering, doesn’t this constitute an indication for you from me?

Cratylus: Yes.

Socrates: And yet I am uttering what I have in mind, using that which is unlike, since you maintain that the ‘l’ is unlike hardness. But if this is the case, what else is this except a

convention you have made with yourself, whereby the correctness of names becomes convention for you? Since the like and unlike letters both act as an indication, don't these turn out to be a matter of custom and convention for you? But even if custom is not convention at all, it would still be incorrect to maintain that likeness rather than custom is the basis of indication, since custom, it seems, gives an indication using both like and unlike letters.

435b

Socrates: Now, Cratylus, since you agree with all this, for I take your silence as assent, it must be the case, I suppose, that when we speak what we have in mind, both convention and custom make some contribution towards indicating this. Indeed, best of men, would you like to turn your attention to number? Where will you get like names to apply to each one of the numbers unless you grant some authority to agreement on your part, and to convention in relation to the correctness of names? Now, I myself favour this notion that names be as much like the things they refer to as possible. But there may be truth in Hermogenes' claim that the actual attraction of likeness is fraught with difficulty, and for the correctness of names it may be necessary to have recourse to the lowly expedient of convention. Indeed, we would speak best if, as far as possible, we were to use words that are likenesses in all cases, or as many as we could, and this means using those that are appropriate, whereas with the opposite approach our speech would be degenerate. Now, answer one more question for me. What power do names possess for us, and what should we say they accomplish well?

435d

Cratylus: To instruct, Socrates, that's my opinion, and the simple fact is that whoever has knowledge of the names also has knowledge of the things they name.

Socrates: Yes, Cratylus, perhaps you mean that once someone knows what the name is like, and it is like the thing it names, he will then know the thing too since it happens to be like the name, and there is a single skill that is the same for all things that are like one another. And that, I believe, is why you say that whoever knows the names also knows the things named.

435e

Cratylus: Very true.

Socrates: Come on then, let's look at this. What would be this manner of instruction about things, the one you spoke of just now? And is there another one that is better than this, or is there no other besides this? What do you think?

436a

Cratylus: Just as you say, there is no other manner at all. This is the only way and this is the best way.

Socrates: And do you think that discovering things is the same as this, and that whoever discovers the names has also discovered the things of which they are the names? Or is this a method of instruction only, while enquiry and discovery require a different method?

Cratylus: Enquiry and discovery certainly involve the same method in every respect.

Socrates: Come on then, Cratylus, let's think about this. If someone who was enquiring into the things were to follow the names by considering what each name means, don't you think there is a significant danger of him being deceived?

436b

Cratylus: How so?

Socrates: Obviously, whoever first gave the names, gave names based on what he thought the things were like. Is this what we maintain?

Cratylus: Yes.

Socrates: Now, if this person was thinking incorrectly and gave the names based upon incorrect thinking, what do you believe would happen to those of us who follow him? Could we avoid being deceived?

Cratylus: But, Socrates, this is not the case. Rather, whoever gave the names must necessarily have had knowledge; otherwise, as I said some time ago, they would not be names at all. And there is considerable evidence that the name-giver did not miss the truth; otherwise all his names would never be so concordant. Did you yourself not reflect, as you spoke, that all the names came into being on the same basis and for the same purpose?

436c

Socrates: But that, my dear Cratylus, is no defence. For if the name-giver, having erred with the first name, forced the others thereafter into concord with this, and compelled them into concord with his own error, that would not be an unusual occurrence. This sometimes happens with geometrical diagrams where an initial, minor, unnoticed error occurs, and thereafter all the remaining additions are in agreement with one another. So everyone should give a great deal of deliberation and consideration to the beginning of an undertaking to see whether it has been established correctly or not. Once that has been adequately scrutinised, all else appears to follow from that. However, I would be surprised if names are actually in concord with one another. Indeed, let's examine our previous account once more where we maintained that the names indicated that the being of everything is moving, progressing and flowing. Don't you think that this is what they indicate?

437a

Cratylus: Very much so, and their indications are correct.

Socrates: Let's consider this by first selecting the word 'epistēmē' (knowledge). Note how ambiguous it is. Indeed, it seems to indicate that it impedes our soul's motion towards things rather than indicating that it is carried along with them. So, it is more correct to pronounce the beginning of the word as we do nowadays, and rather than inserting an 'e' and saying 'epeistēmē', we should insert an 'i' rather than an 'e'. The word 'bebaios' (definite) is some sort of imitation of 'basis' (foundation) or 'stasis' (rest) rather than motion. 'Historia' (investigation) presumably indicates that it prevents the flow (histēsi ton roun) and 'pistos' (faithful) certainly indicates 'preventing' (histan). The word 'mnēmē' (memory) presumably informs everyone that this is rest (monē) rather than motion in the soul. Or take 'hamartia' (error) or 'sumphora' (misfortune), if you go by the name, they will appear to be the same as 'sunesis' (understanding) and the same as 'epistēmē' (knowledge), and all the other names for things that are important to us. And indeed, 'amathia' (ignorance) and 'akolasia' (lack of restraint) also appear to be close to these in meaning, for 'amathia' (ignorance) appears to be 'the progression of one who proceeds with God' (tou hama theōi iontos poreia), while 'akolasia' (lack of restraint) certainly appears to be 'following along with things'. And accordingly, names that we believed to be associated with the worst things possible would appear to be very like those for the very best. And I think that anyone who took the trouble would discover many more examples from which we might come to rethink this matter, and conclude that whoever gave the names is indicating not that things are moving and progressing, but that they are at rest.

437d

Cratylus: But do you notice, Socrates, that most of them indicate motion?

Socrates: What of it, Cratylus? Shall we count the names as if they were votes, and will the correctness lie in this process? Whichever outcome appears to be indicated by most of the names is to be the true one. Is this so?

Cratylus: That is not reasonable.

438a

Socrates: Not at all, my friend. But let us leave these considerations and return to where we digressed. Indeed, a while ago, in the previous discussion, you said that whoever gave the names must necessarily have given them while being knowledgeable of the things to which he gave them. Are you still of this view or not?

Cratylus: Yes, I still am.

Socrates: And do you maintain that whoever gave the first names gave them while being knowledgeable?

Cratylus: Yes, knowledgeable.

438b

Socrates: But from what sort of names had he learned or discovered the things, since the first names had not yet been set down, and according to us it is impossible to learn about the things, or discover them in any other way, besides learning the names or discovering for ourselves what they are like?

Cratylus: I think you have a point there, Socrates.

Socrates: So, in what way should we maintain that they gave names knowledgeably or were convention-setters before a single name had been set down or they had known those names, if indeed it is not possible to learn about the things except from the names?

438c

Cratylus: I believe, Socrates, that the surest account of these matters is that some power, more than human, gave the first

names to things, and so they are necessarily correct.

Socrates: Do you believe then that whoever gave the names contradicted himself, even though he was a daimon or a god? Or do you think we were talking nonsense just now?

Cratylus: But one or the other of these groups are not names at all.

Socrates: Which of these two was incorrect, best of men, those leading in the direction of rest or in the direction of motion? For I presume, based on what was said just now, that the issue will not be decided by majority vote.

438d

Cratylus: Indeed not, Socrates, that would not be right.

Socrates: Now, since there is a conflict among the names, with some claiming that they are like the truth while others claim that they are it, how are we to decide between them and on what basis? Not, I presume, on the basis of other names, different from these, since there are none. It is obvious, rather, that something else apart from names must be sought which will reveal to us which of the two kinds of name is true, obviously by indicating the truth of things that are.

438e

Cratylus: Yes, I think so.

Socrates: So, Cratylus, if this is the case, it is possible without names to learn about things that are.

Cratylus: Apparently.

Socrates: Through what else then would you expect to learn about these? Wouldn't you do so through that which is both likely and most reasonable? Is there any alternative, then, than through one another, if they are somehow akin, and through themselves? For that which is different from those and of another kind would presumably indicate something different

and of another kind, but not those.

Cratylus: You appear to be speaking the truth.

439a

Socrates: Come on then, by Zeus, have we not agreed many times that the names that are well given are like whatever they are names of, and are images of the things?

Cratylus: Yes.

Socrates: Now, if the things really can be learned through the names and also through themselves, which of the two ways of learning would be better and more exact? Is it better to learn from the image, whether it is itself a good likeness, and also to learn the truth of that of which it is an image? Or is it better to learn from the truth, both the truth itself and whether the image of it has been properly fashioned?

439b

Cratylus: From the truth, necessarily so.

Socrates: To know the manner in which things are to be learned or discovered is perhaps too much for you and me. Let's be content to agree that it is not from names that things should be learned or investigated. It is much better to do so from themselves rather than from the names.

Cratylus: So it appears, Socrates.

439c

Socrates: Then let us consider how these various names that incline in the same direction may not deceive us. What if those who gave the names actually had in mind, as they did so, that all things are constantly moving and flowing? Now, it looks to me as if they did have this in mind. But what if this happens not to be the case, and these people themselves have, rather, fallen into a sort of whirlpool and are in the spin, dragging us along and making us fall in too? Indeed, my dear Cratylus, please consider something which I myself have often dreamed. Should

we, or should we not, maintain that there is such thing as beauty itself, and good itself, and so on for each of the things that are?

439d

Cratylus: I think we should, Socrates.

Socrates: Well, let us consider just that, not whether some particular face or something of this sort is beautiful, and whether all these seem to be in flux, but whether we should maintain, rather, that beauty itself is always the sort of thing that it is?

Cratylus: Necessarily.

Socrates: Now, if it is always slipping away, is it possible to say, firstly, that it is this, and secondly, that is something of this sort? Or even as we are speaking, is it necessarily becoming something else and slipping away and no longer being as it is?

Cratylus: Necessarily.

439e

Socrates: How could that which never remains as it is, be anything? For if it ever did remain as it is, it is obvious that at least for that period of time it would not change. And if it always remains as it is and is the same, how could this ever change or be in motion without departing from its own form?

Cratylus: It could not do so at all.

440a

Socrates: In that case, it could not be known by anyone either. For no sooner is it approached by someone who is to know it, than it becomes something else of a different kind, so that one would no longer know what it is like or what state it is in. And surely no knowledge whatsoever knows that which is not in any state at all.

Cratylus: Quite so.

Socrates: Indeed, if all things are changing and nothing remains the same, Cratylus, it is not even reasonable to say that there is knowledge. For if this thing itself, the knowledge, does not change from being knowledge, then knowledge would always remain and there would be knowledge. And if it is always changing, there would never be knowledge, and according to this argument there would be neither the knower nor the known. But if there is always the knower and there is always the known, and there is the beautiful and there is the good, and each one of the things that are, then it is not apparent to me that these things we are now speaking of bear any resemblance to flow or to motion. Now, it is not at all easy to investigate whether this is how matters stand or whether they accord with what the followers of Heraclitus say, and many others too. Nor would someone, fully possessed of intelligence, entrust the well-being of himself and his soul to names, and place his trust in these and in those who instituted them to be confident that he knows something – confident enough to allege, against himself and the things that are, that nothing at all is stable but all things are flowing like leaky jars, and to believe all things are in a condition much like people suffering from colds, and that dripping and flowing is the condition of everything. Perhaps this is how things are, Cratylus, or perhaps not. So you should conduct a brave and thorough enquiry and don't accept anything too easily, for you are still young and of the right age, so conduct your enquiry, and if you make a discovery, please share it with me too.

440d

Cratylus: I shall do as you say, but mark my words too, Socrates, I have not been neglectful of such enquiry. No, I have taken a lot of trouble to consider the matter, and things seem to me much more as Heraclitus says they are.

440e

Socrates: Yes, my friend, instruct me on some future occasion. Now, you should go into the countryside as you have arranged, and Hermogenes here will send you on your way.

Cratylus: So be it, Socrates, but you too should continue to think about these matters.

Critias

persons in the dialogue:

TIMAEUS *from Locris Epizephyrii, southern Italy*

CRITIAS *of Athens*

SOCRATES *of Alopecce, son of Sophroniscus*

HERMOCRATES *of Syracuse*

scene: house of Critias, during the Panathenaea

106a

Timaeus: How glad I am, Socrates, to have come to the end of my protracted account. I feel relieved now, as if I were resting after a long journey. And I pray now to the god who has just been created in words, although created long ago in fact, to grant us the preservation of anything reasonable that we have said and to impose justice, as appropriate, if we have unwittingly gone out of tune on these subjects. And right justice means returning to harmony the person who has gone out of tune. Now, so that the remainder of our discourse about the creation of gods may be spoken aright, we pray that we may be given the most perfect and excellent medicine of all medicines, which is knowledge, and with this prayer I entrust the next discourse to Critias, as we agreed.

106c

Critias: Indeed, Timaeus, although I accept the task, I request some indulgence just as you did at the very outset, since I am about to speak on such major issues. I am now making the same request, but in view of what I am about to say, I deserve even more indulgence than yourself. And I am quite aware that the request I am about to make is most audacious and more blunt than needs be, but I must make it nevertheless.

107a

Critias: Who could reasonably even attempt to deny that everything you have said was good? But I must somehow endeavour to explain that the forthcoming exposition requires

still more indulgence because it is more difficult. Indeed, Timaeus, to sound competent whilst speaking to us humans about the gods is easier to achieve than when speaking about mortals to fellow mortals. For the inexperience and downright ignorance of the listeners about the subject in question makes it very easy for anyone who intends to speak about them to such an audience, and when it comes to the gods, we know where we stand. Follow me here so that I may explain what I mean more clearly. Indeed, anything that is said by any of us must presumably be of the nature of an imitation or representation. Let's look at the production of images of divine and human figures by painters, and how easy or difficult it is to convince the viewers that the imitation is good enough. We shall see firstly that in the case of landscapes, mountains, rivers, woods, the heaven in its entirety and whatever resides and moves there, we are satisfied if someone is able to produce an imitation that bears even a slight resemblance to any of these. Furthermore, since our knowledge of things of this sort is inexact, we do not scrutinise or challenge the paintings, but put up with an unclear and deceptive sketch in these cases.

107e

Critias: But whenever someone sets about producing a likeness of our own bodies, which we are so accustomed to observing, we quickly spot any deficiency and become harsh critics of anyone who does not present us with a full and complete likeness. Well, we need to observe that the same holds for accounts. In the case of the heavenly and divine, we are satisfied with accounts that are likely, even to a small extent, but when it comes to things mortal and human, we scrutinise the accounts with great precision. So, speaking at the moment, without any preparation, you will have to forgive us if we are unable to present an account that is fitting in every respect. For we need to bear in mind that to produce an acceptable likeness of things mortal is difficult rather than easy. Now, Socrates, I have said all

this to remind you of these facts and to request more indulgence, rather than less, for whatever I am about to say. If my request for this favour sounds fair, please be willing to grant it.

108b

Socrates: Why ever would we refuse your request, Critias? And let's grant the same favour again to our third speaker, Hermocrates. For it is obvious that in due course, when it is his turn to speak, he will make the same request as yourself, in which case, without being compelled to repeat the same opening request, let him rest assured that this indulgence is also available to him when it is his turn to speak so that he can provide a different preamble. And yet I forewarn you, dear Critias, of the disposition of your audience. The playwright who went before you was amazingly well received by them, and you will therefore require a great deal of indulgence if you are going to be a competent successor.

108c

Hermocrates: The same warning you gave to this man also applies to me, Socrates. But, of course, a faint-hearted man never set up a trophy, Critias, so you must embark upon your discourse courageously, calling upon Paeon and the Muses to present and sing the praises of your fellow citizens of old, who were such good people.

108d

Critias: My dear Hermocrates, having been assigned last place, with someone else going before you, you are still courageous, but you will soon find out what this process is really like. However, emboldened by your encouraging words, I must have faith and call upon the other gods besides those you mentioned, and especially upon Memory. For the most important of all our accounts rests more or less with this god. Indeed, if I can adequately recall and proclaim what was once spoken by the priests and preserved here by Solon, I am quite confident that I

shall be deemed by this audience to have done justice to my assigned task. So that is what I must now undertake without any further delay.

108e

Critias: First of all, then, let us recall that it is in total nine thousand years since war was declared between those dwelling outside the Pillars² of Heracles and all those who dwell within them. This I must now recount. One side was led, and the entire war was said to have been waged by this city of ours, while the other side was led by the kings of the island of Atlantis, which was, according to reports, an island, once larger than Libya and Asia combined. But nowadays, having been submerged during an earthquake, it acts as a barrier of mud obstructing those who wish to sail out into the open ocean from there.

109a

Critias: As for the various non-Greek peoples, and whatever Greek races there were at the time, the course of our narrative, as it unfolds, will reveal in each case the details of what happened to them everywhere. But in the case of the Athenians and the adversaries against whom they fought, it is necessary to begin by first recounting the power of each side and their political systems. And in speaking of these we must give precedence to our own people. Once upon a time, the gods, without any strife, allotted the entire earth. For it would not be right to suggest that gods are ignorant of what is proper to each of them, nor indeed that, having recognised what most belongs to other gods, they attempt to acquire this for themselves through strife. So, by lots, each was justly allotted his own, and they settled regions. And having settled them, they reared us, their possessions and livestock, except that they did not use physical force as shepherds do when driving their flocks to pasture with a staff. Instead, they led and steered the entire mortal creature in the way that is easiest to manage any living creature, guiding it from the stern, after their own mind, by the

rudder of persuasion.

109c

Critias: Now, other gods, having been allotted other regions, ruled over them, but Hephaestus and Athena, sharing a common nature as siblings born from the same father, sharing also the same pursuit of philosophy and craftsmanship, were allotted a single region. This was our region, a fitting and natural home for excellence and wisdom, and they produced good men, born from its soil, and they implanted in their minds the order of its political system. Although the names of these people have been preserved, their works have disappeared owing to the destructions of their successors and the long time period involved. For the people left behind on each occasion, as we said before, were illiterate mountain folk who had only heard the names of that region's rulers but knew little of their deeds. So, although they were happy to give these names to their own offspring, they were unaware of the excellent qualities and the laws of their predecessors, save for some obscure reports. They and their children lacked the necessities of life for many generations, and so they were preoccupied with what they lacked, and this became their topic of conversation and they had no interest in events of the distant past. For mythology and interest in antiquity come to cities along with leisure when they see that some people have already been furnished with the necessities of life, but not before then.

110a

Critias: That's why the names of the ancients have been preserved, but not their deeds. My evidence for what I say is the report of Solon that the Egyptian priests, describing the war that once took place, used many of these very names such as Cecrops, Erechtheus, Erichthoneus, Erysichthon, and most of the various names of the predecessors of Theseus that are recorded. The same applies to the names of the women too. And, indeed, the figure of the goddess as depicted, displayed as

she is in full battle armour, accords with the custom of the time whereby military activities were once common to men and women alike, an indication that in all cases where male and female creatures congregate together, it is always naturally possible for each kind to pursue its own proper excellence in common.

110c

Critias: Now, in those days, in this region, the various classes among our citizens were engaged in manufacturing and producing food from the earth. But the military class, having been set apart by divine men at the outset, dwelt separately, possessed of everything that was appropriate for their sustenance and training. None of them had any private property, and they asked their fellow citizens for no sustenance beyond the limits of sufficiency. Indeed, their entire lifestyle and customs were the same as those we described yesterday when speaking of those guardians whom we hypothesised. Furthermore, what is said about our land is persuasive and true: firstly that its boundaries at the time were defined by the Isthmus, and on the land side by the heights of Cithaeron and Parnes, and the boundaries went down with Oropus on the right, and Asopus constituted the sea boundary on the left. The soil in the region was more excellent than anywhere else, and that is why it was able to support a large army which was exempt from working the land. And there is strong evidence for its past excellence, since what's left nowadays is a match for any territory in productivity and fruitfulness and in the abundant pasture it affords to any livestock. But its produce in those days, as well as being excellent, came forth in vast quantities.

111b

Critias: Why should we believe this story and what is left of the land of old to confirm this account? The land as a whole is a long promontory, so to speak, extending from the general land mass far out into the ocean, and the seabed round about is of

great depth. Now, although there have been many enormous floods during the nine thousand years that have elapsed since that era, the earth that washed down from the heights during the ongoing deluges did not accumulate significantly, as happens in other places, because it constantly flowed down and vanished into the deep. What is left then, comparing that era with the present, resembles the skeleton of a diseased body. It is just like what happens on small islands where any fat, rich soil has flowed away, leaving behind only the bare frame of the territory. But during that era the land was pristine, our present mountains were lofty hills, and the stony plains of what we call Phelleus were covered in rich soil. The mountains contained lots of trees of which there is still evidence nowadays, for although some of our mountains now support only bees, it was not long ago that roof timbers were cut from the trees there for use in huge buildings, and the rafters still survive to this day. And there were also many cultivated trees providing fodder aplenty for livestock. What's more, the soil was made fruitful by the annual rains sent by Zeus, which were not wasted as happens nowadays by flowing into the sea from land that has been made bare. Rather, since the land had plenty of soil, it could indeed receive the water and store it in impervious clay ground. The water stored there was sent forth from the heights through hollows, providing plenty of flowing water for springs and rivers. The shrines that still remain where the springs once stood are an indication that what we are now saying about this region is true.

111d

Critias: Such was the natural condition of our region in general, and it was managed of course by true workers of the land, dedicated to this task alone, lovers of all things noble, with natural talents. They had access to the very best land with plenty of water, governed by seasons that were blended to perfection. The arrangement of the city at the time was as

follows. Firstly, the Acropolis at that time was not as it is nowadays, washed bare of its soil following a single night of extreme deluge when an earthquake occurred along with the third enormous flood prior to the destruction of the age of Deucalion⁴. But before this, in another era, it was vast, extending from the Eridanos to the Ilisos river, encompassing the Pnyx, with the hill of Lycabettos as a boundary opposite the Pnyx. The entire was covered in earth, and it was more or less flat on top. Outside, under the actual slopes, it was settled by craftsmen and those farmers who worked the land nearby. On the top, the military class dwelt just by themselves around the temple of Athena and Hephaestus, surrounded by a single wall, like the garden of a single household. On the north side, they lived in communal dwellings and provided shared dining halls for the winter, with everything appropriate to their communal political system being available to them in terms of buildings and temples, but without any silver or gold, for none of them had any use for these. Pursuing a middle ground between extravagance and meanness, they built moderate dwellings in which they and their children's children grew old, bequeathing them always to others like themselves. In summer they naturally vacated their enclosed gardens, and their gymnasias and dining halls, and used the southern parts for these purposes. There was a single spring, on the site of the present Acropolis, which has been blocked by the earthquakes, so that nowadays only trickles of water remain in the vicinity, whereas it once provided a plentiful flow of water for everyone at just the right temperature throughout winter and summer.

112d

Critias: This is how their lives were arranged as guardians of their own citizens and leaders of the other Greek peoples, their willing subjects. They kept careful watch that the number of men and women capable of military service at any stage was always more or less the same at about twenty thousand. Now

these Athenians, being themselves people of this sort, were renowned above all peoples of that age, justly managing their own region and Greece generally in such a consistent manner, famous throughout all of Europe and Asia for their physical beauty and the overall excellence of their souls. As for their adversaries, the sort of people they were and their origins, if my memory of what we heard as children does not desert me, I shall now bring their stories centre stage to share with you, my friends.

113a

Critias: But before I begin my account, I owe you a brief explanation in case you are surprised to hear of so many non-Greeks with Greek names. You shall now discover the reason for this. Solon, intending to make use of the Egyptian account in his own poem, found out, on investigating the significance of the names, that those Egyptians who had written them down initially had translated them into their own language. So he himself, having recovered the sense of each name, put them back once more into our language and wrote them down. And these writings were in the possession of my grandfather and are in my own possession now. Indeed, I studied them carefully as a child. So do not be surprised if you hear names of this sort, belonging to our region; you have the explanation.

113c

Critias: Well then, the story, a long one, began somewhat as follows. As was said previously about the allotments of the gods, they portioned the land into lots, some larger some smaller, and instituted sacred places and sacrifices for themselves. And so, Poseidon, being allotted the island of Atlantis⁵, settled his own offspring, begotten of a mortal woman there, in a region of the island described as follows. By the sea, towards the centre of the entire region, there was a plain said to be of sublime excellence, and fertile too. Near the plain, towards the centre, at a distance

of some fifty stades, there was a mountain that was low throughout. There was an inhabitant of that mountain, one of the men of that place born originally from its soil. His name was Evenor and he lived with his wife, Leucippe, and they had an only daughter, Cleito. When the girl had reached marriageable age, the father and mother both died. Poseidon was smitten with desire for the girl and made her his consort. He secured the hill on which she dwelt, fortifying it by making alternating circles of earth and sea, some smaller, some larger, enclosing each other, two of earth, three of seawater, like round wheels in the middle of the island, equidistant from one another on all sides so that they were impassable for people because there were, as yet, no ships and no seafaring. He brought order to the middle part of the island, an easy task for a god, providing two sources of spring water from beneath the ground, one warm, the other overflowing with cool water, and he sent forth from the earth abundant and plentiful food.

114a

Critias: Having begotten and reared five pairs of twin male children, he divided the entire island of Atlantis into ten parts, and assigned the mother's homestead to the eldest of the firstborn twins, including the surrounding portion of land which was the biggest and the best. He installed this son as king over his brothers and appointed the others as rulers giving them dominion over large numbers of people and an extensive territory. He gave names to them all, naming the eldest, the king, after the whole island and the ocean too, which is called the Atlantic because the first-ever person to exercise kingship there was named Atlas. His other twin was granted the extremity of the island towards the Pillars of Heracles, as far as the region now called Gadeira. The place was named after the son whose Greek name was Eumelos, although locally it was Gadeirus in his own region which is named after him. The second pair of twins were called Ampheres and Euaimon. The

eldest of the third pair was called Mneseus, while the other twin was called Autochton. The eldest of the fourth pair was called Elasippus, while the other was called Mestor. The eldest of the fifth pair was called Azaes, while the youngest was called Diaprepes. All these brothers, themselves and their descendants, dwelt there for many generations, ruling over numerous other islands of that ocean, and, indeed, as was said previously, governing all the peoples here within the Pillars of Heracles as far as Egypt and Tuscany.

114d

Critias: From Atlas sprang an extensive and revered people whose king, the eldest son, always passed his title on to the eldest of his offspring, thus preserving the kingship over many generations. They acquired enormous wealth such as no line of kings had amassed before or will easily attain in future. They were provided with all the provisions they needed in the city and in the rest of the country. For although a great deal came to them from outside because of their extensive rulership, the island itself furnished most of the provisions of life. Firstly, it yielded whatever solid or fusible materials are extracted or mined from the ground, including a substance that now exists in name only, but was then more than a mere name. This was orichalc, mined in various locations throughout the island, more valuable at the time than anything else except gold. The island also brought forth an abundance of wood for carpenters to work on, and it was well able to sustain animals too, both tame and wild. And, indeed, there was a plentiful population of elephants, for there was enough pasture available for all sorts of creatures, including those who dwelt in marshes, lakes, rivers, or indeed in mountains or on plains, and enough in like manner for this enormous animal, by nature the most voracious creature of all. As well as all this, the island brought forth and easily sustained whatever fragrant products the earth supports nowadays from roots, herbs, trees or juices that ooze from

flowers or fruits. There was also the cultivated fruit, the dry sort that is our sustenance, and those products that we use as our source of food, consisting in general of what we call pulses, and whatever grows on trees, providing us with drink, with solid food and oils, and tree-borne fruit that is difficult to store, acting as a source of pleasure and delectation which we offer to the fatigued to relieve their satiety. All these were brought forth then in limitless abundance and wondrous beauty by this sacred island beneath the sun. So, being in possession of all these products of the earth, they set about organising and building their temples, royal dwellings, harbours and dockyards, and the rest of their territory, based on the following plan.

115a

Critias: First, they bridged the rings of seawater that surrounded the ancient mother city, creating a way out of and into their palace. They immediately built the palace, at the very outset, in the original dwelling place of the god and his offspring, passing it on from one generation to the next, each adding to its adornments, each doing their best to continually improve upon the work of their predecessor, until they turned the residence into a marvel to behold for the majesty and beauty it displayed. In fact, they dug a canal running from the sea to the outermost circle, three plethra wide, one hundred feet deep and fifty stades long. In this way they created a passage from the sea into the outer circle by opening up an entrance big enough for the largest ships to sail into. And what's more, at the bridges they made openings in the circles of earth which were separating the circles of seawater, openings wide enough for a single trireme to sail through, and they covered these from above so that the ships travelled underground. For the banks of the earthen circles were high enough above sea level to allow this.

115d

Critias: Now, the largest circle, the one that opened directly to the sea, was three stades wide, while the next circle, the earthen one, was the same width as that one. Of the second pair, the circle of water was two stades wide, while the circle of dry land was again equal in width to the previous circle of water. The circle running round the central island itself was one stade wide, while that island on which the palace stood had a diameter of five stades. This island and the circles and the bridge which was one plethron wide, they enclosed roundabout on every side with a stone wall, erecting towers and gates upon the bridges on either side at the sea crossings. They quarried the stone, some of which was white, some black, some red, from beneath the central island, all over, and from beneath the inner and outer circles. And by quarrying the stone, they simultaneously hollowed out a pair of internal docks which they covered over with native rock. Some of their buildings were simple, while in others they combined stone of various colours to amuse themselves, thus making them naturally pleasing to the eye. They covered the entire wall surrounding the outer circle with brass all around, as if they were painting it, while they covered the wall of the inner circle with a coat of tin, and the wall surrounding the acropolis itself with orichalc, which gave it a fiery gleam.

116c

Critias: The palace within the acropolis was designed as follows. In the centre, on the very spot, surrounded by a wall of gold, was a sacred shrine on untrodden ground, dedicated to Cleito and Poseidon. This stood in the place where their family of ten kings was initially begotten and born. To this very place, every year, the first fruits from all ten regions were brought as an offering to each of the kings. There was also a temple to Poseidon himself, one stade in length, three plethra wide, with its height duly proportioned to these dimensions, while its appearance was somehow foreign. The entire exterior of the

temple was overlaid with silver, except for the acroteria, which were covered with gold. On the inside the ceiling was all ivory, decorated with gold and silver and orichalc, while everything else, including the walls, columns and floor, was covered with orichalc. Within, they erected golden statues depicting the god standing upon a chariot, controlling a team of six winged horses, he himself being so tall that his head touched the roof. Encircling this were statues of a hundred Nereids riding upon dolphins, for people at the time believed that there were this many Nereids. Inside, there were also many other statues erected by private individuals. Outside, around the temple, stood golden images of the wives of the ten kings and their descendants, and various other large statues of the kings and of private persons from the city itself, or from foreign places over which they ruled. Their size and workmanship were in harmony with the overall design, and the palace was similarly well suited to the sheer scale of their rulership and the glory of the shrine.

117a

Critias: They made use of both springs, the hot one and a cold one, each providing plenty of water, wondrously pleasant and excellent by nature. And they built dwellings round about and planted suitable trees. There were pools in the area, some cold and in the open air, others warm and covered over for use as baths in winter. There were separate pools for the kings, for private citizens and for women, and others for horses and the various beasts of burden, with appropriate facilities provided in each case. The overflow was channeled to the grove of Poseidon, which, because of its excellent soil, contained a variety⁷ of lofty trees of exceptional beauty. They also channelled the water to the outer circles through pipes running along the bridges. There they had constructed many shrines to various gods, and gardens and gymnasia aplenty, some for men, some especially for horses, on each of the two circular islands. And, in particular, in the middle of the larger island there was a

racetrack reserved for horses, which was one stade wide and whose length was the circuit of the entire island. This space was set aside for equestrian competitions. And around the track on either side were guard houses for most of the bodyguards, although the more trustworthy among them were posted on the smaller circle, closer to the acropolis, while the most eminently trustworthy of all were allowed to reside within the acropolis, close to the kings themselves. The dockyards were full of triremes and all their necessary equipment, and everything was at the ready.

117d

Critias: That is how the residence of the kings was arranged. But beyond the three harbours, outside them, was a circular wall beginning from the sea, everywhere fifty stades distant from the largest circle and its harbours, circling back to the same place where the mouth of the canal opened to the sea. The wall was densely populated with large numbers of houses, while the canal and the largest harbour was full of ships and traders arriving from all quarters, so many that they produced a fantastic commotion and din, day and night.

117e

Critias: Well, I have now given a fairly good report of the city and the environs of the ancient dwelling place as recounted then. I should now attempt to recall the nature and arrangement of the rest of the region. Firstly, the place was said to be elevated, with sheer cliffs rising out of the sea, while the entire area surrounding the city was a plain enclosing the city, itself enclosed by a ring of mountains stretching as far as the sea. The plain was level and smooth, elongated throughout, three thousand stades in one direction and two thousand stades inland from the sea at its centre. This particular section of the entire island was south-facing and was sheltered from the north winds.

118b

Critias: The mountains around the city were lauded at the time for their number, size and beauty, surpassing anything we have nowadays. In the mountains there were many prosperous villages with local populations, and rivers, lakes and meadows that could adequately support all the domesticated and wild animals, and an abundant variety of timber, more than enough for each and every function. Now, the plain, by nature, and because it had been cultivated by many kings over many years, had the following characteristics. It was originally four-sided, oblong, and for the most part a rectangle, but whatever it lacked in this respect they corrected by digging a trench around it. As for the depth, width and length of the trench, it is incredible to relate how any work of human hands could be so vast when compared with our usual endeavours, but I must tell you what I heard in any case. It was excavated to a depth of one plethron and it was everywhere one stade wide, while its length, running around the entire plain, was a thousand stades. It received the waters that flowed down from the mountains as it encircled the plain, and arriving at the city from both directions, it was set on its course out to the sea. Further inland from the city, one-hundred-foot-wide straight channels were cut across the plain, emptying again into the trench on the seaward side. Each of the channels stood a hundred stades apart from the other. These were used to transport wood from the mountains down to the city, and for conveying the rest of the seasonal produce in ships by cutting cross-channels sideways, connecting the channels to one another and to the city. They took two crops from the land each year, relying upon the rains sent by Zeus in the winter, and in summer upon whatever the earth produced when they irrigated it from the channels.

119a

Critias: Out of the total number of men on the plain fit to bear arms, it was decreed that each lot was to provide one leader. The size of a lot was ten stades by ten, and the total number of

lots was sixty thousand. From the mountains and the region in general, there was, according to reports, an enormous number of people, all assigned on the basis of their localities and villages, to these lots and their leaders. Each leader was directed, for military purposes, to provide one-sixth portion of a war chariot for a thousand chariots, two horses with riders, a team of two horses without a chariot-board, including a fighter with a light shield and a driver for the pair of horses who was to remain with them, two hoplites and two archers and slingers, three light-armed stone-throwers and the same number of javelin-throwers, and four sailors for the ships whose full fleet numbered twelve hundred. So this is how the military equipment of the royal city was organised. The various arrangements of the other nine cities would take too long to recount.

119b

Critias: The distribution of positions of authority and of honour was, from the very beginning, as follows. Each one of the ten kings had authority over the people and most of the laws in his own region and his own city, punishing and executing whomsoever he wished. Their authority over one another and their communal affairs were subject to the edicts of Poseidon, which the law transmitted to them, as did the inscriptions of the first kings written on a pillar of orichalc placed on the central island in the sanctuary of Poseidon. There they gathered every fifth year or every sixth year, alternately, thus showing equal respect for the odd and the even portion. When they met they deliberated about their communal affairs, enquired into any transgressions by any of them, and passed judgement. When they were about to deliver their judgement, they first gave pledges to one another as follows. There were bulls roaming free in the sanctuary of Poseidon. The ten kings, being present on their own, prayed that the god would select a sacrificial victim that was pleasing to himself. They then hunted

with ropes and with wooden weapons containing no iron, and whatever bull they captured they brought to the pillar and cut its throat over the top of the pillar, drenching the inscription with blood.

120a

Critias: Now, inscribed on the pillar, in addition to the laws, was an oath calling down mighty curses upon those who disobeyed. So when they had sacrificed in accordance with their own laws, they would dedicate all parts of the bull, and having blended a mixing bowl of wine, they threw in a clot of blood on behalf of each of them, and then having first cleansed the pillar, they poured the rest of the blood into the sacrificial fire. After this, they drew off some wine into golden vessels and made a libation over the fire, swearing an oath to judge in accordance with the laws inscribed upon the pillar, to punish anyone who had previously been a transgressor, and, furthermore, never intentionally to transgress any of the ordinances nor to exercise or submit to authority, save in accordance with the laws of their father. Having sworn all this on his own behalf and on behalf of their succeeding generations, each of them drank and offered up their vessel in the sanctuary of the god. Then, having spent their time engaging in the banquet and any necessary transactions, they all, once darkness had fallen, robed themselves in the most beautiful purple raiment, sat upon the ground by the embers of the ritual fire, and by night, with all fires in the sanctuary extinguished, they delivered and submitted themselves to judgement, if any of them accused the other of any transgression. When the light returned, they inscribed these on a tablet of gold and dedicated this along with their robes as a memorial.

120d

Critias: Now, although there were many other particular laws concerning the rights of the several kings, the most important were that they should never bear arms against one another;

that they would all provide assistance if anyone tried to overthrow the royal family in any city; that in accordance with tradition they would deliberate together on military issues and general concerns, granting leadership to the house of Atlas; and that the king was to have no authority to put a kinsman to death without the agreement of half of the ten. Such was the nature and the extent of the power in those regions at the time. The god, however, arrayed this power and set it against our region, and the motive for this was said to be as follows.

120e

Critias: For many generations, as long as the nature of the god held sway in them, they were obedient to the laws and lovingly disposed towards their kindred god. For their thoughts were true and universal, dealing with one another and life's chance events with wisdom and humility. So they despised everything apart from excellence, thought little of their possessions, and easily bore their heap of gold and other acquisitions as if it were a light burden. They were not drunk on luxury, nor did they flounder because their wealth robbed them of self-control. Being sober-minded, they clearly saw that through communal love accompanied by excellence, all these material goods increase, but the more seriously we take them and the more we honour them, the more do they diminish, while excellence perishes along with them. So, based upon such reasoning as this, and with the persistence of their divine nature, all the wealth we previously described increased. But once the divine portion within them became faded by being mixed again and again with much mortality, their human character became dominant, they were unable to bear their possessions, their behaviour deteriorated, and to those with eyes to see they were an obvious disgrace for they had destroyed their most sublime and precious of possessions. But to those who were unable to see what, in truth, constitutes a happy life, these people seemed, at this stage, to represent the very pinnacle of

goodness and happiness, despite being infected with unjust ambition and power.

121b

Critias: Zeus, god of gods, who exercises his kingship through laws, since he was able to view such matters with clarity, recognised the wretched plight of this fair race, and decided that they should meet with justice to chasten them and make them more orderly. So he gathered all the gods together in their most hallowed dwelling-place, situated at the very centre of the universe with a clear view of the entire realm of becoming, and, having assembled them, he said...

NOTES

1. A healing god associated with Apollo.
2. The 'Pillars of Heracles' is a reference to the Straits of Gibraltar.
3. These are the names of legendary Greek kings. The first three were kings of Attica, the wider region that includes Athens; the fourth was a king of Thessaly.
4. Deucalion was a mythical figure associated with a cataclysmic flood, which he and his wife Pyrrha survived.
5. The account of Atlantis mentions three units of measure: the foot, the plethron (100 feet), and the stade (600 feet).
6. Modern-day Cádiz in southern Spain.
7. The name orichalc, which literally means 'mountain copper', refers to a precious metal of unknown variety.
8. Acroteria were architectural ornaments that were situated at the apex or corners of pediments.
9. Nereids were sea nymphs who were often depicted riding various real and imagined sea creatures.

persons in the dialogue:

SOCRATES of Alopecce, son of Sophroniscus

CRITO a friend and contemporary of Socrates

scene: a prison in or near the Athenian Agora

43a

Socrates: Why have you arrived at this hour, Crito? Isn't it still early?

Crito: It certainly is.

Socrates: What time is it, then?

Crito: Just before dawn.

Socrates: I am surprised the prison guard was willing to answer the door for you.

Crito: He knows me well at this stage, Socrates, because I visit the place so often and, what's more, I have done him a favour.

Socrates: Did you arrive just now, or some time ago?

Crito: Quite some time ago.

43b

Socrates: Then why didn't you wake me immediately instead of sitting there in silence?

Crito: No, by Zeus, I wouldn't do that. I only wish I were not so sleepless and so troubled myself, but I am also amazed at you when I notice how sweetly you sleep, and I deliberately refrained from waking you so that you might pass the time as pleasantly as possible. And on many previous occasions, all through your life, I have noted your happy disposition, especially now that I see how easily and calmly you are bearing this present misfortune.

Socrates: Actually, Crito, it would be most odd, at my age, to be troubled because I now had to die.

43c

Crito: But, Socrates, other men of your age have been overtaken by similar misfortunes, yet their age does not free them from being troubled over their predicament.

Socrates: That's true. But why have you come so early?

Crito: Socrates, I am the bearer of painful news. Not painful for you, apparently, but for me and all your associates it is both painful and grievous, and I think I am the one who bears it most grievously of all.

43d

Socrates: What news is this? Has the ship arrived from Delos¹, the one whose arrival means that I must die?

Crito: Well, it has not actually arrived but I think it will be here today, based on reports from some people who have come from Sounion² and who left the ship there. So it is clear from these reports that it will be here today, and so, Socrates, tomorrow your life must come to an end.

Socrates: Well, Crito, may it be for the best. If this pleases the gods, so be it. However, I do not think it will be here today.

44a

Crito: What is your evidence for that?

44b

Socrates: I'll tell you. Presumably I am to die the day after the ship arrives.

Crito: That is what the authorities say, in any case.

Socrates: Well, I do not think it will be here today, but tomorrow. My evidence is a dream I had a little earlier, during the night, perhaps when you decided not to wake me.

Crito: What was the dream?

Socrates: "Socrates, on the third day thou shalt reach fertile Phthia³." – I thought that a noble and beautiful woman wearing

a white robe approached me, called out and said these words.

Crito: What a strange dream, Socrates.

Socrates: Well now, Crito, it seems clear enough to me anyway.

Crito: It seems all too clear, but dearest Socrates, even at this stage heed me and save yourself. For if you die it is not just a single misfortune for me. No, quite apart from being deprived of a friend, the like of whom I shall never find again, many people who do not know you and me at all well will think that I did not care enough to spend some money to save you. And what reputation could be more disgraceful than this, a reputation for setting higher value on money than on friends? For most people will not believe that you yourself were unwilling to leave this place, although we were willing to help.

44c

Socrates: But bless you, Crito, why does popular opinion concern us so much? The best people, whose opinions are more worthy of consideration, will believe that we acted exactly as we should have acted.

Crito: But Socrates, surely you can see that it is indeed necessary to care about popular opinion? The very situation we are now in demonstrates that if someone is discredited in their eyes, the multitude can do harm, not only on the smallest of scales, but well-nigh the greatest harm of all.

Socrates: I really wish the multitude were able to do the greatest harm, Crito, so that they might also be able to do the greatest good, and all would be well. As it is, they are not able to do either, for they cannot make someone either wise or foolish, and they do whatever occurs to them.

44d

Crito: Let's accept all that, Socrates. But just tell me, if you escape from here, are you concerned for me and for your other associates in case the informers make trouble for us and we

have to forfeit all our property or incur a large fine or suffer some worse fate at their hands? For if you are afraid of any such outcome, bid it farewell, for it is only right that we run these risks to save you, and even greater risks if necessary. So, heed me and just do as I say.

Socrates: Yes, I am concerned about this, Crito, and much else besides.

44e

Crito: Then don't be afraid. In fact, the people who can save you and get you out of here are not looking for a lot of money. Besides, you see, don't you, that these informers are so easily bought that we won't need to spend much money on them either? My own funds are at your disposal, and I believe they are adequate. What's more, if you are concerned about me and don't believe you should spend my money, there are friends here from abroad willing to spend theirs. One of them, Simmias⁴ the Theban, has brought sufficient money for this very purpose. Cebes too is ready, and very many others.

45a

Crito: So, as I say, don't give up on saving yourself for fear of these issues, nor should what you said in court present a difficulty for you, that you would not know what to do with yourself if you went into exile. For there are lots of places where they will welcome you, wherever you go. And if you want to go to Thessaly⁵, I have friends there who will make much of you and provide you with protection so that you are not bothered by any of the Thessalians.

45d

Crito: What's more, Socrates, I don't even think that what you are attempting is right, betraying yourself when you could save yourself, determined to bring upon yourself the sort of thing your enemies would be keen on in their determination to destroy you. As well as this, I also think you are betraying your

own sons by going off and abandoning them when you could rear them and educate them. For all you care, they will meet whatever fate they meet, and they will quite likely meet the sort of fate that usually befalls orphans in these situations. In fact, one should either not beget children at all or else face the difficulties of rearing and educating them. And I think you are choosing the easy way out when you should choose whatever a good and courageous man would choose, especially when you spend your entire life speaking of concern for excellence. So, I am ashamed both on your behalf and on behalf of ourselves, your associates, lest this entire situation in which you are involved may seem to have developed because of some cowardice on our part: the fact that the action went to court when it was possible that it not go to court, how the trial of the action itself unfolded, and, to cap it all, as the most absurd aspect of the matter, people will think that an opportunity escaped us due to our own baseness and cowardice, since we did not save you, nor did you save yourself, when we were well able to do so if we were of any use at all. So beware, Socrates, in case these matters bring not just evil upon yourself and others, but disgrace too. So make your decision. No, the time for making decisions is past, just decide. There is only one decision. Yes, everything must happen this very night, and if we delay any longer it won't be possible. So heed me, Socrates, you must do exactly as I say.

46b

Socrates: Crito, my friend, your eagerness would be very worthy if it had right on its side, but, if not, then the greater the eagerness, the greater the problem. Now, we need to consider whether we should adopt this course of action or not, as I am, now and always, the sort of person who heeds nothing else but the reasoning that on reflection appears best to me. So I cannot now cast aside the reasoned arguments I have stated before because of what has just happened to me. No, they seem much

the same, and I honour and respect the same principles as before. And if we have no better arguments to offer at the moment, then rest assured, I shall not go along with your plan, not even if the power of the populace scares us, like children, to an even greater extent than now by threatening either imprisonment, execution or confiscation of property.

46d

Socrates: So, how may we consider the issues in the most balanced way? What if we first take up the argument you proposed in relation to opinions? Were we right, or were we not, when we said on many occasions that we should pay attention to some opinions but not to others? Or were we right before I was condemned to death, but it has now become quite evident that this was said idly, for the sake of argument, and was, in truth, childish nonsense? And I am eager to consider, along with you, Crito, whether the argument appears in a different light since this has happened to me, or remains the same, whether we should bid it farewell or heed it. It used often to be said, I believe, by those of us who thought they had a point, that, as I have just said, some opinions that people arrive at should be valued highly, others not. By the gods, Crito, don't you think this is a fair statement? For you, humanly speaking, are not expected to die tomorrow, and the present situation should not unhinge you, so think about this. Don't you think it is enough to say that we should not respect all the opinions of mankind, but some only and not others, and not the opinions of all people, but of some people and not others? What do you say? Is it right to say this?

47a

Crito: It is right.

47b

Socrates: Shouldn't we respect the worthy opinions and not the bad ones?

Crito: Yes.

Socrates: Aren't the worthy ones the opinions of the wise, and the bad ones the opinions of the foolish?

Crito: They must be.

47c

Socrates: Come on then. What have we generally said about such matters? When a man is in training and is working at it, does he pay attention to the praise and censure and the opinions of anyone at all, or to one person alone, the person who happens to be a physician or a trainer?

Crito: To one person alone.

Socrates: Therefore, he should fear the censure and delight in the praise of that one person, and not those of the majority.

Crito: Obviously.

Socrates: So, he should go about it as follows: exercise, and even eat and drink, in the way that that one person, his trainer, the knowledgeable person, thinks he should, rather than all the others.

47d

Crito: This is so.

Socrates: So be it. But if he doesn't heed that one person, and disrespects his opinion and his praise, and respects those of the majority who are not at all knowledgeable, won't he suffer harm?

Crito: Inevitably.

Socrates: What is this harm, to what is it directed, and what part of the heedless person does it affect?

Crito: Obviously it affects his body, since it ruins it.

Socrates: That's right. And without going through them all, Crito, doesn't the same issue arise in other cases too, and especially when it comes to justice and injustice, disgrace and nobility, good and bad, with which our deliberations are now concerned? Should we follow the opinion of the majority and fear it, or the opinion of one person, someone who is knowledgeable, and feel more shame and fear before him than before all the others put together? And if we do not follow him, shan't we corrupt and maim that which we agreed is made better by justice and ruined by injustice? Or is this nothing?

47e

Crito: I agree with you, Socrates.

Socrates: Come on then. If by paying no heed to the opinion of knowledgeable people we ruin that which is improved by health and corrupted by disease, would our life be worth living when this had been corrupted? And this, presumably, is the body, isn't it?

Crito: Yes.

Socrates: So, for us, is life worth living with a degenerate and corrupted body?

Crito: Not at all.

Socrates: Then, is our life worth living when that which injustice maims and justice improves has been corrupted? Or do we believe that the part of us, whatever it is, that is associated with injustice and justice to be less honourable than the body?

48a

Crito: Not at all.

Socrates: Is it more honourable?

Crito: Much more.

Socrates: So, best of men, we should not give any thought to what most people will say of us. No, we should heed what the person who knows justice and injustice says, that one person, and truth itself. So your first proposal was not right when you proposed that we should take account of popular opinion concerning what is just, noble and good, and their opposites. Yet someone might still say, “Yes, but the multitude is able to put us to death!”

48b

Crito: Of course someone would say that, Socrates.

Socrates: What you say is true. But, my friend, the argument we have just gone through still seems much the same to me as it did previously. And we should also consider further whether this principle of ours still stands, that we should not attach importance to living, but to living well.

Crito: It still stands.

Socrates: And to live well is to live nobly and justly. Does this stand or not?

Crito: It stands.

48c

Socrates: In that case, based upon what has been agreed, we should consider whether I am justified in trying to get out of here without permission from the Athenians or not. And if it turns out to be justified, we should make the attempt, and if not, we should let it be. But the considerations you introduce, concerning financial expenditure, opinion, and the upbringing of my children, these, I truly suspect, Crito, are the notions of those who would readily put a man to death and then bring him back to life again if they could, notions devoid of reason, the notions of the multitude. But we, since the argument so convinces us, should consider nothing except what we said just now: whether we shall be acting justly in bestowing money and

favours upon the people who will get me out of here, and in escaping and aiding the escape ourselves. Or shall we, in truth, be acting unjustly in doing all this? And if it is evident that we shall be acting unjustly, there is no need to consider whether we should quietly stand our ground and face death, or suffer any other fate whatsoever. We should only consider the injustice of the act.

48d

Crito: What you are saying is all very well, Socrates, but you still need to decide what we should do.

48e

Socrates: Let's consider this together, good man, and if you are able to contradict what I am saying in any way, do so, and I shall heed you. Otherwise, at this stage, blessed man, please stop presenting the same argument to me over and over – that I need to get out of here without the permission of the Athenians – for it is very important to me that I do all this with your approval and not against your will. Now look at the principle of the enquiry, and whether it is stated adequately, and try to answer the questions you are asked, as you think best.

49a

Crito: Well, I'll try.

Socrates: Are we saying that injustice should not be done intentionally in any way, or should injustice be done in one way but not in another? Or is unjust action not at all good or noble, as we have agreed so often on previous occasions? Or has everything we previously agreed been cast aside in these past few days, and have we, at our age, Crito, despite conversing earnestly with one another for so long, overlooked the fact that we are no better than children? Or is it very much the case, as we said then, that whether the multitude say so or not, and whether we must suffer more grievous afflictions, or even milder ones, doing injustice is evil in any case, and disgraceful

in every way, for the one who acts unjustly? Do we accept this or not?

49b

Crito: We do.

Socrates: So we should never act unjustly?

Crito: Of course not.

49c

Socrates: Nor since we should never act unjustly, should we return an injustice if we are treated unjustly, as most people think?

Crito: Apparently not.

Socrates: What about this, Crito, should we do harm or not?

Crito: Of course we shouldn't, Socrates.

Socrates: And if we suffer harm, is it just to do harm in return, as most people assert, or is it not just?

Crito: Not at all.

Socrates: Presumably because doing harm to people is no different from acting unjustly.

Crito: That's true.

49d

Socrates: So we should neither return an injustice nor do harm to any man, regardless of what we suffer at his hands. And take care, Crito, in accepting this, in case you agree to something that goes against your own opinion, since I know that these opinions are held, and will be held, by a few. Now, there is no common counsel between those who hold this view and those who do not, and they must of necessity despise one another when they see one another's decisions. So you too should consider, very carefully, whether you share this view and agree with it, and we should begin our deliberations from this. Is it

never right to do injustice or to return an injustice, or to defend yourself from suffering harm by doing harm in return? Or do you dissent, and do you not share this principle? I have long held this view, and I still do so now, but if you hold a different one speak and explain it. However, if you stand by what we agreed earlier, hear what follows.

49e

Crito: Well, I stand by it and I agree with you, so speak on.

Socrates: Then, the next thing I say, or rather ask, is should a person do whatever he agrees with someone to do, provided it is just, or should he cheat him?

Crito: He should do it.

50a

Socrates: Then look at the matter based on these principles. In leaving this place without having convinced the city, are we doing harm, even to those we should harm least of all? Or are we not doing harm, and are we abiding by our agreements since they are just?

Crito: I can't answer your question, Socrates, because I do not understand it.

Socrates: Well, consider this. Suppose I was about to run away, or call it what you will, and the laws of the city and the community were to arrive, stand before us, and ask: "Tell me, Socrates, what are you intending to do? Do you have anything else in mind, for your part, than to destroy us, the laws, and the entire city too, by your plan of action? Or do you think any city can exist and not be overthrown when its just enactments have no force and are rendered ineffective by private citizens, and set at naught?" What answer would we give, Crito, to these questions and others like them? Someone, especially a rhetorician, might have a lot to say about the subversion of the law whereby judgements, once delivered, stand supreme. Or

shall we reply that the city did us an injustice and did not decide the case aright? Shall we say this, or something else?

Crito: This, by Zeus, Socrates.

50b

Socrates: Well, what if the laws were to reply: “Socrates, was this also agreed between yourself and ourselves, or did you agree to abide by the judgements the city pronounced?” Now, if I were surprised that they asked this, they would probably say: “Socrates, don’t be surprised at the question, just answer it, since you make such a habit of asking and answering questions. Come on, you are attempting to destroy ourselves and the city. On what grounds? Firstly, didn’t we bring you to birth, since through us your father married your mother and begot you. So tell us, do you find any fault in those of us who are the laws concerning marriage, because they are unsound?” “I find no fault,” would be my reply. “What about those concerning the upbringing of children once they are born, and the education you yourself received? Or did those of us who were established for this purpose not issue good instructions, when they directed your father to educate you in music and gymnastics?” “They were good,” I would say.

51a

Socrates: “So be it. But since you were begotten, reared, and educated in this way, can you say firstly that you are not our offspring and our servant, you yourself and your ancestors? And if this is the case, do you think that justice between you and us is on an equal basis, and that you are justified in retaliating against anything we set about doing to you? You did not have such equality towards your father, or your master if you had one, so that you could retaliate against whatever might be done to you, either by responding to any harsh words, striking back when struck, or doing anything else of that sort. So do you think this will be permitted towards your homeland and the laws, so

that if we set about destroying you because we think it just to do so, you may also set about destroying us, the laws and your homeland, to the best of your ability, and may claim that you are justified in doing so, you, a man who truly cares so much about excellence? “Or have you, as wise as you are, overlooked the following facts: that your homeland is more worthy of respect than your mother or father or all of your other ancestors, and is more august and sacred, and more exalted in status, in the eyes of the gods and of men of intelligence; that when your homeland is angry it should be revered, obeyed and assuaged, even more than an angry father, and you should either persuade it otherwise or do as it commands, and suffer in silence if it prescribes any suffering by being beaten or imprisoned; that if it sends you to war to be wounded or slain, this is what you must do, for justice consists in this and you must not surrender or withdraw or desert your post; that in war, in a courtroom, or anywhere else, you must do what your city and your homeland commands, or else persuade it as to where justice lies; that it is unholy to use force against your father or mother, but much more so against your homeland?” What will be our reply to all this, Crito? Are the laws speaking the truth, or not?

51c

Crito: I think so.

51d

Socrates: “Then consider, Socrates,” the laws might say, “whether we are speaking the truth in saying that your actions are unjust when you set about doing what you are now doing to us. For although we begot you, nurtured you, educated you, and gave a share of all the benefits we could to yourself and all your fellow citizens, we nevertheless make an open declaration. We give permission, allowing any Athenian who wishes to take what is his and go wherever he wishes if he is displeased with us, once he has come of age and has seen what goes on in the

city and has seen ourselves, its laws. None of us laws will prevent it or forbid it if any of you want to go to a colony or go to live somewhere else as a foreigner, because we and the city are not to your liking. You may go wherever you want and take your possessions with you. “But should any of you remain, seeing the way that we administer justice and manage the city in general, we then declare that the person has agreed with us, by his action, to do whatever we order him to do. And we maintain that anyone who disobeys commits a threefold injustice: he disobeys us, we who begot him; he disobeys us, we who nurtured him; and having agreed to obey us, he neither obeys us nor persuades us otherwise if we are not acting aright, even though we lay the options before him and do not issue rough commands to do what we tell him. No, we offer two alternatives: either do as we say, or persuade us otherwise. But he does neither of these.

52b

Socrates: “Well, Socrates, we declare that if you do what you have in mind, you will be just as open to these allegations as any other Athenian, more so in fact.” And if I were to ask, “Why is that?” they would probably rebuke me, quite justifiably, saying that I, more so than any Athenian, have accepted this agreement with them. For they would declare: “Socrates, we have strong evidence that you are fond of us and of the city, for you would never have spent more time at home here than any other Athenian unless you were especially fond of her. Indeed, you have neither yet left the city to go to a festival, except once to the Isthmus, nor did you go anywhere else, except on military service, nor have you ever made any other journey abroad like other Athenians, nor have you been taken with a desire to know about another city or any different laws. No, we were good enough for you, and so was our city. You chose us, and you agreed to live under us as a citizen, with such eagerness that you even begot your children here, so much did the city

please you. And even at the trial itself you could have proposed exile as a penalty if you wanted to, and you would then have had the city's permission to do what you are now trying to do against her will. At the time, you made out that you would not be troubled if you had to die, and said you would choose death before exile. But now you are neither ashamed at your own words, nor do you show any respect for us, the laws. In an attempt to destroy us, you are doing what the basest slave might do, trying to run away, contrary to the contracts and agreements under which you contracted us to live as a citizen. So, answer this question for us first. Are we speaking the truth when we declare that you have agreed, by your actions if not by your words, to live as a citizen in accordance with us, or is this not true?" What shall we say to this, Crito? Shall we do something else, or shall we agree?

52c

Crito: We must agree, Socrates.

52d

Socrates: "In that case," they might say, "are you not contravening your contracts and agreements with us? You were not forced or deceived into agreeing, nor were you compelled to decide in a hurry. No, you had seventy years during which you could have departed if we were not to your liking, or if the agreements seemed unjust to you. But you did not prefer either Sparta or Crete, whom you have often declared to be well regulated, or any other Greek city, or any non-Greek city either. Instead, you spent less time outside the city than the lame, the blind and the other disabled folk. So you, more so than your fellow Athenians, are pleased with the city and obviously with us, the laws. For who would be pleased with a city devoid of the laws? And now, will you not abide by your agreements? You will if you heed us, Socrates, and you won't become a laughing stock by leaving the city.

52e

Socrates: “Yes, indeed, consider what good you will do to yourself, or any of your own associates, if you contravene these agreements or fall foul of them in any respect. Indeed, it is quite obvious that your associates themselves also run the risk of exile, losing their status in the city, or confiscation of their property. But taking your own case first, if you go to a nearby city such as Thebes or Megara, both of which are well regulated, you will arrive there as an enemy to their constitution, Socrates, and anyone there who cares for their own city will view you with suspicion, regarding you as a subverter of their laws, and you will confirm the opinion of the jurors and make it seem that they decided the case correctly. For presumably anyone who is a subverter of the laws will seem, most emphatically, to be a corrupter of young, unreasoning people. But what if you avoid the well-regulated cities, and the men who are most orderly? But if you do this, will you have any reason to live on? Or will you associate with these people and, without any shame, discuss what propositions, Socrates? The same ones you discuss here, that excellence and justice, regulations and the laws, are of the utmost value to people? And don't you think that the conduct of Socrates will appear unseemly? You should think so.

53e

Socrates: “Will you then keep away from these places and go instead to Thessaly, to Crito's friends, where there is indeed plenty of disorder and unrestrained behaviour, and they will probably be delighted to hear you tell of the comical way you ran away from the prison, having put on some disguise or wearing the leather garment of a peasant, or the sort of thing that runaways are usually dressed in, and how you changed your own appearance. But will no one mention the fact that as an old man, probably without much of his life remaining, you had such a greedy desire for life that you dared transgress the most important laws? Perhaps not, not if you don't upset

someone. But if you do, you will hear much that is unworthy of yourself. So you will live on, the fawning slave of everyone, doing what? Eating your fill in Thessaly, having travelled all that way for a dinner? And what will come of those arguments of ours about justice and excellence in general? “Well then, do you want to live on for the sake of your children, so that you can rear them and educate them? What about this? And once you have brought them to Thessaly, will you rear them, educate them, and make exiles of them, so that they may share in this advantage too? Or if you don’t do this and they are brought up here while you are still alive, will they be better brought up and educated when you are not with them? In fact, these associates of yours will care for your children. Is it the case that if you go off to Thessaly they will care for them, but if you go off to Hades they will not care for them? If indeed any of those who claim to be associates of yours are of any use at all, you must believe they will care for them.

54b

Socrates: “So, Socrates, heed us, we who reared you, and do not reckon children or life or anything else to be more important than justice, so that when you arrive in Hades you will be able to say all this in your own defence to those who rule there. For even here, if you do this, it will not prove better, more just, or more holy, either for you or any of those who belong to you, nor will it be better when you arrive there. Rather, as matters stand, if you depart this world you depart unjustly treated by your fellow men, and not by us, the laws. But if you escape, having returned injustice for injustice and evil for evil in such a disgraceful manner, contravening your own agreements and contracts with ourselves, and inflicting harm upon those whom you should harm least – yourself, your friends, your homeland and us – then we will be angry with you whilst you are alive, and in the next world, our brothers, the laws in Hades, will not receive you graciously knowing that you also undertook to

destroy us as best you could. So do not heed Crito, and do not do what he says. Do what we say.”

54d

Socrates: So take note, dear friend Crito. These are the words I seem to be hearing, just as the frenzied dancers seem to be hearing the pipes, and the very sound of these words is reverberating within me and makes me incapable of hearing anything else. Mark my words then. If you say anything contrary to the views I now hold, you will speak in vain. Nevertheless, if you think it will achieve anything, speak.

54e

Crito: No, Socrates, I have nothing to say.

Socrates: Well then, Crito, let it be, and let's act accordingly, since this is the way God leads us.

NOTES

1. Delos is an island sacred to Apollo. Each year the Athenians sent a ceremonial expedition to the island, and during this time it was forbidden to carry out executions in the city.
2. Sounion is a cape at the southernmost tip of the Attic peninsula, 69.5 km south-east of Athens.
3. Iliad ix.363. Phthia was the home of Achilles, so Socrates' dream presumably indicates that once he dies he will arrive home.
4. Simmias and Cebes were philosophers from Thebes. They were followers of Socrates and the Pythagorean philosopher Philolaos, and are the main interlocutors in Plato's *Phaedo*.
5. Thessaly is a region of Greece that lies north-west of Athens.

PLATO *author, of Alopecce, Athens*

DIONYSIUS II *tyrant of Syracuse*

DION *of Syracuse*

ARCHYTAS *of Tarentum*

scene: Letters written by Plato to various recipients, c. 366–353 BCE

FIRST EPISTLE Plato to Dionysius: may you do well

309a

Although I spent so much time with you, administering your rule and being trusted more than anyone, you received the benefits while I endured the vexatious slanders. For I knew that people would not think I co-operated in enacting any of your more cruel deeds since I have, as my witnesses, all those who are involved in government along with you, many of whom I have assisted and saved from no small harm. And although I have often protected your city on my own authority, I was sent away with less respect than befits a beggar, banished by you, ordered to sail away having spent so much time with you. Hereafter, I shall consider my own interest, adopting a less human approach, while you, being the tyrant that you are, will dwell alone.

309c

As for the glistening gold you gave me on my departure, Baccheius, the bearer of this letter, is returning it. For it was neither adequate to provide for my journey, nor beneficial for my life in general, and its provision reflects very badly on your reputation as the donor, and not much less upon mine as the recipient. That's why I have not accepted it. Of course, to receive or give such a sum makes no difference to you, so now that you have it back, use it to serve another one of your associates just as you did in my case, for I have had enough of

your services. And it is timely for me to quote Euripides, that should other misfortunes ever befall you, “You'll pray that such a man be by your side.” And I wish to remind you that most of the other tragedians, when they present a tyrant on stage being slain by someone, they have him cry out, “Bereft of friends, wretched, I perish.” But none of them portrays him as perishing for want of gold. The following lines too seem sensible to sensible people: It is not gold, though a shining rarity in mortals' hopeless life, nor gems nor silver couches, that brighten the eyes of men, nor broad and self-sufficient fields laden with the harvest, but the approving thought of upright men. Farewell, and please recognise how much advantage you have failed to obtain from us, so that you may behave better towards others.

SECOND EPISTLE Plato to Dionysius: may you do well

310c

I have heard from Archedemus that you think not only that I myself should say nothing about you, but that my friends too should neither do nor say anything bad concerning you. You made an exception in the case of Dion only, but your argument that Dion is an exception implies that I do not have control over my own friends. But what you should do in future, I think, if anyone reports anything of this sort about any of us, is to write to me and ask me about it. For I shall be neither reluctant nor ashamed to speak the truth.

310d

As for yourself and myself and our dealings with one another: both of us are, in a sense, known to every Greek. And our relationship is no secret. Why am I saying this now? It is natural that wisdom and great power combine somehow, and they constantly pursue and seek one another. For instance,

whenever people talk about Hiero, or Pausanias of Sparta, they love to bring in their association with Simonides and what he did and said to them. And they are in the habit of celebrating Periander of Corinth and Thales of Miletus together, Pericles and Anaxagoras too, and indeed Croesus and Solon, both wise, with the powerful Cyrus. Then, the poets too, imitating these relationships, bring together Creon with Tiresias, Polyeidus with Minos, Agamemnon with Nestor, and Odysseus with Palamedes.

311a

I am saying all this because I wish to demonstrate that when we both die, the stories told about us will not be silenced, and so we need to be careful about them. Now, in our case, it is still possible, God willing, if anything improper has been done in the course of our relationship heretofore, to correct this in word and in deed. For I maintain that if we are reasonable, true philosophy will be better regarded and better spoken of, but if we are corrupt, that will have the opposite effect.

311d

Now, I shall explain how we should proceed and where justice lies. I arrived in Sicily with the reputation of being the most distinguished of those engaged in philosophy, and when I got to Syracuse I wanted to involve you in my cause so that I might see philosophy honoured even by the general public. But the outcome was not propitious for me. The explanation I give is that you appeared not to trust me very much and wanted to get rid of me and send for others instead, and out of mistrust, to find out what my business was. With that there was a general clamour declaring that you despised me and had more important matters to attend to.

312b

What, then, is the right thing to do next? If you have total contempt for philosophy, then bid it farewell, and if you have heard better instruction than mine from elsewhere, or have

discovered better yourself, then respect those discoveries. But if my teachings are pleasing to you, you should also have special respect for me. So now, as in the beginning, you should take the lead and I shall follow. For if I am respected by you I shall have respect for you, but if I am not respected, I shall keep quiet. To sum up then, if you show respect, it is a credit to us both, whereas if I show respect, it is a reproach to us both.

312d

The sphere is not correct, as Archedemus will explain when he arrives. And he really needs to explain the other matter, more venerable and divine than the sphere, which was perplexing you when you dispatched him. Now, it must be related to you in riddles so that if anything happens to the writing tablet in the recesses of sea or land, whoever reads it will not understand it. It says that everything is around the King of All, and everything is for the sake of that king, the cause of all that is good. Around the second are the second things, while the third things are around the third. The human soul hungers to learn about what sort of things these are by looking to the things that are kindred to itself, none of which are adequate. This question, dear son of Dionysius and Doris, or rather, the travail about it engendered in the soul, is responsible for all difficulties. And unless a person frees himself from this he shall never really encounter the truth.

313b

But you told me in the garden under the laurels that you had thought of this yourself and that it was your discovery, and I replied that if this proved to be the case, you would be sparing me from lengthy discussions. Since although you think you are in possession of unassailable proofs, you have not established them securely, and so for you it flits around about the appearance, now in one direction, now in another. But the reality is not like this.

313d

Now that all this has happened, we have more or less found the answer to the question in your letter as to how we should behave towards one another. For since you have tested my arguments by associating with others and comparing my arguments to theirs, if your test is a true one they shall begin to grow within you, and you shall be familiar with them and with us. You were right in sending Archedemus, and if you do this two or three times, and sufficiently test the answers sent from me, I would be surprised if your present difficulties did not take on a very different aspect than now.

314a

However, you must be careful that these communications are never disclosed to uneducated folk, for to most people hardly any words sound more laughable than these, while on the other hand, to those with a natural affinity, none are more wonderfully inspiring. And being frequently repeated and constantly heard over many years, they are with much effort gradually rendered as pure as gold. There are people, many of them, who have heard these words and are now at a point where they say that what had once seemed utterly unbelievable to them now appears most credible and obvious. The greatest safeguard is to avoid writing and to learn by heart, for it is inevitable that what is written down will be disclosed. That is why I have never yet written about these matters, nor is there a written work of Plato, nor will there ever be, and those writings that are now said to be mine belong to a Socrates become fair and young. Farewell and believe. And now, first read this letter many times, then commit it to the flames.

314d

Enough of this. As for Polyxenus, you were surprised that I sent him to you, but I give the same report now as in the past about Lycrophron and the others who are with you. When it comes to dialogue you are far superior to them by nature and in your method of argument. Indeed, it seems to me that you treat them

and reward them in a measured way. If you have use for Phylition, employ him yourself by all means, but if possible please send him to Speusippus and let him employ the man. Speusippus himself asks you to do this too. You did well to release that man from the quarries. And the truth deserves to be spoken about Lysicleides, for he is the only Sicilian who, on arriving in Athens, did not misrepresent the relationship between the two of us. He continues, rather, to speak well and to find something good to say about what transpired.

THIRD EPISTLE Plato to Dionysius: may you have joy

315b

Having written thus, may I, perhaps, have hit upon the best mode of address? Or might it be better to follow my usual practice and write “may you do well”, which is the greeting I habitually use in letters to friends? You yourself, of course, addressed the god at Delphi with this fawning utterance, writing, “I wish you joy and that you may preserve a pleasant tyrant’s life,” whereas I would not greet any human, or indeed a god, by calling upon them to do this. In the case of gods, my injunction would run contrary to their nature, for the divine is situated at a far remove from pleasure and pain. And in the case of humanity, pleasure and pain are for the most part harmful, engendering dullness, forgetfulness, folly and arrogance in the soul.

315d

I am informed, by no small number of people, that you told some of the ambassadors in your circle that I once overheard you saying that you were going to colonise the Greek cities in Sicily, and lighten the burden of the Syracusans by changing the rulership to kingship instead of tyranny. But according to you, I prevented you from doing all this at the time, whereas I am now

instructing Dion to enact these very measures, thus using your own ideas to take your rulership away from you. But you do me an injustice when you speak contrary to the facts, for I have been slandered enough by Philistides and many others. But you yourself know full well that I willingly co-operated with you on a few of your political measures in the beginning when I thought this might do some good.

316c

I came to Syracuse at the behest of yourself and Dion, who was a long-standing, tried and trusted friend of mine. He was middle-aged and settled, two prerequisites for those of even a little intelligence when they are about to give advice on affairs as important as yours at the time. You, on the other hand, were very young and very inexperienced in those matters in which you needed experience. Afterwards, some person or some god or some random event, with your involvement, expelled Dion and you alone remained. Do you think I would associate with you politically when, having lost my wise associate, I beheld only the unwise one left behind, surrounded by lots of degenerate men, not ruling but thinking he was ruling? I bade farewell to political affairs thereafter, being wary of the slanders and jealousies, and I endeavoured by all means to make the two of you the best of friends.

317a

And although it was difficult, the two of us nevertheless agreed that I should sail home since you were involved in a war, and that when peace came, Dion and I were to return to Syracuse and you were to send for us. When peace came you sent for me, but not in accordance with the agreement. You wrote that I was to come alone, and you said you would send for Dion later. Because of this I did not go. After this, a year later, a trireme arrived along with letters from you, and the chief purport of what was contained in the letters was that if I were to come to Syracuse, Dion's affairs would be organised in accord with my

wishes, whereas if I did not, the outcome would be the very opposite.

317c

You know of course what happened after I arrived. In fact, I asked, in accord with the agreement in our letters, firstly, that Dion be restored and that you be reconciled with him. Secondly, I asked that Dion's relatives retain his property and that the annual revenue usually sent to him should continue to be sent. When none of these requests were granted, I asked if I could depart. You then started persuading me to stay for the year, saying that you were selling all Dion's property and were going to send half of the proceeds to Corinth. But, you surprising man, you then topped all of your promises most insolently. For when you expelled Heraclides, an action that neither the Syracusans nor I myself regarded as just, you said that it had been obvious to you for a long time that I thought nothing of you, but only of Dion and his friends.

318e

The argument comes more or less to the second statement against which I must defend myself. I confirm that, with Archedemus present in the garden, along with Aristocritus, some twenty days before I left Syracuse for home, you said then what you are now saying in your criticism of me, that I favoured Heraclides and all the others more than yourself. And you asked me if I remembered when I first arrived calling upon you to colonise the Greek cities. I agreed that I did remember and that I still thought this to be the best policy. But I must also repeat what was said next. For I then asked you whether this was the only piece of advice I gave you or whether there was something else besides this. And you answered me most angrily and contemptuously. You said, I recall, with much feigned laughter, "You bade me to do all of these things after I had been educated, or not do them at all." I replied that your recollection was excellent.

319d

Now, the reason I am saying all this is as follows. Do not slander me by saying that I did not allow you to colonise the Greek cities ruined by the non-Greeks, or to lighten the burden of the Syracusans by introducing kingly rule in place of the tyranny. For in my case, no lie you could ever tell about me is less appropriate than these slanders. And indeed, there is no difficulty in stating plainly that the implementation of these measures was the best course for you, the Syracusans, and for all Sicilians. But, my friend, if you deny saying these things, even though you said them, then justice lies with me. But if you agree that you said them, you should then regard Stesichorus as wise, imitate his recantation, and renounce your false account for the true one.

FOURTH EPISTLE Plato to Dion of Syracuse: may you do well

320a

I believe that my eager interest in the unfolding events has been evident all along, and also my serious concern that they be brought to a conclusion, mainly because of my high regard for noble deeds. For I think it is only right that those who are actually reasonable and who act accordingly should get the recognition they deserve. And although for the moment, thank God, things are going well, the greatest struggle is still to come. For although various others may seem to excel in courage, speed and strength, anyone would agree that those who claim to honour such qualities as truth, justice, and high-mindedness, and decorum in their display of all these, are naturally superior to others.

320c

We need to make it obvious that we are the sort of people we say we are, especially since, God willing, it will be easy to do so. For other people, it proves necessary to wander abroad if they

are to be well known, but with you the position is that people everywhere all look towards one place, and in that place they look most of all towards yourself. So, with the eyes of the world upon you, prepare to take on the role of a Lysurgus or a Cyrus of old. This is especially important since many people are saying that with Dionysius out of the way, there is a strong possibility that your endeavours will come to naught because of the rivalry between yourself, Heraclides, Theodotus, and other notable ambitious characters. Let us hope above all that no one behaves like this, but if anyone does so, you must assume the role of a healer.

320e

Perhaps the fact that I am saying this appears comical to you since you yourself are not unaware of these details. But I observe that in the theatres, the actors are spurred on even by the children, not to mention their friends, provided the actor thinks the encouragement is serious and well-intentioned. So, you yourselves should now act out your parts, and if you need anything just write to us. And now, in spite of the fact that letters arrived in Sparta and Aegina from Theodorus and Heraclides, we still hear much but know nothing. But also bear in mind that you seem to some people to lack the appropriate level of care. So, do not overlook the fact that pleasing other people is a means to acting successfully whereas self-will is the housemate of loneliness. Good fortune.

FIFTH EPISTLE Plato to Perdiccas: may you do well

321a

I advised Euphraeus, at your request, to spend time looking after your affairs. And it is only right that I give you friendly and so-called sacred advice about the other issues you mentioned and as to how you should now employ Euphraeus. The man is useful in many respects, but the greatest is one that

you stand in need of because of your youth. For each political system has its own language, just like various animals, one belonging to democracy, another to oligarchy, another to monarchy. And although everyone claims to know these, most people, with few exceptions, fall short of fully understanding them. Now, whatever political system utters its own language towards gods or men, and makes its actions conform to its utterance, thrives and is preserved. But if it imitates another, it is undone.

321c

Euphraeus should prove useful to you for these purposes at least, and he is also a good man in other respects too. So, by using him for these purposes you will benefit yourself and also be of enormous benefit to him. But if someone were to say, “It seems that Plato pretends to know what is of benefit to the democracy, but despite being allowed to address the populace and advise them as to what is best, he has never yet stood up and uttered a word,” you should respond: “Plato was born at a late stage in the history of his fatherland, and he came upon a populace already advanced in years and habituated by their predecessors to many practices incompatible with Plato’s advice. He would have been most delighted to give advice to the populace, had he not thought that he would be running risks in vain and accomplishing nothing worthwhile.” Good fortune.

SIXTH EPISTLE Plato to Hermias¹⁰, Erastus and Coriscus: may you do well

322d

It is apparent to me that some god has graciously and adequately provided you with good fortune, if you can receive it well. For you live as neighbours and your needs are such that you are of great benefit to one another. As for Hermias, neither abundance of horses nor other military resources nor

accumulated gold would contribute more to his overall power than firm friends of sound character. And to Erastus and Coriscus, in spite of my age, I am saying they should supplement the noble wisdom of the forms with a wisdom and protective power that defends them against the wicked and the unjust. For they are lacking in experience because they have lived out much of their lives with us moderate folk who are not evil.

323a

So what am I saying? To you Hermias, since I am more familiar with Erastus and Coriscus than you are, I assert, declare and bear witness that you will not easily find more trustworthy characters than these neighbours of yours, and I advise you to cleave to these two men by every just means as a matter of no secondary importance. And again, I am advising Coriscus and Erastus to cleave to Hermias and try to develop your mutual closeness into a united relationship of friendship. But if one of you somehow seems to be severing this relationship, for nothing human is entirely firm, send me and my associates here a letter declaring the nature of the complaint. For I believe that unless the breach happens to be grievous, any communications arriving from us here in justice and reverence would do more than any charm to unite you, and restore once again your previous ties of friendship and fellowship.

323c

And if we all, yourselves and ourselves, apply philosophy to this fellowship as best we can, as the nature of each allows, the prophecies I am making will prevail. All three of you should read this letter, preferably together or in pairs, in fellowship to the best of your ability, as often as you can. Use it as a covenant and a supreme law, a just one, swearing earnestly, and at the same time poetically, with a playfulness akin to that earnestness. Swearing to the ruling god of everything that is now and is to come, supreme father of the ruling cause, whom we, if we genuinely engage in philosophy, shall all clearly know

as far as possible for happy humans.

SEVENTH EPISTLE Plato to the relatives and associates of Dion: may ye fare well

323e

You wrote to me that I should regard your thinking as being the same as that of Dion, and indeed you encouraged me to support you to the best of my ability in word and in deed. I reply that if you actually hold the same opinion and aspiration as that man, I promise to support you, but if you don't, this will require further consideration. And I can tell you from certain knowledge, without much need for conjecture, what his thinking and aspiration was. For when I arrived initially in Syracuse, aged about forty, Dion was the same age as Hipparinus is now, and he held the opinion then that he held to the very end. He thought that the Syracusans should be free people living under the very best laws.

324a

When I was young, my experience was the same as many others. I thought that as soon as I had become my own master I would immediately enter into the public life of the city. For the political system at the time, being criticised by many, was overthrown, and fifty-one men set themselves up as leaders of that overthrow. Some of these happened to be relatives or acquaintances of mine, and indeed they encouraged me to join them as their undertakings were worthwhile. My feelings towards them were hardly surprising given my youth, for I thought they would administer the city by leading it out of an unjust manner of life to a just one.

324c

And of course, I saw that these men did not take long to make the previous political arrangement look like a golden age. Among their various exploits, they also sent for Socrates, an

elderly man who was dear to me, whom I would almost say unashamedly was the most just man alive at that time. They dispatched him, along with some others, to fetch one of our fellow citizens by force so that they could execute him. But he did not obey them, and he ran the risk of all sorts of consequences rather than getting involved in their unholy deeds. Seeing all this, and other actions that were just as bad, I was disgusted, and withdrew myself from the evils of that era.

325a

But as it happened, again with this companion of ours, Socrates, influential people prosecuted him, bringing a most despicable accusation against him. They charged him with impiety, while others convicted him, and condemned to death the very man who had refused to get involved in the impious plot against one of their own exiled friends. Watching these developments, and seeing the sort of people who were conducting our political affairs and the state of our laws and habits, the more I saw, as I advanced in years, just how difficult it appeared to be to manage civic affairs in the right way. For it is impossible to do this without friends and trustworthy associates, and to find such people readily available was not easy.

325d

And I was compelled to say, in praise of right philosophy, that from this it is possible to discern all that is just in the political realm and among individuals. So, the evils of the human race shall not cease until either the sort of people who engage in philosophy, rightly and truly, come to power in political affairs, or those who exercise power in cities, by some divine portion, actually engage in philosophy. This was my thinking when I arrived in Italy¹⁵ and Sicily for my first visit. When I got there, the so-called 'happy life', replete with Italian and Syracusan banquets, did not please me at all. They live their lives, gorging themselves on food twice a day, never sleeping alone at night. For with such habits as these no human being under heaven

could ever become wise, nor could anyone ever become sound-minded.

326e

Holding these views as well as the earlier ones, I travelled to Syracuse, perhaps by chance, although it seems that some higher power then set in train the events which have now unfolded concerning Dion and Syracuse. When I met Dion, who was young at the time, and I explained in discussion what I believed to be best for humanity, and advised him to act on these precepts, I seemed unaware that I was somehow or other bringing about the impending overthrow of the tyranny without appreciating what I was doing. Now, Dion learnt very easily in general, and he listened with more keen attention than any young person I have ever come across to the subjects that my discourses dealt with. And he was willing to live the rest of his life in a different way from most of the Italians and Sicilians, for he had come to cherish excellence more than pleasure and general luxury.

327c

After this, Dion concluded that such thinking, which he himself had arrived at through proper discourse, would not always be confined to himself. He thought that Dionysius might perhaps, with the assistance of the gods, become one of those who pursued such thinking. What's more, if such a development took place, the result would be a life of unbounded blessedness for himself and the rest of the Syracusans. Furthermore, Dion thought I should, by all means, get to Syracuse as soon as possible to join him in these endeavours. His request went as follows: "What greater opportunities are we waiting for than those that have now been presented by some divine good fortune?" He described in detail the Italian and Sicilian empire, and his own influence therein, how young Dionysius was, and the intense desire he had for philosophy and education.

328a

In the end I decided on balance that it was necessary to go. If anyone was ever to attempt to implement those thoughts about laws and political systems, now was the time to make the attempt, for by sufficiently convincing just one person, I would have brought about all sorts of benefits. Emboldened by this thinking, I sailed away from my homeland, most of all from a sense of shame on my own part in case I might seem to myself, well and truly, to be some mere word, unwilling to engage in any action whatsoever. By going, I freed myself in the eyes of Zeus, the god of strangers, and put myself beyond reproach on the part of philosophy, which would have been criticised had I disgraced myself through weakness of spirit and base cowardice. On arrival, to keep the story short, I found the circle around Dionysius full of all sorts of faction and slanders brought to the regime against Dion.

329c

Although I defended him to the best of my ability, there was little I could do. And within four months or so, Dionysius accused Dion of plotting against his tyranny, put him on a small boat, and expelled him ignominiously. After this, we, the friends of Dion, were afraid that one of us might be accused and punished for being an accomplice in Dion's plot. Being aware of how we felt, Dionysius received us all in a kindly spirit, and he reassured myself in particular, encouraging me to take heart and asking me in all sorts of ways to remain. For my departure from him would not have been to his credit, but my remaining with him would have been, and that is why he made a great pretence of imploring me to stay.

329e

But we know that the requests of tyrants are always mixed with compulsion, and so he made arrangements to prevent my departure, bringing me to the acropolis and housing me where no ship's captain would take me away, unless Dionysius himself sent them a written instruction to do so. As time went on,

Dionysius became steadily more affectionate as he grew familiar with my manner and character, and he wanted me to praise him more than Dion and to regard him as a more special friend than Dion. But he was reluctant to learn discourses concerning philosophy in close company with myself, fearing the words of the slanderers. I endured all this, preserving my initial thinking with which I had arrived in Sicily, hoping that he would somehow come to desire the life of philosophy, but he succeeded in resisting this.

330c

These were all the circumstances involved in my visit to Sicily and my activities there on the first occasion. After this I departed, only to return once more at the most urgent request of Dionysius. But first I am to advise you about what you should do under the present circumstances. When advising a sick man whose lifestyle is injurious to his health, isn't it necessary in the first place to effect a change in his way of life, and give the rest of the advice only when he is willing to comply? But if he proves unwilling, I would regard someone who stops advising such a person as a manly physician, while someone who persists, I regard as an unmanly, unskilled physician. And the same holds for a city. But there are people who go completely away from the correct political system and have no desire whatsoever to follow in its path. They warn any adviser to leave the system as it is and not to disturb it, or they will put him to death. Anyone who persists in advising such people I regard as unmanly, and those who do not persist I regard as manly.

331c

This, indeed, is the manner in which I would advise you, just as I, along with Dion, advised Dionysius, telling him firstly to live each day of his life in such a way as to be, most of all, master of himself, possessed of trustworthy friends and companions. This would ensure that he did not suffer the same fate as his own father, who annexed many great Sicilian cities that had been

plundered by the non-Greeks, but was unable when he had colonised them to establish reliable political systems in any of them composed of men who were comrades. And there is no greater indicator of one's excellence or lack of excellence than being bereft of such people or not.

332d

Since this was what had happened to his father, myself and Dion gave this advice to Dionysius, who had had no exposure to education or to appropriate company in the first place. He was advised to acquire other friends for himself from among his kindred, friends of a similar age with an affinity for excellence. But he was advised above all to acquire such affinity for himself, for he was remarkably deficient in this. Without speaking in such plain terms, for it was unsafe to do so, we hinted at this, and we maintained in argument that this is how any man is to save himself and those for whom he is responsible. Proceeding as we suggested, if he were then to colonise the abandoned Sicilian cities and bind them to himself and to one another against the leagues of non-Greeks, we told him that he would not merely double the size of his father's empire, but actually make it many times larger.

333b

These were the words of exhortation to Dionysius from ourselves, who, according to reports pouring in from all quarters, were conspiring against him. Such reports eventually led to Dionysius' expulsion of Dion, and put us in a state of fear. Now, to deal briefly with a number of events, when Dion returned from the Peloponnese and Athens he taught Dionysius a practical lesson. When Dion had liberated the Syracusans and given them back their city on two occasions, they had the same attitude towards him as Dionysius had when Dion tried to educate him and train him to be a king worthy of authority. These allegations prevailed for the second time among the Syracusans, and their prevalence was a bizarre and shameful

victory for those who were responsible for this.

333d

I, a citizen of Athens, a companion of Dion, his ally, went to the tyrant with the aim of converting hostility into friendship, but I lost my struggle against the slanderers. Yet, when Dionysius tried to use money and honours to persuade me to testify, as a friend, to the appropriateness of his expulsion of Dion, he failed utterly in his endeavours. Later, as Dion was returning home, he attached himself to two brothers from Athens who had become his friends, not from a love of wisdom but from ordinary companionship. And, indeed, these two friends, having joined him for his return, became his companions. But when they arrived in Sicily, once they saw that Dion was being slandered for plotting to become a tyrant by the very Sicilians he had liberated, not only did they betray their comrade and host, but they became more or less directly involved in his murder, for they stood by the murderers as allies, with weapons in their hands.

334c

All this has been said by way of advice to Dion's friends and associates. But I now give you some additional advice, delivering the same advice and the same argument for the third time to yourselves as the third recipients. This is what I say. Do not subjugate Sicily or any other city to human despots, but to laws. For subjugation is good neither for the subjugated nor for those who subjugate them, neither for themselves, their children nor their children's children. The first person I tried to convince of this was Dion, the second was Dionysius, and you yourselves are now third. Be persuaded then by me, for the sake of Zeus, the third, the saviour¹⁶, looking either to the case of Dionysius or of Dion, one of whom was unpersuaded and is now living an ignoble life while the other was persuaded and died a noble death.

335a

We should always be truly persuaded by the ancient, sacred pronouncements which tell us that soul is immortal, that it has judges and pays great retribution when someone quits the body. That is why we should regard it as a lesser evil to suffer great wrongs and injustices rather than perform them. With these arguments, and others like them, I set about persuading Dion, and I would have very good grounds for being angry with those who murdered the man, and similarly with Dionysius, for both parties did enormous damage to me, and in a sense to all of humanity in general. The murderers did this by destroying a man who was intent upon practising justice, while Dionysius, despite his great power throughout his entire empire, refused to practise justice.

336a

Now, factions have no rest from their evils until those who have won power stop revisiting past evils through open warfare, expulsion and slaughter, and give up the search for revenge upon their enemies, and exercise some control over themselves by passing laws that are common to all, involving no more advantage to themselves than to the defeated parties. They should compel these people to have recourse to the laws by employing two necessary forces, reverence and fear. Otherwise there is no way that a city with internal factions will ever abate its evils. Rather, for cities constituted in this way, factions, enmity, hatred and suspicion, internal to themselves, tend to arise unrelentingly.

337b

So those who have won power should always, once they are truly desirous of security, select from among themselves the very best Greeks they can find, men who firstly are advanced in years, who have households of wives and children, and preferably ancestors aplenty, who are good, reputable and all sufficiently well off. Fifty such people should suffice for a city of ten thousand citizens. Once the laws have been enacted, it is

all-important that the victors render themselves more subservient to the laws than the vanquished. Then everyone will be safe, happiness will abound, and all the evils will be avoided. So, that's enough advice and direction about my first visit to Dionysius.

338b

Once peace had been restored Dionysius began sending for me, and although he asked Dion to wait a further year, he made all sorts of requests for me to come. Dion kept asking and imploring me to travel, and indeed there was much report from Sicily that Dionysius had now become marvelously enthusiastic about philosophy once again. Nevertheless, it seemed safer at the time to stay well away from Dion and Dionysius, and I annoyed them both by replying that I was advanced in years. After this it seems that Archytas visited the court of Dionysius. In fact, before my departure I had forged a bond of hospitality and friendship between Archytas and his people in Tarentum and Dionysius.

338d

In fact, Dionysius, on the third occasion, sent a trireme to make the journey easier for me, and he sent Archidamus, an associate of Archytas. He himself sent a very long letter, knowing full well of my relationship with Dion and Dion's eagerness that I make the journey and visit Syracuse. In fact, the letter dealt with all these considerations, beginning with: "Dionysius to Plato", followed by the usual civilities. And then, without further ado, it said, "If you are persuaded by us and come forthwith to Sicily, then first and foremost Dion's affairs will be arranged for you in whatever way you wish. But if you don't travel, none of Dion's affairs will unfold to your satisfaction." Other letters kept arriving from Archytas and his people in Tarentum, praising the philosophy of Dionysius. So I felt that I should unequivocally test how matters actually stood.

339d

So, clothed in this reasoning, I went on my way with many fears and, as you might expect, a considerable foreboding. It really was a case of ‘the third to the saviour’. Yet fortunately I came through safely once again, and for this, after God, I must be grateful to Dionysius, for although many people were intent upon my destruction, he prevented this. Once I had arrived there, I decided first of all to test whether Dionysius really was inflamed by the fire of philosophy. There is a way of putting such matters to the test which is not crude and really well suited to tyrants. It is necessary to point out to such people what the subject is in its entirety, the sort of subject it is, and how much complexity and effort it involves. Someone who hears this, if he be really philosophic, will believe that he has heard something wonderful and that he should now bestir himself. But those who are not really philosophic, having a mere coating of opinions, once they see how many subjects are involved and the extent of the exertion, they decide that philosophy is difficult and beyond their abilities.

341a

Now, I can say this much about those who have written or shall write, claiming to have knowledge of the subjects I take seriously, having learned from myself or from others, or having made the discoveries themselves. They could not, in my opinion, understand anything about the matter, for there is no writing of mine dealing with these subjects, nor will there ever be. Indeed, this cannot be expressed in words like other subjects, but from much engagement with the matter itself, and from living with it a light is kindled as though from a leaping spark, and once it has arisen in the soul it sustains itself thereafter. But if it had appeared to me that this was sufficiently capable of being written down and formulated in words for people in general, what task could I have undertaken in my life more exalted than this one: to write something enormously beneficial for mankind, and bring the nature of reality to light

for all to behold?

342a

But it occurs to me to speak at greater length about these issues. There is indeed a true argument that stands against anyone who ventures to write anything at all about this sort of thing. For any of the things that exist, there are in each case three things through which the knowledge of anything is necessarily acquired. The knowledge itself is fourth, and as a fifth we must propose the thing itself, which is cognisable and which truly is. First is a name, second is an account, third is an image, and fourth is knowledge. Take one example: there is something called a circle, which has the very name we have just uttered. Second is the account of this, composed of names and verbs – that which has its extremities everywhere equidistant from the centre. Third is that which is drawn and erased, turned on a lathe and destroyed, none of which happens to circle itself. Fourth is knowledge, true reason and opinion about these, which are not contained in utterances or in physical shapes, but in souls. Of these, reason comes closest in kinship and similarity to the fifth, the circle itself.

343b

Now, although the unsoundness of each of the four is an endless topic of discussion, what's most important is that there are two things: what something is and what it is like. And although soul does not seek to know what something is like but what it is, each of the four offers the soul that which it seeks not, and always provides something that is easily refuted by the senses, thus filling almost everybody with perplexity and insecurity of all sorts. But instruction through all these, going upwards and downwards in each case, with effort brings knowledge to birth of that which is good by nature in one who is good by nature. That is why anyone who is serious about really serious matters should never commit them to writing and thus expose them to the rivalry and confusion of humanity in general.

344d

Anyone who has followed this story and digression of mine will appreciate full well that whether Dionysius has written about the primary principles of nature, or some lesser or greater person has done so, then, according to my account, he has not learned or understood anything sound about the matters on which he has written. Nor did he write this down as an aid to memory, for once someone has grasped this with his soul there is no danger that he might forget it. If he did actually write, he did so out of base ambition, as if he was presenting his own ideas or as if he had received an education of which he was not worthy, all from a love of the fame associated with its possession.

345c

Not long afterwards, although Dionysius had previously allowed Dion to retain his possessions and to derive income from them, he then no longer allowed Dion's trustees to send anything to the Peloponnese, as if he had completely forgotten about his own letter. He now maintained that the property belonged not to Dion but to his son, who was his own nephew and under his legal guardianship. These were the developments during my stay up to this point. But when matters unfolded in this way, I saw exactly the extent of Dionysius' desire for philosophy, and I had good reason to be annoyed. I thought I should tell Dionysius that because Dion had been treated so badly, it would be impossible for me to stay.

346a

But Dionysius came up with a plan to detain me for that sailing season. He arrived the following day and presented this persuasive argument: "You and I must get Dion and his affairs out of the way and get rid of our constant disputes over these issues. For your sake I will do the following for Dion. I think it best that he takes his property and lives on the Peloponnese, not as an exile, but with permission to return home here

whenever this is agreed jointly by himself, by me, and by yourselves, his friends. So consider whether these proposals are acceptable to you, and stay for this year on these conditions, and next season you may take the money and depart.” When I heard this proposal I was annoyed. Nevertheless, I told him that I would give him my views on the matter the next day when I had thought about it.

347a

Having made my decisions, I told Dionysius the following day: “I have decided to stay, but I ask you not to presume that I have authority over Dion, but send a letter to him, jointly with myself, explaining what has now been agreed, and asking whether this is acceptable to him. Meanwhile, you should implement no new measures affecting Dion.” This is what was said, and this, more or less, was what we agreed upon. After this, the ships sailed away. It was no longer possible for me to depart. But Dionysius followed up on his proposals in a most high-handed manner by selling Dion’s property, in its entirety, as he pleased, to whomsoever he pleased, without saying anything to me about these plans.

348a

Until these developments took place, I had been acting in support of philosophy and my friends, but afterwards, Dionysius and I lived differently. I was looking outwards like a bird yearning to fly away from the place, while he was working out how he might intimidate me without giving away any of Dion’s property. Then, contrary to the practice of his father, Dionysius tried to reduce the pay of his older mercenaries. But the soldiers, being angry, banded together and charged the walls, shouting some barbaric war cry, at which Dionysius became fearful and conceded all the demands. Word quickly spread that Heraclides had been responsible for these troubles, and when the man heard this he took himself off and disappeared, while Dionysius tried to capture him.

348c

He summoned Theodotes to the garden where I happened to be walking at the time. I know and remember what Theodotes said to Dionysius in my presence: "Plato, I am in the process of persuading Dionysius here that should I prove capable of getting Heraclides to come here to discuss the accusations that have now been made against him, I think it best that he set sail for the Peloponnese, taking his wife and son, and dwell there without being a threat to Dionysius. I ask and implore Dionysius, should someone come across Heraclides, either in the countryside or here in the city, let no harm come to him apart from being deported from this land." Then, addressing Dionysius, he said, "Do you agree with this?" "I agree," said he. "And even if he turns up in your own home, he shall suffer no harm beyond what has just been said."

349a

The next day, during the afternoon, Eurybius and Theodotes came to me in a hurry, remarkably troubled, and Theodotes said, "Plato, you were present yesterday when Dionysius entered into an agreement with both of us in relation to Heraclides, were you not?" "Of course," I replied. "Well, right now," said he, "there are peltasts running around seeking to apprehend Heraclides. But you really need to come with us to Dionysius." So we set off, gained admission, and while the other two stood tearfully in silence, I said, "My friends here are afraid that you might do something high-handed in relation to Heraclides, contrary to what we agreed yesterday." When Dionysius heard this he was enraged. But I said, "Take heart, Theodotes, for Dionysius will never be so bold to do anything contrary to what was agreed yesterday." But Dionysius, in a highly tyrannical manner, said, "With you I agreed nothing, great or small." "Yes you did, by the gods," said I. "You agreed not to do the very things this man is now asking you not to do." And with these words I turned around and walked out.

349c

After this, Dionysius continued to hunt down Heraclides. According to reports, Heraclides was a few hours ahead of them and escaped into Carthaginian territory. After this, his ongoing plan to hold onto Dion's property seemed to afford Dionysius a convincing basis for enmity with myself. First, he expelled me from the acropolis. While I was staying outside the acropolis, Theodotes sent for me, and complained at length about everything that had happened. He then indicated to me that I was not acting at all well in attaching more importance to Dion and his friends than to Dionysius himself.

349e

Thereafter, I was residing outside the acropolis among the mercenaries. Various people came to me, including some ships' rowers who were fellow citizens from Athens, advising me that damaging stories about me were spreading amongst the peltasts, some of whom were threatening to kill me if they ever got their hands on me. So, I sent word to Archytas and other friends in Tarentum, explaining the predicament I happened to be in. Under the pretext of an embassy from their city, they sent a thirty-oared boat and also one of their own people, Lamiskus, who, on arrival, made a request to Dionysius concerning myself, saying that I wished to depart, and asking that he do nothing whatsoever to stop me. He agreed, and sent me on my way having given me provisions for the journey.

350b

On reaching the Peloponnese at Olympia I came across Dion, who was a spectator at the Games, and I told him all that happened. He, calling upon Zeus as his witness, immediately exhorted myself and my associates and friends to make arrangements to take revenge on Dionysius. Having heard this, I encouraged him to call upon my friends to help him if they wished to do so. "As for myself," said I, "it was you, along with others, who somehow forced me to share the table and hearth

of Dionysius and join in his sacred rites. And although he probably believed that I was plotting along with you against himself and the tyranny, he nevertheless did not have me put to death, but showed me respect. Now, I am no longer really at an age to be of military assistance to anybody, but if you ever feel the need for friendship towards one another and wish to do one another some good, I am fully available to both sides.”

351a

Dion had the same intention as I would attribute to myself or, indeed, anyone else who is reasonable and intends to confer the greatest benefits in terms of power and honour on himself, his friends and his own city to the greatest possible extent. For neither Dion nor anyone else ever intentionally pursues power that will be a curse for all time to himself and his family. They pursue, rather, a political system and the provision of the best and most just laws, introduced without any murders or slayings. This is what Dion was engaged in at the time, preferring to suffer unrighteous deeds rather than perform them. For a righteous person, being sound-minded and sensible, would never wholly be deceived about the souls of any unrighteous people he was dealing with. This same failure brought Dion down, for although he was fully aware that those who brought him down were bad people, he failed to notice the height of ignorance they had attained, and their general depravity and greed, and because he overlooked this he now lies fallen, bringing countless misfortunes upon Sicily. As for the situation following the events described, the advice I have to offer has more or less been presented, so let that suffice.

EIGHTH EPISTLE Plato to the relatives and associates of Dion: may ye fare well

352b

I shall attempt to explain to you, as best I can, what principles you should keep in mind if you really are to fare well. Now that the tyranny has been undone, your entire struggle throughout all of Sicily involves two factions, one side wishing to restore the regime again, the other wishing to finalise the elimination of the tyranny. Now, most people in such situations think the correct advice about such matters is to recommend whatever will do most harm to your enemies and most good to your friends. But it is not at all easy while doing much harm to others to avoid suffering a lot of other evils yourself.

353a

Let this then be a prayer in all respects. Now, and ever since the war began, yourselves and your enemies have been ruled throughout, more or less, by a single family which your ancestors once appointed in their hour of utmost need, at a time when there was an extreme threat to Greek Sicily of being entirely overrun by the Carthaginians. For they then chose Dionysius, who was young and warlike, for the military activities that suited him, and Hipparinus as his senior adviser. For the safety of Sicily, these two were appointed as sole rulers, or, in other words, as tyrants.

353d

Now, it is perhaps only right that those who were saved should all be grateful after such achievements as these. But now both sides need to bear in mind just how often you have both presumed, with high expectations, that something minor was all that was needed in order to achieve your objectives. But note that this minor detail proves again and again to be the cause of countless evils. No limit is ever reached. The conclusion of a past issue always seems to be linked to the beginning of a new one, and because of this cycle there is a danger that the entire class of tyrannical folk, and democratic folk too, will be destroyed. It therefore behoves all Greeks, with all eagerness, to come up with a remedy for these evils.

354a

I shall now try to set out for you my own present views, in all frankness, based on our shared concept of justice. For I am speaking as a sort of arbitrator conversing with the two parties, the former tyrant and the subjects of the tyrant. Now, my word of advice to any tyrant would be to avoid this title and this role, and to transform tyranny into kingship if possible. And it is possible, as Lycurgus²¹, that wise and good man, has proved in practice. As a remedy, he introduced the authority of the Elders and of the Ephors as a bond to preserve the kingship. As a result, he brought security and fame to his own people, because for those people the rule of law became king, and people did not exercise tyrannical power over the laws.

354c

These are my words of exhortation to you all now. Those who are intent upon tyrannical power should turn back from what mindless folk crave so greedily and count as happiness. I would advise those who are pursuing the ways of freedom to be careful never to fall foul of the disease of their forefathers, a greedy and immoderate freedom. For before Dionysius and Hipparinus came to power, the Sicilians of that age thought they were living a happy life and even stoned to death the ten generals who preceded Dionysius, so that they would be slaves to none, subject neither to justice nor law, entirely free in every respect. Consequently, they got the tyrants, for slavery and freedom in excess are in both cases utterly evil, whereas in due measure they are entirely good.

355b

Since this is the natural state of affairs, I call upon the friends of Dion to pass on to all Syracusans the advice I have given, advice common to myself and Dion. And I shall put into words what he would have said to you were he alive and able to speak. The answer is as follows: "O Syracusans, accept, first of all, such laws as would obviously not turn your thoughts and desires towards

moneymaking and wealth. Rather, since there are these three things, soul, body and wealth, assign the greatest honour to the excellence of the soul, second greatest to that of the body, and assign the third and last place of honour to wealth, the servant of body and soul. If you come to experience what is now being said about the laws, you will know in practice that my exhortations are true.”

355d

“Accepting such laws as these, since Sicily is in a precarious situation and your side is neither sufficiently dominant nor entirely defeated, it would surely be just and advantageous for you all to adopt a middle course. These are people whose forefathers once performed the great feat of saving the Greeks from the non-Greeks, so that today we are allowed to have this discussion about political systems. So now, let one side have their freedom along with kingly rule, while the other has responsible kingly rule where the laws are master of the citizens in general, and of the kings themselves, in case they do anything contrary to the law.”

355e

“Under all these conditions, honest and sound in your thinking, with the help of the gods you should appoint three kings: my own son being the first because of a twofold debt of gratitude you owe, firstly to my father who in former times freed the city from the non-Greeks, and secondly to myself, who, of late, twice delivered you from the tyrants; then, as a second king, because of his present assistance and because of the piety of his character, appoint the man who is the son of Dionysius and bears the same name as my father, who, despite having a tyrant as a father, is of his own free will in the process of liberating the city; the third person whom you should call upon to become king is the man who is now leading the army of your adversaries, Dionysius the son of Dionysius, provided he is prepared, voluntarily, to transform himself into the shape of a

king out of fear of misfortune, or out of pity for his fatherland.”

356c

“This is what I had in mind for you while I was alive, and still have now. Having defeated our enemies at the time with your assistance, I would have established the political system in the way I had in mind had not alien demonic forces prevented me. After this, had events unfolded as I intended, I would have recolonised the rest of Sicily by depriving the non-Greeks of the territory they now hold. And I now advise all of you together to hold these same precepts, act upon them, exhort everyone to this course of action, and regard anyone who refuses as a common enemy.” But having given honours, accompanied by prayers, to all the gods, never desist from gently persuading and exhorting friends and foes in any way you can, until the words we are now speaking shall, like a divine dream presented to waking eyes, be worked out in clear, full and happy completion by yourselves.

NINTH EPISTLE Plato to Archytas of Tarentum: may you do well

357e

Archippus and Philonides and their associates have arrived, bringing us the letter you gave them and reporting the news from yourself. They concluded their dealings with the city quite easily, since these were not particularly troublesome. They then told us your news and explained that you are losing patience over your inability to get free of the busyness of public affairs. Now, it is more or less obvious to everyone that the greatest pleasure in life consists in attending to your own affairs, especially if someone chooses to deal with the sort of affairs you deal with. But you should also ponder the fact that none of us has been born for ourselves alone. Rather, our fatherland confers part of what we become, our parents another part, our

remaining loved ones another, and much comes from the circumstances that overtake us in life. And when our fatherland itself summons us to public affairs, it would surely be improper to disobey. So much for these matters. We are now looking after Echecrates, and will continue to do so hereafter for your sake, for the sake of his father, Phrynion, and for the sake of the young man himself.

TENTH EPISTLE Plato to Aristodorus: may you do well

358c

I hear that you are one of Dion's most faithful companions at present, and have been so throughout, which is the wisest characteristic of those who apply themselves to philosophy. For I maintain that true philosophy is steadfastness, loyalty and honesty, while other forms of wisdom and cleverness, tending as they do in other directions, are what I refer to, correctly I believe, as platitudes. So, remain strong and continue in the qualities in which you are now abiding.

ELEVENTH EPISTLE Plato to Laodamas: may you do well

358d

I wrote to you previously that it is most important for all the matters you speak of, that you yourself come to Athens. But since you maintain that this is impossible, the second best course, as you said in your letter, is that myself or young Socrates come to you, if possible. At the moment though, Socrates is sick with strangury, and it would be unseemly for me to go there and not accomplish what you asked of me. Besides, at my age I am not physically up to the task of travelling and running the sort of risks that are encountered by land and by sea. I can, however, give advice to yourself and the colonists,

which may, to quote Hesiod, “sound commonplace, while being hard to understand.” Now, they are mistaken in their thinking if they believe that it is ever possible for a political system to be well established by instituting laws of any sort without there being some authority looking after the day-to-day life of the city to ensure that it is both sound-minded and vigorous in the case of slaves and free alike. Until then you should set your hearts on these outcomes, keep in mind what I am saying about them, and don’t be so foolish as to think you will definitely accomplish anything. May good fortune be yours.

TWELFTH EPISTLE Plato to Archytas of Tarentum:
may you do well

359d

We received the treatises that came from you with wondrous delight, and we had particular admiration for the man who wrote them, whom we deemed worthy of those ancient ancestors of his. In fact, your people were said to have been Myrions who were among the Trojans who left during the reign of Laomedon, good men as the traditional story declares. As for my own treatises about which you wrote, they are not yet fully complete, but I have sent them to you in their present state. And since we both agree that they are to be kept safe, there is no need for me to make that request.

THIRTEENTH EPISTLE Plato to Dionysius, tyrant of
Syracuse: may you do well

360a

[Note: the best manuscripts record that this letter is not by Plato] Let this greeting mark the beginning of my letter, and at the same time be a sign that it is from me. Once, when you were entertaining the Locrian youths and were seated some distance from me, you got up, came over to me, and in a friendly way

addressed some admirable words to me, so I thought, and so too did the person beside me, who then said, “Presumably, Dionysius, when it comes to wisdom, Plato here has been of great benefit to you.” And you replied, “And in many other respects too, since from the very moment I issued the invitation, because of the fact that I sent for him, I derived immediate benefit.” Now, this is the spirit we must preserve so that our mutual benefit from one another may continually increase, and to bring this about I am now sending you some Pythagorean writings, and some ‘Divisions’, and also a man who could prove useful to yourself and Archytas. The man’s name is Helicon, and his people are from Cyzicus²⁵. He is a student of Eudoxus, and is well versed in everything that man knows. And, unusually for such people, he is not devoid of social charm, nor it seems is he of bad character; rather, on the contrary, he seems to have a light touch and to be of good character.

361a

As for the items you wrote to me to send to you, I have had the Apollo made and Leptines is bringing it to you. It is by a good, young craftsman whose name is Leochares. I thought that another work of his was most charming, so I bought it, intending to give it to your wife because she looked after me in sickness and in health in a manner that was worthy of you and me. Please give it to her unless you think otherwise. I am also sending twelve jars of sweet wine for the children, and two jars of honey. We arrived too late to store the figs, and the stored myrtle berries had rotted. We shall look after them better in future. Leptines will tell you about the plants.

361c

The money for these items, for these and for some taxes due to the city, I obtained from Leptines. Now, my own circumstances are that I have charge of four daughters of the nieces of mine who died on that occasion when you bade me wear a wreath and I would not do so. The eldest is of marriageable age, another

is eight years old, another is just over three, and the youngest is not yet one. These must be provided with dowries, by myself and by my friends, for those whom I live to see married. The eldest is to marry Speusippus⁷. She is the daughter of his sister, and she requires a dowry of no more than thirty minae, which is quite reasonable with us. And furthermore, if my own mother should pass away, no more than ten minae would be required for the construction of her tomb.

362a

The next issue I address is the expenditure of your funds at Athens. Firstly, if I am required to incur some expense in funding a chorus or something of that sort, you do not have, as we had hoped, a single friend who will advance you the money. I actually discovered this for myself when I sent Erastus to Andromides of Aegina, from whom you told me to borrow if I needed anything. But Andromides replied, reasonably and understandably, that on a previous occasion, having expended funds on your father's behalf, he had difficulty in recovering them, so he would now provide a small sum and no more. Those who ever report to you are reluctant to report anything that involves a financial expense, for fear of your displeasure. So you should get them accustomed to this and compel them to speak of these matters and of others too.

362c

I should speak of Dion next. I cannot yet speak to him of the other matters until the letters from you arrive, as promised. But in general, I think Dion is reasonably disposed towards you in word and deed. To Cratinus, the brother of Timotheus, and my friend, let us give an armoured breastplate, one of the softer variety for foot soldiers, and to the daughters of Cebes, three seven-cubit robes of Sicilian linen. You probably recognise Cebes' name since he has been written of in the Socratic dialogues, conversing with Socrates along with Simmias in the dialogue about the soul. The man is a kind friend to us all.

362e

Now, I presume you remember what I said about the sign, indicating which of my letters are written seriously and which are not. A serious letter begins with “God”, a less serious one with “gods.” The ambassadors asked me to write to you with good reason, for they sing your praises and mine with great eagerness everywhere they go. If you are sending the breastplate or anything else I wrote to you about, please give it to Terillus if you don’t have someone whom you yourself prefer. He makes the journey regularly, he is a friend of ours, and he is accomplished in philosophy and other subjects. Farewell, love wisdom, and encourage the rest of the young accordingly. Don’t neglect now the repayment of the money you owe to Leptines. Repay him as soon as possible so that others, seeing this, may be more eager to be of service to us. Iatrocles, whom I set free at the time, along with Myronidus, is now travelling with the items I am sending. Please give him some paid employment as he is well disposed towards you, and use him for whatever you wish, and preserve this letter, either the letter itself or a reminder of its contents, and be the same.

NOTES

1. Plato's authorship of the Epistles or Letters is doubted in varying degrees and there is a lack of scholarly unanimity as to whether or not any of them are by Plato. The Seventh Epistle is the one that has traditionally been least suspected, though even the authorship of this Epistle is a matter of dispute among scholars.
2. Euripides, Fragment 956.
3. Archedemus was a prominent figure in Plato's interactions with Dionysius, and, as such, is a recurring figure in the Epistles. Third Epistle 318e; Seventh Epistle 339a, 349d.
4. Hiero I was a Syracusan tyrant; Pausanias was a Spartan general and ruler who defeated the Persian Empire at Plataea. Both were associated with the poet Simonides.
5. These are groupings of famous rulers with influential thinkers. Periander was a tyrant in Corinth; Thales was a natural philosopher from Miletus; Pericles was an Athenian general and statesman; Anaxagoras was a philosopher from Clazomenae; Cyrus II was the founder of the Persian (Achaemenid) Empire; Croesus was a king of Lydia, and Solon was an Athenian statesman and legislator.
6. Phylition was a physician and thinker from Locri in southern Italy.
7. Speusippus was Plato's nephew, who became head of the Academy after Plato's death.
8. Perdiccas III was a ruler of Macedon.
9. Euphraeus of Oreus was a student of Plato who rose to prominence in Macedon under the rule of Perdiccas III.
10. Hermias, Erastus and Coriscus were all members of Plato's Academy. Hermias became a tyrant in Atarneus and was the father-in-law of Aristotle. Erastus and Coriscus were brothers from Scepsis. Both Atarneus and Scepsis were in Ionia.
11. Although Plato's authorship of the Seventh Epistle is often doubted, there are scholars who regard it as authentic.
12. These were the supporters of the democracy. The incident is recounted in Plato's Apology.
13. This is Dionysius II, the son of Dionysius I, tyrant of Syracuse, whose death is described just above.

14. This actually describes Plato's second time in Sicily, but is his first interaction with Dionysius II.
15. Archytas of Tarentum was a Pythagorean philosopher and mathematician. He was also a prominent statesman in his native city in southern Italy. He was an important associate of Plato and is mentioned in several of Plato's epistles, some of which are addressed to him.
16. A proverbial expression ('the third to the saviour').
17. Lynceus journeyed with the Argonauts and served as the lookout for them.
18. Iliad vii.360.
19. Odyssey xii.428, Lattimore.
20. The Phoenicians and Opici were two ancient peoples. The former originated in modern-day Lebanon but had established colonies in Sicily. The latter occupied the Campania region in modern-day Italy.
21. Lycurgus was a Spartan legislator.
22. This is the young Socrates who appears as an interlocutor with the Eleatic Stranger in Plato's *Statesman*.
23. This comment about the Thirteenth Epistle comes from the best-attested manuscripts and may go back to Thrasyllus, one of the early editors of Plato's work.
24. The greeting 'may you do well' is intended as an indication of authorship due to its frequent use. Third Epistle 315a-b.
25. Eudoxus of Cnidus was an astronomer and mathematician who had studied with Archytas and Plato. He eventually moved his school from Cyzicus to Athens, and merged it with the Academy.
26. Isocrates was an influential Athenian rhetorician and teacher of rhetoric.
27. Bryson of Heraclea was a mathematician and sophist who is thought to have studied with Socrates. The ancient historian Theopompus claims that Plato had taken many ideas for his dialogues from Bryson.
28. This is a reference to the King of the Persian Empire.

persons in the dialogue:

ATHENIAN STRANGER

CLINIAS of Cnossus, Crete

MEGILLUS of Sparta

scene: no setting

973a

Clinias: Well, stranger, here we are, duly assembled, all three of us as we agreed, you and me and Megillus here, to consider what account we should give of the sort of understanding which, according to us, once apprehended, gives a person the finest understanding a human being can possibly have. For although we maintain that we have, in general, described all matters concerned with lawgiving, we have neither investigated nor referred to the most important question: what exactly should a mere mortal learn in order to become wise? So we should now attempt to make good this omission. Indeed, we run the risk of failing to complete the objective of all our endeavours, which was to clarify everything from beginning to end.

973b

Athenian: Well said, Clinias. I believe the argument you're about to hear is unusual, and also, in a sense, not so strange at all. Indeed, many people, based upon their experience of life, proffer the same argument – that humankind will never be blessed or happy. Follow me, then, and decide whether or not you think I am right in what I say, along with them, about such a matter. I deny the possibility of humanity, with few exceptions, being blessed and happy, at least during this lifetime. But on dying, there is a noble hope of encountering everything that we are so eager for, as we live the very best life we can whilst alive, and we aim for the noblest departure when we die. I am not saying anything wise, but something that all Greeks and non-Greeks would somehow recognise: that from the very

outset, being born is a difficulty for every creature. First, there is involvement in the condition of all who dwell in the womb, then there is the actual birth, followed by nurture and education, and everyone agrees that all of these give rise to a great deal of trouble. And, indeed, if we don't count the travails but only what people would regard as acceptable, the duration would be quite short, providing a sort of breathing space, it seems, in the middle phase of human life. But old age sets in quickly, making anyone who is not full of naïve notions reluctant to live life all over again, having reflected upon the life that has just been lived.

974b

Athenian: So, what evidence do I have for all this? This is the nature of the subject of our current investigation. We are investigating the manner in which we may become wise on the assumption that each of us has this capacity in some measure. But it takes flight and is gone once someone embarks upon any understanding of the so-called skills or the other areas of understanding or branches of knowledge, as none of these deserves the title of wisdom concerning these human affairs. But our soul is strongly convinced and intuits that it somehow possesses this wisdom by nature, although it is quite unable to find out when and how, or even to discover what it is. Now, doesn't the problem with our enquiry into wisdom bear a strong resemblance to this? Shall we agree that this is how matters stand, or not?

974c

Clinias: We shall agree, stranger, based perhaps on the hope that, in your company, in due course, the truest possible opinion on these matters may eventually arise.

Athenian: Well, we must first review the other kinds of knowledge, so-called, whose acquisition does not render the possessor wise. Well, in the first place, of those which constitute

the primary needs of the mortal race we should note that, although these branches of knowledge are more or less the most necessary of all, their possessor is certainly not regarded as wise nowadays. And since it is not by our skill, it seems, but by nature subject to God that we have all come to manage the earth, agriculture will never really make us wise either. Nor indeed will the building of houses, or construction in general, the manufacture of various sorts of equipment, the work of the blacksmith, the carpenter, the potter, the weaver, and the provision of all sorts of tools. This knowledge is of benefit to the populace, but it is not said to confer excellence. Nor again does hunting in all its forms ever elevate the soul and confer wisdom; neither does prophecy or its interpretation do so at all, for the prophet merely knows what he is saying without understanding whether it is true or not.

975b

Athenian: Now, we can see that the acquisition of our necessities is achieved by means of skill, but that none of the skills makes a person wise; what is left after this is play, which is, for the most part, imitative, but by no means serious. For although they are engaging in imitation by various devices, and by numerous imitations of the body itself that are most unseemly, and by means of words and music in general, and the arts that are born of painting, achieving a great variety of designs of all sorts in various media, imitation does not make anyone wise in any respect, even someone who toils with the utmost diligence.

975c

Athenian: When these have all been excluded, what remains is defence of vast numbers of people by countless means, the most important and extensive being called military skill, the skill of the general, requiring a lot of good fortune, but, by nature, given more to courage than to wisdom. As for the skill of the physician, this is presumably a defence of sorts against the

ravages inflicted upon the nature of living creatures by the various seasons with their untimely cold and heat and the like. But none of this is reputed to be wisdom in the truest sense, being devoid of measure and driven by opinion and guesswork. We also refer to steersmen, and sailors too, as defenders, but you would not declare a single man among them to be wise. Those who claim to act as our defenders in lawsuits with their power of speech pay attention to human character by means of memory and experience born of opinion, but they have strayed far from the truth of what is really just.

976c

Athenian: But there remains yet an unusual power that is reputed to be wisdom, although most people would call it a natural capacity rather than wisdom. It is noticed in a person who easily learns whatever he is learning, securely commits a lot of material to memory, recalls what is relevant to each situation and what is appropriate, and quickly enacts this. All this is designated by some as a natural capacity, by others as wisdom, by others as a natural shrewdness, but no sensible person will ever be prepared to call someone truly wise for any of these endowments.

976d

Athenian: But surely there must prove to be some knowledge whose possession would constitute the wisdom of the one who is truly wise and does not merely seem so. Let's see. For we are attempting to find, through an extremely difficult argument, another knowledge besides those we have mentioned, a knowledge which may truly and reasonably be described as wisdom, which will render its possessor neither lowly nor simple-minded, by which he will be a wise and good denizen of the city, ruling and being ruled justly, as a fitting citizen. So, let's first look for the one knowledge among all those we have at present, which would render the human race mindless and stupid if it were removed from human nature. There is not

much difficulty in seeing what this is. For comparing one with another, so to speak, the knowledge which gives number to the entire mortal race would do this. And it is a god, I believe, rather than good fortune, that saves us by giving this to us.

977a

Athenian: But I believe I should state which god, since it is an unusual one, and somehow, again, not unusual. For how could we ever doubt that the cause of everything that is good for us is also the cause of the greatest good of all, namely understanding? So, Megillus and Clinias, what god am I referring to with such seriousness? Surely it is Uranus whom we are duty bound to honor along with all the other daimons and gods, and to whom above all we should pray. We would all agree that he has been the cause of everything else that is good for us, and we also maintain, correctly, that he has at the same time also given us number, and continues to give this to anyone who is willing to follow along. For once someone embarks upon the correct contemplation of this god, either as the universe, as Olympus or as the heaven, or whatever one pleases to call it, let him only follow how this provides the seasons and sustenance to all as it variegates itself and turns all the courses of the stars within itself. But if someone, having accepted his gift of numbers were to explore the entire circuit of the heaven, this would be the supreme benefit.

977c

Athenian: Yet, going back a little in the argument, we should recall how right we were to appreciate that if number was indeed removed from human nature, we would never attain any understanding. For the soul of that creature from whom rational discourse is absent could never yet attain total excellence. And a creature that could recognise neither two nor three, odd nor even, and was ignorant of number in general, would never be able to give a rational account of anything of which it had acquired mere sense impressions and memories.

There is, however, nothing to prevent it from acquiring the rest of excellence, courage and sound-mindedness. But being deprived of true discourse, no one could ever become wise, and whoever is devoid of wisdom, the greatest part of excellence as a whole, could never become happy because he would not have become perfectly good. And so, it is absolutely necessary that number be the foundation, and not a single skill we mentioned earlier remains once someone does away with the skill of number.

977e

Athenian: Someone, having considered the various skills, might perhaps assume that the human race needs number for everyday purposes, although even this is important. But what if someone were to behold both the divine and the mortal aspects of creation, in which reverence and true number will be discovered? Indeed, music in all its aspects obviously requires the enumeration of movements and sounds. And anyone who is to conclude his life in happiness needs to appreciate that any, more or less, irrational, disordered, unseemly, unrhythmical and inharmonious motion, and anything else that involves anything bad, is lacking in all number.

978a

Athenian: Let us proceed, then, with our enquiry into this very question: how did we learn to use number? Come on then, from where did the one and the two come to us? Now, in many other creatures, the nature enabling them to do this is not even present, and so they are unable to learn how to use number even from the Father. But God first implanted this particular ability in us so that we would be up to the task of understanding what is being shown, and he then showed us, and continues to do so. Of all that is shown to us, what one could be a more beautiful one than the realm of day? We may then come to the night time retaining our vision, where something totally different from it would be presented to us. And as the heaven

keeps on revolving these very objects around, through many nights and many days, it keeps on teaching one and two to us humans until even the slowest learner has adequately learned how to use number.

978b

Athenian: And, indeed, on seeing these, each of us would also conceive of three and four and many. And as he was fashioning the various objects, God made one of them, the moon, which appears large at one time, smaller at another, as it proceeds on its way, always illuminating a different day, until fifteen days and nights have elapsed. This is its actual orbit if you are prepared to treat a single whole cycle as one, so that even a creature who is very slow to learn would learn this. God, having made the waxing and waning moon, as we have said, also established, in conjunction, the months in relation to the year. And so, as a happy outcome, all creatures began to discern number in relation to number. Through these, the earth brings forth its fruits and harvests for us in order to provide nourishment for all living things, as the winds and rains arise without excess in due measure. But if anything occurs for the worse, contrary to these measures, the divine nature should not be held responsible.

979c

Athenian: Now, in our enquiry into laws, it seemed to be easy, in general, to understand what is best for humanity. It seemed then, and still seems now, that all the other pursuits are not particularly difficult, but the question of how we are to become good people is extremely difficult. And everyone agrees with everyone else that the soul should be good, and about the way in which it should be good. It should be just, sound-minded and courageous, and everyone maintains that it should be wise too, but as to the sort of wisdom, as we have already explained, no one agrees at all with anyone else in most cases. Now, however, we are discovering, besides all the previous wisdoms, another

one which is not without its uses for certain purposes: whoever has learned the subjects we have outlined seems to be wise. But whether the person who is knowledgeable in these subjects is indeed wise and good, is a question that needs to be decided.

979e

Clinias: How right you were, stranger, to say that we are trying to come up with important formulations on important issues.

Athenian: Indeed, Clinias, the issues are not trivial, but the greater difficulty is that the formulations are to be completely true in every way.

Clinias: Very much so, stranger, but you should not tire of saying what you are saying.

Athenian: Yes, and you two are to keep on listening.

Clinias: Granted. I am answering on behalf of both of us.

980a

Athenian: Very well. To begin with then, we need to say, first and foremost, it appears, most of all, whether or not we are able to capture in a single word what we think wisdom is. But if this proves quite impossible for us, we should say, secondly, what, and what kinds of wisdom, would, according to our account, make a person wise, if he were to acquire them.

Clinias: Please proceed.

Athenian: After this, no reproach will ever be incurred by the lawgiver for presenting a likeness of the gods that is nobler and better than any that have been presented previously, having recourse to a sort of noble game, honouring the gods and celebrating them with hymns and happiness throughout his own life.

980b

Clinias: Well said, stranger. Let this indeed be the objective of your laws: that the life be lived in greater purity, praising the

gods, and that it may end in nobility and supreme goodness.

Athenian: So, Clinias, how are we to describe this? Do you think we should honour the gods by singing heartfelt hymns, praying that the noblest and best words will come to us? Is this the way? Or what do you think?

980c

Clinias: Yes, that's a wonderful way to proceed. So, good man, have faith in the gods, utter your prayers, and then speak the beautiful words that come to you about the gods and goddesses.

Athenian: It shall be so provided if the god himself guides us. Just join in the prayer.

Clinias: Speak on.

Athenian: Well firstly, since our predecessors did such a bad job of describing the origin of gods and mortal creatures, it is necessary for me first to express this better, based upon my previous argument, resuming what I was trying to say to the impious folk. I was saying that there are gods who care for all things great and small, and who are more or less incapable of persuasion in matters of justice. The most important of these statements was that any soul would be elder than any body. This must surely be the case, for it is plausible that the better, more ancient and more godlike be elder than the young, the younger and the less honourable, and that the ruler be elder in every respect than the ruled, and the leader than the led. Let us understand, then, that soul is elder than body. But if this is the case, our starting point would constitute a more plausible basis for the starting point of creation, and we could then propose that we are embarking aright upon the greatest wisdom, that which concerns the origin of gods.

981a

Clinias: Let it be so. We have spoken as best we can.

Athenian: Come on, then. Should we declare that a living creature may most truly be described, according to its nature, as a combination of soul and body coming together to give rise to a single form?

Clinias: Correct.

Athenian: Is something of this sort then rightly called a living creature?

Clinias: Yes.

981b

Athenian: Well, according to the likely account, we should say that there are five solid bodies from which the best and most exalted things may be moulded, while the other kind, in its entirety, has a single form. For nothing could be bodiless and always entirely devoid of colour, apart from the truly most divine kind, which is soul. To this alone, we may say, belongs the function of moulding and fashioning. Now, we should declare that there is fire and water, that air is third, earth fourth, and ether fifth, and that every creature is perfected in complexity and variety by the relative predominance of these bodies. We should propose that the first one is earthy, consisting of all humans, all creatures with many feet, those without feet, those that are mobile, and those that are immobile, being held fast by their roots. We should also propose that there is another type of living creature that consists mostly of fire. And so we should declare that various living creatures, also visible, arise from these constituents, and we should think of them as the race of the creatures of the heavens, which, we should declare, constitute collectively the divine race of stars, each possessed of a perfect body and the happiest and very best soul.

981e

Athenian: So let us, in the first place, bear in mind that, according to us, there are two living beings of this sort: both are visible, although one seems to be composed wholly of fire, the other of earth. The earthy one moves in a disorderly manner, while the one composed of fire moves in perfect order. The one that moves in a disorderly manner should be thought of as unintelligent, acting for the most part like the living creatures about us. The one that maintains an orderly course in heaven should provide us with great evidence of being intelligent. Indeed, by constantly proceeding, acting, and being acted upon in the same way without variation, it would be providing sufficient evidence of living in an intelligent way.

982c

Athenian: Soul has made the best decision in accord with supreme reason, the result is unalterable and complete, truly in accord with reason, and not even adamant could ever prove stronger or more unalterable than this. But, in fact, three Fates hold fast and keep watch to ensure the completion of whatever has been decided with perfect deliberation by any of the gods. For humanity, there should have been adequate proof that the stars and their entire proceedings are possessed of reason in the fact that they always do the same things because they are acting out deliberations of ancient date, made a wondrously long time ago. This conclusion of ours is the very opposite of what most people believe. They think that whatever does the same things without variation does not possess soul. Hence, most people assume that humans are intelligent and alive because they are moving, while the divine race is unintelligent because its orbits remain the same. But humanity could have relied upon the more beautiful, the better, the friendly to understand that whatever is the same and unvarying and always acts accordingly should, for this very reason, be regarded as intelligent. Such is the nature of the stars, most beautiful to behold, as they dance the most beautiful and exalted dance

movement of all.

983a

Athenian: And, indeed, to justify our claim that they have souls, we should first consider their size. For they are not small as they appear to be; each of them is, rather, of enormous bulk. Indeed, it is possible to appreciate correctly that the sun as a whole is larger than the entire earth, and that all the moving stars are possessed of wondrous magnitude. Well, I maintain that God will be the cause of their revolutions, otherwise this is not possible at all. For as we have shown, nothing could ever become ensouled except through God. It is not possible that earth and the heaven, all of the stars and the complete masses formed from them, should proceed with such precision by the year, the month and the day, and that all these happenings benefit all of us, without soul being present to each, or, indeed, in each of them.

983d

Athenian: Insofar as a human being is debased, it is necessary that he avoid mere blabbering and prove to be speaking sensibly. Now, anyone who speaks of the surges or natures of bodies as causes will not be talking sense. Firstly, there are two things, body and soul, and there are many instances of each; there is no third thing common to both, and, finally, soul is distinct from body. We shall propose that one is presumably intelligent, the other devoid of intelligence, one rules while the other is ruled, one is the cause of all while the other is not the cause of any effect. And so, it is most foolish and unreasonable to maintain that whatever is in the heaven has come into being by some other agency, and is not the product of soul and body as we say it is. Now, if our arguments about everything of this sort are to prevail, one or the other of two things must be said of them: either they are to be glorified as actual gods, or they are to be understood as images of gods, created representations, fashioned by the gods themselves.

984b

Athenian: Now, in relation to gods, we should undertake this much: having discerned two kinds of creature, both visible – one, we maintain, being immortal, the other, the earthy, being mortal – we should attempt to speak of the three that are in between these two, the middle three of the five, doing so with the utmost clarity based upon reasoned opinion. Indeed, we should place ether above fire and propose that soul fashions, from this, living creatures possessing power belonging for the most part to the nature of ether. After ether, we should propose that soul fashions a different kind of creature from air, and a third from water. And soul, having wrought all these, is likely to have filled the entire heaven full of living creatures using all five kinds according to their power, all having come into being partaking of life. These are second, third, fourth and fifth in descent from the manifest gods, ending with us humans.

984c

Athenian: As for the gods such as Zeus, Hera and all the others, anyone may propose whatever they wish, but in accordance with the same convention. The visible gods, then, the greatest, the most honoured, the keenest of sight, must be said to be first. These are the stars and whatever else we observe among their cohort. After these and below these in order are the daimons, the airy type, occupying the third and middle position, responsible for interpretation, whom we should greatly honour in our prayers to ensure that they convey auspicious messages. Partaking of a wondrous intelligence, since they constitute a race that learns and remembers with ease, we should declare that they are aware of the entire content of our minds, take delight in the noble and good, and hate the utterly ignoble since they do share in the experience of pain. And the heaven has been filled full of living creatures, who all interpret towards one another and towards all the supreme gods.

985d

Athenian: Now, since there are indeed these five living creatures, howsoever any of us have encountered them, coming across them in dreams whilst asleep, in prophetic statements and utterances heard in health or in disease, or meeting with them at the end of our lives, beliefs develop in individuals or in communities from which various sacred traditions of many peoples have arisen and will arise. And no lawgiver possessed of reason would ever dare to engage in innovation in any of these, and turn his own city over to some service of God that is insecure. Vile indeed are those who dare not speak of them and reveal that there are these other gods, bereft of rituals, receiving not the honours that are due to them. Wouldn't it be agreed then by the man himself, or anyone who understood the situation, that he might rightly be referred to as a bad man?

986a

Clinias: Of course, stranger, the worst of men.

Athenian: Well then, dear Clinias, mark my words, this is clearly what I am engaged in now.

Clinias: How so?

Athenian: Note that there are, in the entire heaven, eight powers that are kindred to one another. These I have observed, and this is no great achievement; in fact, it is easy for anyone. Three of these belong, in one case, to the sun, in another to the moon, and to the stars we mentioned a little earlier. There are five others. But let no one of us ever believe, idly, that some of these are gods while others are not. Instead, we should all declare and proclaim that these are all kindred and share kindred destinies. Happy is the man who, in the first place, wonders at all this and then develops a passion for understanding as much about this as our mortal nature will allow, deeming this to be the best and most fortunate way to spend his life, and attain after death the regions where excellence abides. Then, having been initiated into truth and

reality, being one himself and possessed of one understanding, he will thereafter have a perfect vision of all that is most beautiful, as far as sight allows.

986e

Athenian: What remains for us is to say what and how many of these beings there are, for we should never prove false. I affirm then, with certainty, this much at least: there are eight orbits, three of which have been described already while five still remain. The fourth motion or circuit, together with the fifth, travels at more or less the same speed as the sun, and, in general, neither slower nor faster. Let us say that these are the orbits of the sun, the dawn-bearer, and a third whose name we cannot utter because it is unknown, the reason being that the person who first observed these was a non-Greek.

987a

Athenian: An ancient circumstance encouraged the first observers. Because Egypt and Syria are blessed with an excellent summer season, they had a more or less continuous view of all the stars, since clouds and rains are consistently absent from that part of the world. And so their observations, well tested over a vast, nay limitless, period of time, have spread abroad and arrived here. Therefore, we must be courageous enough to pass laws for these, since it obviously makes no sense that some divinities are honoured while others are not. For the dawn-bearer, which is the same as the evening star, is, by common account, the star of Aphrodite, and this is a most appropriate name for a Syrian convention setter to assign. That which runs its course more or less along with this, and with the sun too, is the star of Hermes. We should also mention three further orbits of bodies proceeding to the right along with the moon and the sun. And we should also mention one, the eighth, which may especially be referred to as the Cosmos, proceeding in the opposite direction to all those, leading the others.

987d

Athenian: The actual truth seems somehow to lie in this direction. Three stars remain, one of which is much slower than the others, and some people take this to be the star of Cronus; the next slowest should be called the star of Zeus, and after this comes the star of Ares, which has the reddest colour of all. None of these phenomena are difficult to apprehend once someone has described them, but it is necessary for someone who has understood the matter to take the lead.

987e

Athenian: Now, there is something that every Greek should understand: the region we Greeks inhabit is perhaps the best of all for the acquisition of human excellence. And in praise of this, it should be explained that our climate is a mean between the extremes of winter and summer. Although such matters as these are difficult to investigate with certainty, there is, nevertheless, a great and noble expectation that we Greeks will exercise a better and, indeed, a more just concern for all these gods than the tradition and worship that has come from the non-Greeks. For we will make use of instruction and prophecy that comes from Delphi, and the entire system of worship ordained by our laws. And let none of us Greeks ever harbour the fear that mere mortals must refrain from engagement with matters divine. We should hold the very opposite view: that the divine is never devoid of intelligence, nor somehow ignorant of our human nature.

988c

Athenian: Now, there is an account, widespread and plausible, that there was a time when humans had their initial conceptions of the gods and how they came into being, and the sort of beings they were and how they engaged in various activities. But the accounts were neither acceptable to nor to the liking of the sound-minded. Nor could they accept the subsequent accounts in which priority was attributed to fire and water and other bodies, and lower status given to the

wondrous soul. But now, since we are saying that soul, once it has actually come to be present in the body, naturally moves and circulates both itself and the body, it is no wonder that soul is the cause of all circulation and motion, that the circulation and motion towards the good belongs to the best soul, while the opposite holds for the opposite kind of soul, and anything that is good must prevail, now and ever, over its opposite.

989a

Athenian: We have said all this according to justice, the avenger of those who are unholy. But, regarding the matter under scrutiny, we cannot but believe that we should regard the good as wise. As for the wisdom we have sought for so long, we should see whether we can discern this in some education or skill whose lack of recognition among the just would render us ignorant for being like this.

989b

Athenian: Indeed, I am strongly of the view, as indicated by what has just been said, that our failures in practising the most important part of excellence is responsible for our predicament. And it must be said that for our mortal race there is no part of excellence more important than reverence, and we should never be persuaded to the contrary. But through the utmost ignorance, this reverence has not arisen in the very best natures. The very best natures are those that, although they come into existence only with extreme difficulty, nevertheless confer enormous benefit when they do arise. For the soul that quietly accepts its due measure of lethargy and its opposite would be good-natured, admire courage, and be easily persuaded towards sound-mindedness. And, most importantly in such natures, soul is able to learn, has a good memory and is able to delight in these qualities, and thus develop a love of learning.

989d

Athenian: For although these qualities are not easy to develop, once they have arisen and have encountered the nurture and education they need, they would be able to constrain the majority of people, the baser sort, in the right way, to think, act and speak about the gods as they should and when they should in relation to sacrifices and purifications belonging to the gods and to humans, not as a mere outward show, but truly valuing excellence, which is indeed of the utmost importance for everyone in every city. According to us, then, this part is, by nature, the most exalted and well capable of learning all that is noblest and best, provided there is a teacher. But there would be no teaching unless God were to take the lead.

989e

Athenian: Let us attempt, then, to give an account explaining what these things are, their characteristics, and how they should be learned, to the best of my ability as the speaker and your abilities as listeners. So, in what way may someone learn to serve God? Now, although it may sound strange on first hearing, we should at least state its name, a name which someone with no experience of the subject would never guess. The subject is astronomy, but people are unaware that the true astronomer must necessarily be utterly wise. He should not engage in astronomy, as did Hesiod and so many others like him, by observing risings and settings, rather than observing seven orbits of the eight as they each proceed in a way that would be beyond the capacity of most natures to discern easily. An exceptional nature would be required.

990b

Athenian: The moon traverses its orbit fastest, bringing the month and the full moon first. Next, we should observe the sun throughout its entire cycle, and those bodies that run their course along with it as it brings the solstices. Now, let's just say that the other orbits of these bodies as described previously are not easy to understand, and to produce natures that are up to

the task it is necessary to work hard and consistently at basic education and training in childhood and youth. Certain studies would therefore be required. First and foremost is that of numbers themselves, devoid of anything physical, concerned rather with the overall generation of odd and even, and the influence this has upon the nature of things that are.

990d

Athenian: Having learned this, what comes next goes by the very strange name of geometry, which, by reference to part of plane surfaces, produces a likeness of numbers that are not by nature like one another. Now, it should be evident to anyone who could understand this marvel that it is no mere human contrivance, but divine in origin. After this are numbers that multiply threefold, and are like unto the three-dimensional. Then again, those that are unlike are made like by a different skill, which those who are acquainted with it call stereometry. This is godly, and a wonder to those who look closely and appreciate that nature in its entirety, in the case of each ratio, is continually turning power, and the opposite to this, about the double. In the means between these themselves, in both senses, the benefit of consonance and symmetry is bestowed upon humanity in furtherance of the play of rhythm and harmony, a gift from the blessed chorus of the Muses.

991a

Athenian: So much, then, for all these matters, let them be as we have described them. But to bring them to a conclusion, we should proceed to a divine creation that is at once most beautiful to behold, and, indeed, the most divine production of any that God has allowed us humans to have sight of. But no one can ever claim to have understood this easily without a clear vision of everything we are now explaining. We must also grasp the precision of the timing, and how precisely all the phenomena of the heaven are completed, so that anyone who has come to believe in the truth of our argument that soul is

older than body, and more divine too, would come to the view that it is right and reasonable to declare that “everything is full of gods”, and that we will never be neglected by our superiors through their forgetfulness or inattention.

991c

Athenian: In relation to all matters of this sort, it is necessary to bear in mind that if someone grasps each of these aright, a great benefit accrues to whoever apprehends systematically. It is necessary to explain what we mean by ‘systematically’. Every geometric construction, every numerical system and harmonic⁶ structure, and the unified agreement of all the circuits of the stars, should be revealed to the person who learns systematically. And revealed they shall be if, as we say, a person learns aright by looking towards one. For a single bond naturally uniting all these will be revealed to those who think about things in this way. For without these studies, no happy person will make an appearance in our cities. This is the system, this is the upbringing, these are the subjects, and whether it be difficult or easy, this is the course along which we must proceed.

992a

Athenian: Whoever has grasped all these subjects together is deemed by me as most truly the wisest. Of such a person, I insist, in jest and in all seriousness too, that when his destiny is fulfilled in death – if we may say that he still persists after death – he will no longer partake of a multiplicity of perceptions as he does now. Having a share of one destiny alone, having become one from many, he will be happy and wise, and blessed too, and whether he lives this blessed life on continents or on certain islands, he will forever share in good fortune of this sort.

992c

Athenian: The same argument is presenting itself now, the one we stated at the very outset, and it really is true that, with few exceptions, it is not possible for us humans to be perfectly

blessed and happy. For only those who are divine and sound-minded and naturally share in excellence in general, and, furthermore, have grasped everything that is contained in the blessed subject – and we have explained what this involves – only these people adequately acquire and retain the entirety of that which belongs to the divine. And so, we maintain in private and enact in public, in our laws, that those who work at these studies in the right way should be awarded the highest positions of authority in their advanced later years. The others, speaking reverently towards all the gods and goddesses, are to follow such people, and it is only right that all of us, having properly recognised this wisdom and put it to the test, should call upon the Nocturnal Council to pursue it too.

NOTES

1. This introduces the notion of ratio.
2. This picks up on the argument from Laws x.
3. Laws x.891e ff, 896a ff.
4. Stereometry is the measurement of solids.
5. These three progressions represent the transition from one dimension to three dimensions. The values of one-dimensionality, which are based on the ratio of 1:2, are squared to obtain the values of two-dimensionality, and cubed to get the values of the 'solid and tangible' third dimension.
6. These ratios are obtained through taking the arithmetic mean, 9, and the harmonic mean, 8, between 6 and 12: $9:6 = 3:2$ and $8:6 = 4:3$; $12:8 = 3:2$ and $12:9 = 4:3$.
7. Aristotle in his *De Anima* (I.5.411a8) attributes this phrase to the pre-Socratic philosopher Thales.

narrator: SOCRATES of Alopecce, son of Sophroniscus

persons in the dialogue:

CRITO *a friend and contemporary of Socrates*

CLINIAS *of Scambonidae, son of Axiochus*

EUTHYDEMUS *of Chios and Thurii, sophist*

DIONYSODORUS *brother of Euthydemus*

CTESIPPUS *of Paeania, cousin of Menexenus*

scene: the Lyceum

271a

Crito: Who was it, Socrates, you were conversing with in the Lyceum yesterday? There was such a large crowd gathered around you that even though I wanted to listen I was not able to hear anything clearly when I got close. Yet when I popped my head up I got a look, and you seemed to be in conversation with a stranger. Who was he?

Socrates: Which of them are you asking about, Crito? For there were two men, not one.

271b

Crito: I am referring to the man seated two places to your right. Axiochus' boy was between the two of you, and he seemed to me to have really grown up, Socrates, and to be much the same age as our own Critobolus, who is a slender youth, while that boy looks older than his years and is noble and good in aspect.

Socrates: Euthydemus is the man you are asking about, Crito. And the person seated on my left was his brother, Dionysodorus. He gets involved in the discussions too.

271c

Crito: I don't know either of them, Socrates. They are, it seems, more sophists, a new kind. Where are they from, and what is their wisdom?

Socrates: Although the family is, I believe, from this part of the world, from Chios, these men went to Thurii as colonists. But after being exiled from there, they have already spent several years in these regions. As for your question about their wisdom, it is astounding, Crito. These two are almost totally wise. They really are a pair of total combatants – not like the two total athletes from Acharnania. For those two are able to fight with the body alone, while these two are firstly physically formidable in armour-fighting, and able to teach anyone who pays them a fee. Secondly, they are supreme in courtroom combat, both in fighting a case, and in teaching someone else to deliver and to compose the kind of speeches appropriate for the law courts. And of late they have brought perfection to their skill as total athletes, becoming so formidable in verbal combat and in refuting whatever anyone says, whether it be true or false. So I am thinking of placing myself in their hands, Crito.

272b

Crito: What's this, Socrates? Aren't you afraid, at your age, that you may already be too old?

Socrates: Not in the least, Crito. I have enough evidence, and encouragement, not to be afraid. For these two were almost old men when they embarked in this disputatious wisdom which I am so keen on. There is only one thing I am afraid of – that I might draw criticism upon the two strangers, just as I did to the harpist Connus, who still, even now, is teaching me to play the harp. So I'm afraid someone may criticise the two strangers in the very same way. And perhaps, fearing this very outcome, they may be unwilling to accept me. Yet, Crito, I have persuaded other old men to attend the class as fellow pupils of mine, and in this case too I shall attempt to persuade some others. Yes, why don't you attend along with me? And we will bring your sons as bait. Since they will want the boys as pupils, I know that they will educate us too.

272c

Crito: There's no reason not to, Socrates, if that's what you think. But first explain to me what the wisdom of the two men is so that I may know what we are going to learn.

Socrates: You shall hear straightaway, as I can't claim that I didn't pay attention to them. No, I attended fully, and I remember, and I shall try to recount everything to you from the beginning. Indeed, by some divine providence I happened to be sitting there, just where you saw me, alone in the dressing room, and I was already thinking of getting up to leave. But as soon as I stood up, the familiar divine sign came. So I sat down again, and a little later these two men entered, Euthydemus and Dionysodorus, and others too, pupils of theirs, I think. And once they arrived they walked about in the roofed portico. They had barely completed two or three circuits when Clinias¹ came in – and what you say is true, he really has grown up. Behind him was a whole host of admirers, and among them was Ctesippus, a young man from the deme of Paeania, noble and good by nature, except for some arrogance born of youth.

272e

Socrates: Now, when Clinias saw me from the entrance, seated on my own, he came straight over and sat down on my right, just as you say. On seeing him, Dionysodorus and Euthydemus first stood talking to one another, glancing over at us from time to time. Then one of them, Euthydemus, went and sat beside the young man, while the other one sat next to me on my left, and the others sat where they could.

273a

Well, I greeted them both warmly as it was some time since I had seen them, and then I said to Clinias that Euthydemus and Dionysodorus knew everything there is to know about warfare, whatever anyone who is to be a good general needs to know, and that they are also able to make someone capable of coming to his own aid in court, should someone do him an injustice.

Now, when I said this they were contemptuous. So they laughed, exchanged glances, and Euthydemus said, “We no longer take these matters seriously, Socrates. No, we treat them as diversions.” I was amazed and I said, “Your work must surely be noble if such weighty concerns as these are mere diversions for you. By god, tell me what this noble concern is.” “Excellence, Socrates,” he replied, “is what we believe we are able to impart better and more quickly than anyone else.”

273e

“By Zeus,” I said, “you are making quite a declaration. Where did you discover this godsend? But, Dionysodorus and Euthydemus, make sure you are speaking the truth. For when you are making such an enormous proclamation, don’t be surprised if it is disbelieved.” “Well, Socrates, you may rest assured that this is how matters stand.” “Then I account you far more blessed for this possession than the Great King for his empire. But tell me this. Are you thinking of giving a demonstration of this wisdom, or what do you intend?” “That’s the very reason we are here, Socrates, to give a demonstration and to teach, if anyone wishes to learn.”

274c

I asked them then to demonstrate – not a comprehensive one, but to convince this young man here, Clinias, that he should practise philosophy and concern himself with excellence, and I described the boy’s situation: the son of Axiochus, first cousin of the present Alcibiades, young and at risk of being turned to some other pursuit. Now, once I had said almost exactly this, Euthydemus responded in a manner both courageous and confident. “That makes no difference, Socrates,” he said, “as long as the young man is willing to answer.” “Well,” I replied, “he certainly is well accustomed to this, for these people here are constantly coming to him, asking him lots of questions and engaging him in discourse, and so he is quite courageous at answering.”

