Socrates: “So, can we say that good people will be friends to good people at all when they do not long for one another when they are apart, since they are sufficient unto themselves even whilst apart, nor do they have any need of each other when both are present? Is there any way that such people as these might set much value on one another?”

Lysis: “There is not,” said he.

215c

Socrates: “And yet, they would not be friends if they did not set much value on themselves.”

Lysis: “True.”

Socrates: “Just take note, Lysis, of how we are going wrong. Could it be that we are, in a sense, being totally misled?”

Lysis: “In what way?” he asked.

Socrates: “There once was a time when I heard someone say, and I am only recollecting it now, that like is utterly hostile to like, and so are good people to good people. What is more, he brought in Hesiod as his witness, by quoting him as follows: ‘And potter is angry with potter, / Bard with bard and beggar with beggar.’⁸

215d

Socrates: “And then he said that this necessarily applies in all other cases, that things that are most like one another are filled with envy, contention and hatred towards one another, while those that are most unlike are filled with friendship. Indeed, for the sake of the assistance that is offered, the poor man is necessarily a friend to the wealthy man, the weak man to the strong, and the sick person to the physician, and anyone who lacks knowledge prizes the one who knows, and loves him.

215e

Socrates: “He then went on, pressing his point in a loftier style, claiming that like was in no way friend to like, and that the situation was the exact opposite since the complete opposite is friend, most of all, to the complete opposite. For according to him that is the sort of thing that anything desires, rather than its like. So dry desires moist, cold desires hot, bitter desires sweet, sharp desires dull, empty desires fullness, and full desires emptiness, and the same argument applies to any other cases. For the opposite is food for its opposite, while the like derives no benefit from its like. And, indeed, my friend, as he said all this he also seemed quite clever because he spoke so well. But what do you both think of what he says?” I asked.

216a

Menexenus: “Well,” said Menexenus, “it sounds good when I hear it like that.”

Socrates: “So, should we declare that the opposite is friend, most of all, to its opposite?”

Menexenus: “Entirely so.”

216b

Socrates: “Well,” said I, “isn’t this absurd, Menexenus, and won’t those all-round wise men, the disputatious folk, attack us gleefully and ask us if enmity is the exact opposite of friendship? What reply shall we give them? Or isn’t it necessary for us to agree that they are speaking the truth?”

Menexenus: “It is necessary.”

Socrates: “In that case, they will ask is the enemy friend to the friend, or is the friend friend to the enemy?”

Menexenus: “Neither,” he replied.

Socrates: “But is the just friend to the unjust, or the sound-minded to the unrestrained, or the good to the bad?”

Menexenus: “No, I do not think that is the case.”

Socrates: “And yet,” said I, “if one thing is indeed friend to another, insofar as they are opposites, it is also necessary that these be friends.”

Menexenus: “It is necessary.”

Socrates: “So like is not friend to like, nor is opposite friend to opposite.”

Menexenus: “It seems not.”

216c

Socrates: “But let us also consider this. Perhaps the friend is evading us to an even greater extent because it is, in truth, none of these. Rather, that which is neither good nor bad becomes a friend of the good, on that very basis.”

Menexenus: “What do you mean?” he asked.

216d

Socrates: “Well, by Zeus,” said I, “I do not know. The fact is I am getting dizzy due to the perplexity involved in this argument, and there is every chance that ‘the beautiful is friend’, as the old proverb says. It seems somehow to be something soft, smooth and slippery, and that is probably why it slips away and eludes us, because that is the sort of thing it is. Indeed, I am saying that the good is beautiful. Don’t you think so too?”

Menexenus: “I do.”

216e

Socrates: “Then I say, prophetically, the neither good nor bad is a friend of the beautiful and the good. Listen now as I explain what my prophecy relates to. It seems to me as though there are three kinds of things: the good, the bad, and the neither good nor bad. What do you think?”

Menexenus: “I think so too,” he replied.

Socrates: “And the good is not friend to the good, nor the bad to the bad, nor the good to the bad. Our previous argument would not allow this either. So, if anything is actually friend to anything else, what is left, the neither good nor bad, is friend either of the good, or of whatever is like itself. For nothing would, I presume, become friend to the bad.”

Menexenus: “True.”

Socrates: “Nor, as we said just now, would like become friend to like. Is this so?”

Menexenus: “Yes.”

Socrates: “So that which is like the neither good nor bad, will not be a friend to whatever is like itself.”

Menexenus: “Apparently not.”

217a

Socrates: “So, it turns out that the neither good nor bad alone is friend to the good alone.”

Menexenus: “That seems necessary.”

Socrates: “Well then, boys,” said I, “is what we are now saying also leading us in the right direction? Well, consider the healthy body if you like. It has no need of medical treatment or the associated benefits, for it is healthy enough already. So no one who is healthy is friend to a physician, because he is healthy. Is there anyone?”

Menexenus: “There is no one.”

Socrates: “But the person who is sick is, I imagine, a friend because he is ill.”

Menexenus: “Of course.”

217b

Socrates: “Now, illness is bad, while medical treatment is beneficial and good.”

Menexenus: “Yes.”

Socrates: “But a body, insofar as it is a body, is presumably neither good nor bad.”

Menexenus: “Quite so.”

Socrates: “And yet a body is compelled by disease to embrace and to love medical treatment.”

Menexenus: “I think so.”

Socrates: “So the neither good nor bad becomes a friend of the good, because of the presence of bad.”

Menexenus: “So it seems.”

217c

Socrates: “This obviously happens before it, itself, becomes bad because of the bad that it has. And of course, once it has become

bad, it would no longer have any desire for the good, nor be its friend. For we said it is impossible for bad to be a friend of good.”

Menexenus: “Yes, impossible.”

Socrates: “Now, consider what I am saying. I say that some things are themselves like those that are present with them, while others are not. For instance, if someone decided to besmear anything at all with some colour, the smeared colour is presumably present to whatever it is smeared onto.”

Menexenus: “Certainly.”

217d

Socrates: “Well then, in respect of colour, is the smeared object at that stage of the same kind as what is on it?”

Menexenus: “I do not understand,” said he.

Socrates: “Consider this,” I said. “If someone were to smear your blonde hair with white lead, would it then be white or would it appear white?”

Menexenus: “It would appear white,” said he.

Socrates: “And whiteness would actually be present to it.”

Menexenus: “Yes.”

Socrates: “Nevertheless, it would be no more white than it was before, and despite the presence of whiteness it is not white, or black either.”

Menexenus: “True.”

217e

Socrates: “But of course, my friend, once old age brings on this same colour, your hair then becomes like in kind to what is present, white by the presence of white.”

Menexenus: “Of course.”

Socrates: “Well, this is what I am now asking you. Will something that has something else present to it be like in kind to that which is present, or does this depend upon the manner of its presence?”

Menexenus: “It is more the latter,” said he.

Socrates: “And so the neither good nor bad is, on occasion, not yet bad although bad is present, but there are times when it has already become like the bad.”

Menexenus: “Entirely so.”

218a

Socrates: “In that case, whenever it is not yet bad, even though bad is present, this particular presence makes it desire good, but once it makes it bad, it deprives it of that desire, and at the same time of the friendship of the good. For it is no longer the neither good nor bad, but bad, and we said bad is not friend to good.”

Menexenus: “It is not.”

Socrates: “Accordingly, we should also say that those who are wise already no longer engage in philosophy, whether they are gods or human beings. Then again, we should say that those who are in such an ignorant condition as to be bad people do not engage in philosophy, for no one who is bad and ignorant engages in philosophy. So we are left with those who possess this bad thing, ignorance, but are not yet rendered senseless by it, or ignorant, even though they still think that they know what they do not know. It follows then that those who are not yet either good or bad engage in philosophy, while those who are bad do not, nor do those who are good. For it was evident to us, in our earlier discussions, that opposite is not a friend of opposite, nor like of like. Don’t you remember?”

218b

Menexenus: “Entirely so,” they both replied.

218c

Socrates: “In that case, Lysis and Menexenus,” I said, “we have now discovered, comprehensively, what the friend is and what it is not. Indeed, we declare that whether it is based upon the soul, or based upon the body, or anything else, the neither good nor bad is a friend of the good, because of the presence of bad.”

Socrates: They both said that they agreed completely that this is the case. And what is more, I myself was utterly delighted, like a hunter pleased at having what I was hunting for within my grasp. And then, I don’t know from where, the strangest suspicion came over me that what we were accepting might not be true. And I was suddenly quite agitated, and I said, “Oh dear, Lysis and Menexenus, it looks as if our new found wealth is only a dream.”

218d

Menexenus: “But why?” asked Menexenus.

Socrates: “I am afraid,” said I, “we may have met up with some arguments concerning the friend that are quite like pretentious people.”

Menexenus: “How so?” he asked.

Socrates: “Let us consider it in this way,” said I. “Would someone who is a friend be a friend to something, or would he not?”

Menexenus: “He must be,” he replied.

Socrates: “Would he be a friend for the sake of nothing and because of nothing, or for the sake of something and because of something?”

Menexenus: “For the sake of something and because of something.”

Socrates: “Now, consider that ‘something’ for the sake of which a friend is friend to his friend. Is that a friend, or is it neither friend nor foe?”

218e

Menexenus: “I do not entirely follow,” he replied.

Socrates: “That is reasonable enough,” said I, “but here is something you will perhaps follow, and I think that I too will better understand what I am saying. We said just now that someone who is ill is a friend of the physician. Isn’t this so?”

Menexenus: “Yes.”

Socrates: “In that case, isn’t he a friend of the physician because of disease and for the sake of health?”

Menexenus: “Yes.”

Socrates: “And yet, sickness is a bad thing?”

Menexenus: “Of course.”

Socrates: “What about health?” said I. “Is it a good thing or a bad thing, or neither?”

Menexenus: “A good thing,” said he.

219a

Socrates: “So, we were saying, it seems, that the body, being neither good nor bad, is a friend of medical treatment because of disease, that is because of something bad even though medical treatment is something good. But it is for the sake of health that medical treatment has acquired this friendship, and health is a good thing. Is this so?”

Menexenus: “Yes.”

Socrates: “And is health a friend or not a friend?”

Menexenus: “A friend.”

Socrates: “And disease is a foe?”

Menexenus: “Very much so.”

Socrates: “So, the neither bad nor good is a friend of the good because of the bad, that is the foe, for the sake of the good, that is the friend.”

Menexenus: “Apparently.”

Socrates: “So the friend is a friend for the sake of the friend, because of the foe.”

Menexenus: “So it seems.”

219b

Socrates: “So be it,” said I. “Since we have arrived at this point, boys, we should pay close attention lest we be deceived. I am prepared to allow that a friend has become the friend of the friend, and the like becomes a friend of the like, something we say is impossible. Nevertheless, there is a point we should consider in case what we are now saying does deceive us. We are saying that medical treatment is a friend for the sake of health.”

Menexenus: “Yes.”

Socrates: “Isn’t health also a friend?”

Menexenus: “Entirely so.”

Socrates: “So, if it is a friend, it is a friend for the sake of something?”

Menexenus: “Yes.”

Socrates: “For the sake indeed of some friend, if it is actually to be in conformity with what was agreed previously.”

Menexenus: “Entirely so.”

219c

Socrates: “Won’t that in turn also be a friend, for the sake of a friend?”

Menexenus: “Yes.”

Socrates: “Well then, if we go on like this, mustn’t we necessarily either exhaust ourselves or arrive at some beginning which will no longer refer to another friend, but will have come to that which is first friend, for the sake of which, we say, all the others are friends.”

Menexenus: “Necessarily.”

Socrates: “Now, this is what I mean. All the others which we said are friends for the sake of that are indeed so many images of it, and should not deceive us, since that friend is the first, the one that is, in truth, friend.

219d

Socrates: “Let us think about it like this. Whenever someone sets great value on something, as a father for instance sometimes esteems his son above all his other acquisitions, does a man like this, for the sake of holding his son in high regard, also set great value upon something else? For example, if he was aware that his son had drunk hemlock, wouldn’t he set a great value on wine, if he thought it would save his son?”

Menexenus: “Of course,” he replied.

Socrates: “And also on the vessel that contained the wine?”

Menexenus: “Entirely so.”

219e

Socrates: “Well then, in that moment does he set no greater value on his own son than on a clay cup, or on three measures of wine than on his own son? Or is the situation as follows: all concern of this sort is directed not to whatever is provided for the sake of something else, but to that for the sake of which anything of this sort is provided. We often say that we set great value upon gold and silver. I am not denying this, but that does not make the statement any truer. But we do value, most of all, that for the sake of which gold, and everything that is provided, is provided, whatever it proves to be. Shall we put it like that?”

Menexenus: “Certainly.”

220b

Socrates: “Doesn’t the same argument apply to the friend? Indeed, when we speak of those who are friends to us, for the sake of some other friend, we are obviously saying it using the mere word ‘friend’. But the actual friend is likely to be the very one in which all these so-called friendships end up.”

Menexenus: “That is quite likely so,” he said.

Socrates: “In that case, the actual friend is not a friend for the sake of a friend.”

Menexenus: “True.”

Socrates: “Well, this idea that a friend is a friend for the sake of a friend is now dismissed. But is the good a friend?”

Menexenus: “I think so.”

220c

Socrates: “So, is it because of the bad that the good is loved, and do matters stand as follows? We have been speaking of three things just now: good, bad, and neither good nor bad. Suppose there were only two left, and the bad were to depart and be gone, and to interact with nothing, neither with body nor soul, nor with anything else that according to us is neither good nor bad just by itself. Would the good then be of no benefit to us? Would it rather have become useless? For if nothing were to harm us any more, we would not be in need of any assistance at all, and accordingly it would become evident that we cherish and love the good because of the bad, the good being a sort of remedy for the bad, and the bad being a sort of disease, and in the absence of disease there is no need for a remedy. So, is the good like this by nature, and is it loved by us because of the bad, we who are midway between the bad and the good? And is it itself of no benefit, for its own sake?”

Menexenus: “That seems to be how matters stand,” he replied.

220e

Socrates: “So that friend to us, the one in which all the others end up – the others that according to us are friends for the sake of another friend – that friend does not resemble these at all. For these are called ‘friends for the sake of a friend’, while the actual friend turns out to be by nature the complete opposite of this, for it proved to be our friend for the sake of a foe, but if the foe departs, this friend it seems is no longer our friend.”

Menexenus: “It seems not,” said he, “based on what is now being said at any rate.”

221a

Socrates: “Well,” said I, “by Zeus, if bad ceases to exist, will there still be hunger or thirst or anything else of that sort? Or will there always be hunger as long as there are humans and other living beings, but will it not be harmful? And thirst too, and the other desires, will these exist but not be bad, since bad has ceased to exist? Or is it ridiculous to ask what will be, or not be, in that situation, for who knows? But in any case, we do know that as matters now stand it is possible to be hungry and be harmed, and it is also possible to be benefited. Is this so?”

Menexenus: “Entirely so.”

221b

Socrates: “Therefore, when someone experiences thirst, or desires anything else of that sort, it is possible sometimes to desire them in a beneficial manner, sometimes in a harmful manner, and sometimes neither?”

Menexenus: “Emphatically so.”

Socrates: “Well, if the bad things cease to exist, is there any reason why it is appropriate for things that are not bad to cease to exist along with them?”

Menexenus: “No reason.”

Socrates: “So desires that are neither good nor bad will exist, even if bad things cease to exist.”

Menexenus: “So it appears.”

Socrates: “Now, is it possible, whilst experiencing desire and passion, not to love whatever the desire and passion is for?”

Menexenus: “I do not think so.”

221c

Socrates: “In that case, even when bad things cease to exist, there will still be some friends.”

Menexenus: “Yes.”

Socrates: “This would not be the case if bad was the cause of something being a friend, since one thing could not be friend to another if this ceased to exist. For once a cause ceases to exist, it is presumably impossible that whatever this cause caused, should still exist.”

Menexenus: “Correct.”

Socrates: “Now, haven’t we agreed that the friend loves something, and does so because of something? And we thought at the time that whatever is neither bad nor good loves the good because of the bad?”

Menexenus: “True.”

Socrates: “But now, it seems, some other cause of loving and being loved is making an appearance.”

Menexenus: “So it seems.”

221d

Socrates: “Well then, is it the case, as we were saying just now, that desire is the cause of friendship, and that which desires is friend to whatever it desires at whatever moment it desires it? And was what we were saying earlier, about what a friend is, just idle chatter, like a tedious, long drawn-out poem?”

Menexenus: “Quite likely,” said he.

Socrates: “And yet,” said I, “that which desires, desires what it lacks. Is this so?”

Menexenus: “Yes.”

Socrates: “So that which is friend, is friend to that which it lacks?”

Menexenus: “I think so.”

Socrates: “And that from which something is taken away, becomes lacking.”

Menexenus: “Of course.”

221e

Socrates: “It seems then that the passion, the friendship and the desire is apparently for that which is kindred to us, Menexenus and Lysis.”

Socrates: They both concurred. “So, if the two of you are friends to one another, you are somehow, by nature, kindred to one another.”

Menexenus: “Exactly,” they said.

222a

Socrates: “And so,” said I, “if one person desires another, my boys, or experiences passion, he would never have felt desire or passion or love unless he somehow happened to be kindred to the object of his passion, on the basis of soul or on the basis of some characteristic, or manners, or form of the soul.”

Menexenus: “Certainly,” said Menexenus, but Lysis was silent.

Socrates: “So there it is,” said I. “It has become evident to us that we necessarily love what is kindred by nature.”

Menexenus: “So it seems,” he said.

Socrates: “Then it is necessary that the genuine and unpretentious lover be loved by his favourite.”

222b

Socrates: To this Lysis and Menexenus gave a somewhat reluctant nod of assent, while Hippothales was so pleased that he turned all sorts of colours. And I, wishing to scrutinise the argument, said, “If what is kindred differs from what is like, we would in my opinion, Lysis and Menexenus, be saying something worthwhile about what a friend is. But if what is kindred and what is like happen to be the same, it is not easy to discard the previous argument, that like is useless to like based upon their likeness, and to accept that what is useless is a friend. Well, since the argument is making us drunk, would you like to come to an agreement and declare that what is kindred is something different from what is like?”

Menexenus: “Certainly.”

222c

Socrates: “And shall we also propose that the good is kindred to everyone while the bad is alien to them all? Or is the bad kindred to the bad, and the good to the good, and the neither good nor bad to the neither good nor bad?”

222d

Socrates: They both said that in their opinion, each is kindred to each, in this way. “Well then, boys,” said I, “we have once more fallen back into those arguments about friendship that we discarded initially. For the unjust will be no less a friend to the unjust, and the bad no less a friend to the bad, than the good will be to the good.”

Menexenus: “So it seems,” he said.

Socrates: “What about this? If we should declare that the good and the kindred are the same, is the good a friend to nothing else but the good alone?”

Menexenus: “Certainly.”

Socrates: “And yet we thought that we ourselves had refuted this argument. Don’t you remember?”

Menexenus: “We remember.”

222e

Socrates: “What use might we still make of this argument? Or is it obvious that there is none? So I should, like the wise men in the law courts, go back over everything that has been said. Indeed, if neither the loved nor the loving, nor those who are like nor those who are unlike, nor the good, nor the kindred, nor any others we have gone through – there were so many that I no longer remember them – well, if none of these is a friend, I no longer have anything to say.”

223a

Socrates: Having said all this, I was thinking of engaging one of the older age group, when the tutors of Menexenus and Lysis came in, like spirits of some sort, bringing the boys’ brothers. They called them, and ordered them to come home since it was already quite late. Now, along with the group around us, we tried initially to drive them away, but when they paid no heed to us, kept on speaking angrily in broken Greek, and calling the boys just as before, we decided they had had too much to drink at the Hermaea festival and might be difficult to deal with, so we gave in to them and broke up our gathering.

223b

Socrates: However, while they were departing, I said, “Now, Lysis and Menexenus, we really have become figures of fun, me an old man, and the two of you. For these people here will say, as they are leaving, that we think we are friends of one another – indeed, I also count myself as one of you – but we have not yet been able to discover what the friend is.”

NOTES

1. The Lyceum was a temple dedicated to Apollo Lyceus, which later became a site for public exercise. It is perhaps best known as the location of Aristotle's Peripatetic school, founded in 334.
2. Ctesippus appears as a character in Plato's *Euthydemus*. He is also mentioned in Plato's *Phaedo* as having been present on the day Socrates was executed.
3. These, together with the Olympic Games, comprised the Panhellenic Games. These were athletic competitions that were held among participants from throughout the Greek world in alternating years of a four-year cycle.
4. Menexenus is mentioned in Plato's *Phaedo* as having been present on the day Socrates was executed. There is also a dialogue of that name attributed to Plato.
5. The reference here is to Darius, King of the Achaemenid Empire of Persia.
6. Solon, Fragment 23, Edmonds.
7. *Odyssey* xvii.218.
8. Hesiod, *Works and Days* 25-26.

persons in the dialogue:

SOCRATES of Alopecce, son of Sophroniscus

MENEXENUS of Athens, son of Demophon

scene: unspecified

234a

Socrates: Menexenus, are you coming from the Agora, or from where?

Menexenus: Yes, from the Agora, Socrates, from the Council Chamber in fact.

Socrates: Why exactly were you at the Council Chamber? Or is it obvious that you think you have completed your philosophic education and intend to turn to more important subjects because you believe that you are now up to the task? My wonderful fellow, are you, at your age, turning your hand to exercising authority over us, your elders, so that your house may keep up its tradition of looking after us?

234b

Menexenus: Socrates, if you allow me to assume public office and advise me to do so, I'll be eager, but not otherwise. On this occasion, I went to the Council Chamber because I found out that the Council was about to select someone to speak over the war dead. You know, of course, that they are about to arrange their funeral rites.

Socrates: Certainly, but whom did they select?

Menexenus: No one, they put it off until tomorrow. However, I think that Archinus or Dion will be selected.

234c

Socrates: And, indeed, Menexenus, to die in battle seems to be a noble fate in all sorts of ways. For even if someone dies in poverty, he gets a noble and magnificent burial, and he wins praise although he was an ordinary fellow, praise from wise

men who do not speak at random but in speeches prepared long before. These people utter their praises so well, speaking of qualities each individual possesses and does not possess, using such splendid verbal embellishments that they enchant our souls as they praise the city in all sorts of ways, the war dead too, and our ancestors who went before us, and, indeed, ourselves who are still alive. And so, Menexenus, I myself, when praised by them, am ennobled by them, and every time I listen, spellbound, I believe there and then that I have become greater, nobler and more exalted.

235b

Socrates: And it often happens that some foreigners are regularly present along with me as part of the audience, and suddenly I become more exalted in their eyes. And, indeed, these people seem to be affected in the same way, both in relation to myself, and to the city in general which they believe to be more wonderful than they previously thought it to be, because they are won over by the speaker. This feeling of exaltation remains with me for three days or more, so deeply does the stream of speech and sound from the speaker sink in through my ears. Only with difficulty, in four or five days, do I remember myself and realise that I am here on earth. Until then I just imagine that I am dwelling on the Isles of the Blest, so accomplished are these rhetoricians of ours.

235d

Menexenus: Socrates, you are always mocking the rhetoricians. However, on this occasion, I think that whoever is selected won't be well prepared since the selection has been left very late, and so the speaker will probably be compelled, more or less, to improvise their speech.

Socrates: How could that be so, my good friend? Each of these fellows has speeches already prepared, and, what's more, it is not difficult to improvise such speeches either. Indeed, if

someone had to speak well of Athenians before an audience of Peloponnesians, or of Peloponnesians before Athenians, a good rhetorician would be required who could be persuasive and well respected. But when performing before the very people he is praising, it is no great achievement to seem to speak well.

Menexenus: You think not, Socrates?

Socrates: Indeed not, by Zeus.

Menexenus: Do you think that you yourself could deliver the speech if required, and if the Council selected you?

235e

Socrates: Well, Menexenus, it would be no surprise if I too were able to deliver the speech. I happen to have a teacher of rhetoric who is far from ordinary. In fact, she has produced many a good rhetorician, including one, Pericles, the son of Xanthippus, who surpasses all other Greeks.

Menexenus: Who is she? Or are you obviously referring to Aspasia?

236a

Socrates: Yes I am, and to Connus, the son of Metrobius. For these are my two teachers, he of music, she of rhetoric. It is hardly surprising then that a man, trained in this way, is an accomplished speaker. But even a person who had been less well educated than me, having been taught music by Lamprus or rhetoric by Antiphon of Rhamnous,¹ even he could be well respected when praising Athenians before an audience of Athenians.

Menexenus: And what would you have to say if you were required to speak?

236b

Socrates: Although I probably have nothing of my own to say, I listened yesterday to Aspasia rehearsing a funeral oration about these very people. She had heard what you just reported, that

the Athenians are about to select a speaker. So she went through a speech for me as it should be delivered, partly improvised, partly prepared in advance by cobbling together various parts left over from when she, as I believe, composed the funeral oration that Pericles delivered.

Menexenus: Can you actually remember what Aspasia said?

Socrates: Yes, unless I am mistaken. I learned the speech from her at any rate, and I was lucky to escape being beaten when my memory failed me.

236c

Menexenus: So why don't you run through it?

Socrates: In case my teacher gets angry with me for making her speech public.

Menexenus: No fear of that, Socrates, but speak on and you will please me greatly whether you choose to recite Aspasia's speech or someone else's. Just speak.

Socrates: But perhaps you will laugh at me if you think I am still playing games in my old age.

Menexenus: Not at all, Socrates, just speak anyway.

236d

Socrates: But, of course, you deserve to be gratified, and even if you were to call upon me to undress and dance, I would gratify you since we are alone. So listen, for she spoke, I believe, initially of the dead themselves in the following way.

Socrates: "By our actions, these men have received all that they themselves deserve, possessed of which they proceed on that fated procession, accompanied in community by the city, and in private by their families. But the law also ordains that one remaining honour be bestowed upon them in words, and that's what is now required. For, by a well-delivered speech, remembrance and honour are assured to those who perform

noble deeds, from all who hear of them. What is needed then is a speech that will give sufficient praise to the dead, while gently exhorting the living by calling upon their offspring and brothers to imitate the excellence of such people, and by consoling their mothers and fathers or any of their remaining ancestors who are still alive.

237a

Socrates: “So what sort of speech might portray this for us? Where might we rightly begin our praise of such good men who, whilst living, gladdened their compatriots by their excellence, and, in death, purchased the salvation of the living? I believe we should praise these men in accord with nature and the manner in which they became good. They became good because of their birth from good parents. So we should first praise their noble origins, and then their upbringing and education. After that we shall display the catalogue of their deeds and show how noble these were, and how worthy of their lineage. Their ancestry was primarily responsible for their noble birth. Their descent was not from outsiders, nor did their lineage turn such descendants into mere settlers in this land, mere arrivals from elsewhere. They were, rather, sprung from the very land itself, inhabiting their true fatherland, living there, being reared not by a stepmother like other peoples, but by their own mother; this land in which they dwelt and under which they now lie in death in familiar regions of the land that bore them, nurtured them, and has now received them back again. But it is only right to begin by honouring the mother herself, for in this way it follows that we honour the noble birth of these men at the same time.

237c

Socrates: “Our land is worthy of praise not just by ourselves but by all peoples for all sorts of reasons, but first and foremost because it happens to be beloved of the gods. Proof of our assertion lies in the disputation of the gods about this land, and the associated judgement.² And surely it is only right that all of

us humans should praise the land that the gods praise? The second basis for deserved praise of our land would be that in an age in which the entire earth was productive and brought forth a vast variety of creatures, wild and tame, our land proved to be undefiled, producing no wild animals, but of all creatures it chose to give birth to the human being, who exceeds all others in understanding and who alone believes in justice and the gods. Strong evidence for this assertion lies in the fact that the land has given birth to the ancestors of these people, and to ours too. For anything that gives birth possesses the nutriment needed by its offspring, and by this fact we can see whether a woman is the true birth mother or just a foster mother who lacks the fount of nutriment for the offspring. And our land, our mother, provides evidence enough that she brought forth us humans, for at the time she alone was first to bear human nutriment, food consisting of wheat and barley by which the human race is best and most excellently nourished, proving that she really did bring forth this living being. And it is best to accept evidence of this sort as applicable more to the land than to woman, for in conceiving and giving birth, earth does not imitate woman; no, woman imitates earth. But she did not begrudge this food; rather, she also apportioned it to others. After this she brought forth the olive for her children to help them in their travails. And having nurtured and reared them to adulthood, she brought in gods as their rulers and teachers, whose names we already know, so we should leave these aside for now. The gods equipped us for life by educating us first in skills for use in our daily lives, and also for the defence of our country by teaching us the acquisition and use of arms.

238c

Socrates: “Having been born and educated in this way, the ancestors of these people lived under a civic arrangement, which they framed for themselves and merits a brief mention now. For a civic arrangement is a nurturer of humanity, a good

one of good people, a bad one of bad people. So it is necessary to show that our ancestors were nurtured under a good civic arrangement because of which they were good people, as are the present generation, including the fallen who lie here before us. For this civic arrangement was then, and is now, the rule of the best, under which we live as citizens today, and for the most part always have done since that past era. One person calls this democracy, another names it as they please, but it is, in truth, aristocracy with popular approval. For although we always have kings, these are sometimes hereditary and sometimes selected. Yet, for the most part, the people hold power in the city, and they devolve power and positions of authority to those deemed best at any time, and no one is excluded from power by weakness or poverty or the obscurity of their ancestry, nor are they preferred for the opposite reasons as happens in other cities. There is but one criterion, that whoever is regarded as wise and good exercises power and authority.

238e

Socrates: “Equality of birth is responsible for our civic arrangement. Other cities are constituted from people of all sorts who are not equal, so that their civic arrangements, which are tyrannies and oligarchies, are also unequal. Their inhabitants regard one another in some cases as slaves, in other cases as masters, while we and our kindred, all brothers born of the same mother, do not expect to be slaves or masters of one another. Our natural equality of birth compels us to seek equality under the law, lawfully, and to yield to one another in nothing except a reputation for excellence and wisdom.

239a

Socrates: “As a consequence, the fathers of these people, our fathers too, and the people themselves, all of noble birth, having been reared in total freedom have displayed many noble deeds for all to see, both in private and in public, in the belief that they should fight for freedom with Greeks on behalf of

Greeks, and with non-Greeks on behalf of all Greeks. The story of how they defended their own country when Eumolpus and the Amazons and others before that waged war against it, and how they defended the Argives against the Cadmeans, and the Heraclids against the Argives,³ deserves more time to recount. But their excellence has already been well hymned in verse by the poets and proclaimed to all. So, if we were to attempt to do justice to these same exploits in plain prose, we would probably appear second-rate. That's why I think we should leave them aside, since they have received the praise they deserve. But there are other deeds which still lie forgotten, for which no poet has yet received a reputation worthy of these worthy themes. These, I believe, should be mentioned, praising them and drawing out subjects for others to set down in odes and poetry in general, in a manner worthy of those who performed the deeds.

239d

Socrates: “The first of these occurred when the Persians were in control of Asia and were in the process of enslaving Europe. The children of this land – our parents – withstood them, and it is right and necessary to mention them first and praise their excellence. Now, if anyone is to praise this well, they need to look at it having gone back in time, mentally, to that era when all Asia was already enslaved by the third king. The first of these kings was Cyrus who liberated the Persians, his fellow countrymen, by his own determination. At the same time, he also enslaved the despotic Medes and ruled over the rest of Asia as far as Egypt. His son ruled Egypt, and Libya too, as far as he was able to advance. The third king, Darius, with his land forces, set their boundary as far away as Scythia, and dominated the seas and the islands with his navy so that no one even thought of opposing him. All peoples were mentally enslaved because the Persian Empire had enslaved so many great military nations.

240a

Socrates: “Darius made an accusation against ourselves and the Eritreans. On the pretext that we had plotted against Sardis, he sent 500,000 men in transport ships and battleships along with 300 ships of war. Datis was in command, and Darius told him to return, bringing the Eritreans and Athenians in captivity if he wished to keep his own head. He sailed to Eritrea against men who were among the most famous of the Greeks in warfare at the time, and whose numbers were not small. These he overpowered in three days, and he then conducted a search of their entire territory so that no one would escape him. This is how he did it. Having arrived at the borders of Eretria, his soldiers positioned themselves at intervals from sea to sea. They joined hands and went through the entire region so that they would be able to say to their king that no one could have escaped them. With the same intention, they set sail from Eritrea to Marathon, assuming it would be easy for them to subject the Athenians to the same fate as the Eritreans and place them under the yoke of captivity. Although they had implemented their plans, and their attempted enslavement was underway, no fellow Greeks came to the aid of the Eritreans and the Athenians except for the Spartans, who arrived the day after the battle. All the others were terrified, and they kept quiet, prizing their temporary safety. By placing yourself in their situation, you may realise the sort of men these were in terms of excellence, who took on the might of the non-Greeks at Marathon, chastened the pride of all Asia, and were the very first people to erect a victory trophy over the non-Greeks, thus becoming leaders who taught everyone else that the might of the Persians was not invincible, but that numbers and wealth always yield to excellence. So, I declare that these men were not only the fathers of our physical bodies, but also of freedom for ourselves and for all those who dwell on this continent. Indeed, once they beheld this achievement, the Greeks, as pupils of the

soldiers of Marathon, were emboldened to run the risks involved in the subsequent battles for the sake of our security.

241a

Socrates: “Now, although we must in our speech grant primacy to these people, second place should go to those who were victorious in the naval battles around Salamis and at Artemisium.⁴ There is, of course, much to recount about these men too, and the sorts of onslaughts they endured by land and by sea, and how they defended themselves against these. But I shall also mention what I regard as their supreme achievement, that they completed the next task after the accomplishments at Marathon. For the victors at Marathon only demonstrated to their fellow Greeks that a few of them could defeat many non-Greeks in a land battle. But in a naval battle, the doubt remained, and the Persians were reputed to be invincible by sea because of their numbers, their wealth, their skill and their strength. So of all the achievements of the men who fought the naval battles at the time, what deserves our praise is the fact that they did away with this remaining fear among the Greeks by stopping them from being afraid of large numbers of ships and men. It follows, then, that the rest of the Greeks were educated by the soldiers who fought at Marathon and the sailors who fought at Salamis. They learned the discipline of not fearing the non-Greeks either by land, as taught by one group, or by sea, as taught by the other. But I maintain that, both in rank and in excellence, the action at Plateia for the security of Greece came third, and here at last was a joint endeavour of the Spartans and the Athenians. All these men warded off the greatest and most grievous danger, and we are praising them now for this display of excellence, as will our successors in time to come.

241d

Socrates: “But afterwards, many Greek cities were still aligned with the non-Greeks, and it was reported that the King himself

was planning to make another attempt against the Greeks. It is only right, then, for us to mention those who brought the endeavours of their predecessors for our security to a conclusion by clearing out all the non-Greeks and driving them from our waters. These were the sailors who fought at Eurymedon and the soldiers who waged war against Cyprus, and those who sailed to Egypt and lots of other places. These are people we should mention with gratitude because they forced the King, out of fear, to pay attention to his own security rather than plotting the annihilation of the Greeks.

242a

Socrates: “Now, this war against the non-Greeks was endured to the very end by our entire city, on our own behalf, and on behalf of all Greek speaking peoples. But when peace had come and our city had won respect, we suffered the fate that tends to befall those who are successful. We were the victims first of a general rivalry, and then of jealousy, which drew this city, against its will, into a war against our fellow Greeks. After this, once the war was underway, whilst fighting for the freedom of the Boeotians, we met with the Spartans at Tanagra, and although the battle was indecisive, the subsequent action did decide the matter, for the Spartans withdrew and departed, deserting the very people they were assisting, while on the third day our army won a victory at Oenophyta and justly brought back the people who had been unjustly expelled. These warriors, then, were the first who, after the Persian war, assisted their fellow Greeks against fellow Greeks in the cause of freedom, proved themselves to be good men who liberated those whom they helped, and having been honoured by the city, were the first to be buried here in this tomb.

242c

Socrates: “But subsequent to these events there was an extensive war,⁵ and all the Greeks marched against us and ravaged our territory, treating this city as it ill deserved. Yet

when our troops had defeated them at sea and captured the Spartan leaders at Sphacteria, we could have slaughtered them, but we let them go, sent them back, and made peace, taking the view that we should pursue a war against our fellow Greeks only to the point of victory, and should not do violence to the common fellowship of the Greek peoples because of resentment particular to our own city. However, against non-Greeks, war should, we thought, be pursued to the point of destruction. These men deserve our praise, men who fought in the war and who now lie here, because they proved that if anyone argues that in the previous war – the one against the non-Greeks – any other peoples were superior to the Athenians, that argument is entirely untrue. These men here have proved this by prevailing militarily in the strife amongst the Greeks by getting the better of the leaders of the other Greeks, and by defeating, on their own, the very people alongside whom they had once defeated the non-Greeks.

242e

Socrates: “After the peace, a third war broke out,⁶ terrible and unexpected, in which many good men died, men who lie here. Many fell during the Sicilian campaign whilst fighting for the freedom of the Leontinians. Faithful to their oaths, they sailed to those regions, but because of the length of the journey and because our city was in difficulty and unable to support them, they met with misfortune and abandoned the campaign. But their enemies who fought against them had more praise for the sound-mindedness and excellence of these men than other people have for their own friends. Many others fell in the naval battles at the Hellespont, where they captured the entire enemy fleet in a single day and won numerous other victories.

243a

Socrates: “I said that this war was terrible and unexpected. What I meant was that the other Greek cities became so determined to defeat us that they dared to make

representations to the hated king, whom they had expelled during their alliance with ourselves. They asked him, on their own account, to come back again, non-Greeks leagued against Greeks, thus gathering the united forces of the Greeks and non-Greeks against our city. Here it was that the strength and excellence of our city shone forth. For they believed that we were already worn down by war, and although our navy was under threat in Mytilene, we sent sixty ships to the rescue. Our citizens manned these themselves and proved themselves beyond dispute to be the very best of men by defeating their enemies and liberating their fellows. But they met with undeserved misfortune when their bodies were not taken from the water to lie before us here.⁷ That's why it is necessary to remember these men and to praise them always, for it was because of their excellence that we were victorious, not alone in that sea battle but also in the rest of the war. Indeed, it was because of them that our city earned the reputation for never being worn down by war, not even if the whole world assails us. And the reputation is a true one, for we were not subjugated by other people but by our own dissensions. We were undefeated by the others, and remain so to this day. We ourselves were the ones who defeated ourselves, we were indeed responsible for our own defeat.

243e

Socrates: "After all this, when calm had returned and we were at peace with the others, a civil war was fought,⁸ but in such a way that if strife is indeed the fate of humanity, no one would pray that his own city might suffer this disease in any other way. So readily and familiarly did the citizens of the Piraeus and the mother city consort with one another and, contrary to expectations, with the other Greeks too, so naturally did they settle the war against the forces at Eleusis, that the only explanation for all this is their genuine kinship, producing firm friendship and unity in practice, not in mere words. What's

needed then is to remember those who died at one another's hands in this war, and to reconcile them through prayers and sacrifices such as these, praying to those who now have power over them, since we too have been reconciled. For it was not through evil that we set upon one another, nor through enmity, but through misfortune. To this do we, the living, bear witness ourselves. For we, being of the same stock as those men, are forgiving towards one another for what we did and what we suffered.

244b

Socrates: “After this there was complete peace among us, the city remained quiet, we were forgiving towards the non-Greeks, because although they had suffered badly at our hands, they had nevertheless put up a decent defence. But we were angry with our fellow Greeks, remembering how, despite the good we had done them, they showed their gratitude by aligning with the non-Greeks and depriving us of the very ships that had once saved even themselves, and by dismantling our walls, the very walls we sacrificed to save their walls from falling.⁹ Our city came to the view that it would no longer defend other Greek cities when threatened with enslavement, either by Greeks or by non-Greeks, and we stood by that decision. Now, such being our thinking, the Spartans decided that since we, the protectors of freedom, had fallen, now was their opportunity to enslave the others, and they set about doing just that.

244d

Socrates: “But why prolong this? For the next events did not happen to people of old in times long past. Indeed, we ourselves know that the foremost peoples among the Greeks – the Boeotians, Argives and Corinthians – being terror-struck, came to need our city, and miraculously, so too did the King, who was so worried that he turned for salvation to no other city than our city, which he had been so eager to destroy. What's more, if anyone were to level a justifiable accusation against this city,

they could rightly accuse it only of being excessively compassionate and of favouring the weak. And, indeed, it was unable to hold out and stand by its decision not to assist any of those Greeks who had wronged it, if any of them were being enslaved. Rather, it relented, came to their aid, and by assisting them it freed the Greeks from slavery so that they were free until such time as they enslaved one another once more. But it dared not render assistance to the King for fear of bringing shame upon the victory trophies raised at Marathon, Salamis and Plateia. Rather, by allowing only exiles and volunteers to provide assistance, it undoubtedly saved him. Having refortified its walls and rebuilt its navy, it took on the struggle since it was necessary to do so, and fought for the Parians against the Spartans.

245b

Socrates: “But the King was afraid of our city because he had seen the Spartans give up on naval warfare against us. So, because he wanted to withdraw, he demanded, if he was to fight alongside us and the other allies, that we surrender the mainland Greeks whom the Spartans had previously given over to him. He assumed we would be unwilling to grant his request, thus giving him an excuse to withdraw from the alliance. In the case of the others he was mistaken, for they were willing to hand them over to him, and so the Corinthians, Argives, Boeotians, and the other allies swore a covenant to hand over the mainland Greeks if the King would give them money. But we alone dared not hand them over or swear the oath. This shows the nobility of our city and how free, resolute and sound it is, with a natural hatred of the non-Greeks because we are purely Greek, devoid of non-Greek admixture. Indeed, there dwell among us none of the offspring of Pelops, nor of Cadmus or Aegyptus, nor of Danaus, nor of the various other peoples who are non-Greeks by nature but Greeks by convention. But we live as actual Greeks, not half-non-Greeks, and so our city is imbued

with a pure hatred of this alien nature. Nevertheless, we stood alone once more because of our reluctance to perform a disgraceful and unholy deed by handing Greeks over to non-Greeks. Now, despite finding ourselves in the same predicament as led to our subjugation previously, we settled the conflict, with God's help, on better terms than we did before. For we concluded the war retaining our walls, our ships, and our own colonies, so glad too were our enemies to be quit of the conflict. Yet we lost good men in that war, as they dealt with the difficult terrain at Corinth and with treachery at Lechaenum. Good too were the men who freed the King and drove the Spartans from our waters. I am reminding you of them and it is fitting that you too should praise and glorify such men as these.

246a

Socrates: “These, indeed, were the achievements of those men who now lie here, and of the others who died for this city. Many noble deeds have been described, and many more deeds, even more noble than these, remain. Indeed, many days and nights would prove insufficient for anyone who set about recounting all of them. So what is needed is to remember these men, and every one of us should exhort their descendants, as if on the battlefield, never to withdraw from the struggle by yielding to cowardice. And so, O sons of good men, I myself am calling upon you now and hereafter, and wherever I encounter you I shall remind and exhort you to set your hearts upon being the very best of men. At the moment it is only right that I tell you what your fathers, when they were about to face danger, directed us to proclaim to those who are always left behind, in case anything was to happen to them. I will tell you what I heard from the men themselves, and also, based upon what they said then, the sort of things they might like to say to you now if they were able to do so. But you must imagine that you are hearing whatever I proclaim directly from the men themselves. What they said was this: ^{246d} ““Sons, the present situation itself makes

it plain that you were born of good fathers. We who had the opportunity to live without honour, choose rather to die an honourable death before we would draw criticism down upon yourselves and your successors, and bring shame upon our own fathers and our entire ancestry. Indeed, we believe that life is not worth living for anyone who brings shame upon his own, and that such a person is a friend neither of the gods nor of humanity, neither during his life on earth nor beneath the earth in death. So you should remember our words, and if you practise anything else, practise it along with excellence, knowing that in the absence of this all possessions and activities are shameful and base. For neither does wealth bring distinction to someone who has acquired it with cowardice, for such a person is wealthy because of something else and not because of himself, nor does beauty and strength of body appear fitting when these dwell within a base coward; they are not fitting, they make their possessor conspicuous, and they highlight his cowardice. And any knowledge that is sundered from justice and from excellence in general proves to be mere chicanery and not wisdom.

246e

Socrates: “For all these reasons you should strive in every way, first and last, by all means, to be possessed of the utmost zeal, particularly to exceed ourselves and our predecessors in glory. But mark my words, if you fall short and we triumph over you in excellence, our victory will be a source of shame, but if we lose out to you, our defeat will bring happiness. And we would best be defeated and you would triumph if you were prepared not to trade upon the reputation of your ancestors, nor to waste it, realising that for a man who thinks he amounts to something, there is nothing more disgraceful than to secure honour for himself, not in his own right, but through the reputation of his ancestors. For honours belonging to ancestors are a noble and exalted treasure to the descendants. But to use up a treasury of

wealth and honours, and bequeath none to your children because of a deficiency of wealth and reputation of your own, is base and unmanly. And if you practise these precepts, you will join us as friends meeting friends whenever fate and destiny carry you here. But if you heed them not and play the coward, no one here will receive you graciously. So let these words be spoken to our sons.

247c

Socrates: “Those of us who have fathers and mothers still living should encourage them to bear the misfortune, should it befall them, as easily as possible, and we should not join in their lamentations, for they will need no additional cause for sorrow. The present misfortune will indeed be enough to provide that. We should rather, with soothing and healing words, remind them that in matters of the greatest importance, their prayers have already been heard by the gods. For they did not pray for their sons to become immortal, but for them to become good and renowned, and they have already succeeded in these great achievements. For a mortal man, everything in his own life does not easily turn out according to plan. And if they bear the misfortunes courageously, they shall be regarded, in truth, as fathers of brave sons, who are just as brave themselves. But if they yield to unmanliness, they shall create the suspicion either that they are not our fathers, or that the people who praise us have been deceived. Neither option is acceptable. They should, rather, praise us most of all with their deeds, thus proving themselves, plainly and truly, to be the fathers of men who are indeed men. For the old saying ‘nothing in excess’ seems to be a good one and well worth quoting. That man is best equipped for life who relies upon himself for everything, or almost everything; that leads to happiness, and does not depend upon other people being compelled, as a consequence, to fare either well or badly in his own affairs as others’ misfortunes fluctuate. This is the sound-minded man, the courageous man, the wise

man. Such a man, as wealth and children come and go, will best abide by this maxim, and will, because of his self-reliance, be seen neither rejoicing nor grieving to excess.

248b

Socrates: ““These are the sort of people we ask our own kinfolk to be, such is our wish and our declaration, and we are now presenting ourselves as such, devoid of tribulation or trepidation, even if we should meet with death in the present struggle. So we implore our fathers and mothers to live out their lives with this same attitude, knowing that they will not really please us by singing dirges and lamenting over us. Rather, if the dead have any awareness of the living, they would greatly displease us by behaving in this way, by debasing themselves and bearing their sorrows so heavily. But by bearing them lightly and in due measure, they would greatly delight us. For our lives will, by then, have come to an end in the most noble death that humans can meet with, so it is more important to glorify these than to lament them. But by caring for our wives and children, and nurturing them, thus turning their attention to this world, they might best forget their misfortune and live a life that is better, more upright, and more pleasing to ourselves. That is a sufficient message to relay from us to our kindred, and we could exhort the city to look after our fathers and sons for us, educating the one systematically, while supporting the others in old age as they deserve. But we already know that the city will care adequately for these people, even without our exhortation.’

248e

Socrates: “These are the words, O children and parents of the fallen, which they directed us to relay and which I am doing my eager best to relay. And I myself, on their behalf, ask their children to imitate these people and ask their parents to be optimistic about themselves because we, both individually and collectively, shall support you in your old age and care for you

whenever any of us encounters any of you. And in the case of the city, you know, I presume, the care it exercises, and that it does so by instituting laws concerning the children and forebears of those who have died in war, and that, more than for any other citizens, the very highest authority is commanded to guard against any injustice being done to the fathers or mothers of such people. The city assists in raising their children, being eager that their status as orphans is concealed as much as possible. While they are yet children, it installs itself in the role of father, and once they have come to manhood it sends them forth on their own worldly duties arrayed in battle armour, showing them reminders of their fathers' pursuits, giving them the instruments of their paternal excellence, and at the same time, for the sake of the omen, reminding them to begin the journey back to the ancestral hearth, there to rule with power, adorned in full armour.¹⁰ The city never fails to honour these fallen men. Every year it performs the traditional rites publicly for all, the very ones that are conducted by each citizen in private. And what's more, it has instituted athletic and equestrian competitions, and contests in music of all sorts. Indeed, it stands, in general, in the position of son and heir to the departed, acting as a father of their sons and as a guardian of their parents, exercising every care for all of them always. Ponder all this and bear the misfortune more gently, for you will in this way be most pleasing to the living and the dead and will most easily serve others and yourselves. Now that you and all the others have publicly lamented the departed according to custom, you should go on your way."

249c

Socrates: There you have it, Menexenus, the speech of Aspasia of Miletus.

Menexenus: By Zeus, Socrates, Aspasia is remarkable according to you, if, being a woman, she is able to compose a speech of this

sort.

249d

Socrates: Well, if you don't believe me, come along with me and hear her speaking.

Menexenus: Socrates, I have come across Aspasia many times and I know the sort of woman she is.

Socrates: Well then, don't you admire her and aren't you grateful to her now for the speech?

Menexenus: Yes, Socrates, I am very grateful for this speech, to her or to the person, whoever it was, who relayed it to you. And for many reasons, I am grateful to the present speaker.

249e

Socrates: Very well, but please don't denounce me to her so that I may, on another occasion, relay to you lots of beautiful political speeches of hers.

Menexenus: Rest assured I shan't denounce you. Just relay the speeches.

Socrates: Yes, you will have your speeches.

NOTES

1. Lamprus was an accomplished lyre player. Antiphon of Rhamnous was the earliest of the ten Attic Orators, and is regarded as the founder of political rhetoric.
2. This refers to the dispute between Athena and Poseidon over the sovereignty of Athens. The question at issue was whether the olive tree provided by Athena or the salt-water spring that Poseidon produced on the Acropolis was more valuable.
3. Eumolpus, leading the Eleusinians, was defeated by the Athenians under the legendary King Erechtheus at Eleusis. According to legend, when the Amazons laid siege to Athens they were repelled by Theseus, who, after leading the Athenians to Thebes, secured the return of the Argive dead following the battle of the Seven Against Thebes. The Thebans were referred to as Cadmeans due to the story of the city's founding by Cadmus. Eurystheus, who ruled a number of cities in Argos, pursued the sons of Heracles, who had retreated to Athens. When Eurystheus attempted to capture them, he was defeated by the Athenians.
4. These battles took place during the second Persian invasion of Greece under Xerxes.
5. The 'extensive war' referred to here is the first part of the Peloponnesian War.
6. The 'third war' referred to here is the second part of the Peloponnesian War.
7. Following the naval battle at Arginusae, the generals were severely criticised for failing to rescue the wounded and retrieve the bodies of the dead from the sea. Plato, *Apology* 32b ff.
8. This civil war was an attempt to topple the oligarchy of the Thirty Tyrants, which had gained power at the end of the Peloponnesian War, and restore the Athenian democracy. The civil war ended with the defeat of the Thirty at Eleusis.
9. This refers to the Persian invasion led by Xerxes when the Athenians abandoned their city, taking to the sea and eventually defeating the invading forces at the battle of Salamis.
10. There was a tradition that during the festival to Dionysus, the sons of soldiers who had died in battle were presented to the public dressed in full armour in a ceremony that marked the transfer of property from father to son.

persons in the dialogue:

MENO from Thessaly

SOCRATES of Alopecce, son of Sophroniscus

UNNAMED SERVANT from Meno's household

ANYTUS a prosecutor of Socrates

scene: unspecified public place

70a

Meno: Well, Socrates, can you tell me if excellence can be taught? Or is it incapable of being taught but attained instead through practice? Or is it incapable of either being attained through practice or learned, and does it come to people rather by nature or by some other means?

70b

Socrates: Meno,¹ previously the Thessalians were famous among the Greeks, and much admired for their horsemanship and their wealth, but nowadays I think they are also admired for their wisdom, especially the people of Larissa, the fellow citizens of your companion Aristippus.² In your case, Gorgias³ is responsible for this, for when he arrived in their city he captured the foremost of the Aleudae – among whom were your lover, Aristippus, and other leading Thessalians – since they were lovers of his wisdom. What is more, he got you into the habit of answering fearlessly and magnificently when anyone asks you anything, after the manner of those who know, by putting himself forward to be questioned by any Greeks who wish, on any topic they wish, and answering all comers.

70c

Socrates: In this part of the world, Meno, my friend, the situation is the exact opposite. It is as if a dearth of wisdom has set in, and it looks as if wisdom has departed from these regions to yours. And so, if you intend to question anyone hereabouts in that manner, there is no one who will not laugh at you and say,

“Stranger, you probably think that I am some blessed person who knows whether excellence can be taught or knows how it arises. Yet, so far am I from knowing whether excellence can be taught or not, that as it happens, I do not even know what exactly excellence itself is at all.”

71b

Socrates: That is the situation I am in myself, Meno, just as badly off as my fellow citizens in this matter, and I blame myself for knowing absolutely nothing about excellence. And when I do not know what something is, how could I know what sort of thing it is? Or do you think that anyone who is totally ignorant as to who Meno is, could know if he is handsome or wealthy or well-born or the exact opposite of these? Does this seem possible to you?

71c

Meno: Not to me. But, Socrates, is this what we are to tell our people back home, that in truth, you do not even know what excellence is?

Socrates: Not only that, my friend, but also that I have never yet come across anyone else who, in my opinion, knows either.

Meno: What? Did you not meet Gorgias when he was down here?

Socrates: I did.

Meno: Well, did you not think that he knew?

71d

Socrates: Meno, my memory is not very good, so at the moment I am unable to say how he seemed to me at the time. But perhaps he did know, and perhaps you know what the man said, so remind me of how he explained this. Or speak for yourself if you prefer, for I presume that you think what he thinks.

Meno: I do indeed.

Socrates: Then we should let the man alone since he is not here anyway. So, what about you, by the gods, Meno, what do you say excellence is? Speak and do not begrudge me in case by sheer good fortune I have been deceived, and it may turn out that yourself and Gorgias are indeed men of knowledge, despite my statement that I have never yet encountered anyone who does know.

71e

Meno: Well, it's not difficult to say, Socrates. Firstly, if you like, the excellence of a man is easy, being competent in relation to civic affairs, doing well by his friends and badly by his enemies, while being careful that he himself does not suffer such harm. Or take the excellence of a woman, that is not difficult to describe either; she should manage the household nicely, look after its contents and be attentive to her husband. The excellence of a child is different again, whether male or female. Then there is the excellence of an old man, or if you prefer, the excellence of a free man, or even the excellence of a slave. And there is a whole host of other excellences, so it is not a challenge to say what excellence is since there is an excellence for every particular activity and time of life, and for any work we engage in. And I believe, Socrates, the same goes for badness.

72a

Socrates: What a piece of good fortune, Meno! In my search for a single excellence I have discovered a swarm of them courtesy of you. Anyway, Meno, based upon this image of a swarm, if I were to ask you about the bee and what precisely its essence is, and you said that there are lots of bees of many varieties, how would you respond if I were to ask you, "So, are you saying that they are many and variegated, and that they differ from one another, in being bees? Or do they not differ in this but in some other respect, such as their beauty or size or something else of that sort?" Tell me how you would reply if you were questioned in that way.

72b

Meno: That's it, one does not differ from the other in that they are bees.

Socrates: Now, what if I were to go on and ask, "Well, Meno, tell me just what it is by which they do not differ but are all the same. What do you say this is?" You would, I presume, be able to tell me.

Meno: I would.

72c

Socrates: Similarly, in the case of the excellences, even if they are numerous and variegated, all of them possess a single form that is the same and which makes them all excellences. And when one is asked to show what excellence actually is, it would presumably be right to answer the question by looking to that form. Or do you not understand what I am saying?

Meno: Well, I think I understand, although I do not yet grasp what you are asking me as well as I'd like to.

72d

Socrates: Do you think this only applies to excellence, Meno, that there is one excellence that belongs to man, another that belongs to woman and so on? Or does it also apply to health and to size and to strength in like manner? Do you think the health of a man is one thing, while that of a woman is another? Or is the form the same in every instance where health is present, be it in a man or in anything whatsoever?

72e

Meno: I think that the health of a man and of a woman is the same anyway.

Socrates: What about size and strength? If a woman is strong, will she be strong on account of the same form and the same strength? And by "the same", I mean that strength does not differ in being strength, whether it occurs in a man or a woman.

Or do you think that it differs?

Meno: I do not.

73a

Socrates: But will excellence differ in being excellence, whether it occurs in a child or in an older person, in a man or in a woman?

Meno: To me, Socrates, this example somehow seems different from those other examples.

Socrates: What about this? Didn't you say that excellence consists for a man in the good management of a city, and for a woman in the good management of a household?

Meno: I did.

Socrates: Now, is it possible to manage a city or household or anything whatsoever, properly, without managing it sound-mindedly and justly?

Meno: Of course not.

73b

Socrates: And if they manage them sound-mindedly and justly, won't they manage them with justice and sound-mindedness?

Meno: They must.

Socrates: So, if they are going to be good, what a man or a woman both need is the same – justice and sound-mindedness.

Meno: Apparently.

Socrates: What about a child or an old person? Surely they could never become good whilst being unrestrained and unjust?

Meno: Of course not.

Socrates: What if they are sound-minded and just?

73c

Meno: Yes, then it is possible.

Socrates: So, all people are good in the same manner, since they all become good by attaining the same qualities.

Meno: So it seems.

Socrates: And obviously they would not be good in the same manner if they did not possess the same excellence.

Meno: Of course not.

Socrates: Well, given that the excellence of every person is the same, try to recount and recollect what Gorgias says that it is, since you do share his view.

73d

Meno: If you are really looking for one formulation applicable in all cases, it is the ability to rule over people.

Socrates: Yes, that is what I am looking for, but in that case, does the same excellence belong to a child and also to a slave, Meno? Can he rule over his master? And do you think someone who exercises such rule would still be a slave?

Meno: No, I don't really think so, Socrates.

Socrates: No, it is not likely, best of men. Indeed, consider the following question too. You refer to the ability to rule, shouldn't we add the words "justly and not unjustly" to this formulation?

Meno: I think so anyway, Socrates, since justice is an excellence.

73e

Socrates: Is it excellence, Meno, or is it an excellence?

Meno: What do you mean?

Socrates: This applies to anything at all. Take roundness if you like. I would say that is a shape, and not simply that it is shape, and I would refer to it in this way because there are other shapes too.

74a

Meno: And you're right to say so, since I too am saying that justice is not the only excellence. There are others.

Socrates: What are they? Tell me. I would be able to mention other shapes to you if you were to tell me to do so. Now list some other excellences for me.

Meno: Well, I think courage is an excellence, so too is sound-mindedness, wisdom and magnanimity, and there are a whole host of others.

74b

Socrates: We are in the same predicament once more, Meno. We have found numerous excellences whilst looking for one, but there is a difference this time. We are unable to find the one that runs through all of them.

Meno: Indeed, Socrates, I am not yet able, as I was in the other instances, to find what you are looking for and come up with one excellence that applies to them all.

Socrates: That is to be expected, but I am eager that we focus on this if I am able. Now you understand, I presume, that this is how matters stand in every case. If someone were to go on and ask you about what I just mentioned, "What is shape, Meno?", and you were to reply "roundness", and he were to ask you what I asked, "Is roundness shape, or is it a shape?", you would of course say that it is a shape.

Meno: Certainly.

Socrates: Isn't that because there are other shapes too?

Meno: Yes.

Socrates: And could you say what sort they are if he went on to ask you that?

Meno: I could.

74c

Socrates: And if he also asked you in the same way about colour and what it is, and when you replied “white”, the questioner then interjected, “Is white colour, or a colour?”, would you say that it is a colour because there happen to be other colours too?

Meno: I would.

Socrates: And if he told you to mention other colours, could you mention others that, as it happens, are no less colours than white is?

Meno: Yes.

74d

Socrates: Now, if, like me, he continued the argument and said, “We continually arrive at multiplicity. Do not describe it to me in this way. Rather, since you refer to these multiplicities by a single name, and you assert that every one of them is a shape – even those that are most opposite to one another – what precisely is it that prevails in round no less than in straight, which you call shape, and by which you agree that round is a shape no less than straight?” Isn’t that what you say?

Meno: I do.

Socrates: Well then, whenever you speak of them in this way, are you then asserting that round is no more round than straight, and that straight is no more straight than round?

Meno: Certainly not, Socrates.

Socrates: Yet you assert that round is no more a shape than straight is, nor is one shape more so than any other.

Meno: That’s true.

74e

Socrates: Then, what precisely is it that bears the name ‘shape’? Try to say. Now, if you were to reply to someone who questioned you in this way about shape or about colour, “Well,

good fellow, I do not understand what you want and I do not know what you mean”, he might well be surprised and say, “Do you not understand that I am looking for some one thing that is the same and applies to all these instances?” Could you not even respond in these cases, Meno, if someone were to ask, “You refer to round, straight and so on, as shapes. What is that same something that applies to them all?” Try to say what it is so that you may get some practice related to our question concerning excellence.

75b

Meno: No, Socrates, you tell me instead.

Socrates: You want me to do you a favour?

Meno: Very much so.

Socrates: And will you also be willing to tell me about excellence?

Meno: I will.

Socrates: Then we should make the effort. It is worth it.

Meno: Yes, very much so.

Socrates: Come on then, we should try to tell you what shape is. Let us see if you would accept that it is as follows. Let shape for us be that alone, among things that are, that always follows colour. Is that satisfactory for you or are you somehow looking for something different? Indeed, even if you were to describe excellence in this way I would be content.

75c

Meno: But that account is silly, Socrates.

Socrates: What do you mean?

Meno: Well, according to your account, shape, I presume, is what always follows colour. So be it. But what if someone were to say that he did not know colour, and is now just as puzzled

about that as he was about shape? What response do you think you would have given him?

75d

Socrates: The truth. And if the questioner was one of the wise, argumentative and combative types, I would say to him, “I have said what I have said, and if I am not speaking correctly it is your job to take up my argument and refute it.” However, if we were friends as you and I are now, and we wished to engage in a dialogue with one another, I would need to respond somewhat more gently and more dialectically. And the more dialectical approach is probably not only to give truthful answers, but also to proceed via whatever the person being questioned admits that he knows. So I shall endeavour to talk with you in this way too.

75e

Socrates: Now, tell me, is there something that you refer to as an end? By this I mean a sort of limit or boundary. I am saying that these are all the same. Perhaps Prodicus⁴ would take exception to this, but you, for your part, would presumably refer to something as having been “limited” or “ended.” That is the sort of thing I mean. It is nothing complicated.

Meno: Well, I do use those terms and I think I understand what you mean.

76a

Socrates: What about this? Is there anything you refer to as flat, and anything else you call solid, in the case of geometrical constructions for example?

Meno: Yes, I use these terms.

Socrates: Well, from these examples you should now understand what I mean by shape. For I am saying of every shape that this is what limits a solid. Or I might say, in short, that shape is the limit of a solid.

Meno: And what do you say colour is, Socrates?

76b

Socrates: You are quite overbearing, Meno, demanding that an old man answer hard questions when you yourself are unwilling to recollect what Gorgias said and tell me what exactly he said excellence was.

Meno: I will answer you once you have answered me, Socrates.

Socrates: From the way you converse, Meno, anyone would realise, even if they were blindfolded, that you are handsome and still have admirers.

Meno: Why so?

76c

Socrates: Because all you do when you are speaking is issue commands, just as dainty young men do, since they can exercise tyrannical power as long as they are in the bloom of youth. And you have probably recognised by now that I am at a disadvantage with handsome folk, so I will oblige you and answer your question.

Meno: Yes, certainly, do me that favour.

Socrates: Would you like me to respond, based upon the approach of Gorgias, in a way you are most likely to follow?

Meno: I would like that, of course.

76d

Socrates: Don't you both agree with Empedocles⁵ that there are certain emanations from things that are?

Meno: Emphatically.

Socrates: And are there passages into which and through which these emanations pass?

Meno: Entirely so.

Socrates: And do some emanations fit into some passages, while others are smaller or larger than the passages?

Meno: This is the case.

Socrates: Now, isn't there also something that you call sight?

Meno: Yes.

Socrates: Well, from all this, "mark thou my words",⁶ as Pindar said. For colour is an emanation from shapes which, being commensurate with sight, is perceptible.

76e

Meno: Socrates, I think your answer has been expressed excellently.

Socrates: Indeed, it was probably stated in a manner that was familiar to you, and at the same time I am sure you realise that from this answer you would also be able to say what sound is, smell too, and numerous other phenomena of this kind.

Meno: Very much so.

Socrates: In fact, Meno, the answer was dramatic, so it was more pleasing to you than the one concerning shape.

Meno: It was.

77a

Socrates: But it is not a better answer. No, son of Alexidemus, I am persuaded that the other one is better. I believe you will think so too, provided you are not compelled to leave prior to the mysteries, as you were saying yesterday, but stay about and be initiated.

Meno: Well Socrates, I would stay if you would give me lots of answers like this.

77b

Socrates: In that case I shall not be found wanting in my eagerness to deliver answers of this kind, for both our sakes,

although I may not be up to the task of delivering a lot of them. So come on, you should also try to fulfil your promise to me and explain what excellence is as a whole, and stop turning the one into many, as witty folk say every time someone breaks something. Instead you should tell me what excellence is, leaving it whole and sound in the process, now that you have these examples from me.

Meno: Well, it seems to me, Socrates, that excellence is what the poet says it is, “to delight in beauties and to have power”. This I say is excellence, to desire beautiful things and be able to acquire them.

77c

Socrates: Are you saying that someone who desires beautiful things is desirous of what is good?

Meno: Definitely.

Socrates: So, is it the case that there are some people who desire what is bad while others desire what is good? Don't you think, best of men, that everyone desires what is good?

Meno: I do not.

77d

Socrates: Then some desire what is bad?

Meno: Yes.

Socrates: Are you saying they believe that what is bad is good, or do they recognise that it is bad and desire it nevertheless?

Meno: I think they do both.

Socrates: So, Meno, do you actually think that someone who recognises that what is bad is bad, desires it nevertheless?

Meno: Definitely.

Socrates: What do you mean by ‘desires’? Does he desire that it be his?

Meno: That it be his, yes. What else could it mean?

Socrates: Does he presume that what is bad benefits the person who gets it, or does he recognise that it harms whoever has it?

Meno: There are some people who presume that what is bad benefits them, while others recognise that it harms them.

Socrates: And do you think that those who presume that what is bad benefits them, recognise that what is bad is bad?

Meno: No, I don't really think so.

77e

Socrates: Then it is obvious that these people who are unaware that it is bad, do not desire what is bad, rather they desire what they presume to be good, but is actually bad. So those who are unaware of this and presume that it is good, obviously have a desire for what is good. Isn't this so?

Meno: They probably do.

Socrates: What about this? Those people who, according to you, desire what is bad whilst believing that what is bad harms the person who gets it, don't they recognise that it will harm them?

78a

Meno: They must.

Socrates: But don't they presume that those who are harmed are wretched to the extent that they incur harm?

Meno: They must presume this too.

Socrates: And don't they presume that wretched people are in a sorry plight?

Meno: I think so.

Socrates: Is there anyone who wishes to be wretched and in a sorry plight?

Meno: I think not, Socrates.

Socrates: Well, Meno, since no one wants to be like this, no one wants what is bad. For to be wretched is to desire what is bad and obtain it, what else?

78b

Meno: It looks as though you are speaking the truth, Socrates, and that no one wants what is bad.

Socrates: Didn't you say just now that excellence is to wish for what is good and to have the power to acquire it?

Meno: I said that, indeed.

Socrates: Doesn't the wish that you mention belong to everyone, and in that respect anyway, no one is better than anyone else?

Meno: So it appears.

Socrates: It is obvious then that if one person is indeed better than another, he must be better on the basis of the power you mentioned.

Meno: Very much so.

78c

Socrates: Then according to your account, this, it seems, is excellence, the power of acquiring what is good.

Meno: Yes, Socrates, I think that the situation is exactly as you now understand it.

Socrates: Then let us see if this statement of yours is true, for you may actually have a point. Are you saying that excellence is the ability to acquire what is good?

Meno: I am.

Socrates: And do you refer to the likes of health and wealth as good?

Meno: And the acquisition of gold and silver, and of honour and high office in the city.

Socrates: Are you saying that anything else is good besides the likes of these?

Meno: No, but I am saying that everything of this sort is good.

78d

Socrates: So be it. Then according to Meno, the ancestral friend of the Great King,⁷ the acquisition of gold and silver is excellence. And would you add that this acquisition of wealth should be done in a just and holy manner, Meno, or does it make no difference to you if someone acquires it unjustly? Do you call it excellence all the same?

Meno: Of course not, Socrates.

Socrates: Then it is badness.

Meno: Entirely so.

Socrates: So, it seems that justice or sound-mindedness or holiness or some other part of excellence must accompany this acquisition of wealth, or else it will not be excellence even though it provides what is good.

78e

Meno: Indeed, how could there be excellence if these are absent?

Socrates: Yet, not to acquire gold and silver whenever it would be unjust to do so, either for yourself or for someone else, that non-acquisition would also be excellence, wouldn't it?

Meno: So it appears.

Socrates: So, the acquisition of such goods would no more constitute excellence than their non-acquisition. It seems, rather, that whatever is accompanied by justice will be excellence, and whatever is devoid of anything of this sort will

be badness.

Meno: I think that the situation must be as you describe it.

Socrates: Didn't we say a little earlier that each of these, justice, sound-mindedness and everything of that sort, is a part of excellence?

Meno: Yes.

79a

Socrates: In that case, Meno, are you playing games with me?

Meno: In what way, Socrates?

Socrates: Because earlier on I asked you not to break up excellence, or cut it into pieces, and I gave you examples of how you should respond. Yet you have paid no attention to this and you are now telling me that excellence is the ability to acquire what is good, and to do so with justice. But don't you say that justice is a part of excellence?

Meno: I do.

79b

Socrates: Then it follows from what you are agreeing to, that to enact whatever you enact along with a part of excellence, is excellence, for you accept that justice is a part of excellence and so is each of the others. Well then, why am I saying this? Because although I asked you to state what excellence is as a whole, you are far removed from saying what it is. Instead you are saying that any action is excellence as long as it is enacted along with a part of excellence, as if you had told me what excellence as a whole is, and I already recognised it, even if you also break it up into parts.

79c

Socrates: So, in my view, dear Meno, you need to face the same question again from the beginning. If every action accompanied by a part of excellence, is excellence, what then is excellence?

For that is what someone means when he says that every action accompanied by justice is excellence. Or do you think that it is unnecessary for you to face the same question once more? Do you believe, rather, that someone who does not know what excellence itself is, knows what a part of excellence is?

Meno: No, I don't think so.

79d

Socrates: Indeed, if you also remember, when I answered you earlier about shape, we rejected the sort of answer that tries to respond in terms of what is still being investigated and is not yet agreed upon.

Meno: And we were right to reject it, Socrates.

79e

Socrates: Well, best of men, do not presume that by giving an answer in terms of the parts of excellence, you will explain it to anyone when you are still investigating what it is as a whole. Nor will you explain anything else by describing it in this way. Rather, it will be necessary to face the same question once more; this excellence that you keep referring to, what is it? Or do you think I am talking nonsense?

Meno: I think that what you are saying is right.

Socrates: Then answer once more, from the beginning, what do you and your associate say that excellence is?

80a

Meno: Being perplexed yourself and making others perplexed, that is all you do, Socrates. I heard that even before I met you. And now, as I see it, you are enchanting and bewitching me, almost casting a spell on me, so that I have become utterly perplexed. And if I may be permitted a jest, I think you are extremely like the flat torpedo fish in your appearance and in other respects too. For it always numbs anyone who approaches or touches it, and I think you have just done something like that

to me, since I am truly numbed in my soul and in my mouth, and I do not have any answer to give you. Yet, on countless occasions I have delivered a whole range of speeches about excellence to lots of people, and they were really good, or so I thought anyway. But now I am not even able to say what it is at all. And I think you are well advised neither to travel abroad nor be away from home, for if you were to do this sort of thing as a stranger in another city, you would probably be locked up as a sorcerer.

80b

Socrates: You are a mischief-maker, Meno, and you almost deceived me.

Meno: What point are you making, Socrates?

80c

Socrates: I realise why you presented a likeness of me.

Meno: Why do you think I did it?

Socrates: So that I would present a likeness of you in return. There is one thing I know about all you fair fellows. You delight in playing with likenesses, it benefits you. For the likenesses of the fair are also fair, but I shall not present a likeness of you in return. Now, if the torpedo fish being numb itself also makes others numb, then I am like it, but otherwise I am not. For I do not make other people perplexed while being free from perplexity myself. No, I make other people perplexed while I am even more perplexed than anyone. And at the moment, on the question of what excellence is, I do not know, while you, perhaps, knew before you got in touch with me, but now you are like a man who does not know. But I want to look at this along with you and enquire into what exactly it is.

80d

Meno: And in what way will you enquire into something when you do not know what it is at all? Yes, what sort of thing that

you do not know will you put forward as an object of enquiry? And even if, at best, you do encounter it, how will you know that this is the thing that you did not know?

80e

Socrates: I understand the point you wish to make, Meno. Do you see that you are introducing a captious argument, according to which it is not possible for a person to enquire either into what he knows or into what he does not know? For he would not enquire into what he knows, because he knows that already, and someone like this has no need for enquiry. Neither would he enquire into what he does not know, for he does not even know what he is to enquire into.

81a

Meno: Don't you think this argument is well formulated, Socrates?

Socrates: I do not.

Meno: Can you say why?

Socrates: I can, for I have heard about matters divine from wise men and women.

Meno: What did they propose?

Socrates: Something true and beautiful, in my view anyway.

Meno: What was it and who were the people who said it?

81b

Socrates: Those who said it were priests and priestesses who cared about being able to give an explanation of their practices. Pindar expresses it too, and so do numerous other poets who are divine. What they say is as follows. Decide for yourself whether they are speaking the truth, for they say that the soul of man is immortal, and at one time it comes to an end and they call this "death", and at another time it comes to birth once more, but it is never destroyed. For these reasons then, we

should live our lives in the utmost holiness. For, “From whomsoever Persephone accepts a penalty for an ancient affliction, / Their souls she sends once more to the sun above, in the ninth year. / From these arise illustrious kings, and men, mighty in strength, supreme in wisdom, / And ever after they are called sacred heroes by humanity.”⁸

81c

Socrates: Now, since the soul is immortal and has come to birth many times, and has beheld everything there is, both here and in Hades, there is nothing she has not learned. So it is no wonder that she is able to recollect what she knew previously about excellence or about other things. Indeed, since all of nature is akin and the soul has learned all things, there is nothing to prevent someone who has only recalled one – a process that people call learning – from discovering all the others, provided he is courageous and does not tire of the enquiry, for enquiring and learning are wholly recollection. So, we should not be persuaded by this captious argument, for it will only make us idle, and it is pleasant only to the ears of feeble folk, while this one will make us active and inquisitive. Placing my trust in its truth, I want to enquire along with you into what excellence is.

81e

Meno: Yes, Socrates, but what do you mean by this statement that we do not learn and what we call learning is recollection? Can you teach me that this is the case?

Socrates: Meno, I said but a moment ago that you are a mischief-maker, and now, so that I might immediately be shown up as contradicting myself, you are asking if I am able to teach you when I am saying that there is no teaching, only recollection.

82a

Meno: Not at all, by Zeus, Socrates, that was not my intention, I said that out of habit. But if you are somehow able to prove that what you are saying holds true, please do so.

Socrates: Well, that is not easy. Nevertheless, I am willing to make the effort for your sake. So please summon for me one of these many servants of yours, whichever one you please, so that I may demonstrate this to you in his case.

82b

Meno: Certainly. You, come here!

Socrates: Is he Greek and does he speak Greek?

Meno: Yes, very much so, he was born in the house.

Socrates: Now, pay attention as to whether he seems to you to be recollecting or learning from me.

Meno: I will pay attention.

Socrates: So tell me, boy, do you recognise that a square figure is like this?

Servant: I do.

Socrates: Then a square is a figure having all of these four sides equal?

Servant: Certainly.

82c

Socrates: Doesn't it also have these lines through the middle, equal?°

Servant: Yes.

Socrates: Couldn't a figure like this be larger or smaller?

Servant: Certainly.

Socrates: Now, if this side was two feet and this was two feet, how many feet would the whole figure be? Look at it this way: if

it was two feet this way and only one foot this way, wouldn't the figure be once two feet?

82d

Servant: Yes.

Socrates: But since it is also two feet this way, wouldn't it be twice two feet?

Servant: It would.

Socrates: So, is the whole twice two feet?

Servant: Yes.

Socrates: How much is twice two feet? Work it out and tell me.

Servant: Four, Socrates.

Socrates: Now, would there be another figure, double this one, but like it, having all its sides equal just as this one does?

Servant: Yes.

Socrates: So, how many feet will it be?

Servant: Eight.

82e

Socrates: Come on then, try to tell me what length each side of that figure will be. Since it is two feet in this case, what length is the side of the double of this?

Servant: Obviously, Socrates, it is double.

Socrates: Meno, do you see that I am teaching this boy nothing? All I do is ask questions. And now the fellow thinks he knows the sort of line from which the eight-foot figure will arise. Is that how it seems to you?

Meno: It is.

Socrates: And does he know?

Meno: Of course not.

Socrates: Does he think the eight foot figure comes from the double line?

Meno: Yes.

Socrates: Now, watch him recollecting, in due order, in the way that one should recollect.

83a

Socrates: Tell me, boy, are you saying that the double figure arises from the double line? I am referring to a figure like this one, not long on one side and short on the other. No, let it be equal on every side, just like this one but double this one, eight feet. Now, see if this still seems to you to come from the double side.

Servant: To me, yes.

Socrates: Doesn't the side become double if we add another line of the same length, here.

Servant: Certainly.

83b

Socrates: And you say that we will get an eight-foot figure from this, once four sides of this length have been constructed?

Servant: Yes.

Socrates: Then, let us draw four equal lines from this line. Is this the figure which according to you will be eight feet?

Servant: Certainly.

Socrates: In this new figure, aren't there four squares, each equal in size to the four-foot square?

Servant: Yes.

Socrates: So what size has it become? Isn't it four times this size?

Servant: It must be.

Socrates: Now, is a square that is four times the size, a double?

Servant: Not at all, by Zeus.

Socrates: How many times is it multiplied?

Servant: Fourfold.

Socrates: Then, boy, the quadruple figure, and not the double figure, arises from the double side.

Servant: What you say is true.

83c

Socrates: Four times four is sixteen, isn't it?

Servant: Yes.

Socrates: But what size line gives an eight-foot figure? Don't we get a quadruple space from this one?

Servant: I agree.

Socrates: And we get this quarter-sized square here, from this line here that is half as long?

Servant: Yes.

Socrates: So be it. And isn't the eight-foot figure double this one, and half that one?¹⁰

Servant: Yes.

83d

Socrates: Then, it will be produced from a line that is longer than this line, but from one that is shorter than that line. Isn't this so?

Servant: I think so.

Socrates: Well said. Yes, you should answer based upon what you think. And tell me, wasn't this line two feet and that one four feet?

Servant: Yes.

Socrates: Now, the line belonging to the eight-foot figure should be longer than this two-foot line, and shorter than the four-foot line.

Servant: It should.

Socrates: Now, try to state what length you claim it is.

Servant: Three feet?

83e

Socrates: Well, if it is to be three feet, shouldn't we add on a half of this line, and will it then be three feet? Yes, this is two and that is one. And on this side, in like manner, this is two and that is one, and the figure that you are referring to arises.

Servant: Yes.

Socrates: Now, if this side is three and that side is three, doesn't the entire figure become thrice three feet?

Servant: So it appears.

Socrates: And how much is thrice three feet?

Servant: Nine.

Socrates: And how many feet should the double figure be?

Servant: Eight.

Socrates: So, the eight-foot figure does not arise from the three-foot line either.

Servant: Indeed not.

84a

Socrates: From what sort of line then? Try to tell us exactly and if you do not want to give a number, point out the kind of line.

Servant: No, by Zeus, Socrates, I just do not know.

Socrates: Well, Meno, do you recognise where he is at this stage in the process of recollection? At first he did not know the

length of the side of the eight-foot figure, and even now he does not yet know. But he thought that he knew then, and he answered boldly as if he knew, and did not think that he was at a loss. But he is now at a stage where he thinks he is at a loss, since he neither knows nor even thinks that he knows.

84b

Meno: What you say is true.

Socrates: Isn't he now better off in relation to the topic he did not know?

Meno: I agree with this too.

Socrates: Now, having made him perplexed and numbed him, as does a torpedo fish, have we done him any harm?

Meno: Not in my opinion, anyway.

84c

Socrates: Indeed, it is quite likely that we have made some contribution towards finding out how matters stand, for now that he does not know he will be quite glad to search. But earlier he would have presumed readily that it is acceptable to declare repeatedly, in front of large audiences, that the double figure must have the double side.

Meno: So it seems.

Socrates: Earlier on, do you think he would have undertaken to enquire into and learn this topic, a topic which he thought he knew but did not know, before he was cast into a state of perplexity through which he realised that he did not know but yearned to know?

Meno: No, I do not think so, Socrates.

Socrates: So, has he benefited from being numbed?

Meno: I think so.

84d

Socrates: Then observe what he will discover from this perplexity by enquiring along with me, while I do no more than ask questions without teaching him. And be on the lookout in case you find me, somehow, teaching him and expounding to him rather than asking for his opinions on this.

Socrates: So tell me, boy, isn't this our four-foot figure? Do you understand?

Servant: I do.

Socrates: And may we add another figure equal to this one?

Servant: Yes.

Socrates: And is this third figure equal to both of these?

Servant: Yes.

Socrates: And may we fill in this space that is left in the corner?¹¹

Servant: Of course.

84e

Socrates: Now, there are these four equal figures, aren't there?

Servant: Yes.

Socrates: Well then, how many times larger is the entire figure than this original figure?

Servant: Four times as large.

Socrates: But we wanted one that was twice as large, or do you not remember?

Servant: I certainly do.

Socrates: Now, doesn't this line from one corner to another cut each of these figures in two?¹²

Servant: Yes.

85a

Socrates: Then there are these four equal lines enclosing this figure here?¹³

Servant: There are.

Socrates: Now look, what size is this figure?

Servant: I do not understand.

Socrates: There are these four figures. Hasn't each internal line cut off half of each figure? Isn't this so?

Servant: Yes.

Socrates: Now, how many of that size are in this?¹⁴

Servant: Four.

Socrates: How many are in that one?¹⁵

Servant: Two.

Socrates: And what is four in relation to two?

Servant: Double.

Socrates: Then how many feet is this figure?¹⁶

Servant: Eight feet.

Socrates: From what line does it arise?

Servant: From this one.¹⁷

85b

Socrates: From the one that runs from corner to corner of the four-foot figure?

Servant: Yes.

Socrates: The experts call this the diagonal. So, if 'the diagonal' is its name, then according to you, Meno's boy, the double figure would arise from the diagonal.

Servant: Yes, certainly, Socrates.

85c

Socrates: How does this seem to you, Meno? Did he respond with any opinion that was not his own?

Meno: No, they were his own.

Socrates: And yet, as we agreed a little earlier, he did not know.

Meno: That's true.

Socrates: Yet he had these opinions within him, didn't he?

Meno: Yes.

Socrates: So the person who does not know about something has true opinions within him concerning what he does not know?

Meno: So it appears.

85d

Socrates: And now these opinions have just been stirred up again within him, just like a dream. But if someone will put these same questions to him repeatedly, in varying forms, you know that he will finally come to know about these issues with as much precision as anyone.

Meno: So it seems.

Socrates: Therefore, if someone asks him questions without teaching him, he will come to know by recovering the knowledge himself, from himself.

Meno: Yes.

Socrates: But recovering knowledge himself, from himself, is recollection, isn't it?

Meno: Very much so.

Socrates: Now, isn't it the case that the fellow either acquired the knowledge he now possesses at some stage, or else he always possessed it?

Meno: Yes.

85e

Socrates: Well, if he always possessed it then he was always knowledgeable. Then again, if he acquired it at some stage it could not be during the present life that he acquired it. Or has someone taught him geometry? Indeed, he will do the same thing when it comes to any aspect of geometry or any of the other subjects. So, is there anyone who has taught him all this? You really should know, especially since he was born and reared in your own house.

Meno: Well, I know that no one has ever taught him.

Socrates: But he does possess these opinions, doesn't he?

Meno: Apparently he must, Socrates.

86a

Socrates: Yet, if he did not acquire them in his present life, is it not evident at this stage that he possessed and had learnt them at some other time?

Meno: So it appears.

Socrates: Then this was the time when he was not a human being?

Meno: Yes.

Socrates: Now, if both at the time when he was and at the time when he was not a human being, there were true opinions within him which become knowledge once awakened by questioning, does his soul then possess understanding throughout all time? For it is obvious that throughout all time he either was or was not a human being.

Meno: So it appears.

86b

Socrates: Then, if the truth about things that are is always in our soul, the soul would be immortal. And so, whatever you do not know at present is something you don't remember, and you should try bravely to enquire into it and recollect it.

Meno: Socrates, I'm not sure how, but I think you have a point.

Socrates: Yes, Meno, that is how I seem to myself too. Now, I would not affirm every aspect of this argument with total confidence, yet we would be better, more manly, and less idle, through believing that we should enquire into what we do not know, rather than believing that it is not within our power to find out or even to enquire into what we do not know. That is a proposition I would maintain insistently, as best I could, in word and in deed.

86c

Meno: Here again, Socrates, I think you have a point.

Socrates: Well, since we are of one mind that we should enquire into whatever we do not know, would you like to undertake a joint enquiry into what precisely excellence is?

Meno: Yes, certainly, and yet, Socrates, it would please me most to consider my initial question, and hear whether we should undertake this enquiry on the basis that excellence comes to people by being taught, or by nature, or comes in some manner yet to be specified.

86d

Socrates: Well, Meno, if I had control, not only of myself but also of you, we would not have considered whether excellence is teachable or not teachable until we had first enquired into what it is. However, since you do not even attempt to control yourself, so that you might actually be free, but you attempt to control me, and you do control me, I shall go along with you. What else can I do? So, it seems we must consider the sort of thing this is, when we do not yet know what it is. Now, please

relax your control over me just a little and agree to consider whether it is teachable, or how it comes to people, on the basis of a hypothesis. And by “on the basis of a hypothesis”, I am referring to just what geometers frequently consider if someone asks them about a figure; for instance, if it is possible to inscribe this triangular figure in this particular circle. One of them might reply, “I do not yet know if this figure is of this sort, yet I have a hypothesis of a kind that is applicable to this matter as follows. If this is the sort of figure that, when applied to the straight line provided by the circle, falls short by a figure like the one that has just been applied, then I think one consequence follows. But a different consequence follows if it is not possible for this to happen. So, by using this hypothesis, I am willing to tell you the solution to the problem of whether the inscription of this figure in the circle is impossible or not.”

87a

Socrates: So, we too can treat of excellence in this way, since we do not know either what it is or the sort of thing it is, by using a hypothesis to consider whether it is teachable or not teachable. We may discuss it as follows. Which of the things associated with the soul must excellence be like if it is to be teachable or not teachable? Firstly, if it is like or unlike knowledge, is it teachable or not, or as we put it a moment ago, recollectable? But it should make no difference which of the names we use. Is it teachable? Is it not obvious to everyone that people are taught knowledge and nothing else?

87b

Meno: So it seems to me anyway.

Socrates: Yes, and if excellence is a form of knowledge, it would obviously be teachable.

Meno: It would of course.

Socrates: So, we settled that issue quickly enough; if excellence is like this, it is teachable, and if it is not like this, it is not.

Meno: Yes, certainly.

Socrates: Then, it seems the next thing we must consider is whether excellence is knowledge, or something different from knowledge.

Meno: Yes, this in my view is the next question we should consider.

87c

Socrates: What about this? Do we agree that excellence is something good, and does this hypothesis that excellence is good, stand according to us?

Meno: Yes, certainly.

Socrates: Then, if anything else is also good, apart from knowledge, excellence might, perhaps, not be a form of knowledge. However, if nothing is good that knowledge does not encompass, our suspicion that it is a form of knowledge would be correct.

Meno: This is the case.

Socrates: What is more, we are good on account of excellence?

Meno: Yes.

87d

Socrates: And if good, then beneficent, for everything good is beneficial, is it not?

Meno: It is.

Socrates: Then excellence too is beneficial?

Meno: From what has been agreed, it must be.

Socrates: Then let us consider the kinds of things that benefit us, taking each in turn. There is health, strength, beauty and,

indeed, wealth. We say that these and the like of these are beneficial, don't we?

88a

Meno: Yes.

Socrates: But we also say that these same things sometimes do harm, or do you deny that this is the case?

Meno: No, this is the case.

Socrates: Then consider this. What is it that benefits us whenever it guides us in relation to each of these, and what is it that harms us whenever it guides us? Isn't it the case that whenever their correct usage guides us, that benefits us, and whenever it does not we are harmed?

Meno: Yes, certainly.

Socrates: Well then, let us also consider this in relation to the soul. Do you say that there is sound-mindedness, justice, courage, ease of learning, retentiveness and magnanimity, and everything of that sort?

88b

Meno: I do.

Socrates: Then consider any of these that you think are not knowledge but are different from knowledge. Don't they sometimes harm us and sometimes benefit us? Take courage, for instance. If courage is not understanding, but a sort of boldness, then when a man is bold in the absence of reason, he is harmed, and when reason is present, he is benefited, is he not?

Meno: He is.

Socrates: Doesn't the same go for sound-mindedness and ease of learning; whatever is learned or inculcated is beneficial when accompanied by reason, and is harmful in the absence of

reason?

88c

Meno: Very much so.

Socrates: In short then, everything the soul undertakes and endures ends in happiness when guided by understanding, and ends in its opposite when guided by folly.

Meno: So it seems.

Socrates: So, if excellence is something that is in the soul and it is, necessarily, beneficial, then it must be understanding, since all things associated with the soul are neither beneficial nor harmful just by themselves, yet they become beneficial or harmful through the presence of understanding or of folly. So, according to this argument, since excellence is beneficial, it must be a kind of understanding.

88d

Meno: I think so.

Socrates: What is more, everything else we mentioned, wealth and the like, is sometimes good and sometimes harmful. So, just as understanding, by its guidance, makes what belongs to the soul beneficial to the rest of the soul while folly renders them harmful, so also does the soul make these beneficial by using and controlling them aright, and harmful by doing so in an incorrect manner. Isn't this so?

88e

Meno: Yes, certainly.

Socrates: And does the intelligent soul guide correctly while the foolish soul leads us to error?

Meno: This is so.

Socrates: Then it is possible to declare that in general, for any person, everything else depends upon the soul, while anything belonging to the soul itself depends upon understanding if it is

to be good. And by this argument what is beneficial would be understanding, but do we accept that excellence is beneficial?

89a

Meno: We certainly do.

Socrates: Then we are saying that excellence is understanding, either the sum total, or a part thereof.

Meno: Socrates, I think this has been very well expressed.

Socrates: Well, if that is how matters stand, then good people would not be good by nature.

Meno: No, I do not think so.

89b

Socrates: Indeed, if this were so, one consequence, I presume, would be the following. If the good were good by nature, presumably there would have been people who recognised for us which of the young folk were good by nature. And once they had revealed this, we would have taken these youths in hand, guarded them in the citadel, having placed our seal upon it, as more important than gold, so that no one could corrupt them and they would be useful to their cities once they had come of age.

Meno: That sounds reasonable anyway, Socrates.

89c

Socrates: Well then, since the good are not good by nature, do they become good by learning?

Meno: At this stage I think this must be so, and obviously, Socrates, based upon the hypothesis, if indeed excellence is knowledge, it is teachable.

Socrates: Perhaps, by Zeus, but were we not right in agreeing to this?

Meno: Well, it seemed right a moment ago, at any rate, when we said it.

Socrates: But it should seem right, not only a moment ago, but also now and in the future, if it is to be at all sound.

89d

Meno: What's this? What has occurred to you? Why do you have misgivings and doubts as to whether excellence is knowledge?

Socrates: I will tell you, Meno. I am not retracting as incorrect the proposition that excellence is teachable if, in fact, it is knowledge. But consider this. Do you think it is reasonable for me to doubt whether it is knowledge? Indeed, tell me this. If anything at all, not only excellence, is teachable, mustn't there also be people who teach it and people who learn it?

Meno: Yes, I think so.

89e

Socrates: And conversely too, if there were neither teachers nor students of something, would we be right to conjecture that it is not teachable?

Meno: That is the case, but do you think there are no teachers of excellence?

Socrates: Well, I have often searched to find out whether there are any teachers of excellence, but no matter what I do I am unable to find any, even though I have conducted the search in company with many people, particularly those whom I regard as most experienced in this matter. And now Anytus¹⁸ here has sat down beside us at just the right time. Let us hand a part of the enquiry over to him. It would be reasonable for us to include him since, in the first place, Anytus here is the son of a wealthy and wise father, Anthemion, who became wealthy not by chance or by being given money, in the way that Ismenias of Thebes has just recently come into possession of the wealth of

Polycrates. No, he acquired it by his own wisdom and industry. Then again, in general, he did not seem to be an arrogant citizen, or pompous, or offensive; rather, he was a well behaved, orderly man. He then gave a good upbringing and education to his son here, as most Athenians agree, since they choose him for the most significant positions of power. So it is only right to investigate whether or not there are teachers of excellence and who they are, along with a person such as this.

90b

Socrates: So, Anytus, you should investigate this along with us, along with myself and your guest, Meno, who the teachers of this subject might be? Think about it this way, if we wanted Meno here to become a good physician, to what teachers would we send him? Wouldn't it be to the physicians?

Anytus: Yes, certainly.

90c

Socrates: And what if we wanted him to become a good cobbler? Wouldn't we send him to the cobblers?

Anytus: Yes.

Socrates: And the same goes for any other examples?

Anytus: Certainly.

Socrates: Then tell me about these same examples once again, as follows. We say that we would be right in sending him to the physicians if we wanted him to become a physician. And whenever we say this, do we mean that we would be acting sensibly in sending him to those who lay claim to this skill, rather than those who do not, and to those who charge a fee on this very basis, proclaiming themselves to be teachers of anyone who wishes to come and learn? If these were our criteria we would be right to send him, wouldn't we?

Anytus: Yes.

90e

Socrates: Don't these same criteria also apply to flute-playing and to anything else? When we wish to make someone a flautist, it is highly irrational to be unwilling to send him to those who promise to teach the skill, and who charge a fee for doing so, but to trouble some other people instead, people who neither claim to be teachers nor have a single pupil of the subject which we expect the person we send to learn from them. Don't you think that would be highly illogical?

Anytus: Yes, by Zeus, I do, and quite stupid too.

91a

Socrates: Well said. Now there is an opportunity for you and me to conduct a joint deliberation in relation to this guest here, Meno. Indeed, Anytus, the fellow has been telling me for some time that he desires that wisdom and excellence by which people manage their households and cities in the right way, care for their own parents, and know how to receive strangers or send them on their way in a manner worthy of a good man. So think about this excellence and whom we would be right to send him to, if we were to send him to someone. Or is it obvious from the earlier discussion that we should send him to those who promise to act as teachers of excellence, and proclaim themselves available as such to any Greeks who wish to learn, levying a fixed charge which they have set?

Anytus: Socrates, who are these people you are referring to?

Socrates: Surely you know yourself that these are the people whom everyone calls sophists?

91c

Anytus: By Heracles, Socrates, mind what you say. May no one acquainted with me, friend or relation, citizen or stranger, ever be gripped by such madness as to frequent these people and become warped by them, for they are evidently an affliction and a corrupting influence upon their followers.

Socrates: What do you mean, Anytus? There are many people who claim that they know how to do some good, but are these men, in particular, so different from the others that they do not benefit whatever is entrusted to them, as the others do, but they do the very opposite, they actually corrupt it? And is it for these services that they openly request financial payment? I just cannot believe you, for I know one man, Protagoras,¹⁹ who accumulated more money from this wisdom than Pheidias,²⁰ whose beautiful works are plain to see, and ten other sculptors combined. Indeed what you are saying is preposterous, since those who repair old shoes and clothing could not avoid detection for thirty days if they kept returning the clothes and shoes in worse condition than they received them. No, if they behaved like that, they would quickly die of starvation. Yet Protagoras spent more than forty years corrupting those who associated with him, and sending them away in a worse condition than when he took them on, without being noticed by the whole of Greece. For I believe he was nearly seventy when he died and had spent forty years in the profession, and throughout that entire period, and even to this very day, he was always well regarded. And not just Protagoras but a whole host of others too, some born before him, some still alive today. Well then, should we say, based upon your position, that they deceive and corrupt the young people knowingly, or without even noticing it themselves? And shall we accuse these people, whom some say are the wisest of men, of being as mad as that?

92a

Anytus: No, they are very far from madness, Socrates. In fact, it is much more the case that the young people who give them money are mad, and those who let them do so, their relatives, are even more mad, and by far the maddest of all are the cities that allow them free entry, and do not drive away any stranger who even attempts to engage in anything of this kind or any citizen either.

92b

Socrates: What is this, Anytus, have any of the sophists done you an injustice? Why are you so hard on them?

Anytus: No, by Zeus, to this day I have never even dealt with one of them, nor would I allow any of my own people to do so either.

Socrates: Then you have no experience whatsoever of these men?

Anytus: Yes, and I hope it remains so.

92c

Socrates: Blessed man, how could you know whether there is anything good or bad in their subject when you have no experience of it whatsoever?

Anytus: Easily, I know who these men are, in any case, whether I have experience of them or not.

Socrates: Perhaps you are a seer, Anytus, since from what you yourself are saying, I wonder how else you could know about these people. But of course we are not looking for the people who would make Meno worse if he went to them, let them be the sophists if you like. Tell us instead, and do a good deed for your family friend too, by advising him whom in this vast city he should go to, in order to attain eminence in the excellence I described just now.

92d

Anytus: Why don't you advise him yourself?

Socrates: Well, I have already stated who, in my view, the teachers of these excellences are, but according to you I was talking nonsense, and perhaps you have a point. So you should take your turn instead and tell him to whom he should go. Mention any name you like.

92e

Anytus: But why should he be given the name of a particular person? Indeed any noble and good Athenian he comes across will make him a better person than the sophists would, provided he is willing to take their advice.

Socrates: And did these good and respectable folk become like this spontaneously? And although they have not learned from anyone else, are they able nevertheless to teach others what they themselves have not learned?

Anytus: Well, I expect that these people have learned from their predecessors who were also good and respectable. Don't you think there have been many good men in this city?

93a

Socrates: I do, Anytus, and I think that there are people here who are good at civic affairs, and there have been just as many in the past as there are now, but were they also good teachers of their own excellence? That is the question that our discussion is concerned with, not whether there are good men here or not, nor whether there were any in the past, but whether excellence is teachable. That is what we have been considering all along. In considering this, we are considering whether the good men of today and their predecessors also knew how to impart to anyone else the excellence that made them good, or whether this is incapable of being imparted by a person, or acquired from someone else. This is what Meno and I have been investigating for some time. Consider it as follows, from your own viewpoint. Wouldn't you say that Themistocles²¹ was a good man?

Anytus: I would, him most of all.

93c

Socrates: In that case, would you say that he was also a good teacher, and if anyone was ever a good teacher of his own excellence, he was one?

Anytus: Yes, I think so, if he actually wanted to be.

93d

Socrates: But do you think he wouldn't have wanted some other people to become good and respectable, especially, I presume, his own son? Or do you think he was jealous of him and deliberately withheld the excellence whereby the man himself was good? Or have you not heard that Themistocles had his son, Cleophantus, taught to be a good horseman? Well, he used to keep his balance standing upright on horseback and throw a javelin from there. And he also performed lots of other wonderful feats in which his father had him instructed and rendered wise, all of which depended upon having good teachers. Haven't you heard this from the older generation?

Anytus: I have heard this.

Socrates: So no one could have alleged that the nature of his son was bad anyway.

93e

Anytus: Probably not.

Socrates: What about this? Have you ever yet heard from anyone, young or old, that Cleophantus, the son of Themistocles, was a man good and wise in the same accomplishments as his father?

Anytus: Certainly not.

Socrates: Well then, should we presume that although he wanted his own son to be educated in these feats, he still made him no better than the next man in the very excellence that made Themistocles himself wise, if, in fact, excellence is actually teachable.

Anytus: Probably not, by Zeus.

94a

Socrates: And yet that is the kind of teacher of excellence he was, this man who, according to you, was also among the very best men of former generations. But let us consider someone else, Aristides,²² the son of Lysimachus. Wouldn't you agree that he was a good man?

Anytus: I would, entirely so.

94b

Socrates: Didn't this man also educate his own son, better than any other Athenian, in everything that depends upon teachers? But do you think he made him a better man than anyone else? Indeed you have presumably dealt with him and you can see what he is like. Or take Pericles,²³ if you like, such a magnificently wise man. Do you know that he reared two sons, Paralus and Xanthippus?

Anytus: I do.

94c

Socrates: Then you also know that he had them taught to be horsemen, as good as any in Athens, and he had them educated to be as good as anyone in music, athletics and anything else that involves a skill. But did he not want to turn them out as good men? I think he did. He wanted to, but perhaps excellence is not teachable. And in case you think that only a few Athenians – mediocre ones at that – are unable to achieve this, bear in mind that Thucydides,²⁴ for his part, reared two sons, Melesias and Stephanus, and had them well educated in general, and they were also the best wrestlers in Athens. In fact, he entrusted one son to Xanthius and the other to Eudorus, and these were reputedly the most accomplished wrestlers of that era. Don't you remember?

94d

Anytus: So I hear, anyway.

Socrates: Isn't it obvious that if excellence can be taught, this man would never have had his own children taught these subjects whose instruction costs money, and not have had them taught the very subjects that produce good men, when that instruction costs nothing? Or was Thucydides perhaps a mediocre fellow after all, who did not have so many friends among the Athenians and her allies? He also belonged to an important family, and he had great influence in the city and throughout the rest of the Greek world. So, if excellence were indeed teachable, he would have found someone to make good men of his own sons, some fellow-citizen or some stranger, if he did not have time to do it himself because of his civic concerns. In any case, friend Anytus, it seems that excellence is not teachable.

94e

Anytus: Socrates, you seem all too ready to speak ill of people, so I would like to give you some advice, if you are prepared to heed me. Be careful, because in any city it is probably easier to do a person harm rather than do them good, but this is especially so in this city. But I think you know this yourself.

95a

Socrates: Oh, Meno, I think that Anytus is angry and I am not at all surprised. For he thinks, firstly, that I am denigrating the men I mentioned, and what is more, he believes that he himself is one of them. But if the fellow ever realises what speaking ill is actually like, he will stop being angry, but he does not realise this at the moment. However, you should tell me, aren't there noble and good men among your people too?

Meno: Very much so.

95b

Socrates: Well then, are these people prepared to put themselves forward as instructors of the young, and accept that they are teachers and that excellence can be taught?

Meno: Not at all, Socrates, by Zeus, you sometimes hear them saying that it is teachable and sometimes that it is not.

Socrates: Well, should we declare that they are teachers of this subject when they do not agree on this very issue?

Meno: I don't think so, Socrates.

95c

Socrates: What about these sophists, the only ones who actually profess to do so. Do you think that they are teachers of excellence?

Meno: That is what I admire most about Gorgias, Socrates. You would never hear him promising to do this, and he laughs at anyone else if he hears them making such a promise. Rather he believes one should turn people into clever speakers.

Socrates: So do you not even think that the sophists are teachers?

Meno: I can't say, Socrates. In fact, I am in the same position as everyone else; sometimes I think they are and sometimes that they are not.

95d

Socrates: Do you know that you and the other politicians are not the only ones who sometimes think excellence is teachable and sometimes that it is not, and that the poet, Theognis,²⁵ also says the same thing?

Meno: In what poem?

Socrates: In the elegiacs where he says, "Eat and drink with men of great power. / Sit with them and please them too. / For you will learn good from the good. / But if you consort with the bad, / You will lose even the intelligence you have."²⁶ Do you notice that in these lines he speaks as though excellence is teachable?

Meno: Apparently so.

95e

Socrates: But in other lines he changes his view somewhat. “If,” says he, “intelligence could be generated, and instilled in a man,” he says, I believe, that those who had the ability to do so “would gather large rewards aplenty”, and “Never would a good father produce a bad son, once he was persuaded by the words of the wise. But you will never make the bad man good by teaching him.”²⁷ Do you recognise that he says the opposite this time, on the same issues?

Meno: Apparently so.

96b

Socrates: Well, can you think of any other subject in which those who claim to be teachers are neither recognised as teachers of other people, nor indeed as being knowledgeable themselves, but are recognised as badly off when it comes to the very subject of which they claim to be teachers; while on the other hand, those who are themselves recognised as noble and good, sometimes claim that the subject is teachable and sometimes that it is not? Would you say that people in such confusion over an issue could be teachers in the strict sense of the word?

Meno: By Zeus, I would not.

Socrates: Well, if neither the sophists nor the good and noble people themselves are teachers of the subject, is it obvious that there would be no other teachers?

Meno: Yes, I think so.

96c

Socrates: And if there are no teachers, there are no pupils either?

Meno: I think the situation is as you describe it.

Socrates: But we have agreed that a subject that has neither teachers nor pupils is not teachable?

Meno: We have agreed.

Socrates: Now, apparently, there are no teachers of excellence anywhere?

Meno: This is so.

Socrates: And if there are no teachers, there are no pupils either?

Meno: It appears that this is so.

Socrates: So excellence would not be teachable?

96d

Meno: It seems not, if, in fact, we have considered this in the correct manner. So I really wonder, Socrates, are there any good men at all, and by what process do good people become good?

Socrates: I fear, Meno, that you and I are both mediocre fellows and that you have not been competently educated by Gorgias, nor I by Prodicus. So we should turn our attention to ourselves most of all and seek out someone who will make us better in one way or another. I say this in view of the previous enquiry, where we, quite ridiculously, overlooked the fact that it is not only under the guidance of knowledge that people conduct their affairs in a correct and competent manner. And that is probably why the understanding of the precise manner in which good men arise is escaping us too.

96e

Meno: What do you mean by this, Socrates?

97a

Socrates: As follows. Good men must be beneficent, we were right to agree that this must be the case, weren't we?

Meno: Yes.

Socrates: And were we perhaps also right to agree that they will be beneficent, if they guide our affairs aright?

Meno: Yes.

97b

Socrates: But it looks as if we were not right to agree that someone who does not have understanding is unable to guide us aright.

Meno: What do you mean?

Socrates: I will tell you. If someone who knew the way to Larissa, or anywhere else you like, were to go there and act as a guide to others, wouldn't he guide them rightly and in a competent manner?

Meno: Very much so.

Socrates: But what if someone had a right opinion as to what the way is, but had never gone there, nor did he possess the knowledge, wouldn't he also guide them aright?

Meno: Very much so.

97c

Socrates: And presumably, as long as he has right opinion concerning matters of which the other man has knowledge, he will be no worse a guide than the man who understands the matter, because what he thinks is true, even though he does not have understanding.

Meno: No worse, indeed.

Socrates: So when it comes to rightness of action, true opinion is no worse a guide than understanding. And this is what we omitted just now in considering the sort of thing that excellence is. We said that understanding alone guides us in acting aright, whereas, in fact, there was also true opinion.

Meno: So it seems.

Socrates: So, right opinion is of no less benefit than knowledge.

Meno: To a certain extent, Socrates, but the person who has knowledge would always succeed, while the person with right opinion would sometimes succeed and sometimes not.

97d

Socrates: What do you mean? Wouldn't someone who always has right opinion always succeed, as long as he forms right opinions?

Meno: Apparently he must, so I wonder, Socrates, in that case, why exactly knowledge is regarded as much more valuable than right opinion, and in what respect they differ from one another?

Socrates: Do you know why you are wondering, or should I tell you?

Meno: You really should tell me.

Socrates: It is because you have not paid attention to the statues of Daedalus,²⁸ but perhaps where you come from there are none.

Meno: What are you getting at, Socrates?

Socrates: That these too, if they have not been tied down, take flight and run away, yet once they have been tied down, they stay in place.

Meno: So what?

97e

Socrates: To acquire one of this man's creations when it has been let loose is of no great value. It is just like acquiring a runaway slave: it does not stay in place. But once it has been tied down it is very valuable, for his works are extremely beautiful. Now, what have I in mind when I refer to these statues? I am thinking of true opinions. For true opinions, too,

are a worthy possession for as long as they remain with us and everything they accomplish is good, yet they are not inclined to stay in place for long; rather, they run away out of a person's soul, and so they are not very valuable until the person ties them down by working out the cause. And this, my friend Meno, as we agreed earlier, is recollection. Once they have been tied down, they become knowledge and are stable. And that is why knowledge is valued more highly than right opinion, and knowledge differs from right opinion in being tied down.

98a

Meno: Yes, by Zeus, Socrates, it seems to be something of this sort.

98b

Socrates: And yet, I too am speaking as someone who does not know, someone who is making conjectures. But I do not think I am merely conjecturing that right opinion and knowledge are different; rather, if indeed I were to claim to know anything, and there is little I would claim, this is one thing I would include among things that I know.

Meno: And rightly you say so, Socrates.

Socrates: What about this? Isn't it right to say that true opinion is no less effective than knowledge in guiding the performance of each activity?

Meno: Yes, I think that is also true, Socrates.

98c

Socrates: So, right opinion will not be at all inferior to knowledge or less beneficial to our activities, nor will a man who has right opinion be less beneficent than a man with knowledge.

Meno: Quite so.

Socrates: And, indeed, we agreed that the good man is beneficent.

Meno: Yes.

98d

Socrates: Well then, since it is not because of knowledge alone that men are good and beneficent to their cities, if they are, but also because of right opinion, and since neither of these, neither knowledge nor right opinion, belongs to people by nature...²⁹ Or do you think either of them is present by nature?

Meno: I do not.

Socrates: Well, since these are not present by nature, neither would the good be good by nature.

Meno: Of course not.

Socrates: And since they are not good by nature, we went on to consider whether excellence is teachable.

Meno: Yes.

Socrates: Didn't it seem that if excellence is understanding, it is teachable?

Meno: Very much so.

98e

Socrates: And if there were any teachers it would be teachable, and if there were none it would not be teachable?

Meno: Quite so.

Socrates: But then have we agreed that there are no teachers of excellence?

Meno: We have.

Socrates: So, have we agreed that it is not teachable, nor is it understanding?

Meno: Entirely so.

Socrates: But do we agree that it is good?

Meno: Yes.

Socrates: And that whatever guides us aright is beneficial and good?

Meno: Entirely so.

99a

Socrates: And that these two alone, true opinion and knowledge, guide us aright, and the person who possesses them guides aright. For whatever unfolds aright due to chance does not happen through human guidance. But whatever is guided aright by man is really guided by these two, true opinion and knowledge.

Meno: I think this is so.

Socrates: In that case, since excellence is not teachable, can excellence still be knowledge?

Meno: Apparently not.

99b

Socrates: So, one of the two things that are good and beneficial has been ruled out, and knowledge would not be our guide in political activity.

Meno: I think not.

99c

Socrates: So, men such as Themistocles and people like him, and those whom Anytus here mentioned earlier, do not guide their cities by means of any wisdom or by being wise. That is also why they are unable to turn others into men like themselves. It is because they are not the sort of men they are on account of knowledge.

Meno: That is probably how matters stand, Socrates.

Socrates: Well, if this does not happen by means of knowledge, then what is left is sound opinion. Through recourse to this the

statesmen regulate their cities, being no better off than soothsayers and prophets when it comes to knowledge. For these people too speak many and true things whilst divinely inspired, but they have no knowledge of what they are saying.

Meno: It looks as if this is so.

99d

Socrates: In that case, Meno, don't these men deserve to be called divine, when they successfully accomplish so much that is so important, in their deeds and in their words, without possessing reason?

Meno: Very much so.

Socrates: So we would be right to refer to the prophets and soothsayers, whom we just mentioned, as divine, and all the poets too. And we would declare that the statesmen too are no less divine and divinely inspired than these, being inspired and possessed by the god whenever they achieve success when speaking on so many important issues, knowing nothing about what they are speaking of.

Meno: Entirely so.

99e

Socrates: And the women too, doubtless, refer to good men as divine, Meno, and whenever the Spartans praise some good man, they say "this man is divine".

Meno: And they appear to be speaking correctly, Socrates, although Anytus here will perhaps be annoyed with you for saying this.

100a

Socrates: That does not concern me; we shall converse with him some other time. But now, if we have enquired and spoken properly throughout this entire discussion, excellence would not be natural, nor could it be taught; rather, it would come to those who receive it as a divine portion, without reason, unless

there were among our statesmen someone capable of turning another person into a statesman. And if there were such a person, he might almost be described among the living as Homer describes Teiresias among the dead, when he says of him “He alone, of those in Hades, is conscious. / While the others are flitting shadows.”³⁰ In the same way, here among us, such a person would also be true substance, alongside shadows, when it came to excellence.

100b

Meno: I think you have expressed that beautifully, Socrates.

100c

Socrates: Well then, Meno, based upon this reasoning, it appears to us that excellence accrues to those who receive it as a divine portion. However, we shall know this with clarity when we first set about investigating what precisely excellence is in itself, before considering the manner in which excellence accrues to people. But it is now time for me to go somewhere else, and you should also convince your friend Anytus here of the very same things you yourself have been persuaded of so that he may be more gentle. For if you do persuade him, you will do a service to the people of Athens too.

NOTES

1. Meno was a general from Thessaly, probably from Pharsalus. He also appears in Xenophon's *Anabasis*.
2. Aristippus was a member of the Aleudae, the most prominent family in Thessaly, and a lover of Meno.
3. Gorgias was a noted and influential rhetorician and sophist from Leontini in Sicily. He has an eponymous dialogue.
4. Prodicus was a sophist from Ceos who was known for his teaching on the correct use of words.
5. Empedocles was a philosopher from Acragas in Sicily. Gorgias was said to be a student of Empedocles.
6. Fragment 105, Snell.
7. This is a reference to the King of the Persian (Achaemenid) Empire.
8. Fragment 133, Snell.
9. Socrates draws a square figure in the sand, adding two lines that intersect in the centre of the figure, running from the centre of one side to the centre of the opposite side.
10. That is, the 8ft square is double the 4ft square, which is based on a line that is 2ft long, and half the 16ft square, which is based on a line that is 4ft long.
11. Socrates constructs a 16ft square out of four 4ft squares by filling the space in the corner.
12. Socrates then draws diagonal lines that bisect each of the four 4ft squares that make up the 16ft square.
13. That is, the new square, which is constructed from the four diagonal lines and inscribed within the 16ft square.
14. Again, the new square, which is constructed from the four diagonal lines and inscribed within the 16ft square.
15. That is, in one of the original 4ft squares.
16. Again, the new square, which is constructed from the four diagonal lines and inscribed within the 16ft square.
17. From the diagonal line that bisects each of the four 4ft squares.
18. Anytus was an Athenian politician and one of Socrates' accusers. *Apology* 23e.

19. Protagoras of Abdera was an influential sophist and teacher of rhetoric. He is depicted in Plato's eponymous dialogue, and positions attributed to him are considered in Plato's *Theaetetus*.
20. Pheidias was a sculptor, painter and architect. Among his many important works was the gold and ivory statue of Zeus at Olympia, one of the Seven Wonders of the Ancient World, and the statue of Athena at the Parthenon in Athens.
21. Themistocles was a famous Athenian politician and general. He successfully led the Athenians in repelling two invasions by the Persian (Achaemenid) Empire.
22. Aristides, nicknamed 'the Just', was an Athenian politician and general. He was a leader of the Athenian resistance against the Persian invasion.
23. Pericles was among the most famous Athenian statesmen and orators of the 5th century.
24. Not to be confused with the famous historian of the Peloponnesian War, Thucydides, son of Melesias, an Athenian politician and rival of Pericles.
25. Theognis was a lyric poet from Megara.
26. Theognis, *Elegies*, lines 33-36, Diehl.
27. Theognis, *Elegies*, lines 434-438, Diehl.
28. Daedalus was a skilled architect and craftsman. He was said to have sculpted figures so real they appeared to live and move.
29. Omitting οὐτέπικτητα at 98d1.
30. *Odyssey* x.494-495.

persons in the dialogue:

SOCRATES *of Alopecce, son of Sophroniscus*

A COMPANION *from Locri Epizephyrri, Italy*

scene: no setting

313a

Socrates: What, for us, is law?

Companion: What kind of laws are you asking about?

Socrates: What's this? Does law differ from law on the particular basis of being law? Consider what I'm actually asking you. It's as if I had asked you what gold is, and you, as you have just done, were to ask me what kind of gold I meant. I believe you would not be questioning me in the correct manner. For gold, presumably, does not differ at all from gold, nor does stone from stone, on the basis of stone being stone or on the basis of gold being gold. And so, neither does law, I presume, differ at all from law. They are, rather, all the same thing, for each of them is a law, none is more so and none is less so. So this is my specific question: what, in general, is law? If you have a ready answer, let's hear it.

313b

Companion: What else could law be, Socrates, except whatever is conventional?

313c

Socrates: And do you think that speech is whatever is spoken, or sight is whatever is seen, or that hearing is whatever is heard? Or is speech other than what is spoken, sight other than what is seen, and is hearing one thing while whatever is heard is something else? And is law, in that case, one thing, while whatever is conventional is something else? Is this so, or how does it seem to you?

Companion: To me, at the moment, they seem different.

Socrates: So law, then, is not whatever is conventional.

Companion: I don't think so.

313d

Socrates: What, then, would law be? Let's investigate this as follows. If someone asked us about what has been said just now, "Since you say that whatever is seen is seen by sight, what is this sight by which they are seen?", we would reply that it is the sense perception that reveals things through the eyes. Suppose he were to go on and ask us, "Well then, since whatever is heard is heard by hearing, what is this hearing?", we would reply that it is the sense perception by which sounds are revealed to us through the ears. Well, what if he were also to question us in this way, "Since it is by law that whatever is conventional is conventional, what is this law by which they are conventional? Is it some sense perception, or an explanation, just as whatever is learned is learned by being explained by knowledge? Or is it discovery, just as whatever is discovered is discovered in the way that, for instance, what is healthy or unhealthy is discovered by medicine, and the intentions of the gods are, according to the soothsayers, discovered by prophecy, since skill, for us, is presumably the discovery of things? Is this so?"

314c

Companion: Entirely so.

Socrates: So, which of these might we best assume law to be?

Companion: The various decisions and decrees, in my opinion at any rate. What else could anyone declare law to be? So it is most likely, to respond to your question, that law in general is a decision of a city.

Socrates: You seem to be saying that law is political opinion.

Companion: I am.

314d

Socrates: And you may perhaps be right, but we may know better, as follows. Do you say that some people are wise?

Companion: I do.

Socrates: Aren't the wise people wise by wisdom?

Companion: Yes.

Socrates: And what about the just people? Aren't they just by justice?

Companion: Certainly.

Socrates: Are not the lawful people lawful by law?

Companion: Yes.

Socrates: Are the lawless people lawless by lawlessness?

Companion: Yes.

Socrates: Are the lawful people just?

Companion: Yes.

Socrates: Are the lawless people unjust?

Companion: Unjust.

Socrates: Are not justice and law most noble?

Companion: Quite so.

Socrates: And injustice and lawlessness are most base?

Companion: Yes.

314e

Socrates: And one preserves the city and everything else, while the other destroys and overturns them?

Companion: Yes.

Socrates: So, we should regard law as something noble and seek it as something good.

Companion: Of course.

Socrates: Didn't we say that law is a decision of a city?

Companion: We said so, indeed.

Socrates: Well then, are some decisions good while others are evil?

Companion: Indeed so.

Socrates: And yet, law was not evil.

Companion: Indeed not.

Socrates: In that case, it is not correct to reply so simply that law is a decision of a city.

Companion: No, I don't think so.

Socrates: So it would not be appropriate for an evil decision to be law.

Companion: No, indeed.

315a

Socrates: And yet it is quite apparent to me, for my part, that law is an opinion. But since it is not evil opinion, it is obvious by now, is it not, that it is good opinion, if law is indeed opinion?

Companion: Yes.

Socrates: But what is good opinion? Is it not true opinion?

Companion: Yes.

Socrates: And true opinion is discovery of what is?

Companion: It is, indeed.

Socrates: So law purports to be discovery of what is?

Companion: How then is it, Socrates, if law is discovery of what is, that we do not always have recourse to the same laws in relation to the same issues if things that are have been

discovered by us?

315b

Socrates: Law, nonetheless, purports to be the discovery of what is. So those people who apparently do not have recourse to the same laws are not always able to discover what the laws purport to discover, namely, what is. Come on, let's see whether it may become clear to us, from here on, whether we always have recourse to the same laws or use different laws at different times, and also whether we all have recourse to the same laws, or different people use different laws.

315c

Companion: Socrates, it is not difficult to recognise that the same people do not always have recourse to the same laws, and also that different people use different laws. Since, among ourselves here, at the moment, the law forbids human sacrifice; it is unholy, whereas the Carthaginians perform such sacrifices, as for them these are holy and conventional, and some of them even sacrifice their own sons to Cronus, as you may perhaps have heard. And it is not just non-Greeks who have recourse to different laws from ours, but even the people of Lycia and the descendants of Athamas perform such sacrifices, even though they are Greeks. And you know, I presume, about ourselves too, having heard about the kinds of laws we had recourse to in the past concerning the dead, laws whereby we first slaughtered sacrificial victims before the corpse was carried out, and engaged women to gather the bones into an urn. Then again, still earlier generations than these used to bury their dead in the house, but we do not follow any of these practices. And it would be possible to give lots of similar examples. Indeed, there is much scope for demonstrating that we ourselves do not always legislate on the same basis among ourselves, nor do people in general do so with one another.

315d

Socrates: I would not be at all surprised, best of men, if you were right in what you are saying and this is something I had overlooked. But as long as you state your opinions in your own way in a lengthy speech, and I do likewise, I don't think we will come to any conclusions. But if the enquiry were common to us both, we might perhaps come to agreement. So, engage with me in a common enquiry by putting questions to me if you wish, or by answering my questions if you prefer.

315e

Companion: I am willing, Socrates, to answer any questions you like.

Socrates: Come on then, are you accustomed to thinking that whatever is just is unjust, and whatever is unjust is just, or alternatively that whatever is just is just, while whatever is unjust is unjust.

Companion: I am accustomed to thinking that whatever is just is just, and whatever is unjust is unjust.

316a

Socrates: And aren't they conventionally thought of in this way by everyone, in the same way as they are thought of here?

Companion: Yes.

Socrates: Among the Persians too?

Companion: Even among the Persians.

Socrates: Always, I presume?

Companion: Always.

Socrates: Are things that offer more resistance conventionally regarded as heavier here, and those that offer less resistance as lighter, or is it the other way around?

Companion: No, whatever offers more resistance is heavier, whatever offers less is lighter.

Socrates: Is this also the case in Carthage and Lycia?

Companion: Yes.

316b

Socrates: And people everywhere conventionally think of whatever is good as good and whatever is base as base, and not that what's base is good and what's good is base.

Companion: Quite so.

Socrates: So, is it not the case, generally speaking, that we ourselves, and all other people too, conventionally think that things that are, are what they are, and not what they are not?

Companion: I think so.

Socrates: So, whoever is in error about what is, is in error about what is conventional.

316c

Companion: Socrates, according to your formulation these all appear conventional, both for ourselves and anyone else. But as long as I bear in mind that we never stop changing our laws this way and that, I cannot be persuaded.

Socrates: Indeed, perhaps you are not bearing in mind that when moving the pieces on a draughts board, the pieces are the same. But look at this closely with me. Have you ever come across writings concerning the health of sick people?

Companion: I have.

Socrates: Well, do you know what skill the treatise belongs to?

Companion: I do, it belongs to the skill of medicine.

Socrates: Don't you refer to those who are knowledgeable about these matters as physicians?

Companion: I agree.

316d

Socrates: Now, do those who are knowledgeable conventionally think the same things about the same matters, or do they differ?

Companion: The same things, in my opinion.

Socrates: Is it only Greeks who conventionally think the same things as their fellow Greeks concerning issues they know about, or does this also apply to non-Greeks, both with themselves and with Greeks?

Companion: There is a strong necessity, I presume, that those who know, be they Greeks or non-Greeks, should agree in thinking the same things.

Socrates: A good answer. And isn't this always the case?

Companion: Yes, indeed, always.

Socrates: Don't the physicians commit to writing whatever views they conventionally hold in relation to health?

Companion: Yes.

316e

Socrates: So, these writings of the physicians are medical writings and are medical laws.

Companion: Yes, medical.

Socrates: So, the agricultural writings are agricultural laws?

Companion: Yes.

Socrates: What about writings and conventions of horticultural work? To whom do these belong?

Companion: To the gardeners.

Socrates: So, these are our horticultural laws?

Companion: Yes.

Socrates: Belonging to those who know how to take charge of gardens?

Companion: Of course.

Socrates: And it is gardeners who know this.

Companion: Yes.

Socrates: To whom do the writings and conventions about the preparation of food belong?

Companion: To the cooks.

Socrates: So, these are culinary laws?

Companion: Culinary.

Socrates: Belonging, it seems, to those who know how to take charge of food preparation?

Companion: Yes.

Socrates: And it is cooks, they say, who know this?

317a

Companion: Yes, they know.

Socrates: Very well. To whom then do the writings and conventions concerning the administration of the city belong? Don't they belong to those with knowledge of taking charge of cities?

Companion: I think so.

Socrates: And who else besides the political people and the kingly people know this?

Companion: These are the people.

317b

Socrates: So, these writings are political writings which people refer to as laws. They are the writings of kings and of good men.

Companion: True.

Socrates: Now, those who are knowledgeable do not write different things at different times about the same matters, do

they?

Companion: No.

Socrates: Nor will they ever change their conventions from one to another on the same matters.

Companion: Indeed not.

Socrates: So, if we see any people anywhere doing this, should we declare that those who are doing so are knowledgeable or not knowledgeable?

Companion: Not knowledgeable.

Socrates: And wouldn't we say that whatever is correct is the convention on each subject, be it medicine, cookery or gardening?

317c

Companion: Yes.

Socrates: And we shall never declare that what is not correct is the conventional thinking?

Companion: Never.

Socrates: So, it happens to be unlawful.

Companion: Necessarily.

Socrates: Isn't it also the case in the writings dealing with what's just and what's unjust, and the general administration of the city, and how the city should be managed, that what is correct is the kingly law, and what's not correct is not this, even though it seems so to those who do not know. In fact, it is unlawful.

Companion: Yes.

317d

Socrates: So, we were right when we agreed that law is the discovery of what is.

Companion: Apparently.

Socrates: Let's also examine the following point about this matter. Who is it who knowledgeably distributes seeds on the land?

Companion: A farmer?

Socrates: Does he distribute the seeds that are appropriate for each type of land?

Companion: Yes.

Socrates: So, the farmer is good at distributing these, and his laws and distributions for these purposes are correct?

Companion: Yes.

Socrates: And who is good at distributing notes to melodies and distributes them appropriately, and to whom do the correct laws here belong?

317e

Companion: They belong to the flautist and the citharist.

Socrates: So, in these distributions the person who is most skilled in the laws is the most skilled flautist.

Companion: Yes.

Socrates: And who is best at distributing nutriment to people's bodies? Isn't it the person who distributes the appropriate nutriment?

Companion: Yes.

318a

Socrates: So, his distributions and his laws are best, and whoever is most skilled in the laws concerning these matters is best at making the distribution.

Companion: Indeed so.

Socrates: Who is this person?

Companion: A trainer.

Socrates: And he is the one who is best at pasturing the human herd of the body?

Companion: Yes.

Socrates: And who is best at pasturing a herd of sheep? What is his name?

Companion: A shepherd.

Socrates: So, the laws of the shepherd are best for the sheep.

Companion: Yes.

Socrates: And the laws of the cowherd are best for the cows.

Companion: Yes.

318b

Socrates: And whose laws are best for the souls of humans? Aren't they the laws of the king? Do you agree?

Companion: I agree.

Socrates: You are answering well. Now, can you say who among the ancients proved to be a good lawgiver in the laws of flute-playing? Perhaps you don't recall; would you like me to remind you?

Companion: Very much so.

Socrates: Was it not said to be Marsyas and his beloved, Olympus of Phrygia?²

Companion: That's true.

318c

Socrates: And their compositions for the flute are indeed most divine, being the only ones that stir and reveal the people who are in need of the gods. And still, to this day, they remain the

only compositions that do this, because they are divine.

Companion: This is so.

Socrates: And among the ancient kings, who is said to have been a good lawgiver whose conventions still remain to this day because they are divine?

Companion: I can't think of anyone.

318d

Socrates: Don't you know which Greek peoples make use of the most ancient laws?

Companion: Are you referring to the Spartans and Lycurgus, their lawgiver?

Socrates: But these are, perhaps, not yet three hundred years old, or a little older. Do you know, rather, where the best of the conventions come from?

Companion: From Crete they say.

Socrates: So, among the Greeks, these people make use of the most ancient laws?

Companion: Yes.

Socrates: Now, among these people, do you know who the good kings were? They were the offspring of Zeus and Europa, Minos and Rhadamanthus, whose laws these were.

318e

Companion: They say, Socrates, that Rhadamanthus, at any rate, was a just man, but that Minos was wild, harsh and unjust.

Socrates: Best of men, you are reporting a story from Attic tragedy.

Companion: What? Isn't this what is said about Minos?

Socrates: Not by Homer and Hesiod at any rate. Yet these two are more credible than all those tragedians put together, from

whom you have heard what you are now saying.

319a

Companion: Well, what do they say about Minos?

Socrates: I'll tell you then, so that you don't commit an impiety as most people do. For there is nothing more impious and nothing we should be more careful to avoid than error in word and deed in relation to the gods, or secondly, in relation to divine humans. You must, rather, employ great foresight whenever you are about to criticise or praise anyone, in case you speak incorrectly. That is why we should learn to distinguish between good and evil people. For the god gets angry whenever anyone criticises someone who is like himself, or when anyone praises someone of the opposite sort, the former being a good person. Indeed, you should not think that there are sacred stones, pieces of wood, birds and serpents, but no sacred humans. A good human being is, rather, more sacred than all these, while an evil one is more wretched.

319b

Socrates: And that is why I shall now speak about Minos, as Homer and Hesiod praised him, lest you, a human being of human birth, fall into error in speaking of a hero and a son of Zeus. For Homer, telling us that Crete had a large population and ninety cities, says that "Among them is Cnossus, a great city where Minos was king in the ninth season holding converse with mighty Zeus."³ So this is Homer's praise of Minos, briefly stated, but unlike anything Homer wrote about any of the heroes. That Zeus is a sophist, and that this skill is entirely noble he makes clear in various places, and especially here. For he means to say that Minos converses with Zeus every ninth year, visiting him regularly for educational purposes, as if Zeus were a sophist. So, the fact that the privilege of being educated by Zeus is assigned to none of the heroes apart from Minos is wondrous praise indeed. And in the *Odyssey*, in the 'Book of the

Dead', he describes Minos, but not Rhadamanthus, passing judgement, holding a golden sceptre.⁴ But here he does not describe Rhadamanthus passing judgement, nor anywhere meeting with Zeus. That's why I maintain that Minos has been praised by Homer more than all the others. For being a child of Zeus, and the only one educated by Zeus, is unsurpassed praise. Indeed, this is the meaning of the verse that says "in the ninth season holding converse with mighty Zeus".

319e

Socrates: Minos is a companion of Zeus, since conversations are discourses and a conversation partner is a companion in discourse. So Minos visited the Cave of Zeus every nine years in order to learn and in order to demonstrate what he had learned from Zeus over the previous nine-year period. There are those who understand 'holding converse' as being a drinking companion or playmate of Zeus, but you may use the following as evidence that those who understand the words in this way are talking nonsense. For of all the peoples there are, Greeks and non-Greeks, there are none who refrain from drinking parties and the playfulness born of wine except the Cretans, and the Spartans too, who learned this from the Cretans. In Crete, among the various laws that Minos instituted, there is one whereby they are not to drink together to the point of drunkenness. And it is evident that whatever he thought noble, he instituted as conventions for his fellow citizens. For Minos did not, of course, behave like some ordinary fellow and think one thing while enacting something else contrary to what he thought. No, his meeting was, as I say, through discourse for the purposes of education in excellence. That's why, for his fellow citizens, he instituted these laws through which Crete is happy for all time, and Sparta too, once it began to make use of them, since they are divine.

320c

Socrates: But Rhadamanthus was a good man, for he had been educated by Minos. He had not, however, been educated in the entire skill of kingship, but in a skill subservient to kingship sufficient to preside in courts of law, and that's why he was said to be a good judge. Indeed, Minos used him as a guardian of the law in the city, and used Talos for the same purpose in the rest of Crete. For Talos went around the villages three times a year as guardian of the law, having the laws inscribed on brass tablets, hence he was called 'brazen'. And Hesiod too says something similar to this about Minos. For having mentioned his name, he says: "Who proved to be the most kingly of mortal kings, lord over most of the neighbouring peoples, holding the sceptre of Zeus by which he also exercised kingship over the cities."⁵ And by 'the sceptre of Zeus' he simply means the education he received from Zeus, by which he governed Crete.

320e

Companion: In that case, Socrates, how on earth has the report been spread abroad that he was an uneducated, harsh person?

Socrates: Because of something, best of men, that you, if you are sound-minded, will be careful about, as will anyone who is going to preserve his reputation. Never cross any of the poetical folk, for the poets have enormous influence on reputations depending on whether they eulogise or demonise their subjects. And this was the mistake Minos made in waging war on this city of ours in which there is, in general, much wisdom and a great variety of poets of every sort, and tragedians too. For tragedy is of ancient date here, beginning not as people think with Thespis, nor with Phrynichus.⁶ Rather, if you care to think about it, you will find that this is a most ancient discovery made in this very city. And tragedy is the most popular and appealing form of poetry in which we attack Minos in revenge for those tributes he compelled us to pay.⁷ So, this was the mistake Minos made, being angry with us. Hence, to answer your question, he

has come to have an increasingly bad reputation. He was good and lawful and, as we said previously, good at distributing, and the strongest indication of this is the fact that his laws are unchanging, since they belong to someone who, in relation to the management of the city, well discovered the truth of what is.

321b

Companion: The argument you have presented sounds probable to me, Socrates.

Socrates: In that case, if I am speaking the truth, do you think that the Cretan citizens of Minos and Rhadamanthus made use of the most ancient laws?

Companion: Apparently.

Socrates: So, these two proved to be the best lawgivers of the ancients, shepherding and distributing to the people, just as Homer said that a good general is a shepherd of the multitude.⁸

Companion: Very much so.

321c

Socrates: Come on then, in the name of Zeus, god of friendship, what if someone were to ask us, “What is it that the good lawgiver, who is good at distributing to the body, distributes to the body to make it better?” We would reply, rightly and briefly, that it is nutriment and exertion to develop the body itself on the one hand, and to exercise and establish it on the other.

Companion: Correct.

Socrates: What if he were then to ask us, “What precisely is it that the good lawgiver, who is good at distributing, distributes to the soul to make it better?” How might we respond if we were to avoid shame to ourselves at our age?

321d

Companion: At this stage, I can no longer say.

Socrates: Well, it is a shame then, on the soul of each of us, that it is so plainly ignorant of that within it which is good or bad for it, even though it has considered what's good and bad for the body and much else.

NOTES

1. Most scholars doubt that Plato was the author of this work.
2. Marsyas was a legendary musician who was credited with having developed the skill of playing wind instruments by picking up and playing an aulos (a kind of double oboe, which is translated here as ‘flute’) that was left behind by Athena. Olympus was credited with having introduced instrumental music to Greece from Phrygia in the East.
3. *Odyssey* xix.178-179.
4. The ‘Book of the Dead’ refers to the *Odyssey*, Book xi. For the account of Minos passing judgement with his golden sceptre see *Odyssey*, xi.568-571.
5. Hesiod, Fragment 144.
6. Thespis is variously credited with having been the first actor in a play, having introduced the principal actor and the chorus, and having been the inventor of tragedy. Phrynichus was a student of Thespis and one of the first tragedians.
7. According to legend, after defeating the Athenians, Minos demanded that a tribute of seven young men and seven young women be sent by Athens to Crete every nine years as food for the Minotaur.
8. *Iliad* i.263, *Odyssey* iv.532.

narrator: CEPHALUS of Clazomenae

persons in the dialogue:

ADIMANTUS *Athenian, son of Ariston, Plato's brother*

ZENO *of Elea, student of Parmenides*

SOCRATES *of Alopecce, son of Sophroniscus*

PARMENIDES *of Elea, philosopher and teacher*

ARISTOTELES *Athenian of Thorae, son of Timocrates*

scene: outside the city walls of Athens at the house of Pythodorus, during the Great Panathenaea

126a

When we arrived in Athens from Clazomenae, our hometown, we came across Adimantus and Glaucon¹ in the Agora. Adimantus took me by the hand and said, "Greetings, Cephalus. If there is anything you want here, anything we can do for you, just ask." "In fact," said I, "that's the very reason I'm here, to ask you for something." "Tell us what you want," he said.

126b

"Your half-brother," I replied, "on your mother's side, what was his name? I have forgotten it. He was just a child when I came to Athens previously from Clazomenae, and that was a long time ago now. I think his father's name was Pyrilampes." "Indeed so," he replied. "And his name was?" "Antiphon. But why are you asking?"

126c

"These men here," said I, "are fellow citizens of mine, serious philosophers who have heard that this man, Antiphon, had numerous meetings with a certain Pythodorus, a companion of Zeno's,² and that he had heard the discussions that took place between Socrates and Zeno and Parmenides³ so often from Pythodorus that he could recite them from memory." "That's true," he replied. "Well," said I, "we want to hear an account of these discussions." "That is no problem," said he. "Indeed, as a

young man he studied these, although nowadays he takes after his grandfather of the same name and busies himself, for the most part, with horses. But if you want we can go to visit him. He left here a while ago to go home, but he lives nearby in Melite.”

127a

With that, we set off on foot and we came across Antiphon at home, giving a bit of some sort to a smith to work on. When he had finished with the smith, the brothers told him why we were there. He recognised me from my previous visit, and greeted me. When we asked him to recount the discussions, he was reluctant at first, saying that it involved a lot of work, but he eventually gave us a detailed account.

127b

Antiphon explained that, according to Pythodorus, Zeno and Parmenides had come to Athens once for the Great Panathenaea.⁴ Parmenides was by then well advanced in years, a grey-haired, sixty-five-year-old man of noble and handsome appearance. Zeno was almost forty at the time, tall and good-looking, and it was said that he had once been a favourite of Parmenides. They were staying, he said, with Pythodorus outside the walls in the Kerameikos. Socrates arrived, accompanied by a number of others who wished to hear a reading of Zeno’s writings which had been brought to Athens for the first time by these two visitors. Socrates was quite young at the time. While Zeno himself was reading to them, Parmenides happened to be outside.

127c

Pythodorus said that when he himself came in, along with Parmenides and Aristoteles, who later became one of The Thirty, very few of the arguments still remained to be read, and they listened to a small number of writings, although he himself had actually heard them before from Zeno.

127d

Having listened, Socrates asked that the first hypothesis of the first argument be read again, and once it had been read, he said,

Socrates: “What do you mean by this Zeno? If things that are, are many, they must actually be both like and unlike, but this is an impossibility since what’s unlike cannot be like, nor can what’s like be unlike. Is that what you are saying?”

Zeno: “It is,” said Zeno.

127e

Socrates: “So if it is impossible for what’s unlike to be like and for what’s like to be unlike, then isn’t it also impossible for them to be many? For if they were many, they would be subject to impossible outcomes. So isn’t this the intention of your arguments, solely to contend, contrary to everything that is said, that things that are, are not many? You think, don’t you, that each of your arguments is a proof of this very claim, and so you believe that you have provided as many proofs as written arguments to the effect that things that are, are not many? Is this what you mean, or have I misunderstood you?”

Zeno: “No,” said Zeno. “On the contrary, you have well understood the intent of the book as a whole.”

128a

Socrates: “Well Parmenides,” said Socrates, “I am discovering that Zeno here wishes to be close to you not only in general friendship, but also in his book. For he has, in a way, written the same thing as yourself, but by making some changes he tries to deceive us into believing that he is saying something different. For you say in your poems that ‘all is one’, and you provide excellent, elegant proofs of this assertion, while this man, for his part, says that it is not many,⁵ and he too provides lots of extensive proofs. So with one of you saying that it is one, and the other that it is not many, and each speaking as if you had seemingly not said the same things, while saying more or less

the same things, what you have said appears to have been spoken over the heads of the rest of us.”

128b

Zeno: “Yes, Socrates,” said Zeno, “but you have not fully appreciated the truth about the book, although like the hounds of Sparta, you hunt down the arguments and follow their trail quite well. In the first place, you are unaware of the fact that the book is not really so serious as to have been written with the intention you are describing, while concealing it from people as if that was some significant achievement. No, you are referring to something incidental, while in truth this is a support to Parmenides’ argument against those who try to make fun of it on the grounds that if it is one, many absurdities and self-contradictions follow from that proposition. This book then opposes those who speak for the many and pays them back with the same and more, intending to demonstrate that this hypothesis of theirs, that it is many, incurs even greater ridicule, if someone sufficiently presses the point, than the hypothesis that it is one. I wrote the book in this sort of combative spirit in my early years, but once it had been written, someone plagiarised it, so I was not allowed to decide whether it should see the light of day or not. So, this is the point you have missed, Socrates. You think it was written out of an older man’s ambition rather than a young man’s combative spirit. Although, as I said, your comparison is not a bad one.”

128e

Socrates: “I accept that,” said Socrates, “and I believe that the circumstances were as you say. But tell me this. Don’t you think that there is a form, just by itself, of likeness, and again another form, opposite to this, that which unlike is? And don’t you and I, and whatever else we call many, get a share of these two? Don’t those that get a share of likeness become like in the way that, and to the extent that, they get a share, while those that get a share of unlikeness become unlike, and those that get a share of

both become both? And even if all things get a share of both, although they are opposites, and by partaking of both become like as well as unlike themselves, is that a surprise?

129b

Socrates: “Indeed if someone were to show the likes themselves becoming unlike, or the unlikes becoming like, that I think would be extraordinary. But if he shows that whatever partakes of both of these is characterised in both ways, that does not seem at all unusual to me, Zeno, nor indeed if he shows that all things are one by partaking of the one, and these same things are again many by partaking of multiplicity. But if someone can prove that this itself, what one is, is many, or in turn that the many are indeed one, at this I will be surprised. And the same holds for all of the others. If someone could show the kinds and forms themselves, in themselves, being characterised by these opposite characteristics, that would be worthy of surprise. But why be surprised if someone can show that I am one and many by saying, when he wants to show that I am many, that my right side is different, my left side is different, my front is different, my back is different, and the same goes for my upper and lower parts, since I presumably partake of multiplicity?

129d

Socrates: And when he wants to show that I am one, he will say that I am one person of the seven of us here, since I also partake of the one. And so he shows that both assertions are true. So if, in the case of stones and sticks and the like, someone were to show that such objects are many and also the same one, we shall maintain that he has shown that something is one and many, not that the one is many or that the many is one, and he is not saying anything surprising, but something we would all accept. But if someone were first to distinguish as separate the forms, just by themselves, of the things I just mentioned, 129e such as likeness, unlikeness, multiplicity, the one, rest and motion and the like, and then show that these are capable of being

combined and separated among themselves, I for one, Zeno, would admire him wonderfully,” said he. “And although I believe you have dealt with these issues very thoroughly, I would, as I say, have much more admiration for someone who could demonstrate that this very same difficulty that you and Parmenides described among visible things, is involved ^{130a} in all sorts of ways in the forms themselves, in things that are grasped by reasoning.”

^{130a}

Pythodorus said that while Socrates was saying all this, he himself thought that at any moment Parmenides and Zeno might get annoyed, but on the contrary they paid close attention to him and occasionally glanced at one another and smiled as if they admired Socrates.

^{130b}

Parmenides confirmed this when Socrates stopped speaking, by saying,

Parmenides: “Socrates, you deserve to be admired for your drive towards arguments, but tell me this. Do you, as you say, distinguish as separate, certain forms by themselves, and as separate too, whatever partakes of the forms? And do you think that likeness itself is something separate from the likeness that we have, and indeed one and many and everything else you heard of just now from Zeno?”

^{130c}

Socrates: “I do, indeed,” said Socrates.

Parmenides: “And what about things of this sort,” said Parmenides, “things like the just, beautiful and good and everything of this sort? Is there a form just by itself in each case?”

Socrates: “Yes,” he said.

Parmenides: “And what about a form of human being separate from us and from all those who are like us? Is there a form itself of human being, or fire, or even water?”

Socrates: “I have often been in perplexity about these, as to whether I should speak of them just as I spoke of the others, or speak of them differently.”

Parmenides: “What about the following things, Socrates, which may seem ridiculous, for example, hair, mud and dirt, or anything else totally contemptible or commonplace? Are you perplexed as to whether or not you should say there is also a separate form of each of these which, in turn, is different from anything we handle?”

130d

Socrates: “Not at all,” said Socrates. “No, these are just what we see them to be. Surely it would be most strange to think that there is a form belonging to these. At that stage, I am troubled sometimes lest there might be something that is the same about all these. Then, whenever I end up in that predicament I take flight, afraid that I might sink into some pit of nonsense and be undone. Finally, getting back to those things which we have just said have forms, I spend my time dealing with these.”

130e

Parmenides: “You are still young, Socrates,” said Parmenides, “and philosophy has not yet taken hold of you as, in my opinion, it will in the future when you will hold none of these things in contempt. For the moment however, because of your youth, you still look to the opinions of other people. In any case, tell me this: does it seem to you, as you say, that there are certain forms of which these other things get a share and adopt their names? For example, getting a share of likeness, do they become like, getting a share of largeness do they become large, and getting a share of beauty and of justice do they become just and beautiful?”

Socrates: “Indeed so,” replied Socrates.

131a

Parmenides: “Doesn’t whatever gets a share in each case get a share either of the whole form or of a part? Or could there be some other way of getting a share besides these two?”

Socrates: “How could there be?”

Parmenides: “Do you think that the whole form, being one, is in each of the many? Or what do you think?”

Socrates: “What’s to prevent this, Parmenides?” said Socrates.

Parmenides: “So, being one and the same, it will be present simultaneously as a whole in things that are many and separate, and would thus be separate from itself.”

131b

Socrates: “No, Parmenides,” said he, “not if it is like a day, which being one and the same is in many places simultaneously, and is, nevertheless, not separate from itself. If this were the case, each of the forms could simultaneously be one and the same in all things.”

Parmenides: “Socrates, how nicely you make the one and the same be in many places simultaneously, as if you were to throw a sail over many people and maintain that one, as a whole, is over many. Don’t you think something like this is what you are saying?”

Socrates: “Perhaps.”

Parmenides: “Would the sail as a whole be on each person or just a part of this, and another part on another person?”

Socrates: “A part.”

131c

Parmenides: “So, forms themselves are divisible, Socrates, and things that partake of them would partake of a part, and would

no longer be in each as a whole, but a part of each form would be in each.”

Socrates: “Apparently so.”

Parmenides: “Well then, Socrates, do you wish to maintain that our one form is in truth divided and will still be one?”

Socrates: “Not at all.”

131d

Parmenides: “Indeed, look at it this way. If you are going to divide largeness itself, and each of the many large things is to be large by a part of largeness, smaller than largeness itself, won’t that appear unreasonable?”

Socrates: “Very much so.”

Parmenides: “What about this? Will each thing that has received a small part of the equal be equal to anything else by possessing a part that is less than the equal itself?”

Socrates: “Impossible.”

131e

Parmenides: “But some of us will have a part of the small, and the small will be greater than this part since this is a part of itself, and the small itself will in this way be larger, while whatever the subtracted part is added to will be smaller, not larger, than before.”

Socrates: “Well, that couldn’t happen,” he said.

Parmenides: “In that case, Socrates, in what way will the others get a share of your forms when they are unable to get a share either on the basis of parts or on the basis of wholes?”

Socrates: “No, by Zeus,” he responded, “I don’t think it is easy to decide such a question at all.”

Parmenides: “What about this then? Where do you stand on the following question?”

Socrates: “Which is?”

132a

Parmenides: “I presume that you think that each form is one for some such reason as this. Whenever many things seem to you to be large, perhaps there seems to be one characteristic that is the same as you survey them all. Hence you think that the large is one.”

Socrates: “That’s true.”

Parmenides: “What about the large itself and the other large things? If you survey all these in the same way with the soul, won’t some one large appear, in turn, by which all these large things appear large?”

Socrates: “So it seems.”

132b

Parmenides: “So, another form of largeness will make an appearance alongside the largeness itself that has come into being, and whatever partakes of this, and another, in turn, over all these, by which all these will be large, and each of your forms will be one no longer but unlimited in multiplicity.”

Socrates: “But Parmenides,” said Socrates, “couldn’t each of the forms be a thought of these, and it would not be appropriate for this to arise anywhere else besides in souls? For in this way, each form could be one and would no longer be affected by everything that has just been described.”

Parmenides: “Then,” Parmenides replied, “is each of the thoughts one, but a thought of nothing?”

Socrates: “No, that’s impossible,” he said.

Parmenides: “So, it is a thought of something?”

Socrates: “Yes.”

132c

Parmenides: “Of something that is or something that is not?”

Socrates: “Something that is.”

Parmenides: “Isn’t it of some one which that thought thinks is set over all of them as one characteristic?”

Socrates: “Yes.”

Parmenides: “That something, which is thought to be one, being always the same over all of them, won’t that be a form?”

Socrates: “Again, this appears necessary.”

Parmenides: “What about this, then?” asked Parmenides. “By the necessity by which you maintain that the others partake of the forms, do you think either that each is from thoughts and everything thinks, or although they are thoughts, they are devoid of thinking?”

132d

Socrates: “No, this is not reasonable either,” he said. “But Parmenides, what appears most obvious to me is that these forms stand like patterns in nature, while the others resemble these and are likenesses, and for the others this partaking of forms turns out to be nothing else but resembling them.”

132e

Parmenides: “Now,” Parmenides replied, “if something resembles the form, can that form fail to be like whatever resembles it, insofar as that has been made like the form? Or is there some way that the like is unlike its like?”

Socrates: “There is not.”

Parmenides: “And isn’t there a strong necessity that the like partakes of one and the same thing as what it is like?”

Socrates: “It is necessary.”

Parmenides: “But what do the likes partake of so as to be like? Won’t that be the form itself?”

Socrates: “Entirely so.”

133a

Parmenides: “So nothing can be like the form, nor can the form be like anything else. Otherwise, alongside the form another form will always make an appearance. And if that form is like something, yet another form will appear, and the continual generation of a new form will never cease if the form turns out to be like whatever partakes of it.”

Socrates: “Very true.”

Parmenides: “Since it is not by likeness that the others get a share of the forms, we must rather look for something else by which they get a share.”

Socrates: “So it seems.”

Parmenides: “Do you see then, Socrates,” said he, “the extent of the difficulty once someone distinguishes forms as being just by themselves?”

Socrates: “Very much so.”

133b

Parmenides: “Mark my words, you have not yet, so to speak, grasped the extent of the difficulty that arises if you propose one form for each of the things that are, in each case, by continually separating something off.”

Socrates: “How so?”

Parmenides: “Though there are various other reasons, the main one is this. If someone were to maintain that if forms are such as we say they must be, it is not in their nature even to be known, no one would be able to show someone who says so that he is wrong, unless the objector happened to be naturally gifted, and have lots of experience and a willingness to follow a very extensive and far-reaching demonstration dealing with the issue. Otherwise, the person who insists that the forms are

unknowable would remain unconvinced.”

Socrates: “Why is that Parmenides?” Socrates asked.

133c

Parmenides: “Because, Socrates, I would imagine that you and anyone else who proposes that there is, for each, some being just by itself, would agree in the first place that none of these are among us.”

Socrates: “Indeed not. How could it still be just by itself?”

Parmenides: “Well said,” Parmenides replied. “Therefore, those characteristics that are what they are in relation to one another have their being in relation to themselves, and not in relation to whatever is with us, whether someone posits likeness or whatever else he suggests we partake of and are named after in each case. While those that are with us, although they have the same names as the forms, are, in turn, what they are in relation to themselves and not in relation to the forms. And whatever things are named in this way refer to themselves and not to those forms.”

133d

Socrates: “What do you mean?” asked Socrates.

Parmenides: “For instance,” said Parmenides, “if one of us is the master or slave of someone, he is not, of course, the slave of master itself, what master is; nor is a master, master of slave itself, what slave is. Rather, as human beings, we are master or slave of a fellow human. Mastery itself, on the other hand, is what it is of slavery itself, while slavery itself, in like manner, is slavery of mastery itself.

133e

Parmenides: But the things among us do not have their power towards those, nor do those have their power towards us. Rather, as I say, these are what they are, of themselves and in relation to themselves, while things with us are, in like manner,

relative to themselves. Or do you not understand what I am saying?"

134a

Socrates: "I understand," said Socrates, "very much so."

Parmenides: "And is it also the case that knowledge itself, what knowledge is, would be knowledge of that truth itself, what truth is?"

Socrates: "Entirely so."

Parmenides: "Then again, each of the instances of knowledge, what each is, would be knowledge of particular things that are. Isn't this so?"

Socrates: "Yes."

134b

Parmenides: "The knowledge with us would be knowledge of the truth with us, and furthermore, particular knowledge with us would turn out to be knowledge of particular things that are with us?"

Socrates: "Necessarily."

Parmenides: "But the forms themselves, as you agree, we neither possess nor can they be with us."

Socrates: "No, indeed not."

Parmenides: "And presumably each of the kinds themselves is known by the form of knowledge itself?"

Socrates: "Yes."

Parmenides: "Which we do not possess."

Socrates: "We do not."

Parmenides: "So none of the forms is known by us since we do not partake of knowledge itself."

Socrates: “Apparently not.”

134c

Parmenides: “So what beauty itself is, and the good, and indeed everything we understand as being characteristics themselves, are unknown to us.”

Socrates: “Quite likely.”

Parmenides: “Then consider something even more daunting.”

Socrates: “Which is?”

Parmenides: “You would say, I presume, that if there is indeed a kind, just by itself, of knowledge, it is much more precise than the knowledge with us, and the same holds for beauty and all the others.”

Socrates: “Yes.”

Parmenides: “Now, if anything else partakes of knowledge itself, wouldn’t you say that a god, more so than anyone, possesses the most precise knowledge?”

Socrates: “Necessarily.”

134d

Parmenides: “In that case, will a god possessing knowledge itself be able to know things in our realm?”

Socrates: “Why not?”

Parmenides: “Because, Socrates,” said Parmenides, “we have agreed that those forms do not have the power that they have, in relation to the things that are with us, nor do the things with us have their power in relation to those forms. The power in each case is in relation to themselves.”

Socrates: “Yes, we agreed on that.”

134e

Parmenides: “Well then, if this most precise mastery is with a god, and this most precise knowledge too, the gods’ mastery would never exercise mastery over us, nor would their knowledge know us nor anything else that is with us. Rather, just as we neither rule over them with our rule nor do we know anything of the divine with our knowledge, they in turn by the same argument, are not the masters of us nor do they have knowledge of human affairs, although they are gods.”

Socrates: “But surely if someone were to deprive a god of knowledge, the argument would be most surprising.”

135a

Parmenides: “Indeed, Socrates,” said Parmenides, “the forms inevitably possess these difficulties and many others besides these, if there are these characteristics of things that are, and someone marks off each form as something by itself. And the person who hears about them gets perplexed and contends that these forms do not exist, and even if they do it is highly necessary that they be unknowable to human nature. And in saying all this he seems to be making sense, and as we said before, it is extraordinarily difficult to persuade him otherwise. Indeed, this will require a highly gifted ^{135b} man who will have the ability to understand that there is, for each, some kind, a being just by itself, and someone even more extraordinary who will make this discovery and be capable of teaching someone else who has scrutinised all these issues thoroughly enough for himself.”

Socrates: “I agree with you, Parmenides,” said Socrates. “What you are saying is very much to my mind.”

Parmenides: “Yet on the other hand Socrates,” said Parmenides, “if someone, in the light of our present considerations and others like them, will not allow that there are forms of things that are, and won’t mark off a form for each one, he will not even have anywhere to turn his thought, since

he does not allow that a characteristic of each of the things that are is always the same. And in this way he will utterly destroy the power of dialectic. However, I think you are well aware of such an issue.”

135c

Socrates: “That’s true.”

Parmenides: “Well then, what will you do about philosophy? In what direction will you turn while these are unknown?”

Socrates: “Well at the moment I don’t think I can see an answer.”

Parmenides: “Socrates,” said he, “that is because you are trying to mark off something beautiful, just and good, and each one of the forms too soon before you have been trained. Indeed, I noticed this earlier as I listened to you in discussion here with this man Aristoteles. Now, mark my words, although the drive you bring to arguments is noble and divine, you must bestir yourself while you are still young and get more training in something that seems useless and which most people call idle talk, or else the truth will escape you.”

135d

Socrates: “What is the manner of the training, Parmenides?” he asked.

Parmenides: “The same as what you heard from Zeno,” he replied, “with the following exception. I was indeed delighted when you said that you would not allow the enquiry to be about visible things or to consider their wandering. It was rather to consider things that one apprehends mainly by reason and might think to be forms.”

Socrates: “That,” said he, “is because by the other approach I think it is all too easy to show things that are, being characterised as both like and unlike or as anything else at all.”

135e

Parmenides: “And you are right to say so,” he said. “But it is also necessary to do something else in addition. It is not enough to consider the consequences that follow from hypothesising that each is, but you must also hypothesise that this same thing is not, if you wish to be better trained.”

Socrates: “How do you mean?” he asked.

136a

Parmenides: “Take for instance, if you like,” said he, “this hypothesis that Zeno proposed, ‘if many are’.⁶ What are the consequences for the many themselves in relation to themselves and in relation to the one, and for the one in relation to itself and in relation to the many. And furthermore, if many are not, you need to consider what the consequences will be both for the one and for the many in relation to themselves and one another. And again, if you hypothesise ‘if likeness is’ or ‘if likeness is not’, what will follow from either hypothesis, both for the things hypothesised themselves, and for the others, both in relation to themselves and one another. And the same argument applies when dealing ^{136b} with unlikeness, with movement, with rest, with generation, with destruction, with being itself, and with non-being. And in a word, whatever you may ever hypothesise as being, or as not being, or as characterised by any other characteristic whatsoever, you should consider the consequences both in relation to itself and in relation to each of the others, whichever you choose, and in relation to a number of them, and in relation to them all together in the same way, and the others too for their part, both in relation to themselves and in relation to anything else you may ever choose, ^{136c} whether you hypothesise it as being or as not being, if you are to be perfectly trained to have a supreme vision of the truth.”

Socrates: “Parmenides,” said he, “you are describing an enormous undertaking which I do not really understand. Why

don't you go through the process yourself for me by hypothesising something so that I may better understand this."

136d

Parmenides: "For a man of my age, Socrates," he replied, "you are assigning a huge task."

Socrates: "Well, Zeno," said Socrates, "why don't you go through a hypothesis for us?"

136e

And Pythodorus said that Zeno laughed and replied,

Zeno: "We should ask Parmenides himself, for he is describing something that is far from commonplace. Don't you see the extent of the task you are assigning him? Now, if there were more of us here it wouldn't be right to ask him, for it is not appropriate to speak of such matters in front of lots of people, especially at his age. Indeed, most people are unaware that without this detailed and extensive exploration it is impossible to encounter the truth and acquire reason. And so, Parmenides, I join Socrates in his request so that I too may hear you out to the very end after all these years."

137a

When Zeno had said all this, Antiphon told us that Pythodorus said that he himself, along with Aristoteles and the others, implored Parmenides to demonstrate what he was speaking of, nothing else would do. So Parmenides said,

Parmenides: "I must comply although I feel as if I am in the same predicament as the horse in Ibycus' poem,⁷ the aged competitor who is about to compete in a chariot race and, because of past experience, trembles at the prospect. The poet comparing himself to this animal said that he himself, an old man, was being compelled against his will to embark upon amorous pursuits. And as I think back, I too, it seems, am fearful as to how at my age I am to swim across such a vast sea of

arguments. Nevertheless, I should oblige you since indeed, as Zeno says, we are by ourselves. So, where shall we begin and what shall we hypothesise first? Or ^{137b} since it seems I am to play this laborious game, would you like me to begin with myself and my own hypothesis by hypothesising about the one itself, and what the consequences must be if it is one or not one?"⁸

Zeno: "Yes, certainly," said Zeno.

Parmenides: "Who," asked Parmenides, "will respond to me? Perhaps the youngest? Yes, he will make least trouble and will be most inclined to answer based upon what he thinks, and at the same time his answering would give me a rest."

^{137c}

Aristoteles: "I'm ready for that, Parmenides," said Aristoteles, "since you are referring to me when you refer to the youngest. So ask your questions and I will answer you."

Parmenides: "Very well," said he. "If one is,⁹ the one would not be many, would it?"

Aristoteles: "No, how could it be?"

Parmenides: "So, of this there is no part, neither could it be a whole."

Aristoteles: "Why is that?"

Parmenides: "The part is presumably part of a whole."

Aristoteles: "Yes."

Parmenides: "And what about the whole? Wouldn't that from which no part is missing be a whole?"

Aristoteles: "Certainly."

Parmenides: "So in both cases the one would consist of parts both by constituting a whole and by having parts."

Aristoteles: “Necessarily.”

137d

Parmenides: “So in both cases the one would thus be many, but not one.”

Aristoteles: “True.”

Parmenides: “But it should not be many, but just one.”

Aristoteles: “It should.”

Parmenides: “So, if the one is to be one, it will neither be a whole nor will it have parts.”

Aristoteles: “Indeed not.”

Parmenides: “Now, if it does not have a part it would not have a beginning, an end, or a middle, for these sorts of things would already be parts of it.”

Aristoteles: “Correct.”

Parmenides: “And indeed, a beginning and an end are a limit of each thing.”

Aristoteles: “Of course.”

137e

Parmenides: “So the one is limitless if it has neither a beginning nor an end.”

Aristoteles: “Limitless.”

Parmenides: “So it is without shape, for it partakes neither of round nor straight.”

Aristoteles: “How so?”

Parmenides: “Well, whatever has its extremities everywhere the same distance from the middle is presumably round.”

Aristoteles: “Yes.”

Parmenides: “And indeed, something is straight if the middle intercepts both extremities.”

Aristoteles: “Quite so.”

Parmenides: “Then the one would have parts and would be many if it were to partake of straight or round shape.”

Aristoteles: “Yes certainly.”

Parmenides: “So it is neither straight nor round since, in fact, it does not have parts.”

Aristoteles: “Correct.”

138a

Parmenides: “And indeed, being like this, it would be nowhere at all, for it would neither be in another nor in itself.”

Aristoteles: “How so?”

Parmenides: “Being in another, it would presumably be encompassed in a circle by whatever it was contained in, and would touch this in many places with many parts. However, since it is one, and devoid of parts, and does not partake of circularity, it is impossible for it to touch in many places in a circle.”

Aristoteles: “Impossible.”

138b

Parmenides: “Then again, being in itself it would, by itself, encompass nothing other than itself, if it were actually in itself, for it is impossible for anything to be in something and not be encompassed by it.”

Aristoteles: “Impossible, indeed.”

Parmenides: “In that case, whatever encompasses would be one thing, and whatever is encompassed would be another, for the same thing will not simultaneously, as a whole, be both active and passive, and thus the one would no longer be one but

two.”

Aristoteles: “Indeed not.”

Parmenides: “So the one is not anywhere, neither in itself nor in another.”

Aristoteles: “It is not.”

138c

Parmenides: “This being the case, consider whether it can be at rest or in motion.”

Aristoteles: “Why could it not be?”

Parmenides: “Because being in motion it would either be transported or altered, for these are the only motions.”

Aristoteles: “Yes.”

Parmenides: “But it is impossible, presumably, for the one still to be one while being altered from itself.”

Aristoteles: “Impossible.”

Parmenides: “So it does not move by alteration at least.”

Aristoteles: “Apparently not.”

Parmenides: “In that case, is it transported?”

Aristoteles: “Perhaps.”

Parmenides: “And yet, if the one were transported it would either be borne around in a circle in the same place, or change location from one place to another.”

Aristoteles: “Necessarily.”

138d

Parmenides: “Now, being borne around in a circle, it must stand upon a centre and have all that is borne around that centre as other parts of itself. But in what way is that to which neither centre nor parts belong, ever to be borne in a circle

upon a centre?”

Aristoteles: “There is no way.”

Parmenides: “Well then, does it come to be in different places at different times by changing place? Is that how it moves?”

Aristoteles: “If it actually does move.”

Parmenides: “Didn’t it appear impossible for it to be somewhere, in something?”

Aristoteles: “Yes.”

Parmenides: “So isn’t it even more impossible for it to come to be somewhere in something?”

Aristoteles: “I don’t understand how.”

Parmenides: “If it is coming to be in something, isn’t it necessary that it not yet be in that something while it is still coming to be in that? Nor can it still be entirely outside that if indeed it is already coming to be in it.”

Aristoteles: “Necessarily.”

138e

Parmenides: “Now, if this is to happen to anything, it could only happen to something that has parts, for some of it could already be in that thing while, at the same time, some is outside. But that which has no parts will presumably not be able, in any way, to be neither wholly inside something nor wholly outside, at the same time.”

Aristoteles: “True.”

Parmenides: “But isn’t it even more impossible for that which has no parts and is not a whole, to come to be in something, somewhere, since it cannot come to be in something else, either part by part, or as a whole?”

Aristoteles: “Apparently.”

139a

Parmenides: “So it does not change place by going somewhere or coming to be in something, nor is it borne about in the same place, nor is it altered.”

Aristoteles: “It seems not.”

Parmenides: “So, on the basis of every movement, the one is unmoving.”

Aristoteles: “Unmoving.”

Parmenides: “And yet we also say that it cannot be in something.”

Aristoteles: “Yes, so we say.”

Parmenides: “So it is never in the same.”

Aristoteles: “Why?”

Parmenides: “Because it would then be in that, in the same that it is in.”

Aristoteles: “Certainly.”

Parmenides: “But it was unable to be either in itself or in another.”

Aristoteles: “It was indeed.”

Parmenides: “So the one is never in the same.”

Aristoteles: “It seems not.”

139b

Parmenides: “But that which is never in the same is neither still nor at rest.”

Aristoteles: “Indeed, it cannot be.”

Parmenides: “So the one, it seems, is neither at rest nor in motion.”

Aristoteles: “Yes, so it appears anyway.”

139c

Parmenides: “Then it will neither be the same as another or itself, nor would it be different from itself or from another.”

Aristoteles: “Why is that?”

Parmenides: “Being somehow different from itself, it would be different from one and would not be one.”

Aristoteles: “True.”

Parmenides: “And indeed, being the same as another it would be that and not itself, and so in this way it would not be just what it is, namely one, it would rather be different from one.

Aristoteles: “Indeed.”

Parmenides: “So it will not be the same as another, or different from itself.”

Aristoteles: “It will not.”

Parmenides: “Yes, and it will not be different from another as long as it is one, for it does not belong to the one to be different from anything. It belongs rather to different alone, and to nothing else to be different from another.”

Aristoteles: “Correct.”

Parmenides: “So it will not be different by being one. Or do you think it could?”

Aristoteles: “Of course not.”

139d

Parmenides: “And yet, if it will not be different by this, it will not be so by itself, and if not by itself it will not, itself, be different, and being in no way different itself it will be different from nothing.”

Aristoteles: “Correct.”

Parmenides: “Nor indeed will it be the same as itself.”

Aristoteles: “Why not?”

Parmenides: “The nature of the one is not of course the nature of the same.”

Aristoteles: “Why is that?”

Parmenides: “Because once something has become the same as something, it does not become one.”

Aristoteles: “What happens?”

Parmenides: “Having become the same as many, it must become many and not one.”

Aristoteles: “True.”

Parmenides: “But if the one and the same did not differ at all, whenever something became the same it would always come to be one, and whenever it became one it would always come to be the same.”

Aristoteles: “Certainly.”

139e

Parmenides: “So, if the one is to be the same as itself, it will not be one with itself, and accordingly, although it is one, it will not be one. But this is indeed impossible. So it is impossible for the one either to be different from another or the same as itself.”

Aristoteles: “Impossible.”

Parmenides: “In this way then, the one would neither be different from, nor the same as, itself or another.”

Aristoteles: “It would not.”

Parmenides: “Nor indeed will it be like or unlike anything, either itself or another.”

Aristoteles: “Why is that?”

Parmenides: “Because whatever is characterised as the same is presumably like.”

Aristoteles: “Yes.”

Parmenides: “But the same appeared to be separate in nature from the one.”

Aristoteles: “So it appeared.”

Parmenides: “And yet if the one were characterised as anything besides being one, it would be characterised as being more than one, and that is impossible.”

Aristoteles: “Yes.”

140a

Parmenides: “So the one is not characterised as being like either another or itself.”

Aristoteles: “Apparently not.”

Parmenides: “So it cannot be like either another or itself.”

Aristoteles: “It seems not.”

Parmenides: “Nor indeed is the one characterised as being different, for in this way too it would be characterised as being more than one.”

Aristoteles: “More indeed.”

140b

Parmenides: “And yet whatever is characterised as different from itself or another would be unlike itself or another, since whatever is characterised as the same is like.”

Aristoteles: “Correct.”

Parmenides: “Then the one, it seems, is not characterised as being in any way different from, or in any way unlike, either itself or another.”

Aristoteles: “It is not.”

Parmenides: “So the one would neither be like, nor unlike, either itself or another.”

Aristoteles: “Apparently not.”

Parmenides: “And indeed, being like this, it will be neither equal nor unequal to itself or another.”

Aristoteles: “Why is that?”

Parmenides: “Being equal it will be of the same measures as that to which it is equal.”

Aristoteles: “Yes.”

140c

Parmenides: “And presumably, if it is greater or lesser it will have more measures than whatever is lesser than it, and fewer measures than whatever is greater, in cases where it is commensurable.”

Aristoteles: “Yes.”

Parmenides: “But in cases where it is not commensurable, its measures will be either smaller or greater.”

Aristoteles: “Of course.”

Parmenides: “Now, isn’t it impossible for that which does not partake of the same, to be of the same measures or the same anything else at all?”

Aristoteles: “Impossible.”

Parmenides: “In that case, since it is not of the same measures, it would not be equal either to itself or to another.”

Aristoteles: “Well, it certainly appears not.”

140d

Parmenides: “Furthermore, being of more measures, or of fewer, it would have as many parts as it has measures, and thus the one would again be one no longer but as many as its measures.”

Aristoteles: “Correct.”

Parmenides: “But if it was of one measure it would become equal to that measure, but this appeared impossible; it was impossible for the one to be equal to anything.”

Aristoteles: “It appeared so indeed.”

Parmenides: “So, since the one neither partakes of one measure nor many nor few, and does not at all partake of the same, it will never, it seems, be equal to itself or to another, nor again will it be greater or lesser than itself or another.”

Aristoteles: “Entirely so.”

140e

Parmenides: “What about this? Does the one seem capable of being older or younger or the same age as anything?”

Aristoteles: “Why could it not be?”

Parmenides: “Because being the same age as itself or another it would partake of equality of time, and of likeness, and we said that the one does not partake either of likeness or of equality.”

Aristoteles: “We said so indeed.”

Parmenides: “And indeed, we also said that it does not partake of unlikeness and inequality.”

Aristoteles: “Yes, certainly.”

141a

Parmenides: “Well then, since it is like this, in what way can it be older or younger or the same age as anything?”

Aristoteles: “There is no way.”

Parmenides: “So the one could not be younger or older or the same age either as itself or another.”

Aristoteles: “It appears not.”

Parmenides: “Well then, if it were like this, would the one actually be able to be in time at all? Or if something is in time, must it not necessarily be constantly becoming older than itself?”

Aristoteles: “Necessarily.”

Parmenides: “Isn’t the older always older than the younger?”

Aristoteles: “Indeed.”

141b

Parmenides: “So, whatever is becoming older than itself is also becoming younger than itself at the same time, if indeed it is going to have something to become older than.”

Aristoteles: “How do you mean?”

Parmenides: “As follows. There is no need for something to become different from something else that is already different. Rather, it must already be different from that which is different already, it must have become different from that which has become so, and be about to be different from that which is about to be so. But it must not have become, nor be about to become, nor be different yet, from that which is becoming different. It must be becoming so, and nothing else.”

Aristoteles: “Yes, necessarily.”

141c

Parmenides: “Furthermore, older is difference from younger and not from anything else.”

Aristoteles: “It is indeed.”

Parmenides: “So that which is becoming older than itself is also, necessarily, becoming younger than itself at the same

time.”

Aristoteles: “So it seems.”

Parmenides: “Then again, it is not becoming so for more or less time than itself. It is rather for a time equal to itself that it becomes, and is, and has become, and is about to be.”

Aristoteles: “This too is necessarily so.”

Parmenides: “So it is necessary, it seems, at least for everything that is in time and partakes of it, that each of them is the same age as itself, and is becoming older than itself and younger than itself at the same time.”

Aristoteles: “Very likely.”

141d

Parmenides: “But of course the one did not share in any of these characteristics.”

Aristoteles: “It did not.”

Parmenides: “Neither then does it have a share of time, nor is it in any time.”

Aristoteles: “It certainly is not, as the argument proves.”

Parmenides: “What about this then? Don’t ‘was’ and ‘has become’ and ‘was becoming’ seem to indicate participation in time that has passed?”

Aristoteles: “They certainly do.”

Parmenides: “And what about ‘will be’ and ‘will become’ and ‘will have become’? Don’t these indicate participation in time to come?”

Aristoteles: “Yes.”

Parmenides: “And ‘is’ and ‘becomes’ refer to time that is present now, don’t they?”

Aristoteles: “Entirely so.”

141e

Parmenides: “So if the one does not partake of time in any respect, it has never come into being, nor was it coming into being, and it never was, nor has it now come into being, nor is it coming into being, and it is not. Nor will it come into being in the future, nor will it have come into being, nor will it be.”

Aristoteles: “Very true.”

Parmenides: “Now, is there any way that anything can partake of being besides one of these ways?”

Aristoteles: “There is not.”

Parmenides: “So the one does not partake of being at all.”

Aristoteles: “It seems not.”

Parmenides: “So the one is not, at all.”

142a

Parmenides: “So the one is not, not in such a way as to be one, for if it were it would already be, and be partaking of being. But it seems that the one is not one, and is not, if we should be persuaded by this sort of argument.”

Aristoteles: “Quite likely.”

Parmenides: “What about anything that is not? Would anything be to that, or of that?”

Aristoteles: “No, how could it be?”

Parmenides: “So no name belongs to it, nor an account, nor any knowledge, nor perception, nor opinion.”

Aristoteles: “It appears not.”

Parmenides: “So it is neither named nor described, nor is it subject to opinion, nor is it known, nor is it perceived by any of the things that are.”

Aristoteles: “It seems not.”

Parmenides: “Now, in relation to the one, is it possible that all this is the case?”

Aristoteles: “Well, I don’t think so anyway.”

142b

Parmenides: “Do you wish to go back to the hypothesis once more from the beginning in case something different occurs to us as we go back over it?”

Aristoteles: “I certainly do.”

Parmenides: “In that case, if one is, we are saying that the consequences relating to it, whatever they happen to be, must be agreed upon. Isn’t this so?”

Aristoteles: “Yes.”

Parmenides: “Then consider, from the beginning. If one is, can it be but not partake of being?”

Aristoteles: “It cannot.”

Parmenides: “Then there would also be the being of the one, and this is not the same as the one, or else it could not be the being of the one, nor could that, the one, partake of that being, and saying ‘one is’ would be just like saying ‘one is one’. But the present hypothesis is not what must the consequences be ‘if one is one’, but ‘if one is’. Isn’t this so?”

142c

Aristoteles: “It certainly is.”

Parmenides: “Does not the ‘is’ indicate something other than the ‘one’?”

Aristoteles: “Necessarily.”

Parmenides: “So, whenever someone makes the succinct statement that ‘one is’, this simply means the one partakes of

being.”

Aristoteles: “Entirely so.”

Parmenides: “Then we should again state what the consequences will be if one is. Now, consider this hypothesis. Doesn’t it indicate that the one, being like this, has parts?”

142d

Aristoteles: “How so?”

Parmenides: “As follows. If we speak of the ‘is’ of the one that is, and the ‘one’ of that which is one, but being and one are not the same although both belong to what we hypothesised, namely the one that is, isn’t it necessary that the one that is, itself, be a whole, and that the one and the being constitute parts of this?”

Aristoteles: “Necessarily.”

Parmenides: “Now, shall we refer to each of these two parts as just a part only, or should the part be referred to as a part of the whole?”

Aristoteles: “Of the whole.”

Parmenides: “So, whatever would be one is a whole and has a part.”

Aristoteles: “Certainly.”

142e

Parmenides: “What about each of these parts of the one that is, the one part and the being part? Is the one ever absent from the being part, or the being from the one part?”

Aristoteles: “It could not be.”

143a

Parmenides: “So, once again, each of the two parts possesses the one and the being, and the least part, in turn, arises from two parts, and according to the same argument it is always the

case that whatever has become a part always possesses these two parts. And so, the one always possesses being and being always possesses the one. And so, of necessity, since it is always becoming two, it is never one.”

Aristoteles: “Entirely so.”

Parmenides: “Consequently, the one that is would be unlimited in multiplicity, would it not?”

Aristoteles: “So it seems.”

Parmenides: “Let’s take the matter even further.”

Aristoteles: “In what way?”

Parmenides: “Do we maintain that because the one is, it partakes of being?”

Aristoteles: “Yes.”

Parmenides: “And for these reasons, the one that is appeared to be many.”

Aristoteles: “Quite so.”

143b

Parmenides: “What about the one itself then, which we maintain partakes of being? If we grasp this in thought, on its own just by itself, without that of which we say it partakes, will it appear to be just one, or will the very same thing also appear to be many?”

Aristoteles: “One. That is what I think anyway.”

Parmenides: “Let’s see. If indeed that one is not being, but as one partakes of being, then its being must necessarily be one thing, and itself something different.”

Aristoteles: “Necessarily.”

Parmenides: “In that case, if the being is one thing and the one is something different, it is not by being one that the one is different from the being, or by being being that the being is other than the one. Rather they are different from one another by the different and the other.”

Aristoteles: “Certainly.”

143c

Parmenides: “So the different is not the same as the one or the being.”

Aristoteles: “No, how could it be?”

Parmenides: “Well then, if from these we were to select, say, the being and the different, or the being and the one, or the one and the different, would we not be choosing, with each selection, some pair that is correctly referred to as both?”

Aristoteles: “In what way?”

Parmenides: “As follows. Is it possible to mention being?”

Aristoteles: “It is.”

Parmenides: “And also, in turn, to mention one?”

Aristoteles: “This too.”

Parmenides: “In that case, has each of them been mentioned?”

Aristoteles: “Yes.”

Parmenides: “And whenever I mention being and one, don’t I mention both?”

Aristoteles: “Certainly.”

143d

Parmenides: “And whenever I mention being and different, or different and one, and so on for each possible case, don’t I speak of both?”

Aristoteles: “Yes.”

Parmenides: “Could things that are correctly referred to as both, be both without being two?”

Aristoteles: “They could not.”

Parmenides: “And if they are two, is there any way that each of them can avoid being one?”

Aristoteles: “None at all.”

Parmenides: “So although each turns out to be a twofold combination of these, each constituent would be one.”

Aristoteles: “So it appears.”

143e

Parmenides: “And if each of them is one, by combining any one whatsoever with any pair whatsoever, won’t they all become three?”

Aristoteles: “Yes.”

Parmenides: “Isn’t three odd and two even?”

Aristoteles: “Of course.”

Parmenides: “What about this? If there are two, is it not necessary that there is also twice, and if there are three, thrice, if indeed two happens to be twice one and three thrice one?”

Aristoteles: “Necessarily.”

Parmenides: “And since there are two and twice, isn’t it necessary that there be twice two? And since there are three and thrice, isn’t it necessary, again, that there be thrice three?”

Aristoteles: “Of course.”

Parmenides: “What about this? If there are three and they are twice, and if there are two and they are thrice, is it not necessary that there be twice three and thrice two?”

Aristoteles: “Very much so.”

144a

Parmenides: “So there would be even times even and odd times odd, and even times odd and odd times even.”

Aristoteles: “This is so.”

Parmenides: “And if this is how matters stand, do you think there is any remaining number which must not necessarily be?”

Aristoteles: “Not at all.”

Parmenides: “So if one is, there must necessarily also be number.”

Aristoteles: “Necessarily.”

Parmenides: “And yet, if there is number, there would also be many, and a limitless multiplicity of things that are. Or does not number, while being many and partaking of being, become limitless in multiplicity?”

Aristoteles: “Yes, certainly.”

Parmenides: “In that case, if all number partakes of being, would not each part of number also partake of this?”

Aristoteles: “Yes.”

144b

Parmenides: “So, has being been distributed to all things which are multiple, and is it not absent from any of the things that are, neither from the smallest nor from the largest? Or is this question unreasonable? For how could being be absent from any of the things that are?”

Aristoteles: “In no way at all.”

144c

Parmenides: “So being is chopped up into all sorts of things that are, from the very smallest to the very largest, and is the

most divided of all things, and there are parts without limit, of being.”

Aristoteles: “This is so.”

Parmenides: “So the parts of being are as many as can be.”

Aristoteles: “As many as can be, indeed.”

Parmenides: “What about this? Of these parts, is there any that is a part of being without being one part?”

Aristoteles: “No, how could that ever happen?”

Parmenides: “Rather, I presume, if it actually is, so long as it is, it is necessarily always one thing, it cannot be no thing.”

Aristoteles: “Necessarily.”

Parmenides: “So the one is present to every part of being, and is not absent from the smaller or larger part, or from anything else.”

Aristoteles: “Indeed so.”

144d

Parmenides: “Well then, being one, is it, as a whole, in many places at the same time? Consider this carefully.”

Aristoteles: “I am considering this, and I see that it is impossible.”

Parmenides: “Then if it is not so as a whole, it is so as divided, for the one will not, I presume, be present at the same time to all the parts of being in any other way besides being divided.”

Aristoteles: “Yes.”

Parmenides: “And indeed, whatever is divided must necessarily be as numerous as its parts.”

Aristoteles: “Necessarily.”

144e

Parmenides: “So we were not speaking the truth just now when we said that being has been divided more than anything. For it has not been divided more than the one, but, it seems, equally with the one, since being is not absent from the one, nor the one from being, but being two they are always equal throughout everything.”

Aristoteles: “It certainly appears so.”

Parmenides: “So the one, having been itself chopped up by being, is many, and unlimited in multiplicity.”

Aristoteles: “So it appears.”

Parmenides: “So not alone is the one that is many, but the one itself having been distributed by being, must also of necessity be many.”

Aristoteles: “Entirely so.”

145a

Parmenides: “Furthermore, because the parts are parts of the whole, the one, on the basis of the whole, would be limited. Or are the parts not contained by the whole?”

Aristoteles: “They must be.”

Parmenides: “And yet whatever contains would be a limit.”

Aristoteles: “Of course.”

Parmenides: “So the one, being one, is presumably also many, and a whole, and parts, and is limited and limitless in multiplicity.”

Aristoteles: “So it appears.”

Parmenides: “In which case, since it is limited, doesn’t it also have extremities?”

Aristoteles: “Necessarily.”

Parmenides: “What about this? If it is a whole, would it not also have a beginning, middle and end? Or can anything be a whole without these three? And if any one of these is missing from anything, will it still, of itself, be a whole?”

145b

Aristoteles: “Not of itself, no.”

Parmenides: “Then the one, it seems, would also have a beginning, an end and a middle?”

Aristoteles: “It would.”

Parmenides: “Now, the middle stands equally between the extremities, for otherwise it would not be a middle.”

Aristoteles: “It would not.”

Parmenides: “Then being like this, the one would also partake of some shape, either straight or round or some mixture of both.”

Aristoteles: “Yes, it would partake of this.”

Parmenides: “Now, since this is so, won’t it also be in itself and in another?”

Aristoteles: “How so?”

Parmenides: “Each of the parts is presumably in the whole, and none are outside the whole.”

Aristoteles: “Quite so.”

145c

Parmenides: “Are all the parts contained by the whole?”

Aristoteles: “Yes.”

Parmenides: “And indeed, the one is all the parts of itself and neither more nor less than all.”

Aristoteles: “Indeed not.”

Parmenides: “The one is also the whole, is it not?”

Aristoteles: “How could it not be?”

Parmenides: “So, if all the parts happen to be in the whole, and the one is all the parts and the whole itself, and all the parts are contained by the whole, the one would be contained by the one, and the one would itself, in this way, already be in itself.”

Aristoteles: “So it appears.”

145d

Parmenides: “Then again, the whole, in turn, is not in any of the parts, nor in them all. For if it is in them all, it must be in one, since without being in any one it would not, presumably, be in them all. And if this one is one of them all, and the whole is not present in this, how will it still be present in them all?”

Aristoteles: “In no way at all.”

Parmenides: “Nor again is it in some of the parts, for if the whole were in some, more would be in less, which is impossible.”

Aristoteles: “Yes, impossible.”

145e

Parmenides: “But if the whole is not in more, or in one, or in all of the parts, must it not necessarily be in something different, or no longer be anywhere at all?”

Aristoteles: “Necessarily.”

Parmenides: “Now, being nowhere it would be nothing, but being a whole, since it is not in itself, it is necessarily in another.”

Aristoteles: “Certainly.”

Parmenides: “Insofar then as the one is a whole, it is in another, whereas insofar as it happens to be all the parts, it is in itself, and thus the one must itself be in itself, and in another.”

Aristoteles: “Necessarily.”

Parmenides: “So, if this is the nature of the one, must it not necessarily be in motion and at rest?”

Aristoteles: “In what way?”

146a

Parmenides: “If it is indeed in itself it is presumably at rest, for being in one and not changing from that, it would be in the same, in itself.”

Aristoteles: “Indeed so.”

Parmenides: “And that which is always in the same must, surely, always be at rest.”

Aristoteles: “Certainly.”

Parmenides: “What about this? Is it not necessarily the case, in contrast, that whatever is always in the different must never be in the same, and never being in the same must never be at rest, and never being at rest must be moving?”

Aristoteles: “Quite so.”

Parmenides: “So, is it necessary that the one, because it is always in itself and in something different, is always in motion and at rest?”

Aristoteles: “So it appears.”

146b

Parmenides: “And indeed, if it is actually characterised as just indicated, it must be the same as itself and different from itself, and in like manner be both the same as and different from the others.”

Aristoteles: “How so?”

Parmenides: “Everything is presumably related to everything else as follows. It is either the same or different, and if it were

neither the same nor different, it would be related to this, either as part to whole, or as whole in relation to part.”

Aristoteles: “So it appears.”

Parmenides: “Now, is the one itself part of itself?”

Aristoteles: “Not at all.”

Parmenides: “So it would not be related as a whole to itself as part of itself.”

Aristoteles: “No, it could not be.”

146c

Parmenides: “But is the one different from one?”

Aristoteles: “Of course not.”

Parmenides: “So it would not be different from itself.”

Aristoteles: “Indeed not.”

Parmenides: “Now, if it is neither related to itself as different, nor as part, nor whole, must it not then necessarily be the same as itself?”

Aristoteles: “Necessarily.”

146d

Parmenides: “What about this? Is it not necessary that whatever is in something different from itself, itself being in the same as itself, must be different from itself, if indeed it is also to be in something different?”

Aristoteles: “Well, I think so.”

Parmenides: “And this appeared to be the case with the one, being both in itself and in another at the same time.”

Aristoteles: “It appeared so indeed.”

Parmenides: “So the one, it seems, would in this way be different from itself.”

Aristoteles: “So it seems.”

Parmenides: “What about this? If anything is different from something, will it not be different from something that is different?”

Aristoteles: “Necessarily.”

Parmenides: “Won’t whatever is not one be different from the one, and the one from whatever is not one?”

Aristoteles: “Of course.”

Parmenides: “So the one would be different from the others?”

Aristoteles: “Different.”

146e

Parmenides: “Now, look at this. Are not the same itself and the different opposite to one another?”

Aristoteles: “Of course.”

Parmenides: “In that case will the same ever, of itself, be in the different, or the different be in the same?”

Aristoteles: “Not of itself, no.”

Parmenides: “So, if the different will never be in the same, there are none of the things that are in which the different will be present for any time, for if the different were in anything for any time, the different would for that time be in the same. Is this not so?”

Aristoteles: “It is so.”

Parmenides: “And since the different is never in the same, it would never be in any of the things that are.”

Aristoteles: “True.”

Parmenides: “So the different would not be in things not one, nor in the one.”

Aristoteles: “Indeed not.”

147a

Parmenides: “So, not by the different would the one be different from things not one, nor things not one from the one.”

Aristoteles: “No.”

Parmenides: “Nor by themselves could they be different from one another, since they do not partake of the different.”

Aristoteles: “No, how could they?”

Parmenides: “And if they are not different by themselves, nor by the different, wouldn’t they totally avoid being different from one another?”

Aristoteles: “They would.”

Parmenides: “Furthermore, things not one do not partake of the one, or else they would not be not one, but would somehow be one.”

Aristoteles: “True.”

Parmenides: “Neither would things not one be number, for in this way they would not be not one in every respect, because they would at least have number.”

Aristoteles: “Indeed.”

147b

Parmenides: “What about this? Are things not one parts of the one, or in that case too would things not one partake of the one?”

Aristoteles: “They would partake of it.”

Parmenides: “So, if in every respect the one is one, and they are not one, the one would neither be a part of things not one, nor a whole with them as its parts. Nor again would things not one be parts of the one, nor wholes with the one as a part.”

Aristoteles: “Indeed not.”

Parmenides: “And indeed, we said that things that are neither parts, nor wholes, nor different from one another, will be the same as one another.”

Aristoteles: “Yes, we said so.”

147c

Parmenides: “Then, should we also say that the one, being related in this way to things not one, is the same as them?”

Aristoteles: “We should say so.”

Parmenides: “So the one, it seems, is different both from the others and from itself, and also the same as them, and itself.”

Aristoteles: “It certainly appears likely from this argument.”

Parmenides: “Now, is it also like and unlike itself and the others?”

Aristoteles: “Perhaps.”

Parmenides: “Well, since it appeared to be different from the others, the others too will presumably be different from it.”

Aristoteles: “Indeed.”

Parmenides: “Wouldn’t it then be just as different from the others as the others are from it, neither more nor less?”

Aristoteles: “Yes, it would.”

Parmenides: “So, if it is neither more so nor less so, it is so in like manner.”

Aristoteles: “Yes.”

Parmenides: “Now, being characterised as different from the others, and the others as different from the one in like manner, the one would in this respect be characterised as the same as the others, and the others as the same as the one.”

147d

Aristoteles: “How do you mean?”

Parmenides: “As follows. Don’t you apply each of the names you use to something?”

Aristoteles: “I do.”

Parmenides: “Yes, and can you speak the same name once or many times?”

Aristoteles: “I can.”

Parmenides: “Now, is it the case that when you say the name once, you refer to that of which it is the name, whereas you don’t refer to that when you say it many times? Or is there a strong necessity that you always speak of the same thing, whether you say the same name once or many times?”

Aristoteles: “Indeed so.”

Parmenides: “Now, ‘different’ is a name given to something, is it not?”

Aristoteles: “Certainly.”

147e

Parmenides: “So whenever you utter it, whether once or many times, you are not referring to something else, or naming anything else apart from that of which it is the name.”

Aristoteles: “Necessarily.”

Parmenides: “Then, whenever we say that the others are different from the one and that the one is different from the others, we say ‘different’ twice, but we are not applying the word to another nature. We are always referring to that nature of which it is the name.”

Aristoteles: “Certainly.”

148a

Parmenides: “So, insofar as the one is different from the others and the others from the one, on the basis of being characterised as different, the one would have a characteristic that is not other than the others but is the same. And whatever somehow has a characteristic the same, is like, is it not?”

Aristoteles: “Yes.”

Parmenides: “Insofar then as the one is characterised as different from the others, it would on that basis be entirely like them all, since it is entirely different from them all.”

Aristoteles: “So it seems.”

148b

Parmenides: “And yet the like is opposite to the unlike.”

Aristoteles: “Yes.”

Parmenides: “And the different too is opposite to the same.”

Aristoteles: “It is.”

Parmenides: “Then again it appeared to be the case that the one is the same as the others.”

Aristoteles: “Yes, it appeared so.”

Parmenides: “And yet being the same as the others is the characteristic opposite to being different from the others.”

Aristoteles: “Certainly.”

Parmenides: “But, at least insofar as it was different, it appeared to be like.”

Aristoteles: “Yes.”

Parmenides: “So, insofar as it is the same, it will be unlike based upon the characteristic opposite to the one by which it was characterised as like. And the different made it like, I presume?”

Aristoteles: “Yes.”

148c

Parmenides: “So the same will make it unlike, or else it will not be opposite to the different.”

Aristoteles: “So it seems.”

Parmenides: “So the one will be like and unlike the others, being like insofar as it is different, and unlike insofar as it is the same.”

Aristoteles: “Yes, it seems that such an argument as this also holds.”

Parmenides: “And indeed the following holds too.”

Aristoteles: “Which is?”

Parmenides: “Insofar as it has a characteristic that is the same, it has a characteristic that is not of another kind; and having a characteristic that is not of another kind, it is not unlike; and not being unlike, it is like. Whereas insofar as it has another characteristic, it is of another kind, and being of another kind, is unlike.”

Aristoteles: “That’s true.”

148d

Parmenides: “So the one, being the same as the others and because it is different, on both grounds and on either ground, would be both like and unlike the others.”

Aristoteles: “Certainly.”

Parmenides: “In relation to itself too, in like manner, since it appeared to be different from itself and the same as itself, on both grounds and on either, it will prove to be both like and unlike itself.”

Aristoteles: “Necessarily.”

Parmenides: “What about this? Consider the question of the one touching and not touching itself and the others.”

Aristoteles: “I am.”

Parmenides: “Indeed, the one somehow appeared to be in itself as a whole.”

Aristoteles: “Correct.”

Parmenides: “Now, won’t the one also be in the others?”

Aristoteles: “Yes.”

148e

Parmenides: “Then, insofar as it is in the others, it would touch the others, while insofar as it is in itself, it would be prevented from touching the others, and being in itself, would touch itself.”

Aristoteles: “So it appears.”

Parmenides: “Thus the one, then, would touch both itself and the others.”

Aristoteles: “It would.”

Parmenides: “What about this then? Mustn’t everything that is going to touch something lie next to whatever it is going to touch, occupying the position that lies alongside the position occupied by whatever it touches?”

Aristoteles: “Necessarily.”

Parmenides: “So the one then, if it is going to touch itself, must lie right next to itself, occupying a place adjacent to the place that itself is in.”

Aristoteles: “Yes, it must do this.”

149a

Parmenides: “Now, the one could do this by being two. It could then be in two places at the same time. But as long as it is one,

how could it do so of itself?"

Aristoteles: "It could not."

Parmenides: "So by the same necessity that makes it the case that the one is not two, it must not touch itself either."

Aristoteles: "The same."

Parmenides: "Nor indeed will it touch the others."

Aristoteles: "Why is that?"

Parmenides: "Because, according to us, whatever is going to touch must be separate from and next to whatever it will touch, without any third thing in between them."

Aristoteles: "True."

Parmenides: "So, if there is to be contact, there must be at least two things."

Aristoteles: "There must."

149b

Parmenides: "And if to the two, the two distinct things, a third is added next to them, they will be three, and the contacts two."

Aristoteles: "Yes."

Parmenides: "And in this way then, by continually adding one thing, one contact is also added, and it follows that the contacts are fewer by one than the quantity of numbers. For by whatever the first two exceed the contacts, in being more in a number than the contacts, any succeeding number also exceeds all the contacts by an amount equal to this. For with every remaining addition, one is added to the number and one contact is added to the contacts at the same time."

149c

Aristoteles: "Correct."

Parmenides: “So, whatever the number of things that are, the contacts are always one fewer than them.”

Aristoteles: “True.”

Parmenides: “And yet if there is only one, and there is no two, there could be no contact.”

Aristoteles: “No, how could there be?”

Parmenides: “Now, according to us, things other than one are neither one, nor do they partake of it if they are indeed other.”

Aristoteles: “No indeed.”

Parmenides: “So number is not in the others since one is not in them.”

Aristoteles: “Certainly not.”

149d

Parmenides: “So the others are neither one nor two, nor do they possess the name of any other number.”

Aristoteles: “They do not.”

Parmenides: “So the one alone is one, and there could not be two.”

Aristoteles: “Apparently not.”

Parmenides: “And in the absence of two, there is no contact.”

Aristoteles: “There is not.”

Parmenides: “So the one does not touch the others nor the others the one, since there is no contact.”

Aristoteles: “Indeed not.”

Parmenides: “Accordingly, on the basis of all this, the one both touches and does not touch itself and the others.”

Aristoteles: “So it seems.”

Parmenides: “Well then, is the one also equal and unequal both to itself and to the others?”

Aristoteles: “In what way?”

149e

Parmenides: “If the one were greater or lesser than the others, or the others for their part were greater or lesser than the one, they could not be greater or lesser than one another by their own being, by the one being one and the others being other than one, could they? But if in addition to being like this each were to possess equality, they would be equal to one another. But if the others had greatness while the one had smallness, or the one had greatness while the others had smallness, whatever form had greatness added to it would be greater, while that to which smallness was added would be lesser.”

150a

Aristoteles: “Necessarily.”

Parmenides: “So there are these two forms, largeness and smallness, are there not? For if somehow there were not, they could not be opposite to one another, nor could they occur in things that are.”

Aristoteles: “No, how could they?”

Parmenides: “Now, if smallness occurs in the one, it would be present either in the whole or in part of it.”

Aristoteles: “Necessarily.”

Parmenides: “What if it were to occur in the whole? Wouldn’t it either be extended equally throughout the whole of the one, or else encompass it?”

Aristoteles: “Of course.”

150b

Parmenides: “Now, smallness, by being equally with the one, would be equal to it, while by encompassing the one, wouldn’t it

be greater than the one?"

Aristoteles: "Inevitably."

Parmenides: "Now, can smallness be equal to or greater than something, and do what belongs to equality or to greatness rather than what belongs to itself?"

Aristoteles: "Impossible."

Parmenides: "So smallness could not be in the one as a whole, but in part, if so at all."

Aristoteles: "Yes."

Parmenides: "But not in the entire part, otherwise it will act in the same way as it did towards the whole. It will either be equal to or greater than whatever part it would always be in."

Aristoteles: "Necessarily."

150c

Parmenides: "So smallness will never be in any of the things that are, since it occurs neither in a part nor in the whole, nor will anything be small except smallness itself."

Aristoteles: "It seems not."

Parmenides: "So largeness will not be in the one either, for in that case, besides largeness itself, something else, whatever largeness was in, would be larger, and that would happen in the absence of the small, which the larger necessarily exceeds if it is actually to be large. But this is impossible since smallness is not in anything anywhere."

Aristoteles: "True."

150d

Parmenides: "Furthermore, largeness itself is not larger than anything except smallness itself, nor is smallness less than anything but largeness itself."

Aristoteles: “Indeed not.”

Parmenides: “So the others are neither greater nor lesser than the one, since they possess neither greatness nor smallness. Nor do these two themselves possess the power of exceeding and being exceeded in relation to the one, but only in relation to one another. Nor again would the one be greater or lesser than these two or the others, since it possesses neither greatness nor smallness.”

Aristoteles: “It certainly appears not.”

Parmenides: “Now, if the one is neither greater nor lesser than the others, must it necessarily neither exceed them nor be exceeded by them?”

Aristoteles: “Necessarily.”

150e

Parmenides: “Now, that which neither exceeds nor is exceeded must necessarily be equally so, and being equally so, must be equal.”

Aristoteles: “Inevitably.”

Parmenides: “And indeed the one itself would also be related in this way to itself, having neither largeness nor smallness in itself, it would neither exceed nor be exceeded by itself, but being equally so, it would be equal to itself.”

Aristoteles: “Yes, certainly.”

Parmenides: “So the one would be equal to itself and the others.”

Aristoteles: “So it appears.”

151a

Parmenides: “And indeed the one, because it is in itself, would surround itself from outside, and by encompassing itself would be greater than itself, while by being encompassed it would be

lesser than itself, and thus the one would be greater than and lesser than itself.”

Aristoteles: “It would indeed.”

Parmenides: “Is it necessary then, that outside of the one and the others, there is nothing?”

Aristoteles: “Of course.”

Parmenides: “And yet what is, must always be somewhere.”

Aristoteles: “Yes.”

Parmenides: “Won’t whatever is in something, be so as a lesser in a greater? For in no other way could one thing be in another.”

Aristoteles: “Indeed not.”

151b

Parmenides: “But since there is nothing else apart from the others and the one, and since they must be in something, mustn’t they necessarily then be in one another, the others in the one and the one in the others, or else be nowhere at all?”

Aristoteles: “Apparently so.”

Parmenides: “So, because the one is in the others, the others would be greater than the one since they encompass it, while the one, since it is encompassed, would be lesser than the others. But because the others are in the one, the one would, by the same argument, be greater than the others and the others lesser than the one.”

Aristoteles: “So it seems.”

Parmenides: “So the one is both equal to, and greater and lesser than, itself and the others.”

Aristoteles: “Apparently.”

151c

Parmenides: “And indeed, if it is actually greater, and lesser, and equal, it would be of equal measures with itself and the others, and of more and fewer measures too, and since of measures, also of parts.”

Aristoteles: “Of course.”

Parmenides: “Then being of equal measures and more and less, it would also be less and more in number than itself and the others, and equal both to itself and the others on the same basis.”

Aristoteles: “In what way?”

Parmenides: “It would presumably be of more measures and parts than whatever it is greater than, and of as many parts as of measures, and likewise for whatever it is less than, and the same holds for whatever it is equal to.”

Aristoteles: “Quite so.”

151d

Parmenides: “Then being greater and lesser than and equal to itself, wouldn’t it be of equal and more and fewer measures to itself, and since of measures, also of parts?”

Aristoteles: “Of course.”

Parmenides: “Well then, being of equal parts with itself, it would be equal to itself in multiplicity, and being more than itself and less than itself, it would be more or less in number than itself.”

Aristoteles: “So it appears.”

Parmenides: “Wouldn’t the one also relate to the others in the same way? Because it appears greater than them, it is necessarily more than them in number, and on the other hand, because it is smaller it is less in number, and because it appears equal in magnitude, it must be equal in multiplicity to the

others.”

Aristoteles: “Necessarily.”

151e

Parmenides: “Accordingly, it seems that the one will in turn be equal to, and more and less in number than itself and the others.”

Aristoteles: “It will.”

152a

Parmenides: “Now, does the one partake of time, and partaking of time, is it and does it come to be younger and older than itself and the others, and neither younger nor older than itself and the others?”

Aristoteles: “How?”

Parmenides: “If one actually is, then ‘to be’ belongs to it.”

Aristoteles: “Yes.”

Parmenides: “And is ‘to be’ anything other than participation in being along with present time, just as ‘was’ is communion with being along with past time, and ‘will be’ is communion along with future time.”

Aristoteles: “It is indeed.”

Parmenides: “So the one partakes of time if it does indeed partake of being.”

Aristoteles: “Certainly.”

Parmenides: “Of time that is advancing?”

Aristoteles: “Yes.”

152b

Parmenides: “So the one continually becomes older than itself if it actually advances according to time.”

Aristoteles: “Necessarily.”

Parmenides: “Now, do we remember that whatever becomes older becomes older than something that becomes younger?”

Aristoteles: “We do.”

Parmenides: “Therefore, since the one becomes older than itself, wouldn’t it become older while becoming younger than itself?”

Aristoteles: “Necessarily.”

Parmenides: “In this way then, it becomes younger and older than itself.”

Aristoteles: “Yes.”

152c

Parmenides: “But it is actually older, is it not, whenever in coming to be it is at the present moment, in between what was and what will be? For as it proceeds from what was to what will be, it will not, I presume, step over the present.”

Aristoteles: “Indeed not.”

Parmenides: “Well, won’t it then cease from becoming older whenever it encounters the present? Then it is not becoming older since it is already older. For while advancing it would never be grasped by the present. For that which is advancing is in a situation whereby it is in touch with both the present and what will be, letting go of the present while grasping what will be, as it is becoming in between both what will be and the present.”

Aristoteles: “True.”

152d

Parmenides: “But if anything that is becoming must necessarily not evade the present, then whenever it is, at this it ceases from its becoming, and then actually is whatever it happened to be becoming.”

Aristoteles: “Apparently.”

Parmenides: “And so the one, as it is becoming older, ceases becoming older and is actually older whenever, as it is becoming older, it encounters the present.”

Aristoteles: “Yes, certainly.”

Parmenides: “Now, it is actually older than whatever it was becoming older than, and wasn’t it becoming older than itself?”

Aristoteles: “Yes.”

Parmenides: “Is the older, older than the younger?”

Aristoteles: “It is.”

Parmenides: “And so the one is then younger than itself whenever, as it is becoming older, it encounters the present.”

Aristoteles: “Necessarily.”

152e

Parmenides: “And yet, the present is always present to the one throughout its entire being, for whenever the one is, it always is in the present.”

Aristoteles: “Of course.”

Parmenides: “So the one always is, and always becomes, older and younger than itself.”

Aristoteles: “So it seems.”

Parmenides: “Now, is it, or is it becoming, for a longer time than itself, or for an equal time?”

Aristoteles: “Equal.”

Parmenides: “But whatever is always becoming for an equal time is the same age.”

Aristoteles: “Of course.”

Parmenides: “And whatever is the same age is neither younger nor older.”

Aristoteles: “Indeed.”

Parmenides: “Then the one, since it is and is becoming for a time that is equal to itself, neither is nor is becoming, younger or older than itself.”

Aristoteles: “It seems not.”

Parmenides: “Well then, what about the others?”

Aristoteles: “I can’t say.”

153a

Parmenides: “Well, you can say that things other than the one, if they are indeed things that are different rather than a thing that is different, are more than one. For a different thing would be one, while different things are more than one and would be possessed of multiplicity.”

Aristoteles: “Yes, they would.”

Parmenides: “And being multiple they would have a share of number greater than the one.”

Aristoteles: “Of course.”

Parmenides: “What about this? Shall we maintain, with respect to number, that it is the more numerous or the less numerous that come into being, and have come into being earlier?”

Aristoteles: “The less numerous.”

153b

Parmenides: “So the least of all is first of all and this is the one. Isn’t this so?”

Aristoteles: “Yes.”

Parmenides: “So, of everything that possesses number, the one has come into being first, and the others all possess number if

they are indeed others, and not just an other.”

Aristoteles: “They possess it indeed.”

Parmenides: “But the one, I think, having come into being first, has come into being earlier, while the others have come into being later, and thus the others would be younger than the one and the one older than the others.”

Aristoteles: “They would indeed.”

153c

Parmenides: “What about this? Has the one come into being contrary to its own nature, or is that an impossibility?”

Aristoteles: “An impossibility.”

Parmenides: “And yet the one was shown to have parts, and having parts, to have a beginning, an end and a middle.”

Aristoteles: “Yes.”

Parmenides: “Now, of all the parts of the one itself, and of each of the others, doesn’t the beginning come into being first, and after the beginning, all the others until the end?”

Aristoteles: “Indeed.”

Parmenides: “And shall we also say that all these others are parts of the whole, that is the one, and that this has itself come to be one and whole, simultaneously with the end?”

Aristoteles: “Yes, so we should say that.”

153d

Parmenides: “And yet the end, I believe, comes into being last, and simultaneously with this, the one naturally comes into being. So that if indeed the one itself necessarily comes into being in accord with its nature, it would naturally come into being later than the others, having come into being at the same time as the end.”

Aristoteles: “So it appears.”

Parmenides: “So the one is younger than the others, and things other than the one are older than the one.”

Aristoteles: “Again, that’s how it appears to me.”

Parmenides: “What about the beginning then, or any other part whatsoever of the one or of anything else at all? If it is a part, but is not parts, must it not of necessity be one, at least insofar as it is a part?”

Aristoteles: “Necessarily.”

153e

Parmenides: “In that case the one would come into being at the same time as the first part that comes into being, and at the same time as the second, and is not left out of any of the other parts that come into being, whatever is added to anything, until, with the arrival of the last part, one whole has come into being, missing neither the middle part, nor the first, nor the last, nor any other part, in its generation.”

Aristoteles: “True.”

154a

Parmenides: “Therefore, the one is the same age as all the others, and so, if the one itself is not by nature opposed to its own nature, it would not have come into being either before or after the others, but at the same time. And according to this account, the one would be neither older nor younger than the others, nor the others than the one. But according to the previous argument the one is both older and younger than the others, and the others are in like manner both older and younger than the one.”

Aristoteles: “Yes, certainly.”

Parmenides: “So the one is, and has come into being in this way. But what about the one becoming both older and younger

than the others, and the others than the one, and becoming neither older nor younger? Is whatever is the case in relation to being also the case in relation to becoming, or is it different?"

Aristoteles: "I cannot say."

154b

Parmenides: "Well, I can say this much at least. If one thing is indeed older than another, it would not be able to become even older by an age difference greater than the age difference when it first came into being, nor for its part could the younger become even younger by an increased amount. For equal amounts added to unequal amounts of time, or anything else at all, always make them differ by an amount equal to the initial difference."

Aristoteles: "Of course."

Parmenides: "So that which is older or younger could never become older or younger if it does indeed always differ in age by an equal amount. It is, and has come to be, older in one case and younger in the other, but it is not becoming older or younger."

Aristoteles: "True."

154c

Parmenides: "Then the one does not ever become either older or younger than the others that are older or younger than it."

Aristoteles: "Indeed not."

Parmenides: "But let's see if they become older or younger in the following way."

Aristoteles: "How?"

Parmenides: "In the way that the one appeared to be older than the others, and the others than the one."

Aristoteles: "What of it?"

Parmenides: “Whenever the one is older than the others, it has been becoming for a longer period of time than the others.”

Aristoteles: “Yes.”

154d

Parmenides: “Consider this, then. If we add an equal amount of time to the greater and to the lesser time periods, will the greater differ from the lesser by an equal portion of time, or by a smaller portion?”

Aristoteles: “By a smaller portion.”

Parmenides: “So, whatever was the initial age difference between the one and the others, this will not be the same thereafter. Rather, having taken a time increment that is equal to the others, the one will always differ from them by a lesser portion than before. Isn’t this so?”

Aristoteles: “Yes.”

154e

Parmenides: “Now, wouldn’t that which is lesser in age than it was before in relation to something else, become younger than before in relation to whatever it was previously older than?”

Aristoteles: “Yes, younger.”

Parmenides: “And if that becomes younger, won’t those others, in turn, become older than before in relation to the one?”

Aristoteles: “Certainly.”

155a

Parmenides: “So that which has come to be younger, becomes younger in relation to that which had previously come to be and still is older, yet although it is always becoming older than that, it never actually is older. For that advances towards the younger, while the younger advances towards the older. And the older, for its part, becomes younger than the younger in the very same way. For as they are both proceeding towards their

opposites, they are becoming opposite to one another; the younger is becoming older than the older, while the older is becoming younger than the younger. But they could not actually become so. For if they had become so, they would no longer be becoming so, but would actually be so. But as matters stand, they are becoming older and younger than one another; the one is becoming younger than the others because it proved to be older and to have come into being earlier, while the others are becoming older than the one because they came into being later. And by the same argument, the others are also related in the same way to the one, since they proved to be older than the one and to have come into being earlier.”

155b

Aristoteles: “Yes, this appears to be the case.”

155c

Parmenides: “Isn’t it the case then, that in so far as nothing becomes younger or older than anything else on the basis of always differing by an equal number, the one would not become older or younger than the others, nor the others than the one. While insofar as things that have come into being earlier necessarily differ from things that have come into being later, and the later from the earlier, by a portion that is never the same, things must in this way be becoming both older and younger than one another, the others than the one, and the one than the others?”

Aristoteles: “Yes, certainly.”

Parmenides: “Based upon all this then, the one is itself both older and younger than the others, and is becoming so, and neither is, nor is becoming, either older or younger than itself or the others.”

Aristoteles: “Yes, entirely so.”

155d

Parmenides: “And since the one partakes of time and of becoming older and younger, mustn’t it necessarily partake of ‘was’, ‘will be’, and of ‘now’, if it does indeed partake of time?”

Aristoteles: “Necessarily.”

Parmenides: “So the one was, and is, and will be, and has become, and is becoming, and will become.”

Aristoteles: “Indeed.”

Parmenides: “And something could be to that, and of that, and was, and is, and will be.”

Aristoteles: “Certainly.”

Parmenides: “And there could then be knowledge of this, and opinion, and awareness, if we are in fact even now engaging in all these in relation to this.”

Aristoteles: “Correct.”

155e

Parmenides: “And a name and an account belong to it, and it is named and described, and anything of this sort that happens to apply to the others applies also to the one.”

Aristoteles: “Yes, this is how matters stand, entirely so.”

Parmenides: “Then, let’s say for yet a third time: if the one is, as we have described it, being both one and many, and neither one nor many, and partaking of time, must it not of necessity sometimes partake of being because one is, and, indeed, sometimes not partake of being because one is not?”

Aristoteles: “Necessarily.”

Parmenides: “Now, when it is partaking will it then be able not to partake, or to partake when it is not partaking?”

Aristoteles: “It will not be able.”

156a

Parmenides: “So it partakes at one time and does not partake at another, for only in this way could it partake and not partake of the same thing.”

Aristoteles: “Correct.”

Parmenides: “Isn’t there also this time when it gets a share of being and gets rid of it? Or how will it be able to have something at one time, and not have the same thing at another, if it does not ever take hold of this and let it go?”

Aristoteles: “In no way at all.”

Parmenides: “Well don’t you refer to getting a share of being as coming to be?”

Aristoteles: “I do.”

Parmenides: “And to departing from being as ceasing to be?”

Aristoteles: “Yes, indeed.”

Parmenides: “Then the one, it seems, in grasping and letting go of being, is coming into being and ceasing to be.”

Aristoteles: “Necessarily.”

156b

Parmenides: “And being both one and many, and coming into being and ceasing to be, isn’t it the case that whenever it becomes one, its being many ceases to be, and whenever it becomes many, its being one ceases to be.”

Aristoteles: “Certainly.”

Parmenides: “And in becoming one and many mustn’t it necessarily be separated and combined?”

Aristoteles: “Very much so.”

Parmenides: “And indeed whenever it becomes unlike and like, mustn’t it necessarily be likened and unlikened?”

Aristoteles: “Yes.”

Parmenides: “And whenever it becomes greater or lesser or equal, isn’t it increased, diminished or equalised?”

Aristoteles: “Quite so.”

156c

Parmenides: “And whenever being in motion it comes to rest, and whenever being at rest it changes to moving, it must not itself be in any time at all.”

Aristoteles: “How so?”

Parmenides: “Being previously at rest and afterwards in motion, or previously in motion and subsequently at rest, are impossible unless it undergoes change.”

Aristoteles: “Of course.”

Parmenides: “And yet there is no time in which something can, simultaneously, be neither in motion nor at rest.”

Aristoteles: “Indeed not.”

Parmenides: “But it cannot undergo change without changing.”

Aristoteles: “Not likely.”

156d

Parmenides: “So when does it undergo change? For it does not change whilst at rest, or whilst in motion, or whilst in time.”

Aristoteles: “It does not.”

Parmenides: “Well, in that case, is there this strange thing in which it would then be when it changes?”

Aristoteles: “What sort of thing?”

156e

Parmenides: “The moment. Indeed the moment seems to indicate something of this sort, such that there is change from

the moment to either state. For a thing does not change from resting while still being at rest, nor does it change from moving while still being in motion. But the moment is this strange nature, inserted between motion and rest, being in no time at all, and indeed to this, and from this, the moving changes to being at rest and the resting to being in motion.”

Aristoteles: “Quite likely.”

157a

Parmenides: “And the one then, if indeed it is both at rest and in motion, would change to both states, for only in this way could it do both. But in changing it changes in a moment, and when it changes it would be in no time at all, nor would it then be in motion, nor would it be at rest.”

Aristoteles: “Indeed not.”

Parmenides: “Is this also the case in relation to the other changes? Whenever it changes from being to ceasing to be, or from not being to coming into being, is it then coming to be in between certain motions and rests? And is it then the case that it neither is, nor is not, and is neither coming to be, nor ceasing to be?”

Aristoteles: “So it seems at any rate.”

157b

Parmenides: “And by the same argument too, when going from one to many and from many to one, it is neither one nor many, neither separated nor combined. And when going from like to unlike and from unlike to like, it is neither like nor unlike, neither likened nor unlikened. When going from small to large, and to equal, and to their opposites, it is neither small nor large nor equal, and it would be neither increasing nor diminishing nor becoming equal.”

Aristoteles: “It seems not.”

Parmenides: “So, if the one is, it would undergo all these affections.”

Aristoteles: “Of course.”

Parmenides: “Well, shouldn’t we also consider what it would be appropriate for the others to undergo if one is?”

Aristoteles: “We should consider this.”

Parmenides: “In that case, should we state what things other than the one must undergo, if one is?”

Aristoteles: “We should.”

157c

Parmenides: “Now, since they are indeed other than the one, the others are not the one, or else they would not be other than the one.”

Aristoteles: “Correct.”

Parmenides: “But the others are not entirely deprived of the one either, but partake of it in some way.”

Aristoteles: “In what way?”

Parmenides: “Things other than the one are presumably other because they have parts. Indeed if they were not to have parts they would be entirely one.”

Aristoteles: “Correct.”

Parmenides: “But parts, we say, are parts of this, this whole.”

Aristoteles: “So we say.”

Parmenides: “And yet the whole is necessarily one composed of many, of which the parts will be parts, for each of the parts must be a part not of multiplicities but of a whole.”

Aristoteles: “Why is that?”

157d

Parmenides: “If something were to be a part of a multiplicity, among which it is itself included, it would presumably be part of itself which is impossible. And it would be a part of each of the others too if it were actually part of them all. Indeed, not being part of this one, it will be a part of the others except for this one, and thus will not be part of each one, but not being part of each it will be part of none of the many. But it is not possible for something that is not a part of all of them to be a part or anything else at all of those things of which it is not a part of any one.”

Aristoteles: “Apparently so.”

157e

Parmenides: “So a part is not a part of a multiplicity or of all; it is rather a part of some one form that we call a whole, a complete one that has arisen from them all. A part would be part of this.”

Aristoteles: “Entirely so.”

Parmenides: “So, if the others have parts, they would also have a share of the one and of the whole.”

Aristoteles: “Certainly.”

Parmenides: “So things other than one must necessarily be one complete whole possessing parts.”

Aristoteles: “Necessarily.”

158a

Parmenides: “And indeed, the same argument applies to each part. For these too must necessarily have a share of the one. For if each of them is a part, being each presumably indicates being distinct from the others and being by itself, if indeed it is to be each.”

Aristoteles: “Correct.”

Parmenides: “And yet it would of course have a share of the one while being other than one, or else it would not have a share of the one but would itself be one. But it is presumably impossible now for anything except the one itself to be one.”

Aristoteles: “Impossible.”

Parmenides: “So both the whole and the part necessarily share in the one. For the whole will be one and the parts will be parts of that. While each part, in turn, that is part of the whole, would be one part of the whole.”

Aristoteles: “Quite so.”

158b

Parmenides: “Won’t whatever shares in the one have a share while being different from the one?”

Aristoteles: “Of course.”

Parmenides: “Things that are different from the one would presumably be many. Indeed if things other than the one were neither one nor more than one, they would be nothing.”

Aristoteles: “Indeed so.”

Parmenides: “But since whatever gets a share of one part or one whole is more than one, it is necessary, is it not, that those things themselves that partake of the one must already be unlimited in multiplicity?”

Aristoteles: “How so?”

158c

Parmenides: “Let’s look at the following. When they partake of the one they partake while neither being one, nor having a share of the one.”

Aristoteles: “Obviously.”

Parmenides: “Then they partake, don’t they, while being multiplicities in which the one is not present?”

Aristoteles: “Multiplicities indeed.”

Parmenides: “What about this? If we wished, in thought, to take away as little as we possibly could from such multiplicities, wouldn’t the part that has been taken away necessarily be a multiplicity and not one, if in fact it does not partake of the one?”

Aristoteles: “Necessarily.”

Parmenides: “Now, continuing to consider the nature just by itself, different from the form, in this way won’t as much of it as we can ever discern be unlimited in multiplicity?”

Aristoteles: “Entirely so.”

158d

Parmenides: “And indeed, whenever each part has become one part, the parts then have limit in relation to one another, and in relation to the whole, and so too does the whole in relation to the parts.”

Aristoteles: “Yes, exactly.”

Parmenides: “In that case, the consequence for things other than the one from the communion of themselves and the one is, it seems, that something different arises among themselves which provides limit in relation to one another, while by themselves their own nature provides limitlessness.”

Aristoteles: “So it appears.”

Parmenides: “In this way then, things other than the one, both as wholes, or based upon parts, are limitless and have a share of limit.”

Aristoteles: “Certainly.”

158e

Parmenides: “Are they not also both like and unlike one another and themselves?”

Aristoteles: “In what way?”

Parmenides: “Insofar as they are all presumably unlimited based upon their own nature, they would in this way be characterised as the same.”

Aristoteles: “Certainly.”

Parmenides: “And indeed, insofar as they all have a share of limit, they would all in this way also be characterised as the same.”

Aristoteles: “Of course.”

159a

Parmenides: “And yet insofar as they have been characterised as both limited and limitless, they have been characterised by characteristics that are opposite to one another.”

Aristoteles: “Yes.”

Parmenides: “And the opposites are as unlike as possible.”

Aristoteles: “Indeed.”

Parmenides: “So on the basis of either characteristic, they would be like themselves and one another, while on the basis of both characteristics, they would be as unlike as possible, and as opposite as possible, in both ways.”

Aristoteles: “Quite likely.”

Parmenides: “In this way then, the others themselves would be both like and unlike themselves and one another.”

Aristoteles: “So they would.”

159b

Parmenides: “And since they actually proved to have these characteristics, we shall find with no further difficulty that things other than the one are the same as, and different from, one another, are in motion and at rest, and are characterised by

all the opposite characteristics.”

Aristoteles: “Correct.”

Parmenides: “Well then, if at this stage we accept these outcomes as obvious, should we consider once more if one is, are things other than the one not so, or just so?”

Aristoteles: “Certainly.”

Parmenides: “Then let us say from the beginning how things other than the one must be characterised if one is.”

Aristoteles: “Let’s say so.”

Parmenides: “Now, must not the one be separate from the others, and the others be separate from the one?”

Aristoteles: “Why is that?”

159c

Parmenides: “Because there is not, I presume, anything else besides these, that is other than the one and other than the others, for once the one and the others have been mentioned, everything has been spoken of.”

Aristoteles: “Yes, everything.”

Parmenides: “So there is nothing further that is different from these, in which both the one and the others could be in the same.”

Aristoteles: “Indeed not.”

Parmenides: “So the one and the others are never in the same.”

Aristoteles: “It seems not.”

Parmenides: “So are they separate?”

Aristoteles: “Yes.”

Parmenides: “Now, according to us that which is truly one does not have parts.”

Aristoteles: “Of course.”

Parmenides: “So the one as a whole, would not be in the others, nor would parts of it, if it is separate from the others and does not have parts.”

159d

Aristoteles: “Of course.”

Parmenides: “So the others would not partake of the one in any way, since they partake neither of a part of it nor of the whole.”

Aristoteles: “It seems not.”

Parmenides: “So the others are not one in any way, nor do they have any one in themselves.”

Aristoteles: “Indeed not.”

Parmenides: “So the others are not many either, for each of them would be one part of the whole if they were many. But, as matters stand, things other than one are neither one nor many, neither a whole nor parts, since they do not partake of the one in any way.”

Aristoteles: “Correct.”

159e

Parmenides: “So the others themselves are neither two nor three nor are these in them if they are indeed entirely deprived of the one.”

Aristoteles: “This is so.”

Parmenides: “So the others are themselves neither like and unlike the one, nor are likeness and unlikeness in them. For if they were like and unlike, or had likeness and unlikeness in themselves, things other than the one would presumably possess two forms in themselves that are opposite to one another.”

Aristoteles: “Apparently.”

Parmenides: “But things that do not even partake of one could not possibly partake of any two.”

Aristoteles: “Impossible.”

Parmenides: “So the others are neither like, nor unlike, nor both. For if they were like or unlike they would partake of one different form, and if they were both like and unlike they would partake of two opposite forms, but these outcomes have proved to be impossible.”

Aristoteles: “True.”

160a

Parmenides: “Nor are they the same or different, nor are they in motion or at rest, nor are they coming into being or ceasing to be, nor are they greater or lesser or equal. Nor do they have any other characteristics of this sort. For if the others submit to being characterised by anything of this sort, they will also share in one and two and three and odd and even. But it turned out to be impossible for them to partake of these since they are entirely deprived of the one in every way.”

Aristoteles: “Very true.”

160b

Parmenides: “In which case, if one is, the one is everything, and both in relation to itself and in relation to the others in like manner, it is not even one.”

Aristoteles: “Entirely so.”

Parmenides: “So be it. Next, should we not consider what the consequences must be if one is not?”

Aristoteles: “Yes, we should.”

Parmenides: “Well, what would this hypothesis, ‘if one is not’, be? Does it differ at all from the hypothesis, ‘if not one is not’?”

Aristoteles: “It differs indeed.”

Parmenides: “Does it just differ, or is saying ‘if not one is not’ the complete opposite to saying ‘if one is not’?”

Aristoteles: “It is the complete opposite.”

160c

Parmenides: “What if someone were to say ‘if largeness is not’ or ‘if smallness is not’, or anything else of that sort, would it be obvious in each case that he is saying that a different thing is that which is not?”

Aristoteles: “Certainly.”

Parmenides: “Is it not also obvious then that whenever someone says ‘if one is not’, he is saying that what is not is different from the others, and we know what he is referring to?”

Aristoteles: “Yes, we know.”

Parmenides: “So whenever he speaks of one, is it obvious, firstly, that he is referring to something knowable, and secondly, to something different from the others, whether being or not being is added. For we still know, nevertheless, what is said not to be, and we know that it is different from the others. Isn’t this so?”

Aristoteles: “Necessarily.”

160d

Parmenides: “So we should say from the beginning as follows, what must be the case if one is not. Now, the first thing that must pertain to it is, it seems, that there be knowledge of it, otherwise we would not know what is being said when someone says, ‘if one is not’.”

Aristoteles: “True.”

Parmenides: “Also, must not the others be different from it, otherwise it could not be said to be different from the others?”

Aristoteles: “Certainly.”

160e

Parmenides: “And so, difference belongs to it in addition to the knowledge. For whenever the one is said to be different from the others, the difference of that one is referred to, and not the difference of the others.”

Aristoteles: “Apparently.”

Parmenides: “And indeed, the one that is not would share in that, in something, and in by-this and in to-this and in these, and in everything of this sort. For the one could not be spoken of, nor could things different from the one, nor could anything be to that or of that, nor could it be referred to as anything if it did not have a share either of something or of these others.”

Aristoteles: “Correct.”

161a

Parmenides: “In that case, although the one cannot partake of ‘to be’, since it is not, there is nothing to prevent it from partaking of many things and this is actually necessary if indeed that one, and not another, is not. In fact, if neither the one, nor that, are not to be, but the argument concerns something else, then nothing should even be uttered. But if that one and no other is hypothesised not to be, it must also have a share in that, and in many others.”

Aristoteles: “Yes, indeed.”

Parmenides: “So the one also has unlikeness in relation to the others. For things other than the one, being different, would also be different in kind.”

Aristoteles: “Yes”

Parmenides: “And are not things that are different in kind, other in kind?”

Aristoteles: “Of course.”

161b

Parmenides: “And things that are other in kind are unlike, are they not?”

Aristoteles: “Yes, unlike.”

Parmenides: “Now, if they are indeed unlike the one, it is obvious that unlike things would be unlike something that is unlike them.”

Aristoteles: “It is obvious.”

Parmenides: “In that case, the one would also have unlikeness in respect of which the others are unlike it.”

Aristoteles: “So it seems.”

Parmenides: “But if it actually has unlikeness to the others, must it not necessarily have likeness to itself?”

Aristoteles: “In what way?”

Parmenides: “If the one has unlikeness to the one, the argument would not, presumably, be about something of this sort, something like the one, nor would the hypothesis be about one, but about something other than one.”

Aristoteles: “Of course.”

161c

Parmenides: “But it should not be about that.”

Aristoteles: “Indeed not.”

Parmenides: “So the one must have likeness of this to itself.”

Aristoteles: “It must.”

Parmenides: “And furthermore, the one is not equal to the others either. For if it were to be equal it would already be, and it would also be like them, based on the equality. But both these

outcomes are impossible if indeed one is not.”

Aristoteles: “Yes, impossible.”

Parmenides: “And since the one is not equal to the others, isn’t it necessary that the others are not equal to the one?”

Aristoteles: “Necessarily.”

Parmenides: “Are not things that are not equal, unequal?”

Aristoteles: “Yes.”

Parmenides: “And unequals are unequal to an unequal, are they not?”

Aristoteles: “Of course.”

161d

Parmenides: “And in that case, does the one partake of inequality in respect of which the others are unequal to it?”

Aristoteles: “It partakes.”

Parmenides: “But inequality involves largeness and smallness.”

Aristoteles: “It does.”

Parmenides: “So, does a one of this sort have largeness and smallness?”

Aristoteles: “Quite likely.”

Parmenides: “But largeness and smallness always stand apart from one another.”

Aristoteles: “Certainly.”

Parmenides: “So there is always something in between them?”

Aristoteles: “There is.”

Parmenides: “Now, can you say that there is anything in between them except equality?”

Aristoteles: “Nothing except this.”

161e

Parmenides: “So, whatever has largeness and smallness also has an equality which is in between these two.”

Aristoteles: “Apparently.”

Parmenides: “Then the one that is not would, it seems, also have a share of equality as well as largeness and smallness.”

Aristoteles: “So it seems.”

Parmenides: “And indeed, it should also, in a way, have a share of being.”

Aristoteles: “In what way?”

Parmenides: “It must be such as we describe it, for if it were not such as we describe it, we would not be speaking the truth when we say that the one is not. But if we are speaking the truth, it is obvious that we are stating what actually is. Is this not so?”

Aristoteles: “It is so indeed.”

Parmenides: “And since we maintain that we are speaking the truth, we must also maintain that we are stating what is.”

Aristoteles: “We must.”

162a

Parmenides: “So the one is, it seems, if it is not. For if it were not to be what is not, but were somehow to let go of its being in relation to not being, it would immediately be what is.”

Aristoteles: “Entirely so.”

Parmenides: “So, if it is not to be, it must have being what is not as a bond of not being, in just the same way that what is must have not being what is not, so that it in turn may be in every respect. For in this way, most of all, what is would be, and

what is not would not be, by what is partaking of the being of being what is, and the being of not being what is not, if it is to be in every respect, and on the other hand, by what is not partaking of the being of not being what is, and of the being of being what is not, if it too is in turn not to be in every respect.”

162b

Aristoteles: “Very true.”

Parmenides: “Now, since what is also shares in non-being, and what is not shares in being, the one must necessarily share in being in respect of its non-being, since it is not.”

Aristoteles: “Necessarily.”

Parmenides: “In fact then, it appears that the one has being, if it is not.”

Aristoteles: “So it appears.”

Parmenides: “And also to have non-being if in fact it is not.”

Aristoteles: “Of course.”

Parmenides: “Now, can something that is in a certain state not be in that state without changing from that state?”

Aristoteles: “It cannot.”

162c

Parmenides: “So everything of this sort, which is both so and not so, implies change.”

Aristoteles: “Of course.”

Parmenides: “And change is motion, or what shall we maintain?”

Aristoteles: “It is motion.”

Parmenides: “Didn’t the one turn out to be and not to be?”

Aristoteles: “Yes.”

Parmenides: “And so it appears in this way to be both so and not so.”

Aristoteles: “So it seems.”

Parmenides: “And so the one that is not turns out to be in motion, since it has turned out to be changing from possessing being to possessing not being.”

Aristoteles: “Quite likely.”

Parmenides: “Then again, if it is not included anywhere among things that are, which it is not since it is not, it would not relocate from one place to another.”

Aristoteles: “Of course.”

162d

Parmenides: “So it would not move by changing place.”

Aristoteles: “It would not.”

Parmenides: “Nor indeed would it revolve in the same, since it has no contact with the same anywhere. For the same is something that is, and what is not cannot be in any of the things that are.”

Aristoteles: “No, it cannot.”

Parmenides: “So the one that is not would not be able to revolve in that in which it is not.”

Aristoteles: “Indeed not.”

Parmenides: “Nor could the one, whether it is or is not, be altered from itself. For in that case the argument would no longer be about the one if it were actually altered from itself, but about something else.”

Aristoteles: “Correct.”

162e

Parmenides: “But if it is not altered, nor does it revolve in the same place, nor does it change place, could it still move in any way?”

Aristoteles: “No, how could it?”

Parmenides: “But that which is not moving must necessarily be still, and that which is still must be at rest.”

Aristoteles: “It must.”

Parmenides: “So the one, it seems, although it is not, is both at rest and in motion.”

Aristoteles: “So it seems.”

163a

Parmenides: “And indeed, if in fact the one is moved, there is a strong necessity that it be altered. For according to the manner in which something is moved, it is to that extent no longer just as it was, but is different.”

Aristoteles: “Quite so.”

Parmenides: “So the one, since it is being moved, is also being altered.”

Aristoteles: “Yes.”

Parmenides: “Then again, since it is not being moved in any way, it would not be altered in any way.”

Aristoteles: “Indeed not.”

Parmenides: “So, insofar as the one that is not is moved, it is altered, but insofar as it is not moved it is not altered.”

Aristoteles: “Indeed not.”

Parmenides: “So the one that is not is both altered and not altered.”

Aristoteles: “Apparently.”

163b

Parmenides: “Now, must not that which is altered come to be different than before and cease to be in its former state, while that which is not altered must neither come to be, nor cease to be?”

Aristoteles: “Necessarily.”

Parmenides: “And so the one that is not, because it is being altered, is both coming to be and ceasing to be. And because it is not being altered it is neither coming to be nor ceasing to be, and accordingly, the one that is not is both coming to be and ceasing to be, and neither coming to be nor ceasing to be.”

Aristoteles: “Indeed it is not.”

163c

Parmenides: “Then let us go back once again to the beginning and see if different outcomes or the same outcomes will appear to us as appeared just now.”

Aristoteles: “We should do so.”

Parmenides: “In that case, are we to state what the consequences for the one must be, if the one is not?”

Aristoteles: “Yes.”

Parmenides: “Whenever we say ‘is not’, isn’t this simply indicating the absence of being in that which we maintain is not?”

Aristoteles: “Nothing else.”

Parmenides: “Now, whenever we maintain that something is not, are we maintaining that in a way it is not, and in a way it is? Or is the phrase ‘is not’ simply indicating that whatever is not, is not at all in any way, and does not partake of being in any way?”

Aristoteles: “Yes, simply that.”

163d

Parmenides: “So, what is not could not be, nor could it partake of being in any other way at all.”

Aristoteles: “Indeed not.”

Parmenides: “But coming to be and ceasing to be are nothing but the acquisition of being and the loss of being.”

Aristoteles: “Nothing but.”

Parmenides: “But that which has no share of being could neither have acquired it nor lost it.”

Aristoteles: “No, how could it?”

Parmenides: “So, since the one is not in any way, it could not possess or lose or acquire being in any way at all.”

Aristoteles: “Quite likely.”

Parmenides: “So the one that is not neither ceases to be, nor comes to be, since in fact it does not partake of being in any way.”

Aristoteles: “Apparently not.”

163e

Parmenides: “So the one that is not is not altered in any way, for if this happened it would already be both coming into being and ceasing to be.”

Aristoteles: “True.”

Parmenides: “But if it is not altered, then necessarily it is not moved either.”

Aristoteles: “Necessarily.”

Parmenides: “Nor indeed shall we maintain that what in no way is, is at rest. For that which is at rest must always be in something the same.”

Aristoteles: “In the same, yes of course.”

Parmenides: “Accordingly, we should also say that what is not is never either at rest or in motion.”

Aristoteles: “Indeed it is not.”

164a

Parmenides: “But in that case, none of the things that are belong to it, for it would then partake of being by partaking of this.”

Aristoteles: “Obviously.”

Parmenides: “So neither largeness nor smallness nor equality belong to it.”

Aristoteles: “Indeed not.”

Parmenides: “Nor would likeness or difference belong to it, neither with respect to itself, nor with respect to the others.”

Aristoteles: “Apparently not.”

Parmenides: “What about this? If it can have nothing, is there any way that it can have others?”

Aristoteles: “There is not.”

Parmenides: “So the others are neither like nor unlike, nor the same as it nor different from it.”

Aristoteles: “Indeed not.”

164b

Parmenides: “What about this? Will there be of that, or to that, or something, or this, or of this, or of another, or to another, or once, or was, or now, or knowledge, or opinion, or perception, or an account, or a name, or will any of the other things that are be related to what is not?”

Aristoteles: “They will not.”

Parmenides: “Accordingly then, the one, if it is not, is not characterised in any way at all.”

Aristoteles: “Well, it certainly seems not.”

Parmenides: “In that case we should go on to say how the others must be characterised if one is not.”

Aristoteles: “Yes, we should.”

Parmenides: “Now, they must somehow be others, for if they are not even others we would not be talking about the others.”

Aristoteles: “Quite so.”

Parmenides: “But if the argument is about the others, the others are different, or don’t you refer to the same thing as both other and different?”

164c

Aristoteles: “I do.”

Parmenides: “And we maintain, I presume, that what is different is different from something different, and what is other is other than something other?”

Aristoteles: “Yes.”

Parmenides: “And the others, if they are to be others, will have something to be other than.”

Aristoteles: “Necessarily.”

Parmenides: “Now, what would that actually be? Indeed, they will not be other than the one since the one is not.”

Aristoteles: “Indeed not.”

Parmenides: “So they are other than one another. Indeed this option still remains for them, or alternatively, to be other than nothing.”

Aristoteles: “Correct.”

164d

Parmenides: “So they are other than one another, in each case, as multiplicities, for they could not be so as ones, since one is not. But in each case, it seems, the mass of them is unlimited in multiplicity, and if someone takes what seems to be the smallest part, suddenly, just as in a dream while sleeping, it appears to be many instead of seeming to be one, and instead of seeming miniscule, it appears enormous in comparison with any parts that are cut from it.”

Aristoteles: “Quite right.”

Parmenides: “In which case, the others would be other than each other as masses of this sort if the others are, although one is not.”

Aristoteles: “Precisely.”

Parmenides: “Won’t there be many masses, each appearing to be one without being so, if in fact one is not to be?”

Aristoteles: “Quite so.”

164e

Parmenides: “And if in fact each seems to be one, there will seem to be a number of them since they are many.”

Aristoteles: “Certainly.”

Parmenides: “And some among them appear to be even, others odd, without in truth being so, if in fact one is not to be.”

Aristoteles: “Indeed.”

165a

Parmenides: “And furthermore, according to us, a smallest will seem to be among them, but this appears to be many and large, relative to each of the many because they are small.”

Aristoteles: “Of course.”

Parmenides: “And each mass will be imagined to be equal to what is many and small, for it could not give the appearance of

changing from greater to lesser before seeming to arrive at whatever is in between, and this would be apparent equality.”

Aristoteles: “Quite likely.”

Parmenides: “Would it not have limit relative to another mass, while having, itself, neither a beginning limit, nor middle, relative to itself?”

Aristoteles: “Why is that?”

165b

Parmenides: “Because whenever anyone, in thought, grasps any of these as if it were one of them, then another beginning always appears before that beginning, and after the end, another end still remains, and in the middle others more in the middle, but smaller due to the impossibility of grasping each of them as one, since one is not.”

Aristoteles: “Very true.”

Parmenides: “So it must be the case, I believe, for anything that is, that whatever one grasps in thought, even as it is being cut into pieces, must crumble apart. For it would always be grasped, somehow, as a mass devoid of the one.”

Aristoteles: “Yes, certainly.”

165c

Parmenides: “Now, isn’t it necessary that something of this sort must appear to be one to anyone who views it dimly from afar, while to someone who considers it keenly from close up, each one must appear unlimited in multiplicity if it is actually deprived of the one because the one is not?”

Aristoteles: “Yes, absolutely necessary.”

Parmenides: “In that case then, the others must each appear limitless and possessed of limit, and one and many, if one is not and there are things other than one.”

Aristoteles: “They must indeed.”

Parmenides: “Won’t they also seem to be both like and unlike?”

Aristoteles: “In what way?”

Parmenides: “In the way that shadow drawings all appear one to a person standing away from them, and appear to have a characteristic the same, and to be like.”

Aristoteles: “Indeed.”

165d

Parmenides: “But to someone who has approached them they appear many and different, and by the appearance of difference they appear to be different in character and unlike themselves.”

Aristoteles: “So they do.”

Parmenides: “And so the masses themselves necessarily appear like and unlike themselves and one another.”

Aristoteles: “Yes, certainly.”

165e

Parmenides: “Therefore if one is not, and there are many, these must appear both the same as and different from one another, both in contact with and apart from themselves, both moving with every motion and at rest in every respect, both coming to be and ceasing to be and neither, and everything else of this sort, I presume, which we could easily set out at this stage.”

Aristoteles: “Very true.”

Parmenides: “Then let us go back once again to the beginning, and let us say what must be the case if one is not and there are things other than one.”

Aristoteles: “Yes, let us do so.”

Parmenides: “In that case, the others will not be one.”

Aristoteles: “No, how could they?”

Parmenides: “Nor indeed will they be many since one would then be present in things that are many. For if no one of them is one, they are all nothing, and so they could not be many.”

Aristoteles: “True.”

Parmenides: “But without the one being present in the others, the others are neither many nor one.”

Aristoteles: “Indeed not.”

166a

Parmenides: “Nor do they even appear to be one or many.”

Aristoteles: “Why is that?”

Parmenides: “Because the others do not have any communion whatsoever in any way at all with any of the things that are not, nor does anything from the others belong to things that are not, since there is no part of things that are not.”

Aristoteles: “True.”

Parmenides: “Nor is there any opinion of what is not, with the others, nor any appearance either, nor is what is not thought of in any way at all by the others.”

Aristoteles: “Indeed not.”

166b

Parmenides: “So if one is not, none of the others is thought to be either one or many, for it is impossible to think of many in the absence of one.”

Aristoteles: “Yes, impossible.”

Parmenides: “So if one is not, the others neither are, nor are thought to be, one or many.”

Aristoteles: “It seems not.”

Parmenides: “Nor are they like, nor are they unlike.”

Aristoteles: “Indeed not.”

Parmenides: “Nor are they the same, nor different, nor in contact, nor separate, nor are they anything else that they appeared to be in our earlier description. They neither are, nor appear to be, any of these if one is not.”

Aristoteles: “True.”

166c

Parmenides: “In that case, if we were to maintain, in short, that if one is not then nothing is, would we be right to say so?”

Aristoteles: “Entirely so.”

Parmenides: “So, let us say this, and also that, as it seems, whether one is or is not, both itself and the others, in relation to themselves and to one another, both are and are not, and appear and do not appear to be all things in all ways.”

Aristoteles: “Very true.”

NOTES

1. Adimantus and Glaucon were Plato's older brothers. They are the main interlocutors with Socrates in Plato's Republic.
2. Zeno of Elea was a philosopher and student of Parmenides who became famous for his paradoxes.
3. Parmenides of Elea was a famous philosopher and founder of the Eleatic school of philosophy.
4. The Panathenaea was an annual festival held over several days in Athens in honour of the goddess Athena. Every four years it was celebrated as the Great Panathenaea.
5. This phrase could be rendered as 'the many are not', 'there is no multiplicity', or as 'multiplicity does not exist'.
6. The Greek phrase here is *ei polla esti*. We have rendered it as 'if many are', but it could be translated as 'if [things] are many'.
7. Ibycus of Rhegium was a lyric poet who was noted, in particular, for his verses on love.
8. Some scholars justify translating this phrase as 'if one is or if it is not'.
9. The phrase 'if one is' can also be translated as 'if it [the one or the all?] is one'. This, however, would make the first hypothesis predicative, while all of the others are existential.

narrator: PHAEDO of Elis, a student of Socrates, founder of philosophy school
persons in the dialogue:

ECHECRATES *of Phlius, a student of Philolaus and Eurytus*

SOCRATES *of Alopecce, son of Sophroniscus*

WARDER *a prison attendant*

XANTHIPPE *Socrates' wife*

CRITO *a friend and contemporary of Socrates*

SIMMIAS *Theban, Pythagorean*

CEBES *Theban, Pythagorean*

POISONER *a public slave*

scene: a meeting of Phaedo and Echecrates in Phlius, a month after Socrates' death / Socrates' prison cell

57a

Echecrates: Were you yourself there with Socrates on the day he drank the poison in the prison, Phaedo,¹ or did you hear about it from someone else?

Phaedo: I was there myself, Echecrates.²

Echecrates: Well then, what did the man say before his death? And how did he die? I would love to hear about this. The fact is, no one from Phlius tends to visit Athens much these days, nor has any visitor come from there for quite a while, someone who could give us a definite account of those events, apart from saying that he drank the poison and died. They had nothing to say about anything else.

57b

Phaedo: So did you not even find out the details of the way the trial unfolded?

58a

Echecrates: Yes, someone did report these events to us, and we were surprised that although the trial took place some time ago, he was evidently put to death much more recently. Why did

that happen, Phaedo?

Phaedo: In his case, it was the result of a coincidence, Echecrates. It so happened that the prow of the ship which the Athenians send to Delos was crowned the day before the trial.

58b

Echecrates: And what ship is this?

Phaedo: It is the ship on which, according to the Athenians, Theseus once travelled to Crete bringing the “twice seven” young people, and he saved them and saved himself.³ Now, it is said that they vowed to Apollo, there and then, to send a sacred expedition to Delos every year if they were saved. Accordingly, every year since then, including this year, they send an expedition to honour the god. Now, they have a law that once they begin the expedition, the city is to be kept pure during that period, and no one may be executed by the authorities until the ship has arrived at Delos and returned once more, and on occasion, whenever the winds happen to detain them, this takes a lot of time. The sacred expedition begins once the priest of Apollo crowns the prow of the ship, and this happened, as I said, the day before the trial took place. That is why Socrates had so much time in prison between the trial and his death.

58c

Echecrates: Yes, but what about the circumstances of the actual death, Phaedo? What did people say and how did they behave? Which of his friends were present with him? Or did the authorities not allow them to be there, and did he die bereft of friends?

Phaedo: Not at all. A number of them were present, quite a number, in fact.

Echecrates: Then try to recount all the details to us as clearly as possible, provided you have the time.

58d

Phaedo: Well, I do have the time and I shall try to give you an account. Yes, indeed, being reminded of Socrates is always the greatest delight of all to me, whether I speak of him myself or hear about him from someone else.

Echecrates: In that case, Phaedo, you have listeners who are like-minded, so try to recount everything as precisely as you can.

Phaedo: Well, I myself had a strange feeling while I was there, for I did not experience the usual pity of someone present at the death of a friend. Indeed, he himself appeared happy to me, Echecrates, both in his manner and in his words, so fearlessly and nobly did he meet his end. I was convinced he was not going to Hades without a divine portion and, indeed, that he would fare well even when he arrived there, if anyone ever does. These are the reasons I did not feel much of the pity which would seem to be expected of someone on a sad occasion. Nor again, did I feel the pleasure which is usual when we are engaged in philosophy, and our discussions were indeed of that kind. Instead, I had an utterly unusual feeling – a strange mixture combining pleasure and a like measure of pain – at the realisation that Socrates was going to pass away soon. And all those present were in much the same state, laughing at one moment and crying at the next, Apollodorus more than any of us. I presume you know the man and his character.

58e

Echecrates: I do, of course.

Phaedo: Well, he was completely overcome, and I was troubled myself, as were the others.

Echecrates: Who else was present, Phaedo?

59b

Phaedo: Of native Athenians, Apollodorus himself was present, and also Critobulus and his father, along with Hermogenes,

Epigenes, Aeschines and Antisthenes. And there was Ctesippus the Paeanian, Menexenus, and some other Athenians.⁴ Plato, I believe, was ill.

Echecrates: Were there any visitors present?

Phaedo: Yes, Simmias of Thebes, Cebes and Phaidondes. And from Megara there was Euclides and Terpsion.⁵

59c

Echecrates: What about Cleombrotus and Aristippus?⁶ Were they there?

Phaedo: Actually, they were not. In fact, they were said to have been on Aegina.

59d

Echecrates: And was anyone else there?

Phaedo: I think that is just about everyone who was present.

Echecrates: In that case, will you tell us what discussions took place?

Phaedo: I shall try to recount everything to you from the beginning.

Now, I myself and the others had always been in the habit of going to visit Socrates on the previous days, gathering at daybreak at the court where the trial took place, for this was near the prison. Every day we used to wait and converse with one another until the prison was opened, as it did not open early, and once it was opened, we would go in to Socrates and spend most of the day with him. We actually met earlier that morning because on the previous day, after we left the prison in the evening, we found out that the ship had returned from Delos, so we encouraged one another to get to our usual meeting place as early as possible next morning.

59e

When we arrived, the doorkeeper came out as usual to answer us, and he told us to wait and not to go in until he called us.

Warder: “The Eleven⁷ are unchaining Socrates, and are giving instructions about how he is to die today.”

Now, it did not take him long before he returned and bade us enter. In we went and took in the scene: Socrates, just released from his bonds, and Xanthippe,⁸ I am sure you know her, sitting beside him holding his little child. Once Xanthippe saw us, she cried out and said the sort of thing women usually say,

60a

Xanthippe: “O Socrates, your friends will be speaking to you now for the very last time, and you to them.”

Then Socrates glanced towards Crito and said,

Socrates: “Have someone take her home, Crito.”

And some of Crito’s people led her away, crying and beating her breast, while Socrates sat up in the bed, bent his leg, rubbed it with his hand, and said as he was rubbing it,

60b

Socrates: “Gentlemen, this thing which people call pleasure seems to be so strange. It is so extraordinarily related to pain, though this appears to be its opposite, for the two tend not to come to a person at the same time. Yet if someone pursues one and obtains it, he is almost always compelled to take the other, as though the two were joined to a single head. And it seems to me that if Aesop⁹ had thought about this, he would have made up a fable that the god wished to reconcile their strife, but as he was unable to do so he fastened their heads together, and that is why when one arises in someone the other also follows after it. It seems that is what just happened to me. After the pain in my leg on account of the chain, the pleasure now appears to follow.”

60c

Cebes: Then Cebes took this up and said, “By Zeus, it is just as well you jogged my memory, Socrates. A number of people have been asking me about your compositions, the setting of Aesop’s fables to verse and the hymn to Apollo. In fact, Evenus¹⁰ also asked me recently what exactly you had in mind, since you composed these works on arriving in prison, even though you had not composed anything before then. Now, if you would like me to have an answer for Evenus, tell me what I should say whenever he asks me again, for I know very well that he will ask.”

60d

Socrates: “Tell him the truth, Cebes,” he replied. “I did not compose these works with a view to rivalling him or his poems. No, I knew that would not be easy. Rather, I was testing out the meaning of certain dreams and clearing my conscience in case they were, perhaps, instructing me to make music in the usual sense. Now, the dreams went something like this... the same one often came to me during the course of my life, sometimes in one guise, sometimes in another, but always saying the same thing. ‘Socrates,’ it said, ‘make music and work at it.’ On previous occasions, I assumed it was encouraging and exhorting me to do what I was already doing, just as people call upon runners to run. So I thought the dream was exhorting me to do what I was already doing – namely, to make music – since philosophy is the greatest music, and I was already engaged in that. But once the trial was over and the festival of the god was preventing my execution, it seemed important not to ignore the dream but to act upon it in case it might, perhaps, be instructing me to make music in the popular sense of the word. Indeed, it seemed safer not to depart until I had cleared my conscience by composing these works in obedience to the dream. So I first composed something for the god whose festival season it was, and after that I realised that a poet needs to compose stories rather than factual accounts if he is actually going to be a poet, and that I

myself was no storyteller. So I took whatever stories were to hand, the fables of Aesop which I know, and turned the first ones I came upon into verse. So Cebes, tell this to Evenus and bid him farewell, and bid him pursue me as quickly as possible if he is of sound mind. I am departing today, it seems, for the people of Athens have given their command.”

60e

Simmias: And Simmias said, “What an instruction to give to Evenus, Socrates! I have met the man many times already, and from what I know of him he will never be persuaded by your request, not willingly anyway.”

Socrates: “Why not?” he replied. “Is Evenus not a philosopher?”

Simmias: “Well, I think he is,” said Simmias.

61c

Socrates: “Then Evenus will indeed be willing, and so will anyone who engages in this activity in a worthy manner. However, he will not do violence to himself, for this, they say, is not lawful.”

And as he was saying this, he placed his feet on the ground and then conducted the rest of the discussion seated in that manner. So Cebes asked him,

Cebes: “Socrates, what do you mean by ‘it is not lawful to do violence to himself’ and that a philosopher should be willing to follow someone who is dying?”

Socrates: “What is this, Cebes? Have you and Simmias not heard about such matters through your association with Philolaus?”¹¹

Cebes: “Not in any detail, Socrates.”

61d

Socrates: “Well, I too am recounting what I have heard about these issues. However, I will not begrudge you an account of whatever I happen to have heard. For it is perhaps especially appropriate for someone about to depart to the next world to consider the sojourn there and tell stories about what we think it will be like. Indeed, what else could one do until the time when the sun sets?”

61e

Cebes: “Socrates, on what precise basis is it said not to be lawful for someone to kill themselves? I have also heard Philolaus saying what you have just said when he was living among us, and I have heard from a number of others since that one should not do this. But I have never yet heard anything clear concerning these issues from anyone.”

62a

Socrates: “Then you should bestir yourself,” he said, “for perhaps then you will actually hear. However, it may perhaps seem surprising to you that this situation alone, in contrast to all others, admits of no exceptions and is never like other personal circumstances. Sometimes, for some people, it is better to be dead than to be alive. But if they are better off dead, perhaps it seems surprising to you that it is unholy for those very people themselves to act beneficially towards themselves, rather than waiting for another to perform that service.”

And Cebes smiled gently and exclaimed in his own dialect,

Cebes: “Zeus be my witness!”

62b

Socrates: “Yes, indeed,” said Socrates, “it may sound illogical when expressed in that way. However, in spite of that, perhaps it does make some sense. The account about these matters, uttered in secret, declares that we humans are under guardianship and people should not free themselves from it or run away. This seems important to me, though it is not easy to

understand. In any case, Cebes, I do think this is well expressed. The gods are our guardians and we humans are among the possessions of the gods. Do you not think so too?"

Cebes: "I do, indeed," said Cebes.

62c

Socrates: "Well, then," said he, "if one of your own possessions were to kill itself, with no indication from you that you wanted it dead, would you not be angry with it? And would you not punish it if you could do so?"

Cebes: "Very much so," he replied.

Socrates: "Perhaps then, in this sense, it is not illogical to say that someone should not kill themselves until a god sends some necessity, such as my present predicament."

62d

Cebes: "Well," said Cebes, "that appears reasonable anyway. However, when you said just now that the wish to die comes readily to philosophers, that, dear Socrates, sounded strange, especially if what we were saying just now is reasonable, that the god is our guardian and we are his possessions. For it does not make sense for the wisest folk to be untroubled on departing from this care in which the gods, the very best guardians of beings, watch over them. For I presume they will not believe that they will take better care of themselves once they are free. Now, an unreasonable person might think that he should flee from his master, and he would not figure out that one should not flee from the good but should stay as long as possible, and so he might make an unreasonable escape. However, the reasonable person would presumably desire to be constantly in the presence of someone better than himself. So on this basis, Socrates, the situation is likely to be the opposite of what you just said: it is appropriate for the wise to be troubled at the prospect of death and for the foolish to rejoice."

63a

Now, I thought Socrates was pleased with Cebes' analysis, and he looked at us and said,

Socrates: "Cebes is always scrutinising some argument or other and is not very willing to be persuaded as soon as someone makes any assertion."

Simmias: Then Simmias said, "Well, on this occasion anyway, I believe that Cebes has a point. For why would people who are truly wise wish to flee from masters who are better than themselves, and take their leave of them so readily? And Cebes seems to be directing his argument at you because you are going so readily, leaving us and those good rulers whom, you agree, are gods."

63b

Socrates: "What you are saying is fair," he replied, "for I think you mean that I must defend myself against these charges as if I were in a court of law."

Simmias: "Yes, very much so," said Simmias.

Socrates: "Come on, then," he said, "and I shall try to conduct my defence more persuasively in front of you than I did in front of the jurors. Indeed, Simmias and Cebes, if I did not believe, firstly, that I would be going to various wise and good gods, and secondly, to men who have died, better men than those who are here, I would be wrong to be untroubled by death.

63c

Socrates: "Now, although I am hoping to arrive among good men, please note that I would not assert this very confidently. However, rest assured that if I were to assert anything else of this sort with confidence, I would also say that I am going to gods who are perfectly good masters. So on this basis I am not so troubled by all this, but am quite hopeful that there is something for those who have died, and, as the ancient saying

puts it, 'at least it is much better for those who are good than for those who are bad'."

63d

Simmias: "What now, Socrates?" said Simmias. "Do you intend to depart keeping this understanding to yourself or would you be prepared to share it with us? For it seems to me that this is something good to be shared with us too, and at the same time it will act as your defence if you persuade us of what you are saying."

Socrates: "In that case, I shall try," he said. "But first, I think Crito here wanted to speak a while ago. Let's ask him what he wants."

Crito: "Socrates," said Crito, "it is just that the man who is going to give you the poison has been saying to me for some time that you should be told to converse as little as possible, for he says that people who converse become more heated, and this sort of thing should be avoided before the poison is to be administered. Otherwise, people who do this are sometimes compelled to drink the poison twice or even three times."

63e

Socrates: And Socrates replied, "Do not mind him; just let him attend to his own duty and give the poison twice, and, if necessary, three times."

Crito: "Yes, I was quite sure you would say that," said Crito, "but he has been bothering me about these things for some time."

Socrates: "Let him be," Socrates replied. "And instead, I now want to present an argument to you jurors as to why it seems likely to me that a man who has really spent his life in philosophy is confident when facing death, and is hopeful that he will obtain enormous benefits in the next world once he dies. Of course, Simmias and Cebes, I shall now try to explain how

this might be the case. For most people are likely to be unaware that those who engage properly in philosophy are themselves in pursuit of nothing except dying and being dead. Now, if this is true, it would surely be strange for someone who was eager all his life for this alone to be troubled when he actually attained what he had pursued so eagerly for so long.”

64a

Then Simmias laughed and said,

Simmias: “By Zeus, Socrates, I am not really in laughing humour just now, but you have made me laugh. Yes, I believe that most people, on hearing this, would think you have made a very good point about philosophers, and our own people would agree emphatically that those who engage in philosophy really do have a longing for death, and that this is the fate they deserve to suffer! They are quite aware of that.”

64b

Socrates: “And in a sense, Simmias, what they are saying would be true, except for their claim that they are aware. For they are unaware of the way in which true philosophers desire death, or the sense in which they deserve to die, or what kind of death it is. Indeed, we should just speak among ourselves”, he said, “and bid farewell to those fellows. Do we think that death is something?”

Simmias: “Very much so,” replied Simmias.

Socrates: “Is it anything other than the separation of the soul from the body? And is this what it is to be dead? The body is separated from the soul and is just by itself, while the soul, having been separated from the body, is just by itself? Is death anything other than this?”

Simmias: “It is nothing but this,” he replied.

64c

Socrates: “Now, good man, consider whether your views are the same as mine. Indeed, from these, I believe we shall come to know more about the issues we are investigating. Does it appear to you that a person who loves wisdom would be serious about such so-called pleasures as eating and drinking?”

64d

Simmias: “Not in the least, Socrates,” replied Simmias.

Socrates: “What about sexual pleasures?”

Simmias: “Not at all.”

Socrates: “And what about the other indulgences associated with the body? Do you think people of this sort would regard them as valuable? I mean, would they value the acquisition of distinctive clothing or shoes and other adornments of the body, or do you think they would disregard them and partake of them only to the extent really necessary?”

64e

Simmias: “I think the true philosopher would disregard them.”

Socrates: “Don’t you think,” he said, “in general, that the preoccupation of such a person is not about the body, but is directed away from it as much as possible, and turned towards the soul?”

Simmias: “I do indeed.”

65a

Socrates: “So is it obvious, in the first place, that in such matters the philosopher exceeds all others in freeing the soul, as much as possible, from communion with the body?”

Simmias: “So it appears.”

Socrates: “And it seems to most people, I presume, Simmias, that someone to whom nothing of this sort is pleasant, and who does not partake thereof, does not deserve to be alive, and that a person who thinks nothing of the pleasures which derive from

the body is well-nigh dead.”

Simmias: “Yes, what you are saying is certainly true.”

65b

Socrates: “But what about the acquisition of wisdom itself? Is the body an impediment or not if it is brought along to assist in the search? My question goes something like this: do sight and hearing afford men any truth? Or is there truth in the sort of things even the poets are constantly repeating to us, that we neither see nor hear anything accurately? And, indeed, if these two bodily senses are neither accurate nor clear, it would be idle to consider the others, for they are all somehow inferior to these two, or doesn’t it seem so to you?”

Simmias: “It does seem so to me.”

65c

Socrates: “So when does the soul encounter the truth? For whenever it attempts to contemplate anything in conjunction with the body, in that case it is obviously deceived by the body.”

Simmias: “What you say is true.”

Socrates: “Well, isn’t it in reasoning rather than anywhere else that any of the things that are, become obvious to it?”

Simmias: “Yes.”

Socrates: “But presumably, then, the soul reasons most beautifully whenever nothing else bothers it, neither hearing nor sight nor pain nor any pleasure, and it is just by itself to the greatest extent possible, bids the body farewell, has as little communion and contact with it as it can, and reaches towards what is.”

Simmias: “This is so.”

65d

Socrates: “Then, is it here too that the soul of the philosopher shows most disregard for the body, flees from it, and strives to

be just by itself?”

Simmias: “So it appears.”

Socrates: “But Simmias, what about this? Do we say that there is something just itself, or nothing is?”

Simmias: “By Zeus, we do indeed say that there is.”

Socrates: “And something is beautiful and is itself good?”

Simmias: “How could there not be?”

Socrates: “Now, have you ever yet seen anything of this kind with your eyes?”

Simmias: “Not at all.”

Socrates: “But have you ever contacted them through the body by means of any other sense? And I am referring to all of them, for example, size, health, strength and all the others. In short, I am speaking of the being of them all, what each of them happens to be. Can the very truth of them be contemplated by means of the body? Or is it the case that whoever is best and most diligently prepared to understand each of these, in itself, is the person who will come closest to the knowledge of them?”

Simmias: “Yes, certainly.”

65e

Socrates: “Now, wouldn’t a person undertake this with the utmost purity if he were to make his approach to each of them with the mind alone to the greatest possible extent? Without introducing sight into the mental activity, or dragging in any other sense perception whatsoever along with the reasoning, but making use of the mind just by itself, without admixture, wouldn’t he take up the hunt for each of the things that are, as free as possible from eyes and ears and, in effect, from all that is bodily, for this disturbs the soul and does not allow it to acquire truth and wisdom whenever it communes with the body? Won’t

this person, Simmias, and no other, attain what is?”

66a

Simmias: “Socrates, what you are saying is extraordinarily true,” replied Simmias.

Socrates: “Then,” he said, “the genuine philosophers must form a particular opinion based upon these conclusions so that they say something of this sort to one another: ‘Yes, a sort of narrow path seems to be leading us on to side with reason in the enquiry, because as long as we have the body, and our soul is compounded with such badness, we shall never satisfactorily obtain what we desire, and this we say is the truth. Indeed, the body brings countless distractions upon us just because it needs sustenance. What is more, if any illnesses befall it, they impede our hunt for what is. And the body also fills us with loves, desires, fears, a whole range of imaginings, and a lot of foolishness, so that, as they say, and it really is true, we never ever acquire any wisdom at all through its agency. And in fact, it is only the body and its desires which bring about wars, insurrections and fighting. For all wars arise on account of the possession of wealth, and we are compelled to acquire wealth because of the body, as we are slaves in its service. And because of all these factors, we become too busy to engage in philosophy. Worst of all, even if we do get time, free from its demands, and turn towards some philosophic enquiry, the body keeps intruding into the enquiry in all sorts of ways, bringing tribulation and agitation, and confounding us so that we are unable to see truth clearly because of it. But, in fact, this argument has shown us that if we are ever going to have pure knowledge of anything, we must be quit of the body and behold the objects themselves, with the soul itself. We claim to be lovers of wisdom, and we shall obtain what we desire and what we claim to love, when we die, as the argument indicates, but not while we are alive.

66e

Socrates: “Indeed, if it is impossible to know anything purely whilst accompanied by the body, there are two possibilities. Either it is impossible to acquire the knowledge at all, or it happens after death, for then, and not until then, will the soul be just by itself, separate from the body. And while we are living in the body, in this way we shall, it seems, be closest to acquiring knowledge when we have the least interaction and communion with it, only what is absolutely necessary and are not contaminated with its nature, but purify ourselves from it, until God himself releases us. And in this way, being pure and liberated from the foolishness of the body, we are likely to be with those who are like this, and we shall know all that is pure through ourselves alone. And this, I daresay, is the truth: that the impure has no contact with the pure for that would not be lawful.’ I believe, Simmias, that this is the sort of thing which all those with a proper love of learning will think and say to each other. Is that how it seems to you?”

67b

Simmias: “More than anything, Socrates.”

Socrates: “Therefore,” said Socrates, “if this is all true, my friend, there is great hope that when someone arrives where I am going, there, if anywhere, they fully attain that objective which has given rise to so much endeavour in our lives so far. So this departure which is now forced upon me offers good hope for any man who believes he has prepared his mind, which has, in a sense, been purified.”

Simmias: “Yes, certainly,” said Simmias.

67c

Socrates: “But does not this purification turn out to be just what we said it was in the earlier discussion: the separation of soul from body to the greatest extent possible; getting soul accustomed to gathering itself together, and collecting itself

from all parts of the body, to dwell just by itself as best it can, both in its present situation and hereafter; being set free from the body as though from bonds?”

67d

Simmias: “Yes, certainly.”

Socrates: “And isn’t this how death is described, a freeing and separation of soul from body?”

Simmias: “Entirely so.”

Socrates: “And we are saying that it is only those who engage in philosophy correctly who are always most eager to free the soul. This is the particular practice of the philosophers; the freeing and separating of soul from body. Is this so?”

Simmias: “So it appears.”

67e

Socrates: “So, as I said in the beginning, it would be ridiculous for a man who prepares himself throughout life by being as close to death as possible, and who lives accordingly, to be troubled at the arrival of his own death.”

Simmias: “Ridiculous, of course.”

Socrates: “So, in fact, Simmias,” he said, “those who engage properly in philosophy practise dying and, of all people, death is least fearful to them. Reflect upon this. If they are indeed at variance with the body in every way, and they wish to have soul just by itself, but they are fearful and troubled when this happens, wouldn’t that be very irrational? Shouldn’t they be glad to go to a place where there is hope that those who arrive there, freed from association with their former adversary, will attain that which they have loved throughout their lives, and what they have loved is wisdom? When humans’ loved ones, wives or sons, have died, many people have been prepared to go after them willingly into Hades, led by the hope of seeing their

loved ones, and of being with them there. So, if someone actually loves wisdom and has a firm hold of this same hope that he will attain no wisdom worth mentioning anywhere else but in Hades, will he be troubled when he is dying? Won't he be glad to go there? Surely he must think so, my friend, if he is in fact a philosopher, for he will hold strongly to the view that there, and nowhere else, will he attain wisdom in its purity. And if this is the case, then as we said before, it would be highly irrational for such a person to fear death."

68b

Simmias: "Very much so, by Zeus."

Socrates: "Therefore, do you have sufficient evidence", said Socrates, "that a man whom you see grieving when he is going to die is no lover of wisdom, but a lover of the body? The same person also turns out to be a money-lover, or a lover of honour, one or the other or both."

68c

Simmias: "Indeed," he said, "the situation is just as you describe."

Socrates: "Well, Simmias, doesn't what we refer to as courage belong mainly to those with a philosophic disposition?"

Simmias: "Entirely so."

Socrates: "And sound-mindedness too, sound-mindedness as most people describe it, not being aroused in the face of desires but being frugal and orderly. Doesn't this belong only to those who show least regard for the body and spend their lives in philosophy?"

Simmias: "It must."

68d

Socrates: "Now, if you wish to consider the courage and sound-mindedness of other people, it will seem unusual to you."

Simmias: “In what way, Socrates?”

Socrates: “You know that everyone else regards death as one of the great evils?”

Simmias: “Very much so.”

Socrates: “And don’t the courageous among them submit to death, whenever they do so, from fear of greater evils?”

Simmias: “That is what happens.”

Socrates: “So apart from the philosophers, everyone is courageous due to fear and terror. However, it is quite illogical to be courageous due to terror and cowardice.”

Simmias: “It certainly is.”

68e

Socrates: “And what about those among them who are orderly? Aren’t they in the same predicament, namely that they are sound-minded due to a certain lack of restraint? Indeed, we say that this is impossible, but nevertheless this is what their foolish sound-mindedness turns out to be like. They are afraid of being deprived of certain pleasures, so, out of desire for these pleasures, they refrain from other pleasures because they are controlled by these pleasures. However, being ruled by pleasure is what they call lack of restraint, but it now turns out that they control pleasures because they themselves are controlled by other pleasures. This is like what was just referred to: they are, in a way, sound-minded due to lack of restraint.”

Simmias: “So it seems.”

69a

Socrates: “Bless you, Simmias, I suspect that when it comes to excellence, this trading is not right, exchanging pleasures for pleasures, pains for pains, fear for fear and greater for less as if they were coins. No, there is only one proper coin for which all these must be exchanged, and that is wisdom, and everything

should really be bought and sold for this and in conjunction with this. And courage, sound-mindedness, justice and in short, true excellence, should accompany wisdom, whether pleasures, fears and everything else of that sort be present or absent. But if these are exchanged for one another unaccompanied by wisdom, won't such excellence be a shadowy image, which is actually slavish and devoid of anything sound or true? But the true is, in fact, a purification from everything of that sort, and sound-mindedness, justice, courage, and wisdom itself are purifications. And it seems that those who established our mysteries¹² were no ordinary folk, but in fact they said long ago, in riddling language, that whoever arrived in Hades uninitiated and imperfect will lie in the mire, while someone who has been purified and perfected when he arrives there will dwell with the gods. For as they say in the mysteries, ^{69c} The thyrsus bearers are many But the Bacchae are few.¹³

^{69d}

Socrates: “And the Bacchae are, in my view, none other than those who have properly engaged in philosophy. And so, throughout my life, unstintingly and to the best of my ability, I have been eager in every way to become one of them. But whether I have been eager in the right way and whether we have achieved anything, that I shall know for certain quite soon when I arrive there, if it be god's will. That is how it seems to me.

Socrates: “Now, Simmias and Cebes,” said he, “thus do I make my case that it is reasonable to bear without difficulty or tribulation my departure from yourselves and the rulers of this place, for I believe that I shall encounter rulers there who are just as good as these, and companions too. So, if I am any more persuasive towards you with this defence than I was to the Athenian jurors, all would be well.”

^{69e}

Once Socrates had said all this, Cebes responded by saying,

Cebes: “Socrates, it seems to me at least, that in general what you have said is excellent, but what you said about the soul brings up a lot of doubt in people lest it may no longer be anywhere, once it is quit of the body. They believe that it is destroyed and perishes on the very day a person dies, as soon as it is separated from the body, and going forth, dispersed like breath or smoke, it takes flight, is gone and is no longer anywhere at all. However, if the soul were, in fact, just by itself, gathered together, freed from those evils you described just now, there would be a great and beautiful hope, Socrates, that what you are saying is true. But it will probably require no small amount of gentle persuasion to prove that after the person dies the soul exists and possesses some power and wisdom.”

70b

Socrates: “What you say is true, Cebes,” said Socrates. “But what are we to do? Would you like us to converse about this very topic, on the question of whether this is likely to be the case or not?”

Cebes: “I, for my part, would be glad to hear what opinion you hold on these issues,” replied Cebes.

70c

Socrates: “Well,” said Socrates, “I do not think anyone who heard us now, even if he were a comic poet, would say that I am being verbose and I am constructing arguments which are of no relevance. So if you see fit, we should examine the matter in detail.

Socrates: “Let us consider whether the souls of people who have died are in Hades or not, in the following manner. There is an ancient story, which we remember, that the souls exist in the other world having arrived there from this world, and they arrive back here again, coming into being from those who have

died. Now, if this is the case, that the living come into being from those who have died, must not our souls be there, for they could not come into being again if they were not there? And if it actually becomes evident that the living come into being from nothing else than from those who have died, this constitutes an adequate proof that these things are so. But if this is not the case, another argument would be required.”

70d

Cebes: “Yes, certainly,” said Cebes.

70e

Socrates: “Then, if you wish to understand this more easily, do not consider human beings alone, but all animals and plants and, in short, anything which comes to be. Let us see whether any of them which happen to have an opposite comes into being from those opposites. Beauty is presumably opposite to ugliness, just is opposite to unjust, and there are thousands more examples. So let us consider this: whether anything which has an opposite must come into being from nothing else but its own opposite. For instance, whenever something becomes greater, presumably it must have been lesser before and became greater afterwards.”

Cebes: “Yes.”

71a

Socrates: “And if it becomes lesser, does it not become lesser having previously been greater?”

Cebes: “That is so.”

Socrates: “And indeed, from the stronger comes the weaker and from the slower the quicker?”

Cebes: “Yes, certainly.”

Socrates: “What about this, doesn’t worse come into being from better and the more just from the more unjust?”

Cebes: “How could it be otherwise?”

Socrates: “Do we understand this sufficiently now, that everything comes into being in this way, opposite things arising from opposites?”

Cebes: “Yes, certainly.”

71b

Socrates: “What about this further question? Is there something of this sort, something in between all these pairs of opposites, which is twofold? Are there two processes, one going from one extreme to the other, and a second going in the opposite direction? For there is increase and decrease in between something greater and something lesser, and, accordingly, do we refer to one as increasing and the other as decreasing?”

Cebes: “Yes.”

Socrates: “Doesn’t this happen in all cases, separation and combination, cooling and heating? And even if we sometimes do not use the names, must it not, in fact, always be like this: that they are generated from one another, and there is generation into one another?”

Cebes: “Certainly.”

71c

Socrates: “What about this?” he said. “Is there an opposite of being alive, just as being awake is the opposite of being asleep?”

Cebes: “There is, of course,” he replied.

Socrates: “What is it?”

Cebes: “Being dead.”

71d

Socrates: “Don’t these come into being from one another since they are opposites, and, as there are two of them, aren’t there

two processes in between them?”

Cebes: “There must be.”

Socrates: “Then,” said Socrates, “I shall describe to you one pairing which we just referred to and its processes too, and you should then describe the other one to me. So I say that there is ‘being asleep’ and ‘being awake’, and from being asleep arises being awake, and from being awake arises being asleep, and the processes between the two are falling asleep and waking up. Is that enough for you,” he said, “or not?”

Cebes: “It is certainly enough.”

71e

Socrates: “Then, describe life and death to me on this basis. Don’t you say that being alive is the opposite of being dead?”

Cebes: “I do, indeed.”

Socrates: “And do they arise from one another?”

Cebes: “Yes.”

Socrates: “Then, what is generated from the living?”

Cebes: “The dead.”

Socrates: “And what is generated from the dead?”

Cebes: “I have to admit that it is the living.”

Socrates: “So, Cebes, do those who are alive, and anything that is alive, come into being from those who have died?”

Cebes: “It appears so,” he replied.

Socrates: “So in Hades our souls are.”

Cebes: “So it seems.”

Socrates: “Now, of the two processes involved here, one at any rate is evident, for dying is surely an evident process, is this so?”

Cebes: “Yes, certainly”

72a

Socrates: “Well,” he asked, “how shall we proceed? If we do not balance this with an opposite process, then won’t nature be one-legged in this respect? Isn’t it necessary to assign some process which is the opposite of dying?”

Cebes: “Absolutely.”

Socrates: “What process is this?”

Cebes: “Coming to life again.”

Socrates: “Now, if there is such a thing as coming to life again, would not the coming to life again be the generation of those who are alive, from those who have died?”

Cebes: “Certainly.”

Socrates: “So, we agree that the living come into being from the dead in this way, just as much as the dead come from the living; and since this is the case, it seems there is sufficient proof that the souls of the dead necessarily exist somewhere, and they come into being once more, from there.”

72b

Cebes: “It seems to me, Socrates,” he said, “that based upon what has been agreed, this must be the case.”

Socrates: “Well, if you look at it this way, I think you will see that what we have agreed is right. For if the various processes did not always correspond to one another as if they were going around in a circle, but the generation was always in a straight line, only from something to its opposite, and it never turned back to the other again or went in the other direction, you know that everything would finally have the same form, suffer the same fate, and would stop coming into being.”

Cebes: “What do you mean?” he asked.

Socrates: “It is not difficult to understand what I mean,” he said. “For instance, if there were a process of falling asleep, on the one hand, without any corresponding process of awakening from sleep, you know everything would eventually make Endymion¹⁴ look insignificant, and his great sleep would be of no account because everyone else would be the same as him, asleep. And if everything was combined and nothing was separated, the statement of Anaxagoras¹⁵ that ‘all things were together’ would soon be fulfilled. By the same argument, dear Cebes, if everything which ever partakes of life were to die, and the dead were to remain in that condition once they had died, without coming back to life again, isn’t it totally inevitable that eventually everything would be dead, and nothing would be alive? For if the living were to come into being from other sources, and the living, for their part, were to die, is there any way to avoid everything being consumed by death?”

72d

Cebes: “I do not think so at all, Socrates,” replied Cebes. “Yes, it seems to me that what you are saying is entirely true.”

Socrates: “Yes, Cebes,” he said, “that is how it seems to me. It is truer than any account, and we are not deceived when we agree with all this. Yes, there is, in fact, also a process of coming back to life again, the living do come into being from those who have died, and the souls of those who have died exist.”

72e

Cebes: “And indeed,” Cebes said in response, “if that argument, Socrates, which you are in the habit of recounting so frequently, is true, then according to that, learning for us is nothing other than recollection, and on this basis we must presumably have learned at some previous time what we are now remembering. But this would be impossible unless our soul was somewhere before it took on this human form. So, in this way too, the soul seems to be something immortal.”

73a

Simmias: Simmias interjected and said, “Cebes, what proofs have we for these claims? Please remind me, for I do not remember them very well at present.”

Cebes: “Well,” said Cebes, “one excellent argument is this: if people are asked questions and someone questions them properly, the people, of themselves, describe everything as it is. However, if knowledge and a correct account were not within them, they would not have been able to do this. What is more, if someone shows them diagrams or the like, you have the clearest evidence that this is the case.”

73b

Socrates: “And,” said Socrates, “as you are not quite persuaded by this, Simmias, let us see whether you will agree if you consider it as follows. Do you actually doubt that what we call learning is recollection?”

Simmias: “I do not doubt it,” said Simmias, “but I want to undergo the very process the argument is describing; I want to be reminded. From Cebes’ attempt at the argument, I almost remember it already and I am persuaded. Nevertheless, I would now like to hear how you propose to deal with it.”

73c

Socrates: “It goes like this,” he said. “We agree, of course, that if someone is to be reminded of something, he must have known that very thing on a previous occasion.”

Simmias: “Certainly,” he replied.

Socrates: “Now, do we also agree that whenever knowledge arises in a particular manner, it is recollection? What manner am I referring to? Well, if someone, having seen something or heard it or acquired some other perception of it, were to know not only that thing, but if he also thought of something else, something the knowledge of which was not the same but

different, would we be right to say that he recollected whatever it was that he thought of?"

73d

Simmias: "What do you mean?"

Socrates: "Something like this. Presumably the knowledge of man and of lyre are different."

Simmias: "How could they not be?"

Socrates: "You know that whenever lovers see a lyre or a garment or anything else which a favourite was in the habit of using, their experience is as follows. They recognise the lyre and they apprehend in their mind the figure of the boy who owns the lyre, and this is recollection, as when someone who has seen Simmias is often reminded of Cebes, and presumably there would be thousands of other examples of that sort."

73e

Simmias: "Yes, by Zeus, thousands," said Simmias.

Socrates: "Isn't that sort of thing a recollection, particularly when the experience relates to things which have already been forgotten through time and lack of consideration?"

Simmias: "Yes, certainly," he replied.

Socrates: "What about this?" he asked. "Isn't it possible to be reminded of a man on seeing a picture of a horse, or a picture of a lyre, or to be reminded of Cebes on seeing a picture of Simmias?"

Simmias: "Very much so."

Socrates: "And isn't it possible to be reminded of Simmias on seeing a picture of Simmias?"

Simmias: "It is, indeed."

74a

Socrates: “So, doesn’t it follow from all this that there is recollection arising from likes, but also from unlikes?”

Simmias: “It follows.”

Socrates: “But whenever someone recollects anything from like things, isn’t there something else that must occur to him? Won’t he recognise whether or not the thing lacks anything in respect of its likeness to whatever he is recollecting?”

Simmias: “He must,” replied Simmias.

Socrates: “Well,” he said, “consider if this is how these matters stand. We say, I presume, that there is something equal, not of wood to wood, or stone to stone, or anything else of that sort, but the equal itself, something different besides all these. May we say that there is such a thing or not?”

74b

Simmias: “Indeed, let us say most certainly that there is. It is amazing, by Zeus.”

Socrates: “And do we know what it is?”

Simmias: “Certainly,” he replied.

Socrates: “From where did we obtain the knowledge of this? Isn’t it as we just said? From seeing pieces of wood or stone or other equals, we have brought that equal to mind from these, and that is different from these. Or does it not appear different to you? Think about this too, as follows. Do not equal pieces of wood and stone, being the same, sometimes appear equal to one thing but not to another?”

Simmias: “Yes, certainly.”

74c

Socrates: “What about this? Did the equals themselves ever appear unequal to you, or equality to be inequality?”

Simmias: “Not yet anyway, Socrates.”

Socrates: “Then these equals, and the equal itself, are not the same.”

Simmias: “Not at all, Socrates, not according to me.”

Socrates: “And yet,” he said, “from these equals, which are different from that equal, the knowledge of equality has nevertheless come into your mind and been apprehended.”

Simmias: “What you say is very true,” he said.

Socrates: “Isn’t it either like them or unlike them?”

Simmias: “Certainly.”

Socrates: “But that makes no difference,” he said. “As long as you see one thing and bring something else to mind from this observation, be it like or unlike, recollection must have taken place.”

Simmias: “Yes, certainly.”

74d

Socrates: “What about this?” he said. “Is our experience somewhat as follows in relation to what is in the pieces of wood and in the equals we mentioned just now? Do they appear just as equal to us as the equal just by itself, or do they lack something of that on account of being something that is like the equal, or do they lack nothing?”

Simmias: “They are considerably lacking,” he replied.

Socrates: “Do we not agree that whenever someone sees something and thinks, ‘what I now see is aiming to be like something else among things that are, however, it lacks something and is unable to be quite like that, instead it is inferior’, presumably someone who recognises this must have had prior knowledge of that which he says it has come to resemble, and of which it is falling short?”

Simmias: “He must.”

74e

Socrates: “Well now, is this also our experience in relation to the equals and the equal itself, or is it not?”

Simmias: “Entirely so.”

75a

Socrates: “Then we must have had prior knowledge of the equal before that occasion when we first saw the equals and realised that these are all striving to be like the equal but attain it in a deficient manner.”

Simmias: “This is so.”

Socrates: “But then do we also agree that it is recognised, and can only be recognised from seeing, touching, or one of the other senses? I am saying that these are all the same.”

Simmias: “Yes, Socrates, they are the same, in the context of what this argument is trying to show.”

75b

Socrates: “Well, in any event, we must have recognised from sense perceptions, that all perceptible equals are striving towards what equal is, and are deficient with respect to it. Or how would we express this?”

Simmias: “In that way.”

Socrates: “Then, before we began to see and hear and use the other senses, I presume we must have acquired knowledge of what the equal itself is if we are to refer the equals perceived through the senses to that equal and recognise that everything of this sort endeavours to be like that, but is inferior to it.”

Simmias: “That must follow from what we said before, Socrates.”

75c

Socrates: “Didn’t we see and hear and use the other senses as soon as we were born?”

Simmias: “Certainly.”

Socrates: “Then we must have acquired the knowledge of the equal before we acquired the senses. Is that what we are saying?”

Simmias: “Yes.”

Socrates: “So, apparently we must have acquired this knowledge before we were born.”

Simmias: “So it seems.”

Socrates: “Therefore, if we were born possessing this knowledge, having acquired it before birth, then is it not the case that before we were born, and at birth, we knew not only the equal, and the more and the less, but everything of that sort too? Indeed, this argument is no more concerned with the equal than with beauty itself, good itself, justice, holiness, and as I say, everything to which we apply the term ‘what it is’, both in the enquiries when we ask questions, and in the responses when we answer them. In which case, we must have acquired the knowledge of all these before birth.”

75d

Simmias: “That is it.”

Socrates: “And if after we have acquired it we have not forgotten it every time, we must always be born with the knowledge and live with the knowledge throughout our lives. For that is what knowing is, the retention of knowledge, without loss, once it has been acquired. For we do refer to forgetting as the loss of knowledge, do we not, Simmias?”

75e

Simmias: “Entirely so, Socrates, of course,” he replied.

Socrates: “On the other hand, I presume that if we acquired knowledge before birth and lost it in the process of birth, but later on, by using the senses in this regard, we re-acquired the

knowledge we previously possessed, then what we call learning would be a re-acquisition of our own knowledge. And wouldn't we be right to call this recollection?"

76a

Simmias: "Certainly."

Socrates: "In fact, this was shown to be possible: that once we perceive something by sight or hearing, or apprehend it with some other sense, it is possible to bring something else to mind from this, something we have forgotten, something associated with it, which may be like it or unlike it. Consequently, as I say, there are two possibilities: either we were born knowing these things, and we all know them throughout life, or else later those who we say are learning are merely remembering, and in that case learning would be recollection."

Simmias: "Yes, indeed, Socrates, that's how things stand."

76b

Socrates: "Well, which will you choose, Simmias? Were we born with the knowledge or do we recollect later on what had previously been known?"

Simmias: "I cannot choose just now, Socrates."

Socrates: "What about this? Can you make a choice and form an opinion about the following? Would somebody who knows be able to give an account of what is known or not?"

Simmias: "Yes, this must be so, Socrates," he replied.

Socrates: "And do you think that everyone can give an account of the matters we have just been talking about?"

76c

Simmias: "I wish they could," said Simmias, "but I am very much afraid that this time tomorrow there will no longer be a single person who can do this in a worthy manner."

Socrates: “So it does not seem to you, Simmias, that everyone knows this?”

Simmias: “Not at all.”

Socrates: “Then are they recollecting what was previously learned?”

Simmias: “They must be.”

Socrates: “When did our souls acquire the knowledge of these things? For, evidently, it was not the very moment at which we were being born human beings.”

Simmias: “Of course not.”

Socrates: “So it was before then.”

Simmias: “Yes.”

Socrates: “So, Simmias, even before then, our souls were there, prior to being in human form without bodies, and possessed wisdom.”

76d

Simmias: “Unless we acquire knowledge of these at the time we are being born, Socrates, for that particular occasion still remains for consideration.”

Socrates: “So be it, my friend. But is there some different occasion when we lose it? For we have just agreed that we are not born possessing this knowledge. So do we lose it at the very time we acquire it? Or can you suggest some other time?”

Simmias: “Not at all, Socrates. I was talking nonsense without realising it.”

Socrates: “Well, Simmias, is this how matters stand with us? If, on the one hand, as we are constantly repeating, there is beauty and good, and all being of that kind, and we refer everything from the senses to this being, rediscovering what existed

previously, and is our own, and we compare these to this, then just as surely as these exist so also must our souls exist before we were born. But on the other hand, if these do not exist, this argument would have proceeded differently. So is that how matters stand, is there an equal necessity that these exist and that our souls exist before we are born, and if these do not exist, neither do those?"

76e

Simmias: "Socrates, it certainly seems to me that the necessity is the same," said Simmias, "and the argument has taken refuge, quite beautifully, in the conclusion that the soul's existence before we were born is just as certain as the existence of the being you are now describing. For nothing is so clear to me as the fact that all such things, beauty, good and all the others you just mentioned, exist. Nothing could be more certain and, in my view, this has been adequately proven."

77a

Socrates: "And what about Cebes?" said Socrates. "For it is also necessary to persuade Cebes."

Simmias: "In my view, it is enough for him too," replied Simmias. "However, he is the most obstinate of men when it comes to incredulity in the face of arguments. Now, I believe he has been adequately persuaded that our soul existed before we were born, but whether the soul will continue to exist after we die seems unproven even to me, Socrates. Rather, the point made by Cebes still stands, the fear of the multitude that once a person dies, the soul is dispersed, and this is the end of its being. For why could it not arise and be constituted from some other source and exist before it arrives in human form? But once it has arrived and then departed, couldn't it too then come to an end and be destroyed?"

77c

Cebes: “You expressed that well, Simmias,” said Cebes. “It seems as if what has been proven is half of what is required, that our soul existed before we were born. But it is necessary to add a proof that after we die, it will exist no less than before birth, if the proof is to be complete.”

Socrates: “Well, Simmias and Cebes, that has been proven already,” said Socrates, “provided you combine this argument and the one we agreed upon before this, the one about all the living being born from the dead, into the same argument. For if the soul also exists previously, and it must come to life and come into being from nowhere else but from death and dying, surely it must exist after death since it has to be born again? So the proof you require has already been given. Nevertheless, I think that you and Simmias would also love to pursue this argument even further, and you are afraid, like children, lest, in truth, the wind will blow the soul away and scatter it when it departs from the body, especially if someone happens to die, not on a calm day, but during a strong gale.”

77e

Cebes: Cebes laughed at this, and said, “Try to reassure us, Socrates, as if we were afraid. We are not really afraid, but perhaps there is some child within us who is afraid of such things. So try to persuade him not to fear death, as he fears monsters.”

Socrates: “Then,” said Socrates, “you should sing charms to him every day until this has been charmed away.”

78a

Cebes: “Now, Socrates,” he said, “where are we going to get a good singer of such charms, since you are leaving us?”

Socrates: “Greece is well populated, Cebes, and there are surely many good men there, and the non-Greek peoples are numerous too, so you should search all these thoroughly in

pursuit of such a singer of charms, sparing neither money nor effort, for there is no better way to spend your money than on this. But you should also search with one another for you are unlikely to find anyone more capable of doing this than yourselves.”

78b

Cebes: “Very well,” said Cebes, “this shall be done. However, we should resume the discussion from where we left off, if that is acceptable to you.”

Socrates: “Of course it is acceptable. Why wouldn’t it be?”

Cebes: “Well spoken,” he said.

Socrates: “In that case,” said Socrates, “should we ask ourselves a question like this: to what sort of thing does the fate of being scattered belong, and for what sort of thing should we fear this fate, and what sort of thing escapes it? Then should we go on to investigate which of the two is soul, and on this basis be confident or fearful for our own soul.”

Cebes: “What you say is true,” he said.

78c

Socrates: “Now, doesn’t it belong to something which has been compounded, and which is by nature a compound, to suffer this fate and to be broken up in the same way it was compounded? But if there is anything which is un-compounded, it belongs to this alone, if anything, not to suffer such a fate.”

Cebes: “I think this is true,” said Cebes.

Socrates: “Now, the things which are always the same and unchanging are most likely to be the un-compounded things, while those which are constantly changing and never the same are those which are compounded. Is this so?”

Cebes: “Well, it seems so to me, anyway.”

78d

Socrates: “Then let us go”, he said, “to the same things we discussed earlier. Is the being itself, whose existence we give an account of through question and answer, always unchanging and the same, or is it constantly changing? The equal itself, the good itself, that which each itself is, and ‘what is’, do these ever admit any change whatsoever? Or does that which each of them always is, since it is uniform just by itself, remain the same and unchanging and never admit any alteration in any respect?”

Cebes: “It must remain unchanging and the same, Socrates,” said Cebes.

Socrates: “And what about the many beautiful things, such as people or garments or anything else of that sort, or the many equals, or anything else bearing the same name as those unchanging things? Do these remain the same, or in total contrast to those are they almost never ever the same as themselves or one another in any respect at all?”

78e

Cebes: “Yes, that is the way they are,” said Cebes. “They never remain the same.”

Socrates: “Now, these you can touch and see and perceive with the other senses. However, there is nothing else by which you could ever apprehend the unchanging things, except the reasoning of the mind, but such things are unseen and are not visible. Is this so?”

Cebes: “What you are saying is entirely true,” he replied.

79a

Socrates: “Then would you like us to propose two kinds of things that are, one visible, the other not visible?”

Cebes: “Let us propose that.”

Socrates: “And does that which is not visible always remain the same, while the visible is never the same?”

Cebes: “We should propose this too.”

Socrates: “Come then,” he said, “do we ourselves consist of anything other than body and soul?”

Cebes: “Nothing else.”

79b

Socrates: “Now, which kind do we say the body most resembles and to which is it most akin?”

Cebes: “It is obvious to everyone that it resembles the visible kind.”

Socrates: “What about the soul? Is it visible or invisible?”

Cebes: “It cannot be seen by humans anyway, Socrates.”

Socrates: “But surely we meant visible and invisible in the context of the nature of human beings? Or do you think otherwise?”

Cebes: “No, the context is the nature of human beings.”

Socrates: “Now, what do we say about the soul? That it is visible or that it is invisible?”

Cebes: “It is not visible.”

Socrates: “So it is invisible then?”

Cebes: “Yes.”

Socrates: “So the soul is more like the invisible than the body is, while the body is more like the visible.”

Cebes: “Yes, Socrates, it absolutely must be.”

79c

Socrates: “Well have we not said this before? Whenever the soul makes use of the body to consider anything, either through sight or through hearing or through any other sense – for consideration through the body means considering anything

through the senses – then the soul is dragged by the body to things which never remain the same. It wanders, is confused, and it is dizzy as though drunk because it is in contact with things of that sort.”

Cebes: “Yes, indeed.”

79d

Socrates: “But whenever it considers just by itself, the soul departs to another realm, to the pure, eternal, immortal and unchanging. And since it is akin to this, it is constantly in its presence, whenever it is just by itself and allowed to be so. Then the soul ceases its wandering, associates with these, and remains always the same and unchanging because it is in contact with things of that sort. And this condition of the soul is called wisdom.”

Cebes: “What you are saying is entirely beautiful and true, Socrates,” he said.

79e

Socrates: “Well then, from what we have already said and are now saying, which of the two kinds does the soul seem to you to resemble, and to which is it more akin?”

Cebes: “Socrates,” he replied, “I think that anyone, even the slowest learner, would agree, based upon this approach, that the soul is completely and, in every respect, more like that which always remains the same, rather than that which does not.”

Socrates: “What about the body?”

Cebes: “It is more like the other kind.”

80a

Socrates: “Now, look at it this way. Once soul and body are together, nature directs the body to serve and be ruled, and the soul to rule and dominate. And in these respects again, which of them do you think is like the divine and which like the mortal?”

Or don't you think the divine is naturally fitted to rule and to lead, and the mortal to be ruled and to serve?"

Cebes: "Yes, I do."

Socrates: "Then, which of them does the soul resemble?"

Cebes: "It is obvious, Socrates, that the soul resembles the divine, while the body resembles the mortal."

80b

Socrates: "Then consider this, Cebes," he said. "From everything that has been said, are we to conclude that the soul is most like the divine, immortal, single in form and indissoluble, which is known by reason and always remains unchanging and the same as itself? And is the body, on the other hand, most like the human, mortal, unreasoning, multiform and dissoluble, which never remains the same as itself? Do we have anything to say which contradicts this, dear Cebes, anything which says that this is not the case?"

Cebes: "We have nothing."

Socrates: "Well then, this being the case, doesn't it belong to the body to be readily dissolved, while the soul, for its part, is entirely indissoluble or almost so?"

80c

Cebes: "How could it be otherwise?"

Socrates: "Now, you realise", he said, "that when a person dies, his visible part, the body, lying in the visible realm, the thing we call a corpse, is prone to dissolution, decomposition and dispersal. But none of these processes happens immediately; instead, it endures for quite a long time, and if someone dies while the body is in good condition and at the right time of life, it lasts even longer. Indeed, once the body has shrunk and has been embalmed as the Egyptians embalm them, it remains almost entire for a considerable period of time, and even when

it decays, some parts of the body, bones and sinews and everything of that sort, are virtually immortal. Isn't this so?"

Cebes: "Yes."

80d

Socrates: "But does the soul, the unseen, go to another noble, pure and unseen place of this sort, a true Hades, alongside the good and wise god, whither, God willing, my own soul should go? Is something of this sort, endowed with such a nature, dispersed and destroyed as soon as it departs from the body, as most people say? Far from it, dear Cebes and Simmias. No, the outcome is much more like the following. If the soul were to depart whilst pure, dragging nothing belonging to the body with it, because the soul had no willing communion with it in life but shunned it, and gathered itself into itself because that is its constant practice, then this is nothing but the proper practice of philosophy, and the true practice of dying without reluctance. Or would this not be the practice of death?"

81a

Cebes: "Entirely so."

Socrates: "Once it is in this condition, will the soul not journey to that which is like it, to the unseen, the divine, immortal and wise, and on arrival will blessedness not be its lot, being released from wandering and stupidity, fears and wild passions and the other evils of the human condition? Then, as they say of the initiated, the soul truly spends the rest of the time with the gods. Should we describe it like this, Cebes, or in a different way?"

Cebes: "In this way, by Zeus," replied Cebes.

81b

Socrates: "But if, on the other hand, it departs from the body, sullied and impure, because the soul constantly associates with it, serving it and loving it and being enchanted by it through

desires and pleasures, so that nothing seems to be true except what has bodily form, what one can touch and see, eat or drink, or use for sexual gratification, while anything obscure to the eyes and unseen, known by reason and apprehended by philosophy, is something it tends to hate, fear and shun, do you think that a soul in such a condition will depart pure, just by itself?"

Cebes: "Not at all," he replied.

81c

Socrates: "Rather, when interpenetrated by that which has bodily form, I think this familiarity and association with the body forces the soul to adopt its nature due to the constant association and great concern with the physical."

Cebes: "Yes, certainly."

Socrates: "Well then, my friend, we must accept that this element is burdensome, heavy, earthy and visible. And, indeed, the kind of soul which possesses this is weighed down and dragged once more into the visible realm through fear of Hades and the unseen, and as the story goes, prowls about memorials and tombs, where indeed some shadowy apparitions of souls have actually been seen. These are the visible images of souls of this kind, souls which were not set free in a pure condition but partaking of the visible, and that is why they can be seen."

Cebes: "Quite likely, Socrates."

81d

Socrates: "Yes, Cebes, and it is also likely that these are the souls not of good but of degenerate folk, who are compelled to wander about such places to pay the penalty for their former way of life which was bad. And they wander until they are bound once more in a body by the desire belonging to the bodily form, their close consort. And quite likely, they are bound in such habits as they have practised during life."

Cebes: “What sort of habits do you mean, Socrates?”

81e

Socrates: “For instance, those who have practised gluttony, insolence or drunkenness, rather than avoiding these at all costs, are likely to take on the forms of donkeys or beasts of that sort. Or do you not think so?”

Cebes: “What you are saying is certainly very likely.”

82a

Socrates: “While those who have preferred injustice, tyranny and robbery take on the forms of wolves, hawks and kites. Or where else should we say such souls go?”

Cebes: “Into creatures of this sort, of course,” said Cebes.

Socrates: “And obviously each of the others would take their course based upon the similarities of their concern.”

Cebes: “Yes, that is obvious. How could it be otherwise?”

Socrates: “Will the happiest among them not take the best course, those who have pursued civil and social virtue which they call sound-mindedness and justice, born of habit and concern but devoid of philosophy and of reason?”

Cebes: “In what sense are they happiest?”

82b

Socrates: “Because it is likely that these people return once more to this sort of sociable or gentle class, perhaps as bees, wasps or ants, or even into the human race again, and from them moderate people are born.”

Cebes: “Quite likely.”

Socrates: “However, no one but the lover of knowledge, one who has practised philosophy and departs in an entirely pure condition, is allowed to attain the race of gods. And these are the reasons, Simmias my friend, and you too Cebes, why those

who love wisdom aright abstain from all of the desires of the body and resist them and do not give themselves over to them. It is not because they fear poverty or loss of property, like most people who love wealth; nor again do they refrain from them because they are afraid of dishonour, or a reputation for depravity, like the lovers of power and reputation.”