275c

So Euthydemus began somewhat as follows. “Clinias, who are the people who learn? Are they the wise or the unlearned?” And the young man, faced with such a significant question, blushed and looked at me in perplexity. And once I realised that he had been upset, I said, “Take heart, Clinias. Answer courageously, giving whatever answer seems right to you, for this may well confer an enormous benefit upon you.” At this, Dionysodorus leaned forward and whispered that whatever answer the young man gives, he will be refuted. And Clinias answered that those who learn are the wise. Then Euthydemus led him through a series of steps: when you were learning, you did not yet know the things you were learning? Then you were not wise, but unlearned? “Then whilst you were learning what you did not know, you were learning whilst being unlearned – it is the unlearned who learn, Clinias, and not, as you believe, the wise.” Now, once he had said all this, his followers laughed and cheered like a chorus at a signal from their teacher.

276a

And before the youth had well and truly recovered, Dionysodorus took over. “What about this, Clinias? Whenever the grammarian gave dictation to you, which boys learned the dictation, the wise or the unlearned?” “The wise,” replied Clinias. “So it is the wise who learn, not the unlearned, and you didn’t answer Euthydemus properly just now.” With this, the admirers of the two men laughed and cheered loudly in delight at their wisdom, while the rest of us were stunned and fell silent. And Euthydemus, in order to astound us even more, like one of those good dancers, gave a double twist to his questions on the same topic and asked, “Now, do those who learn, learn what they know or what they do not know?” And Dionysodorus whispered again, “And this, Socrates, will be another one, similar to the previous one.”

277a

He put Clinias through the letters argument – you know all your letters? Yes. When anyone dictates, doesn't he dictate letters? Yes. Doesn't he dictate something you know? Yes. Therefore you are learning what you know. So you did not answer correctly. Then Dionysodorus threw the argument back like a ball: learning is the acquisition of knowledge, while knowing is already having knowledge, so those who acquire are those who do not have – the unlearned learn, not those who know. Well, Euthydemus was rushing in to give the lad a fall for the third time when I realised the young man was going under. Wanting to give him some respite I said, by way of encouragement, “Clinias, do not be surprised if these arguments appear unfamiliar to you. They are doing the same thing as those who are involved in Corybantic initiation – they are now really just dancing around you and having fun with these dance moves. After this they will initiate you.”

277e

I explained to Clinias that this was the playfulness of their instructions: they were demonstrating that the same word ‘learning’ applies both to someone who initially has no knowledge but subsequently acquires some, and to someone who already has the knowledge and investigates further. These men were demonstrating that this fact had escaped his notice, that the same word is applied to people in opposite circumstances. “So, you should regard all of this as child’s play on their part, after which they will of course demonstrate their serious work to you. So let that be the end of your game playing, Dionysodorus and Euthydemus, and that is probably enough. And so, after this you should give a demonstration in which you exhort the youth to devote himself to wisdom and excellence. But first I shall demonstrate to you both how I understand this, and the sort of thing I am eager to hear.”

278e

So I said, “Does every one of us wish to do well? Or is this question one of those that will provoke the laughter I was afraid of a moment ago? Yes, it is surely ridiculous even to ask such questions, for what man is there who does not wish to do well?” And Clinias agreed. “So be it. The next question is, since we wish to do well, how may we do well? Would it be by possessing much that is good? Come then, all things considered, what sort of things are good for us? Being wealthy, and being healthy too, and being handsome and endowed with the other bodily features?” He thought so too. “Then again, noble birth, power and esteem in your own city are obviously good.” He agreed. “And what about being sound-minded and just and courageous – are these good?” “They are good,” said Clinias. “And where shall we situate wisdom? With the good?” “With the good.”

279c

I then said we were in danger of omitting good fortune, which everyone agrees is the most important good of all – but then I changed my mind: “Surely wisdom is good fortune. Yes, a child would realise this.” I asked whether the flute players are the most fortunate when it comes to flute music, the writing teachers when it comes to letters, the wise pilot on the sea, the wise general in battle, the wise doctor when ill? In every case, Clinias agreed, wisdom brings good fortune, for wisdom would not ever fall into error. Rather, it must act aright and succeed, or else no longer be wisdom. In the end we both agreed, I know not how, that once wisdom is present, he to whom it is present needs no additional good fortune.

280b

I then took up the argument about using good things correctly. If we had a lot of food but did not eat, we would not be benefited. If each of the craftsmen had all the equipment appropriate to his own work but did not make use of it, they would not do well because of the acquisition alone. “So it seems that someone who is going to be happy must not merely acquire

such goods as these, but must also make use of them, or else no benefit arises from their acquisition.” Clinias agreed. “If he uses them correctly or if he does not?” “If he uses them correctly.” And was it knowledge that guided the right usage of everything – wealth, health, beauty? “It was knowledge,” said he. “So, in the case of any acquisition or any activity, knowledge not only provides people with good fortune, but also it ensures they do well.”

281a

I pressed on: would a person derive more benefit if he acquired a lot and did a lot without possessing intelligence, or if he acquired little and did little, while possessing intelligence? If he did less, wouldn't he make fewer errors, and wouldn't he be less wretched? “Entirely so.” Who is inclined to do less – someone rich or poor? “Someone poor.” Someone strong or weak? “Someone weak.” Someone courageous and sound-minded or a coward? “A coward.” And a lazy person, someone slow, dull of sight and hearing? We agreed with one another on all such examples. “To sum up, Clinias, in the case of everything we initially declared to be good, the argument is not about how they are naturally good just by themselves. If ignorance rules, then they are more bad than their opposites; but if understanding and wisdom rule, they are more good, yet just by themselves neither of them is of any value.”

281e

I concluded: “Since we are all eager to be happy, and since it turns out that we become like this through using things, and using them correctly, and since knowledge provides the correctness and good fortune, then every man should, it seems, contrive by every possible means to become as wise as possible. And surely if someone believes he should acquire this from his father, from his guardians too, and from his other friends, begging and imploring them to grant him wisdom is no disgrace, Clinias. Nor is there cause for indignation in being a

servant or slave to a lover or any person for the sake of this, in being willing to render any noble services out of his eagerness to become wise.” “I really think you have spoken rather well,” said he.

282c

I was delighted that Clinias agreed wisdom can be taught and I said, “Best of men, it is good that you say so, and you have done well, by saving me from a lengthy consideration of this very question, whether wisdom can or cannot be taught. So now, since you think both that it can be taught, and that it is the only thing there is that makes a person happy and fortunate, would you say anything else is needed, apart from the practice of philosophy? And is this what you yourself intend to do?” “Yes certainly, Socrates,” he replied, “to the best of my ability.” I was pleased to hear this, and I said, “Dionysodorus and Euthydemus, this is my own example – perhaps amateurish, laborious and a bit too long – of what I want an exhortatory argument to be like. Now, one of you, whoever wishes, should give a demonstration of the same thing, done skilfully. For it is of great importance to us that this youth become wise and good.”

283a

Now, Crito, that is what I said, and I paid very close attention to what was to happen next. Dionysodorus, the elder of the two, was first to set about the argument. “Tell me, Socrates,” said he, “and you others who say you want this youth to become wise. Are you joking when you say this, or are you serious, and do you truly want this?” So, with this in mind, I emphasised that we were extremely serious. And Dionysodorus said, “Well, think about this, Socrates, in case you end up denying what you are now saying.” “I have thought about it,” said I, “and I shall never end up denying it.” “Well then,” said he, “are you saying that you want him to become wise?” “Yes, we certainly are.” “And at the moment, is Clinias wise or not?” “He is not boastful,” said I, “and he does not yet make this claim.” “But,” said he, “you want

him to become what he is not, and no longer be what he now is.”

283b

When I heard this I was confused, and he seized upon my confused state and said, “Since you want him no longer to be what he now is, it seems you just want him to be dead. Yes, friends and lovers like these would be worth a lot, friends who would do anything to destroy their favourite.” When Ctesippus heard this, he was angry on behalf of his favourite and said, “Stranger from Thuri, if it were not such a crude expression, I would say ‘be it on your head’ for presuming to hold such a false notion of myself and the others, and one which in my view it is most unholy to express, that I would like this fellow to be utterly destroyed.” “What’s this, Ctesippus?” said Euthydemus. “Do you think it is possible to speak falsely?” “Yes, by Zeus,” he replied. “I would be mad not to.”

283c

Euthydemus then trapped Ctesippus: when one is speaking of a matter, does he not speak of something that is? And what he speaks of is one of the things that are? So if Dionysodorus is speaking of things that are, he is speaking the truth and is saying nothing false about you. Ctesippus retorted that Dionysodorus was speaking of things that are, but not as they actually are. “What do you mean?” said Dionysodorus. “Are there some people who speak of things as they are?” “There are, indeed,” he replied, “the noble and good, and those who speak the truth.” “What about this? What’s good is well disposed, and what’s bad badly so. Is this the case?” He concurred. “And you agree that the noble and good people speak of things as they are.” “I agree.” “So good people speak badly of anything bad, Ctesippus,” he said, “if they actually speak of it as it is?” This led to banter about speaking ‘greatly’ of the great and ‘warmly’ of the warm, and Dionysodorus accusing Ctesippus of being ‘abusive’.

284c

Since I thought they were being aggressive towards one another, I made light of it with Ctesippus, and said, “Ctesippus, if they are prepared to be generous, I think we should accept anything the strangers say, and not quarrel over a word. For if they know how to destroy people in such a way as to make worthy and intelligent folk out of those who are degenerate and stupid – if they know this, then let us make this concession to them. Let them destroy the lad for us and make him intelligent, and all the rest of us too. But if you younger folk are afraid, then let the danger fall upon me, as if they were practising on some slave. Since I am quite old, I am willing to run the risk and give myself over to Dionysodorus here as if he were Medea of Colchis. Let him destroy me, and if he wants to, let him boil me or do whatever he wants. Just let him bring me forth a worthy man.”

285d

Then the argument shifted to whether contradiction is possible. Dionysodorus said one could not even prove that one person had ever contradicted another. Ctesippus said he was hearing himself, Ctesippus, contradicting Dionysodorus right now. Dionysodorus pressed: are there accounts of each of the things that are? And do they not give an account of each as it is? But if both speakers give an account of the same thing, they say the same things – they don’t contradict. If neither speaks of the thing, neither mentions it. And if I speak of the thing but you speak of something else, then I’m speaking of it while you are not – but how could someone who does not speak of it contradict someone who does? Ctesippus fell silent, while I was amazed at the argument and said it always seemed to me to simply say there is no false speaking, and to ask whether there is false thinking. “There is no false thinking either,” he replied. “So there is no ignorance either, nor any ignorant people?”

286e

I asked directly: “Dionysodorus, are you presenting this argument for the sake of discussion, in order to say something unusual, or do you think in truth that there is no such thing as an ignorant person?” “You should try to refute me,” said he. “And based upon your argument, is there refutation when no one speaks falsely?” “There is not,” said Euthydemus. “Then Dionysodorus did not encourage me to refute him just now?” said I. “Indeed, how could someone encourage what is not?” I pressed on: if it is impossible to be in error either when acting, speaking or thinking, what have the two of you come here to teach? Or did you not claim earlier that you are the best people to impart excellence to someone who wishes to learn it? Dionysodorus dismissed this as old Cronus-talk, reminding me of what was said last year and refusing to deal with what was being said at the moment.

287e

After much back-and-forth, in which Euthydemus tried to trap me into saying I know by my soul and I always know, I resolved to get back to the exhortatory purpose and said, “Clinias, you should remind me where we left off. As I recall it was around the stage where we agreed, in the end, that one should practise philosophy.” “Yes,” he replied. “And philosophy is the acquisition of knowledge. Isn’t this the case?” “Yes.” “Now, would it be of any benefit to us if, as we went about, we knew how to recognise where most gold is buried beneath the earth?” “Probably,” he replied. “But we refuted this suggestion earlier,” said I, “because we would be no better off even if all the earth’s gold were to be ours without any trouble, or any need to dig. And so even if we knew how to turn stones into gold, the knowledge would be of no value, for if we did not also know how to use the gold, there turned out to be no benefit in it. Don’t you remember?” “Entirely so,” he replied.

289a

So what is needed is a knowledge in which the production, and knowing how to use what is produced, reside together. We do not need to be lyre makers, for the productive skill is one thing while the user's skill is another. The same holds for flute-making. I asked about the speech-writer's skill, and Clinias objected: "I notice that some speechwriters do not know how to deliver their own speeches, the ones they have composed, just as the lyre makers are unable to play the lyres – the skill of producing speeches is distinct from the skill of using them." I thought that you are giving sufficient evidence that the skill of the speech-makers is not the one whose acquisition would result in happiness. Indeed, this skill is a portion of the enchanters' skill, but a little inferior thereto. For the skill of the enchanters consists in charming snakes and wild creatures generally, while the speech-makers' skill involves charming and persuading jurors, assembly members, and large gatherings in general.

290a

I suggested the skill of the general next, but Clinias said, "This is, in a sense, a skill in hunting down human beings. Nothing in the actual skill of hunting goes any further than hunting down and subduing, and whenever hunters subdue whatever they are hunting, they are not able to make use of it. Instead the hunters hand it over to the cooks. The same goes for geometers, astronomers and calculators, since they too are hunters. They do not produce their own diagrams; instead, they make discoveries. And since they themselves do not know how to make use of them, but only how to hunt them down, they hand over, of course, to the dialecticians. And the same goes for the generals: whenever they capture some city or army, they hand it over to the statesmen. So if we need a particular skill which also knows how to make use of that which it acquires, then we must search for something else rather than the skill of the general."

290c

Crito: What are you saying, Socrates? Did that young man make a pronouncement of that sort?

Socrates: Don't you believe it, Crito?

Crito: By Zeus, I don't. In fact, if he said all that, I think he needs neither Euthydemus nor anyone else to educate him.

290d

Socrates: Well then, by heaven, perhaps it was Ctesippus who said all this and I am being forgetful? In any case, I know quite well that it was neither Euthydemus nor Dionysodorus who said all this. But, blessed Crito, was it perhaps one of the superior beings in the vicinity who made the pronouncement? For I know that I did hear all this.

290e

Crito: Yes by Zeus, Socrates, I think it was indeed one of the superior beings, very much so. But after that, did you continue searching for some sort of skill? Did you or did you not find the skill you were searching for?

Socrates: Did we find it? Heavens, no. But we were quite comical fellows, just like children chasing after larks, constantly believing we were just on the point of capturing each of the kinds of knowledge, while they kept on escaping us. Once we had arrived at the art of kingship, and we were considering it closely in case it might be the one that provides happiness, we ended up in a sort of labyrinth. Thinking we were already at the end, having turned another corner, we appeared to be back at the beginning of the search once more, and just as badly off as we were at the outset.

291a

Crito: How did that happen to you, Socrates?

Socrates: I'll tell you. The fact is, we had presumed that the skill of statesmanship and the skill of kingship were the same. The

skill of generalship and the others hand over to this skill to take charge of their works, since it alone knows how to make use of them. So it seemed evident to us that this was what we were seeking, and was the cause of right action in the city, simply, as the line from Aeschylus says, seated alone at the helm of the city, governing all, in charge of all, making everything useful.

291d

Crito: Well, was your understanding unsound, Socrates?

291e

Socrates: You will decide, Crito, if you are willing to hear what happened to us after this. When we asked what outcome the skill of kingship brings about for us – as medical skill brings health, and the skill of agriculture brings food from the earth – we found we couldn't say what it produces. Eventually, Clinias and I agreed that good is presumably nothing but knowledge of some sort. So the skill of kingship had to make the citizens wise and confer knowledge, if it was really going to be the one that benefits them and makes them happy.

292c

Crito: That's it. So, based upon your report of the discussion, this was presumably agreed by yourselves at that stage.

Socrates: Well then, does the skill of kingship make the people wise and good?

Crito: Is there any reason why not, Socrates?

292d

Socrates: But does it make everyone good at everything? And is this the skill that confers all knowledge – shoe-making, carpentry, and all the others?

Crito: No, Socrates, I don't think so.

Socrates: Well, what knowledge does it confer? Now, it should not be the artificer of any of the outcomes that are neither good nor bad, yet it should confer no knowledge apart from itself. Is

it acceptable if we say that it is that by which we shall make others good?

Crito: Entirely so.

292e

Socrates: In what respect will they be good and useful for us? Or would we continue to say that they will make others so, and those others will do this too? But it is not at all evident to us in what exact respect they are good, especially since we have discredited the outcomes ascribed to statesmanship. No, it is simply a case of the proverb, ‘Corinthos, son of Zeus’, and as I said, we were just as badly off, or even worse off, when it came to knowing what the knowledge that will make us happy actually is.

293a

Crito: By Zeus, Socrates, it seems you ended up in considerable difficulty.

Socrates: Now, I myself, Crito, since I had landed in this difficulty, began to exclaim at the top of my voice, begging the two strangers to rescue us, myself and the young man, from the third wave of the argument, to be serious in every way, and reveal to us, in all seriousness, what precisely is the knowledge which we should obtain if we are to live out the rest of our lives beautifully.

293b

Crito: Well then, was Euthydemus prepared to reveal anything to you?

Socrates: Of course, and he began his account, my friend, in a very high-minded manner, as follows. “Well, Socrates, this knowledge that has perplexed you for so long, shall I teach it to you, or show you that you possess it?” “Blessed man,” said I, “is it within your power to do this?” “It certainly is,” he replied. “Then show me that I possess it, by Zeus, since for a man of my

age that will be much easier than learning it.” He asked if there is anything I know. “Certainly,” I replied. “That’s enough,” said he. “Now, do you think it is possible for anything at all not to be just what it happens to be?” “By Zeus, I do not.” “And you do know something?” “I do.” “In that case you are knowledgeable, if you actually know.” “Certainly, in relation to that ‘something’.” “That makes no difference. Isn’t it necessary that you know everything since you are knowledgeable?” “Heavens,” said I, “even when there is so much else that I do not know?” “Well then, if there is something you do not know, you are not knowledgeable.”

294a

By Zeus,” said I, “what a wonder you are describing. Great good has come to light. But surely all the rest of the people don’t know either everything or nothing?” “Well, presumably,” said he, “it is not the case that they know some things while not knowing others. Everyone knows everything, if they actually know even one thing.” And under questioning by Ctesippus they did accept that they knew everything, case by case. There was nothing that Ctesippus did not ask them, no matter how base it was. Yet the two men met his questions most valiantly, just like boars that are driven towards an onslaught. As a result, I myself was compelled in the end to ask, incredulously, if Dionysodorus knew how to dance, and he replied, “Certainly.” “I do not suppose that at your age, you have attained such advanced wisdom that you can also somersault over swords, and be spun about on a wheel, have you?” “There is nothing I cannot do,” he replied. “And when you were children, even at the moment you were born, did you know everything?” They both said yes, simultaneously.

295b

Euthydemus wanted to prove I accept these amazing propositions too. He asked if I know what I know by means of something. “By the soul.” He pressed: do you always know by

this same means? Always? Do you know some things by means of this and others by means of something else, or do you know all things by this? “I know all things by this,” I replied, “whatever I know at any rate.” Through careful stripping of qualifications like ‘whatever I know’ and ‘whenever I know’, he got me to say simply “Always” and “All things.” Then he announced: “Now, you have also accepted that you always know by means of that whereby you know. So it is obvious that you knew as a child, even when you were being born, even when you were being conceived. Even before you yourself were born, even before heaven and earth came into being, you knew all things, since you always know. And indeed, by Zeus, you yourself always will know, and will know all things, if it so pleases me.”

296e

I asked him to tell me how I may say that I know such things as that good men are unjust. “You know, indeed,” he replied. “What?” said I. “That good men are not unjust.” “Yes, I’ve always known that,” said I. “But I am asking where I learned that the good people are unjust.” “Nowhere,” replied Dionysodorus. “Then I do not know this,” said I. “You are ruining the argument,” said Euthydemus to Dionysodorus, “and this fellow will turn out not to have known this, and to be knowledgeable and not knowledgeable at the same time.” Dionysodorus blushed. And I said, “I am certainly inferior to Heracles, who was not able to do battle with the hydra, a sophistical creature so clever that if someone cut off one head of the argument, she sent forth many more in its place. He could not do battle with her and with some other sophistical crab recently emerged from the sea, who so pained Heracles by talking and biting from his left-hand side that he called for the help of his nephew, Iolaus. But if my Iolaus were to arrive, he would just make matters worse.”

297d

Then Dionysodorus pursued a new line: “Was Iolaus any more the nephew of Heracles than yours?” Through careful steps he had me admit that Patrocles is my brother, then established that their father Chaeredemus was a father while being other than mine, and since being other than a father means not being a father, that Sophroniscus likewise, being other than Chaeredemus, is not a father. “And so you, Socrates, are fatherless,” said Euthydemus. Then Ctesippus took up the argument: is Euthydemus’ father, being other than my father, the same? “The same, indeed.” “But, Euthydemus, is he my father only, or is he the father of everyone else too?” “Of everyone else too. Or do you think the same man, being a father, is not a father?” This extended to their mother being the mother of sea urchins, and themselves being brothers to gudgeons, puppies and piglets.

298e

Then Dionysodorus asked whether Ctesippus has a dog. “Yes, a very nasty one.” Does he have puppies? “Yes, and they are very like himself.” “So the dog is their father?” “Yes, I saw him covering the bitch myself.” “Well now, isn’t the dog yours? In that case, he is a father and he is yours, and so he turns out to be your father, and you turn out to be the brother of puppies.” Then Dionysodorus quickly interrupted: “Answer this little question for me. Do you beat this dog?” Ctesippus laughed and said, “Yes, by the gods, since I can’t do it to you.” “Aren’t you beating your own father then?”

299b

Euthydemus asked whether it is a benefit for a sick person to drink medicine when he needs to, and whether in battle it is better to go wearing armour. Ctesippus agreed. “Indeed, since you accept that it is a benefit for a man to drink medicine when necessary, shouldn’t he simply drink this beneficial substance as much as possible? And in that case, would it be an advantage if someone were to grind and blend a wagon-load of hellebore for

him?” Ctesippus replied, “Very much so, Euthydemus, particularly if the man who drinks it is the size of the big statue at Delphi.” And in battle, since it is a benefit to wear armour, should we carry as many spears and shields as possible? Ctesippus quipped whether they would arm Geryon¹² and Briareus in this way.

299d

Then Dionysodorus asked whether it is a benefit to possess gold and to have benefits at all times and in all places. And should gold be especially in ourselves? “Would a person be supremely blessed if he were to have three talents of gold in his stomach, a talent in his skull, and a stater of gold in each eye?” Ctesippus retorted that the most blessed of the Scythians¹³, and their very best men, are the ones who have a lot of gold in their own skulls, and that they drink from their own gilded skulls. Then Euthydemus produced another ambiguity: the Scythians and others see what is ‘capable of vision¹⁴’ – which is ambiguous between ‘capable of seeing’ and ‘capable of being seen’ – and so our cloaks, being capable of being seen, are ‘capable of vision’. And do our cloaks see nothing? “To me, Euthydemus,” said Ctesippus, “you seem to have fallen asleep, without being asleep, and if it is possible to speak yet say nothing, that is just what you are doing.”

300d

The discussion moved to whether a speaking of what is silent¹⁵ is possible, and a silence of speaking. Euthydemus asked: when you are silent, are you silent in relation to all things? “I am.” Aren’t you also silent in relation to whatever speaks, if this is included in all things? And since the different is not silent, do all things speak? Dionysodorus jumped in with “Neither and both – yes, I know quite well that you will not be able to deal with this answer.” And Ctesippus, in his usual way, broke into very loud laughter and said, “Euthydemus, your brother has led the argument into a contradiction, and he has perished and been

defeated.” Now, Clinias was extremely pleased, and he laughed, with the result that Ctesippus grew in stature tenfold.

300e

And I said, “Clinias, why are you laughing at matters that are so serious and beautiful?” “Well, Socrates,” said Dionysodorus, “have you ever yet seen a beautiful matter?” “Yes, I have, Dionysodorus, lots of them.” “So are they different from the beautiful, or the same as the beautiful?” And I became utterly perplexed, but I said they were different from the beautiful, although some beauty is present with each of them. “So, if an ox is present with you, you are an ox, and because I am present with you now, you are Dionysodorus?” “What a thing to say,” said I. “But what way could the different be different, just because difference is present with difference?” I asked if the beautiful is not beautiful and the base not base? “If it seems so to me.” “And indeed the two of you seem to me to bring the process of dialectic to fruition, just like craftsmen who bring their appropriate work to fruition.”

301c

Then Dionysodorus led me into another trap: to whom is brass-working appropriate? To the brass-workers. Making pots? To the potters. Cutting up, skinning¹⁶, boiling or roasting the portions of meat once cut up? To the cook. And if someone enacts what is appropriate, isn't he acting aright? So if someone slaughters the cook, cuts him up and boils and roasts him, he will be acting aright? “By Poseidon,” said I, “at this stage you are putting the finishing touches to your wisdom. I wonder, will it ever be mine, and become my own?” Then through steps about what things are mine (those I can sell, give away or sacrifice), and about living creatures (those that have soul), and about my ancestral gods Apollo¹⁷, Zeus and Athena being mine and living creatures, he asked: since you have agreed that Zeus and the other gods are yours, are you allowed to sell them, or give them away, or treat them as you wish, just like any other

living creatures?

303a

Well, Crito, while I lay there speechless, as though I had been felled by the argument, Ctesippus came to my aid saying, “Bravo Heracles, what a good argument.” And Dionysodorus asked, “Is Heracles a bravo, or a bravo Heracles?” And Ctesippus responded, “By Poseidon, what formidable arguments. I give up. The two men are invincible.”

303b

With that, dear Crito, I must say that there was no one present who did not heap praises upon the two men and their argument. Indeed, they almost died laughing, clapping and rejoicing. Now even the very columns of the Lyceum came close to applause and delight at these two men. As for myself, I was reduced to admitting that no one had ever before beheld any people who were as wise as they were, and being utterly captivated by the wisdom of the pair, I took to praising and eulogising them both, saying: “You are two blessed men, possessed of a wondrous nature, who have perfected such a subject so readily in such a short period of time. The most exalted of your arguments is that you have no concern for most of humanity, nor indeed for important people or those with a reputation, but only for those who are similar to yourselves. For I know quite well that there are very few people similar to yourselves who would be content with these arguments, while everyone else is so unappreciative of them that they would be more ashamed to refute others by such arguments than to be refuted themselves.”

303d

I continued: “There is also an appealing and kindly aspect to your arguments. Whenever you declare that there is nothing beautiful, nothing good or white, and so on, and that nothing is at all different from anything else, you simply stitch up people’s mouths well and truly. Yet, because you don’t just do this to

others but you seem also to do it to your own mouths, this is entirely delightful and it takes away the offensive aspect of the arguments. And yet, what is most significant is that you have arranged matters and contrived them so skilfully that anyone at all can learn this in a short period of time. I realised this myself by paying attention to Ctesippus, and how quickly he was able to imitate you without any preparation. Now, the fact that this business of yours is readily imparted is all very well, but it is not appropriate for discussion before a general audience. It is best, rather, that the two of you conduct your discussions only with one another. Failing that, it should be someone who is paying you a fee. And if you are sensible, you will also give the same advice to your pupils: never to conduct a discussion with anyone else. For whatever is scarce is valuable, Euthydemus, while water is cheapest, although it is the best, as Pindar says.”

304b

Socrates: Having discussed all this, Crito, and some other issues that took less time, we departed. Now, you should consider how you are going to join us as a pupil of these two men who claim to be able to teach anyone who is willing to pay them, and who say that neither a person’s nature nor his age prevents anyone at all from easily acquiring their wisdom. And it is most important for you to hear that, according to them, this wisdom is not an impediment to making money.

304c

Crito: Well, Socrates, although I myself love listening to discussions, and would be pleased to learn something, I fear that I too am one of those people who would prefer being refuted by such arguments as these, rather than refuting someone else. Now, although it seems ridiculous to be giving you a warning, I want to report what I heard nevertheless. The fact is that one of the people coming from your gathering approached me as I was out and about, a man who regards himself as extremely wise, a formidable figure when it comes to writing speeches for use in

law courts. “Crito,” said he, “are you taking no lessons from these wise men?” I replied that when I was standing near them I was unable to hear clearly because of the crowd. “And yet,” said he, “it was worth hearing, at any rate.” I asked what his overall impression was. “It was just the sort of thing you always hear from people like this, babbling and making a useless fuss about nothing of any consequence.”

304d

Crito: And I said, “But surely philosophy is something graceful?” “Graceful in what way, blessed man?” he asked. “It is of no value at all. And had you actually been there, I think you would have been utterly ashamed on behalf of your own friend, so strangely did he behave, willing to surrender himself to men who care not what they say, and fasten upon every word that is spoken. And these fellows are counted among the most influential people of this day and age. But the fact is, Crito, that the subject itself, and the people who devote their time to the subject, are worthless and ridiculous.” Now, Socrates, it did not seem right to me for him or anyone else to criticise the subject. However, it did seem right to apportion blame for your willingness to engage in discourse with such people as these, in front of a large audience.

305a

Socrates: Crito, men like these are marvels. However, I do not yet know what I am to say to you. What sort of person was he who approached you and apportioned blame to philosophy? Was he one of the formidable combatants from the law courts, a rhetorician? Or was he one of the people who sends them into battle, a composer of speeches with which the rhetoricians engage in combat?

Crito: By Zeus, he is not a rhetorician at all, nor do I think he has ever appeared in court. Yet they say he understands the business, and that he is formidable, and composes formidable

speeches.

Socrates: Now I understand. I was just about to speak about these people myself. For although they are, according to Prodicus, on the boundary between the philosopher and the statesman, they think that they are the wisest men of all. And they believe that the only thing preventing them from being well regarded by everyone are people who engage in philosophy. So they believe that if they reduce the reputation of these people, and make them seem worthless, the victory prize will indisputably be theirs immediately, a reputation for wisdom in the eyes of all. So they maintain that they are in truth the wisest, and whenever they get tangled up in arguments of a private nature, that they are being worsted by Euthydemus and his followers. Yet they believe quite plausibly that they are extremely wise for they possess a measure of philosophy and a measure of statesmanship. So, remaining aloof from danger and conflict, they reap the harvest of wisdom.

306a

Crito: What of it, Socrates? Do you think they have a point since their argument does have a certain neatness at least?

Socrates: Yes, indeed, Crito, it does indeed possess neatness rather than truth. For if philosophy is good, and so too is the activity of the statesman, each in a different respect, and these fellows are in between those two since they partake of both, then they do not have a point since they are inferior with respect to both. And if one is good and the other bad, then they are better with respect to one group and worse with respect to the other. But if both are bad, in that case and in no other, they would be speaking the truth to an extent. But the fact of the matter is that these fellows, although they partake of both, are inferior with respect to both, with respect to what is of value in statesmanship and what is of value in philosophy, and despite being, in truth, in third place, they are ambitious to be regarded

as first. So we should forgive this ambition of theirs and not be troubled, yet still recognise that they are the sort of people they are. For we ought to admire any man whatsoever who says anything that conforms to good sense and takes the trouble to pursue it courageously.

306d

Crito: Yes, indeed, Socrates, and I myself, as I am always telling you, am perplexed over my sons and how I should deal with them. Now, one of them is still young and little, but Critobulus is now at an age where he needs someone who will do something for him. Now, whenever I am in your company, you always have the same effect. I think that it is madness to have taken such trouble in so many different ways for the sake of my children – trouble in relation to marriage to ensure noble birth on their mother's side, and trouble over making money – whilst I neglected their education. Yet, whenever I look at any of those people who profess to educate humanity, I am shocked, and each one of them seems to me, on reflection, to be utterly outlandish, to tell you the truth between ourselves. And so I do not know how I am to turn the young man towards philosophy.

307a

Socrates: Crito, my friend, don't you realise that in every activity the inferior practitioners are numerous and of no value, while the serious ones are few, and valuable beyond measure? And don't you think that gymnastics is a worthy activity, money-making too, and rhetoric and generalship?

307b

Crito: Entirely so, of course I do.

Socrates: Well then, in each of those cases, don't you know that most people are comical exponents of the particular role?

Crito: Yes, by Zeus, that is certainly true.

Socrates: So, will you yourself shun all of these activities on account of this, and refuse to direct your son towards them?

307c

Crito: That wouldn't be right, Socrates.

Socrates: Then do not do what you should not do, Crito. Rather, bid farewell to the exponents of philosophy, whether they be worthy or base, and having tested the subject itself well and truly, turn not just your sons but every man away from it if it proves in your eyes to be unworthy. However, if it proves to be as I think it is, then pursue it and practise it with all your heart, both you and yours, as the saying goes.

NOTES

1. This is a reference to Clinias, who becomes involved later in the dialogue.
2. A reference to the King of the Persian (Achaemenid) Empire.
3. The Corybantes were armed, crested male dancers who worshipped the goddess Cybele. They also conducted a male coming-of-age ritual connected with the victory of a warrior in battle.
4. According to legend, Medea had the power to reanimate dismembered bodies and rejuvenate the elderly. Having seen her reconstitute a ram that had been cut up and put into a stew, and desirous that their father should be returned to his youth, the daughters of King Pelias cut him up and put him in a pot, but Medea never performed the ceremony.
5. Marsyas was a Satyr who, according to legend, challenged Apollo to a music contest and lost. As punishment, he chose to have his hide used as a wine-skin.
6. Cronus, the father of Zeus, who was overthrown by his son, represents things that are past their time.
7. Meneleus forced Proteus to reveal which of the gods he had offended so that he could make amends and find his way home. *Odyssey* iv.456 ff.
8. The quote is likely to be from *Seven Against Thebes*.
9. This proverb involves needless repetition because Corinthus was the son of Zeus.
10. Castor and Pollux, known as the *dioscuri*, were protectors of seafarers.
11. Hellebore is a plant now known to be toxic but which was used in ancient medicine to treat various conditions, including mental disorders.
12. Geryon and Briareus were two fearsome mythological creatures. The first was a giant with multiple heads and multiple bodies; the second was a giant with one hundred arms.
13. Herodotus, iv.65, describes the Scythians as gilding the skulls of their enemies and drinking from them.
14. The Greek phrase translated 'capable of vision' is ambiguous between 'capable of seeing' and 'capable of being seen'.
15. The Greek phrases translated 'a speaking of what is silent' and 'a silence of speaking' are ambiguous between 'a speaking by a thing that is silent' and 'a speaking about a thing that is silent'.

16. The Greek phrase translated here is ambiguous between ‘it is appropriate for the cook that the cook engages in cutting and skinning’ and ‘it is appropriate for the cook that one engages in the cutting and skinning of the cook’.

17. According to legend, Ion was the son of Apollo and Creusa. Euripides, *Ion* 61-75.

18. *Olympian* i.1.

persons in the dialogue:

EUTHYPHRO a diviner-priest, nothing else is known about him

SOCRATES of Alopecce, son of Sophroniscus

scene: outside the Royal Stoa in the Athenian Agora

2a

Euthyphro: What ever is going on, Socrates? You have left your usual haunt in the Lyceum¹ and you are now spending time here at the Royal Stoa.² Surely you too do not have a suit before the Royal Archon, as I do.

Socrates: Well, Athenians, Euthyphro, do not call it a suit, but a prosecution.

2b

Euthyphro: What are you saying? Then someone is prosecuting you it seems, for I shall not accuse you of prosecuting someone else.

Socrates: Of course not.

Euthyphro: Is someone prosecuting you then?

Socrates: Yes, indeed.

Euthyphro: Who is he?

Socrates: I hardly even know the man myself, Euthyphro. Apparently he is someone young and unknown. Anyway, his name, I believe, is Meletus. He belongs to the deme³ of Pittheus, if you can think of a Meletus from Pittheus with straight hair, not much of a beard, and a hook nose.

Euthyphro: I cannot think of anyone, Socrates. But tell me, what charge has he brought against you?

2c

Socrates: What charge? Well, it is no ordinary charge, in my opinion anyway. Indeed, it is quite an achievement for a young man to have understood a matter of such importance. For this

fellow claims to know how the young people are being corrupted and who their corrupters are. And he is probably wise, and having discerned my ignorance he goes to the city, just as a child runs to its mother, accusing me of corrupting people of his own age. And it looks to me as if he alone embarks upon his political career in the right way, for it is right to care for the young people first so that they turn out as good as they possibly can, just as a good farmer is likely to care first for the young plants, and after that for the others. And in fact, Meletus is probably clearing us out first, the destroyers of the crop of youth, as he says. Then, of course, once he has cared for the older generation as well, he will be responsible for great benefits aplenty to our city. At least, that would be the likely outcome of setting about it in this way.

3a

Euthyphro: Would that it were so, Socrates, but I fear that the outcome may turn out to be the very opposite. In fact, I think he is actually starting off by damaging the very heart of our city by attacking you unjustly. But tell me, how exactly does he say you corrupt the young?

3b

Socrates: It sounds absurd, my wonderful friend, on first hearing at any rate. For he says that I am an inventor of gods, and on the grounds that I am inventing new gods and disregarding the old ones, he is prosecuting me on their behalf, so he says.

Euthyphro: I understand, Socrates. It's because you say that the divine sign comes to you from time to time. So he has prosecuted you on this charge, as an innovator in matters divine, and he goes into court to slander you, knowing that such issues are easily misrepresented to most people. Indeed, in my own case too, whenever I say anything in the Assembly about matters divine, predicting the future for them, they laugh at me

as if I were a madman, and yet nothing I foretold has not come true. But nevertheless, they are jealous of everyone like us. However, we must not worry about them, but face up to them.

3c

Socrates: Dear Euthyphro, being laughed at is perhaps not an issue. Indeed, the Athenians, in my view, are not greatly concerned if they believe that someone is clever, provided of course he does not set about teaching his own wisdom. But if they believe he is also making other people turn out like himself, they get angry, either out of jealousy, as you say, or for some other reason.

Euthyphro: Well, I am not very keen to test their precise attitude to me on this issue.

Socrates: Well, perhaps you have a reputation for holding yourself aloof and being reluctant to teach your own wisdom, while I am afraid lest, due to my love of humanity, I have a reputation in their eyes for saying whatever I have to say without restraint to anyone I meet, free of charge, and not only that, but I would gladly pay someone who was prepared to listen to me. Well, as I was saying just now, if they are going to laugh at me just as you say they laugh at you, it might be quite pleasant to spend our time having fun and laughing in the courtroom. But if, on the other hand, they are going to be serious, then it is unclear how the issue will turn out, except to soothsayers like yourself.

3d

Euthyphro: Well, Socrates, perhaps it will all come to nothing. You will contest your suit in the way you see fit, and I think I shall do the same with mine.

3e

Socrates: But, Euthyphro, what is this suit of yours? Are you defending or prosecuting?

Euthyphro: I am prosecuting.

Socrates: Whom?

Euthyphro: Someone whom I am regarded as mad, once more, for prosecuting.

Socrates: Why so? Are you prosecuting someone who can fly?

Euthyphro: He is very far indeed from flying. In fact, he happens to be well on in years.

Socrates: Who is the man?

Euthyphro: My father.

4a

Socrates: Your father, my good man?

Euthyphro: Yes, certainly.

Socrates: But what is the charge? And what is your suit about?

Euthyphro: Murder, Socrates.

Socrates: By Heracles, Euthyphro! Most people are presumably unaware of the proper procedure here. For I do not believe it is appropriate for any random person to do this, but only someone who is presumably already far advanced in wisdom.

Euthyphro: Far advanced indeed, by Zeus, Socrates.

Socrates: And was it some member of your family who was killed by your father? Of course it was, for I presume you would not have prosecuted your father for murder on account of a stranger.

4b

Euthyphro: It's amusing, Socrates, that you think it makes any difference whether the murdered man was a stranger or a family member, instead of attending to the single issue of whether the killer killed his victim justly or unjustly. And if he acted justly, one should leave him be. However, if he acted

unjustly, one should prosecute him, especially if the killer shares your hearth and your table. For equal is the pollution that befalls you if you live with such a person, knowing what he knows, without purifying yourself and that person by bringing him to justice. In this case, the man who was slain was a day-labourer of mine, and when we were farming on Naxos he worked on our land. One day, mad with wine, he got angry with one of our slaves and slit his throat. So my father bound him hand and foot, threw him into a ditch, and sent a man here to Athens to find out from the legal expositor what he should do. Meanwhile, he showed no regard for the man he had tied up and neglected him, since he was a murderer, and it did not matter even if he should die, which is exactly what happened to him. Before the messenger arrived back from the legal expositor, the man died from hunger, the cold, and his bonds.

Well, my father and the rest of my family are obviously angry over this, because I am prosecuting my father for murder on behalf of the murderer. They maintain that he did not actually kill the man, and even if he did definitely kill him the slain man was a murderer anyway, and I should not be concerned over someone like this, because it is unholy for a son to prosecute his father for murder. So poor is their knowledge of the divine realm, Socrates, and where it stands in relation to what is holy and what is unholy!

4e

Socrates: But, by Zeus, Euthyphro, do you believe that you understand divine matters in relation to holiness and unholiness so precisely that you are not afraid, given the circumstances you are describing, of performing a further unholy action yourself by bringing your father to justice?

5a

Euthyphro: Socrates, I would be useless indeed, and Euthyphro would not be different from anybody else, if I did not have precise knowledge of all such matters.

Socrates: In that case, wonderful Euthyphro, my best course of action is to become your pupil and challenge Meletus on these very issues in advance of his prosecution. I will do so by saying that, heretofore, I have always attached great importance to knowledge of divine matters, and now, since the man claims that I am falling into error through my rash utterances and innovations on matters divine, I have become your pupil. I would then say, “Dear Meletus, if you accept that Euthyphro is wise in such matters, then you should also believe that my views too are sound and drop the charge. Otherwise, rather than prosecuting me, prosecute Euthyphro, my teacher, for corrupting his elders, myself and his own father, by instructing me and censuring and punishing him.” And if I did not convince him, and he did not drop the charge, or prosecute you instead of me, I would say the very same things in court as in my pre-trial challenge.

5c

Euthyphro: Yes, by Zeus, Socrates! And if he were to attempt to prosecute me, I think I would find where his weak point lies, and our argument in court would be concerned with him long before it concerned me.

Socrates: Yes, my dear friend, and I am eager to become your pupil because I recognise all this. I know that neither this man Meletus, nor anyone else I presume, seems even to notice you, yet he picked me out immediately, with so little difficulty that he has prosecuted me for impiety. Now then, tell me, by Zeus, what you claimed a moment ago to know full well. What sort of thing, according to you, is pious, and what is impious, in relation to murder or in relation to anything else? Is not the holy itself the same as itself, while the unholy is, in turn, the

opposite of everything holy, yet like itself? In other words, anything that is to be unholy possesses a single form based upon unholiness?

5d

Euthyphro: Of course, Socrates, entirely so.

Socrates: Tell me then, according to you, what is holiness and what is unholiness?

Euthyphro: Well, I say that what is holy is exactly what I am doing now, prosecuting the wrongdoer for murder, for robbing temples, or for committing any other crimes of that sort, even if he happens to be your father or mother or anyone else, while failure to prosecute is unholy. Now, Socrates, behold what convincing evidence I shall present of the law that this is the case, evidence I have already given to others, showing that these events are unfolding as they should, and we should not give way to an impious person no matter who that person happens to be. For people regard Zeus as the best and most just of the gods, and they accept that he bound his own father, Cronus, for unjustly devouring his children, and that he, Cronus, in turn, had castrated his own father for similar reasons. Yet they are angry with me for prosecuting my father for acting unjustly, and so when speaking about the gods and when speaking about me, they are contradicting themselves.

6a

Socrates: Well, Euthyphro, could this be the reason I am being prosecuted, because whenever someone tells me stories of this kind about the gods, I accept them only with some reluctance? Because of this, it seems, someone may well declare that I am in error. So now, if you who understand such matters so well also approve of these stories, then it seems that I need to go along with them too. For what else can someone say when they admit that they know nothing about these matters? But tell me, in the name of friendship, do you believe in truth that these things

happened in this way?

6b

Euthyphro: Yes Socrates, and there are stories, even stranger than these, that most people do not know about.

Socrates: So, do you also believe that there really is war between the gods, bitter enmities, battles, and lots of other things like these, as recounted by the poets? These also adorn our sacred places, courtesy of the fine painters, and, in particular, the robe that is carried up to the Acropolis at the Great Panathenaea is full of depictions of this kind. Are we to say that these are all true, Euthyphro?

Euthyphro: Not only that, Socrates, but, as I said just now, I shall, if you like, relate lots of other stories to you about matters divine, which, on hearing, I know full well you will be astonished.

6c

Socrates: I would not be surprised. But you can recount these to me at your leisure on some other occasion. Right now, please try to answer the question I asked you a moment ago, more clearly. For you did not instruct me adequately, my friend, when I asked you earlier what precisely holiness is. Instead, you told me that this action you are performing, prosecuting your father for murder, is holy.

Euthyphro: And I told you the truth, Socrates.

Socrates: Perhaps, Euthyphro, but in fact you say that lots of other things are holy too.

Euthyphro: And so they are.

6d

Socrates: May I remind you, Euthyphro, that this is not what I asked you to teach me about – one or two of the many holy actions – but about that very form by which everything that is holy, is holy. For I think you said that what is unholy is unholy,

and what is holy is holy, by a single form, or do you not remember?

Euthyphro: I remember.

Socrates: Well, what precisely is this form? Teach me, so that I may focus upon it, and using this as a standard, declare that any action that is like this standard is holy, and any action that is unlike it is not, whether it is performed by you or by anyone else.

6e

Euthyphro: Well, Socrates, if you want me to express it in those terms, I shall do so.

Socrates: Yes, that is what I want.

Euthyphro: Well then, what is loved by the gods is holy, but what is not loved by them is unholy.

7a

Socrates: Excellent, Euthyphro! You have now answered in the way that I asked you to answer, although I do not yet know if you have answered truthfully. But of course, you will go on to explain that what you are saying is true.

Euthyphro: Yes, certainly.

Socrates: Come on then, let us consider what we are saying: whatever is beloved of the gods, and the person who is beloved of the gods, is holy, and whatever is hated by the gods, and whoever is hated by them, is unholy. And the holy is not the same as the unholy, but is its complete opposite. Is this not so?

Euthyphro: It is so, indeed.

Socrates: And what we are saying is, apparently, correct?

7b

Euthyphro: I think so, Socrates.

Socrates: But Euthyphro, was it not also stated that the gods quarrel and differ with one another, and that there is enmity between them?

Euthyphro: Yes, that was stated.

Socrates: But what is the disagreement about when it generates enmity and anger? Let us consider this. Suppose you and I differ about which of two numbers is greater. Would our disagreement about these generate enmity and make us angry with one another, or would we quickly settle these matters by engaging in calculation, in such cases as these at any rate?

7c

Euthyphro: Of course.

Socrates: And if we were to differ about the greater and the lesser, we would quickly put an end to our dispute through engaging in measurement?

Euthyphro: Yes.

Socrates: And I think we would decide about what is heavier and what is lighter by engaging in weighing?

Euthyphro: Of course.

Socrates: When we become enemies and get angry with one another, what then might our disagreement be about? What issue might we be unable to resolve? Perhaps you cannot answer readily, but I will make a suggestion. Consider if the issue at hand is the just and the unjust, beautiful and ugly, good and bad. Aren't these issues we disagree about, and being unable to come to an adequate resolution do we not become enemies whenever this happens to you and me, or to anyone else?

7d

Euthyphro: Yes, Socrates, this is the disagreement in question, and it concerns these issues.

Socrates: But what about the gods, Euthyphro? If they do, in fact, disagree on anything, would they not disagree on these very issues?

Euthyphro: This must be so.

7e

Socrates: And in fact, according to your account, noble Euthyphro, there are differing views among the gods themselves as to what is just and unjust, beautiful, ugly, good or bad, for they would not have quarrelled with one another if they had not differed on these issues. Is this so?

Euthyphro: What you are saying is correct.

Socrates: Would not the quarrelling parties love anything they themselves regard as beautiful, good, or just, and would they not hate the opposites of these?

Euthyphro: Very much so.

8a

Socrates: Yes, but according to you, the same things are regarded as just by some gods but unjust by others, and because they disagree on these issues, they quarrel and fight with one another. Is this not so?

Euthyphro: This is so.

Socrates: Therefore, it seems that the same things are hated by the gods and are loved by them, and what is god-hated and what is god-loved would be the same.

Euthyphro: So it seems.

Socrates: Then by this argument, the same thing would be both holy and unholy, Euthyphro.

Euthyphro: Quite likely.

8b

Socrates: In that case, you did not answer the question I asked you, marvellous one, for I was not asking what is at once both holy and unholy, which would, it seems, be that which is god-loved and that which is god-hated. And so, Euthyphro, it would be no surprise if, in punishing your father as you are doing now, you are doing something that is loved by Zeus but hated by Cronus and Uranus; loved by Hephaestus but hated by Hera; and if any other gods differ with one another on this issue, the same considerations apply.

Euthyphro: But in my opinion, Socrates, none of the gods differ with one another on this issue: that a man who kills someone unjustly need not pay the penalty.

Socrates: But, Euthyphro, in the case of us humans, have you ever heard anyone arguing that a man who has killed someone unjustly, or performs any other unjust action whatsoever, should not pay a penalty?

8c

Euthyphro: Why, they never stop arguing over these issues, especially in the law courts. Indeed, having performed all sorts of injustices, people do and say anything at all to avoid a penalty.

Socrates: Yes, Euthyphro, but do they also admit that they have acted unjustly, and despite this admission, claim nevertheless that they should not pay a penalty?

Euthyphro: No, they do not do that at all.

Socrates: Then they do not do or say anything at all. Indeed, I think they would not dare to assert or to argue that they should not pay a penalty, if in fact they have acted unjustly. No, I think they deny that they have acted unjustly. Is this so?

Euthyphro: That is true.

8d

Socrates: So they do not argue that the person who commits injustice should not pay a penalty. They surely argue, instead, over who the wrongdoer is, what he did, and when.

Euthyphro: That is true.

Socrates: Do not the same considerations also apply to the gods, if they do indeed quarrel about justice and injustice, as you maintain, and one side claims that the other is acting unjustly, while the other side denies it? But this much is certain, my friend, no one, neither god nor human, would dare to suggest that a person who acts unjustly should not pay a penalty.

Euthyphro: Yes, Socrates, what you are saying is true, on the whole.

Socrates: Yes, I think those who differ, be they humans or gods, if indeed gods do differ, differ over particular actions. When they differ over any action, some maintain that it was performed in a just manner, others that it was performed in an unjust manner. Isn't this so?

Euthyphro: Entirely so.

8e

Socrates: Come on then, dear Euthyphro, and instruct me so that I may become wiser. What evidence do you have that all the gods think that this man met his death unjustly, a man who committed murder whilst working as a day-labourer, who was tied up by the master of the murder victim, and who died prematurely on account of his bonds, before the master, who had tied him up, had found out from the legal expositor what he should do about him. Where is your evidence that it is actually right for a son to prosecute his father, and denounce him, on behalf of a person like that? Come on, try to demonstrate these points clearly to me, that all of the gods really do believe that this course of action is right, and if you prove this to me

adequately, I shall sing the praises of your wisdom unceasingly.

9b

Euthyphro: Well, that is surely no small task, Socrates, yet I should be able to demonstrate it to you very clearly.

Socrates: I understand. That is because you think that I am a slower learner than the jurors, since you will, of course, prove to them that these actions are unjust, and that all of the gods hate such actions as these.

Euthyphro: Very clearly, Socrates, if they will only listen to what I say.

Socrates: They will listen alright, Euthyphro, provided they think you are speaking well. But while you were speaking something occurred to me, and I am thinking to myself, “If Euthyphro were to teach me, comprehensively, that all the gods regard a death like this one to be unjust, what more have I learned from Euthyphro as to what exactly holiness and unholiness are? Yes, this particular action would, it seems, be god-hated, but it turned out earlier that what is holy and what is not are not defined by this, for what is god-hated proved also to be god-loved.” So if you like, Euthyphro, I will grant you this: let all the gods think it unjust, and let them all hate it.

But what about this correction we have just introduced into the argument, according to which whatever all the gods hate is unholy, and whatever they all love is holy, and whatever some love and others hate is neither or both. Would you like us now to define what is holy and what is unholy in this way?

9d

Euthyphro: Is there any reason not to, Socrates?

Socrates: In my case no, Euthyphro, but in your own case, you should decide whether adopting this hypothesis is the easiest

way for you to teach me what you promised.

9c

Euthyphro: Well, I would say that what is holy is what all the gods love, and its opposite, what all the gods hate, is unholy.

Socrates: Should we also investigate whether this formulation is correct, Euthyphro? Or should we leave it, and accept our own or other people's assertions just like that, agreeing that this is the case just because somebody says so? Or should we consider what the speaker means?

Euthyphro: We should consider that. However, in my view, this is now a good formulation.

10a

Socrates: Good man. We shall know better soon enough. Yes, think about this. Is the holy loved by the gods because it is holy, or is it holy because it is loved?

Euthyphro: I do not understand what you are saying, Socrates.

Socrates: Then I shall try to speak with greater clarity. We say that something is carried and something carries, something is led and something leads, something is seen and something sees. And in all these cases, do you understand that there are differences between them, and the way in which they differ?

Euthyphro: I think I understand.

Socrates: And is there something that is loved, and is that different from that which loves?

Euthyphro: Of course.

10b

Socrates: Then, tell me whether something that is carried is what it is because it is being carried, or for some other reason?

Euthyphro: No, that is the reason.

Socrates: And something that is led is what it is because it is being led, and something that is seen is what it is because it is being seen.

Euthyphro: Yes, certainly.

Socrates: So, it is not because it is a seen thing that it is seen. It is the other way around: because it is seen it is a seen thing. Nor is it because it is a thing led that it is led. No, because it is led it is a thing led. Nor is it because it is a thing carried that it is carried. No, because it is carried it is a thing carried. So Euthyphro, is it obvious what I wish to say? What I mean is this. If anything becomes, or is affected, it is not because it is a thing that becomes that it becomes. No, because it becomes it is a thing that becomes. Nor is it because it is a thing affected that it is affected. No, because it is affected it is a thing affected. Do you agree that this is so?

10c

Euthyphro: I do.

Socrates: Now, is not that which is loved either something that is becoming, or something that is being affected by something?

Euthyphro: Yes, certainly.

Socrates: And this case is like the previous cases. It is not because it is a thing loved that it is loved by those who love it. No, because it is loved it is a thing that is loved.

10d

Euthyphro: Necessarily.

Socrates: Well then, what do we say about what is holy, Euthyphro? Is it not loved by all the gods, according to your argument?

Euthyphro: Yes.

Socrates: So, is this because it is holy, or for some other reason?

Euthyphro: No, that is the reason.

Socrates: So, because it is holy it is loved. It is not the case that it is loved and for that reason is holy?

Euthyphro: It seems so.

Socrates: And yet, because something is loved by the gods, it is a thing that is loved and is god-loved.

Euthyphro: Of course.

Socrates: Therefore, what is god-loved is not holy, Euthyphro, nor is the holy god-loved, as you maintain. They are different from one another.

Euthyphro: How so, Socrates?

10e

Socrates: Because we agree that what is holy is loved because it is holy, and it is not because it is loved that it is holy. Is this so?

Euthyphro: Yes.

Socrates: And yet, what is god-loved is beloved of the gods by reason of their very love. But the reason it is loved is not that it is god-loved.

Euthyphro: That is true.

Socrates: But dear Euthyphro, if what is god-loved and what is holy were the same, then if what is holy was loved because of being holy, what is god-loved too would be loved because of being god-loved. And if, on the other hand, what is god-loved was god-loved because of being loved by the gods, what is holy too would be holy because of being loved. But you can now see that these two are opposites. They are completely different from one another. For one is a loved thing because it is loved, while the other is a loved thing, and is loved for that reason. And Euthyphro, when I asked what precisely the holy is, it seems you were not willing to disclose its essence to me, but

only to describe something it undergoes, that what is holy is affected as follows: it is loved by all the gods. But you have not yet said what it actually is. So if you please, do not hide this from me, but tell me again from the beginning what precisely the holy is, regardless of whether it is loved by the gods or whatever else happens to it, for we shall not argue over that. Just state what holiness and unholiness are, and do not hold back.

11b

Euthyphro: But Socrates, I do not know how to tell you what I have in mind. For anything we propose always wanders about somehow and will not stay where we put it.

Socrates: These pronouncements of yours, Euthyphro, seem to be like the works of my own ancestor, Daedalus,⁴ and if I was the one who had proposed them and set them down, you would probably have mocked me over my kinship to that man, because my verbal formulations run away and refuse to remain where someone puts them. But now, of course, the hypotheses are yours, so some alternative mockery is called for since they refuse to remain in place for you, as you can see for yourself.

11d

Euthyphro: But I think the pronouncements deserve more or less the same mockery, Socrates, for I am not the one who set them in motion so that they do not remain in the same place. No, it seems to me that you are the ‘Daedalus’, since if it were up to me they would have remained as they were.

Socrates: Perhaps, my friend, I have become cleverer at the craft than that ancestor of mine, to this extent: while he only made his own works unstable, it seems I do this to my own and to other people’s too. And, indeed, what is most delightful about the skill in my case is that I am wise against my will, for I would have preferred that my own pronouncements be stable, fixed and unmoving, rather than possess the wisdom of Daedalus and

the wealth of Tantalus⁵ too. But enough of all this. Since you yourself seem to be indolent, I will join you in your desire to instruct me about what is holy. Do not give up yet. Think about this: is everything that is holy necessarily just?

11e

Euthyphro: I think so.

12a

Socrates: And is everything that is just, also holy? Or is what is holy all just, while what is just is not all holy, part of it being holy and part something else?

Euthyphro: Socrates, I cannot follow you.

Socrates: And yet you are younger than me, and no less wise, for that. But as I said, your wealth of wisdom makes you indolent. So exert yourself, blessed man, for it is not difficult to understand what I mean. Indeed, I am saying the opposite of the poet who wrote these lines:

*Zeus the creator, who made all this, you shrink from reviling,
For when there is fear there is also reverence.*⁶

Now, I disagree with this poet. Shall I tell you why?

12b

Euthyphro: Yes, certainly.

Socrates: I do not think that ‘when there is fear there is also reverence’, because I think that many people who fear disease and poverty, and lots of other things like these, are afraid, yet they are not at all ashamed of the things they fear. Is this not how it seems to you too?

Euthyphro: Yes, certainly.

Socrates: But I do think that when there is reverence, there is also fear. Indeed, is there anyone who is ashamed of something, feels shame, and is not at the same time fearful, and afraid of a

reputation for wickedness?

12c

Euthyphro: Yes, he is afraid.

Socrates: So, it is not right to say that ‘when there is fear there is also reverence’. On the contrary, when there is reverence there is also fear, and yet when there is fear there is not reverence in every case, for I think that fear is more extensive than reverence. Indeed, reverence is a part of fear, just as odd is part of number, and so it is not the case that when there is number there is also the odd, and yet where there is the odd there is also number. So I presume you follow me now.

Euthyphro: Yes, certainly.

12d

Socrates: Well, this is more or less what I meant by the earlier question. When there is justice, is there also holiness? Or when there is holiness, is there also justice? While conversely, when there is justice, there is not holiness in every case, because holiness is a part of justice? Should we say this, or do you think otherwise?

Euthyphro: No, let us say this. I think you are expressing this correctly.

Socrates: Then, take note of the next issue, for if holiness is part of justice, we should, it seems, find out what part it would be. Now, suppose you had asked me about something we have just discussed, number, for instance, what part of number is the even part, and what kind of number it is, I would reply that it has equal sides rather than unequal sides.⁷ Is that what you think?

Euthyphro: It is.

12e

Socrates: So you should now also attempt to teach me, in this way, the part of justice that is holy, so that I may tell Meletus

not to wrong me anymore, or to prosecute me for impiety, as I have now received adequate instruction from you about what is pious and holy, and what is not.

13a

Euthyphro: Well, Socrates, it seems to me that the part of justice that is pious and holy is the part that deals with care of the gods, while the remaining part of justice deals with care of human beings.

Socrates: And, in my view, you have expressed that well, Euthyphro. But there is one minor detail still outstanding, for I do not yet understand what the care you are referring to actually is. For I presume you do not mean that the sort of care that deals with the gods is just like the care that deals with anything else. Yes, is this not how we speak? We say, for instance, that not everyone knows how to care for horses, only the skilled horse-trainer. Is this so?

Euthyphro: Very much so.

Socrates: For horse-training is, presumably, the care of horses?

Euthyphro: Yes.

13b

Socrates: Nor, for that matter, does everyone know how to care for dogs, only the dog-handler?

Euthyphro: Quite so.

Socrates: For dog-handling is, presumably, the care of dogs?

Euthyphro: Yes.

Socrates: And ox-herding of oxen?

Euthyphro: Very much so.

Socrates: And holiness and piety are the care of gods, Euthyphro. Is this what you mean?

Euthyphro: I do.

Socrates: And does not all care bring about the same outcome? Something like this: it is directed to some good or some benefit of whatever is cared for. For instance, you can see that horses cared for by horse-training are benefited and become better. Do you not think so?

Euthyphro: I do.

13c

Socrates: And dogs are, presumably, benefited by dog-handling, oxen by ox-herding, and the same applies in all other cases. Or do you think that the care aims to harm whatever it cares for?

Euthyphro: By Zeus, I do not.

Socrates: Does it aim to benefit it then?

Euthyphro: How could it do otherwise?

Socrates: Now, is holiness too, being a care of the gods, also a benefit to the gods, and does it make the gods better? And would you accept that you make any of the gods better whenever you do anything holy?

Euthyphro: By Zeus, I would not.

13d

Socrates: No, I did not think that was what you meant either, Euthyphro, far from it. And that is why I asked you what exactly you meant by this care of the gods. I was assuming you did not mean anything like this.

Euthyphro: And you are right, Socrates. I do not mean anything like this.

Socrates: So be it. But in that case, what care of the gods would holiness be?

Euthyphro: It is the care, Socrates, which servants give their masters.

Socrates: I understand. It would, it seems, be some service to the gods.

Euthyphro: Yes, certainly.

Socrates: What about the service to physicians? What product does this service help to produce? Do you not think it is health?

Euthyphro: I do.

13e

Socrates: What about service to shipbuilders? What product does this service help to produce?

14a

Euthyphro: Obviously, Socrates, it is a ship.

Socrates: And in the case of housebuilders, presumably it is a house?

Euthyphro: Yes.

Socrates: Then tell me, best of men, in the case of service to the gods, what product would this service help to produce? You must know the answer since you declare that your knowledge of matters divine is superior to that of anyone else.

Euthyphro: And what I say is true, Socrates.

Socrates: Then tell me, by Zeus, what glorious product do the gods produce, using us as their servants?

Euthyphro: Many and beautiful things, Socrates.

Socrates: Yes, so do the generals, my friend, but it is easy nevertheless to sum it all up by saying that they bring about victory in war. Isn't this so?

Euthyphro: Of course.

Socrates: And farmers too produce many and beautiful things, but nevertheless what they produce is, in summary, food from the earth.

Euthyphro: Certainly.

Socrates: Yes, but what about the many beautiful things that the gods produce? What, in summary, is their product?

14b

Euthyphro: Well, I told you a little earlier, Socrates, that to understand precisely how matters stand in all these cases is a major undertaking. Yet I can say, in general terms, that if someone knows how to do and say what is gratifying to the gods, by praying and offering sacrifices, these actions are the holy ones, and such actions safeguard the things of private homes and the common things of entire cities. But the opposite of what gratifies them is impious, and this overturns and destroys everything.

14c

Socrates: If you had wanted to, Euthyphro, you could have given me the summary I asked you for much more briefly. But you are not eager to instruct me, that is obvious. In fact, right now you turned aside at the very point where, had you answered, I might by now have learned about holiness from you quite adequately. But now the lover needs to follow the beloved, wherever he may lead. So again, what do you say the holy and holiness is? Is it not some sort of knowledge of sacrificing and praying?

Euthyphro: It is.

Socrates: Is not sacrifice giving to the gods, and prayer asking of the gods?

Euthyphro: Very much so, Socrates.

14d

Socrates: So on this formulation, holiness would be knowledge of asking of and giving to the gods.

Euthyphro: You have understood perfectly what I have said, Socrates.

Socrates: That is because I am eager for your wisdom, my friend, and I give it my full attention so that nothing you say may be lost. But tell me, what is this service to the gods? Are you saying that it consists in asking of them and giving to them?

Euthyphro: I am.

Socrates: And would not the right manner of asking be to ask of them what we need from them?

Euthyphro: That is it.

14e

Socrates: Then again, is not the right manner of giving to give them in return whatever they happen to need from us? Indeed, giving anyone something they do not need would, presumably, not require any skill.

Euthyphro: That is true, Socrates.

Socrates: Then, Euthyphro, holiness would be a skill which involved gods and men trading with one another.

Euthyphro: Yes, call it trade if it pleases you to do so.

15a

Socrates: Well, nothing pleases me unless it happens to be true. But tell me, what benefit do the gods derive from the gifts they obtain from us? What they give us is obvious to everyone, for anything good that we have, they have given us. But how are they benefited by what they obtain from us? Or do we gain such an advantage over them from the trading that we get all good things from them, while they get nothing from us?

Euthyphro: But Socrates, do you think the gods derive benefit from what they obtain from us?

Socrates: But Euthyphro, what exactly would these gifts we bestow upon the gods be?

Euthyphro: What else do you think, except honour, reverence and, as I said earlier, gratification.

15b

Socrates: So, the holy is gratifying to the gods, Euthyphro, but is it not beneficial to them, or loved by them?

Euthyphro: I really think it is the most beloved thing of all.

Socrates: So once again it seems that the holy is what is loved by the gods.

Euthyphro: Very much so.

Socrates: And once you say this, will you be surprised then to find that our propositions are inconstant and go walking? And will you accuse me of being the Daedalus who makes them walk, when you yourself are far more skilled than Daedalus, and can make them go around in a circle? Or can you not see that our argument has gone around in a circle and arrived back in the same place? For I presume you remember that, in our previous discussion, it was evident to us that what is holy and what is god-loved are not the same, but differ from one another. Or do you not remember?

15c

Euthyphro: I do.

Socrates: Well, do you not realise now that you are saying that what is loved by the gods is holy? But this happens not to be god-loved, does it not?

Euthyphro: Certainly.

Socrates: In that case, either our earlier agreement was incorrect or, if we were right then, we are wrong now.

Euthyphro: So it seems.

15d

Socrates: Then, we must consider what holiness is once more from the beginning, since I am not willing to give up until I have learned this. But please, do not be contemptuous towards me. Just give this your fullest attention in every way, and tell me the truth now. For you know the truth if any man knows it, and, just like Proteus,⁸ you are not to be let go until you tell me. For if you did not know full well what is holy and also what is unholy, there is no possibility that you would ever have undertaken to prosecute an old man, your own father, for murder, on behalf of a day-labourer. No, you would have feared the gods too much to take the risk that you might be acting improperly. And you would have been ashamed before your fellow men too. But I am now quite aware that you think you know full well what is holy and what is not. So tell me, excellent Euthyphro, and please do not hide what you think it is.

15e

Euthyphro: Well, some other time, Socrates, for I am rushing somewhere else now and it is time for me to go.

16a

Socrates: What are you doing my friend? You are leaving, casting me down from the great hope I had that, having learned what is holy and what is not from you, I would escape the charge of Meletus by showing him that, through Euthyphro, I had now become wise in divine matters, and that I no longer make rash pronouncements and innovations about them because of my ignorance, and that I would live a better life in all other respects from now on.

NOTES

1. The Lyceum was a temple in Athens dedicated to Apollo Lyceus, which later became a site for public exercise. It is perhaps best known as the location of Aristotle's Peripatetic school, founded in 344.
2. The Royal Stoa, an administrative building located in the Athenian Agora, was where Socrates was formally sent forward for trial.
3. Demes were small administrative areas within the city-state of Athens.
4. Daedalus, a figure in Greek mythology, was a skilled architect and craftsman. He was said to have sculpted figures so real that they appeared to live and move. Socrates' father was a sculptor, hence his claim to a familial connection.
5. Tantalus is best known for his punishment in the underworld. His wealth derived from mines in Phrygia.
6. These lines are of unknown authorship.
7. Plato is construing the concepts of odd number and even number here in terms of certain types of triangles: the scalene triangle, which has unequal sides, is odd, and the isosceles triangle, which has equal sides, is even.
8. *Odyssey* iv.382 ff.

Gorgias

ΓΟΡΓΙΑΣ

Plato

translated by David Horan

persons in the dialogue:

CALLICLES an Athenian politician

SOCRATES of Alopece, son of Sophroniscus

CHAEREPHON a close friend of Socrates

GORGAS a renowned rhetorician

POLUS a rhetorician, student of Gorgias

scene: outside a public building where Gorgias has given a display and taken questions

447a

Callicles: Well, Socrates, you know the saying, ‘When going to war or a battle, it may be too late to join in!’

Socrates: Oh! Does this mean that a banquet has ended and we are late?

Callicles: Yes, a very elegant banquet indeed, for Gorgias¹ gave us an exhibition² of great variety and beauty a short time ago.

Socrates: Actually, it was all the fault of Chaerephon³ here for forcing me to spend so long in the Agora.⁴

447b

Chaerephon: It does not matter, Socrates. I shall also solve the problem. Yes, Gorgias is a friend of mine, so he will give the exhibition for you now if you like, or some other time if you prefer.

Callicles: What’s this, Chaerephon? Does Socrates want to hear Gorgias?

Chaerephon: That is the very reason we are here.

Callicles: In that case, come and visit me at my house whenever you wish. Yes, Gorgias is staying with me, and he will give the exhibition for you.

447c

Socrates: It is kind of you to offer, Callicles, but would he agree to converse with us? In fact, I want to find out from him what power this skill of his possesses, and what it is that he proclaims and teaches. He may present the other exhibition on some other occasion, as you suggest.

Callicles: There's nothing like asking the man himself, Socrates. Actually, this was one part of his exhibition, for a moment ago he called upon anyone who was inside to ask any question they wished, and he said that he would answer them all.

Socrates: That is wonderful news! You ask him, Chaerephon.

Chaerephon: What should I ask?

Socrates: Ask him who he is.

447d

Chaerephon: What do you mean?

Socrates: For example, if he happened to be a maker of shoes, I presume he would answer that he is a cobbler. Do you understand what I mean?

448a

Chaerephon: I understand and I shall ask. Tell me, Gorgias, is Callicles⁵ here speaking the truth, that you proclaim that you will answer whatever question anyone may ask you?

Gorgias: It is true, Chaerephon. Yes, indeed, I made that very announcement, and I can tell you that no one has yet asked me a new question, not for many years.

Chaerephon: Then I expect you will find this easy to answer.

Gorgias: Now is your chance, Chaerephon, to put that to the test.

Polus: Come on, Chaerephon, why don't you put me to the test instead? For I think that Gorgias is quite tired since he has just been doing a lot of talking.

Chaerephon: What is this, Polus?⁶ Do you think that you can give better answers than Gorgias?

Polus: What difference does that make, as long as they are good enough for you?

Chaerephon: None. Anyway, since you want to, you should answer.

Polus: Ask.

Chaerephon: My question is this. If Gorgias happened to be knowledgeable in the skill that his brother Herodicus possesses, what would we be right to call him? The same thing we call his brother?

448b

Polus: Certainly.

Chaerephon: So, if we called him a physician we would have described him accurately.

Polus: Yes.

Chaerephon: Yes, and if he practised the skill of Aristophon, the son of Aglauphon, or his brother,⁷ what would we be right to call him?

Polus: Obviously a painter.

Chaerephon: And now, what would be the correct title to give Gorgias, in view of the skill in which he is knowledgeable?

448c

Polus: Chaerephon, humanity possesses numerous skills that have been discovered in a practical way through experience. For practicality makes our time on earth proceed on the basis of skill, impracticality on the basis of chance. Various people partake of these particular skills in various ways, and the best partake of the best. And Gorgias here is one of the best, and he practises the most sublime skill of all.

448d

Socrates: Gorgias, when it comes to speeches, Polus appears to have been equipped well and truly. And yet he is not keeping the promise he made to Chaerephon.

Gorgias: What exactly do you mean, Socrates?

Socrates: He appears to me not to have answered the question at all.

Gorgias: Then you should question him, if you'd like to.

Socrates: If you yourself were willing to answer, I would much prefer to ask you. In fact, it is evident to me from what Polus has said that he has studied so-called rhetoric more than dialectic.

Polus: Why is that, Socrates?

Socrates: Because, Polus, when Chaerephon asked you what skill Gorgias knows about, you praised this skill of his as if someone were criticising it, but you did not give an answer as to what it is.

448e

Polus: Did I not answer that it is the most sublime skill?

449a

Socrates: You did, indeed. But nobody asked you what Gorgias' skill is like, but what it is and what we should call Gorgias. Just as Chaerephon set out questions for you earlier and you answered him clearly and concisely, so should you speak now and say what this skill is and what we should call Gorgias. Or better yet, Gorgias, tell us yourself what you should be called on account of your knowledge, of what skill.

Gorgias: The skill of rhetoric, Socrates.

Socrates: So, you should be called a rhetorician?

Gorgias: Yes, Socrates, but I am a good one, if you are prepared to call me what, in Homer's phrase, 'I boast myself to be'!⁸

Socrates: I am quite prepared to do so.

Gorgias: Then call me that.

449b

Socrates: And should we say that you are able to turn other people into rhetoricians?

Gorgias: Yes, I profess to do just that, not only here but in other places too.

Socrates: Now, Gorgias, would you agree to continue our conversation as we are now doing – one person asking questions, the other answering – and defer to another occasion any lengthy speeches such as the one with which Polus began? And be true to your promise, but please answer each question briefly.

449c

Gorgias: Well, Socrates, some answers demand that long speeches be made. However, I shall try anyway to be as brief as possible. And, indeed, what is more, one of my claims is that no one can express himself as concisely as I on the same issues.

Socrates: That is what is needed, Gorgias. Just give me an exhibition of this concise form of speech and defer the lengthy form to another occasion.

Gorgias: That's what I shall do, and you will say that you have heard no one speak more concisely.

449d

Socrates: Come on, then. You say that you are knowledgeable in the skill of rhetoric and can make a rhetorician of someone else. With which of the things that are, is rhetoric concerned? For instance, weaving is concerned with the manufacture of garments, isn't it?

Gorgias: Yes.

Socrates: And isn't music concerned with composing melodies?

Gorgias: Yes.

Socrates: By Hera, Gorgias, I am delighted with these answers. You are answering as briefly as you possibly could.

Gorgias: Yes, Socrates, I really think that I am doing quite well.

Socrates: Well said. Come now, answer me in the same way about rhetoric. About which of the things that are, is rhetoric the knowledge?

449e

Gorgias: About speeches.

Socrates: What sort of speeches, Gorgias? Speeches that show sick people the regimen by which they may become healthy?

Gorgias: No.

Socrates: So, rhetoric is not concerned with all speeches anyway.

Gorgias: Of course not.

Socrates: And yet it does make people capable of speaking.

Gorgias: Yes.

Socrates: And to understand what they are speaking about?

Gorgias: Inevitably.

450a

Socrates: Now, does medicine, which we just mentioned, make someone capable of understanding and speaking about those who are ill?

Gorgias: It must.

Socrates: So, medicine, it seems, is also concerned with speeches.

Gorgias: Yes.

Socrates: Speeches concerning illnesses?

Gorgias: Certainly.

Socrates: And isn't gymnastic also concerned with speeches about the good or bad condition of the body?

Gorgias: Entirely so.

Socrates: And, indeed, Gorgias, the same applies to the other skills. Each of them is concerned with speeches relating to the subject matter of that particular skill.

Gorgias: So it appears.

450b

Socrates: Then why don't you ever refer to the other skills as rhetorical, since they are concerned with speeches, if, in fact, you call the skill that is concerned with speeches rhetoric?

Gorgias: Because, Socrates, the other skills are almost entirely concerned with knowledge of practical dexterity and activities of that sort, whereas no aspect of rhetoric involves practical dexterity. Rather, its action and efficacy work entirely through words. For these reasons, I regard the skill of rhetoric as being concerned with speeches, and that, I say, is a correct account.

450c

Socrates: Now, do I really understand the sort of skill that you wish to call it? But perhaps I shall come to know this more clearly. So, answer me this. We do possess skills, is this not so?

Gorgias: Yes.

Socrates: Well, I think that the vast majority of skills involve practical dexterity and very little speaking, and some involve none at all because the objective of the skill may be attained through silence, as in the case of painting and sculpting, and numerous other skills. I think you are saying that rhetoric is not concerned with skills such as these. Is this so?

Gorgias: You have understood my meaning very well, Socrates.

450d

Socrates: And yet there is a different set of skills that operates entirely through speech, and requires almost no action or very little. Take arithmetic for instance, or calculation, geometry, or even draughts-playing, and numerous other skills. Some of these involve almost as much speech as activity, but in many such cases, most, if not all, of their entire activity and their efficacy is based upon words. And I think it is a skill belonging to such activities as these that you say is rhetoric.

Gorgias: True.

450e

Socrates: But I do not think you wish to refer to any particular one of these skills as the skill of rhetoric, even though the formulation you used implies that a skill that is effected through words is rhetoric. Indeed, someone who wanted to contrive difficulties in these arguments might respond, “So, Gorgias, are you saying that arithmetic is rhetoric?” But I do not think you are saying that either arithmetic or geometry is rhetoric.

Gorgias: Indeed, Socrates, your thinking is correct, and you rightly understand my meaning.

451a

Socrates: Come on, now. You should also work through the answer to the question in the way that I asked it. Since rhetoric happens to be one of those skills that relies for the most part upon speech, and since there are also other skills of this sort, try to state what words the efficacy of rhetoric is concerned with. Words about what? For instance, if someone were to ask me about any of the skills I mentioned just now, “Socrates, what is the skill of arithmetic?”, I would tell him, as you did just now, that it is one of the skills that is effected by means of speech. And if he were to ask again, “Speech about what?”, I would reply that it is speech about odd and even numbers, and the extent of

each. And if he were to go on and ask, “What skill do you refer to as ‘calculation’?”, I would say that it is one of the skills that is effective entirely through speech. And if he were also to ask, “About what?”, I would say, as the recorders in the Assembly might say, that for the most part calculation is just like arithmetic for it is concerned with the same thing, the odd and the even. Yet they differ insofar as calculation considers the quantity associated with the odd and the even, both in relation to themselves and in relation to one another. And if someone asked about astronomy because I said that it is effective entirely through speech, and said, “What are the pronouncements of astronomy concerned with?”, I would reply that they deal with the motion of the stars and sun and moon, and their speed relative to one another.

451c

Gorgias: Well, you are right to say all that anyway, Socrates.

451d

Socrates: Then you should try this too, Gorgias. Rhetoric is one of those skills that operates and is effective through speech. Is this so?

Gorgias: That’s what it is.

Socrates: Can you explain what it is concerned with? Among things that are, what is it that the particular words employed by rhetoric are concerned with?

Gorgias: With the most important and sublime of human affairs, Socrates.

451e

Socrates: But, Gorgias, this too is ambiguous, and you are still not saying anything that is clear. In fact, I am sure you have heard the round that men sing at parties in which they make a list in song, according to which it is best to be healthy, second best to be beautiful, and third best, according to the composer

of the song, is to be wealthy by honest means.

Gorgias: Yes, I have heard this, but why are you referring to it?

452a

Socrates: What if artificers of whatever is praised by the composer of the song were to stand before you right now? I mean a physician, a trainer, a businessman. First the physician would say, “Socrates, Gorgias is deceiving you. This skill of his is not concerned with the most important good of humankind. Mine is.” Now, if I were to ask him, “Who are you to say so?” he would probably say that he is a physician. “What do you mean?” I would say. “Is the product of your skill the most important good?” “Of course it is,” he would probably reply. “Socrates, the product of my skill is health, and what good is more important to humanity than health?”

And if the trainer spoke next and said, “I too would be surprised, Socrates, if Gorgias was able to show you that there is a greater good in this skill of his than I could show in mine,” I would in turn ask him, “Who are you, my man, and what is your job?” And he would reply, “I am a trainer and my job is to make men’s bodies strong and fair.” After the trainer, the businessman would say, I imagine, with total contempt for everyone else, “Think about this, Socrates. Does any good seem more important to you than wealth, whether it belongs to Gorgias or anyone else at all?” We might then say, “Oh! Are you the artificer of this?” and he would say, “Yes.” “Who are you?” we would ask. “A businessman.” And we shall say, “Well then, do you regard wealth as the greatest good for us humans?” “Of course it is,” he will say. And we would reply, “And yet Gorgias here is arguing that the skill he possesses is the cause of greater good than yours.” Of course, he would then ask, “And what is this good? Put that question to Gorgias.” So come on, Gorgias, you should regard yourself as

being questioned by these people and by me. Tell me what it is that you describe as the greatest good to humanity, a good of which you are the artificer.

452d

Gorgias: What it is in truth, Socrates, is a great good, and the cause on the one hand of freedom for humanity itself, and at the same time of dominion over others, for each person in his own city.

Socrates: And what do you call this good?

452e

Gorgias: I call it the ability to persuade by means of speeches, to persuade jurors in a law court, councillors in the Council, assembly men in the Assembly, or anyone else at a gathering convened for political purposes. In fact, in virtue of this power, the physician will be your slave and the trainer will be your slave, and this businessman will turn out to be making money for someone else and not for himself – for you, actually, the man with the power to speak and persuade crowds of people.

453a

Socrates: I think you have now come as close as possible to showing what you consider rhetoric to be. And if I understand at all, you are asserting that rhetoric is an artificer of persuasion, and its entire function and summation consists in this. Or can you say that rhetoric is able to do anything more than produce persuasion in the soul of those who hear it?

Gorgias: Not at all, Socrates. I think you are defining it quite adequately. Yes, that is the summation of rhetoric.

Socrates: Listen, Gorgias. You need to appreciate something. I am convinced that if anyone ever converses with anyone else with the intention of understanding precisely what it is that the discussion is concerned with, I am one of those people, and I count you among them too.

453b

Gorgias: What point are you making, Socrates?

Socrates: I shall tell you now. You need to be fully aware that when you speak of this persuasion produced by rhetoric, I do not know what exactly it is, or what sort of issues it relates to. And yet I do have my suspicions somehow, based upon what I think you are saying it is, and what it relates to. Nevertheless, I shall ask you what precisely you mean by the persuasion produced by rhetoric, and what subjects it relates to. Now, since I have my suspicions, why do I proceed to ask you rather than telling you myself? Well, it is not for your sake, but for the sake of the argument, so that it may proceed in this way to render the issue we are discussing as evident to us as possible. You should consider whether you regard my questioning as justified. For instance, suppose I were to ask you what sort of painter Zeuxis is,⁹ and you were to reply that he painted animals, wouldn't I be justified in asking what sort of animals he paints, and where?

453c

Gorgias: Entirely so.

Socrates: And is the reason that there are other painters who paint numerous other animals?

Gorgias: Yes.

Socrates: But if no one else besides Zeuxis did any painting, would your response have been adequate?

Gorgias: Of course.

453d

Socrates: Come on then, and speak about rhetoric. Do you think that rhetoric alone produces persuasion, or do other skills do this too? I mean, does anyone who teaches any subject whatsoever engage in persuasion or not?

Gorgias: He does, of course. He is more persuasive than anyone else.

Socrates: Let us talk again about the same skills we referred to a moment ago. Doesn't arithmetic, and the person who is arithmetical, teach us whatever relates to number?

Gorgias: Entirely so.

Socrates: And doesn't he also persuade?

Gorgias: Yes.

Socrates: So, arithmetic is also an artificer of persuasion?

Gorgias: So it appears.

453e

Socrates: Therefore, if someone asks us what kind of persuasion it is, and what it relates to, I presume we would answer him that it is instructive persuasion concerning the extent of the even and the odd. And for all of the other skills we mentioned just now, we shall be able to show that they are artificers of persuasion, what sort it is, and what it relates to. Is this so?

454a

Gorgias: Yes.

Socrates: So, rhetoric is not the sole artificer of persuasion.

Gorgias: That's true.

Socrates: Then since it is not the only skill that performs this function, but others do so too, we would be justified in questioning once more anyone who asserts this, just as we put a further question in relation to painting. Of what kind of persuasion is rhetoric a skill, and concerning what? Or don't you think it is right to ask this question once more?

454b

Gorgias: I do.

Socrates: Well, Gorgias, since that is what you think, you should answer the question.

Gorgias: Socrates, I am referring to the sort of persuasion that occurs in courts of law and in other gatherings, as I said earlier, and it concerns matters that are just and unjust.

Socrates: Yes, Gorgias, and I suspected that this was the sort of persuasion you meant, and that this was its concern. But I do not want you to be surprised if I ask you another question like this quite soon, the sort of question that seems obvious but which I repeat in any case. For, as I say, I am not asking for your sake but for the sake of the completion of the argument, so that we do not get into the habit of snatching at one another's pronouncements through guesswork. Instead, you should come to your own conclusions in whatever manner you wish on the basis of the hypothesis.

454c

Gorgias: Yes, I think that's the right way to do it, Socrates.

Socrates: Come on then, and let us consider this. Do you use the expression 'to have learned'?

Gorgias: I use it.

Socrates: And 'to have believed'?

454d

Gorgias: I do.

Socrates: Now, do you think 'to have learned' and 'to have believed', and 'learning' and 'belief' are the same or different?

Gorgias: In my view anyway, Socrates, they are different.

Socrates: Yes, you are right to think so and you may confirm it as follows. For if someone were to ask you, "Gorgias, is there true belief and false belief?" you would agree, I presume.

Gorgias: Yes.

Socrates: What about this? Is there true and false knowledge?

Gorgias: Not at all.

Socrates: So it is obvious that they are not the same.

Gorgias: What you say is true.

454e

Socrates: And yet those who have learned have been persuaded, and so have those who believe.

Gorgias: This is so.

Socrates: So, do you want us to posit two forms of persuasion, one furnishing belief without knowing, and the other furnishing knowledge?

Gorgias: Entirely so.

Socrates: In that case, which persuasion does rhetoric produce in law courts and other gatherings in relation to matters of justice and injustice? Is it the sort from which believing arises without the knowing, or the sort from which the knowing arises?

Gorgias: It is obvious, surely, that it is the sort from which believing arises.

455a

Socrates: So, rhetoric is, it seems, the artificer of belief-based rather than instructive persuasion about the just and the unjust.

Gorgias: Yes.

455b

Socrates: So, the rhetorician is not instructive towards law courts and the other gatherings with regard to matters of justice and injustice, he is merely persuasive. For, of course, he would not be able to instruct a gathering of that sort in a limited time on such important matters.

Gorgias: Of course not.

Socrates: Come on then, let us look at what precisely we are saying about rhetoric. For I myself am unable to understand, as yet, what I am saying. Whenever there is a meeting in the city about the selection of physicians or shipbuilders, or some other category of artificers, that is not the occasion when the rhetorician will give advice, is it? For it is evident that in each of these selections, the most skilled person should be selected. Nor do they advise us when the subject is the construction of walls or the fitting out of harbours and dockyards. No, the architects advise us then. Again, when there is deliberation about the selection of generals or our formation against our enemies or the capture of territories, it is military men who give advice then, and not the rhetoricians. Or how would you describe deliberations of this kind, Gorgias? Indeed, since you say that you are yourself a rhetorician and can make rhetoricians of others, it would be worthwhile to find out about the details of this skill from you. And you should regard me too as someone who is concerned for your interests, for there may be someone inside who wishes to become a pupil of yours. I notice some, quite a number actually, and they would probably be embarrassed to question you. So, when you are being questioned by me, regard yourself as being questioned by them too: "What will be ours, Gorgias, if we consort with you? On what affairs of the city shall we be enabled to advise? Is it only about what is just and unjust, or also about the topics Socrates mentioned a moment ago?" Now, try to respond to them.

455d

Gorgias: Well, Socrates, I shall try to reveal the entire power of rhetoric to you in a clear manner. You led the way very nicely yourself. For you know, of course, that those dockyards and the walls of Athens and the fitting out of the harbours owe their origin to the advice of Themistocles, and the others to the

advice of Pericles, but not to the advice of artificers.¹⁰

455e

Socrates: Yes, Gorgias, that is what they say about Themistocles, and I heard Pericles myself when he advised us about the Middle Wall.¹¹

Gorgias: And whenever there is a decision of the kind you mentioned just now, you see that the rhetoricians are those who give advice and whose opinions prevail on these matters.

Socrates: Yes, these are the issues I wonder about, and for some time I have been asking what precisely the power of rhetoric is. For when I consider it in this way, its greatness appears to me as something supernatural.

456a

Gorgias: If only you knew all of it, Socrates, that it somehow incorporates all of the powers within itself! I'll give you strong evidence for this. On many occasions, I have gone along with my brother and with the other physicians to someone who was ill but was unwilling to swallow the medicine or submit to cutting or burning at the physician's hands. Now, the physicians were unable to persuade him, but I persuaded him by means of no other skill than rhetoric. And I also assert that if the physician and the rhetorician went to any city you care to name, and it was necessary to have a verbal contest in the Assembly, or some other meeting, as to which of them should be chosen as physician, the physician would not feature at all, but the one with the power to speak would be chosen, if he so wished. And if he were to compete against any other artificer whatsoever, the rhetorician would persuade people to choose himself rather than anyone else at all. For there is no issue on which the rhetorician could not speak more persuasively at a gathering than any other artificer. Now then, such is the power of this skill, and such is its extent.

However, Socrates, one should make use of rhetoric just as one uses any other competitive skill. And, indeed, no other competitive skill is learned in order to be used against the entire human race. Because one learns boxing and fighting, and fighting in full armour so as to be superior to friends and to enemies, one does not, on that account, strike one's friends or stab them or kill them. Nor, by Zeus, if someone has frequented a gymnasium, gets his body into good shape, becomes a skilled boxer, and then punches his father or mother or some family members or friends, should we, on that account, hate the trainers or the teachers of armour-fighting, and expel them from our cities? No, those men imparted the skill to others to be used in a just manner against enemies and miscreants, defensively, not on their own initiative. But the pupils pervert it and use their strength and skill in an improper manner.

Therefore, those who teach it are not corrupt, nor, on this account, is the skill either blameworthy or corrupt. No, I think the fault lies with those who do not use it properly. Now, the same argument also applies to rhetoric. The rhetorician has the power to oppose everyone and to speak on every topic, and so he is more persuasive before large gatherings on any issue he chooses, almost anything at all. However, he need not, on that account, be any more inclined to take away the reputation of physicians or other artificers just because he has the power to do so. Instead, as with any other competitive skill, he needs to use rhetoric justly. But in my view, if someone who has become a rhetorician acts unjustly by means of this power and this skill, we should not hate the person who taught him, and expel him from our cities. For that man imparted the knowledge to be used justly,

but the pupil used it in the opposite way. So, it is right to hate the one who used it improperly, and exile him or kill him, but not the one who taught him.

457c

Socrates: I imagine, Gorgias, that you, like me, have experience of a whole range of speeches, and that you have observed something about them – that the speakers are not easily capable of mutually defining the issues they are trying to discuss, and of learning and teaching themselves, and concluding their meeting upon that basis. Instead, when they dispute over something, and one says that the other is not speaking correctly or clearly, they become angry and they believe that the other is speaking from resentment towards them, from a thirst for victory, rather than pursuing the issue in front of them for discussion. And some of them end up behaving most disgracefully, engaging in slander, and saying and hearing such things as make even their audience angry on their own account, because they deemed such fellows worth listening to.

Well, why am I saying this? It is because I think that what you are now saying is neither entirely consistent nor consonant with what you first said about rhetoric. Yet I am afraid to refute you in case you assume that I am out for victory and my words are aimed at you rather than the issue and its elucidation. Now, if you are the sort of person that I am, I would gladly continue to question you, but otherwise I shall have done with it.

What sort of person am I? I am one of those who would gladly be refuted if I say anything untrue, and would gladly engage in refutation if someone else were to say something untrue, and yet I am no less averse to being refuted than to engaging in refutation. Indeed, I think that being refuted is a greater

good insofar as it is a greater good to be released oneself from the greatest evil, rather than releasing someone else. For I believe that nothing is so evil for a person as a false opinion on the issues with which our present discussion is concerned. So, if you claim to be someone of this sort, let us have a discussion, but if you think we should have done with it, let us bid the issue farewell now, and bring our discussion to an end.

458c

Gorgias: No, Socrates, I say that I myself am the sort of person you have described. However, we should probably take our audience into consideration too. Yes, I should tell you that a while ago, before you arrived, I gave numerous exhibitions to these people, and we are now likely to prolong this unduly if we engage in discussion. So, we should also consider their circumstances in case we are detaining some of them who wish to do something else.

Chaerephon: Socrates and Gorgias, listen for yourselves to the commotion from these men, who wish to hear anything you have to say. As for myself, I pray that I never become so busy that I would set aside such discussions as these, conducted in this manner, because it became more important to do something else.

458d

Callicles: Yes, by the gods, Chaerephon, I myself have been present at many discussions over the years, but I don't know if I have ever before been so delighted as I am now. Accordingly, if you wish to converse for the whole day, you will be doing me a favour anyway.

Socrates: And, indeed, Callicles, there is no impediment on my part as long as Gorgias is willing.

Gorgias: Well, Socrates, after all that it would be a disgrace for me to prove unwilling, since I was the one who announced that anyone could ask whatever they wanted. So, if this is how these people see it, proceed with the discussion and ask any question you want.

458e

Socrates: Then listen, Gorgias, to what surprised me in the statements that you made. Indeed, it is possible that what you say is correct, and I am not understanding you correctly. Do you say that you can make someone a rhetorician, if he wishes to learn from you?

Gorgias: Yes.

Socrates: So that he may be persuasive before a crowd, not teaching them but persuading them?

Gorgias: Entirely so.

459a

Socrates: And you also said just now that even on health matters, the rhetorician will be more persuasive than the physician.

Gorgias: Yes I did, before a crowd anyway.

Socrates: Does not 'before a crowd' mean 'before those who do not know'? For surely before those who know he would not be more persuasive than the physician.

Gorgias: What you say is true.

Socrates: And since he will be more persuasive than the physician, he turns out to be more persuasive than the one who knows.

Gorgias: Certainly.

Socrates: Although he is not a physician. Is this so?

Gorgias: Yes.

459b

Socrates: But the non-physician is, of course, not knowledgeable on matters of which the physician is knowledgeable.

Gorgias: Obviously.

Socrates: So, whenever the rhetorician is more persuasive than the physician, the person who does not know will be more persuasive than the person who knows, before those who do not know. Does this follow or does it not?

Gorgias: It follows from what went before, anyway.

Socrates: Therefore, in relation to all the other skills, the position of the rhetorician or rhetoric is the same. It does not need to know anything about the actual details since it has discovered some means of persuasion by which, before those who do not know, it appears to know more than those who know.

459c

Gorgias: Well, doesn't it make things much easier, Socrates, when, without having learned the other skills but just this one skill, you are no worse off than the other artificers?

459d

Socrates: We shall investigate presently whether or not the rhetorician is worse off than the others under such circumstances, if that is relevant to our discussion. But there is something we should consider first. When it comes to just and unjust, base and noble, good and bad, is the situation of the rhetorician the same as it was in the case of health, and the various concerns of the other skills? Without knowing what is good and bad, base and noble, just and unjust, could he bring about persuasion in relation to these so that, before those who do not know, he seems to know more than those who actually know, even though he doesn't know? Or is it necessary to know

these, and should the person who intends to learn rhetoric know these things before he arrives in front of you? And if not, will you, the teacher of rhetoric, decline to teach these subjects to the new arrival since it is not your job? And instead, although he does not know such matters, will you make him seem to know before the multitude, and seem to be good when he is not? Or will you be unable to teach him rhetoric at all if he does not know the truth about these matters in advance? What is the situation here, Gorgias? And by Zeus, as you said you would do earlier, please reveal rhetoric and state what precisely its power is.

460a

Gorgias: Well, I believe, Socrates, that if he happens not to know, then he will learn these matters from me too.

Socrates: Hold there! Yes, that is well expressed. If you are to make a rhetorician of someone, it is necessary for him either to know the just and the unjust beforehand, or learn these subsequently from you.

460b

Gorgias: Yes, certainly.

Socrates: What about this? Someone who has learned carpentry is a carpenter, is he not?

Gorgias: Yes.

Socrates: And is not someone who has learned music a musician?

Gorgias: Yes.

Socrates: And is someone who has learned medicine a physician? And does the same argument apply to the other subjects? Whoever learns any of them is, in each case, the sort of person that the knowledge makes him.

Gorgias: Yes, certainly.

Socrates: Therefore, according to this argument, the person who has learned justice is just?

Gorgias: Entirely, of course.

Socrates: And presumably the just man performs just actions?

Gorgias: Yes.

460c

Socrates: Therefore, it is necessary that the rhetorician be just, and that the just man wishes to perform just actions.

Gorgias: So it appears anyway.

Socrates: So, the just man will never wish to act unjustly.

Gorgias: Necessarily.

Socrates: And according to the argument it is necessary that the rhetorician be just.

Gorgias: Yes.

Socrates: So, the rhetorician will never wish to act unjustly.

Gorgias: It appears not anyway.

460d

Socrates: Now, do you remember saying a little earlier that we should not blame the trainers or expel them from our cities if a trained boxer makes use of his boxing skill to act unjustly? And on the same basis, that if the rhetorician uses rhetoric unjustly, we should not blame the instructor or drive him out of our cities, but we should blame the one who acted unjustly and did not use rhetoric correctly? Is that what was said or is it not?

460e

Gorgias: That's what was said.

Socrates: But now it turns out that the same person, the rhetorician, would not ever act unjustly. Is this not so?

Gorgias: Apparently.

Socrates: And in our initial discussion it was said that rhetoric was concerned with speeches, not about number, odd and even, but about the just and the unjust. Is this so?

Gorgias: Yes.

Socrates: What is more, at the time you were saying all this, I understood that rhetoric would never be an unjust activity, since the speeches it makes are always about justice. But later on, when you said that the rhetorician could also use rhetoric unjustly, I was amazed at this, and being of the view that your statements were not concordant, I made those pronouncements, that if you were of the view, as I am, that there is an advantage in being refuted, it would be worthwhile to carry on a discussion, but if not, we should bid farewell to the matter. But of late, as we continue our investigation, you see for yourself that we are in agreement once more, that the rhetorician is unable to use rhetoric unjustly or to desire to act unjustly. So, Gorgias, by the dog,¹² we shall need considerable time together to investigate precisely how matters stand here.

461b

Polus: What's this, Socrates? Do you really believe what you are now saying about rhetoric? Or do you imagine that because Gorgias was ashamed not to agree with you about the man who studies rhetoric knowing the just and noble and good, and even if he were to frequent Gorgias without knowing these, he would teach him. Perhaps it was from this concession that a contradiction then showed up in his propositions, something that delights you as you draw people into questions of this sort. Yes, do you believe that anyone would totally deny that he himself knew about justice and would teach this to others? No, it is very crude of you to lead the discussions in such directions.

461c

Socrates: Please, most noble Polus, this surely is why we acquire companions and sons, so that when we ourselves get

older and stumble, you younger men are there to put our lives right once more, both in word and in deed. And now, if Gorgias and I have made some stumble in our discussions, here you are to put us right. It is your duty, and if it seems to you that anything that has been agreed has not been agreed fairly, then I am willing to retract whatever you wish, if you would just watch out for one thing for my sake.

461d

Polus: What are you referring to?

Socrates: That you restrain the lengthy manner of speaking that you tried to use earlier, Polus.

Polus: What's this? Shall I not be allowed to say just as much as I want to?

Socrates: Best of men, you would surely be in an outrageous predicament if, having arrived in Athens, where there is more freedom of speech than anywhere else in Greece, you were the only person there who did not attain it. But look at it the other way. If you speak at length and are not willing to answer what you are asked, would not my predicament be even more outrageous if I was not allowed to leave and stop listening to you? Rather, if anything in the discussion that has just taken place bothers you and you wish to put it right, then, as I said just now, retract whatever you wish, take your turn in questioning and being questioned, just like myself and Gorgias, and practise refuting and being refuted. Now, I presume you also claim to know the same things as Gorgias. Is this so?

461e

Polus: I do indeed.

Socrates: In that case, do you also frequently call upon people to ask you any question they want, on the basis that you are knowledgeable in answering?

462a

Polus: Yes, certainly.

462b

Socrates: So, you should now do whichever of these you prefer, ask or answer.

Polus: That's what I'll do then, and you should answer me, Socrates. Since Gorgias seems to you to be in perplexity in relation to rhetoric, what do you say that it is?

Socrates: Are you asking me what kind of skill I say that it is?

Polus: I am.

Socrates: Since I should speak the truth to you, Polus, it seems to me anyway that it is not a skill at all.

Polus: Then what do you think rhetoric is?

462c

Socrates: An activity which you claim to have made into a skill in your treatise, which I have recently read.

Polus: What activity do you mean?

Socrates: I mean a practice.

Polus: So, does rhetoric seem to you to be a practice?

Socrates: To me it does, unless you can suggest an alternative.

Polus: Practice of what?

Socrates: A practice of bringing about some gratification and pleasure.

Polus: Don't you think rhetoric is noble since it is able to gratify people?

462d

Socrates: What is this, Polus? Have you already found out from me what I assert that rhetoric is? Is that why you are asking the subsequent question about whether I think it is noble?

Polus: Well, didn't I find out that you say it is a practice?

Socrates: Well, since you have such respect for gratification, are you prepared to gratify me, just a little?

Polus: I am indeed.

Socrates: Ask me now what skill I think cookery is.

Polus: I am asking you then. What skill is cookery?

Socrates: It is not a skill, Polus.

Polus: I am saying so.

Socrates: It is a practice.

Polus: I am saying so.

462e

Socrates: Of bringing about gratification and pleasure, Polus.

Polus: So, is cookery the same thing as rhetoric?

Socrates: Not at all, but it is a part of the same pursuit.

Polus: What pursuit do you mean?

Socrates: It may sound somewhat crude if I speak the truth. Indeed, I am reluctant to speak on Gorgias' account in case he thinks I am mocking his own pursuit. Now, what I call rhetoric is part of an activity that is not the fairest of activities, but I do not know if this is the rhetoric that Gorgias engages in, for earlier on nothing clear emerged from our discussion as to what precisely this man believes.

463a

Gorgias: Say what it is, Socrates. Don't be ashamed on my account.

Socrates: Well then, it seems to me, Gorgias, to be a pursuit devoid of skill, and yet it belongs to an intuitive soul that is also courageous and naturally clever in dealing with humanity. And,

in summary, I call this flattery. Now, I do think that there are many other parts of this pursuit, but one of them is indeed cookery, which actually seems to be a skill but, according to my account, it is not a skill, but practice and habit. I also refer to rhetoric as part of this, as are beautification and sophistry – four parts associated with four activities. Now, if Polus wishes to enquire, he should enquire, although he has not yet enquired as to what sort of part of flattery I assert that rhetoric is. No, he has not noticed that I have not yet answered that question, so he proceeds to ask if I regard it as noble. But I shall not answer him as to whether I regard rhetoric as noble or base until I have first answered what it is. No, that would not be right, Polus. But if you really do wish to engage in enquiry ask me what sort of part of flattery I say that rhetoric is.

463d

Polus: That's my question, then. So tell me what sort of part it is.

Socrates: Now, will you understand my answer? Rhetoric, according to my account, is an image of part of politics.

Polus: What else? Are you saying that it is noble or base?

Socrates: Base, in my view anyway, for I refer to what is bad as base, since I must respond to you as if you have already understood what I mean.

Gorgias: By Zeus, Socrates, I don't understand what you mean either.

463e

Socrates: Gorgias, it is quite likely that I am not making my meaning clear, but Polus here is young and impetuous.

Gorgias: Just leave him be and tell me what you mean by saying that rhetoric is an image of part of politics.

Socrates: Then I shall try to state what rhetoric appears – to me anyway – to be. And if it happens not to be what I say it is, Polus here will refute me. I presume there is something you call body and something you call soul?

Gorgias: How could there not be?

464a

Socrates: In that case, do you also think that there is some good condition of each of these?

Gorgias: I do indeed.

Socrates: What about this? Can they seem to be in good condition when they are not? I am referring to a situation such as the following. Many people seem to have their bodies in good condition, and it is not easy for anyone to discern that they are not in good condition, but the physician and any physical trainer can do so.

Gorgias: What you say is true.

Socrates: I am referring to the sort of thing, present in body and in soul, which makes body and soul seem to be in good condition, when, in fact, they possess no more than that seeming.

Gorgias: There are such things.

464b

Socrates: Come on now, and if I can I will give you a clearer demonstration of what I mean. Since there are two activities, I am saying there are two skills. One is directed to the soul and I call it politics, but the single skill directed to the body I cannot name for you off-hand. Yet, I am saying that care of the body is one, though it has two parts – gymnastic and medicine. And in the field of politics, the legislative part corresponds to gymnastic, while justice is the counterpart of medicine. Now, each of these does indeed have something in

common, one with the other – medicine with gymnastic, and justice with law-making – inasmuch as they are associated with the same thing, and yet they are somewhat different from one another. So, there are these four, and they always aim for the best in caring for what belongs to the body, on the one hand, and what belongs to the soul, on the other. Now, flattery notices this. I do not mean that she knows, but she guesses. She divides herself into four, adopts the guise of each of the four, and pretends to be the one whose guise she adopts. Then, devoid of any understanding of what is best, she uses the pleasure of the moment to hunt instead for folly, and she practises deception so as to seem to be of the utmost value. So cookery, having adopted the guise of medicine, also pretends to know what foods are best for the body so that if the cook and the physician had to contest the matter before children, or before men who were just as silly as children, as to whether the physician or the cook had more expertise about wholesome or harmful foods, the physician would die of starvation. Now, this is what I call flattery, and I say that something of this sort is base because it guesses at pleasure regardless of what is best, *Polus*, and that is my reply to you. But I say that it is not a skill, but a practice, because it does not possess any rational account of the nature of what it applies to, or of what those things are applied to, so that it is unable to express the cause of each. And I do not call an activity devoid of an account a skill. Yet, if you wish to contest these assertions, I am prepared to defend the argument.

Now, cookery is the flattery that hides behind medicine, while in the very same way beautification hides behind gymnastic, and in this sense it is a bad influence, deceptive, ignoble and slavish. It practises deception through shaping, colouring, smoothing and dressing-up in such a way as to

make an alien beauty intrude, to the neglect of the native beauty brought about by means of gymnastic. Now, to avoid being long-winded, I wish to talk to you as the geometers do, for at this stage you are probably following me. What beautification is to gymnastic, so is cookery to medicine; and, more to the point, what beautification is to gymnastic so is sophistry to law-making; and what cookery is to medicine so is rhetoric to justice. Well, as I say, on this basis they are distinct by nature, yet insofar as they are closely related, sophists and rhetoricians become confounded into sameness,¹³ concerned also with the same issues, and they themselves do not know how to make use of themselves, nor does the rest of humanity know how to use them. And, indeed, if the soul did not rule over the body but the body ruled over itself, and cookery and medicine were not contemplated by means of soul and distinguished from one another, but the body itself were to decide using its own delectation as the measure, the sameness of Anaxagoras would take over, my dear Polus. Indeed, you are familiar with his sayings. Everything would be confounded into sameness, and medicine, health and cookery would be indistinguishable.

So, now you have heard what I say that rhetoric is: the counterpart in the soul of cookery, doing in the soul what cookery does in the body. And yet, I have surely done something unusual, because, whilst not allowing you to deliver lengthy speeches, I myself have delivered an extremely protracted one. However, I do deserve forgiveness, for when I spoke briefly you did not understand, nor were you able to make use of the answer I gave you; rather, you required further elaboration. And, indeed, if I am unable to make use of your answers when you respond to me, you should protract your speech too, but if I can use them, allow me to use them. That is only fair. And now, if you are able to

make any use of this answer, use it.

466a

Polus: What's your point then? Do you think that rhetoric is flattery?

Socrates: I said, in fact, that it is part of flattery. Can you not remember at your age, Polus? What will happen to you in later life?

Polus: And do the good rhetoricians seem to you to be held in low regard in the cities because they are flatterers?

466b

Socrates: Is this a question, or are you starting to deliver a speech?

Polus: I am just asking.

Socrates: In my view, anyway, they are not regarded at all.

Polus: How could they not be regarded? Don't they exercise enormous power in our cities?

Socrates: Not if you mean that the exercise of power is something good for the powerful person.

Polus: But of course I mean that.

Socrates: Then it seems to me that the rhetoricians exercise less power than anyone else in the city.

466c

Polus: But why? Aren't they just like tyrants? Don't they kill anyone they wish, confiscate property, and expel from the cities whoever seems to them to deserve it?

Socrates: By the dog, Polus, I am in two minds on each of the points you are making. Do you yourself mean this, and are you expressing your own opinion or are you asking me a question?

466d

Polus: Yes, I am asking you a question.

Socrates: So be it, my friend. In that case, are you asking me two questions at once?

Polus: In what way are there two?

Socrates: Did you not just say something of this sort: “Can’t the rhetoricians kill anyone they wish, just like tyrants, confiscate property, and expel from the cities whoever seems to them to deserve it?”

Polus: I did, indeed.

Socrates: Then, I am saying that there are two questions here, and I shall give you an answer in relation to both. Indeed, I assert, Polus, that both the rhetoricians and the tyrants exercise the least power in the cities, as I said a moment ago. For, in a sense, they do nothing they wish. Instead, they do whatever seems to them to be best.

466e

Polus: Isn’t that the exercise of enormous power?

Socrates: Not according to Polus anyway.

Polus: Am I denying this? No, I am asserting this.

Socrates: By the... No, you are not, since you assert that the exercise of enormous power is a good to the powerful person.

Polus: Yes, that’s what I assert.

Socrates: Well, do you think it is good if someone who does not possess intelligence does whatever seems to him to be the best? And do you refer to this as the exercise of enormous power?

Polus: I do not.

467a

Socrates: In that case, once you have refuted me, will you demonstrate that the rhetoricians possess intelligence, and rhetoric is a skill and not flattery? And if you leave me unrefuted, the rhetoricians, who do whatever seems best to

them in the cities, and the tyrants will have acquired nothing good thereby. But, according to you, the power is good. Yet you also agree that doing what seems best without intelligence is bad, do you not?

Polus: I do.

Socrates: So, how could rhetoricians exercise enormous power in the cities, or tyrants either, unless they really are doing what they wish, and Socrates is thus refuted by Polus?

467b

Polus: This man!

Socrates: I deny that they are doing what they wish. Now refute me!

Polus: Didn't you just agree that they do what seems best to them?

Socrates: And I still agree now.

Polus: In that case, don't they do what they wish?

Socrates: That I deny.

Polus: Are they doing what seems best to them?

Socrates: That's what I am saying.

Polus: What you are saying is shocking, Socrates, extremely so.

Socrates: Do not make accusations, precious Polus, if I may address you in your own manner. Rather, question me if you are able to and prove that I am speaking falsely. Otherwise you should respond to me.

467c

Polus: Then I'm willing to respond so that I actually understand what you are saying.

Socrates: Well, what do you think people wish for, the action they are performing at the time or that for the sake of which

they perform the action they are performing? Take, for instance, those who drink medicine at the behest of the physicians. Do you think they wish for the action they are performing – drinking the medicine and suffering its effects – or is it for something else, for the healthy condition, that for the sake of which they drink it?

467d

Polus: Obviously it is the healthy condition.

Socrates: And in the case of those who undertake sea voyages or engage in other money-making activities, it is not the activity that they wish for, the one they are performing at the time, for who wishes to be at sea, running risks and enduring hardship? No, I think they travel by sea for the sake of something else, to be wealthy, for they take to the sea for the sake of wealth.

Polus: Yes, certainly.

Socrates: So, does not the same go for all other actions? If anyone does anything for the sake of something, he does not wish for the action he is performing, but for that for the sake of which he performs the action.

467e

Polus: Yes.

Socrates: Now, among things that are, is not everything either good or bad, or in between these two, neither good nor bad?

Polus: This simply must be so, Socrates.

Socrates: Would you not say that wisdom, health and wealth and the like are good, while the opposites of these are bad?

Polus: I would indeed.

468a

Socrates: And do you say that the things that are neither good nor bad are those which sometimes partake of the good and

sometimes of the bad and sometimes of neither, like sitting, walking, running and sailing, or indeed stones and wood and anything else of that sort? Are you not referring to these? Or do you refer to some other things as neither good nor bad?

Polus: No, just these.

Socrates: Now, which is it? Whenever people perform actions, do they perform those in-between actions for the sake of whatever is good, or the good actions for the sake of the in-between?

468b

Polus: The in-between for the sake of the good, of course.

Socrates: So, whenever we walk, we walk in pursuit of the good, thinking it better to do so. And in the opposite case we stand, when we do stand, for the same reason, for the sake of the good. Is this not so?

Polus: Yes.

Socrates: Therefore, too, if we kill someone, do we not kill them, or banish them or confiscate their property, thinking that it is better for us to do so rather than not do so?

Polus: Yes, certainly.

Socrates: So, those who do all of these things do them for the sake of the good.

Polus: I agree.

Socrates: Have we agreed, then, that whenever we perform actions for the sake of something else, we do not wish for those activities, but for that for the sake of which we do them?

468c

Polus: Very much so.

Socrates: So, we do not wish to butcher people or expel them from our cities or confiscate their property just like that. But

when these actions are beneficial we wish to perform them, and when they are harmful we do not wish to do so. For we wish for whatever is good, as you say, but we do not wish for what is neither good nor bad, or what is bad, do we? Do you think what I am saying is true or not, Polus? Why do you not answer?

Polus: True.

468d

Socrates: Therefore, since we are agreed on all this, if anyone, either a tyrant or a rhetorician, kills someone or banishes them from the city or confiscates their possessions, thinking that it is better for himself and it happens to be worse, this man is obviously doing whatever seems best to him. Is this so?

Polus: Yes.

Socrates: Now, is he also doing what he wishes, if these actions happen to be bad for him? Why do you not answer?

Polus: Well, I don't think that he is doing what he wishes.

468e

Socrates: So, is there any sense in which such a person is exercising enormous power in that city, since, as you agreed, the exercise of enormous power is something good?

Polus: There is not.

Socrates: Then, I spoke the truth when I said that it is possible for a man who is doing what seems best to him in a city not to be exercising enormous power or doing what he wishes.

Polus: Yes, Socrates, as if you would not welcome the opportunity of doing whatever seems best to you in the city, given the choice, nor would you envy someone whom you saw killing whoever seemed to him to deserve it, or confiscating his property or putting people in chains.

469a

Socrates: Do you mean justly or unjustly?

Polus: Whatever he does, isn't it enviable in either case?

Socrates: Mind what you say, Polus.

Polus: Why so?

Socrates: Because the unenviable must not be envied, nor should the wretched. In fact, they should be pitied.

Polus: What's this? Do you think that the men I am referring to are in that situation?

Socrates: How could they not be?

469b

Polus: Well, do you think someone is wretched and pitiable when he has killed someone who seems to him to deserve it and the killing is just?

Socrates: I do not think so, but he is not enviable either.

Polus: Didn't you say just now that he is wretched?

Socrates: That was the person who did the killing unjustly, and he is pitiable as well. But the one who does it justly is unenviable.

Polus: Surely it is the person who has been unjustly killed who is pitiable and wretched.

Socrates: Less than the person who killed him, Polus, and less than someone who is justly killed.

Polus: How can that be, Socrates?

Socrates: On the basis that doing injustice happens to be the greatest of evils.

469c

Polus: Is it the greatest? Isn't it a greater evil to suffer injustice?

Socrates: Not in the least.

Polus: So, would you prefer to suffer injustice rather than do injustice?

Socrates: I myself would prefer neither. But if it were necessary either to do injustice or to suffer injustice, I would choose to suffer injustice rather than do injustice.

Polus: So, you would not welcome being a tyrant?

Socrates: Not if you mean what I mean by being a tyrant anyway.

Polus: Well, I mean what I said already, being able to do whatever seems best to you in the city – killing, banishing, and doing everything based upon your own opinion.

469d

Socrates: Bless you. Then think about what I am going to say. Suppose I were in a crowded market-place carrying a dagger under my arm, and I said to you, “Polus, I have just been granted a wonderful and tyrannical power. Yes, if it should seem to me that one of these men whom you see deserves to die right now, the man I think should die shall die. And if it should seem to me that one of them should have his head smashed, smashed it will be there and then. And if his cloak should be torn, torn it will be, so great is the power I shall exercise in this city.” Now, if you did not believe me and I were to show you the dagger, you would probably look at it and say, “Socrates, anyone at all could exercise great power in this manner since, based on this approach, you could also burn down any house you thought you should, and the dockyards of Athens, triremes included, and all the ships, public as well as private.” But this is not really the exercise of great power, doing what seems best to you. Or do you think it is?

469e

Polus: Of course not, not when it's done in this way anyway.

470a

Socrates: Now, can you say why you deprecate power of this sort?

Polus: I can.

Socrates: Why so? Tell me.

Polus: Because it is necessary for the person who behaves in this way to undergo punishment.

Socrates: And is it not bad to undergo punishment?

Polus: Very much so.

Socrates: In that case, my wonderful friend, once again you are of the view that, provided acting as seems best to you corresponds to acting beneficially, it is good, and this seemingly is the possession of great power. But, if not, it is bad and is insignificant power. But let us also consider this. Do we not agree that it is sometimes good to do the deeds we mentioned, to kill and to banish people and confiscate their property, and sometimes it is not?

470b

Polus: Very much so.

Socrates: Then this point, it seems, is agreed by you and by me.

Polus: Yes.

Socrates: So, when do you say it is better to do these deeds? Tell me what distinction you make.

Polus: You should answer that question, Socrates.

470c

Socrates: Well, Polus, if it is more pleasant for you to hear this from me, I say that whenever anyone does these deeds justly, it is better. Whenever anyone does them unjustly, it is worse.

Polus: Oh! You are so hard to refute, Socrates! Couldn't a mere child refute you and show you are not speaking the truth?

Socrates: Then I shall be very grateful to the child, and equally so to you if you happen to refute me and rid me of folly. So do not tire of doing good deeds for a man who is your friend. Refute me.

470d

Polus: Well then, Socrates, there is no need to refer to ancient deeds in order to refute you. Indeed, recent and not so recent events are enough to refute you and show that many people who act unjustly are happy.

Socrates: What sort of events?

Polus: You see, don't you, that this Archelaus fellow, the son of Perdiccas, is ruling Macedonia?

Socrates: Not really, but I have heard this.

Polus: Well, do you think he is happy or is he wretched?

Socrates: I do not know, Polus, for I have not yet been in the man's company.

470e

Polus: What's this? You would know if you were in his company, but otherwise you do not simply recognise that he is happy?

Socrates: By Zeus, of course I do not.

Polus: Then, Socrates, it is obvious that you will say that you do not recognise that even the Great King is happy.¹⁴

Socrates: And I shall be speaking the truth, for I do not know how he stands with regard to justice and education.

Polus: Come now, is all happiness contained in this?

Socrates: That is what I say anyway, Polus. For I assert that the noble and good men and women are happy, while the unjust and degenerate are wretched.

471a

Polus: So by your account, this Archelaus fellow is wretched?

Socrates: Yes, my friend, if he is unjust.

Polus: But how could he not be unjust? None of the authority he now exercises belonged to him, as he was born of a woman who was a slave of Alcetas, the brother of Perdiccas, so, by right, he was a slave of Alcetas. And if he had wished to enact what is just, he would have acted as a slave to Alcetas and would have been happy, according to your account. But now, wonder of wonders, he has become wretched, since he has perpetrated enormous injustices. Anyway, he first sent for this man, his own master and uncle, on the pretext of restoring the authority that Perdiccas had taken from him. Once he had entertained Alcetas, he got him drunk along with his son Alexander – Archelaus' own cousin of almost the same age – threw them into a wagon, led them away by night, slit their throats, and they were never seen again. Having perpetrated these injustices, he failed to notice that he had become utterly wretched, and he did not mend his ways. No, a little later he showed no wish to become happy by rearing his own seven-year-old brother, the legitimate son of Perdiccas, in a just manner and bestowing the throne upon him, to whom it devolved by right. Instead, he threw him into a well and drowned him, and told the boy's mother, Cleopatra, that he had fallen in and died whilst running after a goose. And of course, since he has behaved more unjustly than anyone in Macedonia, he is the most wretched of all the Macedonians, and not the happiest. And perhaps there is some Athenian, who, following your example, would prefer to be any other Macedonian rather than Archelaus.

471d

Socrates: Indeed, Polus, at the beginning of these discussions I praised you because I thought you had been well educated in rhetoric but had neglected dialectic. And now, is this the argument by which a child could refute me? And do you think I

have been refuted by you, by means of this argument, I who assert that those who act unjustly are not happy? Where is the refutation, good man? On the contrary, I do not agree with anything you are saying.

Polus: You actually don't want to, yet you are thinking what I am saying.

471e

Socrates: Bless you! You are trying to refute me in a rhetorical manner, just like those who believe they are engaging in refutation in courts of law. Yes, indeed, in those places, one party seems to refute another once they bring forward many well-regarded witnesses in support of the speeches they deliver, while the opposing speaker furnishes only one or none. But this refutation is of no value with regard to truth. For on occasion, anyone may be subject to false testimony from numerous witnesses who are held in some regard. And now, with few exceptions, all Athenians and strangers alike will say the same things you say, should you wish to bring witnesses against me to say I am not speaking the truth. They will testify for you if you wish: Nicias, the son of Niceratus, and his brothers too, whose tripods stand in a row in the Sanctuary of Dionysus; Aristocrates, the son of Skellias, whose beautiful statue stands in the Pythian precinct, if you wish; the entire household of Pericles too, or any other family you wish to select from among this company.¹⁵ But I, being one, do not agree with you for you do not compel me. Instead, you furnish many false witnesses against me in your efforts to divorce me from my property, the truth. But if I do not produce you yourself as one witness who agrees with what I am saying, then I think I have achieved nothing worth mentioning in relation to the subjects of our discussion. And neither have you, unless I, one solitary person, bear witness for you, and you bid all those

others farewell.

Now, this is the particular manner of refutation which you and many others accept. Yet there is another, which I, for my part, believe in.

So, let us place them side by side and find out if there is any difference between them. What is more, the issues over which we are disputing are not completely trivial. No, to have knowledge of these matters is almost the fairest acquisition of all, and to lack this knowledge is utterly base, for at the heart of all this is knowing or being ignorant, of who is happy and who is not. First, there is the immediate issue under discussion at the moment. You think it is possible for a man to be blessed although he is unjust and acting unjustly, since you think that Archelaus is unjust and yet happy. May we regard this as your viewpoint?

472d

Polus: Very much so.

Socrates: But I say this is impossible. That is one issue we are disputing. So be it. He will be happy although he is acting unjustly, but what if he meets with justice and punishment?

Polus: He's least happy, since he would be utterly wretched under those circumstances.

472e

Socrates: But if the person acting unjustly does not meet with justice, then, according to your account, he will be happy.

Polus: I agree.

Socrates: But in my view, Polus, the one who is unjust and acting unjustly is utterly wretched anyway. However, he is more wretched if he does not pay a penalty and does not receive punishment as a wrongdoer. But he is less wretched if he does

pay a penalty and meets with justice at the hands of gods and men.

473a

Polus: You are trying to express some strange notions, Socrates.

Socrates: And I shall also try anyway to make you, my colleague, say the same things to me, for I regard you as a friend. Well then, these are the issues on which we now differ, and you should consider these. Did I not say a while ago that doing injustice is worse than suffering it?

Polus: You certainly did.

Socrates: But you said suffering injustice is worse.

Polus: Yes.

Socrates: And I said that those who act unjustly are wretched, and I was refuted by you.

Polus: Yes, by Zeus.

473b

Socrates: So you think, Polus.

Polus: What I think is true.

Socrates: Perhaps, and you say anyway that those who act unjustly are happy, provided they do not pay a penalty.

Polus: Yes, certainly.

Socrates: And I say these people are utterly wretched, but those who pay a penalty are less so. Would you also like to refute this?

Polus: Oh, Socrates, this is even more difficult to refute than the other.

Socrates: Not at all, Polus, it is impossible! For the truth is never refuted.

473c

Polus: What are you saying? If a man is caught engaging in unjust action, striving to become a tyrant, and is put on the rack, castrated, has his eyes burned out, and is subjected to a host of other outrageous abuses, sees his own children and wife abused too, and is finally impaled and tarred, will this fellow be happier than if he had evaded this, set himself up as a tyrant, and spent his life ruling the city, doing as he wished, envied and accounted happy by citizens and strangers alike? Are you saying that all this is impossible to refute?

473d

Socrates: Now, you are telling horror stories, noble Polus, and a moment ago you were calling witnesses, but you are not engaging in refutation. But in any case, remind me of one detail. Did you say he was striving unjustly to become a tyrant?

Polus: I did.

473e

Socrates: Then neither of them will ever be happier, neither the one who manages to become a tyrant by unjust means nor the one who pays a penalty, for of two wretches, neither would be happier. However, the one who evades justice and becomes a tyrant is more wretched. What is this, Polus? Are you laughing? Is this yet another form of refutation – to laugh at someone when they say something, but not refute them?

Polus: Do you think you haven't been refuted, Socrates, when you are saying things the like of which no man at all would assert? Ask anyone here!

Socrates: Oh, Polus, I am not one of your politicians. And last year I was allotted membership of the Council,¹⁶ but when my tribe¹⁷ had the Presidency¹⁸ and I had to cast my vote, I became a figure of fun as I was unable to cast it. So, do not call upon me now to take the votes of the people here. Rather, if you do not have a better refutation than these, then, as I said a moment

ago, let me have my turn and try out the kind of refutation that I deem necessary. For I know how to furnish just one witness of what I am saying, the person with whom my conversation takes place, but I bid the multitudes farewell. And I know how to take the vote from one, and I do not even engage in discussions with multitudes. Now, let us see if you are prepared, in turn, to provide an opportunity for refutation by answering whatever you are asked. Indeed, I am of the view that both you and I, and all these other men, hold that doing injustice is worse than suffering injustice, and not paying a penalty is worse than paying it.

474b

Polus: I, for one, don't think that I or any other man at all holds this view. So, would you accept the infliction of injustice in preference to acting unjustly?

Socrates: Yes. You would too, and so would everyone else.

Polus: Far from it. No. I wouldn't, you wouldn't, and neither would anyone else.

Socrates: In that case, will you respond?

Polus: Yes, certainly. In fact, I am eager to know what precisely you are going to say.

Socrates: Then, Polus, so that you may know, tell me, as if I were questioning you from the beginning, which seems worse to you, doing injustice or suffering injustice?

474c

Polus: Suffering injustice, in my view anyway.

Socrates: But what about this? Which is the more base, doing injustice or suffering injustice? Answer.

Polus: Doing injustice.

Socrates: In that case, it is also worse if, in fact, it is more base.

Polus: Not in the least.

Socrates: I understand. It seems you do not think that noble and good, bad and base are the same.

Polus: Of course not.

474d

Socrates: What about the following? In the case of anything noble, such as bodies, colours, shapes, sounds and activities, do you refer to each of them as noble without looking to something else? Firstly, for instance, do you not say that noble bodies are noble either on the basis of their use, what each is useful for, or on the basis of some pleasure, if the beholding engenders delight in the beholders? Have you anything besides this to say about the nobility of the body?

Polus: I have not.

475a

Socrates: Does not the same apply to all the others, and do you not refer to shapes and colours as noble because of some pleasure or benefit or both?

Polus: I do indeed.

Socrates: Do you not also refer similarly to sounds and all elements associated with music?

Polus: Yes.

Socrates: And, indeed, in the case of the laws or any activities, these presumably are not noble because of anything apart from being beneficial or pleasant or both.

Polus: I don't think so anyway.

Socrates: Does not the same apply to the nobility of whatever we learn?

Polus: Yes, certainly. And you are defining this nicely now, Socrates, defining the noble in terms of pleasure and goodness.

Socrates: Do we not define the base in terms of the opposite, in terms of pain and by badness?

Polus: Necessarily.

Socrates: So, whenever there are two noble things and one is more noble than the other, it is more noble by exceeding in one or both of these factors, in pleasure or in benefit or in both.

Polus: Yes, certainly.

475b

Socrates: But when the two are base, and one is more base, it will be more base by exceeding either in pain or in badness. Must not this be so?

Polus: Yes.

Socrates: Come then! What was said just now about doing injustice and suffering injustice? Did you not say that suffering injustice is more bad, and doing injustice is more base?

Polus: I said so.

Socrates: Therefore, if, in fact, doing injustice is more base than suffering injustice, it is either more painful and would be more base by exceeding it in pain or in badness, or in both. Is this not also necessarily so?

Polus: How could it not be so?

475c

Socrates: Then let us consider this first. Does the perpetration of injustice exceed the suffering of injustice in pain, and are those who act unjustly more pained than those who suffer injustice?

Polus: Not at all, Socrates. It is not this.

Socrates: So, it does not exceed it in pain anyway.

Polus: Certainly not.

Socrates: Therefore, if it does not exceed it in pain, it would not exceed it in both.

Polus: Apparently not.

Socrates: In that case only the other factor remains.

Polus: Yes.

Socrates: The badness.

Polus: So it seems.

Socrates: Therefore, doing injustice would be worse than suffering injustice because it exceeds it in badness.

Polus: Yes, that is obvious.

475d

Socrates: Do not most men agree, and did you not agree with me a while ago, that doing injustice is more base than suffering injustice?

Polus: Yes.

Socrates: But now it turns out to be more bad.

Polus: So it seems.

Socrates: Well, would you accept the more base and bad in preference to what is less so? Do not be reluctant to answer, Polus, for no harm will come to you. Just surrender nobly to the argument as though it were a physician. Answer, and either affirm or deny whatever I ask you.

475e

Polus: No, I would not accept that, Socrates.

Socrates: Would any other man?

Polus: I do not think so, not on the basis of this argument anyway.

Socrates: So, I was speaking the truth. Neither I, nor you, nor any other man, would accept the perpetration of injustice rather than suffer injustice, for it happens to be more bad.

Polus: So it appears.

Socrates: Now, you see, Polus, that when one mode of refutation is set alongside the other, there is no resemblance between them. Although everyone else agrees with you except me, you are sufficient for me, one solitary person who agrees with me and testifies for me, and I am taking the vote from you alone and bidding the others farewell. And let that be our conclusion on this matter. Let us go on now and consider the second issue we were disputing about: whether, as you believe, the greatest evil for someone acting unjustly is to pay a penalty or, as I believe, the greater evil is not to pay a penalty. Let us look at it this way. Do you refer to paying a penalty and being justly disciplined for acting unjustly as the same thing?

476a

Polus: I do.

Socrates: Now, can you deny that everything that is just is noble, insofar as it is just? Think carefully before you answer.

Polus: I don't think I can deny this, Socrates.

Socrates: Then consider this too. If someone does something, must there also be something that suffers at the hands of that doer?

Polus: I think so.

Socrates: And does it experience what the doer enacts, and in the manner that the doer enacts it? I mean, for instance, that if someone is striking, something must be struck.

476b

Polus: It must.

Socrates: And if the striker strikes forcibly or quickly, is whatever is struck, struck in like manner?

Polus: Yes.

Socrates: So, is the experience of whatever is struck akin to what the striker does?

Polus: Entirely so.

Socrates: Also, in the case in which someone burns, is it necessary that something be burned?

Polus: How could it be otherwise?

Socrates: And if he burns intensely or painfully, is whatever is burned, burned in the manner in which the burner burns?

Polus: Entirely so.

476c

Socrates: And in the case in which someone cuts, does the same argument apply?

Polus: Yes.

Socrates: And if the cut is large or deep or painful, is whatever is cut, cut with the sort of cut that the cutter inflicts?

Polus: Apparently.

Socrates: Now, see if you agree with the concise statement I made earlier: in all circumstances, the sort of thing the doer does is the sort of thing the sufferer suffers.

Polus: Yes, I agree.

476d

Socrates: Well, based upon what we have agreed, is paying a penalty something that is suffered or something that is done?

Polus: It must be something that is suffered, Socrates.

Socrates: Therefore, it is being done by someone.

Polus: How could it not be? By the one who disciplines him.

476e

Socrates: And does he who disciplines rightly discipline justly?

Polus: Yes.

Socrates: Is he performing just actions or is he not?

Polus: The actions are just.

Socrates: Therefore, is it the case that the one who is disciplined and pays a penalty suffers just actions?

Polus: Apparently.

Socrates: And it is agreed, I presume, that just actions are noble.

Polus: Entirely so.

Socrates: So, one of these people performs what is noble, and the other, the one who is disciplined, experiences this.

Polus: Yes.

477a

Socrates: Therefore, since they are noble, are they good? For noble actions are either pleasant or beneficial.

Polus: Necessarily.

Socrates: So, the person who pays a penalty experiences what is good?

Polus: So it seems.

Socrates: So, he is benefited?

Polus: Yes.

Socrates: Is the benefit what I presume it to be? That his soul becomes better, if, in fact, he is justly disciplined.

Polus: Quite likely.

Socrates: So, is a person who pays a penalty released from badness of soul?

Polus: Yes.

477b

Socrates: In that case, is he released from the very worst badness? Think about this. When it comes to the state of a man's property, can you envisage any badness besides poverty?

Polus: No, only poverty.

Socrates: What about the condition of the body? Would you say that the badness is illness, disease, uncomeliness and the like?

Polus: I would.

Socrates: Do you not think that there is also some vice in the soul?

Polus: How could there not be?

Socrates: Do you not refer to this as injustice, ignorance, cowardice, and the like?

Polus: Yes, certainly.

477c

Socrates: Since there are wealth, body and soul, these three, you have mentioned three vices, poverty, disease and injustice.

Polus: Yes.

Socrates: Which of these vices is the most base? Is it not injustice, in short, the vice of the soul?

Polus: Very much so.

Socrates: If it is indeed the most base, is it also the worst?

Polus: What do you mean, Socrates?

Socrates: This. On the basis of what was agreed earlier, the base is always base either because it produces the greatest pain or

harm, or both.

Polus: Certainly.

477d

Socrates: And did we just agree that what is most base is injustice and all vice of the soul?

Polus: Yes, we agreed.

Socrates: Therefore, it is either the most distressing, and is the most base of these, because it exceeds in distress or in harm, or in both.

477e

Polus: Necessarily.

Socrates: Now, are injustice and indiscipline, cowardice and ignorance, more painful than being poor or being ill?

Polus: I don't think so, not from these arguments anyway.

Socrates: Now, since by your account at least, the vice of the soul does not exceed the others in pain, it is the most base of them all because it exceeds them extraordinarily in some great harm and astounding badness.

Polus: Apparently.

Socrates: However, I presume that whatever exceeds to the greatest extent in harm would be the greatest badness that there is.

Polus: Yes.

Socrates: In that case, is injustice, indiscipline and the general vice of the soul the greatest badness that there is?

Polus: Apparently.

478a

Socrates: Which skill frees one from poverty? Is it not the skill of money-making?

Polus: Yes.

Socrates: What frees us from disease? Is it not medical skill?

Polus: Necessarily.

Socrates: And what frees us from vice and injustice? In case you have no ready answer, consider this. Where and to whom do we bring people whose bodies are ill?

Polus: To the physicians, Socrates.

Socrates: Where do we bring those who act unjustly or without discipline?

Polus: To the judges. Is that what you mean?

Socrates: So, that they may pay a penalty?

Polus: I agree.

Socrates: Now, do not the people who discipline them aright do so by recourse to some justice?

Polus: Obviously.

478b

Socrates: So, wealth-generation frees us from poverty, medical skill from disease, and justice from indiscipline and injustice.

Polus: Apparently.

Socrates: Then which of these is the noblest?

Polus: Of what?

Socrates: Of money-making, medical skill and justice.

Polus: Justice excels by far, Socrates.

Socrates: Furthermore, if, in fact, it is noblest, does it not produce the greatest pleasure or benefit or both?

Polus: Yes.

Socrates: Now, is medical treatment pleasant, and are those who undergo medical treatment pleased?

Polus: I do not think so.

Socrates: But it is beneficial anyway. Is this so?

Polus: Yes.

478c

Socrates: For it brings release from enormous badness, and so it is advantageous to endure the distress and become healthy.

Polus: How could it not be?

Socrates: Now, on this basis, with regard to the body, would the happiest man be the one who has undergone medical treatment, or the one who was not even ill in the first place?

Polus: Obviously the one who was not even ill.

Socrates: Then it seems that happiness is not the release from badness, but not acquiring it in the first place.

Polus: This is so.

478d

Socrates: What about this? If there are two people possessed of badness, either in body or in soul, which of the two is more wretched, the one who undergoes treatment and is released from the badness, or the one who does not undergo treatment and still has it?

Polus: The one who is not treated. So it appears to me.

Socrates: Was paying a penalty not a release from the greatest badness, namely vice?

Polus: It was.

Socrates: For justice, I suppose, makes one sound-minded and more just, and is a cure for evil.

Polus: Yes.

Socrates: So, the happiest person is the one who is possessed of no badness in soul, since this has turned out to be the worst badness of all.

478e

Polus: Yes, of course.

Socrates: Second happiest is, presumably, the person who is released from badness.

Polus: So it seems.

Socrates: And this is the fellow who is chastised, rebuked, and has paid a penalty.

Polus: Yes.

Socrates: So, the fellow who retains his badness and is not released from it lives the worst life.

Polus: Apparently.

Socrates: And is this not, in fact, the fellow who perpetrates the greatest injustices, and, despite using unjust means, arranges neither to be chastened nor disciplined nor to pay a penalty, just as you say Archelaus and other tyrants, rhetoricians and men of power contrive?

479a

Polus: So it seems.

Socrates: Indeed, best of men, in a sense these fellows have almost arranged to be in the same predicament as someone afflicted with serious illnesses who contrives not to pay a penalty to the physicians for the aberrations of the body, or to undergo treatment, fearing the burning and the cutting, just like a child, because it is painful. Or does it not seem like that to you too?

479b

Polus: It does.

Socrates: It seems they are somehow unaware of what health and excellence of body are like. For based upon what we have just concluded, these men who are evading justice, Polus, are also in danger of doing something similar: of clearly discerning the pain thereof but having a blind spot towards its benefit, and of being unaware of how much more wretched it is to live with a soul that is not healthy, a soul that is unsound, unjust and impious. Hence, they do anything so as neither to pay a penalty nor be released from this great badness, providing themselves with possessions and friends and the ability to speak as persuasively as possible. But if what we have agreed is true, Polus, can you see the consequences of the argument? Would you like me to sum them up?

479c

Polus: Unless you have something else to suggest.

479d

Socrates: Well, does it follow that injustice, and acting unjustly, is the greatest badness?

Polus: So it appears anyway.

Socrates: And did the release from this badness turn out to be the payment of a penalty?

Polus: It was probable.

Socrates: And is the non-payment a continuation of the badness?

Polus: Yes.

Socrates: So, the second greatest badness is the perpetration of injustice, but the foremost and greatest badness of all is, by nature, doing injustice without paying a penalty.

479e

Polus: So it seems.

Socrates: Now, is this not, my friend, what we disagreed about: you, for your part, regarding Archelaus as happy, though he perpetrated enormous injustices without paying a penalty; and I, for my part, holding the opposite view, that if either Archelaus or any other person does not pay a penalty when he acts unjustly, he is inevitably wretched, more so than any other person, and that the perpetrator of injustice is always more wretched than the sufferer, and the one who pays no penalty is more wretched than he who pays one? Are these not the assertions I made?

Polus: Yes.

Socrates: Has it not been shown that what was asserted is true?

Polus: Apparently.

480a

Socrates: So be it. Now, if this is all true, Polus, what is the great advantage of rhetoric? In fact, on the basis of what is now agreed, a man should be particularly vigilant of himself in case he might act unjustly and get his fill of badness. Is this so?

Polus: Entirely so.

Socrates: But if either he or someone else for whom he cares acts unjustly, he will go willingly to wherever he may pay a penalty as quickly as possible, going to a judge just as he would to a physician, hastening lest the disease of injustice be protracted and make the soul fester and become incurable. Or how should we express this, Polus, if what we previously agreed still stands? Must not these assertions, expressed in this way but not otherwise, be in agreement with the earlier ones?

480b

Polus: Well then, Socrates, what should we say?

Socrates: So, rhetoric is not useful to us at all, Polus, in the defence of our own injustice, or that of our parents or

companions or children or fatherland, except if it is deployed for the opposite purpose – to prosecute oneself in particular, as one must, and, indeed, any other kinfolk or loved ones when they happen to act unjustly, not in order to conceal this, but to bring the unjust action to light in order that a penalty is paid and health is restored; to compel both himself and the others to show no cowardice, but to submit with closed eyes, worthily and courageously, as if he were being cut or burned by a physician; intent upon the good and the noble, taking no account of the pain; submitting to flogging, if his unjust deeds merit flogging; to imprisonment, if they merit imprisonment; paying the fine, if a fine is imposed; going into exile, if exile is deserved; and submitting to death, if execution is deserved; he himself being the chief accuser of himself, and of his other kinfolk, and making use of rhetoric for this purpose, so that with their unjust deeds fully exposed, they may be released from the greatest of evils, injustice. Should we formulate it like this, or should we not, Polus?

480e

Polus: It seems absurd to me, Socrates. However, to you it probably seems to be in line with what we said before.

Socrates: Then we must either dispense with the former statements as well, or these latter ones necessarily follow.

Polus: Yes, that's how matters stand.

Socrates: What is more, turning to the opposite case, if it proves necessary to act badly towards someone, be he an enemy or anyone else, then as long as you yourself are not being treated unjustly by that enemy – you do need to be careful about this – and the enemy treats someone else unjustly, one must contrive by every means, in word and in deed, that he pay no penalty and is not brought before a judge. But if he is brought, one must arrange that the enemy is acquitted and does not pay a penalty; and if he has stolen a lot of gold, that he does

not repay this but holds on to it and spends it unjustly and godlessly on himself and his own people; and if he is deserving of death for his unjust actions, arrange that he does not suffer death – yea, that this never happens – so that he becomes immortal as an evildoer, and if not, that he lives for as long as possible in such a plight. It seems to me, Polus, that rhetoric is useful for such purposes, seeing that its usefulness to those with no intention of acting unjustly is insignificant, if indeed it has any use at all, since in the previous discussion it appeared not to be useful at all.

481b

Callicles: Tell me, Chaerephon, is Socrates serious about all this or is he playing games?

Chaerephon: He seems to me, Callicles, to be exceedingly serious. However, there is nothing like asking the man himself.

481c

Callicles: By the gods, I am eager to ask. Tell me, Socrates, should we presume that you are now being serious or joking? For if you are serious, and these pronouncements you are making happen to be true, won't the life of every human being be turned upside-down? And won't we all, so it seems, be doing the complete opposite of what we should?

Socrates: Callicles, if people did not have some experience that was the same, some sharing one experience, others sharing another, but instead one of us underwent a unique experience different from everyone else, it would not be easy for him to describe his own experience to another. And I speak from a recognition that you and I happen to have gone through the same experience. We are two lovers, each with two loves. My two are Alcibiades, the son of Clinias,¹⁹ and philosophy. Yours are the Athenian demos and Demos, the son of Pyrilampes.²⁰ Clever and all as you are, I notice that you constantly change your stance back and forth because

you are unable to contradict what your favourite asserts, and what he declares to be the case. In the Assembly, when you are saying something and the Athenian populace deny that this is the case, you change your stance and propose whatever they wish. And also with this fair youth, the son of Pyrilampes, you are affected in a similar fashion, for you are unable to oppose the formulations and assertions of your favourite. And so, if anyone were ever surprised at what you say when you speak under those influences, because the assertions are so absurd, if you wanted to speak the truth you would probably tell him that unless someone stops your favourite from making those pronouncements, you will never stop uttering them either. Therefore, you should realise that it is also necessary to hear more statements of this sort from me, and you should not be surprised that I make them. Rather, you must stop philosophy, my favourite, from saying what she says.

For she is constantly stating what you are now hearing from me, my dear friend, and she is much less impulsive with me than my other favourite, for the words of this son of Clinias change from one moment to the next, while the words of philosophy are always the same. She is saying what now surprises you, although you were also present yourself as it was spoken. So, as I just said, you should either refute her by proving that doing injustice and acting unjustly without paying a penalty is not the most extreme badness that there is, or else, if you leave this statement unrefuted, by the dog, the god of Egypt,²¹ Callicles, Callicles will not be in agreement with you. Instead he will be in discord throughout his entire life. And yet, best of men, I, for my part, think it better that my lyre be out of tune and discordant, so too the chorus that I provide, and that most of humanity disagree with me and speak against me, rather than that I, being one, should be

discordant with and speak against myself.

482c

Callicles: Socrates, it seems to me that you are out of control in your arguments, like a true mob orator. Yes, you are making these appeals to the mob, now that Polus has met the very same fate that he accused Gorgias of meeting at your hands. Indeed, he pointed out, I believe that when you asked Gorgias whether Gorgias himself would teach justice to someone who came to him, wishing to learn rhetoric but without any knowledge of justice, the man was ashamed and said he would teach him only on account of human convention, because people would be indignant if he said otherwise. Of course, due to this concession, he himself was forced to speak against himself, the very thing you delight in. And he ridiculed you at the time – rightly so in my view – but now he himself, in turn, has suffered the same fate. And I am not much pleased with Polus on this particular issue, because he conceded to you that doing injustice is more base than suffering injustice. For out of this concession, he, for his part, got tangled up in the discussion at your hands and was reduced to silence, ashamed to say what he was thinking. Yes, Socrates, whilst claiming to be pursuing the truth, you are really diverting us into banalities and populisms, propositions that are not sound by nature, but only by convention. Yet, in general, these two, nature and convention, are opposed to one another. Therefore, if anyone is ashamed and does not dare to say what he thinks, he is compelled to utter contradictions. And of course, having recognised this piece of wisdom, you wreak havoc in the discussions, asking surreptitiously about the natural whenever someone mentions the conventional, and about the conventional when they refer to the natural. It happened just now in the references to doing injustice and suffering injustice. When Polus referred to what is base according to convention, you

pursued the argument according to nature. For by nature, everything that is more base, such as suffering injustice, is also more bad, whereas by convention, doing injustice is more base. Indeed, this predicament of suffering injustice does not belong to a man, but to some slave, for whom it is better to die than to live, someone who, on suffering injustice or being mistreated, is unable to defend himself or anyone else he cares for. But in my view, those who set down the laws are the weak people, the multitude. They institute the laws with a view to themselves and their own advantage, and they praise what they praise and censure what they censure. To intimidate the stronger people who have the power to get more than their share, and to ensure they don't get more than the multitude, they say that getting more than your share is base and unjust, and that seeking to have more than others constitutes unjust activity. For I believe that they themselves, being lesser men, would be delighted with an equal share. Of course, that's why they say that this 'seeking to have more than the multitude' is, by law, unjust and base, and they refer to it as unjust action. And yet I believe that nature itself testifies to this: that it is just for the superior men to have more than the inferior men, and for the more powerful to exceed the less powerful. And it is evident in many cases that this is so, both among animals in general, and in the cities and dynasties of men. What is just is decided in this way: the stronger rule over the weaker and have more than them.

To what conception of justice did Xerxes²² have recourse when he waged war against Greece, or his father against the Scythians? And we could describe countless other instances of this sort. Yet I believe these people are acting in accord with the nature of the just. Yes, by Zeus, in accord with the law of nature anyway, though probably not in accord with the

one we institute, moulding the superior and stronger men among us. Capturing them when they are young, as though they were lions, we reduce them to slaves with enchantments and beguilements, declaring that equality is what is needed, and that's what's noble and just. And yet, if a man whose nature is up to the task were to arise, having shrugged off all this, broken it asunder and fled, trampled upon our traditions, aphorisms, verses, and all laws that are opposed to nature, that slave would prove to be our master, and the justice of nature would blaze forth. And it seems to me that Pindar makes the point I am making in the ode in which he says that

*Law the lord of all,
of mortals and immortals both...*

and then he says, it

*conducts extreme violence
with a high hand and renders it just.
My proof lies in the deeds of Heracles,
When, without payment...²³*

It says something of that sort, for I don't know the ode. But it does say that he drove off the cattle of Geryon²⁴ without payment and without permission, because by nature that's what is just. Both the oxen and all the other possessions of the lesser and the weaker belong to the superior and the stronger.

Now, that is the truth of the matter, and you will recognise this once you have bidden farewell to philosophy and moved on to greater things. Yes, philosophy is indeed a delight if it is taken up in due measure at the right age, but if a man

continues its practice for longer than necessary, it can ruin people. For even if he has great natural endowments, but engages in philosophy beyond the right age, a man must perforce remain inexperienced in all matters where experience is needed, by anyone who intends to be a noble, good man who is well thought of. In fact, he is rendered inexperienced in the laws governing the city and the language one must use to engage in the business dealings of men, be they public or private, in the pleasures and desires of humanity, and, in short, he becomes completely inexperienced in the ways of the world. So, once they take to any private or political business they become laughing stocks, just as the men of politics would, I presume, become laughable too if they in turn were to take up this activity of yours and its arguments. And this confirms the statement of Euripides that 'each person shines in this and is eager for this',

*Assigning the greater part of the day to this
Where he himself excels...*²⁵

But he shuns and reviles the activity in which he is inferior, and he praises the other one out of good will towards himself, believing that he himself is praising himself by doing so, but in my view it is best to have a share of both. Insofar as philosophy is educational, it is good to partake thereof, and it is no disgrace for a young man to engage in philosophy. However, if he still engages in philosophy as an older man, he becomes a comical character, Socrates, and I myself have exactly the same feeling towards the philosophers as I do towards people who mumble or behave childishly. For when I see a little child mumbling and being immature, it is still appropriate for him to converse in this manner, so I am pleased and it seems delightful to me, free-spirited and suited

to the age of the child. However, when I hear a young child expressing himself articulately, this seems distasteful to me. It offends my ears, and I regard it as more appropriate for a slave. And whenever anyone hears a man mumbling or sees him behaving immaturely, this appears comical and unmanly and deserving of a beating. Now, I myself have the very same feeling towards the philosophers, for I am delighted when I see philosophy in a young adolescent. It seems appropriate to me, and I regard this man as a free-spirited person, and the one who does not engage in philosophy as devoid of freedom, one who will never prove himself worthy of any fair and noble dealings. And yet, when I see an older man still engaging in philosophy and not giving it up, at that stage, Socrates, the man seems to me to be in need of a beating. For as I said just now, even if this man has many natural endowments, he is prone to become unmanly, avoiding the centres and meeting places of the city – in which, as the poet says,²⁶ men become illustrious – slinking away to live the rest of his life whispering with three or four adolescents in a corner, never expressing anything unbridled and visionary to meet the need of the moment.

Now, Socrates, I do have a somewhat friendly disposition towards you, so having been reminded of Zethus, I am now inclined to have the same feeling as he had towards Amphion in Euripides' play.²⁷ In fact, it occurs to me to say the same sort of things to you as he said to his brother: "Socrates, you care not for what you should, and although your soul has been granted a noble nature, you are pre-eminent in the guise of some youthful figure, and you could neither present speeches before the assemblies of justice in the proper manner, nor proclaim anything persuasive or probable, nor advocate a novel proposal on behalf of someone else." What's more, dear Socrates – and don't be angry with me for I am

about to speak with good intentions towards you – doesn't it seem disgraceful to you to be in the predicament I think you are in, along with the rest of those who are in the habit of pressing philosophy too far? For if someone were now to take hold of you, or anyone else of your sort, and cart you off to prison, claiming that you had acted unjustly when you had done nothing wrong, you know that you wouldn't know what to do with yourself. No, you would be dizzy, open-mouthed, not knowing what you should say, and on being brought to court, meeting some lowly, knavish accuser, you would be executed if he wanted the death penalty for you. Yes, indeed, Socrates. "How can this be anything wise, a skill that takes a naturally talented man and makes him worse?", unable either to help himself or to save either himself or anyone else from the utmost dangers, liable to have all his property confiscated by his enemies, living in the city effectively deprived of his rights? And to put it quite crudely, it is possible to slap someone like this across the face and pay no penalty. So, good fellow, heed my entreaty: desist from the practice of refutation. Practise the sweet music of business affairs instead. Practise something that will make you seem intelligent. Leave the subtleties to other people, the nonsensicalities, or fooleries, or whatever they should be called, for these will have you "dwelling in empty halls".²⁸ Do not envy those who engage in these trifling refutations, but men of substance, reputation and other advantages aplenty.

486d

Socrates: Callicles, if my soul happened to be made of gold, do you not think I would be pleased to discover one of those stones with which they test gold, the best one there is? And if I applied the soul to this, and it confirmed to me that my soul had been properly cared for, would I be right to accept that I am, finally, in good condition, or would I still need another test?

Callicles: Why are you asking this question, Socrates?

Socrates: I will tell you right now. I think that this chance encounter with you is an encounter with a god-send of this kind.

Callicles: In what way?

486e

Socrates: I know very well that if you agree with me on the issues about which my soul forms opinions, such agreements then constitute truth itself. For I realise that someone who proposes to test comprehensively whether or not the soul lives aright surely needs to have three qualities, all of which you possess: knowledge, good intentions and frankness. Indeed, I meet many people who are not able to test me because they are not wise like you. There are others who are wise, but they are not prepared to speak the truth to me because they do not care about me, as you do. These two visitors, Gorgias and Polus, despite being wise and being friends of mine, are yet lacking in frankness, and are both more reticent than they need to be. How could they not be? They both ended up in such embarrassment that for shame, each of them dared to contradict themselves in front of a lot of people on issues of the utmost importance. But you possess all those qualities that the others lack, for you have been properly educated, as numerous Athenians would attest, and you are well disposed towards me.

What evidence do I have? I shall tell you. I know, Callicles, that there are four of you who have become associates in wisdom: yourself, Teisander of Aphidnae, Andron, son of Androtion, and Nausicydes of Cholargos.²⁹ And I once heard you deliberating on how far one should pursue the practice of wisdom, and I know that an opinion prevailed among you that went something like this: that you should not be eager to

engage in philosophy in a serious way; instead you encouraged one another to be careful lest you become wise beyond the limit of necessity and get corrupted without noticing it. Now, when I hear you giving me the same advice you give to your own companions, that is enough evidence for me that you are, in truth, well disposed towards me. And, indeed, you yourself assert, and the speech you made a short time ago confirms, that you are able to speak frankly and be devoid of shame. So, it is evident that this is where we stand on these issues. If you come to agree with me on anything in these discussions, the point in question will at that stage have been adequately tested by you and me, and will not need to be subjected to any other test. For you would never have gone along with it, either from lack of wisdom or excessive shame, and, what is more, you would not make the concession to deceive me, for, as you say yourself, you are my friend. Therefore, agreement between you and me will, in fact, already constitute complete truth. But the most sublime enquiry of all concerns the issues over which you rebuked me: the sort of person a man should be, the pursuits he should engage in and how far he should pursue them, both when he is younger and when he is older. Indeed, if I am acting incorrectly in some aspect of my own life, rest assured that I am not going astray deliberately, but through my own ignorance. And since you have begun to correct me, do not give up. Rather show me, satisfactorily, what it is that I should pursue and the manner in which I may acquire it. And if you find me agreeing with you now, and yet sometime later not enacting what was agreed, you should regard me as an utter fool, and never correct me again thereafter because I do not deserve it.

But tell me from the beginning, what do you and Pindar claim that the justice that accords with nature actually involves? Is

it that the stronger carry off the possessions of the weaker by force, that the superior rule over the inferior, and that better men have more than lesser men? Are you saying that justice is something else, or am I recalling this correctly?

488b

Callicles: Yes, that's what I said then, and that's what I say now.

488c

Socrates: And do you refer to superior and stronger as the same? Indeed, I was not really able to understand what precisely you were saying. Are you calling the more powerful people stronger? And should the weaker people obey the stronger, which is what I think you were indicating earlier, since the bigger cities attack the smaller ones in accord with what is just by nature, because they are stronger and more powerful, since the stronger, more powerful and superior are the same? Or is it possible to be superior and yet lesser and weaker, to be stronger and yet in a worse state? Or is the definition of the superior and of the stronger the same? Make this particular distinction for me in a clear manner. Are the superior the stronger, and the more powerful the same, or are they different?

488d

Callicles: But I am telling you clearly that they are the same.

Socrates: In that case, is the multitude not stronger, according to nature, than the individual? And indeed they impose laws upon the individual, as you also said earlier.

Callicles: Of course.

Socrates: So, the laws of the multitude are the laws of the stronger?

Callicles: Yes, certainly.

Socrates: Are they, therefore, the laws of the superior folk? For according to your argument, I presume the stronger are

superior.

Callicles: Yes.

Socrates: Are their laws not good, by nature, being the laws of the stronger?

Callicles: I agree.

Socrates: And do the multitude conventionally believe, as you said already, that it is just to maintain equality, and more base to do injustice than to suffer injustice? Is this the case or is it not? And do not get trapped here and become ashamed like the others. Does the multitude conventionally believe this or not: that it is just to have an equal share and no more, and it is more base to do injustice than to suffer injustice? Do not begrudge me an answer to this, Callicles, so that should you agree with me, I may finally attain certainty through you, seeing that a man who is competent to decide has agreed with me.

488e

Callicles: Well, the multitude at any rate do conventionally believe this.

Socrates: So, it is not only by convention, but also by nature, that doing injustice is more base than suffering injustice, and that the maintenance of equality is just. And so, it is very likely that you were not speaking the truth and your criticism of me was incorrect when you said that nature and convention are opposed, and that I knew this and wreaked havoc in the arguments by referring to convention whenever someone spoke on the basis of nature, and referring to nature when they spoke on the basis of convention.

489b

Callicles: This man will not cease talking nonsense! Tell me, Socrates, are you not ashamed, at your age, to be chasing after words and making out that it is a godsend if someone goes awry in expressing himself? Indeed, do you think I am saying that

being stronger is something different from being superior? Did I not tell you long ago that I declare the superior and stronger to be the same? Or do you think I am saying that if a mob of slaves and people of all sorts were to get together, worthless except perhaps for their physical strength, and these fellows were to make some pronouncements, that such pronouncements would constitute law?

489c

Socrates: So be it, my utterly wise Callicles. Is that your meaning?

Callicles: Yes, very much so.

Socrates: Well, my divine friend, I myself have been guessing for some time that you meant something of this sort by ‘the stronger’, and I am eager to understand clearly what you are saying. For I presume that you do not regard two as superior to one, nor your slaves as superior to you because they are stronger than you. So tell me once more, from the beginning, what precisely you mean by ‘the superior’, since they are not the stronger? And, my wonderful friend, instruct me more gently to begin with, so that I do not leave your school.

489e

Callicles: You are being ironical, Socrates.

Socrates: By Zethus, I am not, Callicles, to refer to the character you invoked just now, when you were being highly ironical towards me. Come on, tell us! Who do you say are the superior?

Callicles: I mean the better.

Socrates: Do you not see that you yourself are uttering words but explaining nothing? Will you not tell us whether by the superior and the stronger you mean the more intelligent, or someone else?

Callicles: Yes, by Zeus, that is what I mean, emphatically so.

490a

Socrates: So, in most cases, according to your argument, one man of intelligence is stronger than ten thousand who are devoid of intelligence, and this man should rule and the others should be ruled, and the ruler should have more than those who are ruled. Yes, this is what I think you wish to say, and I am not trapping you with words, if the one is stronger than the ten thousand.

Callicles: Indeed, that is what I mean. For I believe this is just, by nature: those who are superior and more intelligent rule over, and have more than, the lesser people.

490b

Socrates: Hold it there! What exactly are you saying now? Suppose we are together, in the same place just as we are now, a large gathering with a large common store of food and drink, and suppose we are a mixed group, some strong, others weak. But one of us is more intelligent about these matters as he is a physician, although in all likelihood he would be physically stronger than some but weaker than others. Will this fellow be superior and stronger in these matters, as he is more intelligent about them than we are?

Callicles: Entirely so.

490c

Socrates: Now, should he have more of these provisions than the rest of us because he is superior? Or, in virtue of his authority, should this man distribute them all, and yet obtain no more than anyone else by consuming them and diverting them towards his own person, if he is to avoid paying a penalty? And should some get more while others get less? And if the superior man happens to be more feeble than everyone else, should he get less than everyone else, Callicles? Or does it not work like this, my friend?

490d

Callicles: You keep referring to food and drink and physicians and fooleries, but I am not talking about these.

Socrates: Are you not saying that the more intelligent person is superior? Say yes or no.

Callicles: I am.

Socrates: And should the superior not have more?

Callicles: Not of food and drink though.

Socrates: I understand. But maybe it applies to clothing, and the most accomplished weaver has the largest cloak, and goes about dressed in the utmost variety and finery.

Callicles: What has clothing got to do with this?

490e

Socrates: But in relation to shoes it is obvious that the man who is most intelligent in this area, the utterly superior man, should have more. The cobbler should walk about shod in the grandest and greatest number of shoes.

Callicles: Why mention shoes? You are talking persistent nonsense!

Socrates: Well, if that is not the sort of thing you mean, then it is probably something like this. For instance, a man of farming stock, intelligent with respect to the land, noble and good, this fellow should probably have more seeds and use as much seed as he possibly can on his own land.

Callicles: You keep on saying the same things, Socrates!

Socrates: Not only that, Callicles, but also in relation to the same issues.

491a

Callicles: Yes, by the gods, you are absolutely always talking about cobblers, clothes-cleaners, cooks and physicians – you never stop – as if these had anything to do with the argument.

Socrates: So, why will you not say who it relates to? What is it that the superior, more intelligent man has more of, and justly so? Or will you neither accept what I am suggesting, nor propose anything yourself?

Callicles: But I have been saying this for quite some time. Firstly, by those who are superior, I mean neither cobblers nor cooks, but those who are intelligent in relation to the affairs of the city and the manner in which it may be well administered. And they are not merely intelligent, but also courageous, competent to bring their plans to completion without faltering through softness of soul.

491b

Socrates: Do you see, utterly superior Callicles, that your accusation against me is not the same as my accusation against you? You claim that I am always saying the same things, and you censure me for this. But I make the opposite accusation of you, that you never say the same things in relation to the same issues, but one moment you define the superior and stronger as the more powerful, then again as the more intelligent. And now you arrive holding an alternative view, some more courageous people are proposed by you as the stronger and superior. But, good fellow, tell me once and for all, who exactly do you say are superior and stronger, and in what respect?

491c

Callicles: But I have already said that they are the men who are intelligent in relation to the affairs of the city, and who are courageous. For it is fitting for these people to rule the cities, and that is what justice is. These people have more than the others. The rulers have more than the ruled.

491d

Socrates: But what about themselves, my friend? Are they ruling or being ruled?

Callicles: What do you mean?

Socrates: I mean each one ruling himself. Or do you think there is no need for someone to rule himself, but only to rule others?

Callicles: What do you mean by ruling himself?

Socrates: Nothing contrived, just what most people mean: being sound-minded, master of himself, ruling over pleasures and desires within himself.

Callicles: How innocent of you. You are saying that the foolish people are the sound-minded people.

491e

Socrates: How could I be? Anyone can see that that is not what I am saying.

Callicles: It certainly is, Socrates! For how could a person become happy whilst in slavery to anyone else at all? No, I will speak frankly now, and tell you what is noble and just according to nature. Anyone who would live rightly should allow his own desires to be as great as possible and not restrain them, but be competent to minister unto them when they are at their utmost, through courage and intelligence, and satisfy them with whatever the desire of the moment is for. But in my view, most people are unable to do this, and so out of shame they criticise people of this sort, concealing their own impotence. And, as I said earlier, they claim that this lack of restraint is base, enslaving the naturally superior men. Being unable themselves to attain fulfilment of their desires, they praise sound-mindedness and justice on account of their own cowardice. Yet for men who, from the very outset, are either sons of kings or are themselves naturally competent to secure some authority, be it a tyranny or a power-group, what in truth could be more base and ignoble for these men than sound-mindedness and justice? When they are allowed the benefit of good things with no interference from anyone, what could be worse than they themselves imposing a master on

themselves – the law, word and censure of the majority of men? Or how could they avoid becoming wretched on account of this ‘benefit’ of justice and sound-mindedness, whereby they bestow no more upon their friends than upon their enemies, even though they are ruling in their own city? But in truth, Socrates – since you claim to pursue the truth – the fact of the matter is that luxury, lack of restraint and freedom, provided they have support, constitute excellence and happiness, while all else, the niceties and the unnatural contrivances of humanity, are foolishness, and of no value.

492d

Socrates: Callicles, the frankness with which you tackle the argument is not devoid of nobility. Indeed, you are now stating clearly what others are thinking, but they are reluctant to express this. So, I ask you not to relent in any way, so that the manner in which a person should live may actually become evident. Now tell me, do you say that the desires should not be restrained if a man is to be as he should be? Rather, letting them develop to the utmost, should he prepare satisfaction for them from any source whatsoever, and does this constitute excellence?

492e

Callicles: Yes. That is what I declare.

Socrates: So, it would not be correct to say that those who are in need of nothing are happy?

Callicles: No, for in that case stones and corpses would be happiest.

Socrates: But surely the life you are describing is awful too. In fact, I would not be surprised if Euripides is speaking the truth, in the lines where he says,

Who knows whether being alive is being dead

*And being dead is being alive.*³⁰

And we perhaps are actually dead, for I heard at some stage, from one of the wise, that we are now dead and the body is our tomb, while this part of the soul in which the desires reside is prone to persuasion and to fluctuation back and forth. And some subtle person – perhaps a Sicilian or an Italian – told a story involving a play upon the words, and due to its credulous and persuadable nature he called it a pitcher, and the mindless people he called ‘uninitiated’, and the part of the soul of the mindless people in which the desires reside, the unrestrained and the unconfined part of it, he compared to a leaking pitcher because of its insatiability. Now, this fellow, in contrast to yourself, Callicles, indicates that these uninitiated people are the most wretched of those in Hades, by which he means ‘the unseen’, and they carry water to their leaky pitcher in another such leaky vessel, a sieve. And according to the person who told me this, he means that the sieve is the soul, and he likened the soul of the mindless people to a sieve because it is leaking, since due to disbelief and forgetfulness it is unable to retain anything.

Now, this is all somewhat strange, yet it does indicate what I wish to prove to you, if I am able, in order to persuade you to change your stance and choose an orderly life, ever content and satisfied with what you have at any moment, rather than a life without restraint, and devoid of satisfaction. Well, am I persuading you, and are you changing to the view that the orderly people are happier than those without restraint? Or would you not change your position, even if I were to relate many more stories of this kind?

^{493d}

Callicles: The latter option is truer, Socrates.

Socrates: Come on then, I will relate another image from the same school as this one. Yes, consider whether you are saying something of this sort about the lives of the sound-minded and unrestrained people. It is as if two men each have a number of pitchers, and in one case they are sound and full of wine, honey and milk. And there are many others with a variety of contents, but the supply of each of these is meagre and hard to come by and is made available with considerable exertion and difficulty. In one case, once filled, the man neither replenishes them nor worries about them, and on account of this he is at peace. But in the other case, as with the other man, the supply can be made available but it is hard to come by, and the vessels are leaky and unsound, so he is compelled to fill them constantly, night and day, or suffer intense pain. Now, since this is what their lives are like, would you say that the life of the unrestrained person is happier than that of the orderly person? In saying all this, do I persuade you at all to go along with the view that the orderly life is better than the unrestrained life, or are you unpersuaded?

494a

Callicles: You do not persuade me, Socrates. For one man no longer has any pleasure at all once he has been filled, but as I said just now that is to live like a stone, no longer experiencing delight or tribulation once you have been filled up. But living a life of pleasure involves taking, inasmuch as you can.

494b

Socrates: But if a lot is to flow in, mustn't a lot flow out? And mustn't the holes for the outflow be of considerable size?

Callicles: Very much so.

Socrates: In that case, you are describing the life of a gull rather than a corpse or a stone. Are you referring to something like being hungry, and eating when you are hungry?

Callicles: I am.

Socrates: Or being thirsty, and drinking when you are thirsty?

Callicles: That's what I mean, and having all the other desires, and delighting in being able to satisfy them and live happily.

494c

Socrates: Excellent, well said! Proceed as you have begun and take care that you suffer no shame. And it seems I must exhibit no shame either. So, tell me firstly whether someone who is itchy, and is scratching with unlimited scope for scratching, who spends his life scratching, is living happily.

Callicles: How strange you are, Socrates, an out and out rabble-rouser!

Socrates: Yes, indeed, Callicles, and I shocked Polus and Gorgias and made them ashamed, but you should be neither shocked nor ashamed, for you are courageous. So, just answer the question.

Callicles: In that case, I declare that the scratcher also lives pleasantly.

Socrates: Since he lives pleasantly, does he also live happily?

Callicles: Certainly.

494d

Socrates: Is this so if he only scratches his head? What if I ask you about other parts? Consider how you would reply, Callicles, if someone were to ask about all the parts in turn, working down from there. And what about the ultimate consideration in all this, the life of the catamites?³¹ Is this not terrible, shameful and wretched? Or will you dare to say that these fellows are happy provided they have unlimited access to what they want?

494e

Callicles: Are you not ashamed at leading our discussion onto topics of this kind, Socrates?

Socrates: Am I the one who led us there, my noble friend? Or was it the person who said, in such absolute terms, that those who enjoy pleasure, regardless of how they enjoy it, are happy, and who did not distinguish between good pleasures and bad ones? But you should also declare now whether you are saying that pleasure and good are the same, or that there are some pleasures that are not good.

495a

Callicles: Well, since my responses will be contradictory if I say they are different, I declare that they are the same.

Socrates: You are undermining your opening assertions, Callicles, and will no longer be investigating things that are, in an adequate manner, along with me if you actually speak contrary to your own opinions.

Callicles: The same goes for you, Socrates.

495b

Socrates: Then if I am actually doing this, neither of us is acting correctly. But, blessed man, consider the possibility that the good may not be this unqualified gratification. Indeed, if this is how matters stand, then the many shameful conclusions I hinted at just now, and many more besides, must follow.

Callicles: That's what you think anyway, Socrates.

Socrates: And do you really hold to those views, Callicles?

Callicles: I do.

495c

Socrates: So, should we tackle this argument on the basis that you are serious about it?

Callicles: Yes, very much so.

Socrates: Come on then, since that is what you think. Make the following distinctions for me. I presume there is something you refer to as knowledge?

Callicles: There is.

Socrates: And did you not say just now that courage is something that may accompany knowledge?

Callicles: I said so indeed.

Socrates: So, on the basis that courage is different from knowledge, you referred to two things?

Callicles: Most emphatically.

Socrates: What about this? Are pleasure and knowledge the same or different?

495d

Callicles: Different of course, O wisest of men.

Socrates: And is courage different from pleasure?

Callicles: How could it not be?

Socrates: Come then, make sure we remember that Callicles of Acharnae declares pleasure and good to be the same, but knowledge and courage to be different from one another, and from the good.

Callicles: And Socrates of Alopecce disagrees with us on this. Or does he agree?

495e

Socrates: He does not agree, and I do not think Callicles will agree either once he sees himself correctly. Indeed, tell me. Do you not believe that those who are acting well are characterised by the opposite quality to those who act badly?

Callicles: I do.

Socrates: Well then, since these are opposite to one another, must not the same consideration apply to them as applies to being healthy and to being ill? For a person is obviously not healthy and ill at the same time, nor is he rid of health and

illness at the same time.

Callicles: What do you mean?

496a

Socrates: For example, take any part of the body you wish, and consider it. Can a person get the disease of the eyes called ophthalmia?

Callicles: Of course he can.

Socrates: And the same eyes are obviously not, simultaneously, healthy.

Callicles: Not at all.

Socrates: But what happens when he is rid of the ophthalmia? Is he also rid of the health at that stage, and does he end up rid of both at the same time?

Callicles: Not in the least.

496b

Socrates: Yes, I think that would be a strange and illogical outcome. Is that so?

Callicles: Very much so.

Socrates: Rather, I believe we acquire either of them and lose them in turn.

Callicles: I agree.

Socrates: Does not the same go for strength and weakness?

Callicles: Yes.

Socrates: And for swiftness and slowness?

Callicles: Certainly.

496c

Socrates: And for anything good and for happiness, and the opposites of these, anything bad and wretchedness. Are they

acquired in turn, and are we quit of either of them in turn?

Callicles: That is totally obvious.

Socrates: So, if we were to find any qualities that a person is quit of and possesses at the same time, it is obvious that these would not be the good and the bad. Do we agree on this? And give this very serious consideration before you reply.

Callicles: But I couldn't agree more!

Socrates: Let us go back to what we agreed upon earlier. Did you say that hunger was pleasant or unpleasant? I am referring just to the hunger.

Callicles: I say it is unpleasant, but to eat when hungry is pleasant.

496d

Socrates: So do I. I understand. However, the hunger itself is unpleasant, is it not?

Callicles: I agree.

Socrates: Does not the same go for thirst?

Callicles: Very much so.

Socrates: Now, should I ask you even more questions, or do you agree that all lack and desire is unpleasant?

Callicles: I do. Stop asking.

Socrates: So be it. And do you agree that to drink when thirsty is pleasant?

Callicles: I do.

Socrates: So, this formulation 'when thirsty' obviously means 'when in pain'.

Callicles: Yes.

Socrates: And the drinking is both the satisfaction of the lack, and a pleasure.

Callicles: Yes.

Socrates: Therefore, whilst the drinking takes place, you say there is enjoyment.

Callicles: Certainly.

Socrates: When you are thirsty anyway.

Callicles: I agree.

Socrates: And experiencing pain?

Callicles: Yes.

496e

Socrates: Now, are you aware of the conclusion that whenever you say that you drink whilst thirsty, you are saying that you experience enjoyment and are in pain simultaneously? Does this not occur at the same time and in the same place, be it in soul or in body? I do not think it makes any difference which it is. Is this the case or is it not?

Callicles: It is.

Socrates: However, you do declare that acting well and acting badly at the same time is impossible.

Callicles: Yes, I do.

Socrates: And yet you have agreed that it is possible to have enjoyment whilst experiencing displeasure.

Callicles: Apparently.

497a

Socrates: So, enjoyment is not ‘acting well’, nor is displeasure ‘acting badly’, and consequently pleasure turns out to be different from the good.

Callicles: I don't understand these wise utterances of yours, Socrates.

Socrates: You do understand but you are playing the simpleton, Callicles. Just move on to the next point anyway so that you may know how wise you are to admonish me. Does not each of us cease being thirsty and simultaneously cease being pleased by the drinking?

Callicles: I do not know what you mean.

497b

Gorgias: Don't be like that, Callicles, but answer him for our sake too so that the arguments may be concluded.

Callicles: But Socrates is always like this, Gorgias. He asks petty, worthless questions, and refutes people.

Gorgias: But why does it matter to you? It is not really up to you to assess their worth, Callicles, but to allow Socrates to carry out his refutation in any way he pleases.

497c

Callicles: Well, since that is what Gorgias thinks, ask your petty, restrictive questions.

Socrates: You are blessed, Callicles, that you have been initiated into the Great Mysteries prior to the Lesser ones.³² I did not realise that this was permitted. Now, answer the question from where you left off. Does not each of us cease being thirsty and simultaneously cease experiencing pleasure?

Callicles: I agree.

Socrates: In that case, is there cessation of hunger and the other desires, and cessation of pleasures simultaneously?

Callicles: This is the case.

497d

Socrates: Therefore, there is a simultaneous cessation of the pains and the pleasures?

Callicles: Yes.

Socrates: However, as you have agreed, there is not a simultaneous cessation of whatever is good and whatever is bad. But do you not agree now?

Callicles: I agree. So what?

Socrates: Then, whatever is good, my friend, turns out not to be the same as whatever is pleasant, nor is what is bad the same as what is unpleasant. For in one case there is simultaneous cessation, and in the other case there is not, because they are different. So, how could whatever is pleasant be the same as whatever is good, or the unpleasant be the same as whatever is bad?

But consider it in the following manner if you prefer, for I do not think you agree based on this approach. Look at it this way. Do you not call good people good, due to the presence of goods, just as you call those to whom beauty is present, beautiful?

497e

Callicles: I do.

Socrates: What about this? Do you refer to the unintelligent and cowards as good men? Well, you did not do so earlier anyway; rather, you said the good were the courageous and intelligent. Or do you not refer to these men as good?

Callicles: I certainly do.

Socrates: What about this? Have you ever seen an unintelligent child being delighted?

Callicles: I have.

Socrates: And have you ever yet seen an unintelligent man being delighted?

Callicles: I think I have, but what about it?

498a

Socrates: Nothing, just answer.

Callicles: I have seen this.

Socrates: And does someone possessed of intelligence experience pain and delight?

Callicles: I agree.

Socrates: But who experiences delight and pain to the greatest extent, the intelligent or the foolish?

Callicles: Well, I don't think they differ very much.

Socrates: That will do. And have you ever seen a cowardly man in battle?

Callicles: Of course.

Socrates: What about the withdrawal of the enemy? Which of them seemed to you to be most delighted, the cowards or the courageous?

498b

Callicles: Both, in my view, but perhaps the cowards delight more, or else they are nearly equal.

Socrates: That makes no difference. So, the cowards are delighted too?

Callicles: Intensely so.

498c

Socrates: The fools too, so it seems.

Callicles: Yes.

Socrates: And at the approach of the enemy, do the cowardly alone experience pain? Or do the courageous do so too?

Callicles: Both.

Socrates: To a similar extent?

Callicles: Perhaps the cowardly experience it more.

Socrates: But do they not experience more delight at the withdrawal?

Callicles: Perhaps.

Socrates: Then according to you, the foolish and the intelligent, the cowardly and the brave, experience pain and delight to a similar extent, although the cowardly experience them to a greater extent than the brave?

Callicles: I agree.

Socrates: However, the intelligent and courageous are good, while the cowardly and foolish are bad?

Callicles: Yes.

Socrates: Then the good and the bad experience delight and pain to a similar extent?

Callicles: I agree.

498d

Socrates: So, are the good people and the bad people good and bad to a similar extent? Or are the bad people even more good?

Callicles: By Zeus, I do not know what you are saying.

Socrates: Do you not know that you are saying that the good are good by the presence of goods, and the bad are bad by the presence of what is bad? And that the goods are the pleasures, and what is bad are the displeasures?

Callicles: I do.

Socrates: Are not the goods, the pleasures, present to those who are experiencing delight, if they are actually experiencing delight?

Callicles: Obviously.

Socrates: And since goods are present, are not those who experience delight good?

Callicles: Yes.

Socrates: What about this? Are not bad things, pains, present to those who experience displeasure?

Callicles: Yes, they are present.

Socrates: And yet you think that the bad people are bad due to the presence of what is bad. Or do you no longer say so?

Callicles: I do.

Socrates: So, those who experience delight are good, while those who experience displeasure are bad.

Callicles: Entirely so.

498e

Socrates: Those who experience these to a greater extent are so to a greater extent. Those who experience these to a lesser extent are so to a lesser extent. Those who experience these to a similar extent are so to a similar extent.

Callicles: Yes.

Socrates: Now, do you not claim that the intelligent men and the fools, the cowardly and the courageous, are delighted and pained to a similar extent, or that the cowardly experience them even more?

Callicles: I do.

499a

Socrates: Well, please sum up what follows from all that we have agreed, along with me. For they say it is well to state and investigate anything exalted twice or even thrice. We say that the intelligent and courageous man is good. Is this so?

Callicles: Yes.

Socrates: But the foolish and cowardly man is bad?

Callicles: Entirely so.

Socrates: And what is more, the man who experiences delight is good?

Callicles: Yes.

Socrates: And the man who experiences displeasure is bad?

Callicles: Necessarily.

Socrates: So, the good and the bad experience displeasure and delight to a similar extent, but perhaps the bad person experiences them more?

Callicles: Yes.

499b

Socrates: Does it not turn out that the bad man is good and bad to a similar extent as the good man, or is even more good? Do not these, and those former consequences, follow once someone declares that pleasures and good are the same? Is this not necessarily the case, Callicles?

Callicles: Socrates, I have been listening to you for some time now, making concessions and reflecting that if someone grants you anything at all, even in jest, you hold onto it in delight just like a child. Do you really think that I, or any other man whatsoever, does not realise that some pleasures are better and some are worse?

499c

Socrates: My, my, Callicles. How clever you are, and how like a child you treat me, deceiving me by saying at one moment that this is how matters stand, and the next moment that the same matters stand otherwise. And yet, I had not expected at the outset that I would be intentionally deceived by you since you are my friend. But now I have been played false, and it seems necessary for me, as the old saying goes, 'to make the best of what is there' and to accept what you have given me. And, indeed, what you are now saying, it seems, is that certain pleasures are good, while others are bad. Is this so?

499d

Callicles: Yes.

Socrates: Well, are the beneficial pleasures good, while the harmful ones are bad?

Callicles: Certainly.

Socrates: And do the beneficial ones bring about something good, the harmful ones something bad?

Callicles: I agree.

Socrates: So, do you mean, for instance, in the case of the bodily pleasures we referred to just now, pleasures of eating and drinking, that those producing health or strength or some other physical excellence in the body are good, while those producing the opposite effects to these are bad?

499e

Callicles: Certainly.

Socrates: Does not the same go for pains – some are useful while others are evil?

Callicles: Inevitably.

Socrates: Should the useful pleasures and pains be selected and enacted?

Callicles: Yes, certainly.

Socrates: But not the evil ones?

Callicles: Obviously.

Socrates: Indeed, you may recall that it seemed to us, Polus and I, that everything must somehow be enacted for the sake of whatever is good. Do you also share this view, that the aim of all actions is the good, and all else must be enacted for the sake of that, rather than the other way around? Are you also voting with us, as a third vote?

500a

Callicles: I am.

Socrates: So, everything else, pleasures included, must be enacted for the sake of whatever is good, rather than enacting whatever is good for the sake of the pleasures.

Callicles: Certainly.

500b

Socrates: Now, does it belong to every man to select what sort of pleasures are good and what sort are bad, or is a skilled person required in each case?

Callicles: A skilled person is required.

Socrates: Then let us go on, recalling what I was saying to Polus and Gorgias. I said, if you remember, that there are processes that go as far as pleasure and furnish pleasure alone and do not recognise the better and the worse, and there are processes which do recognise what is good and what is bad. And in the category concerned with pleasure, I placed cookery a practice, but not a skill. In the category concerned with the good, I placed the skill of medicine. And in the name of friendship, Callicles, do not presume that you need to play games with me, and do not respond at random and contrary to your opinions, and do not, again, treat my utterances as some sort of game playing. Indeed,

our discussions are concerned with a topic on which even a man of minute intelligence should be most serious, the manner in which a person should live. Is it the one to which you exhort me: namely, engaging in these manly activities, speaking in public, practising rhetoric, and engaging in the mode of politics that you people practise these days? Or is it the life spent in philosophy? And how exactly does this life differ from the other one? Now, perhaps it is best to distinguish them as I tried to do before, and once we have made the distinction and agreed with one another, then consider if these are indeed two ways of life, how they differ from one another, and which of the two we should live by. But perhaps you do not understand what I mean yet.

500d

Callicles: Not at all.

Socrates: Then I shall relate it to you more clearly. Since we have agreed, you and I, that there is a good and there is a pleasant, that the pleasant is different from the good, that there is a study and process of acquisition belonging to both, one pursuing the pleasant, the other pursuing the good. But first you should either agree or disagree with me about this. Do you agree?

Callicles: I agree with this.

Socrates: Come on, then. You should agree with me fully on the points I made to our friends here, provided I seemed to you to be speaking the truth at the time. I think I said that cookery did not seem to me to be a skill, but a practice. But in the case of medicine, I said that it considers the nature of whomever it cares for and the motive for whatever it enacts, and is able to give an account of each of these. But the other one cares for pleasure and is directed entirely to that, going about it in an utterly unskilled manner. It provides pleasures without considering either the nature of the pleasure or the motivation

for it, utterly irrational, scarcely bothering to count classifications, retaining, through habit and experience, only a memory of what usually happens. Now, in the first place, do you think these have been adequately described? Or do there also seem to be any processes of this kind concerning the soul, some of which involve a skill and possess a certain foresight of what is best for the soul, and others which make light of this, while they, for their part, consider, as in the former case, only the pleasure of the soul and the manner in which this may be brought about, neither investigating which of the pleasures is better or worse, nor studying anything except the gratification alone, be it better or be it worse? Indeed, Callicles, I think these processes exist, and I declare that this sort of thing is flattery in relation to the body or in relation to the soul, or anything whose pleasure one may care for, without having any concern for the better or the worse. Anyway, do you subscribe to the same opinion as we do on these issues, or do you disagree?

501c

Callicles: I don't agree, but I am going along with this so that you may conclude the discussion, and so that I may gratify Gorgias here.

501d

Socrates: And does this apply to a single soul, but not to two or many?

Callicles: No, it applies to two or many.

Socrates: Is it not also possible to gratify a gathering of souls, all at the same time, without considering what is best?

Callicles: Yes, I think so.

Socrates: Now, can you say what particular activities bring this about? But if you like, it is better that as I ask questions, you agree if the suggestion seems to you to belong to that category, but otherwise disagree. And first, let us consider flute-playing.

Does this not seem to you, Callicles, to be an activity of this kind, one that pursues only our pleasure and thinks of nothing else?

501e

Callicles: It seems so to me anyway.

Socrates: Does not the same go for all activities of that sort, such as playing the cithara in competitions?

Callicles: Yes.

Socrates: What about the instruction of the dramatic choruses or the composition of poetic verses? Is it not obvious to you that they are also like this? Or do you think Cinesias, son of Meles,³³ gives some consideration to how he may say the kind of thing that will enable his hearers to become better people, or instead how he is going to gratify the crowd of spectators?

502a

Callicles: Obviously the latter, Socrates, in the case of Cinesias anyway.

Socrates: What about his father, Meles? Do you think he sang to the cithara with a view to what is best, or did the man even consider what is most pleasant? Indeed, his singing inflicted pain upon the spectators. But think about this. Does it seem to you that all singing to the cithara and all composition of poetic verses have been devised for the sake of pleasure?

Callicles: I think so.

502b

Socrates: But what about the solemn one herself, the wonder that is the composition of tragic verses? What is she intent upon? What, in your view, is her endeavour and intention? Is it only to gratify the spectators? Or in the case where something is pleasant and gratifying to them, but evil, does she engage in a struggle so as not to utter this? And if something happens to be unpleasant but beneficial, will she speak and sing this whether

it delights them or not? Which of these two approaches does the composition of tragic verses seem to you to adopt?

502c

Callicles: Well, Socrates, it is obviously the latter, the one that is most intent on pleasure and the gratification of the spectators.

Socrates: Did we not say just now that this sort of thing is flattery, Callicles?

Callicles: Certainly.

Socrates: Come now, if someone were to strip poetic composition of all its melody, rhythm and metre, would the residue turn out to be nothing but words?

Callicles: Necessarily.

Socrates: Are not those words spoken to a considerable crowd and to the populace?

Callicles: I agree.

Socrates: So, poetic skill is a kind of public speaking.

502d

Callicles: So it appears.

502e

Socrates: Would it not be rhetorical public speaking, or do you think that the poets do not engage in rhetoric in the theatres?

Callicles: I think they do.

Socrates: So, we have now discovered a type of rhetoric directed to a kind of populace that consists of women and children alike, of men both enslaved and free, a rhetoric we do not greatly admire, for we assert that it is based on flattery.

Callicles: Very much so.

Socrates: So be it. But what about the rhetoric directed to the Athenian populace and the other assemblies of free men in the cities? What exactly are we to make of it? Do the rhetoricians seem to you to speak always with regard to what is best, working out how the citizens may be as good as possible on account of their speeches? Or do these fellows aim at the gratification of the citizens, belittle the common good for the sake of their own private interest, and associate with the populace as though they were children, merely trying to gratify them but thinking nothing of whether they will be better or worse as a result of all this?

503a

Callicles: This is no longer a simple question. There are some who say what they say out of concern for the citizens, but there are others of the sort you are describing.

Socrates: That is sufficient. For if there are indeed two aspects to this, then I presume that one would be flattery and a disgraceful public speaking, while the other would be noble, contriving that the souls of the citizens be as good as possible and constantly striving to utter what is best, regardless of whether it be more pleasant or less pleasant to those who hear it. But this is a rhetoric you have never yet seen. Or if you are able to mention any rhetorician of this kind, why have you never told me who he is?

503b

Callicles: But, by Zeus, I cannot mention anyone to you, not among the contemporary rhetoricians anyway.

Socrates: What about the older generation? Can you name anyone, on account of whom the Athenians are reputed to have become better after that person began speaking in public? Indeed, I do not know who the person is.

503c

Callicles: Is that so? Do you not hear people say that Themistocles was a good man, Cimon too, and Miltiades, and Pericles himself, who died recently, whom you yourself have heard?

Socrates: Yes, Callicles, if what you described earlier is true excellence, the satisfaction of your own desires and those of others. However, if this is not the case, and instead, as in the earlier discussion, we are compelled to agree that the satisfaction of some desires make a person better and these should be fulfilled, while others make him worse and should not be fulfilled, and there is a skill involved in this as we thought, can you still claim that any of those four men turned out to be someone with this sort of skill?

503d

Callicles: I cannot find any basis for saying so.

Socrates: But if you search properly you will find one. So, we should examine this in a calm manner and see whether any of these men prove to be a person of this kind. Come on, would not the good man, whose speech is aimed at what is best, say what he says not at random, but with something particular in view? Indeed, he is just like the other artificers, each looking to their own work, selecting whatever they bring to bear not at random, but in such a way as to give a particular form to whatever they are working on. Take, for example, painters, builders, shipwrights and all the other artisans, any one of them you want. See how he places whatever he places in a particular order, and compels this to fit with that and to be in harmony until he has wrought the entire into an organised and orderly entity. And the same goes for the other artificers and those we mentioned earlier, the trainers and physicians who are concerned with the body, and presumably order and organise the body. Do we agree that this is the case or not?

504a

Callicles: Let this be the case.

Socrates: Would a household possessing organisation and order be effective, and would a disorganised one be degenerate?

Callicles: I agree.

Socrates: Does not the same go for a ship?

504b

Callicles: Yes.

Socrates: And do we also say this about our own bodies?

Callicles: Very much so.

Socrates: And what about the soul? Will it be effective when possessed of disorder or when possessed of some organisation and order?

Callicles: Based on what was said earlier, it is also necessary to accept this.

Socrates: Now, what is the name of the condition that arises in the body from organisation and order?

Callicles: You probably mean health and strength.

504c

Socrates: I do. But what about the condition engendered in the soul from organisation and order? Try to find its name and state it as you did in the other case.

Callicles: Why don't you state it yourself, Socrates?

Socrates: Well, I shall say it if that is more pleasing to you, and you should agree if you think I am speaking truly. And, if not, you should refute me and you should not yield to me. For I think that the name of this organisation of the body is 'healthiness' and, from this, health arises in it, and so do the other excellences of the body. Is this the case or is it not?

Callicles: It is.

504d

Socrates: On the other hand, I think that the names of the organisation and order of the soul are lawfulness and law, and from these it becomes lawful and orderly, and these conditions are justice and sound-mindedness. Do you agree or not?

Callicles: Be it so.

Socrates: Then, looking towards these, this rhetorician who is skilled and good also brings the speeches he delivers, and all his actions too, to bear upon the souls. And when he bestows a gift, he will bestow it, and when he confiscates something, he will confiscate it, with his mind ever intent upon how justice may arise in the souls of his fellow citizens and injustice may be banished; how sound-mindedness may be engendered and indiscipline banished; how excellence in general may be engendered and evils done away with. Do you agree or not?

504e

Callicles: I agree.

Socrates: Indeed, what is the benefit, Callicles, in giving a person, sick in body, in a degenerate condition, a lot of food – even the most pleasant – or drink, or anything else that does not benefit him one bit more and, on the contrary, may rightly be said to benefit him less? Is this so?

505a

Callicles: Be it so.

Socrates: For in my view it is not advantageous for a person to live with degeneracy of the body, since it is necessary under those circumstances to live in a degenerate manner. Or is this not so?

Callicles: Yes.

Socrates: Do not the physicians, for the most part, allow a person to satisfy his desires, such as eating as much as he wants when he is hungry and drinking when thirsty, as long as the

person is healthy? However, when he is ill, they hardly allow him to be sated by the objects of his desire at all. Do you also agree with this?

505b

Callicles: I do.

Socrates: And in the case of the soul, excellent man, is there not the same tendency? As long as it is corrupt, foolish, undisciplined, unjust and unholy, it needs to be shut away from the desires and not be allowed to engage in any other activities apart from those whereby it will be made better. Do you agree or not?

Callicles: I agree.

Socrates: For presumably that is what is better for the soul itself?

Callicles: Very much so.

Socrates: Now, is the shutting away from what is desired equivalent to discipline?

Callicles: Yes.

Socrates: So, being disciplined is better for the soul than the indiscipline which you were advocating a moment ago.

505c

Callicles: I don't know what you are talking about, Socrates. Just ask someone else.

Socrates: This man cannot put up with being helped and undergoing for himself the process with which our discussion is concerned – being disciplined.

Callicles: Nor does anything you are saying interest me, and I gave you these answers to oblige Gorgias.

Socrates: So be it. What shall we do now? We are cut off in mid-argument.³⁴

Callicles: Decide for yourself.

Socrates: But they say that it is not lawful to leave off, even in the middle of stories. Rather, they should be given a conclusion so that they do not go about without a head. So, you should also answer the remaining questions so that our argument may acquire a head.

505d

Callicles: How forceful you are, Socrates! But if you take my advice you will bid farewell to this argument, or else you should converse with someone else.

Socrates: Well, who else is willing? For we should not leave the argument incomplete.

Callicles: Could you not work through the argument yourself, either speaking on your own behalf or responding to yourself?

Socrates: So that the saying of Epicharmus may be fulfilled in me: “The words that were spoken by two men, I, one man, must rise to delivering.”³⁵ Anyway, it seems to be absolutely necessary, so that is how we should do it then. I, for one, think that we should possess a thirst for victory when it comes to knowing what the truth is, and what is false, in relation to the matters we are discussing. Indeed, it is a good, common to everyone, that this be made manifest. Now, I shall proceed with the argument based upon how it seems to me. However, if any of you think I am agreeing with myself contrary to things that are, you should pull me up and refute me. For I am not really saying what I am saying as someone who has some comprehensive knowledge. No, I am seeking along with you, and so if someone who contradicts me proves to have a point, I shall be the first to go along with him. Yet, I am asking all this assuming that the argument should be brought to a conclusion. However, if you do not wish to do so, let us bid it farewell at this stage and go our ways.

506a

Gorgias: Well, Socrates, I don't think we need to go our ways, but you need to work through the argument, and it appears to me that the others think so too. Indeed, I myself wish to hear you going through the remaining issues by yourself.

506b

Socrates: But of course, Gorgias, so do I, although I would gladly have conversed further with Callicles here until I had given him the statement of Amphion in response to that of Zethus. However, Callicles, since you are not willing to conclude the argument, you should at least interject as you hear me if you think I am expressing anything badly, and should you refute me, I shall not be angry with you as you were with me. Instead, you will be inscribed as my greatest benefactor.

506c

Callicles: Speak on, good man, and finish it yourself.

Socrates: Then hear me as I take up the argument from the beginning.

Are the pleasant and the good the same?

They are not the same, as Callicles and I have agreed.

Is the pleasant enacted for the sake of the good, or the good for the sake of the pleasant?

The pleasant for the sake of the good.

Is pleasure that from which, when it has arisen, we are pleased? And is good that from which, when it is present, we are good?

Very much so.

But of course we are good, and so too is everything else that is good, from some excellence that arises.

I think this is necessarily the case, Callicles.

And yet the excellence of anything, of an implement, a body, or indeed a soul, or of every living creature, does not best arise in a random manner, but through organisation, correctness, and a skill that has been assigned to each. Is this the case?

Yes, I agree.

So, is the excellence of each an arrangement and an ordering due to organisation?

I would say so.

Then each of the things that are is rendered good by a certain order engendered in each, and particular to each.

So it seems to me anyway.

Then is a soul too, possessing its own order, better than a disordered one?

It must be.

But of course, the one possessed of order is orderly?

How could it not be?

And the orderly is sound-minded?

Most necessarily.

So, the sound-minded soul is good.

Now, dear friend, Callicles, I have nothing else to say in opposition to all this. However, if you have, teach it.

507a

Callicles: Speak on, my good man.

Socrates: Well, I say that if the good soul is sound-minded, the one affected by the opposite of sound-mindedness is bad, and that is the one devoid of sound-mindedness and discipline.

Very much so.

And, indeed, the sound-minded person would perform actions that are appropriate in relation both to gods and men, for those who perform inappropriate actions would not be exercising sound-mindedness.

This is necessarily the case.

And, indeed, in relation to men, those who are performing appropriate actions would be performing just actions, and in relation to gods, holy actions, and the person who performs just and holy actions is necessarily just and holy.

This is so.

Then again, he is necessarily courageous too, for it is not the part of a sound-minded man either to pursue or flee from

whatever is not appropriate. No, he should flee from and pursue whatever he ought to flee from or pursue, be they actions, persons, pleasures or pains, and endure steadfastly wherever he ought. Consequently, it is very necessary, Callicles, just as we were explaining, that the sound-minded man, being just, courageous and holy, be a perfectly good man. And the good man, whenever he acts, acts well and nobly, and he who acts well must be blessed and happy, while the corrupt man, acting in an evil manner, must be wretched. And this fellow, the undisciplined man whom you were praising, would be in an opposite condition to the sound-minded man.

So, I am setting down these principles in this manner, and I declare that they are true. And if this is true, then someone who wishes to be happy must, it seems, pursue and practise sound-mindedness, and each of us must flee from indiscipline as fast as his feet will carry him. And we should contrive as best we can not to be lacking in any discipline, and if it is lacking, either in ourselves, in any member of our household, in an individual, or in a city, then justice and discipline must be imposed if they are going to be happy. This, in my view anyway, is the vision one should look to in life, and all one's own efforts and those of the city should be directed towards this, the manner in which justice and sound-mindedness will be available to the person who is to be blessed. This is how one should act, not allowing desires to be undisciplined and endeavouring to satisfy them, an endless vexation, living the life of a thief. For a person of this sort would be friendly neither to God nor to another human being, for he is unable to commune, and to anyone devoid of communion there would be no friendship. And the wise declare, Callicles, that communion, friendship, orderliness, sound-mindedness and justice hold heaven and earth, gods and men, together. And

on account of this, my friend, they refer to the whole as an 'order', and not as a 'disorder' or 'indiscipline'. But I think you have not applied your mind to these matters, and although you are wise in this area, you are unaware that geometrical equality is a great power among both gods and men, and so, because you neglect geometry, you think it necessary to practise taking more. So be it. Now, we should either refute this argument so that the happy are not happy due to the acquisition of justice and sound-mindedness, and the wretched are not wretched due to evil, or else, if this argument is true, we should consider the consequences. All those consequences follow, Callicles, the ones you asked if I was serious about, when I said that one should prosecute oneself, one's son and one's friend, if they do anything wrong, and that rhetoric should be used for this. And the ones you thought that Polus conceded due to shame also turn out to be true. Doing injustice, insofar as it is more shameful than suffering injustice, is more base to that extent. And he who intends to be a rhetorician in the proper sense must also be just and knowledgeable in matters of justice, and have knowledge of all aspects of justice. That is what Polus, in turn, stated that Gorgias agreed to out of shame.

Now, having established all this, let us consider the precise issue on which you censure me, and whether or not it is valid to assert that I am unable to assist either myself or any of my friends or family members, or deliver them from extreme dangers: that I am just like an outcast, subject to the whim of any random person who, to use that bold phrase of yours, wishes to slap me across the face, or to confiscate my property, or to expel me from the city, or ultimately to kill me. And according to your argument, to be in such a predicament is the most base condition of all. And although my argument has been stated many times already, there is no

reason not to state it again. I deny, Callicles, that being slapped across the face unjustly is the most base experience possible, nor is having one's body or one's purse picked. No, striking me or cutting me and what belongs to me in an unjust manner is more base and more evil, and, indeed, stealing, enslaving, house-breaking and, in short, any unjust action whatsoever towards me and mine is both more evil and more base for the perpetrator of the injustice than for me, the sufferer of the injustice. Once all this had become evident to us in this way earlier, in the previous discussions, it was fastened and secured by – if it is not too crude an expression – arguments of iron and adamant, or that is how they seem anyway. And if you, or someone more forceful than you, does not break them, anyone who says anything different from what I am now saying will be unable to speak properly. Indeed, my argument is always the same. I myself do not know how these matters stand; however, no one I have ever met, and no one today, is able to say otherwise without being ridiculous.

Now I, for my part, am proposing that this is how matters stand. Yet if this is the case for the doer of injustice, and injustice is the greatest of evils, and even greater than this greatest of evils, if that is possible, is doing injustice without paying a penalty, what assistance should a man, in truth, be able to provide to himself to avoid being ridiculous? Is it not the kind that averts the greatest harm? Yes, this really must be the assistance which it is utterly base not to be able to proffer either to oneself or to one's own friends and family members. The second worst baseness relates to the second worst harm, the third to the third worst, and so on. The beauty of being able to assist against each evil, and the baseness of being unable to assist, are proportional to the natural magnitude of each evil. Is this the case or is it

otherwise, Callicles?

509c

Callicles: It is not otherwise.

Socrates: So, of the two – doing injustice and suffering injustice – we declare doing injustice to be the greatest evil, and suffering injustice to be the lesser. Now, with what should a man be provided so that he may assist himself and obtain both of these benefits, the one that comes from not acting unjustly, and the one that comes from not suffering injustice? Is it a power or a wish? What I mean is this. If he does not wish to suffer injustice, will he not suffer injustice, or if he has been provided with the power of not suffering injustice, will he not suffer it?

509d

Callicles: Well, that's obvious anyway. The power would be needed.

509e

Socrates: And in the case of doing injustice? If he does not wish to act unjustly, is that sufficient to avoid acting unjustly? Or is some power needed for this too, and the provision of some skill which, unless it is learned and practised, he will act unjustly? Why do you not give me an answer to this question anyway, Callicles? Do you think that Polus and I were or were not compelled to agree in the right way in those earlier discussions when we agreed that no one wishes to do injustice, but all those who do injustice do injustice unwillingly?

510a

Callicles: I grant you that this is the case, Socrates, so that the argument may be concluded.

Socrates: Then it seems that a power and a certain skill must be provided for this purpose too, so that we do not act unjustly.

Callicles: Certainly.

Socrates: Now, what precisely is the skill of equipping ourselves to suffer no injustice, or the least possible? Decide whether your view is the same as mine. Indeed, it seems to me that one should either rule in the city oneself, even as a tyrant, or else be an associate of the existing constitution.

510b

Callicles: Observe, Socrates, how willing I am to praise you when you make a good point. Yes, I think that was a very good point.

Socrates: Then decide whether you think this is nicely expressed too. It seems to me that one person is friend to another to the greatest extent possible on the basis stated by the ancients and the wise, 'like unto like'. Do you not think so too?

Callicles: I do.

510c

Socrates: Therefore, wherever a crude and uneducated tyrant is ruler, and someone in the city is much better than this fellow, the tyrant would obviously fear him, and he would never become a friend to the tyrant with his entire mind.

Callicles: This is so.

Socrates: Nor, if someone was far inferior, would that man be his friend either. For the tyrant would despise him, and would never take him seriously as he would a friend.

Callicles: That is also true.

Socrates: There remains only one man deserving of the title 'friend' to such a person, someone of similar character, who censures and applauds the same things and who is willing to be ruled and submit to his rulership. This fellow will wield great power in this city, and no one will treat him unjustly and get away with it. Is this not the case?

510d

Callicles: Yes.

Socrates: So, if one of the young people in this city were to think, ‘By what means may I acquire great power, and have no one treat me unjustly?’, the way for him to do so, it seems, is to accustom himself from his very youth to delight in and to detest the same things as the despot, and contrive that he be as like unto that fellow as possible. Is this not so?

Callicles: Yes.

Socrates: Then, according to your argument, immunity from unjust treatment and great power in the city will have been attained in this case.

Callicles: Very much so.

510e

Socrates: Now, does this also apply to not acting unjustly? Or is this very different, since he is like the ruler who is unjust and wields great power alongside him? Yes, I believe anyway that in this regard his contrivance will be the exact opposite, to be able to do as much injustice as possible and not pay any penalty for acting unjustly. Is this so?

Callicles: Apparently.

Socrates: Therefore the greatest evil will befall him, being corrupted and mutilated in soul, through power and his imitation of the despot.

511a

Callicles: I don’t know how you manage to continually twist the arguments this way and that, Socrates. Do you not realise that this imitator will put anyone who does not imitate the tyrant to death, if he wishes, and confiscate his possessions?

Socrates: I do realise that, good Callicles, unless I am deaf anyway, since I am hearing it constantly from you and from

Polus just now, and from almost everyone else in the city. But you hear me. He will kill him, if he wishes, but as a degenerate person killing a good and noble person.

Callicles: Yes, isn't that what's most annoying?

Socrates: Not to a man possessing intelligence, as the argument indicates. Or do you think that a man should contrive to live for as long as possible, and study those skills that preserve us always from danger, such as the one you also directed me to study, the rhetoric that keeps us safe in courts of law?

511b

Callicles: Yes, by Zeus, and I am giving you sound advice.

511c

Socrates: What about this, best of men? Do you also think the knowledge of swimming is something august?

Callicles: By Zeus, I do not.

Socrates: And yet it does save people from death whenever they end up in the sort of danger where this knowledge is needed. But if you think this is trivial, I will refer you to a more important knowledge than this, the piloting of ships, which saves not only souls, but also bodies and property from extreme dangers, just as rhetoric does. It is unpretentious and orderly, and it does not strike self-important poses as if engaged in some remarkable activity. But having engaged in the same activity as the courtroom advocates, getting you safely from Aegina³⁶ to here, it charges two obols,³⁷ I think. And if it is a journey from Egypt or the Pontus,³⁸ for this enormous service, having given safe passage to everyone I have just mentioned – yourself, your children, your property and your womenfolk – and having landed them in the harbour, it charges two drachmas at the very most. And the person who possesses this skill and has engaged in these activities disembarks and walks about on shore beside his

ship with a modest demeanour. Indeed, he understands enough to figure out that it is unclear which of the passengers he has benefited by not allowing them to be drowned at sea, and which of them he has harmed, knowing that he disembarked them no better either in body or soul than when he embarked them. He figures out, therefore, that on the one hand, if someone afflicted with serious, incurable bodily diseases does not drown, he is wretched because he did not die, and he is not benefited by the pilot. Yet on the other hand, if someone has numerous diseases of something more exalted than the body, namely the soul, and these are incurable, he reckons that this man's life is not worth living and he will not be benefiting this man if he saves him from the sea, or a court-action, or anything else whatsoever. He knows, rather, that it is not better for a degenerate person to be alive, for he must perforce live badly.

For these reasons, it is not conventional for the pilot to give himself airs, even though he does save us. Nor, for that matter, my wonderful friend, does the military mechanic who is sometimes able, no less than the general, not to mention the pilot or anyone else, to save people. Indeed, on occasion he saves entire cities. You do not think he is comparable to a courtroom advocate, do you? And yet, if he were to speak after the manner of you people, Callicles, solemnising his profession, he would bury you with words, proclaiming and extolling the need to become mechanics, setting the other professions at naught, for he would have a plausible argument. But you despise this man and his skill nonetheless, and you would call him 'mechanic' as a term of reproach, and you would not be prepared to give your daughter to his son, nor would you yourself accept that man's daughter. And yet, given the basis on which you praise your own profession, for what just reason do you despise the mechanic and the others

you mentioned just now? I know you would claim to be better, and from better stock. But if 'better' is not what I say it is, and excellence is just saving yourself and your own possessions, regardless of the sort of person you happen to be, then your censure turns out to be laughable, be it of a mechanic or a physician or any other skills that have been devised in order to save people. But, blessed man, look again lest the noble and the good may be something else besides saving and being saved. For he who is truly a man must not be attached to life, and must give up the notion of living for a particular period of time. Rather, having turned these matters over to the god, and given credence to women, who say that one should not flee from fate, he should consider this. In what way may a person best live the span of life that he will live? Should he assimilate himself to the constitution under which he abides? And should you now become as much like the Athenian populace as you can if you are going to be beloved of them, and wield great power in the city? See if there is advantage in this for you and for me, my miraculous friend, so that we do not suffer the fate they impute to those women of Thessaly who pull down the moon,³⁹ and this choice of ours, this power in the city, be at the cost of all that is dearest to us. But if you believe that any person could bestow upon you the sort of skill that would make you extremely powerful in this city, while being unlike its constitution – perhaps better, perhaps worse – then in my view you have not been properly advised, Callicles. For you need to be not just their imitator, but like them in your own nature if you are going to achieve anything genuine in friendship with the Athenian demos, or indeed, by Zeus, with Demos, the son of Ppyrilampes. So, whoever renders you most like unto them will make you a politician, in the way that you want to be a politician, and a rhetorician too. For every populace is delighted by speeches delivered after their own

fashion, but they are troubled by anything alien to this. Do you have anything different to say my friend? Can we say anything against this, Callicles?

513c

Callicles: You seem to me – I do not know how – to be expressing this well, Socrates, but I have experienced what most people experience. I am not entirely persuaded by you.

Socrates: The love of the populace residing in your soul is opposing me, Callicles, but if we consider these same issues more frequently, thoroughly and better, you will be persuaded. But now you should recollect that we said there are two means of caring for anything, be it soul or body. One operates with pleasure as its aim, the other aims for the very best, does not engage in gratification, and is assertive. Is that not how we defined them at the time?

513d

Callicles: Entirely so.

Socrates: Is not the one that aims at pleasure ignoble, amounting to nothing but flattery? Is this so?

Callicles: Be it so, if you wish it so.

Socrates: While the other, whether it happens to be body or soul that we are caring for, intends that it will be as good as possible.⁴⁰

Callicles: Entirely so.

513e

Socrates: Must we therefore take the city and the citizens in hand in this manner and care for them, making the citizens themselves as good as possible? For surely in the absence of this, as we found in our earlier discussions, there is no advantage in bestowing any other service whatsoever when the understanding of those who are going to acquire a lot of money or authority over something, or any other power at all, is not

noble and good. Should we declare that this is so?

Callicles: Entirely so, if it pleases you more.

514a

Socrates: Now, Callicles, suppose that we were embarking upon civic affairs, and we encouraged one another to engage in construction projects involving large structures such as walls, dockyards or temples. Would we need to examine ourselves and find out firstly whether or not we had knowledge of this skill of construction, and from whom we learned it? Would we need to do this or not?

514b

Callicles: Entirely so.

Socrates: And secondly, would we also have to find out whether we had ever constructed any structure at all, privately, either for one of our friends or for ourselves, and whether this structure was beautiful or ugly. And if we found through these deliberations that our teachers had been notable and good, and we had constructed many beautiful structures whilst with our teachers, and many indeed on our own after we left those teachers, under such circumstances it would make sense for us to embark upon public projects. However, if we were able neither to point out our own teachers, nor any structures at all, or a lot of worthless ones, it would then be stupid, I presume, to turn our hands to public projects, or encourage one another to do so. Should we assert that this is a correct formulation or not?

514c

Callicles: Entirely so.

514d

Socrates: Would this not also apply to all other situations where, having embarked upon public service, we might encourage one another to enter public service perhaps as properly qualified physicians, for instance? Presumably we would scrutinise one another – I, you, and you, me – asking,

“Come on, Socrates. By the gods, where does your own body stand in respect of health? Has anyone else, slave or free, ever been quit of disease through the agency of Socrates?” And I think I would make other enquiries of that sort about you. And if we did not find anyone, citizen or stranger, man or woman, who had been improved in body through our agency, by Zeus, Callicles, would it not be laughable, in truth, if human stupidity were to attain such a level that before practising on a private basis, often in a haphazard manner but often working systematically and exercising the skill properly, we were to encourage ourselves and other people of this sort to turn a hand to public service and, as the saying goes, attempt to learn pottery by working on a large vessel? Do you not think it would be stupid to act in this way?

514e

Callicles: I do.

515a

Socrates: But now, best of men, since you have just begun to engage in civic affairs, and since you are encouraging me and censuring me because I am not engaged in this, shall we not scrutinise one another? So come on, has Callicles already made any of our citizens better? Is there anyone who was previously degenerate, unjust, undisciplined and stupid, be he citizen or stranger, slave or free, who became noble and good through the agency of Callicles? Tell me, if anyone scrutinises you on these bases, Callicles, what will you say? What person will you claim to have made better through their association with you? Why are you reluctant to answer if there really is some achievement of yours from your days as a private citizen, before you turned your hand to public service?

515b

Callicles: You have a thirst for victory, Socrates.

Socrates: No, I am not asking out of a thirst for victory, but as someone who truly wishes to know the precise manner in which you think political activity should be conducted among us. Or, once you embark upon civic affairs among us, will you really care for anything else besides the issue of how we citizens may become as good as possible? Have we not agreed several times already that this is what a political man should do? Have we agreed or not? Please answer. I shall answer on your behalf. We have agreed. In that case, if this is the service a good man should furnish to his own city, recollect and tell me now about the men you mentioned a short while ago, Pericles, Cimon, Miltiades and Themistocles. Do you still think these men were good citizens?

515d

Callicles: I do.

Socrates: Then, since they were good, it is obvious that each of them made the citizens better rather than worse. Did they do this or not?

Callicles: Yes.

Socrates: In that case, when Pericles began speaking in the Assembly, were the Athenians worse than when he delivered his final speeches?

Callicles: Probably.

Socrates: Surely, best of men, this is not probably, but necessarily the case, based on what we have agreed, if, in fact, Pericles was, at any rate, a good citizen.

515e

Callicles: What about it?

Socrates: Nothing. But tell me this as well. Do the Athenians claim to have become better through the agency of Pericles, or quite the contrary, to have been corrupted by the man? Indeed,

what I hear anyway is that Pericles turned the Athenians into lazy, cowardly, blabbering money-lovers by first instituting paid public service.

Callicles: You have heard all this from admirers of Sparta, Socrates.

Socrates: But there is something else that I do not just hear but know full well, and so do you: that Pericles was well regarded at first, and the Athenians levelled no charge of baseness against him when they were in a worse state. However, once they had become good and noble through his agency, towards the end of Pericles' life, they charged him with embezzlement, and indeed almost condemned him to death on the obvious ground that he was corrupt.

516a

Callicles: What of it? Does it follow that Pericles was a bad person?

Socrates: Yet it seems that someone who cares for donkeys or horses or oxen would be bad if he were the sort of person who took charge of them when they neither trampled him nor gored him nor bit him, and turned them out so wild that they performed all these mischiefs. Or do you not think that any caretaker of any living creature whatsoever is bad who takes charge of them when gentle and turns them out wilder than when he took them on? Do you think this or not?

516b

Callicles: Entirely so, just to gratify you.

Socrates: Then you should also gratify me by answering this question. Is a human being also one of those living creatures, or is he not?

Callicles: How could he not be?

Socrates: And did Pericles not care for human beings?

Callicles: Yes.

Socrates: What now? Should they not have become more just rather than more unjust through his agency, based on what we have agreed a moment ago, if he really took charge of them as a man who was good in relation to civic affairs?

516c

Callicles: Entirely so.

Socrates: Are not just people civilised, according to Homer?⁴¹ But what do you say? Is this not the case?

Callicles: Yes.

Socrates: And yet, Pericles rendered them more uncivilised than when he took charge of them, and these mischiefs were directed against himself, the last person he would have wanted it for.

Callicles: Do you want me to agree with you?

Socrates: If you think I am speaking the truth.

Callicles: Well, let it be so.

Socrates: Now, since they were more uncivilised, were they not more unjust and bad?

Callicles: Be it so.

Socrates: So, according to this argument, Pericles was not good at civic affairs.

516d

Callicles: You say he was not anyway.

Socrates: By Zeus, even you said so, based on what you have agreed. But tell me again about Cimon. Did not the very people he was caring for ostracise him so that they would not hear his voice for ten years? And did they not do the same things to Themistocles, and punish him with exile too? And they voted to

cast Miltiades, the hero of Marathon, into the pit, and were it not for the presiding official he would have been thrown in. However, if these fellows were good men, as you claim, they would never have suffered those misfortunes. It is not the fate of good charioteers that at the beginning of their careers they are not prone to fall out of the chariots, but when they have tended their horses and have themselves become better charioteers, they are prone to fall out then. This is not the case, either in charioteering or in any other activity. Or do you think it is?

516e

Callicles: I do not.

517a

Socrates: So, it seems that our previous statements were true. We know not a single man in this city who has become good in relation to civic affairs. You agree that there are none among the present generation, and although you selected those four men from the previous generation, they actually turned out to be on a par with the moderns. And so, if they were rhetoricians, they did not employ the true rhetoric, or they would not have been cast out, nor did they use the flattering kind either.

517b

Callicles: But surely, Socrates, none of today's men will ever accomplish anything like what was accomplished by anyone of those four you care to choose.

Socrates: You extraordinary man! I am not criticising these fellows either, not as servants of the city anyway. No, they seem to me to have been of greater service than our contemporaries, and better able to provide the city with what it desired. However, when it came to redirecting those desires rather than pandering to them, persuading and compelling them to the one whereby the citizens were going to be better, in this respect these men of the past were, in a way, no

different from those of the present day. Yet this is the sole task of a good citizen. But I agree with you, that in providing ships, walls and dockyards, and anything else like that, those men were more ingenious than these contemporaries of ours.

Now, you and I are engaging in comical behaviour in these arguments. For throughout our entire discussion we are being borne around unceasingly to the same place, each ignorant of what the other is saying. So, I believe you have agreed many times, and realised that this activity itself is something twofold, both in relation to the body and in relation to the soul. One aspect affords a service by which it can provide food when our bodies are hungry, drink when they are thirsty, clothing, bedding and shoes when they are cold, or whatever else the bodies come to desire. And I am deliberately describing this to you based on the same illustrations so that you may understand more easily. Now, if someone can provide these either as a retailer, a merchant or as a manufacturer of any of these things themselves, being a baker or a cook or weaver or cobbler or tanner, it is little wonder that such a person seems, both to himself and others, to be an attendant of the body. Thus does it seem, to everyone who does not know, that besides all of these activities, there is a particular skill of gymnastics and medicine, which is the true attendance upon the body, and this indeed deserves to rule over all of those other skills and make use of what they produce, because this skill knows what food and drink is useful or detrimental to the excellence of the body, while all the others are ignorant of this. Accordingly, those other skills are slavish, servile and devoid of freedom in their dealings with the body, while gymnastics and medicine are, in justice, their mistress.

Now, when I say that these same considerations also apply to

the soul, you seem to me to understand, and on occasion you agree, as though you know what I mean. But then you come along a little later, claiming that there have been men in this city who were good and noble citizens. But once I ask you who they were, you offer as exemplars men engaged in civic affairs, just as if I were to ask you about gymnastic affairs and which men had become good at this and are good attendants of our bodies, and you were to inform me, in all seriousness, that Thearion the breadmaker, and Mithaikos who wrote the book on Sicilian cookery, and Sarambos the wine merchant prove themselves wonderful attendants upon our bodies as these fellows provide us with wonderful bread in one case, and with food and wine in the other instances.

Perhaps you might get angry if I were to tell you, “My man, you understand nothing about gymnastics. You tell me of men who are servants and satisfiers of desires, while appreciating nothing good and noble about them, who stuff and fatten people’s bodies in any way they can, destroy the natural flesh of the people too, and are praised for doing so. These people, for their part, through inexperience, do not blame the banqueters for causing the diseases, and the wasting of their very flesh when disease arrives a long time later, brought on by the excess indulged without regard to the rules of health. No, they blame whoever happens to be around at the time, and who offers them any advice, and they would do these men harm if they could. And they praise the previous fellows who are responsible for the problems.” And you are now behaving just like this, Callicles, praising men who have feasted these citizens by feeding them up on whatever they desired. Yes, they say that these men have made this city great. But they are not aware that it is bloated and festering because of those men of old. For, omitting sound-mindedness and justice, they have filled up the city

with harbours and dockyards and walls and tribute-money and nonsense of that sort, yet whenever a bout of debilitation afflicts her, they blame the present-day advisers, and praise Themistocles and Cimon and Pericles, the men who caused the problems. And they will probably attack you if you are not careful, and my own companion Alcibiades⁴² too, whenever they lose what they had to begin with, along with all they have acquired since. Not that you have direct responsibility for the problems, but perhaps you do share some responsibility.

What is more, I also see an absurd process going on these days, and I hear about it too in relation to the men of old. For I observe that whenever the city proceeds against one of its political men on the grounds that he acted unjustly, they get angry and complain bitterly because they are treated so terribly. They argue that having done so much good for the city, they are now being destroyed by it in an unjust manner. But this is a complete lie, for not one protector of a city could ever be destroyed by the very city that he was protecting. Indeed, the circumstances of those who make themselves out to be politicians, and those who set themselves up as sophists, are probably the same. In fact, the sophists, though wise in other respects, engage in this strange process by which, having claimed to be teachers of excellence, they frequently accuse their own pupils of treating them unjustly by withholding payment from them and failing to afford them any gratitude for being so well treated by them. Now, what process could be more irrational than this description by which men, who have become good and just, whose injustice has been eradicated by their teacher, who have come to possess justice, behave unjustly on account of that which they do not possess? Does this not seem strange to you, my friend? In truth, Callicles, you have made it necessary for me

to engage in mob oratory, through your reluctance to answer me.

519d

Callicles: But were you not the one who was unable to speak unless someone responded to you?

Socrates: So it seemed, anyway. But now, since you are unwilling to answer me, I am protracting my utterances quite considerably. But, good man, tell me in the name of friendship, does it not seem irrational to you for someone who claims to have made someone else good to censure that person, because having become good through his agency, and still being good, he is an evildoer after all?

519e

Callicles: It seems so, to me anyway.

Socrates: Do you not hear this sort of thing from those men who claim to educate people towards excellence?

Callicles: I do. But what can you say about people who are worthless?

Socrates: And what can you say about those who, whilst claiming to have taken charge of the city and cared for it, so that it will be as good as it possibly can be, turn around when circumstances dictate, and accuse it of being a gross evil doer? Do you think these fellows differ at all from the others? Sophist and rhetorician are the same, bless you, or nearly so, and very similar, just as I was saying to Polus. But you, through ignorance, think that rhetoric is something glorious, and you despise the other activity. But in truth, to the extent that law-making is more noble than jurisprudence, and gymnastic than medicine, so too is sophistry more noble than rhetoric. And I for one believe that the popular speakers and sophists alone are not permitted to censure the very personage whom they educate, on the grounds that he is corrupt in his dealing

with themselves, or else they would, by this same argument, be accusing themselves of not benefiting those whom they claim to benefit. Is this not so?

520c

Callicles: Entirely so.

Socrates: And if what I said is true, I presume it is acceptable for them alone, so it seems, to bestow this service without a fee. For in the case of some other service, someone who has received the benefit might perhaps withhold the recompense. For instance, someone who has become a fast runner through the agency of a trainer might do so if the trainer were to bestow the service without stipulating a fee and arranging to get the money as soon as the swiftness had been bestowed. Yet it is certainly not on account of slowness, I presume, that people act unjustly, but on account of injustice. Is this so?

520d

Callicles: Yes.

Socrates: Therefore, if someone eradicates this injustice itself, he should not fear that any injustice will ever befall him, and this service alone may be bestowed without any risk if anyone is really able to make another person good. Is this not the case?

Callicles: I agree.

Socrates: So, for these reasons, it seems there is no disgrace in taking money for giving advice on other matters, such as house-building or on other areas of expertise.

520e

Callicles: So it seems anyway.

Socrates: And yet, when it comes to advising on how one may be as good as possible and best manage one's own household and city, it is regarded as a disgrace to refuse to give advice on this unless someone gives you money. Is this so?

Callicles: Yes.

Socrates: And the reason for this is, of course, that this is the only service that makes the recipient of the benefit desire to confer a benefit in return. Accordingly, it seems to be a good sign if someone who has conferred a benefit through this service is treated well in return, and it is not a good sign if he is not. Is this how matters stand?

521a

Callicles: It is.

Socrates: Now, define which of these services to the city you are encouraging me to engage in, the one that struggles with the Athenians, like a physician, so that they will become as good as possible, or the one where I serve them and minister to their pleasure? Tell me the truth, Callicles, for it is right that since you were so frank with me in the beginning, you continue to say what you are thinking. So, speak out truly and nobly.

Callicles: Well then, I mean that you should act as their servant.

521b

Socrates: So, noblest of men, you are encouraging me to act as their flatterer.

Callicles: Yes, if it pleases you to be so blunt, Socrates. Since if you do not engage in this...

Socrates: Please do not say what you have said many times, that whoever wishes will kill me so that I, for my part, do not have to say that he will do so as an evil man killing a good man. Nor should you say that he will confiscate all my possessions, so that I, for my part, do not have to say that once he has confiscated them, he will not know how he should use them. Rather, having confiscated them from me in an unjust manner, he will make use of them in the unjust manner in which he acquired them, and if he uses them unjustly he uses them basely, and if he uses them basely he uses them badly.

521c

Callicles: You seem to me, Socrates, to believe that you will not suffer a single one of these misfortunes, as though you dwell apart and could not be hauled into court, probably by some utterly corrupt and quite ordinary person.

Socrates: Well, I am, in truth, a fool, Callicles, if I do not believe that in this city of ours anything can happen to anyone. However, I do know that if I were to end up in court facing one of these dangers you refer to, the one who prosecuted me would be an evil-doer, for no worthy person would take an innocent man to court, and it would be nothing strange if I were put to death. Would you like me to tell you why I expect all this?

521d

Callicles: Entirely so.

Socrates: I believe that I am one of few Athenians – I do not say I am the only one – who has taken to the true skill of civic affairs, and I am the only person these days who engages in civic affairs, since any words I ever speak are spoken not with a view to gratification, but with a view to what is best rather than what is most pleasant. And, having no desire to engage in those subtleties that you recommend, I shall have nothing to say in the courtroom. And the same argument that I presented to Polus applies to me, for I shall be judged as a physician would be judged before a jury of children on the accusations of a cook. Yes, consider this. What defence would a person like this, trapped in these circumstances, make if someone were to accuse him, saying, “O children, this man here has inflicted many evils upon you, yes, on yourselves. And he maims the very youngest of you by cutting and burning, he induces distress by withering and choking you, gives you bitter potions and makes you go hungry and thirsty, unlike me who have feasted you sumptuously on a great variety of pleasant delights.” What do you think a physician caught up in such an evil predicament

would be able to say? And if he were to speak the truth, that “Children, I have carried out all of these procedures for the sake of health”, would there not be an enormous outcry from such jurors as those?

522b

Callicles: Probably. I should think so.

Socrates: Do you not think he would be in utter perplexity as to what he should say?

Callicles: Entirely so.

Socrates: Now, I know that I too would find myself in such a predicament as this were I to be landed in court. Indeed, I would not even be able to recount any pleasures I have provided to them which these people regard as services or benefits, and I would envy neither those who provide them nor the people to whom they are provided. And if someone were to say that I corrupt the young people by reducing them to perplexity, or that I revile the older generation by speaking bitter words to them in public or in private, I would be unable to state the truth that “I say all this and I enact all this in a just manner, O gentlemen of the jury”, to use your phrase, Callicles. And I would have nothing else to say either, and so I would suffer whatever fate might decree.

522c

Callicles: Well, Socrates, do you think a man who is unable to help himself when he is in this situation is well established in the city?

522d

Socrates: Yes, Callicles, if he possessed one quality which you have accepted on a number of occasions: if he has assisted himself not to be unjust, neither towards gods nor men, neither in word nor in deed. For we have agreed many times that this assistance to oneself is the most powerful. So, if someone were

to convict me of being unable to help myself or anyone else through this kind of assistance, I would be ashamed, whether I was convicted by many people, by a few, or one on one. And if I were to be put to death on account of this particular inability, I would be troubled by that. But if I were put to death because I lack the flattering kind of rhetoric, I know very well that you would see me bearing death lightly. For no one is afraid of dying itself, unless he is utterly irrational and cowardly. Rather he is afraid of acting unjustly. For the worst of all calamities is to arrive in Hades with one's soul full of injustices. And if you wish, I am prepared to give you an account indicating that this is the case.

522e

Callicles: Well, since you have concluded the other issues, conclude this too.

523a

Socrates: Then, listen to a very beautiful narrative, as they say, one which I believe you may regard as a myth, but which I regard as an account, for whatever I am about to recount to you I shall recount as the truth. Indeed, as Homer explains, Zeus, Poseidon and Pluto made a distribution of the sovereignty after they inherited it from their father.⁴³ Now, there was a law relating to humanity from the time of Cronus, which had always been in place, and still is among the gods. Those people who have passed their lives in a just and holy manner depart, after they die, to the Isles of the Blest to dwell in complete happiness far from evils, while those who have lived in an unjust and godless manner go to the prison-house of retribution and justice that they call Tartarus. But in the time of Cronus, and even more recently under the sovereignty of Zeus, their judges were alive, and they were judged whilst still alive on the very day they were going to die, and so the cases were judged badly. Then both Pluto and the attendants from the Isles of the Blest went to Zeus and

reported that undeserving people were making their way to them in either place. So Zeus said, "Well, I shall stop this from happening. The cases are indeed being decided badly at present, for those who are judged are judged whilst fully clothed because they are judged whilst still living. So, many people possessing degenerate souls are clothed in beautiful bodies, lineage and wealth, and once there is a trial, numerous witnesses appear on their behalf testifying that they have lived in a just manner. Now, the judges are overwhelmed by all this, and what is more, they themselves are fully clothed as they make their judgements, having concealed their own souls behind eyes and ears and the entire body. All of these, both their own clothing and that of the people being judged, become a screen in front of them. So, in the first place," he said, "their foreknowledge of death must be stopped, for at present they know in advance. And so Prometheus has been instructed to put an end to this foreknowledge of theirs.⁴⁴ Hereafter, they must be judged naked of all those additions, for judgement must be passed when they have died. And their judge must be naked, dead, immediately beholding their soul itself with his soul itself once each person has died, bereft of kindred, having left that entire order behind him on the earth, so that the judgement may be just. Now I, having recognised these issues before you did, have made judges of my own sons, two from Asia, Minos and Rhadamanthus, and one from Europe, Aeacus.⁴⁵ Accordingly, as soon as people die, they will pass judgement in the meadow, at the fork from which two roads lead, one to the Isles of the Blest and the other to Tartarus. Rhadamanthus will judge those from Asia, Aeacus those from Europe, and I shall bestow seniority upon Minos to give a final judgement in case either of the others are in perplexity, so that the decision about the destination of human beings may be as just as possible."

Well, Callicles, this is what I have heard and believe to be true, and on the basis of those accounts I conclude that certain consequences follow. It seems to me that death happens to be nothing else but the separation from one another of two entities, the soul and the body. And yet once they have been separated from one another, both of them retain their own condition, which is no worse than when the man was alive, and so the body retains its own nature, and all the care it was given and all the afflictions it suffered are plain to be seen. For instance, if someone's body was large either by nature or through nurture or both, the corpse of this man will be large once he has died, and if he was fat it will be fat when he is dead, and the same goes for the other characteristics. And what is more, if he had long hair his corpse will be long-haired, and if he was a rogue who merited whipping and he had the scars, the imprints of the blows on his body, either from whips or from other injuries during his life, one can see that the corpse also has these when he is dead. Or if someone's limbs were broken or deformed during his life, those same features will be in evidence when he has died. And, in short, whatever bodily features he developed while he was alive will also be in evidence, all of them or most of them, for some time after he has died.

And so, Callicles, it seems to me that the same argument applies to the soul. Everything in the soul is plain to be seen once it has been stripped of the body, both the natural qualities and the effects that the person retains in his soul due to the conduct of particular actions. Now, when they arrive in front of the judge, those from Asia stand before Rhadamanthus, and Rhadamanthus stops them and beholds the soul of each, not knowing whose soul it is. And very often,

having come across the Great King, or some other king or potentate, he observes that there is nothing healthy in the soul, rather it bears the marks of scourging and is full of scars which his own behaviour has imprinted upon his soul on account of oath breaking and injustices. Its ways are all crooked due to falsity and pretence, and nothing is straight because its nurture was devoid of truth. And he sees the soul full of distortion and deformity due to licence, luxury, insolence and unrestrained actions. Having seen this, he sends it away in dishonour straight to the confine, where on arrival it will await the afflictions that are appropriate to it.

It is proper that all who undergo punishment, and are punished by another in the correct manner, either become better and are benefited, or else act as examples to other people so that others who see them being afflicted by whatever they suffer may become better out of fear. Now, those who are benefited, and make retribution before gods and men, are the people who have engaged in transgressions that are curable. Nevertheless, it is through pain and suffering that the benefit comes to them, both here and in Hades, for they cannot be quit of injustice in any other way. However, those who have engaged in utterly unjust actions and are rendered incurable on account of such injustices are the ones who act as examples to others. These people themselves are no longer benefited at all, since they are incurable. But other people are benefited when they see them suffering the most enormous, most painful and most fearful afflictions throughout eternity on account of their transgressions, simply hanging up as examples there, in Hades, in the prison-house, a spectacle and a warning to those unjust people who are continually arriving there. And if what Polus says is true, then I maintain that Archelaus will be one of these, as will anyone else who is a tyrant of that sort.

And I believe most of these examples to other people have come from the ranks of tyrants, kings, potentates and those who administer the affairs of our cities, for these people, on account of their immense power, also engage in the most enormous and unholy transgressions. Homer bears witness to these claims when he represents kings and potentates as the ones who are punished throughout eternity in Hades – Tantalus and Sisyphus and Tityus.⁴⁶ But no one represents Thersites, or any other wrongdoer who is a private citizen, as being incurable and afflicted by these enormous punishments, for in my view he lacked the immense power and so is more fortunate than those who do possess power. Anyway, Callicles, the people who become extreme evildoers come indeed from the ranks of the powerful, yet there is nothing to prevent good men from arising among them too, and those who do arise deserve great admiration. Indeed, Callicles, it is difficult, and deserving of much praise, to live one's life in a just manner having come by an enormous power to act unjustly. Few people of this sort arise. And yet they have arisen, both here and elsewhere, and in my view there will be more of them, noble and good in this excellence of managing in a just manner whatever is entrusted to them. One even became extremely well respected among the other Greeks as well, Aristides,⁴⁷ son of Lysimachus. But, best of men, most of the powerful people became corrupt.

Now, as I was saying, once the judge Rhadamanthus gets hold of someone like this, he knows nothing else about him at all, neither who he is nor who he is descended from, except that he is an evil doer. And having discerned this, he dispatches him to Tartarus with a mark indicating whether he is regarded as curable or incurable, and when he arrives there he suffers whatever is appropriate. But sometimes when he looks upon another soul that has lived a holy life in company

with truth, belonging to a private citizen or someone else, especially, or so I assert anyway Callicles, the soul of a philosopher who has performed his own duties and has not been excessively active throughout his life, he is delighted and despatches it to the Isles of the Blest. Aeacus also engages in the same activities, both of them holding a staff, but Minos sits and oversees them, he alone holding a sceptre of gold, as Homer's Odysseus says that he saw him

*holding a golden sceptre, passing judgements upon the dead.*⁴⁸

Now then, Callicles, I have been persuaded by these accounts, and I give consideration to how I might present my soul to the judge in the healthiest possible condition. So, having bidden farewell to the honours so prized by humanity, practising the truth, I shall endeavour to live my life being as good as I can actually be, and when I die, to die in the same manner. And to the best of my ability I encourage all other people as well, and indeed I exhort you in return towards this life and this struggle, which I assert exceeds all the struggles of this world. And I censure you, because you will be unable to assist yourself whenever you come to the trial and the judgement I have just described. Rather, having arrived in front of that judge, the son of Aegina, once he has hold of you and is controlling you, you will gape and you will be dizzy in that place, just as much as I am in this place, and someone will probably slap you contemptuously on the face and splatter you all over with mud.

Well then, perhaps these descriptions seem to you just like a myth an old woman might recount, and you despise them. And it would be no surprise if we were to despise them, if, in our search, we were somehow able to discover something better and truer than them. But now you see that the three of

you, yourself, Polus and Gorgias, who really are the wisest Greeks of the present day, are unable to prove that one should live any other life than this one, a life which also turns out to be profitable in the hereafter. But in the midst of all these assertions, the others having been refuted, this proposition alone is left undisturbed: that it is necessary to be more wary of doing injustice than of suffering injustice; and it is all the more important for a man to work at being good, both in private and in public, rather than seeming good; and if he becomes bad in some respect, he should be punished. And this good, becoming good and paying a penalty by being punished, stands in second place after being good. And all flattery concerning yourself or concerning others, be they few or be they many, must be shunned, and rhetoric should be used in this manner, always directed to the just, and so should every other activity.

So heed me, and follow me to a place where, on arrival, you will be happy both in life and after death, as the argument indicates. And let someone despise you as a fool and splatter you with mud if he wants to. Yes, by Zeus, and be bold enough to let him strike you that contemptuous blow, for nothing terrible will befall you if you really are noble and good, practising excellence. And after we have practised together in this way, then at that stage, if we deem it useful, we shall contribute to civic affairs, or we shall deliberate upon whatever issues occur to us as we shall be better equipped to deliberate than we are now. Indeed, it is quite disgraceful, given our present condition, that we disport ourselves in a youthful fashion as if we amounted to something, we who are in such an ill-educated state that we never, ever, hold the same views on the same issues, even on issues of the utmost importance. So, let us use the argument that has now been revealed to us, just like a guide. It has indicated to us that this

way of life is best: to live and to die in the practice of justice and all other excellence. So, let us follow this, and encourage others to do so, and not that way of life that you believe in and encourage upon me, for that is worth nothing, Callicles.

NOTES

1. Gorgias was a noted and influential rhetorician and sophist from Leontini in Sicily.
2. An exhibition was a sample lecture or set speech used to show off the skill of a sophist or professional teacher.
3. Chaerephon was Socrates' close friend who famously asked the oracle at Delphi whether there was anyone wiser than Socrates (Apology 21a). He appears in a number of Plato's dialogues.
4. The commercial and civic centre of Athens, and a gathering place.
5. Callicles is thought to have been an Athenian political thinker, but there is no further evidence for his existence outside of this dialogue.
6. Polus was from Acragas in Sicily. He was an orator and a student of Gorgias. He also appears in Plato's Phaedrus and Theages.
7. Aristophon's brother was Polygnotus, the famous 5th-century mural and vase painter.
8. Iliad vi.211 and xiv.113.
9. Zeuxis was an accomplished painter from Heraclea in the south of modern-day Italy. He was especially known for his facility in reproducing nature.
10. Themistocles and Pericles were important Athenian statesmen. The Themistoclean walls included both city walls and walls around the port of Piraeus. The later Periclean 'Long Walls' linked Athens with her port.
11. The Middle Wall was built in 444-442 to enclose the military road from Athens to the Piraeus, and ran parallel to the north Long Wall.
12. A light-hearted oath alluding to the Egyptian dog-headed god, Anubis.
13. Anaxagoras was a natural philosopher from Clazomenae, Ionia, who lived a generation before Socrates. The opening line of his book, describing the initial state of the universe, was "All things were together."
14. The Great King traditionally referred to the King of the Persian Empire.
15. Socrates mentions three Athenian political leaders – Nicias, an old-fashioned conservative, Aristocrates, an oligarch, and Pericles, a democrat.
16. The Council consisted of 500 citizens from each of the ten tribes, chosen by lot to serve for one year. Its chief function was to prepare legislation for the Assembly.

17. The Athenian citizen body was divided into ten tribes which were united politically, militarily and socially, and represented the three regions of Attica – the coast, the plains and the hills.
18. Each tribe served in rotation on the Executive Committee of the Council. A member was chosen daily by lot to be the president or chairman.
19. Alcibiades was a prominent and controversial Athenian statesman, orator and general. He was a close associate of Socrates, and two dialogues that bear his name have been attributed to Plato. He also features prominently towards the end of Plato's *Symposium*, where he describes his relationship with Socrates.
20. The Athenian *demos* refers to the populace of Athens. *Demos* also happens to be the name of Callicles' beloved.
21. This is a light-hearted euphemistic oath alluding to the dog-headed god, Anubis.
22. Xerxes, the son of Darius, was King of the Persian (Achaemenid) Empire.
23. This fragment is from a lost ode of Pindar.
24. This refers to the Tenth Labour of Heracles. Geryon was a fearsome legendary giant who is described as having had multiple heads and/or bodies.
25. Euripides was one of the three great Athenian tragic playwrights. These lines, from a much-quoted speech by Zethus, appear in his play *Antiope*.
26. *Iliad* ix.441.
27. Amphion is the musician brother of Zethus, who was a herdsman. In *Antiope*, the brothers represent two contrasting ways of life, one artistic, the other practical.
28. Both here and in the lines quoted above, Callicles paraphrases Euripides' *Antiope*.
29. These were wealthy, ambitious and somewhat unscrupulous young men. Teisander was a property owner, Andron an oligarchic politician, and Nausicydes a miller and owner of foreign slaves.
30. These lines are from Euripides' *Phrixus* or *Polyidos*.
31. A catamite was the passive partner in male homosexual relationships.

32. This refers to annual initiation rites. The Lesser Mysteries were held in spring in Attica; the Greater Mysteries were held in autumn at the Sanctuary of Demeter and Kore in Eleusis.
33. Cinesias was a poet who composed choral songs in honour of Dionysus. Meles was a famous cithara player but a very poor singer.
34. Not following Dodds' punctuation, who has this as a question.
35. Epicharmus was a comic poet from Syracuse in Sicily. The source of the line quoted is unknown.
36. Aegina is an island, south of Athens, in the Saronic Gulf.
37. There are six obols in a drachma.
38. The Pontus is the region of northern Asia Minor including the south coast of the Black Sea.
39. There was a widespread belief that Thessalian witches caused eclipses and had to pay for their powers with the loss of a family member.
40. Not accepting Dodds' emendation of the manuscript text at this point.
41. The phrase 'kindly and god-fearing' is used three times in Homer's *Odyssey* vi.120, ix.175, xiii.201.
42. Alcibiades was condemned to death in absentia after he had fled to Sparta.
43. *Iliad* xv.187ff.
44. Prometheus was the champion and benefactor of mankind to whom he gave fire. His name means 'forethought'.
45. Minos, Rhadamanthus and Aeacus were famous judges in their lifetimes who became judges in the underworld after death.
46. The punishments of Tantalus, Sisyphus and Tityus are described in Homer's *Odyssey* xi.576-600.
47. Aristides was an Athenian politician and general. Nicknamed 'the Just', he was a leader of the Athenian resistance against the Persian invasion.
48. *Odyssey* xi.569.

Hippias Major

ΙΠΠΙΑΣ ΜΕΓΑΣ

persons in the dialogue:

SOCRATES *of Alopecce, son of Sophroniscus*

HIPPIAS *of Elis, a polymath, sophist and diplomat*

scene: a public place in Athens

281a

Socrates: Ah, it is the handsome and wise Hippias! It has been quite some time since you last set foot in Athens.

Hippias: I don't have the time, Socrates. For whenever Elis needs any business transacted with any other cities, I am the first citizen it approaches, choosing me as ambassador on the assumption that I am the most competent judge and reporter of the communications from the various cities. Now, although I have acted as ambassador to other cities on many occasions, I have dealt most often on the most frequent and important matters with Sparta. And that's why, to answer your question, I don't visit this part of the world too often.

281b

Socrates: Well, that is what comes of being a truly wise and accomplished man, Hippias. For in the private sphere, you are indeed well able to secure lavish payment from the young people, and the benefit you confer upon them exceeds the amount you are paid. And what is more, in the public sphere you are well able to do good work for your own city, as befits someone who is not going to be despised but held in high regard by most people. But, Hippias, what precisely is the reason why those men of old, whose names are a byword for wisdom – Pittacus and Bias, and the associates of Thales of Miletus and those who came later, down to Anaxagoras – all of them, or most of them, apparently refrained from political activity?

281d

Hippias: Why do you think, Socrates? Weren't they just lacking in ability, and the competence to reach an understanding of

both the public and private spheres?

Socrates: In that case, by Zeus, may we say that just as the other skills have advanced and the ancients are of no account compared with today's craftsmen, your skill too, the skill of the sophists, has also advanced in this way and that the ancients who were concerned with wisdom are of no account compared to you?

Hippias: Yes, very much so, that is correct.

282a

Socrates: So, Hippias, if Bias were to come back to life nowadays, he would be an object of fun, just as statue makers say that Daedalus would be a laughing stock if he had been born in our times and were to produce the sort of works that made his reputation.

Hippias: The situation is just as you describe it, Socrates, yet I make a habit of praising our ancient forbears first and to a greater extent than our contemporaries, for although I am wary of the malice of the living, I am in fear of the wrath of the dead.

282b

Socrates: Hippias, in my view you are using words and formulating your thoughts beautifully. I too can bear witness to the truth of what you are saying, that this skill of yours really has advanced in its ability to conduct civic affairs and private affairs too. For this fellow, Gorgias, the sophist from Leontini, arrived here once on a civic matter, acting as ambassador for his own country because he was the most competent of the Leontinians when it came to public affairs. In the public arena he seemed to speak excellently, and in private by putting on exhibitions and associating with young people, he earned a lot of money and took it out of the city. Or take our own friend, Prodicus, if you like, a man who has come here many times, sometimes on public business. But the last time, when he came

here recently from Ceos on public business and spoke in the Council, he was very highly regarded, and by putting on exhibitions in private and associating with young people he made an astonishing amount of money. But none of those ancients ever thought fit to charge a fee or put on exhibitions of their own wisdom to anyone and everyone. In this respect they were simple-minded, and unaware that money is extremely valuable. But each of these men, and Protagoras before them, made more money from wisdom than any craftsman made out of any skill whatsoever.

282d

Hippias: Well, Socrates, you know nothing about the beauties of this. In fact, you would be amazed if you knew how much money I have made. And leaving aside the other places, I once arrived in Sicily while Protagoras was on a visit there. He was well regarded, an older man, while I much younger, yet in a very short time I made more than one hundred and fifty minae, and in one very small place, Inycum, I made more than twenty minae. And when I got home with this I gave it to my father, and he and the rest of my fellow citizens were amazed and awestruck. And I almost think that I have made more money than any two sophists you would care to name, put together.

283a

Socrates: That is beautiful, Hippias, and strong evidence of your own wisdom and the extent to which men of today are superior to the ancients. Indeed, according to your account, your predecessors, Anaxagoras' associates, were very stupid. For they say that what happened to Anaxagoras is the opposite of what happened to you, for although he inherited a lot of wealth, he neglected it and lost everything, so lacking in intelligence was his practice of wisdom. And they tell other stories like this about other men of old too. Now, I think you are presenting beautiful evidence concerning the wisdom of people today compared to that of our predecessors, and many people share

the view that a wise man should be wise for himself most of all, and he is defined, apparently, as the one who makes the most money. Well, I think that is enough said about this, but please tell me, from which of the cities you visited did you make most money? Or is it obvious that it was from Sparta, the one you visited most often?

283b

Hippias: No, by Zeus, Socrates.

Socrates: What are you saying? Did you make least money there?

Hippias: Well, I made nothing at all, ever.

283c

Socrates: That is a monstrous and amazing statement, Hippias. But tell me this, isn't this wisdom of yours the kind that makes better, more excellent people of those who adhere to it and learn it?

Hippias: Indeed, Socrates, very much so.

283d

Socrates: But although you were able to make the sons of the Inycans better, were you incapable of doing this for the sons of the Spartans?

Hippias: Far from it.

Socrates: Well then, do the Sicilians want to become better, while the Spartans do not?

Hippias: No, Socrates, the Spartans want this too, absolutely.

Socrates: Well then, did they avoid dealing with you because they were short of money?

Hippias: Certainly not. They have enough of that.

Socrates: Then how could it be that although they had the desire and the money, and you were able to confer enormous

benefits upon them, they did not send you on your way loaded with money? Is it that the Spartans could educate their own children better than you could? May we put it like that, and would you agree?

283e

Hippias: No, not at all.

Socrates: Well, was it because you were unable to persuade the young people in Sparta that they would make more progress in excellence by associating with you than they would with their fellow citizens? Or was it because you could not persuade their fathers that they should entrust them to you rather than looking after them themselves, if they really did care for these young people? For I presume they would not begrudge their own children the chance to become as good as they possibly could.

Hippias: No, I don't think they would begrudge them that.

Socrates: And of course, Sparta is well regulated.

Hippias: Of course.

284a

Socrates: And in the well-regulated cities, excellence is held in the highest regard.

Hippias: Entirely so.

Socrates: And you know better than anyone how to impart this to someone else.

Hippias: Yes, very much so, Socrates.

Socrates: Now, wouldn't someone who knows best how to impart the skill of horsemanship be more highly regarded in Thessaly than anywhere else in Greece, and make most money there, and anywhere else that horsemanship is taken seriously?

Hippias: Quite likely.

284b

Socrates: Then wouldn't someone who is able to impart learning, which is of the utmost value in developing excellence, be most highly regarded in Sparta and make most money there if he wanted to, and in any other Greek city that is well regulated? Or do you think, my friend, that he would make more in Sicily and in Inycus? Should we believe that, Hippias? For we must believe it if you tell us to.

Hippias: Socrates, it is against ancestral tradition for the Spartans to change their laws, or to educate their sons contrary to their customs.

284c

Socrates: What are you saying? Is acting aright and not falling into error against their ancestral tradition?

Hippias: I wouldn't say so, Socrates.

Socrates: Wouldn't they be acting aright by giving their young folk a better education rather than a worse?

Hippias: They would, but it is not lawful for them to give the young a foreign education, and yet I know very well that if anyone had ever actually been paid for providing education there, I would have been paid by far the most, for they are delighted to hear me and they are full of praise. But, as I say, it is against the law.

284d

Socrates: And are you saying that law is harmful to the city, or a benefit?

Hippias: In my view, it is instituted with benefit in mind, but it sometimes does harm if the law has been badly instituted.

284e

Socrates: What about this? Don't those who institute the law, institute it as something enormously good for the city? And without this, isn't it impossible to live in a well-regulated

manner?

Hippias: That's true.

Socrates: So, whenever those who set about instituting laws are in error about what is good, they are in error about the law and what is lawful. What do you say?

Hippias: Strictly speaking, Socrates, this is the case, but people are not accustomed to using words with such precision.

Socrates: Are you referring to people who know or people who do not know, Hippias?

Hippias: The majority.

Socrates: And are those who know the truth, the majority?

Hippias: Of course not.

Socrates: And yet, I presume that those who know believe that, in truth, what is more beneficial is more lawful than what is less beneficial to every man. Or do you not agree?

Hippias: Yes, I agree. That's the situation, in truth.

285a

Socrates: Therefore, it is as those who know think it is.

Hippias: Entirely so.

Socrates: And yet, according to you, it is more beneficial for the Spartans to be educated by the education you offer, even though it is foreign, rather than the local education.

Hippias: And what I say is true.

Socrates: Yes, and don't you also say that what is more beneficial is more lawful, Hippias?

Hippias: Yes, I said that.

Socrates: So, according to your account, it is more lawful for the sons of the Spartans to be educated by Hippias and less

lawful for them to be educated by their fathers, if, in fact, they really will be benefited to a greater extent by you.

Hippias: And benefited they will be, Socrates.

285b

Socrates: So the Spartans are acting unlawfully by not giving you money and entrusting their own sons to you.

Hippias: I agree with this, for you seem to be presenting the argument in my favour, and I should say nothing to oppose it.

Socrates: Then we are discovering, my friend, that the Spartans, who are regarded as the most lawful people, are law breakers in matters of the utmost importance. Well, Hippias, by the gods, they praise you and they take delight in hearing what? Or is it obvious that it is the subjects you know best, those concerned with the stars and heavenly phenomena?

Hippias: Not in the least. They cannot stand those subjects.

285c

Socrates: Well, do they enjoy hearing something about geometry?

Hippias: Not at all, since many of them barely know how to count.

Socrates: In that case, they are a long way from putting up with one of your exhibitions of calculation.

Hippias: A long way indeed, by Zeus.

Socrates: Well then, is it those subjects where you know how to make more precise distinctions than anyone concerning the effect of letters and syllables, rhythm and harmony?

Hippias: My good man! Harmonies and letters indeed!

285d

Socrates: Then what do they listen to with such delight, and what do they praise you for? Tell me yourself since I cannot

work it out.

Hippias: They love to hear about genealogies of heroes and humans, Socrates, and the settlements that established their cities in times gone by and, in short, all the ancient lore. So I have been forced to learn everything of this sort by heart and practise it thoroughly because of them.

285e

Socrates: By Zeus, Hippias, you are lucky the Spartans do not delight in having someone recite the list of our Archons, beginning with Solon, or else you would have had quite a job memorising them.

Hippias: Why so, Socrates? I can remember fifty names having heard them just once.

286a

Socrates: That is true, yes, I forgot that you have this gift of memory. I now realise that the Spartans are delighted with you because you know a lot, and they use you, as children use old women, to tell stories in a pleasant manner.

Hippias: Yes, by Zeus, about beautiful activities, too, and just recently I was very popular there for recounting the activities a young person should pursue. For I have a most beautiful speech that I composed on this topic, generally well structured, especially in its language. And I have a device and a starting point for the speech as follows. After Troy had fallen, the speech recounts that Neoptolemus asked Nestor what sort of activities are beautiful, the sort that would make a young person really famous. After this I have Nestor speaking, proposing all sorts of regulations to him, most beautiful. Now, I delivered this in Sparta and I shall also deliver it here the day after tomorrow in the schoolroom of Pheidostratus, along with much else that is also worth hearing. Indeed Eudicus, the son of Apemantus, invited me. But you should be there too, and bring other people

as well who are up to the task of evaluating what they have heard.

286c

Socrates: Well, that is what will happen, Hippias, God willing. But, for now, answer a short question about the speech for me, since you have given me a timely reminder about beauty. In fact, just recently, good man, someone cast me into perplexity when I was criticising parts of some speeches as base and praising others as beautiful. He questioned me in a most insolent manner, somewhat as follows, “How do you know, Socrates, the sort of things that are beautiful or base? Well, come on, would you be able to say what the beautiful is?” And because of my inadequacy I was perplexed and was unable to answer him in the right way. So as I went away, I was angry with myself, and I blamed myself, and I resolved that the next time I came across one of you men of wisdom, I would listen, learn and practise, and then go back to my questioner again and contest the point once more. So now, as I say, your arrival is timely, and so give me adequate instruction as to what the beautiful itself is, and as you reply, try to speak as precisely as possible, in case I get refuted a second time and become a laughing stock all over again. For you surely know all too well, and since your knowledge is so extensive, this would presumably be a trivial matter.

Hippias: A trivial matter, indeed, Socrates, and in a sense, by Zeus, of no significance.

Socrates: Then, I will learn it easily and no one will refute me again.

287a

Hippias: No one, indeed, or else my profession would prove to be inadequate and ordinary.

Socrates: By Hera, what you are saying is all very well, Hippias, provided we get the better of the man. But what is to stop me imitating the fellow when you respond, by challenging your arguments so that you give me as much practice as possible? Indeed, I am somewhat experienced in putting up challenges. So if it makes no difference to you, I would like to put up challenges so that I may learn in a more robust manner.

287b

Hippias: Yes, please challenge me. In fact, as I said just now, this is not a major question. No, I could teach you to answer much more difficult questions than this, so that no one would be able to refute you.

Socrates: Now, that is good news. But come on, and since you are telling me to do so, let me do my best to become this fellow and attempt to question you. For if you were to present the speech you mentioned to him, the one about beautiful activities, he would listen, and once you stopped speaking he would first ask you about justice and nothing else. Yes, that is a habit of his, and he would say, “Stranger from Elis, isn’t it by justice that whatever is just, is just?” Well, Hippias, answer as if he was asking you.

287d

Hippias: I shall answer that it is by justice.

Socrates: “In that case, isn’t this justice, something?”

Hippias: Very much so.

Socrates: “And isn’t it by wisdom that anyone wise is wise, and by the good that everything good is good?”

Hippias: How could they not be?

Socrates: “By their being something, and surely not by their not being?”

Hippias: By their being something.

Socrates: “Now, isn’t everything that is beautiful, beautiful by the beautiful?”

Hippias: Yes, by the beautiful.

Socrates: “By this ‘something that is’?”

Hippias: By something that is, what else?

287e

Socrates: “Then tell me, stranger,” he will say, “what is this, ‘the beautiful’?”

Hippias: Socrates, doesn’t someone who asks this question just want to find out what is beautiful?

Socrates: No, Hippias, I think he wants to find out what the beautiful is?

Hippias: And what is the difference between them?

Socrates: Do you think there is none?

Hippias: Yes, there is no difference.

Socrates: But of course you know better. Nevertheless, please consider this, good man, for he is not asking you what is beautiful, but what the beautiful is.

Hippias: I understand, good man, and I shall answer and tell him what the beautiful is, and I shall never be refuted. Indeed, Socrates, mark my words, if the truth must be spoken, a beautiful girl is beautiful.

288a

Socrates: Well, Hippias, by the dog, you have answered beautifully at any rate, and remarkably too. So, is it the case that if I give this answer I shall have answered the question I was asked, in a correct manner, and I shall never be refuted?

Hippias: Indeed, how could you be refuted when you are saying what everyone thinks, and when anyone who hears you will

bear witness to its correctness?

Socrates: So be it, very much so. Come on then, Hippias, let me go over what you are saying for myself. He will question me somewhat as follows, “All these things you declare to be beautiful would be beautiful if the beautiful itself is what?” And shall I then say that if a beautiful girl is beautiful, these would be beautiful because of that?

288b

Hippias: Now, do you think he will still attempt to refute you on the grounds that what you are saying is not beautiful, and if he does make the attempt, won’t he become a laughing stock?

Socrates: You marvel, I know very well that he will make the attempt, but whether he will also be a laughing stock if he does so remains to be seen. However, I would like to tell you what he will say.

Hippias: Speak on.

Socrates: “How sweet you are, Socrates!” he will say. “But is a beautiful mare, which even the god praises in his oracle, not beautiful?” What shall we say, Hippias? What else can we say except that the mare, the beautiful one, at any rate, is beautiful? For how could we dare to deny that something beautiful is beautiful?

288c

Hippias: What you are saying is true, Socrates, and the god was right to say so too, for extremely beautiful mares are bred in our land.

288d

Socrates: “So be it,” he will say. “But what of a beautiful lyre? Is it not beautiful?” Shouldn’t we say it so, Hippias?

Hippias: Yes.

Socrates: Well, after that I am fairly sure, judging by his manner, that he will say, “Best of men, what about a beautiful pot? Is it not beautiful?”

Hippias: Socrates, who is the man? What an ill-educated person to dare to speak in such commonplace terms on such a serious matter.

Socrates: That is what he is like, Hippias, not refined but common, thinking about nothing else except the truth. But the man must be answered, nevertheless, and I am giving my response first. If the pot has indeed been produced by a good potter, smooth, round and beautifully fired, like some of those two-handled pots that hold six choes, and extremely beautiful, if he were asking about a pot like this, we would have to agree it is beautiful. For how could we say that it is not beautiful, when it is beautiful?

288e

Hippias: We simply could not, Socrates.

Socrates: “In that case,” he will say, “isn’t a beautiful pot, beautiful too? Answer me.”

Hippias: Yes, Socrates, this is the case, I think. This utensil too is beautiful once it has been beautifully wrought, but on the whole, it does not deserve to be judged as beautiful in comparison with a horse, a girl, or all the other beauties.

289a

Socrates: Very well, Hippias, I understand that we should respond to the person who asks these questions as follows, “My man, you are ignoring the fact that Heraclitus¹¹ has a point when he says, ‘The most beautiful monkey is ugly when compared to the class of humans’, and that, according to the wise Hippias, the most beautiful pot is also ugly when compared to the class of girls.” Isn’t this the case, Hippias?

Hippias: Very much so, Socrates, you are responding correctly.

289b

Socrates: Then listen, for I know quite well what he will say after that. “Socrates, what if someone were to compare the girls as a class with that of gods? Won’t the outcome be the same as comparing the class of pots with that of girls? Won’t the most beautiful girl appear ugly? Or doesn’t Heraclitus, whom you quote, also say just this, ‘The wisest of men, when compared to a god, will look like a monkey in wisdom, beauty and every other respect?’” Shall we agree, Hippias, that the most beautiful girl is ugly when compared to the race of gods?

Hippias: Who could possibly contradict this, Socrates?

289c

Socrates: Well then, once we agree with all this he will laugh and say, “Socrates, do you remember what you were asked?” I will reply that I was asked what exactly the beautiful itself is. “In that case,” he will say, “having been asked for the beautiful, are you responding with what happens to be, on your own admission, no more beautiful than ugly?” So it seems, I shall say, or what would you advise me to say, my friend?

Hippias: That’s it. Yes, it is true indeed that the human race is not beautiful when compared to gods.

289d

Socrates: “Now, if I had asked you,” he will say, “at the outset, what is both beautiful and ugly, and you had answered as you did just now, you would have answered correctly, wouldn’t you? But do you still think that the beautiful itself, by which everything else is embellished and appears beautiful when this form is added, is a girl or a horse or a lyre?”

Hippias: Well then, Socrates, if that is what he is looking for, it is the easiest question in the world to answer and state what the beautiful is, by which everything is indeed embellished and appears beautiful once this is added. Yes, the fellow is simple-minded and understands nothing about beautiful

possessions. For if you were to respond that what he is asking for, the beautiful, is none other than gold, he would be blocked and would not attempt to refute you. For presumably we all know that whatever this is added to, even if it previously looked ugly, looks beautiful once it has been embellished with gold.

290a

Socrates: Hippias, you have no experience of how relentless the man is; he accepts nothing easily.

Hippias: What does that matter, Socrates? For he needs to accept whatever has been stated correctly, or else become a laughing stock for not accepting it.

Socrates: Well, not only will he not accept this answer, best of men, but he will mock me, hugely, and will say, “Oh you mad person, do you think Pheidias¹³ is a bad craftsman?” And I shall reply, I think, “No, not at all.”

Hippias: And you will be right to say so, Socrates.

290b

Socrates: Right, indeed. And so, once I agree that Pheidias is a good craftsman, he will say, “Do you think Pheidias was ignorant of this ‘beautiful’ you are speaking of?” And I shall reply, “Why do you ask?” And he will say, “Because he did not make the eyes of Athena from gold, nor her hands, but from ivory, even though they would have looked most beautiful if made of gold. Obviously he made this mistake through ignorance, being ignorant of the fact that gold is what makes everything to which it is added, beautiful.” How should we respond to him when he says this, Hippias?

Hippias: That’s not difficult. We shall say that he made the statue properly since ivory, I think, is beautiful too.

290c

Socrates: “In that case,” he will say, “why did he not also make the centre of the eyes from ivory rather than stone, finding

stone that was very like ivory? Or is a beautiful stone also beautiful?" Shall we say so, Hippias?

Hippias: Yes, we shall say so, whenever it is appropriate.

Socrates: "And whenever it is not appropriate, is it ugly?" Should I agree, or not?

Hippias: Yes, agree, whenever it is not appropriate, at any rate.

290d

Socrates: "Then, what about the ivory and the gold, oh wise one?" he shall say. "Don't they make things look beautiful when they are appropriate, and ugly when they are not?" Shall we deny this or agree that what he is saying is right?

Hippias: We will agree with that anyway. Whatever is appropriate to each is what makes each beautiful.

Socrates: He will say, "Whenever someone is boiling the pot we mentioned earlier, the beautiful one, full of beautiful soup, is a gold ladle appropriate to it or a fig wood ladle?"

290e

Hippias: By Heracles, what sort of man is this, Socrates? Don't you want to tell me who he is?

Socrates: If I were to tell you his name, you would not recognise it.

Hippias: But I do recognise, even now, that he is a fool.

Socrates: He is a thoroughgoing pestilence, Hippias, but, nevertheless, what shall we say? Which of the two ladles is appropriate to the soup and to the pot? Or is it obviously the one made from fig wood? For it is likely to make the soup smell nicer, and at the same time, my friend, it would not shatter our pot, spill the soup, put out the fire, and deprive the impending diners of their noble meal, while the golden one would do all that. And so I think we should say that the fig wood is more

appropriate than the golden unless you have an alternative suggestion.

291a

Hippias: No, it is more appropriate, Socrates. However, I would not engage in discourse with a person who asks questions of that kind.

291b

Socrates: And rightly so, my friend. Yes, it would not be appropriate for you to adopt this sort of language when you are so beautifully dressed, so beautifully shod, and so famous for your wisdom among all the Greeks. But it is not a problem for me to consort with this person, so give me some preparatory instructions. Answer the question for my sake. The man will ask, “Well, if the fig wood is indeed more appropriate than the golden, wouldn’t it also be more beautiful, since you have actually agreed, Socrates, that what is appropriate is more beautiful than what is not appropriate?” Can we help but agree, Hippias, that the fig wood ladle is more beautiful than the golden one?

Hippias: Socrates, would you like me to suggest what you should say the beautiful is, if you want to save yourself a lot of argumentation?

291c

Socrates: Very much so, but not before you first tell me how I should answer the question, which of the two ladles I just spoke of is appropriate and also more beautiful?

Hippias: Well tell him, if you like, that it is the one made from fig wood.

Socrates: Then say what you were going to say a moment ago. For by this answer, if I say that the beautiful is gold, it seems to me that gold will turn out to be no more beautiful than fig wood. So what do you now say the beautiful is?

291d

Hippias: I'll tell you, for I think you are seeking a response according to which the beautiful is the sort of thing that will never appear base anywhere, to anyone.

Socrates: Very much so, Hippias, you are now understanding this beautifully.

Hippias: Then listen, and be assured that if anyone has anything to say in opposition to this, you may proclaim that I know nothing at all.

Socrates: By the gods, please tell me as quickly as you can.

Hippias: Well, I say it is always most beautiful for any man, anywhere, to be wealthy, healthy, honoured by his fellow Greeks, to live to old age, to commemorate his own parents beautifully when they die, and be given a beautiful and most appropriate funeral by his own children.

291e

Socrates: My, my, Hippias, you really have spoken wonderfully, magnificently, and in a manner worthy of yourself. And, by Hera, I am delighted at the kind manner in which you seem, to the best of your ability, to be coming to my aid. And yet, we are making no impression on the man. No, he will laugh at us now to an even greater extent, mark my words.

292a

Hippias: The laughter is no good, Socrates. For whenever he has nothing to say on these issues and he laughs, he will be laughing at himself, and he himself will be laughed at by the people around him.

Socrates: Perhaps that is so, and perhaps, if I give this answer, there is a danger, I prophesy, that he will do more than just laugh at me.

Hippias: What do you mean?

Socrates: That if he happens to have a stick, and I don't get away and escape him, he will try to beat me well and truly.

292b

Hippias: What are you saying? Is the man in some sense your owner, and if he does this will he not be charged and pay a penalty? Or is your city lacking in justice, and does it allow the citizens to beat one another unjustly?

Socrates: No, we do not allow that at all.

Hippias: Then he will pay a penalty for striking you unjustly.

Socrates: No, I do not think so, Hippias, not if I were to give him that reply. I think he would be acting justly.

Hippias: Then, I think so too since that is what you yourself believe.

Socrates: Shouldn't I also tell you why I believe he would be acting justly if he beat me for giving that reply? Or will you also beat me without trial? Or will you hear my argument?

292c

Hippias: If I were not to hear you out, it would be a scandal, but what are you saying?

Socrates: I will tell you, imitating that man in the same way I did just now so that I do not speak to you the sort of harsh, uncouth words he speaks to me. For rest assured, he will say, "Tell me, Socrates, would you think it unjust that someone should get beaten for singing a dithyramb of such length, in such an unmusical manner, and so far removed from the question that was asked?" "How so?" I shall ask. "How so?" he will say. "Can't you recall that you were asked for the beautiful itself, by which anything to which it is added turns out to be beautiful, be it a stone, wood, a person or a god, or any action or any subject? For I am asking you, my man, what beauty itself is, and I am no more able to make you hear me than if you were a

stone seated beside me, a millstone at that, possessing neither ears nor a brain.” Now, Hippias, wouldn’t you be annoyed if, out of fear, I were to reply to this as follows, “But Hippias said this was the beautiful, even though I asked him in the same way you asked me, what is it that is beautiful to everyone, always?” What do you say, wouldn’t you be annoyed if I were to say this?

292e

Hippias: Well, Socrates, I know quite well that what is beautiful to everyone is what I said it was, and it will seem so to everyone.

Socrates: “And it will be so?” he will say, “for the beautiful is, presumably, always beautiful.”

Hippias: Certainly.

Socrates: “And it was so too, was it?” he will say.

Hippias: It was so too.

Socrates: “So,” he will say, “did the visitor from Elis say that it was beautiful for Achilles to be buried after his parents, and for his grandfather Aeacus, and for all the other offspring of the gods, and for the gods themselves?”

293a

Hippias: What’s this? Away, by heaven! The questions the man is asking are impious, Socrates.

Socrates: What about this? When someone else asks the question, is it entirely impious to say that these things are so?

Hippias: Perhaps not.

Socrates: “Then perhaps you are the person,” he will say, “who declares that it is beautiful for everyone, always, to be buried by their children and to bury their parents. Or was Heracles not included among ‘everyone’, along with all the others we mentioned just now?”

293b

Hippias: But I did not mean that this applies to the gods.

Socrates: “Nor to the heroes either, it seems.”

Hippias: Not those who were children of gods, at any rate.

Socrates: “Only those who were not?”

Hippias: Yes, certainly.

Socrates: “In that case, according to your further account, apparently it is terrible, unholy and a disgrace for the heroes Tantalus, Dardanus and Zethus, but beautiful for Pelops and the others of like parentage.”

Hippias: Yes, I think so.

293c

Socrates: “Then, you are thinking something you did not state earlier,” he will say, “that burying their parents, and being buried by their children, is sometimes, and for some people, a disgrace. More to the point, it is impossible, it seems, for this to become beautiful and to be so for everyone. And so in this case, as with the previous cases, the girl and the pot, the outcome is the same and, even more comically, it is beautiful for some and not beautiful for others. And so far, today,” he will say, “you are still not able to answer the question you are being asked, Socrates, about the beautiful. What is it?”

293d

Socrates: With these words and their like, he will censure me, justifiably, if I reply to him in this manner. Now, Hippias, for the most part he engages me in discourse that proceeds largely in this way. But sometimes, as though he had taken pity on my inexperience and ill-education, he himself offers me a suggestion by asking if such and such is the beautiful or anything else he happens to be enquiring into and discussing.

Hippias: What do you mean by this, Socrates?

293e

Socrates: I will tell you. “Dearest Socrates,” he says, “stop giving answers like that, in that way, for they are too facile and easy to refute. No, consider whether the following seems beautiful to you, something we picked up just now when we said that gold is beautiful for anything to which it is appropriate, and not beautiful for anything to which it is not appropriate, and that the same goes for anything else to which this is added. Take this ‘appropriate’ itself, and the nature of the appropriate itself, and consider whether this happens to be the beautiful.” Now, I usually agree with such suggestions every time, for I do not know what to say, but do you think the appropriate is beautiful?

Hippias: Of course, entirely so, Socrates.

Socrates: Let us consider this in case we are being deceived.

Hippias: Yes, we should consider it.

294a

Socrates: Then look, do we say the appropriate is that which, when it is added, makes anything in which it is present, appear beautiful, or be beautiful, or neither of these?

Hippias: I think it is what makes it appear beautiful. For instance, when someone puts on clothes or shoes that suit him, even if he is odd, he appears more beautiful.

294b

Socrates: Then, if the appropriate does indeed make him appear more beautiful than he is, it would be some deception about the beautiful and would not be what we are looking for, Hippias, would it? For I presume we are looking for that by which all beautiful things are beautiful, just as that by which all large things are large is by excess. For all large things are large by this, and even if they do not appear large, it is necessary that they be large if they exceed. So, in this way, we also say that the beautiful is that by which all things are beautiful, whether they

appear to be so or not. What could it be? Indeed, it could not be the appropriate, for it makes something appear more beautiful than it is, according to your statement, but does not allow them to appear as they are. But try to say what it is that makes them be beautiful, as I said just now, whether they appear so or not, for if we are really seeking the beautiful, this is what we are seeking.

294c

Hippias: But, Socrates, the appropriate makes things be beautiful and appear beautiful, once it is present.

Socrates: Is it impossible for things that are actually beautiful not to appear to be beautiful, once, at any rate, that which makes them appear so is present?

Hippias: Impossible.

294d

Socrates: So, shall we agree on this, Hippias, that everything that is actually beautiful, including regulations and activities, are also thought to be beautiful, and always appear so to everyone? Or is it the complete opposite? Are people in ignorance, and so there is more strife and contention among individuals in private, and between cities in public, over these matters than over anything else?

Hippias: It is much more the latter, Socrates. They are in ignorance.

294e

Socrates: But this presumably would not be so if the ‘appearing’ was added to them. And it would have been added if the appropriate was indeed beautiful, and not only made things be beautiful, but also made them appear so. So, if the appropriate is that which makes things be beautiful, then it would be the beautiful, the object of our search, rather than that which makes them appear beautiful. And what is more, if that which

makes them appear so is the appropriate, it would not be the beautiful, the object of our search. For that makes them be so, but the same thing could not possibly make them appear beautiful and be beautiful, or anything else whatsoever. So, let us decide whether we think the appropriate is what makes things be beautiful or makes them appear so.

Hippias: It makes them appear so, or so it seems to me anyway, Socrates.

295a

Socrates: Alas, Hippias, since the appropriate has proven to be something other than beautiful, the knowledge of what precisely the beautiful is has departed and escaped us.

Hippias: Yes, by Zeus, and in my view, very strangely.

Socrates: However, my friend, we should not let it go just yet, for I still retain a hope that what precisely the beautiful is, will be revealed.

Hippias: Entirely so, Socrates, for it is not difficult to find. So I know quite well that if I were alone for a while and were to consider this for myself, I could express it to you with the utmost accuracy.

295b

Socrates: Ah, Hippias, do not be boastful. You see how much trouble it has brought us already. Take care that it does not get angry and run away all the more. But I am talking nonsense, for you will easily find it I think, once you are on your own. But, by the gods, you should seek it out in my presence and, if you like, search for it along with me as you were doing just now. And if we find it, that will be a most beautiful achievement, and if we do not, I shall accept my fate and you will discover it easily once you depart. And if we find it now, I certainly will not be a nuisance to you hereafter by enquiring as to what you found out when you were by yourself. But take a look now at what you

think the beautiful is. Well, I am saying – and by the way, you should keep a close attentive eye on me in case I am talking nonsense – well then, for us, let whatever is useful be beautiful. And what I had in mind when I said this was as follows, we say that the eyes are beautiful, not the kind that seem to be so but are unable to see, but those that are able to see and are useful for seeing. Is this so?

295c

Hippias: Yes.

Socrates: And don't we also say that the whole body is beautiful in some way, in one case for running, in another for wrestling? Doesn't the same apply to all beautiful animals, a horse, a cock or a quail, all equipment, and means of land transport, and ships and triremes on the sea, all instruments used for music or in other skills, all activities and laws too? Are not almost all of these referred to as beautiful in the same way? Looking at each of them, the way each is by nature, the way it has been fashioned, the condition it is in, don't we declare that what is useful is beautiful, in the way that it is useful, for the purpose for which it is useful and at the time it is useful, and whatever is useless in any of these ways is base? So is that what you think too, Hippias?

295d

Hippias: I do.

Socrates: So, are we now right to say that, more than anything else, the useful happens to be beautiful?

Hippias: We are right indeed, Socrates.

Socrates: Now, is that which is capable of accomplishing something useful for the purpose for which it is capable, and is that which is incapable, useless?

Hippias: Certainly.

Socrates: So, capability is beautiful and incapability is base?

295e

Hippias: Emphatically so. Indeed, we have a lot of evidence that this is the case, Socrates, particularly from the political realm. For in political affairs, and in one's own city, being capable is the most beautiful thing of all, and being incapable is the most base of all.

296a

Socrates: That is good. Well now, by the gods, Hippias, on this basis, is wisdom also the most beautiful of all and is ignorance the most base of all?

296b

Hippias: What do you think, Socrates?

Socrates: Let's be careful, my friend, as I am cautious as to what precisely we are now saying.

Hippias: What is there to be afraid of, Socrates, when the argument has proceeded so beautifully this time?

Socrates: I wish it had. But please consider this along with me, could anyone do something that he neither knew how to do, nor was at all capable of doing?

Hippias: Not at all. How could he do what he is not capable of?

Socrates: Now, those who make mistakes and do bad work, and do so unintentionally, if they were incapable of doing what they did, they could never have done it, could they?

Hippias: Obviously.

296c

Socrates: And yet, it is by capability that the capable are capable, for it is surely not by incapability.

Hippias: Of course not.

Socrates: And are all those who do anything, capable of doing what they do?

Hippias: Yes.

Socrates: But all men do much more bad than good, beginning in childhood, and they make mistakes unintentionally.

Hippias: This is the case.

296d

Socrates: What about this capability, and these things that are useful, but are useful for accomplishing something bad, shall we declare that these are beautiful, or do they fall far short?

Hippias: I think they fall far short, Socrates.

Socrates: In that case, Hippias, for us it seems that the capable and the useful are not the beautiful.

Hippias: They would be, Socrates, if they were capable of doing good and were useful for such purposes.

296e

Socrates: Then, the proposition that the capable and the useful are beautiful without qualification is gone. Rather, what our soul wanted to say was that the capable, and the useful for doing something good, is the beautiful. Was that it?

Hippias: I think so.

Socrates: But surely this is beneficial, isn't it?

Hippias: Entirely so.

Socrates: And so the beautiful bodies, the beautiful regulations, the wisdom and whatever else we just mentioned, are all beautiful because they are beneficial.

Hippias: Obviously.

Socrates: So, the beneficial seems to us to be the beautiful, Hippias.

Hippias: Entirely so, Socrates.

Socrates: But the beneficial is that which does good.

Hippias: It is indeed.

Socrates: And that which does is none other than the cause. Is this so?

Hippias: It is so.

297a

Socrates: So the beautiful is the cause of the good.

Hippias: It is indeed.

Socrates: Now, the cause, and what the cause is the cause of, are different, for presumably the cause would not be a cause of a cause. But consider this, didn't the cause turn out to be doing?

Hippias: Very much so.

Socrates: Now, what is done through the doer is that which arises, and not that which does?

Hippias: This is the case.

Socrates: And that which arises is one thing and that which does is another.

297b

Hippias: Yes.

Socrates: So, the cause is not the cause of a cause, but of that which arises because of it.

Hippias: Certainly.

Socrates: So if the beautiful is a cause of the good, the good would arise because of the beautiful. And it seems that is why we are eager for understanding and everything else that is beautiful, because their product, their offspring, the good, is worthy of that eagerness. And from what we are discovering, it

looks as if the beautiful is, in form, a father of the good.

Hippias: Yes, certainly, you are expressing that beautifully, Socrates.

297c

Socrates: Well, is this beautifully expressed too. The father is not son, nor is the son father?

Hippias: Beautifully, indeed.

Socrates: Nor is the cause that which arises, nor, for its part, is that which arises a cause.

Hippias: That is true.

Socrates: By Zeus, best of men, then the beautiful is not good nor is the good beautiful, or do you think this is possible based on what has just been said?

Hippias: No, by Zeus, apparently not.

Socrates: Well, are we satisfied with that; do we wish to state that the beautiful is not good, nor the good beautiful?

Hippias: No, by Zeus, I am not at all satisfied.

297d

Socrates: Indeed, by Zeus, Hippias, for me this is the least satisfactory argument of all those we have formulated so far.

Hippias: So it seems, indeed.

Socrates: Then, it looks to us as if the argument, that the beneficial and that which is useful and capable of making something good is beautiful, is not the most beautiful argument, although it appeared so a moment ago. No, this is not the case. It is even more ridiculous, if that is possible, than those initial arguments in which we thought that the girl was the beautiful, and each one of those we mentioned earlier.

Hippias: So it seems.

297e

Socrates: And I no longer know where I should turn, Hippias; I am perplexed. Do you have anything to say?

Hippias: Not at the moment, but as I said earlier, once I have considered this, I know quite well that I shall make the discovery.

Socrates: But if you put this off, I do not think I can wait for you, I am so eager to know. And in fact, I think I have actually found a way now. Yes, look. If we were to say that what makes us pleased is beautiful, not including all pleasures, but those which come through hearing and seeing, how might we fare under contention? Presumably beautiful people, Hippias, and everything decorative, paintings and sculptures, delight us when we see them, provided they are beautiful. Beautiful sounds and music in general, and speeches and storytelling also have this same effect. And so, if we were to respond to this audacious person, “Oh well-born gentleman, the beautiful is that which is pleasant through hearing and seeing”, don’t you think we would restrain his audacity?

298a

Hippias: Well, Socrates, it seems to me, for the moment, anyway, that you are nicely stating what the beautiful is.

Socrates: What about this, Hippias? Shall we state that beautiful activities and laws are beautiful by being pleasant through hearing or seeing? Or do they possess some other form?

Hippias: Perhaps these cases might escape the man’s notice, Socrates.

298b

Socrates: By the dog, Hippias, not this man, a man before whom I would be most ashamed to speak foolishly and pretend to be talking sense when I was talking nonsense.

Hippias: Who is this man?

298c

Socrates: The son of Sophroniscus¹⁵, who would never allow me make these unexamined statements so easily, or to speak as though I know what I do not know.

Hippias: Anyway, now that you mention it, I also think myself that in the case of the laws this is something different.

Socrates: Keep quiet, Hippias, we are in danger of thinking we have found another way out when we have fallen into the same perplexity concerning the beautiful that we were in a moment ago.

Hippias: What do you mean by this, Socrates?

298d

Socrates: I will tell you what is becoming evident to me, if I am actually talking sense. These matters concerning laws and activities may perhaps prove not to be outside of perception that occurs to us through hearing and seeing. Let us, rather, persist with this argument that what is pleasant through these is beautiful, without making the laws a central issue. But if either the person I am speaking of, or anyone else at all were to ask us, “What is this, Hippias and Socrates, are you distinguishing what is pleasant in the way you describe as beautiful from the pleasant, and are you saying that what is pleasant based upon other perceptions, eating, drinking, sexual activity and everything else of that sort, is not beautiful? Or are you saying there is nothing pleasant or any pleasures at all in the likes of these, or in anything else, except seeing and hearing?” What shall we say, Hippias?

298e

Hippias: I presume we shall state emphatically, Socrates, that there are very great pleasures in the other cases too.

299a

Socrates: “Why, then,” he will say, “would you take away this name, and deprive them of being beautiful, although they are pleasures no less than the others?” We shall reply, “Because there is no one who would not laugh at us if we were to say that to eat is not pleasant, but beautiful, and that a pleasant smell is not pleasant, but beautiful. When it comes to sexual activity everyone would argue against us, I presume, that it is extremely pleasant, but if someone is to do it at all, it must be done so that no one can see, it being most base to behold. Once we have said all this, Hippias, he would probably reply, “I too understand that because people do not think they are beautiful, you are ashamed, and have been for some time, to state that these pleasures are beautiful. But I was not asking you what it is that seems to be beautiful to most people, but what is beautiful.” Well, I think we will just say what we proposed, “The part of the pleasant that arises by seeing or by hearing, is beautiful.” But do you have anything still to add to the formulation, Hippias, or should we also say something else?

Hippias: In the light of what has been said, Socrates, we need not say anything else.

299c

Socrates: “Well, you are speaking beautifully,” he will say. “Now, if what is pleasant through seeing and hearing is, in fact, beautiful, any of the pleasures that are not like this would obviously not be beautiful, would they?” Shall we agree?

Hippias: Yes.

Socrates: “Now, is that which is pleasant through seeing,” he will say, “pleasant through seeing and hearing, or is that which is pleasant through hearing, pleasant through hearing and seeing?” “Not at all,” we shall reply, “what is so through one would not be so through both, for that is what we think you are saying. But we said that either of these just by itself would be beautiful, and so would both.” Shan’t we reply in this way?

299d

Hippias: Very much so.

Socrates: “Well then,” he will say, “does anything pleasant differ from anything else that is pleasant, by this, by being pleasant? I am not asking if any pleasure is greater or smaller, or more or less, but if any of the pleasures differ by this alone, by one being a pleasure and the other not a pleasure?” We do not think so, do we?

Hippias: We do not.

299e

Socrates: “In that case,” he will say, “did you not select these pleasures from the other pleasures on some other basis than the fact that they are pleasures, by seeing something in both of them, that they possess something different from the others in the light of which you say they are beautiful? For presumably pleasure through seeing is not beautiful for this reason, just because it is through seeing. Indeed, if this was the reason why it was beautiful, then the other one, the pleasure through hearing, would never be beautiful. So it is not pleasure through seeing.” Shall we say that this is true?

Hippias: Yes, we shall say so.

300a

Socrates: “Neither, for its part, is the pleasure through hearing beautiful for this reason, just because it is through hearing, for in that case the pleasure through seeing would never be beautiful. So it is not pleasure through hearing.” Shall we say that the man is speaking the truth, Hippias, when he says this?

Hippias: The truth.

Socrates: “And yet, they are both beautiful, as you say”. Do we say so?

Hippias: We say so.

Socrates: “Then they possess something that is the same, something that makes them be beautiful, something common, that is present in common to them both, and to each of them individually. For presumably there is no other way they could both, and each, be beautiful.” Answer me as if you were answering him.

Hippias: I think it is as you say it is. That is my answer.

300b

Socrates: So, if both the pleasures have some characteristic that each does not have, they would not be beautiful by that characteristic.

Hippias: But how could that happen, Socrates, that there be some characteristic or other that neither of them possesses, when this characteristic which neither of them possesses is a characteristic of both of them?

Socrates: You do not think it could happen?

Hippias: If I did, I would be overtaken by considerable inexperience of the nature of these matters and the terminology of our present discussions.

300c

Socrates: How pleasant, Hippias. Well then, maybe I am in danger of thinking I see that something is the case, something you say is impossible, when I am really seeing nothing.

Hippias: It is not that you are in danger of this, Socrates. No, you are all too ready to see things amiss.

300d

Socrates: Well, many things of this kind are becoming evident before my soul, but I am not persuaded by them because they are not evident to you, a man who has made more money out of wisdom than any man alive, but to me, who, so far, has made nothing. And I am concerned, my friend, that you may be playing games with me and deceiving me intentionally when

they are so evident to me in such numbers and with such force.

Hippias: No one will know more beautifully than yourself, Socrates, whether I am playing games or not, if you would only attempt to say what it is that is becoming evident to you. For it will be evident that you are talking nonsense, since you will never find that a characteristic which neither you nor I possess is possessed by both of us.

300e

Socrates: What do you mean, Hippias? Perhaps you are talking sense, but I do not understand. But listen to me say with greater clarity what I want to say. For it appears to me that something I am not characterised as being, something I am not and you are not, is able to characterise both of us. What is more, there are others that both of us together are characterised as being, that neither of us is, individually.

301a

Hippias: You seem to be giving outrageous answers again, Socrates, even more so than your answer a moment ago. Yes, think about it. If both of us were just, wouldn't each of us be so too, or if each was unjust wouldn't both also be so, or if both were healthy, wouldn't each be so too? Or if each of us is tired or wounded or has been struck, or been affected in any other way at all, again, wouldn't both of us be affected in this way too? Then again, if we were both made of gold or silver or ivory, or, if you like, we were well-born, or wise, or revered, or aged, or indeed, young, or had any other human characteristic you please, isn't it absolutely necessary that each of us be so too?

301b

Socrates: Entirely so.

Hippias: The fact is, Socrates, you are not considering these matters as wholes, nor do those with whom you usually conduct your dialogues; you test the beautiful and each of the things that are, by taking them individually and breaking them into

pieces in words. Because of this, you are unaware of how naturally great and continuous are the bodies of being. And you are now unaware of this to such an extent that you think there is something, be it a characteristic or an essence that applies to both at the same time but not to each individually, or again, applies to each but not to both, so irrational, unreflective, simplistic and unthinking is your approach.

301c

Socrates: That is how matters stand with us, Hippias, as people are always repeating in the proverb, it is not according to a person's wishes but according to his ability. But you are our benefactor with your constant rebukes, since even now, before you rebuked us for our simplistic approach... shall I go on with the presentation and state what we have in mind about them, or shall I not speak?

301d

Hippias: You will be speaking to a man of knowledge, Socrates. For I know the approach of everybody who is concerned with speeches. Nevertheless, if it pleases you more, please speak.

Socrates: Yes, indeed, it is more pleasant. For, best of men, we were so stupid before you said all this, that we held an opinion about me and you, that although each of us is one, both of us together would not be what each of us is individually, because we are not one but two. That is how simple minded we were. But now at this stage, we have been taught otherwise by you, that if we are both two, each of us must also be two. Yet, if each is one, both must also be one. Indeed, according to Hippias, by the continuous theory of being, it cannot be otherwise, but whatever both may be, each must also be, and whatever each may be, both must be. So I have now been persuaded by you; that is where I stand. But first, remind me Hippias, are we one, you and I, or are you two, and am I also two?

301e

Hippias: What do you mean, Socrates?

302a

Socrates: Exactly what I say, for I am afraid to speak plainly to you because you get angry with me whenever you are of the opinion that you are talking sense. In any case, tell me more; isn't each of us one, and characterised in this way as being one?

Hippias: Absolutely.

Socrates: If this is the case, would each of us also be odd-numbered, or do you not consider one to be an odd number?

Hippias: I do consider it to be.

Socrates: So, being two, are we both also odd-numbered?

Hippias: That could not be so, Socrates.

Socrates: Then we are both even-numbered. Is that so?

Hippias: Absolutely.

302b

Socrates: So it is not the case that because we are both even-numbered, each of us is also even-numbered for that reason?

Hippias: Of course not.

Socrates: So it is not absolutely necessary, as you said just now, that what both are, each also is, and what each is, both also are.

Hippias: Not in such cases as these, but it is so in the cases I mentioned earlier.

302c

Socrates: That is sufficient, Hippias. Indeed, even this is satisfactory. It appears to be so in some cases and is not so in others. Yes, in fact, I said, if you recall how this discussion began, that pleasure through seeing or hearing would not be

beautiful by this, by that which characterises each of them but not both, or both of them but not each. No, because you agreed that they both and each are beautiful, they are beautiful by that by which both and each are beautiful. Because of this I thought that if both are indeed beautiful, it is by the essence that applies to both that they should be beautiful, and not by the essence that is missing from one or the other. And I still think so now. But tell me, as if starting all over again, if, in fact, pleasure through seeing and pleasure through hearing are both and each beautiful, doesn't that which makes them beautiful apply to them both and to each?

Hippias: Entirely so.

302d

Socrates: Now, is it because each and both are pleasure, is that why they would be beautiful? Or, in that case, would all other pleasures be no less beautiful than these? For, if you remember, they proved to be pleasure nonetheless.

Hippias: I remember.

Socrates: But because they operate through seeing and hearing, that is why it was said that they are beautiful.

Hippias: Yes, that's how it was expressed.

Socrates: But consider whether I am speaking the truth, for it was said, as I recall, that this 'pleasant' was beautiful, not all of it, but that which operates through seeing and hearing.

Hippias: True.

302e

Socrates: Now, doesn't this characteristic apply to both but not to each? For, presumably, as was stated previously, each of them is not through both, but both are through both, and each is not. Is this the case?

Hippias: It is.

Socrates: So it is not by this that each of them is beautiful, by what does not apply to each, for ‘both’ does not apply to each, and so according to the hypothesis it is permissible to say that they are both beautiful, but not permissible to say that each is so. Or what should we say? Isn’t this necessarily the case?

Hippias: Apparently.

Socrates: So should we say that both are beautiful, and yet say that each is not?

Hippias: What’s stopping us?

303a

Socrates: I think that what is stopping us, my friend, is that for us, there were attributes that applied to particulars in such a way that, if they were attributed to both they were also attributed to each, and if to each, also to both, all the attributes you listed. Is this so?

Hippias: Yes.

Socrates: But for the attributes that I listed this is not so, and these included ‘the each’ itself, and ‘the both’. Is this the case?

Hippias: It is.

303b

Socrates: Well, Hippias, to which of these does it seem to you that the beautiful belong? Does it belong with the group you mentioned? If I am strong and so are you, so also are we both; and if I am just and so are you, so also are we both; and if both are so, each is also so. In this way too, if I am beautiful and so are you, so also are we both; and if we are both, is each also so? Then there are the examples I said were occurring to me, why cannot it be like those? For instance, if certain things, both together are even, each might perhaps be odd or might perhaps be even; then again, when each is inexpressible, then both combined may perhaps be expressible, or may perhaps be

inexpressible; and there are countless other examples like this. Well, to which of these two do you assign the beautiful? Does it seem to you as it does to me? For I think it highly irrational that both of us together are beautiful while each of us is not, or that each of us is so, while both together are not so, or anything else of this kind. Do you choose this way, just like me, or the other way?

303c

Hippias: This way, Socrates.

Socrates: You are doing well, Hippias, since we may also be released from a more extensive enquiry, for if the beautiful belongs with these, then what is pleasant through seeing and hearing would no longer be the beautiful. For that which is through seeing and hearing makes both together beautiful, but not each; but this is impossible, as you and I agree, Hippias.

303d

Hippias: Yes, we agree.

Socrates: So it is impossible for what is pleasant through seeing and hearing to be beautiful, since if this becomes beautiful it presents us with one of the impossibilities.

Hippias: This is the case.

303e

Socrates: “Then, since you failed this time,” he will say, “tell me again, from the beginning, what you say this is, this beautiful that applies to both the pleasures, because of which you esteemed them above the others and called them beautiful.” Well, I think we have to say, Hippias, that they are the most harmless of the pleasures and the best, both together and each individually. Or can you suggest another way in which they excel over the others?

Hippias: Not at all. Indeed, they really are best.

Socrates: “So, then,” he will say, “are you stating that the beautiful is beneficial pleasure?” “We seem to be,” shall be my reply. And you?

Hippias: Me too.

304a

Socrates: “Now, isn’t beneficial,” he will say, “what makes something good? And what makes and what is made proved just now to be different, and so our argument goes back to the previous one, for the good would not be beautiful, nor would the beautiful be good, if each of them is indeed different.” “Entirely so,” we shall reply, Hippias, if we are of sound mind, for it is not lawful to disagree with someone who speaks aright.

304b

Hippias: But, Socrates, what do you think this all adds up to? The fact is that these are scrapings and clippings of discourse, as I said earlier, little subdivisions. But what is beautiful and really worthwhile is being able to present a speech well and beautifully in a court of law, a council chamber or before any other authority to whom you might present a speech, and having persuaded them, to depart bearing not some utterly trivial prize but the greatest prize of all, safety for yourself and for your own property and for your friends. To this one should cleave, bidding farewell to these trivial discussions lest one look like an utter fool by engaging in babbling nonsense, as you are doing now.

304c

Socrates: Friend Hippias, you are indeed blessed because you know what a man should practise, and you have engaged in the practices yourself, so you say. While I, by contrast, am gripped, it seems, by some supernatural occurrence, and so I am constantly wandering and perplexed, and once I demonstrate my own perplexity to you wise folk, I get trampled in the mire by yourselves again every time I demonstrate it. For I am told

what you have just told me, that I am busying myself with simplistic trivialities that are of no value. Then again, if I am ever persuaded by you and say what you say – that it is best by far to be able to present a speech well and beautifully in a court of law or in any other gathering – I hear nothing but abuse from this man who is constantly refuting me, and from some others hereabouts. He, in fact, happens to be my closest relative and he lives in the same house, so whenever I arrive back at my own home and he hears me saying all this, he asks if I am not ashamed at being so audacious as to discourse on the subject of beautiful activities when I have been so conspicuously refuted in relation to the beautiful that I obviously do not even know what on earth it is. “Yet how will you know,” he will say, “who does or does not present a speech or any other action whatsoever beautifully, when the beautiful is unknown to you? And when you are in such a state, do you think you are better off alive or dead?” So, as I say, that is what happens to me. I get abused and criticised by yourselves and abused by him. But, in fact, I probably need to endure all this, since, strangely, it may be beneficial. So I think, Hippias, that I have been benefited by this interaction with both of you, for I think I now understand the precise meaning of the proverb, “Whatever is beautiful is difficult.”

NOTES

1. Many scholars doubt that Plato was the author of this work.
2. Hippias of Elis was a noted sophist. In addition to the present work, he also features as the main interlocutor in Plato's *Hippias Minor*, he appears in the *Protagoras*, and is mentioned in a number of Plato's other dialogues.
3. Pittacus of Mytilene, Bias of Priene and Thales of Miletus were wise men who were counted among the Seven Sages.
4. Anaxagoras was a natural philosopher from Clazomenae in Ionia who lived a generation before Socrates.
5. Daedalus was a skilled architect and craftsman. He was said to have sculpted figures so real that they appeared to live and move.
6. Protagoras of Abdera was an influential sophist and teacher of rhetoric. He is depicted in Plato's eponymous dialogue, and positions attributed to him are considered in Plato's *Theaetetus*.
7. According to Anaxagoras, intelligence (*nous*) is the fundamental principle governing the universe.
8. The Archons were the top elected magistrates in Athens. Solon was a prominent Athenian lawgiver and statesman.
9. Neoptolemus was the son of Achilles. Nestor was the oldest among those who fought against the Trojans.
10. Six choes is equivalent to about three litres.
11. Heraclitus of Ephesus was a philosopher known for his gnomic utterances.
12. Fragment B82, Diels-Kranz.
13. Pheidias was a sculptor, painter and architect. He was noted for his gold and ivory statue of Zeus at Olympia, and the statue of Athena in the Parthenon at the Athenian Acropolis.
14. A dithyramb was a hymn sung in honour of Dionysus.
15. Socrates himself is the son of Sophroniscus.

Hippias Minor

persons in the dialogue:

EUDICUS of Athens, son of Apemantus

SOCRATES of Alopecce, son of Sophroniscus

HIPPIAS of Elis, son of Diopheithes

scene: Phidistratus' school in Athens

363a

Eudicus: Why are you silent, Socrates, when Hippias¹ has put on such a demonstration? Why don't you join in the praise, or if you think he said something wrong why don't you challenge him? Especially since we have been left to ourselves, we who seriously claim to be involved in philosophic discourse.

363b

Socrates: Yes, indeed, Eudicus, there are matters in what Hippias said just now about Homer on which I would like to question him. For I often heard your father, Apemantus, saying that Homer's Iliad was a better poem than his Odyssey, insofar as Achilles² was a better man than Odysseus, and one of these poems features Odysseus, while the other features Achilles. So if Hippias is willing, I would gladly question him about this matter, and what he thinks of these two men, and which of the two, according to him, is better. For he has indeed presented us with a great variety of information about various poets, including Homer.

363c

Eudicus: It is obvious that Hippias won't begrudge you an answer if you ask him anything. Is this so, Hippias? If Socrates asks you something, will you answer, or what will you do?

Hippias: I would be acting most strangely, Eudicus, if I were to avoid Socrates' questioning, I who always go from my home in Elis to Olympia to the assembly of the Greeks whenever it takes place, and make myself available at the shrine to speak on request on any matters I have prepared for exhibition, and to

answer any questions anyone wishes to ask.

364a

Socrates: You are indeed in a blessed state, Hippias, if for every Olympiad you arrive at the sanctuary with such confidence in the wisdom of your soul. I would be surprised if any of the athletes who come to compete physically had such fearless confidence in respect of their bodies as you claim to have in respect of your mind.

Hippias: Yes, Socrates, that probably is the state I am in. For, ever since I began competing at the Olympics, I have never come across anyone who was better than myself in anything.

364b

Socrates: Well said, Hippias, and this reputation for wisdom that you have is a monument both to the city of Elis and to your parents. But what then can you say to us about Achilles and Odysseus? Which of them, according to you, is better, and in what respect? Indeed, when there were a lot of us inside and you were giving your demonstration, I got left behind as you were speaking because there was such a large crowd in there and I did not want to interfere with the exhibition by questioning you. But now that there are fewer of us, and Eudicus here is telling me to question you, please speak and teach us clearly. What were you saying about these two men? How were you distinguishing them?

364d

Hippias: Well, Socrates, I am willing to explain what I am saying about these men, and others too, even more clearly than before. For I maintain that Homer made Achilles the best man of those who went to Troy, he made Nestor the wisest, and he made Odysseus the wildest.

Socrates: Oh dear, Hippias. Would you do me a favour and not laugh at me if I am slow to understand what you are saying and question you repeatedly? Try rather to answer me gently and

calmly.

Hippias: Indeed, Socrates, it would be a disgrace if I, who teach these very behaviours to others and see fit to charge them for doing so, were to be inconsiderate and harsh myself when responding to your questions.

364e

Socrates: Very nicely expressed. For when you said that Homer made Achilles the best man, and Nestor the wisest, I thought I understood what you meant. But when you say that the poet made Odysseus the wiliest, to tell you the truth, I don't fully understand what you are saying. Tell me now, and perhaps I may better understand you, does Homer make Achilles wily?

365a

Hippias: Not in the least, Socrates. He is, rather, the most straightforward and the truest, since in the 'Entreaties', when he is making them converse with one another, he has Achilles say to Odysseus: "Son of Laertes, seed of Zeus, resourceful Odysseus, / I must speak out without holding back / How I shall act and how I think it will end, / For as hateful to me as the gates of Hell / Is the man who holds one thing in his heart and speaks something else. / I for my part, shall speak as it will end." In these lines he makes the character of each man plain. Achilles is true and straightforward, while Odysseus is wily and false, for he makes Achilles speak these words to Odysseus.

365b

Socrates: Now, Hippias, I may at this stage understand what you are saying. You mean that the wily person is false, or so it appears.

Hippias: Very much so, Socrates. For Homer frequently depicts Odysseus as such a person in the Iliad and in the Odyssey.

Socrates: In that case, Homer seems to think that the person who is true and the person who is false are different people and

not the same.

Hippias: How could he think otherwise, Socrates?

Socrates: And do you yourself think so, Hippias?

Hippias: Emphatically so. It would be strange if I did not.

365c

Socrates: Well, let's leave Homer aside since it is impossible to question him on what precisely he had in mind when composing these verses. But since you are apparently taking up his cause and you agree with Homer's statements as you understand them, please respond on behalf of Homer and yourself together.

Hippias: Let's do so. Ask whatever you like, briefly.

365d

Socrates: Do you maintain that false people, like sick people, lack the power to do anything, or that they have the power to do something?