82d

Cebes: “Indeed, Socrates, that would not be appropriate,” said Cebes.

Socrates: “It certainly would not, by Zeus,” he said. “For in fact, Cebes, those with any concern for their own soul who do not live their lives fashioning bodies bid farewell to these fellows and do not follow the same path as people who do not know where they are going. They do not believe that they themselves should act in opposition to philosophy and the liberation and purifying process it affords, so they turn and follow philosophy wherever it may lead.”

Cebes: “How does this happen, Socrates?”

82e

Socrates: “I shall tell you,” he said. “Those who love knowledge realise that when philosophy takes the soul in hand, it is literally fettered within the body, glued to it, and the soul is compelled to view things that are through the body, as if it were a prison, rather than viewing them itself, through itself. The soul is wallowing in total ignorance, and philosophy discerns the most ingenious aspect of the prison, that it works by means of desires, so that the actual prisoner may be the greatest accomplice in his imprisonment. Now, as I was saying, the lovers of knowledge realise that when philosophy takes their soul in hand in such a condition as this, it exhorts the soul gently and tries to set it free, pointing out that enquiry by means of the eyes is fraught with deceit, and that enquiry by means of the ears and the other senses is also deceptive.

83b

Socrates: “Philosophy persuades the soul to withdraw from the senses and use them only as much as necessary, imploring it to collect and gather itself into itself, trust nothing else except its own self, and what it can cognise just by itself, about things that are, just by themselves. The soul should not believe that what it considers by any other means, things that are different in different circumstances, are true. These are known by the senses and are visible, but what soul sees is known by reason and is unseen by the senses.

Socrates: “Now, the soul of the true philosopher does not think that this liberation should be resisted, and accordingly it refrains from pleasures and desires, pains and fears, as much as it is able to, realising that whenever people experience intense pleasure, pain, fear or desire, the extent of the evil which afflicts them as a consequence is not what they think it is. It is not disease or some financial loss born of desire. No, it is the greatest and most extreme evil of all, this they experience and do not realise it.”

83c

Cebes: “What is this evil, Socrates?” said Cebes.

Socrates: “That whilst experiencing intense pleasure or pain, the soul of every person is compelled to believe that whatever is mainly responsible for the experience is completely evident and entirely true, when this is not the case. And these are, for the most part, visible, aren’t they?”

Cebes: “Yes, certainly.”

83d

Socrates: “Is not the soul completely fettered by the body, in this experience?”

Cebes: “In what way?”

Socrates: “Because each pleasure and pain has a sort of nail which fastens and pins the soul to the body and makes it corporeal, fancying that whatever the body declares to be true is true. For I believe the soul is compelled to become like the body in manner and in nurture because it shares the body’s opinions and it delights in the same things. And it can never enter Hades in a pure condition, but it always departs contaminated with the body, so that it quickly falls into another body and grows there like a seed that is sown. Accordingly, the soul has no share in the company of the divine, the pure, and the unitary.”

83e

Cebes: “What you are saying is very true, Socrates,” said Cebes.

Socrates: “Now, Cebes, that is why those who love knowledge aright are orderly and courageous, and not for the reasons that most people give. Or do you think it is?”

84a

Cebes: “I certainly do not.”

Socrates: “No indeed, the soul of the person who loves wisdom would reason as we have described and would never deign to use philosophy to free itself, and then, once free, give itself over again to pleasure and pain, fetter itself once more, and perform the endless task of Penelope,¹⁶ weaving some web in the opposite direction. Instead, the soul maintains serenity in the face of these, following reason and abiding always in that, beholding what is true and divine and beyond opinion, and being nourished by these. It thinks it should live in this way while it remains alive, and when it dies, arriving among its own kindred and kind, be released from the evils of humanity. Now, there is no danger, Simmias and Cebes, that a soul, nourished in this way, will be afraid once it has practised this, afraid that it may be dispersed on departure from the body, be blown away by the wind, take flight, and no longer be anywhere at all.”

84c

Now, there was silence for quite some time after Socrates had said all this, and it looked as if he himself was reflecting on the discussion which had concluded, and so too were most of us. But Simmias and Cebes were conversing with one another in whispers. When Socrates noticed them, he asked,

Socrates: “What is this? Perhaps you think that these arguments have been poorly presented. Of course, they still afford many grounds for suspicion and points of attack, if someone really intends to scrutinise them properly. Now, if you are considering some other issue, then I have nothing to say. However, if some aspect of these arguments is perplexing you, do not hesitate to state it and scrutinise it yourselves if, in your view, it could have been better formulated. And what is more, you should include me in the discussion if you think you might make better progress with my involvement.”

84d

Simmias: And Simmias said, “In fact, Socrates, to tell you the truth, both of us have been perplexed for some time, one urging the other on and telling him to ask you a question, as we wanted to hear your response. However, we were reluctant to make any trouble, in case it might be unpleasant for you because of the present misfortune.”

When he heard this, Socrates laughed gently, and said,

Socrates: “Oh dear, Simmias, I shall certainly have difficulty in persuading other people that I do not regard my present predicament as a misfortune, when I cannot even persuade you two. Instead, you are afraid that I am more ill-tempered now than I have been all my life. And apparently you think I am less of a prophet than the swans who sing throughout their lives but sing most of all, and most beautifully, once they realise that they must die, rejoicing because they are about to enter the company of the god whom they are serving.

85a

Socrates: “But human beings, on account of their own fear of death, utter falsehoods even about the swans, and say that they sing their song of departure in sorrow, lamenting their death. They do not appreciate that no bird ever sings when it is hungry or cold or suffering any other distress, not even the nightingale or the swallow or the hoopoe, birds which are actually said to be singing lamentations in sorrow. But neither these nor the swans appear to me to be singing in sorrow. I think, rather, that because they are birds of Apollo, swans have prophetic powers, and foreseeing all the good of Hades, they sing and are more delighted on that day than they ever were before. And I myself believe that I am their fellow servant, devoted to the same god, possessing a prophetic power from the lord which is no less than theirs, and I am no more distressed than they are to depart this life. So on that account, you should say or ask anything you want, for as long as the eleven officers of the Athenians allow it.”

85c

Simmias: “That is beautifully expressed,” said Simmias, “and I shall tell you what is perplexing me, and Cebes will, in turn, say why he does not accept what has been said. It seems to me, Socrates, and perhaps to you too, that definite knowledge of such matters is either impossible or extremely difficult in this life. That said, however, it is a very faint-hearted person who does not scrutinise the arguments about these matters in every manner possible, without giving up until totally exhausted by the enquiry. For we should proceed on these issues in one of two ways, either learn or discover how matters stand, or if this is impossible, then adopt the best and most unassailable argument of humankind, climb on board that, as if it were a raft in a perilous sea, and sail upon it through life, unless one can travel on a more secure vessel, some divine word, safely and free from danger. What is more, I will not be ashamed to ask a

question now, in view of what you are saying, nor shall I blame myself later on because I did not say what I am now thinking. Indeed, Socrates, when I consider what has been said, either from my own perspective or from Cebes' perspective, the account does not appear entirely adequate."

85e

Socrates: And Socrates said, "Perhaps this appearance is true, my friend, but you should explain in what way the account is inadequate."

Simmias: "It seems to me inadequate," Simmias said, "in this sense. Someone might propose the very same argument in relation to attunement and a lyre and its strings, saying that the attunement is indeed an unseen, non-physical, entirely beautiful and divine element in the tuned lyre, while the lyre itself and its strings are, by contrast, physical objects with physical form. They are compounds, which are earthly and akin to the mortal. So when someone breaks the lyre, or cuts and severs the strings, if someone were to maintain the same argument as you, he would say that this attunement must still exist and cannot have perished because there would be no way the lyre could still exist with its strings severed, strings that are mortal in nature, while the attunement, which is similar in nature and akin to the divine and immortal, perishes before the mortal perishes. He would claim, rather, that the attunement itself must somehow still exist, and the wood and strings must rot away first before anything happens to that. And in fact, Socrates, I think you yourself are aware that this is the sort of thing we actually take the soul to be. It is as if our body is tempered and held together by hot and cold, dry and moist, and the like, and that our soul is a blend and attunement of these very elements once they are properly mixed with one another in a measured way.

86c

Simmias: “Now, if the soul happens to be an attunement, it is obvious that whenever the body is relaxed beyond measure or is strained by diseases or other evils, the soul, even though it is utterly divine, must perish immediately, just like the other attunements in sounds or in any manufactured objects. And what remains of each body must last for a long time until it is either burned up or rots away.

86d

Simmias: “So consider this, how shall we respond to this argument if someone asserts that the soul, being a blend of elements in the body, is the first thing to perish in what we call death?”

Socrates, as he did so often, stared openly, smiled, and said,

Socrates: “Simmias is making a fair point. Now, if anyone here is more resourceful than I am, why do they not respond to him for he does actually seem to be coming to terms with the argument quite well? However, before we respond, I think it is useful to hear first what further objection Cebes is raising about the argument. That will give us time to decide what we shall say, and then, once we have heard them both, we shall agree with them if their objections seem to ring true in any way, and if not, then we shall proceed to defend the argument at that stage. So come on, Cebes,” he said, “speak up. What else was bothering you?”

87a

Cebes: “Speak I shall,” said Cebes, “for it appears to me that the argument is still in the same predicament and is open to the same objection we stated previously. I will not retract the argument that our soul existed even before it entered this form, as this has been elegantly and, if it is no exaggeration to say so, quite thoroughly proven. However, the argument that it still exists, somehow, after we die, does not seem to me to have been proven. I do not accept Simmias’ point that the soul is less

strong and less enduring than the body, for I think it is far superior in all these respects. So, the argument might ask me, ‘Why are you still incredulous when you can see that the weaker part still exists after the person dies? Do you not accept that the more enduring part must still survive at that particular time?’

87b

Cebes: “Now, determine whether my response to this makes any sense. Indeed, just like Simmias, it seems I shall also need to use an image. For I think that what is being said is quite like the following argument about an old man, a weaver, who has died. Someone might say that the man has not perished but is somehow alive and well, and they might offer the garment he used to wear and which he had woven himself, as evidence, because it is safe and sound and has not perished. And if anyone was unconvinced by this, he might ask them whether a human being is longer lasting than a garment he uses and wears, and having received the answer that the person is much longer lasting, he might think he had proved that the person is alive and well since the less enduring object has not perished. But I do not think that this is the case, Simmias, so consider what I am about to say. Everyone would appreciate that this is a ridiculous argument to propose, because this weaver, having woven and worn out many such garments, has perished after them, although there were many. However, I presume he perished before the last of them and a man is not in any degree inferior to, or weaker than, a garment on that account.

87d

Cebes: “Now, I think the soul’s relation to the body would admit the same comparison, and anyone who uses these very arguments in that context would appear to me to be speaking reasonably, because the soul is long lasting, while the body is weaker and less enduring. He would argue that in fact each of the souls wears out numerous bodies, especially if it lives for many years, for if the body is in flux and is perishing while the

person is still alive, then the soul is constantly weaving anew whatever has been worn away. Yet when the soul perishes, it must be wearing the last garment it wove, and it must perish before that one, and that one alone. And with the perishing of the soul, the body would demonstrate its natural weakness at that stage and would quickly rot away and be gone.

88a

Cebes: “Accordingly, we should not yet deem this argument worthy of belief and be confident that our soul will still exist after we die. For suppose we were to make even more concessions to this disputant than you suggest, and grant to him that our soul exists, not only in the interval before our birth, but concede that there is no reason why, in some cases, it should not still exist even after we die, and continue to exist, and be born and die again many times, as the soul is so strong by nature that it can withstand being born many times. Yet having granted this, we would still not accept that the soul is unaffected during its multiple births, and that it will not come to an end during one of the particular deaths and perish completely. But he would reply that no one has ever known the particular death and the particular dissolution of the body which brings destruction to the soul, since it is impossible for any of us to be aware of it. And if this is the case, it is not appropriate for anyone to have confidence in the face of death, a confidence which is not unreasonable unless he can prove that the soul is completely immortal and indestructible. Otherwise, anyone who is about to die must be in constant fear on behalf of his own soul, lest it perish utterly during its present separation from the body.”

88c

Now, when the rest of us had heard them saying all this, we became unsettled, as we confessed to one another afterwards, because having been strongly persuaded by the previous argument, Simmias and Cebes now seemed to be disturbing us

once more and casting us into doubt, not only in relation to the earlier discussion but also in relation to matters we would discuss later on. We feared that we might not be worthy judges of anything, or even that the issues themselves might be subject to doubt.

Echecrates: By the gods, Phaedo, I have sympathy for you. In fact, when I heard you saying this just now, I started thinking to myself, ‘What argument can we still believe in? The argument presented by Socrates was highly persuasive, but now its credibility has collapsed.’ In fact this argument that our soul is an attunement is extraordinarily captivating to me now, and it always has been, and when you mention this it reminds me that I hold these views already. And I really need some other argument to convince me once more, from the beginning, that the soul of a dying man does not die along with him. So tell me, by Zeus, how did Socrates pursue the argument? And what about the man himself, did he show any sign of being upset like the rest of you, or did he defend the argument calmly? And did he defend it adequately, or were there deficiencies? Tell us everything as precisely as you can.

88e

Phaedo: Well now, Echecrates, I had been amazed by Socrates many times before, but I was never as delighted as I was in his company at that moment. The fact that the man had something to say was not really anything unusual, but I was most amazed: firstly, at the pleasant, gracious and admiring way he accepted the argument of the young men; also by how keenly he discerned how we had been affected by their arguments; and finally by how well he cured us, rallied us as if we were fleeing in defeat, and turned us around to follow him and examine the argument together.

Echecrates: How did he do this?

Phaedo: I shall tell you.

89b

I was sitting to the right of Socrates on a small stool beside the bed and he was seated much higher up than me. He stroked my head and gathered up the hair around my neck, for he was accustomed, on occasion, to play with my hair.

Socrates: “Tomorrow,” he said, “perhaps you will cut off these beautiful locks, Phaedo.”

Phaedo: “Quite likely, Socrates,” I replied.

Socrates: “Not if you let me persuade you.”

Phaedo: “What would happen then?” I said.

89c

Socrates: “I will cut my hair today,” he said, “and you will cut these locks if our argument meets its end and we prove unable to bring it back to life. And if I were you and the argument got away from me, I would take an oath, just like the Argives,¹⁷ not to let my hair grow until I had defeated the arguments of Simmias and Cebes in a fresh battle.”

Phaedo: “But,” said I, “they say that even Heracles could not do battle against two.”

Socrates: “Then,” said he, “call upon me, your Iolaus,¹⁸ so long as it is still daylight.”

Phaedo: “Yes, I shall call upon you,” I said, “but I am no Heracles; I am Iolaus calling upon Heracles.”

Socrates: “It will make no difference,” he said, “but first let us beware that a particular misfortune does not befall us.”

Phaedo: “What?” I asked.

89d

Socrates: “Let us not become haters of discourse,” he said, “just as some people become haters of humanity, for there is no greater evil that could befall a person than developing a hatred

of discourse. But hatred of discourse and hatred of humanity both arise in the same manner. The hatred of humanity arises from placing a strong trust in someone without any experience and believing the person to be entirely true, sound and trustworthy, but finding a little later that he is evil and untrustworthy. And if this happens again with someone else, and the man has this experience frequently, especially with people he regards as his closest acquaintances and best friends, he ends up being buffeted so often that he hates everyone and believes that no one is in any way sound at all. Or have you never noticed this happening before?"

Phaedo: "I have indeed," I replied.

89e

Socrates: "Now," he said, "is this not shameful, and is it not obvious that such a person is attempting to deal with humanity without any experience in human affairs? For presumably, if he had any skill when he dealt with them, he would have realised how matters stand, that those who are extremely good and those who are extremely evil are both rare, while those in between are many."

Phaedo: "What do you mean?" I asked.

90a

Socrates: "Take extremely large and small things as an example. Do you think there is anything rarer than finding an extremely large or extremely small man or dog or any other animal? And does not the same also apply to quick and slow, ugly and beautiful, white and black? Have you not noticed that in all such cases the utmost extremes are rare and few, while those in between are plentiful and numerous?"

Phaedo: "Yes, indeed," I replied.

90b

Socrates: “Do you not think”, he asked, “that if a competition in badness were instituted, very few people would prove to belong in the first rank?”

Phaedo: “Quite likely,” I replied.

90c

Socrates: “Likely indeed,” he said, “but arguments are not similar to people in this respect. No, you gave a lead just now and I followed it. The similarity shows itself rather when someone who lacks any skill in relation to arguments believes a particular argument to be true, and then a little later the argument seems to him to be false, and sometimes this is the case and sometimes it is not, and this happens again and again. And you know that those who have spent a lot of time in disputatious arguments finally decide that they have become the wisest of men, that they alone have realised that there is nothing sound or certain either in the things themselves, or in the arguments, but that all of the things that are, are literally being turned upwards and downwards, as if they were in the strong tides of the Euripus, never constant for a moment.”

Phaedo: “Yes, certainly,” I replied, “what you are saying is true.”

Socrates: “Now, Phaedo,” he said, “would it not be a sad situation if there were, in fact, some true and certain argument that was capable of being understood, and yet, through encounter with some arguments of this sort, the kind which seem true one moment and false the next, a man were to blame not himself or his own lack of skill, but was finally in such pain that he gladly pushed the blame away from himself, onto the arguments, and spent the rest of his life from then on hating and reviling arguments, and was deprived of the truth and knowledge of things that are?”

Phaedo: “Yes, by Zeus,” I replied, “a sad situation indeed.”

90e

Socrates: “Well,” he said, “first and foremost we should guard carefully against this, and never allow into our souls the notion that no arguments are sound. Instead, it is much better to accept that we are not yet in a sound condition ourselves, and that we should take courage and be eager to attain a sound condition, you and the others, for the sake of the rest of your lives, and I for the sake of death itself. Yes, I am unlikely to retain a philosophical approach to this particular issue under the present circumstances, but like highly uneducated folk I may become keen on victory. For whenever such people are debating about something, they do not consider what the argument is about and the status of that. Instead they are eager that whatever they themselves have proposed be accepted by those who are present, and I think that I differ from them only to this extent at present; I am not eager, except incidentally, that what I am saying should seem true to the people here, but that it should seem as true as possible to me. For I reckon, dear friend, and you should note how greedy I am, that if what I am saying happens to be true, it is really good to be persuaded by it. But if, in fact, there is nothing for people who have died, then in this interval before my own death I shall still be less bothersome to the company with my lamentations, and my ignorance will not persist to the last, for that would have been terrible, but it will come to an end quite soon.”

91b

Socrates: “Well, Simmias and Cebes, I am now fully prepared to embark upon the discussion. You, however, if you take my advice, should pay little regard to Socrates, and much more regard to the truth, and if I actually seem to you to be saying anything true then you should agree, but if not, you should resist with every possible argument, being careful lest in my eagerness I deceive both myself and yourselves at the same time, and depart like a bee leaving my sting behind.

91c

Socrates: “Let us proceed then,” he said. “First, the two of you should remind me of what you said, in case I have actually forgotten. Yes, I think Simmias had doubts and was afraid lest the soul, even though it is more divine and more beautiful than the body, might perish before it, as it is in a kind of attunement. I think Cebes, on the other hand, agreed with me over this, that the soul is longer lasting than the body. But he says that it is not obvious to anyone that the soul, having repeatedly worn out many bodies, will not itself perish when it leaves the last body and this may be death, the destruction of the soul, since the body is always perishing unceasingly. So, Simmias and Cebes, are these the issues we need to consider?”

91e

They both agreed that these were the issues.

Socrates: “Now, do you reject all of the previous arguments or do you accept some and reject others?”

“We accept some and reject others,” they replied.

92a

Socrates: “Well,” he said, “what do you say about the argument in which we stated that learning is recollection and, since this is the case, it necessarily follows that our soul existed elsewhere before she was imprisoned in the body?”

Cebes: “I found it wonderfully persuasive at the time,” said Cebes, “and I still do now, more than any argument.”

Simmias: “Yes, indeed,” said Simmias, “I share the same view, and I would be very surprised if I ever found myself holding a different opinion about it.”

Socrates: And Socrates said, “But you will have to hold a different opinion, my Theban friend, if you persist with the idea that an attunement is a compound entity, and the soul is an attunement constituted from the elements of the body once

they are in tune. For I presume you would not accept the suggestion that an attunement may be constituted before there were the elements from which it must be composed. Or would you accept this?"

92b

Simmias: "Not at all, Socrates," he said.

Socrates: "Now, are you aware," he said, "that these are the consequences of what you propose whenever you assert that the soul exists before it enters the form and body of a human being, and on the other hand, that it is constituted from elements that do not yet exist? For your attunement and what you are comparing it to are not really alike; no, the lyre, strings and sounds come into existence first, and they are not tuned at that stage, but the attunement is established last of all, and it is first to perish. So how will this argument be harmonised with the other one, in your view?"

92c

Simmias: "That is not possible at all," said Simmias.

Socrates: "But surely an argument about attunement should be harmonious, if any argument should be."

Simmias: "It should," said Simmias.

Socrates: "Then your argument is not in harmony. So decide. Which of the arguments do you prefer, that learning is recollection or that the soul is an attunement?"

92d

Simmias: "I much prefer the former, Socrates," he replied. "For this occurred to me without any proof, based upon a certain likelihood and plausibility, which is why most people hold this view. However, I am conscious that arguments which construct their proof on the basis of likelihoods are imposters, and if we are not alert to them they are extremely deceptive, both in geometry and in everything else. But the argument about

recollection and learning was expounded through an hypothesis which deserved acceptance. For it was said, I presume, that our soul exists before it enters the body just as surely as its being, bearing the name 'what is', exists. And I am convinced that I have accepted this in an appropriate and correct manner. So, for these reasons, it seems that I must not accept my own or anyone else's assertion that soul is an attunement."

93a

Socrates: "But what about this, Simmias?" he asked. "Do you think it is natural for an attunement, or any other compound entity, to be in a different condition than the condition of the elements from which it is constituted?"

Simmias: "Not at all."

Socrates: "Nor indeed, I imagine, would the compound do anything or experience anything else besides what the elements either do or experience?"

He concurred.

Socrates: "So it is natural for an attunement not to lead the elements it is composed of, but to follow them."

He agreed.

Socrates: "Then an attunement is quite unable to move in opposition, or sound in opposition, or be opposed in any way to its own parts."

Simmias: "Yes, quite unable."

93b

Socrates: "What about this? Is not each attunement by nature an attunement as it has been tuned?"

Simmias: "I do not understand."

Socrates: “Well, if it had been more tuned or tuned to a greater extent, assuming that can actually happen, it would be more an attunement and an attunement to a greater extent. And if it had been less tuned or tuned to a lesser extent, it would be less an attunement and an attunement to a lesser extent.”

Simmias: “Yes, certainly.”

Socrates: “Now, does this also apply to the soul, so that, however slightly, one soul is more what it is than another? Is it more and to a greater extent, or less and to a lesser extent, a soul?”

Simmias: “Not in any way.”

93c

Socrates: “Come on then, by Zeus,” he said, “do we say that one soul has reason and virtue and is good while another has ignorance and wickedness and is bad? And is it true to say this?”

Simmias: “It is true indeed.”

Socrates: “Now, what will any of those who assert that the soul is an attunement say that these things, virtue and the vice, in our souls are? Are they some further separate attunement or non-attunement? And does the attuned soul, the good one, even though it is an attunement, also have another attunement within itself, while the one that is not attuned is just itself and does not have another attunement within it?”

93d

Simmias: “I cannot tell,” said Simmias, “but whoever proposes that hypothesis would obviously be saying something of that sort.”

Socrates: “But we have already agreed that one soul is not more or less a soul than another, and this is the agreement, that one attunement is not more an attunement or an attunement to a greater extent, or less an attunement or an attunement to a

lesser extent, than another one. Is this so?"

Simmias: "Yes, certainly."

Socrates: "And, being neither more nor less an attunement, it is neither more nor less attuned. Is this the case?"

Simmias: "It is."

Socrates: "And does that which is neither more nor less attuned partake of attunement to a greater extent, to a lesser extent, or to an equal extent?"

Simmias: "Equal."

93e

Socrates: "Now, since one soul is no more or less what it is than another one, namely a soul, then it is neither more nor less attuned."

Simmias: "Quite so."

Socrates: "And if it is characterised in this way, it could not partake of attunement, or lack of attunement, to any greater extent, could it?"

Simmias: "It could not."

Socrates: "And what is more, if it is characterised in this way, could one soul partake of virtue or vice to a greater extent than another one, if vice is indeed a lack of attunement and virtue is an attunement?"

Simmias: "Not to a greater extent, no."

Socrates: "Rather, Simmias, according to the correct argument, if soul is indeed an attunement, no soul will partake of vice. For, obviously, an attunement, being completely an attunement, would never partake of lack of attunement."

94a

Simmias: "No, indeed."

Socrates: “Nor, of course, would a soul, being completely a soul, partake of vice.”

Simmias: “No, how could it, based upon what we said earlier, at least.”

Socrates: “So, based upon this argument, we find that the souls of all living beings will be equally good, since souls are by nature equally what they are, namely, souls.”

Simmias: “That is how it seems to me anyway, Socrates,” he said.

94b

Socrates: “And do you think this has been well argued, and would the argument have ended up in this predicament if the hypothesis that the soul is an attunement was correct?”

Simmias: “Not at all,” he replied.

Socrates: “What about this?” he asked. “Of all the elements in a person, is there anything else that rules, according to you, except soul, especially if it also possesses understanding?”

Simmias: “I do not think so.”

94c

Socrates: “Now, does it act in agreement with the affections of the body or in opposition to them? I mean, in situations where there is heat or thirst within the body, soul draws it in the opposite direction, away from drinking, and when there is hunger, it draws the hunger away from eating, and presumably we are aware of countless other examples of the soul opposing the affections of the body. Is this not so?”

Simmias: “Yes, certainly.”

Socrates: “Furthermore, did we not agree earlier that if the soul is an attunement, it would never strike a note in opposition to the tensions, relaxations, vibrations or any other experiences

which its constituents undergo; rather, it would follow them and never act as leader?”

Simmias: “We did agree,” he said, “how could one disagree?”

94d

Socrates: “But look, do we not now find the soul exemplifying behaviour which is the complete opposite, leading all these elements of which some say it is composed, opposing them throughout life in almost everything, and dominating them in every way? Sometimes it chastises them more severely with painful processes based upon gymnastics, or medicine, sometimes more gently by threatening and admonishing, talking to the desires, passions and fears as though they constituted a separate entity. I suppose it is like what Homer wrote in the *Odyssey*, where Odysseus says: He smote his breast and rebuked his heart with the words, ‘Endure, my heart, you have endured far worse.’¹⁹

94e

Socrates: “Now, do you think he wrote this in the belief that soul is an attunement, the sort of thing which is led by the affections of the body, rather than leading them and dominating them, as it is a far more divine entity than any attunement?”

Simmias: “By Zeus, Socrates, I do not think so.”

95a

Socrates: “Then, my excellent friend, it is not at all appropriate for us to state that soul is an attunement, for it seems we would be disagreeing with the divine poet Homer and with ourselves.”

Simmias: “That is how matters stand,” he said.

Socrates: “In that case,” said Socrates, “it seems we have somehow placated the Theban goddess, Harmonia, quite well. But Cebes,” he said, “what about Cadmus,²⁰ how shall we placate him, and with what argument?”

95b

Cebes: “I think you will find a way,” said Cebes. “At least you presented this last argument, the one about attunement, wonderfully, and contrary to what I expected. For while Simmias was describing his difficulty, I really wondered if anyone would be able to come to terms with his argument. So I thought it was remarkable when it failed to withstand the first attack of your argument. Now, I would not be at all surprised if the argument of Cadmus were to suffer the same fate.”

Socrates: “Good man,” said Socrates, “do not be boastful in case some malign influence overturns the impending argument. Anyway, God will take care of that while we, grappling like Homeric heroes, should try to find out if you are saying anything significant. And the essence of what you are looking for is this: you are asking to be shown that since our souls are indestructible and immortal, a man who loves wisdom and who is confident when he is about to die will not be demonstrating an irrational and foolish confidence by believing he is going to fare well when he gets there, better than if he died after living a different sort of life. But as for showing that the soul is strong and divine and had a previous existence before we were born as human beings, you say that all these facts may just as easily indicate not immortality, but only that the soul is long lasting and has somehow existed for a considerable period of time and has known and done a great deal. But in fact that did not make it any more immortal. Rather, this entry into a human body was the beginning of its demise, just like a disease, and the soul lives this life in suffering and finally perishes in what we call death.

95d

Socrates: “You also say that it makes no difference whether it enters a body once or many times, as far as the fear death holds for us is concerned. Indeed, unless he is stupid, it is appropriate for someone to be afraid when he does not know and is unable to uphold in argument that the soul is immortal. So Cebes, I

think these are the sort of issues you are raising, and I am deliberately going over them again and again in case anything escapes us, or there is anything you may wish to add or retract.”

95e

Cebes: “No,” said Cebes, “there is nothing I need to add or retract at the moment, and these are the issues I am raising.”

Socrates paused for a long time, and he was considering something to himself.

Socrates: “Cebes,” he said, “the question you are pursuing is not trivial, for it involves comprehensive deliberation about the cause of generation and destruction. I shall recount my own experiences of these topics, if you wish. Then, if anything I say proves helpful to you with regard to the reassurance you are referring to, you may make use of it.”

Cebes: “Well, I certainly want that,” said Cebes.

96a

Socrates: “Then listen to what I am going to say,” he said. “When I was young, Cebes, I was extraordinarily eager for that wisdom which they call the science of nature. To me it seemed magnificent to know the causes of each thing, why each thing comes into being, why it perishes and why it is. And I was constantly changing my direction back and forth, asking, firstly: do living creatures develop when hot and cold bring about some fermentation, as some people say? Is it the blood with which we think, or is it air or fire? Or is it actually none of these but rather the brain which provides for the senses of hearing, seeing and smelling, from which arise memory and opinion and once memory and opinion have acquired stability, does knowledge arise on the basis of them? And then going on to consider their corruption, and the things that happen in the heavens and on the earth, I finally deemed myself naturally unsuited to this sort of investigation, almost useless.

96c

Socrates: “I will give you enough evidence as follows: before this, there were certain things I knew quite well, or so it seemed to me and to others, but later on I was so utterly blinded by this investigation that I unlearned what I previously thought that I knew about many other matters, and even about why a person grows. Before this, I thought it was obvious to everyone that this is due to eating and drinking. For from the food that is eaten, flesh is added to flesh, bone to bone, and through the same process, their own substance is also added to the other parts, and eventually the lesser bulk becomes greater and this is how the small person becomes big. That is what I thought at the time. Does that sound reasonable to you?”

96e

Cebes: “To me, yes,” said Cebes.

Socrates: “Then consider this too. I used to regard it as acceptable for me to think that whenever a man standing beside a small man appears large, it is on account of the head itself that he is larger, and the same goes for horses. And it seemed even more evident to me that the ten is greater than the eight because the two is added to them, and the two cubits are greater than the one cubit because it exceeded it by half its length.”

Cebes: “Yes, but what do you think about these matters now?” asked Cebes.

97a

Socrates: “By Zeus,” he said, “I am far from convinced that I know any of the causes of these things, when I cannot even accept for myself that whenever someone adds one to one, either the one to which it is added has become two, or that the added one and the one to which it is added became two, due to the addition of the former to the latter. For I am amazed that when each of them was apart from the other, each was somehow one and neither then was two, and yet, once they

drew near to one another, this was, in itself, somehow the cause of their becoming two, this coming together in which they are placed near one another.

97b

Socrates: “Nor can I ever persuade myself that if someone divides one, this division is itself the cause of its becoming two. For this cause of its becoming two turns out to be the opposite of the previous cause. Previously it was because they were drawn together, close to one another, and were added to each other, but now it is because they are drawn apart, and separated from each other. Neither can I ever persuade myself that I know how one arises, nor for that matter how anything else comes into being, or perishes, or is, based upon this manner of approach. No, I do not accept this at all, and instead I somehow devise an alternative manner of approach of my own.

97c

Socrates: “But one day I heard someone reading from a book which he said was by Anaxagoras, which was saying that reason is what sets things in order and is the cause of everything. Now, I was pleased with this explanation, and it somehow seemed appropriate to me that reason is the cause of all, and I decided that if this is the case then reason, as it is ordering everything, orders and arranges each thing in the best possible manner. Therefore, if someone should wish to discover the cause according to which each thing comes into being, perishes, or is, then he needs to discover the best way for that thing to be, or undergo, or enact anything at all. And so, based on this account, a person should consider nothing else about himself or about anything else, except what is most excellent and best. And then the same person necessarily knows what is worse, for the knowledge concerned with both is the same.

97d

Socrates: “As I reflected on all this, I was delighted to think I had found a teacher of the cause of the things that are, whose

reasoning was in accord with my own. I thought Anaxagoras would also tell me first whether the earth was flat or round, and when he had told me that, he would also explain the cause and necessity thereof, describing what is best and why it was better for the earth to be like that. And if he said it was in the centre, he would go on to explain that it was better for it to be in the centre. And if he could clarify these issues for me, I had resolved not to long for any other kind of cause. What is more, I had resolved to conduct an enquiry into the sun and the moon and the other stars in the same manner, their speed relative to one another, their inclinations and their other characteristics, and the precise way in which it is better for each of them to behave as they do, and to undergo whatever happens to them. Indeed, once he had stated that these are ordered by reason, I never thought he would attribute any other cause to them, except that it is best for them to be in the state they are actually in. Therefore, I thought that in assigning the cause to each of the things and to all of them together, he would go on to explain what is best for each of them, and good for all of them together. And I would not have traded these hopes for anything. No, I acquired the books eagerly and read them as quickly as I could, so that I would know the best and the worst as quickly as I could.

98b

Socrates: “Well, my friend, my wonderful hope was wrenched away from me when I continued with my reading and beheld a man neither having recourse to reason nor assigning to it any responsibility for the ordering of things but assigning responsibility to air and ether and water and numerous other oddities. And he seemed to me to be behaving just like someone who says that anything Socrates does is done on account of reason. But then, when he tries to state the causes of each action I perform, he might say, firstly, that the explanation for my sitting in this place now is that my body is constituted from

bones and sinews, and the bones are hard and have joints separating them from one another, while the sinews, which can be tensed and relaxed, surround the bones, as does the flesh and the skin which encloses them. Well, since the bones are dangling in their own sockets, the tightening and loosening of the sinews now enables me somehow to bend my limbs, and this is the cause of my sitting here with my legs bent. And likewise with regard to our conversation, he might also propose other causes of this sort, describing sounds, air currents, auditory experience and countless other such factors as causes, neglecting to mention the true causes, that once the Athenians had decided it was better to condemn me, I in turn decided it was indeed better for me to sit here, because it was more just to remain and submit to whatever penalty they might dictate. Since, by the dog, I am sure these bones and sinews would have been in Megara or Boeotia long ago, impelled by an opinion about what was best, if I had not thought it more just and noble to submit to whatever penalty the city might impose, rather than taking flight and running away.

98d

Socrates: “But to refer to such factors as causes is most absurd. And yet, if anyone were to say that without having such things as bones and sinews, and anything else I possess, I would be unable to do whatever I decide to do, he would be speaking the truth. To say, however, that I do what I do because of these, and that I also perform them on account of reason, and not on account of choosing what is best, would show a very great disregard for the argument. Imagine being unable to make the distinction between the actual cause, on the one hand, and that in the absence of which the cause would never be a cause, on the other hand. Yes, it seems to me that most people are groping about in the dark, and making use of an inappropriate name, when they refer to this as a cause. And on this basis, some place a vortex about the earth, and make the earth remain in

place on account of the heavens, while others support the earth just like a flat dish resting upon air. But the power by which these are now situated in the best way that they could have been placed is a power which they neither look for nor credit with any divine strength. Instead they believe they will eventually discover some Atlas²¹ who is stronger and more immortal than this, who will do a better job of encompassing them all, and it never occurs to them that, in truth, the good and the right bind and encompass. Now, I would gladly have become the pupil of anyone at all in order to learn the precise nature of such a cause as this. However, since this was denied me and I proved unable either to find it myself or learn from someone else, would you like me, Cebes, to give an exposition of how I undertook the second sailing in search of the cause?" he asked.

99c

Cebes: "Yes, I would like that very much," he replied.

99d

Socrates: "Well, after this, since I was exhausted from studying the things that are, it seemed to me that I should beware lest I suffer the fate of those who look at the sun and study it during an eclipse. For some of them, as you know, destroy their eyes unless they study its image in water or something of that sort. I also arrived at a similar understanding, and I was afraid that my soul might be totally blinded by looking at things with the eyes and trying to grasp them with each of the senses. So it seemed to me that I should take refuge in arguments, and study in these the truth of the things that are. Now, perhaps my comparison is in a sense inappropriate, for I do not really agree that someone who studies the things that are, through arguments, has more recourse to images than someone who studies them in actualities.

100a

Socrates: “Anyway, I set about this in the following manner. In each case, I hypothesise an account which I judge to be the strongest, and I regard as true anything which seems to me to be in harmony with this, whether it concerns a cause or anything else at all, and I regard anything which does not, as untrue. But I would like to explain what I am saying to you more clearly for I do not think you understand at the moment.”

Cebes: “No, by Zeus,” said Cebes, “not completely.”

100b

Socrates: “Well, this is what I mean,” he said. “It is nothing new. No, it is just what I have been constantly repeating, both in the argument which has just been presented and on other occasions. Indeed, I am going to attempt to show you the kind of cause I have worked on, and I am going back again to topics which have been discussed repeatedly, and I am starting from those, proposing that there is beauty just by itself, and good, and largeness, and all the others. And if you grant me these and agree that they exist, I hope, from these, to show you the cause and to confirm that the soul is immortal.”

100c

Cebes: “Well, in that case,” said Cebes, “you may assume that I grant you this and you should lose no time in proceeding with the account.”

Socrates: “Then consider the consequences of these admissions,” he said, “and whether they seem to you as they do to me. For it appears to me that, if anything else is beautiful except beauty itself, then it is beautiful because it partakes of that beauty and for no other reason. And I say the same about all the others. Do you accept this sort of cause?”

Cebes: “I accept it,” he replied.

Socrates: “Well, then,” he said, “I no longer understand, nor am I able to recognise those other wise causes, but if someone says

to me that anything at all is beautiful because of the bright colour it has, or its shape, or anything else of that sort, I dismiss the others, for I am confused by them all. And I myself maintain, simply, plainly, and perhaps foolishly, that nothing else makes it beautiful, except the presence of that beauty or communion with it, regardless of the manner or means by which these occur, for I am not making a definite assertion about this yet. But I do assert that all beautiful things are beautiful on account of beauty. And this seems to me the safest answer to give to myself or anyone else, and once I hold to this, I believe I shall never fall. Rather, it is safe for me or anyone at all to answer that beautiful things become beautiful on account of beauty. Or does it not seem that way to you?"

Cebes: "That is how it seems."

100e

Socrates: "And so, are large things large, and larger things larger on account of largeness, and smaller things smaller on account of smallness?"

Cebes: "Yes."

101a

Socrates: "Then you would not accept it if someone were to say that one person is larger than another on account of a head, and the smaller person is smaller on account of this same thing. Instead, you would affirm that you are only saying that everything which is larger than another is larger on account of nothing except largeness, and is larger because of this, because of largeness; and the smaller is smaller on account of nothing else but smallness, and is smaller because of this, because of smallness. I think you would be afraid in case some counter-argument might oppose you, if you were to state that someone is larger or smaller on account of a head: firstly, because you say the larger is larger and the smaller is smaller on account of the same thing; and secondly, because you say the

larger is larger on account of the head which is small, and of course it is preposterous that anyone is large on account of something small. Would you not be afraid of these responses?"

101b

Cebes laughed and replied,

Cebes: "I would, indeed."

Socrates: "Would you not be afraid", he said, "to state that ten is more than eight on account of two, and exceeds it because of this cause, rather than on account of quantity, and because of quantity? And that the two cubits are greater than the one cubit on account of half, and not on account of largeness? Yes, I presume you would have the same fear."

Cebes: "Very much so," he replied.

101c

Socrates: "What about this? Would you not beware of saying that if one is added to one, the cause of their becoming two is the addition, or in the case where it is divided, the division? Instead, you would shout loudly that you know no other way that each arises except by participating in the being particular to each of those in which it participates. And in the examples we are discussing, you know no other cause of becoming two except by participation in duality, and whatever is to be two must participate in this, and whatever is to be one must participate in unity. But those divisions and additions and other subtleties of that kind you would set aside, leaving it to those who are wiser than you are to give those answers. Instead, you would be afraid, as they say, of your own shadow and of your inexperience, and would adhere to that safe hypothesis and would answer based upon that.

101d

Socrates: "Yet, if someone were to adhere to the hypothesis itself, you would ignore him and would not respond, until you

had considered whether the consequences of that were, in your view, concordant or discordant with one another. And when you had to give an account of the hypothesis itself, you would do so in the same way, by proposing another further hypothesis which seems best of those which are higher, until you arrive at something adequate. But you would not confuse matters, as the disputatious people do, by discussing the principle, and the consequences of it at the same time, if you really wanted to discover any of the things that are. Indeed, these fellows do not have a single scruple or concern about this, for they are enabled by their wisdom to jumble everything together, and yet they are still able to be content with themselves. But you, if you really are among the lovers of wisdom, will, I believe, do as I suggest.”

102a

“What you are saying is completely true,” said Simmias and Cebes together.

Echecrates: By Zeus, Phaedo, of course Simmias and Cebes did. Indeed, I think he has explained this with extraordinary clarity to anyone with even a little intelligence.

Phaedo: Yes, certainly, Echecrates, and everyone who was present thought so too.

Echecrates: Yes, and so do those who were absent but are listening to you now. Well, what else was said after all this?

Phaedo: As I recall, when these points had been conceded to him and it was agreed that each of the forms is something and the other things have acquired the names of the forms themselves by partaking of them, he proceeded to ask the following:

102b

Socrates: “Now,” said Socrates to Cebes, “if you describe matters in this way and you say that Simmias is larger than Socrates and smaller than Phaedo, are you not then saying that

both largeness and smallness are in Simmias?”

Cebes: “I am, indeed.”

Socrates: “More to the point,” he said, “are you agreeing with the statement ‘Simmias is taller than Socrates’, when the words used do not actually express the truth? For presumably Simmias is not, by nature, taller than I am on account of being Simmias, but on account of the largeness he happens to possess. Nor, again, is he taller than Socrates because Socrates is Socrates, but because Socrates has smallness relative to Simmias’ largeness.”

Cebes: “True.”

102c

Socrates: “Nor again, is he less tall than Phaedo because Phaedo is Phaedo, but rather because Phaedo has largeness relative to Simmias’ smallness.”

Cebes: “That is it.”

Socrates: “So in this way Simmias is referred to as being both large and small, as he is between both of them, allowing the smallness to be exceeded by the greatness of one person, and presenting to the other the greatness that exceeds that man’s smallness.”

102d

And he smiled at this and said,

Socrates: “I seem to be speaking like a legal document, but anyway the situation is certainly as I am describing it.”

Simmias agreed.

Socrates: “Now, I am saying this for the following reason, I want you to hold the same opinion as I do. For it appears to me not only that the large itself never consents to being large and small at the same time, but also that the large in us never admits the small, nor consents to being exceeded. Instead, there

are two possible outcomes, either it departs and withdraws whenever its opposite, the small, approaches, or else it perishes once the small arrives. But it never consents to being different from the very thing that it is, by waiting about and admitting smallness. Just as I, having admitted and endured smallness, and still being just what I am, I, this same person, am small. But that large has never ventured to be small, and in like manner, the small that is in us never consents to become large or to be so, nor do any of the other opposites, while still being just what they are, also become and be opposite. No, in that circumstance they either depart or perish.”

103a

Cebes: “Entirely so,” said Cebes, “that is how it appears to me.”

And having heard this, one of the company – I do not remember exactly who it was – said, “By the gods, in our earlier discussions, did we not agree the very opposite of what we are now saying? Did we not say that the greater arises from the lesser and the lesser from the greater, and in short, the actual generation of opposites is from opposites? But now I think we are saying that this would never happen.”

103b

Having turned his head to listen, Socrates said,

Socrates: “You have been very brave to remind us. However, you are not recognising the difference between what we are saying now and what we said then. For we were saying then that the opposite thing arises from the opposite thing. Now, however, we are saying that the opposite itself, be it in us or in nature, would not ever become opposite to itself. For then, my friend, we were talking about whatever possessed the opposites, referring to them by the name of the appropriate opposites. Now, however, we are discussing the opposites themselves, whose name the objects bear because those opposites are within them. And we are saying that the opposites themselves would

never be prepared to undergo conversion into one another.”

103c

And at that point he looked at Cebes, and said,

Socrates: “What about you, Cebes? I presume you were not bothered by any aspect of what our friend here said?”

Cebes: “No,” said Cebes, “that’s not how I feel just now, though I am not denying that there are numerous issues bothering me.”

Socrates: “So we have agreed without reservation,” said Socrates, “that the opposite will never be opposite to itself.”

Cebes: “Entirely so,” he replied.

103d

Socrates: “Then consider whether you also agree with me about the following. Do you call something hot or cold?”

Cebes: “I do.”

Socrates: “And are they identical with fire and snow?”

Cebes: “By Zeus, I do not think so.”

Socrates: “Rather the hot is something different from fire, and the cold something different from snow.”

Cebes: “Yes.”

Socrates: “Then I presume you appreciate that, as we said earlier, being snow it will not ever admit heat and still be just what it is, snow, and also hot. Instead, at the approach of heat it either withdraws from it or perishes.”

Cebes: “Certainly.”

103e

Socrates: “And fire also either slips away or perishes when cold approaches, but it will never venture to admit the coldness and still be just what it was, fire, and also cold.”

Cebes: “What you are saying is true.”

104a

Socrates: “Then,” he said, “in some cases like this, the position is that the form itself is not the only thing that always merits the same name forever, but there is also something else which is not that form but always possesses a feature of that form whenever it exists. But perhaps what I mean will be even clearer with this example, for presumably the odd must always be assigned this name which we are now using. Is this not so?”

Cebes: “Certainly.”

Socrates: “But is this the only thing that is assigned this name? That is my question. Or is there something else which is not identical with the odd, but which nevertheless must always be referred to by this name along with its own name, because by nature it is never devoid of the odd? I am referring, for instance, to how the number three and many others are characterised. Think about the number three. Does it not seem that you must always refer to it by its own name and by the name of the odd, although the odd is not identical with the number three? But nevertheless, three, five, and half of all numbers, although they are not identical with the odd, each of them is always odd. And furthermore, two, four, and all the other series of numbers, are nevertheless always even in each case, though they are not identical with the even. Do you agree or not?”

104b

Cebes: “How could I disagree?” said Cebes.

Socrates: “Then take note of what I am trying to show you. It is as follows. It is evident, not only that those opposites do not admit one another, but also that whatever things are not opposite to one another, but always contain opposites, seem not to admit that form which is opposite to the form they contain. Rather, when it approaches, they either perish or withdraw. Or shall we deny that the number three would prefer to perish or suffer any other fate rather than wait about, still being three,

and become even?”

104c

Cebes: “It certainly will,” said Cebes.

Socrates: “And yet, two,” he said, “is not the opposite of three.”

Cebes: “Definitely not.”

Socrates: “So it is not only the opposite forms that do not wait about as they approach one another, but some other things also do not wait about as the opposites approach.”

Cebes: “What you are saying is very true.”

Socrates: “Now, would you like us, if we are able, to define what sort these are?”

Cebes: “Very much so.”

104d

Socrates: “Well, Cebes, would they be those which always compel whatever they take hold of to adopt not only their own form, but also the form of some additional opposite?”

Cebes: “What do you mean?”

Socrates: “Just what we were saying a moment ago, for you know of course, that whatever the form of three takes hold of, it must not only be three but also odd.”

Cebes: “Certainly.”

Socrates: “Then we are saying that the opposite form to the form that produces this would never come to something of this sort.”

Cebes: “It would not.”

Socrates: “Now, does oddness produce this property?”

Cebes: “Yes.”

Socrates: “And is the form of the even the opposite of this?”

Cebes: “Yes.”

104e

Socrates: “So the form of the even will never come to the number three.”

Cebes: “Certainly not.”

Socrates: “Then the number three has no share in the even.”

Cebes: “No share.”

Socrates: “So the number three is uneven.”

Cebes: “Yes.”

105a

Socrates: “Well, I said we were to define the sort of things which, although not opposite to something, nevertheless do not admit it, the opposite. For example, the number three, although it is not opposite to the even, does not admit the even to any extent, for three always imposes the opposite of the even, and two imposes the opposite of the odd, fire the opposite of cold, and there is a whole range of other instances. Now, decide whether they are defined in this way: not only does an opposite not admit an opposite, but there is also that which imposes some opposite upon whatever it approaches, and that imposer itself will never admit the opposite of that which it imposes. But let me remind you again, as it is not a bad idea to hear this very often. The number five will not admit the even, nor will its double, ten, admit the odd. Now, double itself is also the opposite of something, but nevertheless it will not admit the form of the odd, nor will one-and-a-half and other such numbers, like the half and the third, and all numbers of that sort, admit the form of the whole. Do you follow and do you agree that this is the case?”

105b

Cebes: “Yes, I agree most emphatically,” Cebes replied, “and I am following.”

Socrates: “Then recount this to me once more from the beginning,” he said. “And do not answer on the basis of my question, but by imitating what I am doing. I am saying that beyond the first answer I gave, the safe one, I see another safe answer emerging from the present discussion. For if you were to ask me, by the presence of what will the body be hot, I shall not give you the safe answer, the stupid one, that it is by the presence of heat, but a more subtle answer based on this discussion, that it is by the presence of fire. And if you should ask, by the presence of what will the body be ill, I shall not reply that it is by the presence of illness, but by the presence of fever. Nor would I say that a number is made odd by the presence of oddness, but by the presence of a unit, and so on for the other instances. But let us check at this stage whether you understand adequately what I mean.”

105c

Cebes: “Very adequately,” Cebes said.

Socrates: “Then answer this question,” he said, “by the presence of what will the body be alive?”

Cebes: “By the presence of soul,” he replied.

105d

Socrates: “Is this not always the case?”

Cebes: “How could it be otherwise?” he said.

Socrates: “Then soul, whatever it takes hold of, always arrives bringing life to it?”

Cebes: “Yes, that is how it arrives,” he said.

Socrates: “And is there or is there not something opposite to life?”

Cebes: “There is,” he replied.

Socrates: “What?”

Cebes: “Death.”

Socrates: “Now, based on what we agreed earlier, is it not the case that soul will never admit the opposite of that which it imposes?”

Cebes: “It certainly will not,” said Cebes.

Socrates: “Well then, what did we call that which does not admit the form of the even a moment ago?”

Cebes: “Uneven,” he said.

Socrates: “And that which does not admit the just, and that which does not admit the musical?”

105e

Cebes: “Unmusical, and unjust,” he said.

Socrates: “So be it. And what shall we call that which does not admit death?”

Cebes: “Immortal,” he said.

Socrates: “Now, soul does not admit death, does it?”

Cebes: “No.”

Socrates: “Then soul is immortal.”

Cebes: “Immortal.”

106a

Socrates: “So be it,” he said. “Now, may we say that this has been proved? How does it seem to you?”

Cebes: “Yes, very adequately, Socrates.”

Socrates: “What about this, Cebes?” he asked. “If it were also necessary for the uneven to be imperishable, could the number three be anything other than imperishable?”

Cebes: “No, how could it be?”

106b

Socrates: “And if it were also necessary for the ‘un-hot’ to be imperishable, whenever someone brought heat to bear upon snow, would not the snow withdraw, intact and un-melted? For it could not be destroyed, nor again could it wait about and admit the hotness?”

Cebes: “What you are saying is true.”

Socrates: “And in the very same way, I presume, if the un-coolable was indestructible, then whenever something cool approached fire, fire could never be extinguished, nor could it perish, but would depart intact and go away.”

Cebes: “It must,” he said.

106c

Socrates: “And must we not also say the same thing about the immortal?” he asked. “If the immortal is also imperishable, it is impossible for soul to perish whenever death approaches her. For as we said earlier, it will not admit death nor will it be dead, just as we said the number three will not be even, nor for that matter, will the odd be even, nor will fire be cold, and neither will the heat within the fire. But someone might say the odd does not become even at the approach of the even. We have agreed this, but why could it not perish and the even arise in place of the odd? To someone who says this, we would not be able to contend that it does not perish, for the uneven is not imperishable. Indeed, if this point were conceded to us, we could easily have contended that once the even approaches, the odd and the number three depart and are gone, and we could offer a similar contention about fire and heat and the other instances. Is this not so?”

Cebes: “Yes, certainly.”

106d

Socrates: “And therefore, in the present discussion about the immortal, if it were conceded to us that it is also imperishable,

then soul too would be imperishable as well as being immortal, but otherwise some other argument would be required.”

Cebes: “But no other argument is required for this purpose,” he said, “for if the immortal, being everlasting, is going to admit destruction, nothing else could avoid admitting destruction at all.”

Socrates: “Yes,” said Socrates, “and I think it would be agreed by everyone that God, and the form of life itself and anything else that is immortal, will never perish.”

Cebes: “Yes, by Zeus,” he said, “by every human being, and in my opinion, even more so by the gods.”

106e

Socrates: “Now, since the immortal is also indestructible, wouldn’t the soul, if it happens to be immortal, be imperishable too?”

Cebes: “It simply must be.”

Socrates: “So when death comes to a person, it seems that the mortal part dies, while the immortal departs and goes on its way intact and indestructible, giving way to death.”

Cebes: “So it appears.”

107a

Socrates: “So we have all the more reason to accept, Cebes, that soul is immortal and imperishable, and, in truth, our souls will exist in Hades.”

Cebes: “Well, Socrates,” he said, “I do not have anything else to say against these arguments, nor do I doubt them in any respect. But of course, if Simmias or anyone else here has anything to say he had better not remain silent. Because if someone wants to say or hear anything about such matters, I do not know of any other occasion to which he can postpone the present opportunity.”

Simmias: “And yet,” said Simmias, “I too have no further grounds for doubt on the basis of what is being said. However, on account of the vast subject that the arguments are dealing with, and being wary of human weakness, I am bound to harbour additional doubts within myself in relation to what has been said.”

107b

Socrates: “Not only are you right,” said Socrates, “to say that, Simmias, but you should examine the initial hypotheses in greater clarity in any case, even if you believe them yourselves. And if you analyse them properly, I think you will follow the argument to the greatest extent that anyone can follow it. And once this has become clear, you will seek nothing further.”

Simmias: “What you are saying is true,” he said.

107c

Socrates: “But my friends,” he said, “it is right to bear in mind that if, in fact, the soul is immortal, it requires care, not only for the sake of the interval of time which we call ‘life’ but for the sake of all time, and, indeed, if anyone should neglect the soul the danger now seems to be terrible. For if death were an escape from everything, it would be a god-send for the wicked to die, and be freed from the body, and their own wickedness along with the soul. Now, however, since the soul turns out to be immortal, there would be no escape from evils or any salvation for it, apart from becoming as good and wise as possible. For the soul goes to Hades, possessing nothing else except its education and its nurture, which are indeed said to afford the greatest benefit or harm to the person who has died, at the very outset of the journey to that place.

107d

Socrates: “And accordingly, it is said that when each person dies, the daimon of that person, which has been assigned throughout life, is responsible for leading them to some place

where those who are gathered, having undergone judgement, must journey to Hades along with that guide who has been given the task of conducting people from this place to that place. But once they are there and have met what they needed to meet and have remained for as long as necessary, another guide brings them back here again over numerous lengthy cycles of time. So, the journey is not as Aeschylus' Telephos²² describes it. For he says that a simple path leads to Hades, but to me it appears to be neither simple nor single. If it were simple, no guide would be required, for presumably no one could go wrong anywhere if there were only one path. But it now seems that it has many forks and crossroads, and I think this is evident from the sacrifices and rituals which are offered in this world.

108a

Socrates: “Now, the orderly and wise soul follows the guide and is not unaware of its surroundings, while the soul which is possessed of desires of the body, as we said before, flutters around the body and about the visible region for a long time. After much resistance and a lot of affliction, the soul is led away forcibly and reluctantly by its appointed daimon and it departs. Now, the soul which is unpurified and has acted in that sort of manner, having engaged in unjust killings or other activities of the kind which are akin to these, and are the deeds of kindred souls, does arrive where the others are. But everyone shuns the soul and turns away from it, and has no desire to become its travelling companion or its guide. Instead the soul wanders in utter perplexity until certain periods of time have elapsed, and when these are over, it is borne by necessity to the abode appropriate to it. But each soul that has spent a life in purity and measure encounters gods as its travelling companions and guides, and inhabits the region appropriate to it.

108c

Socrates: “Now, someone has convinced me that the regions of the earth are many and wondrous, and it has neither the

qualities nor the extent presumed by those who usually describe it.”

108d

Simmias: And Simmias asked, “What do you mean, Socrates? Of course I have heard a great deal about the earth myself, but not these descriptions which have convinced you. So I would love to hear them.”

Socrates: “Well, Simmias, I do not think the skill of Glaucus²³ is needed to describe, in detail, what they are. However, it appears to me that it is beyond even the skill of Glaucus to show that they are true, and what is more, perhaps I might be unable to do it. And even if I had the knowledge, I do not think my own life is now long enough for such a lengthy discourse. Yet there is nothing to stop me from describing the form which I am convinced the earth has, and the regions it possesses.”

108e

Simmias: “But even that much is sufficient,” said Simmias.

Socrates: “Well,” he said, “I am convinced, firstly, that if the earth is in the centre of the universe and is round, it does not need anything to prevent it from falling, either air or any other constraint of that sort. Rather, the homogeneity of the universe itself with itself in every direction and the even balance of the earth itself are sufficient to hold it. For an evenly balanced object placed in the centre of something homogeneous will not be able to turn more in one direction than in another. Instead, being in a situation of homogeneity, it remains motionless. So that is the first thing I am convinced of,” he said.

109a

Simmias: “And rightly so,” said Simmias.

Socrates: “Now, the next point is that it is absolutely enormous, and we who dwell between the Pillars of Heracles and the river Phasis²⁴ inhabit a tiny part of it, living around the sea like ants

or frogs around a pool, while many others dwell elsewhere in lots of other regions of this sort, for there are numerous hollows all over the earth of various forms and sizes, into which water, mist, and air have gathered together. But the earth itself is pure and it rests in the pure region of the universe where the stars are situated, the region which most people who usually discuss such matters call the ether.

109c

Socrates: “In fact, water, mist, and air are the sediment of ether, and they constantly flow together into the hollows of the earth. But we are unaware that we are living in its hollows and think we inhabit the upper surface of earth. It is as if someone living down in the depths of the ocean were to think he was living on the sea, and beholding the sun and the other stars through the water, believed that the sea was the sky. Due to his lethargy and weakness he would never get to the sea’s surface, nor would he behold how much purer and more beautiful is this region than that of his fellows by coming to the top of the water and popping out his head, nor would he hear about this from someone else who had seen it. Well, our predicament is the same as his, for we inhabit some hollow of the earth and believe that we are dwelling on its surface, and we refer to the air as the heaven because the stars move through this as if it were a heaven.

109d

Socrates: “But, in fact, due to our weakness and lethargy, we are unable to make our way to the furthest extremity of air. Yet if someone were to get to its upper limit, or became winged and flew there, he could stick his head up and have a look, and just as fishes who stick their heads out of the sea can behold whatever is in this region, he would likewise view whatever is in that region. And if his nature were up to the task of sustaining the observation, he would realise that this is the true heaven, the true light, and the true earth. For this earth here, and the

stones and the entire region we are in are corrupted and eroded just as objects in the sea are affected by the brine, and nothing worthy of note grows in the sea, and almost nothing is perfect there. Rather, there are caverns and sand and huge amounts of mud and mire wherever there is any earth, and nothing at all is worthy of comparison with the beauties of our region. But those beauties would, in turn, prove to be superior to the beauties of our realm to an even greater extent. And now, if it is appropriate to tell a story, it is worth hearing, Simmias, what the things upon the earth, that is beneath the heaven, happen to be like.”

110b

Simmias: “In that case, Socrates,” said Simmias, “we would be glad to hear this story.”

Socrates: “Well then, my friend, it is said, firstly, that if anyone views the earth itself from above, it looks just like those balls made from twelve pieces of leather, painted with distinct colours, of which the colours in our region are just like the samples used by painters. But in that place, the earth is entirely composed of such colours, and of colours that are much brighter and purer than those. For one part is purple and its beauty is wondrous, another is golden, and anything white is whiter than chalk or snow, and the earth is composed of other colours in the same way, colours even more numerous and more beautiful than all we have seen. What is more, those hollows themselves, being filled with water and air, exhibit a kind of colour, glistening amidst the variety of other colours, so that the earth appears as one continuous variegated surface.

110d

Socrates: “But since that is what this earth is like, whatever grows there grows in conformity with this principle, be they plants, flowers or fruits. And what is more, in like manner, mountains and stones, in conformity with the same principle,

have smoothness and transparency and more beautiful colours, and the pebbles which are prized among us – sards, jaspers, emeralds and all the like – are fragments of those, but in that place there are no stones that are not like those and even more beautiful than those. And the reason for this is that the stones there are pure and have not been corroded and corrupted like ours by filth and brine, due to everything that flows into this place, influxes which bring deformity to stones, earth and the like, and diseases to plants and animals. But that earth itself has been adorned with all these beauties, and also with gold and silver and other materials of that sort, for these are naturally in evidence as they are plentiful, large, and they are everywhere upon the earth. Consequently, to behold that earth is a vision which is a blessing to those who look upon it. And there are many other creatures there, and humans too, some dwelling inland, others living close to the air, just as we live close to the sea, some on islands surrounded by air, and close to the mainland. And in short, as we have recourse to water and the sea, so do they have recourse to air, and as we have recourse to air, so do they have recourse to the ether.

111b

Socrates: “Their seasons are so temperate that the people are free from disease, and their span of life is much longer than it is here, and in sight, and hearing, and wisdom, and in everything of that sort, they exceed us to the same extent that air exceeds water, and ether exceeds air, in respect of purity. And in fact, they have sacred groves and temples in which the gods really do reside, and utterances, prophecies, awareness of the gods, and any communion of that sort is conducted by them directly with the gods themselves. And the sun, moon, and stars are seen by them just as they actually are, and their general blessedness is a consequence of these blessings.

111c

Socrates: “Now, although the entire earth and the details thereof are thus by nature, there are in fact many regions within it corresponding to the hollows it has all around its entire surface. Some are deeper and wider than the place in which we are dwelling, others are deeper but they have a lesser expanse than our region, and there are others too which are shallower in depth and broader than ours. These are all interconnected beneath the earth in various ways, by channels, some narrow, some wider, and these have outlets from which lots of water pours from one region into the other, as if it were flowing into mixing bowls. And there are enormously large, ever-flowing rivers of both hot and cold water beneath the earth. And there is a great deal of fire and huge rivers of fire and of molten earth, some of which are even more filthy, like the rivers of mud which flow in front of the lava in Sicily, while others are purer, like the lava itself. And in fact, each of the regions is filled by these as the circular flow happens to arrive at each in turn. These all move upwards and downwards just like a kind of seesaw present within the earth. The nature of the oscillation itself is something like this: one of the chasms in the earth happens to be particularly large and it is bored right through the entire earth. This is the one Homer refers to when he says, ‘Far off in the lowest depth beneath the earth...’²⁵

112a

Socrates: “And elsewhere, he and many other poets have named it Tartarus. For all of the rivers flow into this chasm and flow out again from this, and each becomes like the kind of earth through which they flow. But the reason why all the streams flow in and flow out of there is that this liquid has no bottom or base, so it oscillates and surges up and down, and the air and the wind associated with it do the same. For they follow the liquid whenever it gushes to the remote parts of the earth or to these parts. And just as those who are breathing continually inhale and exhale the flowing breath, so also does

the wind there oscillate along with the liquid, giving rise to terrible and enormous gales as it goes in and goes out.

112b

Socrates: “Now, whenever the water withdraws to the region which we call lower, it flows through the earth into the channels that are there and fills them as if it were being pumped. And whenever it leaves there again and surges back here, the streams here are filled once more, and once they have been filled they flow through the channels and through the earth, and when each arrives at the region to which it has been given passage, it makes seas, lakes, rivers and springs. And from there they dive beneath the earth, and when some have gone around the more numerous larger regions, and others have gone around the less numerous smaller regions, they discharge once more into Tartarus, some far below, others a little below where they were pumped out. But they all flow in below where they flowed out, although some flow in directly opposite to the point where they left, others below the same point. There are some that go around in a complete circle, coiling around the earth either once or even many times, like snakes, and having descended as low as possible, they discharge once more. It is possible to descend in either direction as far as the centre but no further, because to both streams the part on either side is uphill.

112e

Socrates: “Now, these streams are numerous, large and variegated, but among this multiplicity are four in particular and the largest and outermost of these, flowing around in a circle, is called Oceanus. Directly opposite to this, flowing in the opposite direction, is Acheron which flows through various desert places, but more significantly, it flows under the earth reaching the Acherusian lake where most souls of the dead arrive and abide for an allotted time, longer in some cases but shorter in others, and are sent back once more to be born as

living creatures.

113b

Socrates: “The third river issues forth midway between these two, and close to its point of exit it emerges into a vast region burning with a lot of fire, and it makes a lake of boiling water and mud larger than the sea in our region. It proceeds in a circle from there, foul and muddy, winding about through the earth in various places and arrives at the shores of the Acherusian lake without commingling with its waters. After many windings under the earth, it discharges beneath Tartarus and this is the river they refer to as Periphlegethon, and from this the lava streams shoot forth their branches from the earth in a random manner.

113c

Socrates: “Directly opposite to this the fourth river issues forth, initially into a terrible and wild region which is said to be entirely coloured like lapis lazuli and is referred to as the Stygian region, and the lake made by the discharging river is the Styx. Now, once it has poured in there and has acquired formidable powers in the water, it dives beneath the earth and proceeds to circle about in the opposite direction to Periphlegethon and meets it in the Acherusian lake coming from the opposite side. Neither does it mingle with the waters of the lake, rather this river goes around in a circle and discharges into Tartarus opposite Periphlegethon. And the name of this, according to the poets, is Cocytus.”²⁶

113d

Socrates: “This is the nature of these regions. Once those who have died arrive in the region to which the daimon guides each one, they first submit to judgement, some having lived in a noble and sacred manner, others not. Now, those who are judged to have lived middling lives, proceed to the Acheron, get on board vessels which are somehow provided for them, and arrive at the lake on these. There they dwell, and if anyone has

done any injustice he is purified of the injustices, makes retribution and is freed from them. And they receive the rewards of their good deeds, each according to their deserts. But those who are judged incurable because of the magnitude of their transgressions, having carried out numerous and grave sacrilegious acts, or many unjust killings contrary to law, or any other deeds of that sort, these people the appropriate fate casts into Tartarus never to emerge again.

114a

Socrates: “But those who are judged curable, though they committed great transgressions such as doing some violence in anger to a father or mother, and living the rest of their lives in repentance, or being involved in homicides under similar circumstances, these people necessarily fall into Tartarus. Once they have fallen in and spent a year there, the surge sends forth the homicides along the Cocytus and those who have assaulted father or mother along the Periphrægethon. They are carried along, and whenever they get to the Acherusian lake they shout and cry out in that place to the people they have slain or the people they have assaulted. With their cries, they plead and beg that they be allowed to come out into the lake and to be accepted, and if they persuade these people, out they come and that is the end of their afflictions. But if they do not persuade them, they are carried again into Tartarus and from there they enter the rivers once more, and this happens to them unceasingly until they persuade the people they have wronged. For this particular penalty has been imposed upon them by the judges. But the people who are judged to have lived with exceptional holiness, are the ones who are set free from those places beneath the earth as though they are being released from prisons. They arrive above in the pure abode and they dwell upon the earth. Of these people, the ones who have purified themselves sufficiently through philosophy live thereafter without bodies for all time, and they arrive at dwellings even

more beautiful than those, which are not easy to describe, nor is there enough time just now. But as a consequence of everything we have been discussing, Simmias, we must make all efforts to partake of virtue and wisdom in this life, for the reward is beautiful and the hope is great.

114d

Socrates: “Now, it would not be appropriate for a man of intelligence to insist that matters are as I have recounted them. But that these considerations, or something like them, are applicable to our souls and their dwelling places, in view of the fact that the soul turns out to be immortal, seems to me a hazard worth taking, for the hazard is beautiful and appropriate to someone who holds this view of the soul. And he should chant to himself as though they were charms and that is why I have been lengthening the story just now.

114e

Socrates: “So, these are the reasons why a man should be confident about his own soul once he has bidden farewell, in this life, to the various pleasures and adornments associated with the body because they are alien. And realising they are more inclined to have the opposite effect, has busied himself with learning and adorned the soul, not with an alien adornment but with its own, with sound-mindedness, justice, courage, freedom and truth. And in this condition he awaits the journey to Hades, ready to make that journey whenever destiny may call. Well, Simmias and Cebes,” he said, “you and the others will each in turn make the journey at some stage, but now, as someone in a tragedy might say, ‘Destiny is already calling me’, and it is almost time for me to make my way to the bath. Indeed, I think it best to drink the poison after bathing and not give to the women the task of washing a corpse.”

115b

Crito: Well, once he had said all this, Crito said, “So be it, Socrates, but what directions do you have for these men or for

me concerning either your children or anything else? What is the greatest service we could perform for you?"

Socrates: "I shall say what I always say, Crito, nothing new, that in caring for yourselves you will be doing a service to me and mine and to yourselves, whatever actions you may perform, even if you make no promises now. But if you do not care for yourselves, and are not prepared to live your life based upon the path which accords with the declarations we have made now and on previous occasions, even if you make a lot of fervent promises now, you will accomplish nothing."

115c

Crito: "In that case," he said, "we shall strive earnestly to do as you ask. But in what way should we bury you?"

115d

Socrates: "Any way you like," he replied, "that is if you can catch me and I do not escape you."

With this he laughed gently, looked towards us and said,

Socrates: "Friends, I cannot persuade Crito that I am this Socrates who is conversing with you right now and arranging each topic of discussion. Instead, he thinks I am the one he will see in a short time as a corpse, and he asks how he should bury me. I presented extensive arguments a while ago, that once I drink the poison I shall no longer remain with you, but shall depart and be gone to some delights of the blessed. But I think these have been spoken to him in vain, while consoling both yourselves and myself at the same time. Therefore, give an assurance about me to Crito," he said, "the opposite assurance to the one he gave the jurors. For he assured them that I would remain but you must assure him that I shall not remain after I die but will depart and be gone, so that Crito may bear this more easily. And when he sees my body being burned or buried, he may not be troubled on my account as though I am being

treated dreadfully, or say at the funeral that Socrates lies before us or is borne to the grave or buried. For mark my words well, excellent Crito, speaking improperly is not only wrong in itself, but it also engenders an evil in our souls. Instead, you must take heart and say that you are burying my body and bury it as you please and as you deem most appropriate.”

116a

Having said this, he got up and went to another room in order to bathe. Crito followed him but he told us to wait. So we waited conversing among ourselves about what had been said and considering it once more, and then we went on to recount the extent of the misfortune which had befallen us, literally believing that we had been deprived of a father and would spend the rest of our lives as orphans. Once he had bathed the children were brought to him, for he had two small sons and a big one, and the women of his household arrived and he conversed with them, in Crito’s presence, and gave the instructions he wished to give. He then asked the women and children to depart and he himself returned to us.

116b

Now, at that stage the sun was almost setting for he had spent a lot of time within. When he came back after bathing he sat down, but not much was discussed after that, and the servant of The Eleven arrived, stood before him and said,

116c

Warder: “Socrates, I shall not find in you the fault I find in others, whereby they are angry with me and curse me when, on the instructions of the Archons, I order them to drink the poison. During your time here I have known you as the noblest, gentlest, most excellent man who ever arrived in this place. What is more, I know quite well that you are not angry with me now but with them, for you realise who is responsible. Now then, since you know what I have come to announce, fare you well and try to bear what must be as lightly as you can.”

116d

And with this he began to weep, turned away and departed. And Socrates looked toward him and said,

Socrates: “Fare you well too. We shall do as you ask.”

Then he said to us,

Socrates: “What a courteous man! Throughout my time here he has visited me and conversed with me sometimes and has been the best of men, and now, see how genuinely he weeps for me. But come now, Crito, let us pay heed to him. Let someone bring the poison if it has been pressed and if not, the man should press it.”

116e

Crito: And Crito said, “Socrates, I think the sun is still upon the hills and has not yet set. What is more, I know that others have drunk the poison very late, whenever the announcement has been made to them. They have feasted and drunk quite a lot, some of them even fraternising with people they happen to enjoy. So do not rush, there is still time.”

Socrates: And Socrates replied, “Crito, it is quite reasonable for these people to do this, the people you describe, for they think there is benefit in doing so. And it will be reasonable for me not to do so, as I think there is no benefit in drinking the poison a little later, apart from becoming a figure of fun to myself by clinging to life and sparing what is already spent. So come on,” he said, “heed me and do not refuse me.”

117a

And when Crito heard this he nodded to his servant who was standing nearby and the boy went out, was gone for quite some time, and returned bringing the man who was going to administer the poison, carrying it already pressed in a cup. When Socrates saw the man, he said,

Socrates: “So be it, best of men, since you are knowledgeable about these matters, what should I do?”

117b

Poisoner: “Nothing,” he said, “except drink this and walk about until your legs become heavy, then lie down and in this way the poison will act by itself.”

And as he said this he held out the cup to Socrates. And having taken it most graciously, Echecrates, without fear or any change of colour or expression, but looking at the man wide-eyed, as usual, he said,

Socrates: “What do you say about pouring a libation to someone from this cup? Is that permitted or not?”

Poisoner: “Socrates,” he replied, “we only press the amount we think you need to drink.”

117c

Socrates: “I understand,” he said, “but it is permitted and indeed necessary to pray to the gods that my change of abode from here to there be graced with good fortune, and so I pray that this may be so.”

And as he said this, he put the cup to his lips and very calmly and without flinching, he drank it down. Up to then most of us were able to restrain our tears fairly well, but when we saw him drinking and saw that he had drunk it, we could do so no longer. In spite of myself, my own tears flowed in a torrent, and so I hid my face, weeping not for him but for myself and my own misfortune at being deprived of such a companion. And even before that, when Crito was unable to restrain his tears, he had moved away. But Apollodorus, who had been weeping incessantly before then, broke out at this stage into such wailing and grieving that none of the company could help breaking down, except Socrates himself.

117d

Socrates: “Strange men,” he said, “what a way to behave! I sent the women away mainly so that they would not cause such a tumult, for I have also heard that it is necessary to die in reverent silence. So keep quiet and endure.”

117e

And when we had heard this we felt ashamed and refrained from weeping. He walked around until he said that his legs were becoming heavy, then he lay flat on his back as the man had instructed, and this man who had administered the poison began examining him, and when some time had passed he probed his feet and legs and then he pinched his foot hard and asked if he could feel it. He said, “No.” And after this the man felt his shin once more, and working upwards in this way he showed us that he was going cold and stiff. And again, he touched him and said that when it reached the heart, he would then be gone.

118a

Now, once the coldness was somewhere in the region of his groin he uncovered his face, for it had been covered, and said, and this was his final utterance,

Socrates: “Crito, we owe a cock to Asclepius,²⁷ so pay the debt without fail.”

Crito: “Yes, it shall be done,” said Crito, “but see if you have something else to ask for.”

To this question he did not even reply. After a short time he shuddered and the man uncovered him, and his eyes were fixed. And when Crito saw this he closed the mouth and the eyes.

Phaedo: Such was the end, Echecrates, of our companion, a man whom we would say was the best, the wisest too, and the most just of any we have ever known.

NOTES

1. Phaedo was a close associate of Socrates, and eventually set up a philosophical school in Elis.
2. Echecrates was a Pythagorean philosopher from Phlius, near Corinth.
3. According to legend, King Minos required the Athenians to send fourteen youths each year to his kingdom on the island of Crete to be sacrificed to the Minotaur. Theseus is reputed to have saved the youths and slain the monster, thus freeing the Athenians from this annual tribute.
4. The nine men listed here from Athens and the surrounding area were part of Socrates' inner circle. A few of them appear in other of Plato's dialogues: Apollodorus appears in Plato's *Symposium*; Crito, the father of Critobulus, lends his name to Plato's *Crito*; Hermogenes is the main interlocutor in Plato's *Cratylus*; Ctesippus is mentioned in both Plato's *Lysis* and *Euthydemus*; Menexenus has a small part in Plato's *Lysis* and has a dialogue named after him. Epigenes and Aeschines are both mentioned in Plato's *Apology* as having been present at the trial of Socrates; the latter was a writer of Socratic dialogues. Antisthenes is regarded as the founder of the Cynic school of philosophy.
5. Simmias, Cebes and Phaidondes were Pythagoreans from Thebes, north of Athens; Euclides and Terpsion were from Megara, a city west of Athens. The first two are mentioned in Plato's *Crito* as having raised enough money to secure Socrates' escape. Euclides was also a writer of Socratic dialogues, and founder of the Megarian school of philosophy.
6. Cleombrotus was a young follower of Socrates who was reputed to have taken his own life after reading the *Phaedo*. Aristippus was the founder of the Cyrenaic school of philosophy.
7. Among the 700 magistrates of Athens appointed by lot, eleven men, simply called 'the Eleven', were in charge of prisons and executions.
8. Xanthippe was Socrates' wife. They had three children, two who were young men and a third still young enough to be carried by his mother.
9. Aesop was a legendary storyteller to whom a collection of fables was attributed.
10. Evenus of Paros was a late 5th-century sophist and teacher. He is also mentioned in Plato's *Apology* (20b-c) and *Phaedrus* (267a).
11. Philolaus was an influential Pythagorean philosopher from southern Italy. He spent some time in Thebes, where he met Simmias and Cebes.

12. The mysteries and rites of initiation referred to here are those that were associated with Orpheus.
13. This quote contrasts the true worshippers of Dionysus, the Bacchae, with those who merely carry the outward symbols of such worship, i.e. the thyrsus, a giant fennel stalk covered with ivy.
14. Endymion was a beautiful mortal who was granted eternal youth by Zeus, who put him into an everlasting sleep, all at the request of Selene.
15. Anaxagoras was a natural philosopher from Clazomenae in Ionia, who lived a generation before Socrates. His influence upon Socrates is described later in the dialogue.
16. Penelope was the wife of Odysseus. She had promised to marry one of her suitors once she finished weaving a shroud for her father-in-law. In order to deceive the suitors, she wove by day and undid each day's work by night. Thus, her task of weaving was endless. *Odyssey* ii.92-105.
17. The men of Argos swore an oath not to let their hair grow until they had defeated the Spartans in battle.
18. Iolaus was the nephew of Heracles, who assisted his uncle in some of his Labours.
19. *Odyssey* xx.17-18
20. Cadmus was the legendary founder of Thebes, and his wife was Harmonia, daughter of Ares and Aphrodite. Socrates plays here upon their reciprocal relationship.
21. Atlas was a Titan who was condemned to hold up the sky for all eternity after the Titans were defeated in their war against the Olympians.
22. Aeschylus' work *Telephos* no longer survives.
23. A common adage of uncertain origin.
24. The Pillars of Heracles refers to promontories that frame the entrance to the Strait of Gibraltar. The River Phasis is situated in modern-day Georgia and flows into the Black Sea.
25. *Iliad* viii.14, 481.
26. The geography of the underworld is drawn from Homer's *Iliad* and *Odyssey*, especially *Odyssey* x.511 ff, xi.157.
27. Asclepius, the son of Apollo, born a mortal but deified after his death, was the god of healing. Sick people who slept in his sanctuary, having been cured, would often sacrifice a cock to him.

persons in the dialogue:

SOCRATES of Alopecce, son of Sophroniscus

PHAEDRUS a young Athenian

scene: outside the city walls of Athens, by the Ilissus river

227a

Socrates: Dear Phaedrus, where are you going to and where are you coming from?

Phaedrus: I have been with Lysias, the son of Cephalus,¹ and I am going for a walk outside the walls for I have spent a long time sitting with him since early this morning. On the advice of Acumenus,² your friend and mine, I take my walks on the open roads, for he says that these walks are more refreshing than those through the streets.

227b

Socrates: Indeed, my friend, he is right to say so. Anyway, it seems that Lysias has been in town.

Phaedrus: Yes, staying with Epicrates, in the house that belonged to Morychus,³ near the Olympieum.

Socrates: Well then, how did you spend the time? Or is it obvious that Lysias entertained you with speeches?

Phaedrus: You will find out if you have the time to come along and listen.

Socrates: What is this? Don't you realise that, as Pindar puts it, I shall accord 'a higher status than any other business'⁴ to hearing how you and Lysias spent your time?

227c

Phaedrus: In that case, lead on!

Socrates: Please tell me.

Phaedrus: Very well, Socrates. Anyway, it is appropriate that you hear this. You see, the speech on which we spent our time

was, in a certain sense, concerned with love. Yes, in fact, Lysias wrote about some beautiful fellow being tempted, but not by a lover. That was the clever aspect of this, for he says that one should favour a non-lover more than a lover.

Socrates: How noble! But I wish he would write that one should favour the poor rather than the rich, or the old rather than the young, and refer to qualities which I and so many others possess. Then the arguments would really be clever and of public benefit. Anyway, I am so enthusiastic to hear you that I will not leave you, even if you take a walk as far as Megara and, like Herodicus,⁵ go back once more when you reach the city walls.

227d

Phaedrus: What are you saying, excellent Socrates? Do you think that I, an amateur, could recall speeches which Lysias, the most formidable writer alive, composed at leisure over a considerable period of time, in a manner worthy of the author? Far from it, and yet that is an ability I always wanted to have more than any amount of gold.

228a

Socrates: Oh Phaedrus! If I do not know Phaedrus then I have also forgotten myself. But since neither of these possibilities is the case, I know quite well that when listening to Lysias' speech he did not hear it only once, rather he asked the speaker to repeat it many times and the speaker obeyed eagerly. But this was not enough for him, and in the end he got his hands on the script and studied whatever interested him most. He sat doing this from early morning, grew tired and went out for a walk, and I believe, by the dog, he had learned the speech by heart, unless it was particularly long. And as he was going outside the wall to rehearse it, he met someone suffering from a love of hearing discourses, and when he saw him he was delighted to have a fellow enthusiast and he bid him 'lead on'. Yet when this

lover of discourses asked him to speak he gave himself airs, as if he was not so keen to speak. But in the end he was going to speak anyway, even if no one was prepared to listen. So, Phaedrus, you should ask him to do now what he will soon do in any case.

228c

Phaedrus: In truth, the best course by far is for me to speak in the way that I can since I do not think you will ever release me until I speak somehow, in some way.

Socrates: Yes, what you are thinking about me is entirely true.

Phaedrus: Then that is exactly what I shall do. Now, the fact is, Socrates, I certainly have not learned the words by heart. However, I have an understanding of almost all those sections in which he says the lover and the non-lover differ, and I shall give a summary of each aspect in turn, beginning with the first.

228d

Socrates: Yes, dearest, when you have first shown me what exactly you are holding in your left hand underneath your cloak. Indeed, I suspect you have the actual speech. And if that is what it is, then you must appreciate that although I do love you very much, you cannot really expect that I shall allow you to practise on me when Lysias is actually present. So come on, show it to me.

Phaedrus: Stop! You have robbed me of the hope I had of practising on you. Now, where would you like to sit so that we may read it?

Socrates: Let us turn off here and go along the Ilissus, then we can sit quietly wherever you please.

Phaedrus: It seems fortunate then that I happen to be barefoot, and you, of course, always are. So, it is very easy for us to walk along in the stream and bathe our feet, not an unpleasant prospect, especially at this time of year and this hour of day.

228e

Socrates: Lead on then, and let us keep our eye out for somewhere we may sit.

Phaedrus: Well, do you see that lofty plane tree?

Socrates: I do.

Phaedrus: There is shade there and a moderate breeze and grass to sit upon, or even to lie upon should we so wish.

Socrates: Please lead on.

229a

Phaedrus: Tell me, Socrates, wasn't it from somewhere around here that Boreas is said to have snatched Orithyia from the banks of the Ilissus?⁶

Socrates: Yes, that is what they say.

229b

Phaedrus: Was it from here, then? The brook is delightful anyway, and it looks clean and bright and suitable for maidens to play alongside.

Socrates: No, it was from two or three stades further downstream, at the place where we cross over to Agra, and I think there is an altar to Boreas at the spot.

229c

Phaedrus: I have never actually noticed it. But by Zeus, tell me Socrates, do you believe that this story is true?

Socrates: Well, if I disbelieved it as the wise men do I would not be unusual. In that case, I would declare sagaciously that Boreas, the north wind, blew her off the nearby rocks as she was playing with Pharmacea, and of course, having died in this way, she was said to have been borne away by Boreas. Or else it was the Areopagus, for they tell another story in which she is snatched away from there and not from here. Now, Phaedrus, I regard such explanations in general as delightful, but they are the

province of a very clever, hard-working, not entirely fortunate person, who, because of this account, also needs to correct our understanding of the nature of Centaurs and then of Chimeras. And a host of such creatures floods in – Gorgons, Pegasi, and an unimaginable multitude of other extraordinary legendary animals. If someone who does not believe in these stories tries to make them sound reasonable through recourse to some common-sense wisdom, such a person will be very busy, but I have no time whatsoever for them. I will tell you the reason, my friend. I am not yet able, in the words of the Delphic inscription, to ‘know myself’. In fact, investigating extraneous matters while I am still ignorant of this appears ridiculous to me. So, I bid farewell to these issues. I accept the traditional views about them as I have just explained, and I do not investigate them, but I investigate myself instead. Am I, perchance, some beast more complex and more lustful than Typho,⁷ or a gentler and simpler creature endowed by nature with a divine and unpretentious fate? But look, my friend, to interrupt our discussion, isn’t this the tree you were leading us to?

230b

Phaedrus: Yes, this is it.

Socrates: Well, by Hera, this is a really beautiful place to rest. The plane tree itself is so broad and tall. See the height and the glorious close shade of the agnus castus, and how it is in full bloom, filling the place with the finest scent. The most delightful spring beneath the plane tree is flowing with the coolest water, as my foot can testify. And from the statuettes and shrines, it seems the place is sacred to some Nymphs and to Achelous.⁸

230c

Socrates: And what is more, the airiness of the place is so attractive and intensely pleasant, echoing clear and summer-like with the chorus of the cicadas. Most exquisite of

all is the grass, which has grown on a gentle slope, just perfect to rest one's head on. Dear Phaedrus, what an excellent guide you are!

230d

Phaedrus: And you prove to be a wonderful and highly unusual person! Yes, from what you are saying, you really seem more like a visitor who is sightseeing than a native. In fact, you never go travelling like this outside our own borders, and I do not think you even go outside the walls at all.

Socrates: Forgive me, my excellent friend. For I am a lover of learning, and the rural haunts and the trees do not of themselves teach me anything, while the people in the city do. However, I think you have discovered the special potion for getting me out. For just as people lead hungry animals by waving a branch or piece of fruit, it turns out that you may also lead me about in this way through Attica, or anywhere else you please, by offering me scrolls of speeches. Well, now that we have arrived here, I think I shall lie down for the moment, and you should adopt any position you think easiest for reading, and then go ahead and read.

230e

Phaedrus: Well, listen.

231a

Phaedrus: “You know about my affairs, and you have heard how I think it best for us to arrange things, but I do not deserve to fail in my request just because I am not actually your lover, since, in the case of lovers, there is regret for any good they may have done once the desire comes to an end, but in the case of non-lovers, there is no occasion on which it is appropriate for them to change their minds. For they do good based upon their own capacity, not under compulsion but willingly, by deciding what is best for their own private interests. But lovers keep thinking about any harm done to their own interests on account

of love, and any good they themselves have done, and once they add any hardship they have sustained into the reckoning, they conclude that their loved ones have received all the favours they deserve a long time ago. But the non-lovers do not have to excuse the neglect of their own affairs on this account, or reckon up the trouble they have taken, or accept any blame for quarrels with relatives. Accordingly, since all such impediments are out of the way, nothing remains but to engage eagerly in actions which he thinks will please them.

231b

Phaedrus: “And yet it may be argued that lovers deserve great credit for this, since they claim to have the utmost affection for those whom they love, and they are prepared to favour their loved ones in word and in deed and be hated by others in the process. But if lovers are speaking the truth, it is easy to appreciate that anyone they love in the future will be more important to them than their present loved ones, and if the new ones so wish, they will even harm the old ones. Furthermore, how could it be reasonable to entrust this sort of thing to someone possessed of such an affliction as this, an affliction that no experienced person would ever attempt to prevent. And, indeed, they themselves accept that they are more sick than sound-minded, and that they realise that their thinking is disordered, but are unable to control themselves. So, once lovers return to their right mind, how could they regard as sound any decisions which were made under such circumstances? What is more, if you were to choose the best from amongst your lovers, your selection would be drawn from a small number, but if on the other hand you were to choose the most suitable from among all the others, you would be choosing from a greater number, where you would have much more hope of encountering someone worthy of your affections.

231e

Phaedrus: “Again, perhaps you are afraid of established convention, afraid that you will be found out by people and incur disgrace. Yet the likelihood is that lovers, believing that they are just as well regarded by others as they are by themselves, will feel an urge to speak out, and with an eye to their reputation proclaim to everyone that their efforts have not been for nothing. However, the non-lovers, as they are in control of themselves, are likely to choose the best course, rather than reputation in the eyes of their fellow men. But again, in the case of the lovers, most people must see or hear of them following their loved ones, and making quite a business of doing so. Consequently, whenever they are seen conversing with one another, it is assumed that they are getting together about a current or impending flirtation. But in the case of non-lovers, no one ever tries to criticise them because they get together, since they realise that it is necessary to talk to someone, either on account of friendship or some other enjoyment. What is more, suppose you became alarmed, thinking that it is difficult for a friendship to endure, and while a falling-out under other circumstances brings misfortune which is shared by both parties, the harm you suffer is enormous when you give away what is most important to you. In that situation it would be reasonable to be more afraid of your lovers, for their afflictions are many, and they think everything that happens is directed at harming them.

232c

Phaedrus: “On account of this, they also discourage the loved ones from meeting with other people, fearing those who have money in case they might surpass them in wealth, and fearing those who are educated in case they might prove superior in intelligence, and they are also wary of the power of anyone else who possesses any other advantage. Now, once they have persuaded you to incur the enmity of those people, the lovers leave you bereft of friends, and if you show more intelligence

than they do by looking to your own interest, you will find yourself at odds with them. Yet those who are not lovers but have attained what they wanted on account of excellence, would not be envious of these associates of yours. Instead, those who are not in love would detest those who refuse you, realising that you are being slighted by these fellows and benefited by your associates, and in consequence, they will have a much greater hope of friendship from the affair than enmity.

232e

Phaedrus: “What is more, most lovers develop a desire for the body first, before they have come to know your character or your other personal qualities, so that it is not clear whether they will still want to be friends with you once the passion has abated. Whereas, in the case of those who are not lovers but were friends with one another before all this took place, the friendship is not likely to be diminished by any of their pleasant experiences, but these are likely to be left as memorials for what is about to unfold. What is more, it better becomes you to be persuaded by me rather than by a lover, for those men praise your actions and utterances regardless of their merit, sometimes from a fear of being disliked, and also because their desire impairs their own judgement. Yes, this is the sort of behaviour that love exhibits. It makes those who are unfortunate regard anything which does not cause pain to others as an annoyance, while it compels those who are fortunate to praise pleasures that are unworthy of them. Consequently, it is much more appropriate to pity the loved ones than to envy them.

233b

Phaedrus: “However, if you trust in me, firstly I shall not associate with you to pander to the pleasure of the moment, but with an eye to your future advantage; not weakened by love, but master of myself; not resorting to bitter enmity over trifles, but slowly arousing a moderate anger over major issues. The

unintentional wrongs I forgive, the intentional ones I try to prevent, for these are the proofs of a friendship that will endure for a long time. But if you are still of the view that a strong friendship cannot arise unless the person is a lover, then you need to ponder that on this basis, we would not prize our sons very much, or our fathers or mothers, nor would we have acquired faithful friends who had become friends, not out of that sort of desire but through pursuits of a different nature.

233d

Phaedrus: “Again, if we ought to favour those who are most in need, then it is also appropriate in other situations to do good, not to the best, but to those who are most lacking, for they will be most grateful since they are relieved of the greatest misfortunes. What’s more, even in the case of private parties, it is not your friends who deserve to be invited, but beggars and those who need sustenance, for these people will be delighted with you, follow you and throng about your doors. They will be most pleased and most grateful and will pray that you may have many advantages.

233e

Phaedrus: “No, perhaps it is not appropriate to grant favours to those who are in greatest need, but those who can best return the favour; not to mere beggars, but those who deserve the attention; not to the sort who will just enjoy the benefit of your best years, but anyone who will share their own advantages with you when you have grown older; not to those who seek reputation in the eyes of others once they have achieved their objective, but anyone who will remain silent from a sense of shame in the eyes of all; not to those who will enjoy a short interval with you, but those who will be your friend in the same way throughout your entire life; not to someone who will seek an excuse for enmity once his desire abates, but those who will display their own excellence once you are past your prime.

234b

Phaedrus: “Now, keep in mind what I have told you and consider this point too. Friends give warnings to lovers about their debased way of life, but in the case of non-lovers, none of their acquaintances has ever censured them for poor judgement of their own affairs on that account. So, perhaps you may ask if I am exhorting you to gratify all non-lovers? But I do not think that even a lover would advise you to have the same attitude towards all lovers. For in that case, it would not merit the same gratitude from the recipient, nor could you keep it a secret from the others if you so wished. Whereas what is needed is that no harm at all should arise from this, and both parties should benefit.

234c

Phaedrus: “Now, I think I have said enough, but if you want more because you think I have left something out, just ask.”

Phaedrus: Well, how does the speech sound to you, Socrates? Isn't it extraordinary, especially in its use of language?

234d

Socrates: Yes, my friend, miraculous. It has astounded me! And I have had this experience because of you, Phaedrus, for I was watching you as you were reading and it seemed to me that you were made brighter by the speech. So, realising that you understand such matters better than I do, I followed you, and in the process I joined you in the wild frenzy, my divine friend.

Phaedrus: Come now, does it all sound like a joke?

Socrates: What? You think I am joking and not being serious?

Phaedrus: Not at all, Socrates, but by Zeus, the god of friendship, tell me the truth. Do you think there is anyone else in Greece who could deliver a more magnificent and expansive speech than this on the same topic?

234e

Socrates: What? Does the speech deserve praise from you, or from me, on the basis that the author has actually said what needed to be said, and not on the sole basis that each of the expressions he fashioned was clear, well rounded and precise? For if that is a requirement, I must concede the point to you, since on account of my nothingness I had overlooked this. I attended only to the rhetoric of the speech, and I do not think that even Lysias himself would regard that as satisfactory. And in fact, Phaedrus, although you may have a different view on this, I thought he made the same points twice or three times, as he was not really up to the task of saying a great deal on the same topic. Or perhaps he had no concern about a detail of that sort. And he appeared quite spirited to me, showing off that he could say the same thing in one way and then in another way, and say it superlatively on both occasions.

235b

Phaedrus: You are talking nonsense, Socrates, for this is the most significant feature of the speech. In fact, it omits nothing that is worth saying on the topic, so that nothing else can ever be said that is more expansive and more significant than what he has said.

Socrates: There I can agree with you no longer, for the wise men and women of old who have spoken and written on these matters will refute me if I give my assent just to gratify you.

Phaedrus: Who are these people? And where have you heard anything better than this?

235c

Socrates: Well, I cannot really say at the moment though I obviously heard it from someone ... perhaps from the lovely Sappho or the wise Anacreon or even from some prose writers.⁹ So, how do I come to this conclusion? My breast is somehow full, my wonderful friend, and I feel I could say something else besides what Lysias said and no worse. Now, because I recognise

my own ignorance, I am well aware that it was not from myself that I formed any of these notions. So, I think the only alternative is that I have been filled through my ears by streams flowing from elsewhere, as though I were a vessel. But again, on account of my dullness, I have actually forgotten how and from whom I heard this.

235e

Phaedrus: Very well, noblest of friends, you have expressed it perfectly. In fact, I will not even ask you to tell me from whom you heard this and how, as long as you do what you just said. Undertake to deliver a better speech than the one on the scroll, just as long and with different content, and I promise you that like the Nine Archons,¹⁰ I shall erect a life-sized golden image at Delphi, not just of myself but also of you.

Socrates: Phaedrus, you are very dear and truly golden if you think I am claiming that Lysias went completely awry, and I can say something entirely different. I do not think that would happen to even the most ordinary writer. For instance, in the case of this speech, do you think anyone asserting that the non-lover should be favoured more than the lover could avoid praising the prudence of the former and censuring the irrationality of the latter, and then have something else to say instead? No, these arguments are in a sense mandatory, and in such cases we should praise their construction and not their contrivance. However, in the case of arguments which are not mandatory and are difficult to contrive, we should praise the contrivance as well as their construction.

236b

Phaedrus: I am going along with your suggestion, for what you have said sounds reasonable to me. So, what I shall do is this. I shall allow you to propose that the lover is more sick than the non-lover and provided the rest of what you say is different, more expansive and more worthy than Lysias' speech, your

statue in beaten metal shall stand beside the offering of the Cypselids at Olympia.¹¹

Socrates: Phaedrus, you have taken the matter seriously because I attacked one of your favourites in jest. Do you actually think that I shall, in truth, attempt to make a different and more ornate speech, exceeding the wisdom of that man?

236c

Phaedrus: On this issue, my friend, you are in the same predicament that I was in. In fact, it is all the more necessary that you speak in any way you can so that we are not compelled to adopt the farcical exchanges of stage comedies. Take care you do not force me to come out with ‘Oh, Socrates! If I do not know Socrates then I have forgotten myself’ or, ‘he wanted to speak but gave himself airs’. No, you need to appreciate that we shall not be leaving this place until you speak all that you said you had ‘in your breast’. We are alone in an isolated spot and I am stronger and younger than you, so taking all of this into account ‘mark thou my words’¹² and do not opt to speak under compulsion when you can do it voluntarily.

236d

Socrates: Bless you, Phaedrus! But I shall be a laughing stock, extemporising as an amateur alongside a fine poet about the same topics.

Phaedrus: Do you appreciate the position you are in? Stop being coy with me! In fact, I have something to say that will pretty well force you to speak.

Socrates: Do not say it then!

236e

Phaedrus: Oh, but I shall say it! And my utterance will be an oath. In fact, I swear to you by... by what god... by this plane tree here if you like. I declare that if you do not deliver the speech here, in its very presence, I shall never perform another speech

for you or tell you about one either.

Socrates: Oh, you wretch! How well you have discovered what it is that compels a lover of discourse to do your bidding!

Phaedrus: Then why try to evade it?

Socrates: I can do so no longer now that you have sworn this. Indeed, how could I hold myself back from banquets of this sort?

237a

Phaedrus: Then speak!

Socrates: Well, do you know how I shall proceed?

Phaedrus: In what respect?

Socrates: I shall rush through the speech as quickly as possible, speaking with my head covered to avoid looking at you and losing my way out of sheer embarrassment.

Phaedrus: Just speak and arrange the other details as you please.

237b

Socrates: Come then, O ye clear-voiced Muses. Whether you are so described because of the nature of your song, or after the musical race of the clear-voiced Ligurians, join with me in this story which this excellent man here compels me to relate, so that his companion who seemed wise to him even before this, may now seem even wiser.

Socrates: Once upon a time there was a boy, more a youth really, very handsome too, and he had very many lovers. But one of them was wily, and although he was no less in love than the others, he had persuaded the boy that he did not love him. And on one occasion as he sought favour, he was persuading him of this very point, that one should favour the non-lover in preference to the lover. And so he said this: ^{237c} “Whatever the

issue, my boy, a single principle applies to those who intend to deliberate properly. They need to know what it is they are deliberating about, or else they must go entirely awry. However, most people are unaware of the fact that they do not know the essence of each thing. Therefore, on the basis that they already know, they come to no agreement at the outset of the enquiry and proceed to pay a predictable penalty. They agree with neither themselves nor one another. Now, you and I should avoid this shortcoming which we censure in others, and since the issue before us both is whether one should accord more friendship to the lover or to the non-lover, we should propose an agreed definition of love – what it is like and what power it possesses – and looking thereto and referring thereto, let us conduct our enquiry into whether love furnishes benefit or harm. Now, it is obvious to everyone, of course, that love is a desire, but we also know that even non-lovers desire the beautiful. On what basis then do we distinguish the lover from the non-lover? We need to recognise that there are two ruling and leading principles in each of us which we follow wherever they may lead: one is an inborn desire for pleasure, while the other is an acquired opinion which aims for the best. These two principles within us are sometimes in concord, but on occasion they are in conflict, and then, sometimes one, sometimes the other, is dominant. Now, when opinion that leads through reason to the best and is dominant, that dominion is called sound-mindedness, but when desire drags us irrationally towards pleasure, and is ruling in us, its rule is referred to as lust. And yet lust goes under many names, for it has many aspects and many parts, and whatever aspect happens to be most in evidence bestows its own name upon the possessor, a name that is neither admirable nor worth acquiring. So, when the desire associated with food dominates over the excellence of reason and over the other desires, gluttony will be in evidence, and its possessor will also be referred to by the same

name. And again, when its tyrannical control is related to drink, it is obvious what name we shall give to its possessor when it leads him in that direction. And in the case of other people of this sort, it is evidently appropriate to call them by the names of the appropriate desires, whichever one is in control at that time.

238b

Socrates: “Now, the type of desire which has prompted all that has been said is quite evident at this stage, but what is spoken is very much clearer than what is unspoken. So, once the desire devoid of reason has overpowered opinion conducive towards what is right, and has led towards delight in beauty, it too, for its part, is impelled forcefully towards bodily beauty by desires kindred to itself. Once this gains the ascendancy, it acquires a name derived from that very force and is called love.”

238c

Socrates: Well now, dear Phaedrus, does it seem to you, as it does to me, that I am undergoing some divine experience?

Phaedrus: Yes, certainly, Socrates, an extraordinary fluency has taken hold of you.

238d

Socrates: Hear me out in silence then. For this really seems to be such a divine place that you must not be surprised if I actually get caught by the Nymphs on occasion as I proceed with the speech. Yes, even at this stage I am almost enunciating verses of poetry.

Phaedrus: What you are saying is very true.

Socrates: And you are the one who is responsible for this! Anyway, listen to the rest of it, for the attack may perhaps be averted. However, these matters will be cared for by god; we for our part should return to our speech to the boy.

238e

Socrates: “There it is, my brave one! Now that the subject of our deliberations has been described and defined, what remains is to keep this in view, and state what benefit and what harm accrues to someone who favours a lover, and to someone who favours a non-lover. Now, it must be the case, I presume, that anyone who is ruled by desire and enslaved by pleasure will render a loved one as pleasing to himself as possible. Whatever offers no resistance is an utter delight to a sick man, whereas the equal or the stronger is detestable. So, the lover will not willingly tolerate either an equal or a stronger person as a favourite, and he will always make him weaker and inferior; and the fool is weaker than the wise man, the coward than the brave, the poor speaker than the orator, and a dull man is weaker than a clever one.

239a

Socrates: “When all these mental inadequacies, and more besides, develop in the loved one or are present by nature, the lover must be delighted. And if they are absent, he must contrive their presence or else forgo his momentary pleasure. Of course, the lover must be jealous and is a source of great harm through keeping the loved one away from numerous other associations which are advantageous and might make him a better man. And the greatest harm is done by barring him from an association whereby he might become most wise, namely divine philosophy. The lover must keep his favourite far away from this, as he is terrified of being held in contempt. And in other subjects, he must arrange that the loved one is completely ignorant and looks to the lover for everything, a state of affairs which would be delightful to the lover but very damaging to himself. Therefore, when it comes to the mental realm, a man in love is not useful at all either as a guardian or as a companion.

239c

Socrates: “As well as this, we also need to look to the condition of the body, and the nature and the extent of the care it will receive from someone who has gained control over it when that person is under compulsion to pursue pleasure in preference to good. Well, he will be seen pursuing someone who is feeble rather than tough, reared not in pure sunlight but beneath flickering shade, unaccustomed to manly exertions and harsh sweaty work, but quite used to a soft and unmanly way of life, adorned with extraneous colours and decorations because the natural qualities are absent. And he also engages in all the activities associated with such traits, but these are obvious and it is not worth continuing the list any further. Rather, we may proceed to another issue once we have summed this up in a single sentence. For such a feeble body, in war and in other circumstances where the need is great, gives courage to the enemy and strikes fear into friends and even lovers.

239e

Socrates: “So, let us accept that this is indeed obvious and proceed to formulate the next question. What benefit, or what harm, does the company and guardianship of a man in love afford us in relation to our property? Well, this much at least is evident to everyone and especially to the lover, that he would pray above all that the loved one be bereft of his dearest, most beneficent and most divine possessions. For the lover would welcome it were the loved-one to be deprived of father and mother, relatives and friends, believing them to be obstructive influences, critical of his delightful association with the loved one. But then, if the loved one has some property, gold or some other possession, he will regard him as not so easy to catch, and not so easy to manage once he has been caught. Accordingly, the lover really must begrudge his favourite any property he has acquired and be pleased if it is lost. What is more, the lover will pray that his favourite may be un-wed, childless and without a household for as long as possible, because he wants to

enjoy the sweetness for himself for as long as possible.

240b

Socrates: “Now, there are other depravities too, but in most cases, by some miracle, they are combined with a momentary pleasure, for instance, the flatterer is a dreadful monster who does a lot of harm, yet nature has commingled in him a certain delight which is not devoid of charm. A courtesan too may be censured as harmful, and so may a host of creatures with similar tendencies and behaviours in whom there is also pleasure, even though it is fleeting. But a lover, in addition to the harm he does, is the least pleasant person of all for loved ones to spend the day with. Yes, there is actually an old saying that ‘same age delights same age’, and I think it means that the equality of years leads to an equality of pleasure and produces friendship on account of this similarity. Yet even in these cases, they can get more than enough of one another’s company. Now, of course necessity is said, in general, to be a burden to everyone, and in addition to their dissimilarity, this principle is especially applicable to a lover and his favourite. For an older man consorting with a younger man does not willingly leave him day or night but is impelled by necessity and the sting of desire which draws the man on, affording him constant pleasures as he sees, hears, touches and is aware of the loved one through every sense so that he serves him diligently and delightedly.

240c

Socrates: “But what sort of consolation and what pleasure does the lover, for his part, grant to the loved one to ensure that the time they spend together does not end in utter disgust at beholding an aged face past its prime, and other features to match? For isn’t it the case that none of these are pleasant to hear described, but the constant unavoidable experience is even worse as he is watched over by a guardian who is suspicious of everyone and everything, and he hears inappropriate and exaggerated praise and criticism too, which are intolerable

when the man is sober, but embarrassing as well as intolerable when he has taken to drink and engages in unbridled and wearisome outspokenness?

240e

Socrates: “Now, when he is in love he is harmful and disgusting, but once the love abates he is untrustworthy thereafter to that very person whom he induced, with difficulty, to endure his tiresome company for that short time, a feat he accomplished by making numerous promises of future advantages, accompanied by countless oaths and imprecations.

241a

Socrates: “But when it is time to deliver on the promises, he has changed the ruler and leader within himself to reason and sound-mindedness, instead of love and madness. He has become a different person, but the loved one is unaware of this. So, as though he were talking to the same person, the loved one demands a favour from him, reminding him of what was done and what was said in the past. The lover, on the other hand, is ashamed and does not dare to say that he has become someone else, nor is he able to stand by the oaths and promises sworn under the former rule of unreason. At this stage, he has acquired reason and has become sound-minded in order to avoid becoming like that other person and being the same again by doing the same things he did before. He becomes a fugitive from all this, and he who was once a lover is compelled to betray his promises, and with the flipping of an oyster shell he turns and takes flight. And the loved one is compelled to pursue him, crying to heaven in anger having misunderstood the entire relationship from the outset. He should not, as it turns out, ever have favoured a man who is in love and perforce, unreasonable. No, far better to favour someone who is not in love and who is, therefore, reasonable. Otherwise, he would be compelled to place himself at the mercy of an unfaithful, awkward, jealous and disgusting person who is surely detrimental to his property,

detrimental also to his bodily well-being, but utterly detrimental to the development of his soul, and in truth there neither is nor shall there ever be anything more precious than this in the eyes of men or gods. So, you need to understand all of this, my boy, and appreciate that the affection of a lover is not accompanied by good intentions, but is a sort of hunger for food. Its aim is satisfaction, for ^{241d} As wolves have a liking for lambs So do lovers have affection for loved ones.”

^{241d}

Socrates: That is it, Phaedrus. You shall not hear me saying any more than this. Please let that be the end of the speech now.

Phaedrus: And yet, I thought this was half of the speech and you would say an equal amount about why the non-lover should be favoured to a greater extent, stating, in turn, all the advantages he affords. Why ever are you stopping at this stage, Socrates?

^{241e}

Socrates: Bless you. Do you not realise that I am already uttering epic verses, not just poetic verses, even though I am being critical? So, what do you think I shall come out with if I start to praise the other man? Surely you realise that I shall be undisguisedly inspired by the Nymphs to whom you have deliberately exposed me. So I should say, in short, that this other man has advantages which are the opposite of anything we have reviled in the first man. Yes, why do we need a long speech? In fact, enough has been said about both of them. And so on this basis, my story may suffer whatever fate it deserves to suffer, whilst I cross over this river and take myself away, before you force me into something even worse.

^{242a}

Phaedrus: Not yet, Socrates, not until the heat subsides anyway. Don't you see that it is almost mid-day and the sun is at its height? No, let us wait here while we discuss all that has been

said. We can go as soon as it cools down.

Socrates: Phaedrus, when it comes to speeches, you are divine and utterly amazing. In fact, I think that of all the speeches produced during your lifetime, no one has been responsible for producing more than you, either by delivering them yourself or somehow forcing someone else to do so. With the exception of Simmias,¹³ the Theban, you are far ahead of everyone else, and I think you have now become responsible once more for the delivery of a speech.

242b

Phaedrus: Well, that is good news anyway, but how did this happen, and what speech are you referring to?

Socrates: I was about to cross over the river, my friend, when the daimon came, the usual sign which comes to me, always holding me back from something I am about to do. And I seemed to hear a voice from there which would not allow me to depart until I had made atonement, because I have actually transgressed the divine. Now, although I am actually a seer, I am not a very significant one, but like undistinguished writers I am good enough for my own purposes, and therefore I now understand exactly what the transgression is. Yes, I tell you my friend, the soul too is prophetic, for something troubled me as I was delivering the speech just now, and I somehow felt ashamed that, in the words of Ibycus,¹⁴ 'I am sinning against the gods in return for reputation before men.' But I have now recognised my transgression.

242d

Phaedrus: Yes, but what do you mean?

Socrates: That was an awful speech you brought here, Phaedrus, and the one you made me deliver was awful too.

Phaedrus: How so?

Socrates: It was silly and just short of blasphemous. What could be more awful than that?

Phaedrus: Nothing, if what you say is true, that is.

242e

Socrates: What is this? Don't you believe that Love is the son of Aphrodite and a god?

Phaedrus: So they say, anyway.

Socrates: Not according to Lysias, or according to your speech, the one spoken out of my mouth once it had been bewitched by you. But if Love is, as indeed it is, a god or something divine, it could not be anything bad. Yet both these speeches about love have stated that it is bad, and so in this regard, they have committed a transgression concerning love. And what is more the silliness of the speeches was very clever, for without saying anything sound or true they made a solemn pretence of doing so, on the off chance that they might deceive some paltry specimens of humanity and win their esteem.

243a

Socrates: Therefore, my friend, it is necessary for me to be purified, and there is an ancient purification for those who have transgressed in storytelling, one that Homer was unaware of but was known to Stesichorus,¹⁵ for when he was deprived of his eyesight because he spoke ill of Helen, he did not, like Homer, fail to understand why. No, since he was a votary of the Muses, he understood the reason and immediately wrote: This story is not true, You never embarked on the well-benched ships Nor went to the citadel of Troy.¹⁶

243b

Socrates: And once he had completed the entire 'recantation', as it is called, his sight returned straightaway. Now, I shall, on this particular issue anyway, act more wisely than these poets. In fact, before anything happens because I spoke ill of Love, I

shall attempt to deliver a recantation to him with my head bare, and not covered out of shame, as it was before.

Phaedrus: Socrates, that is the most delightful thing you could have said to me.

243c

Socrates: And you also recognise, good Phaedrus, how shameless both speeches were, mine and the one you recited from the scroll. For suppose someone of a noble and gentle disposition should happen to hear us, someone in love with another person of a similar disposition or who had loved such a person once before. When we say that lovers arouse enormous enmity on account of trifles, and are jealous and malicious towards their favourites, won't he imagine that he is listening to people reared somehow among sailors, people who, when it comes to love, have beheld nothing free? Would he not be very far from agreeing with our criticisms of love?

Phaedrus: By Zeus, Socrates, he probably would.

243d

Socrates: Anyway, I am ashamed before this man and I am afraid of love itself, so I want to wash away the distasteful sound with the taste of a fresh speech. And I advise Lysias also to write, as soon as he can, that in similar circumstances the lover should be favoured more than the non-lover.

Phaedrus: Well, you may rest assured that this is what will happen, for once you have delivered your speech in praise of the lover it is absolutely inevitable that Lysias, under my compulsion, will write another in turn on the same topic.

Socrates: This I believe, as long as you are the person you are.

Phaedrus: Speak then with confidence!

Socrates: But where is my loved one, the boy I was talking to? He needs to hear this speech too, and if he does not hear it he

may go ahead and favour a non-lover.

Phaedrus: He is here, always close by your side whenever you want him.

244a

Socrates: Well then, my beautiful boy, you need to understand that the previous speech was from Phaedrus, the son of Pythocles from Myrrhinous, while the one I am about to deliver is from Stesichorus, the son of Euphemus from Himera. I must declare that: A story is not true if it states that one should bestow more favour on the non-lover when a lover is present, just because the one is mad and the other is sound-minded. For if it were simply the case that madness is bad, it would be acceptable to say this. However, enormous advantages now come to us through madness once it is given as a divine gift. In fact, the prophetess at Delphi and the priestesses at Dodona¹⁷ do a great deal of good for Greece, both privately and publicly, when they are mad, but they accomplish little or nothing when they are sound-minded. And if we were also to mention the Sibyl and those others who have recourse to inspired prophecy, foretelling many things to many people and correcting their ways for the future, we would be giving a lengthy description of what is obvious to everyone.

244b

Socrates: And yet, it is worth producing the evidence that those ancients who assigned the names did not regard madness as shameful or a matter of reproach, or else they would not have connected this particular word with the sublime skill that discerns the future by calling that skill manic. No, they realised that it was good, and gave it that name whenever it arises from divine providence. But people today, tastelessly inserting the letter T, have called it ‘mantic’. And when people in their right minds conduct their enquiry into the future through birds and other signs, which furnish human opinion with intelligence and

information on the basis of thought, the ancients called the skill 'oionoistic', but nowadays the moderns, being solemn with their long O sounds, call it 'oiōnistic'. And so, to this extent, the mantic is more perfect and venerable than the oiōnistic when name is compared to name and outcome is compared to outcome. And to this extent, the ancients bear witness to the superiority of madness from God over sound-mindedness originating among humans.

244d

Socrates: Then again, when diseases and the greatest afflictions occur in certain families, born of guilt from the distant past, madness has arisen, and exercising its prophetic power has found a means of release for those in need by resorting to prayers and services to the gods. From this, madness hits upon purifications and rites, rendering its possessor healthy, there and then and for all time, by finding a way out of the present evils for the person who is mad and possessed in the right way. A third madness and possession is from the Muses. This takes a tender and pure soul, arouses her and sends her into a frenzy of odes and other poetry, embellishes countless deeds of the ancient past, and educates future generations. But the man who arrives at the portals of poetry devoid of the Muses' madness, convinced that he may be a poet through competent technique, is himself incomplete and so is his poetry; and those works of a sound-minded man are set at nought by the poetry of the man who is mad.

245b

Socrates: Such are the beautiful achievements wrought by madness born of the gods, and I could relate even more to you, so let us have no fear on that account. Nor should any argument trouble us and make us afraid that we should prefer the sound-minded person as a friend rather than the moved one. No, this argument should triumph only if it proves that love is not sent by the gods as a boon both to the lover and the loved

one. But we, for our part, must prove the very opposite: that the madness of love is given by the gods to confer the greatest good fortune. And the proof will sound incredible to the clever folk but credible to the wise.

245c

Socrates: Now, we should first understand the truth about the nature of the soul, both human and divine, by looking to what happens to it and what it does. The beginning of the proof is as follows.

Socrates: All soul¹⁸ is immortal because the ever-moving is immortal, but that which moves another, and is moved by another, ceases living if it ceases moving. Indeed, only that which moves itself, since it does not depart from itself, never stops moving, and this is also the fount and source of motion for anything else that moves. But source is not generated, for everything that is generated must be generated from source, but it must not come from one. For if source were to be generated from something it would no longer be source. And since it is un-generated it must also be indestructible. For of course, once source is destroyed it will never be generated from something, nor will anything else be generated from it, since all things must be generated from source. Accordingly, whatever moves itself is the source of motion, and this can be neither generated nor destroyed, or else the entire heaven and all the earth would collapse into one and be static, without anything from which motion could ever be generated again. And since it has been shown that whatever is moved by itself is immortal, anyone who states that this is the very essence and definition of soul will not be put to shame. For every body to which movement comes from outside is soulless, but if the movement comes from within itself then that body is ensouled, because that is the nature of soul. But if it is the case that whatever moves itself is nothing other than soul, soul would, of necessity,

be both un-generated and immortal.

246a

Socrates: Well, that is enough about its immortality, but now we should say something about its form. To describe the kind of thing it is would require utterly divine powers and a lengthy exposition, but to say what it resembles would yield a shorter account befitting the powers of humans, so that is what we should present. Let it resemble the united power of a team of winged horses and their charioteer. Now, in the case of the gods, the horses and the charioteers are themselves all good and they come from good stock, but the teams belonging to others are a mixture. Now, our ruler, in the first place, has control of a pair of horses, and what is more, one of these horses is noble and good and such is his lineage too, while the other horse is of the opposite sort and of opposite lineage. So the control of our chariot is, of necessity, a difficult and troublesome task.

246b

Socrates: We should now try to explain how living beings have come to be called mortal and immortal. All soul cares for everything devoid of soul, and it traverses the entire heaven, coming into being in various forms at various times. When perfect and furnished with wings, it soars aloft and controls the entire universe. But once it has lost its wings it is borne along until it reaches something solid, and there it makes its abode, taking on an earthly body that seems to be self-moving on account of the power of the soul, and this combination is called a living being, a body and soul conjoined, and it is given the designation of mortal. It is not immortal on the basis of a single reasoned argument; however, without seeing or properly understanding God, we do imagine some living creature possessing a soul and possessing a body which are conjoined for all time. Well, let these matters be arranged and described in whatever manner is pleasing to God, and let us understand

instead the reason for the loss of the wings. Why does the soul lose them? The answer is something like this: ^{246d} The power of the wing naturally draws that which is weighty upwards, raising it aloft to where the race of the gods dwells, and the wing somehow has more communion with the divine than anything else associated with the body. Now, the divine is noble, wise, good and everything of that sort, so the wing of the soul is nourished most by these and it grows, but it is withered and destroyed by the opposite qualities such as deformity and baseness. Now, Zeus, the supreme ruler in heaven, driving a winged chariot, is first to go forth, bringing order to all and caring for all, while the army of gods and daimons follows him arranged in eleven bands. For Hestia alone remains in the dwelling place of the gods, but the others, who are counted among the twelve gods, assume command and lead their cohort based upon the rank assigned to each.

^{247a}

Socrates: Now, many and blessed are the sights and the pathways within heaven, and the well-favoured race of gods makes its course through these, each of the gods doing what belongs to himself, while anyone who wishes and is able to do so follows after, for envy stands outside the heavenly choir. But when they go to a feast or a banquet, they proceed to the summit of the vault above the heavens and the way is steep. And yet the evenly balanced chariots of the gods, obedient to the rein, make their way easily. But for the others it is difficult. For the horse with bad tendencies weighs them down, because it is heavy and inclined to sink to the ground unless it has been well trained by the charioteers. Here indeed lies pain and struggle for the soul. For whenever the souls that are called immortal attain the summit, they proceed outside and stand at the back of the heaven, and once they stand there, the revolution carries them around and they contemplate the sights outside of the heaven.

247c

Socrates: But none of the poets of this world has ever yet sung the praises of the region beyond the heaven, nor will they ever sing them in a worthy manner. But we must dare to speak the truth anyway, especially when truth is our theme. So this is how it is: this region contains the colourless, utterly formless, intangible being that actually is, with which the realm of true knowledge is concerned, seen only by reason, the pilot of the soul. Now, since the mind of a god is nourished by reason and unmixed knowledge, so too is every soul that cares to receive what is proper to it. Eventually, beholding what is, the soul is delighted, and contemplating the truth, it is nourished and gladdened, until the revolution carries it around in a circle to the same place. In the revolution, soul has sight of justice itself, sound-mindedness and knowledge; not knowledge to which becoming is added, this is knowledge different under different circumstances, concerned with what we normally call ‘things that are’; no, it is the knowledge of that which really is. And once the soul has, in like manner, contemplated and feasted upon the other things that really are, it descends once more into the inner heaven and goes home. And when soul arrives there, its charioteer stations the horses at the feeding stall, sets ambrosia before them and gives them nectar to drink.

248a

Socrates: Such is the life of the gods. But the other souls, that best follow and resemble a god, raise up the head of their charioteer into the outer region and are borne around with the revolution, troubled by the horses and barely having sight of the things that are. Others ascend sometimes but descend at other times, and being impelled by the horses they see some things and fail to see others. And yet all of the other souls follow out of a yearning for the upper region, but they are unable to attain it, and are borne along beneath the surface, knocking against one another and trampling one another as each tries to

get ahead of the other. This results in tribulation, conflict and perspiration in which many souls are maimed due to poor charioteering, and many wings are badly broken. But after much exertion, failing in their vision of what is, they depart, and once they leave they feed upon opinion.

248c

Socrates: The reason for the great eagerness to behold the plain of truth is that the nutriment appropriate to the best part of soul lies on the meadow there, and the nature of the wing which lifts the soul upwards is nourished by this. And the ordinance of necessity is as follows: any soul that has become a companion to a god and has sight of any of the truths is safe until the next revolution, and if the soul can do this continually, it is always preserved from harm. But whenever it does not see, because it cannot keep up, and is filled with forgetfulness and vice and weighed down through some mischance and sheds its wings on account of the heaviness and falls to the ground, the law decrees that the soul be not implanted in any beastly nature at its first birth. Rather, the soul that has seen most is implanted in the seed of a man who will become a philosopher¹⁹ or a lover of beauty or a musical and loving person. Those in the second rank enter into lawful kings or military and sovereign natures, the third into political and administrative or financially oriented types, the fourth into a lover of hard exercise or someone who will be concerned with bodily healing, the fifth will have the life of a prophet or someone involved with mystic rites, the sixth will be suited to the poetic life or one that involves some other imitative activity, the seventh to that of a craftsman or farmer, the eighth to that of a sophist or demagogue, and the ninth to that of a tyrant.

248e

Socrates: Now, in all these cases, whoever has behaved justly obtains a better destiny, while whoever behaves unjustly obtains a worse. For the soul does not ever arrive back at the

same place it came from for ten thousand years, because it does not become winged until that time has elapsed, unless it is the soul of one who has genuinely loved wisdom or combined his love of boys with a love of wisdom. These souls become winged in the third cycle of a thousand years if they have chosen this life thrice in succession, and in the three thousandth year they depart. As for the others, once they have completed their first life they encounter judgement, and having been judged, some go to places of correction beneath the earth where they pay the full penalty while others are borne aloft by justice to some place in the heaven and spend their time as they deserve based on how they lived their life when in a human form. But in the thousandth year both arrive for allocation and choice of the second life, and they choose the one they want. At this stage a human soul takes on the life of a beast, and from a beast someone who was once a human enters a human being again. Indeed, a soul that has never beheld the truth will not attain the human condition. For a human being must understand what is said on the basis of form, proceeding from many perceptions to one inferred through reasoning. And this is recollection of those things our soul knew when it accompanied the god, and with a downward glance on things that are now said to be, lifted its gaze to what actually is. Therefore, it is right indeed that only the mind of the philosopher be winged, for by the power of memory it is always as close as it can be to those things by whose proximity a god is divine. And, indeed, someone with proper recourse to such reminders, being continually initiated into perfect mysteries, is the only one who actually becomes perfect. And standing apart from the preoccupations of humanity and getting close to the divine, the person is criticised by the multitude for being disturbed, but the multitude overlooks the fact that he is divinely inspired.

249d

Socrates: Now, this is what our entire discourse concludes about the fourth kind of madness. Whenever someone sees some beauty in this world, and being reminded of the true beauty becomes winged and flutters eagerly to fly aloft but cannot do so, he gazes upwards like a bird, heedless of what is below, and this is the reason he is regarded as mad. So, this is itself the best of all the forms of divine possession, and its origin is the best. It is best for the possessor and for someone who comes to share in it, and when partaking of this madness the man who loves what is beautiful is called a lover. For as we said, every soul of man has, in the course of nature, contemplated things that are, or else it would not have entered into this human form. But it is not easy for every soul to remember those former visions based on what they see here. Perhaps at that time they saw the things there only briefly or met misfortune when they fell down here and being turned toward injustice by bad company forgot the sacred visions they once saw. Few souls indeed remain in whom there is adequate memory, but when these behold any likenesses of the things that are there, they are astounded and can no longer contain themselves, but they do not understand what the experience is because their awareness is inadequate. Now, there is no splendour in the present likenesses of justice, sound-mindedness and everything else that souls revere. But just a few, having recourse to their resemblances, contemplate the form they actually resemble with difficulty through organs that are dull.

250b

Socrates: However, beauty was there to be seen at that time, shining brightly, when in company with a blissful cohort the souls saw a blessed vision and contemplated it, we ourselves following Zeus, others following some other god. We were initiated into what it is proper to call the most blessed of the mysteries which we celebrated, perfect in ourselves, and unaffected by those evils that lay in wait for us thereafter. Being

initiated into perfect, simple, unmoved and blissful revelations, we stood as initiates in a pure light, and we were pure and not entombed in this so-called body that we carry around with us, imprisoned like an oyster in its shell.

250c

Socrates: Now, let these be our tributes to memory, for whose sake I have just spoken at such length, yearning for what was once seen. But as for beauty, as we have just said, it was there with those others and it was shining, and when we arrived here we apprehended it through the clearest of our senses as it glistened in its clarity. Indeed, sight is the keenest of the perceptions furnished to us through the body. Wisdom is not seen, for it would arouse formidable loves if anything of this sort were to present a clear image of itself to the eye, and the same goes for other objects of love. But this role now belongs to beauty alone, and accordingly it is most resplendent and most beloved.

250e

Socrates: Now, someone who is not a new initiate, or who has been corrupted, is not transported readily from here to there towards beauty itself when he sees something here that bears its name. And so he does not look upon it with reverence, but gives himself over to pleasure and tries to behave like a four-legged animal and beget offspring, and keeping close company with wantonness, he is not afraid or ashamed to pursue pleasure contrary to nature. But when a recent initiate, who had seen a great deal at the time, beholds a god-like face or bodily form which imitates beauty well, he shudders at first and some of the former fears come over him. Then he looks upon it as a god and becomes reverential, and if he was not afraid of a reputation for utter madness he would offer sacrifices to his favourites as if to a statue and a god. Once he has seen him, the shuddering gives way as usual, and he is seized by perspiration and unaccustomed warmth, for he is warmed when he receives

the outpouring of beauty through his eyes, an outpouring by which the nature of the wing is nourished. The areas from which it grows are melted by the warmth, regions that have been closed over for some time by this hardness and prevented from growing anew, and with the influx of nutriment the shaft of the wing swells and surges forth in growth beneath the whole form of the soul, for the entire soul was winged at one time. As this goes on it boils and throbs all over, and the experience is like that of children when they first grow teeth and an irritation and pain arise in the gums. The same thing happens to the soul that begins to grow wings; it seethes and is pained and tickled as it grows its wings. Whenever the soul looks to the beauty of the boy, it receives portions that emanate and flow from there, and for this reason we give them the name 'longing'.²⁰ Receiving these, the soul has respite from its pain and rejoices, but when it gets separated and becomes arid, the openings of the channels from which the wings shoot dry up and close, blocking the new growth of the wing. This is trapped inside along with the desire, throbbing like a blood vessel, each stinging at its own particular exit channel, so that the soul is stung all over and is maddened and pained. However, once soul has further memory of the beautiful one it rejoices. Because the pain and the rejoicing are mixed, the soul is dismayed by the strangeness of the experience, and being frustrated to the point of fury, is unable in its madness either to sleep by night or remain still by day, but it runs to wherever it thinks it may behold the possessor of the beauty it longs for. Once the soul sees him and allows the desire to pour over it, it releases what was previously closed in. It secures a respite, its stings and pains cease, and for that moment the soul enjoys once more that sweetest pleasure. Now, soul does not give this up willingly, nor does it set anyone above the beautiful one. No, forgetting mother, brothers and all her companions it thinks nothing of losing its substance through neglect, and despising the standards and decorum on which it

previously prided itself, soul is ready to act as a slave and lie down wherever anyone allows it closest to the one it yearns for. Indeed, as well as revering the possessor of beauty, the soul also finds that he is the only healer of her intense suffering.

252b

Socrates: So, fair boy, the recipient of my discourse, this is the condition that humanity refers to as love, but when you hear what the gods call it you will probably laugh because of your extreme youth. But I believe that some experts on Homer quote two lines about love from his secret works, the second of which is quite outrageous and not particularly metrical. What they recite is this: All the mortals call him winged Erōs But because he must grow wings the immortals call him Pteros.

252c

Socrates: Well, you may be persuaded by these lines or you may not, but in any case the cause and the actual experience of those in love is as I have described.

Socrates: Now, any follower of Zeus who has been taken by love is able to bear the burden of the winged one with equanimity, while those who attend upon Ares and have traversed the circuit along with him, once they have been captured by love and think they have suffered some injustice at the hand of their loved one, become murderers, and are quite prepared to sacrifice themselves and their favourites. And each person lives in this way, revering and imitating as best he can the particular god in whose cohort he follows, as long as he remains uncorrupted and is living out his first life here; and in this manner he interacts and behaves towards his loved ones or anyone else.

252d

Socrates: Each person selects his love from among the beautiful ones based upon character and behaving as if the loved one is himself a god. Each constructs a kind of statue for himself and

adorns it as an object of reverence and worship. Those from the cohort of Zeus seek out in their loved ones a soul that resembles Zeus, so they look for someone who is by nature both philosopher and leader. And once they find him and have come to love him, they do all they can to turn him into a person of that kind. Now, if they have not embarked upon the practice before, then they attempt to learn at this stage from any source they can, and they search themselves, and following the traces within themselves they find that they are well equipped to discover the nature of their own god on account of their intense compulsion to look towards that god. And reaching out to him by means of memory, they are inspired, and adopt his habits and activities in so far as it is possible for a human to partake of the divine. And of course, believing the loved one is responsible for all this, they become even more affectionate, and if they draw upon the well-springs of Zeus, as the Bacchants do,²¹ they pour the waters forth again over the soul of their loved one, making him as like unto their own god as possible.

253b

Socrates: Those who for their part follow Hera seek the regal sort, and once they find him they do all the same things to him. And the followers of Apollo and each of the gods, proceeding in the same way with reference to their god, seek a similar nature in their own favourite. When they gain possession of him, they themselves imitate the god, and they also persuade and discipline their favourites, leading them into the behaviour and character of that god, each according to ability without recourse to envy or petty resentment towards their favourites. Rather, they act as they do in an effort to bring the loved one into complete and comprehensive resemblance to themselves and the god whom they revere. Now, the eagerness of those who truly love, and the consummation thereof, becomes noble and blessed provided they attain what they desire in the manner I describe, through an affection of one for the other

born of the madness of love, once the loved one has been captured. Now, the manner of his capture is as follows.

253c

Socrates: At the beginning of this story we divided each soul in three: two elements were like horses and the third like a charioteer. Let us allow these comparisons to stand. However, although one of the horses is good and the other is not, we have not described the excellence of the good one or the vice of the bad one, so we should explain this now. Well, the horse standing in the better position has an upright aspect. He is clean-limbed, stately, with aquiline features, white in colour, with black eyes, a lover of honour conjoined with sound-mindedness and modesty, and a companion of true reputation. He has no need of the whip for he is controlled by the word of spoken command alone. But the other one is misshapen, gross, put together at random, with a powerful short neck, a flat face, black in colour, grey and bloodshot eyes, a companion of wantonness and pretension, woolly about the ears, deaf, reluctantly yielding to whip and spur combined.

253e

Socrates: Now, whenever the charioteer beholds the vision that awakens love, the entire soul is warmed through the sense and is filled with tickling and the stings of yearning. The horse that is obedient to the charioteer is restrained by reverence at that moment as always, and it holds itself back from leaping upon the loved one, while the other one no longer heeds the whip or spur of the charioteer, but moves with a powerful leap, and causing enormous difficulties to the other horse and to the charioteer, it forces them to approach their favourites and make mention of the delight of amorous pursuits. The other two offer resistance initially, troubled at being forced into dreadful and unlawful acts. But in the end, when there is no limit to the affliction, they go along with him, give up and consent to do as they are bidden. And once they get close to him, they also

behold the gleaming face of the loved one. When the charioteer sees this, his memory is transported to the nature of the beautiful, and he beholds it once more, seated alongside sound-mindedness, upon a sacred throne. At the sight of this, being filled with awe and reverence, he falls backwards, and with this he is forced to pull back upon the reins so strongly that both horses end up seated on their haunches. One is willing, as he offers no resistance, but the wanton horse is extremely unwilling. When they are further away, one horse, on account of his modesty and amazement, drenches the entire soul with perspiration, while the other, once he recovers from the pain he incurred from the bit and from his fall, gradually recovers his breath and engages in angry abuse, greatly reviling the charioteer and his companion horse for their cowardice and weakness in abandoning their position and their agreement. And he impels them forward once more against their will, and he agrees only reluctantly to their pleading to defer this to another occasion. But when the arranged time comes, they pretend to forget, but he reminds them. He becomes violent, neighing and pulling, he compels them to approach the favourite once more with the same propositions. And once they get close, he puts his head down and stretches out his tail, bites into the bit, and drags them forward with no shame at all. But the charioteer undergoes the same experience as before, with even greater intensity. He falls back like a runner from a starting rope, wrenching the bit back from the teeth of the wanton horse with an even greater force. Bloodying his foul-speaking tongue and jaws, and pinning his legs and haunches to the ground, he inflicts pain. Once the evildoer has suffered this a number of times, he gives up his wantonness, he is humbled, and at that stage he follows the providence of the charioteer, and whenever he beholds the beautiful one he is overpowered by fear. And as a consequence, the soul of the lover follows its favourite thereafter in reverence and awe.

255a

Socrates: Now, as the loved one is served as the equal of a god, receiving total service from a lover who is no pretender but has experienced true love, the loved one is naturally the friend of the one who serves him. And even if, perchance, he has been misled by his schoolmates, or anyone else who says that it is disgraceful to associate with a lover, and he rejects the lover on that account, eventually, in the course of time, age and fate lead him to admit the lover into his company. For it is decreed that bad can never be friend to bad nor can good avoid being friend to good. But once he allows him in and accepts his conversation and company, the goodwill emanating from the lover astonishes the loved one as he becomes aware that not even all his other friends and associates combined furnish a single portion of friendship to compare with this god-inspired friend.

255b

Socrates: But if this arrangement goes on for some time and there is close contact in the gymnasium and other meeting places, then at last, the spring of that stream which Zeus called longing when he was in love with Ganymede,²² is borne copiously towards the lover and some of it sinks into him, while the rest flows without, once he has been filled to overflowing. And like breath or an echo rebounding from a smooth hard surface and carried once more to the place from which it issued forth, so too does the stream of beauty travel back to the beautiful one through the eyes, the natural way to go into the soul. Arriving there, it excites the soul, moistens the openings for the wings, stimulates their growth, and also fills the soul of the loved one in turn with love. Now, he loves, but he is puzzled as to what he loves; neither does he know what he is experiencing nor is he able to express it. Like someone who has caught an eye disease from another person, he is unable to explain its cause. He sees himself in the lover just as if he were looking in a mirror, but he is unaware of this. And whenever his

lover is present he has relief from his pain, and so too does the lover for the same reasons. But whenever he is absent, for those same reasons again, he yearns and he is yearned for. In the returned love he possesses an image of love, but he does not call it love because he thinks it is not love but friendship. His desires are like those of the lover but they are weaker; to see, touch, kiss and to lie down with him and, indeed, in all likelihood, this happens very soon afterwards.

255e

Socrates: Now, as they lie together the uncontrolled horse of the lover has something to say to the charioteer, and he claims some small recompense in return for his numerous afflictions. But in the case of the loved one this horse has nothing to say, but swollen with desire and in some confusion, he embraces and kisses the lover as though he were welcoming an extremely well-intentioned man, and when they are lying together, he is unable to refuse his own part in gratifying the man in love, if he should ask for anything. But his companion horse, for its part, along with the charioteer resists these tendencies with modesty and with reason. Now, if the very best part of mind, the part that leads to an ordered life and to philosophy, is victorious, they live their life here in blessedness and concord, masters of themselves and orderly, enslaving whatever produces degeneracy in the soul and granting freedom to whatever renders it excellent. And when they die, they are winged and light, having won a victory in one of three bouts in the true Olympic games, and neither human sound-mindedness nor divine madness can confer a greater good upon a man than this.

256c

Socrates: However, if they resort to a coarser life, loving honour and not wisdom, then perhaps when drunk or in some careless moment, the uncontrolled horses in them both, catching the souls off their guard, draw them together, make that choice which most people call blessed, and obtain what

they desire. Once this has happened they continue the practice thereafter, but sparingly, because their activity has not been accepted by the entire mind. And so, to a lesser extent than the others, they live their lives as friends to one another, throughout their love and also when they have gone beyond it, for they believe they have given and received enormous assurances from one another which it is not lawful to forsake by ever becoming enemies. When their lives end, they are unwinged, but they depart from the body eager to grow wings, so they derive no small recompense from their madness born of love. For it is not ordained that those who have already commenced their journey beneath the heavens should yet enter into darkness or journey beneath the earth. Instead, they live a bright life journeying with one another in blessedness, and on account of their love their plumage is alike when they become winged.

256e

Socrates: These, my boy, are the blessings great and divine that the friendship of a lover will bestow upon you, while the familiarity of the non-lover is adulterated with a mortal sound-mindedness and what it dispenses is mean and mortal. Engendering in the friendly soul a slavishness that most people praise as a virtue, the non-lover condemns her to roll about the earth and beneath the earth, mindlessly, for nine thousand years.

257a

Socrates: This recantation, O beloved Eros, is bestowed upon you. It is the finest and most excellent my ability can offer, especially in its use of some poetic language, under compulsion from Phaedrus. Forgive what was said previously and look upon these words with favour. Be kind and gentle, and do not take away the skill in love that you have bestowed upon me, and do not, in your anger, impair it. And grant me, even more than now, to be revered in the eyes of the fair. If Phaedrus and I said

anything offensive to you earlier, blame Lysias, the father of the argument. Bar him from speeches of this sort and turn him to philosophy, just as his brother Polemarchus has turned, so that this lover of his may no longer be pulled in two directions as he is now but may simply direct his life towards love accompanied by philosophical discourse.

257c

Phaedrus: I join you in prayer, Socrates. If this is what is best for us then may it be so. But I have been amazed for some time at how much more beautifully you crafted this speech than the previous one. So, I am hesitant in case Lysias may look ordinary if he actually consents to present another speech to rival it. Indeed, my wonderful friend, some politician was abusing him recently and he criticised Lysias on this point, and throughout the abuse he kept calling him a ‘speechwriter’. So, perhaps we may find that he gives up writing out of concern for his reputation.

257d

Socrates: Young man, the opinion you are expressing is laughable, and you are quite wrong about your friend if you think he is as timid as that. But perhaps you believe that the man who was abusing him meant this as a reproach.

Phaedrus: Well, that is how it seemed, Socrates. And I presume you yourself are aware that the most powerful and important people in the city are ashamed to write speeches and leave behind their own written compositions. They are fearful of their reputation thereafter, and the possibility that they might be called sophists.

257e

Socrates: You are unaware, Phaedrus, that the sweet elbow gets its name from the long elbow of the Nile, and as well as the elbow, you do not appreciate that the most self-important politicians are the ones who most love speech writing and

leaving behind written records. At any rate, whenever they write a speech, they are so delighted by those who approve of it that they write the names of these admirers into the beginning of the speech.

Phaedrus: What do you mean by this? I do not understand.

258a

Socrates: Don't you understand that in the writings of politicians the name of the approver is written first?

Phaedrus: In what way?

Socrates: For instance, the politician writes, 'It was resolved by the Council' or 'by the people' or both, and says, 'He declared' referring of course to himself in a very solemn manner and praising himself. After this he speaks, showing off his own wisdom to his approvers, sometimes producing a very lengthy composition. Isn't this sort of thing a composed speech? Does it seem otherwise to you?

258b

Phaedrus: Not to me.

Socrates: Now, if the speech enters the records, the composer leaves the place of assembly in delight. But if it is left out of the records, and he does not enter the ranks of speechwriters, and his words are not worth writing down, both he himself and his companions go into mourning.

Phaedrus: Very much so.

258c

Socrates: Obviously, because they regard this activity as a thing of wonder which they do not hold in contempt.

Phaedrus: Yes, certainly.

Socrates: What about this? Once he becomes such a competent orator or king that he acquires the power of a Lycurgus, a Solon, or a Darius,²³ becomes immortal as a speechwriter in the eyes of

the city, won't he believe that he himself, whilst still living, has become the equal of a god? And won't succeeding generations think the same thing about him on seeing his compositions?

Phaedrus: Very much so.

258d

Socrates: Now, do you believe that anyone of that sort, whoever he is or however negative his attitude to Lysias, would criticise him just because he composes speeches?

Phaedrus: Well, that is unlikely, at least on the basis of what you have just said, for in that case, it seems, he would be criticising his own heart's desire.

Socrates: So, it is obvious to everyone that speech writing is not shameful, not in itself anyway.

Phaedrus: How could it be?

Socrates: But I believe that the disgrace lies not in speaking or writing properly, but shamefully and badly.

Phaedrus: Obviously.

Socrates: So, what approach leads us to write properly, and what approach leads to its opposite? Do we need to test Lysias on these issues, or anyone else who has ever written or will write a political or personal composition, whether in verse like a poet or in prose like an ordinary person?

258e

Phaedrus: Are you really asking if we need to test them? What else is there to live for, I might ask, if not for the sake of pleasures of this sort? Surely not for the sake of pleasures that must be preceded by pain if they are to be enjoyed, a feature of most pleasures associated with the body. And so they are rightly referred to as slavish.

Socrates: Well, it seems we have plenty of free time. And I think that the cicadas above our heads are looking down upon us as they sing and converse with one another in the heat. Now, if they were also to see the two of us, like most people at midday, not conversing but slumbering, enchanted by them due to our mental lethargy, they would quite rightly laugh at us and regard us as slaves who had arrived at their abode to spend the afternoon asleep, like sheep around a spring. But if they see us conversing and sailing past them as if they were Sirens and we were immune to their charms, perhaps they would be pleased, and grant us that special gift they have from the gods for bestowal upon humanity.

259b

Phaedrus: But what is it they possess? Apparently I have not heard of it.

Socrates: Well, it is most inappropriate for someone who loves the Muses not to have heard of such matters. Anyway, it is said that these creatures were once humans in the ages before the Muses existed, and when the Muses came into being and song was made manifest, some people of that age were actually so stricken with pleasure that they neglected eating and drinking in favour of singing and did not even notice that they had died. After that, the race of cicadas sprang forth from them, having acquired a gift from the Muses, which meant they were born with no need for nutriment, but they immediately start singing, without either eating or drinking, until the day they die. Afterwards, they go to the Muses to report who in this realm pays respect to each one of them. And so they tell Terpsichore of those who have honoured her in dance, and they render them more agreeable to her, and they tell Erato of those who honour her in matters of love, and they report to the other Muses in a similar fashion based upon the kind of honour that belongs to each. But to Calliope, the eldest, and to Ourania, next

in age, they tell of those who spend their lives in philosophy and honour the music of these two Muses who are most associated with the heaven and with discourse, both human and divine, and send forth the most beautiful sound. So, there are very many reasons why we should converse in the middle of the day rather than sleep.

259d

Phaedrus: Yes, indeed, we should converse.

259e

Socrates: Well then, a moment ago we proposed to consider the manner in which a speech may be properly spoken or written, or badly spoken or written, so let us consider this.

Phaedrus: Of course.

Socrates: Now, for anything to be spoken properly and well, mustn't the mind of the speaker know the truth about the matters on which they intend to speak?

260a

Phaedrus: What I have heard on this question, dear Socrates, is that someone who intends to be an orator need not understand what is actually just, but only what will seem so to the majority of those who will pass judgement, and need not understand what is truly good, but only what will seem so. For persuasion arises from these seemings and not from the truth.

Socrates: Whatever the wise may say, Phaedrus, 'must not be cast aside'.²⁴ Instead we should ask ourselves if they are right, and this statement in particular should not be dismissed.

Phaedrus: What you say is correct.

Socrates: Let us consider it then.

Phaedrus: In what way?

260b

Socrates: If I were to persuade you to acquire a horse to repel our enemies, and we were both ignorant about horses, but I did happen to know this much about you: that Phaedrus believes that a horse is ‘the tame animal with the largest ears...’

Phaedrus: That would be ridiculous, Socrates!

Socrates: Not yet! But it would be ridiculous if I were so eager to persuade you that I composed a speech in praise of the donkey, calling it a horse and saying that the beast is well worth acquiring for domestic and military purposes, useful both for fighting and for its ability to carry equipment, and beneficial in many other ways.

260c

Phaedrus: Then it would be utterly ridiculous.

Socrates: Now, isn’t it better to be ridiculous and friendly, rather than clever and hostile?

Phaedrus: So it appears.

Socrates: Well, suppose an orator, who is ignorant of good and evil, takes hold of a city in a similar state of ignorance, and persuades the people not by praising some silly donkey as if it were a horse, but by praising evil as if it were good. And suppose this orator studies the opinions of the multitude, and persuades them to do evil rather than good, what sort of harvest do you think this rhetoric will reap thereafter from the seeds it has sown?

260d

Phaedrus: It will not be very good.

Socrates: Now, my good man, have we been reviling this skill in speaking more crudely than we should? Perhaps it might respond, ‘Strange people, why on earth are you talking such nonsense? Indeed, I do not compel anyone to learn how to speak in ignorance of the truth. No, if my advice counts for

anything, they should acquire truth first and then have recourse to me. In fact, my proud boast is that without me, someone who knows things that are will not have the skill to persuade anyone else.'

260e

Phaedrus: And would the skill be right to say all this?

Socrates: I think it would, provided the arguments that are descending upon it bear witness to the fact that it is a skill. For I seem, somehow, to hear some arguments approaching and testifying that it is lying, and that it is not a skill but an unskilled trick. And a Spartan is declaring that there is not, nor shall there ever be, a real skill in speaking unless there is contact with truth.

261a

Phaedrus: These are necessary arguments, Socrates. Bring them here and let us scrutinise what they are saying and how.

Socrates: Come hither then, you noble creatures, and persuade Phaedrus, this begetter of fair offspring, that unless he engages properly in philosophy, he will never be able to speak properly about anything. So, let Phaedrus answer your questions.

Phaedrus: Just ask.

Socrates: Well then, wouldn't rhetoric as a whole be a skill which leads the soul through words, not only in law courts and any other public meetings, but also in private? Isn't it the same skill whether it involves minor or major issues and, strictly speaking, deserving of no more respect when dealing with important matters rather than trivial ones? Is this what you have heard?

261b

Phaedrus: No, by Zeus, it's not as extensive as that! Rather, the skill in speaking and writing mainly applies to lawsuits and also to delivering public orations. I have not heard of this wider

application.

Socrates: What? Have you only heard the systems of rhetoric that Nestor and Odysseus composed in their spare time at Troy and have you not heard those of Palamedes?²⁵

Phaedrus: No, by Zeus, nor those of Nestor either, unless you are turning Gorgias into Nestor, and Thrasymachus and Theodorus into Odysseus.²⁶

261c

Socrates: Perhaps. Anyway, let's leave these fellows aside. You should state what legal disputants engage in, in courts of law. Do they not contradict one another? Or what shall we say?

Phaedrus: Exactly that.

Socrates: About what is just and what is unjust?

Phaedrus: Yes.

Socrates: Won't someone who does this by means of a skill make the same thing appear just at one moment and, if the person wishes, unjust the next moment to the very same people?

Phaedrus: Of course.

Socrates: And when engaged in public speaking that person will make the same thing seem good to the populace at one moment and the very opposite the next?

Phaedrus: Just so.

261d

Socrates: And we know, don't we, that the Eleatic Palamedes²⁷ speaks with a skill that makes the same things appear to those listening as like and unlike, one and many, at rest and in motion?

Phaedrus: Very much so.

Socrates: So, verbal contradiction is not associated only with law courts and public speaking but apparently, if it is actually a skill, it is a single skill associated with all verbal utterances. By means of this skill, someone will be able to make anything that is capable of resembling anything else resemble that which it is capable of resembling and bring to light any other resemblance that has been hidden.

Phaedrus: What sort of activity are you describing?

261e

Socrates: I think it will become clearer if we investigate it as follows: does deception arise when there are many differences or just a few?

262a

Phaedrus: When there are few.

Socrates: Then again, if you proceed in small steps rather than large ones, your transition to the opposite will be less noticeable.

Phaedrus: Inevitably.

Socrates: In that case, someone who intends to deceive another, without being deceived by the other, must understand the similarity and dissimilarity of things that are, in a precise manner.

Phaedrus: Indeed.

Socrates: Now, if someone is ignorant of the truth of something, will they be able to discern in anything else, a small or great similarity to that thing of which they are ignorant?

262b

Phaedrus: Impossible.

Socrates: In the case of people who form opinions at variance with the things that are, and who are deceived, isn't it obvious that this condition slips in by means of certain similarities?

Phaedrus: Yes, it does happen in this way.

Socrates: Now, is there any way that someone could be skilful in shifting people, little by little by means of similarities, away from what is, and lead them to its opposite? Or could someone avoid this situation, if the person had not recognised what each of those things that are, actually is?

Phaedrus: Never.

262c

Socrates: So, my friend, a person who does not know the truth but who chases instead after opinions will, it seems, exhibit a ridiculously unskilled skill in speaking.

Phaedrus: Quite likely.

Socrates: Would you like to look for the features we have called skilled and unskilled in the speech of Lysias that you are carrying, and in those I delivered?

Phaedrus: Oh, more than anything. Yes, at the moment we are speaking in an abstract way without having enough examples.

262d

Socrates: And, indeed, by some chance, it seems that the two speeches that have been delivered provide an example of the fact that someone who knows the truth may mislead those who hear by playing with words. And I myself, Phaedrus, blame the gods of this place, and perhaps also those prophets of the Muses who are singing above our heads, and who may have breathed this gift into us, for I do not presume to partake of any skill in speaking.

Phaedrus: Be that as it may, just clarify what you are saying.

Socrates: Then go ahead and read me the beginning of Lysias' speech.

262e

Phaedrus: “You know about my affairs, and you have heard how I think it best for us to arrange things. But I do not deserve to fail in my request just because I am not actually your lover, since in the case of lovers there is regret...”

Socrates: Stop! You should now say what error he makes, and what he does that is unskilled. Is that right?

263a

Phaedrus: Yes.

Socrates: Now, isn't it obvious to everyone that in general we are like-minded on some issues of this sort, and at variance on some others?

Phaedrus: I think I understand what you mean, but please explain it even more clearly.

Socrates: Whenever someone utters the word for iron or silver, don't we all think of the same thing?

Phaedrus: Very much so.

Socrates: But what happens if someone refers to justice and injustice? Isn't there a divergence, and don't we dispute with one another and with ourselves?

Phaedrus: We certainly do.

263b

Socrates: So in some cases we are in accord, and in others we are not.

Phaedrus: Quite so.

Socrates: Now, in which of these two cases will we be more easily deceived, and in which case will rhetoric be more powerful?

Phaedrus: Obviously in the cases where we are uncertain.

263c

Socrates: Therefore, a person who intends to develop a skill in rhetoric must first distinguish these methodically and apprehend some characteristic of each of the two forms, the one in which most people are bound to be uncertain, and the one in which they are not.

Phaedrus: Socrates, even if someone had just apprehended this latter form, something worthwhile would have been understood.

Socrates: And then, whenever the person is dealing with a particular instance, I think that person should not be oblivious as to which of the two kinds the intended subject belongs. No, there is a need to be keenly aware of this.

Phaedrus: Of course.

Socrates: Well, should we say that love is one of the controversial issues, or is it uncontroversial?

Phaedrus: Presumably it is one of the controversial subjects, otherwise how would it be possible for you to say what you have said about it just now, that it is harmful both to the loved one and to the lover, and then again that it is among the greatest goods?

263d

Socrates: Excellently expressed! But tell me this too – for to tell you the truth, because of my inspired state I cannot really remember – whether I defined love at the beginning of the speech.

Phaedrus: Yes, by Zeus! You placed considerable emphasis on that.

Socrates: Oh! To this extent, you are saying that when it comes to speeches, the Nymphs, daughters of Achelous, and Pan, the son of Hermes, are more skilled than Lysias, the son of Cephalus. Or am I talking nonsense, and did Lysias, at the beginning of his

speech concerned with love, compel us to accept that love was one of the things that are, a particular that he himself had in mind, and did he then arrange all of the rest of the speech in relation to this and bring it to a conclusion? Would you like us to read the beginning of it once more?

263e

Phaedrus: If you think we should, but what you are looking for is not in it.

Socrates: Recite it anyway so that I may hear the man himself.

Phaedrus: “You know about my affairs, and you have heard how I think it best for us to arrange things. But I do not deserve to fail in my request just because I am not actually your lover, since in the case of lovers there is regret for any good they may have done, once the desire comes to an end.”

264a

Socrates: It seems that this fellow really does fall far short of supplying what we are looking for. He does not even begin at the beginning but at the end, and he attempts to swim through the speech on his back, in reverse, and starts from those things which a lover would say to his favourite when he had concluded. Or have I spoken nonsense, Phaedrus, my dear one?

Phaedrus: Anyway, Socrates, I grant you he is making a speech about an ending.

264b

Socrates: What about the rest of it? Don't the other parts of the speech seem to have been thrown together at random? Does the second thing he said need to be placed second for any compelling reason, or indeed his other pronouncements? For it seemed to me, although I know nothing about this, that the writer, in a somewhat dignified manner, just uttered whatever occurred to him. But do you know any requirement of speechwriting according to which the man has placed these

elements together in this particular order?

Phaedrus: It is kind of you to think that I am up to the task of understanding the man's pronouncements in such a precise manner.

264c

Socrates: But I think you could say this much anyway: every speech must be constructed just like a living creature with a body of its own, so that it is neither headless nor footless; instead it should be written possessing middle and extremities suited to one another and to the whole.

Phaedrus: Of course.

Socrates: Then consider whether your friend's speech is arranged like this or not, and you will find that it is no different from the inscription which, some say, is inscribed on the tomb of Midas of Phrygia.

264d

Phaedrus: What is it like? And what characteristic are you referring to?

Socrates: Well, the inscription is this: 264d A Maiden of bronze on Midas' tomb I lie As long as water flows and trees grow tall Here I remain on his much-lamented grave Proclaiming to passers-by that Midas is buried here 264e But I presume you recognise that it makes no difference which line you recite first or last.

Phaedrus: You are mocking this speech of ours, Socrates.

264e

Socrates: Well then, let us leave this speech aside in case you get upset. And yet I think it does contain many examples which it would be beneficial to examine, but not at all beneficial to imitate. Instead, we should proceed to the other speeches, for there was something in them, I believe, that anyone who wishes to study speeches would do well to observe.

265a

Phaedrus: What sort of thing are you referring to?

Socrates: There were, in a sense, two opposing speeches. One stated that it is necessary to favour the lover, the other the non-lover.

Phaedrus: And most assertively too.

Socrates: I thought you were going to speak the truth and say ‘madly’. Anyway, that’s the very word I was looking for. In fact, we said that love is a madness, didn’t we?

Phaedrus: Yes.

Socrates: Yes, but there are two forms of madness, the one arising from human disorders, and the other from a divine alteration of habitual attitudes.

265b

Phaedrus: Entirely so.

Socrates: And we distinguished four categories of divine madness belonging to four gods. The prophetic kind was assigned to the inspiration of Apollo, the mystical to Dionysus, the poetical in turn to the Muses, and the fourth kind to Aphrodite and to Love, and we declared that this madness of love is the very best. Now, I do not know what the experience of love should be compared to. Perhaps we have made some connection with truth, perhaps instead we have been borne off in the wrong direction. Having blended a speech that is not entirely unconvincing, we chanted a hymn in the form of a story, with measure and with solemnity, in praise of your master and mine, Phaedrus, Love, the guardian of beautiful boys.

265c

Phaedrus: And it was very pleasant for me to hear it.

Socrates: Then let us use this fact in order to understand how the speech was able to switch from censure to praise.

Phaedrus: What aspect are you actually referring to?

265d

Socrates: It appears to me, for the most part, to have played a veritable game, and yet among these random pronouncements there were two forms, and if we were able, by some skill, to understand the potential of both, that would be most worthwhile.

Phaedrus: What were they?

Socrates: The first takes a collective view of things that are dispersed and multifarious and brings them into one form so that each is defined, and whatever you wish to impart on any occasion is made clear. It is like what we did just now in the case of love. Once we had defined what it is, whether adequately or inadequately, the speech was able, because of that, to state what was obvious and what was in agreement with itself.

Phaedrus: And what is the other form you mentioned, Socrates?

265e

Socrates: The ability to cut it up once more on the basis of forms, according to its natural joints, without trying to shatter a single part by going about it like a bad butcher. And just as our two recent speeches grasped the unreasoning part of the mind as a single common form, and just as the parts of a single body naturally appear in pairs with the same name, although one is on the left and the other on the right, so also did the two speeches regard the mental disorder in us as, by nature, a single form. One speech took the part cut from the left-hand side, cut this once more, and did not relent until, having found what you might call a left-sided love among them, it reviled this and was quite right to do so. The other speech, leading us through the parts of madness of the right-hand side, found and presented a love with the same name as the other one, except that it was

divine, and it praised this as the cause of the greatest benefits that accrue to us.

266b

Phaedrus: What you are saying is entirely true.

Socrates: Now, I myself, dear Phaedrus, am a lover of these processes of division and combination, so that I may be able to speak and to think. And if I believe that anyone else is able to discern a one in what is by nature multiple, I follow him 'wherever he leads as though he were a god'.²⁸ And indeed up until now I have referred to people who are able to do this as dialecticians, but whether or not I am describing them correctly, God knows. Now, tell me what we should call those who are instructed by yourself and Lysias. Do they go by the name of that skill in speaking which Thrasymachus and the others employ in order to become wise speakers themselves, and make others wise once they are prepared to bear gifts to them as though they were kings?

266c

Phaedrus: They are kingly men indeed, but when it comes to the processes you are asking about, they are not knowledgeable. Indeed, I think you are referring to this form correctly when you call it dialectic, and I think that rhetoric, for its part, is still escaping us.

Socrates: What do you mean? Could there be anything of merit which has been deprived of these two processes and is regarded as a skill in any case? You and I should not show total disrespect, but we should also describe the part of rhetoric that is still left.

266d

Phaedrus: Yes, Socrates, presumably there is a great deal of material in the books that have been written about the skill of speech making.

Socrates: Your reminder is well timed. In the first place, I think that a preamble needs to be delivered at the beginning of the speech. Is that so? Are these what you mean by the refinements of the skill?

Phaedrus: Yes.

266e

Socrates: And then, in second place, is an exposition and evidence to support it. Third are proofs and fourth come probabilities. And that superlative speech craftsman, the man from Byzantium, refers I believe to confirmation and added confirmation.

Phaedrus: You mean the worthy Theodorus?

Socrates: Of course. And he says we should employ refutation and added refutation, both in accusation and in defence. And can we avoid bringing in the superb Evenus of Paros,²⁹ who was first to discover insinuation and incidental praise? And according to some people, he also recites incidental censures in verse to help his memory. A wise man indeed!

267a

Socrates: Shall we leave Tisias and Gorgias undisturbed,³⁰ these men who have realised that appearances are more honourable than truth; and who also use force of speech to make minor issues appear important, and important issues appear minor; novelties appear ancient, and ancient truths appear novel; men who discovered how to speak concisely or interminably on any subject whatsoever? Now, when Prodicus³¹ heard me mention this he laughed, and said that he alone had discovered what skilled speech making involves: the speeches should be neither long nor short but duly measured.

267b

Phaedrus: Dear Prodicus, what unparalleled wisdom!

Socrates: And we shall not mention Hippias,³² for I believe this stranger from Elis would vote the same way as Prodicus.

Phaedrus: Why wouldn't he?

267c

Socrates: And how shall we describe Polus³³ and his array of inspired expressions such as 'double-speech' and 'concise-speech' and 'image-speech', and phrases that Licymnius³⁴ gave him in order to produce eloquence.

Phaedrus: Weren't there Protagorean³⁵ works of this kind too, Socrates?

Socrates: Yes, my boy, he wrote 'Proper Diction' and numerous other fine works. Then again, the Chalcedonian giant³⁶ appears, quite skilfully, to have mastered lamentations on old age and poverty in long, drawn-out speeches, and this man, so he says, has become formidable at arousing crowds to anger, and appeasing them again by means of his charms, once they are angry. And he is a master of slander, and of the repudiation of slander, regardless of the source. And yet, when it comes to the conclusion of speeches, they all seem to agree with one another, although some use the term 'recapitulation' while others give it a different name.

267d

Phaedrus: Do you mean reminding your hearers towards the end of the speech of the various issues that have been referred to?

Socrates: That is what I mean. And if you have anything else to say about the skill of speaking...

Phaedrus: Minor matters, not worth mentioning.

268a

Socrates: Well, let us leave the minor issues aside and let us look at the others in a brighter light, and see what power they derive from this skill, and when.

Phaedrus: And it is very powerful, Socrates, particularly in mass gatherings.

Socrates: It is indeed. But take a look, you heavenly creature, and see if there seem to you to be gaps in the fabric they have woven, as there seem to me to be.

Phaedrus: Just point them out to me.

268b

Socrates: Then tell me this: if someone were to approach your friend Eryximachus, or his father Acumenus, and say: “I know how to treat the body in a variety of ways so that it warms up and, if I wish, cools down; and if the idea strikes me, I can make it vomit or make its bowels move and all that sort of thing. What is more, because I know this, I am qualified to be a doctor and to make a doctor of anyone else on whom I confer the knowledge of these matters.” What do you think they would say when they heard this?

Phaedrus: Well, what else could they do but ask whether the man also knows to whom each of these treatments should be administered, and when, and for how long?

268c

Socrates: And if he were to reply, “Not at all, but I regard anyone who learns these matters from me as capable of working out for himself these details which you ask about”?

Phaedrus: I think they would say that the man is mad and believes that he has become a doctor on account of hearing something from a book or stumbling upon some minor remedies without knowing anything about the skill.

Socrates: And what if someone were to approach Sophocles and Euripides and say that he knew how to make extremely lengthy orations about a trifling matter, and very short ones about a major issue, and that he could produce lamentations at will or, in contrast, speeches that terrify and intimidate, and so on and

so forth? And what if he believed that when he passed this knowledge on, he was teaching people how to write tragedies?

268d

Phaedrus: Well, Socrates, I think that they would be amused by anyone who believed that tragedy was anything other than the proper arrangement of these elements with respect to one another, and to the play as a whole.

Socrates: But I do not think they would be too harsh in their criticism. No, they would respond like a musician who meets up with someone who thinks he knows what harmony is because he happens to know how to play the highest note and the lowest note on a string. He would not say fiercely, “You sorry wretch!” but like the gentle musician that he is, he would say, “Excellent fellow, anyone who intends to understand harmony must indeed have knowledge of these things. However, someone at your stage of development could still be devoid of even the smallest understanding of harmony. In fact, you know the necessary prerequisites for harmony, but not the principles of harmony.”

Phaedrus: Absolutely correct.

269a

Socrates: And wouldn’t Sophocles say that the person who is showing off to them knows the prerequisites for tragedy, but not the principles of tragedy? And in the case of Acumenus, wouldn’t he say that the person knows the prerequisites for medicine, but not the principles of medicine?

Phaedrus: Entirely so.

Socrates: But what if the honey-voiced Adrastus,³⁷ or even Pericles,³⁸ were to hear about those glorious technicalities we listed a moment ago, the aphoristic utterances and image-speaking, and anything else we described when we said they should be examined in a brighter light? Do you think they

would respond angrily, just like you and me, and direct some coarse, boorish expression at the people who have written about this, and teach it too, as though it were the skill of rhetoric? Or, since they are both wiser than us, would they rebuke us and say, “Dear Phaedrus and Socrates, you should be sympathetic, rather than angry, if some people with no knowledge of dialectic prove incapable of discerning what exactly rhetoric is, and in this predicament think they have discovered rhetoric when they know the necessary prerequisites of that skill, and actually believe they have provided comprehensive instruction to others when they teach them these prerequisites, but believe that delivering these assorted devices in a persuasive manner, and also assembling them into a whole, is an insignificant task which their pupils must figure out for themselves when they compose speeches.”?

269c

Phaedrus: Yes, certainly, Socrates. I grant you that these men write about this sort of thing and teach it as if it were the skill of rhetoric, and I think that what you have said is true. But the question is how and from where may someone acquire the genuine skill of rhetoric and persuasion?

269d

Socrates: Phaedrus, the ability to do this, and become an accomplished performer in the process, is probably acquired just like any other. In fact, it must be. If you happen to have a natural rhetorical ability, you will be a notable rhetorician once this is supplemented by knowledge and practice, but if you are lacking in any of these, you will be imperfect in that respect. However, the approach taken by Lysias and Thrasymachus does not, as I see it, recognise rhetoric as a skill.

269e

Phaedrus: Well, what should they have done?

Socrates: My friend, it is highly likely that Pericles has become the most accomplished rhetorician of them all.

Phaedrus: Why so?

270a

Socrates: All of the great skills need to be supplemented by verbose and elevated discussion about nature, for it seems that this high-mindedness and total effectiveness originate from something of this sort. And Pericles has acquired this in addition to his natural talents, for I believe he fell in with someone of this sort in the person of Anaxagoras,³⁹ and was filled full of elevated discourse, and appreciated the nature of reason and mind, the very matters on which Anaxagoras constructed an extensive argument. Pericles drew upon this and applied it, as appropriate, to the skill of speech-making.

Phaedrus: What do you mean by this?

270b

Socrates: I presume that skill in medicine works in the same way as skill in rhetoric.

Phaedrus: How so?

Socrates: In both cases we have to determine a nature; in one instance it is the nature of a body and in the other it is the nature of a soul. This is necessary if you intend to proceed by means of a skill, rather than by experience alone, either to engender health and strength by administering drugs and nutriment, or to import whatever excellence and conviction you wish into the soul through words and the cultivation of lawful habits.

Phaedrus: Yes, that sounds plausible, Socrates.

270c

Socrates: Now, do you think it is possible to discern the nature of soul adequately without discerning the nature of the whole?

Phaedrus: Well, if we are to be persuaded by Hippocrates, the Asclepiad,⁴⁰ we cannot even know about the body except through this method.

Socrates: Well said, my friend. However, in addition to the testimony of Hippocrates we should scrutinise our own account to see if it concurs with his.

Phaedrus: I agree.

Socrates: Then consider what precisely Hippocrates and the true account say regarding nature. Now, we should keep the following questions in mind in relation to the nature of anything at all. First, is it something simple or multiform in which we wish to be skilful ourselves and capable of making others skilful? Then, if it is simple, what natural capacity does it have to act, and upon what, and what capacity does it have to be acted upon by anything else? And if it has more forms than one, then we should count them, and, as in the case when there was only one, ask, in each instance, what that particular form is naturally adapted to do, or to have done to it by anything else.

Phaedrus: Very likely, Socrates.

270e

Socrates: In any case, a method devoid of these considerations would be just like the progress of a blind man. But we certainly should not liken any approach based upon a skill to the progress of the blind or the deaf. No, it is obvious that if anyone systematically imparts speech-making to another, he will reveal the essence of that nature towards which the speeches are directed, and that, I presume, will be the soul.

Phaedrus: Of course.

271a

Socrates: Therefore, all of his effort is directed towards soul, for he is attempting to bring about a conviction in the soul. Is this so?

Phaedrus: Yes.

Socrates: So it is obvious that Thrasymachus, or anyone else who seriously imparts a system of rhetoric, will in the first place write with the utmost precision, and then enable us to see whether soul is in its nature one and uniform, or multiform like the structure of the body, for this is what we mean by revealing its nature.

Phaedrus: Entirely so.

271b

Socrates: And secondly, he would clarify what by nature it enacts, by what; or what it undergoes, on account of what.

Phaedrus: Of course.

Socrates: And thirdly, once he has set out the classes of speeches and of souls, and the influence of the speeches, he will explain all this, matching each speech to a soul, and teaching us what kind of soul must, perforce, be persuaded or not persuaded by what kind of speeches, and the reason why this must be so.

Phaedrus: Well, I think that would be an excellent way to proceed.

271c

Socrates: Well then, my friend, neither this speech nor any other will ever be spoken or written by means of a skill, unless it is presented and delivered with this in view. But those who compose systems of rhetoric these days, the people you have heard of, are cunning, and they conceal the fact that they are extremely knowledgeable about the soul. So, until they describe this approach and write about it, we should not accept their claim that they are writing based upon a skill.

Phaedrus: What approach are you referring to?

Socrates: It is not easy to give you the formulations themselves, but I would like to describe the manner in which one must write if the work is to be executed as skilfully as possible.

Phaedrus: Tell me.

271d

Socrates: Since the power of speech consists in leading the soul, the one who intends to be an orator needs to know how many forms of soul there are, that their number is such and such, and there are these types and these other types, and consequently there are people of one sort and people of another sort. And then, once he has categorised souls in this way, there are also various forms of speeches, each with its own qualities. People of a certain kind are easily persuaded to particular viewpoints by speeches of this sort for this reason, while these other people are difficult to persuade for these other reasons. And once he has a proper understanding of these factors and can also see them in operation in practical situations, he must be able to pay keen attention to them or he will derive no benefit, as yet, from the instructions he heard whilst attending the lectures.

271e

Socrates: And when he has the competence to state that this sort of person is persuaded by speeches of this sort, he is able to recognise that person if he happens to meet him, and satisfy himself that the person now standing before him represents a particular nature which was once described in lectures, a nature to which he will have to apply certain speeches in a particular way to persuade it in certain directions; once he has understood all this, and has also appreciated when it is time to speak or to refrain from speaking, and recognises the right time and the wrong time for the aphorisms, lamentations, intensifications or any of the other rhetorical devices he has learned, then and not till then does his skill in rhetoric attain complete and glorious consummation. But if someone ignores these principles when

he teaches or speaks or writes, but still claims to speak by means of a skill, it is best not to believe him. But perhaps our fellow author will ask, “Well then, Socrates and Phaedrus, is that it? Is there no other way to describe the skill of speech-making than this?”

272b

Phaedrus: I think it is impossible to describe it in any other way, Socrates, although it is turning out to be no minor undertaking.

272c

Socrates: True! For this reason we should scrutinise all the arguments from every angle to see if some easier, shorter means of attaining this skill turns up, so that we do not go off in vain down a long, rough road when there is a short and smooth one. But if you have any kind of assistance to offer from what you have heard from Lysias or anyone else, try to remember it and tell me.

Phaedrus: I would have something to say if it were just a matter of trying, but at the moment I have nothing to offer.

Socrates: Then would you like me to recount an argument I have heard from some people who are concerned with these issues?

Phaedrus: What is it?

Socrates: Anyway, Phaedrus, it is said that even the wolf deserves to have his say.

272d

Phaedrus: Then you should take his part.

Socrates: Well, some people say that these issues do not have to be made so solemn and principled through such lengthy elaboration. For as we said at the start of this discussion, when it comes to issues of good and right, or men who possess such qualities either naturally or through education, the one who

intends to be a rhetorician need not be concerned with truth in any way at all. For in the law courts, they say, no one at all cares one jot about the truth of these matters. No, they care about persuasion, and what is persuasive is what is likely, so anyone who intends to speak skilfully should pay attention to this. In fact, sometimes one should not even refer to the actual events if they occurred in an unlikely manner. Instead, one should describe likely events whether in a prosecution or a defence, and in all that is said one should pursue likelihood and, for the most part, bid farewell to the truth. For this, when maintained throughout the entire speech, represents the sum total of the skill of rhetoric.

273a

Phaedrus: Yes, Socrates, the men who make out that they are skilled speechmakers say what you have just said. In fact, I recall that we touched upon this sort of issue briefly in our earlier discussion, but it seems to be extremely important to those who are concerned with these things.

273b

Socrates: And indeed you have made a careful study of Tisias himself, so let Tisias inform us too. He says that likelihood is nothing other than ‘how things seem to most people’.

Phaedrus: What else could it be?

Socrates: Yes, it is quite likely that in the light of this wise and skilful insight, he wrote that if a weak brave man beats up a strong coward and steals his cloak or something else, and is brought before a court, neither of them should speak the truth. Instead the coward, for his part, should say that the brave man was not acting alone when he beat him up, while the other fellow should retort that there was only the pair of them, and should have recourse to the standard defence, ‘How could a man like me have taken on a man like this?’ Then the other chap will not mention his cowardice but, in his efforts to come

up with some other lie, will probably furnish his opponent with a counterargument. And, indeed, whatever the situation, this is the sort of thing that the skilled speaker says. Isn't this so, Phaedrus?

Phaedrus: Of course.

273c

Socrates: Gosh! Tisias, or someone else, whoever he is, and whatever he likes to be named after, has discovered a skill that has been most ingeniously hidden! Yet, my friend, there is something we should say to him, or perhaps not...

Phaedrus: What?

273d

Socrates: This. "Dear Tisias, a while ago, before you joined us, we happened to be saying that this notion of likelihood tends to arise in most people because of likenesses to the truth. But we explained earlier that the person who knows the truth is best equipped in every respect to discover the likenesses. So, if you say anything else about the skill of speaking we shall listen, but if not, we shall believe what we have already explained, that unless someone enumerates the various natures among his prospective audience, and distinguishes things that are on the basis of forms, and unless he is capable of comprehending each particular through a single characteristic, he will never be skilled at speaking to the extent that a human being can be. But these abilities will never be acquired without a great deal of effort which a wise man should undertake, not for purposes of speaking and acting towards his fellow men, but in order to be capable of speaking what is acceptable to the gods, and of acting to his utmost capacity in a manner acceptable to them. Well, there it is, Tisias. Those who are wiser than us proclaim that a man of reason should be concerned, not with gratifying his fellow slaves, except incidentally, but with gratifying his masters who are good in every way. So don't be surprised if the

journey is a long and circuitous one, for we should take the circuitous route in pursuit of exalted objectives, and not the objectives that concern you. And yet according to this argument, if you want these objectives they are best produced from exalted ones.”

274a

Phaedrus: I think you are describing this gloriously, Socrates. If only someone could enact it.

Socrates: But it is good for someone who strives for the good to accept whatever may befall him.

Phaedrus: Very much so.

Socrates: Well, that is enough said about skill and absence of skill in speaking.

Phaedrus: Indeed.

Socrates: We are left with the question of the appropriateness and inappropriateness of writing, and how it may be executed in a worthy or an inappropriate manner. Do you agree?

Phaedrus: Yes.

274b

Socrates: Do you know how best to please a god with speeches, either by performing them or discussing them?

Phaedrus: Not at all. Do you?

Socrates: Anyway I can tell what I have heard from those who have gone before us, but they are the ones who know the truth. Yet if we were to discover it ourselves, would any of the preoccupations of humanity still concern us?

Phaedrus: It is ridiculous to ask that question but do tell me what you say you have heard.

274c

Socrates: Well, I heard that at Naucratis⁴¹ in Egypt there was a certain ancient god of that place, whose sacred bird is the one they call the Ibis, while the name of the divine being himself was Theuth.⁴² He was first to discover number and calculation, geometry and astronomy, and also draughts and dice, and of course writing. Now, at that time, Thamus⁴³ was king of all Egypt round about the great city of the upper region. The Greeks call this city Egyptian Thebes and they refer to Thamus as Ammon. Theuth went to this king to show off his discoveries, and he proposed that they should be passed on to the rest of the Egyptians, and Thamus asked what benefit each of them possessed, and as Theuth explained this he praised whatever seemed worthwhile and criticised whatever did not. Now, Thamus is said to have expressed many views both positive and negative to Theuth about each of the skills, so an account of these would be quite lengthy. But when he came to writing, Theuth said, “This branch of learning, O King, will make the Egyptians wiser and give them better memories, for I have discovered an elixir of both memory and wisdom.” The king replied, “Oh most ingenious Theuth, one man is able to invent these skills, but a different person is capable of judging their benefit or harm to those who will use them. And you, as the father of writing, on account of your positive attitude, are now saying that it does the opposite of what it is able to do. This subject will engender forgetfulness in the souls of those who learn it, for they will not make use of memory. Because of their faith in writing, they will be reminded externally by means of unfamiliar marks, and not from within themselves by means of themselves. So, you have discovered an elixir not of memory but of reminding. You will provide the students with a semblance of wisdom, not true wisdom. For having heard a great deal without any teaching, they will seem to be extremely knowledgeable, when for the most part they are ignorant, and are difficult people to be with because they have attained a

seeming wisdom without being wise.”

275b

Phaedrus: Oh, Socrates, it is so easy for you to make up stories about Egypt or anywhere else you please!

Socrates: And yet, my friend, the people in the sanctuary of Zeus at Dodona said the first prophetic utterances were the words of an oak tree. Of course, the men of that time were not as wise as you moderns, and it was enough for them, on account of their simple-mindedness, to listen to oak trees or rocks if they only spoke the truth. But it probably makes a difference to you who the speaker is and where he comes from. Do you not consider the only relevant issue to be whether or not these things are so?

275c

Phaedrus: You are right to rebuke me, and I do think that what the Theban king says about writing is correct.

Socrates: Then a person who thinks he has left a skill in writing behind him, and anyone who, for his part, inherits this on the assumption that something clear and certain will emerge from writing, would be full of enormous silliness, and indeed ignorant of the prophetic words of Ammon in believing that written words are anything more than a reminder to a person who already knows whatever it is that the written words may refer to.

Phaedrus: Correct.

275d

Socrates: Yes, Phaedrus, I think that writing has a strange feature that makes it quite like painting. For the offspring of the painter’s skill stand before us like living creatures, but if you ask them a question, they are very solemnly silent. And the same goes for written words. You might assume that they are speaking with some degree of intelligence, but if you wish to

learn from them and you ask them a question about what they are saying, they just point to one thing and it is always the same. And once they have been written down, every word is bandied about indiscriminately to people who understand it, and to those for whom it is not appropriate at all, and it does not know to whom it should speak and to whom it should not. And when it is ill-treated or unjustly criticised the word always needs its father to come to its aid, for it is unable either to defend or assist itself.

275e

Phaedrus: You are perfectly right about that.

276a

Socrates: Well then, do we see another word, the legitimate brother of this one, the manner in which it arises and how much more excellently and powerfully it develops?

Phaedrus: What is it and how do you say it arises?

Socrates: The word that is written, along with knowledge, in the soul of the one who is learning, capable of defending itself, yet knowing to whom it should speak and with whom it should be silent.

Phaedrus: You are talking about the living and ensouled word of the man who knows, of which the written word may rightly be called an image.

276b

Socrates: Entirely so. Now, tell me this. Would a farmer who possesses intelligence, holding seeds that he cares about and wants to see as fruit, sow them in all seriousness in summer in some garden of Adonis,⁴⁴ and delight in beholding the manifestation of their beauty within eight days? Or, if he were to do this at all, would he do it only for the sake of amusement at a festival? But if he were serious about these, wouldn't he have recourse to the skill of husbandry, and having sown them

in the appropriate soil, be content if whatever he had sown attained perfection in the eighth month?

276c

Phaedrus: Yes, Socrates, I think he would be acting seriously in one situation and quite differently in the other, just as you say.

Socrates: And are we to say that somebody who has knowledge of things just and beautiful and good has any less insight than the farmer in relation to his own seeds?

Phaedrus: Not the slightest.

Socrates: So this person will not, with any seriousness, write them in black water, sowing them through a pen, along with words that are unable to come to their own aid in a discussion, and also are unable to teach the truth adequately.

Phaedrus: No, that is most unlikely.

276d

Socrates: No indeed! But if he does write he will, it seems, sow and write his gardens of letters for the sake of amusement, storing up reminders both for himself when he arrives at the forgetfulness of old age, and for everyone else who follows the same trail, and he will take delight in beholding their tender growth. And while others have recourse to amusements of a different sort, deluging themselves at drinking parties and pursuing a variety of related pastimes, this man, it seems, will prefer to spend his time in the amusements I have described.

276e

Phaedrus: You are describing a glorious game, Socrates, alongside a mundane one, the pastime of a man who is able to play with words, telling stories about justice and the other topics you are referring to.

Socrates: It is indeed, dear Phaedrus. But I think it is far better to become serious about these matters as when someone, through recourse to the skill of dialectic, takes a fitting soul and

plants and sows words based on knowledge; words that are sufficient to assist themselves and the one who planted them; that are not fruitless, but possess a seed from which others grow in other natures; able to render the seed ever immortal, and make the one who possesses it blessed to the fullest possible extent of human blessedness.

277a

Phaedrus: Yes, the approach you are describing is far better.

Socrates: Well, now that we have come to an agreement about these matters, Phaedrus, we can decide about those other issues too.

Phaedrus: What issues?

Socrates: Well, it was the desire to look at those issues that brought us to this point, the manner in which we might investigate the criticism of Lysias on the grounds of being a speechwriter, and whether the speeches themselves were written by means of a skill or without one. Now, I think that this presence or absence of skill has been explained well enough.

Phaedrus: Yes, so it seemed anyway, but remind me again of how we did it.

277b

Socrates: Our entire previous discussion has revealed that until someone knows the truth of each of the matters about which he is speaking or writing and has developed the ability to define the whole by itself, and once he has defined this, knows how to cut it up again on the basis of forms as far as what cannot be cut. And until he understands the nature of soul on the same basis, discovering the form appropriate to each nature, and arranges and constructs his speech accordingly, presenting variegated and elaborate words to a complex soul and simple words to a simpler soul, he will not be able to engage, with skill, in the practice of speechmaking to the extent that nature allows,

neither for the purposes of instruction nor for the purposes of persuasion.

Phaedrus: Yes, absolutely! This is what our discussion has shown.

277d

Socrates: But what about the question of delivering and writing speeches, and whether this is noble or shameful, and the sense in which the activity may properly become a matter of reproach or praise? Haven't our earlier explanations dealt with this?

Phaedrus: What explanations?

Socrates: That if Lysias or anyone else has ever written or will ever write, either in private or as a public lawmaker writing a political treatise, in the belief that there is any great certainty or clarity therein, this behaviour is a reproach to the writer whether someone actually expresses this or not. For a person who cannot tell a dream of justice and injustice or good and evil from the reality will never, in truth, escape reproach even if the entire populace applauds it.

Phaedrus: Not at all.

277e

Socrates: But the person who realises that in a written discourse on any topic there must be a great deal that is playful; that not one composition in verse or in prose that deserves to be taken seriously has yet been written, nor has any been expounded as the rhapsodes do, without any analysis or instruction, in order to produce persuasion; that in reality the best of these speeches act as a reminder to those who already know; that only in what is taught or spoken for the sake of instruction, and is actually inscribed in the soul in relation to the just and beautiful and good, is there clarity and perfection and anything worth taking seriously; a person who realises that words such as these should be referred to as his own legitimate

sons, the first being the one within himself, if it be found there, and then any offspring and brothers of this which may have sprung up in a worthy manner at the same time in other souls of other persons, and who bids farewell to any other words; this, Phaedrus, is surely the sort of person that you and I would each pray to become.

278b

Phaedrus: Entirely so. What you are describing is just what I wish for and pray for.

Socrates: Well then, let that be the extent of our entertainment with speeches. You should go now and tell Lysias that we both went down to the river and sacred place of the Nymphs, and we heard words directing us to send a message to Lysias and anyone else who composes speeches; to Homer or anyone else who, for his part, has composed poetry in verse or in song; and thirdly, to Solon and anyone who has written political speeches and given them the name of laws. The message is that if he composed these knowing where the truth lies, and if he can provide support when the views he set down are challenged, and is able to demonstrate when he himself is speaking that his written words are of lesser rate, then a man of this sort should not be given a name associated with those literary activities, but should be named after the matters he takes seriously.

278d

Phaedrus: What will you call him then?

Socrates: I think it would be a big step, Phaedrus, to call him ‘wise’ because this is appropriate only for a god. The title ‘lover of wisdom’ or something of that sort would suit him better and would be more modest.

Phaedrus: And not inappropriate either.

278e

Socrates: And wouldn't you be quite right to refer to someone as a poet or speechwriter or law writer if he, for his part, possesses nothing of more value than what he has composed or written through various twists and turns, adding bits on and taking bits away over the course of time?

Phaedrus: Of course.

Socrates: Then tell all this to your friend.

Phaedrus: But what about you? What will you do? Your friend should not be overlooked either.

Socrates: Who is that?

Phaedrus: The fair Isocrates.⁴⁵ What message will you give to him, Socrates? What will we say that he is?

279a

Socrates: Isocrates is still young, Phaedrus. Yet I would like to say what I prophesy for him.

Phaedrus: Oh! What is it?

Socrates: I think that his natural endowments are superior to the speeches of Lysias, and there is a nobler blend in his character. So it would be no surprise, in view of his current interest in discourse, if he were to make all those who have previously taken to speech look no better than children in comparison, once he comes of age, especially if these pursuits do not satisfy him and some more divine impulse leads him to the greater; for my friend, there is some philosophy present by nature in the mind of that man. So, these are the words I convey from the gods of this place to Isocrates, as my beloved, while you convey those other words to Lysias, as yours.

279b

Phaedrus: So be it. Then let us depart now that the heat has died down.

Socrates: Is it not surely appropriate to pray to the gods of the place before leaving?

Phaedrus: Of course.

Socrates: O beloved Pan and any other gods who are here, grant that I may become beautiful within, and that all my outer possessions be in friendly concord with the inner. May I regard the wise as the wealthy, and may I have as much gold as only a sound-minded person could bear and carry. Need we say anything else, Phaedrus? That prayer is enough for me.

279c

Phaedrus: Let me join in that prayer too, for friends have all things in common.

Socrates: Let us go.

NOTES

1. Cephalus features in book I of Plato's *Republic*, along with his son Polemarchus. The discussion depicted in that dialogue takes place in Cephalus' house in Piraeus. His son Lysias, a noted writer of speeches, was present at that gathering but did not speak.
2. Acumenus was a physician and friend of Socrates. His son Eryximachus appears in Plato's *Symposium*.
3. Morychus is noted in a number of Aristophanes' plays for his luxurious lifestyle.
4. Pindar, *Isthmian* i.2.
5. Herodicus was a physician whose exercise regime involved walking to the city walls from some distance away and then turning back.
6. According to legend, Boreas, the god of the cold north wind, kidnapped the Athenian princess Orithyia as she played with Nymphs on the banks of the Ilissus, a river outside the walls of Athens, to the east.
7. Typho, a giant monster, was one of the deadliest creatures in Greek mythology. His complexity stems from his one hundred heads and his multiform physique comprised of a humanoid winged torso atop two snake-tail legs.
8. Achelous was a river god, personified as water and associated with the river of the same name, the longest in Greece. Nymphs were minor deities associated with different aspects of the natural world.
9. Sappho and Anacreon were lyric poets, both included among the canonical Nine Lyric Poets of ancient Greece. Sappho was regarded as one of the greatest lyric poets; Anacreon was noted for his drinking songs and erotic poetry.
10. The Nine Archons were officials of the city of Athens, chosen by lot. Their oath of office stipulated that they would undertake to erect a golden statue as a penalty if they transgressed any of the laws.
11. The Cypselid dynasty ruled over Corinth during its golden age. A chest in which the baby Cypselus, founder of the dynasty, was said to have been hidden by his mother to protect him from assassins was housed as a votive offering at Olympia.
12. A line from Pindar, *Fragment* 82, Bergk.
13. Simmias was a Pythagorean philosopher from Thebes, and an associate of Socrates. He was present at Socrates' execution, and is one of the two

main interlocutors in Plato's dialogue *Phaedo*.

14. Ibycus was a lyric poet from Rhegium in Magna Graeca. He was counted among the Nine Lyric Poets of ancient Greece.

15. Stesichorus was a lyric poet who was counted among the Nine Lyric Poets of ancient Greece. According to legend, he was blinded, and then had his sight restored, for composing first critical, then laudatory poems about Helen of Troy.

16. *Fragment 18*, Edmonds.

17. Delphi and Dodona were two important prophetic sacred sites in the ancient Greek world. Both of them housed oracles. Delphi was more famous, but Dodona was more ancient.

18. The phrase 'all soul' may also be translated 'every soul'.

19. Literally, a 'lover of wisdom'.

20. Socrates here suggests that the Greek word *himeros* (longing) comes from the words *ienai* (go forth), *rhein* (flow), and *merē* (portions/particles). See also *Cratylus* 420a.

21. Bacchants were devotees of Dionysus who were thought to achieve supernatural abilities when possessed by the god.

22. Ganymede was a Trojan youth who was abducted by the gods to serve as Zeus' cup-bearer. The story of the relationship between Zeus and Ganymede was used to justify the Greek social custom of relationships between older men and adolescent boys.

23. These three were a Spartan lawgiver, an Athenian lawgiver and a Persian King, respectively.

24. *Iliad* ii.361.

25. Nestor and Odysseus are Homeric heroes who are particularly skilful orators. Palamedes, though not mentioned by Homer, was noted for his guile, especially in successfully convincing Odysseus to join the Trojan expedition.

26. Gorgias of Leontini was the most formidable teacher of rhetoric at the time. His visit to Athens is immortalised in Plato's eponymous dialogue. Little is known about Thrasymachus of Chalcedon, apart from the role he is depicted as playing in Plato's *Republic*. Theodorus of Byzantium was, like Gorgias and Thrasymachus, a famous rhetorician.

27. The Eleatic Palamedes is generally agreed to be Zeno of Elea, a companion of Parmenides, who produced a number of influential

paradoxes about motion, and who is depicted in Plato's dialogue *Parmenides* advancing arguments of the kind described here.

28. *Odyssey* ii.406.

29. Evenus of Paros was a late 5th-century sophist and teacher. He is also mentioned in Plato's *Apology* (20b-c) and *Phaedo* (60d, 61b-c).

30. Tisias of Syracuse, along with his teacher Corax, is credited with founding the Sicilian school of rhetoric, which was practised by Gorgias.

31. Prodicus of Ceos was a contemporary of Socrates. Plato often mentions him and his insistence on the correct use of words. He appears in the *Protagoras*.

32. Hippias of Elis was a travelling teacher who claimed to be an authority on all subjects. He features prominently in two eponymous dialogues and in the *Protagoras*.

33. Polus was a close associate of Gorgias, and is depicted in Plato's dialogue *Gorgias*.

34. Licymnius of Chios was a dithyrambic poet and rhetorician.

35. Protagoras of Abdera was an influential sophist and teacher of rhetoric. He is depicted in Plato's eponymous dialogue, and positions attributed to him are considered in Plato's *Theaetetus*.

36. The Chalcedonian giant is Thrasy machus.

37. Adrastus was a legendary king of Argos and the leader of the Seven Against Thebes. He features prominently in the work of Pindar, and is a main character in Euripides' *The Suppliants*. The quote is from the Spartan elegiac poet Tertius (*Fragment* 12.8, Edmonds).

38. Pericles was the most influential Athenian politician and orator of the Classical period.

39. Anaxagoras was a natural philosopher and close associate of Pericles. He was from Clazomenae in Ionia, and lived a generation before Socrates. He famously maintained that mind (*nous*) is the ordering force in the cosmos. His views are discussed in greater detail in Plato's *Phaedo* (97b ff.).

40. Hippocrates was a physician from the island of Kos. A younger contemporary of Socrates, he is regarded as one of the most influential figures in the history of medicine, and lends his name to the Hippocratic Oath. The epithet 'Asclepiad' refers to the connection ancient physicians had with Asclepius, the god of medicine in Greek religion and the personification of its healing power.

41. Naucratis was a Greek trading post in ancient Egypt. It was situated on the westernmost branch of the Nile.

42. Theuth (or Thoth) was the Egyptian god of writing, calculation, science and judgement. He was often depicted with the head of an ibis or baboon. The Greeks associated him with Hermes. He also appears in an account of the creation of the alphabet in Plato's *Philebus* (18b).

43. Thamus, or Ammon, was the king of the gods in Egyptian mythology. He eventually became associated with the sun god, Ra. For the Greeks he became associated with Zeus.

44. Gardens of Adonis were small containers in which devotees would force plants (lettuce and fennel) to sprout briefly and then die in order to commemorate the death of Adonis, the consort of Aphrodite.

45. Isocrates was a rhetorician, teacher and contemporary of Plato. He was one of the ten Attic orators. He established a school in Athens, which was a rival to Plato's Academy.

Philebus

persons in the dialogue:

SOCRATES of Alopecce, son of Sophroniscus

PROTARCHUS son of Callias, a very rich Athenian

PHILEBUS nothing is known

scene: no indication

11a

Socrates: Well, Protarchus, be clear now as to what argument you are about to accept from Philebus, and what argument of mine you are to oppose if it does not accord with your thinking. Would you like us to summarise both?

11b

Protarchus: Yes, certainly.

Socrates: So Philebus, for his part, says that what is good for every creature is enjoyment, pleasure and delight, and anything else that belongs to this class. Whereas I contend that not these, but understanding, reasoning, memory and their kindred, right opinion and true thinking, are better and more desirable than pleasure for all of those who are able to acquire them, and that they are supremely beneficial to anyone who can attain them now or in the future. Isn't that the sort of thing we both said, Philebus?

11c

Philebus: Yes, entirely so, Socrates.

Socrates: Well, Protarchus, do you accept the argument that has just been assigned to you?

Protarchus: I must accept it, since the fair Philebus has withdrawn.

Socrates: In that case, should we somehow ascertain the truth about this by all possible means?

Protarchus: Yes, we should.

11d

Socrates: Well then, let us agree on something else besides this.

Protarchus: On what?

Socrates: That each of us will now be attempting to indicate some state or disposition of the soul, capable of providing a happy life to all people. Is this not so?

Protarchus: This is so.

Socrates: Will you say that the state is one of enjoyment, while I in turn say that it is one of understanding?

Protarchus: That's it.

Socrates: And what if some other state turns out to be better than these? In that case, if it proves to be more akin to pleasure, then both our suggestions would be inferior to the life based firmly upon that condition, while the life of pleasure would be superior to that of understanding. Is this so?

12a

Protarchus: Yes.

Socrates: But if it is more akin to understanding, would understanding be victorious over pleasure, and would pleasure be inferior? Do you say that this is now agreed? Or what do you say?

Protarchus: Well, I think so anyway.

Socrates: And what about Philebus? What do you say?

Philebus: It seems to me that pleasure is and will be completely victorious, but you will recognise this yourself, Protarchus.

Protarchus: Having handed the argument over to me, Philebus, you may no longer control my agreements with Socrates, or the disagreements either.

12b

Philebus: What you say is true. In fact, I now renounce it, and call the goddess herself as witness.

Protarchus: And we shall act as your supporting witnesses to the fact that you have said this. Anyway, Socrates, we should try to proceed to the next stages of our discussion, regardless of the willingness of Philebus or his wishes.

12c

Socrates: We should try, beginning with the actual goddess herself, who Philebus here says is called Aphrodite, even though her truest name is Pleasure.

Protarchus: Absolutely correct.

Socrates: Protarchus, my constant awe in relation to the names of the gods is not quite human. No, it is beyond the greatest fear. So, I shall now address Aphrodite in whichever manner is dear to that goddess. However, I know that pleasure is complex, and, as I said, it is necessary to begin with that, and reflect on and consider the sort of nature it possesses. In fact, it sounds as if it is only one thing, yet it has assumed multiple forms, and these are in some way unlike one another. Yes, think about it. We say that an unrestrained person has pleasure, while someone sound-minded is also pleased by that very sound-mindedness. What is more, someone devoid of intelligence and full of stupid opinions and hopes is pleased, and yet the men of understanding take pleasure in that very understanding. Now, how could anyone say that each of these pleasures is like one another and not be regarded, quite rightly, as stupid?

12d

Protarchus: Well, Socrates, although they arrive from opposite things, the pleasures themselves are not opposite to one another. Indeed, how could pleasure not be completely like pleasure, and how could this, of all things, not be like itself?

12e

Socrates: And, indeed, colour, my friend, is like colour. In this respect at any rate, as all being colour, it will not differ. And yet we all realise that black and white are different and happen to be completely opposite. And, of course, shape is like shape on the same basis, and as a class it is all one. However, some of its parts are completely opposite to one another, others have lots of differences, and we shall find numerous other instances of such distinctions. So, do not trust this argument which makes one out of all the complete opposites. No, I am afraid we shall find that some pleasures are the opposite of other pleasures.

13a

Protarchus: Perhaps, but why does that harm my argument?

Socrates: Because I shall maintain that, although they are unlike, you are referring to them by a different name, for you assert that all pleasures are good. Now, no one will put forward the argument that pleasures are not pleasant, but I do say that many are bad while some are good. However, you refer to them all as good, though you agree that they are not alike, if someone compels you to do so in discussion. Well then, what is the same in good and bad pleasures alike, which makes you call all pleasures good?

13b

Protarchus: What are you saying, Socrates? Do you really think that anyone who proposes that the good is pleasure will agree with this, and then tolerate your suggestion that there are some good pleasures but others that are bad?

13c

Socrates: And yet you will state that they are not like one another, and that some are opposites.

Protarchus: But not insofar as they are pleasures.

Socrates: We are carried back again to the same argument, Protarchus, and so we shall say that pleasure is not different

from pleasure, and that all pleasures are alike. The examples we gave just now make no impression upon us, and we go on behaving and talking like the most inept beginners in the conduct of discourse.

13d

Protarchus: What do you mean?

Socrates: That if I copy you, and dare to defend myself by saying that the most unlike is most completely like the most unlike, I shall be forced to say the same thing as you. We shall prove worse than beginners, and our discussion will collapse and come to nought. So, let us work backwards, and perhaps we may be able to come to some agreement with one another by reverting to our original propositions.

Protarchus: How? Tell me.

13e

Socrates: Assume, Protarchus, that I in turn am being questioned by you.

Protarchus: In what way?

Socrates: Take understanding, knowledge, reason, and anything else I proposed at the outset and declared to be good when I asked what good is. Now, does this argument not run into the same problem as yours?

Protarchus: How?

Socrates: All the branches of knowledge taken together will seem numerous, and some of them will seem to be unlike one another. And, indeed, if some turn out somehow to be opposites, would I be a worthy dialectician now if I were to say that knowledge does not become unlike knowledge because I was afraid of that statement about opposites? Wouldn't our discussion then be reduced to nothing, like some, and would we then be saved by something irrational?

14a

Protarchus: No, that simply must not happen, except what you said about being saved. Anyway, the equal treatment of your argument and mine is quite acceptable. Assume there are many pleasures, and let them be unlike; and assume there are many kinds of knowledge, and let them be different.

14b

Socrates: Well, let us not conceal the difference between your concept of the good and mine. We should set them before us for all to see, and be confident that when tested in some way, they may reveal whether we should say that pleasure or understanding, or some third option, is the good. For surely we are not in competition as to whether my views will prevail over yours, or yours over mine. No, somehow we must both strive together for the supreme truth.

Protarchus: Yes, we must.

14c

Socrates: Well, let us make the issue more definite by means of consensus.

Protarchus: What issue do you mean?

Socrates: One which presents a difficulty for everybody, though some meet it willingly, others on occasion unwillingly.

Protarchus: Speak more plainly.

Socrates: I am referring to a natural wonder which has emerged from this discussion. Yes, saying that many things are one, and one is many, is a wonder, and it is easy to argue against anyone who proposes either argument.

14d

Protarchus: Do you mean when someone says that I, Protarchus, am one by nature, and again that there are many of me which are opposite to one another, proposing that the same person is large and small, light and heavy, and so on, endlessly?

Socrates: Protarchus, you have described the more commonplace wonders of the one and the many. But I think most people agree by now not to bother with such instances, appreciating that they are childish, facile and a considerable impediment to the arguments. Nor are we concerned with anyone who uses an argument separating the limbs and the parts of a thing, having secured agreement that they all constitute a single entity, and then argues contemptuously that he has forced us into the monstrous conclusions that the one is many and limitless, and that the many is only one.

14e

Protarchus: Yes, Socrates, but what sort of other wonders are you referring to on this particular issue which are not commonplace and regarded as of no interest?

15a

Socrates: It arises, my boy, when someone proposes a one that is not in the realm of becoming and perishing, as were the examples we were giving just now. Indeed, this sort of one, as we were saying, is agreed to require no scrutiny. On the other hand, if someone attempts to posit man or ox or the beautiful or the good as a one, in the case of these unities and their like, the controversy associated with their division becomes extremely intense.

Protarchus: How?

15b

Socrates: Firstly, over whether we should accept that there are, in truth, units such as these. Then whether we should also accept, somehow, that each of these units – being one, always the same, with no involvement in generation or destruction – is still undeniably this single unit. In which case it is either dispersed among the things which come into being, and which are in turn limitless, or else, though this seems completely impossible, it arises whole, separate from itself, the same and

one, simultaneously present in each and every thing. It is not those other contentions, Protarchus, but contentions about this sort of one and many which are responsible for utter perplexity if not properly resolved, and are responsible for excellent progress if they are.

15c

Protarchus: So, is this the first issue we should tackle now?

Socrates: Well, that is how it seems to me anyway.

Protarchus: Then take it that we shall all go along with you on this. Though perhaps it is best not to ask Philebus right now, and let the sleeping dog lie.

15d

Socrates: Very well, then. Where shall we begin this great and complex dispute about these contentious issues? Ah! What about here?

Protarchus: Where?

Socrates: I think we can say that arguments about the many becoming one and the same are in circulation, in various guises, in everything that is ever said from antiquity to the present day. And this did not begin recently, nor will it ever cease. Rather, it seems to me that this sort of thing is an undying and ageless¹ characteristic of our own discourses. And when any young person first gets a taste of it, he is delighted, as though he had found some treasury of wisdom. He is inspired by pleasure, and loves to set every argument in motion, first rolling it out into its distinctions, and then kneading it into one. Then he rolls it out again and takes it apart, casting himself, first and foremost, into perplexity, followed by any of his usual associates, be they younger, older or the same age, sparing neither father nor mother, nor any other potential listener. And, indeed, he would almost involve the other animals, not only humans, since he would show no mercy even to foreigners, if only an interpreter

were to be found.

16a

Protarchus: Now, Socrates, do you not see how many of us there are, and that we are all young? Are you not afraid in case we join forces with Philebus, and attack you for slandering us? Anyway, we do know what you mean, and if there is any means or contrivance to free our discussion gently from such confusion, and discover some better method than this to approach the argument, please apply yourself to it, Socrates, and we shall follow as best we can. For it is no trivial issue which lies before us.

16b

Socrates: No, it is not, my boys, as Philebus calls you. Well, there is not, nor could there be, a better method than the method whose constant lover I am, though it has often deserted me and left me alone and perplexed.

Protarchus: What is it? Just tell us.

16c

Socrates: It is not a difficult method to describe, but it is extremely difficult to employ. Indeed, anything which has ever been discovered by means of any skill has been made evident through this method. Look, I will describe it.

Protarchus: Yes, describe it.

Socrates: To me, it is evidently a gift to humanity from the gods, hurled from the realm of the gods, along with the brightest fire, by some Prometheus. And the men of old, being superior to us and dwelling closer to the gods, passed on constantly the statement that all of the things which are generally said to be are from one and many, with limit and limitlessness enshrined within them. Now, since this is how they are arranged, we should always assume that there is a single form associated with everything in each case, and we

should search for that, and we shall find that it is there. Then, if we can apprehend it, we should consider two after one, if there is any second, and if not, we should consider three or some other number. And each one of those again in the same manner until we can see that the initial one is not only one, many and limitless, but also how many it is. But we should not apply the form of the limitless to the multiplicity until we can discern its entire number lying between the limitless and the one, and at that stage we may then quite readily allow each one of them to proceed towards the limitless. Now, the gods, as I said, have passed on to us this manner of enquiry, understanding, and teaching one another. But the wise men of today make one and many too quickly or too slowly in a random manner, and after one they go immediately to unlimited, and whatever is in between escapes them. And therein lies the distinction between the dialectical and disputatious approach to our discussions.

17a

Protarchus: I think I understand much of what you are saying, Socrates, but I would still like to hear a clearer explanation of some of it.

Socrates: Well, my meaning is evident, Protarchus, in the case of letters. So, understand it based upon your education in these.

17b

Protarchus: How?

Socrates: Sound which comes through the mouth of each and every person is presumably one. And then again it is also limitless in multiplicity.

Protarchus: Of course.

Socrates: And we are never wiser on account of one or the other of these, neither because we know the limitless aspect of it nor the single aspect. Rather, what makes each of us literate is knowing the number of sounds and their qualities.

Protarchus: Very true.

Socrates: And, indeed, it is the same thing that makes a musician.

Protarchus: How?

17c

Socrates: Well, the sound associated with this art is also presumably one in itself.

Protarchus: Yes, it must be.

Socrates: However, we would propose that there is a high and low pitch, and a third which is neither. Is this so?

Protarchus: Quite so.

Socrates: But you would never be wise with regard to music if you only knew these. Though if you did not know them, I can safely say that you would in a sense be worthless as a musician.

Protarchus: I would, indeed.

Socrates: Rather, my friend, you would have to understand the numerical extent of the intervals of high and low sound, their quality, and the distinctions between the intervals, and the extent of the combinations which arise from these, combinations which our forefathers discovered and passed on to us, their successors, under the name harmonies. And there are ----- 1 See Iliad viii.539 for this epithet for the gods. Socrates' characterisation of the problem in this way underscores its seriousness. other internal responses arising in the corresponding movements of the body, which are indeed measured numerically, and, accordingly, they say should be called rhythms and measures. And we should also appreciate that all investigation of one and many must be conducted accordingly. So, once you grasp them in this way, then you become wise, and whenever you select another 'one' belonging to anything whatsoever, and investigate it in this way, you

become knowledgeable about that. But taking the limitless aspect of each of the multiplicities will make you a second-rate thinker in every case, devoid of any reputation or esteem, since you have never turned your gaze to number in anything at all.

17e

Protarchus: Philebus, it seems to me anyway that what Socrates said just now is excellent.

18a

Philebus: It seems so to me too. It is excellent in its own right, but why ever has this argument been presented to us now? And with what precise intention?

Socrates: Well, Protarchus, Philebus is right to ask us this question.

Protarchus: He is indeed, so you had better answer him.

Socrates: I shall do that, once I have explained a further detail about these particular issues. Now, if we take any 'one' whatsoever, we are saying that we must not look immediately to its limitless nature, but to some number. And similarly, in the opposite case, when we are compelled to apprehend the limitless first, we must not proceed to the one immediately, but discern a particular number possessing some multiplicity, and from many finish at one. Once more, let us understand what is now being described, based upon the letters of the alphabet.

18b

Protarchus: How?

Socrates: When some god, or even some divine person – the story from Egypt says his name was Theuth² – observed that sound was limitless, he first noticed the vowel sounds in the limitless, which are not one but multiple, and then other sounds which are not vowels, but can be sounded nevertheless, and that there are a number of these also. Thirdly, he distinguished what we now call mutes, and after that he divided the

unsounded mutes until they were single entities, and did the same thing to the vowels and semi-vowels. Once he had understood their number, he gave the additional name 'letter' to each and every one of them. But observing that none of us could learn one of them just by itself without all of them, he went on to devise a bond which is one, and somehow makes them all one, and he said that there was a single skill applicable to them, and he called it grammar.

18d

Philebus: Protarchus, I now understand the interaction of these letters more clearly than the other issues, but to me there is the same defect in the argument as there was a moment ago.

Socrates: Philebus, is it that you don't see the point of all this?

Philebus: Yes. Both Protarchus and I have been trying to see this for some time.

Socrates: Then you have actually been trying to see something that, according to you, has been right in front of you for some time now.

18e

Philebus: How so?

Socrates: Wasn't our discussion from the outset about understanding and pleasure, and which of the two we should choose?

Philebus: Yes, of course.

Socrates: And, indeed, we said that each of them is one.

Philebus: Certainly.

Socrates: Well, this is precisely what the previous argument is asking us. How is each of them one and many? And why are they not limitless immediately, but instead, at some stage, each acquires a particular number before each of them becomes

limitless?

19a

Protarchus: Socrates has faced us with a far from trivial question, Philebus, though I do not understand the circuitous manner in which he led us here. Anyway, please consider which of us should now respond to what is asked. Now, perhaps it is ridiculous, when I have promised faithfully to take your place in the discussion, to give it back to you again because I cannot answer this question. However, I think it would be much more ridiculous if neither of us could answer. So, please consider what we should do, for Socrates seems to me to be asking whether or not there are forms of pleasure, how many there are, and what they are like. He is also asking the same questions about understanding.

19b

Socrates: What you say is very true, dear son of Callias. Yes, our previous discussion showed that if we are unable to do this in the case of anything which is one, like or the same, or in the case of their opposites, none of us will ever be of any value in any subject.

19c

Protarchus: Socrates, it is quite likely that this is so. Now, while it is good for a wise man to know everything, his second-best course seems to lie in not forgetting himself. Well, why do I say this just now? I shall tell you. You granted this audience and your presence to all of us in order to determine what human acquisition is supreme. Indeed, when Philebus said that it is pleasure, enjoyment and delight, and everything of that sort, you disputed this and said that these are not the best. Rather, it is the other things which we are continually recalling, on purpose, in order to test both possibilities side by side in mind. You seem to be proposing that the good, which is really better than pleasure, is reason, knowledge, understanding, skill, and all that is related thereto. These we must acquire, and not those

others. Well, when these two assertions were made and there was a dispute, we threatened, playfully, that we would not let you go home until these discussions had come to an end, and had been duly clarified. You went along with this and made yourself available to us for this purpose. Therefore we are saying now, just like children, that a gift rightly given cannot be taken back. So, please desist from this manner of opposing us in the present discussion.

19e

Socrates: What do you mean?

20a

Protarchus: Casting us into perplexity, and asking questions to which we cannot give you a proper response right now. Indeed, let's not imagine that our aim is to make us all perplexed. Rather, if we prove unable to answer, then you must do so, as that is what you promised. So decide this for yourself. Should the forms of pleasure and of knowledge be distinguished by you, or instead left alone because you are somehow able to clarify the issues under dispute in some other way, and are willing to do so?

20b

Socrates: Well, since you put it like that, I no longer expect anything dreadful, for the phrase "if you are willing" takes away all fear about anything. And besides this, I think that one of the gods has given me a reminder to help us.

Protarchus: A reminder of what?

Socrates: Of certain arguments about pleasure and understanding which I once heard a long time ago, whether in a dream or whilst awake. I now realise that they said that the good was neither of these, but a third entity, different from them and better than both of them. And, indeed, if this were now to become evident to us, then pleasure would be deprived of its victory, since the good would no longer be the same as

pleasure, would it?

20c

Protarchus: Quite so.

Socrates: And as I see it, we shall no longer need this distinction between the forms of pleasure, but that will become even clearer as we go on.

Protarchus: That is very well expressed. Keep discussing it like that.

Socrates: Well, let us agree on a few more little details first.

Protarchus: What sort of details? ----- 2 Theuth was the Egyptian god of the moon, knowledge, wisdom, writing, hieroglyphics, etc. He was often depicted with the head of an ibis.

20d

Socrates: Whether that which holds the rank of good is necessarily perfect or imperfect.

Protarchus: Surely, Socrates, it is the most perfect of all things?

Socrates: What about this? Is the good sufficient?

Protarchus: How could it not be? Yes, in this regard it exceeds everything else there is.

Socrates: Indeed, I believe it is imperative to state that whatever recognises the good, pursues and desires it, and wishes to capture and acquire it for itself, and thinks of nothing else except whatever also achieves good.

Protarchus: It's not possible to contradict that.

20e

Socrates: Well, let us consider the life of pleasure and the life of understanding, and judge them by looking at each on its own.

Protarchus: How do you mean?

Socrates: Let there be no understanding in the life of pleasure, and no pleasure in the life of understanding. For if either of them is the good, it must not stand in further need of anything else at all. And if either of them turns out to be deficient, presumably that is not yet the true good, according to us.

21a

Protarchus: No. How could it be?

Socrates: Now, shall we try testing them out on you?

Protarchus: Yes, certainly.

Socrates: Then answer some questions.

Protarchus: Just ask.

Socrates: Protarchus, would you consent to live your entire life enjoying the greatest pleasures?

Protarchus: Yes, why not?

Socrates: And do you think you would still lack something if this life was yours entirely?

Protarchus: Not at all.

Socrates: Are you sure you wouldn't need to understand, reason, and work out what was needed, and that sort of thing?

21b

Protarchus: But why? Surely I would have everything once I had enjoyment.

Socrates: So, if you lived like this, would you always enjoy the utmost pleasure throughout life?

Protarchus: Why not?

Socrates: And yet, without acquiring reason, memory, knowledge and true opinion, you must firstly, I presume, be ignorant of the very fact that you are enjoying or not enjoying, since you are devoid of all understanding.

Protarchus: I must.

21c

Socrates: And, indeed, since you have not acquired memory either, you would be unable to remember what you once enjoyed, and no memory whatsoever would remain of the pleasure you experience in any moment. What's more, when there is enjoyment, you could not form the opinion that you are enjoying something since you have not acquired true opinion. And without calculation, you could not work out what you would enjoy in the future. Your life would not be the life of a man, but of some jellyfish or of sea creatures whose bodies are encased in shells. Are these the facts, or are there alternatives we can consider?

21d

Protarchus: No. How could there be?

Socrates: Well now, do we want a life like that?

Protarchus: This last argument has, for the moment, rendered me totally speechless, Socrates.

Socrates: Let us not give up just yet. We should turn to the life of reason, and consider that.

Protarchus: What sort of life do you mean?

Socrates: It arises if one of us agrees to live in possession of understanding, reason, knowledge and a complete memory of everything, but with no participation, large or small, in pleasure or pain either, but totally devoid of all such experience.

21e

Protarchus: Neither of these lives would ever be attractive to me, Socrates, nor I imagine to anyone else.

22a

Socrates: And what about the composite, Protarchus, a combination formed by mixing the two?

Protarchus: Do you mean a combination of the life of pleasure and the life of reason and understanding?

Socrates: Yes, that's the sort of thing I mean.

Protarchus: Surely everyone would choose that kind of life in preference to the other two. There will be no exceptions.

Socrates: Now, do we understand what the consequence is for the propositions we are discussing?

22b

Protarchus: Yes, certainly. Three lives have been proposed, two of which are not adequate or desirable for man or any other creature.

Socrates: And isn't it obvious at this stage that neither of these two lives actually held the good? If one of them did, it would be adequate and complete and desirable to any plants or animals which were capable of living their entire lives in that way. And if any of us chose any other, his choice would be opposed to the nature of the truly desirable, and it would be made unwillingly, under ignorance or some unfortunate compulsion.

Protarchus: So it seems, anyway.

22c

Socrates: Then, I think we have said enough to show that Philebus' goddess should not be regarded as the same as the good.

Philebus: Yes, Socrates. But your reason is not the good either, since presumably the same objections apply.

Socrates: Perhaps this is so, Philebus, in the case of my reason. But I think it is somehow different for the true and divine reason. Now, I shall not yet claim first place for reason over the combined life, so we must look at second place and decide what to do about that. Indeed, one of us will probably claim that the basis of this combined life is reason, and the other that it is

pleasure, and so, although neither of these two would be the good, perhaps we might appreciate that one of them is the basis of the good. Now, on this issue I would argue more intensely against Philebus, that in the case of this mixed life, the acquisition which renders this life preferable and good – an acquisition which is kindred to it and resembles it – is not pleasure but reason. And on this account, pleasure could never be said to have a true claim to first or second place. No, it is further back than third, if my reasoning is now to be trusted.

22e

Protarchus: Well, Socrates, it seems to me that pleasure has now fallen, as if struck down by your present arguments as it battled for first place. Reason, on the other hand, seems to have acted wisely when it did not claim primacy, for the same thing would have happened to it. But if pleasure were now deprived entirely of second place, it would suffer a disgrace in the eyes of its own lovers, for it would no longer appear quite so beautiful even to them.

23a

Socrates: In that case, is it not better to leave it alone rather than subjecting it to the pain of intense scrutiny and cross-examination?

Protarchus: You are talking nonsense, Socrates.

23b

Socrates: Is that because I am proposing something impossible, namely that pleasure experiences pain?

Protarchus: That's not the only reason. You are also forgetting that none of us will ever let you go until you have brought the discussion of these matters to a conclusion.

Socrates: Oh, dear Protarchus, then a lengthy discussion lies ahead, while the current issue is hardly an easy one either. Indeed, it also appears that we need another means of securing

second place for reason, different weaponry from the previous arguments, though perhaps some will be the same. Is this what we must do?

Protarchus: Yes, we must.

23c

Socrates: But we should try to be careful about where we propose to begin.

Protarchus: What do you mean?

Socrates: Let us divide everything that is now in the universe into two, or better still, if that is alright, into three.

Protarchus: On what basis would you propose to do this?

Socrates: Let us take some elements from our present arguments.

Protarchus: Of what kind?

Socrates: I believe we said that the god revealed the limited, and also the limitless, in things that are.

Protarchus: Yes, certainly.

23d

Socrates: Well, let's propose these as two of our forms, and the third combines both of them into one. But it does seem that I am a comical fellow when it comes to defining and enumerating forms.

Protarchus: My goodness, what are you saying?

Socrates: It appears to me that a fourth kind is also required.

Protarchus: Tell us what it is.

Socrates: Note the cause of the commingling of these with one another, and grant me that as the fourth in addition to the other three.

Protarchus: Would you not also need a fifth element which is able to separate them?

Socrates: Perhaps, but I do not think we actually need it right now. However, I presume you will forgive me if I do go after a fifth kind, should that prove necessary.

23e

Protarchus: Of course.

Socrates: Well then, having first separated three of the four, and noted that two of these are each multiple as they are split up and dispersed, let us make each of them one again, and try to understand how each was ever both one and many.

Protarchus: If you could tell me about them a little more clearly, perhaps I might follow you.

24a

Socrates: Well, I mean that the two which I am proposing are the same as the two we mentioned just now – the limitless and that which has limit – and I shall try to explain that the limitless is, in some way, many. That which has limit can wait.

Protarchus: Yes, let it wait.

Socrates: Now, think about this. Indeed, what I am asking you to consider is controversial and difficult, but consider it nevertheless. First ask whether you could ever discern any limit to hotter and colder, or whether the greater and the lesser which resides within these kinds themselves would never allow any end to come about, as long as more and less are present. Indeed, if an end were to come about, the more and less would be finished.

24b

Protarchus: What you say is very true.

Socrates: However, we say that both the greater and the lesser are always present in the hotter and the colder.

Protarchus: Very much so.

Socrates: Then our argument shows that these two are always without an end. And surely, since they have no end, they are entirely limitless.

Protarchus: Yes, it shows that quite strongly, Socrates.

24c

Socrates: Now, you have answered very well, dear Protarchus, and have reminded me that the word strongly, which you have just uttered, and the word weakly, have the same force as 'more' and 'less'. Indeed, wherever they are present they do not allow a specific quantity to exist, but they always make activities stronger rather than weaker, or the other way around, and give rise to more and to less, but they eliminate specific quantity. For as we just said, if they did not eliminate quantity, but allowed quantity and measure to arise where greater, lesser, stronger and weaker are situated, these classes themselves would disappear from the very positions they occupied. Indeed, they would no longer be hotter or colder once they had acquired quantity, for hotter is constantly advancing and does not stand still, and the same applies to colder. But quantity is fixed and has stopped advancing. So, based upon this argument, hotter, and its opposite too, turn out to be limitless.

24d

Protarchus: So it appears anyway, Socrates. But as you say, this is not easy to follow. And perhaps going over it again and again may demonstrate that questioner and respondent are in quite close agreement.

24e

Socrates: Yes, that is a good suggestion, and we should try to do that. But first consider whether we shall accept a particular characteristic of the nature of the limitless, so that we do not make the discussion too lengthy and detailed.

Protarchus: What sort of characteristic do you mean?

Socrates: Whatever appears to us to become more and less, or involves strength and mildness, or excess and everything of that sort, should all be placed in the limitless as though it were a single kind. This is based on our previous argument that whatever is split up and dispersed should be brought together, and its single nature indicated, as best we can. Do you remember?

25a

Protarchus: I remember.

Socrates: Again, whatever does not involve these but involves all their opposites – first, the equal and equality, and after the equal, the double, and any relation of number to number or measure to measure – all of these should be counted among the limited. This would appear to be our best approach. What do you think?

25b

Protarchus: Yes, very properly, Socrates.

Socrates: Very well. But what about the third kind, the mixture of these two? What characteristic shall we say that this possesses?

Protarchus: I think you are also going to answer that question for me.

Socrates: A god will certainly answer, if one of the gods happens to hear my prayers.

Protarchus: Then pray, and watch.

Socrates: I am watching, Protarchus, and it seems to me that one of them has befriended us just now.

25c

Protarchus: What do you mean? And what evidence have you?

Socrates: I shall answer of course, but please follow my argument.

Protarchus: Just speak.

Socrates: We described something as hotter and colder just now. Is this so?

Protarchus: Yes.

Socrates: Now add drier and wetter to these, also greater and lesser, faster and slower, larger and smaller, and whatever we previously included in the single nature which involves more and less.

25d

Protarchus: Do you mean the nature which is limitless?

Socrates: Yes. And combine this in turn with the offspring of the limited.

Protarchus: What offspring?

Socrates: I am referring to the nature of the limited, which we should also have drawn into a unity just now, just as we did with the limitless. We did not do so, but perhaps we shall get the same result, if the latter nature is made evident by drawing the other two into a unity.

Protarchus: What nature? What do you mean?

Socrates: The nature which contains equal and double, and whatever prevents opposites from differing from one another, and renders them symmetric and harmonious by introducing number.

25e

Protarchus: I understand. I think you mean that when these are mixed, certain products arise as a consequence in each case.

Socrates: Yes, your understanding is correct.

Protarchus: Keep going.

Socrates: Well, in the case of disease, doesn't the proper combining of these opposites produce a healthy nature?

26a

Protarchus: Yes, certainly.

Socrates: And in the case of high and low pitch, and fast and slow, which are limitless, the same products arise. And once limit is brought about, the combinations establish all of music in perfection. Is this so?

Protarchus: Absolutely.

Socrates: And, indeed, if the combinations arise where there is cold or heat, having removed the excessive and limitless, they at the same time brought about measure and symmetry.

Protarchus: Yes, indeed.

26b

Socrates: Don't the seasons and all the other beauties of our world arise from this commingling of the limitless with whatever has limit?

Protarchus: It must be so.

Socrates: Yes. And there are countless other instances which I omit mentioning, such as beauty and strength in addition to health, and also the countless different and varied beauties of the soul. For this goddess, noble Philebus, beholding for herself the insolence and general vice of everyone without any limit on the pleasure or gratification among them, introduced law and order, which do possess limit. You may say that she afflicted us, but I would say the opposite. She saved us. Is this how it seems to you, Protarchus?

26c

Protarchus: Socrates, this is very much to my way of thinking.

Socrates: Well, you may notice that I have now described these three.

Protarchus: Yes, I think I can see that. Indeed, you seem to be saying that the limitless is one, and the limit in things is second and is also one. However, I do not quite understand what you wish to designate as third.

Socrates: Yes, no wonder. The sheer scale of the third class has overwhelmed you. However, the limitless class also demonstrated multiplicity, and yet it turned out to be one, as it was stamped with the mark of the class of more, and its opposite.

26d

Protarchus: True.

Socrates: Nor indeed did we make difficulties by saying that the limited neither involved multiplicity, nor was it one by nature.

Protarchus: No, why would we?

Socrates: There is no reason at all. But assume that I regard the third as the entire offspring of the other two, taken as one, a product brought into being from the measures which are generated along with the limited.

Protarchus: I understand.

26e

Socrates: Well now, besides these three we should also consider the fourth class we mentioned earlier. Let's share the enquiry. Ask yourself whether it is necessary that everything which comes into being is generated because of some cause.

Protarchus: I think so, for how could it come into being without a cause?

Socrates: But doesn't the nature of the maker differ from the cause in nothing except its name, and should the maker and the

cause properly be described as one?

Protarchus: Correct.

27a

Socrates: And, indeed, we shall also find that what is made is, in turn, different in nothing except name from ‘what comes into being’. Is this so?

Protarchus: It is so.

Socrates: Now, isn’t it natural that the maker always leads, while what is made follows that by coming into being?

Protarchus: Certainly.

Socrates: So, the cause, and whatever serves the cause in the productive process, are different and not the same.

Protarchus: Of course.

Socrates: Therefore, whatever comes into being and whatever everything arises from provide us with the three classes.

Protarchus: They do, indeed.

27b

Socrates: And, indeed, we say that the fourth which produces all these is the cause, since we have adequately demonstrated that it is different from them.

Protarchus: Yes, it is different.

Socrates: Well, now that the four have been distinguished, it is a good idea to list them in sequence as a reminder of each one.

Protarchus: Of course.

Socrates: Then I place the limitless first, the limited second, and the mixed-being produced from these, third. And would it be a mistake to say that the cause of the mixing and production is the fourth?

27c

Protarchus: No, how could it be?

Socrates: Well then, what is our next topic of discussion, and what consideration brought us to these issues? Wasn't it this? We were deciding whether the second-best life should consist of pleasure or understanding. Wasn't that it?

Protarchus: Yes, that was it.

Socrates: However, since we have now made this four-fold distinction, perhaps we may be better able to finalise the decision about first and second place, which was of course the first issue we disagreed about.

Protarchus: Perhaps.

27d

Socrates: So come on, we awarded the victory to the mixed life of pleasure and understanding. Is this what we did?

Protarchus: It was.

Socrates: Shouldn't we look at this life and what it is, and which class it belongs to?

Protarchus: Why not?

Socrates: And we shall say, I presume, that it is part of the third class, for this does not consist of just two elements, but of the sum of all that is limitless, bound by limit. On this basis it is appropriate that this victorious mixed life should be part of that category.

Protarchus: Yes, you are quite right.

27e

Socrates: Very well. But, Philebus, what about your life of pleasure which is unmixed? In which of the classes we mentioned should it properly be included? But before you tell us, let me ask this question.

Philebus: Just ask.

Socrates: Do pleasure and pain have limit, or are they in the class involving both more and less?

Philebus: Yes, pleasure involves more, Socrates, for it would not be entirely good unless it happened by nature to be limitless in extent and in intensity.

28a

Socrates: Nor would pain be entirely bad, Philebus, so we should look for something other than the limitless nature of pleasure, in order to furnish it with some part of good. So you may include these two among the classes of limitless things. But, Protarchus and Philebus, into which of the classes we mentioned may we now, without impiety, place understanding, knowledge and reason? Yes, I think there is a lot at stake if we do not get the answer to this question right.

28b

Philebus: Now you are exalting your own god, Socrates.

Socrates: Yes, and you are exalting your own goddess, my friend. Nevertheless, the question must be answered.

Protarchus: What Socrates is saying to you is right, Philebus, and you should do as he says.

Philebus: Didn't you volunteer to speak on my behalf, Protarchus?

Protarchus: I did, indeed. But now I am a bit perplexed, Socrates, and I need you yourself to act as our spokesman, so that we don't miss the point and make some inappropriate statement about your contestant for second place.

28c

Socrates: I should do as you say, Protarchus, as you are not making a difficult request. But did I really upset you with that playful exaltation, as Philebus calls it, when I asked what sort of class reason and knowledge should be in?

Protarchus: You certainly did, Socrates.

Socrates: Anyway, it is easy to answer, for all of the wise concur, in genuine self-exaltation, that reason is our lord of heaven and earth. And perhaps they are right. But we may carry out a more lengthy investigation of the class itself, if you wish.

28d

Protarchus: Proceed as you wish, Socrates! Regardless of the length, you will not bore us.

Socrates: Well said! Let us begin by repeating this question.

Protarchus: What question?

Socrates: Whether we should say, Protarchus, that this so-called universe and everything else is ruled by an irrational and random power, and that things happen by chance, or conversely as our predecessors said, that it is governed by reason and ordered by a wonderful understanding.

28e

Protarchus: It's you, Socrates, who is wonderful. But the two accounts have nothing in common. I see the first option sounds quite irreverent to me. However, the statement that reason brings order to everything is worthy of the ordered vision of the universe, and sun, moon and stars, and the revolving heavens, and I myself would never say nor even think anything else about them.

29a

Socrates: Well, is this what you want? Should we agree with our predecessors and join them in declaring that these things are so, not merely speaking the words of others in safety, but sharing the danger and partaking of the abuse whenever a clever man says that the universe is not ordered like this, but is disordered?

Protarchus: Yes. What else could I want?

Socrates: Then come on and think about the argument we are facing here.

Protarchus: Please explain.

Socrates: I presume we realise that fire, water, air and earth – which storm-battered sailors call land – are involved in the formation of the physical nature of all creatures.

29b

Protarchus: Very much so, and we are truly being battered by the perplexities of the current argument.

Socrates: Now, there is something you should understand about these constituents of our nature.

Protarchus: What is it?

Socrates: That the portion of each of these elements in us is small, mundane, and not at all pure, and does not possess the power worthy of its nature. Let's take a single example, but it is the same for them all. For instance, there is fire in us and also fire in the universe.

Protarchus: Of course.

29c

Socrates: Now, the portion in us is small, weak and insignificant, while the fire in the universe is wondrous in extent, in beauty, and all the power associated with fire.

Protarchus: Yes. What you say is very true.

Socrates: Well then, is the universal fire sustained, given existence and augmented by the fire within us? Or is it the other way around, that the fire in you and in me and in the other creatures derives everything from the universal?

Protarchus: This question is not even worthy of a reply.

29d

Socrates: Correct. And I imagine you will say the same thing about the earth which is here in the creatures and the earth in the universe, and will answer likewise in the case of all of the other elements I asked you about a little earlier. Would you reply in this way?

Protarchus: Well, could anyone answer differently and still appear sane?

Socrates: Hardly anyone at all. But follow this next point. When we see all the elements we mentioned combined into one, don't we call it a body?

Protarchus: Of course.

29e

Socrates: Now, understand that the same applies to what we call the universe, which is composed of the same elements and would, therefore, I suppose, be a body on the same basis.

Protarchus: Absolutely correct.

Socrates: And are our bodies sustained by this body, or is it sustained by ours? And has it acquired and does it possess whatever we ascribed to them just now?

Protarchus: That, Socrates, is another question which is not worth asking.

30a

Socrates: Well then, is this next question worth asking? What do you think?

Protarchus: What is the question?

Socrates: Wouldn't we say that our body has a soul?

Protarchus: Obviously we would.

Socrates: But where, my dear Protarchus, did it get it, unless the body of the universe – a body which has the same as our body but in far greater beauty – is also ensouled?

Protarchus: Obviously there is nowhere else it could come from, Socrates.

Socrates: Now, Protarchus, in the case of the four classes – limit, limitless, their combination and the causal class – I presume we realise that this fourth, present in everything, furnishing us with soul, producing regimen and exercise for the body when it falls ill, is called extensive and multifaceted wisdom when we hear of it in other instances. But do we believe that when these same four are present in the whole universe on a large scale, and, what is more, in greater beauty and purity, this wisdom would fail to generate a beautiful and hallowed nature among them?

30c

Protarchus: That would not be at all reasonable.

Socrates: Well, if that is invalid, we had better go with the other account which suggests, as we have often said, that there is extensive limitlessness in the universe, sufficient limit, and an extraordinary cause which governs them, ordering and arranging the years, seasons and months, which may rightly be referred to as wisdom and reason.

Protarchus: Rightly so, indeed.

Socrates: But there could never be wisdom and reason without soul.

Protarchus: There could not.

30d

Socrates: Then, you will say that there is a lordly soul in the nature of Zeus, and lordly reason is engendered through the power of the cause, while in other gods there are other glories, and each of them likes to be described accordingly.

Protarchus: Very much so.

Socrates: Now, Protarchus, do not imagine that this statement we have made is some trifle. No, it lends support to those people of old who said that reason always rules the universe.

Protarchus: Yes, it does indeed.

Socrates: And, in fact, it has provided an answer to my query, by saying that of the four classes, reason belongs to the one which we referred to as the cause of everything. I presume that you have got our answer to the question at this stage.

30e

Protarchus: Yes I have, and it is most satisfactory, though I did not realise you were answering me.

Socrates: Indeed, Protarchus, playfulness sometimes brings relief from seriousness.

Protarchus: Well put.

31a

Socrates: Surely, my friend, we have now explained quite plausibly the class to which reason belongs, and the power it possesses.

Protarchus: Yes, certainly.

Socrates: And, indeed, the class to which pleasure belongs was evident in like manner some time ago.

Protarchus: Very much so.

Socrates: So, let us also recall some facts about both. Reason was akin to a cause, and fitted that class quite well, while pleasure itself was limitless, and belonged in the class which does not possess beginning, middle or end within itself, from itself, nor will ever do so.

31b

Protarchus: We shall remember. Indeed, how could we forget?

Socrates: Now, the next thing we need to do is see what each of them reside in, and what condition causes them to arise when they do arise. Let us take pleasure first since we examined its class first. Let us do the same with these questions. However, we could never examine pleasure adequately in isolation from pain.

Protarchus: Well, if it is necessary to proceed in that way, let's proceed in that way.

Socrates: Does the generation of these appear to you as it does to me?

31c

Protarchus: How is that?

Socrates: It appears to me that, by nature, pleasure and pain both arise at the same time in the combined class.

Protarchus: But Socrates, my friend, please remind us which of the four classes, from our earlier discussion, you wish to designate as 'combined'.

Socrates: Well, you're a wonder! I'll do the best I can.

Protarchus: Well said.

Socrates: Well, we should regard the 'combined' as the third of the classes we mentioned.

Protarchus: Is it the one you listed after the limitless and limit, and in which, I think, you placed health and harmony?

Socrates: Excellent! Now give me your closest attention.

Protarchus: Speak on.

31d

Socrates: Then, I claim that when harmony is disrupted in us living creatures, then a disruption of our natural state and a generation of pain arise at the same time.

Protarchus: Quite likely.

Socrates: But if harmony is again restored and it returns to its own nature, we should say that pleasure arises, if we must speak on a vast subject briefly and most hastily.

31e

Protarchus: I do think that what you are saying is correct, Socrates, but let's try to describe these particular issues more clearly.

Socrates: Aren't the commonplace and obvious instances somehow easiest to understand?

Protarchus: What instances?

Socrates: Is hunger, in a sense, a disruption and a pain?

Protarchus: Yes.

Socrates: And is eating, and being filled once more, a pleasure?

Protarchus: Yes.

32a

Socrates: Thirst, for its part, is a disturbance and a pain, while pleasure is the ability of a liquid to replenish what has dried out. Again, the unnatural dispersal and dissolution which are the effects of heat is a pain, while the natural restoration and cooling is a pleasure.

Protarchus: Yes, certainly.

Socrates: Also, the unnatural congealing of the fluids in a creature due to cold is a pain, whereas their dispersal and return to their former state, the natural course, is a pleasure. And in short, consider whether it would be reasonable for someone to say that when the natural form of limit and limitless, which as we said earlier constitutes an ensouled being, is disrupted, this disruption is a pain, while the restoration of them all once more, back to the course of their own being, is a pleasure.

32b

Protarchus: Good. That sounds to me like a fair summary.

Socrates: Then, may we propose that either of these experiences constitutes one form of pleasure and of pain?

Protarchus: We may.

32c

Socrates: Also, let us propose that there is expectation of these experiences by the soul itself, the sweet and confident anticipation prior to the pleasures, and the fear and anxiety prior to the pains.

Protarchus: Yes, and this is a different form of pleasure and pain, which arises in the soul itself independently of the body, through anticipation.

Socrates: Your understanding is correct. For in these instances, in my opinion, I believe that each arises in a pure form, and seemingly are not mixtures of pleasure and pain. So, it will be evident, in the case of pleasure, whether the entire class is desirable, or whether we should say this about one of the other classes we mentioned, rather than about pleasure and pain. In which case, pleasure and pain, just like hot and cold and everything of that sort, should sometimes be desired and sometimes not, as they are not actually good, though some of them, on occasion, assume the nature of things that are good at the time.

32d

Protarchus: You are quite right to say that we should work through the difficulty we are now pursuing in this sort of manner.

32e

Socrates: Well, let's agree on something first, that if what was said is indeed the case, and pain is disruptive while pleasure is restorative, we should also reflect upon the absence of

disruption and restoration, and the precise state of each living creature under such circumstances. Think hard about this, and then respond. Isn't it inescapable that the creature, at that particular time, experiences neither pleasure nor pain to any degree?

Protarchus: Yes, it must be so.

33a

Socrates: Isn't such a condition a third option for us besides those of pleasure and pain?

Protarchus: Of course.

Socrates: Well, try to remember this as we proceed, for it is quite significant for our decision about pleasure whether we remember this or not. And we should say a little more about it if you have no objection.

Protarchus: Tell me.

Socrates: Note that there is nothing to prevent someone, who has chosen the life of understanding, from living in this manner.

33b

Protarchus: Do you mean living without either pleasure or pain?

Socrates: Yes. For it was stated, I believe, in the comparison of lives, that the person who chooses the life of reason and understanding must not experience pleasure to any degree.

Protarchus: Yes, that is certainly what was said.

Socrates: Therefore, he would live like this, and it would not be surprising if it proved to be the most divine of the lives.

Protarchus: Yes, as it is quite unlikely that the gods experience either pleasure or its opposite.

Socrates: Most unlikely indeed, as it would be quite unbecoming for them to experience either. However, we shall consider this again later, if it is relevant to our discussion, and we shall add it to the evidence that reason should have second place, if we cannot do so for first place.

33c

Protarchus: A very appropriate suggestion.

Socrates: And, indeed, the other form of pleasure, which we said belongs to the soul itself, comes into being entirely through memory.

Protarchus: How?

Socrates: It seems we must first understand what precisely memory is, and may even have to understand perception before memory, if all of these related issues are to become clearer to us in an appropriate manner.

33d

Protarchus: How do you mean?

Socrates: Take the case of the experiences of our body. Some of these are extinguished within the body before they arrive at the soul, leaving soul unaffected, while others proceed through both body and soul, engendering a sort of vibration which is particular to each but common to both.

Protarchus: Very well.

Socrates: Now, in the case where the experiences do not proceed through both body and soul, would we say that the soul is unaware, while, on the other hand, when they do involve both, shall we be quite right to say that it is not unaware?

33e

Protarchus: This must be so.

Socrates: However, you should certainly not assume that I am saying that the unawareness somehow produces forgetfulness

in this case. Indeed, forgetfulness is the departure of a memory, which in the case we are describing has not yet arisen. And it would be strange to speak of the loss of something which is not, and has not yet come into existence. Is that so?

Protarchus: Of course.

Socrates: Then you should just change the names.

Protarchus: In what way?

Socrates: Rather than saying that the soul is ‘unaware’ when it is not affected by the vibrations associated with the body, let’s use the term ‘insensible’ for what we now call forgetting.

34a

Protarchus: I understand.

Socrates: On the other hand, the coming together of body and soul in a single experience, where they are also moved together, is a movement which, for its part, could appropriately be referred to by the name ‘perception’.

Protarchus: Very true.

Socrates: So, do we now understand what we mean when we use the term perception?

Protarchus: Of course.

Socrates: So, anyone who says that memory is the preservation of perception would, in my view, be quite right to say so.

34b

Protarchus: Yes, correct indeed.

Socrates: And don’t we say that recollection is different from memory?

Protarchus: Perhaps.

Socrates: Are they not different in the following way?

Protarchus: What way?

Socrates: When the soul itself, without use of the body, retrieves within itself as best it can whatever it once experienced along with the body, presumably we say that it is then recollecting. Is this so?

Protarchus: It certainly is.

Socrates: And, indeed, when memory of either a perception or piece of knowledge has been lost, and the soul itself digs it up again within itself all these occurrences are also called recollections, I presume.

34c

Protarchus: You are right.

Socrates: Now, the reason we have said all this is as follows.

Protarchus: Tell me.

Socrates: So that we may understand the pleasure of the soul without body as comprehensively and clearly as we can, and also its desire at the same time. Indeed, through these two it seems that both will be clarified.

Protarchus: In that case, Socrates, we should discuss them next.

Socrates: It seems that our investigation must involve a lot of discussion about the origin of pleasure and every form it has, and, indeed, it appears the first thing we must understand is what desire is and where it arises.

34d

Protarchus: Then let's investigate it, for we have nothing to lose.

Socrates: We do have something to lose, Protarchus. If we find what we are now looking for, we lose our perplexity about these very matters.

Protarchus: You are right to remind us, but now let's try to address the next issues.

34e

Socrates: Didn't we say just now that hunger and thirst, and numerous other things of that sort, were desires?

Protarchus: Most definitely.

Socrates: So, what precisely is the sameness we look to, whereby we call them by one name though they differ so much?

Protarchus: By Zeus, Socrates, that question may not be easy to answer, but it deserves a response nonetheless.

Socrates: Then let's resume the discussion again from there, based on the same examples.

Protarchus: From where?

Socrates: We say, do we not, that someone is thirsty?

Protarchus: Of course.

Socrates: And does this mean that he is empty of something?

Protarchus: Indeed.

Socrates: Now, is thirst a desire?

Protarchus: Yes, a desire for drink.

35a

Socrates: For drink, or satisfaction through drink?

Protarchus: I think it is for satisfaction.

Socrates: So, when one of us is empty, it seems that he desires the opposite of whatever he experiences, for being empty he desires satisfaction.

Protarchus: Obviously.

Socrates: What about this? When we are empty for the first time, is there any way we can have contact with satisfaction,

either through perception or through memory, when we have no present experience of satisfaction, and have never experienced it before?

Protarchus: No, how could we?

35b

Socrates: And yet we say that whoever is desiring, desires something.

Protarchus: It must be so.

Socrates: So he does not desire that which he is experiencing, for he is thirsty and this is an emptiness, but his desire is for satisfaction.

Protarchus: Yes.

Socrates: Therefore, some aspect of the thirsty person would somehow have contact with satisfaction.

Protarchus: It must.

Socrates: However, it cannot be the body, for it is presumably empty.

Protarchus: Yes.

Socrates: The only other option is that the soul would have contact with satisfaction, obviously through memory, for how else could it have contact with it?

35c

Protarchus: There is hardly any alternative.

Socrates: Do we understand what consequences these arguments have for us?

Protarchus: What are they?

Socrates: This argument is telling us that desire belonging to the body does not arise.

Protarchus: In what way?

Socrates: Because it reveals that every creature consistently strives for the opposite of what it is experiencing.

Protarchus: Very much so.

Socrates: But the urge leading towards the opposite of what is being experienced would presumably make it clear that there is memory of those opposite experiences.

Protarchus: Very much so.

35d

Socrates: So, having shown that memory is what impels us towards objects of desire, the argument has demonstrated that every urge and desire, and the motive principle of the entire creature, belongs to soul.

Protarchus: Correct.

Socrates: Therefore, the argument will not accept that our body experiences thirst or hunger or anything of that sort.

Protarchus: Very true.

Socrates: Now, there is something else we should observe about these same examples. Indeed, the argument seems to want to show us that a certain mode of life is implied in these particular cases.

35e

Protarchus: In what cases, and to what sort of life are you referring?

Socrates: I mean cases where there is satisfaction and deficiency, and whatever else is associated with the preservation or destruction of living beings. When one of us encounters either process, he experiences either pain or pleasure, depending on the transformation.

Protarchus: Yes, that is what happens.

Socrates: And what happens if we are in between the two conditions?

Protarchus: How?

Socrates: When someone is pained by an experience, and remembers the pleasures which would stop the pain but is not yet satisfied, what about that? Shall we say that he is in between the two conditions, or shall we not?

36a

Protarchus: Let's say that he is.

Socrates: Is he experiencing complete pleasure or complete pain?

Protarchus: Not pleasure, by Zeus. Instead he is afflicted by a twofold pain, one based upon what the body is experiencing, the other based upon the soul's anticipation and longing.

Socrates: Protarchus, how can you say that the pain is twofold? Is it not the case that sometimes when we lack something we stand in evident hope of being satisfied, while at other times, on the contrary, we have no hope?

36b

Protarchus: Yes, very much so.

Socrates: Don't you think that we are pleased by the memory when there is hope of being satisfied, even though there is also deficiency and we are in pain at that time?

Protarchus: This must be so.

Socrates: On such an occasion, man and the other creatures experience both pleasure and pain simultaneously.

Protarchus: Quite likely.

Socrates: But what if he is empty, with no hope of attaining satisfaction? Isn't that when the twofold affliction would arise over the painful experience which you considered just now,

when you expressed the view that the pain is always twofold?

36c

Protarchus: That is very true, Socrates.

Socrates: Now, let us make some use of this investigation into these experiences in the following way.

Protarchus: In what way?

Socrates: Should we declare that these pains and pleasures are true, or that they are false? Or are some true and others not?

Protarchus: But Socrates, how could pleasures or pains be false?

Socrates: But Protarchus, how could there be true or false fears, or expectations which are true or untrue, or true and false opinions?

36d

Protarchus: Well, I would agree with you about the opinions, but not the others.

Socrates: Do you realise what you are saying? It is very likely that we are initiating a significant discussion.

Protarchus: That's true.

Socrates: Son of a great man! But if it is relevant to what has been said before, we should consider this.

Protarchus: Perhaps, in this case anyway.

Socrates: Then we must forgo any lengthy digression or irrelevant discussions.

Protarchus: Correct.

36e

Socrates: So, discuss this with me, for the very perplexities we presented just now are a source of constant wonder to me. What have you to say? Are there not false as well as true pleasures?

Protarchus: How could there be?

Socrates: In that case, you are saying that no one in a dream or awake, in madness or mental disorder, ever presumes that he is experiencing pleasure when he is not experiencing pleasure, or, on the other hand, presumes that he is experiencing pain when he is not experiencing pain.

Protarchus: Socrates, we all presume that these things do happen.

Socrates: But are we right to presume so or should we consider whether this is correct or incorrect?

Protarchus: I'd say we should consider this.

37a

Socrates: Then let us be more precise and clear in discussing pleasure and opinion. Indeed, we do have the power to form opinions, I presume?

Protarchus: Yes.

Socrates: And to experience pleasure?

Protarchus: Yes.

Socrates: And, indeed, is there also an object of opinion?

Protarchus: How could there not be?

Socrates: And is there something by which the enjoyer is pleased?

Protarchus: Again, there must be.

Socrates: Now, whether the one who forms opinions forms them correctly or incorrectly, the actual opinion forming is never lost.

37b

Protarchus: No, how could it?

Socrates: And again, whether the enjoyer enjoys correctly or incorrectly, obviously he will never lose the actual enjoying.

Protarchus: Yes, that is also the case.

Socrates: Therefore, we must consider how it comes about that opinion can be either true or false, while pleasure is only true. And yet, the opinion forming and the enjoying are both alike designated as actual.

Protarchus: We should consider this.

37c

Socrates: True and false are applicable to opinion, and on that account it becomes not just opinion, but opinion with one of these qualities. Is this what you say we should consider?

Protarchus: Yes.

Socrates: But, besides this, we also need to agree whether in general there are things which have qualities, while on the other hand pleasure and pain are just as they are and do not take on any qualities.

Protarchus: Obviously.

Socrates: But it is not hard to see that these two have qualities. For we said a while ago that pleasures and pains can become great or small in varying degrees of intensity.

37d

Protarchus: We certainly did.

Socrates: And yet, Protarchus, if some badness attaches to any of these, shall we say that the opinion becomes bad in this way, and the pleasure also becomes bad?

Protarchus: But of course, Socrates.

Socrates: And what if correctness or the opposite of correctness attaches to any of these? Won't we say that the opinion is correct if it possesses correctness, and that the same

goes for pleasure?

Protarchus: We must.

37e

Socrates: But if the formation of the opinion involves an error, then the opinion involves an error, and we must agree that it is not correct, and is not being correctly formed.

Protarchus: Yes, how could it be?

Socrates: Then again, if we discern that pain or pleasure involve an error about the object which pains or pleases, should we refer to them as correct, or useful, or apply any other term of praise?

Protarchus: No, we should not, if pleasure can actually be in error.

Socrates: And, indeed, it seems anyway that pleasure often arises in us in conjunction with false opinion rather than correct opinion.

38a

Protarchus: Yes, of course, Socrates. But in that case, it is the opinion which we then call false, but no one would ever refer to the pleasure itself as false.

Socrates: Protarchus, you are putting up a brave defence with your current statement about pleasure.

Protarchus: Not really. I'm just reporting what I hear.

Socrates: But, my friend, is there no difference for us between the pleasure accompanied by correct opinion and knowledge, and the pleasure accompanied by false opinion and ignorance which frequently arises in each of us?

38b

Protarchus: There is probably a significant difference.

Socrates: Then let's proceed to contemplate the difference between them.

Protarchus: Proceed as you see fit.

Socrates: Then I shall proceed in a particular way.

Protarchus: What way?

Socrates: Do we say that our opinion is sometimes true, sometimes false?

Protarchus: It is.

Socrates: And as we said, pleasure and pain often follow these – follow true and false opinion I mean.

Protarchus: Certainly.

Socrates: Don't opinion, and the attempt to form definite opinions, always arise in us, in each case, from memory and perception?

38c

Protarchus: Very much so.

Socrates: Now, do we believe that the following example must be relevant in these cases?

Protarchus: What example?

Socrates: Would you agree that often, when someone happens to see things from a distance, not very clearly, he will want to decide what the objects he is looking at actually are?

Protarchus: I would agree.

Socrates: And wouldn't he go on to a particular question?

Protarchus: Such as?

38d

Socrates: "What exactly is it that appears to be situated beside that rock under a tree?" Do you think he might say that to

himself, when presented with appearances of that nature?

Protarchus: Yes, certainly.

Socrates: And after this, as an answer to such a question, might he say that it is a man, and be correct in his assertion?

Protarchus: Absolutely.

Socrates: And if he makes a mistake, he might say instead that he is looking at a statue, the work of some shepherds.

Protarchus: Very much so.

Socrates: And if someone was with him, he might repeat once more, out loud to his companion, the very words he had spoken to himself. And in this way, what we previously called an opinion would then become a statement.

Protarchus: Of course.

38e

Socrates: However, if he is alone, he thinks the same thing to himself and sometimes proceeds for a considerable time with that idea in mind.

Protarchus: Yes, certainly.

Socrates: Well, I wonder if your view of these situations is like mine.

Protarchus: What is yours like?

Socrates: It seems to me that our soul is then like a book.

Protarchus: How so?

39a

Socrates: When memory coincides with the perceptions and the experiences which are associated with them, they almost seem to me then, in a way, to write words in our souls. And when the truth is written, it results in the generation of true opinion and true arguments within us. However, when our

so-called internal scribe writes what is false, it results in the opposite of true opinions and arguments.

39b

Protarchus: Yes, that is how it seems to me, and I accept this manner of describing it.

Socrates: Then you should also accept that another craftsman arises in our souls at the same time.

Protarchus: Who is he?

Socrates: A painter, who is beside the writer of whatever is said, drawing images of this in the soul.

Protarchus: Yes, but how do we say he does this, and when?

Socrates: It occurs when a person has derived opinions and formulations from sight or some other sense perception, and then somehow beholds images of the opinions and formulations within himself. Doesn't this happen to us?

39c

Protarchus: It certainly does.

Socrates: And aren't the images of the true opinions and formulations true, while the images of the false ones are false?

Protarchus: Entirely so.

Socrates: Now, if we have described this correctly, there is an additional point we must consider.

Protarchus: What is it?

Socrates: Whether this is how we must experience the present or the past events, but not, however, the future events.

Protarchus: Surely it applies to all divisions of time.

39d

Socrates: Wasn't it stated earlier that pleasures and pains arising from the soul itself may come into being before

pleasures and pains arising from the body? As a consequence, anticipated pleasures and pains about the future arise in us.

Protarchus: Very true.

Socrates: Now, we proposed a little earlier that writings and drawings are produced within us. But do these relate only to past and present time, and not to the future?

39e

Protarchus: They definitely relate to the future.

Socrates: So, are you stating emphatically that all these are hopes for the future, and that we, for our part, are always full of hopes throughout our entire life?

Protarchus: Entirely so.

Socrates: Come now, I have a further question from what we have just said.

Protarchus: What is it?

Socrates: Isn't a just and holy and entirely good man also divinely favoured?

Protarchus: Of course.

40a

Socrates: And what about an unjust and utterly bad man? Isn't he in the opposite case?

Protarchus: He must be.

Socrates: Now, every man, as we said earlier, is full of many hopes.

Protarchus: How could he avoid it?

Socrates: Then there are accounts in each of us which we call hopes.

Protarchus: Yes.

Socrates: And what is more, there are the painted images, and a person may often see himself acquiring a huge quantity of gold and a great deal of pleasure on that account. And in this picture he sees himself absolutely delighted with himself.

40b

Protarchus: Inevitably.

Socrates: Now, should we say that the pictures presented to the good people are generally true, due to the divine favour, while the opposite sort are generally presented to the bad people? Should we say this or not?

Protarchus: We certainly should say this.

Socrates: Therefore, the bad people also have just as many pleasures depicted within, but presumably the pleasures are false.

Protarchus: Of course.

40c

Socrates: So the bad people delight for the most part in false pleasures, while the good people delight in the true.

Protarchus: What you say is most compelling.

Socrates: Then, based upon the present argument, there are false pleasures in people's souls, though they imitate the true pleasures in a ridiculous manner, and the same also applies to pains.

Protarchus: There are.

Socrates: Now, it was shown that it is always possible for someone who forms any opinion actually to form that opinion even though it is sometimes based neither upon the present, the past or the future.

Protarchus: Very much so.

40d

Socrates: And these were, I believe, responsible for false opinions and their formation. Is this so?

Protarchus: Yes.

Socrates: Well now, shouldn't we also assign to pleasure and pain a condition corresponding to these?

Protarchus: In what way?

Socrates: In the sense that it is always possible for someone who enjoys any pleasure, however unreasonable, to have actual enjoyment, even though it sometimes has no basis in the present or the past, and often – yes, perhaps most often – has no basis in anything that will ever happen.

40e

Protarchus: Yes, Socrates, that's also the way it must be.

Socrates: Wouldn't the same argument apply to fear and anger, and everything of that sort, that all such responses are sometimes false?

Protarchus: Very much so.

Socrates: What about this? Can we say whether opinions are bad or good unless we refer to their falsehood?

Protarchus: There is no other way.

Socrates: And we realise, I presume, that there is no other way for pleasures to be bad except by being false.

41a

Protarchus: No, Socrates, the precise opposite is the case. Indeed, hardly anyone would suggest that pleasures and pains are bad on account of falsity. No, it is due to the occurrence of a different badness which is extensive and varied.

Socrates: Well, we shall discuss bad pleasures, and those which are as they are through badness, a little later if we both see fit. But we should now discuss, in a different way, the numerous

false pleasures which are so often present and arising within us. For perhaps we may find this useful in making our decision.

41b

Protarchus: Yes. It must be helpful, but only if there are, in fact, pleasures like this.

Socrates: But, Protarchus, in my opinion anyway there are such pleasures. And now that we have raised the issue, this view cannot be left unexamined.

Protarchus: Very well.

Socrates: Then just like athletes, let's take up our positions in relation to this additional argument.

Protarchus: Let's proceed.

41c

Socrates: Well, we said a little earlier, if my memory serves me well, that whenever there are so-called desires in us, the body and the soul are then separated, and divided in relation to their experiences.

Protarchus: I do remember, and that is what was said.

Socrates: Wasn't it soul that desired conditions opposite to the condition of the body, while the body for its part, through its experience, furnished the pain or some pleasure?

Protarchus: Yes, that's how it was described.

Socrates: Now, work out what is happening in these circumstances.

Protarchus: Please tell me.

41d

Socrates: What happens is this. In this situation, pleasure and pain are present at the same time, and although they are opposite to one another, the perception of them occurs simultaneously, as we have shown just now.

Protarchus: Yes, we did.

Socrates: Now, was there something said and agreed upon by us earlier?

Protarchus: What?

Socrates: That both pleasure and pain admit of greater and lesser, and both are in the class of the limitless.

Protarchus: We did say that. What of it?

Socrates: What means are there of judging them correctly?

41e

Protarchus: What sort of judgement? About what?

Socrates: The aim of our judgement about them in such situations is to decide on any occasion if one is greater or lesser than the other, or more numerous or more intense, by comparing pain to pleasure, pain to pain, and pleasure to pleasure.

Protarchus: Yes, this is so. And these are the sorts of things our judgement aims at.

42a

Socrates: What about this? In the case of sight, seeing the sizes of objects from afar and from close up misrepresents the truth, and gives rise to false opinion. However, does the same thing happen in the case of pain and pleasure?

Protarchus: Yes, to an even greater extent, Socrates.

Socrates: Well, this conclusion turns out to be the opposite of the earlier one.

Protarchus: In what way do you mean?

Socrates: In the previous case, the opinions themselves were true or false, and they simultaneously infected the pleasures and pains with their own characteristics.

42b

Protarchus: Very true.

Socrates: But now they change because they are viewed from near or far, as the case may be. And once they are compared with one another, the pleasures appear greater and more intense compared to the pains, and the pains in turn seem smaller in comparison with the pleasures.

Protarchus: This sort of thing must occur under these circumstances.

Socrates: Now, each appears greater or lesser than it actually is, and if you sever this ‘appearing but not being’ from either of them, you will never propose that its appearance is correct, nor would you ever dare to assert that anything associated with this portion of pleasure and pain is ever correct and true.

42c

Protarchus: Not at all.

Socrates: Then, in addition to these, we shall see whether there is a way in which we may find even more false pleasures and pains than these in living creatures, both actually and apparently.

Protarchus: But what are they like? And how shall we find them?

Socrates: It has been said quite often that when the nature of any creature is disrupted by agglomerations, separations, replenishments, depletions, and certain growths and withering, what follows is pain, suffering, distress, and whatever else goes under such names.

42d

Protarchus: Yes, that has often been said.

Socrates: However, once it is restored to its own nature, we agreed among ourselves that this restoration is pleasure.

Protarchus: Correct.

Socrates: But what about the situation in which neither of these processes is happening to our bodies?

Protarchus: But when would that ever happen, Socrates?

42e

Socrates: The question you just asked is not to the point, Protarchus.

Protarchus: Why is that?

Socrates: Because there is nothing to prevent me putting my original question to you once more.

Protarchus: In what way?

Socrates: I shall say, Protarchus, if something like this may not happen, what must the consequences of this be for ourselves?

Protarchus: Are you referring to the consequences of there being no movement of the body by either process?

Socrates: Just so.

Protarchus: Well, one thing is obvious anyway, Socrates. In such a situation, neither pleasure nor any pain would ever arise.

43a

Socrates: Well said. And yet I think you mean that we are always experiencing one or other of these processes, for as the wise say, everything is constantly flowing back and forth.

Protarchus: Yes, that is what they say. And it seems quite important.

Socrates: Well it would be, wouldn't it, since the men themselves are quite important? However, I wish to evade this impending argument, so I intend to get away from it in this way, and you should escape with me.

Protarchus: Tell me how.

43b

Socrates: We should tell them that we accept what they say. However, you should tell me whether all living beings always notice everything that happens to them, so that we are not unaware even that we ourselves are growing, or being affected in that sort of way at all. Is that the case, or is it the very opposite?

Protarchus: Obviously it is the very opposite, for we are hardly aware of that sort of thing at all.

Socrates: Then, what we said just now was not well formulated – that the occurrence of changes ‘back and forth’ brings about pleasure and pain.

Protarchus: Of course not.

43c

Socrates: There is a better formulation, which will be less open to criticism.

Protarchus: How should we put it?

Socrates: That significant changes cause pleasure and pain in us, while, on the other hand, moderate minor changes produce neither of them at all.

Protarchus: That is a more correct formulation than the other one, Socrates.

Socrates: Well, if that is the case, then the life we were discussing earlier is making a reappearance.

Protarchus: What sort of life?

Socrates: The one which we said was devoid of pain and without enjoyment.

Protarchus: Yes, that is very true.

43d

Socrates: So, on this basis, we may propose three lives, one pleasant, another painful, and one which is neither. Or what would you say about them?

Protarchus: I would not say anything different. There are three lives.

Socrates: In that case, not experiencing pain could never be the same as experiencing enjoyment.

Protarchus: No, how could it?

Socrates: So when you hear someone say that to live one's entire life painlessly is the most pleasant thing of all, what do you suppose that he means?

Protarchus: It seems to me that he is saying that pleasure consists in not experiencing pain.

43e

Socrates: Now, select any three entities you wish, say gold and silver and a third which is neither, just to give them more attractive titles.

Protarchus: Done.

Socrates: Well, is there any way that the one which is neither of these could become either gold or silver?

Protarchus: No, how could it?

Socrates: So, based upon a proper account, the middle life may never be correctly regarded as pleasant or painful. And if someone were to think so, it would not be right to think so; and if someone were to say so, it would not be right to say so.

Protarchus: It would not.

44a

Socrates: And yet, my friend, we are aware of people who say this and think this.

Protarchus: Very much so.

Socrates: In that case, do they think they are experiencing pleasure when they experience no pain?

Protarchus: So they say, anyway.

Socrates: Then they believe they are experiencing pleasure at that time, or else they would not have said so I presume.

Protarchus: Quite likely.

Socrates: Well then, they are forming a false opinion about pleasure, if in fact experiencing no pain is, by nature, distinct from experiencing pleasure.

Protarchus: And they certainly are distinct.

44b

Socrates: Now, we should decide for ourselves whether there are three lives, as we said just now, or only two – pain, which is bad for people, and freedom from pain, which in itself is good and should be called pleasure.

Protarchus: But why are we asking ourselves this question now, Socrates? I don't really understand.

Socrates: Then, Protarchus, you do not really understand who Philebus' enemies are.

Protarchus: To which enemies are you referring?

Socrates: Men who give very brilliant accounts of natural phenomena, and who deny that pleasures have any being at all.

Protarchus: In what way?

44c

Socrates: They say that whatever Philebus here and his circle now call pleasures are all escapes from pains.

Protarchus: And do you recommend that we believe them? Or what do you suggest, Socrates?

Socrates: No. But we should make use of them, as if they were prophets prophesying without skill but with a certain harshness of nature which is not devoid of nobility. They have developed a strong hatred of the power of pleasure, and have come to regard it as unsound to such an extent that even its very attractiveness is beguilement, not pleasure. Now, you may make use of these doctrines on these issues once you have also given further consideration to their other harsh judgements. Then, after that, you will hear what pleasures seem to me to be true, so that having considered both arguments, we may come to a decision about the power of pleasure.

44d

Protarchus: That is a good suggestion.

Socrates: Well, let us follow them just as if they were allies, relying on the footprints of their harshness. For I believe they say something like this, beginning with a basic question. If we wished to discern the nature of any form at all, such as the nature of hardness, for instance, would we recognise it better by referring to the very hardest things or those with the most minute degrees of hardness? Now, Protarchus, you must reply to these harsh fellows just as you reply to me.

44e

Protarchus: Yes, certainly. And I say to them that we should refer to the highest standard.

Socrates: Therefore, if we wish to discern the precise nature which belongs to the class of pleasure, we must not refer to minute degrees of pleasure, but to those regarded as most extreme and intense.

45a

Protarchus: Everyone nowadays would agree with you on that point.

Socrates: Now, do we usually say that the commonest and, indeed, greatest pleasures are those associated with the body?

Protarchus: Yes, of course.

Socrates: Now, are the pleasures greater, and do they become greater, in the case of people suffering diseases or in the case of the healthy people? And let's be careful lest we trip ourselves up by answering in haste. Indeed, we might perhaps say that it is in the case of the healthy people.

45b

Protarchus: Quite likely.

Socrates: What about this? Aren't the most overpowering of pleasures those which are preceded by the greatest desires?

Protarchus: Yes, that's true.

Socrates: But don't people with fever, and who have similar diseases, experience thirst and cold and everything else which they normally suffer through the body, to a greater extent? And as they are more acquainted with deprivation, won't they derive greater pleasure from the replenishment? Or shall we deny that this is true?

Protarchus: Well, now that you have said it, it certainly appears to be true.

45c

Socrates: What about this? Are we actually right in saying that someone who wishes to see the pleasures that are greatest must turn his consideration not to health but to disease? And take care not to assume that my intention is to ask you if extremely sick people experience more pleasure than the healthy. No, assume that I am interested in the magnitude of pleasure and the occasions in which the extreme of such magnitude arises. For we are saying that it is necessary to understand its nature and what those people mean when they state that pleasure does

not have any being.

45d

Protarchus: I am following your argument fairly well.

Socrates: And you will actually prove that quite soon, Protarchus, for you are going to answer a question. Can you recognise greater pleasures in a wanton life than in a sound-minded one? Now, I do not mean a greater number of pleasures, but a greater intensity and extent. Think about this, and answer me.

Protarchus: Yes, I understand what you are asking, and I see a significant distinction. The proverbial maxim, “Nothing in excess”, constantly restrains the sound-minded, and they are convinced by it. However, the intense pleasure possesses the uncontrolled and wanton people to the point of insanity, and renders them notorious.

45e

Socrates: Very good. And if this is the case, it is obvious that the greatest pleasures, and indeed the greatest pains, arise from a certain degeneracy of soul and body, but not from their excellence.

Protarchus: Yes, certainly.

Socrates: Then we should select some of these pleasures, and consider what precise characteristic they possess which made us say they are the greatest.

46a

Protarchus: We must.

Socrates: Then let us consider the pleasures associated with diseases of a certain sort, and what precise characteristic they possess.

Protarchus: Diseases of what sort?

Socrates: Of an unseemly sort, which the men we called harsh utterly detest.

Protarchus: Such as?

Socrates: Like the relief of an itch and other such ailments by scratching, as they require no other remedy. By the gods, whatever should we call this condition when it arises in us? Is it pleasure or pain?

Protarchus: Well, Socrates, it seems to constitute a mixture, something bad.

46b

Socrates: Now, I was not actually thinking of Philebus when I offered that example. Yet we would not really be able ever to come to a decision on the current issue, Protarchus, without reviewing these pleasures and those that follow them.

Protarchus: In that case, we should proceed to the pleasures which are related to these.

Socrates: You mean the pleasures which involve admixture?

Protarchus: Yes, certainly.

46c

Socrates: Well there are mixtures which are physical, residing in the bodies themselves, while others belong to the soul itself, and are in the soul. Then again, we shall find pains of the body and of the soul which are mixed with pleasures, and the combinations are sometimes called pleasures and sometimes pains.

Protarchus: How so?

Socrates: Whenever a condition is being established or is abating, and the person experiences the opposite effects and is warmed as he is cooling down or cooled whilst warming up, I believe he will try to attain the one condition and be free of the

other; while if this so-called bittersweet mixture is persistent, it produces irritation and leads on to a violent state.

46d

Protarchus: Yes, what you say is very true.

Socrates: Don't these mixtures sometimes have a balance of pleasure and pain, and sometimes more of one than the other?

Protarchus: Yes, they must.

Socrates: Now, say that more pain than pleasure arises in the case of a tickle or the itch we just mentioned. When the seething and inflammation is internal, and one does not reach it by scratching and rubbing, only the superficial symptom is dissipated. In such circumstances, the application of fire to the external parts changes the pain to the opposite place by means of the externally applied heat, and sometimes produces enormous pleasure. At other times, however, the opposition of internal to external combines pleasure with pain, either of which may be dominant. The outcome is a violent dispersal of what has been accumulated, and an aggregation of what has been dispersed, yielding pleasure and pain alike.

47a

Protarchus: Very true.

Socrates: When more pleasure is included in such mixtures, the reduced admixture of pain causes tickling and a mild irritation, while a much greater influx of pleasure for its part brings tension, and sometimes makes the heart jump. Producing all sorts of complexions, and a variety of physical distortions and irregularities of breath, it induces complete insanity and mindless ranting.

47b

Protarchus: That's exactly what happens.

Socrates: Yes, my friend, and this condition makes others and the man himself say that he is almost dying of enjoyment of

these pleasures. Indeed, the more intemperate and mindless he becomes, the more comprehensively does he pursue them. And he actually calls these the greatest pleasures, and he accounts the man who lives as much as possible in their enjoyment the happiest of all.

Protarchus: Socrates, you have described adequately the entire predicament of most of humanity.

47c

Socrates: Yes, at least in relation to the pleasures from the common experiences of the body itself when internal and external are combined. However, when the soul's contribution is the opposite of the body's, pain is concurrent with pleasure or pleasure with pain, and the pair constitutes a single combination. We described these situations earlier, that when the body is depleted the soul desires satisfaction, and is pleased by the expectation but pained by being depleted. But, at the time, we did not explain this aspect. But now we are stating that in all these countless diverse experiences, where soul is at odds with body, a single mixture of both pain and pleasure is the result.

47d

Protarchus: I suspect you are absolutely right.

Socrates: But there is one of the mixtures of pleasure and pain still left.

Protarchus: Will you tell me what it is?

Socrates: A combination, which we said the soul often acquires by itself.

Protarchus: Yes, but what do we actually mean by this?

47e

Socrates: Don't you include anger, fear, longing, sadness, love, ambition, envy, and the like, among the pains of the soul itself?

Protarchus: Yes, I do.

Socrates: Won't we find them full of extraordinary pleasures, or need we be reminded about desire and anger?

*Wrath that spurs on the wisest man to rage
Sweeter by far than stream of flowing honey.³*

And of the pleasures which are mixed with the pains, in the case of sadness and longing?

48a

Protarchus: No, this is what happens in these cases.

Socrates: Remember too that the audiences at tragedies are experiencing pleasure and are weeping at the same time.

Protarchus: Of course.

Socrates: And do you realise that the condition of our souls at a comedy would also involve a mixture of pleasure and pain?

Protarchus: I don't really understand.

48b

Socrates: Indeed, Protarchus, it is not at all easy to recognise this sort of experience in that situation.

Protarchus: It doesn't seem easy for me, anyway.

Socrates: All the more reason to take this example as it is more obscure and will enable us to appreciate this mixing of pleasure and pain more easily in other instances.

Protarchus: Please explain.

Socrates: Would you count envy, which we mentioned just now, as a pain of the soul or not?

Protarchus: I would.

Socrates: And, indeed, an envious person will be manifestly pleased by the misfortunes of his neighbours.

Protarchus: Very much so.

48c

Socrates: Now, ignorance is a misfortune which constitutes what we call a stupid disposition.

Protarchus: Of course.

Socrates: Well, on this basis, behold what the nature of the comical is.

Protarchus: Please explain.

Socrates: It is, in short, a degeneracy named after a particular disposition. And what's more, this degeneracy, more than any other, has characteristics opposed to what is enjoined by the Delphic inscription.

Protarchus: Do you mean 'Know Thyself', Socrates?

48d

Socrates: I do. And the opposite of this would obviously be not to know yourself at all, as enjoined by the inscription.

Protarchus: Of course.

Socrates: Now, Protarchus, try to make a threefold division of this.

Protarchus: In what way? I am unable to do this.

Socrates: Are you saying that I have to make this division now?

Protarchus: I am saying so. And what's more, I am asking you to do this.

Socrates: Mustn't anyone who does not know himself experience this condition in one of three ways?

Protarchus: How so?

48e

Socrates: Well, the first is financial, when they think they are wealthier than they actually are.

Protarchus: Yes, there are many people in that sort of situation.

Socrates: But there are even more who believe that they are greater and fairer, and superior in all such physical qualities, than in truth they are.

Protarchus: Very much so.

Socrates: But I think the greatest number by far have made a serious error about the third form, at the level of soul, by thinking themselves superior in excellence when they are not.

Protarchus: Most definitely. ----- 3 Iliad xviii.108-109, Hackforth.

49a

Socrates: And when it comes to excellence, don't most people lay unreserved claim to wisdom, being full of contentiousness and false imagined wisdom?

Protarchus: Certainly.

Socrates: And, indeed, it would be right to refer to every such condition as bad.

Protarchus: Definitely.

Socrates: Then we must make a further twofold division, Protarchus, if we are to appreciate this strange mixture of pleasure and pain which we discern in playful envy. "How do we make the twofold split?" you may ask. All those, who unreasonably hold this false opinion about themselves, really must be categorised just like all other human beings – some are strong and powerful, while others are in the opposite case.

49b

Protarchus: They must.

Socrates: Then divide them like that. And you may, in truth, refer to those among them as comical who are unable to retaliate when they are laughed at, due to their weakness, while you will provide yourself with the most accurate description of those who are able to retaliate, by referring to them as powerful, frightening and hostile. Indeed, in the case of powerful men, ignorance is hostile and base for it is harmful to anyone close at hand, whether in fictional representations or in actuality. However, in the case of the weak, ignorance has been allotted the nature and status of comedy.

49c

Protarchus: What you say is absolutely correct, but the admixture of pleasure and pain in these cases is not yet obvious to me.

Socrates: Well, first take the power of envy.

Protarchus: Please explain.

49d

Socrates: Is it somehow an unjust pain and also a pleasure?

Protarchus: Yes, it must be.

Socrates: Now, delight in the misfortunes of enemies is neither injustice nor envy, is it?

Protarchus: Of course not.

Socrates: But is it just to be pleased, rather than pained, if you ever see the misfortunes of your friends?

Protarchus: No, how could it be?

Socrates: And didn't we say that ignorance is a misfortune for everyone?

Protarchus: Correct.

Socrates: Now, take the imagined wisdom of friends, or their imagined beauty, and any other fancies described just now, saying there were three forms which were comical in the case of the weak, but detestable in the case of the strong. Shouldn't we repeat what we said earlier, that this condition is comical when it is evidenced by one of our friends, and is harmless to others?

49e

Protarchus: Yes, certainly.

Socrates: But do we not agree that this is bad since it is ignorance?

Protarchus: Definitely.

Socrates: But are we pleased or pained whenever we are amused by it?

50a

Protarchus: Obviously we are pleased.

Socrates: And did we not say that envy is what produces this pleasure at the misfortunes of friends?

Protarchus: It must be.

Socrates: So, the argument states that when we are amused at the ridiculousness of friends, by mixing pleasure with envy, we are combining pleasure with pain. For we agreed some time ago that envy was a pain of the soul, but amusement was a pleasure, yet both arise at the same time in such situations as these.

Protarchus: True.

50b

Socrates: Indeed, our current argument indicates that in laments, tragedies and comedies, not only on stage but in the entire tragedy and comedy of life, pains and pleasures are also mixed together on countless occasions.

Protarchus: It is impossible to disagree with that, Socrates, even if someone had a great passion for winning arguments against opponents.

50c

Socrates: Indeed, we proposed anger, longing, sadness, fear, love, ambition and envy, and the like, as cases where we shall encounter these mixtures which we keep referring to now. Is this so?

Protarchus: Yes.

Socrates: Now, do we appreciate that everything we have just concluded applies to sadness, envy and anger?

Protarchus: Yes, how could we fail to appreciate that?

Socrates: So, are there many cases still left?

Protarchus: Yes, very many.

Socrates: Well, why exactly do you think I showed you this admixture in the case of comedy? Wasn't I trying to persuade you that the mixing is easier to demonstrate in fear and love, and those other instances? I was hoping that once you had accepted this for yourself, you would release me from the obligation to make the discussion even longer by dealing with the other cases. I thought you would simply accept that the experiences of body without soul, soul without body, or their communion with one another are full of pleasure combined with pain. So, tell me now whether you will release me or keep us here till midnight. I think you are going to release me if I say a little more. Indeed, I am prepared to give you an account of all the instances tomorrow, but now I want to turn to the remaining matters involved in deciding the issue raised by Philebus.

50e

Protarchus: Well said, Socrates. Work through the remaining matters in any way you please.

Socrates: It is natural then to move on to the unmixed pleasures in turn after the mixed ones. In fact it is essential, and there is some need to do so.

51a

Protarchus: Excellent.

Socrates: Then, I shall turn to these and try to point them out to us. For some reason I am not entirely persuaded by those who assert that all pleasures are the cessation of pain, but, as I said, they do bear witness to the fact that some pleasures are imagined and not genuine at all. Others give the appearance of being numerous and extensive, but in fact they are compounded with pains and with the cessation of extreme suffering involved in distress of both body and soul.

51b

Protarchus: But Socrates, which pleasures may properly be regarded as true?

Socrates: Those which involve colours which we call beautiful; also shapes, most smells, pleasant sounds, and any pleasures where the deficiency is painless and unnoticed, while the replenishment they provide is perceptible, pleasant and devoid of pain.

Protarchus: Socrates, how do these examples relate to what we are discussing?

51c

Socrates: Well, the point I am making is certainly not immediately obvious, so I should try to clarify it. Indeed, I am not now trying to discuss the beauty of the shapes which most people may understand, belonging either to living beings or drawings of them. No. What I mean, says the argument, is something straight or round, and the flat or solid shapes

produced from these by means of the lathe, ruler and set square, if you understand me. For I mean that these are not beautiful relative to something else, as other objects are. Instead, they are always naturally beautiful by themselves, and they possess certain intrinsic pleasures which bear no comparison with the pleasures of scratching. Now, colours also possess this type of beauty and pleasure. Do you follow? What do you say?

51d

Protarchus: Well, I am trying, Socrates. So you should also try to explain this a bit more clearly.

Socrates: Yes. I mean that sounds which are smooth and clear and send out a single pure note are not beautiful relative to something else, but are beautiful just by themselves, and the pleasures which follow are natural to them.

Protarchus: Yes, this is also the case.

51e

Socrates: But the class of pleasures based upon scents is less divine than that of sounds. Yet, because they do not have pain inevitably mixed in with them, and due to their location and the way that they arise in us, I regard them as a total counterpart to the previous pleasures. Then, if you can follow, these are two forms of the pleasures we are discussing.

Protarchus: I follow.

52a

Socrates: Well then, we should also include the pleasures associated with learning among these if they seem to us not to involve a longing for learning, and no pains owe their origin to such longing.

Protarchus: Well, I agree with that.

Socrates: What about this? If someone who has been filled with knowledge loses it later through forgetfulness, can you envisage

any pain at the loss?

52b

Protarchus: No, not naturally anyway. But in reflecting on what has happened, someone who has been deprived of the knowledge may be pained by its absence.

Socrates: Well, bless you! And yet at the moment we are describing only the natural responses themselves, devoid of any reflection upon them.

Protarchus: Then what you say is true, and, in the case of learning, we experience no pain when forgetfulness sets in.

Socrates: Then, we should state that these pleasures of learning are not mixed with pain, and that they are not in the possession of humanity in general, but of a select few.

Protarchus: Yes, what else could we say?

52c

Socrates: Well, since we have now made a measured distinction between the pure pleasures and those which may properly be described as somewhat impure, we should add the further statement that the intense pleasures are unmeasured, while those which are not intense are by contrast measured. And those which involve intensity and strength, whether such pleasure arises frequently or seldom, we may include in that limitless class, the more and the less, which pervades both body and soul. However, those which do not involve intensity and strength belong to the class of things which are measured.

52d

Protarchus: You are perfectly right, Socrates.

Socrates: Then, there is one further aspect of them we must examine.

Protarchus: What is that?

Socrates: We should state precisely how they relate to truth. How do we rank the pure and simple, the intense and extreme, or the strong and vigorous?

Protarchus: What exactly do you have in mind, Socrates, when you ask that question?

52e

Socrates: Protarchus, I want to omit nothing as I scrutinise both pleasure and knowledge. And if there is a pure form of either of them and an impure form too, I want to make the decision easier, for you and me and everyone here, by making the decision about that pure form.

Protarchus: Very appropriate.

Socrates: Come on then, let us think about these so-called pure classes in this way. We could select one of them first and consider it.

53a

Protarchus: Which should we select?

Socrates: We could look at white as a class first, if you wish.

Protarchus: Yes, certainly.

Socrates: Now, can we have purity of whiteness? And what would that purity be? Does it consist in its extreme magnitude and extent, or in the total absence of admixture of any other colours at all?

Protarchus: Obviously it is the total purity.

53b

Socrates: Correct. And, Protarchus, won't we also suggest that this, and not the most extensive and numerous, is the truest, and also of course the most beautiful, of all whites?

Protarchus: Yes, that is perfectly right.

Socrates: So, a little pure white is whiter and also more beautiful and truer than a great deal of mixed white. If we were to say this, would we be entirely correct in saying so?

Protarchus: Yes, perfectly correct.

Socrates: Well now, we do not really need many examples of this kind for our discussion about pleasure. It is sufficient that we realise from this instance that any small, insignificant pleasure which has been purified of pain would be more pleasant, true and beautiful than a great and extensive pleasure.

53c

Protarchus: Very much so. Yes, this example is sufficient.

Socrates: But what about the following point? Haven't we heard that pleasure is always a process of becoming, and that there is no being whatsoever of pleasure? Yes, indeed, some subtle thinkers try to explain this argument to us, and we should be grateful to them.

Protarchus: What do you mean?

53d

Socrates: Protarchus, my friend, I shall explain this particular point to you by asking more questions.

Protarchus: Explain it, then. Ask the questions.

Socrates: Well, there is a duality, and one aspect is just what it is, while the other is always aiming at something else.

Protarchus: How are there two? What do you mean?

Socrates: One is by nature always utterly sacred, while the other is deficient in that respect.

Protarchus: Please explain even more clearly.

Socrates: Presumably we have observed handsome and excellent young men, and also their courageous lovers.

Protarchus: Definitely.

53e

Socrates: Search throughout everything that we say there is for another pair which resembles these two.

Protarchus: I ask you for the third time, Socrates, please explain what you are saying more clearly.

Socrates: It is not anything complicated, Protarchus. No, the argument is teasing us by saying that things that are, in one case, are always for the sake of something else; but in the other case are that on account of which, that which arises for the sake of something else, always arises when it does arise.

Protarchus: I am understanding you gradually, because of the constant repetition.

54a

Socrates: And, my boy, it is quite likely that we shall understand more as the argument unfolds.

Protarchus: Undoubtedly.

Socrates: Now, let us take another pair.

Protarchus: Of what sort?

Socrates: One is the becoming of all things, and the other one is their being.

Protarchus: I agree with you. There are these two, being and becoming.

Socrates: Quite right. Now, which of them occurs for the sake of which? Should we say that becoming is for the sake of being, or being is for the sake of becoming?

Protarchus: Do you want to know if that which is called being is what it is for the sake of becoming?

Socrates: Apparently.

54b

Protarchus: By the gods, this is like asking me, “Protarchus, tell me whether you would say that shipbuilding arises for the sake of ships, rather than ships for the sake of shipbuilding?” and other questions like that.

Socrates: I mean just that, Protarchus.

Protarchus: Then why not answer the question yourself, Socrates?

Socrates: There is no reason why not, except that you should also participate in the discussion.

Protarchus: Very good.

54c

Socrates: Now, I am saying that medicine, and all tools and raw materials, are applied to anything for the sake of becoming, but that each process of becoming, for its part, arises for the sake of some particular being, and that becoming in general arises for the sake of being in general.

Protarchus: Yes, that could not be clearer.

Socrates: Therefore, if in fact pleasure is a process of becoming, it would necessarily arise for the sake of some being.

Protarchus: Of course.

Socrates: Well, that for the sake of which anything which comes to be, for the sake of something else, always arises, that belongs to the rank of the good. However, my excellent friend, anything which arises for the sake of something else should be assigned a different rank.

Protarchus: Absolutely necessary.

54d

Socrates: Now, if pleasure is in fact a process of becoming, would we be assigning it correctly if we allocated it a rank other

than the rank of the good?

Protarchus: Yes, that would be perfectly correct.

Socrates: Therefore, as I actually said at the beginning of this discussion, we should be grateful to whoever declared that pleasure is a process of becoming which has no being whatsoever. For it is obvious that this person makes a laughing stock of those who assert that pleasure is good.

Protarchus: Definitely.

54e

Socrates: And, indeed, this same person will also make a laughing stock of those whose objective consists in processes of becoming.

Protarchus: In what way? And what sort of people are you referring to?

Socrates: I am referring to all who obtain relief from hunger and thirst, or anything of that sort, which may be relieved by a process of becoming, and are delighted by the process, as it is itself a pleasure. They say that life would be unbearable without the experiences of thirst and hunger, and all the others which may be said to follow upon such conditions.

55a

Protarchus: Well, they seem to believe that anyway.

Socrates: Now, I presume we would all agree that perishing is the opposite of coming into being.

Protarchus: It must be.

Socrates: If someone were to choose a life based upon coming into being and perishing, he would not be choosing that third kind of life, in which there is neither pleasure nor pain, but only the purest possible understanding.

Protarchus: It seems, Socrates, that a lot of unreasonable consequences follow, once anyone proposes to us that pleasure is good.

Socrates: A lot. And there is even more to be said.

Protarchus: In what way?

55b

Socrates: How can it be reasonable that there is nothing good or fair, in body or in anything else, except in soul? And that the good in the soul should be pleasure alone, while courage and self-control and reason, and the other goods which the soul contains, are neither good nor fair? What is more, must we refer to a man who is not experiencing pleasure but is in pain as bad, once he is in pain, even if he is the most excellent of men? And what's more, must we refer to the man who experiences pleasure as distinguished in excellence, to the extent that he experiences more pleasure when he is pleased?

55c

Protarchus: All these conclusions are as unreasonable as can be, Socrates.

Socrates: Then, we should not be trying our utmost to conduct a comprehensive review of pleasure whilst showing scant regard for reason and knowledge. Let us make bold, and test these thoroughly for any unsoundness, so that we may discern what is naturally purest in them, and then make our joint decision by referring to what is truest in these two and in pleasure.

Protarchus: Right.

55d

Socrates: Well then, I believe that the knowledge involved in learning relates either to a skill or to education and nurture. Is this so?

Protarchus: It is so.

Socrates: Now, in the case of manual skills, let us consider firstly whether some of them involve more knowledge, while others involve less, and whether we should regard the former as entirely pure, and the latter as less pure.

Protarchus: Yes, we must do this.

Socrates: Then, should we deal with the chief skills separately in each case?

Protarchus: What are they, and how should we deal with them?

55e

Socrates: For instance, if someone were to remove counting, measuring and weighing from all of the skills, what was left of each would, so to speak, be worthless.

Protarchus: Yes, worthless indeed.

Socrates: Anyway, after that, what is left would be estimation, and the exercise of the senses through experience and habit, and recourse to the powers of guesswork, which many call skills, since this ability is developed through study and hard work.

56a

Protarchus: What you are saying is undeniable.

Socrates: Now, in the first place, music is presumably full of this as it harmonises the sounds, not through measurement but by inference based on experience. Flute-playing, in general, seeks out the measure of each note by inference, and so to a large extent it involves an absence of clarity, combined with little certainty.

Protarchus: Very true.

56b

Socrates: And we shall find that the same applies to medicine, farming, navigation and military strategy.

Protarchus: Yes, certainly.

Socrates: But building, I believe, uses far more measurements and instruments, and these provide it with much precision, and render it the most skilful of the various branches of knowledge.

Protarchus: In what way?

Socrates: On the basis that both shipbuilding and house-building, along with numerous other skills, involve woodworking. For this skill, I believe, uses the ruler, the compass, lathe, chalk-line and an ingenious kind of set square.

56c

Protarchus: Very much so, Socrates. What you are saying is correct.

Socrates: Then, let us divide these so-called skills in two – those corresponding to music, which involve less precision in their activities, and those corresponding to building, which are more precise.

Protarchus: Let's do that.

Socrates: And the most precise of these are the skills which we just said are primary.

Protarchus: You appear to me to be referring to arithmetic, and whatever skills you mentioned along with it a moment ago.

56d

Socrates: Yes, certainly. But, Protarchus, should we also say that these subjects in turn are also twofold? What do you think?

Protarchus: What two aspects are you referring to?

Socrates: Shouldn't we point out first that the arithmetic of the multitude is one thing, while the arithmetic of those who engage in philosophy is something else again?

Protarchus: How could anyone ever propose a distinction between one kind of arithmetic and another?

Socrates: This is no minor distinction, Protarchus. Indeed, there are people who enumerate units which are somehow unequal, such as two armies, or oxen, or two of the smallest or largest possible entities. But there are others who would never go along with this, unless someone was to propose that each of the units does not differ at all from any of the countless other units.

56e

Protarchus: Then you are quite right to say that the difference between people who deal with numbers is not minor, so it makes sense that there are two types.

Socrates: What about calculation and measurement used in building or trading, compared to the geometry and calculation associated with philosophy? Should we say that each subject is one, or should we propose that there are two?

57a

Protarchus: Following what was said before, according to my vote there would be two types of each subject.

Socrates: Correct. But do you appreciate why we have introduced these issues into the discussion?

Protarchus: Possibly, but I would like you to reply to the question which has just been asked.

Socrates: Well, it seems to me anyway that this discussion – no less than when we first commenced it, in looking for a counterpart to pleasures – has gone on from there to investigate whether one kind of knowledge is purer than another kind of knowledge, just as one pleasure was purer than another.

57b

Protarchus: Yes, and it is quite clear that that is the reason why these topics were introduced.

Socrates: What now? Did we not discover previously that there is a skill applicable to various subjects, which may be more definite or less definite in one case than another?

Protarchus: Yes, certainly.

Socrates: Yet, in these cases, did we not refer to a particular skill with a single name, giving the impression that it was one thing? Then again, are we now behaving as if this definite and pure skill is itself two things, when we ask whether the skill of the philosophic or the nonphilosophic people is more precise?

57c

Protarchus: Yes, it certainly seems to me that this question does arise.

Socrates: Well, what answer do we give, Protarchus?

Protarchus: Socrates! We have arrived at an amazingly significant distinction in relation to the clarity of various types of knowledge.

Socrates: Doesn't that make it easier for us to reply?

Protarchus: Of course. And we should state that these pure skills are far superior to the others, and any of them which are concerned with the endeavour of genuinely philosophic people are immeasurably superior, in precision and truth, in relation both to measure and to number.

57d

Socrates: Let us accept what you say, and placing our trust in you we can reply boldly to those who are so clever at dragging words about.

Protarchus: What sort of reply should we give?

Socrates: That there are two arithmetical and two metrical skills, and countless other similar skills associated with them, which possess this twofold aspect though they share one

common name.

57e

Protarchus: Let's give this answer, Socrates, along with our best wishes to these men whom you say are clever.

Socrates: Are we saying, then, that these are the most precise forms of knowledge?

Protarchus: Very much so.

Socrates: But, Protarchus, the power of dialectic would disown us should we decide that some other skill is preferable to it.

Protarchus: Should we explain again what dialectic is?

58a

Socrates: Obviously it is the skill which understands every skill we are now discussing, at least.⁴ For I believe that anyone who is endowed with even a little reason regards the understanding of being and reality and that which is always entirely the same by nature as the truest knowledge by far. But what about you? How would you decide the issue, Protarchus?

Protarchus: Well, Socrates, I heard consistently and repeatedly from Gorgias that skill in persuasion is greatly superior to all other skills, for everyone is enslaved by it, not by force, but willingly, so it is by far the best skill of all. And now I do not wish to take up a position opposed either to you or to him.

58b

Socrates: I think you wanted to say “take up arms”, but you dropped that wording out of politeness.

Protarchus: Let it be so then, if you think it so.

Socrates: Well, in that case, am I responsible for your inadequate understanding?

Protarchus: In what way?

58c

Socrates: Protarchus, my friend, I was not yet asking what skill or knowledge exceeds all in magnitude, excellence, and the extent of its benefit to us. No, the skill which pursues what is clear and precise and perfectly true, even if it is minor and of little benefit, is what we are searching for now. But look, you will not become an enemy of Gorgias if you grant that his own skill is supreme in relation to its benefit to humanity, while this process we are discussing is the very truest. It is just like the example of whiteness I gave earlier, where even a little pure colour is superior to a lot of colour which is not pure. And now, after intense thought and proper discussion, we should look neither to the benefits of any branch of knowledge, nor to its reputation, but only to whether there is a certain natural capacity in our souls to love the truth and perform all actions for its sake. We should declare that this power deserves close attention, and we should state whether this is most likely to possess pure reason and understanding, or whether we should look for something else which is better.

58e

Protarchus: Well, I am considering this, and I think it is hard to accept that any other skill or knowledge adheres more closely to truth than this one.

Socrates: Now, are you saying what you have just said because you realise that the various skills, and those who work at them, in the first place make use of opinions and are earnestly investigating matters of opinion? And even if they think they are enquiring into nature, you must understand that they are, in fact, spending their lives investigating this universe, how it has arisen, what happens to it, and how it behaves? Is this what we would say? Or how would we express it?

59a

Protarchus: In this way.

Socrates: So, a person like this is not taking on the task of enquiring into things that always are, but into things that are becoming, will become, and have become.

Protarchus: Very true.

59b

Socrates: Now, would we say, in strictest truth, that anything clear arises from these when they have never ever remained the same, never will, and are not so at present?

Protarchus: No, how could we?

Socrates: Well, how could we ever achieve any certainty at all about matters which have never attained any certainty whatsoever? ----- 4 Following Bury's text here.

Protarchus: I do not think it is possible at all.

Socrates: So, there is no reasoning or any knowledge about them which is perfectly true.

Protarchus: No, that is not likely.

Socrates: Well then, we should bid a final farewell to you and me, Gorgias and Philebus, and instead use the argument to make the following case.

59c

Protarchus: What case?

Socrates: That we shall attain the certain, the pure, the true, and what we call absolute, among what is ever the same, unchanging and unmixed, or among whatever is most akin to these. All else should be declared to be secondary or inferior.

Protarchus: What you say is very true.

Socrates: And wouldn't it be most appropriate to assign the most beautiful names for such entities to whatever is most beautiful?

Protarchus: That sounds reasonable anyway.

59d

Socrates: Are not reason and understanding the names which would be most honoured?

Protarchus: Yes.

Socrates: So, these terms are properly applicable, in their most precise sense, to reflections upon what actually is.

Protarchus: Yes, certainly.

Socrates: And these are the very terms I presented for our adjudication earlier.

Protarchus: Of course, Socrates.

Socrates: Very well. Now, if someone were to say that this process of mixing understanding with pleasure turns us into craftsmen, with the materials or constituents for manufacturing something spread before us, he would be making a very good analogy.

59e

Protarchus: Very much so.

Socrates: Then the next thing we should do is set about mixing them.

Protarchus: Of course.

Socrates: Well, would it be appropriate to set out some principles and reminders for ourselves?

Protarchus: Of what kind?

60a

Socrates: We were also reminded of these before, but I think the proverb puts it nicely, that “a good point may be repeated twice or even thrice in a speech”.

Protarchus: Of course.

Socrates: Then, by Zeus, let's proceed, for I believe that what was said then amounts to something like this.

Protarchus: Something like what?

Socrates: Philebus says that pleasure is the right objective for every creature, and they should all aim for this, and this in itself constitutes the good for all of them. And these two names, good and pleasant, have been correctly assigned to one entity which possesses a single nature. But Socrates denies that these two are one – they are two, just as the names are, and the good and pleasant have different natures from one another – and that understanding involves a greater portion of good than pleasure does. Is that how things stand, Protarchus? And is that what was said before?

60b

Protarchus: Yes, definitely.

Socrates: Isn't there a further point we agreed about before, and could still agree about now?

Protarchus: What is it?

Socrates: That the nature of the good differs from everything else in a particular way.

60c

Protarchus: Which is?

Socrates: Any creature which possessed it permanently, entirely, and in every way, would not ever stand in need of anything else, and would be completely self-sufficient. Is this so?

Protarchus: It is so, indeed.

Socrates: Didn't we attempt in the discussion to assign a distinct life to each of them, one a life of pleasure unmixed with understanding, and the other in like manner a life of

understanding without the least portion of pleasure?

Protarchus: That was it.

Socrates: Now, did we think at the time that either of these lives was adequate for anyone?

60d

Protarchus: No, how could we?

Socrates: And yet, if we went somewhat astray at the time, anyone may now revise it and state it more correctly. He should assign memory, understanding, knowledge and right opinion to the same class, and consider whether anyone would agree to possess or acquire anything whatsoever in the absence of these. Would he accept the most extensive and intense pleasure without the true opinion that he was enjoying it, without any knowledge at all of the experience he was undergoing, or any memory of the experience, for any period of time? And he should also ask the same question about understanding. Would anyone accept the possession of understanding without any pleasure, even the slightest, rather than having it along with some pleasures? Or would he accept all the pleasure without any understanding, rather than having it in turn along with some understanding?

60e

Protarchus: No one would accept it, Socrates, and there is no need to ask these questions so often.

61a

Socrates: In that case, would the perfect, the supreme good which everyone desires, be either of these two?

Protarchus: How could it be?

Socrates: Then we need to understand the good, either in its clarity or in outline, so that as we said we may decide how to award second place.

Protarchus: Correct.

Socrates: Well, haven't we found a sort of pathway towards the good?

Protarchus: What is it?

61b

Socrates: It is as if you were looking for a particular person and you first found out exactly where he lived. Surely that would be a significant step in the search for the person.

Protarchus: Of course.

Socrates: And, indeed, a certain argument has now advised us, as it did at the start of our discussion, not to seek the good in the unmixed life, but in the mixed life.

Protarchus: Certainly.

Socrates: In that case, is there greater hope that the good will be more evident in a life which has been beautifully mixed, than in a life which has not?

Protarchus: Much greater.

61c

Socrates: Then, let us set about mixing them, and pray to the gods, either Dionysus or Hephaestus, or whichever god has been allotted the honour of conducting the blending.

Protarchus: Yes, certainly.

Socrates: And, indeed, we have fountains set before us, just as if we were wine-bearers. The fountain of pleasure may be likened to honey, while the sobering, unintoxicating fountain of understanding is like unsweetened healthy water. And we must endeavour to mix these two as beautifully as we can.

Protarchus: So we must.

61d

Socrates: Now, the first question is, would we best achieve a beautiful mixture by combining all pleasure with all understanding?

Protarchus: Perhaps.

Socrates: But this is not safe. I think I have an idea that would enable us to carry out the mixing with less risk.

Protarchus: Tell me what it is.

Socrates: Did we find, so we thought, that one pleasure was more truly a pleasure than another, and indeed that one skill was also more precise than another skill?

Protarchus: They must be.

Socrates: And knowledge actually excels over knowledge, as in one case it was concerned with whatever comes into being and perishes, and in the other with things that neither come to be nor perish, but are always exactly the same as they are. Reflecting on these, on the basis of truth, we regarded the second as truer than the first.

61e

Protarchus: Yes, and rightly so.

Socrates: Now, if we were to look at the truest portions of these two, and mix them together first, would these mixtures be sufficient to provide us with the most prized life? Or would we still need portions which are not like these?

62a

Protarchus: It seems to me anyway that we should do as you suggest.

Socrates: Let us suppose that there is a man among us with an understanding about what justice is, who can give an account accordant with reason, and who also appreciates everything else there is in the very same way.

Protarchus: Very well, let's do that.

Socrates: Now then, will such a man have sufficient knowledge if he can give an account of the sphere itself and circle itself, which are divine, but is ignorant of this sphere and that circle of the human realm, even when using straight edges and circles in house building and other similar activities?

62b

Protarchus: If knowledge consists of only divine knowledge, Socrates, then we are in a ridiculous predicament.

Socrates: Are you saying that we should put the uncertain and impure skill associated with the false straight edge and circle into the mixture with the others?

Protarchus: Yes, we must, if any of us is even going to find his own way home every day.

62c

Socrates: And what about music? We said a little earlier that it is full of conjecture and imitation, and therefore lacks purity. So, should we add this to the mixture?

Protarchus: It appears to me that we must, if we are to have a life which is any kind of life at all.

Socrates: In that case, do you want me to surrender, like a doorkeeper who is pushed and pressed by a crowd and lets the doors fly open, so that every kind of knowledge floods in, and the pure mixes alike with the deficient?

62d

Protarchus: Socrates, I do not know what harm it would do to admit all the other kinds of knowledge once we had the primary kinds.