Hippias: I say that they have the power, a lot of power, to do a great deal, and especially to deceive people.

365e

Socrates: According to your argument then, they are, it seems, powerful and wily. Is this so?

Hippias: Yes.

Socrates: And are they wily and deceptive on account of simple-mindedness and lack of intelligence, or on account of cunning and of intelligence of some sort?

Hippias: Mainly on account of cunning, but also by intelligence.

Socrates: So, they are intelligent, or so it seems.

Hippias: Yes, by Zeus, excessively so.

Socrates: And being intelligent, do they, or do they not, know what they are doing?

Hippias: They know very well, that's why they also do harm.

Socrates: And knowing whatever they know, are they ignorant or wise?

366a

Hippias: Wise, indeed, in these very matters, in deceiving.

Socrates: Come on then, let's remind ourselves of what you are saying. According to you, do those who are false have power and intelligence, and are they knowledgeable and wise in those matters about which they are false?

Hippias: I say so, indeed.

Socrates: And those who are true and those who are false are different and completely opposite to one another?

Hippias: That's what I say.

Socrates: Come on then, according to your argument, the false people are, it seems, included among those who have power and are wise.

Hippias: Very much so.

366b

Socrates: And when you say that the false people have power and are wise in these very matters do you mean that they have the power to be false if they wish, or are they devoid of power in those matters wherein they are being false?

Hippias: I think they have the power.

Socrates: To sum up, then, the false people are those who are wise and have the power to be false.

Hippias: Yes.

Socrates: So, a man who is ignorant and devoid of the power to be false would not be false.

Hippias: That's it.

366c

Socrates: But anyone who can do whatever he wishes, whenever he wishes, has power. I am not referring to someone who is prevented by disease or the like, but to someone like you who has the power to write my name whenever he wishes. Don't you say that someone in such a situation has power?

Hippias: Yes.

Socrates: Tell me, then, Hippias, aren't you experienced in reckoning and calculation?

Hippias: Supremely so, Socrates.

Socrates: So, if someone were to ask you what number is three times seven hundred, you could, if you wished, state the truth of the matter faster and better than anyone?

366d

Hippias: Certainly.

Socrates: Because you are the most powerful and wisest in these matters?

Hippias: Yes.

Socrates: Now, are you merely the most powerful and the wisest, or are you also the best in these matters wherein you are the most powerful and the wisest, namely calculations?

Hippias: Of course I am also the best, Socrates.

366e

Socrates: Then you would also be most powerful at speaking the truth on such matters. Is this so?

Hippias: I think so.

Socrates: What about falsehoods on these same matters? Answer me just as splendidly and nobly as you did previously, Hippias. If someone were to ask you how much is three times seven hundred, would you be best at speaking falsehoods, and on the same matters, consistently speak falsehoods about them if you wished to be false and never give a true answer? Or might someone, ignorant of calculation, have more power to speak falsehoods than you if you wanted to? Or, on the contrary, might the ignorant fellow who wished to speak falsehoods, frequently speak the truth unintentionally, by chance, because of his lack of knowledge, while you in your wisdom, if indeed you wished to speak falsely, could consistently speak falsehoods on the same matters?

Hippias: Yes, that's it, just as you say.

367a

Socrates: Now, is the false person false about other matters but not about number? Would he not be false about numbers?

Hippias: By Zeus, he is also false about number.

Socrates: So, Hippias, should we also presume that there is such a person, someone who is false about calculation and number?

Hippias: Yes.

367b

Socrates: Now, who might this person be? If he is indeed to be false, mustn't he have the power to be false, as you have already agreed? For someone without the power to be false could never be false. That's what you said, if you remember.

Hippias: Yes, I remember. That's what was said.

Socrates: And were you not shown, just now, to have the most power to speak falsehoods about calculations?

Hippias: Yes, that's what was said.

Socrates: So, have you also the most power to speak the truth about calculations?

Hippias: Certainly.

Socrates: Therefore, the same person has the most power to speak truth and to speak falsehoods about calculations, and this is the person who is good at this, the calculator.

Hippias: Yes.

367c

Socrates: Who, then, is false about calculation, Hippias? Isn't it the person who is good at it since this very person also has the power and he is true?

Hippias: So it appears.

Socrates: Now, do you see that the same person is both true and false about these matters, and the true person is no better than the false person? For this is indeed the same person, and they are not two complete opposites as you thought earlier.

Hippias: Apparently not. Not in this case anyway.

367d

Socrates: Would you like to look at another example?

Hippias: If you like.

Socrates: Aren't you also experienced in geometry?

Hippias: I am.

Socrates: Well then, doesn't this also apply to geometry? The same person, namely the geometer, has the most power to speak falsehood or truth about the diagrams.

Hippias: Yes.

Socrates: And is anyone else good at this besides the geometer?

Hippias: No one else.

367e

Socrates: Doesn't the person who is a good and wise geometer have most power to do both? If anyone at all is false about diagrams, it would be this person, the good geometer. For he has the power to speak falsely, while the bad geometer lacks that power, so that as we agreed, the person without the power to be false could not be false.

Hippias: This is so.

368a

Socrates: Well, let's look at a third case, the astronomer, whose skill you think you know better than the previous two skills. Is this so, Hippias?

Hippias: Yes.

Socrates: Do the same arguments apply also in the case of astronomy?

Hippias: Quite likely, Socrates.

Socrates: Then, in astronomy too, if anyone is indeed false, the good astronomer, having the power to speak falsely, will be false, and not the person who lacks this power, for he is ignorant.

Hippias: Apparently so.

Socrates: So, in astronomy too, the same person will be both true and false.

Hippias: So it seems.

368b

Socrates: Come on then, Hippias, consider all branches of knowledge and whether or not this applies generally. You are surely the wisest of all men in most subjects, as I once heard you boasting while proclaiming your own extensive and enviable wisdom at the tables in the marketplace. You said that once when you arrived at Olympia, everything you were wearing

about your person was entirely of your own making. Firstly, the ring you are wearing – you began with that – was your own handiwork, proving that you know how to engrave rings. And another seal was also your own work, as was a strigil⁴, and a flask which you yourself had fashioned. Then you said that you had cut from leather the very sandals you had on, and had woven your cloak and tunic. But what seemed most unusual to everyone, and a demonstration of your superior wisdom, was when you said that the belt of your tunic, the very one you are wearing, was just like those very expensive Persian belts, and that you had woven this yourself. What's more, you said you had brought poems with you, epics, tragedies, and dithyrambs, and lots of speeches in prose, in great variety. There you were, superior to everyone else in the subjects I just mentioned, and in correctness in rhythms, harmonies and letters, and many other matters besides these, as I seem to recall. And, indeed, I had forgotten your skill in memory, as it seems, in which you believe yourself to be most brilliant, and I suspect that I have overlooked many other examples. But what I am asking is that you look at your own skills – there are enough of them – and those of others, and let me know if you can somehow find, as you and I have agreed, a situation where the true person and the false person are distinct people and not the same person. Look for this in any wisdom or in any cunning you like, call it what you like, but you will not find it, my friend, for there is no such thing. So, please respond.

Hippias: I can't, Socrates, not offhand anyway.

Socrates: Nor, I believe, will you ever be able to. But if I am speaking the truth, Hippias, you remember what we concluded from our argument.

Hippias: I don't fully understand what you mean, Socrates.

Socrates: Perhaps you are not using your skill in memory at the moment, for you obviously think you don't need it. But I'll remind you. You know that you said that Achilles was true, while Odysseus was false and wily?

Hippias: Yes.

Socrates: Do you now, then, realise, the false person and the true have proved to be the same, so that if Odysseus was false, he also turns out to be true, and if Achilles was true, he also turns out to be false, and these men are not even different from one another, let alone opposites; they are, rather, alike?

369c

Hippias: Socrates, you are always weaving arguments of this sort, picking the most difficult aspect of the argument, latching onto that in minute detail, and failing to tackle the overall subject that the argument is concerned with. So now, if you wish, based upon much evidence, I'll prove to you with an adequate argument that Homer made Achilles superior to Odysseus and devoid of falsehood, while he made Odysseus a deceitful man who told many falsehoods and was inferior to Achilles. And if you wish, you, for your part, should match argument with argument, contending that the other man is superior, and then these people here will better appreciate which of us is arguing better.

369d

Socrates: Hippias, I do not dispute the fact that you are wiser than I am. But it is my constant habit to pay attention whenever anyone says anything, especially when I think that the speaker is wise. Then, because I want to understand what he is saying, I ask questions and scrutinise and compare his various statements in order to learn. But if I think the speaker is inferior, I ask no questions and I don't care what he says. And that is how you will recognise which people I regard as wise. For you will find that I am relentless about what is said by such a

person, putting questions to him so that I may benefit by learning something. When you were speaking just now, demonstrating that Achilles speaks to Odysseus as if he were a pretender in the verses you just quoted, it occurred to me that this sounds strange. If you are speaking the truth, that Odysseus, the wily, is not shown to be speaking falsely anywhere, while Achilles is shown to be a wily person, it is strange that he speaks falsely. For Achilles first speaks the lines you quoted just now: "For as hateful to me as the gates of Hell / the man who holds one thing in his heart and speaks something else." But a little later he says that he will neither be persuaded by Odysseus nor by Agamemnon, nor will he remain at Troy at all. He says rather: "Tomorrow, when I have sacrificed to Zeus and to all gods, / and loaded well my ships, and rowed out on to the salt water, / you will see, if you have a mind to it and if it concerns you, / my ships in the dawn at sea on the Hellespont where the fish swarm / and my men manning them with good will to row. If the glorious / shaker of the earth should grant us a favouring passage / the third day thereafter we might raise generous Phthia." And even before this, when he was reviling Agamemnon, he said: "Now I am returning to Phthia, since it is much better / to go home again with my curved ships, and I am minded no longer / to stay here dishonoured and pile up your wealth and your luxury." Having said all this, once in front of the entire army and again to his own companions, he is shown nowhere either preparing for his departure or even attempting to drag down his ships in order to sail home. Instead, he is shown to have a most audacious disregard for speaking the truth. Now, Hippias, I have been questioning you since we began, out of perplexity, as to which of these two men the poet makes better, and being of the view that both were excellent, I found it hard to decide who was better in terms of falsehood and truth, and in terms of excellence in general, since they are both similar in this respect.

370e

Hippias: That's because you are not looking at this in the right way, Socrates. For although Achilles speaks falsehoods, he is shown to be false not by design, but unintentionally, being compelled to remain and provide assistance because of the misfortune of the army, while Odysseus on the other hand speaks falsehoods intentionally and by design.

Socrates: You are deceiving me, my dearest Hippias, and imitating Odysseus yourself.

371a

Hippias: Not at all, Socrates. What do you mean and what are you referring to?

Socrates: The fact that, according to you, Achilles did not speak falsehoods by design, even though Homer makes him such a cheat, and, indeed, a pretender too. And so he is shown to be much more intelligent than Odysseus whom he deceives so easily without being noticed, having the audacity to contradict himself in front of Odysseus who does not even notice. In any case, Odysseus says nothing to Achilles to indicate that he is aware of his falsehoods.

371b

Hippias: What are you referring to, Socrates?

Socrates: Don't you know that when speaking later, having already told Odysseus he was going to sail away at dawn, he then told Ajax that he would do something else?

Hippias: Where?

Socrates: In the lines in which he says: "I shall not think again of the bloody fighting / until such time as the son of wise Priam, Hector the brilliant, / comes all the way to the ships of the Myrmidons, and their shelters, / slaughtering the Argives, and shall darken with fire our vessels. / But around my own shelter, I think, and beside my black ship / Hector will be held, though

he be very hungry for battle.” Well now, Hippias, do you believe the son of Thetis, having been educated by the all-wise Chiron, was so forgetful that although he had been reviling pretenders a little earlier with extreme revulsion, he first told Odysseus that he would sail away, and then told Ajax that he would stay? Surely he said this deliberately, in the belief that because Odysseus was aged, he could get the better of him by this very contrivance and falsehood?

371e

Hippias: No, I don’t think so, Socrates. In this case, he was moved by kindness to say one thing to Ajax, and something different to Odysseus. But whatever truths Odysseus speaks, he always speaks by design, and the same holds for his falsehoods.

Socrates: Then, Odysseus is, it seems, better than Achilles.

Hippias: Not in the least, Socrates.

Socrates: Why not? Just a moment ago didn’t those who intentionally tell falsehoods prove to be better than those who do so unintentionally?

372a

Hippias: But how, Socrates, could those who intentionally do injustice and who intentionally and purposely do bad deeds, be better than those who do so unintentionally? In such cases, there seems to be great leniency when someone unknowingly acts unjustly or falsely, or does something bad. Indeed, the laws are presumably much harsher towards those who intentionally act badly or falsely than they are to those who do so unintentionally.

372b

Socrates: Do you see, Hippias, that I am speaking the truth when I state how persistent I am when it comes to questioning the wise? And it is quite likely that this is the one and only good quality I possess, any others I have being significantly inferior.

For I am at a loss about things, and I don't know how matters stand. I have enough evidence for this in the fact that whenever I converse with one of you people with a great reputation for wisdom, whose wisdom is attested by all the Greeks, I am shown to know nothing. For almost nothing seems the same to me as it does to yourselves. And, indeed, is there any greater evidence of ignorance than when one differs from wise men? But I am possessed of one marvellous good quality that saves me, for I am not ashamed to learn. Rather, I enquire and ask questions and I am very grateful to whoever answers me, and I have never withheld my gratitude from anyone. Indeed, I have never denied the fact that I have learned something by pretending that what I had learned was my own discovery. Instead, I praise the person who taught me for his wisdom, and I proclaim whatever I have learned from him. And, indeed, right now I do not agree with what you are saying. In fact, I differ very strongly and I know quite well that this is my own fault, because I am the sort of person that I am, and I don't claim to be any better. For to me, Hippias, it appears, in total contradiction of what you are saying, that those who harm people and act unjustly, falsely and deceptively, not unintentionally but intentionally, are better than those who do so unintentionally. Sometimes, however, I am of the opposite opinion to this and am confused about these matters, obviously because of my not knowing. But now, at the moment, a swoon of some sort has come over me, and I am of the opinion that those who intentionally do wrong in some respect are better than those who do so unintentionally. I hold the previous arguments responsible for causing my present predicament whereby now, at the moment, it appears to me that those who unintentionally do any of these misdeeds are worse than those who do so intentionally. So please be kind to me and don't begrudge me this healing of my soul. For you will do me far more good by putting a stop to this ignorance of my soul than by curing a

physical disease. Now, if you propose to deliver a lengthy speech, I am telling you in advance that you will not cure me. But if you are willing to answer my questions as you did earlier, you will benefit me, and you yourself, I believe, will come to no harm. I might well call upon you too, dear son of Apemantus, since you have inspired me to converse with Hippias. If Hippias is unwilling to answer my questions, you should ask him to do so on my behalf.

372e

Eudicus: But, Socrates, I don't think that Hippias will need a request from us. That's not what he said initially. He said, rather, that he would not evade the questioning of any man. Is this so, Hippias? Isn't that what you said?

Hippias: I did, Eudicus, but Socrates always causes confusion in arguments and seems to be up to no good.

373a

Socrates: Hippias, best of men, at least I don't do this intentionally, in which case I would be wise and clever according to your argument. I am, rather, acting unintentionally, so you should forgive me, since, according to you, someone who unintentionally behaves badly should be forgiven.

Eudicus: Please do just that, Hippias. For our own sakes, and because of what you said at the outset, please answer any questions Socrates asks you.

Hippias: At your request I will answer. Just ask any question you wish.

373b

Socrates: Yes, indeed, Hippias, I really want to investigate the matter we are now discussing, whether those who do wrong intentionally are the better people, or those who do so unintentionally. Now, I think the most correct way to set about

the enquiry is as follows. Please answer me. Is there someone whom you call a good runner?

Hippias: Yes.

Socrates: And a bad runner?

Hippias: Yes.

Socrates: Isn't the one who runs well good, while the one who runs badly is bad?

Hippias: Yes.

Socrates: Doesn't the one who runs slowly run badly, while the one who runs quickly runs well?

Hippias: Yes.

Socrates: In a race then, and in running, speed is good while slowness is bad?

373c

Hippias: Of course.

Socrates: Now, who is the better runner, the one who intentionally runs slowly or the one who does so unintentionally?

Hippias: The one who does so intentionally.

Socrates: And to run is to do something, is it not?

Hippias: To do something, indeed.

Socrates: And if to do something, then also to perform some action, isn't this so?

373e

Hippias: Yes.

Socrates: So, whoever runs badly performs this bad and disgraceful action in a race?

Hippias: Yes, a bad action, of course.

Socrates: And whoever runs slowly runs badly?

Hippias: Yes.

Socrates: Doesn't the good runner intentionally perform this bad and shameful action, while the bad one does so unintentionally?

Hippias: So it seems anyway.

374a

Socrates: So, in a race, the one who unintentionally performs bad actions is more base than the one who intentionally does so.

Hippias: In a race, yes.

Socrates: What about in wrestling? Who is a better wrestler, the one who falls intentionally or the one who does so unintentionally?

Hippias: The one who falls intentionally, it seems.

Socrates: And in wrestling, is it worse and more disgraceful to fall down or to throw someone down?

Hippias: To fall down.

Socrates: So, in wrestling too, the one who intentionally performs base and disgraceful actions is a better wrestler than the one who does so unintentionally.

Hippias: So it seems.

374b

Socrates: What about all activity of the body, generally? Doesn't the one who is better physically have the power to perform both actions, the strong and the weak, the shameful and the good? Consequently, whenever the one who is physically better performs bodily actions that are base, he does so intentionally, while the one who is physically worse performs them unintentionally.

Hippias: Yes, this seems to be the case in respect of physical strength too.

Socrates: What about elegance, Hippias? Isn't the better body able, intentionally, to adopt shameful and base appearances, while the more base body does so unintentionally? How does it seem to you?

Hippias: As you say.

374c

Socrates: So, inelegance too, when intentional, is associated with physical excellence, but when unintentional, with baseness.

Hippias: So it appears.

Socrates: What do you say about the voice? Which do you say is better, the one that intentionally goes out of tune or the one that does so unintentionally?

Hippias: The one that does so intentionally.

Socrates: Is the one that does so unintentionally in a worse predicament?

Hippias: Yes.

Socrates: And would you choose to acquire what is good or what is bad?

Hippias: What is good.

Socrates: And would you choose to have feet that are intentionally lame or unintentionally so?

374d

Hippias: Intentionally so.

Socrates: Isn't lameness a baseness and inelegance of the feet?

Hippias: Yes.

Socrates: What about poor sight, isn't this a baseness of the eyes?

Hippias: Yes.

374e

Socrates: So, which sort of eyes would you like to have and live with, those with which you could intentionally see dimly and abnormally, or those with which this would be unintentional?

Hippias: Those with which it would be intentional.

Socrates: So, you are of the view that any parts of yourself that intentionally perform base actions are better than those that do so unintentionally?

Hippias: Yes, at least in such cases as these.

Socrates: So, a single argument holds in all such cases as ears, nose, mouth and all the senses; those that involuntarily perform bad actions are undesirable because they are base, while those that do so intentionally are desirable because they are good.

Hippias: I think so.

Socrates: What about instruments? Is it better to use those with which you perform bad actions intentionally or unintentionally? For instance, is a rudder by which you will unintentionally steer badly better than one by which you will do so intentionally?

Hippias: The one by which you do so intentionally is better.

Socrates: Doesn't the same also hold for a bow, a lyre, for flutes, and any other examples at all?

Hippias: True.

375a

Socrates: What about a horse? Is it better to have one with a soul such that you could intentionally ride badly, or such that this happens unintentionally?

Hippias: Intentionally.

Socrates: So that soul is better?

Hippias: Yes.

Socrates: So, by the better soul of a horse someone may intentionally perform the base actions of that soul, while with the worse soul he does so unintentionally.

Hippias: Certainly.

Socrates: Doesn't the same hold for a dog and all the other animals?

Hippias: Yes.

375b

Socrates: What about a person? Is it better to have acquired an archer's soul that intentionally goes off target, or one that does so unintentionally?

Hippias: Intentionally.

Socrates: Isn't this soul also better at archery?

Hippias: Yes.

Socrates: And so the soul that unintentionally goes wrong is more base than the one that does so intentionally?

Hippias: Yes, at least in the case of archery.

Socrates: What about medical skill? Isn't the soul that intentionally performs actions that are bad for the body more skilled in medicine?

Hippias: Yes.

Socrates: So this soul is better at this skill than the one that does not act intentionally.

Hippias: Yes, better.

375c

Socrates: And what about the soul that is better at playing the cithara or the flute or doing anything else that involves skill and knowledge? Doesn't the better soul intentionally perform bad and shameful actions and do wrong, while the more base soul does so unintentionally?

Hippias: Apparently.

Socrates: And, indeed, we would presumably choose to acquire slaves whose souls intentionally go wrong and act badly, as they are better in these respects than those that do so unintentionally.

Hippias: Yes.

Socrates: And what about our own souls? Wouldn't we wish to acquire the best ones possible?

375d

Hippias: Yes.

Socrates: Won't it be better if it intentionally acts badly and goes wrong, and not unintentionally?

Hippias: But it would be terrible, Socrates, if those who intentionally do injustice are to be better than those who do so unintentionally.

Socrates: And yet that is how they appear, at least from what has been said.

Hippias: Not to me.

Socrates: But I thought they appeared so to you too, Hippias. Please respond once more. Isn't justice some sort of power or knowledge, or both? Must not justice necessarily be at least one of these?

Hippias: Yes.

Socrates: Now, if justice is a power of the soul, then the more powerful soul is more just, is it not? For it appeared to us, best of men, that such a soul is better.

Hippias: It appeared so, indeed.

Socrates: And what if justice is knowledge? Isn't the wiser soul more just while the more ignorant soul is more unjust?

Hippias: Yes.

Socrates: And what if justice is both? Isn't the soul that possesses both knowledge and power more just, while the more ignorant soul is more unjust? Isn't this necessarily the case?

Hippias: So it appears.

376a

Socrates: Didn't this more powerful and wiser soul prove to be better and to have more power to do both what is good and what is shameful in any sort of activity?

Hippias: Yes.

Socrates: So, whenever it performs disgraceful actions, it does so intentionally by means of power and skill, either of these, or both, apparently being attributes of justice.

Hippias: So it seems.

Socrates: And to act unjustly is to do bad, while not to do injustice is to do good.

Hippias: Yes.

Socrates: In that case, won't the more powerful and better soul do injustice intentionally whenever it does so, while the base soul does so unintentionally?

Hippias: Apparently.

376b

Socrates: Is not the good man the one who has the good soul while the bad man has a bad one?

Hippias: Yes.

Socrates: So it belongs to a good man to do injustice intentionally and to a bad man to do so unintentionally, if indeed the good man has a good soul.

Hippias: Which he surely has.

Socrates: So, if there is anyone who intentionally goes wrong and does what is disgraceful and unjust, that person, Hippias, is none other than the good person.

Hippias: Socrates, on this I am unable to agree with you.

376c

Socrates: Nor can I agree with myself, Hippias. But now at least, this is how it necessarily appears to us from the argument. However, as I said earlier, I myself wander up and down and never hold the same opinions on these issues. And although it is no surprise if I or any ordinary fellow wanders, if you wise men are going to wander too, this will prove quite daunting for us, since even after we arrive in your company we shall not cease our wandering.

NOTES

1. Hippias of Elis was a noted sophist. In addition to the present work, he also features as the main interlocutor in Plato's *Hippias Major*, he appears in the *Protagoras* and is mentioned in a number of Plato's other dialogues.
2. The 'Entreaties' is the portion of the *Iliad* in which Odysseus, Ajax and Phoenix try to persuade Achilles to overcome his anger and rejoin the fight against the Trojans.
3. *Iliad* ix.308-310, 312-314. Plato does not have Hippias quote these lines exactly, and he omits a portion of the text.
4. A strigil was a bladed tool used to scrape dirt, oil and perspiration from one's body.
5. *Iliad* ix.357-363, Lattimore.
6. *Iliad* i.169-171, Lattimore.
7. *Iliad* ix.650-655, Lattimore.

persons in the dialogue:

SOCRATES *of Alopecce, son of Sophroniscus*

ION *of Ephesus, rhapsode*

scene: unspecified public place in Athens

530a

Socrates: Greetings Ion, from where are you visiting us today? From your home in Ephesus¹?

Ion: Not at all, Socrates. No, I have come from the festival of Asclepius at Epidaurus.

Socrates: Oh, have the Epidaurians also instituted a contest for rhapsodes in honour of the god?

Ion: They have indeed, and for music and poetry in general.

Socrates: Well then, did you compete for us? How did you get on?

530b

Ion: We came away with first prize, Socrates.

Socrates: That is good to hear. Make sure that we win at the Panathenaea too.

Ion: That will happen, God willing.

Socrates: And indeed, Ion, I have often been envious of the skill of you rhapsodes. For it is always appropriate to this profession of yours that you are dressed up and look as beautiful as you possibly can. And again, we envy the fact that you need to occupy your time with various poets, lots of them, good ones too, and especially with Homer, the best and most divine of them all, and thoroughly understand his thought and not his words alone. For no one could ever be a good rhapsode unless he understood the sayings of the poet. Indeed, the rhapsode must act for the audience as an interpreter of the thought of the poet, and it is impossible to do this properly without knowing

what the poet means. And all this is enviable.

530c

Ion: That's true, Socrates. Yes, for me this constitutes the main function of my skill. Indeed, I believe that I discourse on Homer more beautifully than anyone else. And I think neither Metrodorus of Lampsacus, nor Stesimbrotos of Thasos, nor Glaucon, nor anyone else that was ever born has had so many beautiful reflections to offer on Homer as I have.

530d

Socrates: Well said, Ion. Yes, you obviously won't begrudge me a demonstration.

Ion: Yes indeed, Socrates, it is well worth hearing how nicely I have embellished Homer. I believe I deserve to be crowned with a wreath of gold by the Homerids.

531a

Socrates: And I shall indeed make time to listen to you some time, but for now please answer this question for me. Are you an expert only on Homer, or on Hesiod and Archilochus too?

Ion: Not at all, Socrates, only on Homer. I think that is enough.

531b

Socrates: And is there anything about which both Homer and Hesiod say the same things?

Ion: Yes, I think there are many.

Socrates: Now, would you better interpret what Homer says about such matters than what Hesiod says?

Ion: Well, Socrates, on matters where they say the same things, it would make no difference.

Socrates: What about matters where they do not say the same things? For example, both Homer and Hesiod have something to say about prophecy.

531c

Ion: Certainly.

Socrates: Well then, would you yourself or one of the good prophets better explain the extent to which these two poets agree about prophecy, and the extent to which they differ?

Ion: One of the prophets.

Socrates: But if you were a prophet, if you were indeed able to explain what they agree about, wouldn't you know also how to explain what they differ about?

Ion: Of course.

531d

Socrates: So, on what precisely are you an expert in relation to Homer, but not in relation either to Hesiod or the other poets? Or does Homer speak on some matters that are different from what all the other poets speak of? Doesn't Homer give accounts of warfare and the dealings with one another of good people and bad, private citizens and craftsmen, and how the gods deal with one another and with humanity, what happens in heaven and in Hades, and the births of gods and heroes? Are these not the subjects of Homer's poetry?

Ion: That's true, Socrates.

Socrates: What about the other poets? Don't they write on the same subjects?

Ion: Yes, Socrates, but they don't compose like Homer does.

Socrates: I see. Are they worse?

Ion: Much worse.

Socrates: And is Homer better?

531e

Ion: Better indeed, by Zeus.

Socrates: Well now, dearest Ion, whenever a number of people are speaking about arithmetic and one person speaks better than the others, someone will presumably recognise who the good speaker is?

Ion: I agree.

Socrates: Now, will the same person or someone else also recognise the bad speaker?

532a

Ion: The same person, I presume.

Socrates: Wouldn't that person be someone who is skilled in arithmetic?

Ion: Yes.

Socrates: What about this? Whenever a number of people are speaking about the kind of foods that are healthy, and one person speaks best, will a different person or the same person recognise that the best speaker speaks best and that the worse speaker speaks worse?

Ion: The same person, of course.

Socrates: Who is this person? What is the name for him?

Ion: A physician.

Socrates: To sum up, then, we are saying that when a number of people are speaking about the same matters, the same person will always recognise both who is speaking well and who is speaking badly. Or if the person does not recognise who is speaking badly, neither will he, of course, recognise who is speaking well on the same matter.

Ion: Quite so.

Socrates: So the same person is an expert in relation to both?

Ion: Yes.

Socrates: Now, you maintain, don't you, that Homer and the other poets, including Hesiod and Archilochus, speak about the same things but not in the same way; one speaks well, the others not so well.

Ion: Yes, and what I say is true.

532b

Socrates: Therefore, since you recognise who speaks well, you would also recognise that those who speak less well are speaking worse.

Ion: Quite likely.

Socrates: In that case, best of men, we shall not be in error if we say that Ion is as much an expert when speaking about Homer as he is when speaking of the other poets, since he himself agrees that the same person will be an adequate judge of all those who speak about the same matters, and all of the poets write, more or less, about the same things.

532c

Ion: Well then, Socrates, can you explain why, when someone discusses some other poet, I pay no attention and am unable to contribute anything of note? I simply doze off. But once someone mentions Homer, I am immediately awake, I pay attention and have plenty to say.

Socrates: This is not a difficult question, my friend. No, it is obvious to anyone that you lack the ability to speak skilfully and knowledgeably about Homer. For if you were able to speak skilfully about him you would also be able to speak about all the other poets, since poetry is presumably one whole, is it not?

Ion: It is.

532d

Socrates: Now, once someone grasps any other skill as a whole, will the same manner of enquiry apply to all of the other skills? Do you need me to explain what I mean by this, Ion?

Ion: I do, by Zeus, Socrates. Indeed, I enjoy listening to you wise men.

532e

Socrates: I wish you were speaking the truth, Ion. But it is, I believe, you rhapsodes and actors and those whose poems you recite, who are wise, while I do nothing but speak the truth like any common person. Take the question I just asked you. See how ordinary and commonplace it is. Anyone at all could understand my meaning. Is the enquiry the same once someone has understood a skill as a whole? Let's come to an understanding by means of an argument. Is there a skill of painting as a whole?

Ion: Yes.

Socrates: And there are, and there have been, many good and not so good painters.

Ion: Certainly.

533a

Socrates: Well, have you ever come across anyone who is an expert in pointing out what Polygnotus, the son of Aglaophon, paints well, and what he does not, while being unable to do so in the case of other painters? Do you know anyone who dozes off, is at a loss, and has nothing to contribute whenever anyone exhibits the works of the other painters, but is wide awake, attentive, with plenty to say when asked to give an opinion on Polygnotus or any other painter you wish, and on that one alone?

Ion: No, by Zeus. Not at all.

533b

Socrates: What about sculpting? Have you ever come across anyone who is an expert in explaining what's good about the works of Daedalus, son of Metion, or Epeius, son of Panopeius, or Theodorus, son of Zamion, or any other individual sculptor,

but is at a loss, dozes off, and has nothing to say, when faced with the works of the other sculptors?

Ion: No, by Zeus, I have not come across this either.

533c

Socrates: Then again, in the case of flute-playing, or playing the cithara whilst singing or not singing, or performing as a rhapsode, I am sure you have never come across someone who is an expert in explaining about Olympus or Thamyris or Orpheus or Phemion, the Ithacan rhapsode, while being at a loss about Ionos of Ephesus, with nothing to contribute in relation to what he performs well or ill.

533d

Ion: I am unable to argue against you on this, Socrates. But I am aware that I speak more beautifully about Homer than anyone else. I have plenty to say, and everyone agrees that I speak well. But I don't speak well about the others. So please, look at what this means.

Socrates: I am looking, Ion, and I'm going to show you what this means, in my opinion. Indeed, as I just said, your speaking well about Homer is not a skill you possess but a divine power that moves you, like the power in the stones that Euripides called Magnets and most people call Heracleon. And, indeed, the stone itself not only attracts rings that are made of iron, but also imparts power to the rings themselves so that they in turn are able to do the same thing as the stone, and attract other rings. Sometimes there is a very long chain of iron rings, but these are all suspended by the power derived from that stone. In this way, too, the Muse herself inspires people, and through these inspired people others are also inspired in a connected chain. For all our epic poets, the good ones, deliver all of their beautiful poems, not by skill, but whilst inspired and possessed. The same holds for our good lyric poets. Just as Corybantes are not in their sane mind when they dance, so too do our lyric

poets compose their beautiful melodies when they enter into the harmony and rhythm, and are frenzied and possessed like the bacchantes who draw honey and milk from the rivers whilst possessed, but not when they are in their sane mind. The soul of our lyric poets does this too, as they themselves confirm. The poets tell us, I believe, that from springs flowing with honey in some gardens and groves of the Muses, they fly like bees gathering melodies and bringing them to us, just as bees do. And what they say is true. For a poet is something light, winged and sacred, unable to compose until inspired, out of their sane mind, with reason no longer present within. But as long as anyone retains possession of this, it is impossible for such a person to compose anything or to engage in prophecy. Now, since it is not by skill but by a divine portion that they compose and have so many beautiful things to say about various matters, as you do about Homer, each of them can only compose in a beautiful manner whatever the Muse impels them to compose. In one case, this will be dithyrambs, and in another it will be encomia or dance songs or epics or iambics, and each of them will be bad at anything else. For they do not speak any of this because of skill, but because of the divine power, since, if in one case they knew how to speak beautifully by means of skill, they would also know how to do so in all other cases too. That is why the god takes reason away from them, using them as his underlings, like prophets and divine seers. This is so that we who hear them may know that the speakers, being devoid of reason, are not the ones making such valuable pronouncements. Rather, the god himself is speaking, making pronouncements to us through these people. A great proof of this argument is the example of Tynnichos of Chalcis, who never composed another work that anyone might deem worthy of mention, but he did compose the hymn that everyone sings, perhaps the most beautiful melody of all, which really is, as he says himself, “an invention of the Muses”. Indeed, I believe that

in this case in particular, the god is demonstrating to us beyond doubt that these beautiful compositions are not human productions of mere humans, but are divine compositions of gods. The poets then are nothing more than the gods' interpreters, possessed by one or other of the gods. To point this out to us, the god deliberately sang this most beautiful song through the least of our poets. Do you think this is true, Ion?

535a

Ion: Yes, by Zeus, I do indeed. For your words touch my soul, Socrates, and I believe that it is by a divine portion that the good poets interpret for us these pronouncements from the gods.

Socrates: Don't you rhapsodes, in turn, interpret for us the pronouncements of the poets?

Ion: That's true too.

Socrates: Then you are interpreters of interpreters?

Ion: Entirely so.

535b

Socrates: Well, stop there, Ion. Answer the question I'm about to ask you and hide nothing. You do well at reciting epic poems and utterly astonish your audience by singing of Odysseus leaping onto the threshold, revealing himself to the suitors and pouring forth the arrows at his feet, or of Achilles lunging at Hector, or when reciting something piteous about Hecuba or Priam. Now, when you do this, are you in your sane mind or are you outside of yourself? Does your inspired soul believe that you are in the midst of the events you are describing in Ithaca or Troy, or wherever the epics are based?

535c

Ion: The example you are giving is quite clear, Socrates. I'll hide nothing from you. Indeed, when I recount something piteous, my eyes fill with tears, and when the story is frightening or

awful, the hairs of my head stand on end from fear and my heart pounds.

535d

Socrates: Well then, Ion, are we to say that a person is sane of mind who, adorned in finery and wearing a wreath of gold, laments at sacrifices and festivals although none of his adornments are under threat? Is a person sane of mind who is fearful in front of more than 20,000 friendly people, even though none of them are robbing him or doing him wrong?

Ion: No, by Zeus, Socrates, not really, to tell you the truth.

Socrates: Now, are you aware that you rhapsodes also affect most of your audience in these same ways?

535e

Ion: I know only too well. Yes, every time I look down upon them from the stage they are weeping, looking at me in awe, sharing the astonishment of the tales. In fact, I need to pay close attention to them because if I set them weeping, I'll be laughing for the money I make, but if I set them laughing, I'll be weeping for the money I've lost.

536a

Socrates: Now, do you know that the spectator is the last of the rings I spoke of which receive from one another the power that comes from the Heracleian stone? The intermediate ring is yourself, the rhapsode, or actor, and the first ring is the actual poet. But the god, making all of these people dependent on one another for their power, through them, draws the soul of us humans to wherever he wishes. And a vast chain of dancers, teachers and tutors hangs from the side of the rings suspended from the Muse, just as they do from that original stone. One poet hangs upon one Muse, another poet upon another Muse, and we use the phrase "he is possessed", and this is well-nigh the case because he is 'held'. And from these initial rings (the poets), others in turn are hanging and are inspired from

another, some from Orpheus and others from Musaeus, but most are held and inspired by Homer. You, Ion, are one of those. You are possessed by Homer, and once any other poet is recited you fall asleep and have nothing to say. But once some strain of this poet is uttered you are immediately awake, your soul dances, and you have plenty to say. This is because you don't say what you say about Homer due to skill or knowledge, but due to possession and a divine portion. You are just like the Corybantes who are keenly aware only of the particular melody of the god who possesses them, and are well equipped with gestures and phrases for that melody, but pay no heed to the others. And, Ion, you asked me to explain why you have so much to say about Homer but not about the others. Well, this is because you are an expert advocate of Homer due to a divine portion rather than skill.

536d

Ion: Well said, Socrates. However, I would be surprised if you were to speak well enough to convince me that when I praise Homer, I do so whilst possessed or insane. And I don't think you would hold this view of me if you were to hear me speaking about Homer.

536e

Socrates: And I do want to hear you, but not before you answer the following question for me. Which of the topics dealt with by Homer are you good at speaking about? Surely not about all of them?

Ion: Mark my words, Socrates, there are no exceptions.

Socrates: Surely this is not true of the topics referred to by Homer, of which you have no knowledge?

Ion: What sort of topics does Homer speak of which I know nothing about?

Socrates: Doesn't Homer, in various places, make many references to skills? For example, about chariot driving. If I can recall the lines, I'll recite them for you.

Ion: No, I'll recite them. I certainly remember them.

Socrates: Then tell me what Nestor says to his son, Antilochus, when advising him to be careful about the turning post during the chariot race in honour of Patroclus.

537a

Ion: "...and yourself, in the well-polished chariot, lean over / a little to the left of the course, and as for your right horse, whip him / and urge him along, slackening your hands to give him his full rein, / but make your left-hand horse keep hard against the turning-post / so that the hub's edge of your fashioned wheel will seem to be / touching it, yet take care not really to brush against it..."

Socrates: That's enough. Now, Ion, who would better understand whether or not, in these lines, Homer is speaking correctly? A physician or a charioteer?

Ion: A charioteer, of course.

Socrates: Is this because he possesses that particular skill, or for some other reason?

Ion: No, it's because he has the skill.

537b

Socrates: So, has each of the skills been endowed by the god with the ability to understand some activity? For, presumably, whatever we understand through the skill of steering could not also be understood by medical skill.

Ion: Of course not.

Socrates: Nor could whatever is understood through medical skill also be understood through the skill of carpentry.

Ion: Of course not.

537c

Socrates: Isn't it the case with all skills that whatever we understand by one skill, we could not understand by another? But answer me this first. Do you agree that one skill is different from another?

Ion: Yes.

Socrates: Do you argue, as I do, that whenever there is a knowledge of various things and a knowledge of various other things, I call one knowledge a skill, and the other knowledge a different skill. Is this what you do too?

Ion: Yes.

537d

Socrates: Indeed, if knowledge were somehow a knowledge of the same things, why would we maintain that one knowledge is different from another, when the same things could be known by both? For instance, I understand that these fingers are five in number, and you understand the same thing about them as I do. And if I were to ask you if we both know the same things by the same skill, namely arithmetic, or by a different skill, you would of course maintain that it is by the same skill.

Ion: Yes.

537e

Socrates: Well, you may now answer the question I was about to ask you earlier. Do you think this is so for all skills? Are the same things necessarily understood by the same skill, while whatever is not the same is understood by a different skill? But if the skill is different, must it not also understand different things?

Ion: Yes, Socrates, that's what I think.

Socrates: Won't someone who does not possess a particular skill be unable properly to understand whatever accounts or activities are associated with that skill?

538b

Ion: That's true.

Socrates: Now, in relation to the lines you recited, would you or a charioteer better understand whether or not Homer is speaking correctly?

Ion: A charioteer.

Socrates: Presumably because you are a rhapsode, but not a charioteer?

Ion: Yes.

Socrates: And the skill of a rhapsode is different from that of a charioteer?

Ion: Yes.

Socrates: So, if it is different, it is also a knowledge of different things.

Ion: Yes.

538c

Socrates: What about the passage where Homer recounts how Hecamede, Nestor's concubine, gives the wounded Machaon a posset to drink? He says something like this: "With Pramnian wine, she grated goat's-milk cheese into it with a bronze / grater, with onion on the side as an appetizer for the drink." Does it belong to the skill of the physician or the skill of the rhapsode to fully understand aright whether or not Homer is speaking correctly in these lines.

Ion: The skill of the physician.

538d

Socrates: What about when Homer says: “She plummeted to the sea floor like a lead weight which, mounted / along the horn of an ox who ranges the fields, goes downward / and takes death with it to the raw-ravens fish.” Should we say that it belongs to the art of the angler rather than of the rhapsode to decide what he is saying and whether he is speaking correctly or incorrectly?

Ion: The angler of course, Socrates.

538e

Socrates: Then, consider this. Suppose you, as the questioner, were to ask me, “Well, Socrates, since you are finding in Homer what is appropriate for each of these skills to decide upon, please find out for me also, in the case of the prophet and prophecy, what sort of things are for the prophet to decide upon and appreciate whether Homer has composed well or ill.” Observe how easily and truly I shall reply to you. Indeed, there are numerous instances. For example, in the *Odyssey*, he recounts that the prophet Theoclymenos, a descendant of Melampus, says to the suitors: “Fortunate fellows, what evil has come upon you? Your heads and faces and / limbs are shrouded in night and darkness; a sound of wailing has broken out, / your cheeks are covered with tears. All the forecourt is huddled with ghosts, / the yard is full of them as they flock down to the underworld and the darkness. / The sun has perished out of the sky, and a foul mist has come over.” And there are many examples in the *Iliad* too – for example, in the *Battle at the Wall*, where he says: “As they were urgent to cross a bird sign had appeared to them, / an eagle, flying high and holding to the left of the people / and carrying in its talons a gigantic snake, blood-coloured, / alive still and breathing, it had not forgotten its warcraft / yet, for writhing back it struck the eagle that held it / by chest and neck, so that the eagle let it drop groundward / in pain of the bite and dashed it down in the midst of the battle

/ and itself, screaming high, winged away down the wind's blast." I shall maintain that it belongs to the prophet to consider and judge these passages and their like.

539c

Ion: What you say is true, Socrates.

539d

Socrates: And what you are saying is also true, Ion. Come on then, and do for me what I did for you. I selected, from the *Odyssey* and *Iliad*, passages that treat of the prophet and of the physician and of the angler. Now, since you have more experience of Homer than I have, Ion, you should select passages that treat of the rhapsode and the rhapsode's skill, passages that the rhapsode, more so than anyone else, should consider and judge.

Ion: All of them, Socrates. That's my answer.

539e

Socrates: All of them, Ion? That's not your answer, or are you so forgetful? And yet it would be quite inappropriate for a rhapsode to be forgetful.

Ion: What am I forgetting?

Socrates: Don't you remember agreeing that the rhapsode's skill is different from that of the charioteer?

Ion: I remember.

Socrates: Don't you agree that, being different, it would understand different things?

Ion: Yes.

Socrates: So, according to your argument, neither the rhapsode nor the rhapsode's skill will know everything.

540a

Ion: Perhaps, Socrates, with the exception of such matters as these.

Socrates: By “such matters as these” do you mean more or less anything that belongs to the other skills? But since it does not know everything, what sort of things will it know?

Ion: The sort of thing that is appropriate for a man to say, I suppose, or for a woman either, or for a slave or free man, or for a subject or someone in charge.

540b

Socrates: So, are you saying that a rhapsode will know better than a steersman the sorts of things that are appropriate for a person in charge of a ship to say when at sea in a storm?

Ion: No, a steersman knows this.

Socrates: But will the rhapsode know better than the physician what sort of thing is appropriate for someone in charge of the sick to say?

Ion: He won't know this either.

Socrates: But you say that he knows the sort of thing that is appropriate for a slave to say?

Ion: Yes.

540c

Socrates: Are you saying, for instance, that a rhapsode, rather than a cowherd, will know what sort of things are appropriate for a slave who is a cowherd to say to soothe the cattle when they are wild?

Ion: Of course not.

Socrates: Will he know the sort of things that are appropriate for a woman who spins wool to say about the working of wool?

Ion: No.

540d

Socrates: Will he know then the sort of things that are appropriate for a man who is a general to say to his soldiers

when exhorting them?

Ion: Yes, the rhapsode will know that sort of thing.

Socrates: But why? Is the skill of the rhapsode the skill of the general?

Ion: Well, I myself would at least know the sorts of things that are appropriate for the general to say.

540e

Socrates: For you are, perhaps, also skilled as a general, Ion. And indeed, if you happened to be skilled simultaneously in both horsemanship and lyre-playing, you would understand when horses are being handled well or handled badly. But what if I were to ask you, Ion, by what skill you understand that horses are being well handled? Is it by the skill of the horseman or the skill of the lyre player? How would you answer me?

Ion: By the skill of the horseman. That would be my reply.

Socrates: Now, if you also recognised those who play the lyre well, you would accept that you do so by means of your skill as a lyre player, not by your skill as a horseman,

Ion: Yes.

Socrates: When you understand military matters, are you doing so by means of your skill as a general or as a good rhapsode?

Ion: I don't think there is any difference.

541a

Socrates: How so? You say there is no difference. Are you saying that the rhapsode's skill and the general's skill are one, or are they two?

Ion: In my opinion, they are one.

Socrates: So, anyone who is a good rhapsode turns out to be a good general too?

Ion: Very much so, Socrates.

Socrates: Therefore, anyone who happens to be a good general is also a good rhapsode.

Ion: No, I don't agree with that.

541b

Socrates: But you do agree that anyone who is a good rhapsode is also a good general?

Ion: Certainly.

Socrates: Aren't you the best rhapsode of all the Greeks?

Ion: By far, Socrates.

Socrates: And also the best general of all, Ion?

Ion: Of that you may be sure, Socrates, and I have learned this from Homer.

541c

Socrates: Why then, by the gods, Ion, do you go around Greece as a rhapsode and not as a general, when you are both the best rhapsode of all the Greeks and the best general too? Or do you think that the Greeks have a great need for a rhapsode crowned with a wreath of gold, but no need for a general?

Ion: Well, Socrates, our city is under the rulership and military command of your city and has no need for a general, and neither your people nor the Spartans would choose me as a general because they think that they have enough themselves.

Socrates: Ion, my good man, you do know Apollodorus of Cyzicus?

Ion: Who is he?

541d

Socrates: A man whom the Athenians have often chosen for themselves as a general, even though he is a foreigner. And this

city appoints Phanosthenes of Andros and Herakleides of Clazomenae to military command and other positions of authority, proving that they are noteworthy even though they are foreigners. So why would Ion of Ephesus not be chosen as a general, and respected, if he too seems worthy of note? You Ephesians were originally Athenians, were you not, and Ephesus is a city second to none? But in fact, Ion, if your claim to be able to praise Homer with knowledge and expertise is actually true, you are doing me an injustice. You promise me that you have knowledge of the manifold beauties of Homer, and you say that you will demonstrate them. But you deceive me and you fall far short of demonstrating them, and you are not even prepared to explain on what matters you are an expert, even though I have been imploring you for some time. You are much like Proteus¹¹, assuming all sorts of forms, turning this way and that, until finally you escape me by appearing in the guise of a general to avoid demonstrating your expertise in the wisdom of Homer. Now, if you have expertise in Homer, then, as I said just now, by promising to give me a demonstration you have deceived me, and you are acting unjustly. However, there is no injustice if you have no expertise but are describing the manifold beauties of the poet possessed, as I said, by a divine portion from Homer, while knowing nothing. So, decide whether you want us to regard you as an unjust man or as divine.

542a

Ion: There is a big difference Socrates. Indeed, the divine is regarded as better by far.

542b

Socrates: In that case, Ion, we grant you this better portion – to be divine and not to praise Homer based on some expertise.

NOTES

1. Ion was a rhapsode from Ephesus in Asia Minor, which at the time was a colony of Athens. He specialised in the works of Homer.
2. Metrodorus of Lampsacus, Stesimbrotos of Thasos, and Glaucon of Rhegium were all prominent interpreters of Homer.
3. The Homerids were a guild of rhapsodes.
4. This reflects the idea that natural magnets were thought to come from the region that included Magnesia and Heraclea, from which they derived their names.
5. Those who worshipped Bacchus would dance themselves into a frenzy in which they would find rivers flowing with milk and honey.
6. Iliad xxiii.335-340, Lattimore (adjusted to conform to Plato's text).
7. Iliad xi.639-640, Lattimore.
8. Iliad xxiv.80-82, Lattimore.
9. Odyssey xx.351-357, Lattimore.
10. Iliad xii.200-207, Lattimore.
11. Proteus was an early sea god. He was associated with the changeability of the seas and other bodies of water, and was thus depicted as being able to take any shape he wanted. Odyssey iv.385 ff.

persons in the dialogue:

LYSIMACHUS a well-educated Athenian

NICIAS an Athenian politician and general

LACHES an Athenian general

SOCRATES of Alopecce, son of Sophroniscus

MELESIAS a friend of Lysimachus

scene: the dialogue follows an exhibition of fighting in armour

178a

Lysimachus: Nicias¹ and Laches, you have seen the man fighting in armour, but we did not tell you at the time why myself and Melesias here invited you to see him with us, but we shall tell you now. Indeed, we believe that it is necessary to speak openly, especially to the two of you. Now, there are some people who are contemptuous of this sort of thing, and if anyone asks them for advice they will not say what they think. Instead they try to guess what advice the person wants, and they say something that is contrary to their own opinion. But we believe that you are men of ample discernment, and based on this discernment you should tell us, in plain terms, what you think about the issues we are about to set before you. Now, the issue that I am leading up to at such length is as follows. We both have these sons: this is my friend's son who bears the name of his grandfather, Thucydides; and this is my son who also bears his grandfather's name, since we call him Aristides, after my father. Now, we have resolved to care for them as best we can, and not to do what most parents do when their sons reach adolescence and allow them to do whatever they wish. No, we have decided to make an immediate start at caring for them as best we can. So, realising that the two of you also have sons, we believed you, if anyone, cared about how they might, with attention, become as excellent as they possibly could. And if it turns out that you have not often thought about this sort of thing, we remind you that it should not be neglected and we

invite you to join us in devising some means of caring for our sons. But, Nicias and Laches, you should also hear how we came to these decisions, even if it takes a little longer. In fact, Melesias and I take our meals together and the two lads dine with us. Now, as I also said at the beginning of our conversation, we are going to speak openly to you. For in the case of his own father, each of us can recount numerous noble achievements to the young men, some performed in time of war, some in times of peace, as they managed the affairs of our allies and of this city of ours. But when it comes to our own achievements, neither of us has anything to report. So we are ashamed of this in front of the boys, and we blame our own fathers for allowing us free rein once we reached adolescence while they were busy with other people's affairs. So we point all this out to the young men, explaining that if they show no care for themselves and pay no heed to us, they will not be famous, while if they do care for themselves they may, perhaps, become worthy of the names they bear. Now, they say that they will heed us, while we for our part are considering what particular subjects or pursuits would render them as excellent as they could possibly be. Now, someone introduced us to this subject of fighting in armour, as a good subject for a young man to learn, and he praised this fellow whose exhibition you have just seen, and then told us to go and see it. So we decided we should go to see the man, and take you two along with us to see him too, and at the same time to be our advisors and, if you wish, co-operate with us in the care of our sons. That's what we wanted to set before you. So at this stage we want you, for your part, to advise us about this particular subject, and whether it should be learned or not, and whether there is any other subject you can recommend for a young man, or any pursuit either. And please tell us how you will respond to the proposed co-operation.

179d

Nicias: As for myself, Lysimachus and Melesias, I applaud your idea, and I am ready to cooperate, and I think Laches here will do so too.

179e

Laches: Yes, that's true, Nicias. And what Lysimachus said just now about his own father and Melesias' father too is, in my opinion, very relevant to them, to the two of us, and to everyone who engages in civic affairs, because almost as a rule what happens to them is just what he described. Whether it concerns their children or anything else, they set little value upon their private affairs, and manage them without proper care. Now, although you are explaining this very well, Lysimachus, I am surprised that you are calling upon the two of us as advisors on the education of the young men, and not calling upon Socrates here, who in the first place is from your own district, and secondly, whenever time is being spent on the sort of worthwhile subjects or pursuits for young men that you are seeking, Socrates is there.

180a

Lysimachus: What do you mean, Laches? Has Socrates here demonstrated an interest in this sort of thing?

Laches: Yes, certainly, Lysimachus.

180b

Nicias: I can tell you about this too, just as well as Laches can. In fact, Socrates recently recommended a music teacher to me for my own son. His name is Damon², a pupil of Agathocles, and the most accomplished of men, not only in music, but in anything else you might deem worthwhile for young men to engage in at that age.

180c

Lysimachus: Well, Socrates, Nicias, and Laches, men of my age do not really understand young people any more, since we spend most of our time at home because of our age. But if you,

son of Sophroniscus, have any good advice to give to someone from your own district, then you should advise me. It is only right that you should. In fact, it so happens that you are my friend, through your father, since myself and your father were friends and associates, and to the day he died he never fell out with me. But something is coming back to me, and I am reminded from what has just been said, that when the young lads here are conversing with one another at home, they often mention Socrates, and they praise him highly. Yet I never asked them if they are referring to the son of Sophroniscus. So, boys, tell me, is this the Socrates you mention so often?

180d

Boys: Certainly, father. This is the man.

180e

Lysimachus: Well, by Hera, Socrates, it is good to see that you do right by your father, the best of men, especially in view of the mutual family connections that are about to be established between ourselves.

181a

Laches: Yes, indeed, Lysimachus, you should not let this man go. For I have also seen him elsewhere, doing right not only by his father but by his fatherland too. Yes, he retreated alongside me in the flight from Delium³, and I am telling you that if the others had been prepared to act as he acted, our city would be standing tall, and a calamity like that would never have befallen her.

181b

Lysimachus: This is fine praise indeed, Socrates, since it comes from trustworthy men, and because of the qualities they are praising in you. Now, rest assured that when I hear all this I am delighted that you are held in high esteem, and you should count me among those who have the highest regard for you. Now, you yourself really should have paid us a visit long before this and treated us as family. It is only right that you should. But

from now on, since we now recognise one another, you have no choice but to get to know us, and make the acquaintance of ourselves and these young fellows here, so that you may preserve our mutual friendship. Well, you will do this of course, and we shall remind you again. However, what do you have to say about our initial discussion topic? What do you think? Is the subject suitable for the young men or not, I mean learning how to fight in armour?

181d

Socrates: Well, Lysimachus, I shall try to advise you about this matter as best I can, and what is more, I shall also do everything else you are asking me to do. However, since I am younger than anyone else here, and less experienced than they are, I think that what is most fitting is that I first listen to what they say and learn from them. Then, if I have anything to add to what they say, I should provide instruction at that stage, and try to convince yourself and these men too. Well, Nicias, why does one of you not speak first?

181e

Nicias: There is no reason not to, Socrates. Indeed, it seems to me that knowledge of this subject is of benefit to the young in lots of ways. In fact, it would be well for the young people to spend their time in this, rather than the pursuits they normally like to engage in when they are at leisure. This must improve their bodies, for it is just as good and just as strenuous as any physical exercise, and, at the same time, this exercise, and horsemanship too, are most appropriate to a free man. For only those who exercise with these instruments of war are trained in the struggle in which we engage and in the instruments upon which our struggle depends. What's more, this subject will also be of some benefit in the battle itself, when it is necessary to fight in ranks alongside many others. However, its greatest benefit is when the ranks are broken and you must then fight one on one, either when pursuing someone who is warding off

your attack, or when you yourself are in retreat and must ward off an attack by someone else. Someone with knowledge of this subject would suffer no harm when faced with a single opponent, or perhaps when faced with many. He would have the advantage in any situation. Then again, something like this also awakens an interest in another noble subject, for everyone who learns how to fight in armour would also develop an interest in the related subject of military tactics, and once he had grasped these and taken pride in them, he might then tackle the subject of generalship. And it is obvious by now that anything related to these, and all the subjects and pursuits that are noble and well worthwhile for a man to learn and practise, would all have their origin in this subject. But we should make an additional point, and it is not an insignificant one. This knowledge would make any man much bolder and braver in battle than he was before. And we should not disdain to mention, even if some think it is insignificant, that he will look more impressive where a man needs to look more impressive, where he needs to appear more formidable to the enemy because of his impressive appearance. So, Lysimachus, it seems to me, as I say, that these subjects should be taught to young men, and I have told you why I think so. But if Laches has a contrary view, I would gladly listen to it.

182d

Laches: Well, Nicias, to take any subject at all and say that it should not be learned presents a difficulty, since it does seem good to know everything. And if this armour business is indeed a subject, as its instructors claim and as Nicias says, then it should be learned. But if it is not a subject, and those who promise to teach it are deceiving us, or if it is actually a subject but not a very serious one, what need could there be to learn it? And I am saying this about it based upon the following observation: I think that if it amounted to anything it would not have been overlooked by the Spartans, people whose sole

concern in life is to seek out and practise any subject or pursuit that might give them an advantage over others in war. And if these people have overlooked it, then the teachers of this subject surely have not overlooked the fact that, among the Greeks, the Spartans are the ones who are most serious about such matters, and that anyone who has won respect among them in this area would also make a great deal of money from the other cities, just as a tragedian does when he has won respect among ourselves. As a result, anyone who thinks that he is a good tragedian does not make a circuit of Attica, putting on performances in all the other outlying cities. No, he makes his way here directly and puts on a performance for us. It is the reasonable thing to do. But I observe that those who fight in armour regard Sparta as sacred ground, and they do not set even a toe there. They make their way around the city in a circle and would prefer to put on a performance for anyone else at all, especially for those who would confess that when it comes to warfare, lots of other cities are superior to themselves. And, Lysimachus, I have come across quite a few of these people in action and I have seen what they are like. So we may also consider the matter on this basis. Indeed, as a rule, not a single person who has practised fighting in armour has ever won fame in battle. Even though, in all the other disciplines, the people who become famous are the ones who practise, these fellows, in contrast it seems, meet with stark misfortune. Yes, and this Stesilaus, whom you saw along with me, putting on that performance in front of such a large crowd and making those great claims that he made about himself, well, I saw him elsewhere, in a real battle, actually putting on a better performance unintentionally. The ship he was serving on had rammed a transport vessel and he was fighting with an unusual weapon, a 'spear-pike' – as unusual as the man himself. Now, his general exploits are hardly worth recounting, except for the details of what happened to the spear-pike. For as he was

fighting, it somehow got caught in the rigging of the other ship and wouldn't budge. So Stesilaus tugged at it in an effort to free it but he was not able to, and the ships were moving. Well, at first he ran along the deck, holding onto the weapon, but then the other ship began to draw away and it dragged him after it, still holding on. He allowed the weapon to slip through his hands until he was left holding onto the end of the shaft. There was laughter and derisory applause from the men on the transporter at the sight of the fellow, and when someone threw a stone that landed on the deck at his feet, he finally let go of the spear-pike. By then, even the men on his own ship were no longer able to contain their laughter when they saw his weapon flapping about on the transporter. Now, all this may perhaps amount to something, as Nicias says, but those whom I have met are people like Stesilaus. So, as I said initially, whether it is a subject but of little benefit, or it is not a subject but people claim that it is and pretend that it is, in either case it is not worth trying to learn it. In fact, it seems to me that if a coward were to believe that he knew this subject, he would become bolder because of it, and the sort of man he actually is would become more obvious, while if a brave man were to do so, he would be under scrutiny from everyone else and would attract enormous criticism at even the slightest mistake. For pretensions to this sort of wisdom produce envy, and unless a man excels over others in excellence to an amazing extent, there is no way he can avoid becoming a laughing stock by claiming to possess this knowledge. Such is my opinion, Lysimachus, of any effort expended upon this subject. But as I told you initially, you should not let Socrates here go, but you should ask for his advice, based on his view of the issue before us.

184c

Lysimachus: Well, I am asking you, Socrates. In fact, our meeting seems to me to require a sort of casting vote. For if these two men had concurred, there would be less need for this,

but now, as you see, Laches has voted the opposite way to Nicias, so it would be nice to hear from you too. Which of the two men do you vote with?

184d

Socrates: What's this, Lysimachus? Are you going to adopt the stance that the majority of us approve of?

Lysimachus: What else could anyone do, Socrates?

184e

Socrates: And you, Melesias, would you do the same? Even if you had a meeting about how your son should exercise for a competition, would you be persuaded by the majority of us or by that person who happens to have been educated and exercised under a good trainer?

Melesias: By that person, Socrates, more likely.

Socrates: So, would you be more persuaded by him than by the four of us?

Melesias: Probably.

Socrates: Because, I presume, an issue should be decided based upon knowledge rather than numbers, if it is to be decided aright.

Melesias: Of course.

185a

Socrates: So, in this case too, we should first consider this particular question. Is there or is there not anyone among us who is skilled in the matter we are deliberating upon? And if there is, we should be persuaded by that one person and bid the others farewell. But if there is not, we should search for someone else to advise us. Or do you and Lysimachus think that what is now at stake is insignificant and does not concern what is actually the most important of your possessions? For, I believe, the entire estate of the father will be managed based

upon the sort of people the children become, and whether or not the sons turn out well.

Melesias: That's true.

Socrates: So it must be given a great deal of forethought.

Melesias: Certainly.

185b

Socrates: Now, on the issue I just mentioned, how would we proceed if we wished to consider which of us is most skilled in the area of competitive contests? Would he not be the person who has learned and practised, and who has had good teachers of this particular skill?

Melesias: I think so.

Socrates: Even before that, should we not consider what this subject, whose teachers we are seeking, actually is?

Melesias: What do you mean?

Socrates: Perhaps this will be more obvious as follows. I do not think we agreed at the outset what exactly it is that we are deliberating about and considering when we ask who among us is skilled in this, and who has acquired teachers for the sake of this, and who has not.

185c

Nicias: But, Socrates, aren't we discussing armour fighting and whether the young men should learn this or not?

185d

Socrates: Yes, certainly, Nicias, but when someone is considering a medicine for his eyes, and whether it should be applied or not, do you think his deliberation at that time is about the medicine or his eyes?

Nicias: It is about his eyes.

Socrates: And when someone is considering a bridle for a horse, and whether it should be attached or not, and when this should happen, presumably he is then deliberating about the horse, and not about the bridle.

Nicias: True.

Socrates: So, in a word, whenever someone considers something for the sake of something else, his deliberation is actually about that other thing. His deliberation is not concerned with whatever he was considering for the sake of that other thing.

Nicias: Necessarily.

Socrates: So, we should consider whether the advisor is skilled in attending to that, namely to that for the sake of which we are engaging in these considerations.

Nicias: Certainly.

185e

Socrates: So, at present we claim to be considering a subject for the sake of the souls of the young men, do we not?

Nicias: Yes.

Socrates: So we should consider if there is anyone among us who is skilled in attending to the soul, and is able to attend to it aright, and if there is anyone who has had good teachers?

Laches: What's this, Socrates? Have you not noticed that in some cases people have become more skilled without teachers than with teachers?

Socrates: I have, Laches, but you would not be prepared to believe them if they claimed to be good practitioners unless they were able to present you with one or more well-executed deeds, born of their own skill, as evidence.

Laches: There you speak the truth.

186a

Socrates: So, Nicias and Laches, since Lysimachus and Melesias have called upon us to advise them about their two sons, being eager that their souls turn out as excellent as they possibly can, we, if we claim to have teachers, should show them the ones who are themselves good in the first place, and have attended to the souls of many young men, and secondly, have evidently given instruction to ourselves. Alternatively, if any one of us declares that he himself has not had a teacher but can recount some deeds of his own, then he should point out any Athenians or strangers, slaves or free men, who are generally acknowledged to have become good through his agency. But if none of this applies to us, we should bid them look for someone else, and not run the risk of corrupting the sons of our companions and incurring enormous reproach from our closest kin. Now, Lysimachus and Melesias, I am the first to admit that I myself have not had a teacher of this, even though I set my heart on the matter from my earliest years. But I cannot afford to pay money to the sophists, the only people who proclaimed that they could make me noble and good, and I am unable, to this day, to discover the skill for myself. Yet I would not be surprised if Nicias or Laches have discovered it or learned it. In fact, they are wealthier than I am, and so they may have learned from others, and indeed they are older, so they may have discovered it already. Now, I think they are able to educate a person, for they would never have expressed their views so fearlessly on the pursuits that are useful or harmful for the young unless they were convinced that they had sufficient knowledge. And although in general I believe them, I was surprised that they disagreed with one another. So, Lysimachus, I ask this of you in return. Just as Laches directed you a moment ago not to let me go, but to question me, I am now recommending that you do not let Laches and Nicias go, but ask them this question. Socrates denies that he has any knowledge

of this matter, or that he is competent to decide which of you is speaking the truth, for he has neither discovered this sort of thing nor learned about it from anyone else. So, Nicias and Laches, you should tell us who is the most formidable person you have consulted in relation to the rearing of your sons; whether you are knowledgeable because you learned from someone else, or because you found out for yourselves; and if you did learn it, who were your teachers and who else has the same skill they have? We ask this in case you are too busy with affairs of state, in which case we could go to these people and persuade them, with gifts or favours or both, to take charge of our children, and yours too, so that they do not turn out badly and bring shame upon their ancestors. But if you have discovered this sort of thing yourselves, give us an example of some people whom you have already made good and noble through your care when they had previously been bad. For if you are now about to educate people for the first time, you should be careful lest you run risks, not with some worthless person, but with your own sons and the children of your friends, and simply end up, as the saying goes, practising pottery on too large a vessel. So, tell us which of these applies to you, and is appropriate in your case, and which is not. Find this out from them, Lysimachus, and do not let these men off.

187c

Lysimachus: Gentlemen, although Socrates has, in my opinion, spoken well, you, Nicias and Laches, should decide for yourselves whether you wish to be questioned on such matters and give an account of them. Now, Melesias and myself would, of course, be delighted if you were willing to give a full response to everything that Socrates asked. In fact, I said at the very outset that we were going to invite you to advise us on this issue because we thought you were likely to care about this sort of thing, especially since your own children, just like ours, are almost of an age to be educated. So, if it makes no difference to

you, speak, and consider this, along with Socrates, in the give and take of discourse with one another. For his point is well made; we are now deliberating about our most important possessions. So take a look and decide if this is what should be done.

187e

Nicias: Lysimachus, you seem to me, in truth, to know Socrates only through his father, and not to have associated with the man himself except when he was a child, when you came across him among the local people, as he accompanied his father to the temple or some other public gathering. But it is obvious that you are still unacquainted with the man in his mature years.

Lysimachus: What makes you so sure, Nicias?

Nicias: You seem to me to be unaware that whoever gets close to Socrates and engages in a dialogue with him must necessarily, even if he starts off by discussing something else at first, be led around by this man relentlessly in the discussion until he submits to giving an account of himself, the manner in which he is living his life at present, and how he has lived his life until now. And once he submits, Socrates will not let him go until he tests all this, well and truly. Now, I am used to him, and I know that it is necessary to undergo this process at his hands, and yet I know quite well that I too shall undergo this. Indeed, Lysimachus, I delight in engaging with the man, and I think there is no harm in being made aware that we have acted, or are acting, badly. Rather, a person who does not flee from these processes, but willingly embraces the maxim of Solon, and values learning for as long as he lives and does not presume that old age of itself brings good sense, he must necessarily be more careful about the rest of his life. For me, there is nothing strange or unpleasant in being tested by Socrates. I more or less knew a while ago that with Socrates present the conversation would not be about our sons, but about ourselves. So, as I say,

there is no reason for me not to converse with Socrates in whatever way he wishes. But you should see where Laches here stands on the matter.

188c

Laches: Nicias, my attitude to discussions is simple, or if you prefer, not simple, but twofold. In fact, someone might think me a lover of discourse, and then again a hater of discourse. For whenever I hear a man discoursing on the subject of excellence or any sort of wisdom, a true man who is worthy of the words he is speaking, I am delighted beyond measure when I see that both the speaker and the words spoken are mutually appropriate and in harmony. And such a person seems genuinely musical to me, attuned to the noblest harmony, not of a lyre or instruments of entertainment, but in truth he makes his own life a concord of words with deeds, attuned not, I believe, to the Ionic mode, nor to the Phrygian nor the Lydian, but to the Doric mode, which is the only harmony that is indeed Greek. When a man like this speaks, he makes me happy, and anyone would think me a lover of discourse because I accept what the man says so eagerly. But someone who behaves in the opposite way pains me, and the better he seems to speak, the greater the pain, and he makes me seem, in turn, to be a hater of discourse. Now, I'm not acquainted with Socrates' words, but it seems that I do have previous experience of his deeds, and therein I found him worthy of noble words and total freedom of speech. So, if he also has this quality, we are like-minded, and I would gladly submit to scrutiny by such a man as this, and would not be reluctant to learn from him, since I too agree with that precept of Solon, with just one reservation: I am willing to grow old, learning a lot in the process, but only from worthy men. Let Solon concede this point to me, that my teacher should also be good, so that I do not turn out to be a difficult pupil with a distaste for learning. But if my teacher is to be younger than I am, or is not yet famous or has some other shortcoming of that

kind, that does not concern me. So, Socrates, I invite you to teach me and refute me in whatever way you please, and also to learn, in turn, anything that I know, such is the regard I have for you ever since that day when you were my companion in danger and gave proof of your own excellence – the sort that a man who intends to do justice to himself ought to give. So say anything you like and do not take account of our age difference.

189a

Socrates: It seems we cannot accuse you two of being reluctant to give advice and join our enquiry.

189b

Lysimachus: But it's our work you are doing, Socrates, for I count you as one of us, so take my place on behalf of the young men and make the enquiry. Find out whatever we need to know from these gentlemen, and then act as our adviser by discussing it with the boys. For I am inclined nowadays, because of my age, to forget for the most part the questions I intend to ask, and any answers too, and if other arguments are introduced during the process my memory goes completely, so you should do the talking. Go through the issues we are interested in among yourselves. I shall listen in, and then I, along with Melesias here, shall do whatever you suggest.

189c

Socrates: Nicias and Laches, we should comply with this request of Lysimachus and Melesias. Now, a moment ago we set about considering what instructors we have had in this kind of education, and what other people we have made better. Perhaps we would do well to investigate such questions ourselves. But I think the following enquiry leads to the same thing, and to an extent it proceeds more from principle. So if we happen to know, in relation to anything at all, that its presence in something makes that in which it is present better, and furthermore we are able to make it be present in that, it is obvious that we know the thing itself, that's the matter on

which we would be acting as advisers on how it might best and most easily be acquired. Perhaps you do not understand what I am saying, but you shall understand more easily from the following. If we happen to know that if sight is present to the eyes it makes those eyes in which it is present better, and if we are also able to make it present in eyes, it is obvious that we know exactly what sight is. And sight is the subject on which we would be acting as advisers on how it might best and most easily be acquired. For if we did not know what exactly sight itself was, or hearing either, we could hardly act as worthy advisers and physicians in relation to eyes or ears, and the manner in which someone might best acquire hearing or sight.

190b

Laches: That's true, Socrates

Socrates: Well, Laches, are there not two men now inviting us to counsel them on the manner in which their sons may be made better by the presence of excellence in their souls?

Laches: Certainly.

Socrates: Well then, the first thing we need is this. We need to know what precisely excellence is, do we not? For if, somehow, we were totally ignorant as to what precisely excellence happens to be, how could we act as advisers to anyone on how it may best be acquired?

190c

Laches: I don't think we could do so at all, Socrates.

Socrates: However, we do say that we know what it is, Laches.

Laches: Yes, we say so.

Socrates: And in the case of what we know, we could of course also, surely, say what it is.

Laches: Of course.

Socrates: Well, excellent man, let us not consider excellence as a whole straight away, since that task is probably beyond us. But let us first see if we have sufficient knowledge of some part of it. Then the enquiry will, in all likelihood, be easier for us.

190d

Laches: Then let us do as you suggest, Socrates.

Socrates: So, which of the parts of excellence should we choose? Or is it obviously the one that learning how to fight in armour seems to promote? And most people presumably think it promotes courage. Is this so?

Laches: Yes, indeed, very much so.

190e

Socrates: In that case, Laches, we should first attempt to state what exactly courage is. Then, after that, we shall also consider the manner in which it may become present in young people, insofar as it can become present through the pursuits they engage in and the subjects they learn. So, as I say, try to state what courage is.

Laches: By Zeus, Socrates. There is no difficulty in stating that if someone were prepared to remain at his post, ward off the enemy and not run away, then mark my words, he would be courageous.

Socrates: That is nicely put, Laches, and perhaps I am to blame for not expressing myself more clearly, but you have not answered the question I had in mind. You have answered a different one.

Laches: What do you mean by this, Socrates?

191a

Socrates: I shall tell you, if I can. Presumably that man is courageous, the one you describe, the one who remains at his post and fights the enemy.

Laches: Yes, that's what I am saying.

Socrates: And so am I. But what about someone who fights the enemy whilst fleeing rather than remaining at his post?

Laches: Fleeing in what sense?

191b

Socrates: Presumably in the sense that the Scythians are said to fight whilst fleeing, no less than they do in pursuit. And Homer, in praise of the horses of Aeneas, says that they knew how to pursue and also to flee very swiftly, hither and thither. And he praises Aeneas himself for his knowledge of flight, and he refers to him as a 'counsellor of flight'.

Laches: And rightly so, Socrates, since he was referring to chariots, and you are talking about the Scythian horsemen. But although the cavalry fight in that way, the men at arms fight in the way I am describing.

191c

Socrates: Except perhaps for the Spartans, Laches. Indeed, they say that when the Spartans at Plataea came across the men with the wicker shields, they were not willing to remain in position and do battle with them, so they fled. But once the Persian ranks had broken, they turned around and fought, just as horsemen do, and so won the battle of Plataea.

Laches: That's true.

Socrates: Well, this is what I meant earlier, that I am responsible for the fact that you did not answer properly because I did not ask the question properly. Indeed, I wanted to find out from you not just who are courageous among the infantry, but also among the cavalry and the entire warrior class; and not only who are courageous in battle, but also amidst perils at sea; and who are courageous in the face of disease or poverty or political issues. And furthermore, I also wanted to find out who are courageous not only when faced with pain or

fear, but also who are formidable at combatting desire or pleasure, either by standing firm or rallying against them. For I presume, Laches, there are some people who are courageous in such situations as these.

Laches: Very much so, Socrates.

191d

Socrates: So all these people are courageous, but some possess courage in the face of pleasures, others in the face of pain or desire or fear, while others I believe display cowardice in the same situations.

Laches: Entirely so.

191e

Socrates: What exactly are these two, courage and cowardice? That is what I wanted to find out. So try once more to state firstly what courage, which is the same in all these instances, actually is. Or do you not fully understand what I am saying yet?

Laches: Not entirely.

Socrates: What I mean is this. It is as if I were asking what exactly speed is, which we encounter in running, in harp-playing, in speaking, in learning – a quality we exhibit to an extent in any activity worth mentioning, of hands, legs or mouth, and in speech and thought too. Is this how you speak of it too?

Laches: Very much so.

192a

Socrates: Well, if someone were to ask me, “Socrates, what do you say this quality is, the one you refer to as speed in all these examples?” I would tell him that I call speed the power that gets a lot done in a short time, whether in speech or running or in anything else.

Laches: And you would be right to say so.

Socrates: Now, Laches, you should also try to describe courage in this way. What power, the same in the case of pleasure and in the case of pain, and in all the other examples we gave a moment ago, is referred to as courage?

192b

Laches: Well, it seems to me to be an endurance of the soul, if I must describe what naturally applies to them all.

Socrates: But of course we must, if we are to answer the question we put to ourselves. Yet it appears to me that you certainly do not, as I see it, regard all endurance as courage. I justify this assertion as follows: I know fairly well, Laches, that you count courage among the qualities that are utterly noble.

Laches: Among the very noblest, rest assured.

192c

Socrates: Is not endurance, accompanied by wisdom, good and noble?

Laches: Absolutely.

Socrates: What if it is accompanied by ignorance? In that case, on the contrary, is it not harmful and damaging?

Laches: Yes.

192d

Socrates: Now, will you say that something like this is noble when it is damaging and harmful?

Laches: No, Socrates, that would not be right.

Socrates: So you do not accept that endurance of this sort is courage, since it is not noble, and courage is noble.

Laches: That is true.

Socrates: So, based on your argument, wise endurance is courage.

Laches: So it seems.

192e

Socrates: Well, let us see. In what respect is it wise? Is it wise in all respects, significant and trivial? For instance, if someone endures in spending his money wisely, knowing that he will gain more from spending it, would you call this man courageous?

Laches: By Zeus, I would not.

193a

Socrates: What if someone is a physician, and his son, or someone else with a lung infection, is begging for drink or food, and he is unyielding and endures in his refusal?

Laches: No, that is not courage either, not at all.

Socrates: And in war, what about a man who is prepared to fight, who calculates wisely, who knows that others will come to his aid, and that he is fighting against fewer troops, inferior to those on his side, whilst holding the better ground? Would you say that this man, who endures with this sort of wisdom, is more courageous than the man in the opposing army who is prepared to stand his ground and endure?

193b

Laches: The man on the opposite side seems more courageous to me, Socrates.

Socrates: And yet this man's endurance is more foolish than the other man's.

Laches: That's true.

Socrates: So you will also say that a man with knowledge of horsemanship, who endures in a cavalry battle, is less courageous than someone who does so without that knowledge.

Laches: I think so.

Socrates: And the one who endures, with knowledge of slinging or archery or any other skill, is less courageous.

193c

Laches: Certainly.

Socrates: And those who are prepared to go down into a well and dive, and who demonstrate endurance in this, or in another task like this, without being trained, will you say that they are more courageous than those who are trained?

Laches: Yes, Socrates, what else could anyone say?

Socrates: Nothing, if he actually thinks so.

Laches: Well then, I think so at any rate.

Socrates: And yet, Laches, such people are running risks and demonstrating endurance in a more foolish manner than those who perform the action with knowledge of the skill.

Laches: Apparently.

193d

Socrates: In our earlier discussion, did not foolish boldness and endurance prove to be shameful and harmful?

Laches: Yes, certainly.

Socrates: And yet courage was agreed to be something noble.

Laches: Yes, that was agreed.

Socrates: But now, on the contrary, we are saying that this shameful behaviour, foolish endurance, is courage.

Laches: So it seems.

Socrates: Well, do you think we are talking sense?

Laches: By Zeus, Socrates, I do not.

193e

Socrates: So I presume, to use your phrase, Laches, you and I are not attuned to the Doric mode, for our deeds are not in concord with our words. In fact, if someone were listening to our discussion now, he might declare that in action we do, it seems, partake of courage, but in words I think he would say that we do not.

Laches: Very true.

Socrates: What about this? Do you think this is a good predicament for us to be in?

Laches: No, not at all.

Socrates: Well, do you want to accept our statement to this extent?

Laches: To what extent, and what statement do you mean?

Socrates: The statement that calls for endurance. So if you are willing, we too should stand our ground and endure in this search so that courage itself does not laugh at us, because we are not seeking it courageously if it turns out that endurance itself is courage after all.

194b

Laches: Socrates, I am prepared to persist even though I am unaccustomed to discussions of this sort. But in the light of what has been said, I am gripped by a thirst for victory, and I am truly annoyed that I find myself unable to express the concept I have. For although I seem to have a concept of what courage is, I do not know how it escaped me just now so that I cannot get my words together to state what it is.

Socrates: Well, my friend, the good huntsman should pursue his quarry and not give up.

Laches: Entirely so.

194c

Socrates: So, let us also invite Nicias here to the hunt. Do you agree? He may be more resourceful than we are.

Laches: I agree. Why wouldn't I?

Socrates: Come then, Nicias. If you have the power to do so, you should come to the aid of your friends, who are caught up in a storm of discourse and are perplexed. You surely see how perplexed we are, but if you say what you think courage is, you will free us from the perplexity and give certainty to your own concept by putting it into words.

194d

Nicias: Well, it has seemed to me, Socrates, for quite some time that you are not defining courage properly. For you are not referring to an excellent maxim, which I have heard you stating before.

Socrates: What maxim, Nicias?

Nicias: I have often heard you say that 'each of us is good wherein he is wise and bad wherein he is foolish'.

Socrates: Well, by Zeus, Nicias. That is true.

Nicias: In that case, if the brave man is indeed good, it is obvious that he is wise.

Socrates: Did you hear that, Laches?

Laches: I did, but I do not really understand what he is saying.

Socrates: Well, I think I understand, and the man seems to me to be saying that courage is a kind of wisdom.

Laches: What kind of wisdom, Socrates?

Socrates: Why not put this question to the man himself?

Laches: I am.

194e

Socrates: Come on then, Nicias, tell him what sort of wisdom courage would be, according to your account. For I presume it is not the wisdom of flute-playing.

Nicias: Not at all.

Socrates: Nor indeed that of harp-playing.

Nicias: Of course not.

Socrates: But what is it then? Knowledge of what?

Laches: That certainly is the right way to question him, Socrates. He should say what he says it is.

195a

Nicias: I say, Laches, that it is the knowledge of what is to be feared and what is to be ventured, in war or in any other situation.

Laches: How strangely he speaks, Socrates.

Socrates: What have you in mind when you say this, Laches?

Laches: What? Wisdom is surely distinct from courage.

Socrates: Yet Nicias says otherwise.

Laches: Indeed he does, and talks nonsense in the process.

Socrates: Then let us instruct him rather than abusing him.

Nicias: Well, Socrates, I think Laches wishes to make out that I too am talking nonsense because he was shown up for doing that sort of thing himself a moment ago.

195b

Laches: Yes, indeed, Nicias, and I shall attempt to prove this at any rate, for you are talking nonsense. So, for instance, in the case of diseases, aren't the physicians the ones who know what is to be feared? Or do you think the courageous people know? Or do you call the physicians courageous?

Nicias: No, not at all.

195c

Laches: Nor the farmers either, I suppose, even though they surely know what is to be feared with regard to the cultivation of the earth. And all the other practitioners know what is to be feared and what is to be ventured in relation to their own areas of expertise. But that does not mean they are any more courageous.

Socrates: What do you think Laches is saying, Nicias? He does seem to have a point.

Nicias: He has a point alright, but it is not true.

Socrates: How so?

Nicias: Because he thinks physicians know something more about sick people than how to pronounce them healthy or ill. Yet this, surely, is the full extent of their knowledge. But, Laches, do you believe the physicians know if being healthy is to be feared by someone, more so than being ill? Or don't you think that it is better in many cases not to recover from an illness? Yes, tell me this. Do you maintain that it is better, in every case, to be alive? In many cases is it not preferable to be dead?

195d

Laches: I think so.

Nicias: And do you think the same things are to be feared by those who are better off dead as by those who are better off alive?

Laches: I do not.

Nicias: Well, do you attribute this knowledge to the physicians or to any other practitioner, apart from the man who knows what is to be feared and what is not – the man I call courageous?

Socrates: Do you understand what he is saying, Laches?

195e

Laches: I do. He is saying the soothsayers are the brave ones, for who else would know who is better off alive rather than dead? And what about yourself, Nicias? Do you admit to being a soothsayer, or are you neither a soothsayer nor courageous either?

Nicias: What is this? Do you yourself think that it is the role of the soothsayer to know what is to be feared and ventured?

Laches: I do, otherwise whose role could it be?

Nicias: It is much more the role of the people I am speaking of, best of men, since the soothsayer need only recognise the signs of what will happen, whether someone will die or be ill or lose his property, whether he will be victorious or suffer defeat in war, or in any other contest. But it is no more a role for the soothsayer than for anyone else at all to decide which of these is best for someone to suffer or not suffer.

196a

Laches: Well, Socrates, I do not understand from this what he wants to say, for he is explaining that he does not refer to the soothsayer or the physician, or anyone else, as a man of courage unless he is saying that it is some god. In fact, as I see it, Nicias is not willing to admit honestly that he is talking nonsense. Instead, he twists this way and that in an effort to conceal his own perplexity. Yet you and I could have performed similar twists a moment ago if we had wanted to avoid seeming to contradict ourselves. Well, if our arguments were being presented in a court of law, there might be some reason to do this, but now, at a gathering of this sort, why would someone adorn himself vainly with empty words?

196c

Socrates: There is no reason to do so, Laches, but let us see. Perhaps Nicias thinks he has a point and is not saying all this just for the sake of talking. So let us find out from him, with greater clarity, what exactly he has in mind, and if it turns out that he has a point we shall go along with it, and if not we shall teach him.

Laches: Well then, Socrates, if you want to find out, go ahead and find out. Perhaps I have found out enough.

Socrates: That will not stop me. Indeed, the enquiry will be on my behalf and yours.

Laches: Very well then.

Socrates: So tell me, Nicias, or rather tell us both, since Laches and myself are sharing the conversation: are you saying that courage is knowledge of what is to be feared and what is to be ventured?

Nicias: I am.

Socrates: And this knowledge does not belong to everyone, since neither the physician nor the soothsayer will know this, nor will they be courageous unless they acquire this particular knowledge. Isn't this what you were saying?

Nicias: It was indeed.

196d

Socrates: So in fact, as the saying goes, 'not every sow would know this', nor would she be courageous.

Nicias: I think not.

Socrates: Obviously, Nicias, you do not believe that even the Crommyonian sow was courageous. And I am not saying this in jest. No, I think it is necessary that someone who maintains this should not accept that any wild beast is courageous, or agree that any wild animal is wise in this way, and thus maintain that

a lion, a leopard or some boar knows what very few humans know, because it's so hard to know. But someone who proposes that courage is what you are proposing it is must maintain that a lion, a stag, a bull or a monkey are, by nature, equally courageous.

196e

Laches: By the gods, Socrates, you are putting that well. And you should answer this truthfully for us, Nicias. Are you saying that these wild animals, who everyone agrees are courageous, are wiser than we are, or would you dare to go against everyone and not even call them courageous?

Nicias: Laches, I do not call wild animals courageous, or anything else that does not fear what is to be feared because it lacks intelligence. Instead, I call them fearless or stupid. Do you think I even call all the children, who fear nothing because they lack intelligence, courageous? No, to my mind fearlessness and courage are not the same. I am of the opinion that courage and foresight belong to very few, while rashness, daring and fearlessness, devoid of foresight, belong to a vast number of men, women, children and wild beasts. So actions that you and most others call courageous, I call rash, but the wise actions I am referring to are courageous.

197b

Laches: Do you see, Socrates, how nicely this fellow adorns himself with words? Or so he thinks. Yet he is trying to deprive those who are universally agreed to be courageous of their due respect.

Nicias: Laches, I am not referring to you, so take heart. Indeed, I declare that you are wise, and Lamachus⁶ too, if you are actually courageous, and so are a host of other Athenians.

197c

Laches: I could respond to that but I shall say nothing, so that you cannot accuse me of being, in truth, an abusive Aexonian.

197d

Socrates: Do not speak, Laches. In fact, you seem to be unaware that he has acquired this wisdom from our mutual friend, Damon, and Damon is a constant associate of Prodicus, who is reputed to be the very best of the sophists at making verbal distinctions of this kind.

Laches: Yes, indeed, Socrates, it is more appropriate for a sophist to engage in such subtleties than a man whom the city chooses as her leader.

197e

Socrates: Blessed man, it is surely appropriate that those who provide leadership in matters of the greatest importance should partake of wisdom to the greatest extent. Yet I think Nicias merits questioning as to his point of view when he uses this word courage.

Laches: Well, question him yourself, Socrates.

Socrates: That is what I am about to do, best of men. However, you should not assume that I will release you from your shared role in the argument, so pay attention and consider whatever is said, along with me.

Laches: So be it, if it seems necessary.

198a

Socrates: So it does. And you, Nicias, should address us again from the beginning. You know, don't you, that at the beginning of the discussion we were considering courage on the basis that it was a part of excellence?

Nicias: Certainly.

Socrates: Did you not also give this answer: that it is a part, and there are other parts too, and when taken all together they are called excellence?

Nicias: Of course.

Socrates: Now, do you speak of these parts as I do? As well as courage, I call sound-mindedness, justice, and the like parts of excellence. Don't you?

198b

Nicias: Entirely so.

Socrates: Stop there, since we agree on these, and let us consider what is to be feared and what is to be ventured, in case you are of one view while we are of another. So we shall tell you what we think, and if you do not agree, you should instruct us. According to us, things that cause fear are to be feared, while those that do not are to be ventured. But it is not past evils that cause fear, or the present ones either, but only those that are anticipated, for fear is the anticipation of impending evil. Don't you agree with me, Laches?

198c

Laches: Very much so, Socrates.

Socrates: Well, Nicias, you have heard our views that, according to us, the impending evils are to be feared, while impending goods, or things that are not evil, are to be ventured. Is this the way you describe them, or is there another way?

Nicias: This way.

Socrates: And the knowledge of these you refer to as courage?

Nicias: Precisely.

Socrates: We should still consider whether we are all in agreement on a third issue.

Nicias: What issue is that?

198d

Socrates: I shall tell you. It seems to myself, and to this man, that in cases where there is knowledge of something, there is not one knowledge that knows how things happened in the past, another concerned with how they are happening at

present, and another dealing with how what has not yet happened will happen, and may best happen. No, it is the same knowledge. For example, in the case of past, present and future health, no other knowledge, apart from medicine, as one, superintends what is happening, what has happened, and how what is going to happen will unfold. And the same also holds for farming, in the case of what is produced from the earth. And when it comes to warfare, the two of you will of course bear witness to the fact that generalship, on the whole, best foresees the future, and it does not believe that it should be subservient even to the soothsayer in relation to the future. No, generalship should rule, as it has better knowledge of how military affairs are unfolding and will unfold. And so the law decrees that the soothsayer has no authority over the general. No, the general has authority over the soothsayer. Is this what we shall say, Laches?

198e

Laches: It is.

Socrates: What about this, Nicias? Do you agree with us, that in dealing with the same issues the same knowledge knows about the future, the present and the past?

Nicias: I do, yes. That is how it seems to me, Socrates.

199a

Socrates: Now, best of men, do you not also say that courage is knowledge of what is to be feared and ventured? Is this so?

Nicias: Yes.

Socrates: And it was accepted that what is to be feared and what is to be ventured are future goods and future evils?

Nicias: Entirely so.

Socrates: And the same knowledge is concerned with the same matters in the future, or at any other stage?

Nicias: This is the case.

199b

Socrates: In that case, courage is not only knowledge of what is to be feared and what is to be ventured. No, just like the other kinds of knowledge, it has knowledge not only of impending goods and evils, but also of those that are present, or past, or at any other stage.

Nicias: So it seems, anyway.

199c

Socrates: So, Nicias, the answer you gave us constitutes part of courage, one third at best, even though we asked you what courage was as a whole. And indeed it now seems, based upon your argument, that courage is not just knowledge of what is to be feared and ventured, but according to your present argument, courage would more or less be knowledge of all good and evil in all cases. May we make this adjustment? What do you say, Nicias?

Nicias: I think so, Socrates.

199d

Socrates: Now, do you think, blessed man, someone like this would be lacking in any excellence, if he actually knew good in its entirety, and fully understood how it arises, will arise, and has arisen, and understood evil in like manner? And do you think this man would be deficient in sound-mindedness or justice or holiness when he alone is equipped to pay careful attention to what is to be feared, or not, in relation to gods or humans, and to ensure good outcomes by knowing how to deal with them aright?

Nicias: I think you have a point, Socrates.

199e

Socrates: In that case, Nicias, what you are now describing would not be a part of excellence, but excellence in its entirety.

Nicias: So it seems.

Socrates: Yet we said that courage is one of the parts of excellence.

Nicias: Yes, we said that.

Socrates: But what is now being described does not appear to be a part.

Nicias: It seems not.

200a

Socrates: In that case, Nicias, we have not discovered what courage is.

Nicias: Apparently we have not.

Laches: But Nicias, my friend, I assumed you were going to make the discovery when you were so contemptuous of my responses to Socrates. Yes, I really had great hopes that you would discover it, using this wisdom you acquired from Damon.

Nicias: That is nice, Laches. You still do not think it is a problem that you yourself, earlier, proved to know nothing about courage. No, as long as I am shown up as someone else like that, that is what you focus on, and it seems to make no difference to you that you know as little as I do about issues on which a man of any reputation should be knowledgeable. Now, you seem to me to be acting in a truly human fashion by focussing not upon yourself, but on other people. As for myself, I think the issues we have discussed have now been adequately dealt with, and if any of them have not been covered in a satisfactory manner I shall correct them in due course with the help of Damon, whom you somehow think you can ridicule without ever having set eyes on Damon himself, and with the help of others too. And once I am certain about them, I shall also teach you. I shall not begrudge you that, for you seem to me to be very much in need of instruction.

200c

Laches: Well, Nicias, you are wise, but nevertheless I am advising Lysimachus here, and Melesias, to bid yourself and myself farewell when it comes to the education of the young men. But as I said at the outset, they should hold on to this man, Socrates, and if my own sons had been at the right age I would have done the very same thing.

200d

Nicias: There I agree with you. If Socrates is prepared to look after the young men, do not search for anyone else. Indeed, I would gladly entrust Niceratus to this man if he were willing. But the fact is, every time I raise the matter with him he recommends someone else, and is unwilling to do it himself. But, Lysimachus, see if Socrates will be more responsive to you.

Lysimachus: It is only right that he should, Nicias, since I would be willing to do a great deal for him that I would be reluctant to do for very many others. So what do you say, Socrates? Will you respond and share in our eagerness that the boys become as good as they possibly can?

200e

Socrates: The fact is, Lysimachus, that it would be a terrible thing to be reluctant to share in the eagerness that anyone become as good as possible. Now, if in the course of our earlier discussions I had turned out to be knowledgeable and these two gentlemen had not, it would have been right to invite me, in particular, to take on this role, but as it is we have all ended up in a similar state of perplexity. So why would anyone prefer one of us over the other? So, in my opinion, none of us should be chosen. But since that is how matters stand, think about the piece of advice I am about to give you. For I declare, gentlemen – and my statement is not to be made public – that all of us ought to search together for the best teacher we can find, for ourselves first and foremost, for we really need one, and then for the young men too, sparing neither money nor anything

else. But I do not recommend that we remain in our present condition. And if anyone should laugh at us because we still see merit in frequenting teachers at our time of life, I think we should quote Homer who says that ‘modesty is not a good companion for a man in need’. And so we, paying no heed to what anyone may say, should jointly undertake the care of our own selves and of the young men.

201b

Lysimachus: Socrates, I am delighted at what you are saying, and insofar as I am the oldest man here, I am also the one who is most eager to learn, along with the young ones. So I want you to do something for me. Come to my home tomorrow at daybreak, without fail, so that we may deliberate on these very issues. But let us break up our gathering for the moment.

Socrates: I shall do as you ask, Lysimachus, and come to you tomorrow, God willing.

NOTES

1. Nicias and Laches were Athenian generals during the Peloponnesian War. Nicias was also a politician, best known for negotiating the 'Peace of Nicias', a temporary armistice between Athens and Sparta.
2. Damon of Athens was a noted musicologist and teacher of Pericles. Republic 400b ff and Alcibiades I 118c.
3. Delium was the site of an Athenian defeat by the Boeotians during the Peloponnesian War. Socrates' bravery during this battle is referred to in a number of Plato's dialogues.
4. Iliad v.229-238.
5. This was a legendary wild pig which wreaked havoc on the village of Crommyon (between Corinth and Megara) before it was slain by Theseus.
6. Lamachus was an Athenian general during the Peloponnesian War. He, together with Nicias and Alcibiades, commanded the Sicilian Expedition.
7. Someone from the Athenian deme of Aexone. They had a reputation for being abusive speakers.
8. Odyssey xvii.347.

persons in the dialogue:

ATHENIAN STRANGER

CLINIAS of Cnossus, Crete

MEGILLUS of Sparta

scene: ascending from Cnossus to the cave of Zeus

BOOK I

624a

Athenian: Well, my friends, was it a god or some human who was responsible for establishing your laws?

Clinias: A god, stranger. Yes, that is the fairest answer. Among ourselves in Crete it was Zeus, while among the Spartans, where this man comes from, I think they say it was Apollo. Is this so?

Megillus: Yes.

624b

Athenian: Don't you say, as Homer does, that Minos used to make regular visits every ninth year to be with his father, Zeus, and he set down the laws for your cities based upon his pronouncements?¹

Clinias: Yes, that is what we say. And, indeed, we also say that his brother, Rhadamanthus – you have heard the name I am sure – was exceedingly just. And we Cretans would maintain that he won this reputation, deservedly, based on the way he dealt with the legal issues of the time.

625a

Athenian: A good reputation indeed, and most befitting to a son of Zeus. And since yourself and this man have been brought up under such lawful customs as these, I presume that spending time now, listening to one another speak about civic affairs and laws, would not be an unpleasant prospect as we proceed on our journey. The road from Cnossus to the cave and sanctuary of

Zeus is quite a long one I am told, but there are it seems resting places, shaded from this extreme heat, along the way, among the tall trees. At our age it would be appropriate that we take a rest often among them, relax and exchange stories with one another, and thus complete the entire journey with ease.

625c

Clinias: Yes indeed, my friend, and as we proceed there are tall cypress trees of wonderful beauty in the groves, and there are meadows too in which we may take a rest and converse.

Athenian: You are right to suggest this.

Clinias: Yes, indeed, and we will say so all the more when we see them. So let us proceed, and may good fortune attend us.

Athenian: So be it. But tell me this. Why is it that the law regulates your common meals, physical exercise, and the nature of your military equipment?

625d

Clinias: Well, my friend, I think that our arrangements are easy for anyone to understand. Indeed, the entire Cretan countryside is not, as you see, flat like Thessaly, and so they make more use of horses; while we are runners, since our territory is rugged and more suited to exercise that involves running. In a country like this then, it is necessary to wear light armour rather than trying to run in heavy armour, and the lightness of bows and arrows seems to fit in with this. All these arrangements equip us for war, and, as I see it, the lawmaker had this in mind when he made all the regulations. And that is probably why he got people together for common meals, seeing that all those who are ever on military campaign necessarily have meals together for their own protection, for the duration, because of the circumstances. Here, I believe, he is demeaning of the stupidity of the broad mass of people who do not understand that there is always constant warfare going on against all of the cities

throughout one's life. Now, if it is necessary when there is a war on to have meals together for purposes of protection, and for some rulers and some subjects to act in turn as their guards, the same thing should be done in time of peace. For what most of the people call peace is so in name only, while in fact all the cities are, by nature, always involved in undeclared warfare against all other cities. And if you look at it in this way, you will surely find that the Cretan lawgiver had an eye to warfare when he instituted all these regulations of ours, be they public or private. And he gave us the task of protecting the laws based on these principles, because nothing else at all, no possessions or pursuits, are of any use unless we prevail in war, since all the goods of the defeated city go to the victorious one.

626b

Athenian: Well, stranger, when it comes to the thorough understanding of Cretan law, you seem to me to have been very well trained. But explain something to me more clearly. The definition you gave of a well-governed city seems to me to be saying that it should be organised and managed so that it is victorious in war against other cities. Is this so?

Clinias: Yes, indeed. And I believe that this man here agrees with this.

Megillus: Heavens! How could any Spartan say otherwise?

Athenian: Now, although this is true of a city in relation to another city, does something different apply to a village in relation to another village?

Clinias: Not at all.

Athenian: Is it the same?

Clinias: Yes.

626c

Athenian: What about one household in the village in relation to another, and one man against another? Is it the same?

Clinias: The same.

Athenian: And what about the man himself, in relation to himself? Should he think of himself as an enemy? Or what do we say in this case?

626d

Clinias: O Athenian stranger! I am not prepared to refer to you as a mere inhabitant of Attica, for I think you really deserve to be named after the goddess,² since you have correctly brought the argument back to its source and made it clearer. As a result, you will easily discover that we were right to say just now that all are enemies to all, at the level of the community or of the individual, and each individual is an enemy of himself.

Athenian: That is surprising! What do you mean?

626e

Clinias: That is to say he himself, winning a victory over himself, my friend, is the first and the best of all victories, while he himself, being defeated by himself, is the worst and most shameful defeat of all. Indeed, these statements are indicating that there is a war going on in each of us, against our own selves.

627a

Athenian: Well, let us turn the argument around again. For since each one of us is both better than himself and worse than himself, should we maintain that the same holds for a household, a village and a city, or not?

Clinias: Are you asking about being better than itself and worse than itself?

Athenian: Yes.

Clinias: And you are right to ask, for this certainly is the case, very much so, especially in cities. For in any cities, where the superior people win a victory over the majority, who are inferior, the city may rightly be said to be better than itself, and the city may quite justly be praised for such a victory. And the opposite applies under the opposite circumstances.

627b

Athenian: Let us set aside the possibility that the inferior might somehow be better than the superior, since that would involve a longer argument. But as I now understand you, you are saying that unjust citizens, of the same stock, born in the same city, will sometimes get together in large numbers and forcibly enslave just citizens who are fewer in number. Whenever they prevail, the city itself may rightly be said to be worse than itself and bad, and whenever they are defeated, the city itself may be said to be better than itself and good.

627c

Clinias: What you are describing is most unusual, stranger. Nevertheless, we have to agree that this is most necessarily so.

Athenian: Hold there. Let us consider this once more. Many brothers may presumably be born, sons of one father and one mother, and it would not of course be a surprise if more of them turned out to be unjust, and less of them to be just.

Clinias: It would not.

627d

Athenian: And it would not be appropriate for you and me to pursue the point that the entire household, and the family, would be referred to as worse than itself if the evildoers were victorious, and as better than itself if they were defeated. For what we are now considering, in relation to the argument of the majority, is not concerned with the appropriateness or inappropriateness of verbal expressions, but with laws, and the precise nature of correctness and freedom from error in them.

Clinias: Very true, my friend.

Megillus: Yes, I agree. This has been very well expressed so far.

Athenian: Then let us look at the following question too. The brothers that were spoken of just now would, presumably, have a judge?

Clinias: Yes, indeed.

627e

Athenian: Now, which of these two would be superior, a judge who destroyed the bad people among them, and directed the better people to rule over themselves, or one who made the good people rule, while allowing the inferior types to live on as their willing subjects? And there is perhaps a third judge we should mention in terms of excellence – if such a person exists – one who takes a single quarrelling family in hand, does not destroy anyone, but reconciles them for the future, and would be able to ensure that they are on friendly terms with one another by giving them laws.

628a

Clinias: This sort of judge, who is also a lawgiver, would be far superior.

Athenian: And yet, he would not be enacting laws for them with a view to war. The very opposite would be the case.

Clinias: That is true.

Athenian: What about the one who brings the city together in harmony? Does he order the life of the city with a view to external warfare, rather than looking out for warfare that arises from time to time within the city, which is called faction? And this is something that no one ever wants in his own city, and when it arises he wants it to be eliminated as quickly as possible.

628b

Clinias: He will look out for faction, of course.

628c

Athenian: What if faction were to come to a peaceful end because some people had been destroyed while others had been victorious? Would that be preferable to reconciliation of the faction and having to turn their thoughts then to external enemies, in friendship and peace with one another?

Clinias: In the case of their own city, the reconciliation is what everyone would prefer.

Athenian: Doesn't the same apply to the lawgiver?

Clinias: Of course.

Athenian: And wouldn't every lawgiver institute all the regulations for the sake of what is best?

Clinias: How could he do otherwise?

628d

Athenian: And what is best is neither warfare nor faction. It would be terrible if we needed these. What is best is peace and a friendly disposition towards one another at the same time. What is more, it seems the city itself, winning a victory over itself, is not to be counted among the best outcomes, but among those that are necessary. It is as if someone were to think that a sick body, which had undergone medical purgation, was then in the best possible condition and did not pay any attention to a body that did not need any treatment at all. In like manner, no one would ever become a true statesman by focusing exclusively and primarily upon external warfare as a means of ensuring the happiness of the city and of the individual. Nor would he ever be a lawgiver in the strict sense of the word, unless he instituted laws relating to warfare for the sake of peace, rather than instituting laws relating to peace for the sake of warfare.

628e

Clinias: It appears somehow that this argument of yours, my friend, has been formulated correctly. And, yet, I wonder if the regulations here, and those in Sparta too, have not been enacted, in all seriousness, for the sake of warfare.

Athenian: Perhaps so. Yet we should not do battle with them aggressively, but question them gently about the issues, since we are most serious about all this, and so are they. Follow along with my argument then. At any rate, let us introduce Tyrtaeus,³ an Athenian by birth, who later became a citizen of Sparta. He, of all men, was particularly interested in these matters, and he said that *I would make no mention of a man or take account of him, even if he were the wealthiest of men even if he possessed goods aplenty...* and here he lists almost all of them *...unless he turned out to be consistently excellent in warfare.* I presume that you have heard these poems too, while I am sure that our friend here has had his fill of them.

629b

Megillus: I certainly have.

Clinias: Yes, indeed, and they have reached us here too, imported from Sparta.

629c

Athenian: Come on, then. Let us question this poet together in some such manner as this: “O Tyrtaeus, you are surely the most divine of poets, for you seem to us to be wise and good indeed, because you have sung the praises of those who excel in war, and you have excelled in doing so. Now, I myself, and this man, and Clinias of Cnossus, are already in full agreement with you on this matter, or so we think, but we would like to know for certain whether or not we are both talking about the same people. So tell us, do you think, for certain, as we do, that there are two kinds of warfare? Or what do you think?” In response to this, I believe, even a far lesser man than Tyrtaeus would state the truth, that there are two, one which all of us call faction,

which is the most bitter of all kinds of warfare, as we ourselves said just now. And we shall all propose, I believe, that the other kind of warfare is what we engage in when quarrelling with other peoples externally, and this is much milder than internal faction.

Clinias: Of course.

629e

Athenian: “Come on then, which warfare were you praising? And which men did you praise so highly, or criticise? It seems it was the men involved in external warfare, for you say in your poems that you simply cannot stand the sort of men who shrink at the sight of blood-drenched slaughter, and will not grapple with the enemy at close quarters.” And after all this, shouldn’t we also say, “It seems, Tyrtaeus, that you lavish most praise on those who achieve fame in external warfare against foreigners.” I presume he would agree with this, and accept the point.

Clinias: Of course.

630a

Athenian: But although these men are good, we maintain that those who excel conspicuously in the greatest warfare are better by far. And we have a poet as witness to this too, Theognis,⁴ a citizen of Megara in Sicily, who says, “In a bitter contest, a faithful man is worth his weight in silver and gold, Cynrus.” We maintain then that this man turns out to be altogether better than that other man in more bitter warfare. He is better to much the same extent as justice, sound-mindedness and wisdom, combined with courage, are better than courage just by itself. For faith and soundness in the midst of faction would never arise in the absence of overall excellence. But in the external warfare that Tyrtaeus speaks of, there are vast numbers of mercenaries ready and willing to stand their ground and die fighting, almost all of whom turn out to be reckless, unjust, arrogant and devoid of intelligence, with

some few exceptions. Well, where will this present argument of ours finally lead? And what precise point is it trying to make by saying all this? Obviously it is this. The god-inspired lawgiver of this country, and any lawgiver who confers even a little benefit, always institutes laws while looking, above all, to nothing else except the very greatest excellence. This, according to Theognis, is “faithfulness in the midst of danger”, which may be called ‘perfect justice’. But what Tyrtaeus for his part has praised most – although it is noble, and has been appropriately glorified by the poet – should nevertheless, properly speaking, be placed fourth in terms of its status and the respect it commands.

630d

Clinias: My friend, we are relegating our own lawgiver to the lowest rank.

Athenian: No, my friend, we are not doing it to him. We are relegating ourselves whenever we believe that Lycurgus and Minos instituted all the regulations,⁵ here and in Sparta, mainly with a view to warfare.

Clinias: How should we have spoken of this?

Athenian: In a way that is true and just, I believe, since we are conversing on behalf of a divine personage. We should not say that he instituted laws with a view to a portion of excellence, and the most commonplace portion at that, but with a view to excellence in its entirety. And we should say that he sought to institute the laws kind by kind, but not the kinds proposed by those who institute laws nowadays. For at present each seeks to propose whatever kind he needs, so one person is concerned with inheritances and heiresses, another with assaults, others with countless other cases like these. But we maintain that the search for laws, when properly conducted, proceeds just as we have now begun. And I thoroughly admire your attempt to explain the laws, for beginning with excellence, and saying that

the lawgiver instituted the laws for the sake of this, is correct. But when you went on to maintain that he institutes laws by referring everything to a mere portion of excellence, and the smallest portion at that, I thought you were clearly mistaken, and that is why the latter part of our discussion was needed. Well then, what sort of distinction would I have liked to hear you making as you spoke? Would you like me to tell you?

Clinias: Yes, certainly.

631b

Athenian: You should have said: “Stranger, it is not for nothing that the laws of Crete are held in exceptionally high regard among all Greeks. They are correct laws that bring about happiness in those who use them, for they provide everything that is good. Now, goods are of two kinds – human and divine – and the human goods depend upon the divine. And if a city receives the greater it also acquires the lesser, but if it receives not the greater it is deprived of both. Of the lesser goods, health is the leader, beauty comes second, third comes strength in running and the other activities of the body, fourth comes wealth – not blind,⁶ but keen-sighted, provided it follows wisdom. Now, the first of the divine goods, and their leader, is wisdom; second is a sound-minded disposition of the soul, imbued with reason; and third, from the combination of these two with courage, comes justice; while courage itself is fourth. All of these have a natural priority over the human goods, and that indeed is how the lawgiver must rank them. After all this, the citizens must be told that the other civic regulations have these goods in view; the human look to the divine, and the divine all look together to their leader, reason. “In their connections through marriage, and afterwards in the birth of their children and their nurture, be they male or female, when they are young or when they get older and into old age, it is necessary to care for them by bestowing honour or dishonour

in the right way. And in all their interactions, in their pleasures, pains, desires and intense passions, they should be watched and supervised, and censure or praise should be bestowed in the right way, through the laws themselves. In anger too, and in fear, and amidst any tribulations that arise in their souls because of bad fortune – and the escape from such tribulations in good fortune – and amidst the effects that disease, war, poverty and their opposites have upon people when they occur, under all such circumstances, what is good and what is bad about the situation should be defined and taught in each case. “Besides this, it is necessary for the lawgiver to watch over the acquisition and disposition of property by the citizens, regardless of how they do it, and to oversee their joint ventures in furtherance of this, and the dissolution of these, be they voluntary or involuntary, noting the way in which they behave towards one another in each of these ventures, and which are just, and which are not. He should assign honours to those who are obedient to the laws, and impose legally prescribed penalties upon those who disobey them. When he reaches the end of the entire constitution, he would look to the manner in which the dead should be buried in each case, and what honours should be assigned to them. Having surveyed this, the one who instituted the laws will, over all these, appoint guardians, some who proceed through wisdom, some who work through true opinion, so that reason may bind them all together and declare that they are following sound-mindedness and justice, rather than wealth and ambition.” So, my friends, that is how I at least wanted, and still wish even now, to hear you describe how all these are present in the laws that are said to come from Zeus, or in the laws of Pythian Apollo, which Minos and Lycurgus instituted. And I also want you to explain how the order they have acquired is evident to someone experienced in the laws, either technically or practically, while it is not at all apparent to the rest of us.

632e

Clinias: Well, my friend, what should we say next?

Athenian: In my opinion we should go through this again from the beginning, starting, as we did at the outset, with activities conducive to courage, and then if you wish we shall go through another kind of excellence, and another one after that. Once we have described the first one, we should try to set this up as a model, and pass the journey nicely by discussing the others in the same way. Later, god willing, we shall demonstrate that what we have described just now has excellence in its entirety in view.

633a

Megillus: That is a good suggestion. Let us try to put our friend here, who praises Zeus, to the test first.

Athenian: I shall also try to test yourself and myself, since the argument is common to us all. So tell me, do we maintain that the common meals and physical training were devised by the lawgiver for the purposes of warfare?

Megillus: Yes.

Athenian: And what comes third and fourth? For it may perhaps be necessary, in the case of the rest of excellence, to rank the parts, or whatever they should be called, in this way, as long as our meaning is clear.

633b

Megillus: Well I myself, and anyone from Sparta, would say that he devised hunting third.

Athenian: We should try to say what comes fourth or fifth if we can.

Megillus: In fourth place, I would still try to argue, lies the endurance of pain, which is so important to us both in our boxing matches and in the robberies we devise, in which there is always a lot of physical violence. Then there is our so-called

‘secret service’,⁷ which involves a lot of pain, but teaches endurance wonderfully. They go without shoes in winter, sleeping on the ground, wandering through the entire countryside by day and by night, looking after themselves without any attendants. Our naked games too are formidable tests of endurance, battling against the raging heat of summer. And there are so many other examples that someone who tried to recite them all would almost never stop.

633d

Athenian: Well said, Spartan stranger. But come now, what should we propose courage is? Is it simply, as you say, doing battle only against fears and pains, or is it set against desires and pleasures too, and against certain formidable corrupting flatteries, that soften the hearts even of those who think they are above this sort of thing?

Megillus: Yes, that is what I think. It is set against them all.

Athenian: Well, if we recall the earlier arguments, this man here spoke of a city that is worse than itself, and of such a man too. Is this so, stranger from Cnossus?

Clinias: Very much so.

633e

Athenian: And are we now saying that the man who is worse than the pains is bad, or is the man who is worse than the pleasures bad too?

Clinias: In my opinion, the one who is worse than the pleasures is more so. Indeed, we all say, presumably, that someone who is ruled by pleasures is worse than himself, shamefully so, rather than someone who is ruled by pains.

634a

Athenian: Now, surely Zeus’ lawgiver and the Pythian one did not institute a crippled courage capable of resisting only the things on its left-hand side, but unable to resist the allurements

and flatteries on its right? Or can it resist on both sides?

Clinias: On both sides, I would say.

Athenian: Shall we say then, once more, what formal activities of both our cities involve tasting the pleasures rather than avoiding them, just as the other activities did not avoid pains but immersed people in them, and used honour to compel or persuade people to rule over the pains? Where then, in the laws, is the same arrangement in relation to pleasures? Let us say what this arrangement of yours is that makes the same people courageous, in like manner, in the face of pains and in the face of pleasures, winning victories over what they should, and never coming off worst against their own closest and harshest enemies.

634b

Megillus: Well, stranger, although I was able to describe, as I did, many laws that are set against pains, I would probably not be so well provided with significant or obvious instances if I had to speak about pleasures. But I might come up with some minor instances.

Clinias: Nor could I myself point to an obvious instance of this sort in the laws of Crete.

634c

Athenian: Best of strangers, that is no surprise. But if any one of us is going to censure anything about each other's own domestic laws because he wishes to discern the truth, and what is best too, we should accept one another's censures submissively, and not make difficulties.

Clinias: Rightly said, Athenian stranger. We should heed that.

Athenian: Yes, Clinias. It would not be appropriate for men of our age to make difficulties.

Clinias: Indeed, it would not.

634d

Athenian: Whether or not someone is right to criticise the constitution of Crete or Sparta is another matter. However, when it comes to the views expressed by most people, I am probably better able to state them than either of you. If your laws have indeed been arranged properly, one of the best laws would be that no young person may conduct an enquiry as to which laws are worthy and which are not, but all must declare together, with one voice, from a single mouth, that all is well with what the gods have ordained. If anyone says otherwise, he is not given a hearing at all. Yet if any old person has some issue on his mind about your laws, he presents arguments of this sort to someone in authority, someone of his own age, with no young person present.

Clinias: What you are saying is quite correct, stranger. And although you are far removed in time from whoever instituted them, it seems you have now guessed his thinking on the matter quite well, like a prophet, and you really are speaking the truth.

634e

Athenian: Well, there are no young people among us just now. So if the lawgiver permits us, on account of our old age, to discuss these matters just by ourselves, we would be doing no great harm, would we?

Clinias: This is so. And do not hold yourself back from criticising our laws, since recognising something that is not good is not disrespectful. In fact, a remedy can be a consequence of this, provided that what is said is received without resentment, in a good spirit.

635a

Athenian: Very well, but I shall not speak critically of your laws just yet, not until I have investigated them to the best of my ability, and am more certain about them. Instead, I shall tell you of my difficulties. As far as we can discover, your lawgiver is the

only one, among Greeks or non-Greeks, who gave directions to refrain from the greatest pleasures and amusements, and not to taste of them at all. Yet when it came to pains and fears, as we explained earlier, he believed that if someone flees from these from his earliest years, in the end whenever he meets with unavoidable hardships, fears and pains, he is going to flee from people who are trained and practised in these, and he will be enslaved by them. I am of the view then that the same lawgiver should have thought the very same thing about pleasures, saying to himself, "If our citizens grow up from their very childhood with no experience of the greatest pleasures, and become totally unpractised in enduring in the face of pleasures, and in resisting the urge to perform shameful acts, their weakness of spirit when it comes to pleasures will place them in the same predicament as those who are overcome by fears. They will be enslaved, in a different and even more shameful way, by people who are able to practise endurance in the face of pleasures, and who have mastered the realm of pleasure, people who are sometimes thoroughly bad. The state of their own soul will be partly slave, partly free, and they will not be worthy of being hailed as courageous and free without reservation." So think about whether anything that has been said is of any particular relevance.

635e

Clinias: Well, although the argument somehow seems to us to make sense, it might well be both naïve and foolish to be persuaded, so quickly and easily, about matters of such significance.

Athenian: But if we turn to the next topic we proposed to discuss after courage, which was sound-mindedness, then, Clinias and my friend from Sparta, we should ask a question. What characteristic difference shall we find between these systems of government and systems that are managed in a more

random manner? In the case of courage, the difference related to warfare. Where does it lie in the case of sound-mindedness?

Megillus: Hardly an easy question, but it does seem that the common meals and physical training have been well devised to promote both virtues.

636a

Athenian: It does, of course, seem hard, strangers, for anything relating to constitutions to be as uncontroversial in practice as it is in theory. Indeed, it is probably like the human body, for which it is not possible to prescribe a single activity for a single body, which would not turn out to be harmful to our bodies in some respects, but beneficial in other respects. So too these physical exercises and common meals, although they benefit the cities in lots of other ways, give rise to the problem of faction, as the young people of Miletus, Boeotia and Thurii demonstrate. What is more, this practice seems to have corrupted an ancient law that also accords with nature, concerning the sexual pleasures not just of humans, but also of animals. And your cities might be held primarily responsible for these, along with any other cities that place most emphasis upon physical training. And whether such matters are taken lightly or seriously, we should note that when the female and male natures combine for procreation, the associated pleasure seems to have been bestowed naturally. But combining male with male, or female with female, seems contrary to nature, and the daring of those who first did this seems to have arisen from uncontrolled desire. And, indeed, we all accuse the Cretans of making up the story about Ganymede.⁸ Since their laws are believed to have come from Zeus, they added this story about Zeus so that they could still enjoy this harvest of pleasure while following their god. But let us bid farewell to the story. Yet, when human beings are considering laws, almost the entire enquiry is about pleasures and pains, either in the city, or in the

behaviour of individuals. For pleasure and pain are two springs sent forth by nature. Drawing from the right one at the right time and in the right quantity leads to happiness in like manner for a city, an individual, or any living being. But whoever draws in ignorance and at the wrong time lives a life that is the very opposite.

636e

Megillus: What has been said, stranger, is in a sense all very well, and it leaves us speechless as to what to say in response. Nevertheless, I still think that the Spartan lawgiver was right to exhort us to flee from pleasures. As for the laws of Cnossus, our friend here can defend them if he wants to. But it seems to me that the regulations in Sparta relating to pleasure are the best in the world. For our law has cast out, from the entire country, the practice that is most inclined to plunge people into extremes of pleasure, arrogance and utter mindlessness. Neither in the countryside nor in the cities that are under Spartan control would you ever see drinking parties, and all the pleasures that are set in train with such force by whatever goes on there. There is no man among us who would not impose a severe penalty, there and then, upon any drunken reveller he came across, and the feast of Dionysus would not serve as an excuse to get him off. I saw this sort of thing once on the festival wagons in your country. And among our own colonies, in Tarentum, I saw the entire city drunk at a festival of Dionysus.⁹ There is nothing like this among us.

637c

Athenian: Dear Spartan stranger, everything of this sort is laudable where there is an inherent steadiness of character, but where this is let go, it all becomes quite stupid. Indeed, one of our people, in his defence, might perhaps take you to task by pointing to the looseness of your womenfolk. Yet in anything of this sort, in Tarentum, among ourselves or among yourselves, a single response seems to do away with the notion that the

behaviour is bad and improper. For everyone will say to a stranger who is amazed at seeing something that is unfamiliar among his own people, “Do not be surprised, stranger. This is the law among us, and perhaps your law about the same things is different.” But our present argument is not concerned with humanity in general, my dear friends, but with the badness and excellence of the lawgivers themselves. Indeed, we should still say more about drunkenness in general, for it is not a trivial matter, nor can an ordinary lawgiver understand it. And I am not speaking about wine, and partaking of it, or not partaking of it at all, but about drunkenness itself. Should we have recourse to it as the Scythians and Persians do – and the Carthaginians, Celts, Iberians, Thracians too, warrior races all – or should we avoid it totally, as you do in Sparta? The Scythians and Thracians, women as well as men, drink completely undiluted wine, pour it all over their garments, and regard this as a lovely, happy activity to engage in. The Persians also indulge in this with great relish, and in the other luxuries that you have banned, but they are more orderly than those other peoples.

637d

Megillus: But, my good man, once we take up arms we put all these people to flight.

Athenian: Best of men, do not say that. In fact, there have been lots of victories and routs that were unexplained, and there will be many more. Therefore, we should never say that victory or defeat in battle is a decisive indicator of whether practices are good or bad. This is a questionable criterion, since larger cities obviously defeat smaller ones in battle, and so we find the Syracusans enslaving the Locrians, who are reputed to have the best laws in that region, the Athenians enslave the Ceians, and you will find countless other examples of this sort. So let us try to persuade ourselves, by speaking of each practice in its own right, excluding victory and defeat from the argument for the

moment. We should simply say how a practice of one sort is good, while a practice of another sort is bad. But first, listen to me as I explain how we should investigate what is useful about these practices themselves, and what is not.

Megillus: How do you say it should be done?

638b

Athenian: It seems to me that those who set about discussing some practice, and propose to criticise it or praise it as soon as it is mentioned, are not proceeding in a proper manner at all. They are acting like someone who has just heard cheese being praised as good food, and immediately criticises it without enquiring as to the effect it has and the manner in which it is administered, by whom, accompanied by what, and to people in what condition. I think we are now doing the very same thing in these arguments, for at the mere mention of drunkenness, as soon as we heard the word, some of us criticised it there and then, while others praised it, most strangely in both cases. We each exalt our own position by recourse to witnesses and praise. Some of us claim we have made a decisive point because we produce so many witnesses, others because we can all see that those who refrain from drunkenness are victorious in battle, and this claim too is a matter of dispute between us. Now, if we are also going to go through each of the other legal regulations in this way, that would not seem reasonable to me. But I am willing to describe another approach, a necessary one in my view, in relation to this very practice, drunkenness. I shall try my best to demonstrate the correct method of investigating anything of this sort, since thousands upon thousands of people will enter the fray verbally on these issues, and argue against both your cities.

638e

Megillus: And, indeed, if we have a correct method of investigating such matters, there should be no reluctance to

hear it.

639a

Athenian: Then let us conduct our enquiry along the following lines. Suppose someone were to praise goat-rearing, and the animal itself as a good beast to own, while someone else, having seen goats grazing without a goatherd, and wreaking havoc on farm land, were to criticise them, and also disparage any other unruly animals he saw, or any that had bad minders, do we think that the censure of such a person could ever be sound on any issue at all?

Megillus: No, how could it be?

639b

Athenian: Would someone be useful to us in charge of a ship if he only had navigational knowledge, regardless of whether he suffered from seasickness or not? What would you say?

Megillus: He would not be useful at all if he had the skill, and the sickness you mentioned too.

Athenian: And what about someone in charge of an army? Would he be up to the task if he had military knowledge, despite being a coward in the face of dangers, seasick, and drunk with fear?

Megillus: How could he be?

Athenian: What if he did not have the skill, and was a coward too?

Megillus: Now, you are describing an utterly worthless fellow, who is not a ruler of men at all, but of some thoroughly effeminate types.

639c

Athenian: Consider any community of any sort which has a natural leader, and which is beneficent when that leader is present. What if someone were to praise or criticise this,

without ever having seen the community working properly together with its leader in place? What if he had only seen it without a ruler, or with bad rulers? Do we think that an observer of this sort, observing a community of this sort, would ever come up with any useful criticism or praise?

639d

Megillus: How could he when he has never seen, or been involved in, any communities like this when they are operating properly?

Athenian: Hold there. Although there are lots of communities, may we suggest that companions in drink and drinking parties constitute one such gathering?

Megillus: Very much so.

Athenian: Now, has anyone, so far, ever seen such a gathering operating properly? The two of you can easily answer that you have not seen this at all, since these are not the custom of your country, nor are they lawful. But I have come across lots of them in lots of places. And what is more I have made a sort of study of them, and I have hardly seen or heard of one that was properly conducted in its entirety. And even if a few minor details were somehow right, most of them were almost completely wide of the mark.

639e

Clinias: In what sense do you mean this, stranger? Explain this more clearly since we, as you have acknowledged, have no experience of such gatherings. And even if we came across them, we would probably not immediately recognise what was proper and improper about the way they were being conducted.

640a

Athenian: What you say is quite likely, but try to understand from this explanation of mine. You do understand, don't you, that in all gatherings and communities associated with any

activities whatsoever, it is always proper in each case that there be a leader?

Clinias: There must be.

640b

Athenian: And, indeed, we said just now that the leader of men in battle must be courageous.

Clinias: He must.

Athenian: Now, the courageous man is less troubled by fears than the cowards.

Clinias: This too must be so.

Athenian: And if there had been some contrivance for putting an utterly fearless and untroubled general in charge of an army, wouldn't we have done so, by any possible means?

Clinias: Definitely.

640c

Athenian: But at the moment we are not talking about a leader of an army of men in time of war, when enemies are set against enemies, but a leader of friends, communing with friends in a spirit of friendship in time of peace.

Clinias: Quite right.

Athenian: And yet, a gathering of this sort, since it will be accompanied by drunkenness, is not without trouble. Is this so?

Clinias: On the contrary, I think trouble is inevitable.

Athenian: So in the first place, don't they too need a leader?

Clinias: Of course, especially in this situation.

Athenian: Now, if possible, shouldn't we provide the kind of leader who is untroubled?

Clinias: Of course.

640d

Athenian: And, indeed, he should be intelligent in relation to social gatherings, since he becomes the guardian of their existing friendship, and responsible for ensuring that this increases because of the current gathering.

Clinias: Very true.

Athenian: Shouldn't a sober and wise ruler be set over those who are drunk, and not the opposite? For someone who was drunk, young, and not wise, would need a lot of good luck to avoid causing harm on a large scale.

Clinias: A lot of luck, indeed.

Athenian: Now, if someone were to criticise such gatherings, in cities where they are being properly conducted as best they could, because he finds fault with the activity itself, perhaps he might be justified in his criticism. But if someone reviles a practice when he has only seen it going wrong in every way possible, it is obvious, firstly, that he is unaware that this is not being properly conducted, and secondly, that any activity at all will look bad under circumstances where it is performed without a sober master or leader. Or don't you realise that when he is drunk, a ship's captain, or any leader of anything, overturns everything, be it a ship, a chariot, an army, or whatever he happens to be in charge of?

640e

Clinias: What you have said, stranger, is true in every respect. But tell us next what possible good would it do us if this regulation about drinking were to operate properly. For instance, we have just explained that if an army is led properly, the result is military victory for the troops, and that is no small benefit. There are other examples too, but what significant benefit would there be, to people or to a city, from a drinking party that is properly guided?

641a

Athenian: What about this? What great advantage would we say accrues to the city from a single child, or even a single group, being guided in the right way? Or having put the question in this way, would we reply that there might be some slight benefit to the city from a single instance? But if we ask generally what great benefit the city derives from the education of all its educated citizens, it is not difficult to reply that having been well educated they would prove to be good men, and, as such, their general behaviour would be noble, and, what is more, they would triumph over their enemies on the battlefield. Now, although education also brings victory, victory sometimes undoes the education, for many people, having become arrogant because of military victories, have then been filled up with countless other vices because of the arrogance. And although education has never proved counter-productive or Cadmeian,¹⁰ humanity has won many such Cadmeian victories, and will do so again.

641d

Clinias: You seem to us, my friend, to be saying that time spent drinking wine together, provided it is properly conducted, is a significant contribution to education.

Athenian: Why not?

Clinias: Well, could you now provide some justification that what you have said is true?

Athenian: Stranger, with so much dispute as to how these matters stand, it belongs to God to assert the truth with certainty. But if you want me to explain how it appears to me, I shan't begrudge you that, since we have now set about constructing arguments in relation to laws and constitutions.

641e

Clinias: That then is what we should try to understand, your opinion on the issues that are now in dispute.

Athenian: That is what we should do then. You should make an effort to understand the argument, while I attempt somehow or other to expound it. But listen to the following point first. The whole Greek world regards our city as fond of words and full of words, and Sparta as sparing of words, while Crete cultivates thoughtfulness rather than being full of words. Now, I am being careful not to give you the impression that I have a lot to say about something trivial, by enunciating a vast argument about the insignificant matter of drunkenness. But it would not be possible to consider the right treatment of this topic naturally, with sufficient clarity in our discussions, without considering correctness in music; and this would never be possible without considering education in its entirety; and all these involve very lengthy discussions. So what should we do? Let us see. What if we leave those matters for the moment and move on to some other argument relating to laws?

642b

Megillus: Athenian stranger, perhaps you do not know that our family is the local representative of your city in Sparta. Now, it is probably the case with all children that once they hear that they are the local representatives of some city, straight away, from their earliest years, a certain goodwill towards that city develops in each of them, as if towards a second fatherland, second only to his own city. And that is what has now happened to me. For when the Spartans were criticising or praising the Athenians for something, I would immediately hear the other children saying, “That city of yours, Megillus,” they would say, “has treated us badly” or “has treated us well”, and through entering the fray on your behalf, again and again, against those who found fault with your city, I developed unreserved goodwill for it. Even now your accent delights me. And when I hear so many people say that any Athenians who are good are good in a special way, I think they are speaking the complete truth, for Athenians are good by a divine portion, good by their own

nature without any compulsion, truly so, and not artificially so. Speak on then, as much as you like, and have no concerns on my account.

642d

Clinias: And, indeed, stranger, once you have heard my account too, and have accepted it, you may speak on boldly and say as much as you wish. Now, you may have heard that Epimenides, that divine man, was born in this country. He was a relative of ours, and ten years before the Persian War he went to Athens, to your people, to comply with an oracle of the god.¹¹ He performed some sacrifices that the god had ordained, and what is more, since the Athenians lived in fear of the Persian expeditionary force, he told them, “They will not arrive for another ten years, and when they get here they will depart without achieving anything they had hoped for, having suffered more harm than they inflicted.” That is when our ancestors formed a bond of hospitality with yours, and I myself and my family have been well disposed towards your people ever since.

643a

Athenian: Well then, it seems that you are both ready to play your part and listen. As for myself, although I am ready and willing, the capacity may be lacking as this is not at all easy, but I must make the effort nevertheless. In the first place then, to develop the argument, we should define what precisely education is, and what power it has. For we maintain that the argument we have taken in hand should proceed along the path of education, until it reaches God.

Clinias: Yes, certainly. Let us do that, if it pleases you.

Athenian: Well, what is education? What should we say it is? Let me answer that, and you should decide if what I say is to your liking.

Clinias: Proceed.

643b

Athenian: What I say is this. I maintain that a man who is to be good at anything at all should practise just that activity from his earliest years, both as a game and seriously, using the particular tools that are appropriate to the activity. Take, for example, a man who is to be a good farmer or house-builder. The builder should play at building toy houses, and the other man should play at farming, and whoever is rearing them should provide each of them with little tools, imitations of the real ones. And, indeed, any of the essential subjects should be learned in advance. And so a carpenter should learn to measure and calculate, a military type should learn horse-riding for sport, or do something else like that, and we should endeavour to turn the pleasures and desires of the children, through games, to where they should ultimately be directed. We are saying then that the essence of education is the correct upbringing which most effectively draws the soul of the child, as he plays, to an intense love of the activity in which he will need to be perfect, in terms of its excellence, when he becomes a man. Now, as promised, let us see if what I have said so far is to your liking.

Clinias: Of course it is.

643d

Athenian: Unless perhaps our description of education still lacks definition. For we are now criticising and praising various upbringings, and we say that one of us has been educated while another is uneducated, and sometimes we are speaking about people who have been thoroughly well educated in certain trades, or in merchant shipping and other such occupations. But in our present argument we would not, it seems, regard any of these as education. We mean education directed to excellence from earliest childhood, which produces an eager desire to become a perfect citizen who knows how to rule and be ruled justly. This argument of ours, having distinguished this particular upbringing from the others, would in my view wish

to refer to this alone as education. And it would say that an upbringing whose aim is money, or some sort of strength, or even another kind of wisdom devoid of reason and justice, is base and slavish, and totally unworthy of being called education. But let us not quarrel with one another over names. Let us hold to the argument we have just agreed upon: that those who have been properly educated usually become good, and education should be shown no disrespect anywhere, since it is foremost among the fairest acquisitions that the best men have. And if it ever goes astray, it is possible to set it right, and this is what everyone should do, unceasingly, to the very best of his ability throughout his entire life.

Clinias: That is right. We agree with what you are saying.

644a

Athenian: And, indeed, we agreed some time ago that the good people are those with the ability to rule over themselves, while the bad are those who cannot do so.

Clinias: What you are saying is correct.

644c

Athenian: Well, let us look at this again, more clearly this time, and say what precisely we mean. And if you allow me, I shall explain this to you by means of an image, if I can.

Clinias: Proceed.

Athenian: May we assume that each of us is, himself, one?

Clinias: Yes.

Athenian: But we each possess, in ourselves, two opposed advisers, devoid of intelligence, which we call pleasure and pain.

Clinias: This is so.

644d

Athenian: Besides these two, there are opinions relating to the future. These go by the general name of ‘expectations’. But to be specific, the expectation prior to pain is called fear, while the expectation prior to pleasure is called confidence. Then there is reasoning about all these as to which is better and which is worse, and when reasoning becomes a doctrine that is common to the city, it is given the name ‘law’.

Clinias: I am following you somehow, but with difficulty. However, assume that I am following you, and tell me what comes next.

Megillus: Yes, I feel the same way.

Athenian: Then let us think about these matters as follows: let us consider each of us living creatures as a puppet of the gods, constructed as their plaything, or for some serious purpose. This we do not understand, but we do know that these emotions within us, like cords or strings, are drawing us, and because they are opposites they are pulling against one another, towards opposite activities, and here lies the boundary line between excellence and evil. And the argument declares that we should each always follow the lead of one of these pulls, and never forsake that one at all, but pull against the other cords. The cord to follow is the golden and sacred guidance of reasoning, called the common law of the city. The other cords are hard and of iron, and they occur in endless varieties, but this one is soft because it is made of gold. We should co-operate then with the exalted guidance of the law. For reasoning, although it is noble, is also gentle and not violent, so its guidance needs our support, so that the golden race within us may triumph over the others. And so the story about excellence, the story about us being puppets, would be saved, and the meaning of being better than oneself and worse than oneself would somehow become clearer. It would also be more obvious that the individual should take to heart the true account

concerning these various pulls, follow this, and live accordingly; while the city, having adopted an argument either from some god, or from this person who understands these matters, should pass a law to govern its dealings with itself and other cities. In this way too, the distinction between badness and excellence might be clearer to us, and once this has become more evident, perhaps we shall have a better perspective on education and the other practices. And in particular, although the pastime of wine drinking might seem to be commonplace, and an odd topic to discuss at such great length, it may well turn out to be worthy of a lengthy discourse after all.

Clinias: Well said. So let us proceed with whatever this discussion requires.

645d

Athenian: Come on, then. If we bring drunkenness to bear upon this puppet of ours, what sort of effect will it have?

Clinias: Why do you ask? What's the purpose of this enquiry?

Athenian: Nothing in particular, I am just asking what sort of thing generally happens when this interacts with that. But I shall try to explain what I mean more clearly. Does the consumption of wine make pleasures and pains, anger and passion, more intense?

Clinias: Much more intense.

645e

Athenian: But what about sense perception, memory, opinions and intelligence? Do these become more intense in the same way? Or do they totally forsake a person once someone becomes intensely drunk?

Clinias: Yes, they forsake him completely.

646a

Athenian: Doesn't his soul revert to the same state it was in when he was a child?

Clinias: Indeed.

Athenian: And that is when he would be least in control of himself?

Clinias: Least.

Athenian: And don't we say that a person like this is thoroughly bad?

Clinias: Thoroughly so.

Athenian: So it is not just the old man, it seems, who experiences a 'second childhood', but the drunkard too.

Clinias: Excellent, stranger. Well said.

Athenian: In that case, is there any argument that will attempt to persuade us that this is a practice we should indulge in, and not one we should flee from with all the strength we can muster?

646b

Clinias: It seems that there is. At any rate, you maintain that there is such an argument, and you were ready to state it a moment ago.

Athenian: Yes, that is true, you remember. And I am now ready to do so, since you have both declared your willingness and eagerness to listen.

Clinias: We shall listen. We simply must, if only because of your surprising and odd assertion that a person should ever plunge himself, willingly, into an utterly depraved state.

Athenian: Are you referring to the state of his soul? Is that what you mean?

Clinias: Yes.

646c

Athenian: What about this, stranger? Would we be surprised if someone ever, of his own free will, got into a physical state of emaciation, ugliness and weakness?

Clinias: We would of course.

Athenian: Now, do we imagine that people, who themselves go along to medical centres to be treated with drugs, do not realise that shortly afterwards, and for many days, their body will be in such a state that if they had to live like that for the rest of their lives, they could not bear it? And we know, don't we, that people who go to the gymnasium and do hard exercises become weak at first.

Clinias: Yes, we know all this.

646d

Athenian: And don't we also know that we engage in all these willingly, for the sake of the benefits that follow from them?

Clinias: Quite so.

Athenian: Shouldn't we also think about any other practices in the same way?

Clinias: Yes, indeed.

Athenian: In that case, we should also think of the pastime of wine drinking in the same way, if it may, indeed, properly be thought of as one of these practices.

Clinias: Of course.

Athenian: Now, if it turns out that this practice is beneficial to us, just as beneficial as the practices associated with the body, it would still win out over physical exercise, because that is accompanied by pain in the beginning, while wine drinking is not.

646e

Clinias: You are right about that, but I would be surprised if we were able to discover any such benefit in this.

Athenian: Then this, it seems, is just what we should now attempt to explain. So, tell me. Can we discern two kinds of fear that are almost direct opposites?

Clinias: What kind of fears?

Athenian: As follows. Presumably we are afraid of evils when we expect them to occur?

Clinias: Yes.

647a

Athenian: And we are often afraid of opinion when we believe that people will form a bad opinion about us, for doing or saying something that is not noble. And we ourselves, and I believe everyone else too, refer to this fear as shame.

Clinias: Of course.

Athenian: These are the two fears I meant. The second of them stands in opposition to pains, and to the other fears, and also to the most numerous and intense pleasures.

Clinias: Correct.

647b

Athenian: Now, doesn't the lawgiver, and anyone else who is of any use, show the utmost respect for this fear and refer to it as 'reverence'? The boldness that is opposed to this he calls 'irreverence', and he regards this as the greatest possible evil, both for a private individual and for a community.

Clinias: Correct.

Athenian: Doesn't this fear save us in many other ways, all of them important? And doesn't this, more so than anything else, ensure victory in war, and our safety in every case? For there are two things that ensure victory: boldness in the face of

enemies, and fear before our friends of the evil associated with shame.

Clinias: Quite so.

647c

Athenian: So each of us should become fearless, and fearful, for the reasons we have distinguished in either case.

Clinias: Certainly.

Athenian: And, indeed, when we wish to make each person fearless in the face of many fears, we ensure this by drawing him into fear, legally.

Clinias: Apparently so.

Athenian: And what about our attempts to make someone fearful, in a manner that conforms to justice? Shouldn't we make him victorious in the battle against his own pleasures, by pitting him against shamelessness, and training him to oppose it? A person should become perfect in courage by doing battle against the cowardice in himself and defeating it. And, indeed, anyone who has no experience or training in such struggles would not attain even half of his own potential in terms of excellence. But in the case of sound-mindedness, can he ever attain perfection without putting up a strong fight against the many pleasures and desires that turn him to shamelessness and injustice, and prevailing against them with the aid of reason, action and skill, both in play and seriously, rather than being devoid of experience of this sort of thing?

647e

Clinias: That would be quite unlikely.

Athenian: What about this? Is there a drug for fear, that some god has given to humanity, such that the more someone is willing to drink of it, the more he regards himself, with every drop he drinks, as doomed to misfortune? He gets afraid of

everything, present and future alike, and in the end even the most courageous man there is gets consumed with fear. But once he has slept off the potion and is rid of its effects, he always becomes himself once again.

648a

Clinias: Is there a potion like this, stranger? Can we claim that such a thing exists?

Athenian: There is no such thing. But if it had existed somewhere, would it have been of any use to the lawgiver in promoting courage? We might well have had a discussion with him about this, somewhat as follows: “Come, lawgiver, whether you are proposing laws for Crete or for any other people, would you like first to have a test at your disposal to determine the courage and cowardice of the citizens?”

Clinias: Every legislator would obviously say, “Yes”.

648c

Athenian: What about this? Would you like a test that is safe, and without significant risks, or the opposite?

Clinias: The test should be safe. Everyone will agree on this.

Athenian: And would you use the test by inducing these fears, and testing the people under these circumstances, so as to compel them to become fearless by exhorting, warning and rewarding them? Would you dishonour anyone who did not obey you and thus become the sort of person you directed them to be? And wouldn't you let someone go without a penalty if he had completed his training well and courageously, but impose some penalty if he had done badly? Or would you not use the potion at all, even though you had nothing else to say against it?

Clinias: How could he decline to use it, stranger?

648d

Athenian: In any case, my friend, in comparison with what is done nowadays, this training would be wonderfully easy to

apply to one person, a few, or to as many people as anyone might ever wish. And what if someone preferred to be alone, in solitude, ashamed at the prospect of being seen until he believed he was in good condition? Suppose he exercised against the fears in this way, equipped only with the potion instead of lots and lots of practices? Wouldn't he be acting correctly? And so too would someone else who, trusting that he himself was properly equipped by nature and by practice, had no reluctance about engaging in the exercise, along with numerous drinking companions, and demonstrating his capacity to transcend this, and retain control in the face of the inevitable disturbance brought on by the potion. And so, because of his excellence, he would not succumb to any serious disgraceful conduct at all, nor would he behave differently. And before the last draught arrived, he would quit the scene, for fear of the defeat that the potion finally inflicts upon everyone.

648e

Clinias: Yes, stranger. In fact a person like this, acting like this, would be demonstrating sound-mindedness.

Athenian: Then, let us speak once more to the lawgiver as follows. "So be it, lawgiver. Although no god has actually given a fear-inducing drug like this to humanity, nor have we devised one ourselves – and I am excluding sorcerers – is there nevertheless a potion to induce excessive courage at the wrong time, where it is not needed?" What do we say?

649a

Clinias: I presume he will reply that there is such a potion, and he will say that it is wine.

Athenian: Doesn't this have the very opposite effect to the one we described just now? Initially it immediately makes the person who drinks it more cheerful than he was before, and the more of it he imbibes the more he is filled with high hopes and with power too, or so he thinks. And in the end, doesn't a

person like this behave like a wise man, and abound in utter frankness, freedom, and complete fearlessness, so that he says anything at all without hesitation, and acts in just the same way? I think everyone would agree with us on all this.

Clinias: Of course.

649b

Athenian: Let us remind ourselves then of the following. We declared that there are two things in our souls that should be cultivated: one so that we may be as confident as possible, and the other, its opposite, so that we may be as fearful as possible.

Clinias: This one we call reverence, I believe.

Athenian: Well remembered. And since courage and fearlessness should be practised in situations of fear, we have to decide whether their opposite would need to be cultivated under opposite circumstances.

Clinias: Well, that is likely to be the case.

Athenian: So, there are situations in which we naturally become exceptionally bold and daring. And these are the situations in which we should practise being as free as we possibly can from shamelessness and audacity, and fearful of ever daring to say, feel, or do anything shameful.

Clinias: So it seems.

649d

Athenian: Now, we are like this, aren't we, in anger, passion, insolence, ignorance, avarice, cowardice? And we may also include wealth, beauty, strength, and anything else that makes us drunk with pleasure and drives us out of our minds. And when it comes firstly to providing an inexpensive and harmless test of these, and for practising with them too, can we think of any pleasure more measured than a playful trial in wine drinking, provided it is conducted carefully? Let us consider

this. Should we test for an intractable and wild soul, the source of countless injustices, by entering into business dealings with the person, and run all the associated risks, or is it safer to get together at a festival of Dionysus? Or should we carry out a trial of a soul that is dominated by sexual desires by turning our own daughters, sons and wives over to that person, thus putting our nearest and dearest in danger, in order to see the condition of his soul? And, indeed, you could give countless examples, and still not show just how superior this safe and secure method of observing people through play actually is. And, indeed, I do not think the Cretans or any other peoples at all will dispute the fact that in these matters, this is a fair way of testing one another. And in terms of its low cost, safety and speed, it is superior to other tests.

650b

Clinias: Well, that is true.

Athenian: This then, the recognition of the natures and dispositions of souls, would be one of the most useful things for that skill which involves caring for them. And this skill, according to us, is I presume statesmanship. Is this so?

Clinias: Entirely so.

BOOK II

652a

Athenian: It seems, then, that the next question we need to consider is whether discerning one another's natures is the only good that comes from the correct use of wine parties, or whether they involve some important benefit that deserves to be taken very seriously. Well, what do we say? The argument, it seems, wishes to indicate that such a benefit is involved, but we should hear how and in what sense, paying close attention in case we get tangled up in the argument.

Clinias: Speak on.

653a

Athenian: Well then, I wish to recall once more what exactly we say right education is, in our view. For my guess now is that the salvation of education lies in this activity being organised in the right way.

Clinias: That is a bold claim.

653b

Athenian: Well, I am saying that the first, primitive sensation in children is pleasure and pain, and it is in these that excellence and vice first come to the soul. As for understanding, and confident true opinions, fortunate is the man to whom they come even in old age, and perfect is the person who has acquired these, and all the goods that are in them. And I call education the excellence that comes to children first, when pleasure, affection, pain and hate are engendered in the right way, in the souls of those who are not yet able to understand the reason. And when they do come to understand, they will concur with reason, and accept that they have become accustomed to acting in the correct manner because the habits of their childhood are so fitting. Now, this total concurrence is excellence, but there is a part of this that may be isolated in the argument and may be referred to as education, and in my opinion it would be right to do so. This part is the correct upbringing in relation to pleasure and pain, so as to hate what one should hate, from the very beginning right until the end, and love what one should love. If our argument were to separate this off and refer to it as education, we would in my opinion be naming it correctly.

Clinias: Yes, indeed, stranger. What you said earlier about education, and what you are saying now, sounds right to us.

653d

Athenian: Good. Now, although this correct training in pleasures and pains constitutes education, it slackens and diminishes to a considerable extent over the course of one's life, and the gods, taking pity on the natural hardship suffered by the human race, have instituted festival days as respites from our labours. And they have provided the Muses, and Apollo their leader, and Dionysus too, as our festival companions to regulate the festivals. And they provided sustenance there in the company of the gods. There is an argument that is repeated constantly nowadays, and we should see whether or not it is true, and accords with nature. It maintains that the young, all of them, are more or less incapable of keeping their bodies or their mouths quiet. Their constant endeavour is to move and make sounds, leaping and jumping, dancing with delight and playing around, and making all sorts of noises. Now, the other animals have no awareness of the kinds of order or disorder in their various movements, order that we call rhythm and harmony. But to us humans, who as we said were given the gods as our companions in dance, these very gods have given us an awareness of rhythm and harmony, accompanied by pleasure. By this awareness they move us and act as our chorus leaders, connecting us to one another with songs and dances. And they gave the chorus its name 'chorus' because of its natural charm.¹² First, then, do we accept this, and may we propose that education is, initially, through the Muses and Apollo? Or what should we say?

Clinias: Just that.

^{653e}

Athenian: So, for us, the uneducated person will be someone who has not participated in the chorus, and we should propose that the educated person has participated enough.

Clinias: Indeed.

Athenian: Now, a choral performance involves dancing and singing combined together.

Clinias: Of course.

Athenian: So the person who has been well educated would be capable of singing and dancing well.

Clinias: So it seems.

654a

Athenian: Let us look at what exactly it is that we are saying now.

Clinias: What are you referring to?

Athenian: We say that 'he sings well' or 'he dances well', but should we add 'provided that what he sings is good and what he dances is good'. Or should we not add this?

Clinias: We should add this.

654b

Athenian: What about someone who regards what is good as good, and what is base as base, and makes use of them accordingly? Will such a person, in our view, be better educated in choral performance and music when he is consistently able to be faithful enough, physically and verbally, to his concept of what is proper, but takes no delight in anything good, and has no aversion to whatever is not? Would he be better educated than someone who was not really able, verbally or physically, to successfully accomplish anything good, or to conceive of it mentally, but is right when it comes to pleasure and pain, because he embraces whatever is good, and detests whatever is not?

Clinias: These two cases, stranger, are vastly different in terms of education.

654c

Athenian: Well then, if the three of us recognise what is good in relation to singing and dancing, we shall also know correctly who has been educated and who is uneducated. But if we do not recognise this, we would never be able to recognise clearly whether a guardian of education exists, and where it is. Isn't this so?

Clinias: It is so, indeed.

Athenian: So what we have to track down next, like hounds following a trail, is what is good bearing, melody, song and dance. But if these escape us and get away, vain would be our subsequent argument about correct education, either of Greek or of non-Greek.

Clinias: Yes.

654d

Athenian: So be it. What exactly then is good bearing and melody? What should we say? Come on then. Consider a courageous soul in difficult circumstances, and a cowardly soul under the very same circumstances. Will their bearing and their utterances turn out to be much the same?

Clinias: No, how could they when their very complexions differ?

654e

Athenian: Well said, my friend. But bearing and melody are present in music, which is concerned with rhythm and harmony, and so we may rightly speak of good rhythm and harmony in melody and bearing, but it is not right to use the analogous term 'good colour', as the choral teachers do. And yet, it is right to speak this way about the bearing and the melody of the coward and of the brave, and in the case of the brave these may correctly be referred to as good, and in the case of the cowards as base. Indeed then, to avoid an excessively lengthy speech, let's just say that altogether the bearings and

melodies associated with excellence itself, or some image of this, are good, while those associated with badness are bad. This applies to excellence and badness of soul or body.