Socrates: So, shall I let all of them flood into the receptacle, the valley, which Homer so poetically describes?⁵

Protarchus: Yes, certainly.

Socrates: They have all been admitted. And now we must go once more to the fountain of pleasures. Indeed, we have not carried out our intention of mixing the true portions of the pleasures first. Instead, due to our indiscriminate desire for all knowledge, we have allowed it all in at once even before the pleasures.

62e

Protarchus: Very true.

Socrates: Then it is time for us to decide also whether all these pleasures should be allowed in together, or we should first admit only those which are true.

Protarchus: It makes a significant difference in terms of safety to let the true pleasures in first.

Socrates: Let them in, then! And what is the next question? If there are some necessary pleasures, as in the other case, should we also add these to the mix?

Protarchus: Why not? Surely the necessary ones should be added.

63a

Socrates: And yet we said it was useful, and not harmful, to have knowledge of all skills throughout our lives. Well, if we now say the same thing about pleasures, that it is of benefit to us and not harmful to anyone to enjoy all pleasures throughout life, they should all be included in the mix.

Protarchus: In that case, what should we say about the pleasures themselves? And what should we do?

Socrates: It is not us who should be questioned, Protarchus, but there is a certain question we may put to the pleasures themselves, and to the instances of understanding, in relation to one another.

63b

Protarchus: What sort of question?

Socrates: “My friends, be ye called pleasures or any other name,⁶ would you prefer to live in the presence of all understanding, or in the absence of understanding?” I believe there is a particular response which they must give here.

Protarchus: What sort of response?

63c

Socrates: Exactly what was said before. “It is not really possible or useful for any class to be single, solitary and absolute. Indeed, we believe, comparing one with another, that in the case of all these classes it is best for us to live in the company of knowledge of all the others, and as complete a knowledge as possible of each one of us.”

Protarchus: “Yes, what you have just said is excellent,” will be our reply.

Socrates: And rightly so. Now, we must put our question once more, this time to understanding and reason. “Would you like to include any pleasures in the mixture?” Yes, that is what we would say in questioning reason and understanding. And they would probably reply, “Pleasures of what kind?”

Protarchus: Quite likely.

63d

Socrates: Well anyway, our conversation continues as follows. We shall ask, “In addition to those true pleasures, do you still feel a need for the company of the greatest and most intense pleasures?” And they would probably say, “How could we, Socrates, when they present countless impediments to us, disturbing the souls in which we reside with insane pleasures, and not allowing us to come into being in the first place? Indeed, in most cases, they totally destroy whatever offspring we bring to birth by engendering forgetfulness through inattention. But please regard those true and pure pleasures

you mentioned as our near kindred, along with any others which involve health and sound-mindedness, and indeed any pleasures which attend upon the totality of excellence, and follow that everywhere as if it were a god. These you may add to the mix. “But surely it would be quite irrational for someone, who wishes to see a mixture and blend which is as beautiful and as free from strife as possible, to put the pleasures which involve thoughtlessness and all sorts of depravity into the mix with reason, especially if he is trying to understand from this what precisely is good by nature in man and in the universe, and to divine its precise form.” Well, shall we not say that reason has responded sensibly and in accord with itself when it says all this on behalf of itself, memory, and right opinion?

64a

Protarchus: Entirely so.

Socrates: Yes, but something else is needed, otherwise nothing at all would ever have come into being.

64b

Protarchus: What is it? ----- 5 Iliad iv.452. 6 See 11b.

Socrates: Anything which we do not combine with truth would not ever truly come into being, nor would it ‘be’ once it had come into being.

Protarchus: No, how could it?

Socrates: It simply could not. Now, if anything else is still lacking in this admixture, you and Philebus should say what it is. For it does appear to me that the present account is complete. It is a non-physical order which presides beautifully over an ensouled body.

Protarchus: Well, on that basis, Socrates, you may say that I accept the account.

64c

Socrates: And would we be right in saying that in a sense we are standing before the portals of the good, and the dwelling place of its kindred?

Protarchus: So it seems to me, anyway.

Socrates: What, then, would we say is most valuable in this admixture, and at the same time most responsible for such an arrangement being attractive to everyone? For once we have seen this, we can go on to consider whether it stands in closer natural kinship with pleasure, or with reason, in the overall scheme.

64d

Protarchus: And rightly so, for this is of the utmost significance for the decision before us.

Socrates: And, indeed, it is not difficult to discern the cause whereby any mixture at all becomes either extremely valuable or entirely worthless.

Protarchus: What are you referring to?

Socrates: I believe there is no man who is ignorant of this.

Protarchus: Of what?

Socrates: That any mixture which does not somehow involve some measure – and the nature – of symmetry must destroy its own components and, first and foremost, itself. For something like this is not even a mixture, but is truly a jumble which has been thrown together – in fact, a constant affliction to those who have acquired it.

64e

Protarchus: Very true.

Socrates: And now we see that the power of the good has fled for refuge into the nature of the beautiful. For surely measure and symmetry always turn out to be beauty and excellence.

Protarchus: Yes, certainly.

Socrates: And, indeed, we said that truth is mixed with them in the blend.

Protarchus: Certainly.

65a

Socrates: Therefore, if we are unable to capture the good in a single form, we may comprehend it with these – beauty, symmetry and truth. Let us declare that the three may properly be regarded as a unity, responsible for the condition of the mixture. And because of this unity, which is good, such a mixture becomes good.

Protarchus: You are perfectly right.

Socrates: Then, at this point, Protarchus, anyone may be a satisfactory judge of whether it is pleasure or understanding that is more closely related to the supreme good, and is more valuable among men and gods.

65b

Protarchus: Yes, that is obvious. But it is best to complete the discussion nevertheless.

Socrates: In that case, we should judge each of the three individually in relation to pleasure and reason. For we need to decide which of the two should be assigned greater kinship with the three.

Protarchus: Are you referring to beauty, truth and measure?

65c

Socrates: Yes. But take truth first, Protarchus, and once you have taken it and considered the three – reason, truth and pleasure – take your time, and answer for yourself whether pleasure or reason is more akin to truth.

Protarchus: What time do I need? Indeed, I believe that they differ enormously. For pleasure is the most deceptive thing of

all. And by report, in the case of amorous pleasures which seem to be the most powerful, even the breaking of oaths is pardoned by the gods, as if the pleasures were just like children who have not attained even the smallest portion of reason. But reason, on the other hand, is either the very same as truth, or resembles it more closely than anything else, and is truer than all else.

65d

Socrates: Now, consider measure next in the same way, and ask whether pleasure has more than understanding, or understanding has more than pleasure.

Protarchus: This question, too, is easy to deal with, for I do not believe that anyone would find anything at all which is more unmeasured than pleasure and excitement. And in contrast, nothing at all could ever be more measured than reason and knowledge.

65e

Socrates: That is very well expressed. Nevertheless, you should still answer the third question. Do we say that reason partakes of beauty to a greater extent than the class of pleasure, so that reason is more beautiful than pleasure? Or is it the other way around?

Protarchus: Now, Socrates, no one either awake or in a dream has ever seen or conceived of understanding and reason as becoming ugly, or being ugly now or in the future in any way whatsoever.

Socrates: Correct.

Protarchus: But somehow when we see anyone enjoying pleasures, particularly if they are quite intense, and we behold the ridiculous or utterly base aspects associated with them, we ourselves are ashamed and remove them from view and hide them as best we can, consigning all such activities to the night because the light of day should not have sight of them.

66a

Socrates: Then you will proclaim to all, Protarchus, by sending forth messages and speaking to those who are present that pleasure is not the first of possessions, nor indeed the second. No, the first somehow involves measure, moderation and appropriateness, and all that must be regarded as similar to these.⁷

Protarchus: That's how it appears from what we are now saying, anyway.

66b

Socrates: And the second is associated with symmetry, beauty, completeness, sufficiency, and whatever, for its part, belongs to that family.

Protarchus: Quite likely.

Socrates: And based upon my prophecy, if you assign third place to reason and understanding you would not have strayed far from the truth.

Protarchus: Perhaps.

Socrates: Should fourth place go to knowledge, skill, and what are called right opinions, which we designated as belonging to the soul itself? Do these come fourth after the other three, since they are more akin to the good than pleasure is?

66c

Protarchus: Perhaps so.

Socrates: Then are the pleasures which we defined as devoid of pain in fifth place? We called these the pure pleasures of the soul itself, associated with knowledge in some cases and with sense perception in others.

Protarchus: Perhaps.

Socrates: “In the sixth generation, bring an end to the well-ordered song”, says Orpheus. Then, it is likely that our

argument is coming to rest in the sixth decision, and there is nothing left for us after this except to provide a sort of summation of what has been said.

66d

Protarchus: Yes, we need to do that.

Socrates: Come on. With an offering to the saviour, let's call the same argument to give evidence for the third time.

Protarchus: What sort of argument? ----- 7 Omitting the last three words of this paragraph as corrupt, following D. Frede.

Socrates: Philebus proposed that, for us, the good is pleasure, complete and entire.

Protarchus: Socrates, apparently when you said “for the third time”, you meant that we must simply take up the argument again from the beginning.

66e

Socrates: Yes, but let us hear what comes next. For once I had appreciated the accounts which have been given just now, and became disgusted by the principle which is stated not only by Philebus but also a countless number of others, I asserted that reason is far superior to pleasure, and also better for the life of humanity.

Protarchus: That is what was said.

Socrates: And yet, suspecting that there were many other candidates, I said that if anything turned out to be better than these two, I would side with reason against pleasure in the struggle for second place, and that pleasure would be deprived even of second place.

67a

Protarchus: Yes, you did say that.

Socrates: And after that, it was shown very adequately that neither of these two is adequate.

Protarchus: Very true.

Socrates: Therefore, on the basis of this argument, pleasure and reason set aside their claim that either of them is the good itself, as they are devoid of self-sufficiency and the capacity for adequacy and completeness.

Protarchus: Absolutely correct.

Socrates: But when a third contestant turned out to be superior to either of these two, reason proved then to be infinitely more akin to and, by nature, closer than pleasure to the character of the victor.

Protarchus: It did, indeed.

Socrates: Therefore, on the basis of the judgment evinced by the current argument, the power of pleasure would get fifth place.

Protarchus: So it seems.

67b

Socrates: But it would never get first place, not even if all the cattle and horses and all of the other wild beasts were to make this assertion through their pursuit of pleasure. Most people believe them, just as soothsayers believe birds and judge pleasures to be the best means to a good life for us, and they regard the animal passions as authoritative witnesses rather than the ardent pronouncements constantly uttered under the inspiration of the Muse, Philosophy.

Protarchus: Socrates, we all agree now that what you have said is perfectly true.

Socrates: Will you also let me go then?

Protarchus: There is a small matter still outstanding, Socrates. Indeed, I am sure you will not give up before we do, so I shall remind you of the remaining issues. -----

NOTES

1. See *Iliad* viii.539 for this epithet for the gods. Socrates' characterisation of the problem in this way underscores its seriousness.
2. Theuth was the Egyptian god of the moon, knowledge, wisdom, writing, hieroglyphics, etc. He was often depicted with the head of an ibis.
3. *Iliad* xviii.108-109, Hackforth.
4. Following Bury's text here.
5. *Iliad* iv.452.
6. See 11b.
7. Omitting the last three words of this paragraph as corrupt, following D. Frede.

Protagoras

narrator: SOCRATES of Alopecce, son of Sophroniscus

persons in the dialogue:

COMPANION *unidentified*

HIPPOCRATES *Athenian*

CALLIAS *a student of Protagoras, Hippias, Prodicus*

PROTAGORAS *a renowned sophist from Abdera*

HIPPIAS *a polymath, sophist, diplomat from Elis*

PRODICUS *a teacher of semantics, rhetoric from Ceos*

CRITIAS *a leader of oligarchy of the Thirty, Athenian*

ALCIBIADES *a famous and notorious general and politician*

scene: Socrates' room / courtyard outside / the street / the house of Callias

309a

Companion: Where are you coming from, Socrates? Or is it quite obvious that you have been pursuing the youthful glory of Alcibiades?¹ And yet, when I saw him just the other day, he seemed already like a fine man to me. Yes, a man he is, Socrates, since between ourselves, his beard is starting to grow.

309b

Socrates: What of it? You are an admirer of Homer, aren't you? And he says that a youth is at his most gracious when the beard is starting to grow,² the stage Alcibiades is at now.

Companion: Well, what's going on these days? Is it him you are coming from? How is the young man disposed towards you?

Socrates: Nicely, in my opinion anyway, especially today, for he said a great deal to support and assist me. And yes indeed, I have just been with him. Yet I want to tell you something unusual, for although Alcibiades was present, I paid no attention to him, and indeed on occasion I forgot he was even there.

309c

Companion: What could have happened to the two of you to bring this about? For surely you have not met someone else more beautiful, not in this city anyway?

Socrates: Yes, much more so.

Companion: What are you saying? Is he a citizen or a foreigner?

Socrates: A foreigner.

Companion: Where is he from?

Socrates: Abdera.³

Companion: And did you think this foreigner such a beauty that he appeared more beautiful to you than the son of Clinias?

Socrates: But how, blessed man, could the wisest avoid appearing more beautiful?

Companion: What is this, Socrates? Have you been in the company of some wise man just now?

^{309d}

Socrates: Yes, the wisest of them all nowadays, presumably, provided you think the wisest of them all is Protagoras.⁴

Companion: What are you saying? Is Protagoras in town?

Socrates: Yes, he has been here for two days already.

Companion: So have you just come from being with the man?

^{310a}

Socrates: I have indeed, and I said and heard a great deal.

Companion: Well, why don't you recount the meeting to us, if there is no reason not to do so? Sit down here. This slave will give you his seat.

Socrates: Yes, of course. I would be grateful if you would listen to me.

Companion: And we would also be grateful to you, if you would speak.

Socrates: Then, the gratitude will be mutual. Anyway, listen.

310b

Last night, just before daybreak, Hippocrates, the son of Apollodorus and brother of Phason,⁵ banged on my door very forcibly with his stick, and when someone opened it for him he rushed straight in, shouting in a loud voice, “Socrates, are you awake or asleep?”

I recognised his voice and said, “Hippocrates, this man! I hope you are not bearing some bad news.”

“Not at all,” he said. “The news is good.”

“It would be nice if you would tell me what it is,” I said, “and the reason you have called at this hour.”

He stood beside me and said, “Protagoras has arrived.”

“The day before yesterday,” I said. “Have you just found this out?”

“Yes, by the gods,” he said, “last evening in fact.”

310c

And at the same time he felt around the top of the couch, sat down at my feet and said, “Yes. Last evening I got back very late from Oenoe, for my slave, Satyrus, had run away. And indeed I intended to tell you that I would be going after him, but something else made me forget to do so.

310d

It was when I was back home and we had eaten supper and were about to get some rest that my brother told me that Protagoras had arrived. I was even prepared to come to you right away, but then I thought it was much too late at night. Yet as soon as the sleep had relieved me of the fatigue, I got up immediately and made my way here.”

Being aware of his impetuousness and excitability, I asked, “Well, what has that to do with you? Protagoras has not done you some injustice, has he?”

He laughed and said, “By the gods, he has, Socrates. He is the only wise man, and he will not make me wise.”

“Oh yes, by Zeus,” I said. “If you pay good money to him, and persuade him, he will make you wise too.”

310e

“By Zeus and the gods,” he replied, “would that it all came down to this, since in that case I would begrudge him nothing belonging to myself or even my friends. Yes, this is the very reason I came to you, to get you to discuss this with him on my behalf. For as well as being too young, I have never even seen Protagoras before, or heard him at all either, since I was still a child when he visited the city before. Anyway, Socrates, everyone praises the man and proclaims him the wisest of speakers. So why don’t we make our way to him now so that we may be sure of finding him indoors? I hear that he is staying with Callias,⁶ the son of Hipponicus, so let us go.”

311a

And I said, “Let us not go there yet, my good man, for it is still early. Instead, let us get up and go out into the courtyard here, walk about, and pass the time until it becomes light. Then we may go. In fact, Protagoras spends most of his time indoors, so do not worry, that is quite likely where we shall find him.”

311b

After that we went out into the courtyard and walked about. And to test the resolve of Hippocrates, I probed him by asking questions.

311c

“Tell me, Hippocrates,” I asked. “At the moment you are trying to gain access to Protagoras, and you will pay money to the man as a fee, on your own behalf. What sort of person will you be

visiting, and what sort of person will you become as a result? For instance, if you intended to visit your own namesake, the Asklepiad, Hippocrates of Cos, and pay money to him on your own behalf as a fee, and someone asked you, ‘Tell me, Hippocrates, you are about to pay a fee to this Hippocrates, to someone who is what?’ How would you reply?”

“I would say that I am paying a fee to someone who is a physician,” he replied.

“In order to become what?”

“A physician,” he replied.

“And if you were going to visit Polycleitus of Argos or Pheidias of Athens and pay a fee to these men on your own behalf, and someone asked you, ‘You propose to pay this money to Polycleitus and Pheidias, to people who are what?’, how would you reply?”

“To people who are sculptors, that is what I would say.”

“So that you yourself may become what?”

“A sculptor, of course.”

311d

“So be it,” I said. “But in the present case, where you and I are visiting Protagoras, we shall be prepared to pay money to him on your behalf, provided our own funds are sufficient to persuade him. If not, we shall spend even our friends’ money as well. If someone observing our extreme seriousness on these matters were to ask, ‘Tell me, Socrates and Hippocrates, you intend to pay money to Protagoras, to someone who is what?’, how would we reply to him? What other name do we hear people using in relation to Protagoras, in the same way that ‘sculptor’ is used in relation to Pheidias, and ‘poet’ in relation to Homer? What title of this sort do we hear in relation to Protagoras?”

311e

“Well now, Socrates, what they say anyway is that the man is a sophist,” he replied.

“So we are going to pay money to him as a sophist?”

“Certainly.”

312a

“Now, suppose someone were to ask you this additional question, ‘If you yourself were to go to Protagoras, what would you intend to become?’”

And he replied, blushing, for the day was breaking by now and I could see him clearly. “If this is anything like the previous instances, it is obvious I intend to become a sophist.”

“By the gods,” I said, “wouldn’t you be ashamed to present yourself before the Greeks as a sophist?”

“Yes, by Zeus, Socrates, if I really must say what I am thinking.”

312b

“Well, Hippocrates, perhaps this turns out not to be the kind of instruction you are expecting from Protagoras. Were you expecting the kind of instruction you get from a teacher of writing, or of the harp, or from a trainer? For it was not with a view to becoming a practitioner that you developed proficiency in these subjects, but to acquire an education suited to an independent free man.”

“Very much so,” he replied, “and I think this is more the kind of instruction I expect from Protagoras.”

“Well, do you know what you are about to do now, or has this escaped your notice?” said I.

“In what respect?”

312c

“The fact is you are about to submit your own soul to the care of a man whom you admit to be a sophist. Yet I would be surprised

if you knew what precisely a sophist is. What is more, if you are unaware of this, you do not know to whom you are handing over your soul, whether the arrangement be a good one or bad one.”

“I think that I know well,” he said.

“Then tell me what you think a sophist is.”

“I think,” said he, “just as the name implies, that this is someone knowledgeable in matters of wisdom.”

312d

“Isn’t it also possible”, I asked, “to say this about painters and builders, that these are the ones who are knowledgeable in matters of wisdom? And if someone were to ask us, ‘Of what wise matters are painters knowledgeable?’, I presume we would say that they know about the production of images, and reply similarly about the other examples. But if someone were to ask us, specifically, ‘Of what wise matters is a sophist knowledgeable?’, how would we reply to him? What sort of processes is he master of?”

“What else could we say he is, Socrates, except a master of turning someone into a formidable speaker?”

312e

“We may perhaps be speaking the truth”, I remarked, “without actually saying enough, for our response invites further questioning as to the subject in which the sophist makes someone a formidable speaker. For example, the harp player obviously makes a person formidable in the subject about which he is knowledgeable, about harp-playing. Is this so?”

“Yes.”

“So be it. About what subject does the sophist make someone formidable in speaking?”

“About the subject in which he himself is knowledgeable, of course.”

“Quite likely. What then is the subject about which the sophist is knowledgeable, and makes his pupil knowledgeable?”

“By Zeus,” he exclaimed, “I cannot really tell you!”

313a

I then proceeded to ask, “Do you know the sort of danger to which you are going to expose your soul? If you had occasion to entrust your body to someone, running the risk that it might be improved or made worse, you would think a lot about whether you should entrust it to that person or not. You would call upon the advice of your friends and family, and deliberate for many days.

313b

Yet, when it comes to your soul – which you value more highly than your body, and on which the good or bad unfolding of all your affairs depends, according as it is improved or made worse – when it comes to this, you have consulted neither your father nor your brother nor any of us, your companions, at all, as to whether or not you should entrust your own soul to this foreigner who has just arrived in town. No, you heard about him yesterday, as you say. You arrive here at daybreak, and without initiating any discussion or consultation as to whether you should entrust yourself to him or not, you are ready to spend your own money and your friends’ money, since you have already decided that come what may, you must be an associate of Protagoras, whom on your own admission you have never either known or spoken to before. You call him a sophist.

313c

You obviously do not even know what a sophist is, and yet, you are about to entrust yourself to him.”

He heard this and said, “Quite likely, Socrates, based on what you are saying.”

“Well now, Hippocrates, could the sophist be a sort of merchant or retailer of the provisions by which the soul is nourished? For that is how he appears to me anyway.”

“What is the soul nourished by, Socrates?”

313d

“By what it learns, I presume,” said I. “But the sophist deceives us by praising whatever he sells, just as merchants and retailers do when they deal in nutriment for the body. For these people, although they praise everything they sell, presumably do not know themselves which of the wares they deal in are beneficial or harmful to the body, nor do the people who buy from them, unless they happen to be trainers or physicians.

313e

“The same applies to those who parade their learning around the cities, acting as salesmen and retailers to any eager customer. They too praise everything they sell. Yet in all probability some of these, my good man, are ignorant as to whether the wares they are selling are beneficial or harmful to the soul. And the same applies to the people who buy from them, unless one of them is, perchance, for his part, a skilled physician of the soul.

314a

“Now, if you are knowledgeable as to which of these wares are beneficial or harmful, you may purchase learning, in safety, from Protagoras or anyone else at all. Otherwise beware, blessed man, lest you take chances and imperil your most precious possessions, for there is surely an even greater danger in the purchase of learning than in the purchase of food. Indeed, it is possible for food and drink purchased from a retailer or merchant to be taken away in separate vessels before admitting them into the body by drinking them or eating them. Once you

have got them home, it is possible to take advice by calling upon someone who knows what we should eat and drink and what we should not, and how much and at what time. Consequently there is no great danger involved in their purchase.

314b

“Learning, by contrast, cannot be borne away in a separate vessel. No, once the fee has been proffered, it is necessary to take that learning into the soul itself, and once you have learned something, you must go your way, having been either harmed or benefited. Well, we should consider these issues in the company of our elders, for we are too young to deal with such an extensive topic.

314c

“Now, however, in accordance with our plan, we should go and listen to the man, and once we have heard him we should also consult other people too. In fact, Protagoras is not the only one there. Hippias of Elis⁷ is also there. So too, I believe, is Prodicus of Ceos,⁸ and a host of others, all wise.”

314d

Once we had decided this, we went on our way. But when we got to the porch, we stood there discussing a particular argument that had occurred to us on the road so that it would not be left unfinished and we could bring the issue to a conclusion before going inside. So we stood in the porch and discussed it until we had come to agreement with one another. Well, I think the doorman, a eunuch, overheard us, but due to the profusion of sophists he was probably annoyed with the visitors to the house, since when we knocked on the door, he opened it, saw us and said, “Ah, some more sophists. Himself is busy.” At the same time, he slammed the door shut with both hands as hard as he possibly could. So we knocked again and he responded, with the door still closed, saying, “Gentlemen, did you not hear me saying that he is busy?”

314e

“But, my good man,” I replied, “we are not visiting Callias, nor are we sophists, so do not worry. In fact, we have come because we want to see Protagoras, so please announce us.” So the man eventually opened the door to us with some reluctance.

315a

And when we went in we found Protagoras walking about in the portico. Walking in line with him on one side was Callias, the son of Hipponicus, and his brother Paralus, the son of Pericles, who has the same mother, also Charmides, the son of Glaucon. On the other side was Xanthippus, the other son of Pericles, Phillipides, the son of Philomelus, and Antimoerus from Mende,⁹ the most highly regarded of Protagoras’ pupils, one who is developing his proficiency with a view to becoming a sophist. Those who followed behind these men and listened in on the conversation seemed for the most part to be foreigners whom Protagoras had drawn from the various cities he travelled through, charming them with his voice, just like Orpheus, while they followed along, enchanted by the sound.¹⁰ There were also some of our fellow-countrymen in the chorus. When I beheld this chorus, I was especially delighted at the beautiful care they exercised never to impede Protagoras by getting in front of him. So when he turned about along with his cohort, those eavesdroppers divided in two nicely, and in due order, on either side, turned in a circle and always positioned themselves perfectly behind him once more.

315c

‘The next person I beheld’, in Homer’s phrase,¹¹ was Hippias of Elis, seated upon a raised chair in the opposite portico. Seated about him on benches were Eryximachus, the son of Acumenus, Phaedrus of Myrrhinus, Andron,¹² the son of Androtion, and among the foreigners were fellow citizens of Hippias, and a few others. They appeared to be questioning Hippias on astronomical issues concerning nature and the heavenly bodies, while he, seated on his raised chair, analysed each of their

questions and dealt with them in detail.

315d

And then ‘I beheld Tantalus’,¹³ for as it happens, Prodicus of Ceos is also in town. He was in a small room which Hipponicus had previously used for storage, but Callias had even emptied this out and turned it into a guest chamber because of the huge number of lodgers. Now, Prodicus was still lying down, covered in fleeces and blankets. There seemed to be a lot of them. Sitting beside him on one of the adjacent couches was Pausanias from Cerames, and with Pausanias there was a young man, still a youth, whom I thought noble and good by nature, and certainly very handsome. I think I heard that his name was Agathon, and I would not be surprised if he happens to be the young favourite of Pausanias. This youth was there, as were the two Adimantuses, one the son of Cepis, the other of Leucolophides,¹⁴ and there seemed to be some others there too. From outside I was unable to understand what they were discussing, despite my earnest desire to listen to Prodicus, for he seems to me to be an extremely wise and divine man. But because of his deep voice, there was a booming sound in the room which made everything he said unclear.

316b

We had only just arrived when right behind us came Alcibiades, the beautiful, as you call him, and I agree with you. Critias, the son of Callaeschrus, came in too.¹⁵ Now, once we had entered, we spent some time on a few minor issues, and when these had been dealt with we went up to Protagoras, and I said, “Protagoras, myself and Hippocrates here have come to meet you.”

“Do you wish to converse alone or in the presence of the others?” he asked.

“It makes no difference to us,” I replied. “When you have heard the reason for our visit, you can decide for yourself.”

“Well, then,” he said, “what is the purpose of your visit?”

316c

“Hippocrates here is one of our fellow countrymen. He is the son of Apollodorus, and he belongs to a great, prosperous family, while he himself seems by nature to be a match for any one of his peers. I think he wishes to attain a high reputation in the city, and he believes he will best attain this if he consorts with you. So please consider at this stage whether you think we should discuss these issues privately on our own or in the company of others.”

316d

“Socrates,” he replied, “you are right to be cautious on my behalf. Indeed, a foreigner who arrives in great cities, persuading the best of their young folk to depart from the company of others, of family members or acquaintances, older or younger, in order to consort with himself so that they may be improved by his company, needs to proceed carefully in so doing. For these activities generate no small measure of resentment, hostility and intrigue.

316e

“Now, I say that the skill of sophistry is of ancient date, yet those men of old who turned a hand to it, fearing the offence it might cause, disguised their skill. Some like Homer, Hesiod and Simonides concealed it as poetry; others, the associates of Orpheus and Musaeus, as rites or oracular sayings. And I have on occasion even observed people concealing it as gymnastics – Iccus of Tarentum, for instance, and the present-day sophist, as good as any, Herodicus of Selymbria, formerly of Megara. Your own Agathocles, although he is a great sophist, adopted the disguise of a musician, as did Pythoclides of Ceos and many others. All these men, as I have been saying, made use of these various skills as a screen because they were afraid of the resentment. Now, I do not agree with the approach of all these people, since I believe that they do not achieve their desired

objective. For the men who exercise power in the various cities, the very people they are trying to deceive, are quite aware of this subterfuge, while the masses hardly notice anything but simply repeat the pronouncements of the men in power. Now, trying to get away with something when you are unable to get away with it, and being exposed in the attempt, is sheer folly on the part of the person who tries to do so, and, of necessity, provokes even greater hostility in people, for they believe that such a person, in addition to his other failings, is also a rogue. So I have adopted an approach that is the complete opposite of theirs. I admit to being a sophist and an educator of humanity, and I regard this precaution, whereby I admit it rather than deny it, as better than the other one. And I have devised other safeguards as well as this so that, with God as my witness, nothing terrible has happened to me due to my admission of being a sophist, even though I have by now been many years in the profession. Yes, indeed, I have a long life behind me and I am old enough to be the father of anyone here, so, if you wish to pursue these issues, I would be very pleased to conduct the discussion in front of everyone in the house.”

317d

I suspected that he wished to put on a show before Prodicus and Hippias, and take pride in the fact that we were admirers of his who had come to join him. So I said, “Why don’t we invite Prodicus and Hippias and the people with them to listen in to our discussion?”

“Yes, certainly,” replied Protagoras.

“Well,” said Callias, “would you like us to arrange a meeting place, so that you may sit down and conduct your discussion?”

317e

That seemed the thing to do, and we were all pleased at the prospect of listening to wise men, so we too picked up the benches and couches ourselves and arranged them beside

Hippias, since the benches were to hand already. Meanwhile, Callias and Alcibiades arrived, bringing Prodicus, whom they had roused from the couch, and Prodicus' associates too.

Once we had all sat down together, Protagoras said, "Well, Socrates, now that these people are also present, would you please elaborate upon what you mentioned to me earlier on this young man's behalf?"

318a

So I replied, "Protagoras, I will begin as I did earlier with the reason for my visit. Yes, it so happens that Hippocrates here wants to be an associate of yours, and he says that he would like to find out what benefit will accrue to him if he associates with you. That is as much as we have to say."

So Protagoras responded by saying, "Well, young man, if you associate with me, this is what you will obtain. On the very first day you spend time with me you will go home a better man, and the same thing will happen the following day. And every day thereafter you will continually develop for the better."

318b

And having heard this, I said, "Protagoras, what you claim is nothing surprising. No, it is quite likely, since even you, as old as you are and as wise as you are, would become better if someone were to teach you what you did not already know. But suppose the situation were different.

318c

Suppose Hippocrates here were to change his desire suddenly and develop a desire to associate with that young man who has only recently arrived in town, Zeuxippus of Heraclea. Suppose he met him and heard from Zeuxippus the same words he has just heard from you now, that every day he is with him he will be better and will develop, and if he were to ask him, 'What are you saying I shall be better at, and in what respect shall I develop?', Zeuxippus' reply to him would be, 'At painting.' And

if he had spent time with Orthagoras, the Theban, and heard from him the same responses he has heard from you, and he were to ask that man in what respect he would become better every day by spending time with him, he would reply, 'At flute-playing.'¹⁶ So, please respond to the young man in this way, and to me when I put a question on his behalf. Hippocrates here, on associating with Protagoras will, on the very first day he spends time with him, depart a better man, and every day thereafter he will develop in this manner. But in what direction, Protagoras, and in relation to what?"

318d

When Protagoras had heard this he said, "You are putting your question very well, Socrates, and I enjoy responding to people who put their questions well. You see, if Hippocrates comes to join me, he will not suffer what he would have suffered by spending time with any other sophist.

318e

In fact, the others mistreat the young people. For no sooner do they get away from the various skills than these sophists draw them back in once more, against their will, immersing them in the skills by teaching them calculation, astronomy, geometry and music." And as he said this, he glanced at Hippias. "Yet, once he comes to me, he will learn nothing else except what he came to learn, and the subject matter is sound-judgement in relation to private affairs and in relation to civic affairs, how he may best manage his own household and how his words and deeds may be extremely influential over the business of the city."

319a

"So, am I following what you are saying?" I asked. "You seem to me to be describing political skill, and promising to produce men who are good citizens."

"That, Socrates, is precisely the profession I profess," he said.

“In that case,” I said, “you have acquired a great system, if indeed you have acquired it.

319b

For I should not say anything else to a man like you, except what I am really thinking. Indeed, I do not believe that this can be taught, Protagoras, yet, when you say that it can, I do not know how to doubt you. But it is only right that I explain the reason I believe that it cannot be taught or procured by people from other people. Indeed I agree, as do the other Greeks, that the Athenians are wise.

319c

Now, I observe that whenever we gather together in the Assembly, and the city needs to engage in some activity related to construction works, they send for the builders to advise on what they are going to construct. When the issue is shipbuilding, they send for the shipwrights, and the same goes for all other subjects which they regard as capable of being learned and taught. Yet if anyone else attempts to advise them, someone whom they believe to be no practitioner, even if he is extremely beautiful and wealthy and of noble lineage, they accept him none the more for that. No, they ridicule him and cause a commotion until either he himself gives up on his attempt to speak because he has been shouted down, or the attendants drag him away or carry him out at the behest of the officials. So, on issues where they believe that a skill is involved, this is how they proceed.

319d

“However, once they need to decide on the administration of the city, it is all the same to them if the person who stands up to advise them about these issues is a carpenter, a blacksmith, a cobbler, a merchant, a ship owner, rich or poor, of noble lineage or none. It makes no difference.

No one rebukes these speakers for this, as they did in the previous case, for trying to give advice without having learned about the matter from anyone, or without even having a teacher. For the Athenians obviously do not believe that this subject can be taught.

319e

“What is more, this conclusion applies not only in the communal aspect of the city, but also in private. For the wisest and most excellent of our citizens are unable to pass on this excellence, which they possess, to anyone else. Indeed Pericles, the father of these two young men here, educated them well and truly in the subjects for which he found teachers, yet when it comes to matters on which he himself is wise, he neither instructs them himself nor hands them over to anyone else.

320a

Rather they go about, grazing like sacred cattle, perhaps somehow stumbling upon excellence of their own accord. Or take Clinias if you like, the younger brother of Alcibiades here. The very same man, Pericles, acting as his guardian, was somehow afraid lest he be corrupted by Alcibiades, so he separated the two brothers, and placed Clinias with the family of Ariphron¹⁷ to be educated.

320b

But before six months had elapsed he gave him back, at a loss as to what he should do with him.

320c

And I can recount a whole range of other examples of those who are themselves good but have never yet made someone else good, either a member of their own family or someone from outside it. So, Protagoras, when I look at all this, I come to the view that excellence cannot be taught. Yet when I hear these assertions of yours, I waver, and I think you are talking sense, because I regard you as a highly experienced, very learned person who has made discoveries of his own. Therefore, if you

can prove to us more clearly that excellence is teachable, do not begrudge us a response.

Prove it.”

“Well, Socrates,” he said, “I shan’t begrudge you. But as an older man addressing his juniors, should I make my point by telling you a story or by working through an argument?” Now, most of the gathering replied that he should proceed in whatever manner he wished. “Well,” said he, “I think it would be more pleasing to tell you a story.”

320d

“Now, there was once a time when, although there were gods, there were no mortal creatures of any kind. And when the moment of destiny came for the birth of the mortal creatures, the gods formed them within the earth, from earth and fire which they mixed together, and from whatever mixes with earth and fire. Once they were ready to bring the creatures forth into the light, they directed Prometheus and Epimetheus¹⁸ to equip them and assign powers to each, as appropriate. Epimetheus asked Prometheus if he himself could do the allocating. ‘Once I have done the allocating, you shall do the inspecting,’ he said, and having persuaded his brother of this, he made the allocations. To some he assigned strength without adding speed; others, who were weaker, he equipped with speed. Some of them he armed, and he devised an alternative means of preservation for those who were given an unarmed nature. To those whom he kept small, he allotted winged flight or an underground dwelling place, while those whom he caused to grow large he preserved ^{321a} through their own largeness. He also distributed the other faculties, balancing them equally in this way. As he was making these arrangements, he took care that no kind of creature should become extinct. When he had provided them with sufficient means of avoiding mutual annihilation, he devised a protection against the seasons sent

from Zeus by wrapping them in thick hair and hard skin, adequate defences against the cold, that could also protect them from heat, so that, as they retired to their lair, these same defences would serve for each as their own self-grown bedding.

321b

Some he shod with hooves, others with hard, bloodless skin. Then he devised various kinds of food for the various species, the pasture of the earth for some, fruit from trees, or roots for others, and to some he gave other creatures as food for them to eat. These he graced with very few offspring, but he made the creatures that were eaten by them highly productive as a means of preserving the species. Now, since Epimetheus was not wise, he carelessly lavished all the powers upon the irrational creatures. So he was left with the human race still unprovided for, and he was at a loss as to what he should do. In his perplexity, Prometheus arrived to inspect the distribution, and he saw that although the other creatures were suitably provided for in all respects, the human race was naked, unshod, had no bedding and was unarmed. But by now the day of destiny was at hand, on which human beings too had to come forth from the earth into the light. Prometheus, gripped by perplexity as to what sort of protection he might find for the humans, stole the wisdom that resides in skill from Hephaestus and Athena, along with fire, for it is impossible for anyone to attain the skill or for it to be useful without fire, and so it is that he bestows this gift upon humanity.

321e

“Now, that is how humanity came to possess the wisdom for everyday life, yet they did not possess wisdom in civic affairs, for that belonged to Zeus. There was no time for Prometheus to enter the high pinnacle that is the abode of Zeus, and the guardsmen of Zeus were too fearsome anyway. But he entered unnoticed into the shared workshop of Athena and Hephaestus wherein they practised their skill, stole the skill that works

through fire, the one that belongs to Hephaestus, and the other skill that belongs to Athena, and bestowed them upon humanity. And as a consequence of this, the life of man is well provided for, and yet it is said that because of Epimetheus, Prometheus was prosecuted afterwards for theft.

322b

“Since humanity had shared in a divine portion, firstly, due to their kinship with the god, they were the only living creatures who acknowledged the gods, and they set about constructing altars and statues of gods. Then, by means of this skill, they quickly produced articulate sounds and names, and invented houses, clothing, shoes, bedding, and the production of food from the earth. Once they had been provided for in this way, the humans did not live communally at first, and there were no cities. So they were being ravaged by the wild beasts, because they were weaker than the beasts in every respect. And although their skilled craftsmanship was enough to secure them a source of food, it fell short when it came to warfare against the wild animals, for they did not yet possess skill in civic affairs of which warfare is a part. So they sought to come together and preserve themselves by building cities.

322c

“Now, when they came together, they acted unjustly towards one another as they lacked skill in civic affairs. So they were dispersed once again, and subject to destruction. Then Zeus, fearing that our race might perish completely, sent Hermes, bearing respect and justice to humanity, so that there would be order in the cities and conjoining bonds of friendship. So Hermes asked Zeus in what manner he should bestow justice and respect upon humanity. ‘Should I allocate these in the same way that the skills were allocated? They were distributed so that one person possessing medical skill was enough to treat numerous laymen, and the same applied to the other skilled persons. So should I also distribute justice and respect among

the humans in this way or should I allocate it to them all?' 'To them all,' replied Zeus, 'and let them all have a share in it, for cities will not come into existence if only a few people share in this skill, as happens with other skills. And set down a law from me whereby anyone unable to share in justice and respect is to die as a pestilence of the city.'

322e

"Accordingly, for these reasons, Socrates, everyone, Athenians included, believes that few advisers should be involved whenever the deliberation relates to excellence in building, or some other skilled work. And if anyone outside of that few offers advice, they do not put up with it, as you have said, quite reasonably in my view. Yet when it comes to advice on excellence in civic affairs, where it is necessary to proceed entirely on the basis of justice and sound-mindedness, they quite reasonably accept contributions from all men because it is appropriate for everyone to share in this excellence; otherwise there would be no cities at all. That is the explanation for this, Socrates.

323a

"In case you think you are being deceived, please accept this additional proof that the whole world really does believe that all men have a share of justice, and also civic excellence in general.

323b

In the case of the other excellences, as you say yourself, if someone claims to be a good flute player or to be good at any other skill which he is not good at, they laugh at him or get angry with him, and his relatives come and rebuke him for being insane. Yet, in the case of justice and excellence in civic affairs generally, if a person whom they know to be unjust should himself declare the truth about himself in front of everyone, they regard this as madness in such circumstances, even though in the previous case, flute-playing, they regarded

speaking the truth as sound-mindedness. Indeed, they say that everyone should claim to be just, regardless of whether they are or are not, and anyone who is not pretending to be just is insane, because it is necessary for everyone to share in it in some way or other if they are to live with their fellow men. So they quite reasonably accept all men as advisers on this particular excellence because they believe that everyone has a share in it. That is all I have to say on that issue.

323c

“Next I shall try to show you that they do not think that it is present naturally or of its own accord. Rather, it is capable of being taught, and those who acquire it acquire it through diligence.

323d

For people who believe that any of their fellow men have bad qualities, due to nature or chance, do not get angry with them or instruct them or punish them, so that they will not be as they are.

323e

Rather, they pity them. Who would be so stupid as to try to inflict any of this upon people who are ugly or small or weak? Indeed, they know, I believe, that these advantages and their opposites come to people by nature and by chance. Whereas if anyone does not possess those good qualities – which, in their view, come to people through diligence, practice and instruction – but has the opposite qualities instead, the bad ones, surely these are the people who become the target of anger, punishment and admonishment. Injustice is one of these bad qualities, so is impiety, and, in short, everything that is in opposition to civic excellence. Hence, everyone gets angry with every offender, and they admonish them, obviously because this excellence is capable of being acquired by diligence and study. Indeed, Socrates, if you would like to consider what precisely punishment can do to those who act unjustly, this will

teach you that people believe that excellence can be acquired.

324b

For no one punishes those who act unjustly because they acted unjustly with this alone in mind and only on account of this behaviour unless he is inflicting punishment irrationally, as if he were a wild animal. But someone who undertakes the infliction of punishment on the basis of reason does not seek vengeance for the past injustice, for that would not undo what had been done. Rather, it is inflicted for the sake of the future, so that the wrongdoer himself will not act unjustly again.

324c

Nor will anyone who sees this fellow punished. And someone who thinks like this is of the view that excellence can be instilled by education, since he inflicts punishment as a deterrent. Now, this view is held by all those who inflict punishment in private or in public. People in general, and your fellow Athenians in particular, seek vengeance and punish those who in their view act unjustly.

So, based on this argument, the Athenians are included among those who believe that excellence can be procured and is capable of being taught.

324d

“Well, Socrates, it seems, to me anyway, that you have been given adequate proof that it is reasonable for your fellow citizens to accept the blacksmith and the cobbler as advisers on civic affairs, and that they believe that excellence can be imparted and is capable of being taught.

324e

“Now, there is still one puzzle left, the issue you raised about the good men. Why, exactly, is it that good men instruct their own sons in the broad range of subjects for which teachers can be found, and make them wise therein, yet when it comes to the excellence in which they themselves are good, they make their

sons no better than anyone else? Now, on this issue, Socrates, I shall no longer recount a story to you, but an argument. Well, think about this. Is there or is there not one thing in which all the citizens must share if there is to be a city? Indeed, the resolution of the difficulty you raise lies in this question and nowhere else. For if there is one, and this one is not the skill of the builder, the blacksmith or the potter, but justice, sound-mindedness and holiness, and what I collectively refer to as one thing, the excellence of man, if this is what everyone should share in, and if all men should act in consort with this if they wish to learn or enact anything else, and if anyone, child, man or woman, who has no share in this should be instructed and punished until they have become better because of the punishment, and if anyone who does not heed the punishment and instruction should be cast out of the city or put to death because he is incurable, if this is how matters stand, and yet in spite of its nature good men teach their sons everything else with the exception of this, behold how strangely good men are behaving. For we have shown that they believe that this can be taught privately and publicly. Yet, in spite of the fact that this can be taught and cultivated, do they really teach those other subjects to their sons – the ones that do not carry the death penalty should the boys lack the knowledge thereof – while, on the other hand, failing to teach or lavish the utmost care on that subject which does carry the penalty of death or exile for their sons, if they neither learn this nor cultivate excellence, and not just death, but confiscation of their property, and, in short, the total overthrow of their family? No, Socrates, we must believe that they teach and admonish them all through their lives, beginning when they are small children.

325d

“As soon as someone can understand what is being said, his nurse, mother, trainer and even his father exert themselves so that the child may excel, teaching him with every word and

deed, and pointing out that this is just, that unjust; this is noble, that base; this is sacred, that profane; do this, but do not do that. If he obeys willingly, all is well, but otherwise they correct him with threats and blows as though he were a twisted and bent piece of wood. Afterwards they send him to various teachers, directing them to attend much more to the proper conduct of the children than to writing and lyre-playing. The teachers attend to these matters, and once the children have learned writing and are beginning to understand the written word just as well as the spoken word, they provide them with the works of good poets to read in the classroom, and compel them to learn these by heart. These contain many words of warning and numerous narratives, praises and eulogies of the good men of old, so that the child may be inspired to imitate them, and may yearn to become a man of this sort. The lyre teachers, doing the same sort of thing, pay attention to sound-mindedness and how the young people may refrain from doing wrong. What is more, once they have learned to play the harp, they teach them the works of some other good poets, lyric poets, which they arrange to the tunes of the harp, and they compel the rhythms and harmonies to take up their abode in the souls of children so that they may be gentler, and be effective in word and deed by becoming more graceful and harmonious, for the whole life of man stands in need of grace and harmony.

326c

And, in addition even to this, they send them to trainers so that their bodies may be in better shape to act as the servant of the mind, which is now so effective, and they may not be compelled to turn cowards, either in war or any other situations, due to the poor condition of their bodies. Those who are in the best position to do all this do it best, and it is the wealthy who are best able to do so, and their sons attend teachers, beginning at the earliest possible age, and giving it up at the latest possible age. Once they are quit of their teachers, the city, for its part,

compels them to learn the laws and to live in accord therewith, in accord with that pattern, so that they do not behave in a random manner of their own volition. Rather, they act as writing teachers do with children who are not yet skilled at writing. They write letters in outline with their stylus, and then give the tablet, thus inscribed, to the child, and make him write with the lines as a guide. So too does the city write its laws, which are inventions of good lawgivers of times past. It compels people to rule and be ruled in accordance with these, and punishes anyone who departs from them. And the name of this punishment, both among yourselves here and everywhere else, is correction, for justice provides correction. Now, when so much attention is paid to excellence, privately and publicly, are you really surprised, Socrates, and puzzled as to whether excellence can be taught? But there is no cause for surprise. No, there would be much more cause for surprise if it could not be taught.

327a

“So why do so many sons of good fathers turn out mediocre? You need to understand this too. Indeed, it is nothing surprising if, in fact, I was speaking the truth earlier when I said that when it comes to the matter of excellence, no one should distance himself from this if there is to be a city. Indeed, if what I am saying is actually the case, as it most certainly is, then select any other activity or subject whatsoever and reflect upon it. Suppose it were impossible that there be a city unless we were all flute players, each according to his ability, and everyone taught this to everyone else in public and in private, and rebuked anyone who did not play well, and did not hold back in doing so. It would be just like the present situation, where no one holds back or conceals his expertise on matters of justice and law, as one would in other areas of expertise. For the justice and excellence we exercise towards one another presumably benefits us all, and, as a consequence, everyone is eager to tell

everyone else what is right and just, and give them instruction.

327c

Now, if we were also to have the same total eagerness and lack of restraint in teaching flute-playing to one another, do you think, Socrates,” he said, “that the sons of any of the good flute players would prove to be better flute players than the sons of ordinary players? I think not. No, if anyone had a son with a natural ability in flute-playing, the boy would grow in reputation, and if he had no natural ability he would never be famous. The son of a good flute player may often turn out to be inferior, and the son of an ordinary one to be good. In any case, they would all be competent flute players compared to unlearned folk who know nothing about flute-playing. You should also think about the present case in the same way. Among those educated by laws and by their fellow men, even the person who seems completely unjust is a just man, a practitioner in the matter of justice, if he is judged by the standard of men devoid of education, with no law courts, no laws and no compulsion of any kind to make them pay attention to excellence, wild folk just like those presented at the Lenaean festival by the playwright Pherecrates last year.¹⁹ Certainly, if you fell in with people of that sort, just like those haters of humanity in the chorus of that play, you would be grateful to meet up with Eurybatus and Phrynonidas,²⁰ and you would wail longingly for the wickedness of the people here.

328a

“And now you are putting on airs, Socrates, because everyone is a teacher of excellence, each to the extent of his ability, yet it seems to you that there are none. It is as if you were to ask who the teacher of the Greek language is. There is not one to be found. And in my view, if you were to ask who would teach the sons of our craftsmen the very skill which they have obviously learned from their own father – insofar as the father and his associates who had the same skill were able to do so – if you ask

who in turn would teach these boys, I do not think it an easy matter to produce a teacher, Socrates, even though it is extremely easy to do so for others who are devoid of experience. And the same argument applies to excellence, and to everything else. But if there ^{328b} is anyone who surpasses us, even a little, in our advance towards excellence, we should be grateful.

^{328c}

And I think I am one of those people, and that I, more so than anyone else, can benefit a person in becoming noble and good. And I am well worth the fee I charge, and even more, so much so that the student himself also agrees. Accordingly, I have devised the following system for paying the fee. Once someone has received instruction from me, he hands over the money I charge if he wishes. Otherwise, he goes to a temple, takes an oath as to how much he claims the teaching is worth, and deposits that amount.

^{328d}

“Socrates,” he said, “I have presented you with a story and an argument like this to show that excellence can be taught, and that the Athenians believe this to be the case, and that it is no surprise that ordinary sons are born to good fathers, and good sons to ordinary fathers, since even the sons of Polykleitus, who are the same age as Paralus and Xanthippus here, are nothing in comparison with their father, and the same goes for the sons of other craftsmen. But these two boys do not deserve such denunciation just yet. Indeed, there is still hope for them because they are young.”

^{328e}

Having expounded for so long in this manner, Protagoras brought his speech to a close. I had been beguiled, and for a long time I kept looking at him as though he was still going to say something, so keen was I to hear him. However, once I realised that he really had finished, I somehow gradually gathered

myself together, as it were, glanced towards Hippocrates and said, “Son of Apollodorus, I am grateful to you for encouraging me to come here, for I think it very important that I have heard what I have heard from Protagoras. Indeed, in former times I did not believe that good people become good by the diligence of their fellow men, but now I am convinced, except for one minor difficulty which Protagoras will, of course, explain away quite easily, since he has already explained so much else.

329a

“If someone were to frequent any of our public speakers on these very issues, he would probably hear speeches of this sort, either from Pericles or any of the other accomplished speakers.

329b

But if anyone puts a question to them, they behave like a book. They are not able to answer the question or ask one themselves. Rather, if someone asks even a trivial question about anything they have said, our rhetoricians protract and draw out their oration in answer to the simplest question, like clanging brass that resounds for quite some time, drawing out its note until someone puts a hand on it. Now, Protagoras here is well able to deliver a good long speech. That is obvious now.

Yet he is also competent at answering briefly when he is questioned, and at waiting, and accepting the answer when he asks a question himself, endowments possessed by very few.

329c

“So, Protagoras, I am not quite there yet, but if you were to answer the following question I would understand everything. You say that excellence can be taught, and if I were to be persuaded by anyone else in the world, I would surely be persuaded by you. But please satisfy me on an issue that surprised me when you were speaking, for you said that Zeus sent justice and respect to humankind, and what is more, on many occasions in your exposition, justice, sound-mindedness,

holiness, and all the rest, were referred to by you collectively as one thing, excellence. Please go through these for me precisely, with an argument on whether excellence is one entity, of which justice, sound-mindedness and holiness are parts, or whether all these words I have just uttered are a variety of names for the same one thing. This is my only remaining desire.”

329d

“Well, Socrates,” he replied, “that is an easy question to answer. Excellence is one, and you are asking about parts of it.”

“Are they parts”, I said, “just as the parts of the face are parts – mouth, nose, eyes and ears? Or are they like the parts of gold, which do not differ in any way either from one another or from the whole, except in being large or small?”

329e

“In the former sense, Socrates, in my view, as the parts of the face relate to the face as a whole.”

“Now, do people also share in these, the parts of excellence, some sharing in one part and someone else sharing in another, or is it necessary that someone who has acquired one has them all?”

“Not at all,” he replied. “Many people are courageous yet unjust, or just but not wise.”

330a

“So are these also parts of excellence, wisdom and courage?”

“Of course,” he said, “most emphatically. And wisdom is the most important part.”

“And is each of them different from the other?” I asked.

“Yes.”

330b

“And does each of them possess its own particular capacity? I mean, are they like the parts of the face, where the eye is not

like the ear, nor does it have the same capacity, nor is any part like another part, either in its capacity or on any other basis? Is this also the case with the parts of excellence, that one part is not like the other, neither in itself nor in its capacity? Or is it quite obvious that this is the case, if it really conforms to our example anyway?"

"Yes, this is the case, Socrates," he said.

And I said, "So no other part of excellence is like knowledge, no other part is like justice, or courage or sound-mindedness or holiness."

"No," he replied.

330c

"Come on, then," I said. "Together let us consider what sort of thing each of them is. Let us ask this question first. Is justice a something or not a something? I think it is, but what about you?"

"I think so too," he replied.

"What about this? If someone were to ask you and me, 'Protagoras and Socrates, please tell me about this thing which you have named just now as justice. Is this itself just or unjust?' I would reply that it is just, but how would you cast your vote? The same way as me, or the other way?"

"The same," he replied.

330d

"So, in response to the questioner, I would say that justice is the sort of thing that is just. Would you say so too?"

"Yes," he said.

"If he were to go on and ask us, 'Wouldn't you also say that there is holiness?' I think we would agree."

"Yes," said he.

“Wouldn’t you say that it too is a something? We would agree to this wouldn’t we?”

He also concurred with this.

330e

“Would you say that this thing itself is the sort of thing that is, by nature, holy or unholy? Now, I myself would be annoyed by that question and I would say, ‘Speak respectfully, my man. Scarcely anything else would be holy if holiness itself were not holy.’ What about you? Would you respond in a similar manner?”

“Very much so,” he said.

“After this, if he were also to ask us, ‘Well, what were you saying a little earlier? Perhaps I did not hear you aright. I thought the two of you said that the parts of excellence are so disposed towards one another that one of them is not like the other.’”

331a

“I would reply that for the most part you have heard right, but if you think that I said so too, you have misheard, for Protagoras here gave this answer. I was just asking the questions.

“Now, if he were to say, ‘Is this fellow speaking the truth, Protagoras? Are you the one who says that in the case of excellence one part is not like another? Is this your statement?’ What answer would you give him?”

“I would have to agree, Socrates,” he said.

331b

“Well, Protagoras, having agreed to that, what answer would we give him if he were to ask us further, ‘So, is holiness not like something just, and is justice not like something holy but like something unholy? And is holiness like something that is not just, and is it therefore unjust, and justice unholy?’ What reply shall we give him? Now, I myself would say, on my own behalf, that justice is holy and holiness just. And I would give the same

response on your behalf too, if you would allow me, either that justness is the same as holiness, or that they are very alike, but most of all that justice is like holiness, and holiness is like justice. Well, let us see if you will disallow that response, or if this is how it seems to you too.”

331c

“I do not think it is as simple as all that, Socrates,” he replied. “I do not agree that justice is holy and that holiness is just. No, I think there is some distinction between them. But what difference does that make?” he said. “If you wish, let justice also be holy and holiness just, for our purposes.”

331d

“Not for mine,” I said, “for I do not want this ‘if you wish’ or ‘if you think so’ to come under scrutiny, but me and you. I say ‘me and you’, because I believe that the proposition will best come under scrutiny once the word ‘if’ is left out of it.”

331e

“But of course justice bears some resemblance to holiness,” he said. “And, indeed, anything at all resembles anything else in some way or other. For there is a sense in which white bears a resemblance to black, hard to soft, and so do others that seem completely opposite to one another. And we said at the time that the parts of the face each have their own capacity, and that one is not like the other, yet there is some sense in which they bear a resemblance and one is like the other. So, based on this approach, you could even prove, if you wanted to, that these too are all similar to one another. But it is not right to refer to things that possess some similarity as similar, even when the similarity is very minor, or to refer to things that possess some dissimilarity as dissimilar.”

Now, I was surprised, and said to him, “So is this your view of the relationship between the just and the holy? Is there only a slight similarity between them?”

332a

"No," he said, "this is not exactly the situation. Then again, it is not as you seem to think it is either."

"Very well," said I, "since you are not well disposed towards this we should let it go and investigate something else you said. Is there something you call folly?"

"Yes."

"And the complete opposite of this thing is wisdom, isn't it?"

"So it seems to me anyway," he replied.

"And whenever people behave properly and beneficially, do you think they are sound-minded when behaving in this way, or the opposite?"

"They are sound-minded," he said.

332b

"Isn't it by sound-mindedness that they are sound-minded?"

"Necessarily."

"Those who do not behave properly behave foolishly, and behaving in this way they are not soundminded, are they?"

"I agree," he said.

"So, is behaving foolishly the opposite of behaving sound-mindedly?"

"Yes."

"Now, whatever is done foolishly is done with folly, whatever is done sound-mindedly is done with sound-mindedness."

He agreed.

"Now, if something is done with strength it is done strongly, and if it is done with weakness it is done weakly. Isn't this so?"

He thought so.

332c

“And is something done with haste done hastily, and is something done with slowness done slowly?”

“Yes.”

“And if something is done in the same way, it is done by the same, and if it is done in the opposite way, it is done by the opposite.”

He concurred.

“Come on now,” said I, “is there such a thing as the beautiful?”

He agreed.

“Is there any opposite of this except the ugly?”

“There is not.”

“What about this? Is there such a thing as the good?”

“There is.”

“Is there any opposite of this apart from the bad?”

“There is not.”

“What about this? Is there such a thing as a high-pitched sound?”

“Yes.”

“Is there any opposite of this apart from a low-pitched sound?”

“No.”

“Now,” said I, “to each one of the opposites isn’t there only one opposite and not many?”

He agreed with this.

332d

“Well, let us summarise the issues we have agreed on. Have we agreed that there is only one opposite of anything, and no

more?"

"We agreed on that."

"And that what is performed in the opposite way is performed by opposites?"

"Yes."

"Did we agree that something done foolishly is done in the opposite way to something done soundmindedly?"

"Yes."

^{332e}

"And that something done sound-mindedly is done by sound-mindedness, while something done foolishly is done by folly."

He agreed.

"In that case, since they are done in opposite ways, wouldn't they be done by opposites?"

"Yes."

"And if one is done by sound-mindedness, will the other be done by folly?"

"Yes."

"In opposite ways?"

"Entirely so."

"In that case aren't they done by opposites?"

"Yes."

"So, is folly the opposite of sound-mindedness?"

"It appears so."

"Now, do you recall that we agreed in our previous discussion that folly is the opposite of wisdom?"

“That was agreed.”

333a

“And that there is only one opposite of anything?”

“I agree.”

“Well, Protagoras, which of our arguments are we to drop? Is it the one stating that everything has only one opposite, or the other one that said wisdom is different from sound-mindedness, although both are parts of excellence? And as well as being different, they themselves are dissimilar, just like the parts of the face, and so are the capacities they possess. So which of them should we drop?

For these two arguments are not expressed in a manner that is entirely in tune. Indeed, they are neither in unison nor in harmony with one another. For how could they be in unison, if, in fact, 333b anything has necessarily only one opposite and no more? Yet, on the other hand, it appears that wisdom and sound-mindedness are both opposite to one thing, folly. Is this the case, Protagoras,” I asked, “or is it otherwise?”

333b

He agreed, very reluctantly.

“So, could it be the case that sound-mindedness and wisdom are one? And what is more, we showed a moment ago that justice and holiness are almost the same.

333c

“Come now, Protagoras,” I said, “let us not flag. Let us consider the remaining possibilities thoroughly. Do you think that a person who is acting unjustly is sound-minded because he is acting unjustly?”

“I would be ashamed to agree to that, Socrates,” he said, “even though there are a lot of people who say so.”

“Now, should I direct the argument at them or at you?” I asked.

“Discuss this argument first, the one that a lot of people hold, if you prefer,” he said.

“Well, it makes no difference to me, as long as you are the person who responds, regardless of whether you hold these views or not. Indeed, for the most part, I am scrutinising the argument, yet it will probably turn out that I, the questioner, and my respondent, come under scrutiny too.”

333d

At first Protagoras was coy with us, deeming the argument too troublesome, but eventually he consented to respond. “Come on, then,” said I, “answer me from the beginning. Do you think some people are being sound-minded whilst acting unjustly?”

“Let it be so,” he replied.

“And by being sound-minded you mean thinking well?”

He agreed.

“And thinking well means planning well for whatever injustice they enact?”

“Let it be so,” he replied.

“Does this mean that their unjust actions proceed well or proceed badly?”

“Well.”

“Now, do you say that there are things that are good?”

“I say so.”

333e

“Well, are these good things the ones that are of benefit to people?”

“Yes, indeed, by Zeus,” said he, “and I refer to things as good even when they are not of benefit to mankind.”

At this stage, Protagoras seemed to me to be angry and combative, and set against answering more questions. So, once I had observed the state he was in, I took care to question him gently.

334a

“Protagoras,” I said, “are you referring to things that are of no benefit to any person or to those which are of no benefit whatsoever? And do you call things of that sort good?”

334b

“Not at all,” he replied. “But I do know lots of things that are detrimental to people – foodstuffs, drink, medicines, and myriads more – and lots that are of benefit; others that have no effect upon humans, but do affect horses. Some only affect cattle, others only dogs; some affect none of these animals, but do affect trees; some are good for the roots of the tree but bad for the shoots. So manure, for instance, is good for all plants when it is spread about the roots, but if you decided to throw it onto the saplings and young shoots it would destroy them all. Oil too is extremely bad for all plants and is utterly inimical to the hair of all other creatures except that of humans, yet it is a salve to human hair and to the rest of the body.

334c

But the good is so variegated and multifaceted that, even in our own case, the very same substance is good for the external parts of the human body and very bad for the internal parts. That is why all the physicians prohibit sick people from using oil on whatever they are going to eat, except in minute quantities to quell the nausea that arises from the odours of food and its sauces.”

334d

Now, once he had said all this, the company applauded his well-delivered speech, and I said, “Protagoras, it so happens that I am a forgetful man, and if someone speaks to me at length I forget what topic the argument is dealing with. Now, if I had

been somewhat deaf you would have thought it necessary to speak more loudly to me than to the others, if you really wanted to converse with me. So also in this case, since I am forgetful, curtail your responses to me and make them shorter, if I am to follow you.”

“So, in what sense are you instructing me to answer briefly?” he said. “Should I answer you more briefly than necessary?”

“Not at all,” I replied.

“As much as necessary then?” he asked.

334e

“Yes,” said I.

“Well, should I give you as long an answer as I deem necessary or as you deem necessary?”

335a

“What I have heard, anyway,” said I, “is that you yourself are able and can, if you wish, teach others to speak at such length that the speech never peters out, and, what is more, to speak with such brevity on the very same subject that no one could be more brief than you. Now, if you intend to engage in discourse with me, please employ the latter mode of speaking, the concise one.”

“Socrates,” he replied, “I have by now engaged in verbal contests with very many people, and if I had done as you are instructing me, and engaged in discourse as instructed by my adversary, I would have looked no better than anyone else, nor would the name of Protagoras be known among the Greeks.”

335b

I then recognised that he was not pleased with his own responses, the ones he had given earlier, and that he was not prepared to engage in discourse in the role of respondent, if he had a choice.

335c

So, having decided that it was not my role to be present at his gatherings any longer, I said, “Well, Protagoras, neither am I comfortable about conducting our meeting in a manner contrary to your sentiments, but whenever you are prepared to engage in discourse in a way that I can follow, then I shall discourse with you. For they say that you are wise and can conduct gatherings based upon lengthy speeches or concise speeches, and you confirm this yourself, while for my part I am not able to handle these lengthy speeches, although I wish I could. But since you are able to do both, you should have co-operated with us so that the gathering might have proceeded. And now, since you are unwilling, and I have some business and need to be elsewhere, I am unable to remain with you as you make these lengthy speeches. So I shall depart, although I might well have enjoyed hearing you deliver them.”

335d

Once I had said this, I was getting up to leave, and, as I was doing so, Callias grabs my hand with his right hand, tugs this worn cloak of mine with his left, and says, “We shall not let you go, Socrates, for once you depart our dialogue will not proceed in the same way. So, I am asking you to remain with us, for there is nothing that would please me more than hearing yourself and Protagoras engaging in discourse. Come on, please do us all this favour.”

335e

At that stage I had stood up to make my exit, and I said, “Son of Hipponicus, I always admire your love of wisdom, and now, in particular, I praise it and love it, and so I would like to grant you a favour if you were to ask me to do something I can do. But at the moment it is as if you were asking me to follow Criso, the champion runner from Himera, when he is at his best, or to run and keep pace with one of the long-distance runners or those who can run all day, for I would reply that I want this for myself much more than you do. But I simply cannot keep pace with

these runners. So, if you want to see myself and Criso running in the same race, you must ask him to drop his pace, for I am unable to run quickly, while he is capable of running slowly.

336b

Now, if you are eager to hear Protagoras and myself, please ask him to answer me now in the same way he answered at first, briefly, just responding to what is asked. Otherwise, what dialogue will there be? For I thought, anyway, that meeting and engaging in discourse with one another was different from public speech-making.”

“But you see, Socrates,” he replied, “Protagoras seems justified in claiming that he himself should be allowed to engage in discourse in whatever manner he prefers, and you seem justified in claiming that he should speak in the manner you prefer.”

336c

At this point Alcibiades took issue and said, “That is not right, Callias! Socrates here concedes that he has no capacity for lengthy speeches, and here he gives way to Protagoras. Yet, in his ability to carry on discourse, and knowing how to present an argument and deal with one, I would be surprised if he gave way to any person. Now, if Protagoras also agrees that he is inferior to Socrates in discourse, that is enough for Socrates. But if he is opposed, let him engage in discourse without stretching out each answer into a lengthy speech, beating arguments down, being unwilling to present an argument, and taking so long that most of the listeners forget what the question was about. Yet I assure you that Socrates will not forget, even though he plays games and claims to be forgetful. Now, since each of us should present his own viewpoint, it seems to me that Socrates is speaking more reasonably.”

336e

I think Critias was the one who spoke after Alcibiades. “Prodicus and Hippias,” he said, “I think Callias is much disposed towards Protagoras, while Alcibiades is always eager for victory in whatever he takes on. But we should not take sides in this, either for Socrates or for Protagoras.

337a

No, we should jointly ask both of them not to break up the gathering in mid-course.”

Once he had said this, Prodicus in turn said, “I think you have expressed that nicely, Critias.

337b

Indeed, those who are present at discussions of this sort should grant a common hearing to both parties, but not as equals for they are not the same. We should indeed grant a common hearing to both and not assign equal status to each. Assign greater status to the more wise and less to the more foolish. I, for my part, Protagoras and Socrates, think it best that you agree to debate these issues rather than arguing over them, for friends also debate with friends in a spirit of good will, while disputants and enemies argue with one another. So, the fairest way to conduct your meeting is through debate, for in this way you, the speakers, will best be held in good repute by us listeners, even though you may not be praised. For a good reputation rests in the souls of your listeners with no accompanying deception, while praise expressed in words is often falsely expressed and contrary to the opinion of the speaker. We, your listeners, for our part, would be most gladdened by this approach rather than pleased, for being gladdened is learning something and acquiring understanding just in the mind, while being pleased is eating something or experiencing some other pleasure just in the body.”

337d

When Prodicus had said all this, the vast majority of those present accepted it. The wise Hippias spoke after Prodicus. “Gentlemen here present,” he said, “I consider you all to be kindred, family and fellow citizens, by nature but not by convention, for by nature like is kindred to like, while convention, the tyrant of humanity, exercises force in general opposition to nature. So, it would be disgraceful for us who understand the nature of things, we who are the wisest of the Greeks, gathered together now for this very reason in the very shrine of wisdom of the Greek world and, in this, the greatest and most prosperous household in that very city, it would be a disgrace, I say, if we were to display nothing worthy of our status but were to quarrel with one another just like commonest of people. So, Protagoras and Socrates, I have a request. I advise you to come to an agreement as though you were being brought to a middle ground by us arbitrators. Socrates, you should not pursue this accurate form of discourse that is excessively short if it does not please Protagoras. You should, rather, let go, and loose the restraints upon the speeches so that they may sound more grandiose and elegant to us. Nor should Protagoras, for his part, hoist every sail and run before the wind, hastening out into an ocean of words, out of sight of land. Instead, you should both steer a middle course. So do as I say, and on my advice select an umpire or overseer or president who will keep watch over the due measure of your speeches in each case.”

338c

The company was pleased at this, and everyone signalled their approval. Callias would not allow me to depart, and they asked me to select an overseer. I said that it would be a shame to select an adjudicator for the discussions. “For,” said I, “if the person chosen were of lesser rate than the two of us, it would be inappropriate that an inferior should oversee his superiors. If he were just like us, that would not be right either, for someone

like us would behave as we do and it would be pointless to choose him. And so, you will select someone who is superior to both of us.

338d

But, in truth, I think it is an impossibility for you to select someone who is wiser than this man, Protagoras. And if you choose someone who is not superior, but you assert that he is, this would also debase Protagoras by treating him like an ordinary fellow and assigning him a supervisor. As for myself, well, it makes no difference to me. So, here is what I propose to do so that the meeting and conversation you are all so keen on may take place. If Protagoras does not wish to answer questions, then he should ask questions and I shall answer. At the same time, I shall try to show him how, in my view, a respondent should answer a question. And since I am prepared to answer as many questions as the man wishes to ask, he should in turn submit to me and respond in a similar manner. Now, if he seems reluctant to answer a particular question he is asked, then you and I together must implore him, just as you implored me, not to break up the gathering. And to this end, no single person need act as an overseer; rather you will all share in the process of supervision.” Everyone thought that this was the right way to proceed, and although Protagoras was not very keen, he was compelled nevertheless to agree to ask questions and, once he had asked enough of them, to take his turn at giving brief responses to any questions put to him.

339a

So Protagoras began his questioning in some such manner as this. “I believe, Socrates,” he said, “that a most significant part of a man’s education is proficiency in relation to poetry. This consists of being able to appreciate which of the poets’ writings are well composed and which are not, and knowing how to distinguish between them and give an account of them when questioned. And, indeed, my question will now

relate to the very matter you and I are now discussing – that is, excellence. But the question will be transferred to the realm of poetry, and to this extent alone it will be different. Indeed, Simonides, speaking to Scopas, the son of Creon of Thessaly, says somewhere, ^{339b}

*For a man to become good truly is hard,
foursquare in hand, foot and intellect,
fashioned without a flaw.*

^{339b}

“Do you know this ode, or shall I recite it all to you?”

“It is not necessary,” I replied, “for I know this ode, and as it happens I have studied it closely.”

“It is good that you say so,” said he. “Now, do you think it has been beautifully and properly composed or not?”

“Beautifully and properly composed in every way,” I replied.

“But do you think it is beautifully composed if the poet contradicts himself?”

“No, not beautifully,” I replied.

^{339c}

“Then take a better look at it,” he said.

“But, my good man, I have scrutinised it quite sufficiently!”

“In that case you know that as the ode continues it somehow says,

*Nor do I regard Pittacus²¹ statement as sound,
even though the man was wise,
when he says that 'tis hard to be noble.*

“You do realise that the same person who said this also made the previous statement?”

“I know,” I said.

“Well,” he asked, “do you think these words are in agreement with the others?”

“So it seems to me anyway,” I replied, but at the same time I was afraid that he might have a point. “Why?” I asked. “Do they not seem so to you?”

339d

“Well, how could someone who makes these two statements show a semblance of agreement with himself? He himself first proposed that it is difficult for a man to become truly good, and a little later in the poem he forgets this and censures Pittacus who says the same thing as himself – that it is difficult to be noble – and refuses to accept from Pittacus the same point he himself is making. What is more, whenever he censures someone who says the same things as himself, it is obvious that he is censuring himself, and so either his earlier statement or his last statement is incorrectly formulated.”

339e

Now, once he had said all this, it drew a clamour of approval from most of the audience. At first it was as if I had been punched by a good boxer. I went blank and became dizzy due to the words he had spoken and the general commotion. Then – and to tell you the truth, it was to give me time to consider what the poet might be saying – I turned to Prodicus, addressed him and said, “Prodicus, Simonides was of course a fellow citizen of yours, so it is only right that you come to the man’s aid. So I think I will call upon you, just as Scamander, according to Homer, called upon Simois when he was besieged by Achilles, by saying, ^{340b}

*Dear brother, let us both, together, restrain
the strength of this man.*²²

“So too do I call upon you, lest Protagoras wreak destruction upon Simonides. And at this stage we really need this art of yours to make a correction on Simonides’ behalf, this art whereby you distinguish wishing from desiring, and show that they are not the same, and make lots more beautiful distinctions as you did a moment ago. Let us find out if this seems to you as it does to me, for it is not obvious that Simonides is contradicting himself. But you should state your opinion first, Prodicus. Do you think that ‘to become’ is the same as ‘to be’, or are they different?”

340b

“They are different, by Zeus,” replied Prodicus.

340c

“In those first lines,” said I, “didn’t Simonides express his own opinion that it would be difficult for a man, in truth, to become good?”

“That is true,” said Prodicus.

340d

“Yes. And he then censured Pittacus”, I said, “for saying something different, and not, as Protagoras alleges, for saying the same thing as he himself says. For Pittacus did not, like Simonides, say that it is difficult to become noble, but that it is difficult to be noble. But to be and to become are not the same, Protagoras, as Prodicus here affirmed. And if to be is not the same as to become, then Simonides is not contradicting himself. Yet Prodicus here, and many others, would probably say with Hesiod that it is hard to become good because

*The gods have decreed that sweat
Is a precondition for excellence.*

*But once someone has attained its pinnacle
It is easy thereafter to keep it
Even though it was difficult to acquire.”²³*

Now, when Prodicus heard this he complimented me, but Protagoras said, “Your correction, Socrates, contains a greater error than what you are correcting!”

340e

“Well, Protagoras,” said I, “it seems that I have caused harm, and I am a comical physician who makes the disease worse in the process of curing it.”

“Yes, so you are,” he said.

“How so?” I asked.

“It would be gross ignorance on the part of the poet to claim that the retention of excellence is a trivial matter when in the opinion of everyone else it is the most difficult thing of all.”

“By Zeus,” said I, “it is timely then that this man Prodicus is present for our discussions.

341a

For I am telling you, Protagoras, this wisdom of Prodicus may well be divine and ancient, going back to Simonides, or to times even more ancient. And you, who are experienced in so many other areas, appear to have no experience of this wisdom, unlike myself who am experienced due to being a pupil of this very man, Prodicus. Right now I do not think you understand that Simonides does not interpret this word ‘difficult’ in the

same way you interpret it. Rather it is like the word ‘terrible’. The same Prodicus corrects me every time, whenever I praise you or anyone else by saying that Protagoras is a terribly wise man, and he asks me if I am not ashamed of myself for referring to what is good as terrible, for he says that whatever is terrible is bad.

341c

So, for example, no one refers to terrible wealth or to terrible peace or to terrible health, but they do refer to terrible disease or terrible war or terrible poverty, because whatever is terrible is bad. Now, perhaps the people of Ceos, including Simonides, also interpret this word ‘difficult’ in turn as bad, or as something else that you do not understand. So let us ask Prodicus, for it is only right to ask him about Simonides’ dialect. Prodicus, what did Simonides mean by the word ‘difficult’?”

“Bad,” he replied.

“So, Prodicus,” said I, “that is why he censures Pittacus for saying that it is difficult to be noble. It is as if he were to hear him saying that it is bad to be noble.”

“Well, Socrates,” he replied, “what else do you think Simonides means if he doesn’t mean this? He is censuring Pittacus because he did not know how to distinguish words correctly. He was, after all, from Lesbos, and brought up to speak a foreign dialect.”

341d

“So, Protagoras,” said I, “you have heard Prodicus himself. Have you anything to say about this?”

And Protagoras responded, “This is very far from being the case, Prodicus. No, I know full well that Simonides meant what everyone else means when he said ‘difficult’ – not ‘bad’, but whatever is not easy, and is brought about through a great deal of trouble.”

341e

“Yes, Protagoras,” I said, “I too believe that this is what Simonides means, and that Prodicus here knows this and is playing a game. And he seems to be testing your ability to come to the aid of your own argument. For there is strong evidence that Simonides does not mean that what is difficult is bad, in the very next sentence, when he says

The distinction would belong to God alone.

342a

“Presumably he cannot mean that it is bad to be noble, when he goes on to say that this belongs to God alone, and he attributes this distinction to God alone. For then Prodicus would surely say that Simonides is a degenerate, and not at all a citizen of Ceos. But I would like to tell you what, in my view, Simonides has in mind in this ode, if you would like to test where I stand ‘in relation to poetry’, to use your phrase. Or if you prefer, I shall listen to you.”

When Protagoras heard my suggestion, he said, “As you wish, Socrates.”

342b

And Prodicus and Hippias urged me on, forcibly, and so did the others. “In that case,” said I, “I shall attempt to recount my own views on this ode to you. Indeed, love of wisdom is most ancient and most prevalent among the Greeks of Crete and Sparta, and these regions contain the greatest number of sophists. Yet, just like the sophists Protagoras was talking about, they utterly deny this and put on a show of ignorance so that people may not discover that it is in wisdom that the ^{342c} Spartans are pre-eminent among the Greeks. Instead, they give the impression that they are preeminent in warfare and courage, believing that if everyone were to realise the means by which they are pre-eminent, they would all practise this wisdom. They

have concealed this fact so well that they have deceived the people in our cities who favour Spartan ways, who then develop cauliflower ears in order to imitate them, bind their knuckles, become keen on gymnastics, and take to wearing short cloaks as if it is through these fashions that the Spartans hold sway over the Greek world. But when the Spartans wish to consult with their own sophists in an unrestrained manner, and are fed up with meeting in secret, they carry out an expulsion of these 'imitators of Sparta' and any other foreigners who are residing there, and consult with their sophists unknown to the foreigners. Nor do they allow any of their young folk to visit other cities, nor do the Cretans, so that their young will not unlearn what they are taught. And in these cities, not only are there men who are proud of their education, but there are women too.

342e

"You may appreciate that I am speaking the truth when I say that the Spartans receive the best education in love of wisdom and discourse as follows. If you are prepared to converse with even the most ordinary man from Sparta, you will find that for most of the discourse he appears quite ordinary; but then, regardless of how the conversation is proceeding, he suddenly throws in a telling phrase, short and terse, like a skilled spear thrower, so that his interlocutor looks no better than a child. Now, there are people today, and among our ancestors, who have recognised the fact that being a Spartan consists much more in being a lover of wisdom than in being keen on gymnastics, and who know that the ability to utter phrases of this kind belongs to a perfectly educated person. Thales of Miletus was one such person, as was Pittacus of Mytilene, Bias of Priene, our own Solon, Cleobolus of Lindos, Myson of Chen, and the seventh was said to be a Spartan, Chilon.²⁴ These were all zealous admirers, devotees and pupils of Spartan education, and you may discern that their own wisdom is of this sort from the

short phrases that each of them has spoken, phrases well worth remembering. When these seven gathered together, they dedicated the first fruits of wisdom to Apollo at the temple that is in Delphi, writing those words that everyone repeats: 'Know Thyself' and 'Nothing in Excess'.

343c

"So why do I mention this? Because this was the manner of philosophy among the ancients, a laconic brevity. What is more, this phrase from Pittacus circulated in private and was praised by the wise: 'It is hard to be good'. Now, since Simonides was eager to gain a reputation for wisdom, he realised that if he were to overthrow this maxim, as if it were a famous athlete, and if he were to prevail over it, he himself would become famous among the people of that age. And so, for these reasons, he targeted this maxim, and it appears to me that he composed the entire ode with the intention of putting it down.

343d

"So, let us all consider this together. Is what I am saying actually true? The first line of the ode would indeed sound insane if, while intending to state that it is difficult for a man to become good, he then inserted a contrasting phrase. For this does not appear to be a reasonable insertion, unless one assumes that Simonides is arguing against the maxim of Pittacus. Pittacus says that it is hard to be good, but Simonides disputes this and says, 'No, rather it is hard for a man to become good, Pittacus. That is what is truly hard.' He does not say 'truly good'. That is not where he applies the word 'truly', as if he were saying that some men are truly good, while others are good yet not truly so, for that would sound silly and unworthy of Simonides. So, we need to suppose that the position of the word 'truly' is changed poetically in the ode, and in some way or other this is hinting at the phrase from Pittacus, as if we are to presume that Pittacus himself is speaking and Simonides is replying. Pittacus is saying, 'People, it is difficult to be good', while Simonides replies,

‘Pittacus, you are not speaking the truth, for what is truly difficult for a man is not to be good, but to become so, foursquare in hand, foot and intellect, fashioned without a flaw’. In this way the insertion appears reasonable, and ‘truly’ lies where it should, at the end. And everything that follows supports the assertion that this is what it means. Indeed, there is a lot more in the various phrases of the ode to demonstrate that it has been well composed, for it is a delightful and intricate piece of work, but it would take too long to go through it in this way. Yet we should scrutinise the character of the work as a whole, and its intention, which is undoubtedly, throughout the entire ode, the refutation of that maxim of Pittacus.

344c

“In fact, a little after this he goes on to say, as if he were lapsing into prose, ‘To become a good man is truly difficult, although it is, of course, possible for a period of time. Yet to remain in this condition once it has been attained, and actually be a good man, is as you say, Pittacus, impossible and inhuman. This distinction belongs instead to God alone.’

*But a man cannot avoid being bad
when irresistible misfortune overthrows him.*

“Now, in the case of the command of a ship, whom does irresistible misfortune overthrow?

344d

Obviously not the unskilled person, for the unskilled person has been overthrown already. So, just as one cannot cast down someone who is already prostrate, but one may cast down a man who is standing and render him prostrate, although you cannot do this to the prostrate man, in like

manner, someone capable of resisting may be overthrown by an irresistible misfortune, but not someone who is not capable. So the ship's captain may be rendered incapable of resistance when a huge storm befalls him; harsh weather may render a farmer incapable of resistance, and the same thing may happen to a physician. So it is possible for the good to become bad. And another poet bears witness to this when he says,

*What is more a good man is
Occasionally bad, occasionally noble.*

344e

“But it is not possible for the bad to become bad, rather they must always be bad. So the capable, wise and good man cannot avoid being bad once irresistible fortune overthrows him. Yet you say, Pittacus, that it is hard to be good. But in point of fact although it is hard to become good, it is not impossible. But it is impossible to be good.

*Any man who fares well is indeed good
While he who fares badly, is bad.*

345a

“Now, when it comes to writing, what is ‘good-faring’, and what faring makes a man good at writing? Surely it is learning the subject. And what ‘faring-well’ produces a good physician? Surely it is learning how to care for the sick. And faring badly in this produces a bad physician. Now, who may become a bad physician? Surely someone who happens firstly to be a physician, and then a good physician, for he may also become bad, while we who are unskilled in medicine may never, by

faring badly, become either physicians or builders or anything else of this sort. And whoever is unable to become a physician by faring badly obviously cannot become a bad physician either.

345c

Accordingly, the good man may also, at some stage, become bad, either through age or hardship or disease, or by some other calamity which deprives him of knowledge. The bad man, on the other hand, may never become bad for he is always bad, and if he is going to become bad he must first become good. So this part of the poem is making the point that it is not possible to be a good man, continually good that is, but it is possible for him to become good, and for the same man to become bad. And those whom the gods love are indeed best for the longest time.

“All this is directed against Pittacus, and this becomes even more obvious as the ode proceeds, for he says,

*I shall not ever cast away my portion of eternity,
In search of that which cannot be,
On an empty, unavailing hope
Of finding an utterly blameless person,
Amongst us, as we feed upon the fruit
Of this broad earth.*

If I find one I will tell you.

345d

“And his onslaught on the maxim of Pittacus is so intense throughout the ode as a whole that he says,

*I willingly praise and love all those
Who perform no base action,*

Yet even the gods do not fight against necessity.

345e

“This verse too is directed against the same maxim. For Simonides was not so ill-educated as to claim that Pittacus praised those who enact nothing bad willingly, as though there are some people who do perform bad actions willingly. For I could scarce imagine any wise man believing that any people make mistakes willingly, or willingly enact anything shameful or bad. Rather, they know very well that all who perform shameful or bad actions do so unwillingly. And indeed Simonides does not say that he praises those who do not perform bad actions willingly. No, he applies the word ‘willingly’ to himself. For he was of the view that the noble and good man often forces himself to praise someone and befriend someone, as often happens when a man has a problematic mother or father or native land, or something else of that sort. Now, when something of this sort happens to degenerate people, it is as if they are pleased to see the degeneracy of their parents or their native land, and to point this out disapprovingly, and criticise it, so that people may not accuse them of neglecting these issues or blame them for such neglect. So they express even stronger disapproval, and add unnecessary feuds to those that are inevitable. The good people, on the other hand, conceal the issue and force themselves to express praise, and should they be angered at being treated unjustly by their parents or their native land, they placate themselves, reconcile themselves to the injustice, and make themselves love and praise their own people. I often wonder if Simonides believed that he himself was praising and extolling a tyrant or someone else of that sort, and doing so unwillingly and under compulsion. And so, what he says to Pittacus is, ‘Pittacus, I am not criticising you

because I love criticising people, since ^{346c}

A man who is not bad, he suffices for me.

^{346c}

*One who knows justice, the profit of a city
A sound man, him I shall not blame.*

‘Indeed, I am no lover of blame, For the tribe of fools is without limit.

‘So, if anyone delights in apportioning blame, he may have his fill through blaming the fools.

^{346d}

Yes, all is fair that is not mixed with baseness.

’ “But he is not saying this as if he were to say that all is white that is not mixed with black. That would be absurd in many ways. No, he is saying that he accepts the average people, and so he does not criticise them. And he says, ‘I am not searching for an utterly blameless person among those who feed upon the fruit of this broad earth, but if I find one I will tell you. This is in case I shall have no one to praise. No, it is enough for me if he is moderate and does nothing bad, since I love and praise all these willingly.’ And he uses the dialect of Mytilene here, because it is to Pittacus he is saying, ‘I love and praise all these willingly’, and we should break the phrase at ‘willingly’ and then go on to say, ‘who perform no base action,

but there are some whom I praise and love unwillingly.’ In your case, Pittacus, if you were saying anything even moderately reasonable and true, I would never have censured you. But now, since you are uttering falsehoods on matters of the utmost importance, while seeming to speak the truth, I rebuke you for so doing.’ So, Prodicus and Protagoras,” said I, “that in my view is what Simonides had in mind in composing this ode.”

347b

Then Hippias said, “I think you have indeed explained the ode quite nicely, Socrates. Yes, I too have a nice account of it, which I can present to you all if you wish.”

“Yes, Hippias,” said Alcibiades, “some other time though. At the moment it is only right, based on the agreement between Protagoras and Socrates, that if Protagoras still wants to ask questions, Socrates should answer them, and if he wants to be questioned by Socrates, then Socrates should ask questions.”

347c

“And,” I said, “I leave it to Protagoras to choose whatever option pleases him. Yet if he does not mind, let us bid farewell to discussion of odes and poems. But I would be glad to bring the first question I asked you, Protagoras, to a conclusion by investigating it along with you. In fact, discussing poetry is, in my opinion, much like what happens at the drinking parties of ordinary, common folk. Yes, indeed, these people, due to their lack of education, are unable to keep company with one another over a drink through their own sound and their own words. So they give respectability to flute girls by paying a lot of money for the alien sound of flutes, and they keep company with one another through the sound of those instruments. But when it is a drinking party of the noble and good, and they are educated people, you would see neither flute girls nor dancing girls nor harp girls. Rather, they are sufficient company for themselves,

through their own sound, as they speak and listen to themselves in turn in an orderly manner, without these trivial playthings, even if they drink a vast amount of wine. And so gatherings of this kind, when constituted of men such as most of us claim to be, have no need of alien sounds, or of poets who cannot be questioned about the topic they are speaking of. And when the majority of people quote them in discussions, some say the poet means one thing while others say he means something else, and they end up discussing matters they are unable to resolve. But the others bid farewell to such gatherings as these, and commune among themselves, testing one another on their own arguments and being tested in turn. I think you and I should rather imitate people of this sort, and setting the poets aside, direct our discussion towards one another on our own terms, putting the truth and ourselves to the test.

348b

“Now, if you still want to ask questions, I am ready to act as your respondent. Or, if you would prefer to conclude the topic whose development we interrupted in midstream, then you should respond to me.” As I was making this point and others like it, Protagoras did not clarify which alternative he would take. So Alcibiades looked at Callias and said, “Callias, do you think, even now, that Protagoras is acting appropriately by being unwilling to clarify whether he will act as respondent or not? I certainly do not think so. For he should either engage in discourse or declare that he does not wish to do so, so that we may all know where we stand here and Socrates may engage in discourse with someone else, or anyone may converse with anyone they want to.”

348c

I thought Protagoras was shamed by the words of Alcibiades. And at the request of Callias, and almost everyone else who was present, he was persuaded very reluctantly to engage in discourse, and he directed me to ask questions so that he could

respond.

So I said, “Protagoras, do not presume that I am conversing with you from any other motive than to investigate those issues that constantly perplex me. For I believe that a line from Homer says it all: ^{348d}

*When two go together, one observes before the other.*²⁵

“For in this way we shall all be more resourceful people in every action, word and thought. But if someone has an insight on his own, he immediately goes about searching until he meets someone to whom he can present it, and with whom he can confirm it. So for this very reason I would gladly converse with you, more so than anyone else, because I believe that you will best enquire into the ^{348e} wide range of issues that a reasonable person is likely to consider, and especially into excellence.

^{349a}

Indeed, who else could I choose but you? You not only believe yourself to be noble and good, just like others who are reasonable but unable to make other people reasonable, but you, by contrast, are good, and are also able to make others good. What is more, you have such belief in yourself that while others conceal this skill, you have proclaimed yourself openly throughout the entire Greek world, giving yourself the title of a sophist, a self-declared teacher of culture and excellence, the first person who thought it right to demand payment for this. So, what could I do but call you into this enquiry, question you and consult with you? There is no other option. And now I want to go back to the beginning, to the issues I was asking you about at the outset, and have you remind me of some, and conduct a joint and thorough investigation of others. The question I believe was as follows. Are wisdom, sound-mindedness,

courage, justice and holiness five names for a single thing, or, underlying each of these names, is there a distinct essence, each with its own capacity, each being unlike the other? Now, you said that they are not names of a single thing, but that each of these five names applies to a distinct thing, and these are all parts of excellence, not in the way that the parts of gold are similar to one another, and to the whole of which they are parts, but in the way that the parts of the face, each possessing a distinct capacity, are dissimilar to the whole of which they are parts, and to one another. Now, if you still think what you thought earlier, say so. If you somehow think otherwise, state this clearly, as I, for my part, will not hold you to that should you now say something different. Indeed, I would not be surprised if you were testing me out earlier when you said what you said.”

349d

“Well, Socrates,” said he, “I am telling you that although all these are parts of excellence, and four of them are fairly similar to one another, courage for its part is entirely different from all the others. You may recognise the truth of what I am saying as follows, for you will find many people who are extremely unjust, unholy, unrestrained and unlearned, yet most outstandingly courageous.”

349e

“Hold it there,” said I, “for it is worth investigating what you are saying. Do you assert that courageous people are daring, or something else?”

“Yes, and impulsive enough to go where most people are afraid to go,” he said.

“Come now, would you say that excellence is something noble? And do you offer yourself as a teacher of this on the basis that it is noble?”

“Yes, it is utterly noble, unless I am a madman anyway,” he replied.

“So,” I asked, “does it involve a base aspect and a noble aspect, or is it wholly noble?”

“Surely it is wholly noble, to the greatest extent possible.”

350a

“Now, do you know what people dive daringly into wells?”

“I do. I know that they are the divers.”

“Is it because they have knowledge, or for some other reason?”

“Because they have knowledge.”

“And who are daring when it comes to fighting on horseback? Is it the horsemen or the nonhorsemen?”

“The horsemen.”

“And when it comes to light infantry, is it the light infantrymen or the others?”

350b

“It is the light infantrymen,” he replied. “And if this is the answer you are looking for, in all other cases those with knowledge are more daring than those without knowledge, and they themselves are more daring after they have learned than they were before.”

“But have you, on occasion, seen people who lack knowledge of all these who are daring in respect of each of them?”

“I have indeed,” he replied, “excessively daring too.”

“So, are these daring fellows also courageous?”

“In that case,” said he, “courage would be base, since these people are mad.”

“Well,” I asked, “what did you mean by ‘the courageous men’? Wasn’t it the daring men?”

“Yes, and I still say so now,” he replied.

350c

“In that case,” said I, “don’t these people, who are daring in this way, turn out to be insane rather than courageous? And in the other case, aren’t the wisest men also the most courageous since they are the most daring? And based upon this argument, would wisdom be courage?”

350d

“Socrates,” he replied, “you are not remembering properly what I said, or the answer I gave you. When you asked me if the courageous are daring, I agreed. However, I was not also asked if the daring are courageous, for had I been asked that I would have said that they are not all courageous. But in no way have you proved that I was wrong in agreeing to what I did agree, that the courageous are daring. After that, you demonstrate that those who are knowledgeable are themselves more daring than they themselves were before, and more daring than others who are not knowledgeable, and on this basis you presume that courage and wisdom are the same. But proceeding in this manner, you might also presume that strength is wisdom. Yes, proceeding like this, you might first ask me if strong people are capable, and I would agree; next, whether those who know how to wrestle are more capable than those who do not know how to wrestle, and are more capable after they have learned than they themselves were before, and I would agree. Once I had agreed to these, you would be able, using those very same conclusions, to state that according to what I have agreed, wisdom is strength. But I do not agree at all, and I am not agreeing here, that the capable people are strong, even though I agree that the strong people are capable. For capability and strength are not the same. One, capability, arises from knowledge or from madness

or from desire, while the other, strength, comes from the nature and proper nurture of our bodies. Similarly, in the other case, daring and courage are not the same, so it turns out that those who are courageous are daring, even though the daring are not all courageous. For daring arises in people from skill, from desire and from madness, just like capability, while courage arises from the nature and proper nurture of our souls.”

351b

“Protagoras,” I said, “do you agree that some people live their lives well, others badly?”

He agreed.

“And do you think any person would live his life well if he were to live in distress and suffering?”

“No,” he said.

“What if he were to live his life pleasantly to the very end? Don’t you think he would have lived his life well in so doing?”

“I do,” he replied.

351c

“So to live pleasantly is good, while to live unpleasantly is bad.”

“Yes,” he said, “provided, at any rate, one lives one’s life being pleased by what is noble.”

“What about this, Protagoras? Surely you don’t, like most people, refer to some pleasures as bad and some suffering as good? I mean, on the basis that they are pleasant, aren’t they also good on this basis, unless some other consequence emerges from them? And doesn’t the same argument also apply to sufferings? Aren’t they bad insofar as they involve suffering?”

351d

“Socrates,” he replied, “I do not know if I should answer your question in the unqualified manner that you have framed it,

that the pleasures are all good and the sufferings bad. I think, rather, that the safer answer, not only in relation to the present question but in relation to my life in general, is that there are some pleasures that are not good, and in the case of sufferings, some are not bad and some are, and there is a third class that is neither good nor bad.”

351e

“But,” I asked, “don’t you refer to whatever partakes of pleasure or produces pleasure as pleasant?”

“Certainly,” he replied.

“Well, that is what I mean. They are good insofar as they are pleasant. I am asking if pleasure itself is good.”

“As you are always saying, Socrates, let us investigate this, and if the argument seems reasonable, and pleasant and good prove to be the same, we shall be in agreement. If not, we shall argue over it at that stage.”

“So would you like to take control of the investigation, or should I lead it?”

“It is only right that you lead it,” he said, “since you are actually initiating the discussion.”

352a

“Well, then,” said I, “would the following approach clarify the matter for us? It is as if someone, considering a person’s health, or some other of the body’s functions, on the basis of his appearance, were to look at his face and arms and say, ‘Come on now, uncover your chest and back and show them to me, so that I may examine you more thoroughly’. I too have a similar urge in relation to this enquiry. Having seen where you stand in relation to the good and the pleasant, as you state it, I want to say something like this: ‘Come on now, Protagoras, also uncover this aspect of your thought to me. Where do you stand in relation to knowledge?’

352c

“Do you think it is what most people think it is, or do you think otherwise? Most people think knowledge is not really strong or authoritative or fit to rule. They do not think it is like this at all. They think, rather, that very often when a person is endowed with knowledge, it is not the knowledge but something else that rules him, desire at one moment, then pleasure, then pain, sometimes passion, very often fear. They think of knowledge almost as if it were a battle-captured slave who is dragged about by all these other factors. Well now, is this also what you think about knowledge? Or do you think it is something noble that is able to rule a person, and that once a person recognises what is good and what is bad he would never be dominated by anything else and do anything else except what knowledge directs him to do? And is understanding enough to save a person?”

352d

“Socrates,” he replied, “I agree fully with what you are saying. And what is more, it would be disgraceful for me in particular to deny that wisdom and knowledge are the most exalted of all things human.”

352e

“You have expressed that beautifully, and it is true,” I said. “Now, you know that most people are not persuaded by our views, and they maintain that many people who realise what is best do not wish to enact it, even when they can, and that they do something else instead. And when I ask them what exactly causes this behaviour, they say that those who do this, do so because they yield to pleasure and pain, or are overpowered by one of those factors I mentioned just now.”

“Indeed, Socrates,” he replied, “in my view people also say a great deal else that is incorrect.”

353a

“Come on then, join me, and let us try to persuade the people and teach them what this experience of theirs is, the one they describe as yielding to pleasures, and for that reason not doing what is best, even when they realise what is best. Perhaps if we were to tell them that what they are saying is incorrect and that they are speaking falsely, they would ask us, ‘Protagoras and Socrates, if this experience does not involve yielding to pleasure, then what exactly is it? What is it according to you? Tell us.’”

“But, Socrates, why should we consider the opinion that the majority of people hold? They only say whatever happens to occur to them.”

353b

“Well,” said I, “I believe this is significant for us in discovering where courage stands in relation to the other parts of excellence. Now, if you think we should abide by what we agreed earlier, that I should lead in the manner that in my view best clarifies the issue, then please follow my lead.

But if you do not want to, I bid the issue farewell, if that is what you prefer.”

“No, you are quite right,” he said. “Proceed as you have begun.”

353c

“Once again, then,” said I, “if they were to ask us, ‘So what are you saying this is, this experience we termed yielding to pleasures?’ What I would say to them is, ‘Listen, and Protagoras and I shall try to explain it to you. Don’t you good people say that this happens in situations where, for instance, you are overpowered, as so often happens, by the pleasures of food and drink or sexual gratification, and engage in these nevertheless, even though you recognise that they are bad?’”

“They would agree.”

353d

“In that case, you and I would ask them again, ‘In what sense are you saying they are bad? Is it because they provide this pleasure in the moment and because each of them is pleasant, or because some time later they produce disease and poverty, and bring on many other such afflictions? Or even if they bring on none of these afflictions afterwards, but produce only delight, could they be bad anyway, just because they produce delight in some way or other?’ Now, Protagoras, I think they can only reply that they are not bad because of the production of momentary pleasure, but due to the diseases and whatever else arises later.”

353e

“Yes,” said Protagoras, “I believe that most people would give that answer.”

“And in producing disease, don’t they produce distress? And in producing poverty, don’t they produce distress?” I presume they would agree with that.”

Protagoras concurred.

354a

“So, good people, is it your view, as Protagoras and I are saying, that these pleasures are bad only because they end in distress and deprive you of other pleasures?’ Would they agree?”

We both concurred.

“Well, suppose we were to put the opposite question to them. ‘You, good people, who also maintain that what is good can be distressful, are you saying, for example, that physical exercise, military activity or medical treatment brought about through burning, cutting, drugs and fasting are good, even though they are distressful?’ Would they agree?”

He concurred.

354b

“Now, is that why you call them good, because of the extreme pain and the suffering they cause at the time? Or is it because of

the health, bodily vigour, the civic safeguards, the dominion over others, and the wealth that arises from them afterwards?' I presume they would agree."

He concurred.

354c

"And are these good for any other reason than because they end in pleasure, and relieve or avert pain? Or can you think of any other outcome that you might refer to when describing them as good, apart from pleasure and pain?" I think they would say no."

"I think so too," said Protagoras.

"So, do you pursue pleasure as good, and flee from pain as bad?"

He agreed.

354d

"So, this pain is what you regard as bad, and pleasure is what you regard as good. Then, you also say that delight itself is bad whenever it deprives you of greater pleasures than those that the delight affords, or brings on pains greater than the pleasures it contains. Now, if you refer to the delight itself as bad on any other basis, or by referring to any other outcome, you would also be able to tell us what it is. But you cannot."

"No, I don't think they can," said Protagoras.

354e

"Then again, is it the same way with the experience of pain itself? Do you call the experience of pain itself good whenever it relieves you of greater pains than the pain it contains or provides pleasures that exceed the pain? Now, if you refer to any other outcome, whenever you call the experience of pain itself good, you would be able to tell us what it is. But you cannot."

"What you are saying is true," said Protagoras.

“Again, in that case, good people,’ said I, ‘if you should ask me, “Why ever are you saying so much and speaking in so many different ways about this matter?” I would reply, “Please excuse me, but firstly it is not easy to demonstrate what precisely this experience you call ‘yielding to ^{355a} pleasures’ actually is, and secondly, all our examples involve this issue.” But even now it is still possible to retract, if you are somehow able to assert that the good is something other than pleasure, and the bad something other than distress. Or are you satisfied with a life lived pleasantly, a life without pain? If this is satisfactory and you are unable to say that anything is good or bad unless it ends in pleasure or pain, then hear what follows. For I tell you that if this is the case, the argument becomes ridiculous once you state that a person who knows that bad deeds are bad, often enacts them anyway when they can be avoided, as he is led and stricken by pleasures, and also, when you go on to state that a person who knows what is good is not prepared to enact it, because he yields to the pleasures of the moment.’

^{355c}

“And it will be obvious that these arguments are ridiculous, once we stop using lots of names at the same time – pleasure and distress, good and bad. Rather, since it turns out that there are only two things, let’s refer to them by two names, first by good and bad, and after that by pleasure and distress. Then, having assigned the names in this way, we should state that a person who knows that bad deeds are bad, enacts them anyway. So if someone asks us, ‘Why did he do it?’ we shall reply that he yielded. ‘Yielded to what?’ the fellow will ask us. But we are no longer allowed to say that he yields to pleasure, for another word, the good, has been substituted in place of pleasure. So when we are asked the question and we say he yields, he will say, ‘To what?’ and we shall say, ‘By Zeus, to the good.’ Now, if our questioner happens to be arrogant, he will laugh and say, ‘You are describing an absurd state of affairs if someone does

what is bad knowing that it is bad, when he doesn't need to do it, because he yields to what is good'. So he will say, 'Does the bad within you prevail over the good, while being worth more or being worth less?' Obviously, we shall say by way of reply that it is worth less, otherwise the person whom we describe as yielding to pleasures would not have erred. He will probably ask, 'But on what basis is the good worth less than the bad, or the bad than the good? Is there any basis other than one being larger and the other smaller, or one being more numerous and the other less so?' We shall be unable to offer any alternatives to this. 'It's obvious, then,' he will say, 'that by this "yielding" you mean getting less good in place of more bad.'

356a

"So in the case of these names, that is the outcome. Let us then substitute the names once more and apply pleasure and distress to those same things. And we would then state that a person enacts what we previously referred to as bad – but should now refer to as distressful – knowing that it is distressful, having yielded to pleasures which obviously are not worthy of victory. Apart from mutual excess or deficiency, is there any other way that pleasure is worth less than pain? And these involve pleasure and pain becoming larger and smaller than one another, or more numerous and less numerous, or more intense and less intense. For suppose someone were to say, 'But, Socrates, the pleasure of the moment differs greatly from the pleasure and pain that will come later', I would reply, 'Is there any other way they could differ than in pleasure and in pain? Indeed, there is no other way they can differ. Rather, just like a person who is good at weighing, you take the pleasures and the pains, together with their proximity or remoteness, place them in the balance, and state which weighs more. So, if you are weighing pleasures against pleasures, the greater and more numerous are always chosen. If it is pains against pains, the lesser and fewer are always chosen. If it is pleasures against

pains, you adopt the course of action in which the distress is exceeded by the pleasure, whether the near exceeds the far or the far exceeds the near. And if the pleasures are exceeded by the distress, the action is not to be performed.’ So I would say, ‘Good people, isn’t this how matters stand?’ And I know they would be unable to say otherwise.”

356c

Protagoras also agreed with that.

“In this circumstance, I shall say, ‘I have a question for you. Do the same objects appear larger to you when they are nearer, and smaller when far away, or is this not the case?’”

“They will agree.”

“And does the same go for their thickness or the quantity of them? And are equal sounds louder when nearer, and fainter when they are far away?”

“They would agree.”

356d

“Now, if our welfare consisted in this, in enacting or adopting whatever has a large measure, and avoiding and not enacting whatever has a small measure, what would the salvation of our lives prove to be? Would it be skill in measurement or the power of appearance? Or is it the latter power that sets us astray and makes us change our views back and forth so often, and regret our actions, and our choices of greater and lesser; while measurement, for its part – would it have rendered this illusion powerless, and by revealing the truth would it have made the soul peaceful, abiding in the truth, and would it have saved our life? So in view of this, would the people agree that the skill of measurement would save us, or would it be a different one?”

356e

“Measurement,” he agreed.

357a

“What if the salvation of our life lay in the selection of odd and even, and when we should rightly choose the greater and when the lesser, either in relation to themselves or to one another, whether near or far away? What would save our life? Wouldn’t it be knowledge, indeed some form of measurement, since this skill deals with excess and deficiency? And since it involves odd and even, what could it be but arithmetic? Would the people agree with us or not?”

Protagoras also thought they would agree.

357b

“So be it, good people, but since the salvation of our life has turned out to lie in the right selection of pleasure and pain, of more numerous and less numerous, larger and smaller, far and near, firstly, isn’t it the case that measurement is an enquiry into their excess and deficiency, or their equality in relation to one another?”

“It must be.”

“Then measurement must presumably be a skill and knowledge.”

“They will concur.”

357c

“Well, we shall consider on another occasion what this skill and knowledge itself is. The fact that it is knowledge will suffice for the demonstration that Protagoras and I must present in answer to your question. You asked a question, if you recall, when we two agreed that nothing is more powerful than knowledge, and wherever it resides it always dominates over pleasure and all the other factors. You, in contrast, maintained that pleasure often dominates even the man who knows, and as we did not agree with you, you proceeded to ask us, ‘Protagoras and Socrates, if this experience does not consist in yielding to

pleasure, then what precisely is it? And what do you say that it is?

357d

Tell us.'

357e

"If, at the time, we had then replied immediately that it is ignorance, you would have laughed at us. But if you laugh at us now, you will be laughing at yourselves too. For you have actually agreed that it is through deficiency of knowledge that those who err in their choice of pleasures and pains, which correspond to good and bad, fall into error. And later on you agreed that the deficiency is not just deficiency of knowledge, but of knowledge of measurement, and I presume you yourselves know that an action performed in error, without knowledge, is performed in ignorance. Consequently, that is what this yielding to pleasure is, the greatest ignorance, which Protagoras here claims to cure, as do Prodicus and Hippias. But because you do not regard this as ignorance but as something else, you do not send your children to those who teach this, these sophists here, nor do you go to them yourselves because it is not teachable. You care instead for money, and you will not give it to these teachers, so you fare badly in your private and public lives.

358a

"These then are the answers we would have given to most people. And now, along with Protagoras, I am asking you, Hippias and Prodicus, do you think I am speaking the truth or speaking falsely? Let us involve the two of you in the argument."

It seemed to everyone, without reservation, that what had been said was true.

358b

“So, you agree,” said I, “that pleasure is good and distress is bad. And I am avoiding Prodicus’ distinctions between words, for whether you say pleasure is enjoyment or delight or however else you may enjoy assigning names of this sort, good Prodicus, please answer my question, as it is intended.”

Prodicus laughed at this and he agreed, as did the others.

“Well, gentlemen,” said I, “what about all actions towards this end, towards living pleasantly and painlessly – aren’t they all noble? And is a noble deed good and beneficial?”

They agreed.

358c

“So, if it is the case,” said I, “that the pleasant is good, no one who knows or believes that other actions are better than those he is enacting, and can enact, then proceeds to enact them anyway, when he can enact what is better. Nor is yielding to oneself anything other than ignorance, nor is controlling oneself anything other than wisdom.”

They all agreed.

“What about this? Would you say that ignorance consists in holding a false opinion and in labouring under falsehood in relation to matters of great importance?”

This too was agreed upon by everyone.

358d

“Then surely no one goes willingly to what is bad, or what they regard as bad. Nor, it seems, is it in human nature to do so, to wish to go to what you regard as bad instead of what is good. And when compelled to choose one or the other of two bad things, will anyone choose the greater if he is allowed to have the lesser?”

All this was agreed by all of us.

“Well now,” said I, “do you use the terms dread and fear? And do you use them as I do? I am directing this question to you, Prodicus. I say that whether you call it dread or fear, it is some expectation of bad.”

358e

Protagoras and Hippias thought that this is what they are, but Prodicus thought this was dread, but not fear.

“Well, that makes no difference, Prodicus,” I said. “My point is as follows. If what has been said previously is true, will any person wish to go to whatever he dreads if he is allowed to go to what he does not dread? Or is this impossible, from what has been agreed? For we have agreed that whatever he dreads, he regards as bad, and no one willingly goes to or takes hold of what they regard as bad.”

359a

Everyone thought so too.

“Then, Prodicus and Hippias,” said I, “based on these conclusions, Protagoras here should offer us a defence of the answer he gave at first, not the very first one though, where he said there are five parts of excellence, each dissimilar to the other one, each having its own particular power.

359b

That is not the answer I mean. No, it is what he said later. For he said that four of them are fairly similar to one another, while one, courage, differs greatly from the others, and he told me I would recognise this from the following piece of evidence: ‘Indeed, Socrates, you will find people who are utterly irreverent, unjust, unrestrained and unlearned, and yet utterly courageous, and you may appreciate from this fact that courage differs considerably from the other parts of excellence’.

359c

“I was immediately surprised by this response at the time, and I am even more surprised now that I have gone through these

issues with you. Accordingly, I asked him if he calls the courageous people daring, and he said, 'Yes, and impulsive too'. "Do you remember giving that answer, Protagoras?" I asked.

He agreed.

"Come on, then," said I, "tell us. Towards what are the courageous people impulsive? Are they the very things towards which cowards are impulsive?"

"No," he replied.

"They are different then."

"Yes," he replied.

"Do the cowards go for daring exploits, while the courageous go for exploits that are dreaded?"

"That is what people say, Socrates."

359d

"That is true," said I, "but I am not asking you that. I am asking what you say the courageous are impulsive towards. Are they impulsive towards the dreaded exploits in the belief that they should be dreaded, or towards exploits that need not be dreaded?"

"Well," he said, "this was demonstrated to be impossible just now by the arguments you presented."

"That is also true," said I. "And so, if this demonstration was correct, no one embarks upon what in his view should be dreaded, since yielding to oneself was found to be ignorance."

He agreed.

359e

"In that case, everyone, cowards and courageous alike, embark upon daring exploits, and in that respect anyway, both cowards and courageous go for the same things."

“And yet, Socrates,” he said, “what the cowards embark upon and what the courageous embark upon are completely opposite. For instance, the courageous are willing to go to war, while cowards are not.”

“And is it noble to go or is it shameful?”

“It is noble,” he replied.

“Therefore, since it is noble, we have agreed previously that it is good, for we agreed that all noble actions are good.”

“That is true,” he said, “and I am always of that view.”

360a

“You are right about that anyway,” said I. “But which of them are you saying is unwilling to go to war, although it is noble and good?”

“The cowards,” he replied.

“And since it is noble and good, isn’t it also pleasant?”

“Well, that is what has been agreed,” he replied.

“So, are the cowards knowingly unwilling to go to what is nobler, better and more pleasant?”

“But if we agree to this as well,” he replied, “we are undermining what we agreed previously.”

“And what about the courageous?” I asked. “Don’t they go to the nobler, the better and the more pleasant?”

“It is necessary to agree,” he replied.

360b

“Now, on the whole, when courageous people are afraid, their fears are not disgraceful, are they?”

Nor is their daring any disgrace either, is it?”

“That is true,” he said.

“And if they are not disgraceful, aren’t they noble?”

He agreed.

“And if they are noble, are they good?”

“Yes.”

“And the cowards, the insolent and the madmen, aren’t their fears, by contrast, disgraceful? And isn’t their daring disgraceful too?”

He agreed.

“And is their daring disgraceful and bad because of anything else except folly and ignorance?”

360c

“That is the case,” he said.

“Well then, do you refer to that because of which cowards are cowards, as cowardice or courage?”

“I call it cowardice,” he replied.

“And didn’t it turn out that they are cowards because of ignorance of what should be dreaded?”

“Certainly,” he replied.

“So, are they cowards because of this ignorance?”

He agreed.

“And you agree that they are cowards because of cowardice?”

He concurred.

“Therefore, would ignorance of what should be dreaded and not dreaded be cowardice?”

He nodded his head.

360d

“And yet,” said I, “courage is the opposite of cowardice.”

He agreed.

“Now, isn’t wisdom, in relation to what should be dreaded and not dreaded, the opposite of the ignorance thereof?”

He still nodded his head at this too.

“And ignorance of these is cowardice?”

At this point he nodded with extreme reluctance.

“So, is courage wisdom, wisdom in relation to what should be dreaded and not dreaded, since it is the opposite of the ignorance thereof?”

He was no longer even prepared to nod at this stage, and he kept quiet. And I went on to say, “What is this, Protagoras? Will you not answer my question one way or the other?”

“Finish it yourself,” he said.

360e

“I have only one question left to ask you. Does it still seem to you, as it did at the outset, that there are some people who are completely ignorant and yet utterly courageous?”

“Socrates,” he said, “you seem to have a thirst for victory. You want me as your respondent, so, to gratify you, I say that from what has been agreed, that seems impossible to me.”

361a

“I am not,” said I, “asking you all these questions from any other motive than a wish to investigate how exactly matters stand in relation to excellence, and what precisely this is, this excellence. For I know that once this has become obvious, the issue on which you and I have each made such long-drawn-out speeches – you claiming that excellence can be taught, me saying that it cannot – would best be clarified.

361b

“And it seems to me as if the recent outcome of our discussions is just like a person, accusing us and mocking us, and if it were to take on a voice it would say, ‘Socrates and Protagoras, how strange you are! You, Socrates, who were saying earlier that excellence is not teachable, are now, in eager opposition to yourself, trying to demonstrate that all sorts of things are knowledge – justice, self-control, courage. But that is the best way to show that excellence can be taught. For if excellence was anything else except knowledge, as Protagoras attempted to assert, it would clearly be unteachable. But if excellence now turns out to be knowledge wholly, as you are so eager to prove, Socrates, it will be a wonder if it is not teachable. Protagoras, for his part, who was then proposing that it is teachable, now seems keen to make the opposite case, that excellence has turned out to be almost anything at all rather than knowledge. And on this view, it would hardly be teachable.’

361d

“Now, Protagoras, when I behold all these matters in such terrible disarray, I am most eager to have them properly clarified. And once we have been through them all, I would like us also to tackle the question of what excellence is and then come back to investigate whether it is teachable or not. This is in case Epimetheus might also trip us up here, and trick us, just as he did when he overlooked humanity in the story you told us about the distribution of gifts. Now, in that story, Prometheus pleased me more than Epimetheus. So, having recourse to him, displaying forethought in relation to my entire life, I occupy myself with all of these matters. And if you are willing, as I said at the outset, I would be delighted to investigate them comprehensively along with you.”

361e

And Protagoras replied, “Socrates, I can only praise your eagerness and the way you concluded the argument. In fact, I do not think I am, in any sense, a bad person, and I am the least

envious of men, since I have actually said to many people that I admire you much more than anyone else I have met, and far more than anyone else of your age. And I say that I would not be surprised if you were to join the ranks of men who are highly regarded for their wisdom. We shall go over these issues on another occasion, whenever you wish, but it is time now to turn to something else.”

362a

“Well,” said I, “if that is how it seems to you, that is what must be done. In fact, it was time for me to depart a while ago for that appointment I mentioned, but I stayed in order to oblige the noble Callias.”

Having said all this and heard all this, we departed.

NOTES

1. Alcibiades, the son of Clinias, was a famous and notorious politician and general, and a close associate of Socrates.
2. *Iliad* xxiv.348, *Odyssey* x.279.
3. Abdera was a flourishing Greek city in Thrace, on the north coast of the Aegean.
4. Protagoras of Abdera was an influential sophist and teacher of rhetoric.
5. The Hippocrates mentioned here is known only from this dialogue.
6. Callias was the son of the richest man in Greece, Hipponicus. He squandered the fortune he inherited, but remained active in Athenian political life.
7. Hippias was a diplomat, polymath and a famous and successful sophist.
8. Prodicus of Ceos was a contemporary of Socrates. Plato often mentions him and his insistence on the correct use of words.
9. The six men mentioned were prominent Athenians between the ages of 17 and 27. Paralus and Xanthippus were the sons of Pericles, Athens' leading statesman. Pericles' first wife later married Callias' father. Charmides was Plato's maternal uncle, who was eventually associated with the Thirty Tyrants. He is immortalised in Plato's eponymous dialogue. Philippides came from a wealthy family. Nothing more is known about Antimoerus.
10. Orpheus, the mythical singer, charmed not only rational beings, but also birds, fish, wild beasts, trees and rocks.
11. *Odyssey* xi.601.
12. Both Eryximachus, who was a physician, and his friend Phaedrus are speakers in Plato's *Symposium*. Phaedrus is also depicted in the dialogue that bears his name. Andron was a politician.
13. *Odyssey* xi.582.
14. Pausanias and Agathon, a successful tragedian, were long-term lovers who eventually left Athens to live in Macedonia. Adimantus, son of Cepis, is unknown, but assumed to be an Athenian. Adimantus, son of Leucolophides, was an Athenian general.
15. Critias was a member of the oligarchic party and leader of the Thirty Tyrants.

16. The instrument referred to here, the *aulos*, was a single-reeded instrument like a clarinet, or a double-reeded one like an oboe.
17. Ariphron is the brother of Pericles.
18. Prometheus was the champion and benefactor of mankind to whom he gave fire. His name means 'forethought'. Epimetheus is his brother, and his name means 'afterthought'.
19. The Lenaeon festival of Dionysus was celebrated in Athens, with contests chiefly in comedy.
20. In Attic comedy and oratory, these two figures served as paradigms of unscrupulous deceit.
21. Pittacus was ruler of Mytilene in Lesbos and was counted among the Seven Sages.
22. *Iliad* xxi.308-9.
23. Hesiod, *Works and Days* 289-292.
24. This is a complete list of the Seven Sages of Greece who were famous teachers, lawmakers and revered thinkers.
25. *Iliad* x.224.

narrator: SOCRATES of Alopecce, son of Sophroniscus

persons in the dialogue:

GLAUCON *Plato's brother*

POLEMARCHUS *son of Cephalus*

UNNAMED SLAVE *from Polemarchus' household*

ADIMANTUS *Plato's brother*

THRASYMACHUS *a rhetorician and diplomat from Chalcedon*

CLITOPHON *an oligarchic political leader*

CEPHALUS *from Sicily, a successful shield manufacturer in the Piraeus*

scene: on the road to Athens during the Bendis festival / at the house of Polemarchus in the Piraeus

BOOK I

327a

I went down yesterday to the Piraeus with Glaucon, the son of Ariston,¹ to offer my prayers to the goddess,² and also because I wanted to see how they would conduct the festival, since they were celebrating it for the first time. Now, although I thought the procession of the local people was beautiful indeed, ^{327b} the one that the Thracians put on seemed to suit the occasion just as well. Having offered our prayers and seen what we had come to see, we departed for the city. Then, as we were heading homewards, Polemarchus, the son of Cephalus, ordered his slave to run after us and order us to wait, and once the slave had caught hold of my cloak from behind, he said, "Polemarchus is ordering you to wait." So I turned around and asked where the man himself was. "He is coming up behind me," he replied. "Just wait." "Wait we will," said Glaucon.

327c

And a little later Polemarchus arrived, with Glaucon's brother Adimantus,³ Niceratus, the son of Nicias, and some others, apparently coming from the procession. Then Polemarchus

said, "Socrates, I assume you two are heading back to the city and leaving us." "Not a bad assumption," said I.

328a

"Well," said he, "do you see how many of us there are?" "Of course I do." "Then," said he, "you should either grow stronger than all of these men, or stay here." "Is there not another option?" said I. "Could we not persuade you that you should let us leave?" "And would you be able to persuade us," said he, "if we were not listening to you?" "Not at all," replied Glaucon. "Then you should presume that we will not listen." And Adimantus said, "Well, do you not know that towards evening there will be a torch race on horseback in honour of the goddess?" "On horseback?" said I. "That is novel indeed. Will they carry torches and pass them to one another whilst racing their horses? Is this what you mean?"

328b

"That is it," said Polemarchus. "And what is more, they will be performing an all-night festival that will be worth seeing. Yes, we are going to go out after supper and watch the night festival, and lots of young people will be with us there, and lots of conversation too. So stay, you really must." And Glaucon said, "It seems we should stay." "Well, if that is how it seems," said I, "that is what we must do."

328c

So we went to Polemarchus' house, and there we met Polemarchus' brothers, Lysias⁴ and Euthydemus, and indeed Thrasymachus the Chalcedonian, Charmantides the Paeonian, and Clitophon,⁵ the son of Aristonymus.⁶ Polemarchus' father, Cephalus,⁷ was also in there and he seemed very old to me, as it was indeed some time since I had seen him. He was seated upon a sort of seat with a cushion, with his head in garlands because he had just performed a sacrifice in the courtyard. So we sat down beside him, for some seats were arranged there in a circle.

328d

Now, as soon as Cephalus saw me, he greeted me and said, “Socrates, you do not often come down to the Piraeus to see us, but you should. Yes, if I were still able to make my way to the city easily there would be no need for you to come here, since we could go to you. But nowadays you should come here more frequently since I must say that for me, at least, as the other pleasures, the bodily ones, lose their intensity, the desires and pleasures associated with discussions increase all the more. So you must do this. Be a companion to these young men and visit us here frequently, as though we were your friends and closest kin.”

328e

“Very well, Cephalus,” said I. “In fact, I enjoy conversing with people who are very old. I think we need to learn from them, as though they had traversed a road on which we too will surely have to proceed. What is it like? Is it rough and difficult or is it easy and smooth? What is more, I would love to find out from you how you see this, since you are already at the time of life that the poets call ‘old age’s threshold’.⁸ Is life difficult? Or how do you describe it?”

329a

“I will tell you, by Zeus, Socrates,” said he, “how it looks to me. Yes, some of us, men of our age, often gather together in accordance with the old proverb ‘like to like’.⁹ Now, when we gather, most of us moan, as we long for the lost pleasures of youth and reminisce about love-making, drinking parties and feasts, and whatever goes along with this sort of thing, and we get distressed as though we had been deprived of something important, and that then we lived well but now we are not even alive.

329b

Some bewail the contemptuous treatment of old age by their own kinfolk, and so they go on about the amount of trouble old age causes them. But I think, Socrates, that these people are

blaming the wrong cause. For if this were the cause, I would also have been affected in the very same way, as far as old age is concerned, and so would everyone else who had reached this stage of life. But I have already met others who are not in this predicament, and indeed when someone asked the poet, Sophocles,¹⁰ in my presence, ‘How are you getting on, Sophocles, when it comes to making love? Are you still able to have intercourse with a woman?’ And he replied, ^{329c} ‘Mind what you say, my man. I am glad beyond measure to have escaped this. It is like escaping from a raving and savage slave master.’ I thought at the time that he expressed this quite well, and I still think so now.

^{329d}

For all in all, with old age comes much peace, and a freedom from this sort of thing. When the desires cease their strain and relax, what Sophocles described really does come to pass. It is a release from a whole host of maniacal slave masters. But in these situations, and in the case of problems with family members, there is only one explanation, and it is not old age, Socrates, but the manner of the people. If they are orderly and contented, then old age is wearisome, but in measure. If not, then for someone of this sort, old age, Socrates, and youth too, turn out to be difficult.”

^{329e}

Well, I was delighted with him for saying all this, and because I wanted him to say more I drew him out by asking, “Cephalus, I think that when you say this, most people do not accept your answer. They think, rather, that you bear your old age with ease, not because of your manner but because you have acquired a lot of wealth, for they say that wealthy people have consolation in abundance.” “What you say is true,” said he. “They do not accept it and they do have a point, but not as much as they imagine. Yet the response of Themistocles¹¹ puts this nicely. He was being reviled ^{330a} by the man from Seriphos,

who said that Themistocles was not well regarded because of himself, but because of his city. He replied that he himself would not have become famous had he been from Seriphos, nor would that other man had he been from Athens. And the same argument applies to those who are not wealthy and bear old age with difficulty. A reasonable man would not bear old age accompanied by poverty with much ease, nor would an unreasonable man who had become wealthy ever become content with himself.” “Cephalus,” said I, “did you inherit most of what you have or did you acquire it yourself?”

330b

“Are you asking what I have acquired, Socrates? As a money-maker, I am sort of midway between my grandfather and my father. For my grandfather, whose name I bear, having inherited about as much wealth as I have now acquired, made many times as much as this again. Then my own father, Lysanias, reduced the wealth below its present value, while I would be pleased if I could leave just as much as I inherited to these lads here, and a little more besides.”

330c

“The reason I ask,” said I, “is because you do not seem to be extremely fond of money, and this is in general the case with those who have not acquired the money themselves, while those who have acquired it are twice as attached to it as anyone else. Indeed, just as poets are fond of their own poems, and fathers of their sons, those who make money are serious about money in the same way, seeing it as a production of their own, and also, like everyone else, because of its usefulness. So they are difficult people to be with, since they are not prepared to speak positively of anything except wealth.” “That is true,” he said.

330d

“It certainly is,” said I. “But tell me something else. What do you think is the greatest good you have enjoyed from the

acquisition of so much wealth?" "What I say," he replied, "would probably not persuade many people. For mark my words, Socrates," said he, "once someone begins to think he is about to die, fears and concerns occur to him about issues that had not occurred to him previously. For the stories told about people in Hades, that someone who has acted unjustly whilst here must pay a penalty when he arrives there, ^{330e} stories that were laughable before then torment his soul at that stage, for fear they might be true. And he himself, either on account of weakness born of old age or because of being, in a sense, already closer to whatever is there, has a better view of this, and so he becomes full of foreboding and fear, and he then starts thinking about this and considering whether he has done any injustice to anyone. Someone who discovers that he himself has done a lot of injustice during his life often awakens from sleep, terrified, like a child, and he lives his life in anticipation of evil. While to someone who is aware in himself of nothing unjust, a pleasant, good anticipation is ever present, 'a nurse in his old age', as Pindar says.¹² Yes, Socrates, the poet expressed this in a delightful manner, explaining that for someone who has spent his life in justice and holiness: *Sweet anticipation accompanies him / Fostering his heart, a nurse in his old age, / Chief ruler of mortal thought / With its many twists and turns.*

^{331a}

"He puts it so well. Truly wonderful! So in this respect, I propose that the acquisition of money is most worthwhile, not for everybody, but for the reasonable man. Indeed, the possession of wealth has a major role to play in ensuring that one does not cheat or deceive someone intentionally or, again, depart to that other world in fear because some sacrifices are still owed to a god, or some money to another person. Now, it also has many other uses, and yet setting one against the other, I would propose, Socrates, that this is not the least significant purpose for which wealth is most useful to a man of intelligence."

331b

“That is most beautifully expressed, Cephalus,” said I. “But this thing itself, justice, shall we say without qualification that it is truthfulness, and giving back what has been taken from someone else? Or can these very actions sometimes be performed justly and sometimes unjustly? For instance, if someone took weapons from a friend when the man was of sound mind, and he then went mad and asked for them back, everyone would, presumably, agree that one should not give them back, and that the person returning them would not be just. Nor again would the person who was prepared to speak the entire truth to someone in such a condition be just either.” “That is right,” said he.

331c

“So this is not a definition of justice: to speak the truth and give back what one has taken.” “It certainly is, Socrates,” said Polemarchus, interrupting, “at least if we are to believe Simonides.”¹³ “Yes, indeed,” said Cephalus, “I am now handing the argument over to you, since it is time for me to look after the rituals.” “Am I not the inheritor of whatever is yours in any case?” said Polemarchus. “You certainly are,” he said with a laugh, and with that he left for the rituals.

331d

“Then tell me,” said I, “you, the inheritor of the argument, what do you say Simonides says, and says correctly, about justice?” “That it is just,” said Polemarchus, “to give back what is owed to each person. In saying this he is, in my view, expressing it nicely.” “Well,” said I, “it certainly is not easy to disbelieve Simonides, for he is a wise and divine man. But although you probably appreciate what precisely he is saying, Polemarchus, I do not understand it. For he is obviously not speaking about what we were describing earlier: giving back something that has been deposited to anyone at all who is not of sound mind when he asks for it, although what has been deposited is presumably

owed. Is this so?" "Yes."

331e

"Yet it should not be given back, under any circumstances, when someone of unsound mind asks for it." "True," said he. "Then when Simonides says that giving back what is owed is just, he is not referring to this sort of thing but to something else." "Something else indeed, by Zeus," said he, "for he thinks that what friends owe to friends is to do them some good, and nothing bad."

332a

"I understand," said I. "Whoever gives gold back to someone who deposited it is not giving back what is owed if the giving back or the taking turns out to be harmful, and the one who hands it over and the one who gives it back are friends. Is this what Simonides means, according to you?" "Yes, certainly."

332b

"What about enemies? Should we give back whatever happens to be owed to them?" "Entirely so," he replied, "whatever is owed to them. And what is owed from one enemy to another one, and what is appropriate too, is something bad."

332c

"In that case," said I, "it seems Simonides was speaking in riddles, as poets do, when he spoke of what is just. For apparently he had in mind that what is just is this: 'giving back what is appropriate to each'. But to this he gave the name 'what is owed'." "What else do you think?" said he. "By Zeus," said I, "if someone had asked him, 'Simonides, the skill called medicine is one that gives back. But what is owed and appropriate, and to what does it give this?' What answer do you think he would have given us?" "Obviously," said he, "it is the skill that gives medicines, food and drink to bodies." "What about the skill called cookery? What is owed and appropriate, and to what does it give this?"

332d

“It is the one that gives seasoning to dishes.” “Very well. And the skill that could be called justice gives what to what?” “Socrates,” said he, “if we are to adhere at all to what we were just saying, it is the skill that gives benefit back to friends and harm back to enemies.” “So is he saying that justice is doing good to friends and bad to enemies?” “I think so.” “When it comes to disease and health, who is most capable of doing good to sick friends and harm to sick enemies?” “A physician.”

332e

“And who is most capable of doing so to those who are sailing and facing the danger of the sea?” “A ship’s pilot.” “And what about the just man? In what activity or in relation to what task is he most capable of benefiting friends and harming enemies?” “In waging war and in forming alliances, in my opinion at least.” “Very well. Now, to those who are not sick, dear Polemarchus, a physician is of no use.” “True.” “And a ship’s pilot is of no use to those who are not sailing.” “Yes.” “So a just man too is of no use to those who are not waging war.” “That is not really how it seems to me.”

333a

“Then justice is also useful in time of peace?” “Yes, it is useful.” “And so is farming, is it not?” “Yes.” “For providing us with the fruits of the earth?” “Yes.” “And so too is shoe-making.” “Yes.” “For providing us with shoes. I presume that is what you would say?” “Entirely so.” “And what about justice? What would you say it is useful for in time of peace? For the use of or the acquisition of what?” “For contractual arrangements, Socrates.”

333b

“And by contractual arrangements, do you mean partnerships or something else?” “Yes, partnerships indeed.” “Well, is the just man also a good and useful partner when it comes to placing draughts on a board, or is it the draughts-player?” “It is the draughts-player.” “But when it comes to the placement of

bricks and stones, is the just man a more useful and better partner than the house builder?" "Not at all." "Well, in what sort of partnership is the just man a better partner than the harpist, in the same way that the harpist is a better partner than the just man when it comes to striking the strings?" "Well, in my opinion, it is when it comes to money."

333c

"Except perhaps when it comes to spending the money, Polemarchus. When it is necessary, in partnership, to buy or sell a horse, then I presume a horse-trainer is better. Is this so?" "Apparently." "And when it is a ship, is a shipwright or ship's pilot better?" "So it seems." "So, when is the just man more useful than others? When the silver or gold is to be used in partnership for what purpose?" "When it is to be placed on deposit and kept safe, Socrates." "Do you mean when no use is to be made of it and it is to lie idle?" "Entirely so."

333d

"So when money is not used, that is when justice is useful to it?" "Quite likely." "And when a pruning hook is to be guarded, justice is useful both in partnership and privately, but when it is to be used, the skill of the vine-dresser is useful?" "Apparently." "Will you also say that when a shield or a lyre are to be guarded and not used, justice is useful, but when they are to be used, military or musical skill is useful?" "It must be so." "And, indeed, in all other cases, is justice of no use when it comes to using each of them, and is it useful when not using them?" "Quite likely."

333e

"Well, my friend, justice would not really be of any great consequence if it turned out to be useful only for things that are not being used. But let us consider this. Consider the person who is most skilled at landing a blow in a fight, whether in a boxing match or in any other situation. Is he not also the one who is most skilled at guarding against a blow?" "Entirely so."

“And is someone who is skilled in guarding against disease also the one who is most skilled at engendering it without being noticed?” “Well, I think so.”

334a

“Then again, if someone is a good guardian of an army, is the same person also good at stealing the enemy’s plans and manoeuvres?” “Entirely so.” “Then someone who is a skilled guardian of something is also a skilled thief of that?” “So it seems.” “So, if the just man is clever at guarding money, he will be clever at stealing it too?” “That is what this argument indicates, at any rate,” said he.

334b

“Then, it seems the just man has turned out to be a kind of thief, and it is quite likely that you learned this from Homer. In fact, he admires Odysseus’ maternal grandfather, Autolycus, and says he surpassed all of humanity in theft and in perjury.¹⁴ So it seems that justice, according to you, Homer, and Simonides, is a kind of theft, although it is for the benefit of friends and to the detriment of enemies. Is this not what you meant?” “No, by Zeus,” he said. “In fact, I no longer know what I meant. And yet, I am still of the opinion that justice benefits friends and harms enemies.”

334c

“And by someone’s friends, do you mean those who seem to that person to be worthy people, or those who actually are so, even though they do not seem so? And does the same apply to enemies?” “Well, someone is likely to be friendly towards people he believes to be worthy, and to hate those he believes to be bad.” “Now, do not people make mistakes about this, so that lots of people seem to them to be worthy when they are not, and vice versa?” “Yes, they make mistakes.” “So to those who make mistakes, are the good people their enemies, while the bad people are their friends?” “Entirely so.” “But in that case is it just, nevertheless, for them to benefit the bad people and to

harm the good people?" "Apparently so."

334d

"And yet, those who are good at any rate are just, and are not the sort of people to act unjustly." "True." "Then according to your argument, it is just to act badly towards those who do no injustice." "Not at all, Socrates," said he. "Indeed, the argument seems to be a bad one." "In that case," said I, "is it just to harm those who are unjust and to benefit those who are just?" "This sounds better than that other conclusion."

334e

"So, Polemarchus, in the many cases where people make mistakes about their fellow men, it will turn out that it is just to harm their friends, for they have bad friends, and on the other hand to benefit their enemies, for their enemies are good. And so we shall be saying the exact opposite of what we said Simonides is saying." "Very much so," said he. "That is how it turns out. But let us make a change, since it is quite likely that we have not defined friend and enemy correctly." "In what way, Polemarchus?" "In saying that someone who seems worthy is a friend." "And how should we change this now?" I asked. "Someone who seems to be, and actually is, worthy is a friend. But someone who seems to ^{335a} be worthy, but is not so, seems to be a friend but is not a friend. And we should make the same proposal in relation to an enemy." "Then, by this argument it seems, the good person will be a friend and the bad person an enemy." "Yes." "Are you asking us to make an addition to our account of what is just? At first we said it was just to do good to a friend and bad to an enemy, but you are now asking us to add to this and say that it is just to do good to a friend who is good, and harm to an enemy who is bad?" "Yes, certainly," he said. "I think that would be a very nice way to express it."

335b

"Now," said I, "is it befitting a just man to harm any person at all?" "Yes, certainly," said he. "He should harm those who are

bad and who are enemies too.” “But when horses are harmed, do they become better or worse?” “Worse.” “And is this in relation to the excellence that belongs to dogs or to horses?” “In relation to the excellence that belongs to horses.” “And when dogs too are harmed, do they not become worse, in the excellence that belongs to dogs and not in the excellence that belongs to horses?” “Necessarily.” “And accordingly, my friend, should we not say that when human beings are harmed, they become worse in terms of human excellence?” “Yes, certainly.”

335c

“And justice, is it not human excellence?” “This too is necessarily so.” “And in that case, human beings who are harmed necessarily become more unjust.” “So it seems.” “Now, are musicians able to make people unmusical by their musicianship?” “Impossible.” “Is it possible for horsemen to turn people into non-horsemen by their horsemanship?” “It is not.” “Well then, can the just men make people unjust by means of their justice? Or, in short, can the good people make people bad by means of their excellence?” “No, that is impossible.”

335d

“Indeed it is, I think, not the function of heat to cool things down, but of its opposite.” “Yes.” “Nor is it the function of dryness to moisten things, but of its opposite.” “Entirely so.” “Nor is it the function of good to do harm, but of its opposite.” “Apparently.” “And the just man is good.” “Entirely so.” “So it is not the function of the just person to harm either a friend or anyone else, Polemarchus. No, that is the function of his opposite, the unjust person.” “I think you are speaking the truth, Socrates,” said he, “entirely so.”

335e

“So, if someone maintains that it is just to give back what is owed to each, and by this he means that harm is owed to enemies by the just man, and benefit is owed to friends, the person saying this was not wise for he did not speak the truth,

since it has become evident to us that there are no circumstances in which it is just to harm anyone.” “I concur,” said he. “Then you and I shall do battle,” said I, “in partnership, if anyone maintains that Simonides or Bias or Pittacus,¹⁵ or any other wise and blessed man, has said so.” “Well, I am ready,” said he, “to be your partner in the battle.”

336a

“But,” I said, “do you know who, it seems to me, is the originator of this maxim, the one that maintains that it is just to benefit one’s friends and harm one’s enemies?” “Who?” he asked. “I think it is a maxim of Periander or Perdiccas or Xerxes or Ismenias the Theban,¹⁶ or some other rich man who thinks he has great power.” “What you say is very true,” said he. “Very well,” said I. “But since it has become evident that this is not justice, or what is just, what else might someone say that it is?”

336b

Now, even while we were conversing, Thrasyarchus made several efforts to take control of the discussion, but he was prevented from doing so by the people sitting beside him who wanted to hear the discussion. But as we had paused, and I had asked this question, he held his peace no longer. Gathering himself up like a wild beast, he came at us as though he would tear us to pieces. Polemarchus and I were panic-stricken with fear, as he roared out in our midst.

336c

“What is this nonsense,” said he, “that has taken hold of you for so long, Socrates? And why are you both fooling around and giving way to one another? Yes, if you really want to know what it is that is just, do not just ask questions or try your best to refute someone when they give you an answer, knowing full well that it is easier to ask questions than to answer them. Answer the question yourself and say what it is that is just according to you. And do not tell me that it is ‘what is needed’ or ‘what ^{336d} is beneficial’ or ‘profitable’ or ‘expedient’ or

‘advantageous’. Just tell me clearly and precisely what it is, for I will not accept your answer if you propose this sort of nonsense.” Now, when I heard him, I was shocked, and looking at him in terror I thought that if I had not seen him before he saw me, I would have been struck dumb. But as it happened, once the argument had begun to make him mad, I looked at him first, and so I was able to answer him, and I ^{336e} said, with a slight tremble in my voice, “Thrasymachus, do not be so harsh with us, for if Polemarchus here and I are making mistakes in considering the argument, rest assured that our mistakes are unintentional. If we were searching for gold we would never give way to one another deliberately in the search, and ruin our chances of finding it. So you certainly should not presume that in searching for justice, something more precious than a lot of gold, we would then give way to one another in this mindless manner and not be serious about bringing it fully to light. Do not make that presumption, my friend. No, in my opinion we lack the ability, so it is surely far more ^{337a} reasonable that you clever people have mercy on us rather than being harsh.” And when he heard this he broke into scornful laughter. “By Heracles,” said he, “there it is, the familiar irony of Socrates. Indeed, I predicted this already. Yes, I told these people that you would not be willing to answer questions and would speak ironically and do anything rather than answer the question someone asked you.” “You are indeed wise, Thrasymachus,” said I. “So you knew full well that if you were to ask someone how much twelve is, and if you were to introduce your question by saying to him, ^{337b} ‘Do not tell me, my man, that twelve is twice six, or three times four, or six times two, or that it is four times three, because I will not accept your answer if you talk such nonsense as this,’ I am sure it is obvious to you that no one could answer your question if you were to put it like that.

^{337c}

But if he responded to you, ‘Thrasymachus, what are you saying? Can I not give a single one of the answers you mentioned? That is amazing! Even if one of them happens to be the answer, should I say something other than what is true? Or what do you mean?’ What would you say to him in reply?” “Well, well,” said he, “so this is like that question of mine!” “There is no reason why not,” said I, “but even if it is not like that but it seems like that to the person you are questioning, do you not think he is likely nonetheless to answer based on how it appears to him, whether we are prohibiting these responses or whether we are not?”

337d

“Is that what you are going to do now?” he said. “Will you give one of those answers that I prohibited?” “I would not be surprised,” said I, “if that is how it seemed to me once I had considered the matter.” “And what if I should present a different answer about justice besides these, and better than all of them? What fate would you deserve?” “The fate that is appropriate to someone who does not know,” said I. “There is no alternative. And presumably it is appropriate that he learn from someone who knows. So this is the fate I deserve to suffer.”

337e

“How sweet you are,” said he. “But as well as learning, you should also pay a fee.” “Yes, when I have the money,” said I. “You have it,” said Glaucon. “If money is an issue speak on, Thrasymachus, since we will all pay for Socrates.” “Yes, I am quite sure you will,” said he, “so that Socrates may arrange things, as usual. He does not answer questions himself, and when someone else answers, he may take hold of an argument and refute it.”

338a

“Best of men,” said I, “how could someone give answers when, in the first place, he does not know nor does he claim to know?

And secondly, even if he does have some thoughts on the matter, he is prohibited from saying what he believes by a man of no mean status? No, it is more reasonable that you speak, since you actually claim to know and to be able to express what you know. So you really must do this. Gratify me by answering the question. Do not hold back, and instruct Glaucon here, and the others too.” Once I had said all this, Glaucon and the others implored him to do what I had asked him to do, and Thrasymachus was obviously eager to speak in order to impress people, since he thought he had a really good answer, but he pretended to be keen that I be the one to answer the question. He ^{338b} finally gave his assent, and then he said, “There it is, the wisdom of Socrates. Although he himself does not want to teach, he goes about learning from others, and he does not even thank them.” “What you are saying is true, Thrasymachus,” said I, “I do learn from others. But when you say I do not give thanks, that is not true, for I give as much as I am able to give. But since I do not have money, I am only able to give praise, and once you give your answer you will know full well, there and then, just how eagerly I praise someone who seems to me to speak well, since I believe you will speak well.”

^{338c}

“Then listen,” said he. “Indeed, I maintain that what is just is nothing else but the ‘advantage of the stronger’. Well, why do you not praise me? You just do not want to.” “I should understand what you are saying first,” said I. “At the moment I still do not know what you mean. You maintain that the advantage of the stronger is just. But what exactly do you mean by this, Thrasymachus? For presumably you are not maintaining that if Polydamas, the pancratiast,¹⁷ is stronger than we are, and it is to his advantage to eat beef for his body, then this food is also advantageous for us weaker folk, and just too?”

^{338d}

“You are loathsome indeed, Socrates,” said he, “and you are interpreting the argument in a sense that does it the most damage.” “Not at all, best of men,” said I. “Just explain what you mean, with greater clarity.” “Do you not know,” said he, “that some cities are governed as tyrannies, some as democracies, others as aristocracies?” “Of course.” “And whatever rules in each city exercises power?” “Entirely so.”

338e

“And each ruling group institutes the laws to its own advantage, democratic laws in the case of a democracy, tyrannical laws in the case of a tyranny, and so on. Having instituted them, they then proclaim that this, what is advantageous to themselves, is just for those over whom they rule and so they punish those who go against this, as lawbreakers who are acting unjustly. So this, best of men, is what I say is just: it is the same in all cities, the advantage ^{339a} of the established ruling group. This presumably holds power, and it follows, if one reasons correctly, that what is just is the same everywhere: the advantage of the stronger.” “I now understand what you are saying,” said I, “and I shall attempt to understand whether it is true or not. So, Thrasymachus, you too have answered that what is advantageous is what is just, even though you prohibited me from giving this answer, and yet the words ‘for the stronger’ were ^{339b} added on to it.” “Yes, a minor addition perhaps,” said he. “It is not yet clear whether it is significant or minor, but it is clear that we should consider whether or not you are speaking the truth. Now, since I too accept that what is just is something advantageous, but you make an addition and say it is the advantage of the stronger, while I do not know, consider it we must.” “Consider it then,” said he. “That is what I shall do,” said I. “Tell me then. Do you not maintain that it is just to obey those who rule?” “Yes, I do.”

339c

“And are the rulers of each city unerring, or are they also capable of making some mistakes?” “Absolutely,” said he. “They are also quite capable of making some mistakes.” “So as they set about instituting the laws, would they not institute some laws correctly, others incorrectly?” “Yes, I think so.” “And what is instituted correctly is to their own advantage, and what is instituted incorrectly is to their disadvantage. Is this what you are saying?” “Just so.” “But whatever they institute must be enacted by those over whom they rule, and this is what is just?” “Of course.”

339d

“Then according to your argument, it is just not only to enact what is advantageous for the stronger, but also the opposite, what is disadvantageous.” “What are you saying?” he replied. “What you are saying, I think, but let us take a better look. Hasn’t it been agreed that when the rulers are directing their subjects to enact something, they sometimes make mistakes about what is best for themselves, yet it is just for the subjects to enact whatever the rulers order? Has this not been agreed?” “Yes, I think so,” said he.

339e

“Then, you must suppose,” I said, “that you also accept that it is just to do what is disadvantageous to those who rule and are stronger, whenever the rulers unintentionally direct what is bad for themselves, since you maintain that it is just for the others to enact what the rulers have directed. So in that case, wisest Thrasymachus, does it not necessarily follow that it is just to do the very opposite of what you are saying? For the weaker have surely been directed to enact what is disadvantageous to the stronger.” “Yes, by Zeus, Socrates,” said Polemarchus, “nothing could be clearer.”

340a

“Yes, if you are to be his witness,” said Clitophon, interrupting. “Why is there need of a witness?” said he. “Indeed,

Thrasymachus himself accepts that although the rulers sometimes direct what is bad for themselves, it is still just for the others to enact this.” “Because, Polemarchus, Thrasymachus posited that to enact the orders of the rulers is just.” “Yes, Clitophon, and he also proposed that the advantage of the stronger is just. And having put both these proposals forward, he went on to admit that the stronger sometimes order the weaker folk, their subjects, to enact what is disadvantageous for themselves. But based upon these admissions, what is advantageous for the stronger would be no more just than what is not advantageous.”

340b

“But,” said Clitophon, “by ‘what is advantageous for the stronger’ he meant what the stronger person believes to be advantageous to himself. This is what is to be enacted by the weaker, and he posited that this is what is just.” “But that is not what he said,” said Polemarchus. “That makes no difference, Polemarchus,” said I. “Rather, if Thrasymachus now means it in this way, let us accept it from him in this way. “So tell me, Thrasymachus, is this what you wanted to say is just, what seems to the stronger to be to the advantage of the stronger, whether it is advantageous or not? Shall we say that this is what you mean?”

340c

“No, not in the least,” said he. “Do you think that I call someone who is making mistakes stronger, at the time he is making the mistakes?” “Yes,” said I, “I did think you meant this when you accepted that those who rule are not unerring, but also make some mistakes.” “That is because,” said he, “you are conducting your arguments unfairly, Socrates. Take an immediate example. Do you call someone who is making mistakes in treating the sick a physician, based on the actual mistake he is making, or someone who makes mistakes in calculating, a calculator at the time he is making a mistake, based on this mistake? No, I 340d

think this is just our manner of speaking. We say the physician makes mistakes, the calculator makes mistakes, and so does the writing teacher. But in fact, I think each of these, insofar as they are what we call them, never makes mistakes. And so, according to this precise account, since you do speak so precisely, none of these practitioners errs. Someone who makes mistakes does so in the absence of knowledge when he is not a practitioner, and so no practitioner, wise person, or ruler, makes mistakes at that time when he is a ruler, even though everyone would say that the physician erred, and so did the ruler. So it ^{340e} is in this sense in which you should understand the answer I gave you a moment ago. But the other account is the most precise. The one who rules, insofar as he is a ruler, does not make mistakes and he unerringly institutes what is best for himself, and this must be enacted by the one who is ruled. And so, as I have been saying from the outset, I say that what is just is enacting what is to the advantage of the stronger.” “Very well, Thrasymachus,” said I. “Do you think I am arguing unfairly?” “Yes, certainly,” he replied.

^{341a}

“Because you think I asked my questions in the way I asked them, as part of a plan to do damage to you in the arguments.” “I actually know this quite well,” he said. “Yes, and you will not get any further for you could not do this damage without my noticing it, nor will you be capable of overpowering me in the argument now that you have been found out.”

^{341b}

“Blessed man,” said I, “I would not even make the attempt! But to avoid something of this sort happening to us all over again, please clarify in which sense you mean ‘the ruler’ and ‘the stronger’. Do you mean the ruler and stronger in the common sense of the words or in the precise sense that you explained just now, who is stronger and whose advantage it will be just for the weaker person to enact?” “The one who is a ruler in the

most precise sense of the word,” said he. “So do damage ^{341c} to that and be unfair if you can – I am asking you for no concessions – but you won’t be able to.” “Do you think,” said I, “that I would be so insane as to attempt to shave the lion, by being unfair to Thrasymachus?” “Well, you made the attempt just now,” said he, “and you came to naught in that case too.” “Enough of this sort of thing,” said I. “But tell me. The physician, in the precise sense you explained earlier, is he a money-maker or someone who treats the sick? And you should speak of someone who really is a physician.” “He is someone who treats the sick,” he replied. “What about a steersman? Is someone who is a steersman, in the correct sense, a sailor or someone who is in charge of sailors?”

^{341d}

“Someone who is in charge of sailors.” “We need not, I believe, take account of the fact that he sails in a ship, nor is he to be called a sailor for that reason. For he is not called a steersman based on his sailing, but based on his skill and the fact that he is in charge of the sailors.” “True,” he said. “Is there not some advantage that belongs to each of these?” “Absolutely.” “And is not the skill naturally directed to this,” I asked, “to seeking out and furnishing what is advantageous to each?” “It is directed to this,” said he. “Now, in each of the skills too, is there any other advantage apart from being as perfect as possible?”

^{341e}

“In what sense are you asking this question?” “It is as if you were to ask me,” said I, “whether it is sufficient that our body be a body, or is it in need of something else besides. I would reply that it does need something else, entirely so, and that is why the skill of medicine has now been invented, because our body is deficient and it is not sufficient that it be like this. So this skill has been provided in order to furnish what is advantageous to this body. Do you think,” said I, “that I would have answered correctly or incorrectly had I said this?” “Correctly,” he replied.

342a

“What about this? Is medicine itself deficient, or is there any other skill that needs some additional excellence, in the way that eyes need sight and ears need hearing, and is there, for this reason, a need for some skill, set over them, that considers what’s advantageous in this respect, and provides it? So too, is there any deficiency in the skill itself, and does each skill need another skill that will consider what’s advantageous to it, and does the one that’s considering this need another skill of this sort, in turn, and is this an unending process? Or will the skill consider what is advantageous ^{342b} to itself? Or does it need neither itself nor another skill to consider what is advantageous in relation to its own deficiency, because there is no deficiency or error present in any skill, nor is it the function of a skill to seek what is advantageous for anything apart from the object of that skill? And is it unblemished and pure, because it is right, as long as each skill is precisely and wholly what it is? And considering that ‘precise’ formulation, is this how matters stand or not?” “So it appears,” he said. “So,” said I, “medicine does not consider what is advantageous to medicine, but to the body.” “Yes,” said he.

342c

“Nor does horsemanship consider what is advantageous to horsemanship, but to horses. Nor does any other skill consider what is advantageous to itself, since it has no additional need. It considers what is advantageous to the object of that skill.” “It appears so,” he replied. “But of course, Thrasymachus, the skills rule over and dominate the objects of those skills.” He agreed to this, but with great reluctance. “So no knowledge at all considers or commands what is to the advantage of the stronger, but what is to the advantage of the weaker, and of whatever is ruled by the knowledge itself.”

342d

In the end he accepted this too, although he did attempt to resist it. Once he had agreed, I said, “So is it not the case that no physician, insofar as he is a physician, considers or commands what is advantageous to the physician rather than to the sick person? For it has been agreed that the physician, in the precise sense, is someone who rules over bodies, but is not a money-maker. Was that not agreed?” He concurred. “Is not the steersman too, in the precise sense, also someone who rules over sailors, but is not a sailor?” He agreed. “So a steersman and ruler of this sort will not consider and command what is advantageous to the steersman, but to the sailor, the person whom he rules over.” He concurred, reluctantly.

342e

“In that case, Thrasymachus,” said I, “no one at all exercising any rulership, insofar as he is a ruler, considers or commands what is advantageous to himself, but to the one he rules over, for the sake of whom he himself exercises his skill. With his gaze fixed upon that, and whatever is advantageous and appropriate to that, he says all that he says and he does all that he does.”

343a

Now, once we had reached this stage in the discussion, and it was apparent to everyone that his argument about what is just had undergone a complete reversal, Thrasymachus, instead of responding said, “Tell me, Socrates, do you have a nurse?” “Why is this?” said I. “Should you not respond rather than asking a question like this?” “Because,” said he, “she overlooks your snivelling and does not wipe your nose though you need it. In any case, with her, you do not even distinguish between shepherds and sheep.” “Why exactly are you saying this?” I asked.

343b

“Because you think the shepherds and the neatherds consider the good of the sheep and the oxen, and fatten them and care for them with a view to something else besides the good of their

masters and themselves. What is more, you imagine that those who rule our cities, those who truly rule, have some other attitude towards those they rule over than the disposition someone might have towards sheep, and that they consider something else, night and day, besides how they will benefit themselves. And when it comes to what is just and justice, what is unjust and injustice, ^{343c} you are so remote that you are unaware that justice and what is just are, in fact, someone else's good, being the advantage of the stronger, of those who rule, and the personal detriment of whoever obeys and is subordinate. But injustice is the opposite, and it rules over the truly simple-minded ^{343d} folk who are just and who, because they are ruled, do what is to the advantage of that stronger man and make that person happy by serving him, without making themselves happy at all. "But, my utterly simple-minded Socrates, you should consider the fact that everywhere the just man has less than the unjust man. Firstly, in contractual arrangements with one another, wherever people like this are in partnership with one another, you would never find that the just man has more than the unjust man when the partnership is ended. No, he has less. Again, in their dealings with the city, when there are taxes to be paid, the just man pays more and the unjust man pays ^{343e} less although they are equally liable. And when there is money to be had one gains nothing while the other gains a lot. And, indeed, whenever either of them holds a position of authority, the just man, even if he suffers no other loss, suffers the deterioration of his personal affairs through neglect, and because he is just he takes no personal advantage of public property. And besides all this he is hated by his family and acquaintances when he is not prepared to afford them any service beyond what is just. But what happens to the unjust man is the opposite of all this. Indeed, I am referring ^{344a} to the person I was speaking of just now, someone who is capable of getting more, on a large scale. That is the person you should

consider if you really want to judge how much more advantageous it is to him, personally, to be unjust rather than just. “But the easiest way of all for you to understand this is by taking the most extreme injustice, that makes the one who has committed the injustice as happy as he can possibly be, and those who have suffered the injustice, and are not prepared to act unjustly, utterly wretched. This is tyranny, which takes, not little by little but all at once by stealth and by force, what does not ^{344b} belong to it, what is sacred and holy, private and public. If someone acts unjustly by enacting a particular part of this extreme injustice, and he is found out, he is penalised and attracts enormous reproach. And, indeed, temple robbers, kidnappers, house-breakers, swindlers and thieves is what they call people who, through crimes of this sort, are unjust in part only. But, when in addition to stealing the wealth of the citizens someone actually kidnaps and enslaves the citizens themselves, instead of these shameful names he is called happy and blessed, not only by those citizens, ^{344c} but by anyone who hears that he has acted in this completely unjust manner. For, those who reproach injustice do not reproach it because they are afraid of doing unjust deeds. No, they are afraid of suffering them. “And so, Socrates, injustice on a sufficiently large scale is stronger, freer and more dominant than justice. And as I said at the outset, what is just is indeed the advantage of the stronger, and what is unjust is profitable and advantageous to oneself.”

^{344d}

Having said all this, Thrasymachus intended to leave, having poured his speech about our ears in a massive flood, like an attendant at the baths. However, the company wouldn't allow him to do so. Rather, they compelled him to stay and provide an argument in support of what he had said. I myself was particularly insistent, and I said, “Heavens, Thrasymachus, after firing off a speech like that, do you intend to take your leave before you provide adequate instruction or before you have

learned whether or not this is how matters ^{344e} stand? Or do you think we are trying to determine some minor issue, rather than a course of life which would enable anyone who pursues it to live the most profitable of lives?" "Indeed," said Thrasymachus, "do I think this is not the case?" "You seem to think so," said I, "or else you do not care about us, nor have you any concern about whether we live worse or better lives, we who are in ignorance about what you claim to know. So, good man, take heart and explain it to us, since you won't fare at all badly if you do a good deed ^{345a} for so many of us. In fact, I must say that I, for my part, am not persuaded, nor do I believe that injustice is more profitable than justice, not even if someone allows it free rein and does not prevent it from doing whatever it wishes. No, my good man, let a man be unjust and able to act unjustly, either by avoiding detection or by open force. Nevertheless, he does not persuade me that injustice is more profitable than justice. Now, there is probably someone else among us, and I am not alone, who is not convinced of this, so do enough to persuade us, blessed man, that we are being ill-advised when we set justice above injustice."

^{345b}

"But how am I going to persuade you?" he asked. "Indeed, if you are not persuaded by what I said just now, what more can I do for you, besides taking the argument and shoving it into your soul?" "By Zeus," said I, "do not do that. No, firstly, you should stand by whatever you said, or if you do change your position do so openly and do not try to deceive us. But at the moment, Thrasymachus, let us look again at the previous examples, because, you see, although you began by defining the physician in the true sense, you no longer thought it necessary later on to be careful and precise ^{345c} about the shepherd in the true sense. Instead, you presume that he fattens the sheep with a view not to what's best for the sheep, but with a view to a banquet, as if he were a dinner guest about to have a feast, or again with a

view to selling them, like a businessman rather than a shepherd. But the skill of shepherding surely does not care for anything else apart from what it has been put in charge of, and how to provide to this what's best, since as long as it does not fall short of being shepherding, whatever belongs to itself has, of course, already been provided to a sufficient extent so that it can be best. Accordingly, I think we need to accept at this stage that all rule, insofar as it ^{345d} is rule, does not consider what's best for anything else except what it rules over and tends upon, whether the rule is exercised in civic or in private matters. But do you think that those who exercise rule in our cities, those who rule in the true sense, do so of their own free will?" "By Zeus," said he, "I do not think it. I know it very well." "But why, Thrasymachus?" said I. "Are you not aware that in the case of the other rulers, no one is prepared of his own free will to exercise rule? Rather, they ask for payment because any benefit accruing from the exercise of rule will accrue, not to themselves, but to those who are ruled. Now, ^{345e} tell me this much. Do we not consistently say that each of the skills is different in virtue of having a different power? And, blessed man, do not give an answer that is contrary to your own opinion, so that we may make some progress." "Yes," said he, "they are different in virtue of this." "Does not each of them provide some benefit of its own to us, a benefit that is not common to them all, medicine providing health, steersmanship providing safety at sea, and so on for the other skills?" "Entirely so."

^{346a}

"And does not wage-earning provide a reward, since that is its power? Or do you call medicine and steersmanship the same skill? Or, if you really want to make a precise distinction, as you proposed, would you be any more inclined to refer to a steersman's skill as medicine if someone acting as a steersman were to become healthy because of the advantages of a sea

voyage?” “Of course not,” he said. “Nor, I believe, would you say this about wage-earning if someone earning wages were to become healthy.” “Of course not.”

346b

“What about this? Would you call medicine wage-earning if someone were to earn a wage whilst healing people?” “I would not,” he said. “Well, did we not agree that the benefit of each skill is particular to that skill?” “I grant that,” said he. “Then whatever benefit all the practitioners obtain in common, they obviously obtain by their common recourse to something else that is the same.” “So it seems,” said he.

346c

“And yet, we maintain that the benefit whereby the practitioners gain a reward comes to them from their recourse to the wage-earning skill.” He agreed reluctantly.

346d

“So, it is not from his own skill that each practitioner has this benefit, whereby he obtains a reward. Rather, if we are to consider this precisely, medicine produces health while wage-earning produces a reward, and although house-building produces a house, wage-earning follows it and produces a reward. And the same goes for all the other skills. Each performs its own function and benefits whatever it is set over, but if a reward were not to accompany the skill, is there any benefit to the practitioner?” “Apparently not,” said he.

346e

“In that case, when he works for nothing, does he not confer any benefit then?” “No, I think he does.” “Therefore, Thrasymachus, this much is obvious by now. No skill or rule furnishes what is beneficial to itself but, as we have been saying for some time, it furnishes and commands what is beneficial to whatever it rules over by considering what is to the advantage of the weaker, but not of the stronger. And that is why, dear Thrasymachus, I was saying just now that no one is prepared to

exercise rule, and get involved in correcting the evil ways of others, of his own free will. Instead ^{347a} he asks for a reward, because whoever is to enact anything properly by means of a skill never enacts what is best for himself, nor commands it either, when his commands are based upon the skill. Rather, he enacts what's best for whoever is ruled. These are the reasons, it seems, why there needs to be a reward for those who are going to consent to exercise rule, either money, honour, or a penalty if they will not exercise rule." "What do you mean by this, Socrates?" said Glaucon. "The first two rewards I recognise, but I do not understand what penalty you are referring to, or how you include it among the rewards."

^{347b}

"Then," said I, "you do not understand the reward of the best people, on account of which the most suitable people exercise rule, whenever they are willing to do so. Or do you not know that having a thirst for honour or for money is said to be, and is indeed, a reproach?" "I do," said he. "Well," said I, "that is why the good people are not willing to rule, either for the sake of money or honour. For they do not wish to be called hirelings for openly securing a reward from exercising authority, nor to be called thieves for profiting from their position of authority by stealth. Then again, they won't do it for the sake of honour either for they are not thirsty for honour. So in their ^{347c} case, there also needs to be some necessity or a penalty if they are going to want to exercise rule. And that is surely why it is regarded as a disgrace to seek to exercise rule of one's own free will and not wait for necessity. But if one is not willing to exercise rule oneself, the greatest penalty is to be ruled over by someone of lesser rate. And for fear of this penalty, it appears to me, the reasonable people exercise rule, whenever they do so. And then they set about exercising their authority, not as though they are embarking upon something good, nor as though they are going to do ^{347d} well out of it, but as a necessity,

because they are not able to entrust it to anyone better than or like themselves. “It is quite likely then that if there were a city constituted entirely of good men, there would be as much contention over not ruling as there is over exercising rule nowadays. And in that case it would become quite evident that, in fact, the true ruler does not, by nature, consider his own advantage, but the advantage of whoever is ruled. Accordingly, everyone who realises this would choose to be benefited by someone else rather than have the trouble of benefiting someone else.

347e

“So I do not agree with Thrasymachus at all, that what is just is the advantage of the stronger. Now, we shall consider this again on another occasion, but what Thrasymachus is now saying seems much more significant to me, when he maintains that the life of the unjust person is superior to the life of the just. Well, Glaucon,” said I, “which do you choose, and which formulation seems truer to you?” “Well, I say the life of the just person is more profitable.”

348a

“And did you hear how much good Thrasymachus ascribed a moment ago to the life of the unjust?” “I heard,” said he, “but I am not convinced.” “So do you want us to persuade him that he is not speaking the truth, if we can somehow find a way to do so?” “How could I not want that?” said he. “Well, if we argue against him, setting one speech against another, as to how much good there is in turn in being just, and he makes a reply, and we make another speech, it will be necessary to count up the good points and measure how many of them each of us made. And at that stage we shall need some judges to decide on the issue. But if we consider the matter as we did just now, 348b by coming to agreement with one another, we ourselves shall be both judges and pleaders at the same time.” “Yes, certainly,” said he. “So which approach do you like best?” I asked. “This

one,” Glaucon replied. “Come on then, Thrasymachus,” said I, “answer us, from the beginning. Do you maintain that complete injustice is more profitable than justice, when it too is complete?” “I certainly do maintain this,” said he, “and I have explained the reasons why.” “Well then, tell me what you say about them in this respect. I presume you refer to one of them as an excellence and the other as a vice?” “Of course.”

348c

“Justice being an excellence, and injustice a vice?” “Well, that is likely, my sweet friend, since I also say that injustice is profitable, while justice is not.” “What are you saying then?” “The opposite,” said he. “That justice is a vice?” “No, it is a very noble simple-mindedness.” “In that case, is injustice an evil disposition?” “No, it is sound judgement,” he said. “And do the unjust people also seem to you, Thrasymachus, to be intelligent and good?” “Yes, those who are able to be completely unjust at any rate,” said he, “and have the ability to bring cities and entire races of humans under their power. But perhaps you think I am ^{348d} speaking of pickpockets,” said he, “although this sort of thing is profitable too, as long as it goes undetected. Yet it is not worth mentioning compared to what I have just been speaking of.” “I am not unaware,” said I, “of the point you wish to make, but what surprised me was this: you placed injustice alongside excellence and wisdom, although you placed justice with their opposites.” “That is where I place them, very much so.”

348e

“This is now a tougher challenge, my friend, and it is no longer easy to come up with a response. For if you had proposed that injustice is profitable, and yet accepted that it is an evil and a disgrace, as some others do, we would have something to say by discussing it in conventional terms. But you are obviously going to say that it is noble and strong, and you will attribute to it all the other qualities that we used to attribute to justice since you

have even dared to place it alongside excellence and wisdom.”

349a

“Your prophecy could not be truer,” said he. “And yet,” said I, “I should not hold back from developing the argument, as long as I understand you to be saying what you are actually thinking. Indeed, Thrasymachus, I do not think you are joking at the moment. No, you are expressing your opinions as to what is true.” “What difference does it make to you,” said he, “whether this is my opinion or not? Why do you not just refute the argument?”

349b

“No reason,” said I. “But apart from all this, please try to answer one further question. Do you think the just person would want to get more than another just person, in any respect?” “Not at all,” said he. “Otherwise he would not be the charming, simple-minded fellow he actually is.” “And what of the just action?” “No, not that either,” he said. “And would he think he deserves to get more than the unjust person, and would he believe that this is just or would he not believe so?” “He would believe it,” said he, “and he would think he deserved it, but he would be unable to achieve it.”

349c

“But I am not asking you that,” said I, “but whether the just man wants, and thinks he deserves, to get more than the unjust man, but not more than the just man.” “Yes, that is it,” said he. “And what about the unjust man? Does he think he deserves to get more than the just man and more than the just action?” “How could he do otherwise,” he said, “when he thinks he deserves to get more than everyone?” “Will not the unjust also get more than the unjust person and the unjust action, and will he not strive, in all things, to get more for himself?” “That is it.”

349d

“Should we, in fact, put it like this?” I asked. “The just man does not get more than someone like himself, only someone unlike,

while the unjust gets more than his like and his unlike.” “An excellent formulation,” he said. “And yet the unjust person is intelligent and good,” said I, “while the just person is neither?” “That too is a good way of putting it,” said he. “In that case,” said I, “does not the unjust man resemble the intelligent and the good, while the just man does not?” “Yes, indeed,” said he. “How could this sort of person fail to resemble people like this, and how could the other fellow resemble them?” “Well said. So each of them is this sort of person. They are each the sort of people they resemble.” “What else could they be?” he said.

349e

“Very well, Thrasymachus. And do you say that one person is musical and another is unmusical?” “I do.” “Which of them is intelligent and which is unintelligent?” “The musical person is presumably intelligent, and the unmusical person unintelligent.” “Is he not good in matters wherein he is intelligent, and bad in matters wherein he is unintelligent?” “Yes.” “What about the medical man? Is not the situation the same?” “It is.” “So, best of men, would it seem to you that any musical man, when tuning his lyre, would want to get more than another musical man in tightening and loosening the strings, or would you think he deserves to get more?”

350a

“No, I do not think so.” “Would he want to get more than the unmusical man?” “Necessarily,” he replied. “And what about the medical man? In prescribing food and drink, do you think he would want to get more than the medical man, or the medical procedure?” “Of course not.” “But more than someone who is not a medical man?” “Yes.” “Well then, in the case of all knowledge and ignorance, consider this. Would anyone at all who is knowledgeable want to choose to do, or say, more than another knowledgeable person, rather than choosing the same as someone who is like himself, in the case of the same activity?” “Yes,” said he. “Perhaps that is how matters must

stand in this case.”

350b

“What about someone who is not knowledgeable? Would he not want to get more than both the knowledgeable person and the person who is not knowledgeable, in like manner?” “Probably.” “And whoever is knowledgeable is wise?” “I agree.” “And whoever is wise is good?” “I agree.” “So, whoever is good and wise does not want to get more than his like, although he does want to get more than his unlike, and his opposite.” “So it seems,” said he. “But whoever is bad and ignorant wants to get more than his like, and more than his opposite too.” “Apparently.”

350c

“In that case, Thrasymachus, does not our unjust man get more than his like and his unlike? Were you not saying this?” “I was,” said he. “And yet, whoever is just will not get more than his like, but he will get more than his unlike?” “Yes.” “So the just person,” said I, “resembles the wise and the good, while the unjust resembles the bad and the ignorant.” “Quite likely.” “But surely we agreed that whoever someone is like, that is the sort of person he actually is.” “We agreed indeed.” “So the just person has turned out, for us, to be good and wise, and the unjust person ignorant and bad.”

350d

Now, Thrasymachus did agree with all this, but not as easily as I am now describing. Rather he was dragged reluctantly, perspiring prodigiously as you would expect on a summer’s day. Then I saw what I had never seen before, Thrasymachus blushing. And since we had finally agreed that justice is excellence and wisdom, while injustice is badness and ignorance, I said, “There it is, let that be our position on this. And yet we also maintained that injustice is strong, or do you not remember, Thrasymachus?”

350e

"I remember," said he, "but what you are now saying is unsatisfactory to me, and I have something to say about this. Yet if I were to say it, I know quite well that you'd accuse me of making public speeches. So, either allow me to speak as much as I want to, or if you want to ask questions ask, and I shall respond with 'there it is', as we do to old women telling stories, and nod my head and shake my head." "No, no," said I, "not if it is contrary to your own opinion." "Yes, to satisfy you," he said. "Since you will not allow me to speak, what else do you want me to do?" "Nothing, by Zeus," said I. "But if you really are going to do this, do it, and I shall ask my questions." "Ask them."

351a

"Then I ask this question, the one I asked earlier, so that we may consider the argument thoroughly, in due order. What sort of thing is justice in relation to injustice? For it was said, somehow, that injustice is more powerful and stronger than justice, and yet now, if justice is indeed wisdom and excellence," said I, "I think it will easily be shown to be stronger than injustice, since, in fact, injustice is ignorance. No one could still fail to recognise that. But I have no desire, Thrasymachus, ^{351b} to consider this in such a facile manner, but somewhat as follows. Would you maintain that a city is unjust when it attempts to enslave other cities and reduce them to slavery, and indeed hold many more in subjection, having enslaved them already?" "Yes, of course. And the best city, being utterly unjust, will do this to the greatest extent." "I understand," said I, "that this was your argument, but I am considering the following question: whether a city that becomes stronger than another city will have this power, in the absence of justice, or is it necessary for it that justice be present?"

351c

"Well, if it is as you were just saying, and justice is wisdom, then this will happen when justice is present. But if it is as I was saying, then this will happen when injustice is present."

“Thrasymachus, I am really delighted,” said I, “that you are not only nodding and shaking your head, but also responding so beautifully.” “Yes,” said he, “I am being obliging towards you.” “It is nice of you to do so, but please oblige me a little more and tell me this. Do you think a city or an army, robbers or thieves, or any other group that jointly undertakes something in an unjust manner, would be able to accomplish anything if they were unjust towards one another?” “Of course not,” said he.

351d

“But what if they were not unjust to one another? Wouldn’t they be more likely to accomplish something?” “Very much so.” “Because injustice, Thrasymachus, presumably causes factions, hatred, and conflict among them, while justice brings like-mindedness and friendship. Is this so?” “Let it be so,” said he, “so that I do not have to differ with you.” “Again, that is good of you, best of men. But tell me this. If the function of injustice is to produce hatred wherever it is present, will it not also, whether it arises among free men or slaves, make them hate one another and develop factions, and be unable to act with one another jointly?”

351e

“Entirely so.” “And what if it arises among two people? Will they not differ, develop hatred, and become enemies of each other and of the just people?” “They will,” said he. “And if injustice arises in a single person, my surprising friend, will it lose its own power or will it still retain it nonetheless?” “Let us say it retains it nonetheless.”

352a

“Is it not apparent that the sort of power it has is as follows. Wherever it arises, be it in a city, a family, an army, or anything else at all, injustice first renders it incapable of acting in collaboration with itself because of faction and difference, and what’s more it makes it an enemy of itself, and of everything that is opposite to it, and of the just? Is this not the case?”

“Entirely so.”

352b

“And if it is present even in a single person, it will I presume produce those same outcomes, the outcomes it naturally produces. Firstly, injustice will render him incapable of action because he has inner factions and is not like-minded with himself, and also make him an enemy of himself, and of the just. Is this so?” “Yes.” “And surely, my friend, the gods too are just?” “So be it,” said he. “And in that case the unjust man will be an enemy of the gods, Thrasymachus, and the just man a friend.” “Feast away on your argument,” said he. “Have no fear. I shall not oppose you in case I incur the displeasure of these people here.”

352c

“Come on, then,” said I, “and complete what is left of the banquet for me by answering questions as you have just been doing. For the just are apparently wiser, better and more capable of action, while the unjust are not able to do anything together. And in fact, when we say that despite being unjust, people have on occasion accomplished something by working together jointly, with strength, we are not speaking the entire truth. For had they been perfectly unjust, they could not have restrained their injustice towards one another, so it is clear that some justice was present in them which prevented them from being unjust both to one another and the people they were set against at the same time. Because of this justice, they accomplished what they accomplished, and they embarked upon their unjust exploits only half-corrupted by injustice, since total degenerates, who are completely unjust, are also completely incapable of accomplishing anything.

352d

“Now, as I understand it, this is how matters stand, and not as you proposed at first. However, we should also consider the issue we put forward for consideration after that, whether the

just people live better lives than the unjust and are happier. Well, based on what we have said, in my opinion it now appears that they are happier. Nevertheless, we should consider this more thoroughly, for this argument is not concerned with any random issue. It concerns the manner in which our lives should be lived. "Consider it then," said he. "Very well," said I. "So tell me, do you think a horse has some function?" "I do." "And would you propose that this function of a horse, or of anything else, would be what can only be carried out with that, or is best carried out with that?" "I do not understand," said he.

352e

"Well, what about this? Can you see with anything else except your eyes?" "Of course not." "And again, can you hear with anything except your ears?" "Not at all." "Would we not be right to say that these are the functions of those organs?" "Entirely so." "What about this? Could you take a cutting from a vine with a dagger, a chisel, or with many other tools?" "Of course." "But you could not do it, I think, with anything else as well as you could do it with a pruning hook, manufactured for this purpose." "True." "In that case, should we not propose that this is its function?" "We should indeed."

353a

"Well, I think you should now have a better understanding of my line of questioning just now, when I was asking if the function of something is what it alone can accomplish or what it can accomplish better than anything else." "Yes," said he, "I now understand, and it seems to me that this is the function of anything."

353b

"Very well," said I. "Now, do you also think there is an excellence belonging to anything to which some function has been assigned? But let us go back again to the same examples. Is there some function of eyes, according to us?" "There is." "And in that case, is there also an excellence of eyes?" "An excellence

too.” “What about ears? Do they have a function?” “Yes.” “Have they not an excellence too?” “An excellence too.” “And in all other cases, does not the same apply?” “It does.”

353c

“Hold on. Could the eyes ever perform their own function properly without possessing their own particular excellence, but possessing a defect instead of the excellence?” “Well, how could they?” he replied. “For presumably you mean that they possess blindness instead of sight.” “I am not yet asking what their excellence might be, but whether anything that exercises a function carries out its own function well by means of its own excellence, and badly by means of its defect.” “Well, what you are saying is true in this case,” said he. “Will not the ears carry out their own function badly when deprived of their own excellence?” “Entirely so.”

353d

“So, do we apply the same argument to all the other instances?” “Well, I think so.” “Come on then, next consider the following. Is there some function of the soul that you could not perform by means of anything else there is, for instance, caring, ruling and deliberating, and everything of that sort? Is there anything else besides soul to which we might properly attribute these? Could we maintain that they are not particular to soul?” “They are particular to nothing else.” “And again, what about living? Shall we say that it is a function of soul?” “More than anything,” said he. “Do we not also say that there is some excellence of a soul?” “We say so.”

353e

“In that case, will a soul ever carry out its own functions well, Thrasymachus, when deprived of its own particular excellence, or is that impossible?” “It is impossible.” “So, of necessity, a bad soul exercises rule and care badly, and a good soul does all this well.” “Of necessity.” “Did we not agree that excellence of soul is justice, and badness is injustice?” “Yes, we agreed.” “Then,

the just soul, and the just man, will live well, while the unjust man will live badly.” “So it appears,” said he, “according to your argument.”

354a

“But someone who lives well is blessed and happy, while someone who does not is the opposite.” “Of course.” “In that case, the just person is happy, while the unjust is wretched.” “Let it be so,” said he. “But there is no profit in being wretched, but in being happy there is.” “Of course.” “Then, blessed Thrasymachus, injustice is never more profitable than justice.” “Well, Socrates, let this be your feast for the festival of Bendis.”

354b

“A feast provided by you, Thrasymachus,” said I, “once you became gentle with me and stopped being difficult. However, I have not feasted properly, but that’s my own fault, not yours. Rather, I think I am behaving like gluttons, who snatch at whatever is spread before them to get a taste before they have enjoyed the previous dish in due measure. Before considering the first thing we were looking for, the just, and what precisely it is, I let that go and set about considering something about this, whether it is badness and ignorance, or wisdom and excellence. And again later on, when another argument came my way, that injustice is more profitable than justice, I could not ^{354c} restrain myself from going after that and abandoning the other one. So the outcome of the discussion for me, at the moment, is that I know nothing. Since I do not know what precisely the just is, I shall hardly know whether it happens to be an excellence or not, or whether someone who possesses it is unhappy or happy.”

BOOK II

357a

Now, having said all this, I thought I was quit of the argument, but it turned out in the end to be a mere prelude. For Glaucon, who is always extremely forthright on every issue, on this occasion in particular could not accept the withdrawal of Thrasymachus, so he said, “Socrates, do you wish to seem to have persuaded us, or do you wish to persuade us truly that it is better in every way to be ^{357b} just rather than unjust?” “To persuade you truly,” said I. “That is what I would choose if it were up to me.” “Well, then,” said he, “you are not doing what you wish to do. Yes, tell me this. Do you think there is a kind of good that we would choose to have not with a view to getting something out of it, but because we welcome it for its own sake, like enjoyment and pleasures that are harmless and produce no future consequences apart from enjoying their possession?” “Well,” said I, “I think there is a good of this kind.”

^{357c}

“What about the kind we prize both for its own sake and for what it gives rise to, thinking, for instance, and seeing, or being healthy, since we welcome these, presumably, for both reasons?” “Yes,” said I. “And do you see a third form of good which includes physical exercise, being healed when you are ill, healing others, and money-making in general? These we would say are troublesome, and although they benefit us we would not choose to have them for their own sake but for their rewards and for whatever else they give rise to.”

^{357d}

“Yes, indeed,” said I. “There is also this third form, but what about it?” “In which of these three do you place justice?” he asked.

^{358a}

“I think,” said I, “that it belongs in the noblest of the three, the one that should be prized for itself and for what it gives rise to by anyone who is to be blessed.” “Well, most people do not think so,” said he. “They think it belongs in the troublesome

form that should be practised for the sake of its rewards, and for reputation based on appearance, but just by itself it should be avoided because it is difficult.” “I know that that is how they think,” said I, “and Thrasymachus has been criticising justice for some time for being like this, and he has been praising injustice. But it seems I am a slow learner.”

358b

“Come on, then,” said he, “and see if you still hold the same view after you listen to me. For Thrasymachus seems to me like a snake who has submitted to your charms more meekly than he should, since to my mind no proof on either side has yet been given. For I am eager to hear what each is, and what power each possesses, just by itself, when present in the soul, and to set to one side their rewards and whatever arises from them.

358c

“So I shall proceed in this way if, indeed, it seems acceptable to you. I shall revive Thrasymachus’ argument, and I shall say first the sort of thing they maintain justice is, and where it has come from. Secondly, I shall show that everyone who practises it does so against their own ^{358d} free will, as a necessity and not as something good. And thirdly, I shall demonstrate that they are acting reasonably in doing so, because the life of the unjust is actually far better than the life of the just, according to them. “Although this is not how it seems to me at all, Socrates, I am perplexed, nevertheless, from hearing Thrasymachus and countless others assailing my ears, while the argument on behalf of justice, that it is better than injustice, I have heard so far from no one in the way I wish to hear it. I wish to hear justice itself being praised for itself, and I think I am most likely to get this from you.

358e

“That is why I shall speak forcibly in praise of the unjust life, and in speaking like this I shall demonstrate to you the manner in which I want to hear you, in turn, censuring injustice and

praising justice. So let us see if what I am proposing is to your liking.” “More than anything,” said I. “Yes, what could be more delightful to a person of intelligence than hearing about this issue and discussing it again and again?”

359a

“You put that perfectly,” said he. “Now, listen to the first thing I said I was going to say on this matter, the sort of thing justice is, and where it has come from. Indeed, according to them, doing injustice is good by nature, while suffering injustice is bad, and the badness in suffering injustice far exceeds the good in doing it. And so, when people are being unjust to one another, and suffering injustice too, and getting a taste of both the doing and the suffering, those who are unable to avoid the one and opt for the other think it profitable to enter a contract with one another, neither to do injustice nor to suffer it. From there they began to set down laws, mutual contracts, and to call whatever the law commands lawful and just. This they say is the origin and the very ^{359b} essence of justice. It is a middle ground between what is best – not paying a penalty when you act unjustly – and what is worst – being unable to get revenge when you suffer injustice. And what is just, being midway between both extremes, is prized not as something good but as something that is respected due to an inability to do injustice, since a true man, who can actually do this, would never enter into a contract with anyone neither to do injustice nor to suffer injustice. That would be madness. So, Socrates, according to their argument, such is the nature of justice. This is what it is like, and such are its natural origins.

359c

“Now, we would be most likely to see that those who practise justice do so against their will because they lack the power to act unjustly, if we were to picture in mind a situation somewhat as follows. Let us grant each of these two, the just and the unjust person, licence to do whatever they want. Then we shall

accompany them and watch where their desire may lead them in each case. We would then catch the just person, in the very act, doing the same thing as the unjust person, getting more. This is what every nature naturally pursues as something good, despite being forcibly misled by law into respecting equality.

359d

“The sort of licence I am referring to would be most apparent if they were to possess the power that they say once belonged to the ancestor of Gyges of Lydia.¹⁸ Well, he was a shepherd working for the then ruler of Lydia, when there was a huge storm and an earthquake. The ground broke apart and a chasm appeared in the very place he was tending the flocks. When he saw it he was amazed, went down into it and, the story goes, he beheld other amazing sights, including a hollow bronze horse which had little doors. And when he bent down and peeped in, he saw that there was a corpse inside that appeared to be larger than a human. This corpse was wearing nothing else apart from a gold ring on its finger. He removed the ring and went out again.

359e

“When the usual meeting of shepherds was held to report to the king, on a monthly basis, on the state of his flocks, he arrived wearing the ring. As he sat down with the others, he happened to turn the ring around towards himself to the inside of his hand. With that, he became invisible to the people he was sitting with, and they spoke about him as if he was not there. He was amazed, and as he fiddled with the ring again he turned the ring outwards, and he immediately became visible once more. Once he had noticed this, he tested the ring out to see if it really had this power, ^{360a} and he found that this was so. On turning the ring inwards he became invisible, on turning it outwards he became visible.

360b

“Having become aware of this, he immediately contrived to become one of the messengers that go to the king. When he got there he seduced the king’s wife, and with her assistance he set upon the king, killed him, and took over the kingship.

360c

“Now, if there were two rings like this, and one was worn by our just person, the other by our unjust person, there is no one, it would seem, with such adamant resolve as to abide by justice, and dare to refrain from touching other people’s possessions when it is possible for him, with no fear, to take whatever he wants from the market, go into private houses and lie with whomever he wants, to kill anyone, or free anyone he wants from prison, and to behave generally among his fellow men as though he were the equal of a god. But behaving in this manner he would not be doing anything different from the other fellow. They would both be going down the same path.

360d

“So, someone might say that this is strong evidence that no one, of his own free will, is just, but only when he is compelled to be so, because being just is not something that is good for him personally, since whenever a person believes he will be able to act unjustly, he will do so. For every man believes that injustice is far more profitable, personally, than justice. And what they believe is true, as anyone who puts forward an argument of this sort will maintain, because if someone who has obtained such licence as this never had any desire to act unjustly, nor to lay hands on other people’s possessions, he would be regarded as wretched and devoid of intelligence by those who noticed, although they would still praise him when face to face with one another, deceiving one another completely because of their fear of suffering injustice.

360e

“Well then, so much for that. As for this decision concerning the life of the people we are speaking of, we shall be able to decide

the issue correctly once we contrast the most just person with the most unjust, but not otherwise. So what contrast do I mean? It is as follows. Let us take nothing away from the injustice of the unjust man, nor from the justice of the just man. No, let us propose that each of them is perfect in terms of his own conduct. So in the first place, let the unjust man act like expert craftsmen, such as a foremost steersman or physician, who is fully aware of ^{361a} the impossibilities and the possibilities associated with his skill, and who attempts what is possible and sets aside what is impossible. And even if he slips up somewhere, he is up to the task of setting it right. So we should also allow the unjust man, attempting his unjust acts in the correct manner, to go undetected if he is going to be utterly unjust. And we should regard the fellow who gets caught as inept, for the pinnacle of injustice is to seem just, even though one is not.

^{361b}

“So, let us grant complete injustice to the completely unjust person, and there should be no omissions, but we should allow him, whilst perpetrating the greatest injustices, to have provided himself with the greatest reputation for justice. And even if he does slip up somewhere, let us grant him the ability to set it right, to speak persuasively enough if any of his unjust actions are ever exposed, and to use force to whatever extent force is needed, because he has the courage and strength to do so and because he is well supplied with friends and property. And having put an unjust person of this sort in place, we should set the just person alongside him, in our account, a simple, noble man who, as Aeschylus says, wishes to be good, and not just to seem so.¹⁹

^{361c}

“So we must take away this ‘seeming’, for if he is going to seem just, he will have honours and privileges because he seems to be this sort of person. Accordingly, it will not be clear whether he

is the sort of person he is for the sake of justice or for the sake of the privileges and honours.

361d

So we should strip away everything else apart from justice, and make his situation the exact opposite of the previous fellow. For although he is doing nothing unjust, let him have an enormous reputation for injustice so that he may be well tested, in terms of justice, by resisting any softening in the face of a bad reputation, and whatever results from that. But let him persist unto death, undeflected in his course, reputed to be unjust even though he is just, so that both men, having attained the pinnacle of justice in one case and of injustice in the other, may be judged as to which of the two is happier.”

361e

“My, my, dear Glaucon,” said I, “how thoroughly you clean up both men for judgement, as though they were two statues.” “I am doing my best,” said he, “and since they are both like this, it will no longer be hard, in my view, to complete our account of the sort of life that is in store for each of them. So this should be described, Socrates, and in this case, if it is described in very crude terms, do not presume that I am the one who is saying this. No, it is the people who praise injustice above justice.

362a

“The people will say that the just man in this situation will be whipped, stretched on the rack, put in chains, have his eyes burned out, and finally, having suffered all possible evils, he will be impaled and will come to realise that one should not wish to be just, but to seem to be so. And the saying of Aeschylus turns out to be much more applicable to the unjust man. For they maintain that, in fact, the unjust man, since he is engaging in something that adheres to truth and does not live his life according to mere seeming, does not wish to seem unjust but to be so, *Enjoying the fruits of the deep furrow of thought / From which sagacious counsel is sprung.*

362b

“Firstly, he rules in the city because he seems to be just. Then he marries a wife from any family he wants and gives his children in marriage to whomsoever he wants, does business with anyone he wishes, and as well as being benefited by all of this he also gains by having no scruples about doing injustice. So, in competitive situations in private or in public, they say he wins out and gets more than his enemies, and is wealthy because he gets more, and so he does good to his friends ^{362c} and harm to his enemies. And he makes sufficient sacrifices and offerings to the gods, magnificently, and serves the gods and any people he wants to far better than the just man. As a result, they say it is more appropriate, in all probability, that he be more beloved of the gods than the just man. On this basis, Socrates, they say that from the gods, and from his fellow man too, the life provided to the unjust person is better than what is provided to the just.”

362d

When Glaucon had said all this, I had in mind to say something in response, but his brother, Adimantus, said, “You surely do not imagine, Socrates, that enough has now been said about this argument?” “But why not?” said I. “The very point,” said he, “that most needed to be made has not been made.”

362e

“In that case,” said I, “as the saying goes, ‘Let a brother be there for a brother’,²⁰ and so you should come to his aid if this man has left anything out. And yet, for my part, what he has said already is enough to floor me and render me incapable of coming to the assistance of justice.” “You are talking nonsense,” said he. “And yet, you should also listen to this. Yes, it is necessary that we go through the opposite arguments to the ones he recounted, arguments that praise justice and censure injustice so that the point I think Glaucon wishes to make may be clarified.

363a

“Fathers, when speaking to their sons and offering them advice, and indeed anyone who cares for anyone, speak to them presumably about the need to be just by praising not justice itself but the good reputation derived from it, saying that by seeming to be just, from the reputation alone, they may secure positions of authority, and marriages, and whatever else Glaucon listed just now, all from having a reputation for being just.

363b

“Yet these people have more to say on the subject of reputation. For when they throw in good reputation in the eyes of the gods, they describe a whole host of goods that they declare are given by the gods to holy people, just as noble Hesiod, and Homer too, declare in one case that for the just people the gods make oak trees *Bear acorns in their topmost branches with swarms of bees below* “And he says, *Their woolly sheep are weighed down with fleeces.*²¹ And there are many other good things connected to these. In the other case, Homer says something similar: 363c *as of some king who, as a blameless man and god-fearing / and ruling as lord over many powerful people, / upholds the way of good government, and the black earth yields him / barley and wheat, his trees are heavy with fruit, his sheep flocks / continue to bear young, the sea gives him fish.*²² “But the goods from the gods that Musaeus and his son bestow upon the just people are more novel than these.²³ In their account they lead them into Hades, and having set them reclining at a symposium of holy people which they have prepared, they crown them with garlands and make them 363d spend their time thereafter in a drunken state in the belief that the supreme reward for excellence is eternal drunkenness. Others extend the rewards from the gods even further than this, for they maintain that holy people who are faithful to their oaths leave behind them a whole race, children and children’s children.

363e

“So, in these respects, and in others like these, they sing the praises of justice while they sink the unholy and unjust people into some mire in Hades and compel them to carry water in a sieve. And while they are still alive they bring them into evil repute, and they ascribe to these unjust people all the punishments that Glaucon listed for those who are just, but have a reputation for being unjust. But they have nothing else to say.

364a

“Such then is the praise and the censure associated with each, with the just and the unjust. But as well as these, Socrates, consider also the kind of arguments about justice and injustice spoken by ordinary folk and by the poets. For they all, with one voice, keep saying that justice and sound-mindedness are something glorious but difficult and hard work to attain, while lack of restraint and injustice are pleasant and easy to attain, and only by opinion and convention are they a disgrace.

364b

“They say that unjust actions are, for the most part, more profitable than just ones, and they regard bad people who are wealthy and generally powerful as happy, and they have no scruples about honouring them in public and in private while disrespecting and looking down on those who are in some way weak or poor, even whilst agreeing that these are better people than the others.

364c

“But the most surprising of all these things is what they say about the gods and about excellence. They say that the gods themselves allot misfortunes and a bad life to many good people, and an opposite fate to people of the opposite sort. And begging priests and soothsayers, going to the doors of the wealthy man, convince him that they have a power provided by the gods through sacrifices and incantations to make good any injustice committed by him or his ancestors with pleasant

festivities. And if he wants to bring ruin upon some enemy, with minimal expenditure on ^{364d} his part, he may do harm to just and unjust alike with certain incantations and spells which, they claim, persuade the gods to serve them. And they bring forth poets as supporting witnesses to all these arguments, some making the case that badness is easy because *Badness is abundant and easy to lay hold of. / The road is smooth and it dwells very close at hand. / But the gods have placed sweat in front of the path of excellence* “and a road that is long and rough and steep.”²⁴ Others bring in Homer as their witness that the gods are turned by humans, because he too said, *Even the gods themselves are moved by prayer. / By sacrifices and soothing vows, / Libations and burnt offerings, / Humanity turns the will of the gods; / Praying whenever someone has transgressed or gone astray.*²⁵

^{364e}

“And they produce a confused array of books by Musaeus and Orpheus, the offspring of Selene²⁶ and of the Muses they say, on the basis of which they perform their sacrificial rites, convincing not only private citizens but whole cities that there are remissions and purifications of their unjust deeds available through sacrifices and playful pleasantries to those who are still alive and also to those who have died. These they call initiations, which deliver us from the evils of the other world, where horrors await those who have not performed the sacrifices.

^{365a}

“Dear Socrates,” said he, “when all this is being said about excellence and badness, and the esteem in which they are held by gods and by humans, and when it is said so often in these various ways, what do we think this will do to the souls of the young when they hear it, young people who are gifted and up to the task of, as it were, flitting between all the various formulations and working out from them the sort of person one should be, and how one should behave in order to lead the very

best life possible? Indeed, he would be most likely to ask himself, after the manner of Pindar: *Shall I, by justice or by crooked deceit / Ascend the high wall and, thus fortified, / live out the rest of my life?*

365b

“For according to what is being said, there is no advantage to me in being just if I actually seem unjust, only trouble and losses that are plain to be seen. But if I am unjust and have secured a reputation for justice, a divinely sweet life is promised. Therefore, since the wise explain to me that seeming overpowers the truth and is lord of happiness, to this indeed should I turn fully. I must sketch about myself a shadowy picture of excellence as an exterior façade whilst trailing the cunning, subtle fox of the all-wise Archilochus behind me.”²⁷

365c

“‘But surely,’ someone will declare, ‘it is not easy to be bad and go undetected always.’ ‘Indeed,’ we shall say, ‘nothing else that is worthwhile is an easy matter either. Nevertheless, if we are going to enjoy happiness, this is the path we must follow since that is the way the footprints of these arguments are leading us. So we shall form companies and associations in order to avoid being detected, and there are teachers of persuasion who, for a fee, impart the wisdom needed for public speaking and for winning lawsuits. Based on these, we shall use persuasion in some cases, and force in other cases, so that we may continue to get more, with impunity.’

365d

“‘But, of course,’ someone might say, ‘you do not go undetected by the gods, nor can you use force against them.’ ‘But what if there are no gods, or human affairs do not concern them at all? Why should we, for our part, care about not being detected? If, on the other hand, there are gods and they do care about us, we know about them and have heard of them from no other sources than the laws and the genealogies of the poets, the very

sources who are saying they are amenable to being turned and persuaded by sacrifices, soothing vows and offerings. We must believe either ^{365e} both or neither. Now, if they are to be believed, then we should act unjustly and offer sacrifice from the fruits of our unjust acts. For by being just we shall merely go unpunished by the gods, but we shall forgo the advantages born of injustice. However, by being unjust we shall have the advantages, and by praying when we transgress or fall into error we shall win them over and escape unpunished.'

^{366a}

"'But surely,' someone may say, 'we shall pay a just penalty in Hades for whatever injustices we may have done here, either ourselves or our children's children.' 'But, my friend,' he will reply on reflection, 'the initiations, for their part, are extremely powerful, and so are the gods of deliverance. So say the greatest cities and the children of the gods who have become ^{366b} the gods' poets and prophets, and who reveal that this is indeed the case.'

^{366c}

"Now, by what argument might we still choose justice in preference to gross injustice, which we may attain along with a fraudulent seemliness, and act as we are minded to act with gods and with humans, in life and after death, as the argument of most people, and of the special folk too, proclaims? Indeed, from all that has been said, is there any way, Socrates, that anyone possessed of any intellectual, physical, financial or family power would be willing to revere justice, and not laugh when he hears it being praised? And so, if someone is able to demonstrate that what we have said is false, and has recognised well enough that justice is best, he has a lot of sympathy with those who are unjust and is not angry with them. He knows, rather, that apart from someone who cannot bear to act unjustly because of a divine nature, or who refrains from it because of the knowledge he has acquired, no one else is just of

their own free will. Rather, they censure unjust action ^{366d} out of cowardice, old age, or some other weakness, because they are powerless to enact it. This must be obvious, because the first such person who attains the power to do so, is the first person to act unjustly as much as he possibly can.

^{366e}

“And there is no other cause of all this except the origin of this entire argument, directed by Glaucon and myself towards you, Socrates, to make the case that, ‘Come on, my wonderful man. Of all of you who claim to be champions of justice, beginning with the earliest heroes whose utterances are still with us, right down to human beings today, no one so far has censured injustice or praised justice on any other basis than reputation, esteem, and the advantages that derive from them. And no one so far, either in poetry or in ordinary language, has described in a sufficiently detailed argument what each does itself, by its own power, when present in the soul of its possessors, unnoticed by gods and humans, an argument according to which injustice is the worst of all ^{367a} the evils that any soul can have within itself, while justice is the greatest good. For if you had all described it in these terms from the beginning, and convinced us of this from our earliest years, we would not have been acting as one another’s guardians for fear we might behave unjustly, but each of us would himself be his own guardian for fear that by acting unjustly he would have to live with the worst evil of all.’

^{367b}

“This, Socrates, and perhaps even more than this, is what Thrasymachus, and anyone else too I suppose, might say about justice and injustice, by crudely misrepresenting, in my opinion at any rate, the power they possess. But I, and I need to hide nothing from you, am speaking as forcefully as I possibly can because I am eager to hear you expressing the opposite views. Do not just show us, by your argument, that justice is stronger

than injustice, but show what each of them, just by itself, is doing to their possessor, such that one is bad and the other good. And take away the reputations that go with them, as Glaucon directed you, for unless you take away the ^{367c} true reputations from each, and substitute the false ones, we shall say that you are not praising what is just, but what is reputed to be just, nor are you censuring what is unjust, but what is reputed to be so, and you are encouraging us to be unjust without being noticed. And you are agreeing with Thrasymachus that what is just is someone else's good since it is the advantage of the stronger, while what is unjust is to one's own advantage and it is profitable, but it is disadvantageous to the weaker.

^{367d}

“Now, since you have agreed that justice is among the greatest goods, those that are worth acquiring for the sake of all that comes from them, but much more so for themselves – goods like sight, hearing, intelligence, and indeed health, and whatever other goods are fruitful by their own nature, and not merely by opinion – you should therefore praise this particular aspect of justice which, in its own right, benefits its possessor, while injustice does him harm. Leave the rewards and the reputations for others to praise, because although I might put up with other people when they are praising justice and censuring injustice in this way, by extolling or bewailing their associated reputations and rewards, I will not accept it from you unless you order me to do so, because you have spent your whole life considering this issue and nothing else.

^{367e}

“So, do not just show us, by our argument alone, that justice is stronger than injustice, but show what each of them, just by itself, is doing to their possessor, whether gods or humans notice this or not, such that one is good and the other bad.”

^{368a}

Now, although I had always admired the natural qualities of Glaucon and Adimantus, nevertheless, when I heard them on this occasion I was utterly delighted and I said, “You are worthy sons of your own father, and that admirer of Glaucon’s began his eulogy of you quite nicely, after you had distinguished yourselves at the battle of Megara, when he said, *Sons of Ariston, a godlike race is born of an illustrious man.*

368b

“And I think this captures the point quite well, my friends, for you have been much influenced by the divine if you are able to speak of injustice in these terms, without being convinced that it is better than justice. And it does seem to me that you are, in truth, unconvinced. And my evidence for this is your character in general, since on the basis of your speeches themselves, I would have doubted you both. But the more I trust you, the more I am at a loss as to how I should proceed, for I am not able to render any assistance. Indeed, I seem to be incapable of doing so, as indicated by the fact that you have not accepted what I said to Thrasymachus, which I thought showed that justice is better than injustice. Nor again am I capable of not rendering assistance, for I am afraid that 368c it might be an unholy act were I to be present when justice is being ill-spoken of, and fail her by not coming to her aid while I still had life and power of utterance. So under the circumstances, it is best that I help her to the best of my ability.” Now, Glaucon, and the others too, begged me in all sorts of ways to render assistance and not give up on the argument, but to examine in detail what each is and where the truth really lies about the benefit of each. So, I said what I was thinking. “The enquiry we are undertaking is no ordinary one,” said I. “No, it calls for keen vision. That is how it seems to me. Now, since we are not clever people,” I said, “I think we should conduct an investigation somewhat as follows. It is as if someone 368d had ordered us to read very small letters from afar when we are not very keen-sighted, and someone

then realised that the same letters are situated somewhere else, but larger, and on something larger. I think it would look like a godsend to read the smaller letters after we have first read the larger ones, if they happened to be the same.” “Yes, indeed,” said Adimantus, “but what do you see of this sort of thing in our enquiry into justice, Socrates?” “I will tell you,” said I. “We maintain that there is justice of an individual man, and presumably also of an entire city?”

368e

“Certainly,” said he.

369a

“Is a city not larger than an individual man?” “Larger,” said he. “Then, surely there would be more justice in the larger, and it would be easier to apprehend. So, if you wish, first let us enquire into the sort of thing justice is in the cities. Then, on this basis, we may consider it even in one individual, thus considering the likeness of the larger in the character of the smaller.” “Yes, I think that is a good suggestion,” said he. “In that case,” said I, “if we were to watch a city coming into being in words, would we not also see the justice of the city coming into being, and its injustice too?” “Quite likely,” said he.

369b

“And once this had come into being, could we not hope to see what we are seeking more easily?” “Very much so.” “So do you think we should attempt to proceed with this, for I think this is no small task? So give it some consideration.” “It has been considered,” said Adimantus, “and it simply must be done.” “Well,” said I, “a city comes into being, as I see it, because none of us are actually self-sufficient. Indeed, we all fall short of this in many respects. Or do you think there is some other principle for the foundation of a city?” “Not at all,” he replied.

369c

“And so, it is that one person associates with another person for one purpose and with someone else for a different purpose, and

since we all have many needs, we assemble people together into a single dwelling place as associates and helpers, and to this shared abode we give the name 'city'. Is this so?" "It is so." "And does one person give to another, if he does so, or receive something on the assumption that he himself will be better off." "Very much so." "Come on, then," said I. "Let us make a city from the beginning, in words. And it seems that our own needs will be making it." "Of course."

369d

"And, indeed, the first and greatest of needs is for the provision of food, for the sake of being and living." "Entirely so." "The second is for housing, and the third is for clothing and such like." "That is it." "Come on," said I. "What size city will be sufficient to provide for as many needs as this? Will there not be one farmer, a house builder too, and someone else who is a weaver? Or should we also add a shoemaker to it, and someone else who looks after bodily needs?" "By all means." "In any case, the absolute minimum for a city to be a city would consist of four or five men." "So it appears."

369e

"What then? Should each one of them place his own work at the joint disposal of everyone else? Should the farmer, for instance, one man, provide food for the other four and spend four times the time and the effort in providing food which he shares with the others? Or should he pay them no attention and produce a quarter of the food for himself in a quarter of the time, spending the remaining three quarters in providing a house, clothing and some shoes, without having to bother about sharing with others, and attend to his own concerns just by himself?"

370a

And Adimantus replied, "The first way, Socrates, is probably easier than that." "That is nothing strange, by Zeus," said I. "Indeed, now that you say so, it also occurs to me that in the

first place people are, by nature, not much like one another, rather they are naturally different. So one person is suited to one task, another to another task. Do you not think so?" "I do."

370b

"What about this? Would someone, one person, fare better by practising a lot of skills, or is it better when one person practises one skill?" "When one practises one," said he. "Then again, I believe, it is also obvious that if we neglect the right moment for some task, it comes to naught." "Yes, that is obvious." "Indeed, in my view, that is because what is to be done is not prepared to wait until the person who is to do it has the time. No, the person needs to attend closely to what is to be done, not partially as a secondary task." "Yes, he must." "On this basis then, more is accomplished, and better and more easily, when one person does one thing that accords with his nature, at the right moment, free of involvement in anything else." "Entirely so."

370c

"Then, Adimantus, more than four citizens are needed to provide all the services we were speaking of. For the farmer, it seems, will not make his own plough himself if it is to be a good one, nor his mattock either, nor any of the other tools required for farming. This applies to the house builder too, who also needs a lot of tools, as does the weaver and shoemaker." "True." "So carpenters, blacksmiths, and many craftsmen of this sort, becoming partners of our little city, will make it quite populous." "Yes, certainly."

370d

"And it still would not be very large if we were to add oxherds and shepherds to their number, and other herdsmen, so that the farmers would have oxen for ploughing, and the house builders, and farmers too, would have beasts of burden to use for carrying loads, and the weavers and shoemakers would have leather and wool." "Indeed," said he, "it would not be a small

city either, if it contained all these.” “And what is more,” said I, “it will be well-nigh impossible to found the city itself in a place where there will be no need of imported goods.” “Impossible indeed.”

370e

“So there will be a further need for even more people, who will import whatever is needed from other cities.” “There will.” “And, indeed, if our agent goes empty handed, bringing nothing which the other cities need, goods they would import, goods they themselves need, he will return empty handed. Is this so?” “I think so.” “Then they need to produce at home not just enough for themselves, but also enough of the sort of goods that are needed by the cities they depend upon.” “Yes, they need to.” “So our city needs more farmers and other artificers.” “Yes, more.” “Then I presume we shall also need additional agents, who will import and export the goods in each case. These people are traders, are they not?”

371a

“Yes.” “Then we shall also need traders.” “Very much so.”

371b

“And if the trading is to take place by sea, then there will be a further need for a lot more people who are knowledgeable about seafaring.” “A lot more, indeed.” “And what happens in this city itself? How will each group share the products of their labour with one another? This was after all the very reason we founded our city and established a community.” “Obviously,” said he, “through buying and selling.” “Then a marketplace will arise from this, and a system of currency to facilitate the exchange.” “Yes, certainly.”

371c

“Now, if the farmer, or one of the other artificers brings something he has produced along to the marketplace and does not arrive at the same time as those who want to exchange what he has with him, will he sit about in the marketplace idle, not

occupied with his own work?" "Not at all," said he. "There are people who see this situation and take on this function themselves. In cities that are properly managed, they are in general the least able-bodied ^{371d} folk, unsuited to involvement in any other work. For they need to wait about in the marketplace and exchange money for goods with people who wish to sell something, and again, goods for money with those who wish to buy something." "So this particular need," said I, "is what gives rise to retailers in our city. Or do we not call those who set themselves up in the marketplace to act as agents for buying and selling, retailers, while referring to those who travel from city to city as traders?" "Yes, certainly."

^{371e}

"And there are still others too, I believe, agents who, when it comes to intellectual matters, are not really worthy of our community. And yet, they possess enough physical strength for manual labour. So they sell the use of their strength, referring to their reward as a wage, and that is why they are called wage-earners, I suppose. Is this so?" "Yes." "Then wage-earners also fill out the population of our city?" "I think so." "Well then, Adimantus, at this stage, has our city grown to full size?" "Perhaps." "So where exactly would justice and injustice be in this city, and did it arise at the same time as one of the groups we have been considering?"

^{372a}

"I have no idea, Socrates," said he, "unless perhaps it is in some need the groups themselves had for one another." "And perhaps you have a good point," said I, "and we really should investigate it and not hold back. So, let us first consider the manner of life of people who are provided for in this way. Will they not make bread, wine, clothing and shoes? And having built their houses, they will work for ^{372b} the most part naked and unshod in summer, and in winter they will be clothed and shod well enough. They will be fed on meal and flour from the

barley and wheat they are provided with, baking and kneading noble cakes and loaves, which they serve up on some reeds or clean leaves as they recline on rustic beds strewn with yew and myrtle; feasting themselves and their children, then drinking their wine, with garlands on their heads as they sing the praises of the gods; delighting ^{372c} in one another's company and not begetting children beyond their resources to support them, being wary of poverty and war." Then Glaucon interjected. "It seems," said he, "that you are making these men partake of a feast devoid of relish."

^{372d}

"What you say is true," said I. "I had forgotten that they will also have relish, salt of course, olives and cheese too, and they will boil up onions and greens as people in the countryside do. And we shall also provide them with desserts, I suppose, of figs, pulses and beans, and they will roast myrtle berries and acorns by the fire, sipping their wine in moderation. And so will they live out their lives, in peace and health, and when, as is likely, they die in old age, they will bequeath another such life to their descendants." "Well, Socrates," said he, "if you were providing for a city of pigs, what else would you feed the beasts with?" "But how should it be done, Glaucon?" I asked. "In the conventional manner," said he. "People who are not going to be in discomfort should, I believe, recline on couches, dine at tables, and have various relishes available to them, the very ones they have nowadays, and desserts too."

^{372e}

"Very well," said I, "I understand. It seems we are not just considering how a city comes into existence, but how a luxurious city does so. And perhaps that is not a bad development either, for by considering something like this, we may perhaps discern how exactly justice and injustice develop in a city. Now, I think the true city is the one we have been describing, a healthy one, in a sense. But if you still want to, let

us look at a city in a feverish state. There is no reason not to. In fact for some people, it seems, all this is not sufficient, nor is the lifestyle itself. They will add couches, tables and other furniture, relishes of course, perfumes, incense, courtesans and cakes, each in endless variety. And what is more, all that we first mentioned – housing, clothing and shoes – should no longer be designated as our necessities. No, we should also get painting underway, embroidery too, and we should acquire gold, ivory, and everything else like that. Is this so?” “Yes,” said he.

373a

“In that case, will our city not need to be made bigger again? Indeed, that healthy city is no longer sufficient. It already needs to be filled out in size, with lots of things that are no longer in cities for the sake of necessity, with hunters of all sorts, for instance, imitators too, many of them concerned with shapes and colours, many concerned with music; poets too and those who serve them as rhapsodes, actors, chorus members and contractors, and artificers of a whole variety of articles for general use, and indeed for female adornment. And so, we shall also require more of these agents. Or does it not seem that we shall need people who look after children, wet nurses, nurses, beauticians, barbers, and, moreover, people to make the relishes, and cooks? And we shall still need to include 373b swineherds, since there were none in our previous city because it didn’t need them. However, they will need to be included in this city. And it will also need a whole host of other beasts if they are to be eaten. Is this not so?” “Inevitably.” “Once we live in this way, will we not also have a requirement for far more doctors than were needed in the previous city?” “Far more.”

373c

“And presumably our territory, which was once sufficient to feed the population at the time, will then become too small and sufficient no longer. Is this the case?” “Just so,” said he. “In that case, we shall have to cut off a slice of our neighbour’s territory

if we are to have enough land to pasture and plough. They in turn will do the same to ours, if they too give themselves over to the unbridled acquisition of wealth, exceeding the limit of the necessities.” “That is quite inevitable, Socrates,” said he. “What follows this then, Glaucon, is that we shall wage war. Is this what will happen?” “Just so,” said he.

373d

“And,” said I, “we really should not say anything yet as to whether war accomplishes anything ^{373e} good, or anything bad either. Let us just say this much: that we have also discovered the origin of war. It originates where most of the cities’ public or private evils originate, whenever they arise.” “Yes, certainly.”

374a

“Then our city must be even larger, my friend, not a little larger, but larger by an entire army, that will go forth and fight against our adversaries, in defence of all that wealth and whatever else we referred to just now.” “Why is that?” said he. “Are the citizens themselves not up to the task?” “Not if you and the rest of us,” said I, “were right to agree, when we were fashioning our city, that it is impossible for one person to practise many skills well. I presume you remember.” “What you say is true,” said he.

374b

“Well now,” said I, “do you not think that warfare and combat is a skilled activity?” “Very much so,” said he. “So, does the skill of shoemaking deserve more care than that of warfare?” “Not at all.” “Well then, we prevented the shoemaker from attempting to be either a farmer, a weaver or a house builder at the same time, rather than just being a shoemaker, so that we would then have the job of shoemaking done properly. And we assigned one task to each one of the others in like manner, ^{374c} the one for which each was naturally suited, and which he was going to work at throughout his life, free from involvement in other

tasks, and not missing the appropriate moment for carrying out the task well. “So then, in the case of warfare, is it not of the utmost importance that this be carried out well? Or is it so easy that whilst engaged in farming, someone may be skilled in warfare at the same time and be practising shoemaking, or any other skill at all, although there is no one who could be sufficiently skilled, even at playing draughts or dice, who did not pursue this alone from ^{374d} childhood, rather than treating it as a pastime? And will someone who grabs a shield or some other piece of military equipment or weaponry be a competent combatant in warfare as a hoplite, or in some other form of combat, there and then? Grabbing any of the other tools will not make anyone a craftsman or an athlete, nor will they be of use to someone who has not got the knowledge in each case, and has not given it sufficient practice.” “If that were the case,” said he, “the tools would be of enormous value.”

^{374e}

“Then,” said I, “insofar as the work of the guardians is the most important work, should it not, to that extent, be unencumbered by any other duties, and, indeed, require the utmost skill and attention?” “Yes, I think so,” said he. “In that case, will it not also require a nature suited to the activity itself?” “Of course.” “Then it will be our job, it seems, if we are up to it, to pick whatever natures and whatever kinds of natures are suited to the guardianship of our city.” “Our job, indeed.” “By Zeus,” said I, “we have not taken on some insignificant task. Nevertheless, as long as our powers do not fail us we must not lose heart.” “Indeed we must not,” said he.

^{375a}

“When it comes to guardianship,” said I, “do you think there is any difference in nature between a noble young hound and a well-born young man?” “In what sense do you mean?” “For instance, each of them, presumably, needs to be keen of sense and nimble in pursuit as soon as they perceive something;

strong too, if they need to fight it out with whatever they catch.” “Yes, all of this is needed,” said he.

375b

“And of course they will need courage too, if they are to fight well.” “Of course.” “Now, would a horse, a dog, or any living creature at all that is not spirited, be prepared to exhibit courage? Or have you not noticed that when irresistible and invincible spirit is present in any soul, it is fearless in the face of anything, and unconquerable too?” “I have noticed.” “Well, it is obvious what the guardian should be like in bodily attributes.” “Yes.” “And in the case of the soul, it should obviously be spirited.” “That too.”

375c

“So, Glaucon,” said I, “how will they avoid being aggressive towards one another and to the other citizens when they are, by nature, people of this sort?” “Not easily, by Zeus,” he replied. “And yet, they need to be gentle towards their own people and harsh towards their enemies or else they will not have to wait for other people to destroy them. No, they will do it themselves first.” “True,” said he. “So, what shall we do?” I said. “Where shall we find a character that is at once gentle and great in spirit? For the gentle nature is, presumably, opposite to the spirited.” “Apparently.”

375d

“And yet, if someone were deprived of either of these qualities, he would never make a good guardian. And yet it seems impossible to have them both, and consequently it turns out that it is impossible to be a good guardian.” “That is likely,” said he. I was perplexed, and having reconsidered what had gone before, I said, “It is only right, my friend, that we are in perplexity, since we have abandoned the image we were proposing.” “What do you mean?” “We did not notice that there are, after all, natures that possess these opposite qualities, natures we thought did not exist.” “Where?”

375e

“They may be seen in other animals too, and particularly in the one we were comparing to the guardian. Indeed you know, I presume, that in the case of noble dogs, their natural disposition is to be as gentle as they possibly can towards familiar people and those whom they recognise, and the very opposite towards those they do not recognise.” “I know, indeed.” “So, it turns out this is possible after all,” I said, “and what we are looking for in a guardian is not contrary to nature.” “It seems not.”

376a

“Now, in addition to being spirited, do you think our prospective guardian also needs this: to become a philosopher in his nature?” “In what way?” he asked. “I do not understand.” “This, too,” said I, “is something you will discern in dogs, and it is worthy of admiration in these animals.” “What is it?” “That when he sees someone he does not recognise, he is aggressive even before he has suffered any harm at all, but when he sees someone he recognises, he welcomes them, even if they have not yet done him any good. Have you never admired this before?” “I have not really given it much attention before now,” said he, “but it is obvious that he does something like this.”

376b

“And yet, this is evidently a delightful characteristic of his nature, and a truly philosophic one.” “In what way?” “In that he distinguishes,” said I, “on sight, between friend and foe on the sole basis of having knowledge of the former and being ignorant of the latter. Indeed, how could he not be a lover of learning, when he makes a distinction between his own and what is alien, based upon knowledge and ignorance?” “Of course,” said he, “how could he not be?” “And surely,” said I, “the lover of learning and the lover of wisdom are the same?” “The same, indeed,” said he.

376c

“Should we therefore propose, with confidence, in the case of a human being too, that someone who is going to be gentle to his own and to people he knows needs to be a philosopher and a lover of learning?” “Let us propose this,” said he. “Then someone who is to be a noble and good guardian of the city will, according to us, be a philosopher who is spirited, swift and strong by nature.” “Entirely so,” said he.

376d

“Since he would be a person of this sort, in what manner will such people be reared and educated by us? And is the consideration of this question of any use to us in bringing clarity to the question that lies behind all our considerations: in what manner do justice and injustice arise in a city? We do not want the argument to be inadequate, or to make it too protracted either.” And Glaucon’s brother said, “Yes, I expect that this particular consideration will help in this.” “By Zeus, Adimantus, my friend,” said I, “in that case we should not give up, even if it turns out to be a lengthy consideration.” “We should not, indeed.” “Come on then, let us educate these men in our discussion, as though we were telling a story and had ample leisure to do so.” “We should.”

376e

“So, what would their education consist of? Or is it hard to find anything better than what has been discovered through the passage of time? This, I presume, consists of physical training for the body, and music for the soul.” “It does, indeed.” “Well then, shall we start educating them in music prior to the physical training?” “Why not?” “And as part of music,” said I, “do you include verbal accounts or not?” “I do.” “Are there two kinds of accounts, one true, the other false?” “Yes.” “Should they be educated in both, beginning with the false ones?” “I do not understand what you are saying,” said he.

377a

“Do you not understand that we tell stories to children, at first? These, I presume, are generally speaking false, although there is truth in them too. And we make use of these stories with children before the physical training.” “This is so.” “Well, that is what I meant when I said that music should be taken up before physical training.” “Rightly so,” said he. “Do you not know that the beginning of any work is most important, especially in the case of ^{377b} anything young and tender, since that is when it is most malleable, and the imprint one may wish to impress upon it sinks in?” “Yes, exactly.” “So, shall we allow the children to hear any random stories, composed by anyone at all, and take beliefs into their soul that are, for the most part, opposite to the ones we will think they should have, once they have come of age?” “No, we shall not allow this at all.”

^{377c}

“Firstly, then, it seems we must watch over those who make up the stories, and we must accept whatever is well made, and reject whatever is not well made, and we shall persuade the nurses and the mothers to tell the accepted stories to the children and shape their souls with these, rather than shaping their bodies with their hands. But most of the stories that they tell nowadays should be rejected.” “What kind of stories?” he asked. “In looking at the greater stories,” said I, “we shall also be looking at the lesser ones. For the greater and the lesser should indeed have the same character and the same capability. Do you not think so?” “I do,” said he, “but I do not understand what you mean by the greater ones.”

^{377d}

“The ones that both Hesiod and Homer told us, and the other poets too, since these men presumably composed false stories which they recounted to mankind, and they still do.” “What kind of stories?” said he. “And what aspect of them are you criticising?” “The aspect,” said I, “which deserves most criticism primarily, and especially if someone tells the

falsehoods in an ignoble manner.” “What is this?” “It occurs when someone presents an image, in words, describing what the gods and heroes are like in an ignoble manner, like a painter who paints something that bears no resemblance to whatever he wishes to paint a likeness of.” “Yes, indeed,” said he, “it is only right to criticise this sort of thing. But how is this done, and what are the falsehoods like?”

377e

“First and foremost,” I said, “is the greatest falsehood of all, concerning the greatest personages of all, a falsehood that its narrator recounts in an ignoble manner, according to which Uranus performed the deeds that Hesiod says he performed, and Cronus in turn took revenge on him.²⁸ But the deeds of Cronus in particular, and what he suffered at the hands of his son, these, even if they were true, should not, I believe, be recounted freely and easily to unreflective young folk. No, they are best kept quiet. And if someone does need to relate them, they should be heard in secret by as few people as possible, after sacrificing not some common piglet, but an enormous beast that is hard to procure, so that the least possible number of people get to hear them.” “Yes, indeed,” said he. “These accounts really are hard to take.”

378a

“Yes, and they should not be told,” said I, “in this city of ours, Adimantus. Nor should it be said, within earshot of the young, that there is nothing out of the ordinary in acting unjustly in the extreme, nor again in punishing a father for his unjust actions in all sorts of ways, since in so doing he would be doing what the foremost and most important gods have done.” “No, by Zeus,” said he. “I myself do not think they are suitable material either.”

378b

“Nor,” said I, “should it be said that gods are at war with gods, and are scheming and fighting, since this is not true either.

Indeed, if we want those who are to guard our city to consider it a disgrace to hate one another easily, then we should not tell or depict stories of the battles of gods and giants – far from it – or stories of a whole variety of other enmities of gods and heroes with their kindred and family members. But if we are somehow going to persuade them that no citizen so far has hated another citizen, and that it is unholy to do so, then this sort of thing must indeed be said ^{378c} to the young by old men and women, and, as they get older, the poets should be compelled to compose speeches for them, adhering closely to this.

^{378d}

“Stories of Hera being tied up by her son, and Hephaestus being flung out of heaven by his father for trying to defend his mother when she was being beaten, and any battles of the gods that Homer has made up, these should not be admitted into our city, whether they have a deeper meaning or not. For the young person is unable to distinguish what is a deeper meaning and ^{378e} what is not, and whatever he incorporates into his beliefs at that age tends to become difficult to eradicate or undo. Surely then, for all these reasons, we should ensure above all that the very first stories they hear are the noblest stories they could possibly hear for the development of excellence.” “Yes, that makes sense,” said he. “But if someone were to press the point and ask us what we are referring to and what the stories are, what stories would we mention?”

^{379a}

And I said, “At the moment, Adimantus, you and I are not poets but founders of a city. Now, it is appropriate that the founders know the guidelines within which the poets should compose stories, and from which they should not deviate when they are composing. But it is not appropriate that the founders themselves make up stories.” “That is right,” said he, “but the question is what would be the guidelines in relation to descriptions of the gods?” “Somewhat as follows, I presume,”

said I. “The god should, of course, always be portrayed as he really is, whether a poet presents him in an epic, a lyric, or in a tragic work.” “Yes, that should always be the case.”

379b

“And since the god is actually good, should he not be spoken of as such?” “Of course.” “And, indeed, nothing that is good is harmful, is it?” “I do not think so.” “Now, can that which is not harmful do any harm?” “Not at all.” “And can that which is not harmful do anything bad?” “No, it cannot do that either.” “Yes, and whatever does nothing bad could not be the cause of anything bad either, could it?” “No, how could it?” “What about this? Is that which is good, beneficial?” “Yes.” “In that case, is it the cause of things going well?” “Yes.” “So, what is good is not the cause of everything. No, it is the cause of all that is well, but it is not the cause of bad things.” “Entirely so,” said he.

379c

“So, since the god is good,” I said, “he would not be the cause of everything, as most people say. No, to humanity he is the cause of very little, and there is a great deal he is not responsible for. Indeed, with us, what is bad far exceeds what is good, and we should declare that no one else is the cause of what is good except the god, and we should seek elsewhere for the causes of what is bad, and not blame the god.” “I think,” said he, “that what you are saying is entirely true.”

379d

“In that case,” said I, “we should not accept, from Homer or any other poet, this error about the gods, when he foolishly makes the mistake of saying that two pitchers ^{379e} *Stand on the floor of Zeus’ abode / They are filled with fates; / One with good, the other with wretched. / And he to whom Zeus gives a mixture of both / Sometimes meets with bad, sometimes with good / But he to whom Zeus gives, from the second jar, unmixed / Foul misery drives him over the divine earth.* Nor that Zeus is our steward of ‘good and bad alike’.²⁹

380a

“As for Pandarus and the violation of oaths and truces, if anyone says that Athena and Zeus brought this about they will not receive our praise, nor if they say that strife and contention of gods was caused by Themis and Zeus, nor indeed should we allow the young to hear, as Aeschylus maintains, that *God implants the cause in mortal men, / When he wants to utterly destroy a house*.³⁰ “If someone includes these lines in a play about the sufferings of Niobe, or of the family of Pelops, or of the Trojan war,³¹ or anything else like that, he should not be allowed to say that these are brought about by a god. And if they are to say this, they must come up with an argument, similar to the one we are looking for, and declare that the god was doing what was just and good, and the 380b sufferers derived benefit from being chastised. But the poet should not be allowed to say that those who paid this penalty were wretched, and the one who did all this was a god. But if he were to say that they were in need of chastisement because bad people are wretched and derive benefit from being made to pay a penalty by the god, that should be allowed. But the statement that a god is the cause of bad to anyone who is good must be opposed. We must do battle, by every possible means, against anyone saying this in his own city, if that city is to be well governed, or against anyone, young or old, even hearing such stories told, in verse or in prose, because if they were spoken they would be unholy utterances, of no advantage to us, not even concordant with themselves.” “On this law,” said he, “I am casting my vote with you, and I am pleased to do so.”

380c

“Well,” said I, “this would be one of the laws and guidelines concerning gods, on the basis of which the speakers will have to speak and the poets write their poems. The god is not the cause of everything, but only of what is good.” “And that,” said he, “is surely enough.” “Well, what about a second one as follows? Do you think that the god is a beguiler who can contrive to appear

in different forms at different times, sometimes actually changing his own form and passing into various shapes, at other times deceiving us and making us believe that this sort of thing is happening to him? Or is the god simple, and least likely of all to go away from his own form?" "I am unable," said he, "to give you a direct answer at the moment."

380d

"What about this? If anything is to depart from its own form, must it not be changed either by itself or by something else?" "It must." "Is it not the case that whatever is in the best condition is least subject to alteration and change by something else? For example, although a body is altered by food, drink and physical work, and any plant is altered by sunlight, the wind and other influences of this sort, the one that is healthiest and strongest is least subject to alteration, is it not?" "Of course."

380e

"And would not the bravest and most reflective soul be least troubled and subject to alteration by some external influence?" "Yes."

381a

"And presumably, in the case of all manufactured items too – equipment, buildings or garments – by the same argument those that are well made and in good condition are least liable to alteration by the passage of time, and any other influences." "Yes, this is so."

381b

"Then anything that is in good condition, by nature or by design or both, is most resistant to transformation by something else." "So it seems." "But surely the god, and what belongs to the god, is in the best possible condition in every way?" "Of course." "So in this respect, the god would be least inclined to adopt a lot of shapes." "Least, indeed." "In that case, would he transform and alter himself?" "Of course," said he, "if he is actually altered." "So, does he change himself into something better and nobler,

or into something worse and more base than himself?” “If he actually changes,” said he, “it must be into something worse, for we surely shall not maintain that the god is deficient either in nobility or excellence.”

381c

“What you are saying is absolutely correct,” said I. “And this being the case, do you think, Adimantus, that anyone, god or man, would willingly make himself worse in any respect?” “Impossible,” said he. “So it seems impossible,” said I, “even for a god, to wish to change himself. Rather, being as noble and excellent as it is possible to be, each of them always remains eternally in his own shape, purely and simply.” “Well, that seems absolutely necessary to me.”

381d

“So, best of men,” said I, “none of the poets should tell us that *Gods in the likeness of strangers / Assume all sorts of disguises, as they visit our cities.*³² “Nor speak falsely of Proteus and Thetis, nor introduce Hera in a tragedy, or any other works, transforming herself into a priestess, gathering alms for *The life-giving sons of Inachos, the river of Argos.*³³

381e

“And there are many other falsehoods of this sort that they should not tell us. Nor again should mothers, misled by these fellows, terrify their children by telling them bad stories in which some gods actually go about at night looking like various strangers of all sorts, lest the mothers speak ill of the gods, and at the same time make their children more cowardly.” “No, they should not do that,” said he. “But is it the case,” said I, “that although the gods themselves cannot undergo transformation, they make us think that they appear in lots of different guises, thus deceiving and beguiling us?” “Perhaps,” said he.

382a

“What about this?” said I. “Would a god be prepared to practise deception, either in word or in deed, by putting forth an

appearance?" "I do not know," said he. "Do you not know," said I, "that the true falsehood, if I may use such an expression, is hated by all gods and all humans?" "How do you mean?" he asked. "As follows," said I. "No one is prepared willingly to be deceived in what is presumably the most important part of themselves, about the most important matters. No, we are afraid most of all to have falsehood reside there." "I still do not understand," said he.

382b

"That is because you think I am saying something profound," said I. "I am just saying that being deceived in the soul in relation to things that are, and to have been deceived and be ignorant, and hold falsehood there and have it reside there is what everyone would find least acceptable, and it is in this case that they most detest falsehood." "Very much so," said he. "Then what I was saying just now was quite right. This ignorance in the soul of the person who is deceived may be called a true lie. For the falsehood in words is an imitation of the experience in the soul, an image that has arisen subsequently, and so it is not unadulterated falsehood. Is this not so?" "Entirely so." "Then the actual falsehood is hated, not only by the gods but by humanity too." "I think so."

382c

"But what about the falsehood in words? When and for whom is this useful, so that it does not merit our hatred? Is it not when it is used against enemies, or when some among the people we call friends, through madness or ignorance, are attempting to do some bad deed, and falsehood then becomes useful as a sort of medicine to prevent this? And in the stories we were speaking of just now, because we do not know the truth concerning events of the distant past, do we not make falsehood resemble the truth as best we can, and render it useful by so doing?" "Yes, indeed," said he, "that is what happens."

382d

“So then, in which respect would the falsehood be useful to the god? Is it because he does not know about past events, and therefore makes up falsehoods that resemble them?” “That would be quite ridiculous,” said he. “In that case, there is nothing of the deceiving poet in a god.” “I do not think so.” “Would he make up falsehoods because he is afraid of his enemies?” “Far from it.” “Would he do it because of ignorance or madness among those who are close to him?” “No,” said he, “no one who is ignorant or mad is beloved of god.” “So, there is no reason for the god to make up falsehoods.” “There is not.” “So, divinity and the divine are entirely devoid of falsehood.” “Entirely so,” said he.

382e

“So, the god is absolutely simple and true, in word and in deed, and he neither changes himself nor deceives others, awake or in a dream, through appearances, words or signs.” “Now that you say so,” said he, “that is how it looks to me too.” “In that case, do you agree that this is a second guideline by which we should speak and write poems about the gods? They are not enchanters who transform themselves, nor do they lead us astray with falsehoods through their words or their actions.” “I agree.”

383a

“So, although we praise a great deal that is in Homer, we shall not praise the part where Zeus sends that dream to Agamemnon, nor shall we praise Aeschylus when he has Thetis say that Apollo sang at her wedding, ‘to celebrate her goodly race of children’, ^{383b} *Their days prolonged, from pain and sickness free, / And rounding out the tale of heaven’s blessings, / Raised the proud paeon, making glad my heart. / And I believed that Phoebus’ mouth divine, / Filled with the breath of prophecy, could not lie. / But he himself, the singer, himself who sat / At meat with us, himself who promised all, / Is now himself the slayer of my son.*³⁴

383c

“Whenever someone says anything like this about the gods, we shall be angry with him and refuse to grant a chorus, nor shall we allow teachers to make use of this for the education of the young folk, if our guardians are going to become as god-revering and divine as it is possible for a human being to be.” “I agree entirely with these guidelines,” said he, “and I would use them as laws.”

BOOK III

386a

“Well,” said I, “these are the sort of things that should be heard about the gods, and the sort that should not, from their earliest childhood by those who are to show respect for the gods and for their own parents, and not make light of their friendship with one another.” “Yes,” said he, “and I think we are now looking at this in the right way.” “But what if they are to be courageous? Must they not be told these stories, and also the kind of thing that will make them least afraid of death? Or do you think anyone would become courageous 386b whilst harbouring this fear within himself?” “By Zeus,” said he, “I do not.” “What about this? Do you think anyone who believes in Hades and its horrors will be fearless in the face of death, and will choose death in battle in preference to defeat and slavery?” “Not at all.” “It seems, then, that we should also supervise those who turn their hand to telling these stories, and implore them not to speak ill of Hades’ realm in such a simplistic manner, but rather to praise it, since 386c what they are now telling us is neither true nor beneficial to those who are to become fighting men.” “We should, indeed,” said he. “So we shall erase everything of this sort,” said I, “beginning with the following verses: *I would rather follow the plough as thrall to another man, / one with no land allotted him and not much to live on, / than be a king over all the perished dead.*³⁵

386d

And this, ... *the houses of the dead lie open to men and immortals, / ghastly and mouldering, so the very gods shudder before them;*³⁶ And, Oh, wonder! *Even in the house of Hades there is left something, / a soul and an image, but there is no real heart of life in it.*³⁷ And this, To whom alone Persephone has granted intelligence / *even after death, but the rest of them are fluttering shadows.*³⁸ And, ... *and the soul fluttering free of his limbs went down into Death's house / mourning her destiny, leaving youth and manhood behind her.*³⁹

387a

And this, ... *but the spirit went underground, like vapour,*⁴⁰ And, And as when bats in the depth of an awful cave flutter / *and gibber, when one of them has fallen out of his place in / the chain that the bats have formed by holding one on another; / so, gibbering, they went their way together.*⁴¹

387b

“And we shall ask Homer and the other poets not to be angry if we strike out these verses and others like them, not because they are unpoetic or unpleasant for most people to hear, but because the more poetic they are, the less they should be heard by the young and by men who need to be free and more afraid of slavery than of death.” “Entirely so.” “What is more, should not all the terrible, frightening names associated with these realms be abolished too, names like ‘Cocytus’ and ‘Styx’,⁴² ‘the dead’ and ‘those beneath the earth’, and other names of this type that make anyone who hears them tremble? Perhaps they are good for some other purpose, but we are afraid that as a result of such trembling our guardians may become more excitable and softer than needs be.”

387c

“And we would be right to be afraid,” said he. “Should they be excluded?” “Yes.” “Then words that have the opposite effect should be used in common parlance and in poetry?” “Of course.” “Shall we also remove the lamentations and wailings of the famous men?” “We must,” said he, “in the light of the

previous exclusions.” “Then,” said I, “let us consider whether we are right to remove them or not. We maintain that a reasonable man will not think that dying is a terrible thing to happen to another reasonable man, who is also his friend.” “We maintain this, indeed.”

387d

“So, he would not lament, at least not for that man, as though something terrible had befallen him.” “Certainly not.” “In that case, we are also saying that as regards living well, a person like this is most sufficient unto himself, and in contrast to other people he is least dependent on anyone else.” “True,” said he. “So, to him, it is least terrible to be deprived of a son or a brother or money, or anything else like that.” “Least indeed.” “So, whenever some such misfortune overtakes him he laments least and bears it with the utmost gentleness.” “Very much so.”

387e

“We would be right then to take these dirges away from men of reputation, and we might give them to women, but not to women of substance, and to bad men, so that those whom we say we are rearing as guardians of their own country will be disgusted at the prospect of behaving like such people.” “We would be right,” said he. “Once again then, we shall ask Homer and the other poets not to have Achilles, the son of a goddess, *Lying now on his side, then again on his back, then face down, / then standing upright and roaming, distraught along the / shore of the unharvested ocean.*⁴³

388a

Nor say, *In both hands he caught up the grimy dust / and poured it over his head and face.*⁴⁴ Nor have him generally wailing and lamenting in the whole variety of ways that the poet makes him behave. Nor should he say Priam, a near relation of the gods, was making entreaties and *...wallowed in the muck before them, / calling on each man and naming him by his name.*⁴⁵

388b

But it is even more important that we ask them at least not to have gods lamenting and saying, ^{388c} *Ah me, my sorrow, the bitterness in this best of child-bearing.*⁴⁶ And even if he makes gods act like this, he certainly must not dare to portray the greatest of the gods so inaccurately that he says, *Ah me, this is a man beloved whom now my eyes watch / being chased around the wall; my heart is mourning for Hector.*⁴⁷ And, ^{388d} *Ah me, that it is destined that the dearest of men, Sarpedon, / must go down under the hands of Menoitios' son Patroclus.*⁴⁸ “For, dear Adimantus, if our young folk were to listen seriously to this sort of thing, and not deride these as unworthy utterances, they would hardly regard such behaviour as unworthy of mere mortals like themselves if it also occurs to them to say or do something like this. Instead, they would exhibit neither shame nor restraint in singing dirges and laments aplenty at the slightest mishap.” “What you are saying is very true,” said he.

^{388e}

“Well, we don’t want that, as the argument indicated to us just now, an argument in which we should place our trust until someone convinces us otherwise with a better one.” “Indeed, we do not want that.” “Indeed not, nor should they be too fond of laughter either. For whenever someone yields to violent laughter, this sort of thing involves a violent change.” “I think so,” said he.

^{389a}

“So, if someone portrays any human being worthy of note as overcome by laughter, that is unacceptable, and it is even more unacceptable in the case of gods.” “More unacceptable indeed,” said he. “In that case we shall not accept anything like the following verses about the gods, even from Homer: *But among the blessed immortals uncontrollable laughter / went up as they saw Hephaistus bustling about the palace.*⁴⁹ “According to our argument these should be rejected.”

^{389b}

“You may attribute that to me if you wish,” said he. “In any case it should not be accepted.” “But, of course, we must attach great importance to truth. Indeed, if we were right to say earlier that although falsehood is really of no use to gods it is still useful to humans, as a kind of medicine, then it is obvious that something like this should be entrusted to physicians, and that private citizens should have no involvement with it.” “Obviously,” he said.

389c

“It is appropriate, then, for those who rule our city, if anyone, to tell falsehoods in dealing with the citizens or in dealing with enemies for the benefit of the city, while it is not appropriate for anyone else to be involved in something of this sort. But for a private citizen to be false towards the rulers in particular is, we shall insist, as much, indeed a greater transgression than not speaking the truth to a physician when ill, or to a trainer during a training programme about the condition of his own body, or not informing a steersman about what is actually going on regarding the ship and the sailors, or his own level of experience or that of his fellow sailors.”

389d

“Very true,” said he. “So if the ruler catches anyone else in the city lying, whether *He is one who works for the people, either a prophet, or a healer of sickness, / or a skilled workman*,⁵⁰ he will punish them for introducing a practice that overturns and destroys the city, just like a ship.” “Yes,” said he, “if word is matched by deeds.” “What about sound-mindedness, then? Will not our young folk need this?” “Of course.” “And for most people, do not the most important aspects of sound-mindedness consist in being obedient to their rulers, and being rulers themselves over the pleasures of drink, sex and food?”

389e

“Yes, I think so.” “Then I think we shall declare that the sort of thing that Diomedes says in Homer, is well said. *Friend, stay quiet*

rather and do as I tell you;⁵¹ And the connected lines, *But the Achaian men went silently, breathing valour, / in fear of their commanders;*⁵² And anything else of this sort.” “Very well.” “What about lines like these: *You wine sack, with a dog’s eyes, with a deer’s heart...*⁵³ and the lines that follow? Are these, and any other insolent remarks directed by private citizens against their rulers, either in verse or in prose, good?” “They are not good.”

390a

“Indeed, I do not think they are appropriate for the young folk to hear, not with a view to sound-mindedness at any rate. Yet if they provide some other pleasure, that is no surprise. How does this look to you?” “As you say,” said he. “And what if he makes the wisest of men say that he thinks the most beautiful moment of all is when *...the tables are loaded with bread and meats, / and from the mixing bowl the wine steward draws the wine / and carries it about and fills the cups.*⁵⁴ “Do you think these lines are suitable for a young person to hear, if he is to develop self-control?

390b

Or indeed, *All deaths are detestable for wretched mortals, / but hunger is the sorriest way to die.*⁵⁵ “Or about Zeus, awake, alone, while the other gods and humans too are sleeping, quickly forgetting all the plans he had made, because of sexual desire; being so overcome at the sight of Hera that he could not even wait to get into their chamber, but wanted to have intercourse with her there and then on the ground; saying that he was never in the grip of such desire, not even when they first consorted together ^{390c} *Unbeknownst to their dear parents* “Nor about Ares and Aphrodite being tied up by Hephaestus for similar reasons.”⁵⁶ “No, by Zeus,” said he, “that does not seem suitable to me.” “But if some feats of endurance in the face of all sorts of trials are spoken of, and enacted by famous men, these should be seen and heard by our young folk. For example, ^{390d} *He struck himself on the chest and spoke to his heart and scolded it: / ‘Bear up, my heart. You have had worse to endure before this.’*⁵⁷ “Entirely

so,” said he.

390e

“Nor indeed should we allow such men to be corruptible by bribes, or be fond of money.” “In no way.” “So, no one should sing the line that says, *Gifts move the gods and gifts persuade dread kings*.⁵⁸ Nor should we praise Achilles’ teacher, Phoenix, as setting the standard when he advised him to accept gifts in return for assisting the Achaeans, and not to abate his wrath if no gifts were forthcoming. We shall not deem Achilles himself worthy of this, nor shall we accept that he was so ^{391a} fond of money as to take bribes from Agamemnon, or indeed to release a dead body if he was paid, but not otherwise.” “No,” said he. “It would not really be right to praise this sort of thing.” “And I am reluctant,” said I, “for Homer’s sake, to declare that it is unholy to say all this about Achilles, or to believe it when others say so, or indeed that he said to Apollo, *You have balked me, striker from afar, most malignant of all gods, / Else I would punish you, if only the strength were in me*.⁵⁹

391b

“Or that he was disrespectful of the river, a god, and was prepared to do battle against him; or again, that although his own locks were already promised to the other river, Spercheius, he said, ‘I would give my hair into the keeping of the hero Patroclus,’⁶⁰ even though Patroclus was a corpse. We should not believe that Achilles did this. And we shall deny that the dragging of Hector’s body around the tomb of Patroclus,⁶¹ and the slaughter of the prisoners of war over his funeral pyre,⁶² is ^{391c} true. Nor shall we allow our charges to be convinced that Achilles, the son of a goddess and of Peleus who was the most sound-minded of men, a grandson of Zeus, reared by the all-wise Cheiron, was so full of confusion as to harbour within himself two opposed diseases: a love of money that ill becomes a free man, and an arrogance towards gods and men alike.” “You are right,” said he.

391d

“Then we should not believe them,” said I, “nor should we believe, nor allow it to be said, that Theseus, the son of Poseidon, and Perithous, son of Zeus, embarked upon such awful abductions, nor that any other child of a god and a hero would dare to enact awful, impious deeds, the sorts that are falsely attributed to them nowadays. Rather, we shall compel the poets to declare either that the deeds were not theirs, or that those who performed them were not the children of gods. But they must not make both statements. Nor should they attempt to persuade our young folk that ^{391e} the gods give rise to evil, or that heroes are no better than mortal men. For as we were saying before, these claims are neither pious, nor are they true. Indeed we have shown, I presume, that it is impossible for evils to come from the gods.” “Of course.” “And what is more, they are harmful to those who hear them, since anyone will forgive himself for being bad once he is convinced that such deeds are performed and have been performed by *The near-sown seed of gods, / Close kin to Zeus, for whom on Ida’s top / Ancestral altars flame to highest heaven, / Nor in their life-blood fails the fire divine.*⁶³

392a

“That is why we should put a stop to stories of this sort, lest they engender a total indifference to degenerate behaviour, in our young folk.” “Yes, precisely,” said he. “So,” said I, “now that we are defining the kind of accounts that should be delivered, and the kind that should not, is there anything we have left out? We have said how the gods, daimons and heroes should be spoken of, and those in Hades too.” “Yes, indeed.” “So, what is left would be concerned with humans, would it not?” “Obviously.” “But, my friend, it is impossible for us to arrange this at the moment.”

392b

“Why so?” “Because I think we shall simply affirm that poets and prose writers do indeed speak ill of human beings on matters of the utmost importance. They say that although they are unjust, many of them are happy while the just people are wretched, that acting unjustly is profitable as long as it goes undetected, while justice is what is good for someone else but inimical to your own interests. And I think we shall forbid them to say this sort of thing and direct them instead to sing and tell stories that say the exact opposite. Do you not think so?” “I know full well,” said he.

392c

“In that case, if you agree that what I am saying is correct, may I claim that you have agreed on the issues we have been investigating all along?” “You have understood correctly,” said he. “Now, once we find out the sort of thing justice is, and how it is naturally beneficial to its possessor, regardless of whether he seems to be just or not, we shall then come to agreement on the sort of accounts that should be given about human beings, but not until then.” “Very true,” said he.

392d

“Well, let that be the end of our discussion of speeches, and in my opinion we should consider speech itself next. Then our consideration of what should be said and how it should be said will be a comprehensive one.” Then Adimantus said, “I don’t understand what you mean by this.” “Well, you do need to understand,” said I. “Perhaps you will get a better sense of it from the following. Is not everything that storytellers or poets say a narrative of events that have happened, are happening, or are going to happen?” “Yes, what else could it be?” said he.

392e

“Yes, and do they not proceed either by simple narrative, by narrative that takes place through imitation, or through both?” “I still need to understand this more clearly,” he said. “I seem,” said I, “to be a ridiculous teacher, devoid of clarity. So like those

who are unable to express themselves, I shall attempt to show you what I mean, not in full, but by taking a particular part of it. Tell me then, do you know the initial verses of the Iliad, where the poet says that Chryses begged Agamemnon to set his daughter free, but that Agamemnon was angry, and so Chryses, since he had been unsuccessful, called down curses from the god upon the Achaeans?"

393a

"I do indeed."

393b

"Then you know that up to the lines *he supplicated all the Achaians, / But above all Atreus' two sons, the marshals of the people*:⁶⁴ the poet himself is speaking, and he does not even attempt to give us the impression that anyone else is speaking except himself. But in the lines that follow these, he speaks as if he himself is Chryses, and he attempts as best he can to make us think that the speaker is not Homer but the priest, an old man. And all the rest of the narrative about events at Troy and Ithaca, and the entire Odyssey, has for the most part been composed in this way." "Yes, indeed," said he. "Now, it is narrative, is it not, on the occasions when he is speaking the speeches, and also when there is an interval between speeches?" "Of course."

393c

"But when he delivers a speech as though he were someone else, will we not then say that as best he can, he is making his own speech resemble that of the person who, he tells us, is about to speak?" "We shall say so. What of it?" "Does not the process of making oneself resemble another person, either in speech or in outward appearance, mean imitating the person one is making oneself resemble?" "Indeed." "So, in a case like this it seems that Homer and the other poets construct the narrative through imitation." "Entirely so."

393d

“But if the poet were not to hide himself anywhere, the entire poetic narrative would have proceeded without imitation. And in case you say once more that you do not understand, I will tell you how this may happen. Indeed, if Homer were to begin by saying that Chryses arrived as a supplicant of the Achaeans, and particularly of their king, bringing his daughter’s ransom, and he was to speak thereafter still as Homer and not as if he had become Chryses, you know that that would not be imitation but simple narrative. It would proceed somewhat as follows. I will deliver it in prose since I am no poet.

393e

“When the priest arrived, he prayed that the gods would grant them safe passage home once they had captured Troy, and that they would accept the ransom and free his daughter out of reverence to the god. Once he had said all this, everyone else was respectful and co-operative, but Agamemnon was annoyed, and he ordered him to depart there and then, never to return, or else his sceptre, and the garlands of his god, would not be enough to protect him. And he said that ^{394a} before he would release Chryses’ daughter she would grow old with him in Argos, and he ordered him to go away and not provoke him if he wanted to return home safely. The old man was terrified when he heard this, and he departed in silence. But once he was out of the Achaean camp he prayed profusely to Apollo, invoking the many names of the god and issuing reminders, asking to be repaid if any gifts he had ever given had pleased the god, either through building temples or sacrificing animals. In return for these, he prayed that the Achaeans would pay the price of his tears with the arrows of the god.

394b

“That, my friend,” said I, “is how a simple narrative proceeds in the absence of imitation.” “I understand,” said he. “Then you should understand,” said I, “that the exact opposite of this occurs when someone removes the intervening words of the

poet himself and leaves only the exchanges between the speakers.” “I understand this too,” said he. “This is the sort of thing that occurs in tragedies.”

394c

“You are quite right,” said I. “You have understood. And I think I am now clarifying for you what I could not clarify previously, that some poetry and storytelling proceeds entirely through imitation including, as you say, tragedy and comedy. The kind that proceeds through reports by the poet himself, you would find for the most part in dithyrambic poems,⁶⁵ while the kind that employs both is found in epic poetry, and in numerous other places too, if you understand me.” “Yes,” said he. “I now follow what you wanted to say then.”

394d

“And do you also recollect what went before, when we maintained that although we have already explained what should be said, we still need to consider how it should be said.” “Yes, I remember.” “Well, this is the point I was making, that we need to come to an agreement on whether we shall allow the poets to compose narratives for us by using imitation, or allow them to imitate in some cases but not in others, and the sort of cases we envisage, or, indeed, not allow them to imitate at all.” “I get the sense,” said he, “that you are considering whether we shall admit tragedy and comedy into our city or not.” “Perhaps,” said I, “and perhaps even more than these. In fact, I do not know yet, but we should go in whatever direction the wind of the argument carries us.” “Yes,” said he, “you put that nicely.”

394e

“Well, Adimantus, reflect upon this. Should our guardians be imitators or not? Or does this also follow from what we said before, that each particular person would be good at engaging in one particular pursuit, and not in many, and if he should attempt to turn his hand to lots of pursuits, he would fail to

achieve distinction in any of them.” “Of course it does.” “Does not the same argument apply also to imitation? It is not possible for the same person to imitate many things as well as he can imitate one thing.” “Indeed not.”

395a

“In that case, he will hardly engage in any pursuit worth mentioning, and simultaneously be an imitator imitating lots of things, when the same people cannot even do a good job of simultaneously producing two imitations that seem as closely related as comedy and tragedy for instance. You did refer to these two as imitations, did you not?” “I did, and what you are saying is true. The same people cannot compose both.” “Nor indeed can they be good rhapsodes and good actors at the same time.” “True.” “And the same people cannot be good actors in comedy and in tragedy too. And all these are imitations, are they not?” “Imitations.”

395b

“And it seems to me that human nature has been cut up into even smaller pieces than these, so that it is incapable of imitating many things well, or of properly enacting the very things that those imitations resemble.” “Very true,” said he. “So, if we are going to save our initial argument, according to which our guardians, set apart from all the other artificers, should be artificers of the freedom of the city in the strictest sense, and engage in no other pursuit that does not lead in this direction, then it is necessary that they neither ^{395c} enact nor imitate anything else. And if they are to imitate anything, they should, from their earliest childhood, imitate only what is appropriate to these artificers of freedom – men who are courageous, sound-minded, pious, free, and everything of this sort. But they will not enact, nor be clever at imitating, anything devoid of freedom, nor anything else that is shameful, in case they proceed ^{395d} from enjoying the imitation to enjoying the reality. Or have you not noticed that imitations that are

continued from our earliest years and beyond become established as habits and as nature at the level of body, speech and, indeed, of thought?" "Very much so," said he. "Then those whom we claim to care for," said I, "men who should themselves become good men, shall not be permitted to imitate a woman, old or young, railing against her husband, in conflict ^{395e} with gods, being boastful about it, and believing herself to be a happy woman; or when she is overtaken by misfortune, grief, or lamentation; and especially not when she is sick, in love, or in labour." "Absolutely," said he. "Nor should they imitate slaves, male or female, doing what slaves do." "No, they should not imitate this either." "Nor bad men either, it seems, nor cowards and those who do the very opposite of what we have ^{396a} said, reviling and ridiculing one another, using foul language when drunk or even when sober, full of the errors that such people fall into, in what they say or do to themselves or others. And I think they should not develop the habit of behaving like mad people, in word or in deed. For although they should be able to recognise mad and degenerate men and women, they should not do anything these people do, nor should they imitate them." "Very true," said he. "Well," said I, "should they imitate metal workers or other artificers, or those who row triremes, ^{396b} or those who shout orders to the rowers, or anyone else related to these activities?" "Indeed," said he, "how could they? They are not allowed to pay any heed to these matters at all." "What about horses neighing, bulls bellowing, rivers rippling, the sea roaring, thunder too, and indeed everything of this sort? Will they imitate these?" "No," said he. "They have been forbidden either to be mad or to imitate mad people."

^{396c}

"In that case," said I, "if I understand what you are saying, there is a particular form of speech and narrative in which the truly noble and good person would tell the story, whenever he had to say something, and there is also another form, unlike this one,

that someone opposite to this man in nature and upbringing would hold to, and in which he would tell the story.” “And what are these?” he asked. “I think,” said I, “that the moderate man, when it comes to the point in his narrative where there is some speech or action of a good man, will be willing to present this as though he himself was ^{396d} that person, and he will not be ashamed of this sort of imitation, especially when imitating a man acting resolutely and intelligently, and less so, and to a lesser extent, as he succumbs to disease, passion, drunkenness or some other affliction. But when it comes to someone unworthy of himself, he will not be prepared, seriously, to make himself like this inferior person, except perhaps briefly whenever he does something useful. Rather, he will be ashamed of being so unpractised at imitating people like this, and disgusted too at the prospect of moulding and adapting himself ^{396e} to the behaviour of people who are worse than himself. Unless it is just for fun, he is repulsed by the very thought.” “Quite likely,” said he. “So, will he not make use of the kind of narrative we described earlier when speaking of Homeric epic? And although his own speech will involve both imitation and the other form of narrative, will imitation not be a small part of the overall discourse? Or am I talking nonsense?” “This makes a lot of sense. This must be the type for a speaker like this.”

^{397a}

“Someone,” said I, “who by contrast is not like this. The more debased he is the more inclined he is to include everything in the narrative, and he will deem nothing unworthy of himself. So he will attempt, seriously and before large audiences, to imitate everything, including what we mentioned ^{397b} just now – thunder, the noise of wind, hail, axles and pulleys, the notes of flutes, of pipes and all instruments, and even the sounds of dogs, sheep, and birds. And in that case, will all this person’s exposition be through imitation by voice and by gesture, or will it include a small element of simple narrative?” “It must include

this too,” said he. “Well,” said I, “these are the two forms of exposition I was speaking of.” “They are, indeed,” said he.

397c

“Now, does not one of these forms involve only minor variations? And once someone imparts an appropriate harmony and rhythm to the exposition, since the variations are minor, does not the person who delivers it correctly, deliver it largely according to the same harmony, a single harmony, and indeed in a rhythm that matches it, in like manner?” “Yes, precisely,” said he. “That is how matters stand.” “And what about the other form? Does it not require the very opposite, all the harmonies and all the rhythms, if it too is going to be delivered in its own way, because it has such a huge variety of forms?” “Yes, this too is very much how matters stand.”

397d

“In that case, do all the poets, or anyone who says anything, fall into one or the other of these two types of exposition, or make up some mixture of them both?” “They must,” said he. “So what shall we do?” said I. “Shall we admit all of these into our city, or one of the unmixed ones, or the mixed one?” “If I am to prevail,” said he, “it will be the unmixed imitator of the noble person.” “And yet, Adimantus, the mixed one is pleasing. And what is most pleasing of all to children, and to people responsible for them, and to the broad mass of people, is the very opposite of what you are choosing.” “Most pleasing, indeed.”

397e

“But perhaps you would maintain,” said I, “that this would not fit in with our constitution because there is no twofold man among us, or a manifold one either, since each engages in only one thing.” “Indeed not. This would not fit in.” “And is that not the reason why a city like this is the only one where we shall find the shoemaker being a shoemaker and not being a helmsman as well as making shoes, and the farmer being a

farmer and not being a juror as well as farming his land, and the soldier being a soldier and not being a businessman as well as acting as a soldier, and so on for everything else?" "True," said he.

398a

"Then it seems that if a man whose wisdom enables him to take on every possible shape, and to imitate anything at all, were to arrive in our city, anxious to put himself and his poems on show, we would fall down before him as though he were a sacred object, a wondrous and pleasing one at that. But we would say that there is no one else of this sort among the citizens of our city, nor is it permitted that there ever shall be. We would anoint his head with myrrh, and give him a garland of wool. But for our own benefit, we would ourselves employ the more severe and less pleasing poet and storyteller, who would imitate the exposition of the noble man for us, and he would deliver the speeches in accord with those types we ordained by law when we first set about educating our soldiers." "Yes, indeed," said he. "That is what we would do if it were up to us."

398b

"Well, my friend," said I, "at this stage, the aspect of music that concerns speeches and stories has probably been brought to a conclusion fully, since we have described what should be said and how it should be said." "Yes, I think so too," said he.

398c

"After this," said I, "is what remains the aspect that concerns the manner of song and melody?" "Of course." "Well, could not anyone at all discover by now what we must say about them, and what they need to be like, if we are going to be in harmony with what we said previously?" And Glaucon said, with a laugh, "Well, Socrates, I am afraid I am not included in this 'anyone at all'. At the moment at any rate, I am not really up to the task of deciding the sort of things we should be saying, although I do have my suspicions."

398d

“Surely,” said I, “you are fully up to the task of saying, firstly, that melody is composed of three things combined: speech, harmony and rhythm.” “Yes,” said he. “This I can say, at least.” “Well, insofar as it is speech, it does not differ at all from speech that is not sung. It needs to be delivered according to the same types we prescribed earlier, and in a similar manner, does it not?” “True,” said he. “And, indeed, the harmony and rhythm should follow the speech.” “Of course.” “But we did say that in the case of speeches we do not need to include dirges and lamentations.” “Of course not.”

398e

“Well, since you are musical, tell me. What are the dirge-like harmonies?” “The mixed Lydian harmony,” said he, “and the taut Lydian, and some others like these.” “Should these not be taken away,” said I, “since they are not even useful to women who are to be reasonable, let alone to men?” “Indeed.” “And, indeed, drunkenness, softness and idleness in our guardians is most unseemly.” “Of course.” “So which of the harmonies are soft and suited to drinking parties?” “Ionic harmonies,” said he, “and also some Lydian harmonies that are called ‘loose’.”

399a

“Well, my friend, could you make use of these for military men?” “Not at all,” said he. “Indeed, it looks as if you only have the Doric and Phrygian harmonies left.” “I do not know these harmonies,” said I, “but please leave one harmony which would appropriately ^{399b} imitate the sound and tone of voice of a courageous man, engaged in military activities, or in any use of force; a man who, even in failure, or when wounded, or facing death, or when some other misfortune befalls him, confronts the situation with steadfast endurance. And leave another one for this man when he is engaged in peaceful activity that is devoid of force, and voluntary; persuading or imploring someone, either by praying to a god, or instructing or

admonishing his fellow man; or when the roles are reversed, and he himself submits to someone else who is asking him for something, or instructing him, or persuading him to change his mind; acting according to his ^{399c} own mind in all these, without being boastful; conducting himself with sound-mindedness and measure, always prepared to accept the outcomes. So leave these two harmonies, one forceful, the other voluntary, that will best imitate the utterances of sound-minded, courageous men as they succeed and as they fail in their purpose.” “Well,” said he, “you are simply asking me to leave the ones I just mentioned.” “Therefore,” said I, “we shall not need to include many-stringed instruments that play all of the harmonies in our songs and melodies.” “No,” said he, “not as I see it.”

^{399d}

“Then we shall not encourage artificers of triangles, harps and all the other many-stringed instruments that play in lots of harmonies.” “Apparently not.”

^{399e}

“What about flute makers and flute players? Shall we also admit them into our city? Or is not the flute ‘many-stringed’ in the extreme, and are not the very instruments that play all of the harmonies just imitations of the flute?” “Of course,” said he. “Then the lyre and the cithara are left for use in the city, and in the countryside there would be pipes of some sort for the shepherds.” “Well,” said he, “that is what our argument is indicating.” “We are not really doing anything new, my friend,” said I, “just preferring Apollo and his instruments, to Marsyas and the instruments that belong to him.”⁶⁶ “By Zeus,” said he, “it seems we are not.”

^{400a}

“By the dog,” said I, “without noticing it, we have been thoroughly purifying the city again, the one we called luxurious a moment ago.” “Well, we are being sound-minded,” said he. “Come on, then,” said I, “let us also purify whatever is left. Yes,

indeed, after harmony we have the matter of rhythm, and we should not pursue complicated or variegated rhythmic units. We should rather look for the rhythms of a life which is orderly and courageous. Once we have seen these, the metrical foot must be made to follow the speech of such a person, and so should the melody, but the speech must not follow the foot and the melody. But it is your job to state what these rhythms are, just as you did with the harmonies.”

400b

“Well, by Zeus,” said he, “I cannot say. And although I can say, from observation, that there are three forms from which all rhythms are woven, just as there are four sounds which are the source of all harmonies, I cannot say what sort of life each imitates.” “Well,” said I, “we shall take advice from Damon on these and on which rhythms are suited to absence of freedom, to aggression and to madness, and what rhythms are to be left for their opposites.⁶⁷ I am not clear about this, but I think I have heard him referring to some military rhythm as 400c a compound, and as a dactyl and as heroic. I do not know how he arranged it, but up and down were made equal, passing into short and long, and I think he called one ‘iambic’, and the other one ‘trochaic’, and he assigned long and short to each. And in some of these he censured, or indeed praised, the tempo of the foot no less than the rhythms themselves, or else some combination of both. But as I said, we should refer all this to Damon, for a decision on this would involve a lengthy discussion. Or do you think otherwise?” “By Zeus, I do not.” “But we can decide that grace and lack of grace follow good rhythm and lack of rhythm.” “Of course.”

400d

“And, indeed, good rhythm follows beautiful speech and resembles it, while lack of rhythm follows the opposite. And the same goes for good harmony and lack of harmony, if rhythm and harmony do indeed follow speech, as we said earlier, and speech does not follow them.” “But of course,” said he, “these

must follow speech.” “But what about the manner of speaking,” said I, “and the speech itself? Do these not follow the disposition of the soul?” “Of course.” “And everything else follows the speech?” “Yes.”

400e

“So good speech, harmony and grace, and good rhythm, follow good disposition, not what is referred to as a good disposition as a euphemism for silliness, but a mind truly endowed with a good and noble disposition.” “Yes, entirely so,” said he. “Well, must not these be pursued everywhere by our young people, if they are to enact what is their own?” “Yes, these must be pursued.”

401a

“And surely painting and any craftsmanship of this sort is full of these. Weaving is also full of them, house building too, and indeed all production of any other items, even the nature of bodies and of anything else that grows, for good grace and absence of grace is inherent in all these. Indeed, the lack of grace, rhythm and harmony is the close kindred of bad speech and bad disposition, and the opposites are the close kindred and imitations of its opposite, a sound-minded and good disposition.” “Entirely so,” said he.

401b

“Well then, should we only oversee the poets, and compel them to portray the image of the good disposition in their poems, or else compose nothing in our city? Or should we also oversee the other artificers and prevent them from portraying this bad disposition – the unrestrained one, devoid of freedom and grace – either in images of living creatures, or on buildings, or in anything else they produce? And if they cannot comply, should we stop them from plying their trade in our city in case our guardians, feeding on images of evil in an evil pasture, grazing freely, day by day gradually picking up a great deal from many different sources, unwittingly accumulate a single great

evil in their own soul? Should we search, rather, for those artificers who are naturally capable of seeking out the noble and graceful nature so that our young folk, as though dwelling in a healthy region, may derive benefit from everything that impinges upon their sight or their hearing from the noble works of the place, like a breeze that bears health from a wholesome region and leads ^{401d} them unwittingly, from their earliest childhood, to an affinity with noble reason, and friendship and concord therewith?" "Yes," said he, "that would be the best way to rear them, very much so." "Well then, Glaucon," said I, "is this not why being reared in music is of supreme importance, because rhythm and harmony, more than anything else, sink into the innermost soul and fasten most powerfully upon her, bringing good grace and making her gracious, provided the person has ^{401e} been reared aright, and having the opposite effect otherwise? And it is also of supreme importance because the person who has been reared in this, as he should be, would quickly discern any deficiencies in whatever has not been well made or well wrought by nature, and being rightly dissatisfied he would praise and delight in whatever is good, receive this into his soul, and being ^{402a} nourished by it he would become noble and good. And he would rightly criticise whatever is base, and he would hate it, even as a child before he was capable of understanding speech, and when speech had finally come, someone reared in this way would welcome it most of all, recognising it because of its familiarity." "Yes," said he, "I think it is for reasons of this sort that there is upbringing in music." "So, it is like when we had an adequate understanding of reading and writing," said I. "Once we noticed that the individual letters, few in number, keep recurring in all of the words they occur in, ^{402b} we showed the same regard for them, whether they were observed in long words or short words, for we were eager to recognise them fully everywhere, because we were never going to be knowledgeable until we were able to do

this.” “True.” “And we will not recognise images of letters that appear somehow in water or in mirrors until we have first recognised the letters themselves, but both involve the same skill and practice?”

402c

“Entirely so.” “Well, then,” said I, “by the gods, can I say that in like manner we shall not become musicians, neither ourselves nor these guardians we say we should educate, until we can first recognise the forms of sound-mindedness, of courage, of freedom, of magnificence, and all that is akin to these, and, indeed, all the opposites of these, everywhere, in all the various places they appear, and can be aware of their presence wherever they are present, themselves and their images too, and show the same regard for minor instances as for major instances, because we believe that the skill and the practice is the same in each case?” “This must be so,” said he, “very much so.”

402d

“Well, then,” said I, “if beautiful qualities, internal to the soul, coincide in the external form and are in agreement and concord with those, and are of the same type, would not that be the most beautiful sight of all for anyone with eyes to behold?” “Very much so.” “And, indeed, what is most beautiful is most loveable?” “Of course.” “Then the musical person would love people who are most like this, and would not love someone who lacked such concordance.” “He would not,” said he, “not if the deficiency were related to the soul. However, if the deficiency were something related to the body, he would accept this and be prepared to embrace him.”

402e

“I understand,” said I, “that you have a favourite like this, or you once had one, and I accept your point. But tell me this. Do sound-mindedness and excessive pleasure have anything in common?” “How could they,” said he, “when excessive

pleasure, no less than excessive pain, drives a person out of their mind?” “Does it have anything in common with excellence in general?” “Not at all.” “What about violence and lack of restraint?” “Least of all.”

403a

“And can you name any pleasure greater or more intense than sexual pleasure?” “I cannot,” said he, “or a more manic pleasure either.” “But does not right love naturally love the orderly and the beautiful, with a sound mind and a musical spirit?” “Very much so,” said he. “So should anything manic, or anything akin to a lack of restraint, be involved in right love?” “No, they should not be involved.” “So this particular pleasure should not be involved, nor should a lover and beloved, who love and are loved in the right way, have any share in it.” “No, by Zeus, Socrates,” said he. “It should not be involved.”

403b

“And so, it seems, you will establish laws for the city we are founding, that a lover is to kiss, consort with, and touch his favourite, as a father would his son, for beauty’s sake, and only with his consent, and in general that a lover is to associate with anyone he is interested in, in such a way that their relationship will never seem to go beyond this, or else he will come in for criticism as an unmusical fellow with no sense of beauty.” “Quite so,” said he.

403c

“Well now,” said I, “does it look to you as though our account dealing with music is at an end? At any rate, it has ended where it should end. Surely, considerations of music should end in considerations of love of the beautiful.” “I agree,” said he.

403d

“After music, then, the young folk should be brought up in gymnastics.” “Indeed.” “Then, they should also be brought up systematically in this, beginning in childhood and continuing through life. And it consists, I believe, in the following; see if

you agree. Indeed, I am not of the view that if a body is sound, it makes a soul good by the body's own excellence, but on the contrary, a good soul renders a body as good as it can possibly be by the soul's own excellence. Is that your view too?" "That is how I see it," said he.

403e

"Well, would we be doing the right thing if we were to care for the mind properly, and then trust it to determine precisely what the body needs, while we provide instruction on the general guidelines, so that we do not have to give a lengthy account?" "Entirely so." "Well, we said that guardians must avoid drunkenness. For a guardian is surely the last person we would allow to get drunk, and not know where on earth he is." "Yes," said he, "it would be absurd that a guardian would need another guardian to look after him." "Well then, what about their food? Indeed, these men are athletes in a contest of the utmost importance, are they not?" "Yes."

404a

"In that case, would the condition of our modern athletes be suitable to these men?" "Perhaps." "But," said I, "this is a somewhat drowsy condition, and it is perilous to their health. Or do you not see that they sleep their lives away, and that the athletes themselves really become violently ill if they depart, even a little, from the prescribed way of life?" "Yes, I see this."

404b

"Then there is a need for some more refined training for our warrior athletes," said I, "who need to be like sleepless hounds whose sight and hearing are as keen as they can possibly be, able to undergo lots of changes on military campaigns – changes of water, of their general diet, of summer and of winter – without their health being in peril." "That is how it seems to me." "Now, would the best upbringing in gymnastics be closely related to the musical upbringing we described a little earlier?" "What do you mean?" "An appropriate gymnastic is also simple,

I presume, especially in the case of warfare.” “In what way?”

404c

“You could,” said I, “even learn this sort of thing from Homer. For you know that on campaign, at the feasts of the heroes, he does not feast them on fish, even though they are by the sea on the Hellespont, or on boiled meats, but only on roast meats, which are easier for soldiers to provide, since generally speaking it is easier to arrange to use a simple fire than to carry cooking equipment around with you.” “Very much so.” “Nor, I believe, does Homer ever mention sauces. And does not anyone who is in training know that if his body is to be in good condition, he should abstain from everything of this sort?” “Yes, they know,” said he, “and they abstain, and rightly so.”

404d

“And if you think these are right, my friend, it seems you will not praise Syracusan cuisine or Sicilian cookery in all its variety.” “I think not.” “Then you will not recommend a Corinthian maiden as a lady friend for men whose body is to be in good condition.”

404e

“Absolutely not.” “Nor the famed delights of Attic pastries?” “I must agree.” “Yes. And on the whole, I think, we could liken a diet and a lifestyle of this sort to melody and song that employs all the modes and all the rhythms, and the comparison would be correct.” “Of course.” “Did not variety engender lack of restraint in that case, while in this case it engenders disease? And simplicity in music engenders sound-mindedness in souls, while simplicity in physical training engenders health in bodies?” “Very true,” said he.

405a

“And when lack of restraint, and diseases, multiply in a city, do not law courts and medical centres open their doors in large numbers, while courtroom oratory and medical skill take on a great solemnity when lots of people, even free men, get

extremely serious about them?” “What else are they to do?”

405b

“But can we get any greater evidence of the bad and disgraceful system of education in a city than the fact that first-rate physicians and legal practitioners are needed, not only by the ordinary folk and the manual labourers, but also by those who pretend to have been brought up in the guise of free men? Or do you not think it is a disgrace, and strong evidence of a lack of education, to be compelled to use justice brought in from other people, who act as your masters and judges, because you do not have any resources of your own?” “It is the most disgraceful thing of all,” said he.

405c

“Or do you think,” said I, “that it is even more disgraceful when someone not only spends most of his life defending himself or prosecuting others in court, but is even persuaded, because he has no sense of nobility, to pride himself on this very fact; on being clever when it comes to acting unjustly and well up to the task of exploring every twist and turn and every possible escape route to wriggle his way out, and avoid facing justice; doing all this for the sake of worthless trivia, ignorant of how much better and more noble it would be to provide himself with a life that did not depend upon the somnolence of a juror.” “No,” said he. “This is even more disgraceful than the other example.”

405d

“And do you not think,” said I, “it is a disgrace to need a physician, not because of injuries or some seasonal diseases you have caught, but due to idleness and the sort of lifestyle we were describing: being filled with fluids and gases like some sort of swamp, compelling the refined Asclepiads to come up with names for diseases, such as flatulences and catarrhs?” “Yes, indeed,” said he. “These really are novel and unusual names for diseases.”

405e

“The sort of diseases,” said I, “that in my view did not exist in Asclepius’ time. My evidence for this is that at Troy, his own sons did not find fault with the women who gave Pramnian wine, sprinkled lavishly with barley and grated cheese, to the wounded Eurypylus, even though these are believed to produce inflammation. Nor did they criticise Patroclus, who was responsible for the treatment.”⁶⁸ “Yes,” said he. “That certainly was a strange potion for someone in that predicament.”

406a

“Not if you recognise”, said I, “that this fostering of diseases that is fashionable in modern medicine was not used by the Asclepiads of former times, not until Herodicus arrived on the scene.”⁶⁹ But Herodicus was a physical trainer, and when he himself fell ill he mixed his physical exercise with medicine, and tormented himself first and foremost, and then did the same to lots of other people.”

406b

“In what way?” he asked. “He turned his own death,” said I, “into a lengthy process. For although he paid minute attention to the disease, which was a fatal one, he was, I believe, unable to cure himself, and he lived his entire life under medical treatment with no time for anything else, tormented if he departed at all from his usual lifestyle. So, struggling against death, aided by his wisdom, he managed to reach old age.” “So,” said he, “he won a beautiful prize from his skill.”

406c

“A fitting prize,” said I, “for someone who failed to recognise that Asclepius was not ignorant or lacking experience in this form of medicine when he did not teach it to his offspring. Rather, he knew that everyone living under good laws is each assigned a single task in the city which he must work at, and no one has time to spend his life being ill and being treated for an illness. And it is laughable that we are aware of this in the case of the craftsmen, and do not notice it in the case of the wealthy

people, who are regarded as fortunate.” “How so?” said he.

406d

“Well,” said I, “when a carpenter is ill, he expects the physician to give him medicine to drink as an emetic for the disease, or apply a purgative, or to get rid of it by burning or cutting. But if someone prescribes a lengthy regimen for him, placing felt hats on his head and so on, he quickly says that he has no time to be ill, nor is it worth his while to live in that way, preoccupied with a disease ^{406e} and neglecting the function that is in front of him. With that, he bids farewell to physicians of this sort, resumes his usual lifestyle, and either gets healthy and lives on doing his own work, or else, if his body cannot take the strain, he dies and is quit of his troubles.” “Well,” said he, “that seems to be the proper approach to medical treatment for someone like this.”

407a

“So,” said I, “was that because he had a function to perform, and it was not worth his while being alive if he could not perform it?” “Of course,” said he. “But the wealthy man, as we say, has no function of this sort set before him, one that makes life unliveable if he is compelled to give it up.” “Indeed not. That is what people say, at any rate.” “Do you not listen to Phocylides,”⁷⁰ said I, “who says that once someone has a livelihood he should practise excellence?” “Yes,” said he, “and I think even before then.”

407b

“Let us not fight with him about this,” said I. “Instead, let us teach ourselves whether a wealthy person should practise this, and whether life is worth living for someone who does not do so. Or is the fostering of diseases an impediment to the application of the mind to carpentry and the other skills, while it does not prevent us from adhering to the injunction of Phocylides.” “Yes, by Zeus,” said he. “Excessive attention to the body, beyond simple physical training, is almost the greatest impediment of them all. In fact, it is troublesome in running a

household, in military campaigns, and in positions of authority in the city.”

407c

“But then, what is most significant is that it makes any kind of learning, reflection or attention to oneself hard. It is constantly suspecting some tension or dizziness of the head, and blaming this on philosophy. And so it acts as a total impediment to practising and testing excellence in this way, for it constantly makes a person believe he is sick, and makes him agonise incessantly about his body.” “Quite likely,” said he.

407d

“Should we maintain that Asclepius recognised all this too? There are those whose bodies are naturally healthy and have a healthy lifestyle, but have contracted some specific disease, and it was for these people, in this condition, that he devised medicine, for getting rid of diseases through ^{407e} drugs and surgery, prescribing their accustomed lifestyle so that he would not damage the public affairs of the city. While in the case of bodies that are diseased through and through, he did not attempt to contrive a long, bad life for the person, by gradually pouring things in and draining things out, enabling him in all likelihood to produce more sickly offspring of this sort. Rather, he did not believe he should treat someone who was unable to live his life normally, following the established course, since this would not be worthwhile either for himself or the city.” “You are saying,” said he, “that Asclepius was a statesman.”

408a

“Of course,” said I, “and his children too, because of the sort of man he was. Or do you not see that at Troy they proved themselves to be good at warfare, and they practised medicine in the way I described it? Or do you not also recall that in the case of Menelaus’ wound, the one Pandarus inflicted on him, ‘They sucked the blood and soothing simples sprinkled’,⁷¹ but they did not prescribe what he should drink or eat afterwards,

any more than they did for Eurypylus, since the drugs were quite sufficient to cure a man who had a healthy and orderly lifestyle before he was injured, even if he happened to take a barley, cheese and wine drink afterwards. However, they thought that it was not worthwhile, either for himself or anyone else, that someone who is diseased by nature, and lacking in restraint, should live on. They decided that their skill should not be applied to people like this, and that they should not treat them, even if they were wealthier than Midas.”⁷²

408b

“You are saying,” said he, “that the sons of Asclepius were men of great refinement.” “Appropriately so,” said I. “And yet, the tragedians, and Pindar too, are unconvinced by us,⁷³ and they maintain that although Asclepius was a son of Apollo, he was bribed with gold to cure a wealthy man who was already at the point of death, and for this, they say, he was struck by a thunderbolt. Whereas we, adhering to what we said before, are unconvinced by either of their claims. Rather, if he was the son of a god, we shall maintain that he was not corruptible, and if he was corruptible, he was not the son of a god.”

408c

“Well, you are quite right about that,” said he. “But what point are you making here, Socrates? Should we not have good physicians in our city? And presumably the best qualified doctors would be the ones who had treated the greatest number of healthy people, and sick people too. And the same would go for jurors. The best would have consorted with a whole range of people of all sorts and varieties.” “I am referring to good ones, very much so,” said I. “But do you know who I regard as good?” “I would if you told me,” said he.

408d

“I will try,” said I. “But you were asking about two dissimilar cases in the same question.” “How so?” he asked. “Physicians,” said I, “become highly accomplished if, beginning in childhood,

besides learning their skill, they also deal with as many bodies as possible of the most degenerate kind, and have themselves suffered from all these diseases and are, by nature, utterly unhealthy. For I do not ^{408e} believe they treat a body using their own body. Indeed if that were the case, their bodies could never be allowed to be in a bad condition, or to become so. But they treat a body using their own soul, which cannot be allowed to become bad, or to be so, if it is to carry out the treatment well.” “Correct,” said he. “But a juror, my friend, rules over a soul using his own soul, which should not be allowed, from its earliest years, to be reared among degenerate souls, to consort with them, act unjustly itself, and systematically go through all the injustices, so that it may, with a keen eye, detect the injustices ^{409a} of others, like bodily diseases. It must, rather, from its earliest years, have no experience of evil dispositions and be uncontaminated by them if it is to be noble and good and deliver sound judgements as to what is just. That is why the most suitable candidates appear simple-minded when they are young and are easily deceived by unjust folk, since they do not have patterns within themselves that resemble the responses of the evil doers.” “Yes, indeed,” said he, “that certainly is what happens to them.”

^{409b}

“That is why,” said I, “a good juror should be old rather than young, someone who has learned late in life what injustice is by realising that it does not belong in his own soul, and practising for a considerable time being fully aware of it as something alien, present in alien souls as an innate badness. To this knowledge he should have recourse rather than his own direct experience.” “Well, a juror like this,” said he, “seems to be the noblest kind of all.”

^{409c}

“And good too,” said I, “which is what you were asking about. For anyone who has a good soul is good. But that clever fellow

with a suspicious mind who has done a lot of evil deeds himself, who is cunning and thinks he is wise when in the company of people like himself. appears clever when he is being cautious, and looks to his own internal patterns. But when he is alongside good ^{409d} people or his elders, at that stage, by contrast, he appears stupid by being unnecessarily suspicious, unable to recognise a healthy disposition because he does not possess patterns of this sort. But since he meets degenerate people more often than worthy people, he seems to himself and to others to be more wise rather than more foolish.” “Yes,” said he, “that is true, entirely so.”

^{409e}

“Well, then,” said I, “we should not seek out a juror of this sort. If we want a good and wise one we should seek the previous sort. For degeneracy would never recognise both excellence and itself. But natural excellence may be educated, over time, to apprehend both itself and degeneracy simultaneously. So this person as I see it, and not the bad person, turns out to be wise.” “That,” said he, “is the way I see it too.”

^{410a}

“Will you not prescribe laws for our city, instituting medicine as we described it, alongside this sort of judicial practice? Will these treat those citizens of yours whose bodies and souls are naturally good, and if this is not so, allow those who are naturally bad in body to die off, while they themselves put to death those who are naturally bad in soul and incurable.” “This is apparently,” said he, “what is best both for the people in this predicament and for the city.” “And so,” said I, “your young folk of course will be careful not to need a judicial process like this, by making use of that simple music which, we say, engenders sound-mindedness.” “Indeed,” said he.

^{410b}

“And will not the musical person, by following the same trail as in the case of physical training, if he wishes, understand how to

avoid the need for medical treatment except when it is necessary?" "It seems so to me, at any rate." "Even the physical training itself, and the exercises, are something he will work at with the spirited aspect of his nature rather than physical strength in view, unlike other athletes who make use of diet and exercise for the sake of strength." "Quite right," said he.

410c

"In that case, Glaucon," said I, "is it not the case that those who established education in music and physical training did not do so with the intention that some people assume, that one would treat the body while the other would treat the soul?" "What was their intention then?" he asked. "It is most likely," said I, "that they established both, mainly for the sake of the soul." "How so?" "Have you not noticed how the mind itself is affected in people who devote themselves throughout ^{410d} their lives to physical exercise, and have nothing to do with music, and in those who do the exact opposite?" "What are you referring to?" he asked. "A fierceness and hardness in one case, and a softness and gentleness in the other," said I. "I have noticed," said he, "that those who devote themselves exclusively to physical training turn out fiercer than they should be, while those who do so in the case of music become softer than is good for them." "And, indeed," said I, "the fierceness is derived from the spirited part of the nature, and, given the proper nurture, it would constitute courage, but if it becomes more intense than it should, it would likely become hard and harsh." "That is how it seems to me," he said.

410e

"What about this? Would not the philosophic nature be associated with the gentleness, and if this is relaxed too much will it not be softer than it should be? And if it is properly nurtured will it not be gentle and orderly?" "Quite so." "And we are saying that our guardians should possess both of these natures?" "They should." "And should not the two be in

harmony with one another?” “Of course.” “And where there is such harmony, the soul is sound-minded and courageous?” “Entirely so.” “And where there is disharmony, it is cowardly and harsh?” “Very much so.”

411a

“Now, is it not the case that whenever someone surrenders to music, to be charmed by the flute sounds pouring into his soul through the ears as if through a funnel, pouring in those sweet, soft, dirge-like harmonies we spoke of just now, and lives his whole life humming delightedly in song, this man, if he possesses a spirited part, softens it at first, like iron, and renders it useful instead of being useless and brittle? But when he pours music in unceasingly, and it works its charms, he then proceeds to melt his spirit, turn it to liquid, until he finally dissolves it away as if he were ^{411b} severing the very sinews of his soul, and turning it into a ‘feeble warrior’.”⁷⁴ “Entirely so,” said he. “Now, if he were endowed by nature,” said I, “from the very outset, with a soul devoid of spirit, this would happen very quickly. But if it were spirited, having weakened the spirit he would render the soul unstable, quick to quarrel over trivia, and just as quick to calm down. So he becomes bad-tempered and irascible, rather than spirited, and he is filled with discontent.” “Yes, exactly.”

411c

“And what if someone, in contrast, works hard at physical training, feeds himself well, very well, but refrains from music and philosophy? At first, because his body is in such good shape, will he not be filled with confidence and spirit, and become more courageous than he was before?” “Very much so.” “And what if he practised nothing else, and had no communion with a Muse at all? Even if there was some love of learning in his soul, since it never gets a taste of learning or of enquiry, and is never involved in discourse, or music in general, will it not become weak, deaf and blind, since it is never awakened or nourished,

and its awareness is never purified?" "Just so," said he.

411d

"Then a person like this becomes a hater of discourse, and is devoid of music. He no longer uses ^{411e} verbal persuasion, but he gets results in everything through force and violence, like some wild animal, and he lives his life in ignorance and ineptitude, without any rhythm or grace." "That is it," said he. "Entirely so." "Well, since there are it seems these two, the spirited and the philosophic, I would say that some god has given humanity two skills, music and physical training, aimed at the spirited and the philosophic, not at the soul and the body except incidentally, but at these two so that they may be harmonised with one another, by tightening and slackening them to the appropriate extent."

412a

"Yes, it seems that way," said he. "So, the person who blends physical training most beautifully with music, and applies them to the soul with the utmost measure, is the one we may rightly declare to be perfectly musical and well harmonised in the highest degree, much more so than anyone who tunes the strings of an instrument." "Quite likely, Socrates," said he.

412b

"In that case, Glaucon, will we not always need some overseer of this sort in our city, if our constitution is to be preserved?" "Yes, indeed, we shall need this most of all." "These then, would be the guidelines for their education and upbringing. Indeed why would anyone itemise the dances, hunts, chases, athletic contests, and horse races that people like this would have? Surely it is quite obvious that these must adhere to those guidelines, and should no longer be hard to discover." "Probably not," said he.

412c

"So be it," said I. "Well then, what should we decide next? Will we not need to decide which of these same people will rule, and

which of them will be ruled?" "Of course." "Is it obvious that the rulers should be older, and those who are ruled should be younger?" "It is obvious." "And is it not obvious that the best of them should rule?" "That is obvious too." "But do not the best of the farmers turn out to be the most accomplished at farming?" "Yes." "And now, since these must be the best of our guardians, will they not be the most accomplished at guarding our city?" "Yes." "And must they not be intelligent in this role, and capable, and still care for the city?"

412d

"That is it." "But someone would care most for that which he actually loves." "Necessarily." "And, indeed, he would love this most once he believes that whatever benefits the city also benefits himself, and thinks that when it does well, he himself does well too, and if it does not, he does not." "Quite so," said he. "Then, we should select men of this sort from among the other guardians, men who, as we watch 412e them throughout their entire lives, seem to us to be entirely eager to do whatever benefits the city, and unwilling under any circumstances to do anything that does not." "These are suitable for selection," said he. "Then, I think they need to be watched at all stages of their lives to see that they guard this precept well, and are never charmed, or forced to forget and cast aside the opinion that they should do what is best for the city."

413a

"What do you mean," said he, "by 'cast aside'?" "I shall tell you," I replied. "It seems to me that opinion departs from the mind either voluntarily or involuntarily: voluntarily when false opinion departs from someone who learns better, involuntarily in the case of any true opinion." "I understand the case where it is voluntary, but I need you to explain the case where it is involuntary." "What about this? Do you not believe," I said, "that people are deprived of what is good involuntarily, and of what is bad voluntarily? And is it not bad to be deceived in

relation to the truth, and good to have the truth? Or do you not think that to have the truth is to think things that are?"

413b

"Yes," said he, "what you are saying is right, and I think they have been deprived, involuntarily, of true opinion." "Does this not happen to them when they are robbed, harmed or forced?" "Now, this I do not understand either," said he. "Perhaps," said I, "I am speaking in a lofty, tragic style. Indeed by 'robbed' I mean those who are persuaded to change their minds, or who are made to forget, because time in the latter case, and discourse in the former case, takes something from them without their noticing. So I presume you understand now." "Yes."

413c

"And by 'those who are forced' I mean those whom pain or distress would induce to change their minds." "Yes, I understand that too, and what you are saying is correct." "Those who are charmed, I think you would agree, are those who change their opinions when beguiled by pleasure or intimidated by some fear." "Indeed," said he, "everything that deceives people seems to charm them." "Well then, as I was saying just now, we should seek out some who are the best guardians of their own precept, according to which they should, on every occasion, do whatever seems best for the city. So, they should be watched from their very earliest years, setting them tasks in which someone would be most inclined to forget such a precept and be deceived. And we should select those whose memory holds and who are difficult to deceive, and reject anyone who is not like this. Is this so?"

413d

"Yes." "And we should also assign hard work, tribulations and trials to them, in which we should watch for these same qualities." "Rightly so," he replied. "Now," said I, "we should also devise a third kind of test in relation to being charmed, and

we should watch what happens. Just as people expose young horses to noise and commotion to see if they are fearful, so too, whilst still young, our guardians should be brought into fearful circumstances and then transferred into situations of pleasure, and thus be tested far better than gold is ^{413e} tested in the fire. And if someone is evidently resistant to charms, dignified in everything, a good guardian of himself and of the culture he has come to understand, adhering to good rhythm and harmony in himself under all these circumstances, he would then be of the greatest service, both to himself and to the city. And someone who is tested continually, as a child, as a youth and as a man, and emerges without taint, should be installed as a ruler and guardian of the city, and should be given honour in life and after death by assigning the most revered of our tombs and other memorials to him, while someone who is not like this should be rejected.

^{414a}

“So, Glaucon,” said I, “I think this is the selection and appointment process for our rulers and guardians. It is just an outline, not a detailed description.” “Well,” said he, “that is how it appears to me too.”

^{414b}

“In that case, would it, in truth, be most correct to refer to these people as guardians in every respect, both in relation to enemies from outside and friends within, so that the friends will not wish to do anything bad and the enemies will be unable to do so, while the younger people, whom we were calling guardians just now, are referred to as auxiliaries, who support the precepts of the rulers?” “Yes, I think so,” said he.

^{414c}

“Is there any way,” said I, “we might contrive one of those lies we were referring to earlier, the ones that arise in response to a need, a single noble lie to persuade the rulers themselves for the most part, or, failing that, persuade the city in general?”

“What sort of lie?” said he. “It is nothing new,” said I. “Yes, it is something from Phoenicia,⁷⁵ which has happened in many places already, as the poets maintain, and has convinced people. But it has not happened in our time, nor do I know if it could happen, and to convince people would require a lot of persuasion.” “You seem to be speaking with some reluctance,” said he. “My reluctance,” said I, “will seem quite reasonable once I have said what I have to say.” “Speak on,” said he, “and have no fear.”

414d

“I will tell you, then, even though I do not know where to find the audacity or the words to use, and I shall attempt firstly to persuade the rulers themselves and the soldiers, and then the rest of the city, that in fact all the education and upbringing we gave them was just like a dream. They imagined they were experiencing all this and that this was happening to them, but in truth they were under the earth at the time, being moulded and nurtured within her, and both themselves and their armour and the rest of their equipment was being manufactured. And once they had come ^{414e} fully to completion, the earth, their mother, sent them forth. And now they are to plan for and defend the place they are in, as though it were their mother and their nurse, if anyone goes against her. And they are to think of all the other citizens as their brothers and sisters, sprung from the self-same earth.” “No wonder you were ashamed to recount this lie,” said he.

415a

“Quite reasonably so,” said I, “but nevertheless, listen to the rest of the story. Yes, indeed, all who are in the city are brothers, that is what we shall tell them in our story. But as the god fashioned you, he mixed in gold in the generation of those of you who are up to the task of being rulers, and because of this such people are valued most. In the case of the auxiliaries, he mixed in silver, and he used iron and bronze in the case of

farmers and other artificers. Now, since you are all kindred, ^{415b} you would, for the most part, produce offspring like yourselves. Yet there are times when silver could be born from gold and there could be golden offspring from silver, and all the others could spring from one another in the same way. So, the god first and most emphatically proclaims to the rulers that they should be good guardians of nothing else, and should watch over nothing as intently as they watch the offspring in case there be any admixture of these other metals in their souls. And ^{415c} if their offspring is born with an admixture of bronze or of iron, they will not act out of pity in any way. Rather, granting them the respect appropriate to their nature, they will banish them to the ranks of artisans or farmers. Then again, if someone with an admixture of gold or silver is born among these, they will respect them and transfer some to the rank of guardians, others to that of auxiliaries, because there is an oracle according to which the city will be destroyed whenever an iron guardian or a bronze guardian guards her. Now, do you know any way that they might come to believe this story?"

^{415d}

"Not at all," said he, "not in the case of the people themselves. But perhaps their sons and the next generation, and humanity in general thereafter, might believe it." "But even this much," said I, "would work nicely to ensure that they show more care for the city and for one another. For I think I understand what you are saying fairly well. Indeed, this will ^{415e} unfold in whatever way human tradition may take it, while we lead out these earth-born men, fully armed, led by their rulers. And when they arrive, have them look about for the best place in the city to set up their military camp, a location from which they could exercise most control over the city's inhabitants in case anyone might be unwilling to obey the laws, a place from which they could also defend her against outsiders in case enemies might come upon her like a wolf upon a flock of sheep. And with

their camp established, having offered sacrifices to the appropriate gods, they could make places to rest. Or how do you see it?" "Just so," said he.

416a

"Will not such places be adequate to withstand the heat of summer and the cold of winter?" "Yes, they must be," said he, "since I think you are referring to their dwellings." "Yes," said I, "dwellings for soldiers rather than for money-makers." "Again," said he, "what distinction are you making between these two?" "I will try to explain this to you," said I. "Indeed, it is surely the most terrible thing of all and an utter disgrace for a shepherd to rear the sort of dogs that mind sheep in such a way that through indiscipline or hunger or some general defect of character, the dogs attempt to harm the sheep, and behave like wolves rather than dogs." "Terrible," said he, "of course."

416b

"So, must we not be on our guard in every way, in case these auxiliaries of ours do something like this to our citizens, because they are stronger than them, and become like harsh overlords rather than well-meaning allies?" "Yes," said he, "we must be on our guard." "Would they not have been provided with the greatest safeguard against this if they really had been properly educated?" "But surely they have been properly educated," said he. And I said, "This is not worth insisting upon, Glaucon, my friend. However, it is worth insisting upon what we said earlier, that they must have the right education, whatever that may be, if they are to possess the most important factor required to make them gentle, both towards themselves and towards the citizens under their guardianship."

416c

"And rightly so," said he. "And in addition to this education, anyone with any intelligence would maintain that they should also be provided with dwellings, and property in general, that does not prevent them from being guardians of the best

possible kind, and does not induce them to behave badly towards the other citizens.” “And he would be speaking the truth.”

416d

“Then see,” said I, “if they should live and be housed somewhat as follows if they are to be guardians of this sort. In the first place, none should possess any private property that is not absolutely necessary. Secondly, none of them should have a dwelling or storehouse that is not open to anyone who wants to go in. The necessities of life, as much as men in training for war who are both sound-minded and courageous require, these they will receive from the other citizens – as they stipulate – as a wage for guarding them, enough to last them no more than a year without any lack. And, like soldiers in a military camp, they should live life in common, and dine together at common tables.

416e

We shall tell them that they have gold and silver of a divine sort as a gift from the gods, always in their souls, and have no further need for the human sort; that it is an unholy act to pollute and contaminate that divine possession through the acquisition of mortal gold, because so much unholiness has arisen from dealing with the currency of the multitude, whereas the currency of these people is without taint; and that they are the only people in the city who are prohibited from handling or even ^{417a} coming into contact with gold or silver, or even from being under the same roof with them, from wearing them about their person, or drinking from a gold or silver vessel. “Accordingly, they would save themselves and save the city. But once they acquire land or houses or money of their own, they will then be householders or farmers rather than guardians, and will become slave-masters and enemies of the rest of the citizens rather than their allies. They will spend their entire life hating and being hated, conspiring and being conspired against, much more fearful of internal rather than external enemies, as

they run a course for themselves and the rest of the city that is already almost doomed to shipwreck.

417b

“So, for all these reasons,” said I, “let us declare that this is how the guardians should be provided with housing and with anything else, and let us establish these arrangements in law. Or do you not think we should?” “Entirely so,” said Glaucon.

BOOK IV

419a

Here Adimantus interrupted and said, “Now, Socrates, what would be your defence if someone were to maintain that you are not making these men very happy, and it is all their own fault, since, although the city is in truth theirs, they do not enjoy a single benefit from her, unlike their counterparts in other cities who own land, build beautiful grand houses, and acquire furniture to match, who offer private sacrifices to the gods, entertain guests, and, indeed, as you were saying just now, have acquired gold and silver and everything else that is supposed to belong to people who are going to be blessed? In fact, he might maintain, they look almost like paid auxiliaries who sit about ^{420a} in the city with nothing to do except keep watch.” “Yes,” said I, “and they do all this in return for their basic provisions, receiving no wages in addition to such provisions, as everyone else does. They will not even be able to travel abroad privately if they wish to, or pay for female companions, or indulge in other kinds of expenditure, like those who are generally regarded as happy. You are leaving out these objections, and a whole host of others like them.” “In that case,” said he, “let those objections also be included.” “So are you asking how we shall conduct our defence?” “Yes.”

420b

“We shall, in my opinion,” said I, “find whatever needs to be said by proceeding along the same track as before. Indeed, we shall say that it would be no surprise if these people, living in this way, are also the happiest people, even though we are not founding our city with a view to this so that one particular group among us will be especially happy, but so that the whole city will be as happy as it can possibly be. For we thought that in a city like this we would find justice to the greatest extent, and, by contrast, would find injustice to the greatest extent in the worst managed city, and, ^{420c} by observing them carefully, decide the issue we have been investigating for so long. At the moment then, we are, I believe, forming the happy city not by considering a few of its people in isolation, and proposing that people like this are happy, but by considering the whole city. We shall look at its opposite presently. “Indeed, it is as if we were painting a statue, and someone came along and said we were not using the most beautiful pigments on the most beautiful parts of the figure because we had painted ^{420d} the eyes, the most beautiful part, not with purple but with black. We would seem to be offering a reasonable defence by saying, ‘Strange man, do not presume that we should paint eyes so beautiful that they do not even look like eyes, and the same goes for the other parts too. But look and see whether we make the whole thing beautiful by applying the appropriate pigments to each part.’ “And, indeed, in the present case, do not compel us to attach happiness of this sort to our ^{420e} guardians, a happiness that will turn them into anything other than guardians. For we know we could dress our farmers in fine robes and deck them out with gold, and bid them work the land whenever they felt like it. We could have our potters recline by the fire, left to right, drinking and ^{421a} feasting, with the potter’s wheel beside them, to make as many pots as they felt like making. We could also make all the others happy in this way, so that the whole city would then be happy. But do not encourage us in this

direction since, if we take your advice, our farmer will not be a farmer, nor will our potter be a potter, nor will any of the other functions from which our city is constituted retain their character. “Now, in the case of the other functions, this is of less account, for shoe menders who are debased and corrupted, and who pretend to be shoemakers when they are not, are no threat to the city. But when guardians of the city and its laws seem like guardians when they are not, then, you see, they utterly destroy the entire city, and, what is more, they alone hold the key to the city being well governed and happy. So if we are producing true guardians of the city, who are least harmful to it, while our critic is referring to some farmers feasting at a festival, not in civic society, then he is describing something else besides a city.

421b

“So, we should consider whether to appoint the guardians with a view to providing them with the utmost happiness, or with a view to ensuring such happiness for the city as a whole, compelling or persuading our guardians to co-operate in this so that they will be the very best artificers of their own work, and the same will apply to all the others. And so, with the entire city flourishing and well managed, we should allow each of the types to have a share in happiness in the way that its nature allows.” “Yes,” said he, “this sounds well said to me.” “Well, then,” said I, “I wonder if the following point, related to this one, will sound reasonable to you.” “What is it?”

421c

“In the case of the other artificers, consider whether there are factors that corrupt them, so that they become bad artificers.” “What sort of factors?” “Wealth and poverty,” said I. “How so?” “As follows. Once he has become wealthy, do you think a potter will still be willing to attend to his craft?” “Not at all,” he replied. “Will he become lazy and less interested than he was before?” “Very much so.” “Will he not become a worse potter?” “That too,” said he, “very much so.” “Yes, indeed. And when,

due to poverty, he is unable to provide the tools or whatever else his craft requires, his workmanship will be poorer and he will teach his son and anyone else he instructs to be inferior artificers.