Clinias: You are right to propose this, and for now our response is that this is how things are.

655c

Athenian: There is a further question. Do all of us take a similar delight in all choral performances, or is this far from being the case?

Clinias: Far from it, totally.

Athenian: Well then, what precisely is it that has sent us astray? Is it that what is good is not the same for all of us, or is it the same but does not seem to be the same? For I presume no one will ever say that choral performances of badness are better than those of excellence, or that he himself delights in the bearing that belongs to degeneracy while others prefer a Muse of the opposite sort. And yet most people say that the ability of music to provide pleasure to souls is the correct standard to judge it by. But this is unacceptable, and it is irreverent in the extreme even to say so. But what sends us astray is, more likely, something else.

Clinias: What?

655d

Athenian: Since choral performances involve imitations of characteristics arising in activities and situations of all sorts, each of the performers goes through the process using habit and imitation. Now, in cases where anything that is said, sung or performed accords with their character, by nature, by habit or by both, they are delighted, and cannot help but praise these performances and pronounce them good. But in cases where the performances go against their nature, character or some habit, they are unable to take any delight in them or to praise

them, so they pronounce them bad. Those whose nature is correct but whose habit is not, or those whose habit is correct but whose nature is not, are people who praise what does not please them. For they declare that each of these performances is pleasant but degenerate, and in the presence of others whom they regard as wise, they are ashamed to adopt bodily movements of the sort that feature in these performances, and ashamed also to sing songs of this sort and imply that they seriously approve of them. But, in private, they enjoy all this.

Clinias: You are quite right.

656a

Athenian: Now, does any harm come to someone who takes delight in bearing or melodies that are degenerate, or do any benefits come to those who take pleasure in the opposites of these?

Clinias: Quite likely.

656b

Athenian: Likely? Is he not, necessarily, in the same predicament as someone who keeps company with bad people of degenerate behaviour, and is delighted rather than repelled? He censures them, half joking, barely dreaming of just how vile this is. Then, of course, this happy man inevitably becomes like whatever company he delights in, even though he would be ashamed to be heard praising it. And, indeed, what greater good or evil could befall us than a totally inevitable process of this sort: a process of becoming like the company we keep? Can we say?

Clinias: I do not think there is one.

656c

Athenian: Now, where laws dealing with education about music in general, and entertainment, are established in the right way, or will be so in future, do we think the poets will be allowed in

their poetry to adhere to whatever rhythm, melody or utterance pleases the poet himself and teach this to the children of citizens who have such good laws, and to the young people in the choruses, regardless of the effect this has in terms of excellence or vice?

Clinias: No, that does not make sense. How could it?

656d

Athenian: And yet, nowadays, this is what is permitted, more or less, in all cities except in Egypt.

Clinias: Tell us then. What laws about such matters have been put in place in Egypt?

Athenian: It is an amazing story to hear. For the very argument that we are now stating was, it seems, recognised by them long ago, the argument that the young people in the cities should practise good bearing and good melody in familiar actions. They codified all the rules, indicating what they are and what they are like, and they displayed these in their temples. They did not allow either painters or anyone else who represents bearing and that sort of thing to innovate or contrive contrary to these, either in these areas or in music generally, except along traditional lines. Nor do they allow this today. And you will find, if you take a look, that the ten-thousand-year-old paintings and sculptures there – and they are literally ten thousand years old – are neither more beautiful nor less so than what is being produced today, because the same skill is being applied.

Clinias: Amazing.

656e

Athenian: Yes indeed, it is a triumph of legislation and statesmanship, but you will find problems there in other areas. But in the case of music this is the truth, and it is worthy of consideration. It was possible to be firm about such matters, and enact laws encouraging melodies that possess a natural

correctness. This would be a task for a god or some divine man, and in fact there in Egypt, they say that the melodies that have been preserved for such a lengthy period of time are actually compositions of Isis.¹³ So, as I said, if someone is able to grasp the correctness of these in any way at all, he should be bold enough to arrange them into a legal framework, since the yearning, driven by pleasure and pain, to indulge continually in new music does not really possess any great power to corrupt the sacred choral performance merely by referring to it as outdated. In Egypt, at any rate, it seems to have had no such corrupting influence at all – quite the opposite in fact.

Clinias: Yes, that appears to be how matters stand, based on what you are now saying.

657b

Athenian: In that case, may we be so bold as to describe the correct use of music and entertainment with choral performances somewhat as follows? We are delighted whenever we think we are doing well, and conversely whenever we are delighted we think we are doing well. Isn't this so?

Clinias: It is so, indeed.

Athenian: And indeed, in a situation like this where we are delighted, we are unable to come to rest.

Clinias: True.

657d

Athenian: Now, aren't our young folk ready and willing to perform in the chorus themselves, while we, their elders, think it more appropriate to spend our time watching them, delighting in their play and festive celebrations. Indeed, our own liveliness is forsaking us now, and because we yearn for this and cherish it, we set up contests for those who are able, as best they can, to rouse us through memory into youthfulness.

Clinias: Very true.

Athenian: So, we should not presume that what is commonly said nowadays about people who celebrate festivals is completely unfounded. It is said that whoever does the best job of cheering us up and delighting us should be regarded as the wisest, and judged to be the winner. In fact, since we are allowed to enjoy ourselves on such occasions, whoever brings most delight to the most people should be honoured most, and as I said just now he should carry off the victory prizes. So, consider what has been said. Isn't it right, and wouldn't this be the right course of action if it were to happen like this?

658a

Clinias: Perhaps.

Athenian: But, blessed man, let us not judge such an issue in haste. Let us rather take it part by part and consider it somewhat as follows. What if someone, sometime, were to set up a contest in some very simple way, without even defining whether it was a contest in gymnastics, music or horse-riding. Suppose he were to bring everyone in the city together, set up some victory prizes, and proclaim that anyone who wishes may come along and compete in a contest that is concerned only with pleasure. Whoever provides most entertainment to the spectators, without any restriction on how he does so, and who is better than everyone else at doing just this, and is judged to be the most pleasing competitor of all, will win. What do you think would come of a proclamation like this?

Clinias: In what sense?

658b

Athenian: It is likely, I suppose, that someone would present an epic poem, just like Homer; someone else a harp song or a tragedy or a comedy; and I would not be surprised if someone were to imagine that he really should be victorious because he put on a puppet show. So when people like this, and thousands of others too, enter the contest, can we say who deserves to

win?

Clinias: What a strange question. Indeed, who could ever answer you knowledgeably until he had heard each of the contestants, and listened to them himself?

Athenian: Well then, would you like me to give you this equally strange response?

Clinias: Indeed.

658c

Athenian: If very little children are to be the judges, they will opt for the puppet show, won't they?

Clinias: How could they do otherwise?

658d

Athenian: And if the bigger children decide, they will opt for the comedy, while educated women, young adolescents, and the vast majority of the population will probably choose a tragedy.

Clinias: Probably indeed.

Athenian: And perhaps old men like us would be most pleased at hearing a rhapsode reciting the *Iliad* or the *Odyssey* or something from Hesiod in a glorious manner, and would declare that he is the outright winner. So, who would be the rightful winner? This is the next question, isn't it?

Clinias: Yes.

658e

Athenian: Obviously, myself and yourselves will inevitably declare that whoever is chosen by people of our own age are the rightful winners, for of all the customs prevailing nowadays, in all of the cities, this seems best to us.

Clinias: Indeed.

Athenian: I agree with the majority viewpoint, to this extent at least: we should judge music by the pleasure it gives, but not to

any random person. Rather, music that gives pleasure to the best and most adequately educated people is almost the very finest music of all, especially the music that pleases the one person who excels in excellence and education. That's why we maintain that those who judge such matters need excellence. They have to possess understanding in general, and courage in particular. Nor should the true judge arrive at his judgement by learning from the audience, and be overpowered by the commotion of the crowd and his own lack of education. Nor again, even though he knows better, should he deliver his judgement without due care because he is a coward who lacks courage, thus speaking lies from the very same mouth out of which he invoked the gods when becoming a judge. For a judge, rightly speaking, does not sit as the pupil of the spectators, but rather as their teacher, and he opposes those who ply them with pleasure in a way that is neither appropriate nor correct. Indeed, the ancient Greek law allowed the judges to do this. But nowadays, in Sicily and Italy, the law hands the decision over to the majority of the spectators to decide the winner by a show of hands. This process corrupts the poets themselves, who then compose for the degenerate pleasure of their judges – the audience – thus corrupting the tastes of the actual audience members. Consequently, the audience itself is instructing the judges. For although they need to adopt more elevated pleasures by constantly hearing of behaviour that is superior to their own, the very opposite now happens to them, and they do it to themselves. What precisely do these various considerations in our argument wish to indicate to us? Think about it. Is it as follows?

Clinias: What?

659d

Athenian: It seems to me that the argument has come back full circle to the same place for the third or fourth time, and it says

that education consists in drawing or leading children towards the argument that is said by the law to be correct, and is confirmed as indeed correct by the experience of the most reasonable and mature people. The soul of the child should not get into the habit of being delighted or pained in a manner that is opposed to the law, and to those who obey it. The child's soul should follow along and be delighted and pained by the very same things as the elder folk. That is why we have songs, as we call them, which are really charms for souls, seriously intended to produce the sort of concord we are speaking of. But because the souls of the young are unable to bear the seriousness, we refer to these as entertainments and songs, and we act accordingly. It is just like the situation in which those who care for sick people with weak bodies try to give them the wholesome nourishment in some pleasant food and drink, and the unwholesome substances in unpleasant food and drink, so that they develop the good habit of being fond of one and detesting the other. In the same way, then, the good lawgiver will persuade, or, failing that, compel, the poetical type, in beautiful and encouraging language, to portray the bearing and the melodies of sound-minded, courageous and entirely good men, in his rhythms and melodies, by composing them correctly.

660a

Clinias: By Zeus, stranger, do you really think that that is how they compose in other cities these days? For as far as I can see, apart from ourselves and Sparta, I do not know of any cities doing what you are describing. Innovations are constantly being introduced in dance, and in the entire realm of music in general, and the changes are not based upon the law but on certain disordered pleasures, which are very far from being the same and unchanging, as they are in Egypt, according to your description. In fact, they are never the same.

660c

Athenian: That is excellent, Clinias. But if you think I am saying that what you are referring to is current practice, in that case then I would not be surprised if this happened because I am not expressing my thoughts clearly enough. I was describing what I would like to see happening in relation to music, and perhaps I gave you the impression that I was describing current practice. Now, it is not at all pleasant to criticise practices that are beyond remedy and well advanced in error, but sometimes it is necessary to do so. But since you agree with me on these matters, tell me, do you maintain that such practices are more prevalent among yourselves in Crete, and among the Spartans, than they are among other Greeks?

Clinias: Indeed.

660d

Athenian: And what if they were to be adopted by the other Greeks too? Should we maintain that these practices would be an improvement over the current situation?

Clinias: I expect it would make a big difference if the Spartan practices, or ours, or even the ones you prescribed just now, were adopted.

660e

Athenian: Come on then, let us agree on the immediate issues. In your cities, isn't this what is said on the entire subject of education and music? You compel the poets to say that the good man, being sound-minded and just, is also happy and blessed, and it makes no difference whether he is big and strong or small and weak, or whether he is rich or poor. In fact, even if he is richer than Cinyras or Midas,¹⁴ but is unjust, he is a wretched man living a miserable life. And your poet says – if he is right about this – “I would not even mention a man, or write his name down” unless he enacted and acquired everything that is said to be good, but did so in consort with justice. And, indeed, he shows a man like this “lunging at the enemy in close combat”,

while the unjust man doesn't even dare "to look upon the face of bloody slaughter"; nor does he outrun the "Thracian North Wind"; nor does he ever achieve anything else that is attributed to good people.¹⁵ Indeed, the things that are said to be good by most people are not being described correctly. For it is said that what is best is health, beauty is second, wealth third. And countless other goods are listed, including acuteness of sight and hearing, and keen perception of sense objects generally, and even becoming a tyrant and doing whatever you like. And the very pinnacle of all happiness is, they say, to acquire all these and become immortal, there and then. But I presume that you and I say that these are all excellent possessions for men who are just and holy, but to the unjust they are all of them thoroughly bad, beginning with health. And, indeed, we would say that seeing, hearing, perceiving and being alive at all, are evil in the extreme when someone is immortal forever, and possesses all these so-called goods in the absence of justice and total excellence, but the evil is less when such a person has a shorter span of life. Now, I think you will compel your own poets to say all that I say, and to educate your young people in this way by giving them rhythms and harmonies that accord with what is said. Is this so? Look at it this way, for I am saying in plain terms that the things that are said to be bad are good for the unjust people, but for the just people they are actually bad, while the good things really are good for the good people, but for the bad people they are bad. So, I repeat my question. Are the two of you and I in agreement, or not?

Clinias: Well, in some respects I think we are, but in other respects certainly not.

661e

Athenian: Suppose someone is possessed of health, wealth and endless tyrannical power – and for the two of you let me add exceptional strength and courage accompanied by immortality

– and that none of the other so-called evils befall him. But suppose that all he has within himself is injustice and arrogance. Perhaps you two are not convinced that someone who lives in this way is not really happy, but is obviously wretched?

Clinias: That's perfectly true.

662a

Athenian: So be it. What should I say to you next? Well, suppose someone is courageous and strong, handsome and wealthy, and does whatever he likes throughout his entire life. Don't you agree that if he is unjust and arrogant, he would necessarily be living in a shameful manner? Will you perhaps accept this word 'shamefully' at least?

Clinias: Yes, indeed.

Athenian: What about the word 'badly'?

Clinias: No, that's different.

Athenian: What about saying that he lives an unpleasant life that is not profitable to himself?

Clinias: How could we possibly agree with that?

662b

Athenian: How? Only if God, it seems, were to grant us some degree of concord, my friend, since for the moment at least there is a fair amount of discord among us. Yes, to me it appears that this is necessarily the case. It is even more obvious, my dear Clinias, than the fact that Crete is an island. And as a legislator, I would try to compel the poets, and everyone else in the city, to speak in this way. And I would impose perhaps the heaviest of penalties in cases where anyone in the land would say that there are some people who are degenerate and yet live pleasant lives, or who say that some things are profitable or advantageous while others are more just. And there is much

else I would persuade my citizens to say that contradicts the prevailing views of Crete and Sparta, it seems, and indeed of humanity in general. Come on then, best of men, by Zeus and Apollo. What if we were to ask these very gods who gave you your laws, “Is the most just life the most pleasant life? Or are there two lives, one that happens to be the most pleasant while the other is the most just?” If they were to declare that there are two, we would, if we were questioning them correctly, probably ask them again, “Which should we say are the happier people, those who live the most just life or those who live the most pleasant one?” Now, if they were to reply, “Those who live the most pleasant one”, their argument would be bizarre. But I don’t want to attribute such a response to the gods, but rather to our forefathers and lawgivers. So let my former question be put now to a forefather and lawgiver, and let him reply that whoever lives the most pleasant life is most blessed. I would then say, “Father, did you not want me to live as happily as possible? Yet you were always calling upon me unceasingly to live as justly as possible.” Now, whoever suggests this, be he a forefather or a lawgiver, would I think look most odd, and be at a loss about how to speak in a manner that is consistent with himself. But if, on the other hand, he declares that the most just life is happiest, anyone who hears this would, I believe, want to know what the law is praising in the just life. What does the just life contain that is good and noble, and superior to pleasure? Indeed, what good, apart from pleasure, could a just man have? Come on then, is fame and the acclaim of humanity and the gods pleasant, while the opposite applies to infamy? “Dear legislator,” we’ll say, “not at all”. If we neither do nor suffer injustice, is that unpleasant, even though it is good or noble? And is doing injustice pleasant, even though it is disgraceful and bad?

Clinias: No, how could this be so?

663a

Athenian: Now, although the argument does not separate pleasant, on the one hand, from just and good and noble, on the other, even if it does nothing else it still persuades a person to prefer to live a life that is holy and just. And for a legislator, the most disgraceful argument, directly opposed to his purposes, is the one that denies that this is the case. For no one would wish, willingly, to be persuaded to do anything that did not result in more pleasure than pain. But looking at things from afar produces a sort of dizziness in everyone, especially in young children, unless a lawgiver introduces a perspective that is the opposite of this; unless, having banished the darkness, he persuades people, somehow or other, by habits, praise or arguments, that their notions of justice and injustice are a play of shadows. When seen from the personal viewpoint of an unjust bad person who is opposed to justice, what's unjust appears pleasant and what's just appears most unpleasant. But from the perspective of the just person, the view of justice and injustice is the complete opposite in every way.

Clinias: Apparently so.

663c

Athenian: And which of these two judgements is more authoritative in terms of truth, the judgement of the worse soul or of the better one?

Clinias: It must be the judgement of the superior one, I presume.

Athenian: So, it must be the case that the unjust life is not only more shameful and degenerate than the just and holy life, but is in truth more unpleasant too.

Clinias: That, my friends, is quite likely, according to the present argument at least.

663d

Athenian: But even if what the argument has just established proved not to be the case, could a lawgiver, who was in any way useful, and who dared tell a lie to the young folk for some good purpose, ever tell a more profitable lie than this, or one with more power to make everyone do what's just in everything, willingly and without compulsion?

Clinias: Truth is noble and enduring, stranger, but it seems to be difficult to persuade people.

663e

Athenian: So be it. But it proved easy to persuade people of the myth about the Sidonian,¹⁶ incredible though it was, and the same applies to countless other stories.

Clinias: Of what sort?

Athenian: The story about the teeth being sown in the ground, and armed men growing from them.¹⁷ In fact, this is a great example for the lawgiver of persuading the souls of the young folk about anything at all, if one tries. Accordingly, in considering this, all he needs to do is find out what story would, once they believed it, lead to the greatest good for the city. And in this regard, he should seek out any means whatsoever whereby an entire community of this sort, and their discourse, would hold always to this theme with one and the same voice, as much as they can in their songs and in their stories. But if anything else occurs to anyone besides this way of looking at these matters, he should feel free to present a contrary argument.

664b

Clinias: No, I don't think either of us would be capable of presenting a counter argument, not on these matters at any rate.

Athenian: The next point is up to me then. So, I say that all the choruses, three in number, should sing to the still young and

tender souls of the children, stating all the noble principles we have recounted, and will, indeed, recount hereafter. Let's summarise them as follows. When we maintain that the most pleasant life, and the best life, are said by the gods to be the same, we shall be stating the very truth. And, at the same time, we shall persuade those who need persuading, more effectively than we would by saying anything else.

Clinias: We have to agree with what you are saying.

664c

Athenian: To begin with, it is only right that the children's chorus, dedicated to the Muses, should come in first to sing such songs, in all seriousness, before the entire city. Second should come the chorus of those who are under thirty, invoking Apollo Paean¹⁸ as witness of the truth of what is being said, and praying that he be gracious to the young, and convince them. A third chorus, consisting of those who are aged between thirty and sixty, should be next to sing. And that leaves the older group, who are no longer up to the task of singing, to present stories about the same characters through divine utterance.

Clinias: What is this third chorus you refer to, stranger? For we don't really understand clearly what you wish to say about these people.

Athenian: And yet most of the argument we have discussed so far was more or less concerned with these.

664e

Clinias: We don't understand yet. Please try to explain even more clearly.

Athenian: We said, if you recall, at the beginning of our discussions, that the nature of all young creatures is fiery, and unable to keep either the body or the voice quiet. The nature is constantly making disordered sounds and leaping about. We also said that none of the other creatures ever develops any

sense of order in body or voice. Human nature alone has this ability. The order associated with movement is called rhythm, and in the case of the human voice, the blending together of high- and low-pitched sounds is called harmony, and the two of these combined is called a choral performance. And we said that the gods, out of pity for us, gave us two fellow chorus members and chorus leaders, Apollo and the Muses, and in fact, you may recall, we said there was a third, Dionysus.

Clinias: How could we fail to remember?

665b

Athenian: Well, we have described the chorus of Apollo and of the Muses, so the third chorus, the remaining one, must be called the chorus of Dionysus.

Clinias: How so? Please explain. A chorus of old men, dedicated to Dionysus, sounds most unusual on first hearing. Are men who are over thirty or over fifty, or even as old as sixty, really going to be involved in a chorus dedicated to Dionysus?

665c

Athenian: That is perfectly true. An argument is needed here, I believe, to show that if this were to happen, it would be a reasonable development.

Clinias: Indeed.

Athenian: Now, are we in agreement about the previous matters?

Clinias: Specifically?

Athenian: About the need for every man and child, free born or slave, female or male, and indeed the whole city, to sing to themselves unceasingly the very charms we have described, changing them this way and that to provide all sorts of variety so that the singers develop an insatiable desire for the songs, and take pleasure in them.

Clinias: How could anyone disagree? Yes, this is what should be done.

665d

Athenian: Where then should the very best people in our city sing their magnificent and exalted songs so as to do the most good? These are the people who are more persuasive than anyone else in the city because of their age and level of understanding. Shall we be so foolish as to set this group aside when they are masters of the most exalted and beneficial songs?

Clinias: No, setting them aside is out of the question, based on what is now being said.

665e

Athenian: How shall we address this properly? See whether this will do.

Clinias: What then?

Athenian: Everyone I believe, as he gets older, becomes reluctant to sing songs, and takes less and less delight in doing so, and when compelled to do so is embarrassed. And the older and more sound-minded he becomes the more embarrassed he becomes. Isn't this so?

Clinias: It is so indeed.

Athenian: Wouldn't he be even more embarrassed to stand before people of all sorts, in the theatre, and sing? And if old people like this were compelled to sing, thin and fasting, just like chorus members training their voices for a competition, they would presumably take no pleasure in the task, and sing in embarrassment and without any enthusiasm?

Clinias: Yes, that's inevitable.

666a

Athenian: How, then, shall we encourage them to be enthusiastic about singing? Shouldn't we first pass a law that

children may not partake of wine at all until they are eighteen years old, explaining that fire must not be poured upon the fire that is already in their body and their soul before they turn their hand to life's labours. Here we are being cautious about the excitable disposition of the young. But after this they may partake of wine, in measure, until they are thirty, but drinking too much and getting drunk are totally prohibited to the young man. As he approaches forty years of age, he may enjoy the common meals and call upon the other gods, and he should invoke Dionysus in particular at the ritual for the older men, which is also their recreation. The god gave this to humanity as a healing draught to cure the crabbedness of old age so that we may grow young again, and our soul, by forgetting its dispiritedness, may become softer rather than harder in character, and become more malleable, just like iron when placed in the fire. First, wouldn't each of them, when this is the state of their soul, be willing to sing, or chant as we have often called it, more eagerly and with less embarrassment, not in front of lots of strangers, but before a select group of friends?

Clinias: Yes, much more.

666c

Athenian: So, as a means of getting them involved in our singing, this approach would not be entirely objectionable.

Clinias: No, not at all.

Athenian: What sort of sound will the men send forth? Or is it obvious that there must be some music appropriate to them?

Clinias: There must be.

Athenian: So what music would be appropriate to divine men? Would it be the music of the choruses?

Clinias: Well, stranger, we in Crete, and these Spartans, would be incapable of singing any other song besides the one we

learned and became familiar with in the choruses.

666e

Athenian: That is reasonable enough, since you have not actually attained the most exalted level of singing. Indeed, you have the civic constitution of a military camp but you have never settled in cities, and you keep your young people in a flock like a collection of grazing colts. None of you takes his own animal and drags it away from the grazing herd, as it gets wildly distressed. You don't appoint a private horse trainer to train him by rubbing him down and taming him and giving him everything that is appropriate for his upbringing so that he may be not just a good soldier, but able to manage a city or a town – someone who, as we said at the outset, is more of a warrior than Tyrtaeus' warriors, because he respects courage, always and everywhere, in private individuals and in entire cities, not as the foremost excellence, but as fourth in the scale of excellence.

Clinias: I don't know, stranger, whether or not you are somehow disparaging our lawgivers yet again.

667a

Athenian: My good man, if I am doing this at all, I am not doing it intentionally. But if you please, let's follow the argument wherever it may lead. For if we have music that is more exalted than the music of the choruses, or the popular theatres, we should try to make this available to these men, who we say are ashamed of that music and are eager for involvement with this most exalted music.

Clinias: Certainly.

667b

Athenian: Isn't it the case, first and foremost, with anything accompanied by some grace, that what is most significant is either the grace just by itself or else a certain correctness, or, thirdly, the benefit? For instance, food, drink and nutriment in general have an associated grace which we call pleasure. As for

their correctness and benefit, we consistently refer to the healthiness of whatever is consumed, and this very healthiness is what's most correct about them.

Clinias: Yes, certainly.

667c

Athenian: And there is indeed a grace that accompanies learning, namely pleasure, but that which produces its correctness – benefit, goodness and nobility – is the truth.

Clinias: Quite so.

667d

Athenian: What about skills that involve imitation and which produce likenesses? If they succeed in producing a likeness, may we rightly refer to the associated pleasure as grace?

Clinias: Yes.

Athenian: But the extent and the degree of equality with the original is what would, presumably, constitute the correctness of such likenesses, generally speaking, rather than the pleasure.

Clinias: That's right.

Athenian: In that case, using the criterion of pleasure, the only thing that we may judge correctly is something that is produced in order to provide neither benefit nor truth, nor likeness, nor indeed to do any harm – something that would exist only for the sake of that which accompanies these other factors, the grace which, when none of these other factors accompany it, is best called pleasure.

Clinias: You are referring only to harmless pleasure.

Athenian: Yes. And I am saying that this very pleasure is indeed amusement, whenever it does no harm or good worth mentioning seriously.

Clinias: Very true.

667e

Athenian: In that case, based on what we are now saying, we would maintain that it is entirely inappropriate to judge any imitation, or indeed its equality, by the criterion of pleasure or by untrue opinion. What is equal or symmetrical is not equal or symmetrical because it seems so to someone or because it does not please someone, but most of all because of the truth, and least of all because of any other consideration.

Clinias: Entirely so.

Athenian: Now, don't we maintain that all music is based upon likeness and imitation?

Clinias: Indeed.

Athenian: So whenever someone asserts that music is to be judged by the criterion of pleasure, this argument should be rejected, and if this music does somehow exist, we should not take it at all seriously in our search. We should seek rather the music that contains the likeness to the imitation of the beautiful.

Clinias: Very true.

668a

Athenian: And those seeking the most exalted song and music should not, it seems, seek what's pleasant but what's correct, for correctness of imitation, according to us, consists in reproducing the original, in quantity and in quality.

Clinias: Of course.

Athenian: And, indeed, everyone would agree on this at least, that in the case of music everything that is produced involves imitation and representation. Wouldn't the composers, the audience and the actors all agree on this at any rate?

Clinias: Very much so.

668b

Athenian: Then anyone who is to avoid falling into error in a particular case should, it seems, recognise what precisely each of the compositions is. For if he does not recognise its being, what precisely the composition intends, and what it is a likeness of, he will hardly discern the correctness or error of the intention.

Clinias: Hardly indeed.

668c

Athenian: And would someone who does not recognise correctness ever be able to discern goodness or badness? But I am not expressing myself very clearly. Perhaps it would be clear if I put it as follows.

Clinias: How?

Athenian: There are, I suppose, thousands of imitations related to sight.

Clinias: Yes.

668d

Athenian: Well, what if someone was ignorant about the things that are being imitated in these cases, and did not know precisely what body each of them has? Could he ever recognise the correctness of the finished representation? For example, could he tell whether it has the correct number and placement of bodily parts, capturing how many there are, and how they are situated next to one another in their proper arrangement, including their colours and shapes, or whether all these have been fashioned in a confused manner? Do you think anyone could ever decide on this without knowing what precisely the creature being imitated actually is?

Clinias: How could he?

668e

Athenian: What if we were to recognise that what has been drawn or manufactured is a human being, and that the artist's

skill has captured all of its parts, colours and shapes? Is it necessarily the case that someone who recognises this also recognises, quite readily, whether the product is beautiful or is deficient in beauty in some particular way?

Clinias: Well, in that case, stranger, we would all in a sense recognise the beauties of the various animals.

669a

Athenian: What you are saying is most correct. So in the case of each image – in painting, in music, or in any form at all – mustn't anyone who is to be an intelligent judge have the following three abilities? Mustn't he be able firstly to recognise what it is, then how correctly it is rendered, and thirdly how well any of the images has been fashioned in language, melody and rhythm?

Clinias: So it seems, anyway.

669b

Athenian: Now, let us not omit mention of the difficulty that is involved in music. Indeed, since there is more talk about music than there is about the other images, it requires much more caution than any of the other images. For someone who falls into error here could do enormous harm by favouring degenerate behaviour, and the error is very hard to notice because our poets are lesser poets than the Muses themselves. For the Muses would never fall into error to such an extent as to compose words for men, and give them the colour or melody that belongs to women. Nor indeed would they frame a melody and bearing that belongs to free men, and harmonise it with rhythms that belong to slaves and to men devoid of freedom. Nor would they decide upon a rhythm and a bearing that is free, and then assign it a melody or words that are opposed to the rhythm. Nor would they ever combine the sounds of beasts, humans, mechanical devices, and noises of all sorts, into a unity, as though they were imitating one thing. But human poets, who

blend such sounds together with great relish and jumble them up without rhythm or reason, would provide great amusement to people who, as Orpheus¹⁹ says, “are ripe for delight”, when they see these all jumbled up. But the poets go further, and divorce rhythm and bearing from melody, put bare words to a metre, and leave melody and rhythm without any language by making use of the harp and the flute on their own. It is very difficult then to recognise, without words, what the rhythm and harmony signify, or what imitations worth mentioning they resemble. So, we need to understand that this sort of thing is crude in the extreme, as it is based on such a passion for speed, dexterity and animal sounds that it uses the flute and the harp in the absence of dance or song. But using either instrument on its own is the mark of a thoroughly uncultured trickster. That is where the theory of all this stands. But in our case we are not considering how our over thirty-year-olds and those who are over fifty should not practise music, but how exactly they should do so. At this stage, then, our argument is indicating that those over fifty-year-olds whose role will involve singing should receive a better education than they get from choral music. For they need to be well aware, themselves, of rhythms and harmonies and recognise them. How else could someone recognise the correctness of the melodies and know which is suited to the Dorian mode and which is not, or whether the rhythm that the poet assigned to this has been correctly assigned or not?

Clinias: No, it’s obvious that he could not do so at all.

670b

Athenian: Indeed, the general populace are being ridiculous when they believe they are up to the task of recognising what constitutes good rhythm and harmony and what does not when they have only been drilled in singing along and marching in step, and do not realise that they are engaging in these

activities in total ignorance. Whereas, in fact, every melody that has what is appropriate to it is constituted correctly, and if it has what is inappropriate to it, it is constituted improperly.

Clinias: That's quite inevitable.

670d

Athenian: What about someone who does not recognise what exactly the melody has? Will he ever recognise, as we were asking, whether it has been correctly constituted in any case?

Clinias: No, how could he?

Athenian: Well, it seems we are now discovering, once again, that these singers of ours whom we are encouraging – and, in a sense, compelling – of their own free will to sing need to have been educated to the following extent. They each need to be capable of following the steps of the rhythms and the chords of the melodies so that they may be able to select those that are appropriate and suitable for men of their age and character to sing. They would sing in this way, and as they sang they would enjoy innocent pleasures themselves, there and then, and would provide leadership to the younger generation in the proper appreciation of good character. Having been educated thus far, they would have access to a more rigorous education than what is made available to the general population, and indeed to the poets themselves. Indeed, it is not imperative that a poet recognises whether the imitation is beautiful or not beautiful, which was our third principle earlier, although it is well-nigh essential that he knows harmony and rhythm. But our elders need to know all three principles in order to decide what imitation is most exalted and what lies in second place, or they would never be up to the task of charming our young folk towards excellence. The argument intended, from the very outset, to demonstrate that our defence of the chorus of Dionysus was a noble undertaking, and it has now said so, as best it can. So let's consider whether it has actually succeeded.

Now, a gathering of this nature inevitably keeps on getting more and more boisterous, I presume, as the drinking proceeds, and we said initially that this is an unavoidable outcome in the cases we are now describing.

Clinias: Unavoidable.

671a

Athenian: Everyone is beside himself and has a joyful time. In this condition he does not listen to the others, but is free with his own speech, and he thinks he has become capable of ruling both himself and the others.

Clinias: Of course.

671b

Athenian: Now, didn't we say that when this happens, the souls of the drinkers, being heated like a piece of iron, become softer and younger? So, just as they were in their younger days, they are easily led by someone with the ability and the knowledge to train them and shape them. And the one who shapes them now is the one who shaped them then. This is the good lawgiver, who should give laws for the drinking party that are capable of making someone willingly do the exact opposite when he is so confident and bold, so improperly devoid of shame, so resistant to orderly behaviour, and so reluctant to observe in turn silence and speech, drinking and music. The laws should be able also to send forth, along with justice, that most exalted and divine fear which we call reverence and shame, to do battle against the ignoble courage.

Clinias: Quite so.

671d

Athenian: There should be legal guardians of these laws who work alongside them, as calm, sober generals set over men who are not sober, since doing battle against drunkenness without such men is more daunting than fighting your enemies without

calm commanders. And what is more, anyone who is unable willingly to obey these officers of Dionysus, the over sixty-year-olds, shall incur as much disgrace, and more, than those who disobey Ares' commanders on the battlefield.

Clinias: And rightly so.

671e

Athenian: Now, if there was this sort of drunkenness and this sort of entertainment, wouldn't such drinking companions be benefited, and part from one another better friends than they were previously, rather than parting as enemies, as they do nowadays? Wouldn't all their dealings with one another be conducted in accordance with the laws, following these whenever the sober men give the lead to those who are not sober?

Clinias: That's right, provided the party is as you are describing it.

672a

Athenian: Then let us not criticise the gift of Dionysus in this unqualified way any longer, saying that it is bad for the city and should be rejected. In fact, one could elaborate on this to an even greater extent. Yet I am reluctant to describe to most people the greatest good that it bestows, because people misunderstand and misinterpret what is said.

Clinias: What sort of benefit are you referring to?

672b

Athenian: There is a report and a tradition in circulation according to which, this god, Dionysus, was robbed of his soul's understanding by his stepmother, Hera, and because of this he introduced revelry and frenzied dancing to get his revenge. And that's the very reason why he gave us the gift of wine too.²⁰ Now, I leave such stories to those who think it safe to relate them about the gods, but this much I do know. No living

creature is ever born with the intelligence, or as much intelligence, as it should possess when it reaches maturity. During the stage of life in which it has not yet acquired its proper intelligence it is totally mad, makes disordered noises, and as soon as it can stand up it jumps about in a disordered manner too. And we should remind ourselves that the origins of both music and gymnastics, according to us, lie in such behaviour.

Clinias: We remember, of course.

672d

Athenian: Didn't we also say that this was the origin of the awareness of rhythm and harmony instilled in us humans, and that the gods responsible for this were Apollo, the Muses and Dionysus?

Clinias: Of course.

Athenian: And, indeed, according to everyone else's account, wine, it seems, was given to humanity out of revenge, to make us mad, whereas our own account maintains, on the contrary, that it is a remedy, given so that we may acquire reverence of soul, and health and strength of body.

Clinias: Your recollection of the argument is excellent, stranger.

672e

Athenian: Let us say, then, that one half of choral performance has been dealt with fully. Shall we deal with the other half, as seems best, or shall we leave it?

Clinias: What are you referring to? What are the two divisions you are making?

Athenian: Choral performance as a whole was, for us, the process of education as a whole, and rhythm and harmony was the part of this that relates to the voice.

Clinias: Yes.

Athenian: But although the part that relates to the movement of the body and the part that relates to the movement of the voice have rhythm in common, bearing is unique to the body's motion, while melody is unique to the motion of the voice.

Clinias: Very true.

673a

Athenian: Now, those aspects of the education of the voice towards excellence, which actually reach the soul, we have for some reason called music.

Clinias: And rightly so.

Athenian: But the movements of the body in creatures at play we called dance. And when movement of this sort is conducive to the excellence of the body, we should refer to this skilled discipline of the body, when used for such a purpose, as gymnastics.

Clinias: Correct.

673b

Athenian: As for music, we said a moment ago that this half of choral performance had been described and dealt with fully, and we may say so again now. But what about the other half? What should be done about it, and how?

Clinias: My good man, you are conversing with Cretans and Spartans, and we have described music in detail, but we are leaving out gymnastics. So what sort of answer do you expect from either of us in reply to your question?

Athenian: I would say that you have responded in pretty plain terms to my question, by asking your question. Yes, I understand that although it is now a question, as I said, it is also an instruction to deal with the subject of gymnastics fully.

Clinias: You have understood very well, and you should act accordingly.

673c

Athenian: So I should. Indeed, there is no great difficulty in speaking to the two of you on matters you both know so well, for you are far more experienced in this art than in the other one.

Clinias: True enough.

Athenian: Well, the origin of this playfulness is the habitual leaping that is natural to all creatures. But the human being, as we said, having acquired an awareness of rhythm, developed and brought forth dance. And since melody brings to mind and awakens rhythm, the two combined together brought forth choral performance and play.

Clinias: Very true.

673d

Athenian: And we maintain that we have already dealt with one part of this, and we shall try to deal with the other part next.

Clinias: Yes, indeed.

Athenian: Well, if it is acceptable to you two, let us put the finishing touch to our discussion of the use of drunkenness first.

Clinias: What do you mean? What sort of finishing touch?

Athenian: What if some city makes serious use of the practice we are referring to, in a lawful and orderly manner, practising it in order to cultivate sound-mindedness? Suppose, in like manner, that it does not do away with the other pleasures, on the same principle, because it is aiming at mastery over them. Then this approach of ours should be applied to all these. But what if, on the other hand, this is regarded as entertainment, and anyone who likes is allowed to drink, whenever he likes, with whomsoever he pleases, while engaging in any sort of

behaviour at all? Then I could not cast my vote to allow this city or this man ever to have recourse to drunkenness. And I would go even further than the practice of the Cretans and Spartans, and propose the law of the Carthaginians, that no soldier may ever taste liquor whilst on campaign. He should, rather, become a water drinker for the entire duration. In the city too, no slave, male or female, should ever taste thereof, nor should a magistrate during his year in office, nor should steersmen or jurors ever taste wine at all whilst on duty, nor should any councillor who is attending a council meeting of any importance. In the daytime, no one should taste it at all except as part of a training regime or to treat a disease. Nor at night either, whenever a man or a woman intends to conceive a child. And one could mention very many other situations in which those in possession of reason and correct law should not drink wine. And so, according to the argument, no city should need lots of vineyards, and although agricultural production in general, and the entire lifestyle, would be regulated, the production of wine in particular would be more moderate and modest than anything else. So, dear strangers, let this, if you agree, be our finishing touch to the argument concerning wine.

Clinias: Well said. We agree.

BOOK III

676a

Athenian: So, let us leave this issue then. But what is the origin of a political system? What should we say? Wouldn't this be appreciated most easily, and in the best way, from the following perspective?

Clinias: From what perspective?

Athenian: The perspective from which we should always observe the progress and transformation of cities in the

direction of excellence or evil.

Clinias: What perspective do you mean?

676b

Athenian: The perspective, I believe, of a vast and limitless span of time and of the changes that occur within it.

Clinias: In what way?

Athenian: Come on now, for a very long time there have been cities and people have lived as citizens. Do you think we could ever discern for how long this has been so?

Clinias: That would not be at all easy.

Athenian: Well, at any rate, the time period would be immense and enormous.

Clinias: That is certainly so.

676c

Athenian: Haven't thousands upon thousands of cities come into existence over that time period, and, by the same reckoning, haven't just as many of them perished, and haven't they each been governed at one time or another by all sorts of political systems? Sometimes a large city has arisen from a small one, and at other times a small one from a large one, better has arisen from worse, and worse from better.

Clinias: Inevitably.

Athenian: Then let us discover the cause of this transformation, if we are able, for that might perhaps reveal to us how political systems come into existence in the first place, and how they change.

Clinias: Well said. So, we should get on with it, you to explain what you have in mind on these matters, and the two of us to follow along.

677a

Athenian: Well then, do the ancient accounts seem to you to possess any degree of truth?

Clinias: Which ones?

Athenian: Those saying that humanity has been destroyed many times by floods, plagues, and lots of other disasters, after which only a small remnant of the human race was left.

Clinias: Yes, indeed, everyone finds a story like this convincing.

Athenian: Come on then, let us think about one of these many destructions, the one that happened once because of the flood.²¹

Clinias: What line of thought do you want us to pursue?

^{677b}

Athenian: That those who escaped the destruction at the time would almost all be mountain-dwelling shepherds, I presume, little embers of the human race surviving among the high mountain peaks.

Clinias: Of course.

Athenian: And, indeed, men like this necessarily lack experience in the other skills, and especially in the devices employed against one another by city dwellers to further their greed and ambition, and any other foul deeds they decide to inflict on one another.

Clinias: Quite likely.

Athenian: Now, may we assume that the cities situated on the plains or by the sea were destroyed totally at the time?

Clinias: We may.

^{677c}

Athenian: Wouldn't all their tools be destroyed too, and if some significant skill in the realm of politics or any other branch of wisdom had been discovered, shall we say that all these also disappeared at the time? For, best of men, if these inventions

had remained all the while as undisturbed as they are now, how would anything new ever have been discovered?

Clinias: This means that for countless ages these matters were unknown to people at that time, but in the past thousand or two thousand years some have been revealed to Daedalus, others to Orpheus or Palamedes, matters musical to Marsyas and Olympus, the lyre to Amphion, and lots of other matters to various others, all, so to speak, just yesterday or the day before.²²

677d

Athenian: It is good of you, Clinias, to omit mention of your acquaintance who was literally a man of just yesterday.

Clinias: You mean Epimenides, don't you?

Athenian: Yes, the very man. Indeed, he far surpassed every one of you with his invention, my friend. Hesiod had an intuition about it in theory, long before, but this man realised it in action, as you people say.²³

Clinias: Yes, that's what we say.

Athenian: Should we say that the situation for the human race after the destruction occurred was as follows? In spite of the terrible and widespread desolation, there was still a vast expanse of available land, and although most other living creatures had disappeared, some herds of cattle, and perhaps some goats, happened to survive, and these initially provided some meagre sustenance at the time.

Clinias: Indeed.

677e

Athenian: Now, our present argument has dealt with cities, political systems and legislation. Do you think there would, in any sense, have been any memory of these at all?

Clinias: Not at all.

Athenian: Now, it is from those people living under such circumstances, isn't it, that everything we have nowadays has arisen – our cities, our political systems, our skills and our laws, a lot of degeneracy and a great deal of excellence too?

Clinias: How do you mean?

678a

Athenian: Do we imagine, my good man, that the people of that time, with no experience of all the good associated with city life, or the many evils either, were ever completely excellent or completely evil?

Clinias: A good question. Yes, we now understand the point you are making.

Athenian: But with the passage of time and the multiplication of our race, everything eventually came to be as everything is now.

Clinias: Correct.

678b

Athenian: But this in all likelihood did not happen suddenly, but gradually over an enormous span of time.

Clinias: Most likely, indeed.

Athenian: Yes, for they were all, I imagine, haunted still by the fear of coming down from the high places to the plains.

Clinias: Of course.

678c

Athenian: Now, although they were always glad to see one another in those days, because there were so few of them, any means of transportation by land or by sea to visit one another had, for the most part, all perished, so to speak, along with the relevant skills. So I do not think they found it at all easy to get together. For iron and bronze and all other metals had disappeared in the flood, and there were no means at all of

extracting such materials from the earth, and consequently there was a shortage of timber. Indeed, any tools that had survived in the mountains were quickly worn out and disappeared, never to reappear until the skill of working with metal had been restored to humanity.

Clinias: Indeed, how could they have tools?

678d

Athenian: How many generations later do you think this happened?

Clinias: Very many, of course.

Athenian: And wouldn't any skills that required iron and bronze, and anything of that sort, also have disappeared for the same amount of time or even longer?

Clinias: Indeed.

Athenian: Then civil strife and warfare too disappeared at the time for a variety of reasons.

Clinias: How so?

678e

Athenian: In the first place, they were kind and had a friendly disposition towards one another because of their isolation. And what is more, food was not a matter of contention for them, for there was no shortage of pastureland except perhaps in some cases initially, and most of them lived off this at the time. Indeed, they were not at all lacking in milk or in meat, and they provided plenty more wholesome food for themselves by hunting. And, indeed, they were quite well off for clothing, bedding, dwellings, and vessels for cooking and for other purposes. For the skills that involve moulding and weaving do not require any iron, and God gave both these skills to humanity to provide all these necessities, so that whenever the human race faced a challenge of this sort, it would still be able to

develop and progress. Now, under such circumstances they were not especially poor, nor did poverty force them into conflict with themselves. Yet, they could never become wealthy either in the absence of gold and silver, which they did not have then. Now, the noblest characters of all generally arise in a society in which neither poverty nor riches reside, since violence and injustice, rivalry and jealousy find no place there. Because of all this, and because of their so-called simple-mindedness too, they were good people. Indeed, such was their simple-mindedness that whenever they heard something described as noble or as base, they took this to be the very truth, and they believed what was said. For unlike people nowadays, none of them knew how to use wisdom in order to suspect falsehood. So they took what is said about the gods and humanity to be true, and they lived in accordance with what is said. Consequently they were, in every respect, the sort of people we have been describing.

Clinias: Well, I agree with you on this anyway, and so does this man here.

679d

Athenian: Therefore, shouldn't we say that the many generations who lived in this way were bound to be less skilled and have less understanding of skills in general than people born before the flood, or people nowadays, especially the military skills practised now in land battles or on the open seas, or, indeed, in the city itself, where they are called law suits and civil factions which contrive, by word and deed, to inflict mutual harm and injustice by every possible means? Weren't they simpler, more courageous people, more sound-minded too, and altogether more just? And we have already explained the cause of all this.

Clinias: That's right.

679e

Athenian: Now, whatever we have said, and anything we will say next as a consequence, all has a purpose. We want to appreciate what need the people of that era had for laws, and who their lawmaker was.

Clinias: Yes, you put that very well.

Athenian: Wasn't it the case that they had no need of lawgivers in that age, nor indeed was anything of this sort likely to arise then? For people born during that part of the cycle²⁴ did not yet even possess the art of writing; they lived, rather, in accordance with custom and the so-called laws of their forefathers.

Clinias: Quite likely.

680a

Athenian: And yet, this already constitutes some manner of political system.

Clinias: What manner?

Athenian: The political system of that era, which is still prevalent nowadays among the Greeks and the non-Greeks too, is what everyone, I believe, calls a dynasty. Homer says that this system constituted the domestic arrangement of the Cyclopes, and he says: "These people have no institutions, no meetings for counsels; rather they make their habitations in caverns hollowed among the peaks of the high mountains, and each one is the law for his own wives and children, and cares nothing about the others."²⁵

680b

Clinias: It seems that this poet of yours was quite charming. In fact, we have also studied other verses of his which were most sophisticated, not many though, since we Cretans are not much in the habit of using foreign poetry.

Megillus: As for ourselves in Sparta, we do make use of Homer, and he seems superior to other poets of this sort, even though

the way of life he generally describes is more Ionian than Spartan. But just now he seems to support your argument, when his story attributes the ancient system of these fellows to their wildness.

680c

Athenian: Yes, he does provide support, and we may use him as evidence indicating that political systems of this sort do arise on occasion.

Clinias: Good.

Athenian: Don't these originate from the people who were dispersed into single family units or clans due to the difficulty during the destructions? Under such systems, doesn't the eldest person exercise authority because authority originates from the father and mother, whom they follow like birds? Don't they form a single flock living under paternal law, and a kingship that is the most just kingship of all?

Clinias: Very much so.

680d

Athenian: After all this, they come together in larger numbers, thus forming cities. They take to farming, at first in the foothills, building enclosures surrounded by dry stone walls to provide a defence against wild animals, and they construct a single large common dwelling place.

Clinias: Yes, that's likely to be how all this happens.

Athenian: There is something else that is likely too.

Clinias: What?

680e

Athenian: These dwelling places grew in size out of the lesser units that were there initially. Each of the small units arrived, clan by clan, with its own ruling elder and its own particular customs, because of the fact that they had dwelled apart from

one another. Since those who begot and reared them were different in each case, the customs they adopted concerning the gods and themselves were different too. They were more orderly when they had more orderly ancestors, and more courageous when they had more courageous ones. So, as we were saying, each group arrived into the larger unit having its own particular laws, and, accordingly, each imposed its own preferences upon their children and their children's children.

Clinias: Yes, it's inevitable.

681c

Athenian: And it is also inevitable, I presume, that each group would favour its own laws over the laws of others.

Clinias: Quite so.

Athenian: It seems then that we have somehow unwittingly made a foray into the origins of legislation.

Clinias: It does indeed.

Athenian: In any case, what's needed next is for these groups that have come together to choose some representative from among their number who will review all of the regulations. Whatever regulations they most favour for common use, they will present openly and put them forward for adoption by the various leaders and chiefs of the people, who are, in a sense, their kings. The representatives themselves will be called lawgivers, and once they have put rulers in place and thus formed an aristocracy, or indeed a kingship, instead of the dynasties, they will themselves live under this transformed political system.

681d

Clinias: Yes, that's what would happen next, albeit gradually.

Athenian: Well, let us go on to speak of a third sort of political system that arises. In this system all forms of political systems,

and of cities too, converge together, and all sorts of things happen to them.

Clinias: What sort is this?

681e

Athenian: The one that Homer too indicated as coming after the second when he said that the third sort arose as follows: “He founded Dardania,” he says, I believe, “since there was yet no sacred Ilium he made a city in the plain to be a centre of peoples, but they lived yet in the foothills of Ida.”²⁶ Yes, these lines that he speaks, and the others about the Cyclopes too, are in accord somehow with God and with nature. For the poetical folk, being inspired when they are singing, are also, indeed, divine, and in the company of some Graces and Muses they often lay hold of a true version of events.

682a

Clinias: Yes, very much so.

Athenian: Let us delve further into the story that is engaging us now, since it may perhaps indicate something relevant to our overall purpose. Shouldn’t we do so?

Clinias: Yes, indeed.

682b

Athenian: Ilium was founded, we maintain, when they moved down from the high places to a vast and beautiful plain. It was situated on a low ridge that had numerous rivers coming down from Mount Ida.

Clinias: Yes, so they say.

Athenian: Don’t we think that this happened many years after the deluge?

Clinias: Yes, it must have been many years later.

682c

Athenian: At any rate, they were, it seems, strangely forgetful of the disaster we are speaking of, since they located their city in this way, below numerous rivers flowing down from the high places, and put their trust in some ridges of no great height.

Clinias: It is obvious then that they were separated from the disaster by an enormous interval of time.

682d

Athenian: And many other cities, I imagine, had already been founded by then as the human race increased in numbers.

Clinias: Indeed.

Athenian: These presumably waged war against Ilium, and they probably did so by sea, since by then they were all taking to the sea fearlessly.

Clinias: Apparently.

Athenian: And after a ten-year wait, the Achaeans sacked Troy.

Clinias: They certainly did.

Athenian: Now, during this ten-year period when Ilium was under siege, matters unfolded very badly for the various besiegers in their own countries because of rebellion on the part of the younger generation. And when the combatants got back to their own cities and homes, the young did not receive them in a noble and just manner, and so there was death, slaughter and exile on a huge scale. Those who had been expelled came back again under a changed name, being called Dorians rather than Achaeans, after Dorieus who had gathered the exiles together at the time. And you Spartans tell the story of all the events that happened after this, and you describe them in detail.

Megillus: Indeed.

682e

Athenian: Well, as if by divine intervention, we have now arrived back again at the very point from which we digressed in the early stages of our discussion about laws, when we came across the subject of music and drunkenness. And our argument is letting us come to grips with it, so to speak, for it has come around to the establishment of Sparta itself, and you maintain that Sparta was established correctly, as was Crete, which has kindred laws. So, we have now gained this much advantage from the wandering course of our argument, as we deal with various political systems and settlements; in the settlements we have seen a first, second and third city succeeding one another, we believe, over some immense span of time. And now this fourth city,²⁷ or nation if you prefer, has arrived. It was once in the process of being founded, and has now been founded. Now, perhaps we might be able to understand from all this what has been properly founded and what has not, what sort of laws save those that are saved, or ruin those that are ruined, and what sort of changes, in what respects, would produce a happy city. If we can do so, dear Megillus and Clinias, then we should state all this once more as if we were starting all over again, unless we find some fault with the earlier arguments.

683b

Megillus: Well, stranger, if some god were to promise us that, in return for making a second attempt at the enquiry into legislation, we would hear arguments that are no worse and no shorter than what has just been presented, I for one would willingly go far to hear it, and this day would seem short to me, even though it is almost the summer solstice when the god turns summer days towards winter.

Athenian: It seems we should conduct an enquiry then.

Megillus: Very much so.

683c

Athenian: Then let us use our imagination to place ourselves in that age when Sparta, Argos, Messene and their adjacent territories, had all more or less come under the control of your ancestors. They decided next, so the story goes, to divide the host into three, thus founding three cities, Argos, Messene and Sparta.

Megillus: Yes, indeed.

683d

Athenian: And Temenus became king of Argos, Cresphontes of Messene, and Procles and Eurysthenes of Sparta.

Megillus: Of course.

683e

Athenian: And everyone at the time swore an oath to these kings to come to their aid should anyone ever try to destroy their kingdom.

Megillus: Indeed.

Athenian: But, by Zeus, is a kingdom ever brought down, or indeed has any government ever been brought down, by anything else besides the rulers themselves? Or have we now forgotten that we proposed this a short time ago in those arguments we came across?

Megillus: No, how could we forget?

684a

Athenian: In that case, we can now make this position more certain, since we have come across historical events that seem to bring us to the same argument. Accordingly, we shall be investigating it on the basis of something that actually happened in truth, rather than something abstract. What actually happened was as follows: each of the three kingships, and the cities over which they reigned, swore an oath to one another in accordance with the common laws which they had instituted about ruling and being ruled. The rulers swore not to

make their rule more oppressive as the years and the generations advanced. The subjects swore that as long as the rulers upheld the agreement, they themselves would never subvert their kingship nor allow others to do so. Kings swore to come to the aid of kings, and of the people too, when they were wronged, and the people swore to aid other peoples, and kings too, when they were wronged. Isn't this so?

Megillus: It is indeed.

684b

Athenian: Wasn't this the most important factor in the settled order of the political systems in the three cities as established by law, whether enacted by kings or anyone else?

Megillus: What?

Athenian: That two cities are always allies set against the other one, if it ever disregards the established laws.

Megillus: Of course.

684c

Athenian: And, indeed, most people insist that their legislators pass the sort of laws that the general populace will accept willingly. It's as if a trainer or physician had to look after and cure people's bodies in a pleasant way.

Megillus: Entirely so.

Athenian: But very often it is quite satisfactory if one can bring about a sound and healthy condition of the body, without the involvement of an enormous amount of pain.

Megillus: Indeed.

684d

Athenian: And the legislators at the time had a further, not insignificant, advantage in instituting their laws easily.

Megillus: What sort of advantage?

Athenian: The legislators were not subject to one very serious accusation as they set about ensuring equality of wealth, an accusation that arises in many other cities when they are passing laws. Whenever someone seeks to make a change in land ownership or to cancel debts, because he sees that without such measures it would not ever be possible for equality to arise to any significant extent, he meets resistance. Everyone opposes a lawgiver who attempts to change anything of this sort, telling him not to disturb the fixed systems, and they curse him for introducing the redistribution of land and the abolition of debts, with the result that everyone ends up perplexed. But for the Dorians there was also the advantage that all this worked out nicely and without any evil consequences, because there was no dispute over the distribution of land, and there were no large, long-standing debts.

Megillus: True.

685a

Athenian: Then why ever, best of men, did their settlement and legislation turn out as badly as it did?

Megillus: In what way? What fault do you find with them?

Athenian: That although three states were founded, two of the three quickly subverted their own political systems and their laws, and one alone has remained as it was, and that is your city, Megillus.

Megillus: You are asking a difficult question.

Athenian: And yet this is what we should now consider and investigate as we play this sober old men's game concerning laws, to relieve the pain of our journey, as we said when we first set out.

Megillus: Indeed. We should do as you say.

685b

Athenian: Well, when it comes to laws, what better enquiry could we make than an enquiry into the laws by which these states have been regulated? And when it comes to the foundation of cities, could we consider any that are greater and more renowned than these?

Megillus: Apart from these, it is not easy to name any others.

685c

Athenian: Well, this much is fairly obvious, the people of that era intended this arrangement as an adequate protection, not just for the Peloponnese, but for all of Greece, in case any of the non-Greek peoples should do them wrong. This is just what those who lived around Ilium did at the time. They placed such trust in the might of the Assyrians as it stood during the reign of Ninus²⁸ that they arrogantly provoked the war against Troy. For the still surviving grandeur of the Assyrian empire was quite considerable, and the Greeks of the time feared its unified structure, just as we fear the Great King nowadays.²⁹ Indeed, the second taking of Troy³⁰ became a great reproach against the Greeks since it was part of the empire of the Assyrians. To deal with all these issues, there was that single arrangement of military forces, divided then into three cities under the command of three kings who were brothers, as they were all sons of Heracles. This, it seems, was an excellent arrangement, superior indeed to the Trojan expedition. For in the first place, these sons of Heracles were regarded as better commanders than the sons of Pelops.³¹ And what's more, this military force was thought to be superior in excellence to the Trojan expedition which consisted of Achaeans, who, although they had been victorious at Troy, were later defeated by the Dorians. Don't we imagine that people organised themselves in this way in those days, and with this intention?

Megillus: Entirely so.

685e

Athenian: Now, weren't they also likely to presume that these arrangements would possess some stability, and would last for a considerable period of time, since they had shared many hardships and dangers together, and had been organised under the command of a single family, their kings being brothers? What's more, they had consulted many oracles among whom was Apollo of Delphi.

Megillus: Yes, that is most likely.

686a

Athenian: But these high hopes, it seems, took flight and were gone soon after, except, as we said just now, for a small part of the alliance, the part in your region, and this has engaged in uninterrupted warfare against the other two parts, right down to the present day. But if the original intention had come to fruition, and they had agreed upon a single aim, they would have possessed military power that none could withstand.

Megillus: Inevitably.

686b

Athenian: So, how was it destroyed and what led to its destruction? Isn't it worth investigating what turn of fortune brought down such a great confederacy as this?

Megillus: Yes. For anyone who neglects these issues and investigates something else would hardly catch sight of laws and political systems that preserve such great and noble undertakings, or indeed, on the contrary, bring them down completely.

686c

Athenian: Well, in that case, it seems we have fortunately embarked somehow upon a significant investigation.

Megillus: We have, indeed.

Athenian: So, my good man, are we now, like most people, unwittingly presuming every time we see some good object that

it would accomplish something wonderful if only someone knew, somehow or other, how to use this properly? But perhaps we are neither thinking correctly nor in accordance with nature about this very issue, and neither is anyone else who thinks in this way about any other matters.

Megillus: What do you mean? What exactly is this argument of yours concerned with? What can we say?

686d

Athenian: My good man, I was laughing just now at my own behaviour. For as soon as I beheld this host we are talking about, it seemed glorious to me and a wonderful acquisition for the Greeks to come by, if only, as I said, someone had used it properly at the time.

Megillus: Wasn't it sound and reasonable for you to say all this, and for us to endorse it too?

686e

Athenian: Perhaps. At any rate, I am of the view that everyone who sees something of significance, possessing power and a lot of strength, immediately feels that if only its possessor knew how to use this, being the sort of thing it is, being as great as it is, he would produce wonderful results aplenty, and would enjoy happiness.

Megillus: That's correct too, isn't it? Or what do you say?

687a

Athenian: Well, consider this. What should a person look to to ensure that he says the right thing when bestowing such praise on anything? Firstly, in the case we are now discussing, if those who were organising the military force at the time had known how to arrange it properly, how would they have set about achieving their objective? Wouldn't they have had good grounds for praising the arrangement if they had set it up securely, safe for all time, so that they themselves were free and

had authority over others as they wished, and that they themselves, and their descendants too, could do as they pleased among their fellow men, Greeks and barbarians alike?

Megillus: Entirely so.

687b

Athenian: And isn't it also the case that someone who sees enormous wealth or exceptional family prestige, or anything else of that sort, might say the very same things? He looks at this and assumes that through this someone might obtain everything he desires, or the most significant part of it anyway.

Megillus: Quite likely.

687c

Athenian: Come on then, is there one object of desire, common to all men, that is now being revealed by the argument, according to the argument itself?

Megillus: What sort of desire?

Athenian: That whatever happens would take place according to the command of his own soul, in most cases, or failing that in the case of human affairs at least.

Megillus: Indeed.

687d

Athenian: Now, since all of us, children and old men alike, are wishing for something of this sort all of the time, wouldn't we also necessarily pray for this constantly?

Megillus: Inevitably.

Athenian: And, indeed, we would presumably join our loved ones in prayer for whatever they pray for themselves.

Megillus: Indeed.

Athenian: Now, a son, who is a child, is loved by his father, who is a man.

Megillus: Of course.

Athenian: And yet in many cases, the father might pray to the gods that what the son prays for, for himself, would never come to pass at all.

Megillus: You mean when the prayers are uttered while his son is still young and foolish?

687e

Athenian: But what if the father, because of his old age, or out of sheer impetuosity, with no recognition of what's good and just, prays with great eagerness whilst gripped by passions akin to those of Theseus towards his son Hippolytus, who died so tragically?³² Do you think that a son who realises this will join in the prayers of his father?

Megillus: I understand your meaning. Indeed, you seem to me to be saying that a man must not pray and strive that everything conform to his own wishes, but that his wishes conform to his own wisdom. Every city, and each and every one of us, should pray and be eager for this – to possess reason.

688a

Athenian: Yes, and a statesman or lawgiver especially should always look to this when putting legal arrangements in place. And I am myself reminded, and I am reminding the two of you, that at the beginning of our discussion, if you recall, your principle was that the good lawgiver should institute all regulations for the sake of war. But I maintained that this would encourage them to institute the laws, aiming at only one of the four excellences, when they should really look to all four, but most of all and primarily to the chief and leader of all excellence combined. This would be wisdom, reason and opinion, along with the love and desire that follow them. So, our argument has arrived back at the same place once more, and I am now saying once again what I said then in jest, if you please, or in all

seriousness, that to have recourse to prayer without possessing reason is perilous, and what unfolds is the opposite of what was wished for. You may take me seriously if you wish to do so, for I really expect that you will discover, if you follow the argument we put forward a while ago, that the cause of the destruction of the kingdoms, and of the entire plan of action, was not cowardice or ignorance of warfare on the part of the rulers or their proper subjects. They were ruined by evil in general, but mostly by ignorance of the most important of human undertakings. Now, since we are friends, I shall try my best to discover and to show you, if you like, by going systematically through the argument that this was how matters unfolded at the time, and still unfold today given similar circumstances, and that hereafter nothing will happen in a different way.

688c

Clinias: Well, stranger, mere words of praise would be an insult to you, so we shall praise you heartily with our deeds, for we shall follow what you say eagerly, and that's how a free born man makes his approval or disapproval most evident.

Megillus: Excellent, Clinias, we should do so as, you say.

Clinias: Let it be so, God willing. Speak on.

688d

Athenian: So, following the remaining course of the argument, we maintain that what destroyed the power at that time was enormous ignorance, and naturally it still does the same thing today. Accordingly, if this is so, the lawgiver must try to implant as much wisdom as he can in the cities, and do his very best to eradicate ignorance.

Clinias: Of course.

689a

Athenian: What kind of ignorance may justifiably be called the greatest? Decide whether you both agree with what I say, for I

am going to make a suggestion.

Clinias: What is it?

Athenian: It is the ignorance whereby something seems noble and good to someone, but he does not love this, but hates it, and loves and welcomes what seems degenerate and unjust. This discord between pleasure and pain on the one hand, and reasoned opinion on the other, is, I maintain, the utmost and greatest ignorance because it pervades most of the soul. Indeed, the part of the soul that feels pain and pleasure corresponds to the general populace of a city. Now, when this part is opposed to knowledge, opinion and reason – the soul's natural ruling elements – this I call folly in a city, when most of the people do not obey the rulers and the laws. And it's the same in a single individual too when the noble principles present in the soul accomplish nothing, but have the very opposite effect. All these, I would suggest, constitute the most discordant forms of ignorance in a city, and, indeed, in any one of its citizens, but not the ignorance of its workmen, if you understand me, strangers.

Clinias: We understand, my friend, and we agree with what you are saying.

689c

Athenian: So that's settled then, and let it be resolved and proclaimed that no authority should be entrusted to those who are in the grip of such ignorance. They should be censured for their ignorance, even if they are highly rational and well trained in all sorts of cleverness, and in everything that naturally produces a quick-witted soul. Those, however, who are more or less the opposite of these fellows should be hailed as wise, and authority should be given to them because they are sensible people, even if as the saying goes, "they don't know how to read or to swim". For how, my friends, could there be wisdom even to the slightest extent in the absence of concord?

There could not. But the greatest and most exalted concord may quite rightly be called the greatest wisdom, and whoever lives in accord with reason shares in this. But he who is devoid of this turns out, time and again, to be a subverter of his household and no saviour of his city, but the exact opposite because of his foolishness in these respects. So, as we just said, let this stand as our declaration.

Clinias: Yes, let it stand.

689e

Athenian: Now, in our cities there must, I presume, be people who rule and people who are ruled.

Clinias: Indeed.

690a

Athenian: So be it. And how many rights, of what sort, to rule and be ruled, are there in cities large or small, and in households too in like manner? Isn't one of these the right of father and mother? And, in general, wouldn't the right of parents to rule over their offspring be accepted everywhere?

Clinias: Very much so.

Athenian: Following from this, is the right of the well-born to rule over the base-born, and thirdly, as a consequence of these, that the elder should rule and the younger be ruled.

Clinias: Indeed.

690b

Athenian: And fourthly, that slaves should be ruled and their masters should rule them.

Clinias: Of course.

Athenian: Fifthly, I believe that the stronger should rule and the weaker should be ruled.

Clinias: Yes, that one is quite inevitable.

690c

Athenian: Yes, and this one is prevalent among all living creatures, and it accords with nature, as Pindar the Theban once said.³³ But the most important right, it seems, would be the sixth, declaring that the wise should lead and rule, and anyone devoid of knowledge should follow. And yet, O wise Pindar, I myself could never maintain that such natural rule of law over willing subjects, without use of force, is contrary to nature. It accords with nature.

Clinias: Absolutely correct.

Athenian: We say that the seventh form of rule involves the favour of god and good fortune. So we introduce people to a lottery system, and the most just outcome, we maintain, is that he to whom the lot falls should rule, while he who fails should depart and be ruled.

Clinias: Very true.

690d

Athenian: And to someone who sets about instituting laws in a light-hearted manner, we might say playfully, “My dear lawmaker, do you see then just how many rights there are relating to rulership, and that they are naturally in conflict with one another? In fact, we have now discovered a wellspring of conflicts which you need to remedy. But first, join us in an enquiry as to how the kings of Argos and Messene destroyed themselves and, simultaneously, the power of the Greeks which was so wondrous at the time. What was their transgression of these rights? Wasn’t it their ignorance of the excellent maxim of Hesiod that the half is often more than the whole?³⁴ Meaning that when it is ruinous to get the whole, and half is the right measure, he thought that what’s measured aright is more because it is better than what’s unmeasured and worse.”

Clinias: A very true saying indeed.

690e

Athenian: Now, do we think that this brings about destruction when it arises among kings or among the general population?

Clinias: Well, this is likely for the most part to be a disease of kings because of their opulent and luxurious lifestyle.

691a

Athenian: Isn't it clear, then, that the kings at the time were the first to catch this disease of greed for more than the established laws allowed? There was no concord among them on the very agreement they had sworn to adhere to under oath, and this discord, which, according to us, is the greatest ignorance even though it seems like wisdom, destroyed everything through a discordant and strident unmusicality.

Clinias: Quite likely.

691b

Athenian: So be it. Now, what precaution should the lawgiver have taken at the time to ensure that this affliction did not arise? By the gods, it takes no wisdom to understand this today and the question is easy to answer, but if it could have been foreseen at the time, whoever had foreseen it would have been wiser than any of us.

Megillus: What are you referring to?

Athenian: By looking at what happened among your people, Megillus, it is possible today to come to an understanding, and then say quite readily what should have happened at that time.

Megillus: Explain this more clearly.

Athenian: The clearest explanation would be along the following lines.

Megillus: What?

691c

Athenian: If someone gives the greater to the lesser, be it a sail to a ship, food to a body, authority to a soul, without regard for the measure, he turns everything upside down, and in their wantonness some will run to disease, others to injustice born of arrogance. So what exactly are we saying? Is it something like this? There is no mortal soul whose nature will ever be able to bear supreme authority over human beings while still being young and irresponsible. Its thinking will be filled with ignorance, that terrible disease, so that the soul comes to hate its nearest and dearest, and when this happens, soul itself is quickly destroyed and all of its power comes to nothing. Now, to guard against this by understanding the measure is the mark of great lawgivers. So, today it is quite reasonable to guess that this actually happened at that time, but it seems there was also...

Megillus: What?

^{691d}

Athenian: There was some god caring for you who foresaw the impending events and expanded your line of kings to two instead of one, thus reducing their power more in the direction of due measure.³⁵ As well as this, someone³⁶ whose human nature had a mixture of divine power saw that your government was still at fever pitch. So he blended the sound-minded power of old age with the self-willed strength of the royal line by making the vote of the twenty-eight elders equal to the power of the kings on the most important matters. And your third saviour,³⁷ observing that your government was still wanton and inflamed, cast a sort of bridle around them, and this was the power of the ephors,³⁸ which is close enough to the power of the lottery. And, according to this account, your kingdom, constituted from the appropriate mixture of elements and possessed of due measure, having saved itself, went on to become responsible for the salvation of the others.³⁹ Since, if

this had been left to Temenus and Cresphontes and the legislators at the time, whoever those legislators may have been, they were not sufficiently experienced in the business of legislation, so even the portion belonging to Aristodemus⁴⁰ would not have survived. Otherwise they would hardly have presumed, with a few oaths, to bring measure to a young soul that had just acquired a position of authority that could develop into a tyranny. But now, the god has shown what rulership should have been like then, and should indeed be like now, if it is to endure. For us to recognise all this now that it has already happened is, as I said earlier, no mark of wisdom, since it is not difficult to see something from an example from the past. But if someone had foreseen all this at the time and had been able to moderate the rulers and unify the three of them, all the noble aspirations of that era would have been preserved, and no Persian horde or any other would ever have attacked Greece, despising us as people of no account.

Clinias: True.

^{692d}

Athenian: At any rate, they repulsed them, Clinias, in a disgraceful manner. And by disgraceful I don't mean that the men of that age were not victorious, and I am not denying that they won notable battles by land and by sea. No, I maintain that what was disgraceful at the time was, firstly, that of these three cities only one came to the defence of Greece. The other two were so badly corrupted that one of them⁴¹ even impeded Sparta in her defence of Greece by fighting against her with all its might, while the other, Argos, in spite of its primacy at the time of the original division, when called upon to defend Greece against the barbarians, paid no heed and did not defend her. And a lot more could be said about what went on during that war which would not reflect at all well on Greece. In fact, it wouldn't even be right to say that Greece defended itself,

because if the joint enterprise of the Athenians and the Spartans had not repulsed that impending enslavement, almost all the Greek nations would have been intermixed with one another by now – barbarians with Greeks, and Greeks with non-Greeks. This is exactly the situation of those who are under the tyranny of Persia nowadays. Having been dispersed and then jumbled together, they live out their lives wretchedly in scattered communities. These, Megillus and Clinias, are the criticisms we must direct at the so-called statesmen and lawmakers of past ages and of today, so that by investigating the causes of these failings, we may discover what other courses of action besides these they should have adopted. For instance, in the present case we said that we should not pass laws creating positions of authority that are too powerful, or indeed too pure. We should, rather, keep in mind that the city should be free, wise, and a friend to itself, and the lawgiver should pass laws with his eye fixed upon this aim. Now, we have already proposed certain aims many times that the lawgiver should look to when passing laws, but we should not be surprised if the proposals seem different to us on each occasion. We need to reckon for ourselves that when we maintain that he should look to sound-mindedness, or to wisdom or friendship, these aims are not different but the same, and we should not be troubled if various other expressions of this sort occur.

693c

Clinias: We shall try to do as you suggest as we go back over the arguments. But now tell us, in the case of friendship, wisdom and freedom, what were you intending to say the lawgiver should aim at?

693d

Athenian: Listen then. It would be right to say that there are, as it were, two mother-forms of political systems from which all others arise: one is called monarchy, the other democracy. The extreme of the former is the Persian system, while that of the

latter is ours. The others are practically all, as I said, variations of these two. Now, a city must necessarily have a share in both of these if it is to have freedom and friendship accompanied by wisdom. This, then, is what our argument wishes to prescribe by saying that a city could never be properly governed in the absence of these two.

Clinias: Indeed, how could it be?

693e

Athenian: Well, the Persian regime has embraced the monarchic, while the other, ours, has favoured freedom exclusively, to a greater extent than they should in each case. Neither regime has got both of these in the right measure, but your regimes in Sparta and Crete do have it more. So did the Athenians and Persians in ancient times, but this is less so nowadays. Should we give the reasons why? What do you think?

Clinias: Of course, if we are serious about pursuing our objective.

694a

Athenian: Listen then. The Persians, during the reign of Cyrus,⁴² observing the proper measure of subservience and freedom, first attained freedom themselves, and then attained supremacy over many others. For, as rulers, they granted freedom to their subjects and maintained equality, so the soldiers were well disposed towards the generals and didn't hold back in the face of danger. And what's more, if anyone among them was wise and capable of offering advice, the king did not begrudge him that opportunity. He allowed free speech and respected those who could assist him in his deliberations, and so the benefit of a man's wisdom was made available to the community at its very heart. In fact, everything prospered for them in those days because of this freedom, friendship and communal spirit.

Clinias: Well, that's likely to be how things happened, anyway.

694c

Athenian: How was it ever destroyed under Cambyses,⁴³ and more or less restored again under Darius? Would you like us to use some sort of prophetic sense to come up with an answer?

Clinias: That might help with the enquiry we have embarked upon.

Athenian: The sense I now have of Cyrus is that although he was a good general who loved his city, he had no contact at all with the right sort of education, and had never applied his mind to economics.

Clinias: Why would we say this?

694d

Athenian: He spent his life, it seems, from his earliest years, on military campaigns, and entrusted the upbringing of his children to women, who reared them from their very childhood as though they were already favoured with the blessings of heaven, with no deficiencies. The women would allow no one to oppose the children in anything because they were so blessed, and they made everyone else praise whatever the children said or did. So they brought them up to be people of a particular sort.

Clinias: A noble upbringing, it seems.

694e

Athenian: A feminine one, as you would expect from women of the royal household who had recently become rich, who were rearing children in the absence of any men, because they were all caught up in warfare with all its perils.

Clinias: That makes sense.

Athenian: But their father acquired flocks for them, sheep too and herds of humans, and various collections of all sorts of

things, but he did not realise that he was about to give all this to boys who had not been educated in their fathers' own skill, the skill of a Persian. The Persians were shepherds, sprung from a harsh land, and their skill was a tough one, just what was needed to produce very strong shepherds well able to live in the open air, go without sleep, and serve in the army if necessary. He simply did not notice that his sons, having been educated by women and eunuchs, had received a corrupted Median education⁴⁴ because of their so-called blessedness. So, having been brought up without hearing a word of reproach, they turned out to be the sort of people you would expect from such an upbringing. Now, when Cyrus died and the children inherited the kingdom, they were infected with luxury and licentiousness. First, one killed the other because he was angry over their equal status, but after that, he himself, maddened by drink and ill-education, lost his kingdom to the Medes and the so-called eunuch,⁴⁵ who had such utter contempt for the foolishness of Cambyses.

Clinias: That's what's said anyway, and it's quite likely that is more or less what happened.

695c

Athenian: And, indeed, it is also said, I believe, that authority reverted to the Persians through Darius and the 'Seven'.⁴⁶

Clinias: Indeed.

Athenian: Let us look at this then, by following the account. For Darius was no king's son and he was not reared and educated in sumptuous luxury. When he came to power, having taken control as one of a group of seven, he divided the kingdom into seven parts, small traces of which remain to this day. He thought it best to administer the kingdom by passing laws introducing some social equality, and he fixed, by law, the tribute money that Cyrus had promised to the Persians, thus ensuring friendship and fellow-feeling among all the Persians

by winning the Persian people over with generous gifts. Consequently, his armies were so full of goodwill that they won as much territory for him as Cyrus had originally left to him.

695e

Athenian: After Darius came Xerxes, who had, once again, received a pampered royal education. We could quite justifiably say to Darius, “O Darius, because you did not learn from Cyrus’ mistake, you trained Xerxes in the very same habits that Cyrus taught to Cambyses.” Anyway, since he was a product of the very same education, Xerxes ended up suffering more or less the same fate as Cambyses. And since then there has hardly been a single king among the Persians who has been truly great in anything more than name. And what is responsible for this, according to my argument, is not ill-fortune, but the bad life that is for the most part lived by the children of exceptionally wealthy folk and tyrants. In fact, no child or man, old or young, could ever attain an exceptional level of excellence from such an upbringing as this. These, then, are issues which, we maintain, the lawgiver should take into consideration and we should do the same right now. Well, it is only right, my Spartan friends, to grant your city this much at least: you do not assign any special honour or training to rich or poor, king or commoner, beyond the prophetic directions you were given at first by some god. In fact, pre-eminent civic honours should not be conferred just because someone is especially wealthy, no more than we should do so just because the person is swift or pretty or strong, unless he has some excellence, and even the excellence should include sound-mindedness.

696a

Megillus: What do you mean by this, stranger?

696b

Athenian: Courage is presumably one part of excellence?

Megillus: Of course.

Athenian: Well then, listen to the argument and decide this for yourself. Would you choose someone who was extremely courageous, but devoid of sound-mindedness and restraint, as your housemate or neighbour?

Megillus: What a suggestion!

Athenian: What about someone who has a skill and is wise in that sense, but unjust?

Megillus: Not at all.

Athenian: And yet justice does not flourish without sound-mindedness.

Clinias: No, how could it?

696c

Athenian: Nor indeed does the wisdom we described a while ago of the person whose pleasures and pains are in accord with and adhere to correct reasoning.

Megillus: Indeed, it does not.

Athenian: There is a further point we should consider on the issue of civic honours, and what sort are correctly or incorrectly conferred on any occasion.

Megillus: What point?

Athenian: Would sound-mindedness, present in a soul on its own without any other excellence, be honourable or dishonourable, rightly speaking?

Megillus: I don't know how to answer you.

Athenian: And yet, you have responded quite reasonably. In fact, had you chosen either of the two alternatives, you would, in my opinion anyway, have gone awry.

Megillus: So my answer has turned out quite well.

696d

Athenian: Indeed. It is not worth saying anything about this additional element in the honourable and dishonourable. Mute silence is a better option.

Megillus: I presume you mean that sound-mindedness is the additional element.

Athenian: Yes. And whatever benefits us most, when combined with this additional element, would rightly be honoured most. The second most beneficial would be honoured second. And if each successive benefit was given its place in the sequence of honours in this way, that would be the right way to arrange them.

Megillus: Quite so.

697a

Athenian: Well then, shouldn't we also say that it is once again the role of the legislator to assign these?

Megillus: Very much so.

Athenian: Would you like, then, to leave it to him to deal with them all, each individual task and all the details, while we, aspiring to be men of the law, make a threefold division in an effort to distinguish separately between those that are most significant, and those that are in second or third place?

Megillus: Yes, certainly.

697b

Athenian: So, we are saying, it seems, that a city that is to save itself and be as happy as humanly possible must, of necessity, assign honours and their opposites in the correct manner. It is only right that the goods of the soul occupy the first and most honoured position, provided the soul is possessed of sound-mindedness. In second place are the goods and beauties of the body, and third are the so-called goods associated with property and wealth. Any lawgiver or city that goes outside of

those rankings by elevating wealth to a position of honour, or promoting any of the lesser benefits to a higher status in terms of honour, is performing an unholy and unstatesmanlike act. May we say this or what should we say?

Megillus: We may say this, plainly.

697c

Athenian: Although our investigation of the political system of the Persians made us say all this at such length, we still find that they ended up in an even worse predicament. The reason for this, according to us, was that they restricted the freedom of the populace excessively, introduced more subservience than appropriate, and thus they undid the friendship and communal spirit of their city. And once this is gone, the policy of the rulers is no longer framed in the interests of their subjects and the populace, but in the interests of their own authority. If they ever think it will be to their own advantage, even slightly, they devastate whole cities, and friendly peoples too, by destroying them with fire, and so they are hated, relentlessly and mercilessly, and they return that hatred. And when they need the populace to fight for them, they find there is no communal spirit among them, no willingness to do battle eagerly in the face of danger. So although in theory they have a vast population at their disposal, they are all useless in a war, so they hire people in as though they were in short supply, believing that their safety lies in foreign mercenaries. As well as this, they inevitably show their ignorance by proclaiming, through their own actions, that everything the city calls honourable and good is a mere trifle in comparison with gold and silver.

Megillus: Entirely so.

698a

Athenian: Well, let that be the end of our discussion of the Persians and how badly their affairs are managed nowadays because of their extreme subservience and authoritarianism.

Megillus: Certainly.

698b

Athenian: Next we should describe the Attic political system in the same way, showing that total freedom, without any rulers, is far worse than the regulated authority of others. Indeed, at the time of the Persian advance upon the Greeks, or perhaps upon more or less all the inhabitants of Europe, we had a political system of ancient date with positions of authority based upon four valuations. Reverence was present among us as a queen, and because of her we were willing to live in subservience to the laws of the time. What's more, the sheer magnitude of the horde that came by land and by sea struck us with fear and perplexity, and increased our subservience to our rulers and our laws to an even greater extent. As a result of all this, a strong bond of affection developed among ourselves. Indeed, some ten years before the battle of Salamis, Datis arrived, leading a Persian horde. He had been sent by Darius with explicit orders directed against the Athenians and Eretrians.⁴⁷ He was to enslave them and deport them, and his own death was the penalty for failure. Datis did not take long to completely overpower the Eretrians with his vast army, and he sent a frightening message to our city, Athens, that not a single Eretrian had escaped him. In fact, Datis' soldiers, with joined hands, had swept through the whole territory of Eretria like a dragnet. This account, whatever its source, whether true or false, terrified the other Greeks, and especially the Athenians, and no one except the Spartans was willing to help them when they sent embassies everywhere. But because their war against Messene was ongoing at the time, and perhaps because they were delayed by something else we don't know about, the Spartans arrived one day late for the battle of Marathon. After this, reports of large-scale preparations and endless threats kept reaching us from the king. Eventually we were told that Darius had died, and his son, who had inherited the throne, was

young and energetic and had no intentions of giving up on the invasion plan. The Athenians presumed that all these preparations were directed against themselves because of what happened at Marathon, and when they heard that a canal had been dug at Athos, that the Hellespont had been bridged, and of the huge number of ships in the Persian fleet, they decided that they would be safe neither by land nor by sea. They realised that no one would help them, for they remembered that when the Persians invaded previously and were successful in Eretria, no one came to their aid, nor did anyone run the risk of fighting alongside them. So they were expecting the same thing to happen again this time, by land anyway, and they lost all hope of safety by sea when they saw a thousand Persian ships, or even more, bearing down upon them. It occurred to them that there was only one safe course, slender and perilous, but the only one. They looked back at what happened previously, and how, from the bleak situation that they also faced then, military victory appeared to emerge. Uplifted by this hope, they discovered that their own refuge lay in themselves alone, and in the gods. A number of factors combined to engender a feeling of friendship among them. One was a fear born of their perilous circumstances at the time, while another originated in the ancient laws, a fear they had acquired through their subservience to those laws of old. We have often referred to this fear in our earlier discussions as ‘reverence’, and we said that anyone who is to be a good person should be subject to this. But the coward is free of reverence and does not experience it, and unless such people had been seized by terror at the time, they would never have joined the defensive effort to protect their temples, tombs and fatherland, their family and friends, by helping as they did on that occasion. We would rather have been routed then, and all of us scattered this way and that.

699c

Megillus: Very much so, stranger, what you have said is correct and a great credit to yourself and your fatherland.

699d

Athenian: Quite so, Megillus, and it is only right to recount the events of that age to you, since you have inherited the character of your forefathers. Now, you and Clinias should consider whether we are saying anything that is relevant to law-making. For I am not telling these stories for their own sake, but for the sake of the topic I am discussing. Yes, look, the same thing, somehow, happened to ourselves as happened to the Persians, except that they totally subjugated the populace, while we, in contrast, urged the masses in the direction of total freedom. So, what should we say next, and how should we express it, since our previous arguments have in a way been quite well stated?

Megillus: Good point, but please try to explain what you are saying to us a bit more clearly.

699e

Athenian: I will. Under our ancient laws, my friends, the populace was not the master. The populace was rather, in a sense, willingly subject to the laws.

700a

Megillus: To what sort of laws?

Athenian: Firstly, to the laws concerning the music of that era. Let's look there so that we may describe, from the beginning, the development of this excessively free lifestyle. At the time, our music was in fact divided into various forms and structures. One was a form of song consisting of prayers to the gods, which were called hymns. Another form of song, almost the opposite of this, consisted of what are best called dirges, and there was another consisting of paeans, and one more which is called a dithyramb,⁴⁸ which is about the birth of Dionysus, I think. Nomes were given this particular name as being a different kind of song,⁴⁹ which they said was for the cithara. Once these and

some others had been duly set in order, it was not permitted to apply one form of melody to another form. The ultimate authority to understand these principles, and indeed pass judgement and impose penalties upon those who transgressed them, did not lie, as it does nowadays, with the trumpeting and uncouth clamouring of the multitude, nor their approving applause. The educated folk themselves agreed to listen in silence to the very end, while for children, their attendants and the common crowd, the rod of chastisement kept them in order. So in these matters, the majority of the citizens accepted such regulation and authority, and did not dare to pass judgement by clamouring. After this, with the passage of time, poets arose who were responsible for an unmusical lawlessness, and although they were poetical by nature, they did not understand what was right and lawful in the realm of the Muses. Frenzied, and much in the grip of pleasure, they mixed dirges with hymns, paeans with dithyrambs, and even imitated the sound of flutes on the cithara. By combining everything with everything, they, in their ignorance, unintentionally perpetuated the false notion that there is no such thing as correctness in music, and that it is quite alright to pass judgement based upon the pleasure it affords to whomever enjoys it, regardless of whether that person is good or bad. By composing works of this sort and adding words of a similar sort, they instilled musical lawlessness into most of the people and the audacity to believe that they were themselves competent judges. And so, the spectators became noisy folk rather than a quiet people, as though they themselves understood what was good and bad in the realm of music, and so instead of the rule by the best, a degenerate rule by the spectators arose. Now, if a democracy of free men had arisen in music alone that would not have been a particularly serious development. But our current notion that everyone is wise about everything began with music, as did lawlessness, and following close behind them came liberty, for believing that

they knew so much, they had no fear, and their lack of fear begat an absence of shame, for it is surely shamelessness of the lowest order not to fear the opinion of the best because of an impudence born of excessive liberty.

Megillus: Very true.

701b

Athenian: Next, after this freedom comes another, which is an unwillingness to be subservient to rulers, and after this comes a flight from any subservience to, or correction by, father, mother or elders. As the end approaches, they have an urge to pay no heed to any laws, and finally, towards the very end of the process, they disregard oaths, entreaties, and anything to do with the gods, as they display and imitate the fabled ancient nature of Titans.⁵⁰ And reverting once more to the same conditions as those fellows, they usher in a harsh age of unrelenting evils. Well, what again is the point of saying all this? Apparently I should restrain the argument from time to time and not allow myself to be borne along by the force of the argument, like a horse with no bridle in its mouth, and, as the saying goes, “fall off my donkey”. So I repeat the question once more. What is the point of saying all this?

Megillus: Good question.

701d

Athenian: The point relates to what was said previously.

Megillus: Which was?

Athenian: We said that the lawgiver should frame laws with three aims in view: that the city under his laws will be free, friendly towards itself, and possessed of reason. These were the aims, were they not?

Megillus: Certainly.

701e

Athenian: With these aims in view, we picked the most authoritarian system of government and the one that allowed most freedom, and we are now considering which of these two is governed in the correct manner. Taking a moderate example of each of these, of authoritarianism on the one hand and of freedom on the other, we saw that everything went exceptionally well for them in each case. But when they went on to the extreme, either of subservience in one case or its opposite in the other, there was no benefit to either of them.

Megillus: Very true.

702a

Athenian: And, indeed, for the same reasons we looked at the settlement of the Dorian horde, the settlement of Dardanos in the foothills, the maritime settlement too, and indeed the first people who survived the deluge, in addition to our previous discussions about music and drinking and the topics prior to these. All this was said for the same reason, in order to see clearly how exactly a city may best be governed and, in the case of an individual, how he may best live his own life. But have we achieved anything worthwhile? What test for ourselves may we suggest, Megillus and Clinias?

702b

Clinias: I think I have one, stranger. It seems that a certain providence has governed these arguments we have just gone through. For I was at a stage where I was in need of these, and your arrival, along with Megillus here, was most opportune. I shan't conceal my present predicament from you two, in fact I regard your presence as an omen. For most of Crete is engaged in forming a colony, and the people of Cnossus have been put in charge of the process, and their city has assigned the task to myself and nine others. At the same time they directed us to frame laws based upon any local laws that we approved of, and any laws from elsewhere that in our view were best, regardless

of the fact that they were foreign. So let's do this favour to myself and to yourselves. Let's construct a city, in words, as though we were founding it from the very beginning, by drawing upon what we have said so far. At the same time, this will also constitute our enquiry into the topic we are investigating, and, what's more, I may find this process useful for my future city.

702d

Athenian: Well Clinias, that's not a declaration of war, so if Megillus has no objection, you may presume that as far as I am concerned you can count on my fullest possible cooperation.

Clinias: Well said.

Megillus: And the same goes for me.

702e

Clinias: Thank you both. So let's first try to found our city in words.

BOOK IV

704a

Athenian: Come on then, what precisely should we suppose our city will be? When I say this, I am not asking what name it has at present or what it should be called in future, since that might well be determined by the circumstances of its foundation, or by the region it is in, or the name of some river or spring or of one of the gods of that region might be applied to the newly founded city. Rather, in the case of the city, what I really want to ask is whether it will be on the coast or inland.

Clinias: Well, stranger, the city I have just been referring to is about eighty stades⁵¹ or thereabouts from the coast.

Athenian: What about harbours? Are there any on that side of the coast or does it have no harbour at all?

Clinias: On that side, stranger, it is well provided with harbours. As good as any.

704c

Athenian: Oh dear! What about the surrounding countryside? Does the land produce all your needs, or are there some needs that cannot be met?

Clinias: It is not really deficient in anything.

Athenian: Will it have a neighbouring city close by?

Clinias: No, not really, that's why it is being founded. Emigration from the locality of old has left the land deserted for quite some time.

Athenian: What about mountains, plains and forests? What proportion of each does it have?

Clinias: It is much the same as the rest of Crete generally.

Athenian: Are you saying that it is rough terrain rather than flat?

704d

Clinias: Certainly.

Athenian: Then, when it comes to the acquisition of excellence, at least it would not be beyond remedy. For if the city was to be on the coast with a good harbour and did not produce all that was needed but had many needs that it could not meet, some mighty saviour would have been required, and some divine lawgivers too, if it were not to have a huge variety of depraved habits as a natural consequence. At the moment, those eighty stades afford some comfort. Yet, it is situated closer to the sea than it should be, and, more to the point, you say it has good harbours, but even this is acceptable. Indeed, having the sea close by makes everyday life pleasant, and yet it really is a "briny and bitter neighbour"⁵² since it fills a city with commercial activity and retail business, breeds restless and

distrustful traits in people's souls, and makes the city suspicious and unkind towards itself and towards the rest of humanity too. In the face of this, there is of course some consolation in the fact that it produces all that it needs, but because the territory is rugged it obviously would not produce everything that is needed, and a surplus besides. For if it had a surplus it would be able to export a great deal, gold and silver coin would fill its coffers in return, and in a way, all things considered, there is no greater enemy than this to the development of a just and noble character, as we said earlier, if you recall the discussion.

Clinias: Yes, we remember. And we agree now, as we did then, that it is correct.

705c

Athenian: Well, what about this? How well is this region of our country supplied with wood for shipbuilding?

Clinias: There isn't any fir or pine worth mentioning, nor is there much cypress either. What's more, you would find very little larch or plane, which shipbuilders regularly need to use for ships' interiors.

Athenian: That, again, would not be a bad feature of the country.

Clinias: How so?

705d

Athenian: It is good that a city is unable to imitate its enemies too easily when the behaviour to be imitated is base.

Clinias: What makes you say this? Is it something we said earlier?

Athenian: Well, my divine friend, keep an eye on me in view of what was said at the outset about the laws of Crete, that they should have a single aim in view. Now, the two of you said that this aim was military, but I responded by saying that although it

is all very well that such regulations should look to excellence, I did not accept at all that they would look to a part of excellence and not to the entire. So the two of you should now watch over me, in turn, in my current legislative efforts in case I enact a law that is not directed towards excellence or to a part of excellence. For I am proposing that a law is rightly enacted only when it aims every time, like an archer, at an outcome that is always constantly accompanied by something ever beautiful, and at that alone. All else should be set aside, be it wealth or anything else of that sort, in the absence of the stated aims.

705e

Athenian: Now, the base imitation of one's enemies that I spoke of earlier arises in the following way when people dwell close to the sea and are troubled by enemies. For instance – and I am not criticising your people, Clinias – Minos once imposed a cruel tribute to be paid by the inhabitants of Attica when he had acquired enormous maritime supremacy,⁵³ while the others had, as yet, no ships fit for war, unlike nowadays. Nor indeed did their territory have lots of wood for shipbuilding so that they could readily provide themselves with a naval force. So they were not immediately able to defend themselves against their enemies by imitating Cretan seamanship and becoming mariners themselves. Indeed, it would have been even better for them to lose many times seven youths and remain as staunch foot soldiers rather than becoming mariners, who repeatedly jump from their ships and then rush back on board once more, who dare not stand their ground and face death when the enemy is bearing down on them, and see nothing shameful in that. Rather, since they always have plausible excuses, they are quite ready to cast their weapons aside and take flight in what they call retreats without dishonour. This sort of talk is inclined to arise as a consequence of resorting to naval warfare, and it merits not unbounded praise but the exact

opposite, for degenerate behaviour should never become habitual, especially in the very best class of our citizens. We could also learn from Homer, I presume, that a practice of this sort is not noble. For he has Odysseus upbraid Agamemnon for ordering the ships to be dragged down to the water's edge when the Achaeans are being pressed hard by the Trojans. Odysseus gets angry with him and says:

*...you who in the very closing of clamorous battle
tell us to haul our strong-benched ships to the sea so that even
more glory may befall the Trojans, who beat us already,
and headlong destruction swing our way, since the Achaeans
will not hold their battle as the ships are being hauled seaward,
but will look about and let go the exultation of fighting.
There, O leader of the people, your plan will be ruin.⁵⁴*

So Homer, too, recognised the fact that placing triremes at sea in support of soldiers fighting on land is bad practice. Even lions would get used to fleeing from deer if they cultivated habits of this sort. What is more, when the power of cities derives from their navies, the honours, when they are saved, are not bestowed upon the most deserving members of their fighting force. For their safety derives from the skill of the steersman, the captain and the oarsman, and a whole variety of people who are not of much consequence, and so it is not possible for someone to confer honours on each deserving person in the correct manner. Yet, in the absence of this ability, how could a city still prosper?

Clinias: It is scarcely possible. But, stranger, it was the naval battle of Salamis, fought by Greeks against the barbarians, which, according to us Cretans anyway, saved Greece.

707c

Athenian: Yes indeed, that is what most Greeks say, and most barbarians too. But we, my friend – that is, Megillus here and I – maintain that the land battle that took place at Marathon was what saved the Greeks initially, while the one at Plataea completed the process,⁵⁵ and while these battles made better people of the Greeks, the other battles did not, which is a strange way to speak of battles that saved us at the time, for I am now including the naval battle at Artemisium for you, in addition to the one at Salamis. As a matter of fact, in looking now at the excellence of a political system, and the nature of a territory, we are also considering the arrangement of the law. Unlike most people, we do not regard the mere survival and continued existence of people as the most important issue, but becoming as good as they possibly can, and being so for as long as they live. But I think we actually said this before in our previous discussions.

Clinias: Indeed.

Athenian: Then we should consider this question alone, whether we are adopting the same approach as we did previously, the one that is best for cities in relation to their foundation and law-making.

Clinias: Very much so.

707e

Athenian: Then tell me next, what people will you be settling? Will there be people from all over Crete, anyone who wants to come, because the population in the various cities has exceeded what the land can sustain? For you are not, I suppose, inviting any Greek who wishes to join you, even though I can see that some people from Argos, Aegina and elsewhere in Greece have settled in your country. So tell me, in this case, where do you say that the current body of citizens will come from?

708a

Clinias: They are likely to come from all over Crete, and as for the rest of the Greeks, it seems that settlers from the Peloponnese are made most welcome. And, indeed, what you were just saying is true, some are from Argos, and of those who are here at present, the most highly regarded clan, the Gortynian, is a colony from Gortyn on the Peloponnese.

708b

Athenian: Well, a settlement would not be easy for the cities unless it is formed, like a swarm of bees, from a single clan coming from a single territory, a friend coming from friends, under pressure because of some shortage of land, or driven by some other afflictions of this sort. There are times too when part of a city may be compelled to relocate elsewhere, having been forced to do so by civil strife, and in one case a whole city went into exile, having been totally overpowered by an overwhelming onslaught. Now, to settle all these and legislate for them is easy in one sense, but difficult in another. For the existence of a single people, with the same language and laws, leads to a spirit of friendship because they share the same sacred rituals and everything else of that sort. However, they do not readily accept laws and other civic arrangements that are different from those of their homeland, and sometimes, although the degeneracy of their laws caused civil strife, they still seek, through force of habit, to behave in exactly the same way that led to their downfall previously, and they become disobedient and difficult for the founders and legislators to deal with. In contrast, a people that combines all sorts of differences might perhaps be more inclined to submit to new laws, but for them to live and breathe in unison, like the team of horses in the proverb, would take much more time and be a huge challenge. The fact of the matter is that making laws and founding cities is, for men, the ultimate test of excellence.

Clinias: Quite likely, but please explain more clearly what you have in mind when you say all this.

Athenian: My good man, as I return again to considering lawmakers, it is possible that I will, at the same time, say something that is actually derogatory, but as long as I say something relevant, this should not really be a problem. But why am I troubled at all? In almost all human undertakings, the situation is much the same.

Clinias: What are you referring to?

708e

Athenian: I was about to say that no human being ever institutes any laws at all, but all sorts of chance occurrences and various coincidences institute all the laws for us. For some, war may perhaps overthrow the political system by force and change the laws, or the challenge of grinding poverty may do so. Diseases, too, force us to make lots of innovations when we are afflicted by plague, or when unseasonal weather lasts for many years as often happens. Anyone, in view of all this, might be justified in saying, as I did just now, that no mortal creature institutes any laws whatsoever, and almost all human affairs are a matter of chance. And although it seems right to say all this about navigation, helmsmanship, medicine and generalship, there is, in fact, something further to be said in these same cases, with similar justification.

Clinias: Which is?

709b

Athenian: That God is all, and that chance and opportunity, with the help of God, determine the course of all the affairs of humanity. And yet we should accept that these are accompanied by a third more gentle element – skill. For I myself would suggest that in a storm it would be a huge advantage for the steersman to cooperate with opportunity. Is this so?

Clinias: Quite so.

709c

Athenian: And the same argument would apply, in like manner, in the other cases too, and indeed the same point should be conceded in the case of legislation. Once the other conditions that the country requires, if it is ever to be settled in a goodly manner, are in place, then a lawgiver who holds to the truth is needed by such a city, to help them.

Clinias: Very true.

Athenian: Now, wouldn't a person who possessed the skill involved in any of the areas I mentioned also presumably be able to pray, in the right way, for whatever he needed, through the operation of chance, so that his skill alone would suffice?

Clinias: He would, indeed.

709d

Athenian: And all the other skilled people we referred to could tell us what their own prayer would be for, if we asked them. Is this so?

Clinias: Indeed.

Athenian: And the lawgiver will, I presume, also do the same thing.

Clinias: Presumably.

Athenian: Let us address him as follows: "Come on then, lawgiver, what should we give you, what condition should the city be in, so that you will be able to proceed from there, and be competent, by yourself, to manage the city?"

Clinias: So, what's the right thing to say in response?

Athenian: We shall give the lawgiver's response, isn't this so?

Clinias: Yes.

Athenian: “Give me a city under tyrannical rule,” he will say, “and let the tyrant be young, with a good memory, a quick learner, courageous, and possessed of natural greatness. And if these various qualities, present in the tyrannical soul, are to be of any benefit, let them be accompanied now by something else, which, as we said previously, needs to accompany all the parts of excellence.”

Clinias: Megillus, I presume that the stranger is saying that what needs to accompany the others is sound-mindedness. Is this so, stranger?

710a

Athenian: Yes, the commonplace sound-mindedness, Clinias, not what someone might speak of when they get too serious and argue that sound-mindedness must be the same as wisdom. It is an innate quality which shows immediately in children and in animals, that some have no control when it comes to pleasures, while others have control. And we said that in isolation from the various other goods we are discussing, it is of no account. I presume you get my meaning.

Clinias: Yes, certainly.

710b

Athenian: Then our tyrant should possess this, in addition to those other natural qualities, if a city is to attain, in the quickest and best way possible, the political system it needs in order to live its life in happiness. For there is not, nor could there ever be, a quicker or better way of establishing a political system than this.

710c

Clinias: How, stranger, and by what argument, could anyone convince themselves that they are speaking correctly if they say this?

Athenian: Presumably, Clinias, it is easy enough to discern this much at least, that this is the natural state of affairs.

Clinias: How do you mean? Are you saying it happens when a tyrant arises who is young, sound-minded, learns easily, has a good memory, is courageous and is possessed of natural greatness?

710d

Athenian: You should add good fortune, in one respect only, that a praiseworthy lawgiver would also arise at the time, and that fortune would bring them both together. For with this arrangement in place, God has done almost all he ever does when he wants a city to do exceptionally well. The second-best arrangement would involve two rulers of this sort, and so on for third best, and, in general, the more there are, the worse the arrangement, and the fewer there are, the better.

Clinias: You maintain that the best city arises, apparently, from a tyranny involving a lawgiver of the highest rate, and a tyrant of good character. You say that it would be easiest and quickest to effect the change to the best city from such an arrangement. From an oligarchy it is second easiest, is that your meaning? And from a democracy you think it is third easiest?

710e

Athenian: Not at all, no, first and easiest is from a tyranny, second is from a political system based upon kingship, third is from some sort of democracy. Oligarchy comes fourth, and because there are so many powerful factions within it, it would face enormous difficulty in allowing the best city to come into existence. And we say, in fact, that this comes about when a true lawgiver naturally arises who happens to share some power with the most influential people in the city. And when this element is fewest in number and greatest in power, as in a tyranny, then the change tends to occur quickly and easily.

Clinias: How so? We don't really understand you.

711a

Athenian: And yet, this has been said, I believe, not once but many times. But perhaps you and Megillus have never seen a city under tyrannical rule.

Clinias: Nor have I any particular desire to see one.

711b

Athenian: And yet you would see the very feature I am now referring to in this.

Clinias: Which is?

Athenian: A tyrant who wishes to change the habits of a city does not require great exertions or a lot of time. He first needs to proceed in that direction himself. Whether he wishes to turn the citizens towards activities involving excellence, or in the opposite direction, he himself should be the standard of all action, conferring praise and honour on some while censuring others, and showing no respect for anyone who remains unpersuaded in any field of endeavour.

711c

Clinias: Yes, but why do we believe that the other citizens will so quickly follow the lead of someone who has adopted this combination of persuasion and force?

Athenian: Let no one persuade us, my friends, that a city could ever change its laws more quickly and easily than through the personal leadership of its powerful people. There is no other way to do this now, nor will there ever be. And, indeed, this is not an impossibility for us, nor would it be difficult. No, the difficulty lies elsewhere, in the occurrence of something that happens only rarely in history, yet whenever it does happen it brings countless advantages of all sorts to the city in which it occurs.

Clinias: What are you referring to?

711d

Athenian: This happens whenever a divine passion for sound-minded and just action arises in some people who wield great power, whether ruling monarchically or on the basis of the exceptional pre-eminence of their wealth or family. Or someone might even hark back to the character of Nestor,⁵⁶ who is said to have excelled everyone else in his power of speech, and to have surpassed them even more in sound-mindedness. Now, although this happened, so they say, in Trojan times, it has not happened at all in our own. But if such a person has existed, or will exist, or one of us is such a person, he himself lives a blessed life, and blessed are those who hear the sound-minded words that flow from his mouth. And the same argument applies to power in general. Whenever the greatest power coincides in a person with wisdom and sound-mindedness, the best of political systems, and of laws too, arise naturally. Otherwise this never happens.⁵⁷ So let us take all this as a story, oracular in nature, which demonstrates that although it is difficult for a city with good laws to arise, it would be the quickest and easiest development of all if what we are describing were to happen.

Clinias: How so?

712a

Athenian: Why don't we apply this to your city and attempt, like elderly boys, to fashion its laws in discussion.

Clinias: Let's proceed without further delay.

Athenian: Let us then invoke God's presence at the establishment of our city, that he may hear our prayer, come to us with gracious goodwill, and join us in ordering the city and its laws.

Clinias: Yes, let him come.

Athenian: But what precise political system do we intend to impose upon our city?

712b

Clinias: What exactly do you mean? Please explain more clearly. Are you asking if it will be a democracy, or an oligarchy, or an aristocracy, or a kingship, since presumably you could not mean a tyranny. At least Megillus and I don't think so.

712c

Athenian: Well, come on then, which of you would like to answer first and say, in the case of your own political system, which of these types it is?

Megillus: In that case, since I am the eldest, isn't it only right that I speak first?

Clinias: Perhaps so.

712d

Megillus: In fact, stranger, now that I think about the Spartan political system, I am quite unable to say offhand what it should be called. In fact, it seems to me to resemble a tyranny, since the provision for ephors that it contains is surprisingly tyrannical, yet sometimes it strikes me as the most democratically governed city of them all. Then again, it would be most odd to deny that it is an aristocracy, and indeed it includes life-long kingship, the most ancient of all according to ourselves and all mankind. So when I am suddenly asked the question, just like that, I am actually unable, as I said, to say definitively which of these political systems it is.

Clinias: It looks as if I am in the same predicament as you are, Megillus. For I have considerable difficulty in saying for certain that the political system in Cnossus is any one of these.

713a

Athenian: That, best of men, is because you really do share political systems, whereas what we named just now are not

political systems but city managements, dominated and enslaved by parts of themselves, each being named after the dominant element. But if your city really must be named after something like this, it should be called after the god who is truly the master of those who possess reason.

Clinias: What god is that?

Athenian: Well, if we are somehow to give a satisfactory answer to your question, may we make a little more use of storytelling?

Clinias: Is that the way we need to do this?

713b

Athenian: It certainly is, for long before the settlement of the cities we have described, they say that in the time of Cronus there had been a government and management, and a very happy one too, and that any of the best managed states nowadays are an imitation of this.

Clinias: It seems then that we really need to hear about it.

Athenian: Well, that is my view too. That is why I introduced this into our discussions.

713c

Clinias: And you were quite right to do so, and since the story is so relevant it's only right that you should recount the whole thing.

Athenian: I must do as you say then. Well, we have received the traditional account of the blessed life enjoyed by those who lived then, and how they had everything in abundance and without effort. The explanation for all this, we are told, was as follows: Cronus recognised, of course, that, as we have explained, human nature is not up to the task of independently managing all human affairs without becoming full of arrogance and injustice. So with this in mind, he then installed kings for our cities, and rulers who were not human but belonged rather

to a more divine and exalted race, the race of daimons. This is just what we ourselves do nowadays with our sheep and herds of domestic animals. We do not make oxen rule over oxen or goats over goats, but we ourselves, a kind superior to them, act as their masters. In like manner, the god, out of love for humanity, appointed a kind superior to us, the daimons, to take care of us. This was a very easy task for them and a great kindness to us, providing us with peace and respect, lawfulness and unrestricted justice, and ensuring that the various groups that comprise humanity were free from faction and happy.

714a

Athenian: This account, then, is now saying – and what it is saying is true – that any cities ruled by some mortal and not by the god find no escape from evils and hardships for their citizens. It would have us believe that we should imitate by every possible means the life of the age of Cronus as described, and manage our homes and our cities while obeying the immortal element within us in our personal and public lives, and calling regulation, by reason, ‘law’. But what if one person, or some oligarchy, or indeed a democracy, were possessed of a soul that hungers for pleasures and passions, and needs to be filled with these, a soul that resists nothing and is assailed by unending, insatiate evil diseases? Well, if something of this sort, having trampled all over the laws, rules a city or some individual, then there is no way to save it. We should consider this account, Clinias, and decide whether we are to be persuaded by this, or what we should do.

Clinias: We are to be persuaded, of course, necessarily.

714c

Athenian: Now, are you aware that some people maintain that there are as many forms of laws as there are political systems, and we have already listed the systems of government as popularly described? Please do not presume that the issue

involved here is unimportant; it is of the utmost importance, for this question faces us once again: where lies the standard of what is just and what is unjust? For these people maintain that the laws should not look to warfare as their standard, nor indeed to excellence as a whole, but to the established political system, whatever that may be, and to the interest of that system so that it may govern forever and never be dissolved. And the natural definition of justice is best formulated in this way.

Clinias: How?

Athenian: That justice is the interest of the more powerful.

714d

Clinias: Explain this more clearly, please.

Athenian: In this way: the powerful, they say, always of course enact the city's laws. Is this so?

Clinias: True.

Athenian: Well then, do you think, as they maintain, that the general populace, or some other political system, or indeed a tyrant when triumphant, would willingly enact laws with any other primary aim besides its own interest in maintaining its authority?

Clinias: No, of course not.

714e

Athenian: And whoever enacts these refers to the enactments as just, and will punish the person who transgresses them for acting unjustly.

Clinias: Yes, quite likely.

Athenian: So such enactments would always, in this way and on this basis, constitute justice.

Clinias: According to this argument anyway.

Athenian: Yes, this is one of those rights of government.

Clinias: What rights?

Athenian: Those we considered before, concerning who should have authority over whom. And it was evident that parents should have authority over their offspring, the elder over the younger, the noble over the ignoble, and there were, if you recall, many other cases too of various restrictions on mutual authority. And, indeed, one of the rights was this very one; we said that Pindar takes the extreme of violence as natural justice, as he puts it.

Clinias: Yes, that's what was said at the time.

715a

Athenian: Then, consider this. To which of these are we to entrust our city? For this sort of thing has occurred thousands of times before, in various cities.

Clinias: What sort of thing?

Athenian: When there has been a fight over positions of authority, the victors take over the affairs of the city so comprehensively that they concede no authority whatsoever to those who lost out, or even to their descendants. The two sides spend their time watching one another in case someone who remembers the evil events of the past assumes office in an uprising. Of course, we are now denying that these circumstances constitute political systems, or that any laws are correct unless they are enacted for the sake of the entire community of the city. Those who pass laws in the interest of some people and not others are, according to us, not citizens but members of factions, and their insistence that these laws are just is a vain claim. We are saying all this for the following reason. We shall not appoint anyone to any position of authority in your city because he is wealthy or because of some other acquisition of that sort, such as strength or stature or family. But we maintain that the person who is entirely

obedient to the established laws, and is triumphant in the city in that sense, should be given the most important role, the service of the gods. So, the most important role goes to the first, the second most important to whomever comes second in the contest, and each of the other positions of authority should be given, in due order, to whomever comes next.

715d

Athenian: Those who are referred to as rulers I have now called ‘servants of the law’, not for the sake of verbal innovation, but because I believe that the salvation or perdition of the city hinges, most of all, upon this. For when law is subservient and devoid of authority, I see destruction close at hand for such a city. But when law is the master of those in authority, and the rulers are subservient to the law, then I behold salvation, and everything good that the gods ever bestow upon cities.

Clinias: Yes, by Zeus, stranger, you have the keen sight appropriate to your age.

715e

Athenian: Indeed so. When people are young they generally have extremely poor sight when it comes to this sort of thing, but in old age it’s at its sharpest.

Clinias: Very true.

Athenian: Well, what next? May we not presume that our colonists are here and are present, and that the rest of our address to them should be concluded?

Clinias: Yes, why not?

Athenian: Well, let us address them as follows: “O men, according to the ancient tradition, God, holding the beginning, end and middle of all of the things that are, proceeds without deviation along nature’s circular course. Justice always accompanies him and is the punisher of those who depart from his divine law. So anyone who intends to be happy holds to

justice and follows her in humility and good order, while anyone who gets carried away by pride, or excited over wealth or honours or a pretty body, inflames his soul with arrogance through impetuosity combined with stupidity. He then feels the need neither for a ruler nor for a leader; he believes he is competent to lead others, and he is left alone, forsaken by God, and having been forsaken, he co-opts others who are like himself, behaves erratically and causes all sorts of confusion. To many people he seems to be someone significant, but he very soon pays the deserved penalty to justice, and brings utter ruination upon himself, his household and his city. Now, since these matters have been ordained in this way, what should an intelligent person do, what should his resolution be, and what should he avoid?"

Clinias: Well, this much at least is obvious; every man should resolve to be included among those who follow after God.

716c

Athenian: "So, what conduct is dear to and follows after God? There is one, and there is an ancient account of this which says that like is dear to like,⁵⁸ once there is due measure, while things that are unmeasured are dear neither to themselves nor to the measured. Now, for us, God more than anything else would be the measure of all things, much more so than any 'man' that some refer to.⁵⁹ And someone who is to be dear to such a being as this needs to become like this himself, to the very best of his ability. And so, by this argument, he among us who is sound-minded is dear to God for he is like God, and he who is not sound-minded is unlike Him and at variance with Him, and so too is the unjust man, and the same argument also applies in general."

716d

Athenian: "Now, there is another principle that follows from all these, and in my view it is the most exalted and truest principle

of all: that, for the good person, to sacrifice to the gods and to commune with them constantly through prayers, offerings and every possible service of gods is the noblest, the best, and the most effective way to a happy life, and the most appropriate by far. But for the bad person, the very opposite is naturally the case, for he is impure of soul, while the good person is pure, and it is never right for a good man or god to receive gifts from the defiled. So, for the unholy, any great endeavour in relation to the gods is in vain, but for all those who are holy, it is always opportune. So this is the mark at which we should aim, but what are the missiles, so called, that should most correctly be fired, and from what bow should we fire them? Firstly, we maintain that someone intent upon piety would rightly hit the mark if he bestowed honours upon the gods of the earth, after honouring the Olympian gods and those that hold the city, thus bestowing the odd, the second, and the left-handed upon the gods of the earth, and the opposites of these, the superior, upon the other gods we just mentioned.⁶⁰ After these gods, the wise would worship the daimons, and after these, the heroes, and close behind these, private shrines to ancestral gods, worshipped according to law. Then come the honours due to living parents, as it is proper that a debtor should repay the first and greatest of debts, the most ancient of all obligations. He should believe that whatever he has and holds, all belongs to those who gave him birth and reared him, and should be used to serve those people to the utmost of his ability, firstly with his wealth, secondly with his body, and thirdly with his soul. Thus, he repays their loans of care and the troublesome travails long past, lent to him in his earliest years, and now being returned to the elders in their old age, when they really need it.”

717d

Athenian: “What is more, throughout his life he should have and retain the utmost respect in addressing his own parents, because there is a heavy penalty to be paid for frivolous,

ill-considered words, for Nemesis has been appointed as the messenger of Justice and overseer of all such matters.⁶¹ So, if his parents get angry he should be submissive, and whether they express the anger in words or in deeds he should be forgiving, as it is only to be expected that a father who thinks he is being treated unjustly by his own son would be especially angry. And when his parents die, the most restrained funeral is the very best, neither exceeding the usual level of pomp, nor falling short of what his forefathers gave to their own ancestors. And, in like manner, every year he should render the services that bestow honour upon those who have already died, and he should show his respect for the departed, especially by preserving their perpetual memory unfailingly and allocating them the appropriate measure of the fund that fortune provides. If each of us were to act in this way, and live by these precepts, we would reap the deserved rewards from the gods and those who are superior to us, and live most of our lives in hope and optimism.”

718a

Athenian: “By fulfilling his duties in relation to offspring, kindred, friends, fellow citizens, and any divinely ordained services to strangers, and through his interaction with all of these, a man should bring order to his own life and brighten it in the process. The system of the laws themselves, by persuading some people, and by just and forceful punishment of those whose characters resist persuasion, renders our city blessed and happy with the counsel of the gods. Now, there are matters that do not lend themselves to being expressed in the form of a law, which a legislator who thinks as I do should and must address. In these cases, I think he should present an example for himself and for the people he is legislating for after he has worked through all the outstanding matters as best he can, and then make a start on enacting laws. In what form then are such matters best laid down? It is not at all easy to

encapsulate these in a single formulation, or outline, as it were. But if we are able to attain any certainty about these matters, it would be in some such manner as follows.”

Clinias: What manner?

Athenian: I would like the citizens to be extremely receptive towards excellence, and this of course is what the lawgiver aims for in all his legislation.

Clinias: Of course.

718d

Athenian: Well, I thought that what has already been said might prove somewhat useful in making the hearer listen to the exhortations in a more gentle and kindly spirit, provided the soul that receives them is not entirely savage. So, if this makes the person who hears it even a little kinder and easier to instruct, that is a most welcome outcome. For it is not very easy to come across people who are eager to become excellent to the greatest possible extent in the shortest possible time; they are not that plentiful. The majority of people make it plain that Hesiod was wise when he said that the path of badness is smooth, and no sweat is involved in taking it as it is very short. But of the path of excellence he says:

*In front of goodness the immortal gods
Have set the sweat of toil, and thereunto
Long is the road and steep, and rough withal
The first ascent; but when the crest is won,
'Tis easy travelling, albeit 'twas hard.*⁶²

Clinias: Yes, I think he expressed that beautifully.

Athenian: Very much so. But I would like to introduce something else for your consideration: the effect the preceding argument had on me personally.

Clinias: Proceed.

719b

Athenian: Let us have a discussion with the lawgiver and say, “Tell us, O lawgiver, if you really did know what we should do and say, isn’t it obvious that you would tell us?”

Clinias: Necessarily.

Athenian: “Well, didn’t we hear you saying a little earlier that a lawgiver should not allow the poets to compose whatever pleases themselves? For they would never know when they are saying something contrary to the laws and doing harm to the city.”

Clinias: True.

Athenian: Suppose then we were to speak on behalf of the poets. Would the following be a fair case to make?

Clinias: What case?

719c

Athenian: As follows. “There is an ancient story, O lawgiver, often repeated by ourselves with the agreement of everyone else, that a poet, when seated upon the tripod of the Muses, is out of his own mind. He is like a fountain, allowing whatever arises to flow forth freely, and since his skill lies in the realm of imitation, he must necessarily, by setting various characters in opposition to one another, often end up speaking in opposition to himself without knowing which of the contradictory positions is true and which is false. But it is not possible for a lawgiver to do this in a law; rather he must always present a single statement on a single matter, and not two statements about one matter. Consider this in the light of what you have just been saying. A funeral may be extravagant, it may be austere, or it may be moderate, but you chose one, the moderate one, and you prescribed this and favoured this one, pure and simple. But in my case, if an exceptionally wealthy

woman in one of my plays were to give directions for her own burial, I would favour the extravagant funeral. But in contrast, a poor and miserly man would favour the shabby version, while a man of moderate means and moderate character would favour that very funeral. But in your case, you shouldn't simply use the word 'moderate' as you did just now. No, you must say what moderation is, and the extent of it, or else accept that such a statement does not yet constitute law."

Clinias: Very true.

720a

Athenian: So, does the person we appoint to preside over the laws add no preamble of this sort to the beginning of the laws? Does he just tell us, straight away, what we should do and what we shouldn't, threaten us with a penalty if we disobey, and then move on to another law, without offering a single word of encouragement or persuasion to those who live under his law code? Just as one physician always treats us in one way while another treats us differently, and we remember both methods, so do we make a request of the lawgiver, just as children make requests of a physician, to treat us by means of the mildest method. Would you like us to give an example? Well, there are physicians and there are physicians' assistants, whom of course we also call physicians.

Clinias: Certainly.

720b

Athenian: Well, they may be slaves or they may be free, but the slaves acquire their expertise under the direction of their masters through observation and experience, and not based on nature, which is how the free physicians have learned the skill themselves and instruct their own pupils. Would you accept that there are these two kinds of what we call physicians?

Clinias: Of course.

720c

Athenian: Now, are you also aware that the sick people in our cities include slaves and free, and that slaves are, for the most part, treated by slaves who either travel about or remain in their clinics? No physician of this sort ever gives any account of the particular diseases of the various household slaves, nor does he ask them for one. Having prescribed what seems best to him based on his experience, as if he knew exactly what to do, like an assertive tyrant he then jumps up and moves on to another sick slave, and in this way he provides some respite to his master in caring for sick people. The free physician, on the other hand, for the most part treats and looks after the diseases of those who are free, and scrutinises these from their inception according to nature. He interacts with the sick person and his loved ones, and he himself learns something from him, and at the same time, insofar as it is possible to do so, he instructs the sick person himself, and he does not prescribe anything until he has somehow won him over. Only then, while continually ensuring the co-operation of the patient through persuasion, does he attempt to complete the task of restoring him to health. Which of these two ways in which a physician cures people, or a trainer trains people, is better – the one that performs the single function in two ways, or the one that does it in one way only, the worst of the two, and annoys the patient in the process?

Clinias: The twofold approach is better by far, stranger.

721a

Athenian: Would you like us then to look at the twofold method and the simple method, operating in legislative activities themselves?

Clinias: I would, indeed.

Athenian: Come on then, by the gods, what is the first law that the lawgiver would enact? Wouldn't he, according to nature,

use legal regulations to set in order, first, the beginning of the generation of cities?

Clinias: Indeed.

Athenian: Now, isn't conjugal union in marriage the beginning of the generation of all cities?

Clinias: Of course.

Athenian: So enacting marriage laws first is likely to be the best way for any city to legislate correctly.

Clinias: Entirely so.

721b

Athenian: Well, let us first state the simple version, it would go somewhat as follows. "A man is to marry between the ages of thirty and thirty-five. If he does not, he is to be penalised by a fine or by loss of status. The fine is to be such and such an amount, and he will lose status in such and such a manner." So, in the case of marriage, let something like that be the simple version of the law and let the twofold version be as follows. "A man is to marry between the ages of thirty and thirty-five, recognising that there is a way in which the human race naturally partakes of immortality, a desire naturally inherent in everyone in various forms. Indeed, a desire to be famous and not lie anonymous in our graves when we die is a desire of this sort. Now, the human kind is, by nature, as old as time itself, its constant companion to the very end. It is immortal in the following way: by leaving its children's children behind, and being always one and the same, it partakes of immortality through the process of procreation. To withhold oneself from this intentionally then is always an unholy act, and whoever totally disregards wife and children is purposely withholding himself. Now, whoever obeys the law avoids any penalty, but the person who turns thirty-five without having married should be penalised an annual amount of such and such in case the

solitary life might seem to be a source of profit and ease. And he is to have no share either in the rewards which the younger people in the city bestow from time to time upon their elders.” Having heard this longer version, along with the other one, it is possible in each case to form a view as to whether our laws should thus be double in length, at the very least, because they persuade and threaten at the same time, or simple and short because they only threaten.

721e

Megillus: The Spartan way, stranger, is always to prefer the shorter alternative. Yet if I were asked to act as a judge of these statutes of yours, and decide which of the two I would prefer to incorporate into my city’s law code, I would choose the longer version. And, indeed, based on this model, given these two alternatives, I would make the very same choice in relation to any law. But let’s not forget that Clinias here should also, I presume, approve of these legal arrangements, since the city that is now thinking of making use of such laws, is his.

Clinias: Well said, Megillus.

722b

Athenian: Now, it is extremely foolish to argue over whether the statutes are to be long or short, since we should value what’s best rather than what is shortest or longest. In the laws just mentioned, one kind is not superior to the other in practical excellence alone. No, as we have just said, the example of the two physicians sets this out in the correct manner. And in this respect, no lawgiver ever seems to have realised that when it comes to legislation, they can make use of two approaches, persuasion and force, depending on the level of education of the broad mass of people. They make use of only one of these, since force is never combined with persuasion when they are enacting laws, they only use unalloyed force. But, good men, I can also see yet a third requirement in relation to laws, and it is

never present nowadays.

Clinias: What requirement?

722c

Athenian: Something that has emerged by some divine guidance from the issues we have now been discussing. Indeed, since we began to speak about the laws, dawn has turned to high noon, we now find ourselves in this glorious resting place, and all the while we have been discussing nothing else but laws. And yet it seems to me that we are only now beginning to speak of laws, while all our previous discussions were but preambles to laws. Why do I say this? I wish to point out that all speeches and other uses of the human voice have their preambles and what you might call ‘preliminaries’, providing an artistic introduction which helps with whatever is going to come next. And so, for instance, we place wonderfully intricate preludes before the so-called ‘nomes’ of a harp song or other musical compositions, but when it comes to actual ‘nomes’, those we refer to as civic laws,⁶³ no one has so much as mentioned a preamble, or fashioned one and presented it for all to see, as if this is unnatural. But our exposition indicates that this is natural, I believe, and the laws I mentioned, that seemed to me to be twofold, are not really twofold in that simple sense. There are in fact two distinct things – the law and the preamble to the law. The tyrannical direction which we said was comparable to the directions of the physicians, who, we said, are not free, is law that is not mixed with anything else. But what’s said prior to this, the persuasive part as Megillus termed it, although it is indeed persuasive, serves the same function as a preamble does in relation to speeches. So it seems quite obvious to me that the entire persuasive discourse is delivered so that the person to whom the lawgiver presents the law will receive it in a spirit of goodwill, and, because of that, will easily understand his direction, which is the law. Therefore, according to my account

of the matter, this should be referred to as a preamble to the law, and not as a statement of the law. Now, having said all this, what would I like to say next? It is as follows. The lawgiver is always to see that the laws as a whole, and each of them individually, are not made without preambles. This will make as big a difference to the laws themselves as it did in the example of the two physicians.

723b

Clinias: Well, I too would have us direct the lawgiver, who is knowledgeable about all this, to legislate in no other way.

723c

Athenian: Yes, Clinias, I think you are putting that very well. There are preambles to all laws, and in setting about the legislative process, it is necessary to prefix to each law the preamble that naturally belongs to the subject matter as a whole since the pronouncement that follows this preamble is not trivial, and it makes a big difference whether it is remembered clearly or not. However, it would be wrong of us to insist that preambles must be provided for laws which are said to be important, and for minor laws too in like manner. Indeed, it is not necessary to do this for every song or speech, and even though there is a natural prelude for each, it need not be used in all cases; such a decision is left to the rhetorician, the musician, or the lawgiver himself, in each case.

723d

Clinias: I think that's very true, but, stranger, let's not delay any longer. Let's return to the argument, beginning, if that's acceptable to you, from those assertions which you made then, though not as a preamble. So yet again, let's repeat this once more from the beginning, this time as a preamble, rather than conducting a random argument as we did just now. "Better second time around", as they say when playing games. Enough has already been said about the honour and service due to gods and ancestors. So we should attempt to recount whatever

comes next in order, until, in your opinion, the entire preamble has been stated adequately. Only then should you proceed to describe the laws themselves.

724a

Athenian: In that case, we are now saying that, in relation to gods, those alongside them and parents who are living or deceased, we provided an adequate preamble at the time. And, as I see it, you are now asking me, in a sense, to shed some light upon whatever has been left out of such considerations.

Clinias: Entirely so.

724b

Athenian: Well then, after such matters as these, isn't it both fitting and of great mutual benefit for the speaker and the listener to attain the best possible education by pondering just how serious or casual they should be about their own souls, their bodies, and their wealth? These are the issues we really need to speak of and hear of next.

Clinias: Correct.

BOOK V

726a

Athenian: Give ear, then, all you who have heard just now about gods and the beloved ancestors. The most divine thing that anyone possesses, after gods, is soul, his closest kindred. All things that ever belong to anyone are of two kinds: the superior and better acting as masters, and the inferior and worse acting as servants, and those that act as master should always be held in higher esteem than those that serve. Accordingly, I say that a person's own soul should be accorded a place of honour second only to the gods and those who follow in their train, and I am right to encourage this. Yet none of us really bestows honour in the correct way, although we think we do. For honour is presumably a divine good, and nothing bad is worthy of honour,

and anyone who believes he is exalting his soul with some words or gifts or indulgences, while making it no better than it was before, thinks he is bestowing honour when he is doing no such thing.

727b

Athenian: Every child, for instance, no sooner comes to manhood than he believes he is capable of understanding everything, so he imagines he is honouring his own soul once he is praising it, and he eagerly grants it licence to do as it pleases. But we are now saying that by acting in this way he is harming his soul rather than honouring it, when, according to us, soul should be second in honour only to the gods. Again, whenever a person presumes that other people, and not himself, are consistently responsible for his own transgressions and his many significant vices, while he always holds himself blameless thinking he is honouring his own soul, he is really doing no such thing. He is, in fact, harming his soul. Similarly, when he indulges in pleasures contrary to the direction and encouragement of the lawgiver, he is not honouring his soul at all but dishonouring it by filling it with woes and regret. And again, in the opposite case, when someone won't make an effort to endure the approved hardships and fears, travails and sufferings, but gives in, his capitulation does not honour his soul. Indeed, all behaviour of this sort brings dishonour.

727d

Athenian: Nor indeed does he honour his soul when he imagines that being alive is good under any circumstances. Rather, he dishonours it, for his soul then forms the view that everything that happens in the other world is evil. And he goes along with this notion instead of resisting it by instruction and refutation because the soul does not really know if, on the contrary, the greatest goods of all for us are to be found in the realm of the gods of that place. And, indeed, whenever someone honours some earthly beauty above excellence, this is the same

as dishonouring the soul completely and utterly, as it is tantamount to declaring falsely that the body is more honourable than the soul. Indeed, nothing earth-born is more honourable than the heavenly, and whoever forms any other opinion about the soul has no idea how wondrous a possession he is despising.

728a

Athenian: Again, when someone loves acquiring wealth by base means, or has no qualms about doing so, he is not honouring his soul with such gifts. Far from it; he sells his soul's treasure and nobility for a little bit of gold. But all the gold on earth, or beneath the earth, is not as valuable as excellence. So, to sum it all up, once the lawgiver has set out in detail what is disgraceful and evil on the one hand, and what is good and noble on the other, whoever is not prepared to refrain from the one by every means at his disposal, and practise the other to the utmost of his ability, does not realise that in doing all this he is heaping vile dishonour and deformity on his most divine possession, his soul.

728b

Athenian: For no one really takes account of the greatest judgement, so called, passed upon evil-doing; to become like unto men who are already evil, and having become like this, to flee from and avoid good men and good words, and pursue the other sort of people, cleave to them and keep their company. But in consorting with such people, he inevitably does what they naturally do, and experiences what such people naturally experience and say among themselves. Now this state of affairs does not constitute justice, since justice and what's just are noble. It is, rather, a punishment, a consequence of wrong-doing, and the person who meets with it and the person who does not, are both wretched; in one case because he is not cured, in the other because he is undone so that many others may be saved. But for us, honour consists, generally speaking, in

following the better and doing our utmost to improve the worse when it can be improved.

728c

Athenian: Now, when it comes to fleeing from evil and following the trail of the utmost excellence, choosing that and then living the rest of one's life in communion with that, a human being has no possession more naturally suited to the purpose than soul. That is why we assigned it second place in terms of honour, while third place, as anyone would recognise, goes to the honour that naturally belongs to the body. Furthermore, it is necessary to consider the various honours, which of them are true and which are spurious. This is the role of the lawgiver.

728d

Athenian: Now, as I see it, he will declare these honours to be as follows and of the following kinds. The body that is worthy of honour is not the one that is beautiful or strong, nor the one possessed of speed or stature, nor indeed the one that is healthy, even though this is what most people think. Nor are bodies of the opposite sort to be honoured either, but those that occupy a middle position are the most sound-minded and safest by far, while the other two make people's souls conceited and arrogant in one case, and submissive and slavish in the other. The same holds for the acquisition of wealth and possessions, and the same ranking in terms of honour applies too. For excess of each of these brings about enmity and faction, in public and in private, while their deficiency, for the most part, leads to slavery. Let no one then covet wealth for his children's sake so that he may leave them as wealthy as he possibly can, since this is good neither for them nor for the city. Indeed, unflattering wealth that still provides for our needs is what's best of all, and most musical, for the young. For it is harmonious and it suits us and ensures a life that is free from pain in every respect.

728e

Athenian: We should bequeath to our children a great sense of reverence, rather than gold. We imagine that we shall bequeath this legacy to the young if we chastise them when they are disrespectful, but the exhortation used nowadays, which declares that the young must be respectful to everyone, won't bring this about. The thoughtful lawgiver would, rather, exhort the older generation to show respect for the young, and to be careful above all else lest any of the young folk ever see an elder, or even hear tell of him, doing or saying anything shameful, because where the old have no shame, the young in that place are also inevitably devoid of reverence. Indeed, the best education of the young, and of ourselves, consists not in admonishment, but in being seen to exemplify in practice throughout one's life, the very directions we use when admonishing others.

729c

Athenian: Someone who honours and respects all his kindred who share the family gods and naturally have the same blood, would, within reason, retain the favour of the birth gods in the procreation of his own children. And, indeed, we would secure the goodwill of friends and companions in daily affairs by regarding their services to us as more significant and important than they themselves regard them, and, conversely, by reckoning our own kindnesses to friends as less significant than our friends and companions themselves regard them. Again, in the case of the city and its citizens, the best person by far is the one who, in preference to a triumph at the Olympic games, or in any other military or more peaceful contests, would prefer to be famous for service to the laws of his own land as someone who, throughout his entire life, rendered them more outstanding service than any other man.

729e

Athenian: Furthermore, when dealing with foreign people, he should bear in mind the special sanctity of contracts. For almost

all offences against strangers, in contrast to those against fellow citizens, rely more upon a god's vengeance, since the stranger, bereft of companions and kindred, is more at the mercy of gods and humans. So, whoever is able to exact vengeance comes to his aid much more eagerly, and the one who is especially able to do so is the daimon or god of strangers, the attendants of Zeus Xenios. Anyone, then, with even a little foresight will go through life to the very end, taking the utmost care to avoid committing any offence against strangers. What's more, the greatest offence against foreigners or fellow countrymen is, in each case, the one that affects supplicants of a god. For the god whom the supplicant called as witness when he entered the agreement becomes the special guardian of this victim, so he would never suffer an offence without vengeance being exacted for the wrongs done to him.

730b

Athenian: We have now reviewed, quite comprehensively, all dealings with one's parents, with oneself, the city, friends and kindred, strangers and fellow countrymen. After this, we need to describe what kind of person one should be to live the most noble of lives. So, we should proceed to speak not of what the law brings about, but of what education achieves through praise and blame in making each person more receptive and well disposed towards the laws we intend to enact. These are our next topics. Now, of all goods, among gods and among humans, truth is the leader, and if anyone is to become blessed and happy, let him share in this from the very beginning so that he may spend as much of his lifetime as possible living as a man of truth. For such a man is faithful, but he who loves intentional falsehood is untrustworthy, and he who loves unintentional falsehood is a fool, and neither of these are enviable. For every untrustworthy or ignorant person is friendless, and as time passes and he is recognised for what he is, in the challenges of old age he isolates himself completely as life's end draws nigh.

And so, it makes no difference whether his companions or children are still alive or not, for he lives almost as if he has none.

730d

Athenian: Someone who does no injustice is worthy of honour, but someone who does not allow the unjust to act unjustly deserves twice as much honour, nay more. For the former is worth as much as one person, while the latter, who discloses the injustice of others to the rulers, is worth as much as many others. But he who also does his best to assist the rulers in chastising the unjust is a great and perfect man in the city, who should be awarded the prize for excellence by popular acclaim. And the very same praise also applies to sound-mindedness and wisdom, and indeed to any other goods which, once acquired, can be held by the person himself and passed on to others too. Whoever passes them on should be honoured to the utmost, while second place should go to someone who wishes to do so but lacks the ability. But anyone who holds back and does not willingly share any of the goods with anyone else in a spirit of friendship is someone who should himself be censured, while showing no less honour for the good he acquired, just because this fellow acquired it.

731a

Athenian: Every one of us should be ambitious for excellence without a hint of jealousy, since a person like this makes a city great by exerting himself personally, while at the same time not impeding others by slandering them. But the jealous type, thinking that he has to get the better of others by slandering them, exerts himself less in pursuit of true excellence, and creates despondency among his rivals by criticising them unjustly. By doing so he makes a weakling of the whole city when it comes to competing for excellence, and, for his part, diminishes its good reputation. Indeed, every man should be spirited, and gentle too, as far as in him lies. For there is no

escaping the dangerous, intractable and, indeed, entirely irremediable injustices of others in any other way than by being triumphant in doing battle and defending oneself against them, and by relentless chastisement. And this is an impossible task for any soul devoid of noble wrath.

731c

Athenian: As for the injustices of those who act unjustly but whose injustices can be remedied, we need to recognise, firstly, that no one who is unjust is deliberately unjust. For no one anywhere would ever deliberately end up possessed of the greatest evils, least of all in his own most honoured possession. And soul, as we have said, is, in truth, everyone's most honoured possession, so no one should ever deliberately take the greatest evil into this most honoured place and live his life possessed of that. Now, the unjust person who is possessed of evils deserves unreserved pity, and in the case of someone possessed of remediable evils, there is scope for pity, gentleness and restraining one's anger, rather than raging bitterly like a shrew. But in the case of an evil and corrupt person who does not respond to any entreaties at all, it is necessary to let the anger loose. And that's why we say that it is appropriate and necessary for the good person to be both spirited and gentle, as the occasion demands.

731d

Athenian: The greatest of all evils, innate in the souls of most human beings, is one that everyone makes an excuse for, in his own case, and makes no effort to avoid. It consists in the assertion that every person is by nature a friend to himself, and that this is the way things should be. But the truth of the matter is that the source of all faults in each person, in every case, lies in this intense self-love. For the lover is blind to the faults of the beloved, so he is a poor judge of what's just and good because he believes he should always honour his own above the truth. But a man who is to be a great man must cherish, not himself or what

belongs to himself, but what's just, either in his own actions, or indeed in the actions of others. From this same fault is born the universal conviction that our own ignorance is wisdom, and so we, who in a sense know nothing, imagine that we know everything. And since we don't rely on others to do whatever we ourselves don't know, we inevitably make mistakes in doing this ourselves. That's why everyone must flee from this intense self-love, and always keep with someone better than himself, without feeling any shame in doing so.

732b

Athenian: But there are lesser precepts than these that are just as useful. They are frequently quoted and should be recited as a reminder to oneself. For there must always be some influx corresponding to any outflow, and memory is an influx of wisdom that had previously left the soul. That is why excessive laughter and tears must be avoided, and everyone should encourage everyone else in this. One should try to show composure by completely concealing all excessive joy and sorrow, whether our own daimon is set fair, or it turns out that we face an uphill struggle in certain situations and the daimons face opposition. So we must have constant hope that the goods bestowed by God will lessen the pains that befall us, and change our present predicament for the better. And in relation to the goods themselves, we must hope that these, and good fortune too, will always be ours, rather than all these pains. Everyone needs to live with these hopes and constant reminders of all such precepts unstintingly, clearly reminding both himself and his fellows, in work and in play.

732d

Athenian: At this stage, as far as divine considerations are concerned, we have dealt quite well with the activities that should be engaged in, and the sort of person each individual should be. We have not dealt with the human considerations so far, but we should do so since we are discussing human beings

rather than gods. Pleasures, pains and desires are most natural to humanity, and every mortal creature really is, in a sense, inevitably dependent and reliant upon such powerful influences. So we should praise the very best life, not only because of its superior outward reputation, but also because, if anyone is prepared to taste it and not take flight from it in his younger years, it also proves itself superior in providing what everyone is seeking, more delight and less pain, all the days of our life. It is easy to show without doubt that this will be the obvious outcome, provided such a life is tasted in the correct manner. But in what does the correctness consist? This is what we must now consider, guided by our argument.

733a

Athenian: We need to decide, by comparing the more pleasant life with the more painful, whether the life conforms to our nature in one case, and goes against our nature in another. We should proceed as follows. We want pleasure, and we do not choose pain, nor do we want it, nor do we want neither in preference to pleasure, but we do want this neutral state, instead of pain. We want less pain along with more pleasure, and we do not want more pain along with less pleasure, and when both are present in equal measure we find it hard to make a decision. And when it comes to desire, all these factors, and their quantity, magnitude, intensity and equality, and all the opposites of these, make a difference, or do not make a difference, to our choice in each case. Now, with all these arranged as they must inevitably be arranged, the life in which there are lots of pleasures and pains, great and intense, and in which the pleasures predominate, is the one that we want, not the one in which the pains predominate. Then again, when there is not much of either, and they are mild and minor but the pains predominate, we do not want that life, but when pleasures predominate, we do. Furthermore, we should think of the life in which pleasures and pains are in balance, just as we did earlier.

We want it insofar as it involves a predominance of what we like, and we do not want it insofar as it involves a predominance of the opposite. We should, then, think of all our lives as bound by nature within these confines, and should think about the kinds of lives we naturally want. And if we assert that we want anything that lies outside of these confines, we are saying so out of ignorance and inexperience of the realities of our lives.

733e

Athenian: So how many lives are there and what are they like? From among these, a man must make his choice between the desirable and undesirable, by reviewing them and turning his decision into a law for himself. And by selecting what he likes, and what is pleasant, what is noblest, what is best at the same time, he should live the most blessed life available to humanity. Now, we should say that the sound-minded life is one, the wise life is another, as is the courageous life and the healthy one. And, as opposites of these four, there are the lives of folly, cowardice, licence and disease. Whoever understands the sound-minded life will count it as gentle in every respect, mild in its pains and pleasures, calm rather than frenzied in its desires and passions. The life of licence, however, he will count as harsh in every respect, intense in its pains and pleasures, impetuous and frantic in its desires, with passions that are mad in the extreme. And he will recognise that in the sound-minded life, the pleasures exceed the pains, whereas in the life of licence, the pains exceed the pleasures in their magnitude, quantity and frequency. And so it follows, naturally and of necessity, that one life proves to be more pleasant, the other more painful, and anyone who wishes to live pleasantly no longer has the option of living a licentious life. Rather, as is obvious by now, if what we are saying is right, any licentious person is necessarily licentious unintentionally. Indeed, it is either through ignorance or lack of self-control, or both, that the broad mass of humanity live lives devoid of

sound-mindedness.

734c

Athenian: And we should think of healthy and diseased lives in the same way; they both involve pleasures and pains, but in health the pleasures exceed the pains, and in disease the pains exceed the pleasures. Now, our intention in choosing between lives is not that pain should be prevalent, the life we have adjudged most pleasant is the one where the very opposite is the case. So we would maintain that both the desires and the pleasures are fewer, smaller and less frequent in the sound-minded life than in the licentious life, in the wise life than the foolish one, in the courageous one than the cowardly. But in each case the former exceed the latter in pleasure, while the opposite applies to pain. So the courageous life wins out over the cowardly, and the wise over the ignorant, and comparing the lives with one another, the sound-minded, the courageous, the wise, and the healthy are more pleasant than the cowardly, the ignorant, the licentious and the diseased. To sum up then, the life of excellence in body or soul is more pleasant than the life of degeneracy, and it is superior, in general, in its extraordinary beauty, rectitude, excellence and reputation, and it makes anyone who possesses this happier in life than his opposite in every respect.

734e

Athenian: Thus far, having presented the prelude to our laws, let us end that discussion here. After the prelude, the ‘melody’⁶⁴ should, I presume, inevitably follow, or, in truth, a sketch of the legal and civic arrangements. Now, to use an analogy, in the case of a web or any woven fabric, the woof and the warp cannot be made from the same thread since the kind of thread used for the warp needs to be superior in terms of excellence. For the warp is tougher and has a certain firmness of character, while the woof is softer and, to an appropriate extent, yielding. On this basis, then, we should make a reasonable distinction

along similar lines, between those who hold positions of authority in our cities and those whose education has been less testing. For there are, you see, two components of a political system – the appointment of individuals to positions of authority, and providing those in authority with laws.

735b

Athenian: But there is something we need to think about before any of these matters. A shepherd, a cowherd, a horse-breeder or the like, taking charge of any herd, will never set about caring for them until he has performed the appropriate purification on each community of animals. Having separated those that are healthy from those that are not, and the noble from the ignoble, he will send the second group off to various other herds and care for the remainder. This is because he realises that such care would be a futile and never-ending exercise in the case of bodies and souls that have been corrupted by nature or poor nurture. He would recognise that the corrupt types will also corrupt those who are healthy and unblemished in body and in behaviour in every herd unless the existing stock is properly purified. Now, in the case of the other animals, this is less important and only merits mention in our argument for the purposes of illustration. But in the case of human beings, it is of the utmost importance for the lawgiver to seek out and proclaim, in each case, what's appropriate in relation to purification and all of his other dealings with them. For instance, in the case of purifications of a city, many means of purification are available, some milder, some more severe, and the lawgiver who is also a tyrant would be able to use the severe purifications, which are also the best. But a lawgiver without tyrannical power, when establishing a new political system or laws, would be content if he could effect even the mildest of purifications. Yet, the best method, like the best medicines, is painful, and it effects punishment by justice combined with vengeance, which is taken to the ultimate point of exile or

death, and usually rids the city of the most serious transgressors who are incurable and do her the greatest harm. The more gentle of the purifications might be described as follows. There are people who, from want of basic sustenance, show themselves ready and willing to follow their leaders in an assault by those who have not on those who have. These are regarded by the lawgiver as a disease sprung up in the city, and he banishes them in as kindly a spirit as possible to a colony in what he euphemistically calls “a removal”. Now, every lawgiver must, somehow or other, do this at the very outset, but for us the present circumstances are even more straightforward, since at the moment we do not have to devise a colony or make a selection for the purposes of purification. In our case, it’s as if waters from various springs and winter torrents are flowing together into a single pool, and we need to concentrate on ensuring that the converging water will be as pure as it can possibly be by drawing it off in some cases, or channelling and diverting it in others.

736b

Athenian: There is, it seems, hard work and risk involved in any civic arrangement, but since our present endeavours are theoretical rather than practical, let’s assume that the selection has been completed and that the purity has been satisfactorily secured. For once we have tested the bad people who are attempting to enter the city and live there as citizens by means of extensive persuasion and sufficient delay, we may then refuse them admission. But we should welcome the good people in the best possible spirit of goodwill and graciousness.

736c

Athenian: Let us not overlook the fact that we ourselves have met with the same good fortune we referred to earlier in the case of the Heraclid colony⁶⁵ – escape from terrible and dangerous strife over land, the cancellation of debts and the distribution of property. When a city, established of old, is

compelled to legislate for such strife, it can neither leave things as they are, nor is it able to effect any change, so the only thing left is something like ‘aspiration’ and gradual cautious change over many years, advancing little by little, as follows. Among the agents of change, there should always be people who have acquired a lot of land, who have many debtors and are willing to be reasonable and share wealth with those debtors who are in distress. So they forgive debts and redistribute land, adhering somehow or other to measure, convinced that poverty consists, not in reduced wealth, but in increased greed. For this conviction is the greatest source of security for a city, and on such a firm foundation it is possible to build whatever political order may be constructed thereafter, appropriate to such an arrangement as this. But when this transition falters, any subsequent political progress, in any city, will be fraught with difficulty.

737a

Athenian: Now, although we say we have escaped this strife, it is only right to explain how we might have extricated ourselves if we had not escaped it. So let us now declare that combining justice with freedom from avarice is the only means of deliverance. There is no other way out, broad or narrow, besides this, and we should let this principle be like a mainstay of our city. Indeed, we should somehow or other ensure that property does not provide grounds for dispute among various parties, otherwise anyone with even a little intelligence will refuse to proceed, unless he has to, with a civic arrangement for citizens among whom there are disputes of ancient date. But God has given us a new city to found, one in which there are, as yet, no mutual enmities. So it would be the height of depravity and human folly if founders in such a situation were, themselves, to cause enmities through their distribution of land and houses.

737c

Athenian: Well then, what would be the correct way to make the distribution? First we must determine what the total size of the population should be. After this, we should come to an agreement on the distribution of the citizens, and the number and size of the subdivisions into which they are to be divided. Land and houses should then be distributed as equally as possible to these subdivisions. An adequate population size could not be correctly decided without referring to the land and to the neighbouring cities. There should be enough land to sustain a particular number of sound-minded people; no more is needed. Their number should be sufficient to be able to defend themselves when they are being wronged by neighbouring peoples, and capable of giving some assistance at least to their own neighbours when they too are being wronged. When we have surveyed their land and its neighbours, we shall define all this in practical terms with supporting arguments, but for now our argument should proceed to complete our legislation as a sketch and an outline.

737e

Athenian: Let us assume, as an appropriate number, that there are 5,040 landholders and defenders of the territory, and let the land with its houses be divided, likewise, into the same number of parts so that the citizen and his allotment are counted together. Let the first division of the entire number be into two parts, then into three. In fact, it is naturally divisible also by four, five, and all successive numbers up to and including ten. This much then must be understood by every man involved in law-making – what number and what kind of number would be most beneficial to all cities. Let's choose the number that possesses the greatest amount of immediately consecutive subdivisions. Now, although number as a whole contains all possible divisions for all purposes, 5,040 can be divided, for military or for peaceful purposes related to any contracts and joint endeavours involving taxation and grants, into fifty-nine

divisions and no more, the first ten being consecutive.⁶⁶

738b

Athenian: Now, all of these numerical relations should be thoroughly understood at leisure by those whom the law directs to do so. They are, indeed, as I have said they are and not otherwise, and a founder of a city should be told these for the following reasons: when constructing a new city from scratch, or reforming an old and thoroughly corrupted one, in relation to its gods and those sacred places which should be founded in the city, and when deciding which of the gods or divinities each should be named after, no one in his right mind shall attempt to alter anything that is based upon guidance from Delphi or Dodona or Ammon,⁶⁷ or certain ancient accounts that convinced some people of apparitions that had taken place, or divine revelations that had been reported. Having been convinced, people established sacrificial practices combined with rites, either from that very locality or imported from Etruria or Cyprus, or somewhere else, and on the basis of such reports they consecrated oracles, statues, altars and shrines, marking off sacred precincts for each of these, none of which should be changed in the slightest by the lawgiver. To each of the places a god or daimon, or even a hero, should be assigned, and in the division of the land, special precincts and everything appropriate should be assigned to them first. As a result, gatherings of the various parts, taking place at regular intervals, would provide an opportunity for people to satisfy all kinds of needs and develop a friendly spirit towards one another, thanks to the sacrifices, and become familiar and get to know one another, and there is no greater good for a city than people knowing one another. For where people are in the dark about one another's characters, and they have no light, no one will ever get the honour he rightly deserves, or the positions of authority, or the justice he is entitled to. So every citizen in every city should strive above all else to ensure that he himself

never proves false to any man, is always simple and true, and never falls foul of deception by anyone else.

739a

Athenian: Now, our next move in the settling of the laws is an unfamiliar one, somewhat akin to a draughts player departing from the sacred line, and it will probably cause surprise at first hearing. Nevertheless, through reflection and experience, it will be evident that a city is likely to be founded in the second best way. Yet someone might, perhaps, refuse to accept this because he is not familiar with a lawgiver who does not have tyrannical power. But the most correct course of action is to describe the best political system, then the second best, and then the third best, and having done so, leave the choice to the person in charge of the settlement. So let's follow this procedure now, and describe the political system that is first in excellence, then second, then third. The choice, for now, should be given to Clinias, and if anyone else ever, at any stage, when faced with a selection between such alternatives, wishes to adopt what he likes from his own native land, he too should be allowed to do so in his own way.

739c

Athenian: The foremost city with the most excellent political system and laws is one where the ancient maxim prevails as widely as possible throughout the entire city, that friends really do have all things in common. So this principle, whether it applies somewhere now or will ever apply in the future, means that women are in common, children are in common, and all possessions are in common too, and what we call 'private' is entirely eradicated by all possible means from every aspect of life. And it has been contrived, as far as possible, that even what is naturally private such as eyes, ears, and hands, seem to see, hear, and act in common. And what's more, everyone expresses their praise and criticism as one, insofar as this is possible, being delighted or pained by the same things. Those laws which

unify the city as much as possible set the standard, and no one will ever suggest an improvement on these by proposing any other standard better or more conducive to excellence. And whether a number of gods, or the sons of gods, manage such a city, they dwell there in this way, living lives of good cheer. Hence, we should not look anywhere else for an ideal political system but should hold to this and do our best to seek out the one that is most like this one. The political system we have just attempted would, if it were ever to come into existence, be closest to immortality, and second in terms of unity. After these two, we shall, God willing, consider the third best. At the moment, the question for us is what is this second best and how would it come to be like this?

740a

Athenian: First then, let them portion out the land and houses, and not work the land in common, since an undertaking of this sort is beyond their present birth, upbringing and education. But let the division be made based on the principle that the person who is allotted a portion should regard this as the common property of the entire city, and since the region is his fatherland, he should care for it more than a mother for her children, as the earth, being a goddess, is the mistress of all mortal creatures. And he should hold the same idea too in relation to the gods and daimons of the locality. And so that this state of affairs may persist for all time, the following precepts should be added. The number of hearths, as we apportioned them at the outset, should always remain at this number and neither increase nor decrease at all. The way to ensure that such an arrangement is fixed, in the case of any city, is as follows: whoever has been allocated the portion is always to leave after him, from among his own children whichever one he most prefers, a single inheritor of this holding, his successor too in attending to the gods of the family and city, be they alive or already deceased by then. As for the other children, when

someone has more than one child, the female children should be given in marriage under a law, yet to be instituted, while the males are to be allocated, as sons, to fellow citizens who have no offspring, preferably on terms of friendship.

740d

Athenian: But there may be cases where friendly arrangements are not available or there are too many children, male or female, or where, on the contrary, there are too few due to infertility. In all these cases, the most important and revered official we have appointed, having considered what should be done about the excesses and deficiencies, shall contrive as best he can some means whereby the 5,040 holdings will always be constant. There are many means of doing so, for there are various ways of curtailing procreation in cases where it is excessive, and on the other hand there are deliberate encouragements to having lots of children through the respect or disrespect shown to young people, and through admonitions and words of warning from their elders. All of these means are capable of producing the outcome we refer to. And, indeed, if in the end we fail completely to maintain the number of holdings at 5,040, because the affectionate disposition of couples towards one another results in excessive growth in the city's population, and we are completely at a loss, an age-old device is at our disposal, one we have often mentioned – sending out colonies, suitably constituted, in a spirit of friendship on both sides. But if, on the contrary, some wave of disease ever deluges us, or we are struck by the ravages of war and fall below our appointed number because of the loss of life, we should never, unless forced to do so, take in citizens who have been poorly educated. And yet, as the saying goes, even God cannot stand against necessity.

741a

Athenian: Let us imagine, then, that our present argument is advising us in the following terms. O most excellent of all men,

never relent in your respect, according to nature, for likeness, equality, sameness, and agreement, based upon number and any power belonging to things noble and good. In particular, now guard first and foremost, the number, as declared, throughout your entire life. Then respect the level and extent of your wealth as allocated to you initially in due measure, and don't dishonour it by its purchase and sale among yourselves, or else you won't have the lot, which is a god, as your ally, nor the lawgiver either. For firstly, in the case of someone who is disobedient, the law now gives a direction by saying, initially, that whoever wants to is to take the lot on the following conditions or not take it all. First, that the land is sacred to all the gods; secondly, that the priests and priestesses shall offer prayers at the first, second and third sacrificial offerings. Whoever buys or sells allotted buildings and land is to suffer the appropriate penalties, which the officials shall inscribe on cypress wood memorials and place in the sacred places as a record for the future. What's more, they will give oversight of these matters to ensure their observance to whichever authority seems most keen-sighted so that any departures from these directions that occur from time to time may not escape their notice, and they may punish whoever disobeys the law and God. Just how good the present injunction actually is for all the cities that obey it, provided the appropriate arrangement has been adopted, "no one bad will ever know", as the proverb says, but only someone who has become experienced and reasonable in his behaviour. In fact, under such an arrangement as this, money-making is largely absent, and consequently no one is either required or allowed to make money from any vulgar commercial activities insofar as any so-called base and reprehensible occupation subverts free character, nor would anyone sink so low as to amass a fortune from such occupations as these.

741e

Athenian: Furthermore, an additional law follows from these directions, stating that no private citizen is allowed to hold any gold or silver, but only coinage for the purposes of the day-to-day exchange, which is more or less unavoidable in the case of craftsmen and anyone at all who needs to pay wages of this sort to wage earners, be they slaves or foreigners. For these purposes, we maintain, they need to have a currency that is valuable among themselves, but which has no value to other peoples. And there is to be a common Greek currency for use on foreign campaigns and expeditions, such as embassies, or any other necessary missions on behalf of the city where there is a need to send someone abroad. For these purposes, it is necessary that the city always holds a common Greek currency. And if it ever proves necessary for someone to go abroad for private reasons, he should travel, having secured the permission of the officials, and if he comes back home with surplus foreign money from that place, let him deposit this in the city coffers and receive the equivalent in local currency in return. And if someone is found to be keeping the funds for himself, they should be confiscated by the state, and anyone who is aware of this and says nothing is to be cursed and reproached, along with the person who brought in the money, and, in addition, incur a fine not less than the amount of foreign currency involved. When marrying or giving in marriage, let no dowry whatsoever be given or received, let there be no depositing of money with someone who is not trusted, and no lending at interest either, as this permits the borrower to repay neither interest nor principal to the lender.

742c

Athenian: Whoever considers these practices in the right way, by referring to their principle and intention, would come to the conclusion that these are the best practices for the city to adopt. We maintain that the intention of the reasonable statesman is not what most people say it is. They would claim

that the intention of the good lawgiver should be that the city he legislates for so benevolently, be as great as it can possibly be, and as wealthy as possible too, possessing silver mines and gold mines, and ruling over as many peoples as possible by land and by sea. And they would add that someone who legislates in the correct manner should intend that the city be as excellent and as happy as possible. Now, some of these objectives are possible, while others are not possible, and whoever is organising things will intend what's possible and will not entertain vain intentions, nor attempt what is impossible. Now, it is well-nigh inevitable that happiness and goodness go together, so he would want this combination. But the combination of extreme wealth with goodness is impossible, based, at any rate, on the popular definition of wealth. And most people say that the wealthy are the rare few who acquire possessions that are worth a lot of money, which are just what a bad person would acquire.

743a

Athenian: But if this is the situation, I would never agree with them that the wealthy person is, in truth, happy unless he is also good, but being exceptionally good and being exceptionally wealthy too is impossible. "Why so?" someone might perhaps ask. Because, we would reply, what's acquired from a combination of just and unjust actions is more than double what's acquired from just actions alone, while the expenditure of someone who is unwilling to spend, either in a good way or in an ignoble way, is less by half than that of good people who are willing to spend on what's good. Therefore, those who acquire twice as much and spend half as much would always be wealthier than those who do the exact opposite. And although the second of these fellows is good, the other is not evil as long as he is frugal, but on occasion he is utterly evil, although as I have just said, he is never good. For whoever acquires in a just way and in an unjust way, and spends neither in a just way nor

in an unjust way, is wealthy as long as he is also frugal, but the utterly evil person, being for the most part beyond redemption, is extremely poor. But someone who spends on what is good, and acquires only from just actions, would never easily become exceptionally wealthy or extremely poor either. And so our argument is correct to say that the very rich are not good, and since they are not good, they are not happy either.

743c

Athenian: Now, the intention of our laws is that the citizens be as happy as possible, and as friendly to one another as possible. But the citizens could never be friends where they take lots of legal actions against one another and injustices proliferate, but only where these are minor and very infrequent. We maintain, then, that there should be neither gold nor silver in the city, nor should there be a lot of money-making from base activities, nor from interest, nor from fattening deformed livestock, but only as much as land cultivation yields or provides, and only so much that people do not get absorbed in money-making and neglect the natural objects of the wealth which are soul and body, and these are of no account, ever, in the absence of physical training and education in general. That is why we have said, not just once, that the pursuit of wealth should occupy last place in the scale of honour. For although every human being has three general concerns, concern with wealth pursued in the right way is third and last in the scale, concern with the body is second, but first in the scale is concern for the soul. And, indeed, if the political system we are now describing were to assign honours according to this scale, it would have enacted its laws in the right way. But if any of the laws enacted afterwards turns out to be granting more honour to health than to sound-mindedness, or more honour to wealth than to health and sound-mindedness, the enactment is patently flawed. So the lawgiver should ask himself on a regular basis, "What is my intention, and am I achieving this or missing the mark?" And in

this way, he would perhaps complete the task of legislation himself and relieve others of that responsibility. There is no other way whatsoever to do so.

744b

Athenian: Let the person who has been assigned a lot hold it then, as we say, under the conditions we have outlined, and it would be good if each person who arrived in our colony also had all their other possessions equal. But since this is impossible, and one person will arrive with more wealth, another with less, it is necessary for various reasons and for the sake of equality of opportunity in our city, that there be unequal property valuations. And so, positions of authority, taxes and grants would reflect the honour that each person deserves not merely on account of his own excellence or that of his ancestors, or his physical prowess and good looks, but also because of how much wealth a person does or does not have. And they obtain honours and positions of authority on as equal a basis as possible by measured inequality, and there would be no quarrelling. For these reasons, we must create four property qualifications on the basis of size, called the first, second, third and fourth, or by some other names, to be used when people remain in the same valuation, or change from being poor to being wealthy, or from being wealthy to being poor, and end up in the valuation appropriate to themselves.

744d

Athenian: The kind of law I would enact as a consequence of these considerations would be this. We say that it is necessary in a city that is to avoid the virulent disease which might more correctly be called division rather than faction, that there be neither grievous poverty nor extreme wealth, both of which give rise to both outcomes. So the lawgiver now needs to declare some limit for each of them. Let the limit of poverty then be the value of the lot. This must remain, and no one in authority or any other citizen who aspires to excellence should

ever ignore any reduction of this, in any case, nor should any other citizen who aspires to excellence. Having put this measure in place, the lawgiver will allow some to acquire twice, three times, or even as much as four times this measure. But if anyone acquires more than this by discovery, as a gift or from commerce, or has come into possession of wealth in excess of the measure by some other good fortune of this sort, he shall keep his good reputation and his innocence if he hands the surplus over to the city and the gods of the city. But if someone disobeys this law, anyone who wishes may disclose the fact in return for half the surplus, while the offender shall pay out of his own resources a fine equal to the surplus, and half shall go to the gods. Everyone's resources, in their entirety apart from the lot, shall be recorded in writing in a register, guarded by officials appointed by law, so that legal disputes relating to any property issues may be straightforward and transparent.

745b

Athenian: After this, the lawgiver must first situate the city, insofar as this is possible, in the middle of the territory, choosing a location possessing all the other advantages that are relevant to the city, which are not difficult to recognise or describe. Next, he should make a division into twelve parts, having first assigned a sacred precinct to Hestia, Zeus and Athena, called the Acropolis, enclosed in a circle, from which he will make the twelve divisions of the city itself and the entire territory. The twelve parts are to be equal, in the sense that the parts consisting of good land are to be small, while those consisting of poor land are to be large. He is to mark off 5,040 lots, each of which is to be divided in two, forming a single lot with two sections, a near one and a far one, the part near the city being paired with one nearest the boundaries, the second closest to the city with the second closest to the boundaries, and so on. And in the twofold divisions, we should arrange the proportion of poor and good soil that we just referred to by

balancing the relative sizes of the distributions. The lawgiver should divide the people too into twelve subdivisions, arranging the distributions so that the rest of the wealth of the twelve parts is as equal as possible, and ensuring that everything is duly recorded. And, indeed, he will then assign twelve divisions to the twelve gods, naming and consecrating each allotted part to the particular god, and calling it a tribe. What's more, the twelve divisions of the city are to be divided in the same way that the rest of the territory was divided, and each citizen is to be allocated two dwellings, one near the centre and one close to the borders. And so the settlement will be completed.

745e

Athenian: But there is something we need to recognise fully. All the arrangements we have outlined are unlikely ever to encounter such favourable conditions that everything falls into place just as described. This would require people who are not resistant to a community of this sort, who will put up with lifelong regulation and control of wealth, the restrictions we have described on producing children, and being deprived of gold and anything else which the lawgiver, on the basis of what has just been said, is obviously going to prohibit. And it would require a central position for the city, with dwellings distributed all over the surrounding countryside, as we said, speaking as though in a dream, shaping some city and its citizens as if they were made of wax. Such reservations are, in a way, not wide of the mark, so the lawgiver should take up the argument again as follows. He will say, "My friends, in these discussions do not presume that I am unaware that there is some truth expressed in what is now being said. Actually, in dealing with any future course of action, I think it best that the person pointing out the ideal approach, the one to be adopted, should never forsake perfect beauty and truth. Anyone who finds it impossible to fulfil some aspect of these ideals should avoid that and abstain from that, and arrange instead to

proceed with whatever aspect is closest and most akin by nature, to that one, and is the most appropriate one to undertake. He should allow the lawgiver to finish outlining the ideal, and when this is done, only then are they to consider together which of his proposals are beneficial and what aspect of his legislation involves difficulties. For even someone who makes a most commonplace object must ensure that it is somehow entirely consistent with itself if he is to deserve any credit.”

746d

Athenian: Now that we have decided upon the twelve-part distribution, we should focus intently upon one particular issue – the obvious way to arrange the twelve parts, each with numerous internal divisions, and those that depend upon them and arise from them, right down to the 5,040 holdings.⁶⁸ From this come the tribes, demes,⁶⁹ villages, and also the battle arrays and marching columns, and even the units of currency, dry measures, wet measures and weights. So the law needs to arrange that all these are duly measured and consistent with one another. There is an additional fear that should also be dismissed. He is not to be afraid of a reputation for petty-mindedness if the law ordains that all the utensils that the citizens possess are to have a standard measure. The lawgiver is to regard it as a general principle that the numerical divisions and variations are useful in all cases, whether they vary among themselves or there are numerical variations in lengths and depths, or indeed, in sounds and movements, whether they are up and down in a straight line or revolutions in a circle. Indeed, the lawgiver, in the light of all this, must direct all the citizens, as best he can, never to depart from this systematic arrangement. For in the realm of economics, or in affairs of state, or in practical matters, no single subject in our education has such great power as the study of numbers. But its greatest benefit is that it awakens the person who is sleepy and

stupid by nature, and makes him easy to teach, retentive and intelligent, and because of this divine science, he makes progress far beyond his natural endowments.

747b

Athenian: All these branches of education then would turn out to be worthwhile and appropriate provided you use further laws and activities to banish slavishness and greed from the souls of those who study them comprehensively and profitably. Otherwise you would unwittingly produce an out-and-out villain rather than a sage. Examples of this are to be seen nowadays in the Egyptians and the Phoenicians and numerous other peoples, due to the enslaving effect of their general activities and their wealth, whether some corrupt lawgiver of theirs may have brought about this state of affairs or some bad luck, or, indeed, some other natural factor like that came their way.

747d

Athenian: In fact, Megillus and Clinias, there is something about location that we should not overlook. When it comes to producing people who are better and people who are worse, some places are superior to others, and we should not enact laws that go against these facts. Some locations bode well or ill due to variations in winds or sunshine, others because of their waters, others because the nutriment that springs from the soil not only provides better or worse food for their bodies, but also has a similar effect on their souls. But most advantageous of all will be the localities where a heavenly breeze blows and there are haunts of daimons who receive anyone who ever settles there in a gracious or ungracious spirit. A lawgiver, possessed of reason, would consider locations like these insofar as this is possible for a human, and would attempt to enact laws applicable to these places. So that's what you should do too, Clinias, since you intend to settle a region. You must first turn your mind to issues of this sort.

Clinias: Yes, Athenian stranger, what you are saying is excellent in every way. I must do as you say.

BOOK VI

751a

Athenian: Well then, after all that has just been said, your next task would presumably be the appointment of the various office holders in the city.

Clinias: It would, indeed.

Athenian: There are two elements involved in the ordering of our political systems. First is the appointment of office holders and their areas of responsibility, and deciding how many there should be and the manner of their appointment. Second, once this has been done, comes the assignment of laws to particular officials, and deciding which laws, how many, and what sort are appropriate to each. But before dealing with the selection, let us pause for a moment and make a pertinent observation about this.

Clinias: What is it?

751b

Athenian: As follows. It is presumably obvious to everyone that although legislation is a major undertaking, if we put unfit officials in charge of good laws in a well-equipped city, not only would no good come of them, and not only would the city turn out to be a total laughing stock, but a good deal of harm and damage might be done to the city by these very laws.

Clinias: Of course.

751c

Athenian: So we should bear this danger in mind, my friend, when dealing with your constitution and your city. You see, then, in the first place that those who are rightly advanced to positions of power should be subjected to an adequate test,

themselves and their family too in each case, from their earliest years until the moment of their selection; and secondly, that the selectors for their part should have been reared in lawful habits and well enough educated to be able to decide in the right way who deserves to be accepted as satisfactory, and who merits rejection as unsatisfactory. But in our particular case, where people have come together for the first time and don't know one another, how would they ever be able to choose their rulers without making mistakes?

Clinias: It would be well-nigh impossible.

751e

Athenian: And, yet, once the contest is underway, as the saying goes, no excuses are accepted. And that's the predicament in which you and I now find ourselves since, as you say, you and your nine colleagues have eagerly promised the Cretan people to found this city, and I for my part have promised to join in with this story we are telling. And so, as I am telling a story, I would be most reluctant to leave it without a head, since it would look decidedly ugly wandering about like that.

Clinias: Excellent, stranger. Well said.

Athenian: Well, yes. But I shall also do my best to deliver on my promise.

Clinias: Absolutely. Let's do as we say too.

Athenian: That is what will happen, God willing, if old age does not get the better of us at this stage.

752b

Clinias: God is likely to be willing.

Athenian: Likely indeed. So let us follow God's lead and take note of something.

Clinias: Of what?

Athenian: The audacious and adventurous spirit in which this city of ours will now be founded.

Clinias: What are you referring to, and why exactly are you saying this?

752c

Athenian: See how glibly and confidently we are legislating for men devoid of experience in the hope that they will eventually accept the laws we have now proposed. But this much at least, Clinias, is obvious to almost everyone, even to those without much wisdom: none of these men is going to accept the laws readily in the beginning. But what if we were somehow to bide our time, until those who had tasted the laws in childhood, who had been reared under them and become sufficiently familiar with them, were to join in the process of selecting officials for the entire city? Well, if we could actually arrange this, and if indeed there were some correct manner or means of doing so, I believe that after such a period of transition, a city that had been through such an education might be well assured of survival.

Clinias: Yes, that sounds reasonable.

752d

Athenian: Well, let us see then if we can provide ourselves with an adequate course towards this objective, as follows. For I maintain, Clinias, that more than any other people in Crete, the Cnossians should not merely show due reverence for the region you are now going to settle, but they should also be particularly careful to appoint the first office holders in the best and safest way possible. Now, although this would not be a major undertaking in other cases, in the case of the guardians of the law it is absolutely essential that we pay the utmost attention to their selection first.

Clinias: What course and what plan shall we devise for this purpose?

752e

Athenian: As follows. I declare, children of Crete, that because of your seniority over the other cities, the Cnossians need to join the new arrivals to this colony in selecting a total of thirty-seven individuals, nineteen from among these people, and the remainder from among the Cnossians themselves. The Cnossians should present these eighteen to this city of yours, including yourself as a citizen of the colony and one of the eighteen persuaded to join or compelled to do so with a measure of force.

Clinias: But tell me, stranger, why do yourself and Megillus have no involvement in our constitution?

753a

Athenian: Athens is a city with grand notions, Clinias, and so too is Sparta, and both cities are a long way off. But this is an appropriate role for you in every respect, and the same applies to your fellow founders. Let us take it for now that what is most appropriate under our present circumstances has been dealt with. But as time passes and the civic arrangement has stabilised, the selection of officials is to proceed somewhat as follows. All who bear arms as foot soldiers or cavalrymen, and all who were involved in the military when they were of age and capable of doing so, are to join in the process of selecting the officials. The selection is to be made in a sanctuary that the city holds in the greatest reverence, and each voter should bring to the altar of the god a small tablet on which he has written the name of his nominee, his father, his tribe, and the deme he inhabits, and he should add his own name too, including the same details. Anyone who wishes is allowed to remove any tablet whose details he objects to and place it on public display for at least thirty days. Those in charge of the process shall

present the three hundred top-ranked tablets for scrutiny by the entire city, and each citizen, in like manner, is to vote once again for whomever he wishes. The top one hundred of them, from this second vote, are to be displayed again for all to see. On the third occasion, anyone who wishes is to vote for any one of the hundred he favours, proceeding through sacrificial victims as he does so. The thirty-seven who receive the most votes should then be subjected to scrutiny and appointed to positions of authority.

753e

Athenian: But in this city of ours, Clinias and Megillus, who will make all these arrangements relating to office holders and their scrutiny? We recognise that some such people are needed in cities that are in the initial stages of their formation, but who would they be when no relevant office holders are available? And yet, somehow or other they are needed, and these should be no ordinary fellows, but the very pinnacle of men. For as the saying goes, “The beginning is half of any task”, and indeed everyone always praises a good beginning. But in my opinion the beginning is more than half the task, and no one has yet lavished sufficient praise on a good beginning.

754a

Clinias: Quite right.

Athenian: Well, now that we have recognised this fact, let us not move on without discussing it to clarify for ourselves how this beginning is to be made. However, I, for my part, do not have much to contribute apart from one comment, which is both essential and expedient to the current issue.

Clinias: Which is?

754b

Athenian: I maintain that this city we are about to settle has, as it were, no father or mother apart from the actual city that is founding it, although I am not unaware of the fact that lots of

colonies have often been, and will be, at variance with their founding cities. Yet, at the moment, our city is still like a helpless child who, even if he is going to fall out with his parents some day, loves them and is loved by them, and is always running back to his relatives, and necessarily finds allies in these alone. This arrangement, I maintain, is already in place between the Cnossians and the new city, thanks to their care, and between the new city and Cnossus. So I repeat what I said just now, for there is no harm in saying something worthwhile twice. The Cnossians must play a role in looking after all these matters by picking at least one hundred of the new arrivals, the eldest and the best they can find, and let there be another hundred from the Cnossians themselves. These people, I say, are to go to the new city and join in the process of ensuring that the various officials are appointed according to law and are subjected to scrutiny once appointed. And when this has been done, the Cnossians should dwell thereafter in Cnossus while this new city tries to sustain itself and thrive. As for those who belong to the thirty-seven, these should have been appointed, now and for all time hereafter, with the following responsibilities. Firstly, they are to be guardians of the law; secondly, of the records wherein each citizen writes down the extent of their own wealth for the city officials, except for four minae in the case of someone with the greatest property valuation, three minae for the second greatest, two minae for the third, and one for the fourth. And if anyone is found to possess anything over and above what was declared in writing, the entire sum is to become public property. What's more, anyone who wishes is allowed to prosecute him on a charge that involves neither credit nor honour, but only disgrace if he is convicted because he despises the laws for the sake of gain. So, anyone who wishes may charge him with base profiteering and prosecute him before the guardians of the law themselves. And if the defendant is found guilty, he may not share in the

common wealth, and whenever some distribution of wealth is made by the city, he is to get no share apart from his original lot. His conviction is to be recorded where, for the rest of his life, anyone at all may read the details.

755a

Athenian: A guardian of the law is to hold office for no more than twenty years, and he should be at least fifty years old when he takes on the role. If he assumes office at the age of sixty, he is to hold office only for ten years. And based upon this principle, once a man is over seventy, he should no longer expect to hold office alongside these officials and occupy such an important position. Let us take it then that these are three responsibilities applicable to the guardians of the law. As the process of legislation proceeds, each new law shall impose further duties upon these people, for which they should be responsible in addition to those we have mentioned.

755b

Athenian: But we should now deal with the selection of the other office holders in due order. In fact, we should select generals next and their various assistants in warfare – those in charge of cavalry or tribes, and commanders of companies of foot soldiers from the tribes to whom the title ‘company commanders’ is particularly appropriate, which is indeed what most people call them. Of these, the guardians of the law are to nominate generals from the citizens of this very city, and everyone who is currently involved in the armed forces, or has been involved when of age, is to make the selection from the nominees. And if anyone thinks someone who has not been nominated is better than one of the nominees, he shall name his candidate and the nominee who is to be replaced, swear an oath to this effect, and nominate the other person instead, whichever of the two is decided upon by a show of hands to be included in the selection. The three who receive the most votes are to be generals, with responsibility for military affairs, once

they have passed the same scrutiny as the guardians of the law. The chosen generals shall nominate twelve company commanders for themselves, one for each tribe, and the counter nomination procedure, the election, and the scrutiny, shall be the same for the company commanders as for the generals. This gathering, prior to the selection of a council and its presiding committee, shall be convened in the interim by the guardians of the law, situated in the most sacred and most spacious location available, with one place for the hoplites, another for the cavalry, and a third for any remaining members of the armed forces. The generals and cavalry commanders are to be elected by everyone present, the company commanders by those who carry a shield, and their tribal commanders are to be chosen by the entire cavalry, while the generals are to appoint, for themselves, the leaders of the light-armed troops, of the archers, and of any other branches of the armed forces. So the outstanding issue is the appointment of cavalry commanders. These are to be nominated by the same people who nominated the generals, and the selection and counter nomination process is to be the same as it was for the generals. The cavalry are to vote for them, in full view of the foot soldiers, and the two who receive most votes are to be leaders of the entire cavalry. The voting may be challenged twice, at most. If anyone issues a third challenge, those responsible for counting the votes in each case should decide the matter by a vote among themselves.

756b

Athenian: The Council is to consist of thirty dozen members, three hundred and sixty being a suitable number for the purposes of various subdivisions. These may be divided into four groups of ninety, ninety council members being elected from each of the four property valuations. First, everyone must vote for members from the highest property valuation, and anyone who does not co-operate is to be fined a specified amount. When these have been voted upon, they are to be duly

ratified. The next day, they should vote for members from the second property valuation, following the same procedure as on the previous day. On the third day, anyone who wishes may vote for members from the third property valuation, but voting is to be compulsory for those who belong to the three highest valuations, but anyone from the fourth and lowest valuation who does not wish to vote shall be exempt from any fine. On the fourth day, everyone is to vote for members from the fourth valuation, the lowest one, but those from the two lowest valuations who do not wish to vote shall be exempt from any fine, while anyone from the first valuation who does not vote is to incur four times the original fine, and anyone from the second valuation three times that fine. On the fifth day, those in charge shall present the ratified names for all the citizens to see, and everyone is to vote once more for these or be fined the original amount, thus selecting one hundred and eighty from each of the property valuations. Half of these shall then be chosen by lot and scrutinised, and these are to be the council members for that year.

757a

Athenian: The selection, conducted in this way, would maintain a mean between a monarchic and democratic constitution, and a constitution should always hold to this mean. For slaves and their masters can never become friends, nor can base folk and excellent folk, even if they are said to be equally deserving of respect. For to the unequals, the various equalities would become inequalities unless they hit upon the measure. Indeed, because of these two inequalities our civic arrangements are filled with faction. For the old saying is true, and it puts it most correctly and elegantly: “Equality gives rise to friendship”. But the saying really confuses us, because it is not very clear which precise equality is capable of bringing this about, for there are two equalities that have the same name but are, in practice, almost opposites in many respects. The other equality – of

measure, weight and number – can be applied through regulation by lot, by any city or legislator when awarding honours, in conducting the various distributions. But the truest and most excellent equality is not at all easy for anyone to see, for it is the judgement of Zeus. And although it imparts very little to humanity, everything it imparts to cities or to individuals produces nothing but good. For it allocates more to the greater and less to the smaller, giving due measure to each according to their own nature. And, indeed, it also dispenses what's appropriate, in proportion, to each, always bestowing greater honours upon those whose excellence is greater, and less upon those in the opposite situation in terms of excellence and education. For this very justice, indeed, always constitutes for us the statesmanship for which we hunger, Clinias, and with this equality in view we should found the city that is now emerging. And if anyone ever founds another city, he should enact the laws aiming at this same objective and not the interests of a few tyrants, or just one, or, indeed, some democratic power group, but what's just always, and this is what has now been described – the natural equality that is consistently given to unequals.

757d

Athenian: Nevertheless, it is inevitable that every city will have to apply these principles in a modified sense if it is going to avoid being embroiled in internal factions somewhere. Fairness and forgiveness, you know, are always a departure from perfection and precision, and a deviation from strict justice. Therefore, because of discontent prevalent among the general population, it is necessary to make further use of the equality of the lot, and then call, in prayer, upon God and good fortune to guide the fall of the lot for them in the direction of the perfectly just outcome. And although it is indeed necessary to make use of both equalities in this way, we should use the other one, the one that relies upon good fortune, as seldom as possible.

758a

Athenian: This is what a city needs to do, my friends, for all these reasons, if it is going to be saved. Since a ship sailing the seas needs to keep constant watch, day and night, so too a city, in like manner, battered by the waves of other cities, and living in peril of being overtaken by conspiracies of all sorts needs a day-long and night-long succession, connecting one official to another as guardians hand over to guardians continuously without interruption. Now, it is never possible for a large number of officials to carry out any of these duties efficiently. Rather, the city needs to allow most of the council members to remain at home most of the time and attend to their own domestic affairs. They should appoint a twelfth part of them to act as guardians for one month, distributing twelve parts over the twelve months of the year. These are to meet readily with anyone who comes from some other place, or even from the city itself, wishing either to make a statement relevant to the city's dealings with other cities, or, on the other hand, to obtain some information. When the city puts questions to other cities, they are to receive the replies. And most importantly, on account of the great variety of innovations that tend to occur in a city on a regular basis, they are to act as guardians so that ideally these never occur, and if they do occur, whatever has happened is remedied and the city is made aware of it as quickly as possible. For all these purposes, this twelfth part must always be the part of the city that presides and is responsible for convening and dissolving any meetings, be they routine or the extraordinary ones that crop up occasionally in the city. So, a twelfth part of the council would be the body that arranges all these matters, being off-duty for the remaining eleven months of the year. But this part of the council must exercise its constant guardianship over the city, in conjunction with the other officials.

758d

Athenian: Now, although this would be a reasonable way of arranging affairs within the city, what oversight and arrangements would apply to all the rest of the territory? Since the entire city and, indeed, the territory as a whole has been divided into twelve parts, shouldn't we appoint superintendents of the city's own roads, houses, public buildings, and harbours, of its market and springs, and, indeed, of its sacred precincts and temples, and everything of that sort?

Clinias: Of course.

758e

Athenian: Let us say then that there should be servants, priests and priestesses for the temples. For the roads and public buildings and their good order, for ensuring humans and other animals do not act improperly both within the city boundary itself and in the suburbs, and so that proper conditions may prevail in the city, three types of officials must be selected: those concerned with the matters we just mentioned, being called city-police; those concerned with the good order of the market, market-police; priests or priestesses of temples, who belong to hereditary priesthoods, are to be left as they are. But if, as is likely with such matters in the case of the initial settlers, there are priests for none or for very few of the temples, then priests and priestesses should be appointed to act as servants of the gods for temples without an established priesthood. Of all these appointments, some should be by election, others by lot, thus mixing the democratic element with its opposite in every territory and city with their mutual friendship as the objective, so that they may be like-minded as much as possible.

759c

Athenian: When it comes to the priesthoods, we should allow God to bring about what is pleasing to Himself by entrusting the matter to the divine chance of the lot. But he to whom the lot falls is to be scrutinised, first for integrity and legitimacy, and

then for descent from houses that are, as much as possible, pure and untainted by slaughter and all such transgressions of divine precepts, in his own life and the lives of his father and mother. The laws concerning all divine matters are to be brought from Delphi, and they should make use of them once they have appointed interpreters of these oracles. Each priesthood is to be for one year and no longer. And whoever is to perform holy rituals adequately, in accord with our sacred laws about divine matters, should be at least sixty years old. And the same regulations should apply to the priestesses.

759d

Athenian: In the case of interpreters there are to be three: the tribes, in three sets of four, are to elect four people each from among themselves, and after testing the three who receive the most votes at each election, they are to send the nine names to Delphi for the oracle to designate one from each group of three. The scrutiny of these three and their age limit is to be the same as for the priests. They are to be interpreters for life, and in the case of a vacancy it is to be filled by the group of four tribes from which the person is missing.

759e

Athenian: There should be treasurers in charge of the sacred funds for each of the temples and the precincts, and their products and rents. Three people are to be chosen from the greatest property valuation for the greatest temples, two for the smaller, and one for the most modest. Let the selection and scrutiny of these be conducted as it was for the generals. So, let these be the regulations relating to sacred affairs.

760a

Athenian: As far as possible, let nothing be left unguarded. The guardianship of the city is to be exercised as follows. It is to be looked after by generals, commanders, cavalry commanders, tribe leaders and presidents, and also by city- and market-police once we have selected and duly appointed them. The rest of the

country, as a whole, is to be guarded as follows. Since the entire territory has been divided as best we could into twelve equal parts, one tribe should be assigned by lot to each part on an annual basis, and the tribe should provide five men to act as rural police and guard leaders. Each one of the five is to be responsible for picking twelve young people from their own tribe who are over twenty-five years of age and under thirty. The twelve parts of the territory should be assigned by lot to these young men, one part to one group, each for one month, so that all may become experienced and knowledgeable of the entire territory. Both the guards and their leaders shall carry out these functions for two years. Under the supervision of the guard leaders, beginning with the part of the territory allocated by lot, they should always take the next portion of land in exchange each month, proceeding in a circle to the right, from west to east. After the first year, so that the guards for the most part do not have experience of the territory only during a single season of the year, but as much as possible, besides the territory, they get to know what happens in each region during each season, the leaders at the time are to lead them once more in the opposite direction, from east to west, constantly changing location until they have completed their second year. In the third year there is to be a fresh selection of rural police and guard leaders, five leaders, each in charge of twelve guards. Whilst on duty in each region, they are to look after it as follows. Firstly, they are to ensure that the territory is as well defended as possible against enemies, by building embankments and digging trenches as needed, using fortifications to defend, as best they can, against anyone who might attempt to despoil the territory or property. For these purposes they may employ the beasts of burden and household servants of each locality, using the animals as instruments and taking charge of the servants, while doing their best not to intrude upon their domestic duties. In short, they are to make everywhere

inaccessible to enemies and as accessible as possible to friends, be they humans, beasts of burden or cattle. They are to attend to the roads to ensure that they are as comfortable as possible, and to the rains sent by Zeus to ensure that they benefit the land rather than doing damage. So, as the waters flow from the high places into the mountain glens and hollows, they should channel the deluge with dams and canals so that the valleys either retain or absorb the rains from Zeus, forming streams and springs for the farms and the localities below, thus providing even the driest regions with an abundance of fresh water. By enhancing and beautifying the clear waters of a spring or a river with various plantations and structures, and by connecting streams through underground channels, they shall ensure abundance and plenty. And if there is a consecrated grove or enclosure in the vicinity, they may beautify it all year round by directing the flow through channels into the very temples of the gods. In all such places, the young are to provide gymnasia for themselves and for their elders, equipped with warm baths and plenty of dry seasoned wood for fuel, for the benefit also of those who are ailing, bodies that are worn out by disease and the toils of farm labour, glad to receive far better treatment than they would from an incompetent physician.

761d

Athenian: These activities, and anything of this sort, would enhance and benefit the various regions, as well as affording a pleasant recreation. The serious aspect of their business would be as follows. Each group of sixty is to guard its own region, not only against enemies but also against those who claim to be friends. And if anyone, slave or free, foreign or fellow citizen, acts unjustly towards someone else, they are to act as judges for whoever claims to have been wronged. In minor cases, the leaders themselves, and in major cases, up to three minae in value, the leaders plus twelve of the guards must judge whatever one person alleges against the other. No judge or ruler

should exercise judgement or authority without being subject to review, except for those who, like kings, pass the final judgement. And, indeed, if these rural police mistreat the people they are looking after in any way, by imposing unfair levies, or attempting to seize or commandeer the property of those who work the land, without consent, or if they accept anything given to them as an inducement or make distributions in an unjust manner, let them bear the censure of the entire city for yielding to such corrupting influences. For any other injustices they may perpetrate against the local people, up to a value of one mina, let them submit voluntarily to trial before the villagers or foreigners. And if they are unwilling to submit on any occasion, convinced that they will escape trial by continually changing their location every month, whether the offence is major or minor, the wronged party is to pursue his case in the public courts, and if he wins he obtains twice the amount from the fugitive defendant who was so unwilling to submit to justice.

762b

Athenian: The leaders and the rural police, during their two years in office, are to have a lifestyle of the following sort. Firstly, in each district there is to be a common mess in which a communal way of living is to be maintained by everyone. If someone is absent from common arrangements, even for a single day, or sleeps elsewhere at night without express orders from the leaders, or a situation where it is absolutely necessary, and the five decide to put him on report and display his name in the marketplace as a deserter from his post, let him incur disgrace for personally betraying the constitution, and let him be punished with blows, fearlessly, by anyone who comes across him and wishes to do so. And if one of the leaders themselves does something like this himself, all of the sixty should attend to the matter, and anyone who is aware of this, or finds out about it and takes no action, is to be held guilty under the very

same laws and be punished even more severely than the younger ones by being stripped of all authority over the young. Let the guardians of the law pay vigilant attention to all these matters to ensure either that lapses do not occur at all, or that they are penalised appropriately when they do.

762e

Athenian: Indeed, everyone should keep in mind that no man alive who has not served could ever deserve to become a master worthy of the name, and we should pride ourselves more on serving well than on ruling well, firstly as a servant of the law, since this is service to the gods, secondly as young folk, constantly serving their elders who have lived honourable lives. As well as this, anyone who has joined the ranks of the rural police must have partaken of the meagre and sparse daily diet for those two years. In fact, once the various twelves have been selected, they should resolve at a meeting with the five leaders, that being just like servants, they will not have other servants or slaves of their own, nor shall they make use of servants from the farmers and villagers of the area for their own personal purposes, but only for public purposes. And, in general, they should decide to live self-sufficiently, serving and being served by themselves, as well as conducting a thorough exploration of the entire territory, winter and summer long, always fully armed for security purposes, and to ensure constant familiarity with each district. For it is surely a study as important as any that everyone should know their own country in detail, and the young should be involved in hunting with hounds, and by other means, for this purpose, as well as for the general pleasure and benefit that everyone derives from this sort of thing. These are the people then, and this is the activity, and whether someone prefers to call them secret operatives or rural police, or anything else, any man who intends to preserve his own city competently should turn his hand to this eagerly, as best he can.

763c

Athenian: The next step for us, in selecting the various officials, would concern the city-police and the market-police. There should be three city-police corresponding to the sixty rural police, dividing the twelve parts of the city into three, imitating their rural counterparts by looking after the roads within the city and the avenues extending into the city from the country, and the public buildings too, to ensure that they are always constructed according to the relevant laws, and, indeed, the water supply that the rural police channel and pass on to them in such good condition. They must ensure that there is enough clean water flowing in the fountains to beautify the city, and to meet its needs. But these people must also have the ability and the leisure to look after public affairs. Therefore every citizen is to nominate anyone he wishes, drawn from the highest property valuation, for the ranks of the city-police. When these have been voted upon, and they have arrived at the six names who received most votes, the responsible officials should select three of these by lot, and once they have been duly scrutinised they are to assume office, subject to the laws prescribed for them.

763e

Athenian: Next, there shall be a selection of five market-police, drawn from the second and first property valuations, the selection process in general being just as it was for the city-police. From the ten who receive most votes, they are to select five by lot, and once these have been scrutinised, they are to declare them duly appointed. Everyone is to vote in every case, and whoever refuses to do so is to be fined fifty drachma if he is reported to the officials, as well as acquiring a bad reputation. Anyone who wishes may attend the assembly or a general meeting, but attendance is to be compulsory for members of the first and second property valuations on penalty of a ten drachma fine for anyone found to have missed such meetings. Attendance is not to be compulsory for members of

the third and fourth valuations, and they shall incur no penalty for non-attendance unless the officials specifically order everyone to meet for some urgent reason. Now, the market-police are to guard the good order of the market place, as directed by the laws, and they are to look after the temples and fountains of the market place too so that no one commits any injustice. They are to punish anyone who acts unjustly, with blows and bonds in the case of a slave or foreigner, and if a local person is disorderly in these respects, they may fine the offender up to one hundred drachma on their own authority, or twice that sum when they pass judgement along with the city-police. Let the same powers to fine and punish also be available to the city-police in their own jurisdiction, fining people up to one mina themselves, and twice that sum when they act in consort with the market-police.

764c

Athenian: After this, it would be appropriate to appoint officials in charge of music and of gymnastics, two kinds in each case, those responsible for education and those responsible for competitions. By education officials, the law means overseers of gymnasia and schools, responsible for their good order and standards of education as well as the attendance and the accommodation of the boys and girls. By competition officials, it means judges of contestants in both athletic and musical contests, and again there are two kinds, those concerned with music, and those concerned with athletic competition. It would be appropriate to have the same judges for competitions involving humans and for those involving horses, but it is appropriate that the judges for those who perform on their own, such as rhapsodes and those who play lyres or flutes or the like, be different from those who judge choral performances. It is first necessary, then, I presume, to select the officials responsible for the playful performance of choruses of men, boys and girls that takes place in dancing, and in our entire

system of music. One official, who should be more than forty years of age, is enough for them. One official, who is more than thirty years of age, is also sufficient for the solo performances, to introduce the contestants and pass adequate judgement upon them. The official responsible for managing the choruses should be selected in the following manner. Those who have a keen interest in such matters are to attend a general meeting or be fined if they do not go. This should be decided by the guardians of the law, but if any others don't wish to attend, there should be no compulsion. The elector must make his nomination from those who have the relevant experience, and in scrutinising the candidate the one sole criterion for acceptance or rejection should be experience or inexperience. And whoever is selected from the ten who received most votes should, once he has been duly scrutinised, take charge of the choruses for a year in accordance with law. In exactly the same way, whoever is chosen from those who have been judged is to preside, for that year, over those who perform music on their own or in groups, once he has submitted to the decision of the judges. After these, judges must be selected for athletic competitions involving horses, and for those involving humans too, from the third and also the second property valuations. Attendance at the election is to be compulsory for the three top valuations, but the lowest valuation should be exempt from any fine. Let three people favoured by the vote of the scrutineers be chosen from the twenty who had previously been selected. If anyone does not pass the scrutiny during any process of selection and appointment for any office whatsoever, others are to be selected instead on the same basis, and they are to be subjected to scrutiny in exactly the same way.

765d

Athenian: In relation to the matters we have spoken of previously, we still have to appoint an official as overseer of the education of boys and girls in its entirety. Let one person be

responsible for them, in accordance with the laws, being at least fifty years of age and the father of legitimate children, ideally of sons and daughters, or, failing that, of one or the other. And let the chosen person himself, and whoever chooses him, regard this office as by far the most important of the very highest positions of authority in the city. Indeed, in the case of anything that grows – plants, tame animals, wild animals or humans – the first shoots of growth, well begun, are the most significant factor in achieving their own natural and appropriate excellence. A human being is, we say, a tame animal. Nevertheless a human who encounters the right education and has a benign nature, tends to become the most divine and gentlest creature of all. But if he is not given an adequate and noble upbringing, he tends to become the wildest creature that walks the earth. That is why the lawgiver must not allow the upbringing of children to become a secondary or incidental matter. And since it is imperative to begin by first selecting, in the right way, the person who is going to be responsible for the children, the lawgiver must do the very best he can to appoint someone who excels in every respect over his fellow citizens, and put him in charge of the children. Accordingly all the officials, except for the council and its committee, are to go to the temple of Apollo, and each must cast his vote in secret for whichever one of the guardians of the law would, in his view, best take charge of educational matters. Whoever gets most votes and has been duly scrutinised by the other officials who elected him, apart from the guardians of the law, is to rule for five years, and in the sixth year there is to be a fresh election to this office by the same procedure.

766c

Athenian: If someone holding public office dies more than thirty days before the end of his term of office, someone else should be appointed by those who are responsible for this, following the same procedure. And if a trustee of orphans dies,

the relatives living in the vicinity, on the father's and mother's side, down to the children of cousins, must appoint another within ten days or be fined one drachma per day each until they appoint a trustee.

766d

Athenian: Of course, any city in which law courts are not properly established would hardly constitute a city at all. And a judge who does not speak to us, and has nothing to add to what the litigants said in the preliminary hearing, as happens in mere arbitrations, would never be good enough as a judge of legal cases. For these reasons, it is not easy for a large number of people to judge a case well, or for a few ordinary folk to do so either. The matter in dispute always needs to be made clear from both sides, and time taken through slow and repeated questioning has the advantage of shedding light upon the dispute. For these reasons, those who are accusing one another should first have recourse to neighbours and friends and those who are most familiar with the events in dispute; and if any party does not obtain an adequate judgement before these people, let him go to another court; and if these two courts are unable to resolve the dispute, a third court shall give a final judgement in the case.

767a

Athenian: Now, in a way, the establishment of the courts is also an election of officials since any official also must be a judge of something or other. And although a judge is not a ruling official, he actually becomes, in a way, a ruling official of some significance on the day on which he decides a case by giving his judgement. Granting, then, that judges are also ruling officials, let's say who the right people for the role would be, what matters they should be judges of, and how many there should be for each particular case. Let the most authoritative court be the one that the parties each proclaim for themselves, making their selections together. Let there be two tribunals for the

other cases, one when a private citizen accuses another citizen of doing him an injustice and brings him to court because he wants the issue to be decided; a second whenever someone believes that the community is being wronged by one of its citizens, and he wishes to come to the aid of his own people. We need to say who the judges are, and what they should be like. Firstly, however, we should have a common court for all private citizens who are in dispute with one another for the third time, set up more or less as follows. When a new year is about to commence in the month after the summer solstice, on the day previous to this, all the officials, whether they hold office for one year or for longer, should come together in a single temple. Having sworn an oath to the god, they are to dedicate, so to speak, one judge from each and every kind of office who has the best reputation in each role, and is likely to decide the various cases of his fellow citizens, best and most piously, for the coming year. Once these have been selected, they must undergo scrutiny by the selectors themselves, and if anyone doesn't pass scrutiny, another is to be selected in the same way to replace him. Those who pass scrutiny are to act as judges for those who are seeking refuge from other courts, and their votes are to be cast openly. It shall be compulsory for council members, and the other officials who elected them, to listen to the legal proceedings and watch what happens, and others may attend too if they wish. If anyone accuses a judge of deliberately deciding a case in an unjust manner, he should go to the guardians of the law and present his charge. A judge who is found guilty of such a crime is to pay double damages to the victim, and if a greater penalty is deemed appropriate, those who are judging the case may impose a further punishment that he must suffer in addition, or some fine payable to the state or to the person who brought the case to court.

768a

Athenian: When it comes to crimes against the state, it is necessary, in the first place, to involve the public in deciding the case since everyone is wronged when the city is wronged, so the people would be justified in feeling aggrieved if they had no involvement in deciding such cases. But while the initial and final proceedings of such cases should be entrusted to the people, the trial itself should go before the three highest officials jointly accepted by the defendant and the prosecutor. And if the two parties are unable to agree on this together for themselves, the council should decide between the two alternatives. In fact everyone should, as far as possible, be involved in deciding private cases too, for anyone who is excluded from involvement in joint decision making feels that he has no involvement at all in his own city. That's why there must indeed be courts based upon tribes, and judges appointed by lot there and then, who are incorruptible in the face of personal pleadings when they pass judgement. But the final judgement is delivered by that court which according to us has been constituted completely free from corruption, insofar as this is humanly possible, for the benefit of those who are unable to obtain a resolution, either before the neighbours, or the tribal courts.

768c

Athenian: Now courts of law we maintain cannot easily be described as ruling officials, yet they cannot be denied such a title either, without some qualification. And although we have given a sort of outline sketch that describes some of the details, it largely omits others. For the best place by far for any detailed regulation and classification of legal cases would be at the end of the legislative process. So, although these details should be asked to wait until the end of our process, the appointments to the other offices have, more or less, been legislated for in full. But it is not possible to arrive confidently at a comprehensive, detailed account of every single aspect of the administration of

the city, and civic affairs in general, before concluding a detailed description from beginning to end, encompassing everything in between. So this stage, where we have completed our description up to the point where the officials are elected, would be a suitable place to conclude the preceding matters and start proposing laws. We need no further hesitation or delays.

768e

Clinias: What you have said so far, stranger, is entirely acceptable to me. And now that you have connected the start of what you are going to say with the conclusion of what has been said already, I am even more pleased than I was before.

769a

Athenian: Well, it seems that our thoughtful old men's amusement has been well played so far.

Clinias: You seem to be pointing out how well executed the work of these men is.

Athenian: Quite likely. But let us see if you agree with me on the following point.

Clinias: What point? What are the issues?

769b

Athenian: You know how the work of painters on any of the figures they paint never seems to come to an end. It seems to go on forever, adding finishing touches that involve 'colouring' or 'decolouring', or whatever the professionals call such processes, and never reaches a point where the painting cannot be made more beautiful or realistic.

Clinias: I understand what you are saying fairly well from hearsay, although I have no direct experience of this sort of skill.

769c

Athenian: Well, that is no harm. But we may still use the example involving this skill, the one that has just occurred to

us, as follows. If anyone ever decided to paint the most beautiful picture imaginable, one that furthermore would never deteriorate but would always improve with the passage of time, you realise, don't you, that since the painter is not immortal, his huge labour will have very short-lived results unless he leaves a successor behind him who can repair anything that happens to the picture because of its age, and is also able in future to improve upon any deficiencies in the work due to the painter's own artistic weaknesses?

Clinias: True.

769d

Athenian: Well then, don't you think that the lawgiver will want some such arrangement? Firstly, he'll want to frame the laws as best he can, with the utmost precision. Secondly, as time passes and his plans are tested in practice, don't you think any legislator who is not a fool will realise that there must necessarily be countless deficiencies in his laws, which some successor will have to put right, so that the civic arrangement and good order of the city he is founding will constantly improve and never deteriorate at all?

Clinias: Of course. Every lawgiver will, presumably, want some such arrangement.

769e

Athenian: Now, what if someone had some means of teaching another person, somehow, by his deeds and his words, to come to some sort of understanding of how laws should be protected and corrected? Wouldn't he persist in explaining this until he succeeded in his objective?

Clinias: Of course.

770a

Athenian: So, isn't that what must be done now by me and by the two of you?

Clinias: What do you mean?

Athenian: Although we are about to make laws, we have selected guardians of those laws who are young in comparison with ourselves, we who are in the evening of life. So, as we say, we should pass laws ourselves, and at the same time attempt as best we can to turn these young people into lawgivers and guardians of the law.

770b

Clinias: Indeed, if we are actually up to the task.

Athenian: Well, we should try with all our hearts.

Clinias: How could we do otherwise?

770c

Athenian: Let us address them as follows, then. Dear friends and preservers of the law, we shall omit a great deal that is relevant to the various topics on which we pass laws, necessarily so. Nevertheless, we shall do our best to include whatever is significant and present the whole system in broad outline. You will have to fill in the details, and you now need to hear what your objective should be in doing so. Megillus, Clinias and myself have stated this objective to one another many times, and we agree that our formulation is sound.

770d

Athenian: But we want you to be of the same mind as ourselves, and to become our pupils too, looking to those very objectives which, according to us three, should be the objectives of the guardians of the law, and the lawgivers too. Our consensus concerned one significant issue, how exactly someone may become a good person, possessed of the excellence of soul that is appropriate to a human being. In the case of any of our fellow citizens, male or female, young or old, this excellence comes from some activity or some habit or acquisition or desire or opinion, or instruction in certain subjects. To attain the

excellence we spoke of, everyone is to exert himself to the utmost throughout his entire life, and none should be found favouring anything else that keeps him from these activities. He should even be prepared to break with his own city or abandon it by going into exile, if revolution proves inevitable, rather than submitting to lesser folk under the yoke of slavery. Everything of this sort must be endured rather than changing to a constitution that, by its very nature, makes people worse. This was our earlier consensus, and you must now look to these two objectives and pronounce your praise and censure of these laws of ours, censuring those that are unable to achieve these objectives, while you embrace and accept those that can do so, live by them in a spirit of friendship, and bid farewell to other activities that lead to other so-called goods.

771a

Athenian: Let us make a start on the laws that follow these, beginning with sacred matters. In fact, we must first take up the number 5,040 again, and how many convenient divisions we found contained both in the number as a whole and the number based on tribes, which we decided was one twelfth of the entire, and naturally exactly twenty times twenty-one. So our entire number has twelve subdivisions, and the tribal number also has twelve, and each portion should be regarded as sacred, a gift of God, corresponding to the months of the year and the revolutions of the universe. That, indeed, is why the innate nature of every city leads it to sanctify these divisions, although some have done their dividing more correctly than others, or have consecrated the division more propitiously. So we may now declare that we are perfectly right in choosing the number 5,040, which contains all divisions from one to twelve with the exception of eleven. And there is a simple solution even to this, for one way to solve the problem is to set two of the households aside, and it would not take a long story to prove the truth of this, if time allowed. For now, let us place our trust in the

principle we have just stated, make this distribution, name each portion after a god or a child of the gods, and assign altars and whatever is appropriate to them, where we should have two gatherings per month for sacrifices, twelve per annum for the tribal division, and twelve for the urban division itself. The first purpose of these shall be to ensure the favour of the gods and of all that belongs to them, and the second, according to us, is to ensure our mutual familiarity and acquaintance with one another, and community spirit in general.

771e

Athenian: In fact, when it comes to marital contracts and connections, it is imperative that any ignorance of the woman's family, the woman herself, and the family she is entering, be eliminated, making every effort as best we can to make no mistakes at all in such matters. So even our games should be arranged to achieve this serious purpose, with dancing for boys and girls, which also allows them to be seen, and see one another, unclothed within reason, on occasions that afford an acceptable pretext, subject to modesty and prudence on the part of each. Those in charge of the choruses should be the supervisors and organisers of all this, and lawgivers too, along with the guardians of the law, in relation to any directions we omitted. And it is inevitable, as we said, in all such matters involving lots of minor details, that the lawgiver will make omissions. So those who have ongoing experience of the laws, year in, year out, should learn by practice to make corrections and changes annually until it seems that a point has been reached where regulations and practices of this sort have been defined adequately.

772b

Athenian: A ten-year cycle of sacrifices and choral performances would be a reasonable and sufficient time period to assign for experience of each and every aspect. While the relevant lawgiver is still alive, they should work in consultation

with him, but once he has died, the officials themselves, each reporting to the guardians of the law, should correct any deficiency in their own area of responsibility until it seems that every detail has been resolved, well and truly. They should then declare the laws unalterable, and thereafter administer these along with the other laws that the original lawgiver prescribed for them at the outset. Nothing relating to these laws should ever be changed deliberately, but if it ever seems necessary to do so, they are to consult all the officials, the general population and the divine oracles for advice, and make the change if all are in agreement. Otherwise, they are not to change them at all and, by law, any dissenting group shall always prevail.

772d

Athenian: Now, when any man, having turned twenty-five years of age, upon due consideration by himself and by others, believes he has found a bride that suits him personally, and is also suitable for companionship and for begetting children, he should marry. Indeed, everyone should do so before they turn thirty-five. But first, he should be told how to find a suitable and fitting bride, for, as Clinias says, every law should be preceded by an introductory preamble of its own.

Clinias: Well remembered, stranger, and you have, in my view, introduced the topic at just the right moment.

772e

Athenian: It is nice of you to say so. Now, to a young man from a good family we should say the following. You should enter into the sort of marriage that meets the approval of sensible folk. These people would advise you neither to shun marriage to a poor family nor chase eagerly after wealthy connections, and, all other considerations being equal, always prefer to enter a union with someone who has fewer resources. For this approach would be beneficial both to the city itself and to the families involved, since balance and proportion are much more

conducive to excellence than unbridled excess. And someone who realises that he himself is too impulsive and hasty in all his actions should look for connections to a well-behaved family, whereas someone with the opposite natural tendencies should pursue connections of the opposite sort. And there should be one rule for all marriages: each person is to seek a marriage that is beneficial to the city, not the one that pleases himself. Everyone is always drawn somehow, by nature, to a person who is most like himself, and so the city as a whole develops an imbalance of wealth and character traits. That's how the consequences we wish to avoid in our own city certainly befall most other cities. Now, to prescribe explicitly by law that the wealthy are not to marry the wealthy, the powerful are not to marry the powerful, that the slower characters have to look for marital unions with the quick-witted, and the quicker with the slower, as well as being ridiculous would anger a lot of people. For it is not easy to appreciate that a city should be blended after the manner of a wine bowl in which the wine, when first poured, seethes madly, but when it is restrained by the good company of another more sober god, it forms a good, duly measured drink. Now, it is virtually impossible for anyone to discern that this is happening in the case of the blending of children, and that is why we should omit such matters from our laws. We should try instead to charm each person into placing more value upon the equipoise of their own children than the marital property equality, which is insatiable, using words of reproach to deter anyone who is intent upon marrying for money, rather than forcing them via a written law.

773e

Athenian: Let these, then, be our exhortations about marriage, and also, indeed, what was said previously, that there is a need to preserve the everlasting nature by constantly leaving children and children's children behind us to serve God in our place. All this, and even more, could be said as an appropriate

prelude concerning marriage and the need to marry. But if someone does not comply willingly, but keeps himself aloof and isolated in the city, and is still unmarried at the age of thirty-five, he is to incur an annual fine of a hundred drachmas if he belongs to the highest property valuation, seventy if he belongs to the second, sixty for the third, and thirty for the fourth. The fine shall be dedicated to Hera. Anyone who does not pay annually is to owe ten times the amount. This should be enforced by the treasurer of the goddess, who is to owe the money himself if he fails to exact it, and everyone is to give an account of this matter at the audits. Let these be the financial penalties upon anyone who is not prepared to marry, and he should also be shown no respect by the young folk, and none of them should heed him at all unless they have to. And if he attempts to punish someone, all are to come to the aid of the victim and defend him, and anyone present who does not assist should be declared by law to be a coward and a bad citizen. We have already dealt with dowries, but let us declare once again that it is not likely that our poorer folk will reach old age without ever receiving a bride or bestowing one because of their poverty, since everyone in this city has everything they need, and so there would be less arrogance on the part of the wives, and less low and slavish servitude among the husbands, because of wealth. Whoever obeys this precept would have one meritorious deed to his credit, while anyone who disregards this by giving or accepting more than fifty drachmas towards the cost of the bride's dress, or one mina, one-and-a-half minae, or even two minae, depending upon their property valuation, is to owe this amount to the state, while the amount given or received is to be dedicated to Hera and Zeus. This should be enforced by the treasurers of these two gods, and as was said in the case of people who don't marry, the treasurers of Hera are to exact the sum in each instance or else pay the fine themselves.

774e

Athenian: The right of valid betrothal belongs first to the bride's father, then to her grandfather and thirdly to her brothers by the same father. If none of these is available, authority belongs next to her mother's family in like manner. And in exceptional situations her closest relatives, acting along with the trustees, shall always have authority.

775a

Athenian: When it comes to the preliminary rites of marriage, or any other ritual that it is appropriate to enact before, during or after the event, the interpreters should be consulted, and everyone should be of the view that all is well if he heeds their advice. As for the festivities, no more than five friends, male and female, should be invited from each side, and the same rule should also apply to relatives and friends from either side. The expenditure should be proportionate to a person's wealth: one mina for the wealthiest, and so on, as their property valuation reduces. Everyone should praise the person who obeys the law, and the guardians of the law are to punish anyone who is disobedient, as a boor devoid of education in the strains of the marital Muse. Drinking to the point of drunkenness is not appropriate anywhere except at the festivals of the god who gave us the gift of wine, nor is it safe, especially for those who take marriage seriously, wherein it is most important for the bride and bridegroom to be sensible as they undergo such a significant change in their lives. This also ensures as much as possible that the offspring are always conceived from sensible parents, since the day or night when conception takes place under God is quite unknown. What is more, the begetting should not take place while the bodies are dissolved in drunkenness. Rather, the new life should be fashioned in quietude, well-formed, stable and peaceful. But when drunk with wine, a person reels about, borne hither and thither, his body and mind out of control. The drunkard is a deranged and

inept sower of seed who, in all likelihood, would produce irregular and faithless offspring, crooked in character and in body. That is why a person, all year round, throughout his entire life, should be careful and refrain from any intentional exposure to disease or actions that involve violence or injustice, especially at the time when children are begotten, for he must necessarily transfer and imprint these onto the souls and bodies of the offspring, and produce utterly inferior children. Most importantly, he should refrain from such activities on that particular day and night, since a beginning, once established, is a goddess among humans and the saviour of all, provided she is accorded the appropriate honour by those concerned.

776a

Athenian: The bridegroom should regard one of the two homes in the allotment as a sort of nest and nursery for his chicks, leave his father and mother, and make there his marriage, a dwelling place, and a source of sustenance for himself and his children. For when some element of longing is present in relationships, it binds the various characters together and unites them, while unmoderated and uninterrupted companionship causes the longing to ebb away with the passage of time because of the over-familiarity. That is why the married couple should leave their own homes to the mother, father and the bride's relatives, and live like newly arrived colonists, visiting and being visited, begetting and rearing their children, passing on the torch of life from one generation to another, always serving the gods in accordance with the laws.

776b

Athenian: Next comes the question of possessions. What sort of possessions would constitute well-proportioned wealth for the person who acquires them? Most of these are easy to rationalise and easy to acquire, but the case of household slaves presents all sorts of difficulties. The reason is that what we say about them is somehow incorrect, but in a sense correct. For the

various pronouncements we make about slaves contradict experience, and then again accord with experience.

776c

Megillus: What do you mean by this? We don't yet understand the point you are making, stranger.

Athenian: That is only to be expected, Megillus. For the helot system of Sparta⁷⁰ is well-nigh the most puzzling and contentious issue in the Greek world, with some maintaining that it is good, others that it is not. This is more controversial than the system of slavery by which the people of Heraclea totally enslaved the Mariandyni,⁷¹ or the situation of the serfs in Thessaly. So, in the light of these examples and others like them, what should we do about ownership of slaves? Now, I made a point during the course of the argument, and you quite reasonably asked me what I meant. The point is as follows. We know, I presume, that everyone would accept the need to acquire slaves who are as friendly and as good as possible. In fact, for some people, slaves have already proven superior to brothers or sons in terms of overall excellence, and have saved their own masters, his possessions and his household. We are aware, aren't we, that people say this sort of thing about slaves?

Megillus: Of course.

776e

Athenian: Haven't we heard the opposite claim too, that the soul of the slave has no health in it, and that no man of sense should ever trust them at all? And the wisest of our poets explicitly proclaimed, speaking of Zeus, "For Zeus of the wide brows takes away one half of the virtue from a man, once the day of slavery closes upon him."⁷² Everyone makes his own decision on this issue. Some, as though they were dealing with wild animals, do not trust the serving class at all, and with goads and whips they make the servants' souls slavish, three times, nay many times over, while others do the exact opposite.

Megillus: Indeed.

777b

Clinias: Well, stranger, in the face of such disagreement, what's to be done about this new territory of ours in relation to the ownership and punishment of slaves?

Athenian: What, indeed, Clinias? It is evident that, since the human being is a difficult creature, and when it comes to the inevitable distinction whereby we differentiate in practice between slave, free man and master, humans seem to have no interest in co-operating in the process. So this form of property presents a difficulty. The extent of its evils is often demonstrated in practice by the frequent and familiar revolts of the enslaved Messenians, and by cities that own lots of slaves who speak the same language, and again by the various criminal exploits of the so-called pirates that occur in Italy. Anyone looking at all this is bound to be at a loss as to what to do about such matters in general. Only two devices are available to us. If the slaves are to be submissive they should not be fellow countrymen, or speak the same language, insofar as this is practicable, and they should be properly cared for, not only for their sake but more so for our own. The proper way to care for such people is to use no violence towards our servants, and as best we can to do less wrong to them than we do to our equals. For someone who naturally and genuinely reveres justice, and really hates injustice, displays his true stature when dealing with people whom he can easily mistreat. The person who remains untainted by unholiness and injustice in his conduct and behaviour towards slaves, would be well able to sow the seed for a harvest of excellence. And the same may rightly be said of a master, a tyrant, or anyone in a position of power, when dealing with someone weaker than himself. Still, slaves should be punished when they deserve it, rather than spoiling them by using a mere reprimand as if they were free men. Any

address to a servant should be more like a direct instruction, and there should be no light-heartedness whatsoever with servants, male or female, whereby so many masters are tempted most unwisely to spoil their slaves, making life difficult for the slaves as subjects, and for themselves as rulers.

778a

Clinias: That's right.

Athenian: Well, now that we have done our best to furnish the citizen with enough servants, suited to the various tasks he needs help with, we should as a next step draw up a plan for our houses.

Clinias: Yes, certainly.

778b

Athenian: Since our city is new and has no pre-existing buildings, it seems it will somehow have to attend to every aspect of its architecture in detail in each case, including its temples and city walls. These considerations, strictly speaking, precede the matter of marriages, Clinias, but for now, since our city exists in words only, it is quite legitimate to proceed in this way at the moment. Later, when our city is actually in existence, we shall at that stage, God willing, make the architectural arrangements precede the marital arrangements, which shall be the final step in the overall process. For the moment though, let's just give a brief outline.

Clinias: Yes, very well.

778c

Athenian: So, the temples should be built all around the market place, and all over the city, in a circle on the highest places for the sake of security and cleanliness. Alongside these there should be buildings for various officials, and law courts in which judgements shall be delivered and received as though on holy ground, partly because the issues are sacred, and partly because

the temples are consecrated to such revered gods. And among these would be law courts in which trials for murder and for crimes that carry the death penalty may properly be held. As far as the walls are concerned, Megillus, I would agree with the Spartan position on this, and allow the walls to lie dormant in the ground and not be erected, for the following reasons. An oft-quoted verse from a poem puts this nicely, when it says that our walls should be made of brass and iron rather than stone.⁷³ More to the point, we ourselves would rightly deserve to be laughed at heartily for sending our young folk out into the countryside every year to dig trenches and ditches and even to construct some buildings to impede the enemy, all to prevent them from invading our country's borders when our city is surrounded by a wall. A wall, in the first place, is not good for the health of our cities and tends to make the inhabitants somewhat soft of soul, encouraging them to take refuge inside their wall rather than repulsing the enemy. Nor do they ensure their own safety by having some citizens on continuous guard duty, day and night. They imagine that they may sleep soundly, fenced in by security systems based upon walls and gates, as though they were born to a life of idleness, ignoring the fact that a life of ease is a reward for hard work, whereas, as I see it, base indolence and laziness tend to produce more troubles. But if it does prove necessary for people to have a wall for some reason, then the construction of the private dwellings should be organised with this in mind from the outset so that the entire city constitutes a single wall, every building being rendered secure by the uniformity and regularity of its orientation toward the streets. And it will be a pleasant sight, indeed, to see the city arranged like a single house, easy to guard and vastly superior to any other arrangement in terms of security. The maintenance of the original buildings would primarily be the responsibility of the inhabitants, but the city wardens would supervise them, and even use compulsion, by fining anyone

who was negligent. And they would also look after all aspects of city sanitation and ensure that no private citizen encroaches upon public property with buildings or excavations. They must also look after rainwater drainage, and any other matters, within the city or without, that would be appropriate for them to manage. On all these matters, the guardians of the law should legislate as soon as they see the need, and on anything else that was omitted from the law code because it was unforeseen. And now that these – and the buildings of the marketplace, the gymnasia and all the schools – are ready for use, and the theatres are ready for the spectators, let us move on to the issues that come next after marriage, as we follow the proper sequence of legislation.

Clinias: By all means.

779d

Athenian: Well, Clinias, let us assume that the wedding ceremony is over. There follows a period of at least a year before any children are born. The lifestyle of a bride and bridegroom, in a city that is to excel over most others, is not the easiest of topics to deal with, but it follows naturally from our earlier discussions. We have faced a few challenges of this sort previously, but this proposal will be harder for most people to accept than any of those others. Nevertheless, Clinias, whatever we believe to be right and true must be spoken, without reservation.

Clinias: Yes, indeed.

780a

Athenian: Suppose someone proposes to promulgate laws for our cities, dealing with the public, communal lives of the citizens, while believing that compulsion in private matters is unnecessary, that everyone should be allowed to spend their day just as they please, and that there is no need to regulate everything by law. Well, he is much mistaken in this belief that

although he leaves private matters unregulated, the citizens will still be prepared to live their public and communal lives in accordance with his laws. Why am I saying all this? We shall maintain that our bridegrooms should frequent the communal meals just as much as they did before they were married. This custom was met with surprise when it was first introduced in your countries, probably dictated by a war or pressure from some other circumstances among a small population facing extreme difficulties. But once you had been forced to avail yourselves of communal meals and had experienced their benefits, you formed the view that this custom was highly advantageous for the security of the city. And that is more or less how the practice of communal meals was established among yourselves.

Clinias: Quite likely.

780c

Athenian: So, I am saying that although this was once seen as a surprising custom, and somewhat daunting to impose on people, no such difficulty would face any lawgiver who wished to legislate for this nowadays. But there is a logical sequel to this, a measure that would also turn out well if it were implemented. But it is not implemented anywhere these days, and this failure effectively makes the lawgiver, as the saying goes, ‘card his wool into the fire’, and perform countless other never-ending tasks of that sort. This measure is not easy to mention, or to implement once it has been mentioned.

Clinias: What is it, stranger, that you are trying to explain, and seem so reluctant to mention?

780d

Athenian: Listen then, so that we do not spend a lot of time on this issue in vain. In a city, whatever occurs in an orderly and lawful manner produces nothing but good, while anything unregulated or ill-regulated, for the most part undoes the work

of something else that is well regulated. The issue we are discussing is a case in point. Among yourselves, Clinias and Megillus, communal meals for men have been well established, to some surprise as I said, born of some divine necessity. But there are no corresponding regulations in place for women, and this is simply not right. The practice of common meals for women has never seen the light of day, and so the female sex, who are in general more susceptible to secrecy and guile, have been abandoned to their own faults by improper indulgence on the part of the lawgiver. Because you neglected women, you lost control of many things that would have gone much better than they do today if only they had come under your laws. For neglecting the good order of women's lives is not just half of the problem, as it might seem. To whatever extent the female nature is inferior in terms of excellence to the male nature, to that extent the effect of its negative influence would be more than double. So it would be better for the overall happiness of the city to revise this custom, and put things right by arranging all the activities of men and women jointly. But nowadays the human race is so far removed from this fortunate situation that it is impossible for a man of sense even to mention this in other regions or cities where the very existence of communal dining as a civic institution is totally unfamiliar. How, then, will anyone, without becoming a laughing stock, set about forcing women to consume their food and drink in full public view? The female sex would be more reluctant to put up with this than with anything else, accustomed as they are to living in seclusion and obscurity. They will offer all sorts of resistance to being led forcibly into the light of day, and will be more than a match for any lawgiver. In other cities, as I was saying, women would not tolerate even the mention of the correct principle without a massive outcry, but in our city they might be tolerant. So, if you want this account dealing with civic affairs in general to achieve its objective, in theory at least, then I am prepared to argue that

this proposal is good and appropriate, if you both agree to listen. Otherwise, let's drop the subject.

781e

Clinias: No, stranger, we are both extremely enthusiastic about hearing you speak.

Athenian: Listen to this then. But don't be surprised if I seem to be starting from a long way back, for we are enjoying our time together, and we are under no pressure to stop our comprehensive examination of every aspect of the laws.

Clinias: Quite right.

782a

Athenian: Well, let's revert once more to our initial statements. Everyone would do well to bear in mind this much at least: either the human race never had any beginning whatsoever and will never have any end at all, but always was and always will be, or else an absolutely vast period of time must have elapsed since the race first began.

Clinias: Indeed.

Athenian: Well now, can't we also assume that all over the world cities have been founded and have perished, that there have been regimes of all sorts – some orderly, some disorderly – and a huge variety of tastes and fashions in eating and drinking, and all sorts of revolutions of climate too, during which the living organisms probably underwent innumerable transformations?

Clinias: Of course.

782b

Athenian: Yes. And we also believe, I presume, that vines made their appearance at some stage although they didn't exist before then, and the same goes for olives and the various gifts of Demeter and Kore,⁷⁴ and that some Triptolemus was the agent of all this. And we must presume, mustn't we, that at the time

when these fruits of the earth didn't exist, the living organisms took to feeding on one another, just as they do nowadays?

Clinias: Indeed.

782c

Athenian: And even today, in many regions, we see that human sacrifice still persists. And we are also told that in other regions, by contrast, people dared not taste the flesh of oxen, and there were no animal sacrifices but 'pure' sacrifices of cakes and meal soaked in honey and the like. They refrained from the flesh of animals as it was an unholy act to eat it or to pollute the altars of the gods with blood. In those days, a so-called Orphic lifestyle was prevalent among us,⁷⁵ which held to a strictly vegetarian diet, and they refrained completely from eating living creatures.

Clinias: Yes. This is referred to a lot and the reports are quite credible.

782d

Athenian: Now, someone might ask us why we are now saying all this.

Clinias: You're right about that, stranger.

Athenian: So, as best I can, Clinias, I will try to set out the considerations that follow from these.

Clinias: Please proceed.

Athenian: I observe that for human beings everything depends upon three necessary desires, which result in excellence if people are led aright, and its opposite if they are led badly. As soon as they are born, there are the desires for food and drink. Every creature has an innate passion for all this, and it is full of frenzied defiance at the suggestion that anyone should do anything else except gratify their pleasures and desires for everything of this sort, and be quit of all pain. Our third and

greatest need, and our most extreme passion – which emerges later and completely inflames us humans to madness – is the burning, wanton passion for procreation of offspring. These three disorders then must be diverted towards what is best rather than what is said to be most pleasant. We must try to restrain them by the three mighty forces of fear, law and true reason, assisted by the Muses and the gods of competitions to stem their growth and influence.

783b

Athenian: So, after the subject of marriage, let us place the procreation of children, followed by their nurture and education. And perhaps if our discussions proceed in this way, each of our laws will reach a conclusion. And when we come to the communal meals, and view the issues at close quarters, perhaps we may see more clearly whether this sort of communal activity should include women, or be confined only to men. And having arranged the preliminaries to the communal meals, which are still unregulated at present, we shall place these in front of them, and as I said just now we shall look at the communal meals with greater precision and be better able to prescribe suitable and appropriate laws for them.

Clinias: Absolutely correct.

783c

Athenian: Well, let us preserve the memory of what has been said just now, since all of this may prove useful at some stage.

Clinias: What are you telling us to remember?

783d

Athenian: The three factors we defined. I think we spoke first of eating, secondly of drinking, and thirdly of an intense sort of sexual excitement.

Clinias: Yes, stranger, we shall certainly remember what you are telling us to remember.

Athenian: Good. Let's turn our attention to the married couple then, and teach them how, and in what way, they should procreate children, employing legal threats if we fail to persuade them.

Clinias: In what way?

783e

Athenian: The bride and bridegroom should have the intention, as best they can, of presenting the city with the very finest and the very best progeny. Now, whenever any human beings who are partners in any activity apply their intelligence to themselves and to the activity, the outcome is entirely noble and good, but the outcome is the direct opposite if they do not pay attention or are devoid of intelligence. So the bridegroom should apply his intelligence to the bride and to procreation, and the bride should do the same. They should have overseers, women whom we have appointed, their number,⁷⁶ more or less, and the timing of their appointment being determined by the officials as they see fit. They are to gather every day at the temple of Eileithyia⁷⁷ for at least one third of an hour. At the gathering, they should inform one another of any man or woman of reproductive age whom they see preoccupied with anything else besides the injunctions imposed upon them as a consequence of the sacrifices and solemnities of their marriage. Let this period of producing children, and oversight of the young couples, last no more than ten years in cases where offspring are plentiful. But if some couples are still childless after this period of time, they should separate, having taken advice jointly as to what is advantageous for both of them from family members and the female officials. And if some dispute arises over what is appropriate and advantageous for each party, they should choose ten guardians of the law, accept their remit as arbiters, and abide by the instructions they issue. The female supervisors are to put a stop to any errors and folly of

the couples by going into their homes and using admonitions or threats. If they are unsuccessful, they should go to the guardians of the law and report the problem, and the guardians should deal with it. If even the guardians are somehow unsuccessful, they should bring the matter to public attention by publishing a notice, having sworn on oath that they are unable to reform such and such a person. Unless the person who is the subject of the notice turns the tables on his accusers in a court of law, he is to be deprived of his rights as follows. He may not attend weddings or thanksgivings for the birth of children, and, if he shows up, anyone who wishes may, with impunity, punish him with blows. The same regulations shall also apply to a woman. If she has been reported publicly in like manner for disorderly behaviour, and loses her case, she shall be excluded from the processions of women, or from any honours, and from attending weddings or celebrations of the births of children.

784d

Athenian: Once they have produced their children, as ordained by the laws, a man who consorts with another woman or a woman who consorts with another man, while the other party is still of reproductive age, shall incur the same penalties as outlined for those who are still producing children. Once this time has passed, a man or a woman who shows restraint in such matters should be well regarded in every way, while those who do the opposite should be honoured in the opposite way, or rather shown no respect at all. When most people are moderate in their behaviour in such matters, the regulations can be left to lie in silence, but if disorder sets in among the general population, then regulations should be implemented based upon the laws we have just prescribed.

784e

Athenian: For each person, their first year is the start of their entire life, and this should be recorded in their ancestral shrines

as the 'beginning of life' for each boy and girl. A further record should be kept on a whitened wall in each tribe, giving the number associated with particular archons after whom the years are numbered. Nearby, the names of those members of the tribe who are still alive should be written, while the names of the deceased should be erased. For marriage, the age limits shall be sixteen to twenty for a girl, the longest determinate time, and thirty to thirty-five for a boy. For public office the age limit shall be forty for a woman, thirty for a man. For military service the age limits shall be twenty to sixty for a man. A woman, once she has borne her children, may be directed to do what she is able to do and what's appropriate in each case until she turns fifty, doing whatever military duties are deemed useful.

BOOK VII

788a

Athenian: Now that our children, male and female, have been born, it's only right that their nurture and education should be spoken of next. It is impossible to avoid mentioning this topic at all, yet when dealing with education, it would apparently be better to make use of instruction and exhortation rather than legislation. For privately, in domestic situations, a lot happens that is trivial and this goes unnoticed by most people. Because of their individual pains, pleasures and desires, which run counter to the intentions of the lawgiver, a huge variety of inconsistent habits arises all too easily among the citizens. This is bad for the cities because, on the one hand, the triviality and frequency of these transgressions make it inappropriate and unseemly to impose legal penalties, yet, on the other hand, the transgressions subvert the laws that have already been passed by accustoming the people to acting contrary to the laws in lots of trivial situations. Consequently, although we are at a loss as to how to legislate about these matters, we can't remain silent

either. I shall try to clarify what I mean by presenting some examples, since at the moment what I am saying sounds somewhat obscure.

Clinias: Very true.

788c

Athenian: Now I presume it was right to say that a correct upbringing must demonstrate an ability to produce bodies and souls that are as beautiful and excellent as possible in every respect.

Clinias: Indeed.

788d

Athenian: And in the case of children, having very beautiful bodies means, I presume, in the simplest terms, that they should grow as straight as they possibly can from their earliest years.

Clinias: Of course.

Athenian: What about this? Aren't we aware that in every living organism the first shoots of growth are the greatest and most extensive. Consequently, many people contend that the height increase in human beings is greater during the first five years than in the following twenty years.

Clinias: True.

789a

Athenian: Now we know, don't we, that without plenty of appropriate exercise, rapid growth causes lots of physical problems?

Clinias: Of course.

Athenian: Therefore, most exercise is required at the time when most nutriment is being provided to our bodies.

Clinias: What's this, stranger? Shall we prescribe most exercise for new-born babes and infants?

Athenian: Not just then, but even before then, when they are still being nurtured within their own mothers.

Clinias: What do you mean, my friend? Are you referring to babies in the womb?

789b

Athenian: Yes. It is not surprising that you are unaware of the physical training that is appropriate at that stage of life, but since this is so unusual, I would like to explain it to you.

Clinias: By all means, do so.

789c

Athenian: Well, there is more awareness of this sort of training among my own countrymen because some people there are more involved in sport and games than they should be. In fact, among ourselves, not just children, but even some older men rear wild birds to fight with one another. Now, they are far indeed from believing that the exercises in which they train such creatures by pitting them against one another constitute adequate training. Indeed, besides these exercises, each owner keeps his bird concealed about his person, smaller ones in their hands, and larger ones under their arm. They go about, walking mile after mile, to ensure not just that their own bodies, but the bodies of these creatures too are in good condition. This much should make it obvious to anyone who is observant enough, that all bodies are benefited and invigorated when they are moved by any sort of shaking or motion, whether they are moved of their own volition, or by a swaying vehicle, by a ship at sea, from horse-riding, or by any other means of bodily transport. Because of all these, our bodies assimilate the nourishment of food and drink and can become a source of health, beauty and general robustness for us.

789d

Athenian: Now, in the light of these arguments, how would we say we should proceed? Would you like us to risk ridicule by explicitly implementing laws whereby pregnant women are to take walks, mould the newborn child like wax while it is still supple, and wrap it in swaddling clothes for the first two years of its life? And should we also use legal penalties to compel the nurses always to carry the children, somehow or other, to the fields, the temples, or to their relatives until they are well able to stand upright themselves? And then, should they persist in carrying the new arrivals until they turn three as a precaution in case their legs get deformed when they are young from bearing their full weight? And shall we prescribe that there should be more than one nurse per child and that they should be as strong as possible? And should we specify a penalty for every case of failure to follow these directions? Or is this too extreme? Indeed, it would result in far too much of the outcome I just mentioned.

Clinias: Which was?

790a

Athenian: The enormous ridicule we would attract. And what's more, we would be unlikely to make much impression upon the feminine and servile characters of the nurses.

Clinias: Why, then, did we think it necessary to mention all this?

790b

Athenian: Here's why. The characters of the masters and free men in our cities may perhaps be more receptive to hearing this, and come to the conclusion, rightly, that any notion of a stable body of laws for communal affairs is a vain dream in the absence of correct regulation of private life in our cities. A citizen who recognises this may well adopt the suggestions we have just made as laws, resort to them to manage the city

nicely, and his own household too, and live in happiness.

Clinias: A very likely outcome.

790c

Athenian: So, let us not move on from this sort of legislation until we have also given a detailed account of the various activities concerned with the souls of the young children, just as we went through corresponding accounts related to their bodies when we began.

Clinias: That is the right way to proceed, very much so.

Athenian: Well, let us adopt this as a common principle applicable to both body and soul – that the nursing and motion of the bodies and souls of the very young, particularly of the youngest infants, when maintained as best we can day and night, is beneficial in all cases. Indeed, if it were possible, it would be good for them to spend their lives as if they were constantly sailing the seas. But as matters stand, in the case of our new born infants, we should get as close to this ideal as possible. The following examples provide additional evidence. Nurses of small children adopt this procedure and recognise its usefulness, and so do the women who treat corybantic conditions.⁷⁸ Indeed, that is why mothers who want to lull sleepless children to sleep do not resort to stillness but, on the contrary, to movement, rocking them continually in their arms, using some sort of melody rather than silence, as they literally charm the children. The nurses use the combined motion of dance and music, just like the priestess who charms those who are out of their minds using cures from the Bacchic rites.

Clinias: What, stranger, is the cause of all this?

Athenian: That is not particularly difficult to appreciate.

Clinias: What is it then?

791a

Athenian: Both these responses presumably involve being frightened, and fright originates in some degenerate state of the soul. However, when someone brings external rocking to bear upon such responses as these, the externally applied motion overcomes the internal motion, which is fear and frenzy, and once the external motion prevails, it produces a manifest tranquillity in the soul and a relief from the distressing agitation of the heart that had been present in each case. This results in complete satisfaction, bringing sleep to the sleepless, and sanity in place of their frenzied state of mind to the others who are wide awake, as they are drawn into dancing and music-making, aided by the gods to whom they offer propitious sacrifices. And this account, although brief, is a plausible explanation of these matters.

Clinias: Very much so.

791b

Athenian: Given that these measures have this sort of power, we need to recognise, in the case of these people, that every soul experiencing such frights from its earliest years is more likely to develop the habit of being fearful. And we would all agree, I presume, that this constitutes the practice of cowardice rather than courage.

Clinias: Of course.

791c

Athenian: And we would accept that the opposite course, the pursuit of courage from our very earliest years, consists in being victorious over any frights and fears that assail us.

Clinias: Correct.

Athenian: According to us then, this one factor, the training of very young children through various movements, contributes enormously to developing one part of the soul's excellence.

Clinias: Very much so.

Athenian: And, indeed, absence of discontent would play a significant role in developing a good soul, while discontent would produce a bad soul.

Clinias: Inevitably.

791d

Athenian: Now, in what way may we implant either of these two qualities from the very outset, at will, in the new-born babes? We need to make an effort to state how and to what extent these two qualities are within our control.

Clinias: Of course.

Athenian: The view held among ourselves is that a soft life produces in the young people habits of discontent, bad temper, and a strong tendency to get agitated over trifles. Yet, on the other hand, the opposite sort of regime, based on excessive harsh subjugation, renders them unsuited to life in society by turning them into cringing, servile creatures who hate their fellow man.

791e

Clinias: But how should the city as a whole set about the task of rearing children who don't yet understand speech and cannot yet partake of education generally?

792a

Athenian: As follows. It is usual for every creature, human beings included, somehow to utter a loud scream as soon as they are born, and, indeed, human children, in addition to the scream, are more prone to crying than other creatures.

Clinias: Yes, indeed.

Athenian: Now, when the nurses are trying to discover what a child wants, they are guided as to what to give it by these various sounds. When an offering is greeted with silence, she concludes that all is well, but when the child cries out and screams, she knows there is a problem. So you see that the

infants indicate what they love and hate by these cries and screams, a most unfortunate set of signals, and this phase lasts for at least three years, and that is no small part of one's life to spend well or ill.

Clinias: You are right about that.

792b

Athenian: Now, don't you both think that a discontented person, who is not at all gracious, will be morose, and for the most part, more given to moaning than a good person should be?

Clinias: Well, I think so, anyway.

Athenian: Well then, if during those three years we were to try our best, by all possible means, to ensure that our charges experience distress, fear, and any form of pain to the least possible extent, don't you think that the soul of the child we are rearing would then be rendered more cheerful and gracious?

Clinias: Of course, stranger, especially if we provide him with lots of pleasures too.

792c

Athenian: Now, on this point I can no longer go along with Clinias, wonderful and all as he is. In fact, such a practice is, for us, enormously destructive in every respect, since it is introduced, in every case, at the very start of the child's upbringing. Let us see if I have a point here.

Clinias: Explain what you mean, please.

Athenian: I am saying that the issue before us now is far from trivial. You should consider this too, Megillus, and help us arrive at a decision. Now, the position I hold maintains that the right way to live is neither to chase after pleasures, nor again to entirely avoid all pain, but to embrace the mean, which I described just now as gracious, a condition which belongs to

God, as we all rightly declare on the basis of a prophetic utterance. So, I maintain that any of us who are to be like God should pursue this state of the soul, neither giving ourselves over entirely to pleasure because we realise that we cannot avoid pain, nor are we allowed to tolerate the same behaviour in someone else, old or young, male or female, and least of all, if we can help it, in the newly born, for that's the time when character, on the whole, is chiefly determined through habit. But I would still like to insist, at the risk of sounding frivolous, that all women who are with child should be shown special care for the duration of their pregnancy to ensure that the expectant mother does not indulge in frequent, excessive pleasures, or pains either, and cultivates a gracious, kindly and gentle spirit throughout.

792e

Clinias: Stranger, there is no need for you to ask Megillus here which of us has spoken more correctly, since I myself agree with you that everyone should avoid the life of unadulterated pleasure or pain, and always adopt some mean. What you have said is to the point, and so is my response.

793a

Athenian: And correct too, Clinias, very much so. So the three of us should apply our minds to the following issue.

Clinias: Which is?

Athenian: That all the precepts we are now recounting are what most people call 'unwritten regulations', and everything of this sort, taken together, is exactly the same as what they refer to as the 'ancestral laws'. And what is more, the argument that occurred to us just now, that these precepts should neither be designated as law nor left unspoken, was quite right. For in all political systems these act as bonds between all their enactments, those that have already been written down and are in place, and those that will be enacted in future. They really do

constitute a body of ancestral regulations, truly ancient, which, rightly enacted and practised, shelter the existing laws in total safety. But if they stray outside of the bonds of what's right into disorder, and the ancient supports collapse, it's as if the supports installed by carpenters in a building were to give way, causing everything to tumble into everything else, one thing lying on top of another, both the supports and the rightly constructed later superstructure. With these principles in mind, then, Clinias, we should bind this city of yours together, totally, while it is still new, doing our best to omit nothing large or small, be they laws, customs, practices or whatever they are called. For a city is bound together by everything of this sort, and neither of these is stable without the other. Accordingly, we should not be surprised if the inclusion of lots of seemingly trivial regulations and customs makes our laws quite lengthy.

Clinias: Well, you are right to point this out, and we shall bear this in mind.

793e

Athenian: So, if we could implement these measures precisely until a boy or girl reaches the age of three, and not treat what has been said casually, these would be of no small advantage to our young charges. But the souls of three-year-olds, and four-, five- and even six-year-olds, would need games, and the gentleness should then give way to punishments which are not demeaning or violent, neither provoking anger in the chastised child, nor spoiling him through lack of correction. In other words, we should apply the same principles to the free born as we prescribed earlier for slaves.

794a

Athenian: Now, there are certain games that come naturally to children at that age, and they readily work these out for themselves when they get together. So at that stage, the three- to six-year-olds should gather at the village temples so that all

the children of each village come together in the same place. What's more, the nurses are to be responsible for the orderly conduct or misbehaviour of the children, and one woman in each case, one of the twelve who have already been mentioned, is to be put in charge of the nurses themselves, and of each group as a whole, for one year. These are to be appointed by the guardians of the law, while the women who are responsible for overseeing marriages should select the twelve, one from each tribe, the same age as themselves. Once appointed, she should pay an official visit to the temple each day, assisted by some of the city servants, punishing any wrongdoer, slave or foreigner, whether male or female. In the case of a citizen, where there is a dispute over the punishment, she should refer the matter to the city wardens, but where there is no dispute, she herself should punish even a citizen.

794c

Athenian: After the age of six, the sexes should then be separated, boys being made to associate with boys, girls with girls. Each needs to turn their attention to various courses of instruction, the boys going to teachers of horsemanship, archery and the use of javelins and slings. The girls too may take instruction in these, if they wish, especially in the use of weapons. For the prevailing view on such matters is, for the most part, misguided.

Clinias: What view?

794d

Athenian: The view that when it comes to using our hands for various activities, the right and the left are different by nature, whereas in tasks involving our feet and lower limbs, no such difference is apparent. But due to ignorance on the part of nurses and mothers, each of us has turned out more or less disadvantaged when it comes to manual activities. For although the limbs are more or less equally balanced on each side, we

ourselves have made them different through habitual incorrect use. Now, in activities of no great importance this doesn't really matter. For instance, it matters little if someone holds the lyre in his left hand and the plectrum in his right, but it borders upon stupidity to use these examples as our models in other situations where there is no need to adopt such a practice. The Scythian practice of using the right hand and the left hand interchangeably to draw the bow and to string the arrow, rather than using just one hand for each, illustrates the point. And there are lots of similar examples, from chariot-driving and so on, which are enough to show us that those who train the left side to be weaker than the right are training them contrary to nature. Now, as we said, this makes little difference with plectrums made of bone, and other such implements, but it matters a great deal when iron weapons such as bows and arrows, javelins and the like are to be used in war, and it matters enormously in the clash of weapons with weapons where there is a huge difference between someone who has learned the skill and someone who has not, someone who has been trained and someone who has not. For instance, a perfectly trained pancratiast or boxer or wrestler is well able to fight to his left, and he is not handicapped, dragging himself about in disarray whenever an opponent puts him under pressure by switching sides. So too, in my view, in the case of weapons or anything else, it is only right to accept that someone possessed of two sets of limbs with which to defend himself or attack others should do his best to avoid leaving either side to lie idle and untaught. Indeed, someone endowed with the physique of a Geryon or a Briareus⁷⁹ ought to be able to throw one hundred darts with all of those one hundred hands of his. All this should be looked after by those who are in charge, male and female, the women acting as supervisors of the games and general upbringing, the men of the courses of instruction, to ensure that all boys and girls turn out sure-footed and good

with their hands, with none of their natural endowments marred by acquired habits, insofar as this is possible.

795d

Athenian: The courses of instruction would fall, more or less, under two headings – physical training relating to the body, and music for the sake of a good soul. Physical training, in turn, has two aspects – dancing and wrestling. In one form of dancing the eloquence of the Muse is imitated, preserving both dignity and freedom. Another form aims at fitness, lightness and beauty, ensuring the appropriate flexibility and reach of the limbs and other parts of the body itself, and at bestowing upon each of them a beautiful rhythmic motion of their own, which pervades and consistently accompanies all kinds of dancing. As far as wrestling is concerned, the techniques invented by Antaeus and Cercyon for the sake of useless ambition, or those developed by Epeius or Amycus for boxing, being of no use in the conduct of warfare, don't deserve to be dignified with a mention.⁸⁰ But the techniques of stand-up wrestling, to free one's neck, arms or ribs, practised with ardour and a good physique, for the sake of health and strength, these are useful for all purposes and should not be neglected. So when we come to the appropriate point in our laws, we should direct the teachers to impart all knowledge of this sort generously, and the pupils to receive it graciously. Nor, again, should we neglect in the choral performances any imitative actions that are appropriate to the particular place, the armed games of the curetes on this island⁸¹ and of the Dioscuri in Sparta. And, indeed, among my own people, our Virgin Queen,⁸² delighting in the entertainment of the dance, thought it wrong to play the game with empty hands, and right to perform the dance adorned in full battle array. So it would be most fitting then for our boys, and girls too, to copy these out of respect for the grace of the goddess, for their military benefit and for the sake of the festivals. So, from the outset, until they are of age for military service, the children should, I suggest,

when in processions to any gods and when involved in parades, always be equipped with horses and armour as they pay their respects to the gods and their offspring with marches or dances, quick or slow. And their sole purposes in competitions, or preparing for competitions, should be these and these alone. For competitions in peace or war are beneficial to a state and to private households, while other exertions, sports or business related to the body are not worthy of a free people. Now Megillus and Clinias, I have more or less described in detail the gymnastics that I said in our initial discussions needed to be described. There it is in its entirety. If you have anything better to offer, please share it with us.

Clinias: Stranger, if we reject this account it won't be easy to come up with anything better to say about gymnastics or competition either.

Athenian: We thought earlier that we had dealt comprehensively with the related matter of the gifts of the Muses and of Apollo, and that the only topic remaining was gymnastics. But what still needs to be said to everyone, and that it should be said at the very outset, is now obvious. So let's state this, systematically.

Clinias: Certainly. That's what we should do.

797a

Athenian: Listen to me, then. You have done so already, but the speaker, and the listeners too, need to be extremely careful when the proposition is highly unusual and unfamiliar, as is the case now. I shall advance my argument with some trepidation; nevertheless, I shall summon up my courage and not be put off.

Clinias: What is your argument, stranger?

797b

Athenian: I maintain that in all cities there is total ignorance about games in general, and how extremely influential they are

in relation to the enactment of laws, and in determining whether or not laws endure once they have been enacted. For when there is regulation ensuring that the same children always play the same games, under the same conditions, in the same way, and enjoy the same playthings, this provision also allows the existing regulations on more serious matters to be free from disturbance. However, when there are variations and innovations in games, and changes are constantly being introduced, and the children's tastes are never the same for long, when they never settle upon a standard of what's seemingly or unseemly in the deportment of their own bodies, or in anything they make use of, they then develop undue respect for anyone who constantly innovates by introducing something new and different from what they are accustomed to, in terms of shape, colour and everything of that sort, and I think we may safely say that no greater harm could befall a city than such a person as this. For he is surreptitiously changing the habits of the young, making them despise what is old, and honour whatever is new. So, I say again that nothing does more damage to any city than the expression of such a doctrine as this. Listen, and I will tell you just how bad it is.

797d

Clinias: Are you referring to criticism of the ancient traditions of our cities?

Athenian: Very much so.

Clinias: You won't find this particular argument falling on deaf ears with us. We'll do our best to give you a good hearing.

Athenian: So I expect.

Clinias: Please proceed.

797e

Athenian: Come on then, let us surpass ourselves both as listeners and as speakers. The fact is that all change, except

when it deals with evils, will be found to be extremely precarious, whether it affects the seasons, the winds, our bodily regimen, or the tendencies of our souls. And this is not, as we might say, sometimes so and sometimes not so, but always so, except, as I said just now, in the case of evils. Look at our bodies, for instance. We see that they become accustomed to all sorts of food, drink and exercises, even though they were disturbed by these at first. Then, over time, from these very materials they grow flesh that is akin to these, and having developed a fondness, familiarity and understanding of this entire regimen in terms of pleasure and health, they live an excellent life. But if someone is ever compelled to change once more to some other worthy regimen, the person is disturbed in the beginning by various diseases, and only gradually recovers as he gets accustomed again to the diet. Now, we should presume that the same thing also applies to people's minds, and at the same time to the natures of their souls too. For when the laws they have been reared under are, through some divine good fortune, stable over a long period of time, so that no one remembers or has even heard of them being different from the way they are at the moment, all the soul reveres them and is afraid to alter anything that has been in place for so long. So the lawgiver should discover, somehow or other, the means whereby his city will secure this advantage. My suggestion is as follows. All lawgivers are of the view that changes in children's games, as we said before, are in themselves a mere game, and that no great or serious harm comes from them. Consequently, instead of trying to avert them, they go along with them compliantly, and it never occurs to them that children who engage in innovation in their games necessarily become very different people than the previous generation of children. Once they become different they seek a different life, and in their search they develop a desire for different pursuits and laws, and none of them fears the arrival of what we have just called the greatest

evil afflicting our cities. Other changes, affecting mere externals, would be less productive of evils, but frequent changes in what is praised or censured in the characters of people, are, I believe, the most influential of all, and should be treated with the utmost caution.

Clinias: Of course.

798d

Athenian: Well now, do we still believe the previous arguments in which we asserted that rhythms, and music in general, are imitations of the manners of better people or worse people? Or where do we stand?

Clinias: Our opinion on the matter would remain unchanged.

Athenian: Should we maintain then that every possible means must be devised to ensure that our children neither develop the desire to come up with alternative imitations, in dance or in song, nor that anyone lures them in that direction with pleasures of all sorts?

Clinias: Correct.

798e

Athenian: For such purposes, can any of us suggest any device better than what the Egyptians use?

Clinias: What are you referring to?

799a

Athenian: Making all dance and all song sacred, having first regulated the festivals by drawing up an annual list prescribing which festivals are to be celebrated, at what times, dedicated to what particular gods, children of gods or daimons. After this, certain people must first ordain which hymn is to be sung at the various sacrifices to the gods, and with which dances the sacrifice is to be graced on that occasion. Once these have been ordained, all the citizens, communally, having performed sacrifices to the Fates and to all the other gods, should

consecrate the relevant hymns to the particular gods and divinities. But if anyone introduces other hymns or dances besides these to any god, the priests and priestesses, assisted by the guardians of the law, shall be performing a sacred and lawful act in excluding the offender from the festival. And if he is unwilling to accept his exclusion, he shall, for the rest of his life, be subject to a charge of impiety by anyone who wishes to pursue the matter.

Clinias: And rightly so.

799c

Athenian: Well, having embarked upon this argument, we should behave in a manner that becomes us.

Clinias: What are you referring to?

799d

Athenian: No young person, presumably, not to mention the elderly, on seeing or hearing anything strange and not at all familiar, would ever, I imagine, rush to some hasty resolution of the difficulties on the spot. He would pause, like someone who had arrived at a crossroads as he travelled alone or with others and did not really know the right road to take. He would question himself and others in the light of the difficulty and would not proceed further until he had settled the question of where precisely the road would lead him. And that is exactly what we should do now. For having just come across a strange argument in relation to laws, we need to investigate it thoroughly, I presume, and not, at our age, make pronouncements so glibly on such important matters, insisting there and then that we have something illuminating to impart.

Clinias: Very true.

799e

Athenian: Now, although we should allow time for this and only settle the issue after a comprehensive investigation, we do

not wish to be prevented needlessly from completing the subsequent arrangement of the laws that are now before us, so we should go on to the end of them. For perhaps, God willing, once this exposition as a whole reaches a conclusion, it may also proffer an adequate solution to our present difficulty.

Clinias: That's an excellent suggestion, stranger, let's do as you say.

800a

Athenian: So let's accept this unusual doctrine. We say that our hymns have become 'measures',⁸³ and that is just what the men of old seem to have called their harp-tunes too, so perhaps these people would not distance themselves entirely from what we are now saying, and one of them, I suspect, had an inspired vision of this whilst asleep, or in a waking dream. So let the following pronouncement be made on this matter. No one, in action or utterance, is to depart from the publicly prescribed tunes, rituals or choral performances of the young, any more than he would depart from any of the other legal measures. Whoever conforms shall suffer no penalty, but whoever disobeys, as we said just now, shall be punished by the guardians of the law, the priestesses and the priests. May we now take it that these issues have been settled by our argument?

Clinias: We may.

800b

Athenian: In what way, then, could someone legislate on these matters without becoming a total laughing stock? Let us look at this further issue concerning them. The safest approach is to contrive some aspects theoretically first. So I suggest the following. Suppose a sacrifice has been conducted and the offerings have been burned in accordance with the law, and some individual, a son or a brother, standing close to the altar and the offerings, were to utter all sorts of outright

blasphemies; wouldn't we expect this outburst to fill his father and other relations with despair, foreboding, and ominous apprehensions?

Clinias: Indeed.

800d

Athenian: Well, in our part of the world this is more or less what happens in almost all the cities. Whenever some official conducts a sacrifice in public, along comes not a single chorus, but a host of them, who stand not at a distance from the altars but sometimes right beside them, pouring out utter blasphemy over the sacred offerings, afflicting the souls of the gathering with their words, rhythms and mournful harmonies, and whoever provokes most tears from the sacrificing city carries off the victory prize there and then. Now, we shall cast our vote against such a practice, shan't we? And if our citizens ever actually need to give ear to such doleful strains on certain days that are not holy or noteworthy, wouldn't it be better that the choruses be hired in from outside for the occasion, just like the paid performers with their doleful Carian music who escort the dead at funerals? Some such arrangement would presumably be suitable for songs of this sort, and the costumes appropriate for performing these funereal dirges would not consist of garlands and gold embroidery, but to get the topic over with as quickly as I can, the direct opposite. I would just like us to ask ourselves this particular question once again. Are we satisfied that the first aspect of hymns, for us, would be this one?

Clinias: Which?

801a

Athenian: Reverent delivery. And, indeed, our hymns in general must be entirely reverent in every respect or is there no need to repeat the question? May I simply impose this regulation.

Clinias: Yes, impose it by all means. Indeed, this measure would win the vote unanimously.

801b

Athenian: Well, after reverent delivery, what would the second law belonging to music be? Is it that there should always be prayers to the gods to whom the sacrifice is being offered?

Clinias: Of course.

Athenian: Our third law, I believe, is that the poets, recognising that prayers are requests made of the gods, are to be extremely careful in case they ever unwittingly ask for bad as though it were good. In fact, making a prayer of this sort would in my view be an absurd state of affairs.

Clinias: Indeed.

Athenian: Now, weren't we persuaded by our argument a moment ago that wealth in the form of silver or gold should neither settle nor find a home in our city?

Clinias: We certainly were.

801c

Athenian: So can we say what precise aspect has been highlighted by this argument? Is it that poets in general are not really up to the task of recognising, unequivocally, what is good and what is not? Of course, when a poet falls into this error of praying in the wrong way, either in his words or in the melody, he will make our citizens utter prayers in matters of the utmost importance, contrary to our directions. And, indeed, as we said, it would be hard to find an error more serious than this. So shall we institute this as one of our legal models relating to music?

Clinias: What are you instituting? Explain this more clearly please.

801d

Athenian: The poet is to compose nothing contrary to what the city holds to be lawful and just, noble and good. He is not allowed to display his compositions before any private citizens until they have first been shown to and approved by the judges appointed to consider these matters, and by the guardians of the law. And these people have effectively been appointed by us already when we selected lawgivers concerned with music, and our supervisor of education. Well then, to repeat my question, shall we lay this down as a third model or aspect of our law? What do you think?

Clinias: Do so, indeed.

801e

Athenian: After these issues are settled, the right thing to do would be to sing hymns and praises to the gods, combined with prayers, and then, in like manner, prayers and praises to the daimons and the heroes, as appropriate to each.

Clinias: Of course.

Athenian: And after this there could be no objections to an immediate law whereby praises may be properly sung for any citizens approaching life's end, who have noble achievements to show for their hard work, physical or mental, and who have been obedient to the laws.

Clinias: How could anyone object?

802a

Athenian: As for those who are still alive, it is not safe to honour them with praises and hymns until their entire life has run its course and has attained a noble end. Then all these honours may be allowed to men and to women, without distinction, who have been conspicuous for their goodness. As for the songs and the dances, these should be organised as follows. Among the works of the ancients there are many beautiful traditional musical compositions, and the same may

be said of dances too for our bodies. And we are free to select from these whatever is appropriate and suitable for the constitution we are establishing. To make the selection, scrutinisers of these poems and dances are to be chosen who are more than fifty years of age. Whatever works of the ancients are deemed satisfactory should be accepted, while those deemed deficient or totally unsuitable are to be either rejected out of hand, or revised and corrected, as the case may be. For this we shall employ the services of the musical and poetical folk, making use of their ability as composers without surrendering to their tastes and preferences, with rare exceptions. Rather, by interpreting the wishes of the lawgiver, we shall institute dancing, singing and choral performance in general, as much in accord with those overall intentions as possible.

802c

Athenian: Any disordered musical activity is improved a thousandfold once it is regulated, even without the addition of the honey-sweet Muse. Pleasure is a common feature of all kinds of music. For someone who has lived his life from his earliest childhood until the age of maturity and good sense in the presence of a sober and measured style of music hates the opposite style when he hears it, and declares it to be unworthy of a free people. But someone who is brought up on popular sweet music regards the opposite style as cold and joyless. And so, as I said just now, neither the pleasure nor the joylessness has prevailed in either case, but the styles differ insofar as one makes those who are brought up on it better, while the other makes them worse.

Clinias: You have expressed that very well.

802e

Athenian: It would be necessary, in addition, to make a rough division, distinguishing between songs suited to females and those suited to males, and it would be important to set them to

appropriate harmonies and rhythms. Indeed, it would be terrible for the overall harmony, and the rhythms too, to be discordant, because the songs are not assigned what is suitable and appropriate in each case. So it will be necessary to legislate on these matters, at least in general terms. Now, although it is possible to assign the required harmony and rhythm to both kinds of songs, what songs are assigned to the female should be determined by the actual distinction between the natures of the sexes. Whatever is exalted and inclines towards courage should be pronounced manly, while anything that tends more towards order and sound-mindedness should, by our tradition of language and of law, be regarded as more feminine. This then is the arrangement. After this, we shall speak of teaching and passing on these subjects, the manner in which this is to be done in each case, to whom, and when. I seem to be behaving much like a shipbuilder who begins his design by laying down the keel and sketching the vessel in general outline. I am trying to set various lives before you in various terms, based upon the manner of people's souls, actually laying down their keels, to give proper consideration to this important question: how may we best navigate this journey of life? By what manner or means of living is this to be done? Now, human affairs are not worthy of extreme seriousness, but be serious we must, more's the pity. Yet, since we are here in this world, if we were somehow or other to be serious in an appropriate way, that would probably be the right measure for us. But what precisely do I mean? Someone would probably challenge me with that question, and rightly so.

Clinias: Indeed so.

803c

Athenian: I maintain that we should take what's serious seriously, and not be serious about what's trivial. God is naturally worthy of the utmost beneficent seriousness, while

humans, as I said before, have been constructed as a plaything of God, and that really is what's best about us. Every man and woman then should live their lives accordingly, adopting this way of living by playing the game as beautifully as they can, in total contrast to their present attitude.

Clinias: How so?

803d

Athenian: Nowadays they are of the view, it seems, that anything serious should be undertaken with play as the objective. And so, they believe that warfare, being a serious business, should properly be undertaken for the sake of peace. But the fact is that in warfare there never has been any play, nor indeed any education worth mentioning, nor is there now, nor will there ever be, and this I maintain is the most serious issue for us. So each of us should spend our lives, for the most part, in peace and excellence. What, then, is the right way to do this? Our lives are to be lived playing certain games which involve performing sacrifices, singing hymns, and dancing, so as to be able to secure the favour of the gods, and, indeed, repel our enemies and defeat them in battle. By what sorts of singing and dancing may both these objectives be attained? This has already been answered in broad outline, and the path has, in a sense, been opened up for us to tread, confident that the poet was right to say: "Telemachos, some of it you yourself will see in your own heart, and some the divinity will put in your mind. I do not think you could have been born and reared without the gods' will."⁸⁴ So, our charges too should be of the same mind as the poet; they must accept that what has been said is sufficient, and that in the case of sacrifices and dances, the daimon and god will make suggestions as to the particular gods to whom they are to offer their games in propitiation. And so, they will live out their lives in accord with the sort of nature they possess, being for the most part puppets, occasionally getting a

glimpse of the truth.

804b

Megillus: You are belittling the human race mightily, stranger.

Athenian: Do not be surprised, Megillus, just forgive me. I was intent upon God just now, and I said what I said in the light of that experience. So, if you prefer, let us allow that this human race of ours is not lowly, but deserves to be taken seriously.

804c

Athenian: To continue with the original subject, we spoke of buildings for public gymnasia and schools, three of them in the centre of the city, and, indeed, three training grounds and open spaces for horses outside the city on the periphery, fitted out for instructing and training the young in archery and long-range warfare in general. And if it turns out that these were not described in sufficient detail earlier, let us incorporate them now into our argument and laws. In all these places there are to be teachers in residence for each subject, foreigners attracted by the pay to teach any subjects that are concerned with warfare, or, indeed, with music, to those who attend. And it is not that the children are to attend if their father so wishes, and be exempt from the education if he does not. No, if possible, every "man and boy", as they say, being children of the city more so than of their parents, has to be educated. And, indeed, in the case of females, my law would mandate the very same provision as for males; the training of males and females should be identical. And in stating this argument, I have no reservations about horsemanship and gymnastics being appropriate for men but not for women. In fact, I have been convinced of this by hearing time-old stories, and nowadays I know that there are, so to speak, thousands and thousands of women living around the Black Sea – Sarmatian women, they are called – who have been directed to get involved to the same extent as the men, not only in horsemanship but in archery and

the use of weapons generally, and they train to the very same extent. Besides, I have a particular viewpoint on these issues, as follows. If it really is possible to arrange matters in this way, then the current practice in our parts of the world is the height of folly. It is sheer folly that all men and women don't conspire, with all their might, to engage in the same pursuits. As matters stand, almost every city turns out, more or less, to be only half what it might be, based upon the same expenditure and effort. And that, surely, constitutes an astonishing error on the part of the lawgiver.

805c

Clinias: So it seems, stranger. Nevertheless, much of what is now being suggested runs counter to our customary civic practices. You said that the argument should be allowed to run its course and we should draw conclusions only when it is over. That suggestion was most reasonable, and I must rebuke myself for saying what I have just said. So, proceed with the argument as you think best.

Athenian: Well, Clinias, what seems best to me is what I said previously; if current practices did not provide sufficient evidence that these proposals can actually be implemented, perhaps it might have been possible to contradict the argument. But now someone who won't accept this law of ours must pursue a different course, and our injunction will not be nullified by these arguments. The female sex must share, as much as possible, with the male sex both in education and in everything else. And, indeed, this somehow is the way in which we need to think about these issues. Suppose that women do not participate in common with men in every aspect of their lives, won't we need to make some different arrangements for them?

Clinias: Yes, we would need to do that.

805e

Athenian: If we had to pick some arrangement that is currently established somewhere in preference to this common participation that we are now imposing on them, which arrangement would we choose? Would it be the system used by the Thracians and many other peoples whereby their womenfolk tend the land, mind the oxen and sheep, perform menial tasks, and are not much different from slaves? Or should we do as all of us do in our region? Among ourselves nowadays, our practice on these issues is as follows. We accumulate all of our wealth under one roof, so called, and to the women we hand over the management of provisions and responsibility for weaving and wool-working in general. Or should we propose the middle ground, Megillus, the Spartan approach? Are the young girls to be involved in gymnastics and music too, while the women, although excused from wool-working, weave for themselves a busy life that is not at all commonplace or paltry, reaching a middle ground consisting of service, management of provisions and child-rearing, without having any involvement in warfare? So, if some necessity ever arises to do battle on behalf of the city and its children, are they to be unable to use a bow skilfully like the Amazons can, or use any other kind of projectile either? Could they even imitate the goddess⁸⁵ by picking up a shield and spear, taking a noble stand against the devastation of their native land, and be able, at very least, to strike fear into their enemies by being seen in battle formation? Based upon their manner of living, they could never attempt to imitate the Sarmatian Amazons at all; alongside your women, those women would look like men. So, if anyone wishes to sing the praises of your lawgivers, let him do so. For my part, I can only say what I have just said: the lawgiver is to be fully committed and not half do the job by allowing the female sex a luxurious, profligate and disorderly lifestyle, while paying close attention to the male sex, thus endowing the city with just half of a completely happy life, rather than the whole thing.

806c

Megillus: What are we to do, Clinias? Shall we allow the stranger to denigrate Sparta in our presence in this way?

806d

Clinias: Yes. Having granted him freedom of speech we must allow him free rein until such time as we have gone through the laws in sufficient detail.

Megillus: You're right.

Athenian: What comes next? Shall I now try to tell you?

Clinias: Of course.

Athenian: What sort of life, then, would people have if all their needs were met in due measure, all skilled labour had been handed over to others, and their farms had been entrusted to slaves, yielding a return sufficient for people who live orderly lives? What if communal meals were arranged, with men eating apart, while members of their household dined close by, including female children and their mothers? Suppose supervisors, male and female, were appointed to break up the gatherings on each occasion, having kept the conduct of the meals under observation, ensuring that everyone went on their way, in due course and order, after the supervisor and the others had poured a libation to the gods to whom that day and night happened to be sacred. For people living under such arrangements, what necessary work is there? What work is really appropriate? Is each of them to spend their life like a fatted beast? No, that, I maintain, is neither just nor noble, nor could someone living in this way fail to get what is due to him, and what is due to an idle creature, fattening itself in indolence, is generally to fall prey to some other creature, one that has been worn thin by vigorous hard work.

807a

Athenian: Now, if we sought to implement these measures, as now described properly in detail, they would probably never see the light of day as long as there are private wives, children and dwellings, and everything of this sort is arranged on a private basis for each and every one of us. But if, instead, we could implement the second-best arrangements, the ones we are describing, that would be most reasonable. And yet, we maintain that for people living in this way, the task entrusted to them is far from trivial or commonplace; a just law has assigned them the most important task of all.

807b

Athenian: Consider, then, a life that affords no leisure for any other activities at all, the life of someone intent upon victory in the Olympic or Pythian games, for instance. Well, the life that is concerned with the overall care of both body and soul in terms of excellence, the one that may most truly be called a life, is twice – indeed, more than twice – as busy. Indeed, no other tasks should act as a distraction, impeding the provision of the appropriate exercise and nutriment to the body, or, indeed, of the necessary instruction and habituation to the soul. All day and all night is scarcely enough for someone engaged in this task to derive full and complete benefit from these pursuits. And this being the case, all these free people should have a regulated lifestyle all of the time, beginning more or less at dawn on one day and continuing without any interruption until dawn and sunrise on the next. Now, any lawgiver who makes lots of detailed trivial pronouncements about private domestic arrangements would be a sorry sight, especially when these are concerned with how long people should remain awake at night if they are to be accomplished and attentive guardians of the entire city. Indeed, for any of our citizens to spend the whole of any night in slumber, and not be seen wide awake by his entire household because he got up first, should be regarded by everyone as disgraceful and unworthy of a free people, whether

such behaviour is dictated by law or by practice. And, indeed, for the lady of the house to be awakened by some attendants rather than herself wakening everyone else first should be proclaimed a disgrace among the servants themselves, male and female, young and old, and even, if possible, by the very building itself. A good proportion of civic and household affairs should be dealt with whilst awake during the night hours by those in authority in the city, and by masters and mistresses in private households. For a lot of sleep is not naturally suitable either for our bodies or for our souls, or, indeed, when dealing with all these affairs. No one who is asleep is good for anything, any more than a dead person. But those of us who care most for being alive and using our minds, remain awake as much as we can, making sure that we get only as much sleep as is needed for our health, and that is not much once the habit has been well established. When the rulers in cities are awake during the night hours, they strike fear into evil doers, be they external enemies or fellow citizens, yet they are admired and respected by the just, sound-minded people, and are a source of benefit to themselves and to the city in its entirety.

808d

Athenian: In addition to all the benefits we have listed, spending the night in this way will also equip the souls of everyone who resides in these cities with some courage. And when day breaks once again at dawn, the children make their way to their teachers, for children should not be allowed to live without someone in charge of them, nor slaves without masters, any more than sheep or any other beast should be without herdsmen. Of all beasts, the young child is the most difficult to take in hand, since the fact that he, in particular, possesses a fount of intelligence that is as yet uncontrolled makes him a scheming, shrewd and extremely unruly creature. That is why a child needs to be reined in by lots of bridles, as it were, firstly, when he is away from his nurse and his mother, by attendants

to deal with his childish immaturity; then by teachers of any subjects at all, and by instruction that befits a free people. And yet he must also be treated as a slave who may be punished by any free man who comes across the child himself, or his attendant or teacher, engaging in any transgression. What is more, if the person who comes across them fails to inflict a just punishment, he is first and foremost to be held in the utmost contempt. Then the guardian of the law who has been put in charge of the children shall keep a close eye on this person who came across the transgression we are referring to and did not impose the required punishment or did so in an improper manner. This guardian of ours should be extremely vigilant, pay particular attention to the rearing of the children, and guide their development by constantly turning them towards what is good and lawful.

809b

Athenian: As for the guardian himself, how might this law of ours provide him with adequate instruction? As matters stand, it has not so far said anything that is sufficiently clear; some issues have been dealt with, others not. But in the case of this man, the law should do its best to omit nothing and expound a full account so that he in turn may expound this to others and look after them. The types of choral performances, by which we mean songs and dances, which should be selected, corrected and consecrated, have already been dealt with. But, O most excellent overseer of children, we have not described the kinds of written compositions, devoid of metre, to be used by your charges, and the manner in which they should be used. Now, you already have an account of what they should learn and study in relation to warfare. Then there are letters and the lyre, and also calculation, of which we said there should be as much as each person needs to learn for the purposes of warfare, household management and the administration of the city. For the same reasons, they should also learn whatever is useful

concerning the orbits of the heavenly bodies, the sun, moon and stars, and any provisions that any city needs to make with reference to these. What I am referring to is the arrangement of the days into cycles of months, and the months into each recurring year, so that seasons, sacrifices and festivals are each celebrated in accord with the natural order because they have each been assigned their own appropriate place. These keep the city alive and alert, bestow honours upon its gods, and render the people more intelligent about these matters. These issues have not so far been adequately explained to you by the lawgiver, my friend. So pay attention to what is to be said next.

809e

Athenian: Now, in the first place, we are saying that you have not had adequate instruction about the written word. What is our objection? It is this: it has not yet been explained to you whether someone who is to be a reasonable citizen is to go into the subject in detail or set it aside entirely, and the same consideration applies to playing the lyre. Well, we are now saying that these studies should not be set aside. For a ten-year-old, three years on writing is more or less enough, and if he takes up the lyre at the age of thirteen, three years is a good measure of time to spend on it. And neither the child himself nor his father may be permitted to prolong or curtail the time spent on these subjects out of love or distaste for them, and go against the law by so doing. Whoever does not comply is to be deprived of the educational honours which we shall describe shortly.

810b

Athenian: You should first understand what precisely the young people should learn in those years, and, again, what the teachers should teach. And we should not insist upon high achievement, in terms of speed or beauty, in students whose development is naturally slower during the specified time periods. For the purpose of instruction in written compositions

not set to music, some having metre, others devoid of rhythmical subdivisions, consisting in fact of the spoken word alone, bereft of rhythm and harmony; for this purpose we have been left writings that are fraught with danger by some of the numerous authors of this kind. So, most excellent guardians of the law, what are you to do with these? And what exact directions for using them would the lawgiver give you if he were to proceed aright? I think this will challenge him mightily.

810c

Clinias: What exactly do you mean, stranger? You are apparently describing your own personal perplexity.

Athenian: Your suspicion is correct, Clinias, and, indeed, since the two of you are my partners in this discussion of laws, I need to explain where the difficulties seem to lie and where they do not.

Clinias: Well then, what point are you making now, and what is bothering you?

Athenian: I will tell you, then, although it is not at all easy to speak in opposition to tens of thousands of voices.

Clinias: What's this? Do you think that what we have said already about laws goes against majority opinion, merely on a few insignificant matters?

810d

Athenian: Very true, in fact you seem to be telling me, as I see it, that although the same course is anathema to the majority, it is perhaps acceptable to just as many others, and even if there are fewer of them, they are every bit as good as the majority. You are now encouraging me to take my chances with these few, not to give up, but proceed courageously along the legislative course prescribed by our present arguments.

Clinias: Indeed.

810e

Athenian: I shall not give up, then. Now, I am saying that we have countless poets who compose in hexameters, in trimeters, and in all the metrical forms you could mention, some whose intention is serious, others intent upon raising a laugh. The tens of thousands of voices maintain that properly educated young people should be brought up on these verses and saturated in them, thus turning them into highly learned folk who have heard a lot, having committed entire poems to memory. There are others who select highlights from all the poets' works, compile whole extracts, and maintain that these must be studied and committed to memory if our young charge is to be good and wise, because of this extensive experience and learning. Are you telling me, then, to be frank with these people and point out the rights and wrongs of what they are saying?

Clinias: Of course.

811b

Athenian: Well then, is there a single statement I can make about all of these poets that will suffice? I think that something along the following lines may be enough, something on which most people will agree with me. Each of these poets has said much that is good and much that is not. If this is the case, then I maintain that for children, extensive learning is fraught with danger.

Clinias: So what advice would you give to the guardian of the law?

Athenian: About what?

811c

Clinias: About the guideline he is to refer to as to what all the young folk should be allowed to learn and what should be forbidden. Tell us and hold nothing back.

Athenian: Good man, Clinias, I suspect that I have somehow been fortunate.

Clinias: In what respect?

811d

Athenian: Insofar as I am not entirely at a loss for a standard. In fact, as I look back now at the discussions we have conducted from dawn up to this point, not, I believe, without some inspiration from the gods, these seem to me to have been delivered from start to finish like some poem. Indeed, as I surveyed our own arguments, gathered together as it were, it is surely no surprise that I experienced great delight. In fact, of all the many discourses I have learned or listened to, in poetry or in a flood of words like ours, these to me are evidently the most measured, and especially appropriate for young people to hear. So I don't think I would be able to propose a better standard than this to an educator and guardian of the law, or do better than encourage him to instruct those who teach children, to teach them these discourses. And if in his enquiries he should somehow come across poetical compositions that are related to or similar to these, in the form of prose writings or simple unwritten works, akin to these discourses, he is not to let them go at all, but get them written down. Firstly, he is to compel the teachers themselves to learn and to praise these, and any of the teachers who don't like them are not to be employed as colleagues, while those who go along with his praise are to be employed and entrusted with the instruction and education of the young. And so, with this, let my story about the written word and the teachers thereof be concluded.

812a

Clinias: Well, stranger, looking at our initial intention, I don't think we have gone outside of the bounds of the discussions we intended. But it is hard to say for certain whether we are still adopting the correct approach or not.

Athenian: That, dear Clinias, as we have said on many occasions, is likely to become clearer of itself once we come to

the end of our entire exposition concerning laws.

Clinias: You're right.

812b

Athenian: So, after the teacher of the written word, shouldn't we deal next with the harp teacher?

Clinias: Indeed.

Athenian: Well then, in the case of harp teachers, I think we shall assign them their appropriate roles as instructors and as educators in such subjects generally, if we bring our previous discussions to mind.

Clinias: Discussions about what?

812c

Athenian: We said, I believe, that the sixty-year-old singers of the chorus of Dionysus have to be exceptionally perceptive in relation both to the rhythms and to the constructions of the harmonies in melodic imitations, which may be good or bad in terms of how they affect the soul. This will ensure that there is someone who can distinguish between the likenesses associated with a good imitation and those of a bad one, reject the latter, give pride of place to the former, and sing these to the young folk to charm their souls, encouraging each of them to hold fast to the acquisition of excellence which they should understand by means of the imitations.

Clinias: Very true.

812d

Athenian: To this end, the harp teacher and the student should make use of its sounds for the sake of the distinctness of its strings by matching the notes of the instrument to those of the voice. But the harp exhibits contrast and variation, so that one tune comes from the strings, another from the composer of the melody, especially when lots of notes are sounded with very few, fast tempo with slow, high pitch with low, and likewise all

sorts of variations in rhythm can be incorporated into the notes of the harp. All such devices are to be avoided if our pupils are to derive benefit from music in the short space of three years. For this clash of opposites with one another makes learning difficult, but it is most important that our young people learn easily. Indeed, the compulsory subjects we are assigning to them are neither few nor trivial, but the progress of our discussion will reveal these in due course. So, our educator is to look after these matters for us in this way. As for the musical compositions themselves, and the words that the choral instructors should teach, and what these should be like, all this we have already described in detail. We stated that they should each be consecrated and assigned to the appropriate festival, thus benefiting the cities by providing them with propitious pleasure.

Clinias: True. You have explained this.

813b

Athenian: True, indeed. And our chosen supervisor of music is to assume responsibility for this, and may good fortune attend him. Our contribution will be to add to what has already been said about dance and physical training in general. Just as in the case of musical instruction we contributed what was missing, so we should also do the very same in the case of physical training. For the children, male and female, must indeed learn to dance and to train their bodies. Isn't this so?

Clinias: Yes.

Athenian: The boys and the girls should have dancing teachers, male and female, so that this exercise may be of service to them.

Clinias: They should.

813c

Athenian: Then let us call once again upon the person who will have most duties to perform, the one in charge of our children,

who, being responsible for both musical and physical training, will be very busy indeed.

Clinias: How will he be able, at his age, to be responsible for so much?

813d

Athenian: Easily enough, my friend. For in exercising this responsibility, the law has given him, and will always give him, the support of any of the citizens, male or female, whom he wishes to enlist. And he will know the people he needs, and will resolve to make no error in selecting them because he has the intelligence to recognise and respect the importance of his own role, and come to the realisation that when the young have been, and continue to be, well brought up, everything holds to a steady course for us. But if not, the consequences should not even be spoken of, and we are not to speak of them now in the case of our new city out of respect for those who are highly superstitious. On these matters too, concerning dancing, and movement related to bodily exercises in general, we have said a great deal already.

813e

Athenian: For we are instituting gymnasia and the various bodily exercises related to warfare: archery, throwing missiles, skirmishing, all sorts of armour fighting, tactical manoeuvres, various marches of armies and encampments, and the subjects involved in cavalry training. Indeed, there should be public instructors in all these, earning a wage from the city, and their pupils should be the boys and men of the city. And the girls, and women too, must be knowledgeable about all these matters, having practised dancing and fighting in armour while still young, and in womanhood having taken part in manoeuvres, drills, and the placing and taking up of arms. If nothing else, this will ensure that if it ever proves necessary for our entire fighting force to leave the city on military campaign, those who

are left guarding the children and the city at large, will at least be up to the task. Or if, on the other hand, and this is nothing unusual, some external enemy, Greek or barbarian, were to invade with huge power and might, and there had to be a battle for the city itself, it would presumably be a vile disgrace to the state if the women had been so badly brought up that they were not prepared to do as birds do and fight for their young against the strongest of beasts in the face of death and all sorts of dangers, but instead they made straight for refuge in the temples, crowding all the shrines and altars, pouring upon human beings the reputation for being the most cowardly creatures of all.

814c

Clinias: No, by Zeus, stranger. If this were to happen in the city, apart from the harm it would do, it would be most unseemly.

Athenian: Should we enact a law to this effect – that to the extent indicated at least, women are not to neglect military matters, but all citizens, male and female, are to attend to them?

Clinias: Well, I agree with you at any rate.

814d

Athenian: Now, as for wrestling, much has been said, but I would maintain that we have not yet dealt with its most important aspect, nor is it easy to do so without a physical demonstration to illustrate what is being said. So, we shall only make a decision on this when word follows deed and makes something about the various issues we have spoken of quite clear – that of all movements, the sort of wrestling we are referring to is very closely related to military combat, and, indeed, the wrestling should be pursued for the sake of the combat, and not the other way around.

Clinias: You are right about that anyway.

814e

Athenian: Let that be enough said for now on the efficacy of wrestling. Movement of the entire body, other than in wrestling, may, for the most part, properly be described as dancing. We should think of this as having two forms, one being the dignified representation of the movement of beautiful bodies, the other being the base representation of the motion of ugly bodies. And again, the base and the serious movements have two further subdivisions. One form of the serious movement occurs in warfare and in the strenuous exertions of beautiful bodies and a courageous soul, the other is the motion of a moderate soul in success, amidst measured pleasures, and this would naturally be called the dance of peace. The warlike kind, which is quite different from the peaceful one, may properly be referred to as Pyrrhic. This imitates various means of avoiding blows and missiles by ducking, yielding, jumping upwards, and by crouching, and their opposites too, motions that involve postures of attack, attempting to imitate the shooting of arrows and darts and the inflicting of all sorts of blows. In these dances, the upright and well-braced posture, when imitating the good bodies and souls, preserving for the most part the straightness of the limbs of the body, is the sort of imitation we accept as correct, while imitations of the opposite of these are wrong. In the case of the peace dance, the following question needs to be considered in each case. Does the performer, in his dances, succeed or fail in persistently adopting the noble dancing in a manner appropriate to people with good laws?

815c

Athenian: So we have, in the first place, to make a distinction between controversial dancing and the uncontroversial kind. What, then, is this distinction, and how may we distinguish one kind from the other? Any Bacchic dances, or those of that ilk, which, as they say, mimic so-called nymphs, pans, sileni and

satyrs in a drunken state, which are performed during certain purifications or initiations, all constitute a class of dancing that defies easy definition as a peace dance or a war dance, nor is its purpose easy to define. I think that the most correct way to distinguish this dance is to insist that it is distinct from the warlike and the peaceful kinds, declare this dance to be uncivilised, leave it aside, and return once more to the warlike and peaceful dances which are, undeniably, ours. Whatever belongs to the non-warlike Muse, dances in which people revere the gods and their offspring, constitutes a single general class involving a sense of well-being. This may be divided into two parts. One imitates people escaping from hardships and dangers and coming out well. This is more pleasurable. The other is milder in its pleasures, and it involves the preservation or increase of goods that they already possess. And in these situations, presumably, a person moves more violently when the pleasures are greater, and less violently when they are less. Again, someone who is better behaved and better trained for courage moves less violently, while the coward, and someone untrained for restraint, exhibits more violent and erratic changes in his movements. In general, when the voice is being used, whether in song or in speech, no one is able to keep the body totally still. And so, because there is imitation, in gesture, of whatever is spoken, this has produced the art of dancing in its entirety. In all these situations, some of us move in harmony with the utterances, others do not. Now, many of our other traditional names should be given well-deserved praise for their excellence and their accord with nature. One of these is the name given to the dances of people who are doing well and are themselves measured in their use of pleasure. See how right the man was, and how musical too, whoever he was, who, with good reason, named all these dances "harmonious" and established two kinds of noble dances, one warlike, called "pyrrhic", the other one peaceful, called "harmonious". He gave a suitable and

fitting name to both. These the lawgiver should explain in general terms, while the legal guardian should scrutinise them, and having completed his investigation, combine dance with music in general, and allocate to the various sacrificial festivals whatever is appropriate to each, thus consecrating them all in due order. Thereafter, there should be no change in anything involving dance or song. And so, the same city and body of citizens should live well and live happily, being as like unto one another as possible by enjoying the same pleasures in the same way.

816c

Athenian: So, that concludes the matter of beautiful bodies and noble souls engaged in choral performances of the kind we have prescribed. But we also need to look at and take note of ill-formed bodies and ill-formed notions, and those who engage in laughable clownish activity in speech, song or dance, using imitations of all these for comic effect. For it is not possible to understand the serious without considering the comic, or to understand anything that has an opposite in the absence of its own opposite if we propose to develop our intelligence. Nor indeed is it possible to engage in both if we really intend to share even in a modicum of excellence. No, the very reason why we need to understand these is to ensure that we never do or say ridiculous things out of ignorance when we shouldn't. But such mimicry is to be turned over to slaves and foreign hirelings, and it should never be taken seriously. Nor should any free-born man or woman ever be seen engaging in its study, and there should always be something novel about these imitative performances. So much then for the laughable entertainment which we generally call comedy. It may be settled in this way by law and by reason.

817a

Athenian: As for the so-called serious compositions of the tragic poets, suppose some of them were to approach us and

question us. "Strangers, may we or may we not visit your city and its territory, and may we bring our poetry along with us, or how have you decided to deal with such matters?" How might we respond to these divine men in the right way on these issues? I suggest the following. "Visitors, best of men, we ourselves are authors of a tragedy, the most beautiful and excellent one we are capable of. Indeed, our entire civic arrangement has been constructed as an imitation of the most beautiful and excellent life, which, at least according to us, really is the truest tragedy. So you are poets and we are poets too, of the same sort, rival authors and rival actors in the most beautiful drama, which true law alone naturally produces. That is what we believe. Do not presume then that we shall ever allow you so easily to set up your stage in our midst in our market place, bringing in your honey-voiced actors to drown out our sound, or trust you to speak publicly to our women and children and the general populace, speaking on the same topics we speak on, not saying the same things as we do, but for the most part, the complete opposite. In fact, we would be completely mad, more or less, and so would any city that would allow you to do what is now being suggested, before the officials had decided whether or not your works are fit to be spoken and deserve a hearing among us. Well then, ye children sprung from the soft Muses, once you have, in the first place, exhibited your own verses to the officials alongside ours, then provided your pronouncements turn out to be every bit as good as ours or even better, we shall grant you a public chorus. But if not, my friends, we could never do so. So, if you agree, in the case of choral performance in general, and instruction in these matters, let these customs be prescribed to accompany the laws, one set of arrangements for slaves, a different set for their masters."

817e

Clinias: How could we disagree, at this stage at least?

Athenian: For a free people there are three subjects still remaining: calculation and whatever involves number, one subject; measurement of length, area and volume is the second one; while the third deals with the orbit of the stars, and their natural motion relative to one another. It is not necessary for a lot of people to apply themselves to all these subjects in all their detail. Only a few should do so. And we shall say who these people are as we come to the end. That's the appropriate place. It would be appropriate for the multitude to learn as much of these subjects as is necessary, and it would be a disgrace, properly speaking, for most people not to know that much at least. But for everyone to study them in detail would neither be easy, nor at all practicable. Yet, what is necessary in them cannot be cast aside, and it seems that whoever first devised the proverb about God had these in view when he said that not even God would ever be seen doing battle against necessity, referring, I believe, to necessities that are divine. Since, if the reference is to human necessities, which is what most people have in mind when they say this sort of thing, then this is by far one of the silliest of all sayings.

818b

Clinias: What, stranger, are the necessities in these subjects that are not of this human sort, the divine ones?

818c

Athenian: In my opinion they are those which, if they neither enacted nor learned them at all, no god would be a god to humanity, nor would any daimon or hero be capable of exercising any serious care of us humans. They would fall far short of the status even of a godly human if they were completely unable to tell one from two or two from three or, in general, distinguish odd from even, or did not know how to count at all and were unable to demarcate night and day, having no familiarity with the orbits of the sun and the moon and the other stars. So all these studies are necessary for anyone who

intends to attain any knowledge whatsoever of the most exalted of subjects, and it is utter folly to think otherwise. The particular aspects of these that should be studied, the extent and timing of this, what goes with what, which may be studied in isolation, and all combinations of these, this is what needs to be understood first. We may then proceed, guided by these subjects, to learn the others. For necessity has settled matters in this way, and against this we maintain none of the gods now does battle, nor will they ever do so.

818e

Clinias: It seems at the moment, stranger, when you put it like that, that this has been expressed correctly and that what you are saying is in accordance with nature.

Athenian: This is indeed the case, Clinias, yet although we have prearranged matters in this way, it is difficult just now to enact any laws. But we might, if you agree, enact laws in greater detail on some other occasion.

Clinias: You seem to us, stranger, to be concerned about the customary lack of experience in these subjects among ourselves. But your fear is ill-founded, so try to explain yourself without any reservation on those grounds.

819a

Athenian: Although I have concerns on the grounds you mention, I am even more fearful of those who apply themselves to these particular subjects but do so in the wrong way. Complete and total inexperience is never a threat, nor is it a huge evil, but vast experience and learning, accompanied by bad training, is much more damaging.

Clinias: True.

819b

Athenian: So I maintain that free people should learn as much of these various subjects as vast hordes of children in Egypt

learn when they are being taught to write. For beginning with calculation, lessons have been devised for mere children, combining amusement and pleasure with learning. They make distributions of some apples or garlands, allocating the same fixed number to larger or smaller groups, or they arrange byes and pairings for boxers and wrestlers, who take their turn in sequence as natural circumstances dictate. And, indeed, they devise games in which saucers of gold, bronze and silver and other such materials are mixed, or in other cases whole sets of these are distributed. By fitting the applications of the rules of arithmetic into a game, as I said, they are of benefit to the students in terms of the arranging, leading and marching of armies, and in household affairs too, and so they produce people who are generally more useful to themselves and more alert. After this, in the case of measurements of distance, area, and volume, they dispel the natural but laughable and shameful ignorance about all these matters that is so widely prevalent.

Clinias: What do you mean? What sort of ignorance?

819d

Athenian: Dear Clinias, when I heard only recently of our general predicament in relation to these matters, I was astonished, and it seemed to me more like the predicament not of humans, but of lowly creatures like pigs, and I was ashamed not only for myself, but for the entire Greek world.

Clinias: About what? Tell us what you mean, stranger.

Athenian: I am telling you, but I will make the point clearer by using questions. Tell me briefly, do you know what length is?

Clinias: Of course.

Athenian: What about area?

Clinias: Absolutely.

Athenian: Do you realise that these are two distinct things and that volume is a third?

Clinias: Certainly.

Athenian: Now, do you think that all these can be measured against one another?

Clinias: Yes.

Athenian: I mean, that length can naturally be measured against length, area against area, and the same applies to volume.

Clinias: Very much so.

819e

Athenian: But what if this is neither very much so nor moderately so, but so in some cases and not so in others, and you believe that it is so in all cases? How then, would you rate your understanding of these matters?

Clinias: I'd rate it badly, of course.

Athenian: Now, what about length and area with respect to volume, or length and area with respect to one another? Aren't we Greeks all of the view that they can somehow or other be measured against one another?

Clinias: Entirely so.

820a

Athenian: But if this is not possible in any way at all, but we Greeks, as I said, are of the view that it is possible, are we not justified, out of shame on behalf of us all, in saying to them, "Oh most excellent Greeks, this is one of those matters of which we said that ignorance constitutes disgrace, although there is nothing particularly wonderful in knowledge of such necessary matters either."

Clinias: Of course.

820c

Athenian: And besides these, there are other matters related to these in which, again, many errors akin to these errors arise for us.

Clinias: Such as?

Athenian: Issues concerning the nature of the interrelationship of things that are measurable against one another and things that are not. In fact, we need to be able to distinguish between these or else be very lowly creatures indeed. People should be constantly setting problems like this for one another, competing in activities that are valuable to them, a much more refined pastime for old men than draughts.

Clinias: Perhaps. After all, there is not a great deal of difference between draughts and these subjects.

820d

Athenian: Well, Clinias, I maintain that the young folk should learn these subjects. Indeed, they are neither harmful nor difficult, and when learned through the medium of play they will benefit the city and do it no harm. Yet if anyone says otherwise, we should listen to him.

Clinias: Of course.

Athenian: Well then, if this turns out to be how matters stand with these subjects, we should obviously include them in our scheme, but if this is not the case they should be excluded.

Clinias: Obviously, indeed.

820e

Athenian: In that case, stranger, shall we now let these be included among the subjects that need to be learned so that there may be no gaps in our laws? But let us let them lie there like so many pledges that can be revoked from the rest of the constitution, in case we who have given them or you who are receiving them come to disapprove of them.

Clinias: A fair pledge.

Athenian: Next we should consider teaching the young people about the stars, and whether you approve of this or not.

Clinias: Proceed.

Athenian: There is a major surprise in relation to these matters, a totally intolerable one.

Clinias: What is it?

821a

Athenian: We maintain, nowadays, that the greatest god and the entire universe should not be subject to enquiry, nor should we busy ourselves in seeking out their causes, because to do so is an unholy act. But it does seem that the very opposite course of action to this is the correct course.

Clinias: What do you mean?

821b

Athenian: What I am saying is controversial and may be thought inappropriate to men of our advanced years. However, once a person believes a particular teaching to be exalted, true, beneficial to the city, and favoured completely by God, it is no longer at all possible for him to refrain from speaking about it.

Clinias: Quite likely. But what teaching concerning the stars shall we find that matches your description?

Athenian: Good friends, nowadays all Greeks are, in a sense, telling a lie about the great gods – the Sun and the Moon.

Clinias: What lie is this?

Athenian: By calling these, and some other heavenly bodies along with them, planets, we are saying that they never hold to the same course.

821c

Clinias: Yes, by Zeus, stranger, that is true. Indeed, in my own lifetime, I myself have often observed that the morning star and evening star, and certain others, never traverse the same course, but wander in all sorts of ways, while the sun and the moon behave in a way that presumably is familiar to us all.

Athenian: That is the very reason, Megillus and Clinias, why I am now maintaining, in relation to the gods of the heaven, that our citizens and our young folk should learn at least enough about all these matters to avoid blasphemy in this regard and speak always with reverence, both when performing sacrifices and when uttering solemn prayers.

821d

Clinias: That's true, provided, firstly, that it is possible for whatever you are speaking of to be learned, and secondly, that anything we are now expressing incorrectly about them will be expressed correctly once we have learned this subject. If this is so, then I agree with you that something like this, something of such importance, must be learned. So you should attempt to explain, comprehensively, that this is indeed how matters stand, while we follow along with you and learn.

821e

Athenian: Well, what I am speaking of is not easy to learn, nor again is it enormously difficult, nor does it involve some huge time period. Here's my evidence. Although I had not heard about these matters in my early years, or long ago, I would nevertheless be able to explain them to you both in a relatively short time, whereas if they were complicated, I, at my age, would never be able to explain them to men of your age.

Clinias: True, but what exactly is this teaching which, according to you, is surprising, yet so appropriate for the young, and unknown to us? Please explain this much about it at least, as clearly as you can.

822a

Athenian: Try I must. For this assertion, best of men, that the moon and the sun and the other stars are wandering planets, in any sense, is incorrect; the exact opposite is the case. Each of them always traverses one and the same circular course, not many, even though each appears to follow many. What is more, the quickest of them is believed, incorrectly, to be the slowest, and the slowest to be the quickest. Now, if this is the natural state of affairs, but we believe otherwise, it's as if we were forming such views about horses racing in the Olympic Games, or about men running long distances, declaring the slowest to be quickest and the quickest to be slowest, and singing our celebratory odes to the loser rather than the winner. I imagine such odes would be misplaced, and not very well received by the competitors, who are, after all, mere humans. Yet nowadays, when we fall into the very same errors about the gods, can we not appreciate that what was incorrect and comical in that example would, in this present case, be no laughing matter at all? It is surely not pleasing to the gods that we are continually perpetuating a lie about them.

Clinias: Very true, if this is indeed how matters stand.

822b

Athenian: Well then, if we can demonstrate that this is how matters stand, then everything of this sort should be learned, thus far at least, but if this cannot be demonstrated, then we should leave them aside. Is this our agreement?

Clinias: It certainly is.

822c

Athenian: Well, at this stage we may declare that our regulations concerning the subjects of education are concluded. So we should now apply our minds, in like manner, to hunting and any other activities of this sort. In fact, the responsibility of a lawgiver seems to involve more than instituting laws and leaving it at that. There is something else, besides the laws,

something that naturally lies somewhere between admonition and laws, something that has come up frequently in our discussions, for instance, in connection with the nurture of very young children. For we are not saying that these matters cannot be formulated, but in formulating them it would be outright folly to imagine that we are enacting laws. So, when the laws and the overall constitution have been written down like this, any praise of a citizen for pre-eminent excellence is deficient when it maintains that a citizen is good merely because he is an exceptional servant of the law who obeys them to the utmost. The praise would be more comprehensive if it said that the best citizen is the one who spends his life, through and through, in obedience to anything the lawgiver has written by way of legislation, praise or censure. This statement in praise of a citizen is the most correct one, and so the real lawgiver should not only write down the laws, but he should also intertwine his views on what is good and what's bad with the details of his laws. And the pre-eminent citizen should uphold these, no less than those that are enforced by legal penalties.

823b

Athenian: But if we were to introduce our present topic as a sort of witness, that might make our meaning clearer. Indeed, hunting is a very complex subject, encompassed more or less by a single name. Hunting of water creatures is multifarious, and so is the hunting of birds, and there are a whole variety of ways of hunting land creatures, not only beasts but humans too, and this form of hunting deserves our attention. It operates in warfare and in hunting based upon friendship, which is sometimes praiseworthy, sometimes the opposite. Capture by kidnappers or armies is also a form of hunting. Now, the lawgiver, when enacting laws about hunting, cannot avoid making these differences clear, nor can he set down legal regulations and directions applicable to every situation with penalties as a deterrent. What, then, should be done about such

matters? The lawgiver should praise or censure the various aspects of hunting with a view to the endeavours of the young and their activities, while the young, for their part, should listen and obey, uninfluenced by the pleasure or the pain that is involved. They should comply more with whatever it is that the lawgiver praises, and be more respectful of that than of any particular legal penalties instituted as a deterrent. After these preliminary remarks, a measured praise and censure of hunting should follow, praising the sort that makes the souls of the young better, and censuring the form that does the opposite.

823d

Athenian: Next we should speak to the young people, addressing to them a prayer. Friends, we pray that no desire or passion for hunting by sea may ever overtake you, nor for angling either, nor for the hunting of water creatures in general, nor for lazy hunting using baskets that work on your behalf whether you are awake or asleep. May you never be overtaken by a longing for piracy, the pursuit of your fellow-man on the high seas, which would turn you into wild and lawless hunters. As for thieving in the countryside or in the city, may the thought never so much as cross your minds. And may none of you young folk be seized by the seductive passion for bird-hunting, which is so unbecoming of a free people. What's left for our competitors, then, is only the hunting and pursuit of land animals. One form of this, night hunting, is for idle men who take it in turns to sleep, and it deserves no praise. It involves just as much rest as exertion, and the wildness and strength of the quarry is overpowered by nets and snares rather than the triumph of a soul that loves exertion. The only kind of hunting left for everyone, and the best kind, is the hunting of four-footed beasts using horses, hounds and their own limbs, where the hunters, those that cultivate a divine courage, overcome all the creatures themselves with their own running, striking and shooting.

824a

Athenian: The discourse we have gone through would constitute our praise and our censure of all these matters. The law would be as follows: no one is to prevent those truly sacred hunters from hunting wherever and however they wish. But no one is ever to allow the night hunter, who puts his faith in nets and snares, to hunt anywhere at all. The bird hunter is not to be hindered in the open countryside or on the mountains, but anyone who comes across him on cultivated land or sacred open countryside is to drive him away. The fisherman is allowed to catch fish anywhere except in harbours, sacred rivers, pools and lakes, except that he may not make the water turbid with plant juices.

824c

Athenian: And now, at this stage, we may declare that all our regulations concerning education have been completed.

Clinias: Well you may say so.

BOOK VIII

828a

Athenian: The next step for us, with the help of the oracles from Delphi, is to arrange and establish by law which sacrifices, offered to which gods, would be better and more agreeable to the city. The timing of these and their number would, for the most part, be largely up to ourselves to legislate.

Clinias: Yes, in the case of their number that is quite likely.