421d

“Indeed he will.” “Then, on account of both factors, poverty and wealth, what the crafts produce will be inferior and the artificers themselves will be inferior.” “Apparently.” “Then these, it seems, are additional factors which our guardians must watch out for by every possible means in case they creep into the city unnoticed.” “What sort of factors?” “Wealth and poverty,” said I, “since one produces luxury, idleness and disturbance, while the other leads to lack of freedom and bad workmanship, in addition to the disturbance.”

421e

“Entirely so, Socrates,” said he. “But please consider how our city will be able to go to war when it has acquired no wealth, especially if it is compelled to go to war against a large and wealthy city.”

422a

“It is obvious”, said I, “that it would be more difficult to fight against a single city like this, but against two such cities it would be easier.” “What do you mean?” said he.

422b

“Firstly,” said I, “if they need to do battle, will not they be fighting against wealthy men when they themselves are trained warriors?” “Well, yes,” said he. “This is so.” “Now, Adimantus,” I asked, “do you not think a single boxer, very well trained, could easily fight two rich, fat fellows who were not boxers at all?” “Probably not,” said he, “not at the same time, anyway.” “Not even if he were allowed to retreat,” said I, “and then turn around and strike the first man coming at him, and he were to do this repeatedly, under the baking sun? Would not a man like this ^{422c} get the better of quite a number of such fellows?”

“Indeed,” said he, “that would be no surprise.” “And do you not think rich people have more knowledge and experience of boxing than of warfare?” “I do,” he replied. “So, our trained warriors will easily do battle with two or even three times their own number.”

422d

“I shall concede the point,” said he, “for it seems to me that what you are saying is correct.” “What if we sent an embassy to the other city, telling them the truth: although we have no use for gold or silver, you do, so fight alongside us and take the wealth that the others have. Do you think anyone who heard this offer would choose to fight against tough, lean dogs, rather than fight alongside them against fat, soft sheep?” “No, I do not think so,” said he. “But if one city accumulates all the wealth of the others, watch out, in case it constitutes a danger to the one that is not wealthy.”

422e

“How fortunate you are,” said I, “that you think anything else deserves to be called a city except the sort we are equipping.” “What should we call it then?” he asked.

423a

“We should speak about the others,” said I, “as more than one city. For each of them is not a city, but a combination of many cities, as people say in jest, two at least – one of rich folk, the other of poor – both at war with each other. And in each of these, there are very many which you would be totally incorrect to regard as one. But if you regard them as many cities, distributing the wealth of some to the others, and the powers too, and even the people themselves, you will always have access to many allies and have few enemies. And as long as your city is managed sound-mindedly as was just arranged, it will be the greatest city, not in reputation, I do not mean that, but truly the greatest city, even if there are only a thousand defenders among her ranks. For you will not easily 423b find a single city

that is great in this way, among Greeks or non-Greeks, although there are many that seem to be many times greater than ours. Or do you think otherwise?" "By Zeus, I do not," said he. "Would this," said I, "not be the perfect criterion for our rulers in determining what size to make the city and, accordingly, the extent of the territory they should mark off, setting the rest aside?" "What criterion?" he asked. "I think it is as follows," said I. "Let it keep growing as long as it remains one city. It may grow thus far and no further."

423c

"That is a good way to proceed," said he. "In that case, should we give this additional instruction to our guardians: to be on their guard, in every respect, to ensure that the city be not small, nor seem to be great, but be one and sufficient?" "Quite a commonplace instruction, surely," said he. "And there is an even more commonplace instruction than this, which we mentioned previously, saying that it would be necessary, in situations in which any ordinary offspring are born to the ^{423d} guardians, that these should be sent away to other ordinary folk. And if special offspring are born to ordinary folk, these should be sent away to the guardians. And this is intended to show that even in the case of the other citizens, whatever anyone is suited to by nature is the task each should attend to, one person to one particular task, so that each, by practising the one task that is his own, would become not many but one, and in this way then the entire city would naturally come to be one, rather than many." "Yes," said he, "that is a more insignificant instruction than that other one."

423e

"Adimantus, my good man," said I, "we are not giving them a lot of important instructions as someone might presume. No, they are all quite minor, provided they guard the so-called 'one important thing'. Or should I say sufficient rather than important?" "What is that?" he asked. "Education and

upbringing,” said I. “For if, by being educated, they become reasonable men, they will easily see all of this quite clearly, and anything else we are leaving out at present, including the acquisition of women, marriages and procreation of children. They will see that all these should be conducted, as much as possible, so as to make all things common to friends. “Yes,” said he, “that would be most correct.”

424a

“And, indeed,” said I, “the state, once it is set in motion properly, proceeds like a developing circle. For a worthy upbringing and education that is kept safe produces good natures; and worthy natures in turn, by acquiring an education of this sort, become even better than their predecessors in general, and especially in their breeding, as is the case with other creatures.” “Quite likely,” said he.

424b

“So, to put it briefly, those who are to care for the city must hold fast to education so that it does not get corrupted without them noticing. They should, rather, guard this against everything, against any innovation in gymnastics or in music, contrary to our direction. They should be on their guard, as best they can, when anyone says that *People, surely, always give more applause to that song / which is the latest to circulate among the listeners*⁷⁶ for fear someone might presume the poet is perhaps speaking not of new songs, but of a new manner of singing, and is praising this. This sort of thing should not be praised, nor should the poet be ^{424c} understood in this way. Indeed, one must be cautious about change to a new form of music, as it poses a threat to the whole, since the manners of music do not change without the most important civic laws changing too. So says Damon, and I trust him.” “Well, you can count me as someone who trusts him too,” said Adimantus. “Then,” said I, “it is here in music, it seems, that the guardians must found their citadel.” “This, at any rate,” said he, “is where lawlessness easily creeps

in unawares.” “Yes,” said I, “since it is regarded as a sort of amusement that does not do any harm.”

424d

“Nor indeed does it do so,” said he, “except by establishing itself little by little. It flows gently into habits and behaviour, and from these it emerges larger, and enters the arrangements between the citizens, and then from these private arrangements it assails the laws and constitution with unrestrained licentiousness, Socrates, until finally it overturns everything, private as well as public.” “Indeed,” said I, “is that what it does?” “I think so,” said he.

424e

“In that case, as we were saying initially, should not our own children be involved straightaway in play that adheres to law, since if play itself becomes lawless and the children do likewise, it is impossible that they would develop into law abiding men?” “Yes, how could they?” said he.

425a

“Well then, when the children, having made a good start at playing, adopt a lawful spirit through music, then, in contrast to those other cases, this accompanies them in everything, and develops them, setting right anything in the city that was previously cast down.” “True indeed,” said he. “Then these people discover for themselves,” said I, “the seemingly trivial regulations, all of which their predecessors subverted.” “What sort of regulations?”

425b

“This sort: appropriate silence of the young in the presence of their elders, for instance; offering them seats, and standing up before them; care of parents; hairstyles, clothes, shoes, and physical appearance in general, and anything else of that sort. Do you not think so?” “I do.” “But to institute laws for these is, I think, silly. For having been instituted as laws, verbal or written, they are surely not acted upon, nor do they last.” “No,

how could they?"

425c

"It is likely at any rate, Adimantus," said I, "that the direction set by their education determines the sort of things that follow thereafter. Or does like not always call forth like?" "Of course." "And finally, then, I believe we would declare that it turns into something single, complete and active, which is either good, or the opposite." "Inevitably," he said. "That," said I, "is why I, for one, would not go further and attempt to institute laws for this sort of thing." "Well, that is reasonable," said he.

425d

"But, by the gods," said I, "what about commercial affairs and all the arrangements with one another that people enter into in the market, and, if you like, the contracts with manual labourers, actions for slander or assault, the bringing of lawsuits, the appointment of jurors, and if necessary, I presume, the imposition and payment of commercial or maritime taxes, general regulations of the market, the city, and the harbours, and anything else like this. Shall we bring ourselves to institute laws for any of these?"

425e

"No," said he, "it is not worth giving instructions to men who are noble and good, since in most of these cases in which laws need to be instituted, they will, I presume, easily discover them." "Yes, my friend," said I, "provided god grants them preservation of the laws we described before." "If not," said he, "they will spend their lives continually instituting and amending a whole host of regulations of this sort, in the belief that they will arrive at the best arrangement." "You are saying," said I, "that people like this are living like sick people who are not prepared to depart from their degenerate lifestyle because they lack the restraint required to do so." "Entirely so."

426a

“And, indeed, these people live their lives in a delightful manner. For in spite of any medical treatment, they make no progress, although they do make the diseases more complicated and more extensive, and they are always hoping, whenever anyone suggests a remedy, that this is the one that will make them healthy.” “Yes,” said he, “that is exactly the sort of thing that happens to people who are sick in this way.”

426b

“What about this?” I said. “Is it not a delightful feature of these people that what they regard above all as their greatest enemy is the person who speaks the truth, namely that until one gives up drunkenness, gluttony, womanising and laziness, neither drugs nor burning nor cutting, nor indeed any charms or amulets, nor anything else of that sort, will be of any benefit at all?”

426c

“It is not really delightful,” said he, “since getting annoyed with someone who speaks well holds no delight.” “It seems,” said I, “that you are not an admirer of men like this.” “No indeed, by Zeus.” “In that case, you will not praise the city as a whole either, as we said before, if it acts in this way. Or does it not seem to you that those cities that are badly governed and yet direct their citizens not to change the existing state of affairs as a whole, on pain of execution for doing so, are behaving just like those sick people? And whoever is pleased to serve them even though they are governed in this way, who delights them with flattery, who anticipates their wishes and is clever at fulfilling them, he will be their good man, wise too in important matters, and will win their respect.”

426d

“Yes,” said he. “I think they are behaving in the same way, and I have no praise whatsoever for them either.” “And what about those who are willing to serve cities like these, and are eager to do so? Are you not delighted by their courage and humanity?”

"I am," said he, "except in cases where they are deceived into believing that they are statesmen just because most people praise them." "What are you saying?" said I. "Can you not sympathise with the men? If a man who does not know how to measure is told by people like himself that he is six-foot tall, do you think it is possible for him not to believe this about himself?" "No, again I do not think so," said he.

426e

"Then, do not be so harsh with them. For people like this are the most delightful of all, instituting laws of the sort we just described, amending them, always believing they will find some way of curtailing corrupt practices in business dealings, and in the other areas I spoke of just now, while being unaware that they really are, as it were, cutting off the head of the Hydra."⁷⁷ "Yes, indeed," said he, "that is all they are doing."

427a

"Well, then," said I, "I would not have thought the true legislator needs to trouble himself with this sort of thing in relation to laws or civic affairs, either in a badly governed city or a well-governed one – in the former, because it is of no benefit and achieves nothing, and in the latter, because some of them could be discovered by anyone at all, while the others emerge automatically from the practices described earlier."

427b

"So," he asked, "what would be left for our legislative process?" And I said, "For us there is nothing, but for Apollo, who is in Delphi, there remain the greatest, most beautiful, and primary subjects of legislation." "What are they?" he asked. "The foundation of temples, sacrifices, and general care for gods, daimons and heroes; then, for those who have died, burial rites and whatever services to the denizens of the other world are needed to keep them well disposed. For obviously we have no knowledge of such matters, nor, as we are founding our city, shall we believe anyone else if we have any sense, nor shall we

have recourse to any ^{427c} interpreter except our ancestral one. For this god is surely the ancestral interpreter for all humanity in such matters, seated on the navel stone in the middle of the earth, giving his interpretations.”⁷⁸ “Yes, you are expressing that nicely,” said he, “and that is how it should be done.” “Well, then,” said I, “although your city would be founded at this stage, dear son of Ariston, you should now proceed to look within it, provided with sufficient light from somewhere. Do this yourself, and call upon your brother and Polemarchus and the others, in case we may somehow see ^{427d} what precisely justice may be, and injustice too I suppose, and what the difference between them is, and which of them a man who is to be happy should acquire, whether all gods and men are aware of this or not.”

^{427e}

“You are talking nonsense,” said Glaucon, “since you promised that you yourself were going to search for this because it would be an unholy act on your part not to come to the aid of justice, to the best of your ability, in every possible way.” “True,” said I. “You have reminded me and I should act accordingly, but you should all be involved too.” “That is what we shall do then,” said he.

^{428a}

“Well,” said I, “I hope we shall find it in the following way. I think our city, if it has indeed been founded correctly, is perfectly good.” “It must be,” said he. “Then it is obvious that it is wise, courageous, sound-minded and just.” “Obviously.” “Is it not the case that if we can find some of these qualities in the city, the remainder will be what has not been found? “Of course.” “Well, suppose there were four different things, and we were looking for one of them in something or other, and we then recognised this one first, that would be enough for us. But if we had previously recognised the other three, by this fact alone the object of our search would be recognised too, since obviously it is just the remainder and nothing else.” “Correct,”

said he. "So, in relation to these excellences, since there are four of them,⁷⁹ should we not conduct our search in the same way?" "Obviously."

428b

"And, indeed, it seems to me that wisdom is the first thing that is seen plainly in this, and something unusual becomes evident about it." "What?" he asked. "The city we have described is, I think, actually wise, since it is well advised, is it not?" "Yes." "And, indeed, it is obvious that being well advised is, in itself, knowledge of some sort. For it is not by ignorance, but by knowledge, that people are well advised." "Clearly." "But there are many varieties of knowledge in the city." "Yes, there must be." "Now, is it because of the knowledge of its carpenters that a city should be referred to as wise and well advised?"

428c

"Not at all," said he. "Because of this knowledge it is referred to as knowledgeable in carpentry." "So, it is not because of the knowledge dealing with wooden implements, and advising on how they might turn out best, that a city should be called wise." "No, indeed." "What about the knowledge dealing with objects made from bronze, or any other knowledge of this sort?" "It is not any of these either," said he.

428d

"Nor is it the knowledge dealing with producing crops from the earth. Rather, because of this it is knowledgeable in farming." "I think so." "What about this?" said I. "Is there, in the city we have just founded, any knowledge that is particularly associated with some citizens, knowledge by which the city is advised, not about some aspect of its affairs but about the city as a whole, and the manner in which it might best conduct itself towards itself and towards the other cities?" "There is, indeed." "What is it?" I asked. "And in which citizens does it reside?" "It is guardianship," said he. "And it resides in those who rule, to whom we have just given the name perfect guardians." "So,

what, on account of this knowledge, do you call the city?" "Well advised," said he, "and truly wise."

428e

"Now," said I, "in our city, do you think there will be more bronze workers or more of these true guardians?" "Far more bronze workers," said he. "Indeed," said I, "and among those who have some knowledge, and are named accordingly, would not these guardians be the fewest in number of them all?" "The fewest by far." "So, a city founded on a natural basis would be wholly wise because of the smallest group or part of itself and the knowledge residing in this presiding, ruling part. And it seems that this class naturally turns out to be the fewest in number, and is the class that deserves to be allocated this knowledge, which alone, among all other kinds of knowledge, merits the name wisdom." "Very true," said he.

429a

"Well then, I do not know how, but we have found this one, one of the four, and where it is situated in the city." "Well," said he, "in my opinion at any rate, it has been discovered quite satisfactorily." "Then again, it is not difficult to discern courage itself, and the part of our city in which it resides, on account of which the city is then called courageous." "How so?" "Who," said I, "could say that a city is cowardly or courageous, unless he had looked to the particular part that fights for her, and goes to war on her behalf?" "No one," said he, "would look to anything else." "Indeed," said I, "the fact that the other citizens in the city were cowardly or courageous would not, I believe, determine whether the city has the one quality or the other." "It would not."

429b

"And so, a city is courageous by some part of itself because it has a capacity of this sort in that part, a capacity which, in any situation, preserves the opinion about what things should be feared, and these are the same things, and the same sorts of

things, that the legislators proclaimed whilst educating them. Do you not refer to this as courage?" "I do not fully understand what you are saying," said he. "Please say it once more."

429c

"I am saying," said I, "that courage is a sort of preservation." "What sort of preservation is it?" "The preservation of the opinion, produced by law, through education, about what should be feared and what sorts of things they are. And when I said 'in any situation', I meant that the brave man preserves this opinion, faithfully, in the face of pleasure or pain, desire or fear, and never rejects it. I can give you what I regard as an example to illustrate this if you wish." "Yes, I do."

429d

"Do you not know," said I, "that when dyers want to dye wool so that it becomes purple, they first make a selection from all these colours and pick one kind – wools that are naturally white – and they prepare these in advance by treating them extensively so that they will take on the colour as best they can, and they then proceed with the dyeing? And whatever is dyed in this manner becomes ^{429e} colourfast, and no washing, either with detergents or without them, is able to remove the colour. Otherwise, well, you know the sort of things that happen when someone dyes wool of other colours, or even dyes these white wools without preparing them in advance." "I know," said he, "that they become washed-out and they look ridiculous."

430a

"Then," said I, "you should understand that we, to the best of our ability, were also engaged in a process of this sort when we were selecting our warriors and educating them in music and gymnastics. Understand that there was only one objective: that once they had been persuaded, as beautifully as possible, by ourselves, they would accept the laws like a dye so that their opinion in relation to what should be feared, and in relation to anything else, would become colourfast because they had

acquired a nature and an education that was suitable. Then, these detergents would not ^{430b} wash this dye out of them, despite their formidable dissolving power, pleasure, which is more to be feared for doing this than any soda or lye from Chalaestra; pain too, or fear, or desire, more to be feared than any detergent. Now, a power of this sort – the preservation, in any situation, of right and lawful opinion as to what should be feared and what should not – this I call courage, and this is what I propose unless you have some other suggestion.” “I have nothing else to suggest,” said he, “for I think you regard right opinion concerning these very issues when it arises without education, as is the case with beasts or slaves, as not entirely stable, and you refer to this not as courage but as something else.”

^{430c}

“Very true,” said I. “Then I accept that this is what courage is.” “And, indeed, you should accept it,” said I, “as being civic courage at any rate, and you will then be right to do so. But we shall, if you wish, give a better exposition of this on some other occasion. At the moment we are not looking for courage, but for justice, and for that enquiry, in my opinion, this is sufficient.” “That is fine,” said he.

^{430d}

“Then, there are,” said I, “two remaining qualities that we need to discern in our city, sound-mindedness and, the reason for our entire enquiry, justice.” “Yes, certainly.” “Now, how may we find justice so that we do not have to trouble ourselves about sound-mindedness anymore?” “Well,” said he, “I do not know. Nor do I wish justice to be revealed first if we will not be considering sound-mindedness anymore. But if you wish to gratify me, consider this before justice.” “Yes, indeed,” said I. “It is only right that I should wish to do so.” “Consider it then,” said he.

^{430e}

“Consider it I must,” said I. “And from our present vantage point, it looks more like a concord and harmony than the previous ones.” “How so?” “Presumably,” said I, “sound-mindedness is a kind of order, and a mastery over certain pleasures and desires, as people say when using the expression ‘stronger than oneself’, the manner of which I do not understand. And other expressions of this sort express a trace of this, do they not?” “Yes, absolutely,” said he.

431a

“Is not the phrase ‘stronger than oneself’ quite comical? For whoever is stronger than himself would of course also be weaker than himself, and the weaker be stronger, since the same self is spoken of in all of these cases.” “It must be.”

431b

“But,” said I, “it appears to me that this expression wishes to convey that there is something better, and something worse, associated with the soul of the particular person, and whenever the part in it that is naturally better is master of the worse, this is described as being stronger than oneself, as it is at any rate a term of praise. But whenever, through bad upbringing or company of a certain kind, the better part, which is smaller, is dominated by the sheer size of the worse part, this is censured as blameworthy and is called ‘being weaker than oneself’, and someone in this condition is said to be devoid of restraint.” “Yes, quite likely,” said he.

431c

“Well then, take a look at our new city,” said I, “and you will find one of these conditions in it, for you would be justified in saying that it is, itself, stronger than itself, if indeed we should refer to the city in which the better rules over the worse as sound-minded, and stronger than itself.” “Yes, I am looking,” said he, “and what you are saying is true.” “And indeed, the numerous and variegated desires, pleasures and pains would be found mostly in children, women and household slaves, and in

the majority of so-called ‘free men’ of the lowest order.”
“Entirely so.”

431d

“But the simple and measured desires which are led by reasoning, accompanied by intelligence and right opinion, are found in just a few people, those who are best by nature and those who have received the best education.” “True,” said he. “And do you not see that these are all present in your city and that the desires of the majority, the common folk, are controlled there by the desires and the understanding of the more moderate minority?” “I do,” said he. “So, if any city should be described as stronger than its pleasures and desires, and thus stronger than itself, this one should be so described.” “Yes, entirely so,” said he. “Should it not also be described as sound-minded on the basis of all these?” “Very much so,” said he.

431e

“And what is more, if the same opinion as to who should rule is present among the rulers and subjects in any city, it would indeed be present in ours. Do you not think so?” “Very much so,” said he. “Definitely.” “So, among which of the two groups of citizens would you say that sound-mindedness is present whenever they hold such an opinion, among the rulers or among the ruled?” “Among both, I presume,” said he. “Well, do you see,” said I, “that our prophecy just now, that sound-mindedness resembles a sort of harmony, was quite accurate?” “Why so?”

432a

“Because unlike courage and wisdom, each of which are present in a particular part of the city – thus making it wise in one case and courageous in the other – sound-mindedness operates differently. It really extends through the whole city, through everyone, the weakest and the strongest alike, and those in the middle too, be it in intelligence, strength, numbers or wealth, or

in anything else like this, and it makes them sing the same song. And so we would be quite right to declare this unanimity to be sound-mindedness, a natural concord of the worse and better as to which should rule, either in a city or in a single individual.” “I agree entirely,” said he.

432b

“There it is,” said I. “We have seen these three quite clearly in our city. That is how it seems at any rate. But what about the remaining form? The city would also get a share of excellence through that, so what precisely would it be? For it is, of course, justice that remains.” “Of course.”

432c

“Now is the time, Glaucon, when we, like hunters, should surround the thicket, paying careful attention lest justice escape us, slip away, and be lost from sight. Yes, apparently it is around here somewhere, so look out and make an effort to catch sight of it, and if you see it before I do, then tell me.” “If only I could,” said he. “But it is better if you use me as your follower, as someone who is able to see what is pointed out quite clearly to him. Then you will be treating me fairly.” “Follow then,” said I, “and pray along with me.” “I shall do so,” said he. “Just lead on.”

432d

“And yet,” said I, “it looks as if the terrain is hard to traverse and shadowy. It is dark indeed, and hard to hunt in, but we must proceed nevertheless.” “Yes, we must proceed,” said he. Then I spotted something, and shouted, “Ho, ho, Glaucon! Perhaps we have a trace of it, and so I do not think it will escape us entirely.” “That is good news,” said he. “In fact,” said I, “we are being stupid.” “In what way?”

432e

“All the while, blessed man, it appears to have been rolling about under our feet from the very outset, and yet we did not see it. We are highly comical figures, like people who sometimes

look for something they are already holding in their hands, and we, instead of looking directly at it, were peering off into the distance, and that is probably why it escaped our notice.” “What do you mean?” he asked. “As follows,” said I. “I think that although we have been speaking of justice, and hearing about it all along, we have not understood ourselves, and appreciated that in a way we have been speaking about it.” “For someone who is eager to hear you,” said he, “this prelude is a lengthy one.”

433a

“But do listen,” said I, “in case I have a point. Indeed, in the beginning when we were founding our city, the rule of action that we proposed throughout was, in my opinion, either justice or a form of justice. And we proposed of course, and have said many times since if you recall, that each individual should engage in one activity in the city, the one to which his own nature would naturally be best suited.” “Yes, we have said this.”

433b

“And, indeed, we have heard from many others, and have often said ourselves, that justice is doing what belongs to oneself and not being meddlesome.” “Yes, we said so.” “Then justice, my friend,” said I, “is likely to be this ‘doing what belongs to oneself’, when it occurs in a certain way. Do you know how I come to this conclusion?” “No,” said he. “Please tell me.”

433c

“It seems to me,” said I, “that after considering sound-mindedness, courage and wisdom in the city, this is what is left, and this is what provides the power for all these to come into existence. And once they have come into existence, it ensures their preservation, as long as it is present, since we did maintain that if we were to find the other three, this would be the one left undiscovered.” “Yes, indeed, this must be so,” said he.

433d

“Well now,” said I, “if we had to decide which of these four contributes most to making our city good, it would be difficult to decide whether it is the unanimity of opinion among the rulers and those who are ruled; or the preservation of the opinion, in accordance with law, as to what things should and should not be feared; or the wisdom and guardianship inherent in the military class. Or is this what does most to make the city good, the fact that among children, among women, among ^{433e} slaves and free, among artisans, rulers and subjects, each individual was engaging in the one undertaking that is his own, and was not being meddlesome?” “It would be hard to decide between them of course,” said he. “In that case, it seems that in relation to the excellence of the city, the capacity of each person in it to engage in what belongs to himself is on an equal footing with its wisdom, its sound-mindedness and its courage.” “Very much so,” said he. “So, would you propose that what is on an equal footing with these three, in terms of the excellence of the city, is justice?” “Entirely so.”

^{434a}

“Then you should also consider the following argument too. Will you assign the task of judging legal disputes to those who rule in the city?” “Of course.” “And do they have any other intention in passing judgement besides ensuring that no one gets what belongs to someone else, or is deprived of what belongs to himself?” “Nothing besides this.” “Because this is what is just?” “Yes.” “So, we could also accept on this basis too that having or doing what is one’s own and what belongs to oneself is justice.” “This is so.”

^{434b}

“Then let us see if this seems to you as it does to me. Suppose a carpenter attempts to do the work of a shoemaker, or a shoemaker the work of a carpenter, or they exchange tools or social status with one another, or the same person tries to engage in both activities, and all the other roles are changed

too, do you think this would greatly harm the city?" "Not really," said he.

434c

"But whenever someone, who is by nature a craftsman or some other commercial type, puffed up by wealth, numbers, strength or anything else like this tries to enter the military class, or a member of that class tries to enter the decision-making guardian class undeservedly, and they interchange their instruments and social status with one another, or the same person tries to engage in all these activities at the same time, then I think you agree with me that this exchange of roles and this meddling is the ruination of the city." "Yes, entirely so."

434d

"So, this meddling among these classes, three in number, and changing one into the other, is enormously harmful to the city, and this, above all, may be referred to most correctly as evil-doing." "Exactly so." "And would you not declare that the greatest evil-doing towards one's own city is injustice?" "Of course." "So this is injustice. Then again, we may say that the opposite of this, the commercial, auxiliary and guardian classes, engaging in their own functions, each of them doing what belongs to itself in the city, would be justice and would render the city just." "Yes," said he, "that is it. Just so."

434e

"Let us not," said I, "say it with complete certainty just yet. But if this form, when applied to each person individually, is also accepted by us as justice in that case too, we shall concede the point at that stage. What else could we do? But if not, we shall then consider something else. But we should now complete the enquiry in which we presumed that if we first attempted to observe justice in something large that possesses it, we would more easily discern the sort of thing it is in a single person. Now, we thought this large entity was a city, and so we founded the best one we could, ^{435a} knowing full well that justice would

be present in the good one. “So, we should apply whatever has become evident in the city to the individual, and if it corresponds, all will be well. But if something different becomes evident in the case of the individual, we should go back again to the city and put this to the test. Then perhaps, scrutinising them side by side and rubbing them together, we might cause justice to blaze forth like fire from firesticks, and once it has made its appearance we could become certain of it for ourselves.” “Yes,” said he, “that is the method and we should do as you say.” “Well now,” said I, “if something may be described as the same, be it larger or smaller, would it turn out to be unlike in that way, in the way it is described as the same, or would it be like in that way?” “Like,” said he.

435b

“And in that case,” said I, “a just man will not differ from a just city with respect to the form of justice itself; rather, he will be like it in that respect.” “Like,” said he. “And indeed, a city seemed to be just because of the three kinds of natures present in it, each engaged in what belonged to themselves. Furthermore, it was sound-minded, courageous and wise through certain other characteristics and habits of these same classes.” “True,” said he.

435c

“And so, we shall expect, my friend, on this basis, that the individual, having these same forms in his own soul, because of the same characteristics as those, rightly deserves the same names as the city.” “That is completely inevitable,” said he. “My excellent man,” said I, “we have stumbled into a further ordinary issue concerning the soul, whether it has these three forms within itself or not.” “It does not seem at all ordinary to me,” said he. “In fact, the saying may well be true, Socrates, that what is good is difficult.”

435d

“Apparently so, Glaucon,” said I. “And mark my words, in my opinion we shall never understand this in a precise manner from the sort of methods we are now using in these arguments. For there is another path, longer and more extensive, leading to this. Yet, it may perhaps be done in a manner worthy of what has been said previously, and the previous enquiries.” “Would not that be satisfactory,” said he. “Indeed, that would be enough for me, for the moment at least.” “Yes,” said I. “It will be quite sufficient for me too.” “Then do not flag,” said he. “Just enquire.”

435e

“In that case,” said I, “do we not really have to accept that the same forms and traits in the city are present in each of us? For presumably they did not get there from anywhere else. Indeed, it would be laughable if someone were to believe that the spiritedness in cities does not arise from its private citizens, the ones who actually have this reputation, as the Thracians and Scythians do, and almost ^{436a} anyone else from the northern region; or indeed, the love of learning that someone might attribute mostly to our own region; or the love of money mainly associated with the Phoenicians and the people of Egypt, as some would say.” “Very much,” said he. “This is how matters stand then,” said I, “and it is not difficult to recognise.” “No indeed.”

436b

“The difficulty at this stage concerns whether we enact each of these with the same thing, or with three things, using a different one for each. Do we learn with one of the parts within us, become spirited with another, and then feel desire with some third part, concerned with the pleasures of food and procreation, and anything related to these? Or do we, in each case, act with the whole soul when we are impelled to action? These are the issues that will be difficult to determine properly.”

436c

"I think so too," said he. "Well, there is a way to determine whether these are the same as one another, or different." "How?" "It is obvious that the same thing will not, at the same time, do or suffer opposites, in the same respect and in relation to the same thing, at any rate. And so, if we should somehow find this happening in the case of these three, we shall know that the things in question are not the same, but a number of different things." "So be it." "Then please consider what I am saying." "Speak," said he. "So, is it possible," said I, "for the same thing to be stationary and moving at the same time, in the same respect?" "Not at all."

436d

"But we should agree this even more precisely in case we encounter some conflict as we proceed. For if someone describes a man who is stationary but is moving his hands and his head, and says that the same person is stationary and moving at the same time, I presume we would not think that was the right way to describe this. We would say that a part of him is stationary, while another part is moving. Is this not so?" "Just so."

436e

"Now, if the person saying all this were to enjoy himself even more, by making the subtle point that spinning tops as a whole are stationary and in motion at the same time when they are spinning around, with their centre fixed in the same place, we would not accept this, because in cases like this, they are not at rest and moving about in respect of the same parts of themselves. We would say, rather, that they have straight and circular in them, and in respect of the straight, they are stationary since they are not tilting in any way, while in respect of the circular, they are moving in a circle. But when the straight inclines to the right or the left, to the front or the back, and it is revolving at the same time, then it is not stationary at

all.” “And we would be right to say so,” said he.

437a

“So, no assertions of this sort will bother us or persuade us to any extent, that the same thing could ever experience, be, or perform two opposites at the same time, in the same respect, in relation to the same thing.” “Not me, at any rate,” said he. “Nevertheless,” said I, “so that we are not compelled to drag this out by going through all possible objections of this sort and confirm that they are not true, let us assume that this is how matters stand, and proceed, having agreed that if it ever proves otherwise, all our conclusions derived from this will have been undone.” “Yes,” said he. “That is what we should do.”

437b

“In that case,” said I, “would you propose that assenting and dissenting, striving to get something and rejecting it, embracing and pushing away, everything of this sort, are all opposites of one another, regardless of whether one does them or suffers them? For that I presume makes no difference.” “Yes,” said he. “They are opposites.”

437c

“What about this?” I said. “What about hunger and thirst and the desires in general, wanting and wishing too? Would you not, somehow, include these among those forms we just described? For example, would you not say that the soul of someone who has a desire either strives for whatever it desires or embraces whatever it wishes to obtain? Or again, insofar as it wants something to be provided, would you not say it assents to this, assents to itself, as if someone else was asking, and the soul was reaching out to get it?” “I would.”

437d

“What about not wishing, not wanting and not desiring? Would we not associate these with the soul’s pushing away or driving away from itself, and, in general, the opposites of those previous examples?” “Of course.” “This being the case, shall we

maintain that desires constitute a particular class, and the most obvious of these are what we call thirst and hunger?” “We shall,” said he. “Is not one a desire for drink, the other for food?” “Yes.” “Well then, insofar as it is thirst, would it be a desire in the soul for anything more than this, anything more than what we are saying it is a desire for? Is thirst, for instance, a thirst for hot or cold drink, or a lot of or little drink, or, in short, for a certain kind of drink? Or if some heat is present ^{437e} in addition to the thirst, would it give rise to the desire for cold, and if cold is present, to the desire for hot? And if, because of the presence of ‘much’, the thirst is much, will it bring about a desire for much, and if it is little, a desire for little? Or is it the case that thirst itself will never become a desire for anything else besides what it is naturally for, namely drink, while hunger, for its part, is desire for food?” “That is it,” said he. “Each desire itself, without qualification, is only for the natural object of that desire, just that, while any additions are desires for something of this sort or something of that sort.”

^{438a}

“And beware,” said I, “lest anyone trouble our unreflective minds by saying that no one desires drink or food, but good drink and good food, since everyone of course desires what is good. So if thirst is desire, it would be for good, be it good drink or anything else. And the same holds for the other desires.” “Yes,” said he. “Perhaps someone who said this might seem to have a point.”

^{438b}

“Well now,” said I, “in the case of the sort of things that are related to something else, the things of a certain kind are related to something else of a certain kind, or so it seems to me, while the things, just by themselves, relate to themselves alone.” “I do not understand,” said he. “Do you not understand,” I said, “that the greater is greater in relation to something?” “Entirely so.” “Is it not greater in relation to the lesser?” “Yes.”

“And what is much greater is much greater in relation to what is much less. Is this the case?” “Yes.” “And what is greater, on occasion, is so in relation to what is less, on occasion, and what will be greater will be so in relation to what will be less?” “Of course,” said he.

438c

“And does the same apply to more in relation to fewer, double in relation to half, and everything else of this sort, and of course heavy in relation to light, fast in relation to slow, and hot in relation to cold, and everything like these?” “Very much so.” “What about various kinds of knowledge? Does not the same thing apply? Knowledge is, itself, knowledge of learning, of learning itself, or of whatever we should propose that the object of knowledge actually is. Whereas, particular knowledge of a certain kind is of something particular of a certain kind. What I mean is this. When knowledge of how to build a house arose, was it not ^{438d} different from the other kinds of knowledge so that it could be referred to as ‘house-building knowledge’?” “Of course.” “Was this not by its being a certain kind of knowledge, a kind that is different from any of the others?” “Yes.” “Was it not because it was of something of a certain kind that knowledge itself became knowledge of a certain kind, and does not the same apply to the other skills and kinds of knowledge?” “Just so.”

438e

“Well, then,” said I, “if indeed you understand now, please accept that this is what I wanted to say earlier: that among things that are related to something else, these, just by themselves, relate to these just by themselves, while those of a certain kind relate to things of a certain kind. And I do not mean that they are also the sorts of things they are related to so that knowledge of what is healthy or diseased is healthy or diseased knowledge, and knowledge of what is bad and good is bad or good knowledge. Rather, when knowledge became not just

knowledge of the object of knowledge, but of something of a certain kind, namely health or disease, then the knowledge as a consequence became knowledge of a certain kind and was no longer simply called knowledge. Once the particular kind is added on, it is called medical knowledge.” “I understand,” said he, “and I think this is how matters stand.”

439a

“Well, then,” said I, “in the case of thirst, would you not propose that it is one of those things that is what it is in relation to something else? And what it is, of course, is thirst.” “I would,” said he, “and it is in relation to drink.” “And is it not a particular kind of thirst related to a particular kind of drink, while thirst itself is neither for much nor little, neither for good nor bad, nor in short for any particular kind of drink? Thirst itself is rather, by nature, only for drink itself?” “Entirely so.” “So, the soul of the thirsty person, insofar as it is thirsty, wants to do nothing else except drink. It yearns for this and strives for this.” “Of course.”

439b

“In that case, if anything ever draws it away from drink when it is thirsty, would not that be something else within the soul besides that which is just thirsty, and is leading it on like a wild animal to drink? For according to us, the same thing does not, at the same time, do opposite things with the same part of itself in relation to the same thing.” “Indeed not.” “So, for instance, in the case of an archer, I presume it is not appropriate to say that his hands push and pull the bow at the same time, but that one hand pushes while the other pulls.” “Entirely so,” said he.

439c

“Now, would we maintain that there are, on occasion, people who refuse to drink although they are thirsty?” “Very much so,” said he, “lots of them, on many occasions.” “Well, then,” said I, “what might one say about these people? Whatever bids them drink is present in their soul, is it not? And whatever

forbids them is there too, and this is something different which overpowers whatever bids them.” “I think so,” said he. “Now, does not whatever forbids such actions as these arise, whenever it does arise, from reasoning? While everything that attracts and drags the soul comes about through external influences, or diseases?” “Apparently.”

439d

“So,” said I, “it would not be unreasonable for us to regard these as two things, separate from one another, referring to the one by which the soul reasons as the rational part, and to the one by which ^{439e} it is passionate, hungry, thirsty, or is aroused by the other desires, as the irrational, appetitive part, associated with certain satisfactions and pleasures.” “Indeed,” said he, “it would be reasonable for us to think so.” “Then, we should,” said I, “distinguish these two forms in the soul. But what about spirit, and that by which we become spirited? Is this a third form, or would it be similar in nature to one or the other of these two?” “To one of them, perhaps,” said he. “To the appetitive.”

440a

“But I heard a story once,” said I, “and I believe it, that Leontius, son of Aglaion, was coming up from the Piraeus, along the outside of the northern wall, when he noticed corpses lying beside the public executioner. He felt a desire to look at them, and at the same time he was disgusted and turned himself away, and for a while he struggled and covered his face. But finally, overpowered by the desire, he opened his eyes wide, ran up to the corpses and said, ‘Take a look, you wretches, have your fill of this beautiful sight!’.” “I have heard this myself,” said he. “Well,” said I, “this story indicates that wrath sometimes fights against desires, one thing fighting against another.” “Yes, it does indicate this,” said he.

440b

“Are there not many other situations too where desires are forcing someone to act contrary to reason, and he reviles

himself and rouses his spirit against the part within himself that is forcing him, as if there are two factions, and the spirit of a person like this becomes the ally of the reasoning part. But spirit making common cause with the desires, when reason concludes that something should not be done... I am sure you would say you have never observed anything like this in yourself, nor I presume in anyone else.” “No, by Zeus,” said he.

440c

“But what if someone thinks he himself is acting unjustly?” I asked. “Is it not the case that the more noble he is, the less able he is to get angry because he suffers hunger or cold, or anything else like that, at the hands of someone who believes he is inflicting these justly? Indeed, I am saying that his spirit will not be prepared to rise up against this fellow.” “True,” said he.

440d

“And what if someone believes he is being treated unjustly? In that case, does he not seethe with anger and fight alongside whatever seems just? And despite suffering hunger, cold, and everything of that sort, does he not endure and prevail, never forsaking all that is noble, until he has either succeeded or perished or is called back and calmed by the reason within him, just as a dog is recalled by a shepherd?” “Entirely so,” said he. “It is just as you say. And of course we installed the auxiliaries in our city, just like dogs, obedient to their rulers, the shepherds of the city.” “You have appreciated what I wish to explain quite well,” said I. “But I wonder whether you noticed something else besides this.” “What?”

440e

“That the spirited element is appearing opposite to how it did just recently. Then we thought that it was something appetitive, but now, in total contrast, we are saying that when there is conflict in the soul, it is much more inclined to deploy its weaponry in support of the rational element.” “Entirely so,” said he.

441a

“Now, does it do so as something different from the rational element, or as a form of the rational element, in which case there would not be three elements in the soul but two, the rational and the appetitive? Or is the soul just like the city, which was constituted by three classes, the commercial, the auxiliary and the deliberative? And is the spirited element, therefore, a third thing in the soul, a natural auxiliary to the rational element, unless it gets corrupted by a bad upbringing?”

441b

“It must be a third element,” said he. “Yes,” said I, “provided it is shown to be different from the rational element, just as it was shown to be different from the appetitive element.” “But that is not difficult to show,” said he. “Indeed, even in children, you can see that although they are full of spirit as soon as they are born, some of them, in my opinion, never partake of reason, while most of them take a long time to do so.” “Yes, by Zeus,” said I. “You put that nicely. And even in wild animals it can be seen that what you are saying is true. And in addition to these examples, the extract from Homer that we quoted elsewhere will lend support: *He smote his breast and rebuked his heart with the words...*⁸⁰ since in this case Homer has clearly made the part that has reasoned about what is better and what ^{441c} is worse rebuke the unreasoning spirit, as if they were two different things.” “Exactly,” said he, “you are right.” “So,” said I, “we have, with some difficulty, come safely through all this, and we have agreed that in all likelihood the same kinds are present in the city and in the soul of each individual person, and the same number too.” “This is so.” “Well, is it not necessarily the case, at this stage, that in whichever way the city is wise, so too is the private citizen wise, and the element by which the city is wise is the element by which the person is wise?” “Of course.”

441d

“And is the element by which a private citizen is courageous also the element by which the city is courageous, and is the way in which one is so the way in which the other is so, and in all other cases related to excellence must the same manner of being so apply to both?” “Necessarily.” “Then, Glaucon, I presume we shall maintain that a man is just, in the same way that a city was just.” “This too is necessarily the case.” “But we surely have not forgotten that this city was just, by each of the three classes within it doing what belongs to itself.” “I do not think we have forgotten,” said he.

441e

“Then, we must remember that each of us, in whom each of the parts within us does what belongs to itself, will be just, and will be doing whatever belongs to himself.” “We must remember this, indeed,” said he. “So, is it not appropriate that the rational element rule, since it is wise, and exercises forethought on behalf of the entire soul, while the spirited part should be subordinate, and fight by its side?” “Entirely so.” “In that case, as we were saying, does not the combination of music and gymnastics make them both harmonious, intensifying and nurturing the one with noble words and learning, while relaxing and soothing the other, making it gentle through harmony and rhythm?” “Exactly,” said he.

442a

“And these two, then, nurtured in this way, having learned and been educated in what truly belongs to themselves, will take command of the appetitive element, which is the most extensive part of the soul in each of us, and the part that is by nature the most greedy for wealth. They will watch over this in case it gets too big and strong by filling itself with the so-called pleasures of the body, and rather than doing what belongs to itself, attempts to enslave and rule over what its kind should not rule over, and overturn the entire life of everyone.” “Very much so,” said he.

442b

“And are not these two,” said I, “also best equipped to guard against external enemies, on behalf of the soul and the body too, one giving advice, the other fighting on their behalf following the advice of the ruling element, and carrying it out courageously?” “Just so.”

442c

“And we call each individual courageous too – I presume, because of this – whenever his spirited element, in the face of pain or pleasure, holds to what has been proclaimed by the words to be worthy of fear, or not.” “And rightly so,” said he. “And we call him wise because of that small part, the one that ruled in him and made these proclamations; a part that has, in turn, the knowledge within itself of what is beneficial to each part and to the whole community, consisting of the three of them.” “Very much so,” said he.

442d

“What about this? Is not being sound-minded the result of the friendship and harmony among these themselves, when the ruling element and the two that are ruled share the belief that the rational element should rule, and do not take a stand against it?” “That”, said he, “is exactly what sound-mindedness is, either in a city or a private citizen.” “Then again, he will be just because of the principle we have referred to on many occasions. He will be just because of this, and in this way.” “Yes, he really must be.”

442e

“Well then, what about this?” said I. “Are we seeing justice any less distinctly? Does it seem to be something different from what it turned out to be in the case of the city?” “It does not seem different to me,” said he. “Indeed,” said I, “in case there is any doubt still lurking in our souls, we could make completely certain of this by applying some commonplace considerations to it.” “Of what sort?”

443a

“Suppose we needed to come to an understanding concerning this city and the man who resembles it in nature and upbringing, and whether such a person would withhold a deposit of gold or silver with which he had been entrusted. Do you think anyone could believe that a man like this would do such a deed, rather than someone who is not like this?” “No one could,” said he. “And would not sacrilege, theft, betrayal of friends in his private life, or betrayal of the city in his public life, be alien to this man?” “Alien.” “Nor indeed would he be unfaithful to his oaths or any other agreements.” “No, how could he be?” “Adultery too, neglect of parents, and disregard for the gods, may be associated with anyone else, but not with a person like this.” “Anyone else indeed,” said he.

443b

“And is it that in all these cases, the explanation is that each of the elements within him does what belongs to itself, in relation to ruling and being ruled?” “There is no other explanation. That is it.” “So, are you still looking for justice? Is it anything else besides this power which produces men of this sort, and cities too?” “By Zeus,” said he, “I am not.”

443c

“So, our dream has finally come to maturity, the suspicion we spoke of that, as soon as we set about founding our city, thanks to some god, we had in all probability stumbled upon the origin and some outline of justice.” “Yes, entirely so.”

443d

“And so, Glaucon, this was, after all, a sort of image of justice – that is why it was useful – the principle that someone who is by nature a shoemaker rightly practises shoemaking and engages in nothing else, while the carpenter engages in carpentry, and the same goes for all the others.” “Apparently so.”

443e

“Now, although justice was, in truth, it seems, something of this sort, it was not anything concerned with the external activity that belongs to a person but with the inner activity that truly concerns himself and what belongs to himself, not permitting each element in himself to engage in activities that are alien to it, nor allowing the kinds that are in the soul to meddle in one another’s functions; rather putting what is his own in place well and truly, ruling over and bringing order to himself, becoming a friend to himself, and harmonising the three elements which are really like the three defining notes of the musical scale, the highest, lowest and middle, and any others that are in between. Having bound all these together from many, he becomes entirely one, sound-minded and harmonious. Then, and only then, does he proceed to act if any action is needed, either in the acquisition of wealth, the care of the body, or indeed in civic affairs or private contracts. In all these activities, whatever preserves and helps to bring about this condition, he regards as a just and noble action and he names it accordingly, and the knowledge that presides over this action he calls wisdom. But whatever action consistently undoes this disposition, he calls unjust, and he calls the opinion that presides over it ignorance.” “What you are saying, Socrates,” said he, “is entirely true.”

444a

“There it is,” said I. “If we were to claim that we had found the just man and the just city, and what justice in them happens to be, I do not think we would seem to be telling an out-and-out lie.” “Indeed not, by Zeus,” said he. “So should we make this claim?” “We should.”

444b

“Let it be so then,” said I, “since we should go on to consider injustice next.” “Obviously.” “Must it not, by contrast, consist in faction among these three elements, a meddlesomeness by which they do what is alien to themselves, one part rising up against the entire soul to rule there when that is not its role, a

part that is naturally suited to slavery enslaving the part that is naturally suited to rule? These, I believe, are the sort of things we will say, and that the confusion of these elements, and their going astray, is injustice, lack of restraint, cowardice and ignorance, and in short, all evil.” “That is exactly what they are,” said he.

444c

“Well, then,” said I, “as for performing unjust actions and being unjust, and performing just actions too, isn’t it clear and obvious at this stage what all of these actually are, since it is clear what injustice and justice are?” “How so?” “Because”, said I, “there is no difference between these two and health and disease, which are to the body as justice and injustice are to the soul.” “In what way?” he asked. “What is healthy presumably produces health, while what is diseased produces disease.” “Yes.” “And does not doing what is just produce justice, while doing what is unjust produces injustice?” “Necessarily.”

444d

“And producing health consists in establishing the elements in the body so that they control and are controlled by one another according to nature, while producing disease consists in establishing them so that they rule and are ruled by one another contrary to nature.” “Yes, that is it.”

444e

“Well,” said I, “would not producing justice, for its part, consist in establishing the elements in the soul so that they control and are controlled by one another according to nature, while producing injustice will consist in establishing them so that they rule and are ruled by one another contrary to nature?” “Exactly,” he replied. “So, excellence, it seems, would be a sort of health, beauty and vigour of the soul, while vice would be a disease, disgrace and weakness.” “Just so.” “Now, is it not the case that noble activities lead to the acquisition of excellence, while disgraceful ones lead to vice?” “Necessarily.”

445a

“Then, what remains for us to consider at this stage, it seems, is whether it is indeed profitable to do what is just, engage in noble actions, and be just, whether such behaviour goes unnoticed or not; or, on the other hand, to act unjustly and be unjust, provided one does not pay a penalty, or become a better person by being punished.” “But Socrates,” said he, “that consideration, as I see it, is already becoming absurd if it implies that life is not worth living when the nature of the body is corrupted, even if the person is surrounded by food and drink of every sort, huge wealth and enormous power, ^{445b} yet implies that life will indeed be worth living when this very nature by which we live is confounded and corrupted, provided the person does as he wishes and avoids anything by which he will banish evils and injustices, and acquire justice and excellence, especially since these have turned out to be as we have described them.” “Absurd, indeed,” said I. “But nevertheless, since we have come far enough to see quite clearly that this is how matters stand, we should not flag at this stage.” “No, by Zeus,” said he. “We should not flag at all, not in the least.”

445c

“Come here, then,” said I, “so that you may behold how many forms this evil has in my opinion, those that are worthy of note at any rate.” “I am following you,” said he. “Just speak.” “Well, then,” said I, “it appears to me from our present viewing point, so to speak, having ascended to this level of argument, that there is one form of excellence, and that the forms of evil are without limit, although there are four of them that are worth mentioning.” “How do you mean?” said he. “There are probably as many types of soul as there are types of government, with a particular form.” “How many?”

445d

“Five types of government,” said I, “and five types of soul.” “Tell me, what types?” “I say,” said I, “that one type of government is

the one we have been describing, although it is given two names. For when one exceptional individual arises among those who rule, it is referred to as kingship, and when there is more than one, as aristocracy.” “True,” said he.

445e

“Well, I am saying,” said I, “that this is one form. For whether one such person or a number arises, they would not alter any laws of the city worth mentioning, provided they have recourse to the upbringing and education we have described.” “Yes, that is most unlikely,” said he.

BOOK V

449a

“Well, a city like this and such a form of government, and a man of this sort too, I call good and right. And if this is indeed right, I call the others bad and wide of the mark in relation to the management of cities and provision for the type of soul of their private citizens. There are four forms of degeneracy in cities.” “What are they?” he asked.⁸¹

449b

And, as I was about to speak of these four in turn, and how in my view they each evolve from one another, Polemarchus, who was seated further from Adimantus, reached out his hand, grabbed his garment from above around the shoulder, drew the man toward him, stretched forward, leaned towards him and said a few things, none of which we could hear except, “Well, shall we let this go,” said he, “or what shall we do?” “Not in the least,” said Adimantus, speaking loudly at this stage. “And,” I said, “what precisely are you ‘not letting go’?” “You,” said he.

449c

“Because of what, precisely?” said I. “We think,” said he, “that you are taking the easy way and cheating us out of a whole section of the argument, an important one at that, so that you

do not have to go through it in detail. And you think you will get away with saying glibly that, of course, in the case of women and children, it is obvious to everyone that ‘friends will have all things in common’.” “Is that not right, Adimantus?” said I.

449d

“Yes,” said he. “But ‘right’, like everything else, requires explanation – common in what sense? Indeed, it could be meant in many ways. So do not just pass on. Tell us what sense you intend, since we have been waiting for some time, expecting you somehow to mention the procreation of children – how this will happen and how they will be reared once they have been born – and explain this whole issue of women and children being in common that you are speaking of. For we believe that arranging this correctly or incorrectly is of enormous significance, on the whole, to a system of government. So now, since you are in the process of tackling another form of government before dealing properly with these 450a issues, we are resolved, as you heard, not to let you proceed until you have gone through all these details, just as you did with the others.” “And you can include me in that vote too,” said Glaucon. “Indeed, Socrates,” said Thrasyarchus, “you may regard this as a resolution of us all.” “What have you done,” said I, “tackling me like this? What an enormous argument you are setting in train. It is like starting all over again from the beginning about the form of government when I was pleased that this had been dealt with already, being satisfied if someone would allow all 450b this and accept what was said at the time. Now, when you call these matters into question, you do not realise what a swarm of arguments you are stirring up. I saw this earlier, and I passed on for fear of raising too much difficulty.”

450c

“What is this?” said Thrasyarchus. “Do you think these people have come here on some gold-rush, and not to hear arguments?” “Yes,” said I, “arguments, in measure.” “Yes,

Socrates,” said Glaucon. “But for reasonable people, their whole life hearing arguments like these is the measure. But do not be concerned about us, and, for your own part, do not tire at all of expanding upon your views about what will be the manner of this sharing of children and of women among our guardians, and the rearing of the young ones in the intervening years after they are born and before their education. A troublesome period, it seems. So, try to describe the manner in which this should happen.”

450d

“Blessed man,” said I, “this is not easy to explain since it involves a great deal that is difficult to accept, even more than what we dealt with previously. Indeed, it may be hard to believe that what is said is possible, and even if it were somehow or other to become a reality, it may be hard to accept that these would be the best arrangements. That is why, dear friend, there is some reluctance to touch them at all in case the argument looks like a vain hope.” “Let there be no hesitation,” said he, “for your hearers will be neither unsympathetic nor incredulous nor negative.” “And,” I said, “best of men, I presume you wish to encourage me by saying this?” “I do,” said he.

450e

“Well, you are doing the exact opposite,” said I. “If I believed I knew what I was talking about, your encouragement would be well placed. For to speak the truth when you know it, among reasonable people and friends, on matters of great importance that are dear to your heart, is safe and encouraging. But to construct arguments when you are still in doubt and still seeking, which is what I am doing, is a frightening and perilous undertaking. Not for fear of being laughed at – that is a trivial concern – but that I shall stumble from the truth and bring down not just myself but my friends too on issues we should not stumble from at all. And I prostrate myself before Adrasteia,⁸²

Glaucou, for what I am about to say. For I expect that it is a lesser error to become a murderer by mistake than to deceive noble and good people about what is just and lawful. Now, it is better to run this risk among enemies rather than friends, so you do well to encourage me.”

451a

Glaucou laughed and said, “But, Socrates, if we experience any disquiet over your argument, we shall acquit you as if you had been charged with murder. To us you are pure and not a deceiver, so take heart and speak.” “Well, then,” said I, “according to the law, someone acquitted in court is pure so that is likely to be so in this situation too.” “Then speak,” said he, “now that this is resolved.”

451b

“In that case,” said I, “we need to go back over this once more, and say now, in due order, whatever we probably should have said at the time. And perhaps this would be the correct way: after the male drama has been described thoroughly, let us go on and conclude the female drama, especially since that is what you are asking me to do. Indeed, in my opinion, for people whose nature and education is as we have described it, there is not another correct way of possessing and dealing with children and women besides proceeding in the direction in which we first sent them. In our account we attempted, I believe, to establish the men as guardians of a herd.” “Yes.”

451c

“Well, let us follow this up by assigning them the relevant birth and upbringing, and consider whether that is appropriate for our purposes or not.”

451d

“In what way?” said he. “As follows. Do we think female guard dogs should guard whatever the males guard along with them, and hunt, and share in the other duties too? Or should they be kept at home indoors, unable to do all this because they bear

the puppies and rear them, while the males go out to work and have total responsibility for the flock?" "They should share in everything," said he, "except that we should employ the females as weaker and the males as stronger."

451e

"Now, is it possible," said I, "to employ any creature in the same roles as any other creature if they have not received the same upbringing and education?" "That is not possible." "So, if we are to employ women in the same roles as men, they also should be taught the same things."

452a

"Yes." "Music and gymnastics were given to the men." "Yes." "In that case, these two skills should be given to the women too, along with anything related to warfare, and they should be employed in the same ways." "That is likely," said he, "from what you are saying." "Perhaps, then," said I, "compared to what we are used to, a lot of what we are now describing might appear comical, if practised in the way it is being described." "Very much so," said he.

452b

"What," said I, "do you regard as the most comical aspect of all this? Or is it, of course, the prospect of the women exercising naked in the Palaestra alongside the men, not just the young women but the older ones too, just like the old men in the gymnasium when they are wrinkled and not a pleasant sight, who love their gymnastics nevertheless?" "Yes, by Zeus," said he. "that would look comical, by present-day standards at least."

452c

"Well," said I, "since our discussion is under way, we should not be afraid of whatever jokes, of whatever kind, the witty folk might make about such a transformation taking place in the realms of gymnastics or music, especially in relation to women bearing arms or riding horses." "Quite right," said he. "And

since we have begun to discuss this, we should proceed to the rough terrain of the law, and implore these wits not to do what belongs to themselves but to be serious, and we shall remind them that it is not long since the Greeks thought it disgraceful, and comical too, as do most other races today, for men to be seen naked. And when the practice of exercising naked first started ^{452d} among the Cretans, and then among the Spartans, the polite folk of that era got away with making a mockery of all this. Do you not think so?" "I do." "However, I think once it became evident to those who adopted the practice that it is better to undress for any activities of this sort rather than covering up, then what is comical to the eyes vanished in the face of what reason proclaimed to be best. And this demonstrated that it is futile to regard anything as comical, except what is bad. And that someone who tries to raise a laugh by ^{452e} regarding any other spectacle, apart from stupidity and evil, as comical, will also in all seriousness be setting up another standard of nobility, apart from what is good." "Entirely so," said he. "Well now, should we not first come to agreement on whether all this is possible or not, and grant a right of reply in case someone wishes to argue, in jest or seriously, over whether human nature, ^{453a} in the case of the female, is able to share in all the tasks of the male, or in none of them, or in some but not in others, and over which of these two categories this military role belongs to? Would this not be the best way to start the process, to ensure that we are likely to finish in the best way too?" "Very much so," said he.

^{453b}

"In that case," said I, "would you like us to take up the dispute ourselves on their behalf in case the arguments of the other side go undefended against our repeated attacks?" "There is no reason not to," said he. "Then, let us say on their behalf, 'Socrates and Glaucon, there is no need for you to dispute with anyone else since you yourselves, when you began founding this

city of yours, agreed that each individual should engage in the one function that is his own by nature.” “I believe we agreed this. Why would we not?” “Must there not be an enormous difference in nature between a woman and a man?” “Yes, they must be different.”

453c

“In that case, is it not appropriate to assign a different function to each, the one that is their own by nature?” “Of course.” “So how can you avoid falling into error now, and saying the opposite of what you yourselves said before by maintaining that although men and women are vastly different in nature, they should perform the same functions?” Well, my wonderful friend, what defence will you be able to offer in response to this?” “It is not very easy,” said he, “to respond so suddenly. But I shall ask you, and I am asking you, to elaborate the case on our behalf, whatever that is.”

453d

“These, dear Glaucon, and many others like them, are the issues that I was afraid of when I foresaw them a while ago, and so I was reluctant to deal with the law concerning the possession and upbringing of women and children.” “It does not seem to be an easy subject to deal with,” said he. “Not at all, by Zeus.” “Indeed not,” said I. “But the fact of the matter is that regardless of whether someone falls into a little bathing pool or the middle of a vast sea, nonetheless he swims.” “Very much so.” “Should we not swim too and attempt to save ourselves from the argument, hoping that some dolphin, or some other more unusual saviour, would pick us up?”⁸³ “Quite likely,” said he.

453e

“Come on, then,” said I. “Let us find some way out of this. Although we agree of course that a different nature should engage in a different activity, and that women and men differ in nature, we are now maintaining that these different natures

should engage in the same activities. Are these the accusations against us?" "Yes, precisely."

454a

"Dear Glaucon," said I, "how noble is the power of the skill of contradiction." "Why?" "Because," said I, "it seems to me that many people fall into this unintentionally, and believe they are not arguing, but engaging in discussion. This is because they are unable to consider what is being said by making distinctions on the basis of forms, so they pursue their opposition to what is being said based just upon a word, employing argumentation rather than dialectic towards one another." "Yes, indeed," said he, "that is what happens to a lot of people. But surely this does not apply to us at the moment?" "It certainly does," said I, "since we are in danger of engaging, unintentionally, in contradiction." "How?"

454b

"On the basis only of the word, we are very vigorously and argumentatively pursuing the point that different natures should have different pursuits, but we did not consider, in any way, what kind of different nature we were distinguishing when we assigned different pursuits to a different nature, and the same to the same." "No indeed," said he. "We did not consider this."

454c

"In that case," said I, "we may, it seems, ask ourselves if the nature of bald men and long-haired men is the same or the opposite. And should we agree that it is opposite, and bald men engage in shoemaking, we would not allow hairy men to do so, and again if hairy men did so, we would not let the others do so." "That would be ridiculous indeed," said he.

454d

"Yes," said I, "but for what reason? Is it not because, at the time, we were not speaking of a nature that was the same or different in every respect? Rather, we were paying attention only to that

form of difference or sameness that applies to the pursuits themselves. We meant, for instance, that a man and a woman with the soul of a physician have the same nature. Do you not think so?" "I do." "But a physician and a builder have a different nature?" "Completely different, I suppose." "Well," said I, "if it turns out that the male sex and the female sex excel at some skill, or in any pursuit, should we not then declare that this should be assigned to them? But if it merely turns out ^{454e} that they differ in that the female bears the offspring while the male begets them, and in this respect alone, then we shall maintain that nothing more has yet been presented that is relevant to what we are saying, about how a woman differs from a man, and we shall go on thinking that our guardians and their women should engage in the same pursuits." "And rightly so," said he.

^{455a}

"Now, after this, should we not ask anyone who says the opposite to explain precisely this to us: in relation to what skill or pursuit, relevant to the condition of our city, is the nature of a woman and a man not the same, but different?" "Well, that is fair enough." "But perhaps someone else might also say what you said a little earlier, that although it is not easy to respond adequately there and then, given time to consider the matter it is not difficult." "Yes, they might say that."

^{455b}

"So, do you want us to ask the person who raises such objections as these to follow us in case we may somehow demonstrate to him that there is no pursuit, related to the administration of a city, that is particular to a woman?" "Entirely so." "'Come on, then,' we will say to him, 'answer us. In what way do you mean that one person has a natural gift for something while another person does not? Is it that one person learns it easily while the other has difficulty? Would the one, with minimal instruction, discover a lot for himself about the subject he has been taught while the other, despite a great deal

of instruction and study, ^{455c} would not even retain what he has been taught? And is whatever belongs to the body adequately subservient to thought in one case and opposed to it in the other? Are these the criteria by which you distinguish the naturally gifted person from the one who is not, or are there others?" "No one," said he, "will maintain there are others."

^{455d}

"Now, do you know anything that is practised by humanity in which the male sex does not excel over the female, in all these respects? Or are we to go on at length about weaving and attending to pancakes and stews, in which the female sex does have a reputation, and where it is utterly laughable for them to lose out to a man?" "That is true," said he. "You could say that one sex is much surpassed by the other in every- ^{455e} thing, and although many women are better than many men in many respects, the situation is, on the whole, as you describe it." "So, my friend, in the case of those who manage a city, there is no pursuit that belongs to a woman because she is a woman, or to a man because he is a man. The natures are distributed in like manner among both creatures, and a woman by nature shares in all the pursuits, and so does a man, although a woman is weaker than a man in every case." "Entirely so."

^{456a}

"Well then, shall we allocate them all to the men and none to the women?" "How could we?" "On the contrary, we shall maintain, I presume, that one woman is by nature inclined to be a physician while another is not, one is musical while another is unmusical." "Of course." "Is not one woman inclined towards gymnastics and warfare, while another has an aversion to warfare and is no lover of gymnastics?" "Yes, I think so." "What about this? Will one be a lover of wisdom while another hates it? Will one be spirited while another is devoid of it?" "This is the case too."

^{456b}

“So one woman also has the qualities of a guardian while another does not, since this was the sort of nature we selected in the case of our male guardians too, was it not?” “This sort, indeed.” “So in the guardianship of a city, the nature of a man and of a woman is the same, except insofar as one is weaker and the other stronger.” “Apparently.”

456c

“In that case, women of this sort should be selected to live with and exercise guardianship with men of this sort, if they are indeed up to the task and akin to them in nature.” “Entirely so.” “And should not the same pursuits be allocated to the same natures?” “The same.” “So after all that, we have come back to our previous considerations, and we accept that it is not contrary to nature to prescribe music and gymnastics to our women guardians.” “Entirely so.”

456d

“In that case we were not passing impossible laws, like vain hopes, since we proposed a law in accordance with nature. Rather, our present-day practices that run counter to this are, it seems, more opposed to nature.” “So it seems.” “Was not our enquiry concerned with whether our proposals might be possible, and for the best?” “It was indeed.” “And have we agreed that they are actually possible?” “Yes.” “Then do we need to agree next that they are for the best?” “Of course.” “Well, when it comes to creating a woman guardian, we will not need one education to produce the men and a different one to produce the women, will we, especially since it is taking charge of the same nature?” “No, not a different one.” “Now, what view do you hold on the following issue?” “What issue?”

456e

“Do you presume that some men are better while others are worse? Or do you think they are all alike?” “Not at all.” “Now, in the city we were founding, who do you think turned out to be our better men, the guardians who received the education we

described, or the shoemakers who have been educated in shoemaking?” “What a funny question to ask,” said he. “I understand,” said I. “And what about the other citizens? Are not these guardians the best of them?” “Very much so.” “And what about these guardian women? Will they not be the best of the women?” “This is also the case,” said he. “Very much so.” “And is there anything better for a city than the presence of the very best women and men?” “There is not.”

457a

“And will music and gymnastics, applied in the way we have described them, bring this about?” “Of course.” “So, not only is the regulation we proposed possible, but it is also best for the city.” “Quite so.” “Then, the women guardians must undress, since they will be clothed in excellence rather than garments. And they must share the military role and the other duties of a guardian of the city, and not engage in anything else, although in the exercise of these the lighter duties should be assigned ^{457b} to the women, rather than the men, because of the weakness of their sex. But the man who laughs at naked women exercising with the best of intentions, ‘plucks the fruit of laughter, unmatured by wisdom’,⁸⁴ and does not know what he is laughing at, it seems, or even what he is doing. Indeed, this is surely expressed most beautifully, and always will be, by the saying ‘what is beneficial is beautiful, and what is harmful is ugly’.” “Entirely so.”

457c

“May we then claim that we are escaping this first wave, so to speak, without being swept away completely by describing the law relating to women’s affairs? We proposed that our male and female guardians should share in all pursuits, but does the argument somehow or other agree with itself, since it describes what is possible, and beneficial too?” “Yes, indeed,” said he. “It is no small wave that we are escaping.” “You will not say that this one is big,” said I, “when you see the next one.” “Keep

talking,” said he. “Let us see.” “There is, in my opinion,” said I, “a law that follows from this, and from whatever else has been said before.” “What is it?”

457d

“These women are all shared among all these men, and no woman is to live together in private with any man. And the children too are shared, and no parent is to know its own offspring, or any child its parent.” “This,” said he, “presents a much greater credibility issue than the previous one, in terms of its possibility and also of its benefit.” “I do not think,” said I, “there would be dispute over the benefit, since there is great good, is there not, in women being shared and children too, if it can be done. But I think there would be much dispute over whether this is possible or not.” “Both issues,” said he, “would be disputed, well and truly.”

457e

“You mean,” said I, “that there is an alliance of arguments against me. I thought I had escaped the first one, provided you would accept that the arrangement would be beneficial, and I would then be left with the question of whether it is possible or not.”

458a

“Well, your escape did not go unnoticed,” said he, “so give an account of both.” “Then I must pay the penalty,” said I. “But gratify me to this extent. Allow me a holiday, just as people who are mentally lazy are in the habit of indulging themselves when they proceed on their own. In fact, people like this, before discovering how something they desire will come into existence, somehow set that question aside so that they will not tire themselves out by deliberating over whether it is possible or not. They assume that what they want exists already, and set about arranging everything else, and they delight in working out the sort of things they will do now that this has come into existence, thus making an already lazy soul even lazier.

458b

“Well, I too am getting soft at this stage, and I wish to postpone those issues and investigate how they are possible later on. Just now, on the assumption that they are possible, I shall, if you let me, consider how the rulers will arrange all this in detail once the system is in place, and whether their implementation would be more advantageous than anything else for the city and its guardians. These, if you let me, are the issues I shall first attempt to consider in detail with you. We shall consider those others later.” “I am letting you,” said he. “Go ahead and consider this.”

458c

“Well, I think,” said I, “that if our guardians are to be really worthy of this name, and their auxiliaries likewise, the latter should be willing to follow orders and the former to issue them, in some cases obeying our laws themselves and, in other cases, those in which we transfer responsibility to them, they will imitate our laws when giving their orders.” “Quite likely,” said he.

458d

“Then you, their lawgiver,” said I, “just as you selected the men, should also select the women, to bestow upon them women who are as similar to them in nature as possible. And these people, since they have shared dwelling places and meal tables, and no one possesses anything of this sort privately, will be together. And having mingled with one another in the gymnasium, and throughout their general upbringing, they will necessarily be drawn by innate nature to intercourse with one another. Or do you think this lacks the force of necessity?” “Well, not the necessities of geometry at any rate, but those of love, which are surely more potent at persuading and drawing most people.”

458e

“Very much so,” said I. “But besides all this, Glaucon, to have intercourse, or do anything else at all in a random manner, is

unholy in a city of happy people, and the rulers will not allow it.” “No,” said he, “that would not be just.” “Then it is obvious,” said I, “that we should next make marriages sacred, to the best of our ability, and those that are most beneficial would be sacred.” “Entirely so.”

459a

“Well, in that case, how shall they be most beneficial? Tell me this, Glaucon. I notice that you have dogs for hunting, and quite a number of well-bred birds, at home. Now, by Zeus, have you noticed anything about their unions and their production of offspring?” “What sort of thing?” he asked. “Firstly, although they are all well bred, are there not some that are, or turn out to be, the very best?” “There are.”

459b

“Now, do you breed from all of them in like manner, or are you careful to do so, as much as possible, from the best of them?” “From the best.” “And do you breed from the youngest or from the oldest, or as much as possible from those in their prime?” “From those in their prime.” “And if they are not bred in this way, do you believe your stock of birds and hounds will be much worse?” “I do,” said he. “And in the case of horses and other animals,” I asked, “is the situation any different?” “It would be strange,” said he, “if it were different.”

459c

“Well, well, my dear friend,” said I, “our rulers will need to be at their very best if the situation is the same in the case of the human race.” “But the situation is the same,” said he. “What of it?” “Because they will need to make use of many medicines,” said I. “And presumably, in cases where bodies do not need medicine because they are responsive to a particular lifestyle, we regard even an ordinary physician as sufficient. But whenever it is necessary to make use of medicines, we know that a bolder physician is required.” “That is true. But what are you referring to?”

459d

“To the following,” said I. “It is likely that our rulers will have to resort to falsehood on a large scale, and deception too, for the benefit of their subjects. And we maintained, I believe, that everything of this sort is useful as a form of medicine.” “And rightly so,” said he. “And the fact that it is right turns out to be most significant in the case of marriages and in the production of offspring.” “How so?” “Based upon what has already been agreed, the best should have intercourse with the best, as often as possible, and the worst with the worst as seldom as possible, and the offspring of the former ^{459e} should be reared, while those of the latter should not, if the flock is to be at its pinnacle. And all this should take place without anyone knowing about it except the rulers themselves, if our herd of guardians, for its part, is to be as free of faction as possible.” “Quite right,” said he.

460a

“In that case, should there not be some festivals, instituted by law, at which we shall bring together the brides and the bridegrooms? And should there not be sacrifices too, and should not our poets compose hymns appropriate to the marriages that are taking place? We shall make the rulers responsible for the number of marriages so that they may, as best they can, maintain the population at the same level, taking war, disease, and anything else like this into consideration, and as far as possible neither allow our city to become too big or too small.” “Right,” said he. “Then I think certain ingenious lotteries should be devised so that the ordinary person will blame chance, rather than the rulers, for each union.” “Yes, indeed,” said he.

460b

“And to those young men who are somehow best in war, or I presume in anything else, honours and prizes should be given, and in particular more generous opportunity for intercourse with the women so that as many children as possible may be

begotten by men like these, while affording an excuse for this at the same time.” “Right.” “And any offspring that are born will be taken over by the officials responsible for these matters, who may be men or women or both, since official posts too are presumably shared between women and men.” “Yes.”

460c

“Then, I think, having taken the offspring of the good, they will transfer them into the fold, to special nurses who dwell apart in some precinct of the city, while the offspring of the inferior, or of any of the others that are born with deformities, they will hide away in a secret, undisclosed place as appropriate.” “Yes,” said he, “if the race of guardians is to be kept pure.”

460d

“Would not these officials also take responsibilities for the nursing, bringing the mothers to the fold when they are full of milk, while ensuring by every possible means that none recognises her own child, and providing other women who have milk if ever the mothers do not have enough? They will also be responsible for the mothers themselves so that they do not spend too much time in feeding, and will hand over the sleepless nights and the rest of the hardship to wet-nurses and carers.” “By your account,” said he, “childbearing will be very easy for the women of the guardians.” “As it should be,” said I. “But we should proceed to the next suggestion we made, for we said that the offspring should be bred from parents in their prime.” “True.”

460e

“Now, are you also of the view that for a woman her prime lasts about twenty years and for a man about thirty years?” “Which years?” he asked. “A woman,” said I, “is to bear children for the city beginning from her twentieth year until her fortieth, while a man, once he has passed the age at which he can run most swiftly, begets children for the city until the age of fifty-five.” “Well, in both cases,” said he, “this is the prime of body and of

mind.”

461a

“Now, if those who take to begetting for the community are older or younger than this, we shall maintain that their error is neither holy nor just, as a child has been born to the city who, if this goes unnoticed, will have been born without the sacrifices and prayers offered at every marriage by priests and priestesses, and by all of the city; that better offspring, of greater benefit to the city, may always be born from the good people and from the city’s benefactors. But this child will have been born of darkness, accompanied by a shocking lack of restraint.” “Quite right,” said he.

461b

“And the same law applies,” said I, “if any man, still at the right age to beget children, has a relationship with any women of that age without the ruler bringing them together. For we shall state that he is imposing an illegitimate, unauthorised and unsanctified child upon the city.” “And rightly so,” said he.

461c

“But presumably, once the women and the men have passed the age for reproduction, we shall set them free to form relationships with anyone they wish, except daughter or mother, or the children of daughters, or the mothers of a mother, in the case of men; or in the case of women, a son, a father, or the descendants and ancestors of them. And we shall allow all this only after we have directed them to take particular care that no child sees the light of day if any is conceived. And if any child forces its way into the light, this should be dealt with on the basis that such offspring are not to be reared.”

461d

“Yes, that all sounds quite reasonable,” said he. “But how will they recognise one another’s fathers and daughters, and the other relatives you mentioned?” “They will not,” said I, “not at all. But any offspring born in the tenth month, and indeed the

seventh month, after he became a bridegroom, all these he shall address as his son if they are male and as his daughter if they are female. And they, in turn, shall address these men as their father, and similarly he shall call their offspring his grandchildren. And these, for their part, shall call his age group grandfathers and grandmothers. Those born during the time when their mothers and ^{461e} fathers were begetting children shall call each other brothers and sisters so that, as we were saying just now, they will not have intercourse with one another. But the law will grant that brothers and sisters may dwell together if the lot falls accordingly, and the Pythia adds a favourable response.” “Absolutely correct,” said he.

^{462a}

“Well, Glaucon, this, or something like this, is the sharing of women and children among the guardians of the city. But we should next confirm, from the argument, that this fits in with the rest of our system of government, and is by far the best arrangement. Or how should we proceed?” “In this way, by Zeus,” said he. “Now, is not our first step towards agreement to ask ourselves what precisely we can say is the greatest good for the fabric of our city – a good that the lawgiver should aim at when instituting the laws – and what is the greatest evil? And then investigate whether everything we described in detail just now matches the footprint of the good, and not the footprint of the evil?” “Most of all,” said he.

^{462b}

“Well, do we know any greater evil for a city than that which tears it asunder and makes it many rather than one? And do we know any greater good than that which binds it together and makes it one?” “We do not.” “Does not the sharing of pleasure and pain bind it together whenever, to the greatest extent possible, all the citizens are pleased and pained to the same extent by the same successes or failures?” “Entirely so,” said he. “And do not personal responses on occasions like these break

the city apart, whenever some people are troubled while others are delighted, when the very same things are happening to the city or its inhabitants?"

462c

"Of course." "Now, does not something like this arise because expressions like 'mine' and 'not mine' are not uttered in our city at the same time? And the same applies to the word 'alien'?" "Yes, precisely." "Then the city in which the most people say 'mine' and 'not mine' about the same things, in the same respect, is the best managed city." "Very much so." "Is it also the one that bears the closest resemblance to a single human being? For instance, imagine one of us injures his finger. The entire community, extending from the body to the soul, in a single ^{462d} arrangement under the ruling element, perceives this in itself and all of it experiences the pain together, simultaneously, as a whole, even though only a part suffered the injury. And so we say, accordingly, that the person has pain in his finger. And the same argument applies to any other part of the person at all, whether there is pain because the part suffers or pleasure because it finds relief." "The same, indeed," said he. "And in answer to your question, the best administered city is closest to such an arrangement."

462e

"So, I imagine, when anything good or bad happens to any one of its citizens, a city like this is most inclined to say that the victim is its own, and the entire city will share in the pleasure or the pain." "Necessarily," said he, "if it is well regulated at any rate." "Now would be the time," said I, "for us to revisit our own city and observe therein the principles agreed in the argument, and see if this city embodies them more than any other." "Should we not do so then?" said he.

463a

"Well, what about this? In other cities there are, I presume, rulers and the populace, and they are present in this city of ours

too.” “They are.” “And do all of these people refer to one another as fellow citizens?” “Of course.” “But what else besides fellow citizens do the people in other cities call the rulers?”

463b

“In most cities they call them masters, but in those governed democratically they call them just this, rulers.” “What about the populace in our city? What do they call the rulers, besides fellow citizens?” “Saviours and helpers,” said he. “And what do our rulers call the populace?” “Pay masters who give them sustenance.” “And in the other cities, the rulers call the populace...” “Slaves,” he said. “And what do their rulers call one another?” “Fellow rulers,” said he. “And ours...” “Fellow guardians.”

463c

“Now, can you tell me whether any of the rulers in the other cities can refer to one fellow ruler as kindred and to another as not kindred?” “Very much so.” “Does he not regard the kindred as his own and the non-kindred as not his own, and speak accordingly?” “So he does.” “And what about your guardians? Would any of them be able to regard any of their fellow guardians as non-kindred, or speak of them as such?” “Not at all,” said he, “since in the case of anyone he meets he will think he is meeting a brother or sister, a father or mother, a son or daughter, or their offspring, or their forbears.”

463d

“Excellent,” said I. “But tell me this too. Will your laws merely ordain that they should use these names of kinship, or will you also ordain that they should act in accordance with these names in all their activities. In the case of fathers, should they do whatever the law relating to fathers ordains in terms of respect and care, and the obedience that is due to parents, without which they will not fare well with the gods or their fellow men, because their actions would be neither holy nor just if they were to act in any other way? Shall these proclamations ring

from the very outset in the ears of the children, sung by all of the citizens about the fathers, that anyone might point out to them, and about their other relatives too?"

463e

"These are the ones," said he, "for it would be laughable if the names were to be on their lips without the deeds to back them up." "So, in this city most of all, whenever any one citizen fares well or fares badly, all the citizens together will pronounce the words we used just now and say that 'what is mine fares well', or 'what is mine fares badly'." "Very true," said he.

464a

"And did we not also say that with this belief and these words there came a sharing of pleasures and pains?" "And we were right to say so." "Will not our citizens, most of all, share in the same thing which they will all call 'mine'? And by sharing this in this way, will they not, most of all, have shared pleasure and pain?" "Very much so." "Now, is not the cause of all this, besides the general constitution of the city, the sharing of women and children among the guardians?" "Yes," said he, "much more than anything else."

464b

"And we did agree that this was the greatest good for the city, comparing a well-managed city to a human body in terms of its response to pleasure or pain in a part of itself." "And we were right to agree," said he.

464c

"So, the sharing of children and of women among the auxiliaries has turned out to be the cause of the city's greatest good." "Yes, indeed," said he. "In that case, we are also being consistent with what went before. For we said, I believe, that they should have no private households, or land, or any other possession. They should, rather, receive sustenance from everyone else as their guardians' pay, and should all spend it together if they really are to be guardians." "Yes, precisely," said he.

464d

“So, is it not the case, as I say, that whatever was said before, and is being said now, turns them into true guardians to an even greater extent, and prevents them from tearing the city asunder by using the word ‘mine’, to refer not to the same thing but to something different; one man dragging whatever he is able to acquire on his own off to his own house, while another fellow drags things to a different house, also his own, with a separate wife and children, thus introducing the private pleasures and pains of private persons? Rather, with a single belief concerning what is private, all striving as best they can for the same objective, they have the same experience of pain and pleasure.” “Precisely,” said he.

464e

“What about this? Will not lawsuits and accusations against one another almost vanish from their midst because they have no private property, apart from their body, while everything else is shared? And thus they will be free from any factions that people develop because of the acquisition of wealth, children or family connections.” “Yes,” said he, “they will be free of all that. They really must.” “And, indeed, there would be no justification for legal action for assault or violence among them for we shall presumably maintain that self-defence against people of the same age is noble and just, and impose upon them the requirement to look after their bodies.” “And rightly so,” said he.

465a

“And this law,” said I, “is right in the following way too. If someone was provoked by someone else he might satisfy his rage through a personal encounter of this sort and be less inclined to keep going until there were more serious conflicts.” “Yes, certainly.” “What is more, an older man will be given the task of ruling over and restraining all of the younger ones.” “Of course.”

465b

“And, indeed, a younger person will not, unless the rulers command it, use force against someone older, nor is he likely to strike him, nor, I believe, will he show disrespect in any other way either. For the twin guardians, fear and shame, prevent this. Shame prevents him from laying hands upon a possible parent, and he fears the help others will give to the victim, either as his sons, brothers or fathers.” “Yes, that follows,” said he. “Under these laws then, the men will enjoy great peace towards one another, in every respect.” “Great indeed.” “And in the absence of any conflict among themselves there would be no danger of any faction between them and the rest of the city, or one another.” “No, there would not.”

465c

“I am reluctant to mention the most trivial difficulties, which they will be quit of, because they are so unseemly: the flattery of the rich by the poor, the troubles and pains involved in rearing children, and making money to provide for the needs of the household members by borrowing from some people, failing to repay others, using every possible means to provide resources, that they then ^{465d} hand over to the women and household members to manage. All that they suffer over these matters, and what it is like, is self-evident, and it is ignoble and unworthy of mention.” “Yes, it is evident,” said he, “even to a blind man.” “Quit of all this, our guardians will live a life more blessed than the life of Olympic victors.” “In what way?” “These victors are made happy by a small portion of what those guardians get. For their victory is more beautiful and their popular support is more comprehensive. Indeed, the victory they win is the safety of the entire city, and they are crowned with support and everything else that human life requires, they and their children too. They receive honours from their own city during their lives and are granted a worthy burial when they die.” “Yes, that is all very beautiful,” said he.

465e

“Now,” said I, “do you remember that in our earlier discussions, an argument – I do not know whose – took us to task by maintaining that we were not making our guardians happy, because even though it is possible for them to own everything belonging to their fellow citizens, they have nothing? And I think we said that we would look at this again if it turned out to be the case, but at the moment we are making our guardians into guardians and making our city as happy as possible, without focussing upon one group within the city and working on its happiness.” “I remember,” said he.

466a

“Well then, since the life of our auxiliaries now turns out to be far better and more beautiful than the life of Olympic victors, is there any way it compares to the life of shoemakers, or other artificers, or to the life of farmers?” “I do not think so,” said he.

466b

“In that case, what I said there may rightly be repeated here. If a guardian attempts to attain happiness in a way that makes him a guardian no longer, and if such a measured and stable life – which according to us is the best life – is not enough for him, but some mindless, immature opinion about happiness takes over, it will impel him, because he has the power, to appropriate everything in the city, and he will realise that Hesiod was indeed wise when he said that ‘half is somehow more than the whole’.”⁸⁵ “If he takes my advice,” said he, “he will abide by this life.”

466c

“So do you accept,” said I, “this sharing of the women with the men in relation to education, children, and their guardianship of the rest of the citizens, as we have elaborated it? Whether remaining in the city or going to war, should they guard and hunt together like dogs, and to the best of their ability share everything in every way? And by doing all this, do you accept

that they will be doing what is best and not acting contrary to the nature of the female towards the male, and their natural tendency to share with one another?" "I agree," said he.

466d

"Do we not still have to decide," said I, "if it is possible for this sharing to be engendered among human beings, just as it is among other creatures, and how this is possible?" "You have anticipated the point I was just about to raise," said he. "Indeed, when it comes to warfare," said I, "I presume that the way in which they will do battle is obvious." "How?" he asked. "They will march out together, and, what is more, they will bring their children, the stronger ones, with them to the battle so that like the children of other artificers, they may see the work they will have to engage in when they are grown up. And as well as looking on, they will assist and serve in everything related to the battle and will care for their fathers and mothers. Or have you not ^{466e} noticed what goes on in the various crafts? Potters' children, for instance, spend a long time looking on as assistants, before they ever put their hands to the task itself." "Very much so." "Well, should these people show more care than our guardians in educating their children through experience and observation of what is appropriate to them?" "That would be ridiculous," said he.

467a

"Then again, every creature fights especially well when their own offspring are present." "This is so, Socrates. But if they lose, as is prone to happen in war, there is no small danger that having lost their children as well as themselves, they will also make it impossible for the rest of the city to recover." "True," said I, "but do you think that we should arrange, firstly, that there will be no danger?" "Not at all." "Well then, if there is somehow to be danger, should not this be in a situation where they will be better if they are successful?" "Yes, of course."

467b

“But, do you think it makes little difference whether or not those who are to be military men watch the proceedings of the battlefield when they are children? Is the risk not worth taking?” “No, it does make a difference for the purpose you mention.” “So this must be arranged. The children must be made spectators of warfare, and once their safety is assured, all will be well. Is this so?” “Yes.” “And will not their fathers,” said I, “as far as humanly possible, be knowledgeable people, able to recognise which campaigns are dangerous and which are not?” “Quite likely,” said he.

467c

“So they will bring them on some campaigns and be wary of bringing them on others.” “And rightly so.”

467d

“And, presumably,” said I, “they will not appoint ordinary fellows as their leaders, but those who are competent by age and experience to be guides and tutors.” “Yes, that is appropriate.” “Yes, but as we shall declare, lots of unexpected things also happen to lots of people.” “Very much so.” “Well, in the light of such possibilities, my friend, they should be equipped with wings from earliest childhood so that if the need arises they may take flight and be gone.”

467e

“What do you mean?” he asked. “They should go on horseback,” said I, “from the youngest possible age. And having learned to ride, they should be brought to view the battle mounted on horses, not spirited or warlike animals but those that are most swift-footed and responsive to the rein, since in this way they will have the best view of their own future function, and, should the need arise, they could get away safely, following the lead of their older guides.”

468a

“Yes,” said he. “This sounds right to me.” “And what about the events of the battlefield?” said I. “How should your soldiers

behave towards themselves and towards the enemy? I am looking at this correctly or not?" "Tell me," he said, "in what sense." "Among themselves, someone who deserts his post or throws away his weapons, or does anything else like that through cowardice, should he not be reduced in status to an artificer or farmer?" "Yes, certainly." "And should not someone who is captured alive by the enemy be given to his captors as a gift, for them to use their captive as they wish?"

468b

"Precisely." "But someone who excels and wins fame, do you not think he should first be crowned on campaign by his comrades in arms, youths and children in turn? Or do you not think so?" "I do." "Shall they shake his hand?" "That too." "But this, I suppose you would not accept..." "What?" "That he kisses and is kissed by each." "This most of all," he said. "And I would make an addition to the law that as long as they are involved in this campaign, no one whom he wishes to kiss is allowed to refuse, so that if someone happened to be in love with someone else, male or female, he would also be more eager to carry off the prize for valour."

468c

"Very good," said I. "And we have already said that a good person will have more opportunity for union than the others, and will be selected for such purposes more often than the others so that as many children as possible may be born from a person like this." "Yes, we said that," said he. "And indeed, according to Homer, it is right to honour young folk who are good through arrangements of this sort. For he says that when Ajax had won fame in battle, he was rewarded 'with the choicest cuts of meat',⁸⁶ as this is the appropriate honour for someone in the prime of youth and courage, as it honours him and increases his strength at the same time." "Quite right," said he.

468d

“So,” said I, “we shall be persuaded by Homer on these matters at any rate. And, indeed, during sacrifices and everything of this sort, we shall honour the good people, insofar as they prove themselves to be so, with hymns and whatever we have mentioned just now, and to this we shall add ‘seats of honour, meat, and goblets full to the brim’,⁸⁷ so that we may train these good men and women at the same time as we honour them.” “Excellent,” said he.

468e

“Very well. And in the case of those who die on campaign, should we not first say that someone who wins fame in death belongs to the golden race?” “Most of all.” “And shall we believe Hesiod, that when anyone who belongs to such a race dies, they become ^{469a} *Hallowed spirits dwelling on earth, averters of evil, / Guardians watchful and good of articulate speaking mortals?*⁸⁸ “We shall believe him indeed.” “So, having found out from the god how demi-gods and divine beings should be buried, and what the difference is, shall we bury these men according to the mode and manner he expounds?” “How could we do otherwise?” “And ever after, shall we care for and revere their tombs as though they were the tombs of demi-gods? And should we observe the same customs whenever someone, who is judged to have been exceptionally good whilst alive, dies of old age or in some other way?” “It would be right to do so,” said he.

469b

“What about this? How should our soldiers behave towards the enemy soldiers?” “In what sense?”

469c

“Firstly, concerning enslavement, does it seem right that Greek cities should enslave fellow Greeks? Or should they, as best they can, not even allow another city to do so and accustom them to sparing their fellow Greeks for fear of enslavement by the non-Greek races?” “Sparing them,” said he, “is completely better in every way.” “Then they are not to own a Greek slave

themselves, and they are to advise their fellow Greeks to do likewise.” “Yes, certainly,” said he. “And so in this way, they would turn their attention more towards the non-Greeks and show restraint towards themselves.”

469d

“And what about stripping and despoiling the dead after a victory?” said I. “Besides removing their weapons, is this the right thing to do? Or does it not give cowards an excuse for not engaging with another combatant because they are doing something needful when they are poking about among the dead? Has not many an army already been lost because of this sort of plundering?” “Very much so.” “Does it not seem like a slavish and mercenary act to strip the armour from a corpse? And is it not the mark of an unmanly and petty mind to regard the body of the dead man as the enemy when the real foe has fled, leaving only the instrument with which he fought? Or do you think those who do ^{469e} this are doing anything different from dogs who get angry with the stones that struck them, and do not touch the person throwing them?” “Not in the least,” said he. “So should we abandon the stripping of corpses and hindering the enemy from removing their fallen comrades?” “We should abandon this indeed, by Zeus,” said he.

470a

“Nor indeed shall we carry weapons off to our temples as dedicatory offerings, especially those belonging to our fellow Greeks, if we have any interest in fostering good relations towards them. Rather, we shall be afraid that it might be a defilement to bring this sort of thing from our own kin to a temple, unless, of course, the god says otherwise.” “Quite right,” said he. “And when it comes to ravaging Greek land or the burning of houses, how will your soldiers behave towards their enemies?” “I would like to hear you expressing your opinion on that,” said he.

470b

“Well,” said I, “I do not think they would do either of these. No, they should just deprive them of their annual harvest. Do you want me to tell you why?” “Very much so.” “As I see it, just as we make use of these two words, ‘war’ and ‘faction’, so they are indeed two, being applied to two disputes between two different parties. I mean that the disputant is their own kindred in one case, but alien and foreign in the other case. The hostility of their own is called faction, while the hostility of the alien is called war.” “Yes,” said he. “There is nothing strange in what you are saying.”

470c

“Then decide whether this is strange or not. I maintain that the Greek race, to itself, is its own kindred, but is alien and foreign to the non-Greek race.” “Well said,” he replied. “So, when Greeks do battle against non-Greeks, or non-Greeks against Greeks, we shall maintain that they are at war and are enemies by nature, and we should refer to this hostility as ‘war’. But when Greeks do this sort of thing to Greeks, we shall maintain that although they are friends by ^{470d} nature, the Greek state is sick in this case, and has fallen into faction, and we should refer to such hostility as ‘faction’.” “Yes,” said he, “we should consider it in this way. I agree.” “Then,” said I, “take note that in faction, as it is understood nowadays, wherever something like ^{470e} this arises and a city is divided, and one side devastates the land of the other and burns their homes, such faction is regarded as an abomination, and neither party is thought to have any love for their city or they would not have dared to ravage their nurse and mother. But it does seem reasonable for the victors to deprive the vanquished of their harvest and to bear in mind that they are going to be reconciled, and not be at war forever.” “Yes,” said he, “this way of thinking is much gentler than the other.” “What about this then?” I asked. “Will not the city you are founding be a Greek city?” “It must be,” said he. “In that case, will not the people be good and gentle?”

“Absolutely.” “And will they not love their fellow Greeks, and will they not regard Greece as their own, enjoying the sacred places in common with their fellows?” “Yes, absolutely.”

471a

“In that case, will they regard a dispute with Greeks, their own people, as faction, and not refer to it as war?” “No, indeed.” “And will they conduct the dispute with a view to reconciliation?” “Very much so.” “Then they will correct their adversaries out of goodwill, not punishing them to make slaves of them, or indeed to destroy them, since they are correctors, after all, not enemies.” “Quite so,” said he.

471b

“And so being Greeks, they will not ravage Greece or burn down its homes, nor will they accept that all the people in a particular city are their enemies, men, women and children alike. They will accept, rather, that a few enemies are always responsible for the dispute, and for all these reasons they will not be prepared to ravage their land or pull down their houses, since most of them are their friends. They will, rather, pursue the dispute to the point where those who are responsible are forced into a just response by the suffering of their innocent fellow citizens.” “I agree,” said he, “that our citizens should behave like this towards their Greek opponents, while treating the non-Greeks as the Greeks treat us Greeks nowadays.”

471c

“Shall we set down this law for our guardians, that they neither lay waste to the land nor burn down houses?” “Let us set it down,” said he, “and accept that this is all good, and so is what was said previously. But, Socrates, it seems to me that if someone leaves it to you to speak on such issues, you will never remember the question you pushed aside in order to say all this, namely the question of whether it is ever possible for this civic arrangement to come about, and in what way is it possible at all. I agree that if it were to come about it would be really good for

that city. And I will add what you omitted to say, namely that they would fight ^{471d} best against their enemies since they would be least likely to desert one another because they recognise themselves as brothers, fathers and sons, and use these very names. And if the female sex is to campaign with them, either in the same rank or assigned to the rearguard to strike fear into the enemy and to provide assistance if needed, I know full well that with all this they would be invincible. And I see also all the domestic advantages they would have, which you omitted to mention. Now, you may assume that I agree that there would be all these advantages, and thousands more, if this civic arrangement were to arise, so do not say any more about it. Let us try rather, at this stage, to convince ourselves that this is possible, and how it is possible, and bid farewell to everything else.”

^{471e}

“Well,” I said, “you have made quite a sudden onslaught upon this proposition of mine, without any allowance for my hesitation. For perhaps you do not appreciate that you are bringing a third ^{472a} huge and most troublesome wave upon me when I have barely escaped the first two. Once you see and hear this you will have more sympathy and will understand that my reluctance was reasonable, and so was my fear of recounting such a paradoxical argument and attempting to scrutinise it.”

^{472b}

“The more you go on like this,” he said, “the less likely we are to release you from describing how this civic arrangement could arise. So speak, and do not delay.” “In that case,” I said, “should we first be reminded that we got to this point by enquiring into what justice and injustice are like?” “We should,” he said. “But why do you say this?” “No reason, but if we do find what justice is like, shall we also insist that the just man must not ^{472c} be different at all from justice, and that such a man is like justice in every respect? Or shall we be satisfied if he gets as close as

possible to it and partakes of it to a greater extent than most people?" "Yes," he said. "We shall be satisfied with that." "Then," said I, "we have been seeking justice itself, the sort of thing it is, and the perfectly just man, if there be such a man, and the sort of person he would be if he ever did come into existence to use as a model. The same considerations also apply to injustice and the utterly unjust man. The intention was to look to these standards and apply whatever became evident about their happiness ^{472d} or unhappiness, and be compelled to accept that in our own situation, whoever is most like one of those standards will have the like portion of happiness. However, it was never the intention that we would demonstrate that such persons could come into existence." "Yes, what you say is true," he said. "Now, would you maintain that a painter was not really a good painter if he painted an exquisitely beautiful person as a standard, rendered it in consummate detail, but was unable to demonstrate that such a person could ever come into existence?" "By Zeus, I would not," he replied. "Well then, have we not, so we say, been making a standard in words of a good city?"

^{472e}

"Very much so." "Then, do you maintain that our words lack merit, on account of the fact that we may be unable to demonstrate that the city could be established in the manner in which we have described it?" "I certainly do not," he said. "Then that is the truth of the matter," said I. "But if, for your sake, we must endeavour to demonstrate how exactly and upon what basis this is at all possible, I must ask you again to concede the same points regarding such a demonstration." "What points?"

^{473a}

"Is it possible for anything to be enacted as spoken, or must action by nature involve less truth than speech, in spite of what some people think? Well, do you agree that this is the case or

not?” “I agree,” he said. “In that case, do not force me to prove that the sort of thing we have recounted in words can also come into existence in its entirety in deed. Rather, if we are able to discover how a city that is very close to what we have described might be constituted, you must say that we have found out how
^{473b} this city can come into being, which was the task you set us. Would you be satisfied if that happened? I, for one, would be satisfied.” “And so would I,” he said. “Well then, after this it seems we should try to find, and demonstrate, what precisely is enacted badly in the various cities nowadays so that they are not constituted like ours. Also, what change would bring a city to this manner of civic arrangement, the smallest change possible – ideally just one, otherwise two, or the fewest in number – with the least impact.”

^{473c}

“I entirely agree,” he said.

^{473d}

“Well,” said I, “there is one change that could effect this transformation, and I think we can show this. However, it is not minor or easy, though it is feasible.” “What is it?” said he. “I am now,” said I, “on the verge of what we likened to the most enormous wave. But it must be spoken, even if some wave of hilarity is literally going to deluge me with laughter and ridicule. So pay attention to what I am about to say.” “Speak on,” he said. “Unless philosophers exercise kingly rule in the cities,” said I, “or those whom we now call kings and rulers engage in philosophy with dignity and competence, and political power and philosophy coincide in the same person, while the vast majority, whose natures incline them to pursue one
^{473e} rather than the other, are necessarily excluded from both, the cities will have no rest from their evils, my dear Glaucon, and neither, in my view, will the human race. Nor until then will this civic arrangement, which we have described in words, ever grow to its full potential or see the light of day.

Well, this is what made me reluctant to speak earlier, for I could see this will be directly opposed to popular opinion. For it is hard to see that there is no other way for one to be happy, neither as an individual nor as a society.”

474a

“Well, Socrates,” he said, “you have blurted out an utterance and argument like this, and now that you have said it you should expect a large number of men, no common folk, to rip off their garments, grab the first weapon that comes to their hand, and rush at you, naked, at full stretch, intending unspeakable deeds. If you do not ward them off in argumentation and make your escape, you will pay the penalty of being well and truly ridiculed.” “Are you not the one who is responsible for all this, in my case?” I said. “I am doing the right thing,” he said. “However I shall not desert you, but will defend you by whatever means I can, and I can do this through good will and encouragement. And perhaps I may respond to your questions more reasonably than someone else would. But now that you have such assistance, try to prove to the unbelievers that what you are saying is so.”

474b

“Try I must,” I said, “since you are offering such a significant alliance. Now, if we are going to escape from the men you describe, I think it will be necessary to define for them which philosophers we are speaking of when we dare to maintain that they must rule. Then, once that has become evident, we can conduct our defence by demonstrating that it belongs to these men by nature to engage in philosophy and to lead in the city, while it belongs to the others to have no dealing with philosophy and to follow their leadership.” “Now would be the time to define this,” he said.

474c

“Come on then. You will have to be guided by me here if we are to have any chance of explaining this properly.” “Lead on,” he

said. “Now,” I said, “will it be necessary to remind you, or do you remember already, that anyone who is said to love something must, if the description is correct, show that his affection is total, and he does not love one aspect of that thing while not loving another?” “It seems you will have to remind me,” he said, “for I do not really understand.”

474d

“That response of yours, Glaucon, would be appropriate for another person, but it is hardly appropriate for a man of love to be reminded that all those youths in their prime afflict and stir the amorous lover, and all are deemed worthy of his care and affection. Is this not how you behave towards the fair? If someone is snub-nosed you praise him by calling him charming, and if he is hook-nosed you say he is kingly, while if he is halfway between the two you say his features are perfectly balanced. Those who are dark have a manly aspect, those who are fair are children of gods, and as for the name ‘honey-pale’, who could invent it except a coaxing lover who willingly tolerates a poor complexion, provided it belongs to a pretty youth? And, in short, you invent any excuse at all, and 474e resort to any expression at all, to avoid rejecting those who are in the bloom of youth.” “If you wish to allege that I behave as these lovers do, I shall go along with you for the sake of this discussion,” he replied.

475a

“What about this?” I said. “Do you not see the lovers of wine doing the very same thing, welcoming every sort of wine on any pretext at all?” “Very much so.” “And I am sure you observe that those who love honour, if they cannot command an army, will command a lesser cohort. And if they are not honoured by the important and distinguished people, 475b they will be satisfied with the respect of lesser, more ordinary folk, so consummate is their desire for honour.” “Yes, exactly.” “So, do you agree or disagree that when anyone is said to desire

something, we should say that he desires it all, or one part only and not another?" "All of it," he said. "Therefore, shall we say that the philosopher does not desire one part of wisdom rather than another, but desires it all?" "True."

475c

"Then we shall not say that a person who cannot stand study is a lover of learning or a lover of wisdom, especially if he is young and still lacks the reasoning power to distinguish what is useful from what is not, just as someone who makes difficulties about food is said neither to be hungry nor to want food, and will not be called a food lover but a poor eater." "And we shall be right to say so."

475d

"However, anyone with a ready desire to taste all branches of learning, who enters into study gladly and with an insatiable appetite, may properly be called a lover of wisdom. Is this so?" Glaucon replied, "Then you will have lots of unusual examples of such people. For those who love seeing sights all seem to me, anyway, to be like this because they take a delight in learning. Those who love hearing things are the strangest folk to include among the philosophers, for although they would never willingly engage in serious discussion or devote their time to anything of that sort, they run around all the festivals of Dionysus in the city or the country, as if they had hired out their ears to listen to them all. Now, shall we refer ^{475e} to all these people, and others with knowledge of similar activities, or even the minor crafts, as philosophers?" "Certainly not," I said, "but they are similar to philosophers." And he said, "Whom do you refer to as true philosophers?" "Those who love beholding the truth," I said. "Yes, that is all very well," he said, "but what do you mean by this?" "This would not be at all easy for someone else," said I, "but I do think that you will agree with me here." "About what?"

476a

“That since beauty is the opposite of ugliness, they are two. “How could I disagree?” “Therefore, since they are two, each is one.” “I also agree with this.” “And the same argument applies to just and unjust, good and bad, and to all of the forms. Each itself is one, but since they manifest everywhere in communion with activities, bodies, and with one another, each appears to be multiple.” “What you are saying is correct,” he said. “Well,” I said, “this is how I make the distinction, separating the people you referred to as ‘those ^{476b} who love seeing things’ or ‘those who love skills and are practical’, from those we are now discussing, who are the only ones we may properly refer to as philosophers.” “In what way?” he said. “Presumably,” I said, “those who love hearing things, and seeing things, delight in beautiful sounds and colours and shapes and everything that is fashioned from these, but their mind is unable to behold the nature of beauty itself, and to delight in that.” “Yes,” he said, “that is certainly the case.”

^{476c}

“On the other hand, would not those who can have recourse to beauty itself, and behold it just by itself, be quite rare?” “Very much so.” “Now, do you think that a person is awake or living in a dream if he recognises beautiful objects but does not recognise beauty itself, and cannot follow someone else if he leads him to the knowledge of this? Think about this. Is not dreaming an activity in which someone, either in sleep or whilst awake, thinks that a likeness is not a likeness, but is itself the very object which the likeness resembles?” “Yes, I am inclined to say that a person like that is dreaming,” he said.

^{476d}

“Well then, what about someone who, by contrast, thinks that there is beauty itself and is able to behold it and whatever partakes of it without thinking that that which partakes is beauty itself, or that beauty itself is that which partakes. Do you think this person is awake, or living in a dream?” “He is very

much awake,” he said. “Would we not be right to refer to the mental state of this man as knowledge because he knows, and to the mental state of the other as opinion because he is forming opinions.” “Yes, certainly.”

476e

“Now, what if this fellow, whom we accuse of forming opinions and of not knowing, gets angry with us and argues that we are not speaking the truth? Shall we be able to console him and engage in gentle persuasion whilst concealing the fact that he is not of sound mind?” “You really should try, anyway,” he said. “Come on, then. Let us consider what we shall say to him. Or if you prefer we could put some questions to him, maintaining that if he does know something, nobody will begrudge him that. Rather, we would be delighted to see that he knew something. So tell us this: does someone who knows know something or nothing? Now, you should reply on behalf of this fellow.” “I reply that they know something,” he said.

477a

“Is it something that is or is not?” “Something that is, for how could something that is not be known?” “Well, are we satisfied that no matter how we consider the matter, ‘what entirely is’ is entirely knowable, and ‘what in no way is’ is entirely unknowable?” “We are completely satisfied.” “Very well. But if, in fact, something is characterised in such a way that it both ‘is’ and ‘is not’, would it not lie in between ‘what purely is’ and ‘what in no way is’?” “Yes, in between.” “Therefore, since knowledge is directed towards ‘what is’, and ignorance is necessarily directed to ‘what is not’, we must search for something in between ignorance and knowledge, which is directed to that which lies between ‘what is’ and ‘what is not’, if there happens to be such a thing.” “Yes, certainly.”

477b

“Now, do we say that opinion is something?” “What else could we say?” “And is it a different power from knowledge, or the

same power?" "Different."

477c

"So opinion is directed to one, and knowledge to another, each on the basis of its own power." "Just so." "Is not knowledge naturally directed towards 'what is', to know 'what is' as it is? But before we go on, I think we must make a further distinction." "How?" "Shall we say that powers are a class of things that are, by which we are able to do whatever we can do, and anything else is able to do whatever it can do. So I say for example that seeing and hearing are powers, if you understand what I am trying to explain." "I do understand," he said.

477d

"Well, listen, and I shall tell you my view of them. Indeed, with respect to powers I do not discern any colour or a shape, or anything of this sort, as I do in many other things, features to which I can look in order to distinguish for myself between some objects and others. But in the case of a power, I look only to what it is directed to and what it accomplishes, and on this basis I call each of them a power, and whatever is directed to the same object and accomplishes the same thing, I call the same, while anything that is directed to a different object and accomplishes something different, I refer to as different. How about you? What do you do?" "Just as you do," he said. "At this stage," I said, "I should ask you the question again, my excellent friend. Do you say that knowledge is a power, or in what class do you place it?"

477e

"In this one," he said. "It is the strongest of all powers." "And what about opinion? Shall we assign it to power or to another form?" "To no other form," he said, "for opinion is nothing other than the power by which we are able to form opinions." "Yes, and you did agree a little earlier that knowledge and opinion are not the same." "How could any reasonable person," he replied, "ever suggest that something that does not make

mistakes is the same as something that makes mistakes?"

478a

"Well expressed," I said. "And it is obvious that we agree opinion is different from knowledge." "Yes, different." "So is each of them by nature a different power, directed to something different?" "They must be." "Well, is knowledge directed to 'what is', to know 'what is' as 'it is'?" "Yes." "And we say that opinion forms opinions." "Yes." "Does it not form opinions about the same things that knowledge knows? And will the objects of knowledge and opinion be the same? Or is that impossible?" "According to what we have agreed, that is impossible," he said. "If, in fact, a different ^{478b} power is naturally directed to something different, and opinion and knowledge are both powers and each is different, which is what we are saying, then we cannot accept, based on this, that the object of knowledge and the object of opinion are the same." "Now, if the object of knowledge is 'what is', would not the object of opinion be something other than 'what is'?" "Yes, something other than that." "Well, does it form opinions about 'what is not', or is it impossible even to form an opinion about 'what is not'? Reflect on this. Does not someone who forms an opinion apply the opinion to something? Or again, is it possible to form an opinion which is an opinion about nothing?" "That is impossible." "Rather, the person forming an opinion forms it about some one thing."

478c

"Yes." "However, would it be at all correct to refer to 'what is not' as some one thing? Instead, it should be called nothing." "Entirely so." "Well, did we, by necessity, assign ignorance to 'what is not' and knowledge to 'what is'?" "We did, and rightly so," he said. "So opinions are not formed either about 'what is' or 'what is not'." "They are not." "Then opinion is neither ignorance nor knowledge." "It seems not."

478d

“Well, in that case, is it beyond them, exceeding either knowledge in clarity or ignorance in obscurity?” “It does neither.” “Alternatively,” I said, “does opinion appear to you as darker than knowledge and yet brighter than ignorance?” “Very much so,” he said. “Does it lie within these two extremes?” “Yes.” “So opinion would be in between knowledge and ignorance.” “Yes, exactly.”

478e

“But did we not say earlier that if anything were to prove capable of being and of not being at the same time, it would lie in between ‘what purely is’ and ‘what entirely is not’, and that neither knowledge nor ignorance would be directed towards it, but something, which for its part makes its appearance in between knowledge and ignorance, would be directed towards it?” “Correct.” “But now the power that we call opinion has made its appearance in between these two.” “It has.”

479a

“Then what remains for us to discover, apparently, is something partaking of both being and non-being, which may not properly be called either pure being or pure non-being. Should that be found, we would be right to call it the object of opinion, thus assigning the powers at the extremes to the objects at the extremes, and the powers that lie in between to the objects that lie in between. Is this how we should proceed?” “It is.” “Now that we have established all this, let this good fellow speak to me and give me an answer, this man who thinks there is no such thing as beauty itself, or a form of beauty itself, which is always just the same as it is, even though he does think that there are many beautiful things. He is someone who loves seeing things and cannot endure it if someone says that beauty is one, and so too is justice, and that the same goes for the others. I shall say to him, ‘Best of men, tell me this. Are there any of these numerous beautiful things which will not appear to be ugly? Are there any of the many just actions which will not appear unjust, any

sacred things which will not appear profane?”

479b

“No,” said Glaucon, “they must somehow appear to be both beautiful and ugly, and the same applies to your other instances.” “And what about the many things which are doubles? Do they appear to be halves any less than doubles? “No less.” “And things we say are large or small, light or heavy, will they be called by these names any more than the opposite names?” “Yes,” he said, “each of them always has both names.”

479c

“Then, if anyone says that any of these many things is this, is it no more this, than not this?” “It is like party games involving the double meanings of words,” he replied, “and the children’s riddle about the eunuch striking the bat, in which they also make obscure statements about what it was struck by and what it was sitting upon.⁸⁹ In fact, these too are ambiguous, and none of them is capable of being thought definitely to be, or not to be, either both or neither.” “So, do you know what to do with them,” I said, “or can you put them in any better place than in between being and non-being? Presumably they will not prove to be darker than ‘what is not’, involving more non-being, or brighter than ‘what is’, involving more being.”

479d

“Very true,” he said. “Well, it seems we have found that the numerous conceptions about beauty, or anything else, which most people hold, are somehow rolling about between ‘what is not’ and ‘what purely is’.” “That is what we have found.” “And we agreed previously that if something like this were to turn up, it should be referred to as an object of opinion rather than an object of knowledge. The wandering object is apprehended by the intermediate power.” “We agreed on this.”

479e

“So those who see many beautiful things, without beholding beauty itself, and who are unable to follow someone who is

leading them towards it, who see many just actions, but not justice itself, or anything like that, we shall say that these people form opinions on all these matters, but know nothing about the matters on which they are opining.” “We must,” he said. “And what about those who, by contrast, behold things themselves, things which are always just the same as they are? Do they not know rather than opine?” “This must also be so.”

480a

“And will we not say that these people embrace and love the objects of knowledge, while those others embrace and love the objects of opinion? Or do you not remember? We said that the others love and contemplate beautiful sounds and colours, and the like, but they cannot bear to hear that there is such a thing as beauty itself.” “We remember.” “In that case, would it be offensive to call them lovers of opinion or philodoxical⁹⁰ rather than lovers of wisdom or philosophical? Would they get very angry with us if we referred to them in this way?” “Not if they are persuaded by me anyway,” he said, “for it is not appropriate to be angry at the truth.” “Then should those who embrace what anything actually is be called philosophers, or lovers of wisdom, rather than lovers of opinion?” “Yes, entirely so.”

BOOK VI

484a

“Well then, Glaucon,” I said, “after conducting quite a lengthy enquiry, we have, with some difficulty, discovered those who are philosophers and those who are not.” “Yes,” he said, “perhaps it would not have been easy to shorten it.”

484b

“Apparently not,” I replied. “And yet I still think the discovery would have gone better if we only needed to talk about this topic and we had no need to discuss a host of outstanding issues if we are going to discern the difference between the just and

the unjust life.” “What do we need to discuss after this?” he said. “The next issue in due sequence,” I replied. “What else? Since philosophers can apprehend that which is always the same as it is, while those who cannot do so are not philosophers but wander instead amid multiplicity and variety, which of them should actually be rulers in the city?” “How may we give an adequate response to this question?” he said. “Whichever sort proves capable of guarding the laws and the proceedings of the city are the ones to appoint as guardians,” I replied.

484c

“Quite right,” he said. “Well,” I said, “is it obvious whether it is a blind man or a keen-sighted man who should keep watch over something?” “Of course it is obvious,” he said. “Well then, do these people seem any better than blind men? I mean, are these people blind who are, in truth, deprived of the knowledge of what anything is, who have no evident pattern in their soul and are unable to look towards perfect truth, as a painter looks at a model, always referring ^{484d} to that realm and contemplating it with the utmost precision, and who cannot establish regulations concerning beauty, justice and goodness in this realm, if they are needed, or act as guardian saviours of what is already in place?” “No, by Zeus,” he said. “They are not much different from blind men.” “So, shall we install these men as guardians in preference to those who know what each thing is, and are not lacking in practical experience compared to the others or inferior to them in any other aspect of excellence?” “It would be most strange,” he said, “to choose anyone else if the philosophers, in fact, lacked none of the other qualities. For the particular quality in which they excel is really the most important one of all.”

485a

“Well, should we not explain how the same people will be able to possess these qualities and the other qualities?” “Yes, certainly.” “We said at the beginning of this discussion that it is

necessary to understand their nature first, and I believe that if we come to a satisfactory agreement on this, we shall also agree that the same people can possess both sets of qualities, and these must be the rulers of the city and not anyone else.” “How?”

485b

“Well, let us agree something about the philosophic natures. Let us agree that they always love any learning, which would reveal to them something of that being which always is, and does not wander in subjection to generation and decay.” “We should agree on that.” “And what is more,” I said, “they will love all of it and will not willingly dismiss any part, be it small or large, honourable or dishonourable. They are just like the lovers of honour and the flattering lovers we described earlier.” “What you are saying is correct,” he said.

485c

“Here is something else you should think about. Consider whether people who are going to conform to this description must have an additional characteristic in their nature.” “What sort of characteristic?” “Freedom from falsehood. They will never willingly accept the false; they hate it and love the truth.” “Quite likely,” he said. “Oh it is not merely likely, my friend, but absolutely necessary for someone, who is by nature lovingly disposed to anything, to cherish all that is kindred and related to the beloved.” “You are right,” he said. “Now, could you find anything more closely related to wisdom than truth?” “No, how could you,” he said. “And is it possible for the same nature to be both a lover of wisdom and a lover of falsehood?” “Not at all.” “So, the genuine lover of learning must strive to the utmost for all truth from his youth upwards.” “Entirely so.”

485d

“However, when desires are strongly inclined in a single direction, we surely understand that they are weakened in the other directions, just like a stream which is diverted to a

particular place.” “Of course.” “Now, those who are inclined towards the objects of learning and everything like that would, I believe, be concerned with the pleasure of soul just by itself and would forsake the pleasures of the body, if the person is to be truly a philosopher and not artificially so.” “This must necessarily be so.”

485e

“Indeed, such a man is sound-minded and in no sense a lover of money. In fact, it is not appropriate for him to be involved in the concerns of money and its objects, and its enormous extravagance.” “Quite so.” “Yes, and there is something else you must consider if you are going to distinguish the philosophic nature from the unphilosophic.” “What is it?” “Be on the lookout for any involvement in slavishness. For presumably, petty-mindedness is utterly inimical to the soul, which intends to strive always for the whole and entire, of both the divine and the human.” “Very true,” he said.

486a

“Now, do you think that a mind endowed with magnificence, and a vision of all time and all being, could regard human life as something important?” “Impossible,” he said. “And a man like this will not think that death is something terrible, will he?” “Not in the least.” “Then, it seems a cowardly and slavish nature would have no involvement in true philosophy.” “I do not think so.”

486b

“Then again, is there any way that someone who is well behaved – not a lover of money, or slavish, or boastful, or cowardly – could be unjust or difficult to deal with?” “There is not.” “Well, when you are considering whether a soul is philosophic or not, you will enquire whether he was just and gentle from his youth upwards, or unsociable and wild.” “Yes, indeed.”

486c

“And I think there is one more consideration you should not omit.” “Which is?” “Whether he learns easily or with difficulty. Or do you expect that someone would ever really love an activity when its performance caused him pain, and after much difficulty he accomplished little?” “No, he would not.” “And what if he could preserve nothing of what he learned, being full of forgetfulness? Could he avoid being empty of knowledge?” “No, how could he?” “Now, as his labour accomplishes nothing, do you not imagine he will be driven finally to hate both himself and this sort of activity?” “That is inevitable.”

486d

“So, we should not ever admit a forgetful soul into the ranks of those competent for philosophy, but we must search instead for a retentive soul.” “Yes, entirely so.” “What is more, we would say that a person of unharmonious and deformed nature is drawn to mismeasure, and to nothing else.” “Of course.” “And do you think truth is akin to measure or to mismeasure?” “To measure.” “So, we should look for a mind which naturally exhibits measure and good grace in addition to the other qualities, a mind whose own nature allows it to be led easily to the form of anything that is.” “We should, of course.”

486e

“Well then, do you think that the qualities we have listed are in any way unnecessary, or incompatible with one another, for a soul which intends to apprehend ‘what is’ adequately and comprehensively?” “They are absolutely necessary,” he replied.

487a

“Now, is there any way you could criticise a pursuit like this, which no one would be able to engage in properly unless he were naturally retentive, a good learner, magnanimous, gracious, and a friend and relation of truth, justice, courage and sound-mindedness?” “Not even Momus⁹¹ would criticise an activity of that sort,” he said. “Then,” I said, “would you not entrust the city to such people, once they have been perfected

by education and the passage of years?”

487b

Then Adimantus said, “Socrates, no one would be able to contradict you on these matters. However, your hearers have a particular kind of experience every time they hear what you are saying now. They think, due to their inexperience in questioning and answering, that with every question, they are being led a little astray by the argument. But when the little steps are gathered together at the conclusion of the arguments, the defeat proves to be enormous, and quite contrary to the initial assertions. And just like draughts players who are finally boxed in by clever opponents and do not know what move they should make, your 487c hearers are also finally boxed in and do not know what they should say in this quite different game of draughts, played not with counters but with words. However, they have no better knowledge of the truth on account of this process.

487d

“I am speaking in the context of the present discussion. For someone may now say that they cannot oppose you in argument based upon each individual question, but that you should look at the facts. Those who venture into philosophy, not taking it up in their youth for educational purposes and then being free from it, but engaging in it for a long period of time, become for the most part very odd or, we could even say, utterly debased. There are others who seem completely reasonable, except that they are rendered useless to their cities through their encounters with the very subject which you commend.” Having listened to all this, I replied, “Do you think that the people who make these statements are lying?” “I do not know,” he said, “but I would be glad to hear your opinion.” “Then I will tell you. In my opinion, they appear to me anyway to be speaking the truth.” “In that case,” he said, “how is it appropriate to say that the cities will have no relief from evils

until the philosophers rule in them, when we agree that such people are useless to these cities?"

487e

"The question you have asked," I replied, "needs an answer expressed by means of an image." "And I suppose you are quite unaccustomed to speaking in terms of images!" he said. "Very well," I said. "Are you mocking me now that you have landed me with a proposition which is so hard to prove? Anyway, listen to the image so that you may get a better appreciation of how sparingly I make use of images. Indeed, the plight which the most reasonable ones experience at the hands of their cities is so grievous that there is not a single predicament like it. Rather, it is necessary to draw numerous sources together to develop an image of their condition and conduct a defence on their behalf, like the painters who draw goat-stags and hybrid creatures of that sort.

488a

"So, imagine something like this taking place on numerous ships or on a single ship. The captain, though he exceeds everyone on board in size and strength, is, on the other hand, somewhat deaf, his eyesight is also poor, and his knowledge of navigation is not much better. Now, the sailors are arguing with one another over the steering of the ship, each believing that he should steer, though he has not ever learned the skill nor is he able to indicate who his own teacher was, nor when it was that he studied with him. What is more, they assert that the subject is not even teachable, and they do not hesitate to cut into pieces anyone who says that it can be taught. They throng 488b about the captain himself, imploring him and doing anything so that he will turn the helm over to them. Sometimes, if they do not prevail and others are preferred, they kill these others or throw them out of the ship. And having entangled the noble captain with drugs or drink or something 488c else, they assume command of the ship, make use of its contents, and sail on,

drinking and feasting in the manner you expect from such people. As well as this, they praise anyone who is clever at working out how they can gain power by either persuading or overpowering the captain, and they refer to such a person as navigator, helmsman or professor of nautical affairs, and anyone who is not like this they dismiss as useless. But they do not want to hear about the true helmsman, that he ^{488d} must make a study of the year, the seasons, the sky, stars and winds and everything appropriate to this skill, if he really intends to govern a ship. And they do not believe it is possible to be skilled and practised in taking the helm regardless of the wishes of anyone else, and be a skilled helmsman at the same time.

^{488e}

“Now, since this is what is happening on board the ship, do you not think the true helmsman will indeed be called a star-gazer, an idler, and a useless person by the mariners on ships which are organised in this way?” “Very much so,” said Adimantus.

^{489a}

“Now,” I said, “I do not think you will require detailed scrutiny of the image to appreciate that it resembles the disposition of the cities towards the true philosophers. I think you understand what I mean.” “Very much so,” he said.

^{489b}

“Then the first thing is to teach this image to the person who is amazed because philosophers are not honoured in the cities, and try to persuade him that it would be much more amazing if they were honoured.” “Yes, I shall teach him,” he said. “And therefore, what you are saying is true, that the most reasonable of those who engage in philosophy are useless to the multitude. However, tell him that the people who do not make use of the philosophers are responsible for their uselessness, and not those reasonable men. For it is not natural for the helmsman to implore the sailors to be ruled by him, or for the wise to go to the doors of the wealthy. No, whoever invented that ingenious

expression was lying. The truth of ^{489c} nature is that whether you are rich or poor you must go to the doors of the doctors when you are ill, and all who wish to be ruled must go to the doors of those who can rule. The ruler must not implore his subjects to submit to his rule if he is to be of any use at all. But you will not be wide of the mark in comparing the politicians who are ruling now to the sailors we described earlier, and those whom they refer to as useless and as star-gazers to the true helmsmen.” “You are perfectly right,” he said.

^{489d}

“Well, under these circumstances and in these situations, it is not easy for philosophy to be esteemed as the paramount activity by people who are acting in opposition to it. But by far the greatest and most intense detraction of philosophy owes its origin to those who claim to be engaging in philosophic activity. Indeed, you said that the critic of philosophy maintains that most of those who embark upon its study are utterly debased, while the most reasonable are useless, and I admitted you were speaking the truth. Is this so?” “Yes.” “Did we not explain the cause of the uselessness of those who are reasonable?” “Very much so.”

^{489e}

“Do you want us to go on and explain the inevitable debasement of the majority? And if we are able, should we try to demonstrate that philosophy is not responsible for this either?” “Yes, certainly.”

^{490a}

“Then let us listen, and let us speak, once we have reminded ourselves of where we described the sort of nature with which someone who is to be noble and good must be endowed. First, if you recall, it was truth that guided him. He had to pursue it comprehensively by every means, or being a pretender, have no involvement whatsoever with true philosophy.” “Yes, that is what was said.” “And is not this one quality, the pursuit of

truth, in stark contrast to the opinions currently expressed about him?" "Very much so," he said.

490b

"Now, shall we not put up a reasonable defence by saying that someone who actually loves learning would naturally strive towards 'what is', and would not dwell upon each of the many things which seem to be? Rather, he would go on, without blunting his love or relenting in it, until he had grasped the nature of what each thing is in itself, with that part of the soul best fitted to apprehend this, the part which is kindred to it. Once he had drawn close to what actually is, and consorted with it through that part of the soul, having given birth to reason and truth, he would know, and live truly and be nourished, and in this way and in no other would his travail cease." "Nothing could be more reasonable," he said.

490c

"Well then, will he share any love of falsehood, or, on the contrary, will he hate it?" "He will hate it," he said.

490d

"So once truth is leading the way, I presume we would never say that a chorus of evils could follow it." "How could it?" "But what will follow is a healthy and just character accompanied by sound-mindedness." "Correct," he said. "And, in fact, why should it be necessary to arrange the rest of the chorus belonging to the philosophic nature all over again from the beginning? For presumably you do recall that courage, magnanimity, ease of learning and memory turned out to belong to such a nature. And you objected that everyone would indeed be forced to agree with what we are saying, and yet if they set the arguments aside, and looked at the people we are referring to, they would say that some of them are seen to be useless, while the majority are bad in every way. In considering the cause of this criticism we have come to a question. Why precisely are the majority bad? And now, on account of this

question, we have taken up the nature of the true philosophers once more and we are compelled to define it.” “So it is,” he said.

490e

“Then,” I said, “we need to look at the corruption of this nature and how it is destroyed in most cases, with few exceptions – a few who are, of course, referred to not as debased, but as useless. And after that we should look in turn at those who imitate this nature and set themselves up as practitioners of it. When souls of this nature encounter an activity of which they are unworthy, and which is greater than themselves, they constantly fall into error and bring upon philosophy the reputation you describe, in all sorts of ways and in front of everyone.” “What is the corruption you refer to?” he said.

491a

“I shall try to explain this to you if I am able,” I said. “There is one point on which I think everyone will agree with us. A nature like this, possessing all the qualities we prescribed just now for a perfect philosopher, will be few in number and will develop infrequently in people. Do you agree?” “Yes, definitely.” “Now consider the many significant causes of the destruction of these few.” “What causes?”

491b

“Well, the most amazing thing of all to hear is that each of the qualities which we praised in that philosophic nature destroys the soul that possesses it, and tears it away from philosophy. I am referring here to courage, sound-mindedness, and all the qualities we described.” “That is very strange to hear,” he said.

491c

“Yes,” said I. “And in addition to these, all the so-called goods corrupt and tear one away from philosophy: beauty, wealth, strength of body, strong family relationships within the city, and everything associated with these. Now you understand the kind of thing I am referring to.” “I understand,” he said, “and I would love to hear what you have to say in more detail.”

“Then,” I said, “comprehend it correctly in its entirety and it will appear quite clear to you, and the previous statements about these goods will not seem strange.” “What are you telling me to do?” he said.

491d

“In the case of all seeds, or any growth either in the earth or in animals, we know that whatever does not encounter appropriate nourishment, or climate, or location, feels a lack, and the more vigorous it is the more it feels the lack of what is appropriate to it. For badness is more opposed to good than to that which is not good.” “Of course.” “Now, it stands to reason, I believe, that the best nature turns out worse than the ordinary nature under nurture which is alien to it.” “It does.”

491e

“And,” said I, “will we not say, Adimantus, that the same applies to souls? Those with the best natural endowments will become especially bad on encountering bad instruction. Or do you think that enormous injustices and unadulterated baseness originate in an ordinary nature rather than in a high-spirited nature corrupted by its nurture? Will a weak nature ever be responsible for any great good or any great evil?” “No,” he said, “the situation is as you describe it.”

492a

“Then, I presume, the nature we designated as philosophic must develop and attain complete excellence if it obtains the proper instruction. However, if it is not sown, planted and nurtured in the proper manner, it attains the very opposite instead, unless one of the gods happens to come to its aid.

492b

“Or do you also believe, as many do, that some young people are corrupted by sophists, and that certain sophists, operating in private, are a corrupting influence of any significance? Rather, is it not the very people who make these statements who are the greatest sophists, who educate young and old, men and

women, to the utmost, and fashion them according to their will?" "When does this happen?" he said.

492c

"Whenever many people sit down together in large numbers in the assembly," I said, "the law court, the theatre or a military camp, or some other crowded public forum, and with much commotion they censure some things that are said or enacted, and praise others, both in excess. They cry out and applaud, and the rocks and the very place they are in echo with them and redouble the din of their censure and praise. Now, in such a situation, how do you think the young man's heart will fare? What private education will withstand this, and not be swept away by this sort of censure and praise, and be gone, borne away by the flood to wherever it may lead? Won't he declare that what is beautiful or ugly is just what they say it is? Won't he behave as they do and be just like them?"

492d

"Yes, Socrates," he said, "he must." "And yet," I said, "we have still not mentioned the most powerful compulsion." "What is that?" he said. "The compulsion which these educators and sophists employ through their actions when they fail to persuade with words. Or do you not realise that they punish people who are not persuaded, through loss of status, fines and death?" "Yes, most definitely," he said.

492e

"So what other sophist, or what sort of private principles, do you think will prevail in a struggle against such people as these?" "I do not think there is one," he said. "No, there is not," I said. "And even the attempt would be utter folly. For there is not, nor has there been, nor indeed will there ever be, a character distinguished in excellence who has been educated in the system which these people provide, not among humanity anyway, my friend. Of course, according to the proverb, we should make an exception in the case of the divine. For we need

to appreciate that if anything is saved and develops as it should, when cities are in such a predicament ^{493a} as this, it is the providence of God that saves it. If you say this, you will be speaking no evil.” “Well, that is how it seems to me anyway,” he said. “Then,” said I, “there is another proposition you should also accept as well as these.” “What is it?” “Each of the private hirelings, whom certain people call sophists and regard as their professional rivals, do not teach anything other than the doctrines of the masses, the opinions that they form when they are gathered together. And the sophists call this wisdom. It is as if a huge powerful beast was being nurtured and someone made a careful study of its appetites and desires: how it ^{493b} should be approached and how it should be touched; when it is at its most difficult or when it is most docile; how these moods arise, and, indeed, what sounds it usually utters in either circum- ^{493c} stance, and what sounds uttered, in turn, by others make it gentle or wild. Suppose having learned all this through years of experience of being with the creature, he called it wisdom, set it up as a skill, and turned to teaching it. Without knowing if any of those doctrines or desires was beautiful or ugly, good or bad, just or unjust, he would decide everything according to the opinions of the huge animal. Whatever pleased it he would call good, whatever upset it he would call bad, and this is the only argument he would have on the matter. Whatever was necessary he would call just and beautiful, without having seen the nature of the necessary and the nature of the good, and the extent to which they really differ, or being able to demonstrate this to anyone else. Now, by Zeus, do you not think a person like this would be a strange educator?” “I think so,” he said.

^{493d}

“Well, is there any difference between this man and someone who believes that discerning the mood and pleasures of these numerous, variegated gatherings of people is wisdom, whether it concerns painting, music or even politics? For regardless of

how someone deals with them, whether he presents poetry or some other product or service to the city, once he turns the multitude into his masters beyond the limit of necessity, the so-called ‘necessity of Diomedes’⁹² compels him to produce whatever they praise. But have you ever yet heard someone make the case that these productions are in truth good and beautiful, based on an argument which was not utterly laughable?” “No, and I do not think I ever shall,” he said.

493e

“Well, now that you have understood all this, let me remind you of something. Is there any way that the masses will accept or believe that there is such a thing as beauty itself, rather than many beautiful things, or anything ‘by itself’, rather than many particular things?” “Not in the least,” he said. “So it is impossible for the multitude to be a philosopher,” I replied. “Impossible.” “And so those who engage in philosophy must be censured by the multitude.” “They must.” “And, of course, by those private educators who associate with the crowds and who long to please them.” “Obviously.”

494a

“Now, do you see any salvation for the philosophic nature emerging from all this, so that it will persist in its activity and reach its objective? Think in terms of what was said earlier. We did agree that ease of learning, memory, courage, and magnanimity belong to this nature.” “Yes.” “Will not a person like this, from his very childhood, be the first among them all in everything, especially if his body also develops like his soul?” “He must be,” he said.

494b

“Then his associates and fellow citizens will want to make use of him for their own purposes, once he comes of age.” “How could they do otherwise?” “So, they will fall at his feet, and petition him and honour him, laying on their flattery as they anticipate his impending power.” “That is what tends to happen, anyway,”

he said.

494c

“Now, what do you think a person like this will do under such circumstances,” I said, “especially if he happens to belong to a great city in which he is wealthy and of noble birth, and he is tall and good-looking besides? Will he not be filled with unbounded confidence, believing himself competent to manage the affairs of the Greeks and non-Greeks? Will he not exalt himself on account of this, and be loaded with pretension and empty thinking which is devoid of reason?” “Yes, very much so,” he said.

494d

“Well, if one were to approach a person in such a predicament gently and tell him the truth – that there is no reason in him but he does need reason, and that anyone who does not have it must work like a slave to acquire it – do you think it would be easy for him to hear this in the midst of such corrupting influences?” “Far from it,” he said.

494e

“What if one such person somehow becomes aware of philosophy,” I said, “turns to it, and is drawn there on account of good rearing and an affinity with reasoned arguments? How do we think the others will respond when they presume that they will lose his influence and companionship? Will they not do anything, or say anything, through private conspiracies and public confrontations to prevent him from being persuaded, and to prevent the persuader from succeeding?” “Yes, they must,” he said.

495a

“Then is there any way that such a person will enter into philosophy?” “Certainly not.” “Do you see now that we were not far wrong when we said that the very qualities of the philosophic nature, once they encounter bad nurture, are in a way responsible for making a man give up the activity? And the

same goes for the so-called goods, such as wealth or any acquisition of that sort.” “Yes, what was said was correct.”

495b

“So, wonderful friend, such is the extent of the corruption, and the sort of destruction, which afflicts the very best nature with regard to this supreme activity, and we assert that this nature is a rare occurrence in any case. And, indeed, from the ranks of these men come the people who inflict the greatest evils on cities and individuals, and the greatest good too should they happen to be inclined in that direction. But a weak nature never does anything significant, either for a city or for an individual.” “Very true,” he said.

495c

“And now that these people who are most suited to philosophy have gone away like this, they leave it alone and incomplete, while they themselves live an unseemly and untrue life. Philosophy, on the other hand, is like an orphan without relatives. Unworthy characters arrive on the scene and they subject it to shame and derision, levelling the sort of criticisms you describe, that some of its associates are worthless, while most of them are responsible for countless evils.” “Well, yes, that is what they say anyway.”

495d

“And what they say is quite reasonable. For other puny specimens of humanity observe that this place is becoming empty, though it is full of fair titles and reputations. Like men who flee from prison to take refuge in temples, those who happen to be cleverest in their own little subject are glad to jump from their professions into philosophy. Nevertheless, philosophy, in spite of its predicament, retains a most worthy reputation in comparison with the other occupations. So of ^{495e} course many people whose nature is undeveloped aspire to this, but their souls are stunted and crushed by vulgarities, just as their bodies are deformed by their professions and occupations.

This is inevitable is it not?" "Very much so," he said. "Now," I said, "do you think they are any different to behold than a small, bald-headed bronze-worker who has acquired some money, has recently been freed from bondage, washed himself at a bathhouse, is wearing a brand new garment, and is decked out like a bridegroom, intending to marry his master's daughter because she is poor and abandoned?" "No, there is not much difference," he said.

496a

"And what sort of offspring are such unions likely to bring forth? Will it not be illegitimate and ordinary?" "It really must be." "Well then, what sort of ideas and opinions would we say are produced when those who are unworthy of education draw near to philosophy and consort with it when they do not deserve to? Would it not be best, in truth, to call them sophisms, possessing nothing genuine or worthy of true intelligence?" "Entirely so," he said.

496b

"Well, Adimantus," I said, "what is left is some tiny remnant of those who are worthy to consort with philosophy, perhaps a noble and well-reared character who has suffered exile, has no access to corrupting influences and remains naturally by its side. Or sometimes a great soul may grow up in a small city, show no respect for the affairs of that city and may see beyond them. Or perhaps some few with natural endowments may come to it from other professions, for which they rightly show an appropriate disregard. The bridle of our friend Theages⁹³ may also be able to restrain someone. Yes, indeed, all other factors in Theages' life gave him cause to give up philosophy. However, his inclination to physical illness keeps him out of public affairs and acts as a restraint. But my own sign,⁹⁴ the daimon, is not worth mentioning, for I believe it has happened to scarcely anyone else before.

496c

“Now, those who belong to this small group have tasted the sweetness and blessedness of this possession, and can also see the madness of the multitude quite well, realising that in a sense no one does anything reasonable in the conduct of civic affairs, nor is there an ally with whom a man could go to the aid of justice and still survive. Instead, he is like a man who has fallen in with wild animals, has no desire to conspire in wrongdoing but is not up to the task of resisting all their savagery, a man who will perish before he is of any benefit to the city or his friends, and would be of no use to himself or anyone else. Having understood all this through reflection, he is at peace and attends to his own affairs, like a man in a storm of wind-driven dust and rain who crouches ^{496d} beneath a low wall. And seeing that all else is crammed full of lawlessness, he is content if somehow he can live this life here purified of injustice and unholy deeds, and take his departure with good hope, gracious and kindly as he goes.” “But surely,” he said, “if he were to depart, having accomplished this, it would be no mean achievement.”

^{496e}

“Nor the greatest possible achievement either,” I said, “unless he encounters a form of government which is propitious. For he himself will develop fully in a propitious city, and will save what is public and what is private. “And now the origin of the slanders against philosophy and the injustice of the charges have, in my opinion, been properly explained, unless you have anything else to say.” “No,” he said, “I have nothing else to say on this topic. But which of the present forms of government is propitious to philosophy?”

^{497a}

“None whatsoever,” I said. “That is the very accusation I am making. Not one city of those presently in existence is worthy of the philosophic nature, and therefore it is contorted and altered. Just as an alien seed planted in foreign ground tends to

be overpowered and fades into the local countryside, this type, in like manner, no longer holds onto his own capacity, but degenerates into a character which is not his own. However, if he encounters the most excellent form of government, as excellent as himself, then it will be evident that this type is truly divine, while the others are human both in their natures and in their activities. Obviously the next thing you will ask is what this form of government is.”

497b

“No, you are wrong,” he said. “I was not about to ask you that, but rather whether this is the very form of government we have been describing whilst establishing our city, or a different form.”

497c

“In general terms, it is that form,” I said. “However, it was also stated earlier that there must always be one person in the city possessing the same understanding of the form of government which you, the lawgiver, held when you were instituting the laws.” “Yes, that was said,” he replied.

497d

“But this was not made sufficiently clear,” I said, “because we were afraid of your objections which show that the proof of this is long and difficult. Indeed, what now remains is not at all easy to recount.” “What does remain?” “The manner in which a city practising philosophy may avoid destruction. For obviously all great undertakings are prone to failure, and it is a true saying that ‘hard is the good’.”

497e

“But we should bring the proof to a conclusion anyway by making this point clear.” “It is not lack of will,” I said, “but lack of ability, if anything, which may prevent this. And since you are here you will see how eager I am. Behold the impetuosity and rashness with which I now declare that the city must take up this philosophic activity in the opposite manner to the

present manner.” “How?”

498a

“Nowadays,” I said, “those who take up the subject are youths just out of childhood, before they turn to household affairs and money-making, who get close to the most difficult aspect of the activity and then give up. I am referring to those with the greatest philosophic pretensions. And when I mention ‘the most difficult aspect’, I mean reasoned arguments. Subsequently, if they are invited by others who engage in philosophy, they prefer to participate as listeners, and they think that this is significant for they regard it as a necessary pastime. But in their later years, save of course for a few, they are extinguished more comprehensively than Heraclitus’ sun,⁹⁵ insofar as they are never again rekindled.” “What should they do?” he asked.

498b

“The complete opposite. When they are youths and children, they should engage in a youthful form of education and philosophy, and at a time when their bodies are developing and reaching manhood, these should be very well cared for in order to procure a servant for philosophy. “But once they reach the age at which the soul starts to become mature, they should intensify the exercises of the soul. And later, when the strength abates and they become unfit for political ^{498c} or military affairs, at that stage they should be left to indulge in philosophy without restraint and do nothing else unless as a pastime, if they are to live happily, and when they die, crown the life they have lived here with a propitious destiny beyond.” “Socrates,” he said, “it really does seem to me that you have, at best, spoken enthusiastically. However, I think that most of your listeners are resisting you with even greater enthusiasm and will not be persuaded at all, beginning with Thrasymachus.”

498d

“Do not speak ill of me and Thrasymachus,” I replied. “We have only just become friends, not that we were enemies before that.

For we shall not give up this effort until we either persuade him and the others, or make some preparation for that life wherein they come into being once more and encounter arguments such as these.” “You are referring to quite a short time period,” he said. “Yes, but it is really nothing in relation to all time,” I replied. “However, the fact that most people are not persuaded by what is being said is no wonder at all. For they have never beheld what is ^{498e} now being described. No, just a lot more expressions of this sort, which cohere with one another due to contrivance rather than the chance occurrence which happened just now. But they have never yet seen a number of men, or even one man, who is perfectly balanced and coherent in virtue as far as this is possible, in both word and deed, holding power in a city which is just like himself. Or do you think they have?” “Not at all.” “Nor, blessed friend, have they listened properly to beautiful and free discourse, of a kind which exerts itself in every way to seek truth for the sake of knowledge, showing only a distant regard for clever and argumentative words whose aim, both in law courts and in private gatherings, is nothing except reputation and contention?” “No, they do not have this experience, either,” he said.

^{499a}

“Well,” I said, “on account of these issues, and anticipating them, at the time we were afraid. But nevertheless, under the compulsion of truth, we said that neither a city, nor a form of government, nor an individual person either, would attain perfection until some necessity, perchance, compels those few philosophers – who are not corrupted but who have just been referred to as useless – to take responsibility for the city, whether they want to or not, and also constrains the city to heed them. Or, until a true love of true philosophy, through some divine providence, inspires the sons of our present kings or potentates, or even the men themselves. And I am saying that

there is no reason why either or both of these outcomes is impossible. For in that case, we would rightly be laughed at for uttering nothing but empty pieties. Is this not so?" "It is so."

499b

"Then, if some necessity had arisen for those at the very pinnacle of philosophy to take charge of a city, in the boundless ages of the past, in some foreign land which is somehow far beyond our view, or there is such a need at present, or if this will ever happen in future, then I am prepared to uphold the argument that there has been a form of government such as we have described, and there is and will be such a form whenever the Muse of philosophy has come to power in a city. For it is not impossible to bring this into being, neither are we describing impossibilities, but we do acknowledge that it is difficult." "And that is how it seems to me too," he said.

499c

"And would you agree," I said, "that this is not how it seems to most people?" "Perhaps," he replied. "Blessed friend," I said, "do not level undue criticism at the masses in this manner. They will hold a different opinion if you are encouraging, rather than adversarial, as you undo this slander against the love of learning. Show them the people you call philosophers, and define their nature and the activity just as you did before, so that they will not think you are referring to the people whom ^{499d} they themselves regard as philosophers. And once they see this, surely you agree that they will hold a different opinion and respond differently. Or do you think that anyone gets angry with someone who is not being angry, or acts grudgingly towards someone who is ungrudging and is a generous, gentle person? Actually, I shall anticipate your answer and say that it may happen in a few cases, but in most cases such an angry nature does not arise." "And I agree with you, of course," he said.

499e

“And will you not also agree that the angry disposition of most people towards philosophy is caused by those outsiders who rush in wildly where they do not belong, abusing one another, possessed by a love of adversity, always framing their arguments in relation to other people, an activity utterly inappropriate to philosophy?” “Very much so,” he replied.

500a

“Yes, and surely you would also agree, Adimantus, that someone whose mind is truly directed towards things that are, has no time to look down upon the affairs of men and do battle with them, ^{500b} filled with envy and hostility. No, he looks towards things which are in their assigned place, which are always the same, and seeing that these neither act unjustly nor are treated unjustly by one another, but are completely ordered and in accord with reason, he imitates them and becomes as like unto them as possible. Or do you think there is any way that a person who delights in something, and consorts with it, can avoid imitating it?” “Impossible,” he said.

500c

“Then the philosopher, consorting with the divine and the orderly, becomes as divine and orderly as is possible for a human being. But there is enormous prejudice from all quarters.” “Yes, entirely so.” “Now, should some need arise for him to practise instilling what he sees in that place into the private or public affairs of humanity, and not merely to work upon himself, do you think he would prove to be a poor artificer of sound-mindedness and justice and the sum total of public excellence?” “Not in the least,” he said.

500d

“But if the masses actually realise that we are speaking the truth about the philosopher, will they still be angry with the philosophers, and disbelieve us when we say that a city will not ever be happy at all unless it is drawn by draughtsmen who have recourse to the divine pattern?” “They will not be angry

once they realise this,” he said. “But what manner of drawing are you referring to?”

500e

“Having taken the city,” I said, “as if it were a writing tablet, and the customs of humanity too, they would first make them clean, and this is no easy task. But in any case, you know that they would immediately differ from others in this respect; they would not be prepared to take responsibility for a person or a city, or write laws, unless these were either clean when they received them, or they themselves made them clean.”

501a

“And rightly so,” he said. “And after that, do you not think they would sketch an outline of the form of government?” “Of course.”

501b

“Then, I presume, they would turn their gaze in both directions as they filled in the details, looking towards what is naturally just and beautiful and sound, and everything of that sort, and towards their counterpart in the realm of humanity. Mixing together and blending various activities, they would fashion the likeness of a man by referring to what Homer calls ‘the form and image of God arising in human beings’.”⁹⁶ “Correct,” he said.

501c

“And I imagine they would erase one feature and then draw in another feature, until they had made the character of humanity as beloved of God as it can possibly be.” “The picture could scarcely be more beautiful,” he said. “Now,” I said, “are we somehow persuading the people who are ‘rushing at us in battle array’ that this is the sort of draughtsman of forms of government we commended to them earlier? They were angry because we were going to hand the city over to this man, but are they any gentler now that they have heard this?” “Very much so,” he replied, “if they are sound-minded, anyway.”

501d

“Yes, but how could they dispute this? Would they say that the philosophers are not lovers of truth and ‘what is’?” “That would indeed be strange,” he said. “Or that their nature, as we have described it, is not akin to the very best nature?” “They cannot say that either.”

501e

“Well then, will they say that such a nature, encountering the appropriate practices, will not be perfectly good and philosophic, if any nature can? Or will they say that the people we have excluded have a better chance?” “Certainly not.” “So, will they still be angry when we say that until the philosophic type assume power, there will be no cessation of evils for cities or for citizens, nor will the city which we are describing in fabled words ever be perfectly realised in action.” “Perhaps they will be less angry,” he said. “May we say not that they are less angry, but they have become completely gentle and have been persuaded, so that they are inclined to agree with us, even if only from shame?” “Yes, certainly,” he said.

502a

“Then let us assume,” I said, “that they are persuaded of this. Is there anyone who will argue nevertheless that there is no chance of the offspring of kings and potentates turning out to be philosophers by nature?” “Not a single person will argue that,” he replied. “Can anyone maintain that such people absolutely must be destroyed once they do come into being? We do agree of course that they are difficult to save, but is there anyone who would contend that throughout all time not even one of them has ever been saved?” “How could anyone maintain that?”

502b

“But surely,” I said, “if one such person comes into being, and the city is co-operative, that is sufficient to accomplish everything which is now cast into doubt?” “Yes, it is sufficient,”

he said. "For I presume," said I, "that once the ruler has set down the laws and practices we have described, it is certainly not impossible for the citizens to be willing to enact them." "No, not at all."

502c

"Well then, would it be any surprise if others held the opinions which we hold, or is this impossible?" "Well, I do not think so anyway," he said. "And, indeed, in my opinion we have provided sufficient evidence already that these arrangements, if they are possible, are the very best." "Yes, quite sufficient." "Well now, it seems we are coming to the conclusion that when it comes to the enactment of laws, the arrangements we are describing are the best, if they can be enacted. However they are difficult, but not impossible, to implement." "Yes, that is what we are concluding," he said.

502d

"Therefore, since this issue has with some effort reached a conclusion, we should of course go on and discuss whatever remains: the manner in which the saviours fit into our form of government, the subjects and activities upon which this is based, and the ages at which they will take them up." "We should indeed discuss this," he said.

502e

"And nothing came of my earlier cleverness," I said, "in passing over the difficult question of the possession of women, the begetting of children, and the appointment of rulers. I knew that the completely true version would attract hostility, and is also difficult to implement, but now it proves necessary to give an account of it in any case. "Well, matters relating to women and children have been concluded. However the question of the rulers must, in a sense, be dealt with from the beginning. We said, if you recall, that they must prove themselves to be lovers of the city, tested both in pleasure and in pain, and must show that they never set aside this principle in the face of hardship,

or fear, or any adversity whatsoever. Those who cannot do this must be rejected, while anyone who turns out to be entirely pure, like gold tested in the fire, should be installed as a ruler and be accorded honours, both in life and after ^{503a} death, yea, and prizes too. These were the sorts of things we were saying while the argument turned aside and hid itself for fear of initiating this particular discussion.” “What you are saying is very true,” he replied. “I do remember.”

^{503b}

“Yes, my friend. I was reluctant to say what I have just dared to say,” said I, “but now we should have the courage to declare that philosophers must be appointed as guardians, in the strict sense of the word.” “Yes, we should say so,” he replied. “Now, bear in mind that they will probably be few in number. For the various qualities of the nature we described must be applicable to them, and those qualities are seldom inclined to develop together in the same person, but are usually dispersed throughout the population.” “What do you mean?” he said.