Athenian: Then let us deal with their number first. Let there be no fewer than three hundred and sixty-five festivals, ^{828b} so that there is always at least one official offering a sacrifice on behalf of the city, its people or its property, to some god or daimon. Interpreters, priests, priestesses and prophets are to gather together, along with the guardians of the law, and make appropriate arrangements for whatever the lawgiver has

inevitably omitted. And, indeed, these very people should act as judges of what has actually been omitted. And the law, in fact, ^{828c} will say that there are to be twelve festivals to the twelve gods after whom the twelve tribes would each be named, involving monthly sacrifices offered to each of these gods, with choruses and competitions in music and gymnastics being dedicated, as appropriate, both to the gods themselves and the particular seasons of the year. In the case of the women's festivals, they are to determine those from which men should be excluded and those they may attend. What is more, the rituals associated with the gods of the underworld, and those associated with the gods who should be called heavenly, are to be kept separate and not be mixed together, allocating them by law to the twelfth month, sacred to the god of the underworld, ^{828d} Pluto. And there should be no revulsion among military men towards a god of this sort, who should, rather, be revered as being consistently best for the human race. For I would seriously maintain that communion of soul with body is not better in any way than its dissolution in death. Furthermore, those who are going to make these distinctions in a satisfactory manner need to bear the following facts in mind: no city comparable to ours is to be found nowadays, either in terms of the amount of leisure time afforded, or the availability of life's ^{829a} necessities; and, like an individual human being, the city should live well. And to live happily it is first necessary that we ourselves neither do injustice, nor suffer injustice at the hands of others. The first of these requirements is not hugely difficult, but it is extremely difficult to acquire the ability to suffer no injustice, and it is not possible to have this ability perfectly except by becoming perfectly good. The same principle also applies to the city; if it becomes good, its life is peaceful; if bad, its life is a battle, internally and externally. Since this is more or less how matters stand, everyone should train for warfare, not ^{829b} in time of war, but in time of peace. So a city possessed of

intelligence should conduct military exercises for at least one day each month, or more, as the rulers see fit, paying no heed to the weather, be it hot or cold. Whenever the rulers decide to march them all, men, women ^{829c} and children must go. On other occasions they may call upon only part of the population. They should also be continually devising noble games to accompany the sacrifices so that there may be some festive battles imitating the real-life military battles as best they can. At each of these they should award prizes for victory and for excellence, and they should compose speeches of praise or of censure for one another according to how each person fares in the contests, or, indeed, in life generally, decorating whoever is deemed to be best, and censuring anyone who falls short.

^{829d}

Athenian: Not everyone is to be a composer of such speeches. Firstly, they should be more than fifty years of age, and they should not be the sort of people who have attained an acceptable proficiency in poetry and music but have never performed a single noble or illustrious deed themselves. The compositions of people who are themselves good and who are honoured in the city for the noble works they produce, these are the songs that should be sung, even if they are not naturally musical. The selection of these composers shall lie with the educator and the other guardians of the law, who shall allow them the following privilege: they alone are to be allowed freedom of expression in music. No one else is to have such licence, nor ^{829e} should anyone dare to sing an unapproved song that has not been judged by the guardians of the law, even if it be sweeter than the hymns of Thamyras and Orpheus.⁸⁶ All that are allowed are those that have been duly dedicated to the gods, and those composed by good men, which present censure and praise, and have been adjudged to do so in a measured way. And I say that the same directions relating to military activity and freedom of expression in poetry should apply in like manner to

women and men. The lawgiver should reflect and reason with himself as follows. “Now that my preparations are in place for the city as a whole, what sort of people am I nurturing here? Won’t they be competitors in the greatest conflicts of all, where they will encounter vast numbers of opponents?” “Very much so” would be the correct response. Well then, suppose we were ^{830a} nurturing boxers or all-in-fighters or competitors in some other contests like these, would we go into the actual contest itself without practising fighting with someone else on a daily basis beforehand? Surely if we were boxers, we would have been learning to fight for very many days in advance of the competition, and working hard at imitating all the moves we intended to rely upon when we eventually fought it out for victory, and getting as close as possible, in training, to the real thing. Instead of training gloves, we would wear match gloves so as to practise punching and avoiding punches as best we could. And if we had a major problem finding people to train with, would we be so bold as to hang up a lifeless dummy and practise on that, or would we be afraid that some fools might laugh at us for ^{830b} doing so? And if we were ever devoid of opponents, animate or inanimate, and were on our own without training partners, would that deter us from literally fighting with our own shadows? Or what else, besides shadow-boxing, would you call this sort of practising with your own hands?

^{830c}

Clinias: The very name you gave it, stranger, there isn’t really an alternative.

Athenian: Well then, will the fighting force of our city dare to embark every time upon the greatest of all contests worse prepared than contestants of this sort as they do battle for their lives, their children, their wealth and the entire city? And is the lawgiver to be afraid that these training exercises against one another may seem ridiculous to some? Is he, then, to refrain

from enacting laws requiring military activity, if possible, on a daily basis, at least on a small scale without weapons, directing all training, whether in groups or not, to these ends?

830d

Athenian: Won't he also order exercises of another kind, major and minor, to be held at least once a ^{830e} month, involving various contests with one another throughout the entire territory, in which people compete in capturing certain positions and laying ambushes, thus imitating warfare in every aspect? These trials have a way of revealing who is spirited and who is not, through fighting with actual combat gloves and missiles that are as close as possible to the real thing, ^{831a} making use of weapons that are somewhat dangerous so that their game may not be entirely devoid of fear but involve some threats. Then, by correctly awarding honour to one and dishonour to the other, the lawgiver would enable the entire city to be of service in the true life-long contest. And, indeed, if someone loses his life in the process, the slaying is to be regarded as an accident, and once the killer has been purified in accordance with the law, his hands may be pronounced clean. The lawgiver's view will be that if a few people should perish, others who are just as good will be born to replace them, whereas if fear itself should perish, so to speak, he will not find a test to distinguish the better people from the worse in ^{831b} all such cases, and for the city, that is a far greater evil than the other one.

831b

Clinias: We agree with you, stranger. Measures like these should be enshrined in law, and every city should practise them.

Athenian: Now, do all of us understand the reason why such choristry and competition do not exist at all in cities nowadays, except perhaps on a very small scale? Would we say it is because of the ignorance of the general population and the people who

institute laws for them?

Clinias: Perhaps.

^{831c}

Athenian: Not at all, Clinias, bless you! We should insist that there are two causes that are well capable of bringing this about.

Clinias: What are they?

Athenian: One originates in the passion for wealth, which keeps a person so busy that he cares for nothing else besides his own personal possessions. Once the soul of every citizen depends upon these, it would never be capable of having any care for anything else besides short-term advantage, everyone, personally, being extremely keen to learn and practise any ^{831d} subject or activity that leads to this objective, and laughing at any others. This, we must insist, is one particular cause of a city's refusal to take this or any other noble and good pursuit seriously. Indeed, because of this insatiable desire for gold and silver, everyone is prepared to resort to any skill or device, noble or unseemly, provided it is going to make him rich. He will perform any act, holy or unholy, even an utterly disgraceful one, without scruple, as long as he is able to provide himself, like some wild beast, with total, unrestricted ^{831e} satisfaction in eating, drinking and lust, in endless variety.

^{831e}

Clinias: Correct.

Athenian: Well, this cause, the one I am speaking of, may be set down as one that prevents cities from properly practising military activities or any other noble pursuits, and turns people who are naturally well behaved into traders, merchants and out-and-out servants, while ^{832a} making pirates, thieves, temple robbers, thugs and tyrants of the courageous types, although much of the time they are not bad-natured but unfortunate.

832a

Clinias: In what way?

Athenian: Unfortunate in the extreme. How else could I describe people who are compelled to go through life with a constant hunger in their own souls?

Clinias: Well, that's one cause. What's the second cause, stranger?

Athenian: It is good that you remind me.

832b

Clinias: Yes, according to you, one cause is the insatiable lifelong search which keeps people busy, and gets in the way of the proper practice of military exercises. So be it. Now tell us the second cause.

832c

Athenian: I expect you think that I am delaying and won't tell you because I am at a loss.

Clinias: No, but you do seem to us, out of a sort of hatred for the character you are describing, to be castigating him more than is required by the present argument.

Athenian: An excellent rebuke, strangers. It seems you want to hear what comes next.

Clinias: Speak on.

Athenian: I maintain that the causes lie in the 'non-constitutions' which have been mentioned so many times in the preceding arguments, the democratic, the oligarchic and the tyrannical. In truth, not one of these is a political system; indeed, they may all quite correctly be called 'states-of-faction'. None of them involves willing rule over willing subjects, but willing rule over the unwilling, always with some degree of force, and the ruler, out of fear of his subject, will never willingly allow him to become noble, wealthy, strong,

courageous or in ^{832d} any way military. Now these, more or less, are the two main causes of all evils, at least of the evils we are now considering. However, the political system for which we are now enacting laws has eliminated both. For it presumably allows the most free time and its citizens are free from one another, and under these laws, I believe, they would be least fond of wealth. Consequently, it is reasonable to expect that of all political systems, only the one arranged in this way would make allowance for the military education we have set out, which is also an amusement, as described appropriately in our account.

^{832d}

Clinias: Good.

Athenian: After all this, shouldn't we declare once and for all, regarding athletic contests in general, that those that are militarily useful should be pursued and prizes for victory should be awarded, while those that are not should be set aside? It is best to begin by stating which these are and by enacting laws. And we should first provide for contests in running and ^{832e} rapidity in general, shouldn't we?

^{832e}

Clinias: We should.

Athenian: Now, bodily agility in general of the feet or the hands is more useful than anything else for military purposes. In flight and in pursuit, fleetness of foot is required, while in a set fight at close quarters calling for endurance and strength, quick hands are needed.

Clinias: Indeed.

Athenian: But in the absence of weapons, neither of these has its full effect.

Clinias: No, how could they?

^{833a}

Athenian: So, at our competitions, the herald, as he does nowadays, shall first call the short distance runner, and he shall come in wearing his armour, and we shall award no prize to a competitor without armour. First then, the competitor who runs one stade in full armour shall enter, second comes the contestant who runs twice that distance, third is the one who runs the length of the horse track, fourth the chariot-course runner, and then fifth is the one in heavier armour whom we shall despatch, in the first instance, to run sixty stades to some temple of Ares and back again. We shall call him a hoplite, and he shall follow a smooth course, while his rival, an archer wearing full archer's gear, must run one hundred stades⁸⁷ ^{833b} through hills and varied countryside to a temple of Apollo and Artemis. And having set up the competitions, we shall wait until the contestants return and award the prizes to the victors in each event.

^{833b}

Clinias: Rightly so.

Athenian: Then, let us devise contests in these three classes – one for children, one for youths and one for men. And let's set the course distance for youths at two-thirds of the full length, ^{833c} and for children at half the length, whether they compete as archers or as hoplites. In the case of females, girls who have not yet attained womanhood are to run one stade, two stades, the horse track and the chariot course, without gear, on the course itself. From the age of thirteen, while awaiting marriage between the ages of eighteen and twenty, they may still be involved, but they must put on the proper gear when entering these races. So ^{833d} let these be the arrangements concerning running for men and women. As for events involving strength, instead of wrestling and the like, the 'heavy' contest of today, let's arrange fights in armour, one against one, two against two, up to a maximum of ten contending against ten. What must be

accepted and what may be done to win a victory, and the points awarded, should be decided based upon current practice in wrestling where the relevant officials regulate what constitutes good wrestling and what does not. So we, in like manner, should call upon experts in armour fighting and ask them to help us to make ^{833e} laws about who rightly deserves victory in these fights, what he must do or avoid, and, similarly, the rules for deciding the loser. Let these regulations also apply to females until they are married. For boxing in the pancration,⁸⁸ we should substitute general combat using missiles; fighting with bows, light shields, javelins and stones thrown by hand or with slings. For these too we must make regulations, awarding the honours of victory to the one who best conforms to the rules of these competitions.

^{834a}

Athenian: After these should be the regulation of horse-racing. But we don't have much use for horses, nor are there many of them, certainly not in Crete at any rate, and so their breeding and racing is inevitably taken less seriously. As for chariots, there is no one at all who keeps them, nor would anyone have any significant ambition in that direction. Consequently, ^{834b} to set up a competition of this sort, contrary to local custom, would not be an intelligent course of action, nor would it seem so. But if we were to institute prizes for horse-riding on colts, young horses and full-grown animals, we would be adapting the sport of horsemanship to the nature of the country. For these particular competitors, then, let there be competitive contests established by law, and let judgement both of the actual courses themselves, and of the competitors bearing arms, be entrusted jointly to the company commanders and cavalry commanders. For competitors who are unarmed it would not be right to set up compe- ^{834c} titions by law, either in this case of horsemanship, or for the athletes. For a Cretan there is some advantage in being a mounted archer or javelin-thrower, so let there be

sportive rivalry and competition in these activities too. Yet there is no merit in forcing women, by laws and regulations, to be involved in these contests. But if, due to their earlier education, a habit has developed whereby their nature accepts such involvement when they are children or young women, let them do so and let there be no criticism.

834d

Athenian: Well now, at this stage the subject of competition and instruction in gymnastics has been concluded, including our endeavours in relation to contests and day-to-day teaching. Similarly, too, in the case of music, most aspects have been dealt with, but the matter of rhapsodes and anything associated with them, and any choral competitions required at our festivals, shall be put in order once the months, days and years have been assigned to the gods and their associates, also determining whether the festivals should be held every two ^{834e} years or every four years, or whatever interval or manner the gods may suggest. On these occasions we should expect the music competitions to be held, in turn, as set down jointly by judges of the contests, the educator of the young, and the guardians of the law, at a meeting concerning these very matters where they act as lawgivers, determining when, by whom, and with whom the contests will be instituted in the case of all choruses and dances. The original lawgiver has frequently declared what each of these should be like with respect to ^{835a} their words, melody, and harmony combined with rhythm and dance. These secondary legislators should follow his lead, allocating the contests appropriately to each sacrifice at fitting times, thus providing the city with festivals to celebrate. Now, it is not difficult to recognise how to give a legal structure to these regulations and others like them. Nor indeed would changing them this way and that be greatly to the advantage or detriment of the city. But there is a matter that makes a difference, a significant difference, about which it is difficult to persuade

people. In fact, it is really a task for a god, ^{835b} if it were somehow possible for guidance to come directly from such a source. But, for now, what is needed is probably some courageous person who, valuing frankness above all else, will say what he believes to be best for the city and its citizens, someone who, surrounded by corrupted souls, prescribes what is appropriate and becoming to the constitution, speaking in opposition to the most powerful desires of all, with no one else to help as he stands alone, by reason alone.

^{835c}

Clinias: What point are you making now, stranger? We don't understand you so far.

Athenian: That is not unexpected. In that case, I will try to explain myself to you more clearly. Indeed, when my argument arrived at the topic of education, I pictured young men and women consorting with one another in a friendly manner, and, not unexpectedly, I became fearful as I considered how one is to manage a city like this in which young men and ^{835d} women, well reared, are exempt from the hard work which does so much to curb the passions, and for whom sacrifices, festivals and choruses are their lifelong concern. In a city like this, how precisely will the young refrain from those desires that so often plunge so many into ruin, desires from which reason, in an effort to become law, directs them to refrain? Now, if our previous regulations as enacted were to curtail most of these desires, that would not be surprising. Indeed, the prohibition on becoming excessively wealthy is ^{835e} of considerable benefit in promoting sound-mindedness, and their entire education includes regulations adapted for similar purposes. What's more, the eye of the officials, having been trained to look nowhere else and to be constantly vigilant towards the young people themselves, brings an element of measure to their desires in general, insofar as this is humanly possible. However, when it

comes to the loves of children of either sex, or of men for women or women for men, which have had all sorts of consequences for individuals and for entire ^{836a} cities, how may he guard against this and what remedy is to be found to avoid such a danger in each of these cases? This question, Clinias, is not at all easy to answer. And, indeed, Crete in general, and Sparta too, have given us reasonable assistance in framing laws that are unusual compared to most, but when it comes to these loves, I have to say, just between ourselves, that the position is the exact opposite. What if someone, following the natural ^{836b} order, should institute the law previous to that of your lawmaker, Laius,⁸⁹ and maintain that it is not right for males to consort with males, old or young, in the same way as they have intercourse with females? In the process, he might cite the natural habits of animals and point out that in such situations males do not have contact with males because this is contrary to nature, and he would then perhaps have a persuasive argument even though this ^{836c} does not conform to the practices of your cities. What is more, the matter which, according to us, demands the utmost vigilance of the lawgiver, does not fit in well with these practices of yours. For we are constantly enquiring as to which enactments are conducive to excellence and which are not.

^{836d}

Athenian: So, come on then, suppose we were to agree that this practice is noble and not at all disgraceful, and were now to legislate accordingly. What consequence would follow in terms of excellence? Will it engender the quality of courage in the soul of the one who is seduced, or develop some form of sound-mindedness in the soul of the seducer? Surely no one will ever believe this. Quite the contrary; everyone will censure the softness of a person ^{836e} who yields to pleasures and is incapable of mastering them, and won't they also rebuke the man who imitates a woman for his very resemblance thereto? This being

the case, who on earth will ever legislate for such a practice? Hardly anyone, not if they have any notion of what true law is. So how are we to maintain that this is all true? If anyone is to think aright ^{837a} about these matters, he will need to discern the nature of friendship, of desire too, and of what is referred to as love. For there are these two, and from both, another third form arises, but a single name encompasses the three and this gives rise to all sorts of perplexity and obscurity.

^{837a}

Clinias: In what way?

Athenian: We refer, as you know, to the friendship of like for like and of equal for equal in respect of excellence, and indeed of the needy for the wealthy, despite being opposite in kind. And whenever either friendship becomes intense, we call it love.

^{837b}

Clinias: And rightly so.

Athenian: Well, the affection between opposites is fierce and wild, and among ourselves it is seldom mutual, while affection between like for like is gentle, mutual and lifelong. When there is a mixture of these two, firstly, it is not easy to appropriate what precisely someone who has this third love wants for himself, and secondly, he is perplexed as he is dragged in opposite directions by one or the other, one encouraging him to avail himself of the delight, ^{837c} the other forbidding him. For one person loves the body, and being hungry to pluck the ripe fruit of its delights, he encourages himself to have his fill without showing the least regard for the soul of the beloved or its condition. The other man, however, regarding desire of the body as a diversion, contemplates rather than loves; he really desires soul with soul, and regards the sating of body by body as wantonness. Respecting and revering sound-mindedness, courage, magnanimity and wisdom, he would wish to live in

constant ^{837d} purity with his pure beloved. The kind of love which is a mixture of both is the one we have just described as the third love. Now, since there are three of them, should the law prohibit all of them and prevent their occurrence among us, or is it obvious that the one that loves excellence and wants the young person to be as excellent as possible is what we would like to have in our city, while prohibiting the other two if this were possible? What is our position here, my dear Megillus?

^{837e}

Megillus: I say, stranger, that you have just spoken very well in every respect on these matters.

Athenian: It seems, my friend, as indeed I suspected, that I meet with your approval. The law among yourselves in Sparta, and what it thinks about such matters, is something I don't need to investigate, I need only accept your approval of my argument. After this, on another occasion, I shall try charming Clinias into agreeing with me. What you both concede to me should be left at that, and we should return, by all means, to dealing with the laws.

Megillus: Quite correct.

^{838a}

Athenian: I have a device ready to hand for establishing this law, and although it is straightforward, it is also, in a way, as difficult as could be.

Megillus: What are you referring to?

Athenian: We know indeed that even nowadays most people, however lawless they are, are well ^{838b} and truly prevented, without any resistance and with complete consent, from having intercourse with beautiful people.

^{838b}

Megillus: On what occasions?

Athenian: When they have brothers or sisters who are beautiful. Also, in the case of a son or daughter, the same law, although it is unwritten, is quite enough to guard against anyone lying with them either openly or in secret, or wanting to touch them in this way. No, the desire for this intercourse does not even occur to them at all.

Megillus: That's true.

Athenian: Doesn't one little saying extinguish all such pleasures?

838c

Megillus: What saying do you mean?

Athenian: The saying that these practices are not at all holy, are detested by God, and are the most disgraceful of all disgraceful deeds. The explanation for this is that no one speaks differently from anyone else about these matters. Rather, each of us, as soon as we are born, hears this spoken of in comic utterances, or frequently in serious tragedy when Oedipus or Thyestes appears,⁹⁰ or a Macareus having intercourse in secret with his sister, all of whom are seen readily inflicting death upon themselves as the penalty for their misdeeds when they come to light.

Megillus: You're quite right in saying this much anyway, that popular opinion possesses a wondrous power once no one at all attempts to breathe a word that does not accord with the law.

838d

Athenian: Isn't it right, then, as I said just now, that it is easy enough for a lawgiver who wishes to restrain a desire that utterly enslaves people at least to recognise how he should go about it? By making this saying sacred in the eyes of everyone, bond or free, children and women, and the entire city on the same basis, he will thus be ensuring that this law is firmly established.

Megillus: Very well, but how it will ever be possible to arrange that everyone will be willing to say this sort of thing...

838e

Athenian: A good interjection. Indeed, this is what I was saying, that in relation to this law I might have a device for ensuring the natural use of reproductive intercourse; the male refraining from the male, thus avoiding the deliberate annihilation of the human race by sowing seed into rocks and stones where it will never take root and adopt its own fruitful nature; refraining also from any female field in which you would not want the sown seed to spring up. This law, then, having become permanent and holding sway in the same way that the law about intercourse of parents with their children prevails nowadays, would indeed confer countless benefits if it were also to prevail, as is only right, in the other cases too.

839a

Athenian: Firstly, it is in accord with nature and it brings about restraint of the raging madness of love, of all sorts of debauchery, of any excesses in drinking and eating, and, indeed, it makes men friendly and affectionate towards their own wedded wives. There would also be countless other benefits if it were possible for someone to have this law enforced. But perhaps some intense young man, his seed overflowing, might be close by and hear us proposing our law, and he might ridicule it as a stupid regulation that is impossible to implement, and fill the air with his declamations. This is what I had in mind when I made the statement that I had a particular device for ensuring that this law is permanently established, ^{839b} in a way the easiest device of all, but in a way, extremely difficult. In fact, it is easy enough to appreciate that this is possible and how it is possible, for according to us, once this law has been made sacred enough, every soul will become subject to it. This will lead to a fear ^{839c} of the established laws, and total obedience to them. But nowadays things have come to such a pass that even with this law in place,

it seems that the desired outcome might not come about. It is just like the situation with the practice of common meals, where the possibility of implementing this in the daily life of the entire city is greeted with disbelief. And ^{839d} even though it is an actual practice among yourselves, nevertheless, even in your own cities, the extension of this practice so as to include women is regarded as contrary to nature. And so, it was because of the strength of this disbelief that I said that both these practices are extremely difficult to establish permanently as law.

^{839d}

Megillus: And you were right to say so.

Athenian: So, would you like me to try to formulate some argument possessing some degree of certainty to show that this can actually happen and is not beyond human capacity?

Clinias: Of course.

^{839e}

Athenian: Tell me, then, in which of these cases would someone exercise sexual restraint more easily and be willing to do as directed in these matters, with due measure – when his body is in good condition and not out of training, or when it is run down?

Clinias: When it is not out of training, this is much easier.

^{840a}

Athenian: Yes, and we all know what is said about Iccus of Tarentum because of his involvement in the contests at Olympia and elsewhere.⁹¹ Due to his sheer ambition in these competitions, his professionalism, and the courage combined with sound-mindedness he possessed in his soul, they say he never touched a woman, or, indeed, a boy either, while his training was at its peak. And, indeed, the same story is also told of Crison and Astylus and Diopompus and very many others. And yet, Clinias, these people had received a far inferior

education in ^{840b} soul than your citizens and mine, while their bodies were much more vigorous.

^{840b}

Clinias: You're right in saying so. Yes, it has been confidently reported by men of old that this was indeed what actually happened in the case of these athletes.

Athenian: Well then, are these athletes to refrain from what most people refer to as a blissful activity, all for the sake of victory in the ring or on the track and such like, while our young folk refuse to tolerate restraint for the sake of a much more sublime victory? This is a victory ^{840c} whose glory we shall praise as we speak to them from their very childhood, in the hope of charming them, using stories, speeches and songs.

^{840c}

Clinias: What victory?

Athenian: The victory over pleasures, which, if they win it, ensures a happy life, we'll say, whereas if they are defeated, the outcome is the exact opposite. And besides this, won't a foreboding at the out and out unholiness of this activity be capable of ensuring this victory for them, a victory which has been won by others who are worse people than these citizens of ours?

Clinias: Quite likely.

^{840d}

Athenian: Well, this is our predicament in relation to this particular regulation: we have been cast into perplexity by the evil ways of the majority of people. So I maintain that our regulation on these particular matters should simply proceed by stating that our citizens ought not to be worse creatures than birds and any other animals that flock together on a large scale. Until the time for reproduction arrives, they live unwed, as pure, chaste virgins, and when they reach the appropriate

age they come together in pairs, as they prefer, male with female, ^{840e} female with male, and live out their lives in holiness and justice, constant and true to their first ties of affection. Surely our citizens should be superior to animals. But what if, instead, they are corrupted by the vast majority of Greeks and non-Greeks in general, seeing and hearing of the enormous power of the so-called 'irregular love' among these people, and consequently prove unable to win this sublime victory? Then the guardians of the law must become lawgivers and devise a second law for them.

^{841a}

Clinias: What law would you advise them to implement if the one we are now implementing evades them?

Athenian: The one that comes after this one is obviously second, Clinias.

Clinias: Which do you mean?

Athenian: There was a way of making the power of these pleasures largely ineffective by diverting their influx and sustenance elsewhere through physical work. This would also happen if there were less shamelessness involved in recourse to sexual activity, since because of the shame, resort to this would be more sparing and, being used less frequently, the strength of ^{841b} its tyranny would be reduced. Let them accept then that discretion in such activity is something noble, endorsed by custom and unwritten law, while lack of discretion is shameful. But they need not refrain from the activity completely. In this way, we would have a second best standard of what's shameful or noble, established by this law, and a second-best standard of rightness too, and the particular kind of people whose natures have been corrupted, whom we describe as inferior to themselves, would be restrained by a threefold barrier and prevented from transgressing the law.

^{841b}

Clinias: What are the three?

841c

Athenian: Reverence for God, accompanied by love of honour and the birth of a desire for the beautiful qualities of the soul rather than those of the physical bodies. What we are now saying may well be a sort of combination of fable and prayer, and yet if this were to happen it would be the very best thing that could happen in any city. But perhaps, God willing, we might enforce one or the other of two regulations concerning sexual relations. One would be that no noble freeborn person should dare to touch any except his own wedded wife, or sow unconsecrated and illegitimate seed with concubines, or sow unproductive seed with 841d males, in contravention of nature. Alternatively, we could completely ban sexual activity with males, and in the case of women, if anyone consorts with any woman save those brought into his house and consecrated by divine marriage rites, whether he buys her or acquires her in any other way, and he is found out by any man or woman, we would probably be right in enacting by law that he be deprived of his rights and honours as a citizen of the city because he is, in truth, an alien. So this law then, whether we refer to it as one law or as two, should apply to sexual relations and all matters concerning love, and what practices 841e are right and what practices are not right, in our interaction with one another by reason of such desires as these.

841e

Megillus: Well, stranger, for my own part I would accept this law without reservation, but Clinias should declare for himself what precisely his views on these matters are.

Clinias: That's what I'll do, Megillus, whenever I think the occasion is right. For now, let's allow the stranger to proceed further with his laws.

Megillus: Right.

842a

Athenian: Very well then, our proceedings have now reached the point at which common meals have been more or less established. Elsewhere, according to us, this would be difficult, but in Crete no one suggests doing anything differently. As for the manner in which they are arranged and whether the system here or the system in Sparta is better, or whether there is some third system that is better than both, this would not, I think, be difficult to ascertain, but there would be no great advantage in doing so. In fact, we have now made these arrangements in a satisfactory manner.

842b

Athenian: The next issue is provision for these common meals in a manner suited to them. In 842c the case of cities, there would be a huge variety of provisions from lots of different places, at least twice as many sources as these cities of ours. For most Greek cities get their food supply from the land and from the sea, while these cities of ours get it from the land alone. This makes things easy for the lawgiver, for the number of laws required would be less than half, much less, and besides, they would be more suited to a free people. Our lawgiver, being largely quit of merchant shipping, trading, retailing, inn-keeping, compound interest and countless other requirements of that sort, will then pass laws for farmers, herdsmen, beekeepers, and for those who supervise such matters and are responsible for the equipment.

842d

Athenian: He has already enacted laws dealing with the most important issues: marriage, the birth and upbringing of children, education, and the appointment of officials in the city. He now needs to turn his attention to legislating in relation to food and the people who collaborate in producing this.

842e

Athenian: Firstly, then, let there be laws that go by the name of 'agricultural'. The first law, the law of 'Zeus of the boundary', may be stated as follows. No one is to move a land boundary marker, either of a neighbour who is a fellow citizen, or when he owns land bordering a foreign frontier and his neighbour is a foreigner. He must realise that, in doing ^{843a} so, he is, in truth, moving the immovable.⁹² And everyone must prefer to attempt the removal of some enormous rock that isn't a boundary marker rather than the tiny stone, consecrated to the gods, that marks off the land of a friend or the land of a foe. For in one case, Zeus, god of the clan, is witness, and in the other case, Zeus, god of strangers, is witness, and when these are aroused the most bitter conflicts follow. Now, whoever obeys the law shall not suffer any of its penalties, while those who disregard it are to be subject to a twofold ^{843b} retribution, first and foremost from the gods, and secondly from the law. For no one is deliberately to move the boundary markers of his neighbour's land, and whoever does so is to be reported to the land-owners by anyone who wishes, and they in turn should take him to court. If someone is convicted of such a crime, since the offender is making a redistribution of land by stealth or by force, let the court decide what penalty the guilty party must suffer, or the compensation he should pay.

^{843c}

Athenian: Furthermore, lots of minor grievances between neighbours, by their very frequency, give rise to a significant accumulation of ill-feeling, and turn neighbourly relations into something difficult and extremely bitter. Therefore, a neighbour must be extremely careful to do nothing offensive to a neighbour, in general, and must always be particularly careful not to encroach on his land at all. For it is not difficult to do harm – anyone can do so – but not everyone can confer a benefit. Whoever encroaches upon the land of his neighbour, disregarding the boundary markers, is to make good any

damage, and, what's more, to cure ^{843d} him of his shamelessness and unworthy behaviour, he is to pay double the damages to the victim in addition. In all cases of this sort, let the rural commissioners act as inspectors, judges and assessors. In major cases, as stated previously, the entire command structure of the district is to act, while in lesser cases the guard commanders may do so.

^{843e}

Athenian: If someone's cattle graze on another's land, these officials shall decide the case and the penalty once they have inspected the damage. And if anyone exploits the susceptibility of bees and appropriates a hive by making rattling noises to attract them to his own property, he is to pay damages. And if he should light a fire and is not careful about his neighbour's materials, he is to pay a fine as assessed by the officials. He is also to be fined if, while planting trees, he plants them too close to his neighbour's property. These are issues that lots of lawgivers have dealt with quite adequately, and we should simply make use of their ^{844a} laws and not expect the important person who is putting our city in order to legislate for the numerous trivial matters which any random lawgiver could deal with.

^{844b}

Athenian: Since time-tested laws are already in place for farmers concerning water supply, we need not draw upon these for our argument. Rather, anyone who wants to bring water to his own holding from the communal sources may bring the water provided he does not intercept the exposed well of any private individual and he avoids any houses, temples and tombs and does no damage beyond what's required for the channelling. In areas where the land is naturally arid and fails to retain the heaven-sent waters and there is a shortage of necessary drinking water, the person should dig on his own land until he reaches the clay subsoil, and if he does not

encounter any water at all at that depth, he is to be supplied by his neighbours with enough drinking water to meet the needs of every member of his household.

844c

Athenian: If the scarcity also extends to his neighbours, he is to make arrangements for a water supply with the rural commissioners, receiving this on a daily basis, and share his neighbours' water in this way. And when the rains from heaven come, if someone does damage to the farm or the adjoining house that lies below his own by blocking the outflow of water, or, conversely, the person above damages the holding below by carelessly discharging the flow, and the parties are unwilling to accommodate one another, either may go to the city commissioners, in one case, or the rural commissioners, in the other, for a direction as to what they should do. Anyone who does not abide by such a direction is to be penalised for his grudging and unco-operative spirit, and on conviction is to pay double the damage to the injured party for his refusal to obey the officials.

844d

Athenian: In the case of the fruit harvest, the generally accepted rule should be as follows. Two gifts are bestowed upon us by the grace of this goddess, one being the bounty of Dionysus that none can store, the other naturally produced for storage. So, let the following law be enacted concerning the fruit harvest. Whoever tastes the coarse fruit, whether grapes or figs, before the season of the vintage comes with the rising of Arcturus,⁹³ either from his own land or from another's, is to pay fifty drachmas, sacred to Dionysus, if he plucks it from his own property, a mina if plucked from his neighbour's land, and two thirds of a ^{844e} mina if it was taken from elsewhere. Whoever wants to harvest what nowadays are called special grapes or special figs may gather them as and when he wishes if he takes them from his own land. But if he takes them from someone

else's land without permission, he is to be fined for each offence in accordance with the law which declares that you don't disturb what you have not set down. But if a slave touches such fruit without the permission of the landowner, he is to be whipped, receiving one stroke for each grape on the bunch or for every fig taken. A resident alien who has bought a crop of special fruit may harvest it if he so wishes. A visiting foreigner who wants fruit to eat as he travels the roads may, along with one attendant, avail of special fruit if he wishes, without payment, as our gift to our ^{845a} guest. As for the so-called coarse fruit and the like, the law should prohibit the visitor from sharing in these. And if anyone, master or slave, takes them unknowingly, the slave is to be punished by being beaten, while the free man is to be told off and instructed to avail of the other fruit that is not suitable for being stored to make raisins, wine or dried figs. Let there be no disgrace in taking apples, pears or pomegranates, or the like, secretly, but if anyone under thirty is caught in the act, let him get a beating, avoiding serious injury, as a deterrent, and let there be no legal redress available to a free man for such an assault. Let a foreigner ^{845b} be allowed to partake of this sort of fruit in just the same way as the grapes and figs, and if any older person avails of them, eating them on the spot and taking nothing away, let him have his share of all fruit of this sort, just like the foreigner. But if he disregards this law, ^{845c} he runs the risk of being disqualified from every public distinction when the time comes, if such behaviour is brought to the attention of the acting judges.

^{845d}

Athenian: Water, more so than anything else, is what sustains garden produce, but it is easily spoiled. For neither earth nor sun nor winds, which co-operate with water in nourishing the growing plants, are at all easy to spoil by poisons, diversion or theft. However, in the case of the water, it is possible for everything of that sort to happen, and so the protection of the

law is needed. So, let there be the following law about this. If anyone deliberately spoils another's water supply, in a spring or in a pond, with poisons, by digging trenches or by theft, the injured party is to take the case before the city commissioners, detailing the extent ^{845e} of the damage. If someone is found guilty of doing such damage using poisons, in addition to any fine he is also to purify the springs or water reservoir in whatever manner the legal interpreters prescribe for the conduct of the purification in any particular case, or on any particular occasion.

^{846a}

Athenian: When gathering in the season's harvest, it shall be open to anyone to convey his own produce through any place he wishes, provided he does no damage, or the profit he himself gains from the route is three times the damage done to his neighbour's property. In these cases, the officials are to act as assessors, and also in all other cases where someone maliciously harms the person or property of another by force or by stealth, by the way he uses his own possessions. All such cases are to be reported to the officials for award of compensation where the damage is less than three minae. If anyone makes a claim against another ^{846b} for a greater sum, he is to pursue the case before the public courts to secure redress from the wrongdoer. If any official is judged to have decided a penalty based upon an unjust opinion, he is to be liable to pay double damages to the injured party. And, indeed, anyone who wishes may challenge the unjust decisions of any officials before the public courts.

^{846c}

Athenian: Governing the conduct of the legal actions, there are countless minor regulations dealing with the statements of grievance, the summonses, the serving of the summons, and whether its service requires two witnesses or some other number, and so on and so forth. These matters do require legislation, but they are unworthy of a senior lawmaker. The

junior lawgivers then are to legislate for these matters, imitating the previous enactments, the minor imitating the major, having had practical experience of the need for their use, until they are all arranged in an adequate manner. Then, having fixed them permanently, they should live by them, since at that stage the measure is right.

846d

Athenian: For skilled workers in general we should proceed as follows. Firstly, no native citizen is to be numbered among those who labour at the professions of skilled workers, nor may the servant of a citizen do so either. For a citizen already has a sufficient profession, one that demands a lot of practice and a great deal of learning, in maintaining and preserving the good order of the city, and this needs to be a full-time occupation. For among us humans ^{846e} there is scarcely anyone who is naturally up to the task of working at two occupations or professions in a comprehensive manner. Nor indeed can we practise one profession ourselves while supervising someone else who is practising another. So, in our city, the guiding principle from the very outset should be that no one is to work as a smith and, at the same time, as a carpenter, nor indeed while working as a carpenter is he to supervise someone working as a smith rather than his own profession. It is no excuse to say that by supervising ^{847a} lots of subordinates who work on his behalf, he naturally supervises them better because his income from their work is greater than the income from his own profession. Rather, each skilled worker in the city is to have one profession, and from this he is also to earn his living. The rural commissioners then are to exert themselves in maintaining this law, and if any native person is inclined towards any profession to the neglect of the concern for excel- ^{847b} lence, they shall punish him with censure and loss of privileges until they return him to his own proper course. If any foreigner pursues two professions, they shall punish him with bonds, financial

penalties and expulsion from the city, thus compelling him to be one person rather than many. Cases involving payments to workers or the acceptance of their work, or where someone does an injustice to them or they wrong someone else, are to be decided by the rural commissioners up to a value of fifty drachmas, but if the amount involved is greater than this, the public courts are to judge the case according to the law.

847c

Athenian: No duties are to be paid in our city by anyone either on exported or imported goods. No one is to import frankincense or any other foreign produce of that sort relating to sacrifices to the gods, or purple or any coloured dyes not produced in the country, or anything associated with any other profession that requires imported goods but serves no necessary purpose. Nor indeed should any goods that are needed in the country be exported; they should remain. The overseers and supervisors of all these matters are to consist of the twelve guardians of the law who are left after the five senior members are exempted.

847d

Athenian: As for weaponry and all military equipment, there may be a need to import a particular skill, plant material, metal, rope, or animals, for such a purpose. If so, the cavalry commanders and generals are to be given responsibility for the imports and exports, the city itself being the buyer and seller, and the guardians of the law are to institute appropriate and adequate laws about these matters. No one in our country as a whole, or in our city, is to trade for financial gain, either in this or in anything else.

847e

Athenian: In the case of the food supply and its distribution, it seems that if a good system, coming close to that set out in the laws of Crete, were to be implemented, that would be quite suitable. Everyone should divide the total production of the

territory into twelve parts, which is how it is to be consumed. Each twelfth part of wheat, for instance, or barley, are allocations to which all the other allocations of the crops should conform, including any animals that are for sale in any district. These parts are to be divided into three, proportionately, one part for free-born citizens, one for their attendants, and the third for skilled workers and for foreigners in general, including communities of resident aliens who are in need of ^{848a} sustenance, or people who have come in for a time to do business with the city or some private citizens. Of all the basic necessities that have been allocated, this third portion is the only one that may be placed on sale compulsorily. There is to be no compulsion to sell any part of the other two divisions. Now, what would be the correct way to allocate these? In the first place it is obvious that in a way we are allocating them equally, and in a way unequally.

^{848a}

Clinias: What do you mean?

Athenian: The earth will, I presume, inevitably produce each of these portions in varying quality, some being better than others.

Clinias: Of course.

^{848b}

Athenian: In this regard, none of the three subdivisions, once allocated, is to involve any advantage, neither the one given to the masters nor to their slaves, nor indeed the one that belongs to the foreigners. Rather, the distribution shall ensure the same equality of likeness for everyone. Each of the citizens, having taken the two portions, is to be responsible for its distribution to slaves and to free-born, distributing as much as he wishes of whatever quality he wishes. The surplus from these should be distributed according to the following measures and numbers. It is to be distributed by counting up the total number of

animals that need to be sustained from the land.

848c

Athenian: What is needed next are individual houses for the inhabitants, suitably arranged, and the arrangement best suited to such purposes is as follows. There should be twelve villages, one in the centre of each of the twelve regions. And in each village we should first set aside 848d temples and a marketplace for the gods and their associated divinities. And if there are any local divinities belonging to the Magnetes, or shrines of other ancient divinities whose memory is still preserved, they are to be granted the same ancient honours that those people gave them. And in every one of the twelve districts, temples are to be founded to Hestia, Zeus, Athena or whatever other god happens to be the patron of the region. To begin with, there 848e are to be dwellings around these temples, wherever the ground is highest, as the most secure lodging possible for the guards. All the rest of the territory is to be provided with skilled workers who are to be divided into thirteen groups. One of these will take up residence in the city itself, and this group shall in turn be divided into twelve parts corresponding to the twelve divisions of the entire city, dwelling round about on the outskirts, while in each village the kinds of workers that will be useful to the farmers are to be given residence there. The supervisors of all these arrangements are to be the people in charge of the rural commissioners. They are to decide the number and type of workers each region needs, and where they should live so that they will be the least trouble and of maximum benefit to the 849a farmers. And in the city, in like manner, the board in charge of the city commissioners should have and retain the supervision of the workers.

849b

Athenian: The market commissioners are of course to look after everything to do with the market. Their second task, after their oversight of the temples adjacent to the market in case anyone

does anything wrong, is to oversee the way people conduct their business, watching out for proper and improper behaviour, punishing anyone who needs to be punished. They shall first of all see to it that when the city folk are required to sell goods to foreigners, the sale is conducted according to the law in every case. The law for each item will be that on the first of the month the portion of the goods that are to be sold to the foreigners should be brought out by the agents – that is, the foreigners or slaves who have been given this task by the city folk. Beginning with corn, the foreigner is to purchase at the first market a month's supply of corn and whatever is associated with it. On the tenth ^{849c} of the month, the sale and purchase of liquid goods is to be conducted, enough to last for the entire month. Every third month, on the twentieth day, let there be a sale of any livestock that need to be bought or sold to meet the needs of those involved. Let there also be a sale by farmers of any goods or materials such as hides, clothing items in general, woven materials, felt, and anything else of that sort, items that foreigners are required to purchase from other people.

^{849d}

Athenian: As for trading in these goods, barley or wheat flour, or other foodstuffs in general, no one is to sell these to citizens or their slaves, nor may anyone buy these from them. However, in the markets of the foreigners, a foreigner, dealing in wine and corn, may sell to the skilled workers and their slaves, which most people call trading. Butchers too may cut up animals and distribute the meat among foreigners, skilled workers and their attendants. Any wood for burning may be bought in bulk on any day by a foreigner, as he wishes, from the agent in the localities, and he may sell it on himself to other foreigners as much as he wishes, whenever he wishes.

^{849e}

Athenian: The other goods or products that people need are to be sold in the public market, being brought to the specific location where the rural commissioners, assisted by the city commissioners, mark out suitable sites, defining the positions of the stalls. Here, goods are exchanged for money and money for goods, and no one may forgo his part of the transaction. And if anyone does forgo his part and thus give credit, he must accept his fate whether he is repaid or not, because no legal redress is available for a contract in such matters. If ^{850a} the extent or value of the purchase or sale contravenes the law that sets upper and lower limits beyond which neither transaction may go, the excess shall be recorded immediately by the guardians of the law in the case of excess, or the transaction shall be cancelled in the opposite case.

^{850b}

Athenian: The same rules about the recording of excess wealth are also to apply to resident aliens. Anyone who wishes may become a resident alien on specified terms, since residency is open to any foreigner who wishes to reside here and is able to do so provided he has a skill and dwells here no more than twenty years from his date of registration. All we require is his good behaviour, so he need pay no aliens' tax, nor indeed any duty on purchases or sales, and on completion of his permitted stay he may depart taking his wealth with him. And if during this time with us he acquires a good reputation because of some significant service to the city, and he believes he can convince the Council and the Assembly either that he deserves an official postponement of his departure, or even lifelong permanent residency, let him come forward and persuade the city, and whatever he persuades them of ^{850c} shall be his in full. For children of resident aliens who are skilled workers and have reached fifteen years of age, their period of official residency shall begin after they turn fifteen. When one of them has remained for twenty years on the specified terms, he may go

wherever he likes. If he wishes to remain, he may do so, subject to the same procedure for convincing the state. On departure, he is to ensure that any official records, previously recorded by the officials, are erased.

BOOK IX

853a

Athenian: The next topics in our systematisation of the laws would naturally be the legal procedures associated with all the activities referred to previously. Although some of the matters that give rise to legal proceedings have been dealt with, in the case of farming and related activities the most significant issues have not yet been dealt with. So, explaining this in 853b detail, stating what offence requires what punishment and before what courts it should be tried, these are the issues that should be dealt with next.

853b

Clinias: And rightly so.

Athenian: Now, there is an element of disgrace in actually legislating, as we are proposing to do on all these issues, in a city of this sort, which, according to us is well managed and possessed of all the right conditions for the cultivation of excellence. The very assumption that some citizens might grow up in a city like ours, sharing in the depravities of other cities in their most extreme forms – so that we need to pass laws in anticipation as a deterrent in 853c case such people arise, and that we have to put laws in place for them, to warn and punish them as if they were going to exist – this, as I said, involves an element of disgrace. But we are not now legislating like the lawgivers of ancient times, who, as we are told, passed laws for heroes and children of the gods, they themselves being descended from gods, imposing 853d laws on others of similar stock. We, rather, are humans, setting laws for those who are

sprung from human stock. So we may be forgiven for being afraid lest any of our citizens prove to have a sort of hard shell, and to be so tough by nature as to be incapable of softening. They could be just like hard-shelled seeds in the heat of the fire, and might prove incapable of softening down when exposed to our laws, strong and all as they are. It is, then, for the sad sake of these people that I shall begin dealing with the plundering of temples, in case anyone has the audacity to do such a deed. Now we would never wish, nor indeed would we expect in the least, that any citizen who has been properly brought up would ever be infected by this disease. But slaves, foreigners, and the slaves of foreigners might often turn their hands to such misdeeds. So, it is mainly for their sake, but ^{854a} also out of a wariness of the overall weakness of human nature, that I shall state this law dealing with the plundering of temples, and all the other diseases of this sort that are difficult or impossible to cure. And, on the principle agreed upon previously, we should include preambles to all such laws, keeping them as brief as possible. We might address that person with words of reason and of encouragement, the person whom evil desire exhorts on a daily ^{854b} basis and awakens at night, leading him on to plunder temples. We might say, "Dearest, it is no human badness, or divine badness either, that sets in train this inclination to go out and plunder temples. It is a madness that springs up in people because of ancient injustices that have not been cleansed, and it is still running its accursed course. This you must guard against with all your strength. Listen to the caution you must exercise. Whenever any ^{854c} notions of this sort assail you, turn to the sacrifices that banish the evil, go as a supplicant to the temples of the gods who avert evils, seek the company of those among you who are reputed to be good and learn from them, and say this yourself, that everyone should honour what is noble and what is just, and flee headlong from bad company. And if, by such a course, the disease abates, well and good. And if not, then

look to death as the better option and take your leave of this life.”

854d

Athenian: These are the preambles we are to intone to those who are intent upon all these unholy deeds that undermine our city. For those who are already convinced, the law may remain unspoken. But for those who are not convinced, the law, besides the preamble, must proclaim loudly that whoever is caught plundering a temple, be he a slave or a foreigner, shall have the misfortune written onto his forehead and his hands, and he shall suffer as many lashes of the whip as the judges deem fit, and he is to be cast out beyond the borders of our country, naked. For perhaps having suffered this punishment, he might become a better, more sound-minded person. Indeed, no penalty imposed by law aims to do any harm. In general, it brings about one of two outcomes: it either makes the person who receives the punishment a better person or, failing that, a less degenerate one.

854e

Athenian: But if some citizen ever exhibits such behaviour by perpetrating enormous, unspeakable injustices against the gods, his parents or the city, the judges, reckoning that he has not refrained from the most extreme evils in spite of the education and upbringing he has been receiving from his earliest years, are to regard this fellow as already incurable. The penalty in this case is death, the least of evils, serving as an example for the benefit of others, and he is to be buried anonymously beyond the borders of our country.

855a

Athenian: His children and family, if they shun the ways of the father, are to be famous, spoken of with honour as people who have done well and acted courageously in fleeing from evil to good. It would not be appropriate that the property of any such person be forfeited to the state in any city in which the

property allocations must always be equal and of the same number. When someone has done an injustice that seems to deserve a financial penalty, the fine may properly be paid only when there is a surplus over and above what is needed to maintain the holding. The fine may not exceed this surplus. In these cases, the guardians of the law are to look at the details in the registers, and consistently convey the exact information to the judges so that none of the holdings ever falls out of use through a deficiency of funds.

855b

Athenian: If it is decided that someone deserves a fine of more than this, and it turns out that none of his friends is willing to act as surety by getting together to pay the fine and secure his freedom, he is to be punished with prolonged imprisonment, public disgrace and degrading treatment. No one is ever to lose his citizen's rights completely for any transgressions, not even if he flees the country. Rather, the penalty should be death, imprisonment, beating, or some degrading situations or positions, or placement before temples on the country's borders, or fines subject to the strictures we described earlier.

855c

Athenian: In the case of the death penalty, the guardians of the law are to be the judges, along with a court, selected on merit from the officials who held office in the previous year. The bringing of the case, the summons and the like, and how the case is to be conducted, should be dealt with by the junior lawgivers, while it should be our job to legislate for the voting procedure. The vote is to be conducted openly, and before this happens our judges are to take their seats in close formation in order of seniority, face to face with the defendant and the accuser.

855d

Athenian: All citizens who have the time shall attend and pay close attention to such cases. The accuser is to speak first, the

defendant second, each making a single speech. After these speeches, the most senior judge shall present his examination of the case, conducting a comprehensive review of what was said in the speeches. After the eldest, they are all, in ^{855e} turn, to go through in detail whatever they found lacking or mistaken in any way in the speeches of either side. Any judge who finds nothing lacking should hand over his review time to someone else.

^{856a}

Athenian: Whatever seems relevant in what has been said is to have a seal affixed thereto, the signatures of all the judges are to be attached, and the document is to be placed on the altar of Hestia. They are to meet again the next day in the same place, review the case in the same way, and sign the statements once more. Having done this three times, giving due consideration to the evidence and the witnesses, each judge is to cast a sacred vote, swearing before the altar of Hestia to give just and true judgement as best they can, thus bringing a case like this to a close.

^{856b}

Athenian: After cases concerning the gods come those dealing with the subversion of the constitution. Whoever attempts to enslave the laws by placing them under human control or making the city subject to some party, and does all this by force and stirs up faction, this person indeed should be thought of as the worst enemy of all to the entire city. And anyone holding any of the most important positions of power in the city who does not take part in ^{856c} such machinations, yet fails to notice all this, or who notices it and, out of cowardice, fails to stand up for his own fatherland, is the sort of citizen who should be regarded as second in the scale of badness. Any man who is worth anything must inform the officials by bringing the plotter to court on a charge of changing the constitution by force and of breaking the law. The judges in these cases are to be the same as

for the temple plunderers, and the entire case is to be conducted in the very same way, and their vote may impose the death penalty by majority verdict. But to be brief, in no case is the disgrace or punishment of the ^{856d} father to fall upon the children except where someone's father, grandfather and great-grandfather have all, in turn, incurred the death penalty. The city is to send these children back to their own fatherland and city, along with their personal property, except for the wealth required to equip the holding fully. Ten names are to be chosen by lot from the families of citizens with more than one son under the age of ten, nominated by their father or grandfather ^{856e} on the father's or mother's side. The ten chosen names are to be sent to Delphi, and whomever the god selects is to be installed as the legal holder of the lot that has been vacated, and may better fortune attend it.

^{856e}

Clinias: Very good.

^{857a}

Athenian: There is to be one law like the last, a third law prescribing which judges should judge the cases and how the trials are to be conducted when people are brought to court on a charge of treason. And, in like manner, let there be a law about whether the offspring should remain in the country or leave, applicable alike to these three cases of temple-plundering, treason, and the forcible subversion of the laws of the city. For a thief, regardless of whether the theft is big or small, let there be only one law, and a single legal penalty in all cases. First, he is to pay twice the value of what was stolen once he has been convicted of such a crime, provided he has enough wealth over and above his holding to make the payment. If not, he is to be imprisoned until the fine is paid or he ^{857b} persuades the person who prosecuted him to release him. If someone is convicted of theft of public property, he shall be released from prison once he has persuaded the state to let him out or he has repaid

double the value of what was stolen.

857b

Clinias: How can we say, stranger, that it makes no difference to the thief's treatment whether he steals something big or small, from a sacred, holy place or from elsewhere, and that none of the other differences between the various kinds of theft matter? Surely the lawgiver should pay heed to the variations, and not impose similar penalties in every case?

857c

Athenian: Very good, Clinias. I was, so to speak, letting myself drift when you clashed with me and woke me up. You have reminded me of something I thought of previously, that the issues involved in setting down the laws have not been correctly worked out at all, and what has just happened confirms this. What do I mean? We didn't make a bad comparison earlier when we compared all law-making nowadays to medical treatment given by slaves to slaves. For you really need to appreciate that if one of those physicians who set about healing people through experience devoid of reason were to come across a physician who is free, conversing with a patient who is free, using arguments much like those used in philosophic discourse, dealing with the disease from its source, recapitulating in its entirety the nature of human bodies, he would laugh aloud on the spot. He would have nothing else to say on the matter besides the words that always spring so readily to the lips of most so-called physicians, for he would say, "Fool, you are not healing your patient, you are educating him as if he wanted to become a physician instead of becoming healthy."

857d

Clinias: Would he not be right to say so?

857e

Athenian: Perhaps he would, provided he also appreciated, in addition, that anyone who deals with laws in this way, just as we

are now doing, is educating the citizens rather than legislating for them. Wouldn't this observation also apparently be relevant?

Clinias: Perhaps.

Athenian: Our present predicament is a fortunate one then.

Clinias: In what way?

Athenian: There is no necessity for us to make laws, but only to enter into an enquiry ourselves about political systems in general and attempt to see how what's best and what's essential may be brought about. And what's more, we are now seemingly in a position to consider what is best or what is essential in relation to laws, as we prefer. So we should make our choice.

858a

Clinias: We are presenting a ridiculous choice, stranger. Indeed, we would be behaving like lawgivers who are under pressure to pass laws there and then, by some urgent necessity, because tomorrow will be too late. But we are allowed, if I may say so, to act like stone masons, or anyone else who is starting to construct something. We may accumulate materials at random, from which we shall then choose what's suitable for what we intend to construct and, indeed, we may choose at our leisure. So, let's not put ourselves in the position of those who build under compulsion rather than doing so at their leisure, laying some materials aside for future use while using others to build with. And so we may rightly say that some of our laws are being enacted while others are being laid aside.

858b

Athenian: Well, Clinias, at least our review of the laws would be more natural. Indeed, we should look, by heavens, at an issue concerning lawmakers.

Clinias: Which is?

Athenian: There are writings and written speeches by lots of people in our cities, and there are writings and written speeches of the lawgivers too.

858c

Clinias: Of course.

Athenian: Now, are we to pay serious attention to the writings of the various other authors, who have set down for posterity a written record, in verse or in prose, of their own advice concerning the conduct of life, while ignoring the writings of the lawgivers? Or should we attend to these most of all?

Clinias: Very much so.

858d

Athenian: There are many writers who advise us about what is noble, good and just, teaching us what these are and how they should be pursued by those who are intent upon a happy life. Surely the lawgiver can't be the sole exception.

Clinias: Of course not.

858e

Athenian: Well, in that case, is the disgrace greater for Homer, Tyrtaeus and the other authors if they did badly in setting down precepts about life and activities in their writings, but less of a disgrace for Lycurgus and Solon and any other lawgivers who have written down laws?⁹⁴

859a

Athenian: Or, more correctly, should all writings in our cities, written on the subject of laws, prove, when the scroll is unfolded, to be by far the most beautiful and excellent writings? Should the writings of others either conform to their standard, or else, if they are discordant with these legal writings, be a laughing stock? And how are we to think about writings dealing with the laws of our cities? Are they to appear in the guise of an affectionate and intelligent father or mother, or should they

give orders and issue threats, like a tyrannical despot, who writes his decrees on the walls and that is that? So, this is the question we now should consider. Should we, in thinking about the laws, try to state them in this gentler way, proceeding ^{859b} eagerly at any rate, whether we are up to the task or not? And in adopting this approach, are we to accept whatever predicament we end up in? May all be well, and God willing, all will indeed be well.

^{859b}

Clinias: Well said. We should do as you suggest.

Athenian: So, since we have set it in train, we should first conduct a detailed enquiry into the law concerning temple-plundering, theft in general, and injustices of all sorts, and not be dis- ^{859c} couraged if in the midst of passing our laws we find that we have already enacted some, while others are still under consideration. For we are in the process of becoming lawgivers, but we are not there yet, although we may perhaps succeed. So, if we agree to consider the issues I have spoken of, in the way that I have spoken of them, let's proceed to do so.

^{859c}

Clinias: Yes, certainly.

Athenian: There is something we should be clear about in relation to what is noble and just. To what extent do we agree with one another at the moment, and to what extent do we disagree? According to ourselves, we are eager at least to do better than most people, even if we achieve nothing else. But to what extent do the majority themselves disagree, for their part, ^{859d} among themselves?

^{859d}

Clinias: What sort of differences between us do you have in mind?

Athenian: I shall try to explain. In relation to justice in general – just people, just deeds and just behaviour – everyone agrees somehow that these are all noble. And so even if someone ^{859e} insists that just people who happen to have ugly bodies are yet utterly noble because their character is so very just, whoever says so would not really be too far wide of the mark it seems.

^{859e}

Clinias: Isn't this right?

Athenian: Perhaps. But let us take note that if everything possessed of justice is noble, 'everything' includes what is inflicted on us just as much as what we enact.

Clinias: What of it?

Athenian: An action that is just, insofar as it shares in justice, also to that extent participates in nobility.

Clinias: Indeed.

^{860a}

Athenian: And in accepting that an infliction that shares in justice is, to that extent, also noble, our language would be consistent, wouldn't it?

Clinias: True.

Athenian: But if we accept that a just infliction is ignoble, then what is just and what is noble will be inconsistent because we are then saying that what is just is utterly ignoble.

Clinias: What point are you making?

Athenian: Nothing that is hard to understand. Indeed, the laws we set down a little earlier seem to be saying the exact opposite to what's being said now.

Clinias: In what sense?

^{860b}

Athenian: We laid it down that the temple-plunderer, and the enemy of our duly enacted laws, may be put to death, and when we were about to enact many more regulations of this sort we held back. We saw a huge number of severe penalties being inflicted under these regulations, and that all these inflictions were most just, and at the same time ignoble in the extreme. Accordingly what is just and what is noble will look exactly the same to us at one moment, and directly opposite the next. Isn't this so?

Clinias: There is that danger.

860c

Athenian: And that is the inconsistent way that most people speak about these matters, setting apart what is just and what is noble.

Clinias: Apparently so, stranger.

Athenian: Well, let us look once more at our own position, Clinias. Where indeed does the consistency lie in relation to these very matters?

Clinias: What consistency? In relation to what?

Athenian: In our previous discussions, I think I stated explicitly somehow – or if I didn't say so before, you may take it that I am saying so now...

Clinias: Saying what?

860d

Athenian: That all bad people are always bad unintentionally. This being the case, the next point necessarily follows from this.

Clinias: What do you mean?

Athenian: That the unjust person is indeed bad, but the bad person does not intend to be like that. But it makes no sense that an intentional deed is done unintentionally, so for someone

who is of the view that injustice is unintentional, the person who acts unjustly does so unintentionally, and this is indeed the view I must now accept. For I agree that everyone does injustice unintentionally. And if someone out of contentiousness or because they want to be famous maintains that although some people are unjust unintentionally, many people intend to act unjustly, well that is not my argument. So how may I be consistent in my own argu- ^{860e} ments? Suppose you two, Megillus and Clinias, were to ask me, “If this is indeed how matters stand, stranger, what advice are you giving us regarding the legislative process for our city of Magnesia? Are we to enact laws or not?” “By all means,” I shall reply. “Now, will you make a distinction for them between intentional and unintentional injustices, and are we to impose greater penalties for the intentional transgressions and injustices, and lesser penalties for the others? Or should the penalties be equal for them all, because there are no intentional injustices whatsoever?”

^{860e}

Clinias: Yes, you are expressing that in the right way, stranger. So, what is the practical application of what you are now saying?

^{861a}

Athenian: Good question. Well, let us apply them first as follows.

Clinias: In what way?

Athenian: Let us remind ourselves that we said just now, and rightly so, that we are utterly confused and inconsistent in relation to what is just. Bearing this in mind, let us ask ourselves a further question. Well then, there is a difficulty concerning these two which we have not resolved, nor have we defined what precisely the difference is between these two kinds of injustices, those that are intentional and those that are

unintentional. Every legislator who has ever appeared in any city has legislated for these two forms of injustice. And will the proposition we have just advanced say this much and walk away, laying down the law like some divine pronouncement which doesn't provide a supporting argument because it has ^{861b}spoken the truth? No, before making laws it is necessary to demonstrate that there are these two forms of injustice, and that the difference between them is other than what people imagine, so that whenever someone imposes a penalty in either case, anyone who follows what we are saying would be able, somehow or other, to decide what's appropriate to impose, and what isn't.

^{861c}

Clinias: That sounds good to us, stranger. Yes, we need to do one of two things. Either we deny that all injustices are unintentional, or else, having first made the appropriate distinctions, demonstrate that this is correct.

^{861d}

Athenian: Well, of these two options, there is one that I cannot accept at all. I cannot allow you to deny this because I think that this is where the truth lies, and so a denial would be unlawful and unholy. But how are there to be two, if the two don't differ as unintentional and intentional injustices? In that case, we must try to demonstrate the principle on some other basis.

Clinias: Entirely so, stranger. It is not possible for us to approach this issue in any other way.

^{861e}

Athenian: That is what we will do. So come on, then. When citizens are involved in communal activities and various interactions, they harm one another in lots of ways, so it seems, and in these cases there are countless instances of the intentional and the unintentional.

Clinias: Inevitably.

Athenian: No one should insist that all the harms are injustices and, accordingly, decide that the injustices involved in these harms are twofold, some being intentional, some unintentional. For on the whole, there are as many instances of the unintentional harms as there are inten- ^{862a} tional harms, and they are just as significant. But please consider whether I am making sense or talking utter nonsense in saying what I am about to say. For I am not saying, Megillus and Clinias, that if someone injures someone else unintentionally, without wanting to do so, he is acting unjustly even though he is doing so unintentionally. And I am not going to propose laws on that basis by treating this as an unintended injustice. Rather, I shall not designate this sort of harm as an injustice at all, regardless of whether it is of ^{862b} greater or lesser significance. But in many cases we shall say, if my opinion prevails, that the person responsible for a benefit that unfolds wrongly is acting unjustly. For, in general, my friends, even if someone gives anything at all to someone else, or indeed takes it from them, such an action should not be referred to in simple terms either as just or as unjust. Rather, the lawgiver needs to consider whether or not the person is benefiting another or harming them, in a just spirit and in a just manner. He must take these two factors into account, the injustice and the harm. He must do the best he can, by the laws, to make good ^{862c} the harm done. He should restore what has been undone, reconstruct what has fallen down, and make good the slaughter and the deep wounds. And when the harm has been atoned for by awarding compensation, he must constantly endeavour to use the laws to establish friendship in place of discord, among the perpetrators and their victims.

^{862c}

Clinias: Yes, very good.

Athenian: As for cases of unjust harm, and profit too, where someone treats another unjustly but causes him to profit from

that action, these are diseases of the soul, and when they are curable they are to be cured. And the curing of the injustice, according to us, should proceed as follows.

Clinias: How?

862d

Athenian: In such a way that if someone commits an injustice, great or small, the law will teach him and compel him never, intentionally, to dare to do such a deed again at all, or to do so very much less often, and, in addition, to pay for any harm done. The actual function of the 862e most sublime laws is to bring this about with words or deeds, employing pleasures and pains, honours and dishonours, financial penalties or gifts, or any means at all at the disposal of the lawgiver to induce a hatred of injustice and a love, rather than hatred, of justice itself. But if the lawgiver realises that someone is beyond cure in these respects, what penalty shall he impose in such cases, and under what law? He would recognise, I presume, in all such cases, that it is not better for the people themselves to continue living, and that their departure from this life benefits others in two ways: by acting as an example to others to avoid injustice, and by ridding the city of bad men. And so, in such cases and no others, the lawgiver needs to impose the death penalty as a punishment for the transgressions.

863a

Clinias: What you have said sounds most reasonable somehow. But it would be nice to hear a clearer account of how the distinction between injustice and harm, and between what's intentional and what's unintentional, have become so mixed up.

Athenian: Then, I must try to do as you ask and explain this. There is something about soul that you have surely discussed with one another, and heard about. There is innate in it one characteristic, or part of its nature, namely passion – a contentious, aggressive quality whose irrational force

frequently wreaks havoc.

863b

Clinias: Of course.

Athenian: And, indeed, we do not speak of pleasure as being the same as passion. We maintain that it holds sway by using a power that is the opposite of this, always getting its own way through persuasion combined with deception.

Clinias: Very much so.

863c

Athenian: And if someone were to say that ignorance is a third cause of the transgressions, that would not be a lie. Now, it would be better if the lawgiver were to divide this in two, regarding its simple form as the cause of slight transgressions. The complex form of ignorance arises when a person is devoid of understanding, being gripped not only by ignorance, but by a belief that he is wise, as if he was completely knowledgeable about things he knows nothing about at all. This sort of ignorance, when accompanied by strength and power, the lawgiver regards as the cause of major, vile transgressions. But when it is accompanied by 863d weakness, he will see that it is the cause of transgressions belonging to childishness or old age. And although he will indeed regard these as offences, and will pass laws as if these people were transgressors, these will be the most gentle and forgiving laws of all.

863d

Clinias: That sounds reasonable.

Athenian: Now, we all speak generally of one person as being in control of pleasure and passion, and another as controlled by them, and this is indeed how matters stand.

Clinias: Entirely so.

Athenian: But we have never heard it said that one person is in control of his ignorance while another is controlled by it.

Clinias: Very true.

863e

Athenian: And yet we say that when his own will is taking him in one direction, all these frequently urge the person in the opposite direction.

Clinias: Yes, with great frequency.

Athenian: Well then, I should now define for you, clearly and without complication, what I mean by just and unjust. For I refer to the tyranny in the soul of passion and fear, of pleasure and pain, envy and desire, whether they cause harm or not, as injustice in all cases. But when the opinion as to what's best is dominant in souls, and orders the lives of everyone – whatever a city or some citizens believe this to be – then, even if damage is done, anything that 864a is done in this way, and whatever is obedient to such rule, should be declared just and best, all in all, for the lives of us humans, even though the sort of harm I refer to is regarded by most people as unintended injustice. But our concern at the moment is not with some contentious argument about names. Rather, since it has been demonstrated that there are three 864b forms of transgressions, we should first get an even better mental grasp of these. One form is pain, which we call passion and fear.

864b

Clinias: Very much so.

864c

Athenian: The second consists of pleasure, and desires too. The third, which is quite different, is the striving for hopes, and true opinion about what is best. And when this one is itself divided in three, we have five forms, as we are now saying.⁹⁵ Different laws in each case should be enacted for these five, in two categories.

Clinias: What are these two?

Athenian: One consists of any deeds involving outright violence, the other of deeds done secretly with dark deception. There are also deeds that involve both aspects, and in such a case the laws should be at their harshest if they are to play their proper role.

Clinias: Yes, that's reasonable.

864d

Athenian: Next, let's return to the point from which we digressed, and continue the enactment of our laws. We had, I believe, put laws in place about plundering of the gods' property, about treason, and about the subversion of the laws in order to destroy the established constitution. Now, someone might engage in one of these whilst mad or under the influence of disease or extreme old age or out of immaturity, which are not much different from madness. If any ^{864e} of these circumstances comes to the notice of the selected judges, on the report of the offender himself or someone acting on his behalf, and it is adjudged that he broke the law whilst in this condition of madness, he should simply pay in full for any harm he has done to anyone, and any other penalties are to be waived. However, if he has killed someone and his hands have not been cleansed of the murder, he is in that case to be banished to another country, and dwell in that foreign place as an exile. Should he return before the time specified by law, or if he even sets foot in his native land, he is to be imprisoned in the state prison by the guardians of the law, and released only after two years.

865a

Athenian: Now that we have begun on the subject of murder, let us try to enact laws in full concerning all of its forms, dealing first with cases of unintentional violence. If someone causes the death of a friend in a contest or during public competitions, whether the person dies on the spot or later on from his

wounds, or the same thing happens in war or during military training when practising with the body unprotected, or in full armour when imitat- ^{865b} ing actual warfare, he may be pronounced pure once he has been purified in accord with a law received from Delphi concerning these cases. And in the case of physicians, if the patient dies unintentionally at their hands, let the law account the physician pure. If one person, by his own act, unintentionally kills someone else, either unarmed using his own body or using some implement or missile, or by giving the person food or drink, or by exposing him to heat or cold or suffocating him, whether he does this himself ^{865c} in person or through the agency of others, in any case the act should be treated as if it was his own act in every respect, and penalties should be imposed as follows. If he kills a slave he is to compensate the dead man's master for any damage or loss, treating the matter as if a slave of his own had been done away with. Otherwise, he is to incur a penalty of double the value of the dead slave, as determined by the judges, and undergo purifications that are greater and more numerous than in cases where people cause death during competitions.

^{865d}

Athenian: And interpreters whom the god selects are to be in charge of these purifications. If the slain slave was his own, he is to be acquitted once he has been purified according to the law. If someone unintentionally kills a free man, he is to undergo the same purifications as someone who kills a slave, and he should respect the ancient story, recounted of old. This tells us that someone who has suffered a violent death, having lived his life proud and free, is angry, ^{865e} just after death, with the person who did the deed. He is filled with fear and dread because ^{866a} of his own violent fate, and when he sees his own murderer frequenting his own familiar haunts, he is maddened, and, being disturbed himself, with memory as his ally, he troubles the perpetrator as much as he possibly can, both the man himself

and all his actions. For this reason, the perpetrator should avoid the victim for all the seasons of a single year, by vacating any places that are personal to the man throughout his native land. And if the man who died was foreign, he is also to refrain from visiting that foreign country for the same period of time. If someone complies willingly with this law, the dead man's closest kin, ^{866b} supervising all of these developments, are to forgive him, and in making peace with the offender they would be acting reasonably in every respect. But if someone does not comply, and first has the audacity to enter the sacred places and offer sacrifice without being purified, or again fails to fulfil the period of exile as decreed, the dead man's closest kin are to prosecute the killer for murder, and if he is convicted, all the penalties are to be doubled. And if his closest relative does not pursue the case, anyone who wishes may take a case against him, demanding five years of exile from his own native land as the legal penalty, as if the defilement had come around to the kinsman.

^{866c}

Athenian: If a foreigner unintentionally slays another foreigner, anyone in the city who wishes may prosecute him under the same laws, and if he has alien residency rights he is to be exiled for a year. But if he is an alien in every respect, whether a foreigner, a resident alien or a citizen was slain, in addition to the purification he is to be excluded for his entire life from the country where these laws hold sway. And if he returns illegally, the guardians of the law are to impose the death penalty upon him, and if he has any property this should be handed over to the victim's closest kindred. If he returns unintentionally because of a shipwreck off our coast, he is to encamp where the sea wets ^{866d} his feet, and keep watch for a ship to take him away. If he returns by land because some people have taken him here by force, the first city official who comes across him is to release him, and send him safely across

the border. If someone by his own hand slays a free-born citizen, but the deed is done in passion, we should begin by making a twofold distinction. For such a deed is done out of passion in one case by those who suddenly, and without planning the killing in advance, take someone's life in a spur-of-the-moment attack with blows or the like, and are remorseful as soon ^{866c} as the deed is done. In another case it is done out of passion by those who, having been insulted with words or disrespectful behaviour, pursue their revenge and eventually take someone's life, fully intending to kill, and are not remorseful over what has been done. It seems then we should treat these as two kinds of murder, both born more or less of passion, and it would be only right to say that they fall somewhere between the intentional and the unintentional. Not that they don't bear a resemblance to the two extremes. One resembles the intentional, in that the person nurses his passion and does not take revenge suddenly on ^{867a} the spur of the moment, but later on as part of a plan. The other, while not being entirely unintentional, does resemble the unintentional. The person is out of control, giving vent to his anger suddenly, on the spur of the moment, without advance planning, just like the unintentional murderer. Therefore, it is difficult to decide whether murders done in passion are to be treated by the law as intentional or, in a sense, unintentional. The best and truest course is to treat them both as resemblances, and distinguish them by the presence or absence of premeditation. Those who kill in anger, with premeditation, should be punished more harshly by the law, while those who do so suddenly, on the spur of the moment, should be ^{867b} treated more gently. For the deed that resembles the greater evil should receive the greater punishment, while the deed that resembles the lesser should be punished less. Our laws ^{867c} then must act accordingly.

^{867c}

Clinias: Entirely so.

Athenian: Well, returning to our theme once more, let us say this. If someone slays a free-born citizen by his own hand, whoever does so in anger, without premeditation, should suffer in general the fate deserved by someone who kills without passion, but he should be compelled ^{867d} to go into exile for two years, restraining his own passion. Someone who slays out of passion, but with premeditation, is to be treated much the same as the previous person, except that he is to be exiled for three years, rather than the two years in the other case, the greater passion receiving a longer term of punishment. Their return from exile should be dealt with as follows. Now, it is difficult to enact such laws in a precise manner since, of the two, the person treated by the law as more dangerous might, on occasion, be less aggressive, while ^{867e} the person it treats as less aggressive might be more dangerous and have carried out the murder more savagely, while the other was less aggressive. However, for the most part, what happens is in accord with what we have just been saying. So, the guardians of the law are to act as arbiters in all these cases, once the period of exile is over. In either case, they are to send twelve judges from among themselves to the country's borders, judges who have, during the period of exile, looked into the actions of the exiles in even greater detail. They are to act as judges concerning the forgiveness and the return home of these offenders, ^{868a} who are, for their part, to abide by whatever is decided by such officials. If either of the two, having returned home, ever lets anger get the better of him and does the same thing again, let him be exiled, never to return. And if he does return, let him suffer the same fate as a returning foreigner. If someone kills his own slave, he is to be purified, and if he kills someone else's slave out of passion, he is to pay double damages to the owner. If any killer of any sort dis- ^{868b} regards this law and defiles the market place, the games or the other sacred places by being impure when he goes there, anyone who wishes may prosecute the

responsible member of the dead man's family, and the killer too, and compel them in one case to demand, and in the other case to pay, double the fine and other penalties. And let the fine be payable, by law, to the person who prosecuted them. Should a slave kill his own master out of passion, ^{868c} the relatives of the dead man may treat the killer as they please; except to be pure, they are under no circumstances to leave him alive. If some other slave, out of passion, kills a free citizen, his masters are to hand the slave over to the relatives of the dead man who must put the murderer to death, but may do so in any way they please. If, as sometimes happens, but not often, a father or mother, out of passion, slays a son or daughter with blows or by some other violent means, let them be purified by the ^{868d} same procedures as in the other cases, and be exiled for a period of three years. When such killers return, a woman is to separate from her husband and a man from his wife, and they are not to have any more children together. Nor may they share a home with those whom they have robbed of a child or a brother, nor may they join in their sacred rituals. Anyone who disrespects and disregards these requirements may be prosecuted for impiety by who- ^{868e} ever wishes. If some man in anger kills his own wedded wife, or a woman does the very same thing to her husband in the same way, let them undergo the same purifications and be exiled for three years. On their return, someone who has done such a deed may not join in the sacred rituals of their own children, nor share their table. If either the parent or the child disregards these requirements, they are to be prosecuted for impiety by anyone who pleases. If, out of passion, brother slays brother or sister, or sister slays brother or sister, they ^{869a} are to undergo the same purifications and period of exile as decreed for the parents and the offspring. No one may ever share the home or join in the sacred rituals with brothers whom they have deprived of brothers, or parents whom they have deprived of their children. If anyone

disregards this precept, it is only right and just that they be prosecuted under the law as stated concerning impiety in such cases.

869b

Athenian: If someone develops such uncontrolled passion directed against those who gave him life, that in the madness of anger he dares to slay one of his parents, and the victim, just before death, willingly forgives the perpetrator of murder, then let him be accounted pure once he has undergone the same purifications as those who have committed an unintentional murder, and has done everything else that is required in those cases. If he is not forgiven, then whoever has done such a deed must be subject to a number of laws, for he would be liable to penalties in the extreme, for assault, for impiety, and for temple plundering too, ^{869c} because he has stolen the soul of his parent. And so, if it were possible for the same person to die many times, then it would be perfectly just for a patricide or matricide, who did the deed out of passion, to suffer many deaths. Indeed, in this case alone, even in self-defence where his life is under threat from his parents, no law will permit the slaying of a father or mother, the very people who are responsible for his existence. The law will ordain that he put up with anything rather than do such a deed. How else under the law could such a person be punished appropriately? So let the death penalty stand as the punishment for someone who slays his father or mother out of passion.

869d

Athenian: If, during some civil faction, a brother slays a brother during a fight or the like, while defending himself against someone who started the trouble, let him be accounted pure, just as if he had killed an enemy. The same applies to the killing of a citizen by a citizen, or a foreigner by a foreigner. If a citizen slays a foreigner, or a foreigner a citizen, in self-defence, the procedures for purification are to be the same, and likewise if a

slave kills a slave. But if, on the other hand, a slave kills a free-born citizen in self-defence, he is to be subject to the same laws as someone who kills his father. What has been said about the forgiveness of ^{869e} murder on the part of a dying father is also to apply to all forgiveness of such offences. If anyone willingly forgives anyone else for this, as though the murder has been unintentional, the offender is to undergo the purifications, and the period of exile under the law is to be for one year. Let that stand as a reasonable treatment of murders that are violent, unintentional and born of passion. We must now add to these our treatment of murders that are intentional and born of total injustice, that are premeditated and performed under the dominion of pleasures, desires and jealousies.

^{869e}

Clinias: Quite right.

^{870a}

Athenian: Once again, then, let us begin by stating, as best we can, how many such causes there are. The greatest is desire, which dominates a soul made wild by its own longings. Now, this is strongest when the object of the most frequent and powerful yearning that affects most people is present. Because of their bad nature and ill education, the power of wealth is such as to breed countless passions in people for its own insatiable and unchecked acquisition. And the cause of the ill education is the custom, among Greeks and non-Greeks alike, of praising wealth in a perverse manner. For by deciding that it is the foremost of goods, when ^{870b} it really lies third, they do harm to the succeeding generations and to themselves. The most exalted and excellent practice of all, for any city, is to speak the truth about wealth, which is that it exists for the sake of the body, and the body for the sake of the soul. So since there are these goods, and wealth exists for their sake, it would lie in third place after the excellence of body and soul. Now, this precept would teach us that someone intent upon a happy life

^{870c} should seek not to be wealthy, but to be wealthy in a just and sound-minded manner, and in this way, murders requiring further murders as a purification would not take place in our cities. Nowadays, however, as we said at the outset of these deliberations, this love of wealth is the single most significant factor responsible for the most serious court cases involving intentional murder. Second is the disposition of an ambitious soul, producing jealousies that are particularly difficult even for the jealous person himself to live with, and difficult too for the best people in the city.

^{870d}

Athenian: In third place are the fears born of cowardice and injustice that lead to so many murders in cases where someone is doing, or has done, something they wouldn't want anyone else to know about, so they do away with those who might expose such secret deeds by killing them when they are unable to stop them in any other way. Let what has been said so far be preludes dealing with all these matters, to which we should add the account, firmly believed by many, who have heard it from those who have concerned themselves with this sort of thing in the sacred mysteries. The account states ^{870e} that in Hades there is retribution for such transgressions, and that on returning to this world once more, the offender must pay the natural penalty, the penalty of experiencing the crime he himself committed, thus ending his present life by suffering that very fate at the hands of another.

^{871a}

Athenian: There is no need to recount the full law on this matter to someone who is convinced, and totally dreads such a penalty. But for anyone who is not convinced, let the law declare in writing, that whoever by his own hand slays a fellow citizen with premeditation, in an unjust manner, is, in the first place, to be excluded from the lawful assemblies and is not to defile the sacred places, the market, the harbours or any public

meeting with his presence, whether someone notifies the offender of these exclusions or not. In fact, the law notifies ^{871b} him on behalf of the entire city, and does so publicly, and will continue to do so. If anyone closely related to the deceased, on his father's or mother's side, as close as a cousin, who should prosecute the killer doesn't do so, or fails to proclaim his exclusion, firstly, the defilement should fall upon that person, and the wrath of the gods too, for the wrath of the law brings infamy with it. Secondly, he is liable to prosecution by anyone who wishes to exact punishment on behalf of the deceased. Whoever is prepared to exact punishment should ^{871c} pay due attention to the relevant ablutions and whatever other requirements the god has ordained in these cases, and give formal notice of the proceedings. He should then go on to compel the offender to submit to the imposition of the penalty, according to law. Now, the lawgiver may declare, quite easily, that this must all be brought about through certain prayers and sacrifices to the gods who are concerned, that no murders take place in our cities. But who these gods are, and what manner of prosecuting such cases would be most correct in relation to the divine, shall be ordained, in conjunction with inter- ^{871d} preters, prophets and the god, by those who make the laws, who should conduct these cases accordingly. And the judges of these cases shall be the same as those who were said to have full authority to try the temple plunderers. Whoever is found guilty is to be sentenced to death, and is not to be buried in the land of his victim, for quite apart from the impiety, such a burial would imply forgiveness. If he flees and is not prepared to submit to judgement, let him flee and be an exile forever. But if any such person sets foot in the land of the murder ^{871e} victim, the first relative or fellow citizen of the deceased that comes across him may kill him with impunity, or else tie him up and hand him over to the officials who tried the case, to be put to death. Whoever is prosecuting a case must, at the outset, secure a

guarantee from the person he is accusing, who should provide guarantors, worthy people in the opinion of the court that tries such cases. Three such worthy guarantors are to guarantee to present him for trial. And if the accused is unwilling or unable to make such an arrangement, the ^{872a} court shall apprehend him, keep him in prison, and present him for trial. If someone does not commit a murder by his own hand, but nevertheless plots the death of another person, and having killed him through planning and contrivance continues to dwell in the city, responsible for murder but with his soul unpurified, let him be subject to the same judicial procedures as the previous case except in the matter of the guarantee, and let's allow him be buried in his own native land. In all other respects the procedure in his case is to be the same as in the previous case.⁹⁶ These same procedures apply, apart from the guarantee, to killings in person or through contrivance, involving foreigners against foreigners, citizens and foreigners against one another, or, indeed, slaves against slaves. The ^{872b} guarantee, as we said, is to be obtained by those who kill in person, and so whoever makes the accusation of murder must demand a guarantee in these cases too. But if a slave intentionally slays a free citizen, either in person or through contrivance, and he is found guilty of the crime, the public executioner is to drag him towards the burial place of the deceased, to a place where the tomb is visible, and lash him as many times as the accuser ordained. And if he is still alive after being whipped, he is to be put to death. If someone kills a slave who has done no wrong, fearing that he might expose the man's own disgraceful, evil deeds, or from some similar motivation, let him stand trial for the murder of such a slave in just the same way as if he had slain a fellow citizen.

^{872c}

Athenian: Now, there are cases for which the framing of laws is a dreadful and utterly distasteful task, yet it is impossible to

avoid enacting them. I am referring to murders of close relatives, either in person or through contrivance, that are intentional and unjust in every way. These occur for the most part in cities that are badly governed, where people are badly brought up, but something like this may happen even in a country where you might least expect it. So we should repeat the account we gave a moment ago in the hope that someone who hears us may be better able under such guidance, to refrain of their own accord from murders that contravene every sacred precept. For the story or account, or whatever it should ^{872d} be called, comes from priests of old, and declares plainly that justice, the avenger of the blood of kinfolk, keeps watch using the law we have just stated, and decrees that whoever does such a deed must of necessity suffer that very same fate himself. If someone ever kills his father, he himself must submit to suffering the same violent death sometime at the hands of his own offspring. If he slays his mother, he himself must be born with a female nature, and in due course lose his life at the hands of those to whom he gave birth. For once the shared blood has been defiled, there is no other purification besides this, and the stain of pollution will refuse to be washed away until the offending soul has paid the price, murder ^{872e} for murder, like for like, and has brought the anger of all the kinfolk to rest by appeasing them. So, dreading such vengeance from the gods, a person should show restraint. If, however, any people are overtaken by such wretched misfortune as to deprive a father or mother, siblings or offspring, of their human body, with premeditation and full intent, the law enacted by the mortal lawgiver should decree the following. The proclamations of their exclusion from lawful assemblies, and the guarantees, are to be the same as described in the previous cases. And if someone is found guilty of such a murder, having slain one of ^{873a} these kinfolk, the judges' assistants and the officials are to put him to death and throw his body at a place outside the city

where three roads meet. There all the officials, on behalf of the entire city, each bearing a stone, are to throw it at the head of the corpse to sanctify the whole city. Afterwards, by law, the body is to be carried beyond the boundaries of the country, and cast out unburied.

873b

Athenian: But what is to happen to someone who slays the closest kindred of all, the dearest of all, so called? I am referring to someone who kills himself, violently depriving fate of its destined course without the city's just decree, without being compelled to do so because he has been afflicted by huge, inescapable pain, without being involved in some desperate disgrace that he cannot live with; someone who, out of idleness and unmanly cowardice, passes an unjust sentence upon himself. In this case then, in general, god knows the observances ^{873c} that are required in relation to purification and burial. The closest kindred should make enquiry about these from the interpreters, and from the relevant laws, and act in accordance with their injunctions. The graves of those who have met their end in this way are firstly to be solitary. There must be no shared tombs. And they are to be buried ignominiously, with no headstones or names visible on their graves, on unnamed waste land between the borders of the twelve regions.

873d

Athenian: Now, if a beast of burden or some other animal murders someone – except when it does something like this while competing in the public games – the relatives shall prosecute the killer for murder and the case is to be judged by those rural commissioners, in whatever number, whom the relatives appoint. The guilty animal is to be killed and cast out beyond the country's borders.

873e

Athenian: What if something lifeless deprives a human being of life? Except in the case of lightning or some such dart from god, any other object that kills someone by falling on him, or because he falls against it, is to be tried by the man's nearest neighbour at the behest of his closest relative, who is thus purified, himself and the whole family. The offending item is then to be cast out beyond the boundaries, just as we described in the case of animals.

874a

Athenian: If someone has obviously been slain and it is not apparent who killed him, and this is not discovered even after a careful investigation, the same notices of trial are to be served, just as in the other cases, but the prosecutor should make his public address to “the person ^{874b} who committed the murder”, and having established his right to prosecute, shall announce in the market place that “whoever killed so and so’ is guilty of murder and is not to enter the sacred places, nor anywhere in the country of his victim. And if he does make an appearance and is recognised, he shall be put to death and cast out, unburied, outside the country of his victim. So let this stand as one of our established laws, one dealing with murder. So far we have dealt with cases of this sort, in this way. But the cases and circumstances where a killer may properly be accounted pure are as follows. If someone slays a ^{874c} thief whom he catches entering his house by night to steal his property, let him be accounted pure. If someone kills a robber in self-defence, let him be pure. If someone is doing violence to a free-born woman or boy, sexually, he may be slain with impunity by those who are being forcibly violated, or by their father, brothers or sons. If a man finds his wedded wife being violated and he kills the perpetrator, let him be pure in the eyes of the law. And if anyone slays someone while defending his father's life when his father is doing nothing improper, or indeed when defending his mother or children or brothers or the mother of his children, let

him be accounted pure, entirely so.

874d

Athenian: Let us take it, then, that laws are in place for punishments in cases of violent death and for the upbringing and education of the living soul, which makes life liveable when present, and the very opposite when absent. And although the laws that deal with the nature and education of bodies have been described, what follows from these – the violent actions against one another that occur intentionally or unintentionally – must be distinguished as best we can, stating what they are and how many there are, and what the appropriate punishments are in each case. It seems only right to legislate for these matters as well as the others. Now, even the most incompetent practitioner of the law would place cases of injuring 875a and consequent maiming next, after cases involving death. Injuries must be distinguished in the same way that murders were distinguished, some being unintentional, born of passion or fear, others being intentional and premeditated. But everything of this sort requires a prefatory statement explaining that it is, indeed, necessary for us humans to enact laws, and to live according to those laws, or else be no different from the wildest of wild beasts. The reason for this is that there is no human being whose nature is so fully developed as to recognise what is beneficial to humanity in civic terms, and having recognised this be capable 875b of doing what is best, always and willingly. Indeed, it is difficult to recognise, firstly, that the true science of politics needs to care not for the private but for the common interest, for what's common unites the cities, while the private tears them asunder. And it is hard to recognise too that it is beneficial, both to the community and to the individual, that the common be given priority over the private. Secondly, even someone who arrives at an adequate recognition that this is the natural state of affairs in theory, and afterwards rules the city unchecked, answering to none but

himself, would never be able to abide by that precept, ^{875c} and spend his time fostering common interests in the city while placing his personal interests second. Rather, his mortal nature will drive him to greed and self-interest, fleeing from pain and pursuing pleasure in an irrational manner, giving higher priority to these two than to justice and goodness, producing its own darkness, and finally filling itself and the entire city with all sorts of evils. Of course, if any person was ever born, by divine providence naturally equipped with the ability to appreciate these truths, no laws would be needed to govern him. For no law or command is more authoritative than knowledge, nor is it ordained ^{875d} that reason be subservient to anything, or be its slave. Reason should have authority over everything, if it really is as it naturally is, true and free. But nowadays this appreciation is nowhere to be found, or is quite rare, so we must take the second-best course – command and law. These two can discern a great deal, and attend to a great deal, but not to everything. All this has been said because we are now deciding what should happen to the person who injures or harms someone else, and what ^{875e} the penalty should be. At this stage, anyone might quite rightly interject, and ask in general, “What injury does this person do, to whom, how, and when?” For there are countless possibilities here, and they differ enormously from one another. Now, it is impossible to entrust all these issues to the law courts for judgement, or to entrust none of them. Indeed, in all cases one issue that must be entrusted to them for judgement is the question of whether each of these events happened or did not happen. And it is well-nigh impossible to avoid entrusting them with the further decision on the penalty for the wrongdoers, and what they ^{876a} must suffer in any of these cases. And it is impossible too for the lawgiver to enact laws for all these cases, great and small, himself.

^{876a}

Clinias: After this, what precept comes next?

Athenian: That some matters should be entrusted to the courts, while others should rather be legislated for by the lawgiver.

Clinias: Which matters should be legislated for, and which should be handed over to the law courts for judgement?

876b

Athenian: It would be more correct to make the following point next. Consider a city where the law courts are degenerate and inarticulate, where they don't disclose their members' opinions, where judgements are given secretly, and to make matters worse are made not in silent proceedings but amidst tumult, as if in a theatre, with shouts of approval or disapproval of each of the speakers in turn. All this tends to be a difficult predicament for the entire city.

876c

Athenian: To take on the task of enacting laws for courts of this sort, under pressure of necessity, is a most unfortunate position to be in. Nevertheless, having taken on the task out of necessity, we should trust the courts to assign penalties in the insignificant cases, while most cases are dealt with explicitly by formal legislation, if that is, one would ever legislate for such a society at all. But in a city where, to the best of its ability, the courts have been properly established, and the people who are to act as judges have been well trained and tested in every detail, it would be right and sensible to trust judges of this sort, for the most part, to decide what is to happen to offenders, and what penalties they should incur. No one should ^{876d} blame us then, in the present case, if we do not prescribe for them by law the various important principles which even less educated judges would be well able to discern, and then impose upon each of the transgressors the deserved penalty for the injury suffered and the crime committed. That is because the judges for whom we are making laws are, in our view, more than

capable of deciding such matters for themselves, and should be trusted to do so in most cases. Of course, we cannot avoid the approach stated and acted upon so often previously in the implementation of our laws by providing an outline and giving samples of the punishments as examples to the judges, so that they do not transgress the bounds of justice. That was the right thing to do then, and that's what should be done now, as I return once more to consideration of laws.

877a

Athenian: Let our enactment about wounding be as follows. If someone plans and intends to slay a friendly party, apart from those whom the law opposes, and he fails to kill him but wounds him instead, the person who planned the murder and inflicted the injury deserves no mercy. And there should be no concern about treating him just as if he had killed someone, and making him stand trial for murder. But we should show respect for the fact that his misfortune was not total, and respect too for the daimon who took pity on him and on the person he injured by acting as their saviour so that the injury did not prove fatal in one case, and that the misfortune did not turn into a curse in the other case. So, out of gratitude ^{877b} and submission to the daimon, the offender should be spared the death penalty, and exiled instead to a neighbouring state to live out his life there, enjoying all of his own possessions in full. If he has damaged the injured party, let him make payment to the person he has damaged, and let the amount be assessed by the court that judges the case, a court consisting of the judges who would have decided the murder case if the victim had died of his wounds.

877c

Athenian: If a son intentionally wounds a parent, or a slave his master, let the penalty be death. And if a brother wounds a brother or sister, or a sister does the same, and they are found guilty of wounding with intent, let the penalty be death. If a man wounds his own wife, or a woman her husband, while

intending to kill them, they are to be exiled in perpetuity. If they have any sons or daughters who are still children, their property is to be entrusted to trustees who should look after the children as orphans. If the children are adults, they should be under no obligation to support the exiled parent, and the property should belong to them.

877d

Athenian: If such disasters befall someone who is childless, there should be a meeting of relatives on both sides, the male and the female, extending as far as children of cousins, to decide upon an inheritor for this holding – a 5,040th part of the city – in conjunction with the guardians of the law and the priests. They are to bear in mind the general principle that of the 5,040 holdings, none belongs to the occupier or even to his entire family as much as it belongs, as public and as private property, to the city itself. And the city must, as best it ^{877e} can, preserve the sanctity and good fortune of its own holdings. So, whenever a household suffers such misfortune and ignominy at the same time, to such an extent that the possessor, unwed or married, without offspring, dies, having been sentenced to death for wilful murder or some other such offence against the gods or the community, for which the death penalty has been expressly prescribed by law, or when a man with no children is in exile in perpetuity, this holding must first be purified and exorcised in accordance with the law. Then the ^{878a} members of his household are to meet together, as we described just now, along with the guardians of the law, to discover the family in the city that is held in the highest esteem for its excellence, and is fortunate too, and in which there are a number of children. From this family they shall give one child up for adoption to succeed the father of the dead person and his lineage, naming him after one of them as an omen, praying that by so doing he may become a source of offspring for them, a guardian of the hearth, who cares for everything holy and sacred, enjoying better fortune

than his adoptive father. This person is to be installed by law as the heir to the holding, while the offender, when such misfortunes befall him, is allowed to lie nameless, childless and portionless.

878b

Athenian: It is not the case it seems, under all circumstances, that one boundary line is always adjacent to another boundary line. In some cases there is an intervening space between the boundaries, touching either of the two first, as it lies midway between them. And, indeed, we said that a deed done in anger is like this, as it lies between the intentional and the unintentional. So our law about wounding in anger should be as follows. If someone is found guilty, he is to pay double damages if the injury turns out to be curable, and quadruple damages if it is incurable. And if, although it is curable, the wounded party suffers enormous shame and embarrassment, quadruple damages are to be paid.

878c

Athenian: When someone inflicts injuries that not only harm the victim, but the city too, by rendering the victim incapable of defending his fatherland in time of war, he is to compensate the city for the damage, in addition to the other penalties. For as well as his own military service, he should also do service on behalf of the incapacitated person, and take on the military duties in his place. If he fails to do so, anyone who wishes may take a legal action against him for evasion of military service. The amount of any damages, whether they are to be double, triple, or quadruple, should be determined by the judges who found him guilty in the first place.

878d

Athenian: If kindred in like manner injures kindred, then the parents and the relatives, as far as the children of cousins, on both the male and female side, are all to meet together, men and women alike, and having judged the case are to entrust the

decision on the penalty to the natural parents. If the penalty is disputed, the male relatives are authorised to decide the penalty, and if they are unable to do so themselves, they should finally entrust the decision ^{878e} to the guardians of the law. In cases where such injuries are inflicted on parents by their offspring, the judges need to be over sixty years of age, with natural children of their own, not adopted. If the defendant is found guilty, they are to decide whether such a person should be put to death, or suffer some more severe, or even slightly less severe, punishment. None of the relatives of the offender are to judge the case, not even if they have reached the age stipulated by the law.

^{879a}

Athenian: If a slave wounds a free citizen in anger, the owner is to hand the slave over to the injured party to do with him as he pleases, and if he doesn't hand him over, he himself is to make good the damage. If someone alleges that what happened was a conspiracy hatched by the slave and the injured party, he must sustain that allegation in court. If he fails he shall pay triple damages, but if he succeeds he shall secure an action for kidnapping, against whoever devised the conspiracy in conjunction with the slave. If someone injures someone ^{879b} else unintentionally, let him pay the simple damage, for no lawgiver is up to the task of controlling the operation of chance, and the judges shall be those prescribed for cases where children injure their parents, and they shall assess the value of the damages payable.

^{879c}

Athenian: All the cases we have just spoken of involve violence, and assault too, as a general category, also involves violence. Now, in relation to such behaviour, every man, woman and child must always bear in mind that the elder is revered much more than the younger, among the gods, and among people who intend to live a safe and happy life. So, an assault

perpetrated in public by the younger on the elder is a disgraceful act to behold, and one detested by the gods. So, it is most becoming for a younger person who is struck by an ^{879d} older person to endure the anger with equanimity, thus storing up such respect himself for his own old age. Let our principle be that everyone is to revere everyone older than himself, in word and in deed. Any man or woman more than twenty years his senior is to be regarded as his father or mother and treated with care. All, who because of their age are capable of having begotten him or given him birth, are to be shown restraint for the sake of the gods of birth. In like manner, restraint should be exercised with a foreigner, whether he is a long-term resident or newly arrived. Indeed, neither as the aggressor nor in self-defence, under any circumstances, should a citizen dare to chastise such a person with blows. And if he himself has been assaulted outrageously and audaciously by a foreigner, who he believes ^{879e} should be punished, he is not to retaliate, but to apprehend the foreigner and bring him before a court of city commissioners so that he may learn never to be so bold as to assault a native citizen. The commissioners, having taken the foreigner in hand and cross-examined him with due respect for the god of strangers, are, if the foreigner proves to have unjustly beaten the native, to lash him just as many times as he himself struck the native to put a stop to this foreign audacity. If he has not acted unjustly, they shall warn and censure the man who brought him in, and send both on their way. If someone assaults someone of the ^{880a} same age as himself, or someone who is older but childless, whether elder strikes elder or younger strikes younger, natural self-defence with bare hands, devoid of weapons, may be employed. If someone over forty years of age dares to engage in a fight, either as the aggressor or in self-defence, the degrading punishment of being regarded as wild, unworthy of freedom, and little better than a slave, is no more than he deserves.

880b

Athenian: Someone who readily accepts such exhortation will be easy to deal with, while someone who resists and thinks nothing of our prelude should readily accept the following law. If anyone assaults someone who is twenty years older than himself, or more, firstly, whoever comes across them and is not the same age, or younger, is to separate them or else be an evildoer in the eyes of the law. And if he is the same age, or even younger, let him come to the defence of the victim, as if he were his brother or father or elder relative. Furthermore, whoever dares to attack an elder, as described, is to be tried for assault, and if he is found ^{880c} guilty he is to be imprisoned for at least a year, and if the judges impose a longer sentence that penalty is binding. If a foreigner or a resident alien strikes someone who is twenty years older than himself or more, the same laws relating to assistance from bystanders shall have the same force. For anyone who is convicted of such an offence, who is a foreigner without residency rights, the penalty should be two years imprisonment. A resident alien who dis- ^{880d} obeys these laws should be imprisoned for three years, unless the court decides to impose a longer sentence upon him. A bystander who doesn't render assistance in such cases, as prescribed by law, is to be fined one mina for those of the highest property class, fifty drachmas for the second highest, thirty for the third, and twenty for the fourth. And the court in such cases should consist of generals, army commanders, cavalry officers and cavalry commanders.

880e

Athenian: Some laws it seems are aimed at worthy folk, to teach them a manner of dealing with one another that will ensure that they live wisely. Other laws are aimed at people who reject education, who are hard by nature and devoid of the softness required to avoid going the way of total evil. These people are responsible for whatever we are about to state, since

the lawgiver needs to enact certain laws for them, wishing all the while that they were not needed. Whoever dares to lay hands upon father or mother or their progenitors in a violent ^{881a} assault, fearing neither the wrath of the gods above nor the punishments reported in the world below, acting as if he knows when he does not know at all about these matters, who transgresses the law out of contempt for the ancient and universal traditions, is someone who requires the ultimate deterrent. Now, death is not the ultimate deterrent. The travails described for such offences in Hades are much more extreme than those in this world, but although they are recounted in great detail, they do not act as a deterrent for souls like these, for if they did, these unholy, flagrant assaults upon mothers and ancestors would never occur. So, the punishments of these people for such offences in this life, should, if possible, not fall short of those in Hades.

^{881b}

Athenian: Let our next pronouncement, then, be as follows. If someone who is not in the grip of madness dares to strike their father or mother, their grandfather or grandmother, firstly, as in the previous cases, any bystander must render assistance. A foreigner with residency rights who helps shall be called to the seats of honour at the public games, or shall be exiled from the country in perpetuity for not doing so. A foreigner without residency rights who helps is to be praised, and if he does not help he is to be reprimanded. A slave who helps is to be given his freedom, or if he does not help, let him receive one hundred lashes of the whip from the market commissioners if the assault took place in the market place. If it took ^{881c} place in the city, but outside the market, the resident urban commissioner should administer the punishment. If it happened in some rural area, those in charge of the rural commissioners should see to it. If the bystander is a native-born man, woman or child, they should, in every case, ward off the attack and denounce the

outrageous act. If they fail to do so they are liable by law to the curse of Zeus, the god of kindred and parentage. If any of them are ^{881d} found guilty of assaulting their parents, first let them be exiled from the city to some other region in perpetuity, and excluded from all sacred places. If they ignore the exclusion, the rural commissioners should punish them with whipping, or in any way they please, and if they return to the city they should be condemned to death. If any free-born person eats or drinks or has a similar interaction with such an offender, or even meets up with him and makes physical contact, he should enter no holy place or the marketplace, or anywhere else in the city, before he has been purified, as though he had been involved in an abominable ^{881e} crime. And if he disregards the law and defiles the city illegally, any official who is aware of this and does not prosecute such a person shall, at his audit, face this omission as one of the most serious allegations made against him.⁹⁷ Should a slave strike a free citizen or a foreigner, any bystander should come to their assistance or else be subject to the fine previously specified for their property evaluation. The bystanders shall help the victim to bind the slave, and then turn him over to the wronged party who shall take charge of him, bind him in fetters, whip him as many times as he wishes without detriment to his master, and finally hand him over to that master and rightful owner.

^{882a}

Athenian: So, let the law be that when any slave strikes a free person without being directed to do so by the officials, his owner is to receive him, in bonds, from the person he assaulted, and is not to release him until the slave persuades his victim that he deserves to be released and continue with his life.

^{882b}

Athenian: In all such cases, the same regulations should apply whether women are dealing with women, men with women, or women with men.

BOOK X

884a

Athenian: Now that assaults have been dealt with, a single universal regulation concerning the use of force should be stated as follows. No one is to take or remove what belongs to others, nor should he make use of what belongs to a neighbour without the owner's consent, for all the evils we have described, past, present and to come, derive from such behaviour. Of the remaining causes, the most grievous is unrestrained and outrageous behaviour in the young, and this is most serious when it affects the sacred, and is especially serious in the 885a case of whatever is sacred to the community, or partly so, being common to clans or similar groupings. Second in rank and severity are outrages against private shrines and tombs. Third are outrages against parents, apart from those described earlier. A fourth kind of outrage occurs when someone has so little regard for those in authority that he removes or takes away or makes use of something that belongs to them without their consent. Fifth would be any outrage against the civic entitlement of any individual citizens, calling for legal remedy. A common law applicable to each case should be provided.

885b

Athenian: In the case of temple plundering, by force or subterfuge, we have already stated briefly what should happen to the offenders. We should now say what is to happen in any cases where someone acts outrageously towards the gods, in word or in deed, by what is said or what is done, beginning with a preamble as follows. No one who believes in the gods, as the laws prescribe, has ever deliberately done an impious deed or let loose an unlawful word. If anyone does so it is because one of three things befalls him. Either, as I was saying, he does not really believe in them, or secondly he believes that they exist but do not care about us humans, or thirdly he believes that

they are easily appeased under the influence of sacrifices and prayers.

885c

Clinias: So, what should we do or even say to these people?

Athenian: Good man, let's listen first to what I suspect they would say, mocking us contemptuously.

Clinias: In what way?

Athenian: To tease us they would probably say this. "Athenian stranger, Spartan and Cnossian, what you are saying is the truth. Some of us indeed do not believe in any gods at all, while others believe in gods of the kind you are describing. We then deserve the very same ^{885d} treatment that you deserved from the laws, that before issuing harsh threats, you first attempt to persuade us and teach us by providing adequate proofs that the gods exist, and that they are too good to be diverted from the path of justice when beguiled by some gifts of ours. For as matters stand, we hear all this and other ideas of this sort from poets, orators, prophets and priests, of the highest reputation, and from countless others too. And so most of us, ^{885e} rather than following a path where we do nothing unjust, act unjustly and attempt to make amends. From legislators like yourselves then, who claim to be gentle rather than aggressive, we expect to be dealt with first through persuasion. And if you don't do much better than the others in speaking about the existence of the gods, but do better in terms of truth, you may perhaps persuade us. So, if what we are saying sounds reasonable, try to rise to our challenge."

886a

Clinias: It seems easy enough, stranger, to speak truthfully when saying that the gods exist, does it not?

Athenian: How so?

Clinias: First there is the evidence of the earth, sun and stars, and the entire universe, and the beautiful ordering of the seasons, divided into months and years. And then there is the fact that Greeks and non-Greeks alike believe in the existence of gods.

Athenian: Bless you. But I do have a fear of the degenerate folk – although I would never say that I am in awe of them – a fear that they may somehow despise us. Indeed, you don't understand the cause of their disagreement with us, and you believe that lack of control over pleasures and desires is the only thing that impels their souls to a life of impiety.

Clinias: What other cause could there be, stranger, besides this?

Athenian: One which you scarcely understand at all, because you live outside its realm and are unaware of it.

Clinias: What cause are you referring to now?

Athenian: A grievous ignorance that seems to be the height of wisdom.

Clinias: How do you mean?

^{886b}

Athenian: In my country, we have accounts in writing which, as I understand it, are not in existence among yourselves because your civic arrangement is so excellent. These speak of the gods, some in verse, some in prose. The most ancient of them describe how the primal nature of heaven and all else came into being, and, moving on a little from this starting point, describe the birth of the gods and how they treat one another once they have been born. Regardless of whether these accounts are somehow beneficial or detrimental to those who hear them, ^{886c} it is not easy to censure these ancient authorities, and yet I could never bring myself to praise their stories of respect and care for parents, or say that these are beneficial or entirely true.

So we should let go of these ancient tales, bid them farewell, and let them be told in the manner that pleases the gods, while we blame the views of our young folk, and the wise, as the cause of the evils. The arguments of such people proceed as follows. Whenever you and I present proofs for the existence of gods, proposing this very point – that sun, moon, ^{886d} stars and the earth are gods and divinities – the young folk, having been convinced by the wise, are inclined to say that these all consist of earth and stone, and are therefore unable to think about human affairs, and that these proofs of ours have been nicely dressed up in reasoned arguments to make them sound persuasive.

^{886e}

Clinias: The argument you are referring to would be troublesome enough, stranger, even if it was the only one, but nowadays, when there are so very many of them, the difficulty is even greater.

Athenian: What of it? What are we to say? What should we do? Are we to defend ourselves against the impious folk who, when they fall foul of our legislation, accuse us of doing something terrible by enshrining the existence of gods in law? Or should we bid farewell to the issue, in case our preamble becomes longer than the actual laws it is introducing? For our argument ^{887a} would run to considerable length if we were to defer the enactment of suitable laws until we had first presented these people, who are so inclined to impiety, with the reasoned arguments which they say are needed, frightened our accuser away, and made the impious folk detest their impiety.

^{887b}

Clinias: But, stranger, one point has been made many times in the short interval at our disposal: that there is no need at the moment to prefer a short argument over a lengthy one, since as they say no one is chasing after us. So, to be seen choosing the

brief in preference to the best would be comical and undignified. But it is of the utmost importance that our ^{887c} arguments, somehow or other, have a degree of persuasiveness when they maintain that the gods exist, that they are good, and that they revere justice more than any of us humans. Indeed, this formulation would constitute the best and most beautiful preamble for any of our laws. So, without reluctance or impatience, let's deploy any power of persuasion we possess on such issues unstintingly, to expound the arguments adequately as best we can.

^{887c}

Athenian: What you have just said was expressed with such depth of feeling that it seemed to me like a call to prayer. No further delay is allowed then. We must speak. Come on then, how could anyone discourse on the existence of gods without depth of feeling? In fact, it is ^{887d} inevitable that we bear ill-feeling and hatred towards these people who have been, and still are, responsible for our involvement in these arguments, people who don't believe the stories they hear as young children, still at the breast, from their nurses and mothers, tales told in songs of a sort, in a playful or serious spirit, which they also hear directly in prayers during the sacrifices, accompanied by the delightful sights that the young person sees and hears enacted at the sacrifices, beholding their own parents, with the utmost seriousness, offering earnest prayers and supplications on behalf of themselves and their offspring to gods whose ^{887e} existence is undeniable. At the rising of the moon and the sun, and at their setting too, they see and hear the prostrations and adorations of all Greeks and non-Greeks when faced with various misfortunes and successes, not as if there are no gods, but as if they really do exist beyond any grounds for suspicion.

^{887e}

Athenian: But people who view all of this with contempt, without a single adequate argument – as anyone with a

modicum of intelligence would agree – are now compelling us to say ^{888a} what we are saying. So, how might anyone, in mild language, be able to chasten these people and, at the same time, instruct them about the gods, teaching them first and foremost that they exist? But we should take on the task, for there is no use in some among us being maddened by a greed for pleasure, while others are equally maddened by their ill-feeling towards such people. Let our dispassionate preliminary address to those who corrupt their minds in this way proceed, and let's speak to them in mild language with any ill-feeling extinguished, as though we were addressing one person of this sort as follows. "Child, you are young, ^{888b} but as you get older time will transform many of the opinions you now hold into their direct opposites. Wait until then before you sit in judgement on matters of the utmost importance, and the most important is the one that you set at naught – thinking aright about the gods, and so, living, or not living, a good life.

^{888b}

Athenian: "Now, there is one thing I should mention to you at the outset which will never prove false. Neither yourself alone, nor your friends, are the first thinkers to lead the way in holding this opinion about the gods. There are always people, sometimes more, sometimes fewer, ^{888c} who are afflicted with this disease. So I, who have made the acquaintance of lots of them, should inform you that no one who adopts this opinion about the gods when young, the opinion that they don't exist, ever persists into old age still holding to the same belief. But the other two misconceptions about the gods do persist in some cases, although not many: that the gods exist but have no concern for human affairs, or, alternatively, they are indeed concerned, but are easily appeased by sacrifices and prayers. So, if you heed me you will wait until your opinion concerning the gods has become as clear as possible, deliberating ^{888d} as to what the truth of the matter actually is, seeking guidance from

people in general, but especially from the lawgiver. And in the meanwhile, do not dare to show any impiety towards the gods. For whoever is instituting laws for you, now or hereafter, should endeavour to teach you the truth about these matters."

888e

Clinias: What we have said so far, stranger, sounds excellent to us.

Athenian: Entirely so, Megillus and Clinias, but we have unwittingly stumbled upon a wondrous argument.

Clinias: What are you referring to?

Athenian: An argument regarded by most people as the very pinnacle of wisdom.

Clinias: Please clarify.

Athenian: Some people presumably maintain that everything that is coming into being, has come into being or will come into being does so by nature in some cases, by artifice in others, or, again, by chance.

Clinias: Aren't they right to say so?

Athenian: Well, the wise men are likely to be right in what they say, I presume, but let's pursue the matter with them at any rate, and find out what people from that camp actually have in mind.

Clinias: Absolutely.

889a

Athenian: Evidently, they say, the most important and beautiful things are produced by nature and chance, while artifice produces those of lesser importance. Artifice takes the important primary products from nature already created, and then forms and fashions the lesser items, which we all refer to as artificial.

Clinias: What do you mean?

Athenian: I'll explain this more clearly. Fire, water, earth and air all exist by nature and chance, they say, and none of these exist by artifice. And the bodies that then come after these, those of the earth, sun, moon and stars, have come into being through these four entirely soulless entities.

889b

Athenian: They move by chance, each according to its particular power, in such a way that they come together, combining somehow with their own – hot with cold, dry with moist, soft with hard, and so on – for any mixture of opposites that is produced, of necessity, according to chance. In this way, based upon these processes, the whole heaven has come into existence, and everything under heaven, including animals and, indeed, all the plants too. And from these all the seasons have arisen, neither through reason, they say, nor through the agency of some god, nor through artifice, but according to them through nature and chance. Artifice comes afterwards, a later production of these two, itself mortal, born of 889c mortal antecedents. Artifice goes on to generate some playthings, which have not the slightest share in truth, being mere images, just like artifice itself, images that painting generates, music too, and any artifice that assists these. Those artifices that actually give rise to something worthwhile are the ones that lend their own power to collaborate with nature, as happens in the case of medicine, farming and gymnastics. Statesmanship in particular, according to them, involves nature to a small extent, but mostly involves artifice, and so all legislation involves artifice rather than nature, and its propositions are not true.

889d

Clinias: In what way?

Athenian: The first point these people make, my friend, is that the gods exist by human artifice, by some legal conventions,

and not by nature. They are different in different places, depending upon what the various peoples agreed among themselves when making their laws.

889e

Athenian: Furthermore, what's good by nature is one thing, and what's good by convention is something else. And what's just is not absolutely just by nature; rather, people are persistently arguing over this and changing their positions, and any changes they make are then authoritative, although they arise from artifice and legal conventions, and not from anything natural. All these, my friends, are the views of men who are wise in the eyes of the young people – prose writers and poets who maintain that supreme justice consists in attaining anything by force. Consequently, various impieties have afflicted our young people, as if gods, like those the law tells us to believe in, don't exist. And so, there are factions because 890a of these, as the clever folk set about attracting people to the life that is correct by nature, the life of ruling over others in truth, and not being in servitude to others by legal convention.

890b

Clinias: What a dreadful argument, stranger, so damaging to young people as citizens of our cities and as individuals in private households.

Athenian: True indeed, Clinias. So what do you think the lawgiver ought to do when such beliefs have been in place for so long? Should he simply stand up in public and issue threats to all and sundry who don't accept the existence of the gods, and don't believe that they are such as the law proclaims that they are, and who adopt the same attitude in relation to what's 890c noble, what's just, and all matters of importance that relate to virtue and vice? Is he to declare that everything must be done in accordance with the beliefs prescribed by the lawgiver in his writings, and whoever does not accept the laws readily should,

in some cases, be put to death, in other cases be beaten, imprisoned or dishonoured, or alternatively suffer poverty or exile? What about persuading the people at the same time as he imposes laws upon them? Is he to avoid adding persuasion to his pronouncements and doing his best to make them gentle?

890d

Clinias: Not at all, stranger. If there happens to be the slightest possibility of any persuasion in relation to such matters, no lawgiver who is worth anything should relent in any way, but he should, as they say, be an out-and-out advocate, supporting the ancient, traditional argument that the gods exist, and any other arguments you have just recounted. And, indeed, he must also defend law itself, and artifice, as being natural or not inferior to nature, since they are products of reason, according to the correct argument which you now seem to me to be propounding, and with which I agree.

890e

Athenian: How eager you are, Clinias! But when addressing lots of people in this way, isn't it difficult to pursue arguments? And don't they take on an inordinate length?

Clinias: What's this, stranger? We were patient with one another when discoursing at such length about drunkenness and about music. Are we to be impatient now on the subject of gods and 891a the like? And, indeed, this argument is surely of great assistance to wise legislation, because legal injunctions, once written down, are completely unalterable, ready to meet any challenge forever. Nor need we worry if they are hard to appreciate at first, since even the slowest learner can come back and consider them over and over. Neither should we be concerned about their length, provided they are beneficial. So, it seems to me that it is both unreasonable and impious for any man not to do his best to support these arguments.

891a

Megillus: I think, stranger, that Clinias has made an excellent point.

891b

Athenian: I couldn't agree more, Megillus, and we should do as he says. Indeed, if such fallacious arguments were not so widely sown in more or less every human heart, there would be no need for counterarguments defending the existence of the gods. But we need them now, so who better than the lawgiver to come to the aid of our most important laws when they are being subverted by evil folk?

Megillus: There's no one better.

891c

Athenian: Well then, speak to me again, Clinias, and you too, for you need to join in the arguments. It is likely that someone who says all this is of the view that fire, water, earth and air, all of which he refers to as 'nature', come first, before everything else, and from these afterwards comes soul. But, in fact, this seems more than just likely, since this is being indicated to us directly by the argument.

Clinias: Very much so.

Athenian: Well, by Zeus, have we discovered a sort of fountain of irrational opinion on the part of all the people who have ever turned a hand to investigations into nature? Let's look at ^{891d} this, scrutinising each argument, for it will make an enormous difference if it can be shown that those who engage in impious arguments, and give the lead to others, are not only employing the arguments badly, but are wide of the mark too. I, for one, think that this is how matters stand.

891d

Clinias: Well said. But where does the error lie? Try to explain this.

Athenian: Well, I shall, it seems, have to deal with unfamiliar arguments.

Clinias: Don't be reluctant, stranger. I do understand that you think we will be straying outside the bounds of legislation if we deal with such arguments, but if it is impossible to agree on the correctness of the descriptions of the gods in our laws, in any other way apart from this, then this, my friend, is the course we must adopt.

891e

Athenian: I should, it seems at this stage, recount a somewhat unusual argument, as follows. According to the arguments that fashion the soul of the impious folk, the first cause of the generation and destruction of all things is said not to come first, but to arise subsequently, and what's subsequent is said to be prior. That's how they fall into error about the actual being of the gods.

Clinias: I do not yet understand you.

892a

Athenian: Soul, my friend – what it's like, and the power it possesses – is a matter about which all but a few are inclined to be in ignorance generally, and especially in relation to its origin. They don't know that soul is among the things that come first, having come into existence before all of the bodies, and more than anything else controls all their changes and transformations. And if this is indeed the case, mustn't anything akin to soul, of necessity, be prior in origin to anything associated with bodies, since soul is older than body?

Clinias: Necessarily.

Athenian: Then opinion, attention, reason, artifice and law would be prior to anything hard or soft, heavy or light. And, indeed, the important primary works and activities would be those born of artifice because they are among the first, while

those that are natural, and nature itself, incorrectly so called, come later and come from artifice and reason.

892b

Clinias: Incorrectly in what sense?

Athenian: By the word 'nature' they intend to describe the generation of things that come first. But if it turns out that soul comes first, rather than fire or air, then soul, having arisen with the things that come first, may be described most correctly as pre-eminently natural. This is how matters stand, provided it can be demonstrated that soul is older than body, but not otherwise.

Clinias: Very true.

Athenian: Shouldn't we set about this very proof next?

Clinias: Indeed.

892c

Athenian: Let's be on our guard, then, against an utterly deceitful argument lest we somehow, in our old age, beguiled by its youthfulness, let it get away from us and turn us into figures of fun, who seem to aim for great things but miss the little ones. So, think about this. Suppose we three needed to cross a river with intense currents, and I happened to be the youngest of us, with a lot of experience of such currents. What if I suggested that I attempt the crossing first by myself, leaving you two behind in safety, so as to test whether the river can be crossed by you two older men or not? And if it turned out to be crossable, I could then, ^{892d} based on my experience, call upon the two of you to make the crossing too, and if it was too deep for you, the danger would be all mine. This would sound like a reasonable suggestion. And, indeed, in this case, the argument we are facing is most intense, and perhaps a little too deep for the strength you possess. So, in case it makes you dizzy and puts you in a spin, with its onslaught of questions you are not

accustomed to answering, and begets ^{892e} a distasteful lack of dignity and decorum, I think I should follow the same procedure myself now. I'll put the questions to myself first, while you two are listening in safety, and then I shall, in turn, answer the questions myself and conduct the entire argument in this way until it has dealt with the subject of soul, and shown that soul is prior to body.

^{893a}

Clinias: We think, stranger, that your suggestion is excellent. Please do as you suggest.

^{893b}

Athenian: Come on, then. If ever there was a time to call for a god's help, now is the time to do so. Let's take it, then, that the gods have been invoked, in all seriousness, to demonstrate their own existence, while we plunge into the argument before us, holding on to this rope for safety. Now, when I am being challenged on such matters with questions of this sort, it seems safest to respond as follows. For instance, when someone asks me, "Stranger, is everything stationary and does nothing move? Or is the situation the exact opposite? Or do ^{893c} some things move while others stay still?", I shall reply that some presumably move, while others stay still. "Now, don't the stationary things stand still, and the moving things move, in a certain place?" "Of course." "And some, presumably, will do this in a single location, others in several." "Do you mean," we shall say, "that objects which can be stationary at their centre are moving in a single location, as happens to circular objects which are said to be stationary, although their circumference is revolving?" "Yes."

^{893d}

Athenian: "And we do understand that in this revolution, carrying around the greatest circle and the smallest one simultaneously, such motion distributes itself to the greater and the lesser, in proportion, being itself both lesser and greater, in

proportion. And so it has become a fount of all wonders as it provides both large and small circles at the same time, with harmonised slowness and swiftness, an outcome which might be regarded as impossible." "Very true."

893e

Athenian: "And when you refer to things moving in several locations, I presume you mean those which move by being borne, constantly changing from one location to another, sometimes having a single centre of support, sometimes more than one, in which case they roll about. Any time they collide with each other, a moving body is disintegrated by a stationary one, whereas moving bodies coming from opposite directions coalesce into a single combination that is midway between the two." "Yes, I agree. This is how matters stand, just as you say."

Athenian: "And, indeed, when combining, they increase in bulk, and when they disintegrate they decrease, provided the established condition of each persists, but if this does not ^{894a} remain, they are dissolved by both processes. So, under what set of circumstances does generation occur in all cases? Obviously it is when a beginning, having taken increase, has arrived at its second stage, and from this arrives at the next, and having reached the third stage becomes perceptible to observers. Everything comes into being by changing and moving in this way. It is really existing only for as long as it persists, and it is completely destroyed whenever it changes to another state."

894b

Athenian: So have we mentioned all movements that can be classified numerically, apart, my friends, from two?

Clinias: Which two?

Athenian: The two for whose sake, good man, almost all of our present enquiry is being conducted.

Clinias: Please clarify.

Athenian: Presumably, it is for the sake of soul?

894c

Clinias: Very much so.

Athenian: Well, let one of the two be the motion that is always able to move other things but is unable to move itself. And of all the various motions, let the other one be the motion that is always able to move itself and other things by combination, disintegration, by increase and its opposite, and by generation and destruction.

Clinias: Let's do so.

Athenian: In that case, we shall place the motion that always moves another and is moved by another ninth. And we shall say that the tenth motion is what moves itself and another, being included in all actions performed or suffered, and is actually called the change and motion of everything that exists.

Clinias: Entirely so.

894d

Athenian: Of the ten motions, then, which should we adjudge most correctly to be the most powerful of all, and most exceptionally effective?

Clinias: We must insist, I presume, that the motion that can move itself is enormously superior, and that all the others come after it.

Athenian: Well said. In that case, must we rectify one or two of the incorrect statements we have made?

Clinias: What are you referring to?

Athenian: What was said about the tenth wasn't really correct.

Clinias: In what way?

Athenian: According to the argument, it is first in origin and in potency, and the one after it we hold is second, although we

have just referred to it, oddly, as ninth.

Clinias: What do you mean?

894e

Athenian: Whenever we find something changing something else, and that in turn another and so on, will there ever be a first source of change in such a sequence? How indeed, when this is moved by something else, can this ever be the first of the things that are altered? It is impossible. But when this, having moved itself, changes something else, and that changes another, and thousands and thousands of things are moved in this way, would the source of all the movement of all these be anything other than change in the motion that moved itself?

Clinias: That's very well argued. These points must be conceded.

895a

Athenian: Then let's continue our discussion in this way, and let's reply to ourselves again. Suppose all things had come to a standstill together, as most thinkers of this sort have ventured to suggest, which of the motions we have mentioned would necessarily be the first to arise among them? It would of course be the motion that moves itself, for they will never undergo previous change by something else when there is no previous change among them. So, as the source of all motions, the first to arise among stationary things, and first in rank among things that are in motion, we shall necessarily declare the motion that moves itself ^{895b} to be the oldest and most powerful change of all, while the motion that is altered by something else, and then in turn moves others, comes second.

895b

Clinias: Very true.

Athenian: Well, now that we are at this point in the argument we should answer the following question.

Clinias: Which is?

Athenian: If we were to see this motion in operation in something made of earth or water or fire, either separately or in combination, what condition would we say something of that sort was in?

895c

Clinias: Aren't you asking me whether we should describe something as being alive whenever it moves itself?

Athenian: Yes.

Clinias: Alive, yes of course.

Athenian: What if we see soul in something? Is the situation any different? Mustn't we accept that it is alive?

Clinias: It's no different.

895d

Athenian: Hold there, by Zeus. Wouldn't you be prepared to think of each thing as having three aspects?

Clinias: In what way?

Athenian: One is the essence, one is the account of the essence, and one is a name. And, indeed, there are two questions you can ask about everything that exists.

Clinias: What are the two?

Athenian: Sometimes when proffering the name itself we ask for the account, sometimes when presenting the account itself we ask in turn for the name. Anyway, don't we, for our part, wish to convey something like the following?

Clinias: Which is?

895e

Athenian: Among numbers, and everything else too, there is, I presume, something that is divisible into two. The name of this

in the case of number is 'even', and the account is 'number, divisible into two equal parts'.

Clinias: Yes.

Athenian: That's the sort of thing I am referring to. Aren't we speaking of the same thing in either case, whether being asked for the account we respond with the name, or being asked for the name we give the account? By the name 'even' and by the account 'a number that can be divided by two', aren't we describing the same thing?

Clinias: Entirely so.

896a

Athenian: What is the account, then, of that which is designated by the name 'soul'? Have we any other account apart from the one just stated: 'the motion that is able to move itself'?

Clinias: So the same essence, which everyone refers to by the name 'soul', has as its account 'that which moves itself'. Is that your point?

Athenian: Well, that's what I'm saying. So, if this is how matters stand, do we still feel that it has not been satisfactorily proved that soul is the same thing as the first becoming and motion of anything that is, or has been, or will be, and, indeed, of the opposites of all these, since 896b it has been shown to be the cause of change and motion in everything?

896b

Clinias: No, it has been quite adequately proved that soul is the oldest of all, since it has turned out to be the source of motion.

Athenian: Now, mustn't the motion arising in one thing because of another – motion that never gives anything the ability to move itself – come second, or, indeed, as far down the list as you wish to count it, since it is the change in a body that is in reality devoid of soul?

Clinias: Correct.

896c

Athenian: So, our statement would be correct, authoritative, true and certain if we were to assert, as we have done, that soul is prior to body, while body is second and subsequent; that soul is ruling, while body is naturally being ruled.

Clinias: Yes, very true.

Athenian: Now, we agreed in our earlier discussion, as I'm sure you recall, that if soul proved to be older than body, whatever belongs to soul would also be older than whatever belongs to body.

Clinias: Very much so.

896d

Athenian: Then, tendencies, habits, intentions, reasoning, true opinions, attention and memories would have arisen prior to the height, breadth and depth of bodies, if soul is indeed prior to body.

896e

Clinias: Necessarily.

Athenian: Mustn't we necessarily agree next that the cause of whatever is good is soul, and also of whatever is evil, noble, shameful, just, unjust and all their opposites, if we are to insist that soul is indeed the cause of everything?

Clinias: There is no alternative.

Athenian: Then, since soul controls and resides in everything that is moving anywhere, mustn't it also, necessarily, be said to control the heaven?

Clinias: Indeed.

Athenian: Is there one soul, or more than one? More than one, I shall reply on behalf of both of you. We should propose at least

two – one beneficent, the other capable of producing the opposite effect.

Clinias: Absolutely correct.

897a

Athenian: So be it. Soul impels everything in heaven and earth and ocean, by the motions of itself whose names are intention, consideration, attention, deliberation, opinion both correct and false, delight and tribulation, confidence and fear, hatred and affection. It impels them by these, and by any motions that are akin to these or are primary in their operation. And bringing in their train the motions that are secondary in their operation, and those of bodies, they impel everything to increase or decrease, disperse or combine, and to adopt the related qualities of hot and cold, heavy and light, hard and soft, white and black, bitter and sweet, and all those to which soul has recourse, when with reason – which is ever, rightly, a god to gods – as its helper, it leads everything happily and in the right way, or when it consorts with unreason and produces the very opposite effect in every case. Should we propose that this is how matters stand, or do we still suspect it might be otherwise?

Clinias: Not at all.

897b

Athenian: What kind of soul should we say is in control of heaven and earth and their entire cycle? One that is wise and full of excellence, or one that is possessed of neither? Would you like us to respond as follows?

Clinias: How?

Athenian: If, my friend, we are to state that the entire course and motion of heaven, and of everything it contains, resembles the natural motion, circuit and calculations of reason, and proceeds in a kindred manner, we must of course maintain that the very best soul cares for the entire universe and leads it

along that course.

Clinias: Correct.

897c

Athenian: But if it proceeds in madness and disorder, then the bad soul is in control.

Clinias: That's also correct.

Athenian: What, then, is the nature of this motion of reason? This, my friends, is a difficult question to answer already, with any degree of cogency. And so, it is only right that I take a hand in answering the question, along with you.

Clinias: A good suggestion.

897d

Athenian: Well, in giving our answer let's not, so to speak, look directly at the sun and turn our midday to dark night, acting as though reason could ever be adequately seen and discerned with mortal eyes. Looking at an image of our quest would be a safer way to view it.

Clinias: In what way?

Athenian: Of those ten motions, let's adopt the motion which reason resembles as our image. I'll recall this along with you, and then give the answer.

Clinias: An excellent suggestion.

897e

Athenian: Well, of what was said at the time, do we still at least recall that we proposed, in general, that some things are in motion, while others are at rest?

Clinias: Yes.

898a

Athenian: Again, of those that are in motion, some move in one location while others traverse several.

Clinias: So they do.

Athenian: Of these two, the one that moves in one place must always move about some centre, being an imitation of a wheel fashioned on a lathe, and must as far as possible be akin to and resemble the circuit of reason in every respect.

Clinias: What do you mean?

898b

Athenian: If we were to say that reason, and the motion that occurs in one place – both resembling the motions of a fashioned sphere – move of course regularly, in the same way, in the same place, concerned with the same things, in accord with the same things, and a single principle and arrangement, we would never prove ourselves to be inferior craftsmen of noble, verbal images.

Clinias: Quite right.

Athenian: Then again, motion that never occurs in the same way, nor regularly, nor in the same place, that is not concerned with nor in accord with the same things, that does not move with a single motion, order or arrangement, nor on a single principle, would be akin to total unreason.

Clinias: Very true. It would, indeed.

898c

Athenian: At this stage there is no further difficulty in stating categorically that since soul, for us, is what drives everything about, we must declare that the circuit of heaven is necessarily driven about, whilst being cared for and ordered by either the best soul or its opposite.

Clinias: No, stranger. From what has been said just now, it would be unholy to deviate from the statement that what drives these about is one soul, or more than one, possessed of total excellence.

898d

Athenian: You have followed the argument exceedingly well, Clinias. But please attend to the following additional point.

Clinias: Which is?

Athenian: Consider the sun, moon and other stars. If soul does indeed impel everything, would it not also impel each one individually?

Clinias: Indeed.

Athenian: Then, let's construct arguments concerning one star, and these will prove for us to be applicable to them all.

Clinias: Which one?

898e

Athenian: Although everyone sees the sun's body, no one sees its soul, nor indeed the soul of any other creature's body, alive or dead. But there is great hope that this kind of thing, which cannot be perceived at all by our bodily senses, envelops us, and can be known by reason. By reason alone then, and by thinking, we should understand the following point about this.

Clinias: Which is?

Athenian: Since soul impels the sun, we wouldn't go too far awry in saying that it does so in one of three ways.

Clinias: Which are?

899a

Athenian: Either it resides within this apparent spherical body and conveys this sort of thing everywhere, just as the soul in us carries us everywhere. Or, as some argue, soul, having procured for itself an external body of fire or air, forcibly pushes body with body. Or thirdly, soul itself, devoid of body, exercises its guidance, possessed of other exceedingly wondrous powers.

Clinias: Yes, this must necessarily be so. Soul must impel everything by acting in one of these ways.

899b

Athenian: Better than this, this soul brings light to us all, and whether it does so by having the sun in a chariot, or acts from outside or by some other means, everyone should regard it as a god. Is this so?

Clinias: Yes, unless they had reached an extreme of unreasonableness.

899c

Athenian: Concerning all the stars then, the moon too and the years, months and all the seasons, have we any alternative than to give the very same account? Since soul or souls have turned out to be the causes of all these, being good in respect of every excellence, we shall say that souls are gods, whether they order the entire heaven while present in bodies as living beings, or in some other way. Now, is there anyone, agreeing with all this, who will tolerate the assertion that 'all things are not full of gods'?⁹⁸

Clinias: No, stranger, there is no one so disordered in his thinking as that.

Athenian: Then, Megillus and Clinias, by stating our terms to the person who until now does not believe in gods, let's have done with the matter.

Clinias: What terms?

899d

Athenian: He should either teach us that we are wrong in proposing that soul is the first origin of everything, and in the various conclusions we drew from this, or if he is unable to improve upon our account, he should adopt it and spend the rest of his life believing in the gods. So, let's decide at this stage whether we have done a good job of explaining to those who

don't believe in gods that there are gods, or whether we have fallen short.

Clinias: We have not fallen short in the slightest, stranger.

Athenian: Well, let that be the end of our argument with these people. But we should now admonish those who believe that, although the gods exist, they have no concern for the affairs of us humans. "Good man," we shall say, "as for your belief in gods, it is perhaps some divine kinship that draws you to your common stock, in honour and belief. Now, the fortunes of evil and unjust people in private and in public, are, in truth, unhappy, although they are ^{899e} acclaimed as happy, insistently but erroneously, by public opinion, and so you are led into impiety by their improper celebration in poetry and stories of all sorts. Or again, when you see old men coming to the end of their lives, leaving children and children's children behind, who are held in the highest regard, perhaps you are troubled when you find out, either from others or from personal experience, that amongst their number lots of awful, impious deeds have ^{900a} taken place, and through these very acts they have risen from lowly status to tyrannical power and the highest office. Then, faced with all this, you are obviously reluctant to hold the gods responsible for this sort of thing, because they are your kindred. So, driven by poor reasoning and your inability to criticise the gods, you have ended up in your present predicament ^{900b} where you believe that, although the gods exist, they despise us humans, and don't care about our affairs. Now, so that your current belief does not land you in a worse predicament in terms of impiety, and so that you may be able somehow to banish it by arguments, as it draws nigh, let's attempt to attach the related argument, the one we expounded initially to the total unbelievers, and use this for our present purposes too." You, Clinias and Megillus, should accept the role of answering on the young man's behalf, as you did before. And I, if any

difficulty comes up in the argument, will take over from you, as I did ^{900c} just now, and get you across the river.

^{900c}

Clinias: You are right to say all this. So, do as you suggest, and as best we can we'll do as you bid us.

^{900d}

Athenian: Well, perhaps it would not be too difficult to demonstrate this much at least, that the gods are careful about minor matters, more so, indeed, than about matters of great importance. Indeed, the young man was presumably present at our discussions recently and heard it said that the gods, being good in respect of every excellence, have care for all things, as something that is most appropriate to themselves.

Clinias: Yes, he certainly heard that.

Athenian: Well, next, let us join together and enquire into what is meant by this excellence of theirs, by which we agree that the gods are good. Come on then, to be sound-minded and possessed of reason belongs to excellence, while their opposites belong to evil. Is this what we maintain?

Clinias: We do.

^{900e}

Athenian: And, indeed, that courage belongs to excellence, while cowardice belongs to evil?

Clinias: Very much so.

Athenian: And of these, shall we maintain that the latter are shameful, while the former are noble?

Clinias: We must.

Athenian: And shall we say that the base qualities, if they belong to anyone, belong to ourselves, while the gods have no share, great or small, in anything of this sort?

Clinias: Everyone would agree with this too.

Athenian: What about this? Shall we insist that carelessness, idleness and indulgence constitute excellence of soul? What do you say?

Clinias: No, how could we?

Athenian: So the opposite is the case?

Clinias: Yes.

901a

Athenian: So, do their opposites constitute the opposite condition of soul?

Clinias: Yes, the opposite.

Athenian: In that case, for us, won't any person who is indulgent, careless and idle be someone whom the poet described as "most like a stingless drone"?⁹⁹

Clinias: And he was quite right to say so.

Athenian: Therefore, it must never be said that God has such a disposition as this, a disposition He Himself detests, nor must we allow anyone to attempt to utter such an opinion.

Clinias: No, indeed. How could we?

901b

Athenian: Consider someone who is responsible for acting and really caring for something, but whose mind cares for major issues while neglecting small ones. What grounds could we have for praising such a person without going completely awry? Think of the matter as follows. Doesn't the behaviour of such a person, be he god or man, who acts like this take one of two forms?

Clinias: What are they?

901c

Athenian: Either he is of the view that neglect of the minor matters makes no difference to the whole, or, in spite of the difference it makes, he neglects them out of indifference and indulgence. Or does carelessness arise in any other way? For, presumably, when it is actually impossible to care for all of them, it will not in that case constitute carelessness for things small or great, when someone, be he a god or an ordinary person, neglects what he is unable to care for because it is impossible for him to do so.

Clinias: No, how could that be carelessness?

901d

Athenian: At this stage, then, let the two parties respond to the three of us. They both accept that gods exist, but one says they can be appeased by entreaty, the other that they don't care about little things. You first assert, both of you, that the gods know and see and hear everything, and in any cases where there is knowledge or perception, nothing can escape their notice. Is this what you maintain, or something else?

Clinias: This.

901e

Athenian: Don't they also agree that gods are capable of anything that mortals and immortals are capable of?

Clinias: How could they fail to accept that this is also the case?

Athenian: And the five of us have already agreed that gods are good and excellent.

Clinias: Very much so.

Athenian: In that case, is it not completely impossible for us to accept that they do anything at all out of indifference and indulgence, given that they are as we agree that they are? Indeed, among ourselves at any rate, idleness is born of cowardice, and indifference of idleness and indulgence.

Clinias: Very true.

Athenian: None of the gods, then, show a lack of care out of idleness and indifference, since they are not possessed of cowardice.

Clinias: Correct, indeed.

902a

Athenian: Therefore, we conclude that if they do indeed neglect the small and insignificant details of the All, they would do so either thinking that nothing of this sort should be cared for at all, or, alternatively, we can only conclude that they think the direct opposite.

Clinias: There is no alternative.

Athenian: So, my good and excellent man, what shall we presume your position to be? Are the gods ignorant? And although care is necessary, are they careless out of ignorance of this fact? Or do they know full well that care is necessary, but behave as the basest of us humans are said to behave? They know that another course of action is better, but don't act accordingly because they are somehow overpowered by pleasures or pains.

Clinias: Impossible.

902b

Athenian: Now, don't human affairs have a share in the ensouled nature, and at the same time isn't a human being the most god-fearing of all creatures?

Clinias: So it seems.

Athenian: And we maintain, indeed, that all beings that are mortal are possessions of the gods, and that the whole heaven belongs to them too.

Clinias: Of course.

Athenian: At this stage, then, anyone may assert that these issues are small or large in the eyes of the gods. But that doesn't matter, since in neither case would it be proper for those who own us to show a lack of care, when they are supremely caring and good. Yes, and there is something else we should consider besides these.

Clinias: Which is?

902c

Athenian: When it comes to perception and power, aren't these two, by nature, direct opposites of one another in respect of ease and difficulty?

Clinias: In what way?

Athenian: It is more difficult, I presume, to see and hear small things than large things, while on the other hand it is easier for everyone to move, control and care for the small and the few, than for their opposites.

Clinias: Very much so.

902d

Athenian: Consider a physician, given the task of treating a body as a whole. If he is willing and able to care for whatever is large, yet neglects the parts and anything small, will he ever have the entire body in good condition?

Clinias: Not at all.

Athenian: No. Nor indeed will steersmen, generals, household managers, nor indeed certain 902e statesmen, nor anyone else of this sort, succeed with the many and great, without the few and the small. In fact, even stonemasons say that without the small stones, the large ones don't sit well.

902e

Clinias: No, how could they?

Athenian: Let us never accuse God then of being inferior to mortal craftsmen, who the better they are at their own proper tasks, great or small, the more precisely and perfectly do they execute them in virtue of a single skill. No. Let us never presume that God, being perfectly wise, ^{903a} willing to care, and able to do so, does not care at all for small things that are easy to care for – just like some idle coward who shirks the work – but does care for the large things.

^{903a}

Clinias: We should never adopt an opinion of this sort about the gods, stranger, for the very notion would be unholy and untrue.

Athenian: I think we have now, already, done very well in arguing against the person who likes to accuse the gods of not demonstrating care.

Clinias: Yes.

^{903b}

Athenian: Well, he has at least accepted, in virtue of the force of our arguments, that what he is saying is incorrect. And yet it seems to me that something further needs to be said to charm him.

Clinias: What sort of thing, my friend?

Athenian: We should persuade the young man, with our arguments, that the one who cares for the All has organised everything with a view to the safety and excellence of the whole, and so each part of the entire, as best it can, experiences and enacts whatever is appropriate. And there are rulers of what's experienced or enacted allocated to these various parts, in each ^{903c} case down to the very smallest, who have attained perfection down to the last detail. Your own part too, tiny as it is, my stubborn friend, is one of these, ever intent upon the All, ever looking thereto. But you have overlooked this very point: that all generation is for the sake of the All, so that a blissful

existence may be secured for the life of the world, which is not created for your sake. No, you are created for its sake. For every physician and skilled craftsman does all his work for the sake of the entire, fashioning the part to serve an overall ^{903d} purpose, the part being for the sake of the whole, rather than the whole for the sake of the part. But you are troubled because you don't recognise that in your own affairs what is best for the All turns out also to be best for you, based on the power of your common origin. And since soul is continually being united with body after body, undergoing multifarious changes of itself or because of another soul, no other role is left for the player of the game except to relocate the character that is becoming better to a better place, and the worse, to ^{903e} a worse place, based on what is appropriate in each case, so that each may be allotted its own proper destiny.

^{903e}

Clinias: In what way?

Athenian: In the way that gods may exercise easy care of all things. I think I can describe it in this way. If someone with a constant eye upon the whole, whilst changing the forms of all things, were to fashion fire, for example, into ensouled water, rather than making lots of ^{904a} things from one or one from many, then once they had undergone their first, second or third generation, the variations in the changing arrangement would be unlimited in multiplicity. But as matters stand, the one who cares for the All has a wonderfully easy task.

^{904a}

Clinias: Again, in what way?

Athenian: As follows. Our king has observed that all our actions involve soul, and that among these many are excellent while many too are evil, and that body and soul, once they have ^{904b} come into being, are indestructible but not eternal, just like the gods ordained by law. For there would never be any generation

of living beings if either of these two were destroyed. He realised, too, that any soul that is good is always naturally beneficial, while the evil does ^{904c} harm. So, being aware of all this, He devised a location where each of the parts might lie, to ensure the triumph of excellence and the defeat of evil in the All, in the best and easiest way. In fact, He has devised, in furtherance of this overall purpose, what sort of character, as it develops, should always occupy what sort of position, and in what precise regions it should dwell. The causes of generation of any particular sort he left to the will of each of us. For, in general, the manner of someone's desires in each case, and the nature of his soul, largely determines the sort of person every one of us becomes.

^{904c}

Clinias: Quite likely.

Athenian: So, all things that partake of soul undergo change, having acquired within themselves the cause of change, and as they change they move in accordance with law and the ordinance of fate. The smaller the change of the characters, the less do they proceed on the surface of the region, while with the greater and the more unjust change, they descend into the depths and the so-called 'regions below', which go by the name Hades, and the like, filling people ^{904d} with fears and imaginings whilst alive, or when the body falls. Whenever the soul partakes of evil or excellence to a greater extent, of its own free will or because of the strength of the company it keeps, then, if it has had communion with divine excellence, it becomes pre-eminently divine, and moves to a special, completely holy region, borne to another better place. Under the opposite circumstances, it is transported to the opposite region to live ^{904e} out its life. This is the just decree of the gods who inhabit Olympus.¹⁰⁰ Take note, my impetuous child who believes that the gods care not, that the one who becomes more evil proceeds

to the more evil souls, while the one who becomes better goes to the better, to experience and to enact there, in life and in various deaths, whatever it is appropriate for like to do to like. From this decree of the gods, neither you nor anyone else who has fallen into misfortune ^{905a} shall ever boast of having escaped. For gods who issue decrees have prescribed this one especially above all others, and it should be heeded without reservation. For you will never evade its care, neither by being so small as to dive beneath the depths of the earth, nor by becoming so exalted as to ascend to the very heaven. And you will pay them the proper price, either whilst remaining here, or, indeed, when you have proceeded to Hades, or even ^{905b} when you have been transported to a still more fearsome region than these. You will find that the same argument also applies to those people whom you have seen becoming great from insignificant beginnings, through unholy deeds or the like. You thought they had come out of misery into a blessed life, and that you had discerned in their actions, as though in a mirror, total neglect on the part of the gods, not realising how precisely their contribution fits into the entire. So, my most vigorous friend, this decree must be understood. How could ^{905c} you think otherwise? Someone who does not understand this would never have even an inkling about human life, nor be able to contribute a single word on what makes it happy or miserable. Now, if Clinias here, and the rest of our aged gathering, persuades you of all this, that when it comes to the gods you don't know what you are saying, then thank God for it. But if you require some further argument, then listen, if you are possessed at all of reason, as we address our third opponent. Indeed, I would claim that we have demonstrated ^{905d} to you, and made a fairly good job of it, that the gods exist and care about us humans. But the further proposition, that the gods are susceptible to being placated by wrongdoers provided they are given gifts, should not be accepted by anyone, and should furthermore be refuted by

every possible means.

905d

Clinias: Well said. We should do as you propose.

905e

Athenian: Come on then, by the gods themselves! In what way might they be placated by us, if they could actually be placated? And what would they be, and what sort of beings would they be? They must necessarily be rulers, I presume, since they manage the entire heaven to perfection.

Clinias: Quite so.

Athenian: But what kind of rulers do they resemble? Or, comparing small with great, of all the rulers with whom we could compare them, which are they like? What about comparing them to drivers of competing teams, or steersmen on ships? Or perhaps they might be likened to commanders of armies, or indeed they might be like physicians looking after the ^{906a} body in a war against diseases, or like farmers fearfully anticipating seasons that tend to be difficult for the growth of plants, or even like herdsmen.

906a

Athenian: For since we have agreed among ourselves that the heaven is full of much that is good and also of the opposite, and that there is more of what is not good, the battle, according to us, is undying, and requires wondrous guardians. The gods are our allies, and so are the daimons, and we are, in fact, possessions of the gods and daimons. Injustice and wantonness, accompanied by ignorance, are our undoing, while justice and sound-mindedness, ^{906b} accompanied by wisdom, are our salvation. And these reside in the ensouled powers of the gods, but some trace of such powers may be clearly seen residing here within ourselves. But there are souls dwelling upon earth, and they have acquired unjust gain, akin of course to wild animals. They prostrate themselves before the souls of the guardians, be

they watchdogs, shepherds or supremely exalted masters, persuading them with flattering words and ^{906c} prayerful entreaties that, as the stories of the evildoers recount, they should be allowed to gain excessively at the expense of their fellow men, and suffer no grievous consequences. But we maintain that the transgression I have just named, the excessive gain, is called disease in the case of physical bodies, pestilence in the case of seasons and years, and in the case of cities and political systems this same transgression appears, through verbal transformation, as injustice.

^{906c}

Clinias: Entirely so.

^{906d}

Athenian: So, this argument really amounts to the claim that the gods are always forgiving towards unjust people and wrongdoers, provided they are given a share of the proceeds of the injustice. It's as if wolves were to give a share of their prey to the sheepdogs, who being appeased by the gifts would agree to the ravaging of the flocks. Isn't this, in effect, the argument of those who maintain that the gods can be placated?

Clinias: That's it, indeed.

Athenian: Well then, to which of the guardians mentioned previously could anyone compare the gods without becoming a laughing stock? To steersmen, who, diverted themselves by the ^{906e} "flow and savour"¹⁰¹ of wine, overturn both ship and crew?

^{906e}

Clinias: Not at all.

Athenian: Nor indeed to charioteers, all set for the contest, who are induced by gifts to give up their victory to another team.

Clinias: No, that would be a terrible verbal image to introduce into this argument.

Athenian: Nor to generals either, nor to physicians, farmers or herdsmen, nor indeed to hounds who have been beguiled by wolves.

907a

Clinias: Mind your tongue. How could they?

Athenian: Aren't the gods, all of them, the greatest of all guardians, concerned with what is most important to us?

Clinias: Very much so.

Athenian: Shall we ever maintain then that those who guard the most precious things, and are 907b themselves excellent in their role as guardians, are inferior to dogs and ordinary people, who would never give up what is just because of some gifts offered by unjust men, in an unholy act.

907b

Clinias: Not at all. The notion is intolerable. And of all those who are involved in any form of impiety, anyone who holds this opinion may well be adjudged, quite rightly, as utterly evil, and impious in the extreme.

Athenian: May we assert then that our three propositions have presumably been adequately proved: that the gods exist, that they care about us, and that they are not at all susceptible to being placated when justice is at stake?

Clinias: Undeniably. Yes, we vote with you on these propositions.

907c

Athenian: And, indeed, they have been delivered with some vigour, in our thirst for victory over the evil folk, thirst for victory, my dear Clinias, in case the evil folk might prevail in their arguments, and presume that they are allowed to act as they wish, when they hold so many perverse ideas about the gods. It was our eagerness in the face of these issues that made us speak so assertively. And if we have made the least

contribution towards persuading these men to hate their own character and somehow love its opposite, then we would have done well in delivering our preamble to the laws about impiety.

Clinias: Let us hope so. But if not, the nature of the argument will at least bring no discredit upon the lawgiver.

907d

Athenian: After the preamble, a statement that would act as a correct interpreter of the laws should follow, forewarning the impious folk to change their ways utterly in favour of pious behaviour. For those who disobey, let the law be as follows. If anyone acts impiously in word or deed, whoever comes across this should defend the laws by reporting the matter to the officials. The officials who first find out should bring the offender before the court appointed to judge such matters, according to the laws. And if any official is informed, but fails to act on this, let the official himself be liable to a charge of impiety by anyone who wishes to exact punishment on behalf of the laws. And if someone is convicted, the court is to impose a particular penalty for each particular impious act.

907e

Athenian: Now, although imprisonment is to be imposed in every case, there are to be three prisons in the city: a common one in the area of the market place for most offenders – a secure location for the majority of cases; another close to the meeting place of the Nocturnal Council,¹⁰² is called the house of sound-mindedness; and a third in the middle of the country, ^{908a} in the wildest, most isolated place imaginable, whose very name speaks of punishment. Now, since there are three causes of impiety which we have already described, and from each such cause two kinds of impiety arise, there would be six kinds of people who fall into error concerning divine matters. These need to be distinguished, as they do not deserve an equal or similar penalty. Indeed, a person who does not believe that the

gods exist at all may naturally come to possess a just character, and develop a hatred of evildoers. Due to their detestation of injustice, such people would never attempt to perform such deeds, and would avoid unjust people and love the just.

908b

Athenian: Others, as well as believing that the universe is devoid of gods, are afflicted with a lack of control over pleasures and pains, but are endowed with powerful memories and keen understanding. Now, although they both suffer in common from a lack of belief in the gods, one would do less damage to people in general, and the other, more, for he would be completely outspoken about gods, sacrifices and oaths, and so, by ridiculing others, he ^{908c} would probably make others like himself, unless he meets with justice. The other fellow, although he holds the same views as this one, is referred to as 'gifted', full of trickery and contrivance. From these types we are supplied with prophets aplenty, skilled in all sorts of magic. Sometimes, from their number, tyrants emerge, populists and generals too, and people who devise private mysteries, and the devices of those who are referred to as 'sophists'.

908e

Athenian: There would be many forms of these, two of which require laws to be enacted. The ironical form falls into an error that deserves not one death but two, while the other deserves admonition and imprisonment. In like manner, the belief that the gods do not care about us gives rise to two different kinds of impiety, and the belief that they can be placated to another two.

909a

Athenian: Once these distinctions have been made in this way, those who have acted out of ignorance, without having an evil disposition or character, are to be placed by the judge, as the law decrees, in the house of sound-mindedness for at least five years. During this time, none of the other citizens may associate with them, except members of the Nocturnal Council, who shall

visit them for the purposes of admonition and the salvation of their souls. When their term of imprisonment has run its course, any who are deemed to be sound-minded again may dwell among the sound-minded, but if not, and he is convicted once more of such a crime, let the penalty be death.

909b

Athenian: But there are those who, in addition to their lack of belief in the gods, or their belief that they do not care for us, or can be appeased, have become like wild animals, and who, out of contempt for their fellow men, beguile the souls of many of the living, and claim to beguile the souls of the dead too, and promise to persuade the gods by enchanting them with sacrifices, prayers and hymns, and attempt, for the sake of money, to utterly ruin individuals, entire households and cities. Of these people, whoever is found guilty is to be ^{909c} sentenced by the court to imprisonment in the central prison, according to the law, where no free man shall ever visit them, and they shall receive a food ration from the attendants as decreed by the guardians of the law. When one of them dies, he is to be cast out beyond the borders, unburied. If some free citizen helps to bury him, anyone who wishes is allowed to prosecute him for impiety. If he leaves children behind, fit to be citizens, they are to be ^{909d} cared for by those who look after orphans, just as well as for any other orphans, from the day of their father's conviction.

909d

Athenian: A law should be laid down, applicable in common to all these transgressors, which would make most of them offend less against the gods in word and in deed, and, what's more, become less foolish by forbidding them from dealing in divine matters, in contravention of the law. Indeed, the following law applicable to all cases should be laid down without exception: no one is to have a shrine in his own home. If anyone is moved to perform a sacrifice, let him attend and do so at the public

sacrifices, placing his offerings in ^{909e} the hands of the priests and priestesses who are responsible for their consecration. And he himself shall join in the prayers along with anyone else he wishes to pray with. The reasons for all this are as follows. To establish shrines and gods is no easy task, and to do this sort of thing in the right way requires some serious thought. It is the habit especially of all women, and of those who are sick in any way, and people in peril or deprivation regardless of the cause of the deprivation, and under the opposite circumstances when things go well, ^{910a} to dedicate whatever is to hand at the time, and swear to offer sacrifices and promise to found shrines to gods, to daimons, or to children of gods. And fears caused by apparitions whilst awake, or by dreams and likewise, as they recall numerous visions and are inclined to devise a remedy in each case, incline them to set up altars and shrines, and with these they fill every home and every village, and the open spaces too, and wherever it occurs to such people to place them. For all these reasons, it is necessary to act in accordance with ^{910b} the law we have just described, so that the fraudulent behaviour of the impious people does not extend to these matters too by establishing shrines and altars in private households, believing that they are making the gods agreeable, in secret, through their sacrifices and prayers. They are multiplying their own level of injustice enormously, and so they render themselves, and the better people who trust them, guilty in the eyes of the gods, and the whole city thus reaps the harvest of impieties, and rightly so.

^{910c}

Athenian: God, however, shall not blame the lawgiver. Indeed, let this law be set down: there is to be no possession of shrines in private households, and whoever is caught owning or worshipping at any shrines, except the public ones, regardless of whether the owner is a man or a woman, provided their wrongdoing is not enormously unholy and whoever notices this

is to inform the guardians of the law, who in turn are to order that the private shrines be removed to the public areas, and if the owners do not co-operate, they are to impose penalties until the shrines are removed. But if someone is found to be acting impiously, not the trivial ^{910d} impieties of children but the serious impieties of mature adults, either by setting up shrines in private or while performing public sacrifices to any god whatsoever, he is to be sentenced to death for performing sacrifices when he is not in a pure state. The guardians of the law, having decided whether the offence is childish or not, shall bring the offenders before the court, and, accordingly, impose the penalty upon them, appropriate to their impiety.

BOOK XI

^{913a}

Athenian: What is needed after all this is proper regulation of our dealings with one another. The simple rule, I believe, is this: as far as possible, no one should touch my personal property, nor indeed disturb it in the slightest unless he has my full consent. And I, if I have any sense, would act on the same basis in relation to the property of others. Let us speak, in the first place, of treasure which someone who is not an ancestor of mine has set aside as a ^{913b} hoard for himself and his own people. I must never pray to the gods that I may discover such treasure, nor if I find it should I disturb it, nor indeed should I take advice from the so-called prophets who are certain to advise me to "take up what has been deposited in the earth". For I would never gain as much benefit in terms of wealth by taking it up as I would increase the store of my soul's virtue and justice by letting it lie. For by acquiring one possession instead of another, the better one in my better part, I prefer to acquire justice in my ^{913c} soul rather than riches in my estate. This is one of the many cases where it is well said that "the immovable is not to be moved". And we should also heed the stories that are told about

these matters whereby nothing of this sort is advantageous to future generations. And whoever pays no heed to children disregards the one who enacted the law, and takes up, without the permission of the person who put it there, what neither himself nor his ancestors put down. He thus subverts the most sublime of all laws, the simplest one, enacted by a truly ^{913d} noble man,¹⁰³ which states, "don't take up what you have not put down." But what should happen to someone who despises these two lawgivers¹⁰⁴ and takes up what he himself has not put down, a treasure of some significance, often quite enormous? What the gods will do to him, God knows, but the first person to become aware of the offence is to report it. If this sort of thing happens in the city, he informs the city police, or the market police if it ^{914a} happens in a city marketplace, and if it occurs elsewhere in the country, the rural police and those in charge of them are to be informed. Once they have been informed, the city is to send a delegation to Delphi, and whatever the god ordains in relation to the treasure or the person who disturbed it is to be enacted by the city in subservience of the pronouncements of the god. If the person who disclosed the offence be a free-born citizen, let him be famed for his excellence, or indeed for his depravity if he does not disclose the offence. If a slave discloses the crime, it would be right for the city to give him his freedom, having compensated his master, but he should be sentenced to death for failure to do so.

^{914b}

Athenian: Following on from this, there would be a related rule concerning major and minor matters alike. If someone leaves behind anything of his own, anywhere, either intentionally or unintentionally, whoever comes across the item should let it lie in the belief that anything of this sort is under the protection of the goddess of the wayside, the goddess to whom such items are consecrated by the law. If anyone, acting contrary to these precepts, takes the items up and takes them home, and the

offender be a slave and the items of little value, ^{914c} whoever comes across him shall, if over thirty years of age, whip the fellow thoroughly. If the offender be a free-born citizen, he is to be regarded as someone unworthy of freedom who has no involvement with the laws, and he should pay the owner ten times the value of whatever goods he disturbed. If one person accuses another of being in possession of some of his property and the accused admits that he has the property but denies that it belongs to the accuser, then, if the property be legally registered with the officials, the possessor is to be called before the court and he is to produce the item there. Once it is on display, if it has ^{914d} been duly recorded in the register and it is obvious which of the disputants it belongs to, let him take it and depart. If it belongs to someone else who is not present, whoever provides the most acceptable surety should take it away, by his legitimate right of removal on behalf of the absent person, in order to return the item to that person. If the disputed item has not been registered with the officials, let it remain with three of the oldest officials until the case is decided. And if the pledged item be a beast, whoever loses the relevant case shall compensate the officials for its upkeep. The officials shall decide the case within three days.

^{914e}

Athenian: Anyone may handle his own slave as he pleases, provided he is sensible, using him as he wishes for any legitimate purposes. And he may also handle a runaway slave for safekeeping on behalf of someone else from among his own family or friends. If someone is being led away as a slave and someone else removes him to freedom, whoever is leading him should let him go, while the person removing him should put three acceptable sureties in place and remove him to freedom on these terms, but not otherwise. And if anyone ^{915a} removes the person contrary to these conditions, he may be charged with assault, and, on conviction, shall pay double the registered

damages to the deprived party. One may also lay hands upon a freed slave if he does not attend to those who freed him or does so inadequately. The attention involves visiting the home of those who freed him three times a month, and offering to do whatever needs to be done, provided it is fair and within his capacity. When it comes to marriage he should do whatever his former master consents to. He is not allowed to become more wealthy than the man who freed him, and any excess is ^{915b} to belong to the former master. The freed slave may not remain in the country for more than twenty years. Rather, just like the other foreigners, he too must depart, taking all of his own property unless he persuades the officials and the person who freed him, to let him stay. If the freed slave, or indeed any other foreigners, come to have more wealth than the size of the third property valuation, let them depart, taking their own property, within thirty days of the day on which this threshold is reached. And in this case no application to remain is to be granted by the officials. If some foreigner disobeys these precepts and is brought to ^{915c} court and convicted, let him be put to death and let all his wealth become public property. These cases are to be tried before the tribal courts unless the charges against one another have been resolved previously before their neighbours or specially selected jurors. If anyone claims another person's animal as his own, or some other item of the person's property, the person who has the item should refer the matter to the person who, as its deserving and rightful owner, sold it to him or gave it to him or conveyed it to him in some other legitimate way. In the case of a citizen, or a foreigner residing in the city, this ^{915d} should happen within thirty days, or in the case of a foreign delivery, five months, the middle month of which is to include the summer solstice. Whatever one citizen exchanges with another through sale or purchase is to be handed over in the location specified for each item in the marketplace, and nowhere else. It must be paid for there and then, upon receipt,

and ^{915e} no purchase or sale is to be conducted on credit. This is the process of exchange. If someone carries out any exchange at all with someone else, in a different way or in a different place, because he trusts the person he is dealing with, let him do so on the understanding that no legal redress is available in relation to anything that is not sold in conformity with the regulations just described. In the case of private associations, anyone who wishes may subscribe as a friend to fellow friends, but if any dispute arises about the subscription payment, they must proceed on the basis that no legal redress is to be available in relation to these matters. Whoever sells something and receives a price of more than fifty drachmas must ^{916a} remain in the city for ten days, and the purchaser is to be told where the vendor lives because of the accusations that tend to be made in relation to such transactions and on account of legal rights to return goods. Let the legal rights to return goods or not be as follows. If someone sells a slave suffering from consumption or stone or strangury or the so-called 'sacred disease'¹⁰⁵ or some other disease, physical or mental, that goes unnoticed by most people and is long-lasting and hard to cure, then if the sale is to a physician or to a trainer, let there be ^{916b} no right of return in such circumstances, nor if the purchaser was told the truth at the time of the sale. If such a practitioner makes such a sale to an ordinary person, the purchaser has a right of return for six months except in the case of the sacred disease, where he is allowed to return the sick slave within twelve months. The case is to be judged by a panel of physicians proposed and selected jointly by the two parties, and, on conviction, a seller shall pay ^{916c} double the selling price. If one private citizen sells to another, let there be a right of return and a procedure for trial as previously described, and let a vendor, on conviction, pay the mere selling price. If someone sells a murderer and both parties know this, let there be no right of return such a purchase. But if the buyer did not know, then he has a right of return once he

becomes aware of the fact. The case is to be decided before five of the youngest guardians of the law, and if it is decided that the seller knew about the murder, let him purify ^{916d} the purchaser's household according to the prescription of the interpreters of the divine law, and pay him three times the selling price. When someone exchanges money in return for money or for anything else, animate or inanimate, then in conformity with the law, what is given or received must not be counterfeit in any way. And as we did with the other laws, let us also allow a prelude concerning this general malaise. Everyone needs to appreciate that counterfeiting, lying and deception, ^{916e} constitute a single kind, which most people are inclined, mistakenly, to regard as the right thing to do on many occasions, once the action is opportune, but the how and the when of what is opportune they leave unspecified and undefined. For this precept they themselves pay a high price and they impose the same upon others. But the lawgiver is not allowed to leave this matter undefined; rather, upper or lower limits should always be spelled out, and indeed these should be specified now. No one, calling upon the gods, is to engage in any ^{917a} falsehood, deceit, or counterfeiting either in word or in deed, if he is to avoid being detested by the gods as someone who swears false oaths, with no regard for the gods, or, less so, as someone who lies to those who are his own superiors. Now, the better people are superiors of the worse, the older are generally superiors of the younger, and so, parents are superiors of children, men of women and children, and rulers of those who are ruled. It would be appropriate for everyone to revere all these people, those who hold any position of authority, and especially those who hold office in the state, and this is what our present argument has ^{917b} been dealing with. For anyone who engages in counterfeiting of the commodities of the market place is lying and deceiving, and, calling upon the gods, he swears an oath in the face of the market police and their protections, showing

neither reverence for his fellow man, nor piety towards the gods. It is certainly a good practice not to have free recourse to ^{917c} the names of the gods, and hold to the purity and scrupulousness that most of us generally and consistently adhere to in anything concerning them. If this is not heeded, the law is as follows. Anyone selling anything in the marketplace should never state two prices for what he is selling; he is simply to state one price, and if he does not get this price, it is only right that he take the goods away again and not increase or decrease the price on the same day; and he is to refrain from singing the praises of wares, and swearing oaths about them. If anyone disobeys these regulations, any townsman over thirty years of age who comes across ^{917d} him is to punish the oath taker by beating him, with impunity, but if he ignores the offence and disregards this requirement, he is liable to censure for betraying the laws. Someone who sells anything counterfeit and is not amenable to influence by our present argument is to be challenged before the officials by whatever knowledgeable person comes across him and is able to mount a challenge, and if he be a slave or a resident foreigner, let him keep the counterfeit item. A citizen who does not challenge him is to be proclaimed a criminal for defrauding the gods, but if he does issue a challenge, he is to dedicate the item to the ^{917e} gods of the market place. Whoever is caught selling something of this sort, as well as being deprived of the counterfeit item, is to be scourged with one lash for each drachma of the selling price, and a herald is to proclaim in the market place the reason why the fellow is about to be beaten. The market police and the guardians of the law, having found out about the various counterfeits and malpractices from those who have the relevant experience of each craft, are to write up the details of what a seller should and should not do, and inscribe this on a tablet placed before the office of the market police as clear legal information for those doing business in the

market place. The duties of the market police have been sufficiently explained previously, but if anything more is thought necessary, they are to confer with the guardians of the law, write down the required details, and place on a tablet in front of the office of the city police the initial and subsequent regulations governing their responsibility.

918a

Athenian: After counterfeit activities, the business of retailing trade follows directly. We shall first offer advice and argument concerning this matter as a whole, and then put a law in place. Indeed, the natural purpose for which there is retailing within a city is not to do harm, but the very opposite. For how could someone who brings about a balanced and measured distribution of goods, which had previously been unbalanced and out of measure, be anything but a benefactor? The power of money, we must declare, brings this about, and we 918b should say that this is also the role assigned to the merchant. And, indeed, the hireling, the innkeeper and others, some well regarded, some held in low esteem, all have the ability to provide satisfaction of everyone's needs and an even distribution of wealth. So, why exactly is this regarded as ignoble and unseemly, and why has it come to be disparaged? Let us 918c look at this so that we provide a legal remedy, for parts of it at least, if not for all of it. This, it seems, is no ordinary undertaking and requires a significant degree of excellence.

918c

Clinias: How so?

918d

Athenian: Dear Clinias, some small section of humanity, naturally few in number, trained to the utmost, is able to hold fast to measure whenever they are afflicted by various needs and desires, and are sober when they are in a position to acquire great wealth, choosing measure in preference to excess. The broad mass of humanity is in the opposite situation to these

people: when they have needs they know no bounds, and when they are able to make measured gains, they choose greed instead. That is why all those involved in retailing, merchant trading and inn-keeping are disparaged and subject to shameful criticism. But there ^{918e} is something which I pray may never happen and surely never will, something which sounds ridiculous and which I propose to speak of nevertheless. What if someone were to compel the very best men, for a time, to do inn-keeping or retailing or engage in some other activity of that sort, or indeed compel the women by force of necessity to get involved in some such occupation? We would then realise that each of these occupations is a welcome friend, and provided they are conducted on incorruptible principles, all such occupations are to be respected as a mother and a nurse. But nowadays someone sets up his dwelling in an isolated ^{919a} place, a long way from anywhere, in order to conduct retail trade. There he receives into his welcoming abode the distressed travellers and refugees from fierce and violent storms, providing them with quiet shelter or cool respite from extreme heat. But then, rather than receiving them as companions and providing them with friendly hospitality as well as entertainment, he treats them as captured enemies to be released in return for an enormous, unjust ^{919b} and heinous ransom. These transgressions and the like, in all occupations of this sort, provide proper grounds for criticism of this care for the distressed. For these the lawgiver must consistently find a remedy. Indeed, it has rightly been said of old that it is hard to fight against two foes and from opposite sides, as is the case with various diseases and in many other situations too. And now, in particular, our battle against these transgressions is a battle ^{919c} against twin foes, poverty and wealth. One corrupts the soul of humanity with luxury, while the other drives it to shamelessness out of sheer pain. What remedy might there be for this disease in a city possessed of reason? The remedy is,

firstly, to make the least possible use of retailers as a class; secondly, to assign the role to those whose corruption would not constitute a major outrage for the city; and thirdly, some means must be found whereby those ^{919d} involved in these roles do not end up too easily with a character possessed of unchecked shamelessness and meanness of soul. After these preliminaries, by good fortune we may have a law as follows. Of the Magnesians whom the god is restoring and settling anew, none of the 5,040 landholders who belong to the associated households shall become a retailer, either intentionally or under compulsion, nor a trader either, nor shall he provide a service of any kind to private individuals who do not render an equal service to himself, ^{919e} except to his father and mother, to prior generations, and to all his elders, free citizens whom he freely serves. It is not easy to determine precisely by law what constitutes free service and its opposite, so this should be decided by those who have acquired a peerless reputation for their detestation of the one and their love of the other. Whoever gets involved, by any device, in retailing that is not free, may be prosecuted by anyone who wishes before those with the foremost reputation for excellence. And if he is adjudged to have sullied his own ancestral hearth by an unworthy occupation, he is to be imprisoned for one year to ^{920a} discourage such activity. If he repeats the offence he is to be imprisoned for two years, and the term of imprisonment is to be doubled for each repetition thereafter. There is to be a second law whereby the person who intends to engage in retailing must be a resident alien or a foreigner, and thirdly, let there be a third law to ensure that such a person, dwelling among us in our city shall be as good as possible, or evil to the least possible extent. To this end, the guardians of the law should bear in mind that they are guardians not only of those people whom it is easy to guard from lawlessness and evil ways, of those who have been well ^{920b} educated by their family and upbringing;

rather they should exercise even more guardianship of those who are not like this and engage in activities which have a strong tendency to turn people to evil ways. Accordingly, retailing, which is quite extensive, and the numerous debasing activities it includes, those whose continuance in the city is regarded as absolutely necessary, shall be the subject of a meeting of the guardians of the law with those who are ^{920c} experienced in the particulars of the relevant area of retailing. This is similar to the ^{920d} procedure prescribed earlier in the case of counterfeiting – a closely related matter. When they meet, they are to see what rate of income and expenditure makes a moderate profit for the retailer, and the resulting rates of income and expenditure are to be set down in writing and enforced by the police of the market, the city and the country. In this way, retailing might be of benefit to everyone, while doing the least harm to those who practise it in our cities.

^{920e}

Athenian: If someone agrees to a contract and fails to act in accordance with the agreement, except in cases where the laws or a decree prevent its fulfilment, or an agreement is made under unfair compulsion or force, or when someone is hindered, despite his intentions, by unforeseen circumstances, let there be for all other unfulfilled agreements a trial before the tribal courts, unless they are able to settle the matter in advance before arbitrators or their neighbours. The class of craftsmen who help in providing for our daily life with their skills are sacred to Hephaestus and Athena, while others who safeguard the products of the craftsmen using different, defensive skills are sacred to Ares and Athena, and it is only right that these people as a class are also sacred to these gods. Indeed, they all continuously look after the country and its people, one group by taking charge of military conflicts, while the others produce, for a wage, various tools and wares. And out of reverence for their ancestral gods, it would be improper for

such people to be deceitful in respect of such activities. So, if any craftsman malevolently fails to complete his work within a specified time because he does not revere the god who provides his livelihood, and believes, blindly, that the god is forgiving because of their kinship, he shall firstly pay a penalty to the god, and secondly an associated law is to be put in place.

921a

Athenian: He is to owe the value of the works which were the subject of his falsehood towards his employer, and he must do the work again, from the beginning, within the specified time, free of charge. The law will advise the contractor undertaking the work in the same way as it directed the vendors. They were told not to take advantage by setting a higher price, but to ask simply for what the item is worth, and the contractor is told to do the same since a craftsman is aware of the real value. So, in a city of the free, the craftsman should never use his skill, which, by nature, is pure and free of deception, to impose craftily upon private individuals, and there is to be a legal remedy available for the victim against the wrongdoer in such cases.

921b

Athenian: If, on the other hand, someone engages a craftsman and does not pay him his due wages according to their legal agreement – all for love of petty profit, dishonouring Zeus, protector of the city, and Athena, and their joint role in civic affairs – he thereby weakens our vital communal spirit. So, let there be a law to preserve this divinely ordained civic bond, as follows.

921c

Athenian: Someone who has received goods and has not paid the contractor within the agreed time shall be liable for double the amount. And if a year should elapse, although all other money lending is to be interest-free, this person shall pay one obol on the drachma for each month of arrears.¹⁰⁶ Actions in such cases are to be heard before the tribal courts.

921d

Athenian: As we have dealt with craftsmen in general, it is only right to speak in passing of the craftsmen responsible for our safety in war, such as generals and those possessed of skills in the area. Whatever applies to these also applies to those who are craftsmen of a different sort. So if any of them undertakes public service, either as a volunteer or as a conscript, and he does a good job, the law will never tire in its praise of the citizen who recompenses him with the soldiers' wages, namely honour. But if he receives some noble military service but offers no recompense, the law will censure him.

921e

Athenian: So, let there be a law associated with our praise of these people which gives advice to the broad mass of citizens rather than 922a compelling them. They are to honour, in second place, those good men who act as saviours of the entire city, either by their courageous deeds or military exploits, for the greatest respect is due to those in the first rank, those who are pre-eminently capable of honouring the enactments of the good lawgivers.

922b

Athenian: We have now, more or less, made regulations concerning the most important contracts that people enter into, except for those relating to orphans and the care of orphans by their guardians. So after all we have said so far, we need somehow or other to regulate these matters too. The origins of all these contracts lie in the desires of those who are about to die to put their affairs in order and the vagaries of those who make no such arrangements at all. And I used the word 'need', Clinias, because I had noted the complexity and difficulty of such situations. We cannot leave this area unregulated either. Indeed, if unquestioned 922c authority were granted to any will that anyone makes, regardless of his disposition as his life draws to a close, people might make

arrangements that were self-contradictory, or contrary to the laws, or to the ways of their fellow men, or to their own ways prior to the making of their will. For most of us, when we believe that our end is nigh, become unreasonable or broken in spirit.

922c

Clinias: What of it, stranger?

Athenian: A person who is about to die presents a challenge and is gripped by an alarming notion, difficult for the lawgiver to deal with.

Clinias: In what way?

922d

Athenian: In seeking supreme authority over everything, he is inclined to speak in anger.

Clinias: What sort of things does he say?

Athenian: Ye Gods! He will say, "What a terrible thing it is if I am not allowed to bestow or withhold my own property from whomsoever I please, giving more to one and less to another who has proven to be good to me, or not so good, when sufficiently tested in sickness, old age, and the various other circumstances of life."

Clinias: Yes, stranger, but don't you think they have a point?

922e

Athenian: I think that the ancient lawgivers were too soft, Clinias, and passed laws based upon a narrow view of human affairs and a partial understanding.

Clinias: How so?

Athenian: For fear of this argument, my good man, they enacted the law allowing anyone to make ^{923a}any arrangement he pleases in relation to his own property, without restriction. But you and I will respond more suitably to those in your city

who are about to die. "Friends," we shall say, "veritable creatures of a day, it is difficult for you now to know your own possessions, and also, in accord with the Delphic maxim, to know your own selves too. So I, as your lawgiver, decree that neither yourselves nor this property belongs to you, but to your kinfolk as a whole that was and will be hereafter, and, even more so, that all of your kindred and ^{923b} its property belong to the city. And this being the case, I shall not willingly give my consent if someone persuades you, when you are distressed by sickness or old age, to make a will that is contrary to what's best by stealing upon you with flatteries. I shall legislate from the overall perspective of what is best for the city and the people, justly assigning less importance to a single individual. So you should proceed with us in tranquillity and goodwill, ^{923c} continuing along this journey, the natural course of mankind. Everything else of yours will be looked after by ourselves, exercising the very best care, without any exceptions or omissions. These shall be our consolations and preliminaries, Clinias, addressed to the living and to those who are about to die, and let the law be as follows: Whoever is making a will disposing of his own property should, if he is the father of children, first indicate which of his sons he deems worthy to be his heir, and he should also include the name of any of his ^{923d} other children whom he gives in adoption to someone else. If there is, besides, any other son who has not been adopted as heir to some holding who hopes to be sent legally to a colony, the father is allowed to give him as much as he wishes from the rest of his wealth, apart from the family holding and its associated provision. If there are a number of them, the father may allocate to them anything he owns, over and above the holding, in any proportion he wishes. Nothing is to be allocated to a son who already owns a house, and likewise he shall make no allocation to a daughter who is already betrothed to a man, but he is ^{923e} to make an allocation if she is not betrothed. If it

turns out, after the will has been made, that a son or a daughter has come into possession of a local holding, they are to leave it in the hands of the heir of the person who made the will. If there is no male issue but there is female issue, the testator is to bequeath a man as husband to any daughter he chooses, and as a son to himself as his designated heir. In case a son, begotten or adopted, dies as a child before he can attain manhood, a provision is to be included to meet such a situation whereby ^{924a} the will is to specify the child who is to succeed this son, with better fortune. If someone completely childless makes a will, he may set aside one tenth of his excess wealth, and if he wishes to gift it to anyone, he may do so, having given everything else over to the adopted heir whom he shall make his son, legally, with integrity on one side and acceptance on the other. When the children require guardians and the person dies having made a will specifying whom he wants as guardians and their number, and they willingly agree to act in that capacity, the choice of guardians, documented in this way, shall be final. If someone dies without having made any will at all, or the selection of guardians is omitted, the official guardians are to be the closest relatives on the father's and mother's side, two from each side, plus one friend of the deceased person, and these are to be appointed by the guardians ^{924b} of the law for any orphan who needs them. All aspects of guardianship and orphans should always be looked after by fifteen guardians of the law, the most senior of all, who are to divide themselves into three groups according to their age. Three are to act for one year, and another three for the next, until five periods of office have completed their cycle, and as far as possible there are to be no exceptions to this procedure. If anyone dies without having made a will at all, and he leaves children requiring guardians, his needy children shall avail themselves of these same laws. If a man meets ^{924c} with an unexpected misfortune, leaving daughters behind him, he must be forgiving towards the

lawgiver who arranges the betrothal of the daughters if he observes only two of three important precepts – namely, close family kinship and the preservation of the family holding – and neglects the third one which a father would look to, which is to find, by assessing the entire citizen body, someone suited in character and manners as a son to himself and a bridegroom to his daughter. This the lawgiver abandons as an impossible task. Let's do our best, then, to have the following law enacted in relation to such matters. If someone with no will dies, leaving daughters behind, a brother of the deceased, having ^{924d} the same father or the same mother, who does not have a holding, shall take responsibility for the daughter and the holding of the deceased. If there is no brother but there is a brother's child, the same arrangement applies, provided they are the right age for one another. If neither of these is available but there is a sister's child, then the same arrangement applies. The fourth option is a father's brother, fifth is his child, and sixth the offspring of his father's sister. And so, the line always proceeds, based upon proximity of kinship, through brothers, brothers' children, first the males then the females, in a single family, whenever someone ^{924e} leaves female children behind. A judge is to decide, by inspection, upon the match or mismatch of their ages for marriage, by looking at the males naked and the females naked from ^{925a} the waist up. If there is a deficit of relatives within the family as far as brothers' grandchildren on the one hand, or grandfather's children on the other, then whichever willing citizen the girl with her guardians willingly chooses from among the citizen body shall become the heir of the deceased and the bridegroom of his daughter.

^{925b}

Athenian: But circumstances vary, and there may come a time when there are even fewer eligible males in the city itself. If a young lady, at a loss for a husband locally, sees someone who had been previously sent to a colony and has in mind that the

man become heir to her father's property, then if he is related to her he may proceed to the holding in accordance with the direction of the law. If he is from outside her family, and no one in the city is her near relative, then based upon the selection of the deceased's daughter and her guardians, ^{925c} he is authorised to marry her and return home to take over the holding of the intestate man. If someone dies without issue, male or female, and without a will, let the law in such a situation be, in general, the same as the previous one, and let a male and female family member occupy the deserted home as consorts, so to speak, in each case, and let their claim to the ^{925d} lot be ratified. The order of succession shall be sister first, brother's daughter second, a sister's child third, a father's sister fourth, the daughter of a father's brother fifth, and the daughter of a father's sister sixth. These shall reside with the male kinsmen according to their closeness of kinship and their right as decreed in our earlier legislation. Now, we should not overlook the burden associated with laws of this sort since they sometimes harshly direct a relative of the deceased to marry a close relation, while seeming to take no ^{925e} account of countless impediments which make someone reluctant to comply with such commands, and prefer to suffer any other fate at all. This happens when there are physical or mental diseases or defects in either of the parties to the proposed marriage. The lawgiver might seem to show no regard for these factors, but this is not the case. So, let there be a statement in the interests of the lawgiver and whoever is subject to the law, a sort of general preamble, asking those who are given directions to be forgiving towards the lawgiver, because in his care for public interests he may not always be able, at the same time, to man- ^{926a} age the particular difficulties of private individuals. And those who are subject to the laws should, in turn, be forgiven if they are sometimes naturally unable to fulfil the directions of the lawgiver, directions he gave in ignorance of those difficulties.

926a

Clinias: Well, stranger, what would be the most reasonable course of action under such circumstances?

Athenian: Arbitrators need to be selected, Clinias, for these laws, and for those who are subject to them.

Clinias: How do you mean?

926b

Athenian: Sometimes a nephew with a rich father might be unwilling to take his uncle's daughter in marriage, giving himself airs, with his mind set upon a more significant match. There are times, too, when the lawgiver gives a direction that presents enormous difficulty, and a person is compelled to disobey the law because, for instance, he is being forced to marry into a family where there is madness or various other terrible difficulties of body or soul which make life unbearable. So let our statement on the matters be a law, as follows. If any-
926c one finds fault with the laws in place concerning a will or anything else at all, especially if it concerns marriages, and insists that the lawgiver himself, were he alive and present, would never have insisted upon such a course of action and forced the couple to marry, as is now proposed, while some relative or guardian, on the other hand, says otherwise, then we declare that the lawgiver has left the fifteen guardians of the law as arbitrators and fathers to the orphans, male and female, and the disputants are to go to these people and submit to 926d their judgement, and their pronouncements are to be final. If someone believes that too much power has been entrusted to these guardians of the law, he may take them to court, the court of selected judges, and submit to their judgement regarding the points in dispute. If he loses the case, he must accept censure and disgrace from the lawgiver, a penalty more grievous to a man of reason than any large fine.

926e

Athenian: So the orphaned children would now undergo a kind of second birth. How they are all to be reared and educated after their first birth has already been described. After their second birth, being bereft of parents, some means must be devised by which their orphan plight will give the least cause for pity at the misfortune of those who have been orphaned. Firstly, we say that they are to be given, by law, guardians of the law in place of their natural fathers, and every bit as good, and, what is more, we direct these people to look after them, year by year, as if they were their own. And we now add a preamble on the rearing of orphans, appropriate to these people themselves and to the guardians.

927a

Athenian: I now see that there was something opportune in what we mentioned earlier about the souls of the departed, even after death, possessing a certain power whereby they still care about human affairs. Although the accounts dealing with this are true, they are quite lengthy, but we should believe the general tradition concerning these matters, varied and most ancient as they are. What is more, we should also believe the lawgivers who maintain that this is the case, unless 927b we see them as utter fools. If this is the natural state of affairs, there should be fear, first and foremost, of the gods above, who are aware of the loneliness of orphans; secondly of the souls of the departed, which naturally care greatly for their own offspring, honour those who are kind to them and have no respect for those who are unkind. Finally, there should be fear of those who are still alive but well advanced in years and much respected. Where a city flourishes and has good laws, our children's children live happily in tender love for 927c such people who have sharp eyes and keen ears for these matters and are kind to those who act justly in this area, while they get exceedingly angry with those who mistreat a lonely orphan whom they regard as a mighty and sacred responsibility. A guardian or official with any

sense should pay attention to all these people and take care of the upbringing and education of orphans as if he were providing sustenance to himself and his own kindred, and ^{927d} do his very best to benefit them in every possible way. Whoever heeds the message of our preamble to the law and does not mistreat a single orphan shall not unleash the unbridled wrath of the lawgiver against such crimes, but whoever heeds it not and wrongs someone who has no father or mother, shall pay twice the total compensation payable by a person who behaves badly towards someone with two living parents.

^{927e}

Athenian: When it comes to general legislation for guardians in relation to orphans, and for officials in relation to their responsibility for guardians, if, on the one hand, they had never come across a model for the rearing of free-born children themselves in rearing their own children and looking after their own property, and if they did not have laws setting out the relevant details properly, it would make sense to have a law of guardianship framed specifically for this purpose, distinguishing the life of orphans from that of others by certain specific features. But nowadays, among ourselves, although the status of an orphan is not much ^{928a} different in all these respects from someone under paternal care, they do tend to differ greatly in terms of the level of respect they are shown and the level of care they bestow. For this very reason our law has been quite serious about encouragement and threats in its legislation concerning orphans. But a threat of the following kind would still be most timely. Whoever acts as a guardian to a girl or a boy, and any guardian of the law who has been put in charge of a guardian, is to be just as affectionate to an orphan as to his own offspring, ^{928b} and shall look after the property of someone under his care just as zealously as he looks after his own property, or even better. Anyone acting as a guardian shall adhere to this single law about orphans. If anyone acts

otherwise in such matters, contrary to the law, then in ^{928c} the case of a guardian, the official is to fine him, and in the case of an official, the guardian is to take him before the court of selected judges and fine him twice the penalty adjudged by the court. If a guardian is deemed by the child's relatives, or any of the other citizens, to have neglected his duty or acted badly, he is to be brought to the same court. And on conviction, he is to pay four times the assessed damages, one half being payable to the child and the other half to whoever brought the case. Once an orphan has come of age, he may take legal action in relation to his guardianship within a five-year period from its termination, ^{928d} if he believes the guardian behaved badly. And if the guardian is found guilty, the court is to impose the appropriate penalty or fine. If, however, one of the officials is deemed to have harmed an orphan through neglect, the court is to decide the amount he is to pay to the child, but if he harmed him through an unjust act, then in addition to the fine, he is to be removed from office as a guardian of the law, and the civic authority is to appoint another in his place for the country and the city. Disputes can arise between fathers and their own sons, and between sons and their fathers, that are more serious than they should be. In such cases, the fathers are inclined to the view that the lawgiver should grant them the legal right, if they wish, to proclaim publicly ^{928e} through the herald that their son is no longer legally their son, while sons, in turn, expect to be allowed to take legal action claiming insanity on the part of their fathers because they are laid low by sickness or old age. Such situations tend to arise from the thoroughly bad characters of the people involved, since if the badness was on one side only, the son being bad but not the father, or vice versa, the difficulties would not give rise to such a degree of hostility. Now, under another civic arrangement, a disinherited child would not necessarily lose the right of citizenship, but in our society, for which these laws are proposed, ^{929a} someone

who has been disowned by his father needs to resettle in another country, for the addition of one more household to our 5,040 holdings is not permitted. Therefore, whoever is to suffer this fate legally must be disowned, not alone by his father, but by the entire family. Such matters should be dealt with based upon a law, somewhat, as follows. If anyone, with justification or without, beset by accursed anger, wishes to expel from his own family someone whom he has begotten and reared, he should not be allowed to do so ^{929b} there and then without due process. He shall first gather his own kindred together, as far as cousins and his son's kindred on his mother's side in like manner, and lay his accusation before these people, explaining that his son deserves formal expulsion from the family by everyone. The son is to be given equal speaking time to argue that he does not deserve to suffer such a fate at all. If the father prevails and secures the votes of more than half of all ^{929c} the family members, excluding the votes of the father himself, the mother, the defendant, and any male or female who has not yet come of age, then in this way and upon these terms the father is permitted to disown his son, but not otherwise. If some citizen wants to adopt the disowned son as his own, no law should stand in the way, for the characters of the young naturally undergo numerous changes during their lives. But if within ten years no one offers ^{929d} to adopt the dispossessed son, those responsible for excess offspring who are about to be resettled elsewhere shall be responsible for such cases too, so that they may be duly included in the same resettlement. It may happen that sickness, old age, difficult behaviour, or indeed a combination of them all, makes someone exceptionally deranged and this goes unnoticed by everyone except those who live with him, and he squanders his own wealth as he has the authority to do so. His son, too, may be at a loss and be reluctant to take legal proceed- ^{929e} ings on grounds of insanity. In this case, let there be a law that decrees that the son should

first go to the most senior guardians of the law and describe the father's affliction. Having ^{930a} looked into the matter sufficiently, they are to advise him either to take legal action or not. If they advise him to proceed, they shall act both as witnesses and advocates for the prosecution, and if the father loses the case he is no longer to have the slightest authority to administer his own property, and he shall live out the rest of his life just like a child. If a husband and wife are no longer getting along with one another at all because their behaviour is so bad, ten of the guardians of the law, in middle age, should take constant ^{930b} charge of such people, along with ten of the women responsible for marriages. If they are able to bring about a reconciliation, such arrangements shall be binding, but if feelings are running too high, they shall do their best to find suitable alternative partners for each of them. Such people are unlikely to have gentle dispositions, and so they should try to match them with partners of a more sedate and gentle character. Disputants who are childless or who have very few children are to make the fresh match with a view to producing children, while those who have sufficient children should separate and form fresh unions for the sake of companionship and mutual care in their old age.

^{930c}

Athenian: If a wife dies leaving behind both male and female children, there shall be a law, advisory rather than prescriptive, that the father is to bring up the existing children without introducing a stepmother. If there are no children, the widower must remarry until such time as he has begotten sufficient children for his household and the city. If the husband dies leaving sufficient children behind, the mother of the children is to remain there and bring them up. But if she seems too youthful to live healthily without a husband, the relatives ^{930d} shall confer with the women responsible for marriage and do whatever seems best to themselves and the women. If there are not enough children, then children should be considered, and,

by law, one boy and one girl shall constitute a specified minimum. When the question of parentage is undisputed but a decision is required as to which parent a child should cleave to, the law is to be as follows; if a female slave lies with another slave or with a free man or a freedman, the offspring shall belong in every case to her master. If a free woman lies with a slave, the offspring is to belong to the slave's master; if a man has a child by his own ^{930e} slave or a woman by hers, and the facts are beyond dispute, then the women are to send the woman's child away to another country, along with its father, while the guardians of the law are to send the man's child away, along with the woman who bore it. No god or man with any sense would ever advise anyone to neglect parents, and we need to recognise that the following preamble concerning the worship of the gods would fit well with the subject of parental respect and disrespect. The ancient laws concerning the gods are, in every case, twofold. Some of the gods whom we honour are in plain sight, whereas we set up statues of others as images which we worship even though they are life- ^{931a} less, believing that those living gods, because of these images, are well disposed to us and grateful. So if anyone has a father or mother, or fathers and mothers, of such people, laid up like treasures in his home, infirm with old age, he should never presume that any statue could be more potent when he has a living image like this at home by his hearth, provided its possessor worships it in the right way.

^{931a}

Clinias: What do you mean by the right way?

Athenian: I shall tell you, for this sort of thing, my friends, deserves to be heard.

Clinias: Speak on.

^{931b}

Athenian: Oedipus, we say, having been dishonoured, called down curses upon his own children which by all accounts were heard by the gods, and fulfilled. Amyntor, in a fit of anger, cursed his own son Phoenix, Theseus cursed Hippolytus, and countless other fathers cursed just as many sons. These curses of parents upon their children are obviously heard by the gods, for it is only right that a parent's curse upon their offspring be unlike any other curse ^{931c} upon anyone else. Let's not suppose then that it is natural for a god to give a special hearing to the imprecations of a father or mother when they have been dishonoured by their children, yet when they are actually honoured and are very pleased about this and pray earnestly to the gods that good will befall their children, let's not believe that they do not pay just as much heed to prayers like these, and respond accordingly. No, if that were the case they would never be just in dispensing their blessings, and for gods that would really be most inappropriate.

^{931d}

Clinias: Indeed.

Athenian: And so, we should be of the view, as we said a little earlier, that we can possess no statue that is more honourable in the eyes of the gods than a father or grandfather laid low ^{931e} by old age, or a mother with the same capacity. When these people are exalted with honours, God rejoices, otherwise he would not hear their prayers. Indeed, for us, an ancestor is a wondrous image, more so than anything lifeless. For those that are alive always join in our prayers when we serve them, and pray against us when we do not, whereas the lifeless images do neither. And so, provided we treat fathers, grandfathers and anyone else of that sort in the right way, we would have images that are unsurpassed in securing a portion of divine favour.

^{931e}

Clinias: You expressed that very well.

Athenian: Anyone with any intelligence, then, fears and honours the prayers of parents, knowing ^{932a} that in many cases these have so often proved effective. And since this is the natural order of things, to good people aged ancestors are a boon to the very end of their lives and are deeply mourned by the young when they depart, while they are truly a source of fear to bad people. So, let everyone, in obedience to these precepts, honour their own parents with all the honours ordained by law, but in case someone is, by all accounts, deaf to such prelim- ^{932b} inaries, it is only right the following law should apply. If anyone in this city does not care for his parents as much as he should, and does not look after all their interests and comply with their wishes more so than his own sons, his own offspring and even himself, whoever suffers such neglect is to report this in person to the three most senior guardians of the law, and similarly to the three eldest women responsible for marriages. They shall take charge and punish the offenders with beating and imprisonment if they are young, up to the age of ^{932c} thirty for men and up to forty for women, who are to receive the same punishment. If they persist in this parental abuse or mistreatment when they are older than this, they should be brought before a court of 101 citizens, the most senior of all, and, if convicted, the court shall assess what the fine or punishment should be, without restriction, up to the limit of ^{932d} what a person is able to suffer or pay. If a victim is unable to speak on his own behalf, any free-born citizen who discovers the neglect is to report the matter to the officials or else be regarded as an evildoer and be liable to an action for damages by anyone who wishes. If a slave informs them, let him be set free. If the slave belongs to the victim or the perpetrator, he is to be freed by the court. If he belongs to some other citizen, the public treasury shall pay compensation for the slave to the owner, and the officials are to take care that no one wrongs the slave in revenge for acting as an informer.

932e

Athenian: Cases where one person harms another with poison with fatal consequences have already been dealt with, but other cases of injury where someone does harm using potions, foodstuffs or ointments, intentionally with premeditation, have not been dealt with so far. The fact that poisonings are of two kinds because of the nature of human beings is some- 933a thing we must pause to consider. One kind has just been described explicitly where bodies naturally injure other bodies. The other uses magic, enchantments and spells, not only to convince those who are intent upon doing harm that these measures are effective, but to convince their victims, above all, that they really are being harmed by these people who 933b are able to bewitch others. Now, in relation to all such matters, in general it is not easy to understand what precisely the natural state of affairs actually is, nor, having understood this, is it easy to convince others. But when people are suspicious of one another in their souls, there is no value in trying to convince them about this sort of thing and encourage them to think nothing of it if they behold some imitation moulded in wax in a doorway, or where three roads meet, or on a parent's grave, because they have no clear appreciation of 933c these matters. So, having made a twofold division in our law about poisoning depending upon how the person attempts to do it, we shall first request, exhort and counsel that such a deed never be attempted. Nor should anyone scare the general population like frightened children, nor indeed compel the lawgiver and judge to cure our people of such fears, because to begin with, the person trying to administer poison does not know what he is doing in the case of the body, unless he happens to be a knowledgeable physician, nor indeed in the case 933d of magic, unless he happens to be a prophet or diviner. So, let the law about poisoning be stated as follows: whoever poisons someone so as to do harm, not fatally, either to that person himself or to his people, or harms his

cattle or his hives, with or without fatal consequences, shall, if found guilty of poisoning, be put to death if he happens to be a physician, or if he be an ordinary citizen, the court shall impose the appropriate fine or penalty. If it is suspected that someone is apparently causing injury using spells, enchantments or charms, ^{933e} or any other poisonings of this sort, he is to be executed if he happens to be a prophet or diviner, but if he is convicted of poisoning with no knowledge of magic, then, as in the previous case, the court shall impose in this case too whatever fine or penalty it thinks he should suffer. In cases where one person injures another through theft or violence, the greater the injury, the greater the compensation payable to the injured party, and the smaller the injury, the lesser the compensation, but, above all, the compensation payable in every case is to be ^{934a} sufficient to make good the harm done. In addition, each offender shall pay the penalty associated with that particular crime to teach him self-control. When someone acts badly because of the folly of another person, being unduly influenced because of his youth or for some other reason, then the penalty should be lighter. However, when that bad deed is due to the person's own folly because of a lack of control over pleasure and pain, or due to incurable desires, envy or anger, then the penalty should be heavier. The penalty is not ^{934b} imposed because of the wrongdoing, for what has been done will never be undone, but with an eye to the future so that the wrongdoer himself, and those who see him being punished, will utterly detest the injustice, or at least recover to a large extent from such a dreadful affliction. For all these reasons, and with a view to everything of this sort, the laws, like a good archer, should aim to estimate the extent of the punishment in each case, and, above all, the amount of the compensation. The judge must lend assistance to the lawgiver when- ^{934c} ever, in executing the same task, the law entrusts him with assessing the punishment the defendant is to suffer or the compensation

he is to pay. The lawgiver, on the other hand, is to outline some actions that illustrate conformity to the written law. That, indeed, is what we must do now, Megillus and Clinias, as best and beautifully as we can. We should state what the penalty should be for any acts of theft or violence, insofar as the gods or their children allow us to enact such laws.

934d

Athenian: Someone who is insane is not to be at large in the city, and the relatives of such people are to keep them indoors by any means at their disposal, or else be subject to a fine, which, for the highest property class, shall be one hundred drachmas whether it is a slave or a free citizen that is being supervised. A member of the second class shall pay four fifths ^{934e} of a mina, the third class shall pay three fifths and the fourth class two fifths. Now, many people are insane and in many different ways. In the cases we are referring to now, the madness is due to diseases, but there are other cases where there is a bad innate tendency to anger which is actually fostered. Such people, in minor disputes, raise their voices to speak abusively and slanderously to one another, behaviour that is completely and utterly inappropriate in a well-regulated city. So, let there be a single law applicable to all cases of abusive speech, as follows: no one is to verbally abuse anyone else. Any party to a verbal dispute is to instruct and learn from his adversary and the company, refraining entirely from all verbal abuse. Indeed, when people call down curses upon one another and employ dis- ^{935a} graceful language in a shrewish tone, firstly, although the words are as light as air, from these spring deeds that are heavy with hatred and hostility. For the speaker is embracing anger, an unkind trait, feeding this urge to the full with a noxious banquet, and his soul, once made gentle through education, is made wild again, and he becomes a beast who lives in discontent, reaping the bitter harvest of his anger. What's more, all those involved in ^{935b} such encounters are

inclined all too often to resort, somehow or other, to mocking their opponent. And no one has ever adopted this habit without completely failing to retain their own dignity or, in large part, losing their mental power. For these reasons, no one in a sacred place is to express themselves in this way at all, nor at a public sacrifice, at the games, in the marketplace, in court, or at any public gathering. And every transgression is to be punished^{935c} by the official in charge on pain of being debarred from all public distinctions, as someone who neither cares about the laws nor heeds the injunctions of the lawgiver. In other situations, if someone either initiating the criticism or retaliating does not refrain from such language, anyone older who comes across him is to defend the law by driving out with blows those who are so fond of that evil companion, anger, or else be liable himself to the appointed penalty. So, we are now saying that when someone is involved in criticism, he^{935d} cannot help attempting to resort to mockery, and this, when it is born of anger, is what we are criticising. But what about the comic writers who are keen on mocking people? Are we to accept this provided they resort to this sort of mockery of our citizens without any anger? Or are we to make a distinction between mockery in jest and mockery that is serious, and allow anyone to mock anyone else without anger, but not allow them, as we have said, to do so^{935e} in earnest and in anger? This stipulation must not be retracted, but we must pass laws stating who may do this and who may not. No composer of a comedy or any iambic or lyric song should be allowed to mock any of our citizens, either in word or through imitation, whether or not this is done in anger. If any of them disobeys this law, the officials in charge of the^{936a} competition are to expel him from the area entirely, on that very day, or be fined three minae, dedicated to the god in whose honour the competition is being held. Those with permission, as we said earlier, to compose works about one another are allowed to engage in mockery in

jest, but not in earnest or in a spirit of anger. Determination in this matter is to be left to the person responsible for the overall education of the young, and the composer shall be allowed to publicly present whatever that person approves, but whatever he rejects must ^{936b} not be shown to anyone else, nor should he ever be found teaching it to any other person, slave or free born, on pain of being regarded as a rogue who does not heed the laws. It is not the person who is hungry or who suffers a similar misfortune who deserves to be pitied, but the person who is sound-minded or possessed of some excellence, even in part, who comes by misfortune in addition. So it would be surprising if someone like this, slave or free, were to be totally neglected and reduced to utter beggary in a society or city that was even moderately well managed. Therefore, there will be no threat to such people ^{936c} if the lawgiver enacts a law somewhat as follows. There is to be no begging in our city, and if someone attempts to engage in such behaviour, scraping a life together through incessant entreaties, the market police are to expel him from the marketplace, and the board of city police are to expel him from the city, and the rural police from the rest of the country, driving him beyond the border so that our land may be entirely purged of such creatures. If a slave, male or female, damages anything at all that belongs to other people, and the injured party himself is not partly responsible through ineptitude or some other irre- ^{936d} sponsible actions, the owner of the slave that did the damage shall either make good the damage in full, or hand that slave over to the victim. But if the slave's owner issues a counter claim that the charge involves collusion between the injured party and the culprit slave in order to deprive him of that slave, he may take an action for conspiracy against the person who claims to have suffered the damage, and if he is successful he is to receive twice the value that the court sets upon the slave, but if he loses he is to pay for the damage and hand over the slave. And if a draught animal, a

horse or a dog, or some other beast, damages ^{936e} anything belonging to a neighbour, compensation is to be paid on the same basis. If someone won't of his own volition act as a witness, the person who needs his evidence shall summon him as a witness, and once summoned he shall appear in court, and if he has information and is willing to give evidence, he should do so. But if he claims to have no information, let him swear an oath to Zeus, Apollo and Themis, denying any knowledge, and be excused from the case. But a person called as a witness who does not show up in court in response is liable by law to an action for damages. If someone calls one of the judges at this trial to ^{937a} act as a witness, then, having given evidence, the judge must not vote in that case. A free woman is allowed to act as a witness or to support someone's case provided she is over forty, and she may initiate a legal action herself if she has no husband, but if she has a husband who is alive, she may only act as a witness. A slave, male or female, or a child, is permitted to act as a witness or a support only in a murder trial, provided that individual furnishes a trustworthy guarantor to ensure that the witness will remain and await trial in ^{937b} case the evidence is challenged as false. Either side in a case may challenge all or part of the evidence before the verdict has been decided if he maintains that he is a victim of false witness. The officials shall keep the challenges by both parties safely sealed up, and shall produce them at the trial for false witness. If a person is twice convicted of false witness, no law shall compel him to act as a witness thereafter. If it happens three times, he shall no ^{937c} longer be permitted to act as a witness, and if he dares to give evidence having been convicted three times, anyone who wishes may report him to the authorities, who shall bring him to court, and, if convicted, he shall be sentenced to death. In cases where evidence is condemned by a court and it is adjudged that someone gave false evidence and ensured that the victorious party won the case, then if more than half

his evidence is condemned, the case that was lost on that basis should be subject to review, and there should be argument and an adjudication as to whether or not the original case was decided by the false evi- ^{937d} dence, and this adjudication, whatever the outcome, shall determine how the previous cases conclude. Although there are many fine things in human life, most of them are beset by a sort of plague that pollutes and defiles them. And, indeed, justice among us humans is undeniably something fine which has civilised the life of man, and since this is fine, how could judicial advocacy not be fine too? But a pernicious skill hiding behind a noble name brings these fine things into disrepute. It begins by claiming that there is a certain contrivance for ^{937e} dealing with judicial proceedings, which itself constitutes a means of conducting a case and advocating on behalf of someone else, being capable of ensuring victory regardless of whether the behaviour of the defendant in the case had been just or not. It also claims that this skill and the arguments it produces may be had as a gift to anyone who hands over ^{938a} money. Now, regardless of whether this skill is indeed a skill or just a knack based upon practice devoid of skill, it should never, if possible, take root in our city. The lawgiver asks for obedience, that they don't speak contrary to justice, or that they depart to another country, and if they comply, he has no more to say. If they do not comply, then the voice of the ^{938b} law is as follows. Anyone suspected of attempting to turn the force of justice in the souls of the jurors to the very opposite course, or of taking multiple legal actions opportunistically, or advocating for others in such actions, is liable to prosecution by anyone who wishes, for perversion of justice or supporting others in such perversion. The case should be tried by the court of selected judges, and, on conviction, the court is to determine whether the defen- ^{938c} dant was acting out of greed or out of ambition. If ambition was the motive, the court is to decide for how long such a person is to be debarred from taking a legal

action against anyone else, or from advocacy in a legal action. If the motive was greed, a foreigner is to be banished from the country, never to return, on pain of death, while a native, because he was motivated by such out and out greed, is to be put to death. Someone who is convicted of doing this sort of thing out of ambition, for a second time, is to be put to death.

BOOK XII

941a

Athenian: If someone acting as an ambassador or envoy executes his embassy unfaithfully by lying about his city to another city, or by failing to convey the actual representations he was sent to convey, or he obviously misreports the message from hostile or friendly cities in his role as ambassador or envoy, let the offender be charged with unlawful impiety against the messages and edicts of Zeus and Hermes. If he is convicted, there should be an assessment ^{941b} of the fine he should pay or the punishment he should suffer. Theft of property is unworthy of a free person, while open robbery is a disgrace. No son of Zeus, taking delight in fraud or violence, has ever engaged in either of these. So, let no one who commits such offences be misled or deceived, by the poets or any other perverse storytellers, and come to believe that thieving and violence is the very behaviour of the gods themselves, rather than a shameful act. Indeed, this is neither true nor plausible, and whoever does this sort of thing in contra- ^{941c} vention of the law is no god, nor indeed a child of a god. And it belongs to the lawgiver to be more aware of this than all the poets put together. Now, whoever heeds our precept is fortunate and endures in good fortune, while whoever heeds it not shall come thereafter into conflict with the following law. The penalty is to be the same whether theft of public property be on a large scale or a small scale. For when someone steals something minor, he ^{941d} does so with the same desire but with less capacity, while the

person who takes up something major, something he himself has not put down, is wholly unjust. So the law sees fit to impose a lesser penalty on one than on the other, not because of the scale of the theft, but on the grounds that one is perhaps curable while the other is beyond cure. Accordingly, if someone secures a conviction in court against a slave or foreigner for theft of public property, the ^{942a} court is to decide what fine should be paid or what punishment should be suffered since the person is in all probability curable, while a citizen, brought up as our citizens will be brought up, once convicted of plundering or doing violence to his fatherland, whether he is caught in the act or not, is to be put to death as someone who is more or less beyond cure. When it comes to military organisation, much deliberation and many laws are in order, but what's most important is that everyone, male or female, should always be under authority. Nor should anyone develop in soul the habit of acting autonomously, just by themselves, either in serious matters or in play. Rather, both in time of war and in time of ^{942b} peace, they should live looking always to and following an authority, and be guided thereby even in the slightest details such as halting when ordered to do so, advancing, exercising, washing, eating, awakening at night for guard duty or to act as a messenger, and, in the face of danger, neither pursuing nor retreating without the commander's signal. In a word, he is ^{942c} to teach his soul, by habituation, to have no awareness or appreciation whatsoever of performing any action separately from other people, so that life is lived as much as possible together, collectively, in a community of all with all. For there is not, nor shall there ever ^{942d} be, a means of ensuring our safety and victory in war that is as powerful, as good, or as effective as this. So, in peacetime, the practice of ruling others and being under someone else's authority should be encouraged from earliest childhood, while absence of authority should be eradicated entirely from human life, and indeed from the life of

all animals under human control. Furthermore, all choral dances should be performed with an eye to military excellence, and all training in dexterity and fortitude should be for the same purpose, as well as the patient toleration of the pangs of hunger and thirst, of heat and cold, and of hard beds. But what is most important is not to destroy the capacity of the head and feet to produce and grow their own felt and footwear by swathing them in unnatural coverings. For ^{942e} these extremities, when kept safe, preserve the power of the entire body at its utmost, while their neglect has the opposite effect. One is the body's greatest servant, while the other is its supreme ruler, naturally holding all of its dominant sense organs.

^{943a}

Athenian: Such is the praise of the military life to which the young should have decided to listen. The laws, on the other hand, are as follows: whoever is enlisted or assigned any role is to perform military service. If anyone, out of cowardice, is absent without the permission of the generals, he is to be tried for desertion before the army officers when they return from the campaign, and each division that served on the campaign is to judge the cases separately. Hoplites, cavalry, and the various other divisions of the military are all to follow the same procedure – hoplites being brought before hoplites, cavalrymen before cavalrymen, ^{943b} and so on for all the others, each appearing before their own colleagues. Whoever is convicted is to be debarred from ever competing for any distinctions, from prosecuting another for desertion, or from being an accuser in such cases. Furthermore, the court is to determine what additional penalty he is to suffer or what fine he is to pay. After this, once the trials for desertion have been decided, the officers of each division are to meet again, and whoever so wishes may be judged by his own peers in relation to his military distinctions, furnishing ^{943c} no evidence or supporting witness statements from any previous wars, apart from the campaign

they have just concluded. The victory prize in such cases shall be an olive wreath, which he may hang with an inscription in any temple of the gods of war he chooses, to bear witness for the rest of his life that he has been awarded the highest of military distinctions, or the second or third highest as the case may be. If someone involved in a military campaign goes home before the appointed time without permission of his officers, he is to stand ^{943d} trial for leaving the field, before the same people who try the cases of desertion, and, on conviction, the same penalties as prescribed previously are to be imposed. Anyone bringing a legal action against another should of course be as fearful as he can of the imposition of an undeserved penalty, whether intended or unintended. For justice is indeed, and has been truly called, the virgin daughter of reverence. And by their very nature, reverence and justice abhor falsehood. So, we should in general be careful of transgressions against justice, especially in the case of loss of weapons in battle, lest we completely misjudge cases where loss ^{943e} of weapons was unavoidable, censure such losses as shameful, and visit undeserved retribution upon an innocent man.

^{944a}

Athenian: Now, it is not at all easy to distinguish between these various cases. Nevertheless, the law must somehow attempt to differentiate one from the other. We may use a story to illustrate the point. Suppose Patroclus, having been brought to his tent without his armour, had revived there, as has happened to countless others, it would have been possible for the base folk of the time to censure the son of Menoetios for losing the weapons, which according to the poet had been given to Peleus by the gods as a dowry with his wife, Thetis.¹⁰⁷ There ^{944b} are people, too, who lose their weaponry when they are thrown from a height, or at sea, or from the sudden impact received from a great gush of water in a storm. Or one could come ^{944c} up with an endless variety of similar excuses to gloss over a

suspicious misfortune. It is necessary then to distinguish, as best we can, the more significant and problematic misfortune from its opposite. Now, the application of these epithets as a criticism does involve a distinction of sorts. For it would not be justifiable, in all cases, to refer to such a person as a 'shield-thrower' rather than as someone who had merely lost his weapons. For the person who loses his weapons under duress would not be a shield-thrower in the same way as someone who discards them willingly. The two cases are completely and entirely different. So let the law state the following: if someone, in possession of weapons, is overtaken by the enemy combatants and does not turn around and defend himself, but deliberately drops his weapons or throws them away – winning a life of shame through his cowardice, rather ^{944d} than a noble and blessed death through sheer courage – there shall be punishment for such loss of weapons that are thrown away. But in the other case we mentioned, the judge is to ensure that an investigation is carried out. Indeed, the coward should always be punished in order to make him a better man, but there is no point in punishing the unfortunate. But what penalty would be appropriate for someone who throws away such powerful defensive weaponry in an act of cowardice? Now, it is said that a god once transformed Caeneus of Thessaly,¹⁰⁸ a woman, into a man, and although no human can do the opposite and turn a man into a woman, if this penalty had been inflicted upon the fellow who threw away his shield, and he had been turned into a woman, that would in a way have been the most fitting ^{944e} penalty of all. But as matters stand, to get as close to this arrangement as possible because of the man's attachment to life, let the following law apply to such a person so that he may live on without peril for as long as possible, and put up with being reviled as a coward. A man who is convicted of shamefully throwing away his weapons of war shall not, thereafter, be employed as a soldier by any general or any other

army officer, nor may he be assigned ^{945a} any other military position whatsoever. Otherwise, whoever gives the coward a posting is to be fined one thousand drachmas by the auditor if he belongs to the highest property class, five hundred if he belongs to the second, three hundred if he belongs to the third and one hundred if he belongs to the fourth. The convicted soldier, besides being excluded by nature from perilous manly exploits, shall also pay a fine of one thousand drachmas if he belongs to the highest property class, five hundred if he belongs to the second, three hundred if he belongs to the third, and one hundred as before if he belongs to the fourth.

^{945b}

Athenian: What do we have to say that is appropriate to the auditors, some of whom are appointed by lot for one year, while others are appointed from a panel for a number of years? Who will be competent to audit such people if one of them somehow acts awry, weighed down by the burden of his office and his own inability to give the role what it deserves? Now, although it is not at all easy to find an overseer for overseers, someone who ^{945c} is pre-eminent in excellence, we should nevertheless make the effort to find some auditors who are divine. This is how matters stand. There are many critical factors involved in the dissolution of a political system, just as there are in the case of a ship or a living organism, with their stays and braces and tendons and sinews, a single nature dispersed multifariously and referred to by a variety of names. One significant factor critical in the preservation of a political system, or its dissolution and ruination, are auditors. For if those who audit the ^{945d} officials are better than them, and this role is exercised irreproachably with blameless justice, then the entire country and city thrives and is happy. But if the auditing of the officials ^{945e} is conducted improperly, then justice, which holds all civic functions together, is subverted, every public office is torn apart from every other, and they are no longer inclined in the

same direction, thus turning the city into many cities rather than one, so full of faction that it is soon destroyed. That's why auditors need to be totally exemplary in all forms of excellence.

946a

Athenian: Let's arrange, then, to produce these people in some such manner as this. Each year after the summer solstice, the entire city should assemble in the common precinct of Helios and Apollo to present to the god, from among themselves, three men over fifty years of age, apart from themselves, whom each of them regards as the best in every respect. They shall choose half of those who have been nominated, those who obtain the most votes if their number is even. If their number is odd, the person with the least votes shall be eliminated, retaining half the nominees as determined by the number of votes cast. If some 946b receive an equal number of votes, thus making the half too large, the excess is to be eliminated by removing the youngest, while the rest are to be carried forward to another vote. And the process is to be repeated until three people with an unequal number of votes remain. If all three, or two of them, get the same vote, they shall entrust the outcome to benign fate and to fortune by deciding first, second and third place by lot, and crown them with olive wreaths. Once the appointments have been made, they are to proclaim to everyone that the 946c city of the Magnesians, safe once more under God, is presenting its three foremost personages to Helios, and according to the ancient law it dedicates the pick of its manhood as a joint offering to Apollo and Helios for as long as they hold judicial office. Twelve such auditors shall be appointed in the first year, each to hold office until they turn seventy-five, and thereafter three new members are to be added each year. The auditors, having divided the officials into twelve groups, are to scrutinise them by applying every test worthy of free people. For as long as they are serving as auditors, they should reside in the very precinct 946d of Apollo and Helios, in which they were elected.

Once they have passed judgement upon the city officials, whilst acting sometimes on their own, sometimes in consultation with one another, they are to display a written record in the marketplace stating what punishment or fine each official is to incur according to the decision of the auditors. Any official who believes he has been judged unjustly may bring the auditors before the court of selected judges, and, if he is acquitted of the auditors' charges, he may, if he wishes, take an action ^{946e} against the auditors themselves. But if he is convicted, and he has already been sentenced to death by the auditors, then he need simply be executed, while in the case of other penalties that are capable of being doubled, let him pay double the penalty.

^{947a}

Athenian: It is necessary to hear about audits of these auditors themselves, and how they are to be conducted. These people, who have been deemed worthy of the highest distinctions by the entire city, are to have seats of honour for life at all the festivals. From this group of people, official representatives are to be sent out to any sacrifices common to all Greeks, to any spectacles, or to any other sacred gatherings. They alone, of all the city's inhabitants, are to be adorned with a laurel wreath. All are to be priests of Apollo and Helios, and the chief priest for the year is to be the one who comes first in that year's election, and the year ^{947b} shall be recorded under his name as a means of reckoning the date for as long as the city survives. When they die, their lying in state, funeral procession and burial are to be different from those of the other citizens. The raiment shall be all white, and there shall be no dirges or laments. A chorus of fifteen maidens and another of fifteen youths, each standing about the bier, shall in turn chant a sort of hymn of praise to the priests celebrating them in song throughout the entire day. At dawn the next day, the bier itself is to be escorted to the tomb ^{947c} by one hundred youths belonging to the gymnasia, as chosen by the relatives of the deceased, led by the unwed soldiers with

their military accompaniments – cavalrymen with ^{947d} their horses, hoplites with their armour, and so on for all the others. Around the bier, the boys, being in front, shall sing the national chant, with the maidens following behind, while the women past childbearing come next. After this shall come the priests and priestesses, even though they are excluded from other burials, as if they were going to an undefiled tomb, provided the voice of the Pythian prophetess lends it support. Their tomb is to be constructed beneath the earth, oblong, made of porous stone, as ageless as can be, fitted with stone benches placed side by side. Once the blessed dead have been laid there, earth ^{947e} shall be piled up in a circle, and they shall plant a grove of trees round about, except at one end so that the tomb may be extended in that direction, with no mound covering those who are placed there. Every year they shall hold a contest in music, gymnastics and horse-racing in their honour.

^{947e}

Athenian: These are the honours due to those who have passed scrutiny at their audit. But if any of them, relying upon the fact of their election, proves himself all too human by turning bad after they have been appointed, the law shall ordain that anyone who wishes may prosecute them, and the trial shall be conducted in a court constituted as follows. Its first mem- ^{948a}bers shall be the guardians of the law, then the auditors themselves who are still alive, and finally the court of selected judges. Whoever brings a charge against someone else is to state that such and such a person is unworthy of those distinctions, and of the office he holds. And if he is found guilty as charged, he is to be deprived of his office, of that burial, and of the other honours bestowed upon him. But if the prosecutor fails to obtain one fifth of the votes, he is to be fined twelve minae if he belongs to the highest property class, eight ^{948b} if he belongs to the second highest, six minae for the third and three for the fourth.

948b

Athenian: Rhadamanthus is worthy of our admiration for the way he is said to have judged legal cases, because he discerned that human beings at the time were quite certain of the existence of the gods, as well they might be, since most people in those days were the offspring of gods, himself included, as the story goes. He seems then to have concluded that he should place his trust, not in any human judges, but in the gods, and so he arrived at simple, quick judgements. For he administered an oath to the contending parties regarding each issue under dispute, and thus secured a rapid, secure resolution. But nowadays, we ^{948c} say, a portion of the human race does not believe in the gods at all, while others are of the view that they don't concern themselves with us humans, while the opinion of the worst people, who are the most numerous, is that in return for some paltry sacrifices and flatteries, the gods help them to commit fraud on a vast scale and to evade all sorts of grievous penal- ^{948d} ties. Therefore, the skill of Rhadamanthus would no longer be appropriate in legal proceedings for people of this era. Since people's beliefs about the gods have changed, the laws must change too. Indeed, a lawgiver possessed of reason should abolish the oaths of both adversaries in legal proceedings, and whoever is taking an action against another should simply write out the charges without swearing an oath, and the defendant, similarly, should write out his denial and hand it over to the officials without swearing an oath. Indeed, with so much legal activity taking place in a city, it is surely terrible to know full well that ^{948e} although close to half of those involved are perjurers, they have no compunction about associating with one another at common meals, or at other public gatherings or private meetings. Let the law then decree that a judge who is about to give judgement is to swear an oath. Someone appointing a public official is always to do so under oath or using a voting pebble ^{949a} taken from a sacred place, as should a

judge of choruses or musical performances and any umpires or adjudicators of gymnastic or equestrian competitions, or of any matters where the outcome confers no advantage upon someone who breaks his oath, as far as we can humanly see. But in situations where there is an obvious and significant advantage in deny- 949b ing the truth, and doing so under oath, then the various accusers and counter-accusers should be judged through judicial proceedings without any oaths being sworn. And, in general, during the trial the presiding judges should not allow anyone to speak under oath in order to make his case more persuasive, or to lend solemnity to his curses upon himself and his clan, and they should prohibit any recourse to grovelling appeals or emotional outpourings. They are to ensure that everyone always explains the justice of their case in respectful language, and hears the other side. Otherwise, those in charge shall bring them back to the 949c point at issue, the point from which they had digressed. In cases of one foreigner against another, exchanges of oaths are to be accepted if desired, just as they are nowadays, and they may be granted legal authority, since these people, for the most part, shall not grow old and build homesteads in our city, thus producing others like themselves with legal status in our country, and similar habits. Their private legal actions against one another are also to be decided in the same manner.

949c

Athenian: There may be situations where a free citizen is disobedient to the city, cases that do not merit whipping or imprisonment or execution, relating perhaps to attendance at choruses or processions or involvement in other public ceremonies, or services such as sacrifices in time of peace or special impositions in time of war. In all such cases, the first requirement 949d is to make good the harm done, and for the offenders to give security to those whom the city and the law authorise to demand it, and if they disregard their pledges,

there is to be a sale of the securities and the funds are to go to the city. If further penalties are required, the relevant officials, having imposed the appropriate penalties on the offenders, are to bring them before the court until they are prepared to do as they are bidden.

949e

Athenian: A city whose sole source of wealth is the produce of the earth, and which does not engage in commercial activity, needs to decide what to do about foreign travel by its own citizens, and the admission of foreigners from elsewhere. Now, the lawgiver should begin by giving advice on these matters as persuasively as he can. This intermingling of cities with cities naturally combines a whole variety of customs, as strangers introduce novel behaviour to citizens, and citizens do the same to strangers. This does the greatest harm to cities that are well governed under proper laws, although in most cases, since the cities are ^{950a} not at all well governed, the intermingling makes no difference, whether it occurs by receiving strangers into their midst, or when they themselves travel for fun to other cities out of a desire for foreign travel of some sort, either when young or in their later years. Then again, it is not feasible to impose a total ban on the admission of strangers and on foreign travel by our own people. And what's more, this might appear like aggressive, rough treatment to the world at large, and we might get a reputation for using the harsh language of the so-^{950b} called 'alien expulsions', and for behaving in an inflexible and cruel manner. Indeed, we should never make light of our good or bad reputation in the eyes of others, for although most people fall far short of true excellence, that does not prevent them from judging the extent to which others are good or evil. There is a divine intuition present even in the bad people, so that the vast majority, even of extreme evildoers, do a good job of distinguishing, ^{950c} in their views and in how they express them, between the better people and the worse. So, the

exhortation to set a high value upon a good reputation in the eyes of the world is sound advice for most cities. In fact, what's most important and most correct is truly being good, and seeking a good reputation in this way, not, if we mean to be complete, by omitting the actual goodness. And, indeed, it would be fitting for the city we are founding in Crete to ^{950d} attain a most glorious and exalted reputation for excellence in the eyes of the world. For there is every reasonable hope, provided our plan is followed, that it will be among the few well-governed cities and regions under the gaze of the sun and the other gods.

^{950e}

Athenian: Now, what should be done about travels abroad to other regions and places, and the admission of foreigners, is as follows. Firstly, no one under the age of forty is to be allowed to travel abroad under any circumstances whatsoever. No one may ever do so for personal reasons, but such travel is to be permitted on public business as an envoy or ambassador, or to attend certain ceremonies. We should send representatives to Apollo at Delphi, to Zeus at Olympia, Nemea and the Isthmus to partake in the sacrifices and competitions in honour of those gods, doing our best to send delegations that are as noble, as distinguished and as ^{951a} large as possible, thus promoting the good reputation of the city at those sacred, peaceful gatherings, conferring a renown comparable to their military prestige. On returning home, they shall teach the younger folk that the customs of other cities are in second place compared to their own civic arrangements. There are other envoys who may, with the permission of the guardians of the law, be sent abroad. They are as follows. If any citizens wish to study the manners of other peoples, and have sufficient leisure to do so, no law shall stand ^{951b} in their way. For a city with no experience of people, both good and bad, would never, in its isolation, be able to become sufficiently civilised or perfect, nor indeed would it ever be able

to safeguard its own laws without appreciating them intelligently rather than through mere habit. In fact, there are always, among the broad mass of humanity, some few divine personages whose company is of the utmost value, and they spring up just as much in badly governed cities as in those that are well governed. The inhabitant of a well-governed city, who is incorruptible, should constantly seek out the traces of such people, going by land and by sea, with the aim of developing a confidence in any practices of his own people that ^{951c} are in good order, and of introducing corrections where there are any defects. For without this scrutiny and enquiry, or if this is badly conducted, no city ever remains perfect.

^{951c}

Clinias: How may we achieve both objectives?

Athenian: As follows. Firstly, an envoy of this sort is to be over fifty years of age and to have secured a good reputation in general, and in military affairs too, if he is to be sent abroad ^{951d} to other cities as proof of what the guardians of the law can produce. Once he turns sixty he may no longer act as an envoy. Having served in this role for as much of the ten years as he wishes, and then returned home, he is to report to the council that has oversight of the laws. This is to be a body composed of younger and older members, which has to meet every day from daybreak until the sun has risen.¹⁰⁹ It shall consist firstly of priests who have ^{951e} achieved high distinction, secondly of the ten most senior guardians of the law, and finally of whoever is currently responsible for all education, and those who have retired from this role. Each of these shall attend not on his own, but accompanied by a young man of his own choosing, aged between thirty and forty. Their meeting and discussions shall always ^{952a} deal with the laws of their own city, and anything they may learn about such matters from some other places, and, indeed, any subjects that may seem beneficial to learn for their

enquiry, because such studies bring clarity to the consideration of the laws, while their neglect clouds the matter in darkness and obscurity. The young folk shall, with all eagerness, study any of the subjects that the elders approve, but if any of those who are encouraged to undertake this study prove unworthy, the entire council is to censure the person who invited ^{952b} them. The rest of the city is to take responsibility for those young people who have a good reputation by keeping a special eye on them, and taking care of them, honouring them when they act aright, and dishonouring them more than their fellows if their behaviour falls below the general standard.

^{952b}

Athenian: The person who has surveyed the customs of other peoples is to proceed to this coun- ^{952c} cil as soon as he gets back home, and if he has come across people who are able to state some principle concerning legislation, education or the rearing of children, or he has brought back some reflections of his own, he is to share these with the entire council. If he seems to have returned neither better off nor worse off, he should be praised nevertheless for his eager enthusiasm. If he has returned in a better position, he is to receive much more praise in his lifetime, and when he dies, the authority of the council shall honour him with fitting tributes. If it turns out on his return that he has been corrupted, he should never gain the company of anyone else, old or young, by pretending to be wise, and if he manages to reassure the officials, he may live a private life. Otherwise, if he is convicted in court of busying ^{952d} himself in the field of education or laws, he is to be put to death. If he deserves to be brought to court, but none of the officials brings him to trial, this shall count to their discredit in the decision about awards of distinction.

^{952d}

Athenian: So much for the sort of people who may travel abroad, and how they may do so. Our next concern is the visitor

from abroad and how he should be welcomed. There are four kinds of visitors for whom we should make provision. First is a relentless, perpetual arrival who usually makes his repeated visits in summer, after the manner of migratory birds. Most of these cross the sea as if they had wings, flying all summer long to various cities to conduct ^{952e} trade and make money. The officials who have been put in charge of these matters should receive this visitor at marketplaces, harbours and public buildings close to the city, but outside its walls, ensuring that no visitors of this sort introduce any innovations. They shall administer justice to them and interact with them as much as necessary, but as little as possible. The second visitor is a true observer, who sees various sights with his eyes and hears musical displays with his ears. All such arrivals must be accommodated at the temples and provided with generous hospitality by the priests and wardens who are to look after them ^{953a} carefully. They may remain for a reasonable period of time, seeing and hearing whatever they came for, and they should then depart with no harm done or suffered. Should anyone do an injustice to them, or they to another, the priests are to act as their judges provided the sum involved is less than fifty drachmas. If the claim exceeds that amount, the case is to be tried before the rural commissioners. The third visitor who should be received by the state is one who arrives on public business from another region. They are to be received only by ^{953b} generals, cavalry commanders and infantry commanders, and their care should be the sole responsibility, in consultation with the prytanes, of whichever commander the visitor is residing with as a guest. The fourth kind of visitor arrives rarely, if ever. But if someone from another region ever does arrive who is the counterpart of our own observers, he is firstly required to be over fifty years of age, and, what's more, he is to be here in the expectation either of seeing something fine, something superior in beauty to what is found in ^{953c} other cities,

or of showing something of the same sort to another city. Now, any such visitor may go uninvited to the doors of the wealthy and the wise, since he himself is a person of that sort. Indeed, he may go to the home of the person in charge of all education, confident in the propriety of being the guest of such a host, or to the home of someone who has received official recognition for his excellence. Having spent time with these people, teaching and being taught, let him depart as a friend taking his leave of friends, bestowing suitable ^{953d} gifts and marks of honour. By these laws, all visitors, both male and female, are to be received from other regions, and our own people are to be sent abroad, honouring Zeus, the god of strangers, not driving visitors away with our eating habits and rituals, as the people of the Nile do nowadays, or by issuing harsh edicts.

^{953e}

Athenian: If anyone gives a guarantee, let him do so explicitly, agreeing the entire transaction in a written contract in front of witnesses, at least three for a contract under one thousand ^{954a} drachmas, and at least five if it exceeds that sum. A broker in any sale is to act as a guarantor for a seller without legal title to the goods, or one who is generally untrustworthy, and he is to be just as liable to prosecution as the seller. Someone who wishes to search someone else's property for stolen goods is to strip to his shirt and wear no belt, and swear an oath to the legally prescribed gods that he really expects to find something. He may then conduct his search. The other party shall allow him to search his house, including whatever is sealed or unsealed. But if one party wishes to conduct a search while the other refuses to allow ^{954b} this, the one who has been refused access may take legal action, specifying the value of the item he is looking for, and the other party, if convicted, shall pay double its value in damages. If the master of the house happens to be away at the time, the members of the household shall hand over whatever is unsealed to be searched, and whatever has been

sealed is to receive a second seal from the searcher, who is to appoint someone of his own choosing to stand guard for five days. And if the master is away for a longer period of time, the city police are to be brought in, and the search conducted accordingly by breaking the seals and resealing them again as before, in the presence of the household members and the city police.

954c

Athenian: In cases of disputes over property, there is to be a time limit as follows, after which someone who has acquired the item shall no longer be open to challenge. In our city there is no such thing as a dispute over land or houses. In the case of any other possessions that someone has acquired, if he has been using the item openly in the city, the marketplace and the temples, with no one making a claim, and someone asserts that he has been looking for the item all this time, although its possessor was obviously not hiding it, and this goes on 954d for a year with one person in possession of the item and the other seeking it, then once the year has elapsed no one is to be allowed to lay claim to the item. If the item is used openly in a rural area but not in the city or the marketplace, and no one challenges its possession for five years, then once the five years have elapsed no one shall be allowed to lay claim to such an item. If someone uses the item at his home in the city, the prescribed time period 954e is to be three years. For undisclosed use in a rural area the period shall be ten years, but when the item was being used in a foreign country there is to be no time limit for a claim, regardless of when it is found. If anyone forcibly prevents a person or his witnesses from appearing in court, and the person hindered is a slave, either his own or someone else's, the case shall be declared null and void. But if the person hindered is a free citizen, then, in addition to the nullification of the case, the offender is to be imprisoned for one year, and 955a is to be liable to prosecution for kidnapping by

anyone who wishes. If anyone forcibly prevents a rival in a gymnastic or musical or other competition from making an appearance, whoever wishes may inform the competition presidents, who are to grant the person who wished to compete the freedom to enter the contest. But if they are unable to do so, and victory goes to the entrant who hindered his rival, they shall award the prize to the hindered ^{955b} party, and commemorate the victory in whatever temples he chooses, while the offender is to be barred from setting up an offering or inscription relating to such a competition, and he shall be liable to pay damages whether he was victorious or not.

^{955b}

Athenian: If anyone knowingly receives any stolen item, he is to be liable to the same penalty as the thief, and for receiving someone who has been exiled the penalty shall be death. Everyone is to regard the city's friend or enemy as his own. And anyone who makes peace ^{955c} or war privately with others, without common consent, is also to be liable to the death penalty. If part of the city makes peace or war with any for itself, the generals are to bring those responsible for this action to court, and on conviction the penalty shall be death.

^{955c}

Athenian: Those who serve the nation are to render such service without accepting gifts, and there is to be no excusing this, or praise for the argument that "good deeds deserve gifts ^{955d} while foul deeds do not". For it is not easy to know what to do and then stand by what you know, and it is safest to heed and obey the law that no service be done in return for gifts. Whoever disobeys, shall, on conviction in court, simply be put to death. In relation to financial contributions to the common fund, not only must the property of each citizen be valued for various reasons, but a tribal official shall also present a written record of the annual production to the rural commissioners so that the treasury may decide which of the two kinds of

contributions it wishes to employ, choosing year by year either to take part of the overall valuation or a portion of the annual income in that particular year, after the deduction of the costs of the common meals.

955e

Athenian: The reasonable man should present moderate offerings to the gods. Now, land and the household hearth are always sacred to all gods, so let no one consecrate to the gods for a second time that which is already sacred. Gold and silver, possessions that are used in other cities both in private and in the temples, are a source of jealousy, while ivory, coming from a body that came to be devoid of soul, is an unclean offering, and iron and bronze are instruments of war. Anyone may present at the public temples any wooden or stone offerings he wishes, made from a single piece, or a woven item no larger than what a woman can weave in a single month. White is the colour appropriate to the gods, both in woven items ^{956a} and in general, while dyes should only be used for the trappings of war. The most divine gifts are birds, and pictures that a single painter can complete in one day, and any other offerings should be modelled on offerings of this sort.

956b

Athenian: Since the subdivisions of the city – their number, and what they should be – have been described, and laws relating to business transactions in all of the important matters have been stated as best we can, what remains is to deal with judicial procedures. The first of our law courts should consist of chosen judges, jointly chosen by the defendant and the prosecutor together, and more appropriately referred to as arbitrators rather than judges. The second shall consist of fellow villagers and tribesmen based upon a twelvefold division, before whom cases are to be argued if no decision was reached in the first court. Here the ^{956c} penalty is to be greater, and if the defendant loses at this second trial he is to pay one fifth more than what

was specified in the written action. And if someone challenges the judges and wishes to contest the issue for a third time, he is to bring the case before the selected judges. And if he loses once again, he is to pay one-and-a-half times the assessed penalty. If the prosecutor, having lost the case in the first court, is dissatisfied and goes to the second, he shall receive an additional fifth if he wins the case, and pay the same fraction of the assessed penalty if he loses. And if the parties go to the third court because they don't accept ^{956d} the previous judgements, the defendant, as we said, is to pay one-and-a-half times the penalty if he loses, while the prosecutor is to pay half.

^{956d}

Athenian: The allocation of courts and their composition, and the appointment of staff to support the various boards of officials, the intervals at which each court must sit, the voting procedures and associated adjournments, and any other requirements of this sort relating to judicial practice, such as the prioritisation of cases, compulsory response to questions and attendance at court, and any related matters, have all been dealt with previously, but it ^{956e} is good to repeat what's right two or even three times. However, all of these minor regulations that are easy to devise may be set aside by the older lawgivers, and the young lawgiver should fill in such details. Now, it would be reasonable for courts dealing with private matters to conduct their business in this way. But for those dealing with communal or public matters, and for those which the various officials make use of in managing the business of their own office, numerous sound regulations produced by reasonable men are already in existence in many cities. Drawing on these, our guardian of the law should provide our ^{957a} fledgling constitution with what it requires by making comparisons and corrections, and testing them in experience, until they decide that each of them is adequate for its purpose. Only then, having concluded the process so that they are quite

immutable, should they implement them on a permanent basis.

957b

Athenian: The matter of respectful silence on the part of judges, and its opposite too, and any divergences from general standards of justice, goodness and nobility in other cities, has to an extent been dealt with, although more will be said towards the end. Anyone who intends ^{957c} to be a fair and just judge must look to these matters and study any writings he possesses on the subject. Indeed, of all subjects, the very best at improving the person who learns them are those dealing with laws, provided they are rightly enacted. Were this not the case, our divine and wondrous law would bear its name in vain, a name that is akin to reason.¹¹⁰

957d

Athenian: Furthermore, when it comes to other utterances such as praise or censure of people, delivered in verse or in prose, either in writing or in daily conversation in all our various interactions, with their contentious disputes, or agreements that are often quite futile, the clear test of all these would be the writings of the lawgiver. Possessing their content within himself as a sort of antidote to the other words, the good judge should regulate himself and the city by ensuring ^{957e} the establishment and growth of justice in good people and doing his best to change the ways of the bad people from ignorance, licence, cowardice, and, in short, from any kind of wrongdoing, provided their habit is curable. But in the case of those who are fated to have such habits, then, as has rightly been said so many times before, those judges and their superiors ^{958a} who impose the death penalty as a cure for souls in this condition deserve the praise of the entire city. Once legal cases for the year have finally been adjudicated, laws are required for their implementation as follows. Firstly, the official deciding the case is to assign to whomever wins the case, all of the property of the person who loses, apart from possessions that he needs to

retain. This should be done in each case immediately after the voting, through ^{958b} proclamation by the herald within the hearing of the judges. And if someone fails to settle with the victorious party to their mutual satisfaction by the end of the month following the month of the trial, the judge who decided the case shall, at the behest of the successful party, hand over the property of the person who lost. But if he does not have the resources, and the shortfall is one drachma or more, the person who lost is not to be allowed to take a legal action against anyone else until he has fully paid off his debt to the successful party. Others, ^{958c} however, are fully entitled to take legal action against this debtor. If anyone who has been convicted obstructs the court that convicted him, the judges who have been unjustly obstructed are to bring the offender before the court of the guardians of the law, and, if a person is found guilty, he is to be sentenced to death as a subverter of our city and its laws.

^{958c}

Athenian: To proceed. When a man has been born and reared and has begotten and reared his ^{958d} own children, has engaged reasonably in business affairs, paying compensation when he has wronged another and accepting the same from someone else, and has duly grown old abiding by the laws, the end comes to him in the course of nature. In the case of the dead, male or female, the interpreters are to have the authority to prescribe the appropriate divine observances, to be performed for the gods beneath the earth and those of our realm. There ^{958e} are to be no graves on any land that can be cultivated, whether the tombs be large or small. They are to fill up places where the land is naturally suited for this sole purpose alone, that of receiving and concealing the bodies of the dead, while causing the least disturbance to the living. Where earth, a true mother in these matters, is naturally inclined to provide sustenance to humanity, no one alive or dead is to deprive us living beings of this. They are ^{959a} not to build up a burial mound higher than

what five men can complete in five days, nor erect a standing stone larger than what is needed to accommodate a eulogy on the life of the deceased in four lines of heroic verse. The laying out of the corpse in the house shall, in the first place, be for long enough to establish that the person really is dead, and not just in a swoon. So in general, for most people, the third day would be a reasonable one for carrying out the burial. We need to listen to the lawgiver, especially when he declares that soul ^{959b} is superior to body in every respect, and that, in this very life, what makes each of us what we are is nothing else but soul, while the body is just an apparition that follows each of us around. And it is well said that the bodies of the dead are images of the departed, while the real being of each of us, which is called the immortal soul, departs to render an account to the other gods, as the ancestral law declares – a fearful prospect for the bad, and a heartening ^{959c} one for the good. But not much help can be given to a deceased person. In fact, all of his kindred should have helped him while he was alive to ensure that he lived as just and as holy a life as possible throughout, thus being free after death from retribution in the life that follows this one for any foul misdeeds. Since this is how matters stand, we should never squander our wealth in the belief that this lump of flesh that is being buried is related to ourselves, rather than believing that the real person, the son or brother or whoever else we ^{959d} imagine we are burying amidst great mourning, has left us to journey on and fulfil his own destiny, while we do our duty through measured expenditure upon this, as it were, soulless altar to the gods of the underworld. And it is the lawgiver who would best divine what that appropriate measure is. So let the law be as follows. For someone of the highest property valuation, the measure of expenditure on the entire burial shall not exceed five minae, three ^{959e} minae for the second highest valuation, two for the third and one for the fourth. There are many other duties that the guardian of the

law must perform, and much that he must look after. Not least of these responsibilities is to spend their lives looking after children and adults, and indeed any age group, and, in particular, at anyone's death, a single guardian of the law is to act as a supervisor, whom the relatives of the deceased are to bring in as an overseer. And if the arrangements relating to the deceased are conducted with dignity and measure, this shall count to the guardian's credit, or indeed to his shame if they fall below these standards. The laying out and the other arrangements are to be conducted in accordance with custom concerning such matters, but we should allow freedom to the statesman ^{960a} when he is legislating, as follows. It would be unseemly for him either to enjoin or prohibit weeping for the dead, but laments and loud displays outside the house are to be forbidden. Bearing the corpse along the public roads and crying aloud as they proceed is to be prohibited, and they must be outside the city walls before daybreak. So let these be the regulations concerning matters of this sort, and whoever complies shall incur no penalty, while anyone who disobeys one of the guardians is to be penalised by all of them with a penalty jointly decided by them all. Any further rituals of burial of the dead, and those deeds that bar one ^{960b} from the right of burial for parricide, robbing temples, and everything of that sort, have been dealt with previously through specific laws, and so our legislative task is almost complete. But the completion of anything never consists merely in doing something or acquiring something or establishing something. Only when we have discovered a means of making our production completely safe for all time may we then believe that we have done all that we should have done. Until then, our overall task is incomplete.

^{960b}

Clinias: Yes, you put that very nicely, stranger. But could you please explain the additional point you are now making more clearly?

960c

Athenian: Dear Clinias, many of our ancient utterances have rightly been praised, not least of these are the names we give to the Fates.

Clinias: Specifically?

960d

Athenian: The first of them is Lachesis, the second is Clotho, then Atropos the third saviour of what has been spoken, making the process irreversible. These should provide a city and a constitution not only with health and soundness of its citizens' bodies, but also with lawfulness of their souls, or, more to the point, security for its laws. And it seems evident to me that this is what our laws are still lacking. They require some natural means of engendering this quality of irreversibility.

Clinias: If it really proves impossible to find some means of imparting this quality to every law, that is no small matter.

960e

Athenian: But it is indeed possible, as I can now see quite plainly.

Clinias: Well, we mustn't let up at all until we have provided the laws we have formulated with this very quality. For it is ridiculous to labour in vain at any task by not building upon secure foundations.

Athenian: You are right to encourage me, and you will find me of the same mind as yourself.

Clinias: Well said. So, what, according to you, would be the salvation of our constitution and our laws, and how would this operate?

Athenian: Well, didn't we say there should be a council in our city, constituted as follows. The ^{961a} ten most senior current guardians of the law, and all those who have been awarded civic distinctions, are to meet together in council. Furthermore,

those who had travelled abroad to seek out anything worth hearing for the guardianship of the law, and had returned safely home, were to be scrutinised by the members, and on approval deemed worthy to join the council. In addition to these, each member was to bring along one young person over the ^{961b} age of thirty, having first decided for himself that the person was worthy in terms of his nature and upbringing. He was to present him to the other members, and take him on if he was approved by the others. If not, the fact of his nomination was to be kept secret from everyone, and especially from the young person who was rejected. The council was to meet before daybreak when everyone would have most freedom from other responsibilities- ^{961c} ties, private or public. This, I believe, was the sort of description we gave in our previous discussions.

^{961c}

Clinias: It was indeed.

Athenian: Having taken up the discussion of this council once more, I would maintain that if someone were to use this, with all it has to offer, as a sort of anchor of the entire city, it would preserve everything we wish to preserve.

Clinias: How so?

Athenian: Now would be the time for us to display the utmost eagerness in explaining matters correctly.

Clinias: Yes, very much so. Please proceed as you propose.

^{961d}

Athenian: Well, Clinias, we need to discern in everything an appropriate saviour in its various activities. So, in the case of a living creature, for instance, soul and the head are naturally most important in this respect.

Clinias: Again, how so?

Athenian: Surely the excellence of these two ensures the saviour of every creature.

Clinias: In what way?

Athenian: By reason being present in the soul in addition to everything else, and sight and hearing being present in the head as well as everything else. In short, reason, and the most sublime senses, combined into a unity, may rightly be called the saviour of any creature.

Clinias: Quite likely.

961e

Athenian: Likely, indeed. But in what respect would reason, combined with the senses, be the 962a saviour of ships in storms or on calm seas? On board ship it is the pilot and the sailors who save themselves and the ship's company by combining their senses with the reason of the pilot. Is this not so?

962a

Clinias: Quite so.

Athenian: Not many examples of this sort are needed then. We might consider for instance military expeditions, or any medical care, and the objective the generals or the physicians should rightly aim at in each case to ensure salvation. For the generals, wouldn't it be victory and domination over the enemy? And for the physicians and their assistants, the provision of health to people's bodies?

Clinias: Of course.

Athenian: Now, if the physician had no understanding of the bodily condition we have just called health, or a general had no understanding of victory, wouldn't it be obvious that they did not possess reason in relation to any of these matters?

962b

Clinias: Indeed, how could they?

Athenian: And what about the city? If someone proved ignorant of the objective at which a statesman should aim, would he, in the first place, deserve to be called a ruler? And secondly, would he be able to save something when he is totally ignorant of its objective?

Clinias: No, how could he?

Athenian: So, if the settlement of this region of ours is now to be concluded, there must, it seems, be some thing within it that first understands the objective we are referring to, the one at which we, as statesmen, are aiming, and secondly how this may be attained, capable too of understanding first and foremost which of the laws give the best advice, and which give the worst, and indeed which people do the same. If any city is bereft of something of this ^{962c} sort, it would hardly be surprising if its lack of reason and awareness led it to act every time in a random manner in all of its affairs.

^{962c}

Clinias: That's true.

Athenian: So in our case, in which particular part of the city or in which of its institutions has provision been made for an adequate safeguard of this sort? Can we say?

Clinias: Not really, stranger, not with any certainty anyway. However, if I were to hazard a guess, this argument of yours seems to me to be indicating the council which you said meets at night.

^{962d}

Athenian: Nicely anticipated, Clinias. This council, as our recent argument indicates, should be possessed of all virtue, the first being a refusal to wander and aim at multiple objectives. It should, rather, focus upon one objective, and direct everything to that as if it were firing darts.

Clinias: Entirely so.

Athenian: So, we are now in a position to understand, not surprisingly, that the laws of various cities are so divergent because the legislators in each city look to all sorts of different objectives. It is no wonder, then, that in many cases the definition of what's just, for some of them, is designed to ensure that certain people rule in the city, whether they happen to be good or bad. For others, it is designed to make themselves wealthy, even if they end up being slaves, while some others are intent upon the free lifestyle. But there are others again ^{962e} who legislate for two objectives together, with an eye to both – freedom for themselves, and dominion over other cities. But the wisest – or so they imagine – pursue all of these objectives, and others like them, with no special respect for any one of them, being unable to say which one the others should look to.

^{963a}

Clinias: In that case, stranger, wasn't the position we adopted some time ago correct? For we said, I believe, that all our laws would look to one objective, and we agreed that this is most correctly called excellence.

^{963b}

Athenian: Yes, we did.

Clinias: And we also stated, I recall, that excellence is fourfold.

Athenian: Very much so.

Clinias: And reason is the leader of all these, to which the other three, and everything else, should look.

Athenian: You are following this admirably, Clinias, so pay attention to what remains. In the case of a pilot, a physician or a general, that single objective to which reason should look has been stated. And now at this stage we are examining the reason of the statesman. So, as if we were putting a question to some person, we might ask, "I wonder, my friend, what your gaze is fixed upon. What precisely is that one objective? The reason of

the physician is able to provide a clear answer, so what about you, who might claim to be superior? Are you unable to answer?" Well, Megillus and Clinias, can you speak on his behalf, providing a ^{963c} definition, just as I have given you definitions so often on behalf of others, and tell me what precisely you say this objective is?

^{963c}

Clinias: Not at all, stranger.

Athenian: What is it that we should be eager to discern, both in itself and in what forms?

Clinias: What do you mean by its forms?

Athenian: For instance, when we say that there are four forms of excellence, it is obvious that we must be stating that each, individually, is one.

Clinias: Indeed.

^{963d}

Athenian: And, indeed, we refer to them all as one, as though they were in reality not many but just this one thing, excellence. For we say that courage is excellence, and wisdom is excellence, and so are the other two.

Clinias: Very much so.

Athenian: Well, it is not difficult to say how these two differ from one another and have acquired two names, as have the others. However, it is still no easy matter to explain why we call them both, and the others too, by one name, excellence.

Clinias: How do you mean?

Athenian: It is not difficult to explain my meaning. Let's divide the roles of questioner and answerer between us.

Clinias: Again, what do you mean?

^{963e}

Athenian: You are to ask me why exactly we refer to them both as one thing, excellence, and then again say that there are two things, courage and wisdom. I shall tell you the reason. It is because one of them, namely courage, involves fear, and even wild beasts have a share in this one, and so does the behaviour even of very young children. For the soul can become courageous in the course of nature without reasoning. However, in the absence of reasoning, no soul ever is, has been, or will be wise and possessed of reason. That's the difference.

Clinias: True.

964a

Athenian: Well, you have now received an account from me explaining the way in which they differ and are two. You should now give me an account, in return, of the way in which they are the same and are one. Bear in mind that you will also have to tell me how, although they are four, they are also one. And once you have shown how they are one, you must ask me in turn how they are four. After that, we should consider someone who has an adequate knowledge of anything at all which has a name, and, what's more, also possesses an account. Could he possess knowledge only of the name while being ignorant of the account? Or would it be a disgrace for anyone of any consequence to be ignorant of everything of this sort when dealing with the most important and exalted matters?

964b

Clinias: Apparently so.

Athenian: For a legislator or guardian of the law, or someone who thinks that he is superior to everyone else in terms of excellence, and has been rewarded for such achievements, is there anything of greater importance than these very qualities we are now discussing – courage, sound-mindedness, justice and wisdom?

964c

Clinias: No, how could there be?

Athenian: Then, consider the interpreters, teachers and lawgivers, the very guardians of everyone else in relation to these matters. What if someone lacked understanding and knowledge, or needed to be punished or rebuked for certain transgressions? Shouldn't the one who can teach him the power of evil and excellence, and who can explain this comprehensively, be preferred to anyone else? Or could some poet who has just arrived in the city, or someone claiming to be an educator of the young, prove himself superior to a person who has triumphed in all excellence? Tell me this, then. In a city like that, where there are no guardians competent in word and deed, with an adequate understanding of excellence, would it be surprising if such a city, devoid of guardianship, suffered the fate experienced by so many cities nowadays?

Clinias: No, probably not.

Athenian: Well then, are we to do what we are now suggesting, or what? Are we to provide our guardians, in word and in deed, with a greater perfection in excellence than everyone else? Or how else will our city resemble the head and the senses of wise folk who have acquired an internal guardianship of this sort?

964d

Clinias: How, stranger, are we to understand this likeness, and in what does this consist?

Athenian: The city itself is, of course, the torso of the body, and at the very top, so to speak, are the young guardians who have been selected because they are especially gifted. And being thoroughly quickwitted, they survey the entire city, and as they watch they commit whatever they observe to memory and act as sources of information for the elders on every aspect of civic affairs. These elders, who are likened to reason for their exceptional wisdom in so many matters of importance, are to

deliberate, and using the younger members as assistants ^{964e} and advisers, they co-operate together, acting as true saviours of the whole city. Is this how we say things should be, or should we make some other arrangements? Are all our citizens to have a similar upbringing and education, with no one receiving a more exacting education than anyone else?

^{964e}

Clinias: Heavens, no. That's impossible.

Athenian: Then we should move on to an education that is more rigorous than previously described.

^{965a}

Clinias: Probably.

Athenian: Could the education we began to touch upon just now turn out to be the one we have need of?

Clinias: Yes, indeed.

Athenian: Didn't we say that the supreme craftsman or guardian in any sphere must have the ability not alone to look towards multiplicity, but also to press on to recognise the one, and, having recognised that, to arrange everything else while keeping the one in view?

^{965b}

Clinias: And we were right to say so.

Athenian: Now, could anyone get a more exact vision and perspective in relation to anything, without being able to look from multiplicity and dissimilarity towards one form?

^{965c}

Clinias: Probably not.

Athenian: It is not probable, my friend. It really is the case that no method more certain than this is available to any of us humans.

^{965d}

Clinias: I believe you, stranger, and I do agree. So, we should proceed to discuss the matter in these terms.

Athenian: So, it seems that we must compel the guardians of our divine constitution too, first and foremost, to discern with precision whatever is the same through all four of these, being one and the same in courage, in sound-mindedness, in justice and in wisdom, and rightly called according to us by one name, excellence. To this, my friends, we must if you please hold fast, and not let go until we have stated adequately what precisely it is that we should look to. Is it one, is it a whole, is it both? Or what exactly is it by nature? Or if this evades ^{965e} us, do we think we shall ever properly understand anything about excellence, when we will be unable to say whether it is multiple or fourfold or one? So, if we are to heed our own advice, we shall arrange somehow or other that this knowledge is present in our city. But we also need to decide whether or not to abandon the entire consideration.

^{965e}

Clinias: By the god of strangers, stranger, the last thing we should do is to abandon such a consideration, since you seem to us to be making perfect sense. But how might all this be arranged?

^{966a}

Athenian: We are not yet in a position to say how we should arrange this. We should first ascertain, by agreement among ourselves, whether this consideration is necessary or not.

Clinias: Why, yes it is, provided this can actually be done.

Athenian: Well then, what about the fair and the good? Are we to adopt the same view? Should our guardians recognise only that each of these is multiple, or should they also know how and in what respect each is one?

Clinias: It seems more or less essential that they should also understand how each is one.

966b

Athenian: Well, although they understand this, might they be incapable of demonstrating their understanding verbally?

Clinias: Impossible. You are describing the condition of some slave.

Athenian: And does the same argument of ours apply to all matters of importance? Must those who really are to act as guardians set over the laws really understand the truth about them and be capable of expounding them verbally, and adhering to them in practice, judging what actions are noble by nature, and what actions are not?

Clinias: Of course.

966c

Athenian: Now, one of the most exalted matters, one that we dealt with seriously already, is the subject of the gods. It is important to know, as far as humanly possible, that the gods exist, and the obvious extent of their supreme power. And although we may forgive most of our population if they adhere merely to the letter of the law, we should exclude, even from candidacy as a guardian, anyone who does not work hard at acquiring total faith in the existence of the gods. And this exclusion involves never selecting someone as a guardian of the law ^{966d} who is not divine and who has not worked hard in that direction, and is not even included among those who are recognised for their excellence.

966d

Clinias: Yes, as you say, it is only right that someone who is reluctant or unable to engage with such matters should be kept well away from the ranks of the good.

Athenian: Now, do we know of two factors leading to belief in the gods, among those we described previously?

Clinias: Which two?

966e

Athenian: One was our statement about the soul, when we said that soul is the most ancient and most divine of all things, whose motion once it gets underway provides ever-flowing existence. The other one concerns the regular movement of the stars and other bodies under the control of reason, which has brought order to the universe. For no one, beholding all this with an attentive and trained eye, has ever turned out to be an ungodly person, affected in 967a the way that most people expect. Quite the contrary. In fact, it is commonly believed that those who study such matters are rendered ungodly by astronomy and the other related sciences, through observing events that occur by strict necessity rather than by the intention of a will concerned with accomplishing good.

967a

Clinias: And what is the actual situation?

Athenian: Well, as I said, the situation nowadays is the reverse of what it was when those who consider these bodies thought that they were soulless. Yet, even in those days a sense of wonder crept in, and people who studied them in detail suspected the truth of the view, now 967b held, that if these were devoid of soul they could never have employed such wonderfully accurate calculations, since they would not have possessed reason. And some people, even then, dared to suggest this very doctrine, and say that it is reason that brings order to everything in the heavens.¹¹¹ But these same thinkers fell into error once again by thinking that soul, which is older than body, is in fact younger, and they, so to speak, overthrow everything again, and more to the point, overthrow themselves. For based upon the evidence of 967c their eyes, everything moving in the

heavens seemed to them to be composed of earth and stone and many other soulless bodies, even though these constitute the causes of the entire universe. These views led at the time to constant charges of atheism against such thinkers, and great unpopularity too, and indeed the poets took to slandering those who engage in philosophy by comparing them to dogs howling at the moon and saying other silly things. But nowadays, as I said, the situation is the complete opposite.

967c

Clinias: In what way?

Athenian: It is not possible for any of us mortal humans ever to attain constant reverence for the gods, unless the person understands these two statements: that in the realm of things that come to birth, soul is the oldest, is immortal, and is indeed the ruler of all material bodies.

967d

Athenian: Furthermore, he should understand the statement repeated so often, that reason, belonging to things that are, is present among the heavenly bodies. And he should also understand the necessary subjects that precede these, and having observed their connection with music, apply this in a fitting manner to the practical regulation of human behaviour. And in cases where an explanation is possible, he should be able to give the appropriate account. But ^{967e} whoever is unable to master all this, in addition to the commonplace excellences of the populace, would never be up to the task of ruling the whole city, and should instead assist others in that function. Well, Megillus and Clinias, we should now consider whether, in addition to all the laws we have described already, we should also add this law making legal provision for the Nocturnal Council of rulers, with the special education we have described, to act as a guardian and protector. Or how should we proceed?

968a

Clinias: Of course we must make this addition, my friend, if we are up to the task of doing so at all.

Athenian: In that case, let us, one and all, strive towards this objective. I shall be your eager assistant because of my considerable experience in such matters, and extensive study, although ^{968b} I may find other collaborators.

^{968b}

Clinias: Well, stranger, this is the way that the god is leading us, so this certainly is how we should proceed. But we should now discuss and explore the correct approach to be adopted here.

^{968c}

Athenian: It is not yet possible, Megillus and Clinias, to legislate on such matters. Only when the council has been set up should we pass laws concerning the extent of their authority. At this stage, these arrangements can only be made, if they are to be made correctly, through instruction combined with constant application.

Clinias: In what way? What do you mean by this?

Athenian: First, of course, a list of names is to be drawn up of those who are of a suitable age, learning ability, character and habits for the role of guardian. Subsequent to this it is not ^{968d} easy to discover what subjects should be learned, or to become a pupil of someone else who has discovered them. What's more, it would be futile to specify in writing the sequence in which the various subjects should be taken up, or the duration of the study. Indeed, it would not become evident, even to the very people who are learning them, what it is appropriate to learn until knowledge of what is being learned somehow arises within the soul of each. Accordingly, while it would hardly be right to say that none of these matters is capable of verbal expression, they certainly cannot be formulated in advance, since advance formulation clarifies nothing of what they

contain.

968e

Clinias: In that case, stranger, since this is how matters stand, how should we proceed?

Athenian: Well, my friends, we are, it seems, in the middle with the crowd, as the saying goes, and since we are prepared to take risks with the entire constitution – that the dice may, as 969a they say, turn up a triple six or three ones – that's what we should do. I shall share the danger with you by stating and elaborating my own views on education and upbringing, which have now been set in train once more by our discussion. But the danger is quite significant and quite beyond comparison. So I encourage you, Clinias, to attend to this at least. For once you have established the city of the Magnesians, or whoever else the god names it after, fame will be yours if you establish this in the right way, or at the very least you shall inevitably get a reputation for courage, unparalleled among subsequent generations.

969b

Athenian: If this divine council of ours comes into existence, my dear companions, the city must be entrusted to its care, and there will be hardly any dispute at all on this matter from any modern lawgiver. Then we shall attain the finished waking reality of the dream we dealt with a while ago in our discussion, when we somehow constructed an image depicting the co-operation of reason and the head. For once our members have been meticulously 969c selected, educated as they should be, and then installed in the National Acropolis, they would prove to be guardians like none we have ever seen before in our lives for their excellence as protectors.

969c

Megillus: My dear Clinias, based upon all that has been said, we must either bid farewell to the idea of founding the city, or else

retain the services of this stranger here, by entreaty or any means at our disposal, and make him co-operate with us in the foundation of the city.

969d

Clinias: Very true, Megillus. I shall do as you ask and you should assist me.

Megillus: Assist you I will.

NOTES

1. Odyssey xix.178-179. Minos was the legendary king of Crete, son of Zeus and Europa, who, every nine years, made King Aegeus select fourteen children (seven girls and seven boys) to be devoured by the Minotaur.
2. The goddess referred to here is Athena, the goddess of wisdom and foundress of the city of Athens.
3. Tyrtaeus was an elegiac poet who lived in Sparta. He was noted for his poetry, which exhorted the Spartans to fight courageously in defence of their city. The Athenian stranger quotes the first line of the poem and paraphrases the subsequent nine lines.
4. Theognis was a lyric poet. Despite what the Athenian stranger says here, he is likely to have hailed from the Megara near Athens rather than the Megara in Sicily. His poetry was lively, and provided practical advice about life and commentary on civic matters.
5. According to tradition, Lycurgus and Minos established the Spartan and Cretan constitutions.
6. Plutus, the god and personification of wealth, was, in some contexts, depicted as being blind so that he could distribute his benefits without prejudice.
7. An official group of young Spartan citizens who were tasked with ensuring the compliance of the slaves (helots).
8. Ganymede was kidnapped and taken to Olympus to serve as Zeus' cup-bearer, etc. Iliad xx.231 ff.
9. Dionysus was the god of wine and fertility. Festivals in his honour typically involved liberal consumption of wine.
10. A Cadmeian victory is one that comes at a greater loss than the benefit it brings. It is a proverbial saying that references Cadmus, the legendary founder of Thebes. It is comparable to our phrase 'Pyrrhic victory'.
11. Epimenides was a legendary seer who was granted the power of prophecy after having slept for 57 years in a sacred cave on Crete. Clinias' description puts his birth about a century after its actual date.
12. Wordplay based on an alleged connection, likely fanciful, between the Greek words for 'chorus' and 'joy'.
13. Isis was a goddess in the Egyptian pantheon. She was the sister of Osiris, and it was believed that she assisted the dead in their transition to the afterlife.

14. Cinyras and Midas were legendary kings of ancient kingdoms in Cyprus and Phrygia, respectively.
15. The lines quoted here are from the elegiac poet Tyrtaeus.
16. This is a reference to the story of Cadmus.
17. Cadmus was said to have slain a sacred dragon whose teeth, when planted, grew into a group of fully armed fierce warriors known as the Spartoi.
18. The god of healing.
19. Orpheus was a legendary poet, musician and prophet.
20. Euripides, *Cyclops* 3.
21. This refers to the legendary flood in the age of Deucalion. He and his wife Pyrrha were the only survivors.
22. Daedalus was an inventor and master craftsman who constructed the Labyrinth for King Minos of Crete; Orpheus was a legendary musician and prophet; Palamedes was a prince from Euboea, credited with inventing, among other things, mathematics and writing; Marsyas and Olympus were both musicians who played the doublepipe (aulos); Amphion was a brilliant lyre player.
23. Epimenides was a Cretan seer to whom many magical happenings were attributed.
24. The 'cycle' referred to here is the period of time between cataclysmic events.
25. *Odyssey* ix.112-115, Lattimore.
26. *Iliad* xx.216-218, Lattimore. Dardanus, an ancestor of the Trojan kings, ruled the entire Troad. His grandson Tros gave his name to Troy and the Trojans. Ilium was more commonly known as Troy.
27. The first city is a dynasty, the second is an aristocracy, the third city is in the plains, exemplified by Troy. The fourth, which will be described presently, is a league of cities.
28. Ninos was the legendary founder of the Assyrian Empire, an important kingdom in the Upper Tigris region in modern-day Iraq.
29. The 'Great King' always referred to the King of the Persian empire.
30. According to the *Iliad* (v.640-651), Heracles sacked Troy a generation prior to the Trojan War.

31. Menelaus, king of Sparta and Agamemnon, king of Mycenae, who were both leaders of the second expedition against Troy.

32. Hippolytus was falsely accused by Phaedra, his stepmother, of attempting to sexually assault her. Her husband, Theseus, believed her accusations and cursed his son, asking the sea god Poseidon to kill him. Poseidon sent a bull from the sea, which terrified the horses pulling Hippolytus' chariot. He became entangled in their reins and was dragged to his death.

33. The allusion here is to a short portion of a poem by Pindar, of which only a small fragment remains (Fragment 109, Snell).

34. Hesiod, *Works and Days* 40.

35. The first kings of Sparta were Procles and Erythraeus, twin sons of Aristodemus.

36. This refers to Lycurgus, founder of the Spartan Council of Elders.

37. 'Third saviour' was a proverbial phrase arising from the custom of offering the third libation at banquets to Zeus the Saviour.

38. A group of five overseers who were elected annually by the Assembly (all Spartan citizens were eligible) and who had judicial, financial and administrative powers over the kings and the senators.

39. Sparta had two royal families, both claiming descent from Heracles. The two kings were political, military and religious figures.

40. 'The portion belonging to Aristodemus' is a reference to Sparta.

41. The reference here is to Messene.

42. Cyrus the Great, having become king of a small kingdom in Persia, extended the territory considerably, by conquest and in so doing founded the Persian (Achaemenid) Empire.

43. The reign of Cambyses, Cyrus' son, was marred by military defeats. His successor, his son Darius, was able to steady the ship of state through sensible policies.

44. This expression denotes an education in extreme luxury.

45. Gomates, the Eunuch, seized Cambyses' kingdom for a short time by impersonating his dead brother while Cambyses was away in Egypt.

46. After seven months, Gomates was slain by seven Persian nobles, one of whom was Darius.

47. Datis was the commander of the first Persian expedition. He was sent to punish the island of Eretria, north of Athens, for taking part, along with

Athens, in the revolt against Persian domination in Ionia.

48. Paeans are hymns in honour of Apollo, and the dithyramb is a choral ode to Dionysos.

49. *Nomos* (meaning law, custom, tradition) also refers to a style of song with a prescribed *harmonia* (tuning) and a definite rhythm.

50. The Titans, the older generation of gods, were the first-born children of Uranus and Gaia. The Titans were overthrown by their children, the Olympian gods.

51. Eighty stades is about 14.8 kilometres (9.25 miles).

52. A quotation from Alcman, a Spartan poet.

53. Minos, who had a powerful navy, attacked Athens because his son, Androgeos, had been killed there. He forced the Athenians to send an annual tribute of seven young men and seven young women as food for the minotaur, a half-bull, half-human creature.

54. *Iliad*, xiv.96-102, Lattimore.

55. The Battle of Marathon decided the outcome of the first Persian War; the Battle of Plataea decided that of the second. Both were Greek victories.

56. Nestor, the king of Pylos in the south-western corner of the Peloponnese, was the oldest of the heroes who fought in the Trojan War.

57. A restatement of the concept of philosopher kings from the *Republic* v.473d and *Seventh Epistle* 326b.

58. *Odyssey* xvii.218.

59. The reference here is to Protagoras, an influential sophist, who was famous for having said that man is the measure of all things. His relativist doctrine is described in the *Theaetetus*. He has an eponymous dialogue.

60. This refers to the Pythagorean lists of opposites, which include odd/even, good/bad, right/left, male/female, among others.

61. Nemesis was the goddess of retribution. She resented anyone who violated the natural order of things or possessed a given quality in excess.

62. Hesiod, *Works and Days* 287-292, Lamb.

63. There is a play on the Greek word *nomos* here, which can refer either to a musical melody, tune or strain, or to a law or custom.

64. There is an untranslatable play here upon the word *nomos*, which refers both to a musical melody, tune or strain, and to a law.

65. The Heraclids were the Dorians who controlled Argos, Messene and Sparta.
66. 5,040 is divisible by all numbers from one to ten, but not by eleven. It is divisible by a total of fifty-nine numbers.
67. These three sites all housed influential oracles. Delphi was dedicated to Apollo, Dodona to Zeus, both situated on mainland Greece; the third was dedicated to the Egyptian god Ammon, and located at the oasis of Siwa in the Libyan desert.
68. The division of the 5,040 citizens into twelve yields tribes of 420 people. These smaller tribes can then be further subdivided.
69. A deme was a collection of villages and their inhabitants.
70. The Helots were a large class of subjugated people in ancient Sparta. They substantially outnumbered the Spartans, who were constantly concerned with how to prevent Helot uprisings.
71. The Mariandyni were a people who lived in the region of Bithynia in the north-west of Asia Minor who were enslaved for a time by the inhabitants of Heraclea Pontica, the chief city of the region.
72. *Odyssey* xvii.322 ff, Lattimore.
73. The source of this quote is unknown.
74. The gifts referred to here are grains.
75. The Orphics, whose practices were based on the writings attributed to the legendary poet Orpheus, refrained from killing and eating meat on the basis of their belief in the reincarnation of souls, both of humans and of animals.
76. This is the first mention of these women.
77. Eileithyia was the goddess of childbirth and midwifery.
78. The Corybantes, offspring of the god Apollo, were legendary armed and crested dancers who worshipped the goddess Cybele (Rhea) through their ritual dancing and drumming. Corybantic conditions were pathological compulsions to dance, thought to have been caused by divine possession.
79. Geryon and Briareus were, according to myth, two fearsome many-limbed giants.
80. The techniques referred to here are dropping to the floor in the case of wrestling, and the use of gloves in the case of boxing.
81. The curetes were the Corybantic dancers on Crete who worshipped Rhea, and were said to have protected the infant Zeus.

- 82.** The 'Virgin Queen' of Athens was Athena.
- 83.** A play on the word *nomes*, which can mean either 'laws' or 'melodies' or 'chants'. Here the word is translated as 'measures' in an attempt to reflect this ambiguity.
- 84.** *Odyssey* iii.26-28, Lattimore.
- 85.** A reference to Athena.
- 86.** Thamyras was a mythical singer who challenged the Muses to a competition and lost. Orpheus was legendary for his ability to charm any living thing, and even non-living things like rocks, with his sweet music.
- 87.** One Greek stade was roughly equivalent to 180 metres (600 feet). So a distance of sixty stades is 10.8km (6.75 miles) and a distance of one hundred stades is 18km (11.25 miles).
- 88.** The pancration was a form of combat that combined wrestling and boxing, but also allowed kicking and choking. It was not dissimilar to contemporary mixed martial arts.
- 89.** Laius was a legendary king of Thebes who kidnapped and raped Chrysippus, the young son of King Pelops. As a result of this incident, Laius is cited as having instituted the practice of homosexual pederastic love.
- 90.** Oedipus was said to have married his mother, and Thyestes was said to have raped his own daughter in an attempt to fulfill a prophecy.
- 91.** Iccus of Tarentum was an athlete who was noted for his strict adherence to Pythagorean tenets in his training regime, which included maintaining a meagre diet and abstaining from sexual activity.
- 92.** This was a common expression indicating a resistance to social change.
- 93.** A reference to the autumnal equinox.
- 94.** Lycurgus was the legendary lawgiver who is credited with having established the laws of Sparta, introducing equality among the citizens along with the austere regime of fitness and military preparedness for which Sparta was famous. Solon was a poet and the most famous Athenian lawgiver.
- 95.** This refers back to 863c-d where ignorance as a cause of transgressions is divided into simple and complex forms. The latter is further subdivided into complex ignorance accompanied by power, and complex ignorance accompanied by weakness. Thus, there are three forms of ignorance leading to transgressive behaviour, which, when added to the first two, yield five.

96. That is, in the case of one who kills by his own hand.
97. City officials were to be assessed for their conduct at the end of their terms in office.
98. This statement has been attributed to Thales, who was one of the first of the early Greek philosophers.
99. Hesiod, *Works and Days* 304.
100. *Odyssey* xix.43, Bury.
101. *Iliad* ix.500.
102. The details of this administrative body are discussed later. See 961 ff.
103. The reference here is to Solon.
104. The two are Solon and the lawgiver for the society they are establishing in Magnesia.
105. Epilepsy was known as the 'sacred disease' on account of its presumed connection with the divine.
106. One drachma was equivalent to six obols, thus making the interest on the arrears in a case such as this equal to 200% per year.
107. In the *Iliad*, Patroclus was killed by Hector while wearing the armour of his companion, Achilles. *Iliad* xvii.125 ff, xviii.78 ff.
108. According to legend, Caeneus was originally a woman, Caenis, who was transformed into an invincible man by Poseidon at her request.
109. This is a reference to the Nocturnal Council. For further details, see 960b ff.
110. A connection is made here between the words *nomos* (law) and *nous* (reason).
111. This is likely to be a reference to the preSocratic philosopher Anaxagoras, whose influence upon Socrates is described in Plato's *Phaedo*.

Lysis

persons in the dialogue:

SOCRATES of Alopecce, son of Sophroniscus

HIPPOTHALES a young man

CTESIPPUS a cousin of Menexenus

LYSIS early teens

MENEXENUS early teens

scene: a newly erected palaestra (wrestling school) outside the west wall of Athens

203a

Socrates: I was making my way from the Academy directly to the Lyceum,¹ along the road outside the wall, under the wall itself. But when I reached the gate at the spring of Panops, I came across Hippothales there, the son of Hieronymus, along with Ctesippus of Paeania, and there were other young men with them standing together in a group. And when Hippothales saw me approaching, he said,

Hippothales: “Socrates, where are you going, and where have you come from?”

203b

Socrates: “From the Academy,” said I. “I am making my way directly to the Lyceum.”

Hippothales: “Come here,” he said, “directly to us. Will you not join us? It will be well worth your while.”

Socrates: “Where do you mean,” I asked, “and whom should I join?”

Hippothales: “Here,” he replied, showing me an enclosure of sorts with its door open, just opposite the wall. “Here is where we spend our time, ourselves and others, a great many others, handsome too.”

204a

Socrates: “But what is this, and what do you spend your time doing?”

Hippothales: “It is a wrestling school,” he replied, “newly built. But we spend our time for the most part in discussions, and we would be most pleased to include you in them.”

Socrates: “It is good of you to do so,” said I. “But who does the teaching here?”

Hippothales: “A friend of yours,” said he, “and an admirer, Miccus.”

Socrates: “By Zeus,” said I, “he is no ordinary man, at any rate. No, he is a competent man of wisdom.”

Hippothales: “So, would you like to follow us,” he said, “and see for yourself who is here?”

204b

Socrates: “I would first like to hear what I am going in for, and who the handsome one is.”

Hippothales: “There are differing opinions on that, Socrates.”

Socrates: “Tell me, who you think it is, Hippothales?”

Socrates: When he was asked this question, he blushed, and I said, “Son of Hieronymus, Hippothales, there is no need to say whether you are in love with someone or not, for I know that you are not only in love but also that you are already proceeding far along love’s path. I myself am, for the most part, quite ordinary and useless, but somehow or other, God has given me the ability to recognise quickly a lover and a beloved.”

204d

Socrates: Now, when he heard this, he blushed even more, much more. So Ctesippus² said,

Ctesippus: “It is so charming, Hippothales, that you blush and are shy about telling Socrates the name. But if the man spends

any time with you, even a little, he will be worn out by hearing you mention the name so often. At any rate, Socrates, he has deafened our ears by filling them up with 'Lysis'. And if he has been drinking, there is a good chance we will be woken from our slumbers thinking we are hearing the name Lysis. Now, what he says in normal conversation is awful, but it is not really awful compared to the times when he tries to pour his poems all over us, and his prose compositions too. And what is even more awful than all this is when he sings to his favourite, in an extraordinary voice, which we have to endure hearing. And now, when you ask him for the name, he blushes!"

204e

Socrates: "It seems that Lysis is a young man," said I. "I say this, because when I heard the name I did not recognise it."

Ctesippus: "Yes," he replied, "he does not use his own name very much. He is still named after his father, because his father is so very well known. But I know full well that you will not fail to recognise the boy's appearance. Yes, he is sufficiently recognisable from his appearance alone."

Socrates: "Tell me whose son he is," said I.

Ctesippus: "He is the eldest son of Democrates of Aexone," he replied.

205a

Socrates: "Well, Hippothales," said I, "what an utterly noble and spirited love you have discovered. Come on then, show to me what you also show to these people here so that I may see whether you know what a lover should say about his favourite, either to him directly, or to others."

Hippothales: "Socrates," said he, "do you attach any significance to anything this fellow is saying?"

Socrates: "Well," said I, "do you even deny being in love with the one this fellow is referring to?"

Hippothales: “I do not,” he replied, “but I deny composing poems for my favourite, and prose works too.”

Ctesippus: “The man is not well,” said Ctesippus. “No, he is raving, and quite mad.”

205b

Socrates: And I said, “Hippothales, I am not asking to hear any of the verses, or any ode you may have composed to the young man, but I do want to hear what your thinking is, so that I may know how you behave towards your favourite.”

Hippothales: “Surely this fellow here will tell you,” said he, “since he knows and remembers in such detail, if indeed, as he claims, he is deaf listening to me.”

Ctesippus: “By the gods,” said Ctesippus, “I certainly am, and what he says is actually ridiculous, Socrates. Indeed, how can a lover avoid being ridiculous when he is so preoccupied with his favourite he has nothing of his own to say that even a child would not say? So, what he puts into verse and prose is whatever the whole city celebrates about Democrates, and Lysis, the boy’s grandfather, and about all his ancestors – their wealth, the horses they bred, and their victories, in the Pythian, Nemean, and Isthmian games,³ with four-horse chariots or single horses, and stories still more ancient than these. Indeed, the other day, in some poem or other, he recounted a connection with Heracles and how an ancestor of theirs entertained Heracles as a guest because they were related, the ancestor himself being the offspring of Zeus and the daughter of the founder of their deme. What the man says and sings, and forces us to listen to, are the stories of old women, Socrates, and there are many more like these.”

205e

Socrates: And when I heard this I said, “You are ridiculous, Hippothales! Are you composing a victory ode to yourself

before you have won the victory?”

Hippothales: “No, Socrates, I am not composing or singing it to myself.”

Socrates: “You do not think so, at any rate,” said I.

Hippothales: “So, what is going on?” he asked.

Socrates: “These odes apply most of all to you,” said I, “for if, on the one hand, you capture a favourite who is like this, all that you have said and sung is an adornment to you, and is in reality a victory ode to you, as though you had been victorious because you were successful with a favourite like this one. But if, on the other hand, he escapes you, the more you have said in praise of that favourite, the more nobility and goodness will you seem to be losing, and the more ridiculous will you look. So whoever is wise in matters of love, my friend, does not praise the beloved until he captures him for fear of how events may unfold. And besides, whenever anyone praises those handsome fellows and makes much of them, they get full of ideas about themselves, and become arrogant. Don’t you think so?”

Hippothales: “I do,” he replied.

Socrates: “Don’t they become harder to capture as they become more arrogant?”

Hippothales: “Quite likely.”

Socrates: “Well, what sort of hunter do you think would rouse his quarry in the course of the hunt, and make it harder to capture?”

Hippothales: “A bad one, of course.”

206b

Socrates: “And indeed, it is most uncivilised to use speech and song in order to make someone wild rather than to soothe them. Is this so?”

Hippothales: “It seems so to me.”

Socrates: “Be careful, Hippothales, that you do not render yourself liable to all these allegations because of your poetry. What is more, I do not think you would be prepared to accept that a man who does harm to himself with his poetry is ever a good poet, insofar as he is harmful to himself.”

206c

Hippothales: “By Zeus, no,” said he. “That would be highly irrational. But, Socrates, these are the very reasons why I am confiding in you, and if you have anything else to offer please advise me as to what a person should say or do if he is to be regarded with affection by his favourite.”

Socrates: “It is not easy to say,” I replied. “But if you are prepared to get him to enter into a discussion with me, perhaps I may be able to show you what you should say when you converse with him instead of saying what, according to these people, you actually say and sing.”

206d

Hippothales: “Well, that is no problem,” he said, “for if you go inside along with Ctesippus here, sit down and converse, I think he will surely come over to you, Socrates, since he is particularly fond of listening to discussions, and besides, as they are celebrating the festival of Hermes, the older boys and the younger ones are mingling with one another. So he will come over to you, and if he does not, he is friendly with Ctesippus through Ctesippus’ cousin, Menexenus,⁴ and, in fact, Menexenus happens to be his companion, more so than anyone else. So Ctesippus should call him if he does not come over himself.”

206e

Socrates: “That is what we should do then,” said I. And with that, I took Ctesippus with me and went over to the wrestling school, and the others followed us. When we arrived inside, we

found that the boys had offered the sacrifice, and the associated rituals had almost been completed by then, so they were all playing knucklebones, dressed in their finery. Now, although most of them were playing outside in the courtyard, some were playing odds-and-evens in a corner of the dressing room, with a huge quantity of knucklebones which they were picking from some little baskets, while others stood around watching them. In fact, one of them was Lysis, and he was standing among the boys and youths, wearing a garland on his head, most distinctive in his appearance, worthy of note not just for his beauty, but because he is both beautiful and good.

207a

Socrates: We, for our part, withdrew to the opposite side because it was quiet there, and we sat down and were discussing something with one another. Now, Lysis kept turning around to look at us, and he was obviously eager to come over, but he was at a loss for a while and was reluctant to come over on his own. Then Menexenus entered from the courtyard, between games, and once he saw myself and Ctesippus he came to sit beside us. So, when Lysis saw him he followed suit and sat with us too, along with Menexenus. Then the others came over, and what is more, when Hippothales saw so many people standing there, he used them as a screen and stood close by where he thought Lysis could not see him because he was afraid of annoying him, and he stood like that and listened.

207b

Socrates: I then looked over at Menexenus and asked, “Son of Demophon, which of you is older?”

Menexenus: “We argue over that,” he replied.

Socrates: “Then you would also dispute over which of you is more noble,” said I.

Menexenus: “Very much so,” he replied.

Socrates: “And, likewise, over which of you is more handsome.” They both laughed at that. “However, I will not ask which of you is more wealthy, since you are friends, aren’t you?”

Menexenus: “Very much so,” they replied.

Socrates: “Well, it is said that friends have all things in common, so you will not differ on this issue at any rate, if what you say about your friendship is actually true.”

207c

Socrates: They both agreed. After that, as I was in the process of asking which of them was more just or more wise, someone came in and fetched Menexenus away, saying that the trainer was calling him. I presumed he was involved in conducting a sacrifice. So he went out, and I asked Lysis a question: “Presumably,” said I, “your father and mother love you very much, Lysis?”

Lysis: “Certainly,” he replied.

Socrates: “In that case, they would want you to be as happy as you could possibly be?”

Lysis: “Of course.”

207d

Socrates: “Do you think that a person who is enslaved, and who is not allowed to do any of the things he desires is happy?”

Lysis: “By Zeus, I do not think so,” he said.

Socrates: “Well, if your father and mother love you and desire that you become happy, it is obvious that they are eager, in every way, that you should be happy.”

Lysis: “Of course,” he said.

Socrates: “So, do they allow you to do whatever you wish, and do they not rebuke you at all or prevent you from doing whatever you desire to do?”

Lysis: “By Zeus, Socrates, there are lots of things they stop me from doing.”

207e

Socrates: “What do you mean?” I asked. “Although they want you to be happy, they prevent you from doing what you wish? Tell me this: if you developed a desire to ride on one of your father’s chariots, taking the reins during a race, they would not allow you to do so. They would prevent you, wouldn’t they?”

Lysis: “By Zeus, they certainly would not allow me.”

Socrates: “Whom would they allow to do it?”

Lysis: “There is a driver who is paid by my father.”

Socrates: “What do you mean? Do they trust a hireling more than they trust you to do whatever he wishes with the horses, and as well as this they pay him money?”

Lysis: “What else could they do?” said he.

208c

Socrates: “But I presume they would trust you to take charge of the mule-team, and if you wished to grab the whip and beat them, they would allow you to do so.”

Lysis: “Why ever would they allow me?” he replied.

Socrates: “Well, then,” said I, “is no one permitted to beat them?”

Lysis: “Of course,” he replied, “the muleteer.”

Socrates: “Is he a slave or a free man?”

Lysis: “A slave,” he replied.

Socrates: “Then it seems they think more highly of a slave than they do of you, their own son, and they trust him with their own property, rather than you, and they allow him to do whatever he wishes, yet they prevent you from doing so. But tell me this

too: do they allow you yourself to be in charge of yourself, or do they not even trust you in this?"

Lysis: "How could they trust me in this?"

Socrates: "Is someone in charge of you then?"

Lysis: "This tutor here," he replied.

Socrates: "Surely he isn't a slave?"

Lysis: "What else would he be? He is ours though," he said.

Socrates: "How awful," said I, "a slave in charge of a free man. But what does this tutor do when he is in charge of you?"

Lysis: "Well, he takes me to my teacher," said he.

208d

Socrates: "Surely they are not in charge of you too, your teachers I mean."

Lysis: "Entirely so."

Socrates: "So, your father, of his own free will, puts a whole host of masters and rulers in charge of you. But when you get home to your mother, does she allow you to do whatever you wish with her wool or her loom, when she is weaving, in order to make you happy? Yes, I presume of course that she does not prevent you from touching the blade or the shuttle or any other part of her wool-spinning equipment."

208e

Lysis: He laughed at this and said, "Socrates, not only would she prevent me, but she would beat me if I were to touch them."

Socrates: "By Heracles," said I, "surely you have not wronged your father and your mother somehow?"

Lysis: "By Zeus, I have not," he replied.

Socrates: "Then, for what reason do they prevent you, so cruelly, from being happy and doing whatever you wish,

bringing you up all day long in constant slavery to someone and, in a word, doing scarcely anything you desire? Consequently, it seems you do not even benefit from their extensive wealth. No, everyone else exercises more control over it than you do. Nor do you benefit from your own body, noble and all as it is, but someone else cares for it and shepherds it. But you are in charge of nobody, Lysis, nor do you do anything you desire.”

209a

Lysis: “That is because I am not yet of age, Socrates.”

Socrates: “Son of Democrates, that should not stop you, since there are areas where your father and mother do place trust in you and do not wait until you are of age. Indeed, when they want someone to read to them or to do some writing, I presume you are the first person in the house to whom they assign this task. Is this so?”

Lysis: “Very much so,” said he.

209b

Socrates: “Therefore, in these cases you are allowed to write the letters of the alphabet in any sequence you wish, and you are allowed to read with the same degree of freedom. And when you take up the lyre, I am sure that neither your father nor your mother prevent you from tightening and loosening any of the strings you wish, or from plucking it or using the plectrum. Do they prevent you?”

Lysis: “Of course not.”

209c

Socrates: “Well then, Lysis, what exactly is the reason why they do not prevent you in these cases, yet in the other cases we mentioned just now they do stop you?”

Lysis: “I think it is because I know about these, but I do not know about the others.”

Socrates: “That is it, my good man,” said I. “So your father is not waiting for your coming of age before he trusts you in everything. But when he thinks you understand better than he does, on that day he will entrust himself and his possessions to you.”

Lysis: “Yes, I think so,” he replied.

209d

Socrates: “Very well,” said I, “and what about your neighbour? Do you think he will use the same rule in dealing with you as your father does? Do you think he will entrust the management of his own household to you whenever he believes you understand the management of household affairs better than he understands them himself, or might he take charge of it himself?”

Lysis: “I think he would entrust it to me.”

Socrates: “What about the Athenians? Don’t you think they would entrust their affairs to you once they noticed that you have enough understanding?”

Lysis: “I think they will.”

Socrates: “By Zeus,” said I, “what about the Great King? Would he trust his eldest son, who is to be ruler of all Asia, to throw anything he wishes to throw into the stew when the meat is being boiled, rather than us, if we were to present ourselves before him and show him that we had a more refined understanding of food preparation than his own son?”

Lysis: “Obviously, he would trust us,” he replied.

209e

Socrates: “And although he would not allow his son to throw anything into the pot, he would even allow us to throw in handfuls of salt if we wished.”

Lysis: “Yes, of course.”

Socrates: “And what if his son’s eyes were diseased? Would he allow him to touch his own eyes if he did not think he was medically qualified, or would he stop him?”

Lysis: “He would stop him.”

Socrates: “But if he presumed that we had medical skills, and if we wished to open his son’s eyes and sprinkle them with ashes, I think he would not stop us, as he would assume we had the appropriate level of understanding.”

Lysis: “That is true.”

Socrates: “So, would he also entrust to us, rather than to himself and his son, all other matters in which we seemed to him to be wiser than the two of them?”

Lysis: “Necessarily, Socrates,” he replied.

210a

Socrates: “So that is how things are, dear Lysis,” said I. “Everyone, Greeks and non-Greeks, men and women, will entrust us with matters we understand. And in these cases we shall do whatever we wish, and nobody will deliberately obstruct us, and we shall be free in ourselves and have charge of others, and these will be ours, for we shall benefit from them.

210b

Socrates: “But in matters in which we have not acquired intelligence, no one will entrust these to us to do whatever we think we should do. Instead, everyone will obstruct us to the best of their ability, not just strangers, but our father, and mother, and any kindred even closer than these, and we ourselves shall be subject to others in these matters. And these will be alien to us, for we shall derive no benefit from them. Do you accept that this is the case?”

Lysis: “I do.”

Socrates: “So shall we be dear to anyone, and will anyone love us, in these matters wherein we are of no benefit?”

Lysis: “Of course not.”

210c

Socrates: “In that case, your father, does not love you, nor does anyone love any other person in so far as that person is useless.”

Lysis: “It seems not,” he replied.

210d

Socrates: “So, if you actually become wise, everyone will love you, and everyone will be your kindred, for you will be useful and good. But if you do not, neither your father nor anyone else will love you, nor will your mother, nor your kinfolk. Well, Lysis, is it possible under these circumstances to have an enlarged understanding, in matters one does not yet understand?”

Lysis: “How could we?” he replied.

Socrates: “Now, if you are in need of a teacher, you do not yet understand.”

Lysis: “True.”

Socrates: “So you do not have an enlarged understanding, if, in fact, you still lack understanding.”

Lysis: “By Zeus, Socrates, I do not think so.”

210e

Socrates: When I heard this, I looked over at Hippothales and almost made a mistake, for it occurred to me to say, “Hippothales, that is how you should converse with your favourite, humbling him and deflating him rather than puffing him up and spoiling him as you do.” But when I saw him struggling and in tribulation over what was being said, I remembered that he had actually stood where he hoped Lysis

would not notice him. So I checked myself and held my words back. Meanwhile, Menexenus had returned and was sitting beside Lysis in the seat he had vacated earlier. Then Lysis, unnoticed by Menexenus, whispered to me playfully in a low, friendly voice.

Lysis: “Socrates, say what you have been saying to me to Menexenus too.”

Socrates: And I said, “You shall say that to him, Lysis, since you have been paying such full attention.”

Lysis: “I certainly have,” he said.

211b

Socrates: “Then try to remember it as best you can,” I said, “so that you can tell him everything comprehensively. And if you forget any of it, ask me again when you next meet me.”

Lysis: “Yes, I shall do that, Socrates. I am very keen to do so, rest assured. But say something else to him, Socrates, so that I can listen to that too, until it is time to go home.”

Socrates: “Well, that is what I should do,” said I, “since you are the one who is asking. But be sure to come to my aid if Menexenus attempts to refute me. You know how argumentative he is, don’t you?”

211c

Lysis: “Yes, by Zeus,” said he, “very much so. That is the very reason why I want you to converse with him.”

Socrates: “So that I can look ridiculous?” said I.

Lysis: “No, by Zeus, so that you can punish him.”

Socrates: “How so?” said I. “That is not easy, since the man is formidable, a pupil of Ctesippus’. And look, can’t you see? Ctesippus is here in person.”

Lysis: “Do not be concerned about anyone else, Socrates,” said he. “Just go ahead and converse with him.”

Socrates: “Converse I must,” said I. Now, as we were saying all this Ctesippus interrupted, and asked,

211d

Ctesippus: “Why are you holding a feast just for two? Won’t you share your discussions with us?”

Socrates: “Of course, we should share them,” said I. “This fellow does not understand something I am saying, but he says that he thinks Menexenus knows, and he is asking me to question him.”

Ctesippus: “Well,” said he, “why not question him?”

Socrates: “I shall ask him then,” I replied. “And you, Menexenus, should answer the questions I ask you. The fact is that from my childhood I have had a desire for a particular possession, just like anyone else. But the difference is that while one person has a desire to acquire horses, another to acquire dogs, another to acquire gold, and another to acquire honour, I am easy about all these. However, when it comes to the acquisition of friends, I am extremely passionate, and I would rather have a good friend than the best quail or cockerel anyone ever had. Yes, by Zeus, rather than any horse or dog either, and I think, by the dog, that I would far sooner acquire a companion than all of Darius’ gold, or even Darius himself.⁵ That is how fond of companions I am.

212a

Socrates: “So, seeing the two of you, yourself and Lysis, I am amazed, and I account you blessed, because you are able to acquire this possession quickly and easily at such a young age. Indeed, you have acquired this man, such a staunch friend, so quickly, and he, for his part, has got you. But I am so far from acquiring this that I do not even know how one person becomes the friend of another. And since you are experienced, these are

the very issues on which I wish to question you.

212b

Socrates: “Tell me then, when someone loves someone else, which of them becomes a friend? Does the one who loves become the friend of the one who is loved, or does the one who is loved become the friend of the one who loves, or is there no difference?”

Menexenus: “I think there is no difference,” he replied.

Socrates: “What do you mean?” said I. “Do they both become friends of each other if only one of them loves the other?”

Menexenus: “I think so, anyway,” said he.

Socrates: “What about this? Isn’t it possible for someone who loves not to be loved in return by the person he loves?”

Menexenus: “It is.”

212c

Socrates: “And what about this? Is it also possible for someone who loves to be hated? This is the sort of fate, I imagine, that lovers sometimes seem to suffer in dealing with their favourites. For although they love them as much as they possibly could, some believe that they are not loved in return, others that they are hated. Don’t you think this is true?”

Menexenus: “Yes,” he replied, “very true.”

Socrates: “Well,” said I, “in a case like this, doesn’t one person love, while another is loved?”

Menexenus: “Yes.”

Socrates: “So which of them is the friend of which? Is the one who loves a friend of the one who is loved, whether or not he is loved in return, or even if he is hated? Or is the one who is loved the friend of the one who loves? Or again, in a case like this, is neither of them a friend of the other unless they both love one

another?”

Menexenus: “Well, yes, that seems to be how matters stand.”

212d

Socrates: “So, this seems different to us now than it seemed previously. Yes, it seemed to us then that if one loved, both were friends. But now, unless both love, neither is a friend.”

Menexenus: “Maybe so.”

Socrates: “So nothing that does not love in return is a friend to the one who loves.”

Menexenus: “It seems not.”

Socrates: “So there are no horse-lovers unless the horses love them in return, nor quail-lovers either. Nor again are there dog-lovers, wine-lovers, exercise-lovers, nor any lovers of wisdom unless wisdom loves them in return. Or do they each love these things even though these are not friends, and was that poet a liar who said, ‘Happy is he who has children as friends, solid hoofed horses too, / Dogs that he hunts with, and a host when he travels abroad.’⁶

Menexenus: “I do not think so,” he replied.

Socrates: “Then you think he was speaking the truth.”

Menexenus: “Yes.”

212e

Socrates: “So, Menexenus, that which is loved is, it seems, a friend to the one who loves it, whether it loves him or indeed hates him. For instance, children recently born who have not yet begun to love, and can even demonstrate hatred, even though they hate their mother or father when they are punished by them, are nevertheless at that very moment, above all, the very dearest of friends to their parents.”

213a

Menexenus: “I think,” he said, “that is so.”

Socrates: “So, based on this argument, the one who is loved is a friend, but not the one who loves.”

Menexenus: “So it seems.”

Socrates: “And the one who is hated is an enemy, but not the one who hates.”

Menexenus: “Apparently.”

213b

Socrates: “In that case, lots of people are loved by their enemies and hated by their friends. And they are friends to their enemies and enemies to their friends, if the one who is loved is a friend, but not the one who loves. Yet it is most illogical, my dear friend – in fact, I think it is impossible – to be an enemy to a friend, or a friend to an enemy.”

Menexenus: “You seem to be speaking the truth, Socrates.”

Socrates: “Well then, if this is impossible, then that which loves would be a friend of that which is loved.”

Menexenus: “Apparently.”

Socrates: “Then again, that which hates would be an enemy of that which is hated.”

Menexenus: “It must be.”

213c

Socrates: “In that case, it will prove necessary to accept the same propositions we accepted earlier. A friend is often a friend of a non-friend, or even of an enemy, in cases where someone either loves that which does not love him, or even loves that which hates him. And an enemy is often an enemy of a non-enemy, or even of a friend, in cases where someone either hates that which does not hate him, or even hates that which loves him.”

Menexenus: “Quite likely,” said he.

Socrates: “Well now, what are we going to do,” said I, “if those who love are not to be friends, nor are those who are loved, nor are those who love and are also loved? Shall we say that there are still some further cases besides these where people become friends with one another?”

Menexenus: “No, by Zeus, Socrates, I cannot really see a way out of this difficulty.”

213d

Socrates: “Well,” said I, “perhaps we have not been conducting the enquiry in the proper manner at all, Menexenus.”

Lysis: “Well, that is how it seems to me, Socrates,” said Lysis, and as soon as he had said this he blushed. In fact, I think his words got out unintentionally because he was paying such close attention to what was being said. Indeed, it was evident that he had listened intently throughout.

213e

Socrates: Now, I wanted to give Menexenus a rest, and I was delighted by Lysis’ love of wisdom, so I changed my approach, directed my words to Lysis, and said, “Lysis, I think that what you are saying is true, that if we had been considering the matter properly we would never have wandered about like this. So let us not go in this direction any longer, for the enquiry looks difficult to me, rather like a hard road. No, I think we should go back to where we turned off and consider the matter based on what the poets say, for these people are like our fathers in wisdom, and our guides. They speak, of course, in no ordinary manner when they hold forth on the subject of friends and who they actually are. But they do maintain that god himself makes them friends by drawing them towards one another. And what they say I believe goes somewhat as follows: ‘God doth ever draw like unto like’,⁷ and he makes them

acquainted. Or have you not come across these verses?"

Lysis: "I have," he replied.

Socrates: "Haven't you also come across the writings of extremely wise people making the same point, that like is necessarily always friend to like? These, I presume, are the people who discourse and write about nature and the universe."

Lysis: "That is true," said he.

Socrates: "Well, then," said I, "are they right to say so?"

Lysis: "Perhaps," he replied.

214c

Socrates: "Perhaps it is half right," said I, "and perhaps it is entirely right. But we do not understand it, since it seems to us that the more a bad person gets closer to another bad person, and the more he associates with him, the more he becomes his enemy. For he acts unjustly, and it is presumably impossible for those who act unjustly, and those whom they treat unjustly, to be friends. Isn't this so?"

Lysis: "Yes," said he.

Socrates: "Accordingly, one half of their statement would not be true, if bad people are indeed like one another."

Lysis: "That is true."

214d

Socrates: "But I think they mean that the good people are like one another and they are friends, while the bad people, as the saying goes, are never alike. They are not even like themselves, since they are impulsive and unstable. And whatever is unlike and different from itself could hardly be like something else or be its friend. Is that what you think too?"

Lysis: "I do," he said.

Socrates: “Then it seems to me, my friend, that this is the riddle posed by those who say that like is friend to like: that the good person alone is friend to the good person alone, while the bad person never attains true friendship with either the good or the bad. Is that how it seems to you too?”

Socrates: He nodded.

214e

Socrates: “So, at this stage, we have the answer. We know who the friends are, for the argument is indicating that they are the people who are good.”

Lysis: “Well, it certainly seems so to me,” he said.

Socrates: “And to me,” I said. “And yet, there is something in it that is bothering me. Come on then, by Zeus, let us look at what I am suspicious about. Is the like person, insofar as he is like, a friend to his like, and is such a person useful to the other person? Or let me rather put it as follows. What benefit would anything that is like anything else be able to afford to its like, and what harm could it do that it could not also afford or do to itself? Or what could be done to it that it could not also do to itself? Indeed, how could such things as these be prized by one another if they offer no assistance to one another? Is there any way?”

Lysis: “There is not.”

Socrates: “And how could that which is not prized be a friend?”

Lysis: “There is no way it could.”

215a

Socrates: “In that case, a like person is not a friend to his like, while the good person – to the extent that he is good, not to the extent that he is like – would be a friend to a good person.”

Lysis: “Perhaps.”

Socrates: “What about this? Wouldn’t the good person, to the extent that he is good, be sufficient unto himself, to that extent?”

Lysis: “Yes.”

Socrates: “And the person who is sufficient, based upon his sufficiency, lacks nothing?”

Lysis: “Of course.”

Socrates: “And the person who does not lack anything would not prize anything either?”

Lysis: “No, he would not.”

Socrates: “And what he did not prize, he would not love either?”

Lysis: “Of course not.”

Socrates: “And he who does not love is not a friend?”

Lysis: “Apparently not.”