^{503c}

“You know that ease of learning, memory, sagacity, acuity, and whatever is associated with these, along with spiritedness and magnificence of mind, tend not to develop along with a desire to live an orderly life in peace and constancy. Rather, such people are borne by their own brilliance wherever chance may lead, and all constancy goes out of them.” “What you say is true.”

^{503d}

“On the other hand, do not characters that are constant and not easily swayed, in which we place more trust, that are unmoved in the face of terrors on the battlefield, also act in just the same way when faced with things to be learned? They are hard to move and hard to teach, as if they had been paralysed, and are full of sleep and yawning if they must apply themselves to such a task.” “That is what happens,” he said. “But we stated that a

person must partake of both characters in proper and fair measure, or else he should not be given a share of education in the truest sense, or of honour, or of rule.” “Correct,” he said. “Do you not think that this will be rare?” “How could it not be?”

503e

“Then they should be tested under the hardships, fears and pleasures we described earlier. And there is also the point we just mentioned, which we passed over before, that they should be put through exercises in many branches of learning to see if they will be able to endure the most important sub- 504a jects, or will prove to be cowards, just as people also prove to be cowards in the other situations.” “Yes of course,” he said, “it is quite appropriate to consider the matter in this way. But what sort of important subjects are you actually referring to?” “You remember, I presume,” said I, “that once we had distinguished three parts of soul we came to conclusions about what justice is, and about what sound-mindedness, courage and wisdom each is.” “Well,” he said, “if I did not remember, I would have no right to hear the rest of this discussion.” “Do you also remember what was said before that?” “What sort of thing?”

504b

“I believe we said that in order to obtain the clearest possible view of these, another longer, circuitous route would be necessary, and they would become apparent to someone who took that route. However, we said we could add proofs which follow from the previous discussion, and you agreed that this was sufficient, and what was said was said on this basis, though it seemed to me to lack precision. But whether it was satisfactory to you is for you to say.” “Well, to me it was satisfactory in some measure, and the others seemed to think so too.”

504c

“But, my friend,” I said, “in such matters a measure which leaves out any aspect of ‘what is’ does not act as a measure at

all, for nothing incomplete is a measure of anything. However, it does sometimes seem to some people that enough has been achieved already, and it is not necessary to search any further.” “Yes, lots of people feel like this due to laziness,” he said. “But this feeling has no place whatsoever in a guardian of the city and the laws.” “That is reasonable,” he said.

504d

“Then, my friend,” I said, “the longer route must be taken by someone like this, and he should devote just as much labour to learning as to gymnastics. Otherwise, as we just said, he will never attain the objective of the greatest and most important subject.” “So, is there something greater than justice and whatever else we described?” he asked. “Are these not the greatest?” “There are greater,” I said, “and in those cases we must behold no mere outline as we did just now. No, we cannot avoid giving a complete and comprehensive account. Would it not be ridiculous to make all these efforts to achieve the utmost precision and clarity in issues of little significance, and in contrast deem the greatest issues unworthy of the greatest precision?” “Very much so,” he said. “But do you think that anyone will let you go without asking what the greatest subject is, and what it deals with?”

504e

“Not at all,” I said, “you should ask. You have heard the answer often enough, that is for sure, but now either you cannot think of it, or alternatively you intend to make work for me by raising objections. And I suspect it is more the latter, since you have often heard that the form of the good is the greatest subject, and that justice and the others become useful and beneficial through recourse to this. You know quite well that I am going to talk about this, and will also say that our knowledge of it is inadequate. And if we do not know this, but have comprehensive knowledge of other matters without knowing this, you know it is of no benefit to us, nor is anything else we

acquire, without acquiring the good. Or do you think there is any advantage in acquiring everything without acquiring the good? Or in understanding everything else except the good, but understanding nothing fair and good?" "By Zeus, I do not," he said.

505a

"Well now, you also know that to most people pleasure seems to be the good, but to the more refined people it seems to be understanding." "So it does," he said.

505b

"And you know, my friend, that those who believe this are unable to indicate what this understanding is. Rather, they are finally compelled to say that it is understanding of 'the good'." "Yes, it is quite comical," he said. "Isn't that inevitable," I said, "if they criticise us because we do not know the good while talking to us as if we did know it? For they say that it is understanding of the good, as if for our part we follow what they are saying whenever they utter the phrase 'the good'." "Very true," he said.

505c

"And what about those who define pleasure as the good? Are they any less adrift than the others? Are they not also compelled to agree that there are bad pleasures?" "Definitely." "In that case it follows, I presume, that they are agreeing that the same things are both good and bad. Is this so?" "Of course." "Is it not evident then that there are many intense disputes about it?" "Inevitably."

505d

"What about this? Is it not evident that many people would choose whatever seems to be just and fair when it comes to actions, possessions, or reputations, even if these are not actually just and fair? But no one is ever satisfied with acquiring what seems to be good. No, they search for things that are good, and in this case they utterly despise seeming." "Very much so,"

he said.

505e

“So, there is something that every soul pursues, and for the sake of which it performs all actions, possessing an intuition that there is such a thing. But it is perplexed, and cannot apprehend precisely what it is, or resort to a stable belief as it does in other pursuits, and on this account it loses any benefit from the other pursuits. Now, would we say that our guardians, the very best people in the 506a city, to whom everything is entrusted, should be in such dark ignorance about something as important as this?” “Least of all,” he said. “Anyway,” I said, “I suspect that when there is ignorance as to how exactly the just and fair are also good, they will obtain a guardian who is not good for much, since he will be ignorant of this issue. And my intuition is that no one will have adequate knowledge of the just and the fair, until the good is known.” “A sound intuition indeed,” he said.

506b

“Will not our form of government attain perfect order if a guardian such as this, someone with knowledge of these matters, watches over it?” “It must,” he replied. “But, Socrates, are you saying that the good is knowledge or pleasure, or something else besides these?” “What an excellent man you are,” I said. “Indeed, it has been evident for some time that you would not accept the opinions of others about this.” “Yes, Socrates, it does not seem right to me to be able to express other people’s opinions but not your own, when you have been engaged in these issues for such a long time.”

506c

“Then what about this?” I said. “Does it seem right to you for someone who does not know to speak as if he knows?” “He certainly should not speak as if he knows,” he replied. “But he should be prepared to state what he believes as if he believed it.” “Yes, but have you not observed that opinions devoid of knowledge are all disgraceful? That the very best of them are

blind? Or do you think that those who form true opinions, devoid of reason, are any different from blind men travelling along the right road?" "Not one bit," he replied.

506d

"So, would you like to contemplate the disgraceful, the blind and the deformed, when it is possible to hear what is bright and beautiful from other sources?" "By Zeus, Socrates," said Glaucon, "do not give up when you are almost at the end. Indeed, we shall be satisfied even if you give an account of the good, in the same way that you also gave an account of justice, sound-mindedness and the others." "And so shall I, my friend," I said, "I shall be quite satisfied. But I fear that I shall not be able, and in my enthusiasm I shall disgrace myself and incur ridicule. Instead, blessed friends, let us set aside for now this question of what precisely is the good, for it appears to me that to attain what I ^{506e} now have in mind is beyond this current endeavour. However, I am prepared to describe something which appears to be the offspring of the good, and to resemble it very closely, if that is acceptable to you. Otherwise, let us leave it." "Just speak," he said. "You will repay the story of the father some other time."

507a

"I wish that I could give you this," I said, "and that you could receive it and not the mere 'interest'⁹⁷ I am giving you now. Anyway, you should certainly accept this interest and offspring of the good itself. However, be careful, in case I somehow deceive you unintentionally with a false account of the interest." "We will be as careful as we can," he said. "Just speak."

507b

"I will begin," I said, "once I have come to an agreement with you and reminded you of what was said previously, and has often been said on other occasions too." "What are you referring to?" he asked. "We say," I said, "that there are many

beautiful things, many good things, and so on, and we define them in words.” “Yes, that is what we say.” “And we say there is beauty itself and good itself, and the same applies to everything else we then designated as many. Furthermore, based upon a single form belonging to each multiplicity, designating the form as being one, we refer to it as ‘what each is’.” “This is so.” “And we say that the many are seen but are not known by reason, while the forms are known by reason but are not seen.” “Entirely so.”

507c

“Now, with which of our faculties do we see visible objects?” “With sight.” “And with hearing we hear whatever is heard, and with the other senses we perceive all that is perceived. Is this so?” “Of course.” “Now,” I said, “have you thought about the great extravagance with which the artificer of the senses fashioned the faculty of seeing and being seen?” “Not much,” he replied. “Well, consider this: do hearing and sound require another factor so that the one can hear, and the other be heard, a third element in the absence of which hearing will not hear and sound will not be heard?” “They require nothing,” he replied.

507d

“Yes,” I said, “and I believe there is no such requirement in most other instances, though I do not wish to say there are none at all. Or do you have any examples?” “No, I do not,” he said. “But do you realise that the faculty of sight and visibility does have this requirement?” “How so?” “Sight is presumably present in the eyes and their possessor attempts to make use of it. Colour is present too, but in the absence of a third factor naturally adapted to the particular purpose, you know that sight will see nothing, and colours will be invisible.” “What factor are you referring to?” he asked. “It is what you call light,” I replied. “What you are saying is true,” he said.

507e

“Then, the sense of sight and the capacity to be seen are yoked together by a bond, more noble in no small measure than other combinations, since light does not lack nobility.” “On the contrary,” he said, “it is far from ignoble.”

508a

“Now, can you say which lord of the gods in heaven is responsible for this light, by which our sight can see so clearly and by which the visible things can be seen?” “I can say what you or anyone else can say, for obviously you are asking about the sun.” “Well, is there a particular natural relation of sight to this god?” “How is it related?” “Neither sight itself, nor the eye in which we say sight arises, are the sun.” “No, they are not.” “And yet I believe the eye, of all the organs of sense, is most like the sun in form.”

508b

“Very like.” “And is not the power it possesses acquired as an influx dispensed from the sun?” “Yes, entirely so.” “In which case the sun is not sight. However, being the cause of sight, is it seen by sight itself?” “Quite so,” he replied.

508c

“Then you should realise”, I said, “that what I am describing is the offspring of the good, which the good itself generated in a particular relation to itself. Insofar as the good, in the realm of reason, relates to reason and whatever is known by reason, so does the sun, in the realm of sight, relate to sight and whatever is seen by sight.” “In what way?” he asked. “Tell me more.” “You know,” I said, “that whenever the eyes are no longer turned to objects whose colours receive the light of day, but to objects in the dim light of the night, their keenness is blunted, and they almost seem blind as though there is no clear vision in them.” “Very much so,” he replied.

508d

“And yet, I believe, when they turn to objects on which the sun shines, they see clearly, and it appears that there is vision in

those same eyes.” “Of course.” “Then, you should also understand the condition of the soul in the same way. Whenever it rests on something upon which truth and ‘what is’ shine, it reasons and knows it, and appears to possess reason. However, when directed to something compounded with darkness which comes into being and is destroyed, the soul forms opinions, sees dimly, changes its opinions back and forth, and in this situation seems not to possess reason.” “Yes, that is how it seems.”

508e

“Then, you should declare that the form of the good bestows truth upon whatever is known, and confers the power of knowing on the knower. Being the cause of knowledge and truth, you should think of it as knowable. However, although knowledge and truth are both beautiful, you would be right to regard this as different from them, and even more beautiful than both of them. And just as in the previous case, it is right to regard light and sight as resembling the sun in form, but it is not right to believe they are the sun, so also in this case it is right to regard knowledge and truth as 509a both resembling the good in form, but it is not right to believe that either of them is the good. No, the character of the good should be accorded even greater honour.” “You are speaking of an unparalleled beauty,” he said, “if it bestows knowledge and truth, and exceeds them in beauty. For you are surely not saying that it is pleasure.” “Please show respect,” I said, “and consider a further aspect of its image.” “In what way?”

509b

“I assume you will agree that the sun bestows not only the ability to be seen upon visible objects, but also their generation and increase and nurture, though the sun itself is not generation.” “How could I disagree?” “Then not only does the knowability of whatever is known derive from the good, but also what it is, and its being, is conferred on it through that,

though the good is not being, but is even beyond being, exceeding it in dignity and power.”

509c

Then Glaucon exclaimed quite hilariously, “By Apollo, it is utterly supernatural!” “Yes,” I said, “and you are responsible for making me express my opinions about it.” “And you should not stop at all,” he replied. “At least give us more details about this simile of the sun, if there is anything you are leaving out.” “In fact,” I said, “I am leaving out quite a lot.” “Well, you should not omit even a little,” he said. “I think I shall omit a lot,” I said. “Nevertheless, to the extent that it is possible at present, I shall 509d not leave anything out deliberately.” “Then do not,” he said. “Keep in mind what we have been saying, that there are two things, one having lordship of the realm and kind known by reason while the other is lord of the visible realm. Now, I hope you do not think I am just playing with words,⁹⁸ but do you now understand that there are these two kinds, one known by sight and the other by reason?” “I understand that.”

509e

“Then, take a line which has been divided into two unequal sections, one corresponding to the kind known by sight, and the other to the kind known by reason. Divide each section once more in the same ratio, and you will have an expression of their relative clarity and obscurity in the realm of sight. There, one section consists of images, and by images I mean shadows first, and then appearances produced in water, and in anything dense, smooth and polished, and indeed everything else of that sort. Do you understand?” “I do understand.”

510a

“Then you should designate the other section as that which the first one resembles – the animals around us, everything that grows, and the entire class of inanimate objects.” “Very well,” he said. “And would you also be prepared to say that this division makes a distinction involving truth and its absence, for

as an object of opinion relates to an object of knowledge, so also does a likeness relate to whatever it is like?" "I would indeed," he replied. "Now, you should go on to consider how the section known by reason is to be divided." "Yes, in what way?"

510b

"In this way. In one of the sections, the soul is compelled to search, based on hypotheses, using as images what had previously been imitated, and proceeding not to a first principle but to a conclusion. In the other section however, it also goes on from hypothesis to an un-hypothesised first principle, and based upon forms themselves, it conducts its approach through them, without the images used before." "I don't really understand what you are saying," he said.

510c

"Then I will try again," I said, "for you will learn more easily from these preliminary examples. Indeed, I am sure you appreciate that those involved with geometry or calculation, or such subjects, hypothesise the odd and the even, the various shapes, the three kinds of angles, and other kindred hypotheses, depending on the particular approach. They assume that these are already known, turn them into hypotheses, and see no value in giving an account of them, either to themselves or to anyone else, since they are obvious to everyone. Beginning from these, they proceed with the remaining issues, and arrive at consistent conclusions about the matter they set out to investigate." "Yes," he said. "I certainly know this."

510d

"In that case, you also appreciate that they make use of the visible forms, and construct their arguments in relation to them, although it is not the visible forms that they have in mind but the things which they resemble. They construct their arguments with an eye to the square itself, and the diameter itself, and not the one in the diagram. The same applies to the other instances. They take the objects which are fabricated or

drawn, objects which have shadows, and images in water, and use them in turn as images, seeking to discern the entities themselves, which may only be discerned through thought.” “What you are saying is true,” he said.

510e

“Well, this is the form I described as ‘known by reason’. However, the soul is compelled to employ hypothesis in its investigation of it, not proceeding to a first principle, since it is unable to transcend any higher than hypotheses. Instead, it employs as images the very objects which are imitated in 511a the lower division, objects which are regarded as clear and worthy of honour when compared to their images.”

511b

“I understand that you are referring to the province of geometry and related subjects,” he said. “Then you should appreciate that I am referring to the other division of the realm, known by reason, as what reasoned argument itself attains through the power of dialectic. It does not turn the hypotheses into first principles, but into actual underpinnings, like steps or points of attack, so that it may go as far as the un-hypothesised, to the first principle of all. Having attained that, and proceeding 511c once more to follow whatever depends on that, it descends in this way to a conclusion, having no recourse whatsoever to any sense object, but to forms themselves – through forms, to forms, and ending in forms.” “I appreciate that,” he said, “but not very well, for you seem to me to be describing a vast undertaking. Anyway, you wish to establish that the realm contemplated by the knowledge of dialectic, the realm of ‘what is’ and what is known by intelligence, is clearer than what is contemplated by what we call skills. In skills, the hypotheses are the first principles, and those who discern their objects, despite the fact that they must see them through understanding rather than through the senses, enquire on the basis of hypotheses. However, 511d because they do not ascend to a principle, you do

not think they employ intelligence in relation to these objects, even though they are objects of intelligence associated with a principle. And you seem to me to be calling the faculty of geometers and the like not intelligence, but understanding, since understanding is something in between opinion and intelligence.”

511e

“You have given a very competent exposition,” I said. “And corresponding to the four sections, you should assume four qualities arising in the soul: intelligence corresponding to the highest, and understanding to the second, assign belief to the third, imagination to the last. And arrange them in proportion, accepting that these partake of clarity insofar as their objects partake of truth.” “I understand,” he said, “and I agree. And I am arranging them as you suggest.”

BOOK VII

514a

“Now,” I said, “after this you should compare our nature, in respect of education and lack of education, to a condition such as the following. Behold men in a sort of underground cave-like dwelling, with a long entrance facing towards the light along the side of the entire cave. They have ^{514b} been in this place from childhood, with bonds both on their legs and on their necks, so that they remain looking only at what is in front of them, being unable to turn their heads around because of the chain on the neck. “Light comes to them from a fire burning above and at a distance behind them, and higher up, between the fire and the prisoners, there is a path, and you can see a low wall built along the path, just like the screens which puppet-makers place in front of themselves, over which they display their puppets.” “I see,” he said.

514c

“Besides this, you should also see men carrying a variety of objects past the wall, including statues ^{515a} of men and other animals made of wood, stone and all sorts of materials. Some of the object-carriers are likely to be speaking, while others are silent.” “You are describing a strange image,” he said, “and strange prisoners.” “They are just like us,” I said. “For in the first place, do you think such people would ever have seen anything of themselves, or one another, apart from the shadows cast by the fire onto the cave wall in front of them?”

^{515b}

“How could they,” he replied, “if they were compelled to keep their heads motionless throughout life?” “And what about the objects being carried? Is not the situation the same?” “Of course.” “Now, if they were able to converse with one another, do you not think they would name these things that they are seeing?” “They must.” “What if the prison had an echo coming from the opposite wall? Whenever one of the passers-by spoke, do you think the men would believe the speaker to be anything other than the passing shadow?” “By Zeus, I do not,” he said.

^{515c}

“Then, such people would believe,” I said, “without reservation, that the truth is nothing but the shadows of the artificial objects.” “They really must,” he said. “Now,” I said, “consider what liberation from their bonds, and cure of their ignorance, would be like for them, if it happened naturally in the following way. Suppose one of them were released, and suddenly compelled to stand up, crane his neck, walk, and look up towards the light. Would ^{515d} he not be pained by all this, and on account of the brightness be unable to see the objects whose shadows he previously beheld? And if someone were to tell him that he beheld foolishness before, but now he sees more truly, since he is much closer to ‘what is’, and is turned towards things which partake of more being, what do you think he would say? Moreover, if they showed him each of the passing objects and

forced him to answer the question ‘what is this?’, do you not think he would be perplexed, and would believe that what he saw before was truer than what he is now being shown?” “Very much so,” he replied.

515e

“And if he were compelled to look towards the light itself, would not his eyes be pained? Would he not turn away and flee to those things he really can see, and regard these as, in fact, clearer than what he is being shown?” “Just so,” he replied.

516a

“And,” I said, “if someone were to drag him forcibly from there, along the rough upward path, and not let him go until he had been dragged out into the light of the sun, would he not be distressed and upset by the process? And once he had come into the light, would not his eyes be flooded with its glare, and be unable to see even one of what are now called truths.” “No, they would not,” he said. “Not immediately anyway.” “Yes, I think he would need to become accustomed to it if he were ever to behold the objects of the upper realm. At first he would discern shadows very easily, after that images of men and other objects in water, then the actual objects. From these he would proceed to view the heavenly bodies and the heaven itself by night, looking at the light of the stars and the moon more easily than the sun and the light of the sun by day.” “What else could he do?”

516b

“Then, I imagine, he would finally be able to behold the sun, not its appearance in water or in an alien setting, but just by itself, in its own place, and he would see the sun as it is.” “This must be so,” he said. “And after this, he would then make deductions about it, that this is what provides the seasons and the years, presiding over everything in the visible realm, and in a way the cause of everything they have been seeing.” “Obviously,” he said. “Those are the steps he would take.”

516c

“What then? Remembering his first dwelling place, and the wisdom there, and his former fellow prisoners, would he not believe that he himself was blessed by the transformation, and feel compassion for them?” “Very much so.”

516d

“And suppose they received certain honours and praises from one another, and there were privileges for whoever discerns the passing shadows most keenly, and is best at remembering which of them usually comes first or last, which are simultaneous, and on that basis is best able to predict what is going to happen next. Do you think he would have any desire for these prizes, or envy those who are honoured by the prisoners and hold power over them? Or would he much prefer the fate described by Homer and ‘work as a serf for a man with no land’,⁹⁹ and suffer anything at all, rather than hold their opinions and live as they do?” “I think it is just as you say. He would accept any fate rather than live as they do.”

516e

“Yes, and think about this,” I said. “If such a person were to go back down, and sit in the same seat, would not his eyes become filled with darkness after this sudden return from the sunlight?” “Very much so,” he said. “Now, suppose that he had to compete once more with those perpetual prisoners in recognising these shadows, while his eyesight was still poor, before his eyes had adjusted. Since it would take ^{517a} some time to become accustomed to the dark, would he not become a figure of fun? Would they not say that he went up, but came back down with his eyes ruined, and that it is not worth even trying to go upwards? And if they could somehow get their hands on and kill a person who was trying to free people and lead them upwards, would they not do just that?” “Definitely,” he said.

517b

“Then, dear Glaucon,” I said, “you should connect this image, in its entirety, with what we were saying before. Compare the realm revealed by sight to the prison house, and the firelight within it to the power of our sun. And if you suggest that the upward journey, and seeing the objects of the upper world, is the ascent of the soul to the realm known by reason, you will not be misreading my intention, since that is what you wanted to hear. God knows whether it happens to be true, but in any case this is how it all seems to me. When it comes to knowledge, the form of the good is ^{517c} seen last, and is seen only through effort. Once seen, it is reckoned to be the actual cause of all that is beautiful and right in everything, bringing to birth light, and the lord of light, in the visible realm, and providing truth and reason in the realm known by reason, where it is lord. Anyone who is to act intelligently, either in private or in public, must have had sight of this.” “I also hold the same views that you hold,” he said, “after my own fashion, anyway.”

^{517d}

“Come on, then,” I said, “and agree with me about something else. Do not be surprised that those who have attained these heights have no desire for involvement in human affairs. Their souls, rather, are constantly hastening to commune with the upper realm. For I presume that is what is likely to happen, if this really does accord with the image we described earlier.” “Yes, quite likely,” he said. “Yes. And do you think it would it be any surprise,” I asked, “if someone who has returned from divine contemplations to human affairs disgraces himself badly, and appears utterly ridiculous, while his eyes are still dim, and if, before he has become accustomed to the prevailing darkness, he is compelled to argue, in courtrooms or elsewhere, about the shadows of justice or the artificial ^{517e} objects which cast those shadows, and dispute about these matters as understood by people who have never seen justice itself?” “No, that would be no surprise at all,” he replied.

518a

“But if someone were endowed with reason,” I said, “he would recall that the confounding of the eyes is of two kinds and has two sources: a change from light to darkness, and from darkness to light. And having realised that the same thing happens to the soul, he will not laugh boorishly whenever he sees a soul confused and unable to see clearly. Instead, he will enquire whether it has come from a brighter life and is darkened because it is not used to the gloom, or it is coming from 518b the utter darkness of ignorance into a brighter realm, and is dazzled by the greater brilliance. So, on this basis he would regard the condition and the life of one soul as blessed, while he would feel compassion for the other. And if he wished to laugh at it, his laughter would be less scornful than it would for a soul descended from the light above.” “Yes,” he said. “What you are saying is very reasonable.”

518c

“Then,” I said, “if this is all true, there is something we need to recognise about it: education is not the sort of thing which some people profess it to be. They somehow claim that although knowledge is not present in the soul, they can put it there as if they were putting sight into blind eyes.” “Yes, that is what they say.” “Yes,” I said, “but the argument is now indicating that this capacity, present in the soul of each person, the instrument by which each learns, is like an eye which cannot turn to the light from the darkness unless the whole body turns. So, this instrument must be turned, along with the entire 518d soul, away from becoming until it becomes capable of enduring the contemplation of ‘what is’ and the very brightest of ‘what is’, which we call the good. Is this so?” “Yes.”

518e

“Then,” I said, “there would be a particular skill dealing with this turning of the soul, which will turn it around in the most easy and effective manner, a skill which does not produce sight

in the soul, but assumes that although sight is already present, it is not directed properly or looking where it should, and sets about correcting this.” “Yes, so it seems.”

519a

“Now, the other excellences, which are said to belong to the soul, are really somewhat closer to excellence of the body, for they are not actually present at first, but are generated later through habit and practice. However, that excellence wherein we employ reason surely belongs most of all to something more divine, it seems, something whose power is never destroyed, but becomes either useful and beneficial or useless and harmful, depending upon how the soul is turned. Or have you never noticed those men who are said to be evil and yet wise? Have you noticed the keen vision of their tiny soul, and how sharply it discerns whatever it happens to turn to? For there is no problem with its sight, but it is forced into the service of evil, and consequently the more keenly the soul sees, the more evil it accomplishes.” “Yes, certainly,” he said.

519b

“However,” I said, “if this part of one who possesses a nature of this kind is worked upon from earliest childhood, the relationships with becoming are cut away, as if they were leaden weights. These grow upon the soul through gluttony and similar pleasures, and the refinements thereof, and turn the vision of the soul downwards. But once the soul is quit of them, it turns around to the realm of truth, and the same part of the same people beholds that realm, just as clearly as it beholds whatever is in front of it now.” “Quite likely,” he said.

519c

“What about this? Is it not also likely,” I said, “and must it not follow from what we said before, that neither the uneducated, with no experience of truth, nor those who are allowed to spend all their time in education, would ever be adequate custodians of the city – the one, because they do not have a single purpose

in life which they should aim at in all the actions they perform in public or in private, and the other because they will not willingly engage in action, believing that whilst still alive they are already dwelling on the far-off Isles of the Blest?" "True," he said.

519d

"Now," I said, "it is our task as founders to compel the best natures to attain the learning which we said previously was the most important: to see the good, and ascend that upward path. And once they have ascended and seen enough, we must not allow them to do what is permitted at present." "What is that?" "They are allowed to remain there," I said, "with no desire to descend once more among those prisoners or to partake of their endeavours and their honours, whether these are mundane or more serious." "In that case," he said, "shall we be doing them an injustice? Shall we make them live an inferior life when a better one is available to them?"

519e

"My friend," I said, "you have just forgotten that the law is not concerned with how one particular class in the city may fare better than the others. Instead, it tries to bring this about in the city as a whole, creating harmony among the citizens by persuasion and compulsion, and making them share with one another any benefit that each of them is able to contribute to the community. And the law itself produces men like these in the city, not so that each may go in any direction he pleases, but to use them to bind the city together." "True," he said. "I had forgotten this."

520a

"Then," I said, "you must see, Glaucon, that we are not doing an injustice to the philosophers in our midst, but we shall be making just demands when we compel them to care for and protect the other citizens. We shall say that 'when people like you arise in the other cities, it is reasonable that 520b they do not

share in the labours of those cities. And this is justified there because such people develop of their own accord, through no intention on the part of that civic arrangement, and it is only fair that whatever develops of its own accord owes its nurture to no one, and should feel no urge to pay for that nurture. “But you have been bred by us like kings and rulers of the hive, both for your own sakes and for the rest of the city. Having been better and more perfectly educated than them, you are ^{520c} more capable of participating in both realms. Therefore, you must each play your part, and go down to where the others dwell together and become accustomed with them to the dark shadows. For once you are used to the darkness you will see a thousand times better than the people there. And you will know what each of the images is and what it is an image of, because you have seen the truth about things beautiful, just and good. Accordingly, the city will be governed by us and by you in a wakeful state, and not in a dream, as most cities are governed today by men who fight ^{520d} one another over shadows, and battle for public office as if that was the greatest good. But surely the truth is that the city in which those who are going to rule have the least desire to do so must be the best governed city and the one most free from strife. And if it gets the opposite sort of rulers, it must be ruled in the opposite manner.” “Yes, certainly,” he said. “Now, will our charges be unmoved when they hear this? And will they be reluctant to join in the work of the city when it is their turn, and then live together most of the time in the pure realm?”

^{520e}

“Impossible,” he replied. “We are laying just injunctions upon just men. However, each of them will approach public office very much as a necessity, in contrast to those who now rule each city.”

^{521a}

“So on this basis, my friend,” I said, “if you can find a better life than ruling for these who are going to rule, a well-governed city becomes a possibility for you. For only there will the truly wealthy be the rulers, wealthy not in gold but in the wealth which a blessed man needs – a good and reasonable life. However, if beggars, starved of goods of their own, enter public affairs thinking that therein they may seize the good, then it is an impossibility. For public office then becomes something to fight over, and a domestic and internal battle like this destroys the disputants and the rest of the city.” “Very true,” he said.

521b

“Now,” I said, “other than the life of true philosophy, can you think of any life that despises political office?” “By Zeus, I cannot,” he said. “Well, in that case, those who are not lovers of public office must take it on. Otherwise, the competing lovers will fight over it.” “How could it be otherwise?” “Now, are there any others whom you would compel to act as guardians of the city, others who would manage it better than those who are wisest about these matters, who have other honours and a better life than politics?” “There are no others,” he replied.

521c

“Then, would you like to go on to consider the manner in which people like this will arise in our city and how we shall lead them to the light, just as certain people are said to have ascended from Hades to the gods?” “How could I refuse?” he said. “Well this, it seems, would not be the mere flipping over of an oyster shell, but a process of turning the soul around from a day which is more like night, to the true day, the ascent to ‘what is’, an ascent which we may truly call philosophy.” “Yes, certainly.”

521d

“Then, is it necessary to consider which branch of learning possesses a power like this?” “It is necessary.”

521e

“Now, Glaucon, what subject would draw the soul from becoming towards ‘what is’? And something else occurs to me as I say this. Did we not state that these guardians must be practised in war when they are young?” “Yes, we said that.” “So, the subject we are looking for must also have this characteristic as well as the other.” “What characteristic?” “It must not be useless to military men.” “It certainly must not, if that is actually possible.” “In the earlier account they were educated by us in gymnastics and in music.” “They were,” he said. “Gymnastics is presumably concerned with what comes into being and passes away, for it presides over the development and the decline of the body.” “So it appears.” “Then this would not be the subject we are looking for.” “It would not.”

522a

“So in that case, is it music in the sense we described it earlier?” “But that was the counterpart of gymnastics,” he said. “And if you recall, it educated the guardians through habit, imparting gracefulness through its harmony, and orderliness through its rhythm, without imparting knowledge. And it also contained habits akin to these in its words, both in the mythical stories and in the truer versions. However, music does not include a branch of learning that leads towards the sort of thing you are looking for now.”

522b

“A most exact reminder,” I said, “for music actually contains nothing of that sort. But, my blessed Glaucon, what kind of subject would this be? Indeed all of the skills seemed somehow to be mechanical.” “Yes, they must be. And yet what other subject is left apart from music, gymnastics and the various skills?” “Come on,” I said. “If we cannot come up with anything besides these, let us select something applicable to them all.” “Like what?” “Like this, what they have in common, that which all skills, thoughts and knowledge refer to, and which is also the first thing everyone needs to learn.” “What is it?” he asked.

522c

"The ordinary process," I said, "of distinguishing one, two and three; in short, arithmetic and calculation. Is it not the case that all skill and knowledge needs to involve recourse to these?" "Very much so," he replied. "Military skill too?" I asked. "It certainly must," he replied.

522d

"In that case, Palamedes in the tragedies repeatedly shows up Agamemnon as an utterly ridiculous general.¹⁰⁰ Or have you not noticed that he claims to have discovered number, and arranged the ranks of the army at Troy, counted the ships, and everything else, as though they had not been counted before? And apparently Agamemnon did not know how many feet he had since he did not know how to count. So what sort of general do you think he was?" "A strange one," he replied, "if this is true."

522e

"So," I said, "should we propose that the ability to calculate and count is a necessary branch of learning for a military man?" "It is the most necessary of all," he said, "if he is going to have any understanding whatsoever of arranging armies, and more importantly if he is even to be human." "Now, do you notice what I notice about this subject?" "What is that?"

523a

"It is quite likely to be one of the subjects we are seeking, which, by nature, leads us towards reason. However, no one uses it correctly, that is, as a subject which can draw one comprehensively towards being." "How do you mean?" he said. "Well, I shall try to set out my opinion," I said. "Look at this with me, and agree or disagree so that we may see more clearly if my suspicion is correct. For I am distinguishing for myself between what leads and what does not lead in the direction we spoke of." "Give an example," he said.

523b

“Take this example,” I said. “Observe, if you can, that in the case of sense perceptions, there are some which do not call upon reason to investigate them since they are adequately judged by the senses. Others, however, completely depend upon reason to investigate them, since the senses furnish nothing trustworthy.” “You are obviously referring to distant phenomena and to shadow-drawing,” he said. “You have not really got my meaning,” I said. “Then what do you mean?” he asked.

523c

“Those which do not call upon reason are those which do not extend into the opposite sensation at the same time. However, in the case of those which do extend, I suggest that they call upon reason whenever the sense impression reveals something, no more than its opposite, regardless of whether it impinges upon us from near or far. My meaning will be clearer from this example. We would say that these are three fingers, the smallest, the second and the middle.” “Certainly,” he said. “Assume that I am describing them as seen from close up. Now, there is a question you must consider in relation to them.” “What is it?”

523d

“Well, each of them, in the same way, appears to be a finger, and in this respect there is no difference, whether it is seen in the middle or at either extreme, whether it is white or black, or whether it is fat or thin, or anything of that sort. For in all these cases, the soul of most people is not compelled to put a question to reason as to what precisely a finger is. For at no stage does sight indicate to the soul that the finger is the opposite of a finger at the same time.” “No, it does not,” he said. “Therefore,” I said, “a case such as this would be unlikely to call upon or awaken reason.” “Unlikely.”

523e

“What about this? Does sight see their largeness or smallness adequately, and does it make no difference to sight whether one of them lies in the middle or on either side? Does the same apply to thickness and thinness, and hardness and softness in the case of touch? And do the other senses ^{524a} reveal things like this without any deficiency? Or does each of them behave in the following manner: the sense which extends to hard must also extend to soft, and it proclaims to the soul that the same thing is being perceived as both hard and soft?” “Just so,” he replied. “Must not the soul,” I said, “for its part, be perplexed in such circumstances, as to what precisely the hard that the particular sense is indicating actually is, since it also says that the same thing is soft. And if the sense of light and heavy indicates that heavy is light and light is heavy, must not the soul be perplexed as to what is heavy and what is light?” “Yes, indeed,” he replied. “These messages to the soul are strange and require further investigation.”

^{524b}

“So,” I said, “it is likely that in these situations the soul first calls upon calculation and reason, and tries to investigate whether each of the proclamations is two or one.” “Yes, what else could it do?” “If it turns out that it is two, would not each of the two appear to be both different and one?” “Yes.” “So, if each is one and both are two, soul will recognise the two as separate, for if they were not separate it would not have recognised two, but only one.” “Correct.” “And we say sight too has seen large and small, not separately however, but in combination. Is this so?” “Yes.”

^{524c}

“But for the sake of clarity in this, reason, in contrast to sight, is compelled to view large and small, not mixed together but separately.” “True.” “Hence, the first thing that occurs to us is to ask what precisely ‘large’ and ‘small’ actually are. Is this not so?” “Entirely so.” “And on this basis, of course, we said there

was a realm known by reason, and also a realm known by sight.”
“You are perfectly right.”

524d

“Well, this is what I was trying to explain earlier, that there are some things that call upon thought, and others that do not. Now, I define those things that impinge upon the sense at the same time as their own opposites as provoking reason, while those which do not do this do not awaken reason.” “Very well, I understand now,” he said, “and I think this is right.” “Well then, to which realm do you think number and the one belong?” “I cannot decide,” he replied.

524e

“But you can work it out from what was said before,” I said. “If the one is seen adequately just by itself, or apprehended by some other sense, it would be like the finger we referred to and would not draw people towards being. However, if the one is always seen along with something which is opposite to it, so that what is presented is no more one than its opposite, discrimination would then be required. And in that situation, the soul, activating the intelligence within itself, would have to be perplexed, and search, and ask, ‘What precisely is the one itself?’ And accordingly, getting knowledge of the one would be among the branches of learning that lead the soul, and turn it around towards the contemplation of ‘what is’.” “And, indeed,” he said, “this applies in no less measure to seeing it, for we see the same thing both as one, and as an unlimited multiplicity, at the same time.”

525a

“Since this is what happens in the case of the one,” said I, “will not the same thing happen with all number?” “It must.” “And, indeed, calculation and arithmetic are entirely concerned with number.” “Very much so.” “Yes, and these appear to lead towards truth.” “Yes, to an enormous extent.” “So apparently, these would be among the subjects we are seeking. For a

military man must learn them in order to arrange an army in ranks, and a philosopher has to learn them too, because he ^{525b} must lay hold of being and rise out of becoming, otherwise he will never be able to calculate.” “This is the case,” he replied. “Now, our guardian turns out to be both a military man and a philosopher.” “Of course.”

525c

“In that case, Glaucon, it would be appropriate to establish this subject by law, and persuade those who are going to participate in the most important affairs of the city to have recourse to calculation, and take it up not as a personal matter, but until they attain the contemplation of the nature of the numbers by means of reason itself. They should not practise it for the sake of buying and selling, like merchants or retailers, but for the sake of war, and the ready turning of the soul itself away from becoming, towards truth and being.” “That is beautifully expressed,” he said.

525d

“And, indeed,” I said, “in the light of what is being said about the subject of calculation, I realise that it is nicely and entirely suited to our purpose, provided it is pursued for the sake of knowledge and not for shop-keeping.” “In what way then?” he asked. “In the way we already described. It leads the soul powerfully upwards to some place, and compels it to engage in dialectic in relation to the numbers themselves. It will not accept it at all if someone presents the soul with numbers associated with visible or tangible things, and discusses them. For ^{525e} I presume you know that its skilled exponents are amused if anyone, in discussion, attempts to divide the one itself, and they will not accept this. If you divide it, they will multiply, being careful lest the one ever proves to be not one, but a multiplicity of parts.” “What you are saying is very true,” he said.

526a

“Glaucón, if someone were to ask them, ‘Wonderful men, what sort of numbers are you talking about in which the one is as you are proposing, each in every case equal to each, not the slightest bit different, and having no parts within itself?’ What do you think their reply would be?” “I think they would say that they are referring to those numbers which it is possible to grasp only by thought, and which it is not possible to deal with in any other way at all.”

526b

“Now, my friend,” I said, “do you see that in truth this is likely to be the subject we require, since it evidently compels the soul to resort to reason itself, for the sake of truth itself?” “Yes, indeed,” he said. “It certainly does that.” “Well then, have you ever considered the fact that those who take naturally to calculation are said to be bright in all subjects? While those who are dull, if they are educated and exercised in this subject, all improve and become brighter than they were before, even if they derive no other benefit?” “That is the way it is,” he replied.

526c

“And indeed, in my view, you would not easily find many subjects which involve greater toil in learning or in practising than this one.” “Indeed not.” “So for all these reasons, the subject must not be dismissed, and the best natures must be educated in it.” “I agree,” he said. “Then let us leave it at that, and consider whether the second subject, the one that follows it, is appropriate to our purpose.” “What sort of subject?” he asked. “Do you mean geometry?” “The very one,” I replied.

526d

“Insofar as it is applicable to military affairs, it will obviously be appropriate,” he said. “Indeed, the man who knows geometry would be superior to one who does not in setting up camp, capturing territory, drawing the army into close formation or dispersing it, and in any other arrangements of the army in the battle itself or on a march.”

526e

“But, of course,” said I, “even a little geometry and calculation would be sufficient for these purposes. But we need to consider whether most of it, and the more advanced part thereof, is inclined to make the form of the good easier to discern. That is the objective. And according to us, any subject inclines to this, provided it compels the soul to turn around to that place where the most blessed part of ‘what is’ resides, a part that the soul must behold in every way.” “Correct,” said he. “And in that case, if it compels the soul to behold being, it is an appropriate subject. But if it compels it to behold becoming, it is not appropriate.” “Yes, so we say.”

527a

“Well,” said I, “no one with even the slightest experience of geometry will argue with us over this proposition, that this knowledge itself stands in total contrast to what is said about it in discussion by those who practise it.” “How so?” said he. “Well, they somehow speak quite comically, and they are actually compelled to do so. In fact, by using terms like ‘squaring’ and ‘applying’ and ‘extending’, and so on, they speak as though they are engaging in activity and as if they are constructing arguments for some practical purpose, even though, I presume, the entire subject is pursued for the sake of knowledge.” “Yes, entirely so,” he said.

527b

“Can we agree on a further point?” “What is it?” “They pursue it for the sake of knowledge of ‘what always is’, and not of what becomes something at some time and is then destroyed.” “That is easy to accept,” said he. “Geometrical knowledge is knowledge of what always is.” “So, my noble friend, it would be a subject that draws the soul towards truth and produces a philosophic mind, directing upwards whatever we now, incorrectly, direct downwards.” “Yes, as best it can,” said he.

527c

“So,” said I, “you must arrange, as best you can, that the people in ‘Noble-City’ do not refrain from geometry in any way, for even its incidental benefits are significant.” “What are they?” he asked. “Those you mentioned,” said I, “those concerned with warfare. And of course we know, I presume, that for any subject to be better assimilated, it generally makes all the difference whether the student has already taken to geometry or not.” “All the difference indeed, by Zeus,” said he. “So, should we propose this as the second subject for our young folk?” “We should.”

527d

“What about this? Should we propose astronomy as a third subject? Or do you not think we should?” “I do, indeed,” said he. “For being better able to discern the seasons, the months and the years is appropriate, not only for agriculture and navigation, but also for generalship, no less.”

527e

“You amuse me,” said I. “You seem to be afraid of what most people may think of you if you prescribe impractical subjects. It is no ordinary matter; in fact, it is quite difficult to be convinced that some organ of the soul, an organ that everyone has, is purified and rekindled by these studies, having been corrupted and blinded by our other pursuits, and that it is more important to preserve this organ than it is to preserve ten thousand eyes. For truth is seen only by this. Now, those who hold these opinions already will think that what you are saying is really sound, while those with no awareness of this at all are likely to think you are talking nonsense, for they will see no other benefit worth mentioning from these. So decide here and now which group you are conversing ^{528a} with, if any. Or perhaps you are formulating the arguments mainly for your own sake, although you would not, of course, begrudge anyone else who might derive some benefit from them.” “That is my choice,” said he. “I am speaking, asking questions and answering them, mostly for my own sake.” “Let us fall back then,” said I, “since

we did not pick the subject that comes next after geometry correctly just now.” “How did we go wrong?” he asked.

528b

“After flat surfaces,” I said, “we took solids already in rotation before taking solids just by themselves. The correct sequence is to take the third dimension after the second, and this is presumably the dimension associated with cubes, and whatever has depth.” “Quite so, Socrates,” he said, “but these do not seem to have been found yet.” “Yes,” said I, “for two reasons. Firstly, because no city affords them proper respect, these matters, being so difficult, are not thoroughly investigated. Secondly, investigators in this area need a guide, without whom they will not discover anything. But a guide is hard to find in the first place, and 528c when found, as matters now stand, the arrogant fellows who would be able to investigate this would pay no heed to him. But if an entire city were to co-operate with the guide by treating these matters with respect, these people would heed him, and under close and intensive investigation the true state of affairs would become evident. Even now, although they are disrespected and criticised by most people, and by those who investigate them without being able to explain their usefulness, nevertheless, in the face of all this they develop by force, due to their inherent charm, and it would be no surprise if they were to come to light.”

528d

“Yes, indeed,” said he. “They do possess exceptional charm. But explain what you are saying more clearly, for I presume you designated the study of flat surfaces as geometry.” “Yes,” said I. “Then,” said he, “initially you put astronomy after that, but later on you changed your mind.” “Yes,” said I. “In my haste to recount everything quickly I am making slower progress. For, although the study of the dimension of depth is next in sequence, I passed over this because of the comical state of the investigation, and after geometry I spoke of astronomy, which is

the motion of objects with depth.” “Right,” said he.

528e

“Then, provided the city pursues it, let us propose astronomy as the fourth subject, on the assumption that the third, the one we are now passing over, exists.” “Quite likely,” said he. “And I will now praise astronomy, Socrates, in the way you set about it, and avoid the commonplace manner of praise for which you rebuked me. Indeed, ^{529a} it is obvious to everyone that this study compels the soul to look upwards, and leads it away from what is here to what is there, above.” “This is probably obvious to everyone except me,” said I, “since that is not how it seems to me.” “How does it seem to you?” he asked. “Handled, as it is nowadays, by those who are elevating us towards philosophy, it really makes the soul look downwards.” “How do you mean?” he asked.

529b

“I think you have a very liberal understanding of the subject concerned with the upper realm,” I said. “Indeed, if someone were to throw his head back and contemplate adornments on the ceiling and arrive at some understanding, you would probably think he was contemplating them with his intellect rather than his eyes. Now, perhaps your thinking is sound and I am being simple-minded, for I cannot think of anything that makes the soul look to the upper realm except the subject that is concerned with ‘what is’ and the unseen. Whether someone attempts to understand sense objects by gaping upwards or squinting downwards, I would never maintain that he has ever understood ^{529c} anything. For things of this sort do not admit of knowledge, and his soul is not gazing upwards but downwards even if he tries to understand while floating on his back, on land or in the sea.” “I am getting my just deserts,” said he, “and you are right to rebuke me. But in what way are you saying astronomy should be studied, contrary to the way they study it nowadays, if its study is to confer the benefits we are speaking

of?” “As follows,” said I. “These adornments that are in the heavens adorn in the visible realm, and although they should be regarded as the most beautiful and perfect of visible objects, they do fall far short of the true adornments, the motions with which actual speed and actual slowness are moved with respect to one another in the true number and in all the true shapes, carrying whatever they contain. These can be apprehended by reason and by thought, but not by sight. Or do you think otherwise?” “Not at all,” he replied.

529d

“Therefore,” said I, “we must use the heavenly adornments as patterns in order to understand what is unseen, just as if we had come across diagrams, exceptionally well drawn and executed by ^{529e} Daedalus,¹⁰¹ or some other craftsman or draughtsman. For anyone experienced in geometry, on seeing this sort of thing, would surely think that although the workmanship is very beautiful, it would be quite ridiculous to scrutinise them seriously with a view to finding the truth about equals, or doubles, or any other proportion, in these.” “Yes, it must be ridiculous,” said he.

530a

“Do you not think, then,” I asked, “that the genuine astronomer will come to the same conclusion when he looks upon the motions of the stars? Will he not be of the opinion that these, and whatever they contain, have been fashioned in the most beautiful manner possible for objects of this sort by the craftsman of the heaven? But what about the proportion of night to day, of these to the month, of the month to the year, and of the other stars to these and to one another? Well, do you not believe the true astronomer will think it strange if anyone regards these as unchanging and as undergoing no alteration whatsoever, even though they are physical objects and are visible; and if someone seeks in various ways to grasp the truth about these?” “Well, I think so now at any rate,” said he, “now

that I hear you saying so.”

530b

“So,” said I, “we should engage in astronomy by making use of problems, just as we do in geometry, and bid farewell to the heavenly bodies, if we are actually going to engage in astronomy, so as to make the intelligence that is naturally present in the soul useful rather than useless.” “You are prescribing a task,” said he, “that is very much larger than what astronomy deals with nowadays.” “I think,” said I, “that our other prescriptions will be of the same sort if we are to be of any use as lawgivers. But anyway, do you have any other appropriate subject to suggest?” “I do not have any,” said he, “not immediately at any rate.”

530c

“Well,” said I, “motion, in my opinion, does not consist of one form only, but of many. Now, a wise man could perhaps list them all, but two are evident, even to us.” “What are they?” “Besides this one, astronomy, there is the counterpart of this.” “Which is?”

530d

“It is quite likely,” said I, “that just as the eyes have been framed for astronomy, so too were the ears framed for harmonic motion, and that these two branches of knowledge are kindred to one another, as the Pythagoreans maintain. And we are agreeing with them, Glaucon. Is that what we are doing?” “Just so,” he replied.

530e

“Therefore,” said I, “since this is a considerable task, we shall find out from them what they have to say on these matters, and whether there is anything else besides these. But throughout the entire process we shall guard our own concern.” “Which is?” “That our charges should never attempt to learn anything incomplete, anything that does not consistently reach the point which everything needs to reach, a failing we ascribed earlier to

astronomy.

531a

Or do you not know that in the case of harmony, too, the practitioners do something similar? Indeed, for their part, they measure the concords and sounds that are heard, against one another, engaging in useless labour, just like the astronomers.” “Yes, by the gods,” said he. “And they call some intervals ‘dense’, bending their ears towards them as if they were eavesdropping on their neighbours, some declaring that they still hear a note in between, and that this is the smallest interval by which we should measure, while others dispute this and say it is the same as the note already sounding, both parties 531b granting their ears priority over their intelligence.” “You are referring,” said I, “to the good fellows who inflict trouble upon the strings, and torture them by tightening them upon the pegs. But in case this image gets out of hand I will put a stop to it now, before it refers to the strings being beaten with the plectrum, the various accusations against them, and their reluctance or readiness to answer. These are not the people I am referring to, but the others, those we said just now we would ask about harmony. Indeed, these fellows do the same 531c thing as those who are involved in astronomy since they are looking for numbers in the concords that they can hear, and they do not ascend to the level of problems and investigate which numbers are concordant and which are not, and the reason why this is so.” “The task you are describing,” said he, “is not of this world.” “Well,” said I, “it is useful if it is done in search of the beautiful and the good; otherwise it is useless.” “Quite likely,” said he.

531d

“And I also think,” said I, “that if the method we have described for all these subjects gets to their kinship and what they have in common, and works out their mutual affinities, then their pursuit does contribute something to our desired ends and is

not unprofitable; otherwise it is pointless.” “And I feel the same way, Socrates,” said he. “But you are describing an enormous undertaking.” “Are you speaking of the prelude,” said I, “or what? Or do we not know that these are all a prelude to the main theme, the one that we must learn? For you surely do not think that those who are clever in these subjects are skilled in dialectic.”

531e

“By Zeus, I do not,” said he, “apart from a few exceptions I have come across.” “Well, then,” said I, “do you think those who are unable to present an argument, and respond to one, will ever know anything of what we say they must know?” “In that case, too,” said he, “the answer is no.”

532a

“Glaucón,” said I, “is not this, at last, the main theme, the very one that dialectic performs? And although it is known by reason, it would imitate the power of sight that we described in our earlier image, which at a certain stage tries to look at the actual living creatures, then at the stars themselves, and finally at the sun itself. And whenever someone attempts in this way, by dialectic, without any of the senses, to get to what each thing itself is, through reason, and does not give up until he apprehends what the good itself is, by the reasoning process itself, he then arrives at the end of 532b the realm known by reason, just as the other man in our allegory came to the end of the visible realm.” “Entirely so,” said he.

532c

“Yes, and do you not refer to this process as dialectical?” “Indeed.” “And what about the release of the prisoner from his bonds, his turning from the shadows to the images that cast them, and to the light, the ascent from underground into the sunlight, and his inability when he gets there to look yet at the actual animals and plants and the light of the sun, and his looking instead at divine appearances in water, or at shadows of

things that are, rather than the shadows of images, cast by another such light which, when compared to the sun, is like another shadow? All this practice of the subjects we have described has this power, and leads what is best in the soul upwards to the sight of what is most excellent among things that are, just as in our allegory what is brightest in the body was led upwards towards the sight of what is most resplendent in the realm of the physical and visible.”

532d

“I accept,” said he, “that this is so. And yet, although I find it extremely difficult to accept, in another way it is difficult not to. Nevertheless, this needs to be heard often, not only today, but in future, so we should return to this. But let us assume for now that what has been proposed is indeed so, and then proceed to the main theme itself and go through it in detail, just as we did with the prelude. So tell me, what is the manner of this power of dialectic, what sort of forms is it divided into, and what paths does it follow? For these would be the ones that lead at last to where there is, for whoever gets there, a sort of rest from the journey and an end to the process.”

532e

“Dear Glaucon,” said I, “you will not be able to follow me any longer, even though there will not be any lack of eagerness on my part. Nor would you still be seeing an image of what we are speaking of, but the truth itself, as it appears to me anyway. At the moment it is not right to insist that this is actually so, or that it is not. But we should insist that there is something of this sort to be seen. Is this so?” “Of course.” “And should we not also insist that the power of dialectic alone would reveal this to someone with experience in what we have been describing just now, and that this is not possible in any other way?” “It is only right,” said he, “that we insist upon this too.”

533a

“Well,” said I, “no one will argue against us when we say that some other method, apart from the five subjects, attempts to grasp systematically, in each and every case, what each itself is. But all the other skills are concerned with people’s opinions and desires, or with producing things or assembling them, or with looking after them once they have been produced or assembled. As for the rest, geometry and so on, we maintained that these apprehended something of what is. But we ^{533b} see that although they dream about what is, they are unable to see it, wide awake, as long as they make use of hypotheses that are left unchallenged because they are unable to give an account of them. For when the first principle is something that is not known, and the conclusion and everything in between is woven from what is not known, is there any way that a combination like this could ever constitute knowledge?” “None at all,” said he.

^{533c}

“Does not the dialectical method alone,” said I, “proceed in this way to the first principle itself by doing away with hypotheses in order to be sure of its ground? It draws the eye of the soul, which is actually buried in some outlandish mire, and leads it upwards, using the very subjects we have described as helpmates and assistants in the conversion. We have often referred to these subjects as branches of knowledge out of habit, but they need another name to indicate greater clarity than opinion, and more vagueness than knowledge. I think we used ‘understanding’ to make the distinction earlier, but in my opinion there is no point in arguing over a name, when an enquiry into such important matters lies before us.”

^{533d}

“No, indeed,” he replied.

^{533e}

“So,” said I, “are you content to do what we did before and call the first part knowledge, the second ^{534a} understanding, the

third belief, and the fourth imagination? The last two, both together, constitute opinion; the first two, intelligence. Opinion is concerned with becoming, while intelligence is concerned with being. And as being is to becoming so is intelligence to opinion, and as intelligence is to opinion so is knowledge to belief, and understanding to imagination. “But the proportion between what these two are directed towards, Glaucon, and the twofold division of each of these – what is grasped by opinion and what is grasped by intelligence – this we should leave aside in case we get involved in many times more arguments than we have already been through.”

534b

“Well,” said he, “insofar as I am able to follow, I agree with you about the others.” “And do you describe someone who acquires an account of the being of each thing as dialectical? And would you not say that someone who cannot do so, insofar as he is unable to give an account, either to himself or to anyone else, lacks intelligence about the thing to that extent?” “How could I say otherwise?” he replied.

534c

“Does not the same also apply to the good? If someone is not able to separate the form of the good by argument – setting it apart from everything else, going through all the refutations like a warrior, eager to practise refutation based upon being rather than opinion, and coming through all this with his argument still standing – you will say, will you not, that someone who cannot do this does not know the good itself, nor any other good either? And if he does, somehow, get hold of some image of the good, he does so by opinion and not by knowledge? He is dreaming and sleeping this life ^{534d} away, and before he ever wakes up here, he arrives finally in Hades and sleeps on forever. Is this not what you would say?” “Yes, by Zeus,” said he. “I’d say all that, very much so.” “But of course in the case of your own children, whom you are bringing up and

educating in our discussion, if you were ever actually bringing them up, I presume you would not allow them to be irrational, like lines in geometry, when ruling the city and presiding over matters of the utmost importance.” “Indeed not,” said he. “Then will you pass a law by which they receive an education that enables them, above all, to ask and answer questions in the most knowledgeable manner possible?”

534e

“I shall, indeed,” said he, “with your help.”

535a

“In that case,” said I, “do you think we now have dialectic positioned above the other subjects, like a coping stone, that no other subject may rightly be placed higher, and that our discussion of the various subjects is now complete?” “I do, indeed,” said he. “Well,” said I, “your remaining task is their distribution and deciding to whom we shall allocate these subjects, and in what way.” “Of course,” said he. “Do you remember the kind of people we chose when we selected our rulers earlier?” “How could I forget?” said he.

535b

“Well, in general,” said I, “those very natures are the ones that must be selected. The most steadfast and the bravest should be chosen, and, as far as possible, the most comely. As well as this, we must look not only for those who are noble and virile in character, but they should also have the natural qualities suited to this particular education.” “What qualities?” “They need to be keen, my friend, on the subjects they learn, and have no difficulty in understanding them. Indeed, men’s souls are much more inclined to turn coward in the face of demanding ^{535c} studies than in the gymnasium, since the exertion is more personal to themselves because it is private and not shared with the body.” “True,” said he. “Well, we should look for good memory, robustness, and a total love of hard work. Or how else do you think anyone would be prepared to undertake the

physical labour and also complete so much study and practice?" "No one would," said he, "not unless he was extraordinarily gifted by nature."

535d

"Our current problem," said I, "and the associated disrespect for philosophy, has come about because, as I said before, those who take to philosophy are unworthy of it. What philosophy needs are genuine adherents, not fakes." "In what way?" he asked. "Firstly," said I, "someone who takes to philosophy should not be handicapped in his love of hard work so that he loves half the work and does not bother with the other half. This happens when someone loves exercise and loves hunting and loves all physical labour but is not a lover of learning, does not like to listen, has no spirit of enquiry, and hates any work that involves any of these. And when the situation is reversed, the man's love of labour is handicapped in the opposite way." "Very true," said he.

535e

"And will we not suggest," said I, "that a soul is maimed in relation to truth in the same way if it hates the deliberate lie, finds it unbearable in itself, and gets extremely angry when lied to by others and yet calmly accepts the unintentional lie, is untroubled by the lack of understanding when caught out somehow, and has no qualms about being debased in ignorance like some swinish beast?" "Yes, entirely so," said he.

536a

"And when it comes to sound-mindedness, courage, magnanimity, and all the other parts of excellence," said I, "must we not be on our guard just as much to distinguish between the genuine and the fake? For whenever a city or an individual does not know how to look at things like this comprehensively, they unwittingly rely on fakes or those whose work is handicapped as their allies or rulers as the case may be." "That is what happens," said he, "very much so."

536b

“Then, we should be extremely careful about everything of this sort,” said I, “because if we introduce sensible people, sound of body, to such extensive study and exercise, and educate them, justice itself will find no fault with us and we shall save our city and its form of government. But if we introduce people of the wrong sort to these studies, we shall achieve the complete opposite, and deluge philosophy with even more ridicule.” “That, indeed,” said he, “would be shameful.”

536c

“It certainly would,” said I. “But at the moment, I too seem to be inviting ridicule.” “How so?” said he. “I forgot,” said I, “that we were just playing, and I spoke with too much intensity. For as I was speaking I turned my gaze towards philosophy, and seeing it being trampled undeservedly in the mire, I think I went into a rage and said what I said too seriously, as though I were angry with those responsible.” “By Zeus, no,” said he. “That is not how it sounded to me as I listened.”

536d

“Well,” said I, “that is how it sounded to me as I said it. But we must not forget that in the previous selection process we picked old men, but in this case that is not allowed. Indeed, we should not believe Solon,¹⁰² that a person is able to learn a lot in old age. He can no more learn than run a race! No, all great labours, and there are many, belong to the young.” “They must,” said he.

536e

“Now, calculation, geometry, and all the preliminary instruction that should precede education in dialectic, needs to be set before them when they are still children, without presenting it in the form of compulsory instruction that they must learn.” “Why not?” “Because,” said I, “a free man should never learn any subject under conditions of slavery. Indeed, physical labours performed under compulsion do not make the body any worse, but no instruction, forcibly imparted, is

retained by the soul.” “True,” said he.

537a

“So, my friend,” said I, “as you bring up the children in these various subjects, do not do it forcibly, but playfully, so that you will be better able to discern what each of them is naturally adapted to.” “That sounds reasonable,” said he. “Do you not remember,” said I, “that, assuming it was safe to do so, we also maintained that the children should be brought to the battlefield on horseback, as spectators, and brought close to the fray to get a taste of blood like young hunting dogs?” “I remember,” said he. “And in all these exertions, studies, and dangers,” said I, “whoever should prove consistently to be most adept is to be admitted to a select number.” “At what age?” he asked.

537b

“At the time,” said I, “when their compulsory gymnastics comes to an end. For during that period of about two or three years, it is impossible to undertake anything else, since tiredness and sleep are inimical to study. And at the same time, their prowess in gymnastics is in itself one of their most important tests.” “Yes,” said he, “it would have to be.” “And when this period is over,” said I, “those twenty-year-olds who have been selected will have ^{537c} to bring the subjects that were presented unsystematically during their childhood education into a combined view of the interrelatedness of the subjects with one another, and with the nature of ‘what is’.” “Yes,” said he, “only this sort of learning becomes steadfast in those who receive it.” “And this,” said I, “is the greatest test of whether their natures are dialectical or not; someone who can take a combined view is dialectical, while someone who cannot do so is not.” “I concur,” said he.

537d

“Well,” said I, “you will need to consider all this. Those among our young folk who are most like these people and are also

reliable in their studies, in war, and in their other appointed duties, these again, once they reach thirty, should be selected from among the previous selection and awarded even greater honour. You should then see, testing them by the power of dialectic, who is able to let go the eyes and the other senses, and proceed in the company of truth to what just 'is'. And here, my friend, the task requires the utmost care." "Why exactly?" said he.

537e

"Are you not aware," said I, "of how much harm is done by dialectic as it is practised nowadays?" "What sort of harm?" he asked. "Its practitioners," said I, "are filled with lawlessness." "Very much so," said he. "Now," said I, "do you think it is any surprise that this happens to them, and do you not sympathise with them?" "In what way exactly?" he asked.

538a

"Suppose," said I, "that a changeling child was brought up amidst great wealth, in a large and extensive family, surrounded by lots of flatterers. What if he became aware as a grown man that he was not related to these so-called parents and was unable to find his real parents? Can you guess what his attitude would be towards those flatterers and the substitute parents, either during the time when he did not know about the switch, or later when he did know? Or would you like to hear my guess?" "I would like that," said he.

538b

"Well," said I, "my guess is that during the time when he did not know the truth, he would honour his father and mother and his other supposed family members more than those who flatter him. He would be less inclined to allow them to want for anything or to do or say anything unlawful to them, and more inclined to be persuaded by them rather than by the flatterers on important matters." "Quite likely," said he.

538c

“But once he had become aware of the actual situation, my guess is that, in contrast, he would lose his honour and respect for them, intensify his respect for the flatterers, and be persuaded by them to a greater extent than before. He would then live as they do, associate openly with them, and pay no heed to that pretended father and the rest of his pretended relatives, unless he was extremely reasonable by nature.” “Everything you are describing,” said he, “is the sort of thing that would actually happen. But what relevance does this image have for those who are encountering dialectic?” “As follows. There are, I presume, certain doctrines about what is just and beautiful that we have from childhood, doctrines we have been brought up on, so that we grant them authority and honour them like parents.” “There are indeed.”

538d

“And there are pursuits, opposed to these doctrines, pursuits that involve pleasure which flatter this soul of ours and drag it in their direction. However, these do not sway people who have some element of measure, who continue to honour the traditional doctrines and grant them authority.” “That is right.” “What about this?” said I. “Suppose there comes a time when someone in such a situation is faced with a question and asked, ‘What is the beautiful?’, and he gives the answer he heard from the conventional source, but the argument refutes this. Suppose it refutes him many times in lots of different ways, and reduces him to the opinion that this is no more beautiful than it is ugly, and the same thing happens with the just, the good, and whatever is held in the highest esteem. How do you think he will behave after this towards those doctrines in terms of honour and granting them authority?” “Inevitably,” said he, “he will no longer honour them in the same way, or be persuaded by them either.”

538e

“Now,” said I, “when he regards these doctrines as no longer worthy of the honour he gave them before, and has no affinity with them, but cannot discover the true ones, is he likely to have recourse to any other life besides the flatterer’s life?” “He is not,” said he. “In that case, I think, he will seem to have become lawless, having previously been law abiding.” “He must.”

539a

“Is this not,” said I, “the likely predicament of those who encounter dialectic in this way and who, as I said earlier, deserve a lot of sympathy?” “Yes,” said he, “and pity too.” “Well, should you not be careful with every detail of their encounter with dialectic so that there is no need to pity your thirty-year-old students?” “Very much so,” said he.

539b

“So, there is one thing to be extremely careful about, is there not? That they do not get a taste of this when they are still young. For I presume you have noticed that youngsters, when they first get a taste of dialectic, misuse it as if it was their plaything, by using it always to come up with counter-arguments. They themselves imitate those who engage in refutation by refuting other people, taking delight, like puppies, in verbally tugging at and pulling apart anyone who ever comes near them.” “Exceedingly so,” said he.

539c

“And so, when they themselves have refuted many, and have been refuted by many, they descend rapidly and inexorably to a state where they believe nothing they believed before, and, as a consequence, they themselves, and philosophy in general, are held in low regard by everyone else.” “Very true,” he said. “But someone older,” said I, “would not want to be involved in such madness. He will imitate the one who is willing to engage in dialectic and consider the truth rather than the one who plays with ^{539d} it for fun and just argues against people. And he himself

will be more measured and will bring honour to this activity rather than dishonour.” “That is right,” said he. “Now, was not everything that was said previous to this said as a caution? That dialectic is to be imparted to the orderly and stable natures, and not, as is done nowadays, to anyone at all, even if they are unsuited.” “Yes, certainly,” said he.

539e

“Is it enough then to persist with the practice of dialectic continuously and intensively, without any involvement in anything else, as a mental counterpart of the bodily exercises they practised for twice as many years as that?” “Do you mean six years or four?” he asked. “It does not matter,” said I. “Let us suggest five. For after this they will be brought down again into that cave, and compelled to rule over military matters and take up other positions of authority suited to the young so that they do not lag behind the others in experience. And in these situations, ^{540a} too, they will still be tested to see if they hold firm or shift their ground when they are being dragged in all directions.” “How much time,” he asked, “are you proposing for this?” “Fifteen years,” said I. “And when they have turned fifty, those who have come through safely and have excelled in every way at everything, in action and in knowledge, should be led at that stage to the final destination. They should be compelled to lift the ray of the soul upwards to behold that which provides light to everything, and, seeing the good itself and using that as their pattern, ^{540b} bring order to the city, its citizens and themselves, for the rest of their lives. Each in turn should spend most of their time in philosophy. But when their turn comes, they should get involved in the drudgery of civic affairs, each exercising authority for the sake of the city, doing so not as some fine activity but as a necessity. And having continually educated others in this way, others who are like themselves, and having left these behind as guardians of the city, they themselves depart to the Isles of the Blest to dwell there. And

the city should have memorials to them and ^{540c} offer sacrifices publicly, as if to demigods, if the Pythia consents, and if not, as to blessed or divine personages.” “You are like a sculptor, Socrates,” said he, “fashioning rulers who are absolutely beautiful.” “Female rulers too,” said I. “Do not presume that what I have said applies any more to men than it does to those women among their number who are naturally equipped for the role.” “You are right,” said he, “if they really are to share everything equally with the men, as we have explained.”

^{540d}

“Well, then,” said I, “do you agree that what we have said about the city and its system of government has not been a mere aspiration? Rather, although it is difficult, it is still possible, but only in the way we have described. Whenever true philosophers, many or just one, come to power in the city, despise the honours of the age, which they regard as unworthy of free men and attach most importance to what is right and to the honours that come from that, and treat justice as ^{540e} supreme and absolutely necessary, then by serving this and strengthening this they will set their own city in order.” “How?” said he.

^{541a}

“They will send anyone in the city who happens to be more than ten years old,” said I, “out into the countryside. They will then isolate the children from their present habits, the habits of their parents, and bring them up in their own manners and regulations, the sort we just described. And once the city and form of government we were speaking of has been established very quickly and easily in this way, do you not agree that it will be a happy city and that the people among whom it arises will benefit enormously?” “Very much so,” he said. “And I think, Socrates, that you have described nicely how it might come into existence, if it were ever to do so.”

^{541b}

“At this stage,” said I, “have we not had our fill of arguments about this city and the sort of person who resembles it? For surely it is also obvious what sort of person we shall say he must be.” “It is obvious,” said he. “And as for your question, I think that is the end of the matter.”

BOOK VIII

543a

“So, there it is. This has now been agreed, Glaucon. For a city to be governed at its very best, women are to be shared, children are to be shared, and all education too. And in like manner, all activities are to be shared, both in war and in peace, and those among them who turn out best in philosophy, and in warfare too, are to be their kings.” “This was agreed,” said he.

543b

“And indeed, we also accepted that once the rulers are in place, they will take the soldiers in hand and settle them in living arrangements of the sort we have already described, which are common to all, with nothing private to anyone. And as well as such living arrangements, we also agreed upon the sort of possessions they will have, as you may recall.”

543c

“Yes,” said he, “I recall. We thought that none of them should acquire any of the possessions that everyone else has nowadays. Rather, like warrior athletes and guardians, they must care for themselves and for the rest of the city, accepting their guardians’ pay for the year from the others, to sustain them in their work.” “You are right,” said I, “but come on. Now that we have concluded this, let us remember where we digressed from so that we may proceed along the same course once more.”

543d

“That is not difficult,” said he. “You presented your arguments about the city then, much as you are doing now, as though the

exposition was complete. You proposed a city, saying that a city like the one you had described was good, and so was the man who resembled it, ^{544a} even though, it seems, you were able to speak of a still more beautiful city and a more beautiful man too. But in any case, you were saying that if this city is right, the others are in error, and you maintained, as I recall, that there are four other forms of government besides this one. You said these would be worth describing to see their particular errors and the kinds of people who resemble these forms, and having agreed upon who is the most excellent and who is the worst man, we might then investigate whether the most excellent person is happiest, and the worst is most wretched, or whether the situation is otherwise. And when ^{544b} I was asking you which four forms of government you meant, Polemarchus and Adimantus interrupted at that stage, and so it was that you took up the argument again and arrived here.” “That is right,” said I. “You have remembered this very well.” “So then, like a wrestler, offer me the same hold once more, and in response to my same question try to say what you were about to say at the time.” “I shall, if I am able to,” said I. “And, indeed,” said he, “I am also anxious to learn for myself what four forms of government you were referring to then.”

^{544c}

“That is not difficult,” said I, “so listen. The forms I am referring to are those that have names. First is the one that most people praise, your Cretan or Spartan form. Second to arise, and second ^{544d} too in terms of praise, is the one called oligarchy, a form of government full of evils aplenty. Next comes the adversary of this form, democracy. And then there is noble tyranny, set apart from all the others, the fourth and last disease of the city. Or can you think of any other form of government of any type that constitutes another obvious form? Indeed dynasties, purchased kingships, and other forms of government of this sort are presumably something intermediate between these four, and

they are to be found no less among non-Greeks than among the Greeks.” “Yes,” said he, “many unusual forms are spoken of.”

544e

“Now,” said I, “do you know that there must be as many types of human character as there are forms of government? Or do you think that forms of government come into existence from oak or from rock,¹⁰³ and not from the characters of the people in the cities, which, in a sense, exert their influence and pull everything else in their direction.” “Yes,” said he, “that is where they come from and not from anywhere else at all.” “In that case, if there are five types of cities, there would also be five conditions of individual souls.” “Indeed.” “Well now, we have already described the person who resembles the aristocracy, whom we rightly declare to be good and just.” “We have.”

545a

“Now, after this should we not describe the lesser men: first, the ambitious fellow who loves honour, and corresponds to the Spartan form of government, then the oligarchic man, the democratic and, finally, the tyrannical? Would this not enable us to look at the most unjust man alongside the most just man, and complete our enquiry as to where exactly pure justice stands relative to pure injustice, in relation to the happiness or wretchedness of their possessor, so that we could either be persuaded by Thrasymachus and pursue injustice, or accept the argument that is now emerging, and pursue justice?” “Yes,” said he, “that is what we should do. Entirely so.”

545b

“Well now, we began this process by considering the characters of the various forms of government – where they are more obvious – prior to considering those of the individuals. So, should we proceed in a similar way now, and consider first the form of government that loves honour? In our language I have no other name to call it except timocracy or timarchy, and in relation to this we shall consider the man who resembles it.

Then, after that, we shall consider the oligarchy and the oligarchic man. And after looking at the democracy, we shall behold the democratic man. And arriving at the fourth city, the tyrannical one, and looking at that, and at the tyrannical soul too, we shall try to become competent judges of the issues we have put forward.”

545c

“Well,” said he, “if we proceed in this way, our perspective and our judgement would surely be reasonable.” “Come on, then,” said I. “Let us try to describe the way in which timocracy would arise from aristocracy. Or is it simply that change in any form of government comes from the part of it that exercises authority, whenever faction arises in that particular part, whereas if it is of one mind, even if it is very small, no disturbance is possible?” “Yes, indeed so.”

545d

“So, Glaucon,” said I, “how shall this city of ours be disturbed, and in what way shall our auxiliaries and our rulers develop factions against one another, and against themselves? Or would you prefer that we copy Homer and pray to the Muses to tell us how faction first came about,¹⁰⁴ and we could declare that they are playing with us, like children, speaking lightly but in a tragic style, pretending to be serious by speaking in a lofty manner?”

545e

“How?”

546a

“As follows. Although it is difficult to disturb a city that has been constituted in this way, nevertheless, since destruction is the lot of anything that has come into being, even something constituted like this will not endure for all time. It too will be dissolved, and its dissolution will be as follows. Not alone for the plants in the earth, but also among the animals on the earth there is productiveness and sterility of their souls and bodies as they run their circular course and complete their cycles, ^{546b}

which are short for those who are short-lived, and longer for the long-lived. But for your race, although the people whom you educated as leaders of the city are wise, they will be unable by calculation combined with sense experience, to hit upon the best time for bringing children to birth and for not bearing children. This will evade them, and they will, on occasion, bring forth children when they should not.

546c

“Now, divine birth has a cycle that the perfect number encompasses. But for a human being the number is the first in which root and square increases, having comprehended three distances and four limits of whatever brings about likenesses and unlikenesses, waxings and wanings, renders all things mutually agreeable and expressible towards one another. Of these four, three yoked together with five yields two harmonies when increased threefold. The first is equal, an equal number of times, one hundred times this amount. The other is equal in length on one side, but it is oblong on the other side of one hundred squares of rational diameters of five diminished by one each, or, if of irrational diameters, by two, on the other side of one hundred cubes of three.

546d

“This entire geometrical number is lord of anything like this,¹⁰⁵ of better and worse births. And whenever our guardians, in ignorance of this, make brides cohabit with bridegrooms inappropriately, their children will be neither well developed nor fortunate. And although their predecessors will install the best of them in power, nevertheless, being unworthy, when their turn comes to rule and exercise the powers of their fathers, they will begin, as guardians, firstly to pay little heed to us Muses by regarding our realm of music as less important, and secondly they will neglect ^{546e} the realm of gymnastics too, and so your own young people will become less musical. From these, ^{547a} rulers will be installed who cannot exercise much

guardianship when it comes to testing for the races of Hesiod,¹⁰⁶ and of your people too, the gold, silver, bronze and iron. The indiscriminate mixing of iron with silver and of bronze with gold will produce dissimilarity and an inappropriate inconsistency, which always beget war and enmity wherever they arise. So, we should declare that ‘such is the lineage’ of faction,¹⁰⁷ whenever and wherever it occurs.” “And we shall declare,” said he, “that they have answered correctly.” “As they must,” said I, “since they are Muses.”

547b

“Well, then,” said he, “what shall the Muses say next?” “Once faction had arisen,” said I, “both races began to exert their influence, the iron and brass kinds drawing the city towards the acquisition of money, land and property, gold and silver, while the gold and silver kinds, for their part – since these are not in poverty but are naturally wealthy of soul – led in the direction of excellence and the ancient order. As they struggled violently in opposite directions, they eventually agreed to compromise, distribute land and property for themselves, and make these private. With this, they enslaved those they had previously guarded as free men, friends and supporters by treating them as serfs and underlings, while they themselves 547c attended to warfare and guarding themselves against their former friends.” “I think,” said he, “that this is how the change comes about.” “Would not this form of government,” said I, “be something in between aristocracy and oligarchy?” “Very much so.”

547d

“Well, that is how it will change, but once it has changed, how will it be administered? Or is it obvious that in some respects it will imitate the previous form of government, and in other respects 547e the oligarchy, since it is in between them, and that it will also have something that is particular to itself?” “Quite so,” said he. “In the respect given to its rulers, the fact that its military class refrains from working the land and from skilled

labour and from other sorts of money-making, in its provision of common meals and the attention it pays to physical exercise and military competition, in everything of this sort will it not imitate the previous form?" "Yes."

548a

"Will not the features that, for the most part, are particular to itself be its fear of admitting the wise to positions of authority since it no longer has people of this sort who are straightforward and sincere, rather than complicated? Will it not also prefer spirited types who are simpler, more fitted by nature for war than peace, who attach value to its tactics and strategies? And will it not spend all its time waging war?" "Yes."

548b

"And yet," said I, "people like this will have a longing for money, just like those in the oligarchies, harbouring a concealed but fierce reverence for gold and silver because they have storehouses and private treasuries in which to keep it all hidden, and enclosures too, houses which are really private nests in which they spend their money, lavishing it extravagantly on women and on many others, whomever they please." "Very true," said he.

548c

"And they will also be miserly with money since they revere it and may not acquire it openly. Yet because of desire, they love spending other people's money and enjoying their pleasures in secret, running away from the law like boys from their father, having been educated by force rather than persuasion because they paid no heed to the true Muse who accompanies argument and philosophy, and had more respect for gymnastics than for music." "You are," said he, "most certainly describing a form of government that is a mixture of good and bad."

548d

"Yes, it is mixed," said I, "but what is most distinctive about it is one particular feature. Due to the dominance of spiritedness in

it, it is ambitious and loves honour.” “Most certainly,” said he. “Well,” said I, “this form of government would arise in this way, and this is what it would be like. This is just a verbal sketch providing an outline without the detail, because a sketch will indeed be enough to reveal the most just person, and the most unjust. But to describe all forms of government and all their characters, omitting nothing, would be an inordinately lengthy undertaking.” “That is right,” said he.

548e

“Now, what about the man who corresponds to this form of government? How did he arise, and what sort of person is he?” “I think,” said Adimantus, “that when it comes to ambition, at any rate, he is quite like Glaucon here.” “Well, in that respect,” said I, “perhaps you are right, but in other respects his nature is different.” “In what respects?”

549a

“He must be more stubborn,” said I, “and less musical, even though he loves music, and despite being a good listener he is not at all eloquent. And he would be aggressive towards slaves rather than merely looking down upon them, as an adequately educated person would do. Yet he would ^{549b} be gentle towards free men, and highly respectful towards those in authority. He himself loves authority and he loves honour, and he is worthy of authority, not because of what he says or anything of that sort, but because of his achievements on the battlefield and in military affairs generally, being fond of physical exercise and of hunting.” “Yes,” said he, “this is the character of that form of government.” “Would not a person like this,” said I, “despise money when young, but grow more and more fond of it the older he gets because he has a share of this money-loving nature and is no longer directed towards excellence, purely and simply, because he has been deprived of its very best guardian?” “What is that?” asked Adimantus. “Reason,” said I, “combined with music, which alone, once engendered, dwells as the

lifelong preserver of excellence for whoever possesses it.” “Very good,” said he. “So, that is what the young timocrat is like,” said I. “He is just like this sort of city.” “Yes, indeed.”

549c

“Now, this person arises somewhat as follows,” said I. “Sometimes he is the young son of a good father who is living in a city that is not well run. His father shuns the honours, the positions of authority, legal disputes and all business of that sort, and he is willing to accept loss of status to avoid trouble.” “And how,” he asked, “does he become timocratic?”

549d

“Whenever,” said I, “in the first place, he hears his mother being annoyed at the fact that her husband is not one of the rulers, and that she is losing status among the other women as a result. She sees that he is not particularly serious about money and does not fight or engage in slander, either in private or in the law courts or public gatherings, but is indifferent to everything like this. She notices that he is constantly turned in on himself, does not show her much respect, and does not disrespect her either. And she gets annoyed at all this and tells her son that his father is unmanly and extremely neglectful, and she repeats all the other expressions of this sort that women like to use when speaking of such men.”

549e

“Yes,” said Adimantus, “there are lots of them. That is what they are like.” “And you know,” said I, “that the servants of such men, the ones that seem well-intentioned, sometimes say this sort of thing secretly to the sons. And if they see someone owing money to his father, or someone doing him some other injustice, someone whom the father will not pursue, they exhort ^{550a} him to take revenge on all such people when he becomes a man, and be more of a man than his father. And when he goes out he hears and sees other things of this sort. Those who do what belongs to themselves in the city are called

simple-minded and are held in little regard, while those who do not are honoured and praised. Then the young man, seeing and hearing all this, and also hearing the words of his father and seeing his father's actions from close up, alongside those of everyone ^{550b} else, is dragged in both directions: his father encouraging and fostering the rational element in his soul, while the others foster the appetitive and spirited elements. Because he is not, by nature, a bad man, but has fallen into bad company of others, he is pulled by both of these, ends up in the middle, hands over the authority within himself to the middle element of ambition and spiritedness, and becomes a high-spirited man who loves honour." "I think," said he, "that you have described the origin of this fellow quite accurately."

^{550c}

"In that case," said I, "we have our second form of government, and the corresponding man too." "We have, indeed," said he. "After this, should we, as Aeschylus says, speak of 'another man set before another city'¹⁰⁸ or, according to our procedure, speak of the city first?" "Yes, certainly," said he. "And the form of government that comes after this one would, I think, be oligarchy." "Well," said he, "what kind of constitution do you call oligarchy?" "The one that is based on a property qualification," said I, "in which the rich rule and the poor man has no share of authority." "I understand," said he.

^{550d}

"Should we not say how the change from timocracy to oligarchy first begins?" "Yes." "And, indeed," said I, "even to the blind, it is obvious how this changes." "How?" "That treasury," said I, "private to each, filled with gold, is what destroys a form of government of this sort. For in the first place they invent various extravagances for themselves, and divert the laws to this end by disobeying them themselves, and their wives do likewise." "Quite likely," said he. "Next, I imagine, they start watching each other, and by entering into rivalry they

eventually make almost everyone else behave just like themselves.” “That is likely.”

550e

“And, thereafter,” said I, “as they proceed further with their money-making, the more honour they assign to wealth, the less honour they assign to excellence. Or is this not how excellence contrasts with wealth, as if they were each being weighed on a balance that is constantly inclining in opposite directions?” “Very much so,” said he. “So, when wealth and the wealthy people are honoured in a city, excellence and the good people are shown less honour.” “Evidently.” “But whatever is honoured constantly is practised, and whatever is dishonoured is neglected.” “Just so.”

551a

“Then, instead of being ambitious men who love honour, they finally become men who love money and money-making. They praise the wealthy man, and they are in awe of him and put him in positions of authority, while they dishonour the poor man.” “Absolutely.” “And at that stage they pass a law that defines the oligarchical form of government. They prescribe a particular sum of money, which is more when it is more of an oligarchy, less when it is less so, and they decree that anyone whose property falls short of the prescribed valuation may have no involvement in ruling the city. They bring this about either through force of arms, or else they will establish a form of government like this through fear. Is this not so?” “Yes, this is so.”

551b

“Well then, this is what we might call its establishment.” “Yes,” said he. “But what is the manner of this form of government, and what defects do we say it possesses?” “Well, firstly,” said I, “consider its own defining characteristic and what it is like. What if helmsmen for ships were to be appointed based upon a property qualification, and the poor man was never given the

role, even if he was a better helmsman?" "Their sea voyage," said he, "would be terrible." "Does not the same also apply to the control of anything else at all?" "Yes, I think so." "Except a city," said I. "Or does this also apply to a city?"

551c

"Very much so," said he, "to a city most of all, since the rule of a city is so difficult and important."

551d

"Then oligarchy would possess this one significant defect." "Apparently." "What about this? Is the following defect any less significant?" "Which one?" "The fact that such a city is not one, but necessarily two: a city of poor folk and a city of wealthy people, living in the same place but always scheming against one another." "By Zeus," said he, "that is not a less significant defect!"

551e

"And, indeed, it is not good that they are unlikely to be able to wage a war, because that compels them either to arm the general population, and then be more afraid of them than of the enemy, or not to arm them and thus be true oligarchs, a few rulers alone on the battlefield. And at the same time they are unwilling to contribute to military expenditure because they love money so much." "Not good, indeed." "And what about the aspect we criticised a while ago? What about the fact that people have lots of different roles? Under such a form of government, the same people simultaneously engage in ^{552a} agriculture, make money, and fight in wars. Do you think this is all right?" "No, not at all." "Then let us see if such a form of government is the first to tolerate the greatest of all these evils." "Which is?" "Allowing someone to sell everything he has, and allowing someone else to take possession of this. Having sold everything, the man may live on in the city without any role as a businessman, ^{552b} a craftsman, a cavalryman or an infantry-man. They call him poor, a man without means." "It is

the first to tolerate this,” said he. “This sort of thing certainly will not be prohibited in oligarchies or else some people could not be excessively wealthy while others are in total poverty.” “That is right.” “Think about this too. When he was still wealthy, was this fellow of any more benefit to the city in the various roles we have described? Or did he seem to be one of the rulers of the city, when in truth he was neither a ruler nor an underling, but a mere spender of anything that was available?”

552c

“That is it,” said he. “He seemed to be something else, but he was nothing more than a spendthrift.” “Would you like us to declare,” said I, “that just as a drone is born in a cell of honeycomb, a pestilence to the hive, so too is a man like this, born in a private dwelling house, a drone and a pestilence to the city?” “Yes, certainly, Socrates,” said he. “Now, Adimantus, although the god made all the winged drones without any stings, did he not make some of the drones that go by foot stingless, and others with terrible stings? Is it not the case 552d that those who remain beggars to the very end belong to the stingless sort, while all the so-called evildoers are from the drones which have stings?” “Very true,” said he. “So, it is evident”, said I, “that in any city where you see beggars, there are thieves and cutpurses somewhere in the vicinity, hidden away, temple robbers too, and artificers of all sorts of evil deeds.” “That is evident,” said he. “What about this? Do you not see beggars in the oligarchical cities?” “Yes,” said he, “almost everyone apart from those in authority are beggars.”

552e

“Should we not presume, then,” said I, “that there are also lots of evildoers in these cities, complete with stings, whom the rulers deliberately restrain by force?” “We should presume so,” said he. “Well then, shall we declare that people like this arise there because of ill-education, bad upbringing, and the evil foundations of this form of government?” “We shall.” “In that

case then, the oligarchical city would be something of this sort, and would have as many evils as this, and perhaps even more.” “That just about sums it up,” said he.

553a

“Then,” said I, “we have dealt with this form of government too, the one they call oligarchy, the one having rulers appointed on the basis of a property qualification. Next, we should consider the person who resembles this, how he arises, and what he is like once he has arisen.” “Yes, certainly,” said he. “Does not the change from that timocratic type to the oligarchic type take place, for the most part, as follows?” “How?”

553b

“It happens when a son, born to a timocratic man, emulates his father at first and follows in that man’s footsteps. Then he sees him suddenly dashed against the city, like a ship against a reef, his property and the man himself being lost overboard. Perhaps he was serving as a general, or exercising some other important position of authority, and then ended up in court because of damaging allegations by false informers, and was put to death, or exiled, or lost his civil rights and had all his property confiscated.” “Quite likely,” said he.

553c

“And the son, my friend, seeing all this, suffering its consequences and losing all his property, is presumably afraid, and immediately thrusts any love of honour, and that spiritedness too, from the throne in his own soul. Humbled by poverty, he turns to money-making, and greedily, gradually, by being thrifty and working hard, he gets some money together. Now, do you not think someone like this, at that stage, would install the appetitive element with its love of money on that throne, turn this into the Great King within himself, and deck it out with tiaras, necklets and ceremonial swords?” “I do,” said he.

553d

“And I presume that he seats the rational and the spirited elements on the ground on either side, beneath that king, as his slaves. He would not allow the rational element to work out or consider anything except how to turn smaller sums of money into larger ones. And he would not allow the spirited element to hold anything in awe, or to have any respect for anything apart from wealth and wealthy people, or to take pride in anything at all except the acquisition of wealth, and anything that brings this about.” “There is,” said he, “no other transformation of a young man who loves honour into one who loves money that is as swift and sure as this.”

553e

“So, is this fellow our oligarchical man?” I asked. “Well, at any rate, the transformation of this fellow starts with a man who resembles the timocracy, the form that turns into oligarchy.” “Let us investigate whether he himself resembles the oligarchy.” “Let us investigate it.” “Would he not resemble it firstly by assigning the utmost importance to money?” “Of course.” “And, indeed, by being miserly and diligent, satisfying only the most necessary of his desires without making provision for any other expenditure and enslaving the other desires because they are unprofitable.” “Yes, certainly.”

554a

“He is a squalid fellow,” said I, “a man who builds up a fortune by making a profit out of everything, the sort of man that most people praise. Would not this person be the one who resembles a form of government like oligarchy?”

554b

“Well, I think so,” said he. “At any rate, money is what this city honours most, and so does a man like this.” “Yes,” said I, “presumably because a man like this has not paid attention to education.” “It seems not,” said he, “or else he would not have installed blind wealth as the leader of his chorus, and honoured this most.”¹⁰⁹ “Nicely explained,” said I, “but consider this.

Should we not state that because of his lack of education, drone-like desires arise in him – the desires of the beggar in some cases, those of the evildoer in others – but these are restrained by his other concern?”

554c

“Indeed,” said he, “very much so.” “Now,” said I, “do you know where you will see the evil deeds of these people, if you look?” “Where?” he asked. “In their guardianship of orphans, and any other opportunity like this that arises, where they get unrestricted licence to act unjustly.” “True.” “So is it not obvious from this that in the other business dealings, those in which a man like this is well regarded and seems to be acting justly, he is forcibly restraining other bad innate desires ^{554d} by some moderation of his own devising? He does not persuade them that it is better not to do this, nor does he tame them by reason, but by compulsion and fear, because he is afraid of losing the rest of his property.” “Yes, entirely so,” said he. “And, by Zeus, my friend,” said I, “once they have the opportunity to spend other people’s money, you will find that the drone-like desires are present in most of them.” “Yes,” said he, “with great intensity.”

554e

“So a man like this would not be free of internal factions, nor would he be one person, but somehow double, although his better desires would, for the most part, prevail over his worse desires.” “Quite so.” “Because of this, I believe, such a person would be more respectable than many others. But the true excellence of the even-minded and harmonious soul would escape him by some distance.” “I think so.”

555a

“And, indeed, this miserly fellow, as a private citizen, is a poor competitor when it comes to any civic ambition or love of noble achievements as he is not prepared to spend money for the sake of good reputation, or on any rivalries of this sort. He is afraid

to awaken the desires that make him spend money and summon them to join the battle and fulfil his ambition. So he fights like a true oligarch with only a few of his own resources, loses most of the time, but remains wealthy.” “Very much so,” said he.

555b

“Now,” said I, “are we still in any doubt that the miserly money-maker corresponds to the oligarchical city, and resembles it?” “Not at all,” said he. “Then we should, it seems, consider the democracy next, the manner in which it arises and what it is like once it has arisen. This will allow us to recognise the character of the man who is like this, and judge him alongside the others.” “Well, we would at least be proceeding much as we did earlier,” said he. “Does not the change from oligarchy to democracy come about, somehow, because of this insatiable desire for what is presented as good, this need to become as wealthy as possible?” I asked. “How so?”

555c

“Since the rulers hold office in that city because they have acquired so much wealth, they are, I think, unwilling to restrict by law any young people who are becoming unrestrained, and prevent them from spending and wasting all they possess. This enables them to buy up the property of such young folk, and also to lend money on security of the property, thus becoming even wealthier and more privileged than before.” “More than anything.”

555d

“Now, is it not obvious already that in a city it is impossible to have reverence for wealth and sufficient sound-mindedness among the citizens at the same time? Is it not necessary rather to neglect one or the other?” “Yes,” said he, “that is fairly obvious.” “In fact, when they neglect this in the oligarchies, and encourage unrestrained behaviours, good people are sometimes forced into poverty.” “Very much so.” “So these people, I imagine, sit there in the city, complete with stings in armed

array, some of them in debt, some of them deprived of their rights, some in both predicaments. They hate and conspire against those who took their possessions, and against everyone else too, and they are passionate for revolution.” “That is right.”

555e

“And yet, the money-makers, keeping their heads down and without even seeming to notice these people, insert their silver, injuring anyone else who does not consistently resist them. And they recover their original sum many times over in interest, and cause the drone and the beggar to multiply in the city.” “Yes,” said he, “why would they not multiply?”

556a

“Nor,” said I, “are they willing to extinguish an evil of this sort, as it blazes up in the city, by restricting a person’s right to do what he likes with his own property, nor again will they undo such arrangements by another law.” “What law do you mean?” “A law that is second best after that, one that compels the citizens to pay attention to excellence. For if it were decreed that a person enters into most voluntary contracts at his own risk, there would be less shameless money-making in the city and fewer evils like those we have been describing would spring up there.” “Much fewer,” said he.

556b

“But as matters stand,” said I, “for all sorts of reasons, such as those we have given, the rulers of the city put their subjects in this predicament. As for themselves and their own kindred, do they not make the young folk delicate, averse to hard work, be it physical or mental, too soft to withstand pleasures or pains, and lazy too?” “Indeed.” “And do they not turn themselves into money-makers who neglect everything else besides this, caring no more for excellence than the poor people do?” “Yes, no more than that.”

556c

“Then, under such an arrangement, whenever the rulers and their subjects come into contact with one another, either on a journey or in some other communal activities such as a festival, or on a military campaign as shipmates or fellow soldiers, and when they see one another facing actual dangers, the poor are no longer held in contempt by the wealthy folk at all. Indeed, very often the poor man, lean and sunburnt, stationed in battle beside a wealthy man who has been reared in the shade, with far more flesh than he needs, sees this rich fellow out of breath and in total confusion.

556d

So, do you not think he will then conclude that such people are wealthy due to some failing on the part of the poor, and when the poor get together in private will they not proclaim to one another that ‘These men are good for nothing. They are ours for the taking.’?” “I know quite well,” said he, “that that is what they will do.”

556e

“Is it not like an unhealthy body that needs only the slightest external influence to tip it into disease, and is sometimes in conflict with itself, without any external influence? Will not a city that is in the same condition as that unhealthy body become diseased at the slightest prompting, and fight against itself? Perhaps one group might bring in allies from an oligarchic state, or the others might bring them in from a democratic state, and there may sometimes be conflict even without any external influence.”

557a

“Yes, emphatically so.” “Then democracy, I imagine, comes about when the poor, having won their victory, execute some of their opponents, exile others, and grant an equal involvement in civic affairs and in positions of authority to those who remain. And positions of authority in the city are, for the most part, assigned by lot.” “This is indeed how the democracy is

established,” said he, “whether it happens through force of arms, or the others withdraw out of fear.”

557b

“Well, then,” said I, “in what way do these people live their lives, and what will a form of government of this sort be like? For it is obvious that a man like this will prove to be a democratic man.” “That is obvious,” said he. “Well, in the first place, are they not free, and does not the city become full of freedom and unrestricted speech, with licence for anyone there to do what he likes?” “So they say, anyway,” said he. “And wherever there is licence, it is obvious that each person would make individual arrangements for his own life there, an arrangement that pleases him.” “That is obvious.”

557c

“So under this form of government especially, I imagine, an enormous variety of people of all sorts would arise.” “Inevitably.” “Perhaps,” said I, “it is the most beautiful of all the forms of government. Just like a many coloured robe, embroidered with flowers of all sorts, this city, decked out with characters of all sorts, would prove to be the most beautiful one there is. Indeed, it is quite likely that most people, just like children and women when they see decorated objects, would decide that this form of government is the most beautiful one.” “Very much so,” said he. “And, indeed, my friend,” said I, “it is somehow quite appropriate to search for a form of government in this one.”

557d

“Why is that?” “Because it contains forms of government of every kind on account of the licence that it allows. Indeed, anyone who intends to arrange a city, as we have been doing just now, should really go to one that is governed democratically and select whatever arrangement pleases him, as if he was entering a general market selling forms of government of all sorts, to make his selection and found his city

accordingly.” “Well,” said he, “there would surely be no shortage of examples to choose from.”

557e

“There is no compulsion to exercise authority in this city, even if you are qualified to do so,” said I, “or indeed to be subject to authority if you do not feel like it, or to go to war in time of war, or to observe the peace when everyone else does so, if you do not want peace. What is more, if some law is preventing you from holding office or being on a jury, you may hold office or serve on the ^{558a} jury anyway, if it suits you to do so. Now, is this not a divinely pleasant and sweet way of carrying on, for a while?” “For a while, perhaps,” said he. “And what about the calmness of those who have ended up in court? Is that not nice? Or have you never seen people who have been sentenced to death or exile under a form of government like this, remaining on in the city nevertheless, and going about in public. Or how a convicted person stalks about the place unheeded and unseen by anyone, like a ghost?” “This happens a lot,” said he.

558b

“And note the tolerance of this form of government and its lack of any attention to detail. It despises anything we were so serious about when we were founding our city, and said that unless someone had an exceptional nature, he would never become a good man unless he were to play in the midst of beauty from his earliest childhood and engage in pursuits of a similar sort thereafter. See how high-mindedly it tramples upon all this, pays no heed to the sort of pursuits someone engaged in before they got involved in public life, but honours him as long as he declares that he is well disposed towards the people.” “How utterly noble,” said he.

558c

“So democracy would, it seems, have these qualities and others akin to these,” said I. “It is a pleasant form of government, anarchic and variegated, that bestows some equality on equals

and unequals alike.” “Yes,” said he, “what you say is all very recognisable.” “Then,” said I, “think carefully about what the corresponding person will be like. Or should we first consider how he arises, just as we did with the form of government?” “Yes,” said he. “Well, would it not happen in the following way? The miserly oligarchic man might have a son, I imagine, who has been brought up in the habits of his father.” “Yes, why not?”

558d

“Then the son too would forcibly control any pleasures within him that are conducive to spending money rather than making it, the pleasures that are referred to as unnecessary.” “Obviously,” said he. “Now,” said I, “so that we do not discuss this in an obscure manner, do you first want to distinguish between the desires that are necessary and those that are not?” “I do,” said he. “Well, desires which we would be unable to divert, and those whose fulfilment benefits us, may we justifiably refer to these as necessary? In fact, it is necessary for us, by our very nature, to pursue both of these. Is this not so?” “Very much so.”

558e

“Then we may justifiably use the word ‘necessary’ to refer to these.” “Justifiably.” “What about those which someone may be rid of, through practice from his earliest years, which do not do him any good when they are present, and can indeed do the opposite? If we declare that all these are unnecessary, would we be right to say so?” “Right, indeed.” “Then should we pick an example of each, so that we may grasp what they are, in rough outline?” “We should do that.”

559a

“Would not the desire to eat just to maintain health and well-being, the desire just for bread and for relish, be necessary?” “I believe so.” “The desire for bread is presumably necessary for both reasons; it is beneficial, and it can bring

our lives to an end if we do not satisfy it.” “Yes.” “Whereas the desire for relish is necessary insofar as it confers some benefit in terms of well-being.” “Yes, certainly.” “What about desire that goes beyond these, desire for different things to eat besides this sort of food, desire that is capable of being eliminated from most people by restraint and education from their earlier years and is harmful to the body and harmful to the soul’s intelligence and soundness ^{559c} of mind? May this correctly be referred to as not necessary?” “Most correctly.” “Now, should we not say that these desires are conducive to spending money, and the others to making money because they are useful in relation to work?” “Indeed.” “And shall we say the same about sexual desires and the others?” “The same.” “Now, is it not the case that the fellow we called a drone just now, this man, according to us, is full of pleasures and desires of this sort, and is ruled by the unnecessary ones, while the miserly oligarchic type is ruled by the necessary ones?” “Yes, indeed.”

^{559d}

“Well,” said I, “let us go back again and say how the democratic type arises from the oligarchic. It seems to me to happen, in general, as follows.” “How?” “Whenever a young man, brought up in the manner we just described – ill-educated and miserly, being a mere drone – gets a taste of honey and keeps company with wild, clever creatures who are ^{559e} able to ply him with a whole variety of pleasures of all sorts and types, this, you may safely assume, is the source of the change from the oligarchic system within himself to the democratic one.” “It must be,” said he, “very much so.” “Well then, just as the city changed when an external alliance came to the aid of one of its parts, like supporting like, so too does not the young man change when some form of external desire comes in turn to the aid of similar, corresponding, kindred desires within himself?” “Entirely so.”

^{560a}

“And I presume that if some alliance provides assistance, in turn, to the oligarchic element within him, either from his father’s circle or any other relations who are censuring and criticising him, then faction and counter faction and internal warfare against himself arises.” “Indeed.” “And sometimes, I imagine, the democratic element yields to the oligarchic, and some of the desires are destroyed while others are expelled, some shame arises in the soul of the young man, and its good order is restored once again.” “Yes, this sometimes happens,” said he.

560b

“At other times, I believe other desires, akin to those that have been expelled, arise in their place because the father lacks knowledge of proper nurture, and these can become numerous and strong.” “Yes,” said he. “That is what is inclined to happen.” “Do they not drag him back into the same bad company, and by getting together in secret, give birth to a rabble?” “Indeed.” “Then finally, I believe, they seize the citadel of the young man’s soul, having noticed that it is devoid of understanding, noble pursuits and words of truth, which are of course the very best watchmen and guardians in the minds of men whom the gods love.”

560c

“Much the best,” said he. “False and arrogant arguments and opinions then rush up and seize the self-same citadel of a man like this, usurping the place of the true ones.” “With great energy,” said he.

560d

“So, does he not go back once more to those Lotus Eaters and live openly among them this time? And if any assistance from the relatives arrives to help the miserly aspect of his soul, do not those arrogant words close the gates in the walls of the kingly element within him, refuse to allow the alliance itself to get through or to accept the words of private persons who are

older and wiser as ambassadors? They themselves do battle and prevail. Shame they rename as silliness, and they thrust it out as an exile, showing it no respect. Sound-mindedness they rename as unmanliness, and having trampled it in the mud, they cast this out too. Is it not the case that they convince him that measure and orderly expenditure are crude restraints on freedom, and with the help of lots of useless desires, they drive these beyond the frontier?" "They do, indeed."

560e

"And once they have somehow emptied and purged the soul they have occupied and are initiating with magnificent rites, they proceed at that stage to reinstate insolence, anarchy, wastefulness and shamelessness, in a blaze of light, accompanied by a vast procession, crowning them with garlands, singing their praises and calling them by sweet names. They refer to insolence as good education, anarchy as freedom, wastefulness as magnificence, and shamelessness as courage. Is this not somehow the way," said I, "that he changes, as a young man, from being reared on the necessary desires to the liberation and licence that goes with unnecessary and unprofitable pleasures?" "Yes," said he, "that's very clear."

561a

"After all this, I imagine, a person like this lives on, spending money, effort and time on the necessary and unnecessary pleasures in equal measure. But if he is fortunate, and his frenzy does not go beyond all bounds, and he gets a bit older too, then once the great inner tumult has passed he may readmit some parts that he had expelled and not give himself over entirely to the new arrivals. He proceeds to place the various pleasures on some sort of equal footing, handing authority over himself to any pleasure that comes along, in a sort of lottery, until it is satisfied, then he moves on to another, cherishing them all equally and showing no disrespect to any of them." "Yes, certainly."

561b

“And he does not accept true argument,” said I, “nor admit it into that citadel, when someone says that there are pleasures that belong to noble and good desires, and others that belong to base desires, and that the former should be pursued and honoured, while the others are to be restrained and kept in subjection. No, he shakes his head at all such arguments and declares that these pleasures are all much the same, and equally worthy of honour.” “Yes, indeed,” said he, “that is his position and that is what he would do.”

561c

“And that is how he passes his life from day to day,” said I, “gratifying whatever desire comes along. At one moment he is a drunkard, charmed by sweet music; next he becomes a water-drinker and goes on a diet; then he starts exercising, but he soon gets lazy and completely careless, and after that he seems to be engaged in philosophy. He often turns to politics, jumping up and saying ^{561d} or doing whatever occurs to him, and if he ever develops an admiration for military folk, he takes himself off in that direction, or he might admire business people and go that way instead. There is no order in his life, nor any compulsion to do anything, and yet he calls this life pleasant, free and blessed, and he holds to this through and through.” “You have,” said he, “given a comprehensive description of a ‘legal equality man’.”

561e

“And I think,” said I, “that he is a man of great variety, full of character traits aplenty, and this fellow, just like that city, is the fair and many-coloured one. Most men and women would admire his life, which contains so many models for systems of government and personal traits.” “Yes,” he said, “that is him.”

562a

“Well now, should we have aligned a person like this with the democracy as a man who may correctly be referred to as

democratic?” “We should,” said he. “Then,” said I, “all that is left for us to describe is the most beautiful form of government and the most beautiful man – tyranny and the tyrant.” “Certainly,” said he. “Come on then, my dear friend, what does the manner of tyranny prove to be? Indeed, it is quite obvious that it develops out of a democracy.” “It is.” “Now, does tyranny arise from democracy in somewhat the same manner as democracy arose from oligarchy?” “In what manner?”

562b

“The good that they proposed,” said I, “which is the very basis of the oligarchy, was wealth. Is this not so?” “Yes.” “Well, the insatiable desire for wealth, and the disregard of everything else in favour of making money, destroyed the oligarchy.” “True,” said he. “And whatever democracy defines as good, and the insatiable desire for this, is what breaks the democracy apart, is it not?” “What, according to you, does it define as good?”

562c

“Freedom,” said I. “For you would surely hear it said in the democratically governed city, that this is its most precious possession, and that’s why it is the only city worth living in for anyone who is free by nature.” “Yes, indeed,” said he. “That is what is said, and it is said often.” “Well, then,” said I, “as I was just about to say, the insatiable desire for this sort of thing, to the neglect of everything else, changes this form of government too, and puts it in a position where it needs tyranny.” “How so?” he asked.

562d

“This happens, I believe, whenever a democratically governed city with a thirst for freedom gets leaders who behave like bad wine pourers. The city gets intoxicated by drinking too much unadulterated freedom, and unless the rulers are very obliging and provide the city with a lot of freedom, it punishes them and accuses them of being despicable oligarchs.” “Yes,” said he,

“that is what it does.” “And,” said I, “it hurls insults at those who are obedient to their rulers for being willing slaves and mere nobodies. But in private, and publicly too, it praises and honours any rulers who are like the subjects, and any subjects who are like rulers. Now, is it not inevitable that freedom in a city like this would extend to everything?”

562e

“How could it do otherwise?” “And this,” said I, “must also seep down into private households, my friend, until finally the anarchy springs up even among the wild beasts.” “How are we saying this happens?” he asked.

563a

“We would say, for example,” said I, “that a father gets accustomed to behaving like a child and is afraid of his sons. A son behaves like a father and feels neither shame nor fear before his parents so that he may, of course, be free. A foreigner residing in the city has equal status with a citizen, and a citizen has equal status with a foreigner, and the same applies to a visitor.” “Indeed,” said he, “that is what happens.”

563b

“It does,” said I, “and there are other trivial examples. A teacher in such a situation fears and flatters the pupils, while the pupils belittle their teachers and whoever else is put in charge of them. And the young become like their elders in all respects, competing with them in word and deed, while the elders come down to the level of the young folk by being full of banter and wit, imitating the young for fear of seeming disagreeable or oppressive.” “Very much so,” said he.

563c

“And yet, my friend,” said I, “freedom in such a city reaches its extreme when slaves, male and female, are just as free as those who buy them. And I almost forgot to mention how much equality and freedom there is among women in relation to men, and among men in relation to women.” “Should we not follow

Aeschylus,” said he, “and say ‘whatever now comes to our lips?’” “Certainly,” said I, “and accordingly I say that unless he had experienced it first hand, no one would believe how much freer the domesticated animals are in this city than in any other. Indeed, it is literally the case that, as the proverb says, ‘the bitches become just like their mistresses’. And, indeed, horses and donkeys get used to going about with total freedom and solemnity, bumping into anyone they happen to meet on the road who doesn’t get out of their way, and everything else becomes just as full of freedom.” “You are describing my own dream,” said he. “I experience this myself when I am making my way out into the countryside.”

563d

“And,” said I, “the outcome of all of these factors combined together is the observable softness it produces in the souls of the citizens. Consequently, if anyone tries to introduce any subjugation to any authority at all, they get angry and cannot stand it. Indeed, I am sure you recognise that in the end they don’t even pay attention to the laws, written or unwritten, so that no one may have any authority whatsoever over them.” “Yes,” said he, “I know quite well.” “Well, my friend,” said I, “this, in my view, is the beautiful and high-spirited source from which a tyranny springs up.” “High-spirited, indeed,” said he. “But what happens after this?”

563e

“The same disease,” said I, “that developed in the oligarchy, and destroyed it, also develops in the democracy, but it is more pervasive and more virulent on account of the licence it allows, and it dominates the democracy completely. In fact, anything that is done to excess tends to reciprocate with an enormous corresponding change in the opposite direction, in seasons, in plants and in human bodies, and especially in forms of government.” “Quite likely,” said he.

564a

“Indeed, the excessive freedom seems to transform simply into excessive slavery in the individual and in the city.” “Yes, quite likely.” “Then,” said I, “it is likely that tyranny arises from no other form of government besides democracy. From the very pinnacle of freedom comes the most extensive and savage slavery.” “Yes,” said he, “that is reasonable.” “But I do not think that is what you were asking,” said I. “I think you asked what kind of disease develops identically in an oligarchy and in a democracy too and reduces it to slavery.” “True,” said he.

564b

“Well,” said I, “I was referring to that class of idle, spendthrift men, the most courageous of whom take the lead while the less vigorous among them follow. These we compare to drones, some having stings, others stingless.” “And rightly so,” said he. “Well,” said I, “these two cause trouble in any city when they arise there. They are like phlegm and bile in the body which a good physician, and a lawgiver in the case of a city must be careful ^{564c} about from afar, just as careful as a wise beekeeper, so that ideally they do not arise in the first place, and then if they do arise they are cut out as quickly as possible, along with the wax that surrounds them.” “Yes, by Zeus,” said he, “entirely so.” “Well,” said I, “to see what we want to see with greater precision, let us proceed in the following way.” “In what way?”

564d

“Let us use the argument to divide the democratically governed city into three, which is how matters actually stand. One part is presumably this drone-like class that develops there, no less than it does in an oligarchy, because there is so much licence.” “So it does.” “But this class is much fiercer in a democracy than in an oligarchy.” “How so?” “In the oligarchy it gets no exercise and doesn’t get strong because it is not respected and it is excluded from positions of authority. But in the democracy, with few exceptions, this is presumably the dominant class, and the fiercest part of it is vocal and active while the rest gather

about the ^{564e} speaker's platform, sit there buzzing, and will not stand for any opposition. Consequently, with few exceptions, everything in such a form of government is managed by this class." "Very much so," said he. "And another distinct part always emerges from the general population as follows." "In what way?" "Presumably, if everyone is involved in making money, those who are by nature most orderly generally become wealthier than everyone else." "Quite likely." "Well, that is where the drones find most honey, and it is easiest to extract from there." "Yes," said he. "How could someone extract it from the others who have so little?" "Then, I imagine, wealthy people like this are called 'the drones' feeding-ground'." "Pretty much," said he.

^{565a}

"The 'People' would be the third class, consisting of easy-going types, those who work their own land and do not own a lot. They constitute the most numerous and most powerful group in a democracy when they gather in an assembly." "That is right," said he, "but they are not inclined to do this very often unless they get a share of the honey." "Do they not always get a share," said I, "as much as the people in charge are able to spare, since they confiscate property from those who have it, distribute some to the people, but hold on to most of it themselves?"

^{565b}

"Yes," said he, "that is indeed how they get a share." "In that case, I imagine, those whose property is being confiscated are compelled to put up a defence by speaking in the assembly and by taking whatever action they can." "Inevitably." "Then an accusation against them is made by those on the other side, and even though they have no desire for revolution, they are accused of conspiring against the people and acting like oligarchs." "Indeed."

^{565c}

“Finally, they see that the people are trying to do them an injustice, not intentionally but out of ignorance, because they have been deceived by various slanderers. And at this stage they really do become oligarchs, whether they wish to do so or not. They are acting against their will, but the drone is stinging them and that is what produces this evil too.” “Yes, exactly.”

565d

“Then the two sides launch impeachments, lawsuits and court cases against one another.” “Very much so.” “And in such a situation are not the people always inclined to put forward one person in particular as their own protector, whom they nurture and turn into a great man?” “That is what they are inclined to do.” “So this much is obvious,” said I. “Whenever a tyrant springs up, the root from which he springs is a protectorate and nothing else.” “Yes, that is quite obvious.”

565e

“So, what is the origin of the change from protector to tyrant? Or is it obvious that this happens once the protector begins to do the same thing as the fellow in the story about the sanctuary of Lycean Zeus in Arcadia?” “What story?” he asked. “The story is that someone who tastes one piece of the innards of a human being, chopped up and mixed with the innards of other sacrificial animals, must necessarily turn into a wolf. Or have you not heard the account?” “I have.”

566a

“Now, does not someone who has become a protector of the people do something like this? Does he not take control of a faithful mob and show no restraint, even to shed the blood of his own people, making unjust accusations, the mob’s usual favourites? And does he not drag someone into court and commit murder, doing away with a man’s life, tasting the blood of his own kin with defiled lips and tongue? Does he not banish people, slay them, and hint at the cancellation of debts and the redistribution of land? Now, is it not inevitable that such a

person, after all this, is destined either to be destroyed by his enemies or to become a tyrant, and transform from a man to a wolf?” “Quite inevitable,” said he.

566b

“Then this fellow,” said I, “turns out to be someone who is at odds with those who own the wealth.” “He does.” “Now, if he is expelled and then returns in defiance of his enemies, will he not return as a finished tyrant?” “Evidently.” “But if they are unable to expel him or to have him killed by spreading slander in the city, they conspire to have him slain in secret and die a violent death.” “Yes,” said he, “that is what tends to happen.” “Then comes the request of the tyrant, all too familiar, the one that they all come up with at this stage. They ask the people for some bodyguards so that the saviour of the people may be kept safe for them.” “Indeed so,” said he.

566c

“And they grant his request, I believe, because they are afraid on his behalf, although they are confident about their own situation.” “Yes, indeed.” “Now, when the man with money sees all this – a man who, besides having money, is accused of hating the common people – then, my friend, as the oracle given to Croesus says,

*He flees along the shore of many-pebbled Hermus
He abides not, nor is he ashamed to be a coward.*¹¹⁰

“Indeed,” said he, “he will not get a second chance to be ashamed.” “And I imagine,” said I, “that he is done to death if he gets caught.”

566d

“Inevitably.” “And yet that protector of the people does not of course lie fallen, ‘a great man brought down in his greatness’.¹¹¹ No, he overthrows numerous adversaries, and stands in the controlling position of the city, a complete tyrant rather than a

mere protector.” “It must be so,” said he. “Should we,” said I, “give an account of the happiness of this man and of the city in which such a creature has arisen?” “Yes, certainly,” said he. “Let us give the account.”

566e

“Well,” said I, “initially, in the early days, does he not have a smile and a warm greeting for anyone he meets? Does he not deny that he is a tyrant and make lots of promises in private and in public, free people from their debts, and distribute land to the people and to his own circle, and does he not pretend to be kind and gentle to everyone?” “He must,” said he. “And yet I believe once he is reconciled with some of his enemies in exile, and has destroyed the others, and all is quiet in that regard, he sets about waging some war or other constantly so that the people will be in need of a leader.” “Quite likely.”

567a

“He does this so that they will also be impoverished by paying taxes, forced to focus upon their day-to-day needs, and be less inclined to conspire against him.” “Obviously.” “And if he suspects that some people with exalted notions of freedom will not accept his authority, I believe he can come up with a pretext to destroy these people by handing them over to the enemy. So, for all these reasons it is imperative that a tyrant stirs up war continuously.” “Imperative.” “And because he behaves like this, must he not expect to be increasingly hated by the citizens?” “How can he not expect that?”

567b

“And will not some of those who helped him to power, and are in power themselves, speak frankly to him and to one another, criticising the things that are happening – those who are brave enough to do so at any rate.” “Quite likely.” “So, the tyrant needs to do away with all these people secretly if he is to have authority, until finally there is no one left, friend or foe, who is of any use to him.” “Evidently.”

567c

“So, he must keep a sharp eye out to see who is courageous, who has a great mind, who is intelligent, and who is wealthy. And such is his blessedness that whether he likes it or not, he must be an enemy to all these people, and conspire against them, until such time as he cleanses the city.” “A fine cleansing that is,” said he. “Yes,” said I, “it is the exact opposite of what physicians do to bodies. They remove the worst and leave the best, but the tyrant does the opposite.” “Yes,” said he. “It seems he needs to do this if he is to rule the city.”

567d

“So, he is bound,” said I, “by a blessed necessity which directs him either to live alongside people who are, for the most part, quite ordinary, or else not live at all.” “He is,” said he. “Now, is it not the case that the more he is hated by the citizens for doing all this, the greater his need for more bodyguards who are more trustworthy?” “He has no alternative.” “So, who are these trustworthy people? And where will he source them from?” “Lots of them will fly in of their own accord,” said he, “once he comes up with the money.”

567e

“By the dog,” said I, “I think you are referring to some more drones, foreign ones this time, of all varieties.” “Yes,” said he. “I think that is true.” “What about local ones? Would he be at all reluctant to take the slaves away from the citizens, set them free, and then make them part of his own circle of bodyguards?” “He will be very keen to do so,” he said, “since men like this will be extremely loyal to him.” “What a blessed thing this tyranny is,” said I, “if it relies upon such people as trusted friends, having done away with their predecessors.” “But of course he relies on people like this,” said he.

568a

“And these companions of his admire him, of course,” said I. “And the new citizens associate with him, while the respectable

citizens hate him and avoid him.” “What else could they do?” “It is no wonder,” said I, “that tragedy is generally thought to be wise, and Euripides is thought to excel in it.” “Why so?” “Because he uttered the following maxim, born of cogent thought: ‘tyrants are wise, by associating with the wise’. And he meant of course that these people, with whom the tyrant is associating, are wise people.”

568b

“And,” said he, “he praises the tyranny as the equal of the gods, and he himself says much else besides, as do the other poets.” “And that,” said I, “is why the tragic poets, being wise, forgive us and those with a form of government similar to ours for not admitting them, because they are advocates of tyranny.” “I think,” said he, “that the more civilised among them do forgive us.”

568c

“And yet, I believe, they go around the other cities, and by gathering crowds and paying for the services of good voices that are loud and persuasive, they influence those regimes in the direction of tyranny or democracy.” “They do indeed.” “And besides this, will they not receive payment and be honoured too, mostly, as seems likely, by tyrannical regimes and, to a lesser extent, by democracies? But the higher they climb along the ascending scale of systems of government, the more their honour starts to flag, as if it were unable to go any further because it was out of breath.” “Yes, indeed.”

568d

“But we have digressed here,” said I. “Let us go back to that noble, numerous, variegated and ever-changing army of the tyrant, and say how it is supported.” “Obviously,” said he, “if there are sacred treasures in the city’s temples he will spend these for as long as the proceeds from their sale is sufficient, and make the people contribute less.” “And what happens when this runs out?” “Obviously,” said he, “he himself, his fellow

drinkers and his companions, both male and female, will be supported from his father's estate."

568e

"I understand," said I. "The people who brought forth this tyrant will support the man himself and his companions too." "They need to," said he, "very much so." "What are you saying?" I asked. "What if the people get angry and say that it is unjust for a grown-up son to be supported by his father, and that it should be the other way around – the father should be supported by the son? That was not why they created him and put him in place, so that when ^{569a} he had grown up the people would then be enslaved by their own slaves and end up supporting him, along with the slaves and a rabble of others too. They wanted to be liberated from the wealthy classes and the so-called 'noble and good' people in their own city, with him as their protector. What if they now order him to get out of the city, himself and his companions, like a father driving an errant son out of the house along with a rabble of revellers?"

569b

"By Zeus," said he, "the people would then realise what sort of beast they had brought forth, embraced and encouraged. They are now the weaker party driving out someone stronger." "What do you mean?" said I. "Would the tyrant dare to do violence to his father and aim a blow at him if he was not compliant?" "Yes," said he, "after he had disarmed him." "You are saying," said I, "that the tyrant is a parricide and a harsh nurturer of the aged, and it seems that this would indeed be undisguised tyranny. And, as the saying goes, in fleeing from the ^{569c} smoke of slavery to free men, the people would have fallen into the fire of total subjugation to slaves. Instead of that vast and immoderate freedom, they have donned a new robe, the harshest and most bitter slavery, slavery to slaves." "Yes, that is what happens," said he, "very much so." "Well, then," said I, "would it be appropriate for us to claim that we have

given a sufficiently detailed account of how tyranny follows after democracy, and what it is like then?" "Sufficiently detailed indeed," said he.

BOOK IX

571a

"Then," said I, "what remains to be considered is the tyrannical man himself, how he develops from the democratic man and what he is like then, and whether his manner of life is wretched or blessed." "Yes," said he, "this fellow remains to be considered." "I feel that something is still missing," said I. "Do you know what it is?" "What?" "I do not think we have adequately distinguished the kind and number of the various desires. Indeed, if we do not remedy this deficiency, the search we are engaged in will lack clarity." "Would not this still be a good time to do so?" said he.

571b

"Yes, certainly. And consider what I wish to see in these desires. It is as follows. Among the unnecessary pleasures and desires, some I believe are lawless. Although these are probably innate in everyone, they can nevertheless, when restrained by the laws and by the better desires accompanied by reason, be eliminated completely in some cases, or a few weak ones may be left. But in other cases those that remain may be stronger and more numerous." "Can you say," said he, "what these desires are?"

571c

"Those," said I, "that are aroused whenever the rational, gentle part of the soul, the part that rules the other part, is in slumber, and the brutish and wild part, gorged on food or wine, springs to life, refusing to sleep, and sets out to indulge its bad habits. You know that in a situation like this, it ^{571d} dares to do anything at all, as if it had been released from and was rid of all shame and understanding. Indeed, it does not shrink, or so it imagines,

from intercourse with mother or with anything else at all, man or god or beast. It murders anyone at all and eats any meat at all, without restraint, and in short there is no deed, be it mindless or shameless, that it leaves undone.” “Very true,” said he.

571e

“And yet I think when someone keeps himself healthy and of sound mind, and goes to sleep having aroused the rational part of himself, and feasted it on beautiful words and considerations, he attains concord with himself. He ensures that his appetitive part is neither in want nor fully satisfied so ^{572a} that it may be lulled to sleep and not be a source of trouble to the best part of him by being pleased or in pain, but will allow that part, just by itself, to reflect on its own and aspire to perceive what it does not know of the past, the present or the future. “He calms the spirited part too in the same way, and he will not go to sleep with a troubled heart after being angry with someone. Rather, having quietened the other two parts and activated the third, the one in which understanding resides, he then takes his rest. You know that under such circumstances he is most likely to apprehend the truth, and the visions that appear in his dreams are then least likely to be lawless.” “That is it,” said he, “entirely so.”

572b

“Well, all of this has led us to say more than we needed to, but what we want to recognise is this: that there is, in fact, some fearsome, savage and lawless form of desires present in each of us, even in some people who seem to be extremely moderate, and this becomes evident when we are asleep. So, think about whether I am making any sense and whether you agree.” “Yes, I agree.”

572c

“Well, remember the democratic man, and what we said he was like. He presumably became like this by being brought up from

his earliest years by a miserly father who only had respect for those desires that make money and had no respect for the unnecessary ones that exist for the sake of amusement and ostentation. Is this so?" "Yes."

572d

"But once he associates with cleverer men who are full of the desires we have just described, he rushes in the direction of total excess, adopts the behaviour of those new-found friends, and hates the miserliness of his father. But because he is by nature better than his corruptors, he is drawn in both directions and finally takes up a middle position in between the two tendencies. Managing – so he believes anyway – to enjoy each of them in due measure, he lives a life that is neither devoid of freedom nor utterly lawless. He has been transformed from an oligarchical man into a democratic one." "Yes," said he, "this was, and remains, our view of such a person."

572e

"Then, assume once again," said I, "that a man like this has already grown older, and has a young son who has, in turn, been brought up in the habits of his father." "I am assuming this." "Assume too that the same things that happened to his father also happen to the son. He is drawn to utter lawlessness, which is called total freedom by those who are leading him. His father and other relatives assist those middle desires, while his corruptors, in turn, help the other desires. And when these clever beguilers and tyrant-makers lose hope of controlling the young man by any ^{573a} other means, they contrive to engender a passion in him, as a protector of the idle desires that are keen to spend so freely. And the passion in such people is a huge, winged drone. Or do you think it is something else?" "No, I do not think it is anything else," said he.

573b

"Now, when the other desires are buzzing about the drone, full of incense, perfume, garlands and wine, and all the pleasures

that are usually let loose at such gatherings, they feed the drone and make it grow, and engender in it the sting of desire. Then this protector of the soul, with madness as its bodyguard, goes into a frenzy, and if it detects any opinions or desires within itself that are accounted worthy, or still have any shame, it kills them off and pushes them out of itself until it has been cleansed of sound-mindedness and is full of madness brought in from outside.”

573c

“That,” said he, “is a comprehensive description of the origin of the tyrannical man.” “Is this not why Eros has traditionally been called a tyrant?” said I. “Quite likely,” said he. “And, my friend,” said I, “does not a man who is drunk have a certain tyrannical frame of mind?” “He has.” “And, indeed, someone who is mad or deranged endeavours to exercise authority, not only over men but over gods too, and he imagines that he can do so.” “Very much so,” said he.

573d

“And this, dear fellow, is exactly how a man becomes tyrannical,” said I. “It happens when, by nature or by his pursuits, or both, he has become drunken, passionate and maniacal.” “Entirely so.” “That, it seems, is how the man originates and that is what he is like. But how then does he live?” “You tell me!” said he, as people say when they are having fun. “I shall,” said I. “Indeed, I believe that after this they indulge in feasting, carousing, revelry and womanising, and all sorts of things associated with people whose entire soul is governed by an indwelling tyrannical passion.” “Inevitably,” said he. “Now, do not desires, many and fearsome, spring up alongside this one, every day and every night, making many demands?” “Many indeed.” “So, any sources of income are quickly spent.” “Of course.”

573e

“And after this comes borrowing and the erosion of his estate.” “Indeed.” “And when all this fails him, must not there be an outcry from that crowd of intense desires that have made their nest there? Must not the men themselves be goaded on, so to speak, by the stings of the other desires, and especially by the master-passion itself which leads all the others as if they were its bodyguards? Will they not look about in a frenzy to see who has something that can be taken away by deception or by force?” “Very much so,” said he.

574a

“So, he needs to plunder from every quarter, or else be gripped by enormous travails and pains.” “He must.” “Now, just as the newer pleasures in him got the better of the old ones and took away all they possessed, so too would not the man himself also, in spite of his youth, feel that he deserves to have more than his father and mother, and to take away and appropriate the family’s wealth, once he had spent his own portion?” “Yes, indeed,” said he.

574b

“And if they would not turn it over to him, would he not initially attempt to steal from his parents and deceive them?” “Absolutely.” “And if he were unable to do this, would he then seize what he could by force?” “I think so,” said he. “And then, my friend, if that elderly man or woman resisted him and put up a fight, would he be careful and spare them from any tyrannical behaviour?” “No,” said he, “I am not at all confident about the fate of the parents of a man like this.”

574c

“But, by Zeus, Adimantus, do you think he would rain down blows upon his aged friend, the friend he needs, his own mother, all because of a new-found girlfriend, a companion he does not need? Would he strike his elderly father, a man in decline, a much-needed and most ancient friend, all because of a newfound boyfriend in his prime whom he does not really

need? And would he let his parents be slaves of these new friends if he were to bring them all into the same household?" "Yes, he would, by Zeus," said he. "How very blessed it seems to be," said I, "to bring forth a tyrannical son." "Entirely so," said he.

574d

"But what happens to such a person when the resources of his father and mother fail him, while the swarm of pleasures within him is already growing in size? Will he not initially turn his hand to house-breaking or steal the robe of someone who is out late at night, and then go on to plunder a temple? And in all these exploits, the opinions he held of old since childhood about what is noble and what is shameful, opinions that are accounted just, will be subject to those opinions, newly released from slavery, that constitute the bodyguards of the ruling passion and rule alongside it.

574e

These were released previously only in dreams during sleep, when he was still subject to the laws and to his father, because he was under democratic rule within. But now that he is under the tyranny of passion, the sort of person he occasionally became whilst dreaming is the sort of person he has ^{575a} now become, constantly, whilst awake. He will not refrain from any vile murder; there is nothing he will not eat, no action he will not perform. Passion lives within him as a tyrant, in total anarchy and lawlessness, since it is itself the sole ruler, and like a tyrant in a city it will lead anyone in whom it resides to utter recklessness. From this it feeds itself and the rabble that surrounds it, some of which come in from outside from bad company, some of which come from within because the very same tendencies, his own tendencies in this case, have been established and set free. Is this not the life that a man like this leads?" "That is it, indeed," said he.

575b

“And,” said I, “if people of this sort are few in number while the rest of the population of the city is sound-minded, they leave and act as bodyguards for some other tyrant, or serve as paid mercenaries in time of war. But if they arise in time of peace when things are quiet, they stay in the city and do a lot of bad deeds on a small scale.” “What sort of deeds?” “Theft, for instance, house-breaking, picking pockets, stealing people’s clothes, robbing from temples and kidnapping. And sometimes, if they are accomplished speakers, they become informers, give false evidence and take bribes.” “Yes,” said he, “small-scale bad deeds indeed, provided such people are few in number.”

575c

“Yes,” said I, “what is small is small relative to what is large, and none of these evils ‘come nigh at all’, as they say, to a tyrant in terms of the corruption and degeneracy of a city. For when such people grow large in number in the city, along with the others who follow their lead, and they realise how numerous they are, these are the ones who, with assistance from the unthinking general populace, bring forth that tyrant, the particular person who has the greatest and most extensive tyrant within his own soul.” “Yes, quite likely,” said he, “since he would be the most tyrannical of them all.”

575d

“That is what happens if the people yield willingly, but if the city will not submit to him, then he acts as he did towards his own father and mother. He will punish his fatherland in the same way that he punished them, if he can, by bringing in his newfound companions, and he will hold and maintain his beloved ancient fatherland – or motherland, as the Cretans say – in slavery to them. And this would be the culmination of such a man’s desire.” “It would,” said he, “entirely so.”

575e

“Well, then,” said I, “how do these people behave as private citizens, even before they have authority? In the first place, will

they not spend their time with people who flatter them when they are together, or who are prepared to do anything to serve them? Or if they want something from someone else, will they not debase themselves and try any device, as if they were friends, but turn into strangers once their mission is accomplished?" "Yes, very much so."

576a

"And so they live their entire lives without ever being friends to anyone, but always either someone's master or someone else's slave. But the tyrannical nature never gets a taste of true freedom or true friendship." "Entirely so." "Well then, would we be right to refer to such people as unfaithful?" "Of course." "And unjust too, to the greatest extent possible, if we were indeed correct in agreeing what we agreed previously about the sort of thing justice is." "Well, we were right about that at any rate," said he.

576b

"To sum up, then," said I, "let us say this about the most evil person: he would presumably, even when awake, be like the sort of person we described in dreams." "Yes, certainly." "And he comes into existence when someone who is by nature utterly tyrannical, has sole authority, and the longer he lives the life of a tyrant, the more like this he becomes." "He must," said Glaucon, taking up the argument.

576c

"So, is it the case," said I, "that whoever proves to be most evil will also prove to be most wretched? And is it the case that whoever is a tyrant to the greatest degree for the most time, has in truth been most miserable for the most time? But popular opinion on this is quite varied." "Well, the situation must be as you describe it," said he. "And does not the tyrannical man correspond to the tyrannically governed city in likeness," I said, "and the democratic man to the democratically governed city, and similarly for the others?" "Of course."

576d

“Now, as city corresponds to city in excellence and happiness, does one man correspond to another man in this respect too?” “Of course.” “Now, in terms of excellence, how does the city governed by a tyrant correspond to the first one we described, the one governed by a king?” “It is the complete opposite,” said he. “Indeed, one is the most excellent of all and the other is the worst.”

576e

“I shall not ask,” said I, “which you are referring to since it is quite obvious. But would your decision be the same in relation to happiness and wretchedness, or would it be different? And let us not be dazzled by looking at the tyrant in person or a few people in his inner circle; we need to look at the whole city by going into it, delving into every corner and seeing what is there. Then and only then may we express our opinion.” “You are right to challenge me,” said he. “Indeed, it is obvious to everyone that no city is more wretched than one that is governed by a tyrant, and none is more happy than one that is governed by a king.”

577a

“Well,” said I, “what if I were to issue the very same challenges in relation to individual men? Would I be right to suggest that the only person who has the right to decide these issues is someone who is able to use his mind to go deep into the character of a man and see clearly, without being dazzled by the pretence of the tyrannical types, like a child who looks only from the outside, someone who is well able to see through the pretence that tyrants put on for the world at large? Now, what if I were to presume that we should all listen to that person, the one who is able to make this decision and who has lived alongside a tyrant and has witnessed his dealings with his household and how he behaves towards the various members of his family where he is best seen, stripped of ^{577b} theatrical

trappings, and who has also seen him amidst the perils of public life? Since this person has seen so much, should we call upon him to report where the tyrant stands relative to the others, in terms of happiness and wretchedness?" "You would," said he, "be absolutely right to suggest this." "Would you like us," said I, "to pretend to be people who are able to make this decision, and who have already met up with tyrants, so that we may have someone to answer the questions we asked?" "Certainly."

577c

"Come on, then," said I, "and consider the following. Remembering the similarity between the city and the individual man, consider them carefully, each in turn, and describe the characteristics of each." "What sort of characteristics?" he asked. "Firstly," said I, "to speak of the city, will you say that the one governed by a tyrant is free or enslaved?" "Enslaved," said he, "to the greatest extent possible." "And yet you see masters and free men there."

577d

"Yes," said he, "I see this, and it is a small detail, but the whole population, so to speak, in that city, and the very best part, is dishonourably and miserably enslaved." "Now," said I, "if the individual is like the city, must not the same state of affairs prevail within him, and must not his soul be full of slavishness and restriction, the very best parts being enslaved, while a small part, the worst and the maddest, is their master?" "It must be so," said he. "In that case, will you maintain that a soul of this sort is enslaved or free?" "Enslaved, I presume."

577e

"Furthermore, does not the enslaved, tyrannically governed city do what it wishes to do to the least possible extent?" "Yes, the very least."

578a

"So, the tyrannically governed soul, too, will do what it wishes to do to the least possible extent, speaking of the soul as a

whole, and, being continually impelled by the gadfly of desire, it will be full of confusion and regret.” “Inevitably.” “And must the tyrannically governed city be wealthy or poor?” “Poor.” “So the tyrannical soul too must always be in need and dissatisfied.” “It must,” said he. “And what about this? Must not a city like this and a person like this be full of fear?” “That is quite inevitable.”

578b

“And do you think you will find more wailing, groaning, lamentation and suffering in any other city than you find in this one?” “Not at all.” “And do you think this sort of thing is more prevalent in any other individual than it is in this tyrant, mad with desires and passions?” “How could I?” he said.

578c

“Now, I imagine you decided that this city, at any rate, is the most wretched of cities in view of all these considerations and others like them.” “Was I not right to do so?” he asked. “Very much so,” said I. “But what do you say, in turn, about the tyrannical individual in the light of these same considerations?” “That he is”, said he, “the most wretched by far, more so than any of the others.” “That,” said I, “is not quite correct.” “How so?” he asked. “This fellow,” said I, “is not yet the most wretched I imagine.” “Then who is?” “Someone who will surely seem to you to be more wretched than this fellow.” “Who?”

578d

“Someone,” said I, “with a tyrannical nature who does not live out his life as a private citizen, but by an unfortunate accident gets the opportunity to become an actual tyrant.” “I reckon,” said he, “from what has already been said, that this is true.” “Yes,” said I, “but we should not merely think about matters of this sort. We should consider them very carefully, using an argument like this, since our enquiry is concerned with the most important issue of all – living a good life or a bad one.” “Quite right,” said he. “Now, consider if what I am saying makes

any sense. For I think this needs to be considered with the following examples in mind.” “What examples?”

578e

“The example of any of the private citizens in the city who are wealthy and own lots of slaves, for they have this in common with tyrants: they rule over many people, although they differ in that the tyrant rules over a greater number.” “They differ in this way, indeed.” “And you know, do you not, that these people do not live in fear and they are not terrified of their own household slaves?” “Yes, for what would they be afraid of?” “Nothing,” said I. “But do you recognise the reason why?” “Yes, because the entire city is there to assist every single private citizen.” “That is right,” said I. “But what if some god were to take one man who owned fifty slaves or even more, lift him and his wife and children out of the city and set him down in an isolated place, along with his other property and his household slaves, where none of his fellow free men would be in a position to come to his aid? Can you imagine his fear, and how afraid he would be that he, his children and his wife might be done away with by his own slaves?” “I think he would be in total fear,” said he.

579a

“Would he not be compelled, at that stage, to ingratiate himself with some of those slaves, make lots of promises, and even set them free when there was no need to, and he himself would thus turn out to be the flatterer of his own servants.” “He would have to do that,” said he, “just to survive.” “And what if the god,” said I, “were to settle other people around him, lots of neighbours who would not put up with it if someone were to claim the right to enslave anyone else, and would inflict the most severe punishments on someone who acts like this, if they could catch him?” “I think,” said he, “that he would be in even more difficulty, in every respect, being watched from all sides by nothing but enemies.”

579b

“So, is it not the case that the tyrant is bound fast in a prison house like this, since his nature is as we have described it, filled with a huge variety of fears and passions? Although his soul is full of craving, he is the one person in the city who finds it impossible to travel abroad or to see anything that other free men love to see. Skulking inside his own house most of the time, does he not live ^{579c} like a woman, envying the other citizens if any of them ever travel abroad or see anything good?” “Yes, entirely so,” said he. “So, does not the man who is ill-governed within, the tyrannical man whom you deemed most wretched, reap an even greater harvest of such evils once he forsakes his private life and is compelled by some chance event to become a tyrant, and attempts to rule others when he cannot even control himself? It is as if someone with a sick body that cannot control itself was compelled to ^{579d} live his life not in quiet privacy, but in constant competition and physical combat.” “Very true, Socrates,” said he, “it is exactly like that.” “Now, dear Glaucon,” said I, “is this not an entirely wretched predicament, and does not the actual tyrant live an even harsher life than the person whose life you decided was harshest?” “Definitely,” said he.

579e

“So, the truth of the matter, even if someone thinks otherwise, is that the real tyrant is actually a slave to fawning and servitude on a huge scale, and a flatterer of the most vile people of all. Since none of his desires are satisfied, he turns out to be most needy in most respects, and in truth, poor, once someone knows how to look at a soul as a whole. He is full of fear too throughout his entire life, beset with convulsions and pains, if he does indeed resemble the disposition of the city he rules over. And he does resemble this, does he not?” “Very much so,” said he.

580a

“And in addition to all this, should we not also ascribe what we spoke of earlier to this man? Must he not be envious, unfaithful, unjust, friendless and impious, a host and nurturer of every evil? And must he not become even more like this than he previously was because he is a ruler, and for all these reasons be most unhappy in himself and make people around him unhappy too?” “No one,” said he, “with any intelligence will argue against you.”

580b

“Come on now,” said I, “act like the overall judge in a competition and announce who, in your opinion, comes first in terms of happiness, who comes second, and so on for the other five in turn, the kingly person, the timocratic, the oligarchic, the democratic and the tyrannical. Decide!” “The decision is an easy one,” said he. “I judge them as if I were judging theatrical choruses, and I rank them in terms of excellence and evil, happiness and its opposite, in the very order in which they made their entrance.”

580c

“Shall we hire a herald then?” I asked. “Or shall I myself proclaim that the son of Ariston has decided that the best and most just person is also the happiest, and this is the most kingly person who exercises kingly rule over himself, and that the worst and most unjust person is also the most wretched, and he, for his part, turns out to be the most tyrannical person who tyrannises to the greatest possible extent over himself, and over the city too?” “Consider it done,” said he. “And should I declare, in addition,” said I, “that this is the case whether their dispositions are noticed by all men and gods, or not?” “Add that declaration,” said he.

580d

“So be it,” said I, “and this would be one of our proofs. But take a look at a second one and see if you think it amounts to anything.” “What is it?” “Since the city,” said I, “is divided into

three parts, and the soul of each individual is threefold in like manner, this I believe will afford another proof.” “In what way?”

580e

“As follows. It seems to me that there are three kinds of pleasures corresponding to the three parts of the soul, one pleasure being particular to each part, and that the same goes for desires and for ways of ruling the soul.” “What do you mean?” he asked. “There is, according to us, one part with which a person learns, and another with which he becomes spirited. We were unable to provide a particular name for the third since it is complex, so we named it after its largest and strongest aspect. We called it the appetitive part, due to the intensity of its appetite for food, drink and sex, and everything associated with these. We called it money-loving too, because such appetites are satisfied mainly through money.”

581a

“And we were right to do so,” said he. “Well then, if we were to say that the pleasure and love belonging to this part was for profit, would that best summarise the argument so that we could be confident that we are referring to this part of the soul correctly when we refer to it as money-loving or profit-loving?” “So it seems to me anyway,” said he. “What about this? Do we not maintain that the spirited part is always wholly intent upon power, victory and fame?” “Very much so.” “Now, if we were to refer to it as ambitious and in love with honour, would that seem right?” “Right indeed.”

581b

“But, of course, it is obvious to everyone that the part by which we learn is always intent upon knowing the truth as it is, and, of the three parts, this one is least interested in money and reputation.” “The least by far.” “Would it be appropriate then for us to refer to it as having a love of learning and of wisdom?”

581c

“Yes, of course.” “Is it not the case,” said I, “that this part rules the soul of some people while one of the other two rules the souls of others, as the case may be?” “Quite so,” said he. “For these reasons, then, we say that the principal kinds of human being are also three in number: the kind that loves wisdom, the kind that loves winning and the kind that loves profit.” “Exactly.” “And are there not three forms of pleasure, one underlying each of these?” “Entirely so.”

581d

“Now you do realise, do you not,” said I, “that if you decided to ask three people of this sort, each in turn, which of these lives is most pleasant, each would praise his own way of life the most? Will not the money-maker maintain that unless he makes some money from them, the pleasures of attaining honour or learning are worthless in comparison with the pleasure of making profit?” “True,” said he. “What about the kind that loves honour?” I asked. “Will he not regard the pleasure that comes from money as vulgar, and the pleasure that comes from learning, for its part, as insubstantial nonsense unless the learning confers some honour?” “That is his position,” said he.

581e

“And how,” said I, “do we think the lover of wisdom will regard the other pleasures in comparison with knowing the truth as it is and being continually involved in something like this while he is learning? Will not the other pleasures be far removed from this pleasure, and will he not refer to them as necessary, in a literal sense, because he would have no need for any of them unless necessity was involved?” “This needs to be well understood,” said he.

582a

“Now,” said I, “when there is dispute over the pleasures of each kind and over the life itself, not only over which life is more noble or more shameful, which is worse and which is better, but over which life is actually more pleasant and least painful, how

are we to know which of them is really speaking the truth?" "I just cannot say," he replied. "Well, consider it in this way. What should things be judged by if they are going to be properly judged? Is it not by experience, intelligence and argument, or could anyone have a better criterion than these?" "How could they?" said he.

582b

"Then consider this. Of the three men, who among them has most experience of all the pleasures we mentioned? Does the lover of profit, by understanding truth itself and what it is like, seem to you to have more experience of the pleasure of knowledge than the lover of wisdom has of the pleasure that comes from making a profit?" "There is a big difference," said he. "Indeed the lover of wisdom, of necessity, tastes the other pleasures from his earliest childhood. But there is no necessity that the lover of profit tastes the pleasure of learning the nature of things that are, and how sweet that pleasure is, or that he have any experience of this, and even if he is eager to do so, it is not easy." "There is a big difference, then," said I, "between the lover of wisdom and the lover of profit in their experience of both of these pleasures." "Big, indeed."

582c

"And how does he compare to the lover of honour? Does the lover of wisdom have less experience of the pleasure of attaining honour than the profit lover has of the pleasure of the intellect?" "No," said he, "honour accrues to them all once they achieve whatever they are each intent upon. Indeed, the wealthy are honoured by lots of people, and so too are the courageous and the wise. So they all have experience of the kind of pleasure that comes from attaining honour. But it is impossible for anyone except the lover of wisdom to have tasted the kind of pleasure that comes from beholding what is."

582d

“So, in terms of experience,” said I, “he is a better judge than any of the others.” “Much better.” “And, indeed, he alone will have gained his experience in the company of intelligence.” “Indeed.” “Then again, the instrument that is needed in order to judge is not the instrument of the profit lover, or of the lover of honour, but of the lover of wisdom.” “What is it?” “I think we said that it is necessary to judge by means of arguments. Is this so?” “Yes.” “And arguments are the instrument of the philosopher most of all.” “They must be.” “Now, if whatever is to be judged were best judged by wealth and profit, then the things that the profit lover praised and censured would necessarily be the truest of all, would they not?” “Much the truest.” “And if they were judged by honour, victory and courage, would not whatever is praised by the ambitious lover of honour be truest?” “Obviously.”

582e

“But since they must be judged by experience, intelligence and argument, what follows?” “It must be the case,” said he, “that whatever the lover of wisdom and argument praises is the truest.” “So, of the three pleasures, would the one that belongs to the part of the soul we learn with be most pleasant, and would the life of the person in whom this part rules be the most pleasant life of the three?” “How could it be otherwise?” said he. “The man of intelligence is the one who has complete authority to praise his own life.” “And what life comes second and what pleasure comes second, according to the judge?” I asked. “It is obviously the pleasure of the military type who loves honour since this is closer to the lover of wisdom than the pleasure of the lover of profit.” “Then it seems that the pleasure of the lover of profit comes last.” “Indeed,” said he.

583a

“These would constitute two arguments in succession, and two victories for the just over the unjust. Let the third, in Olympic fashion, be dedicated to the Saviour, Olympian Zeus. Consider

this carefully. The pleasure of the others, apart from the pleasure of the man of intelligence, is not completely true, nor is it pure; it is a mere shadow-drawing, as it seems to me I have heard from one of the wise. And, indeed, this next overthrow of the unjust would be the greatest and most decisive of all.” “Very decisive. But what do you mean?” “I will discover this,” said I, “if you answer questions while I carry out an enquiry.” “Ask your questions then,” said he.

583b

“Then tell me,” said I, “do we not maintain that pain is the opposite of pleasure?” “Very much so.” “And do we not also say that being neither in pleasure nor in pain is possible?” “It is indeed.” “Would you describe this as a middle state, between these two, a respite of the soul from both?” “Quite so.”

583c

“Now,” said I, “do you recall the utterances of sick people and what they say when they are ill?” “What sort of utterances?”

583d

“That nothing is actually more pleasant than being healthy, but they were unaware, prior to their illness, just how pleasant it is.” “I remember,” said he. “And do you not hear people who are gripped by some huge pain saying that nothing is more pleasant than cessation of pain?” “I do hear that.” “And I believe in lots of other situations like this, you notice that people in pain, rather than praising enjoyment, praise absence of pain and respite from this sort of thing as the greatest pleasure.” “Yes,” said he, “this respite is probably pleasant and enjoyable then.”

583e

“And,” said I, “when someone’s enjoyment comes to an end, respite from the pleasure will be a source of pain.” “Probably,” said he. “So respite, which we said just now is in between pleasure and pain, will on occasion be both.” “So it seems.” “But is it possible for something that is neither to become both?” “I do not think so.” “And, indeed, the pleasure that arises in the

soul, and the pain too, are both movements of some sort, are they not?" "Yes."

584a

"And did not whatever is neither painful nor pleasant turn out just now to be a repose between these two?" "So it did." "Now, how could it be right to think that not being in pain is pleasure, and absence of enjoyment is pain?" "It could not be." "So this is not the case," said I, "but it appears so. Respite, on occasion, appears pleasant in comparison with pain, and painful in comparison with pleasure, but there is nothing sound in any of these appearances in relation to the truth about pleasure. They are, rather, a sort of enchantment." "Well," said he, "that is what the argument is indicating."

584b

"Then," said I, "look at the pleasures that do not originate in pains, so that you do not come to believe, in the present case, that this is the natural state of affairs, that pleasure is indeed the cessation of pain, and pain the cessation of pleasure." "Where shall I look," said he, "and what sort of pleasures do you mean?" "Well," said I, "although there are many other examples, I would like you to pay particular attention to the pleasures associated with smells. For these suddenly become extraordinarily intense, without any preceding pain, and when they cease they leave no pain at all behind." "Very true," said he.

584c

"So, let us not believe that being quit of pain is pure pleasure, or that being quit of pleasure is pain." "Let us not." "And yet," said I, "the greatest and most numerous of the so-called pleasures that extend through the body as far as the soul, are of this form. They are mere releases from pain." "They are, indeed." "And does not the same hold for the anticipatory pleasures and pains that arise from our expectations of these?" "The same, indeed."

584d

“Now,” said I, “do you know what qualities they have, and what they most resemble?” “What?” he asked. “Do you think,” said I, “that in nature there is an up, a down and a middle?” “I do.” “Now, do you think that someone being carried from below towards the middle would think he is being carried upwards? Could he think otherwise? And once he is standing in the middle, looking back to where he had been carried from, would he not presume without question that he is above, never having seen the truly above?” “By Zeus,” said he, “I really do not think a person in such a position could think otherwise.”

584e

“And if he were carried back again,” said I, “would he think he was being carried down, and would that be true?” “How could it not be?” “And would not all this happen because he has no experience of what is truly above, in the middle, and below?” “Obviously.” “And would you be at all surprised if people who, in like manner, have no experience of the truth about many other matters, hold unsound opinions? Might they hold a view of pleasure and pain, and the intermediate state according to which, when they move in the direction of pain, they think they really and truly are in pain? But on the other hand, when they move from pain to the intermediate state, might they be convinced that they are approaching fulfilment and pleasure, and be deceived by comparing an absence of pain to pain, without any experience of pleasure, as if they were comparing black to grey with no experience of white?” “By Zeus,” said he, “I would not be surprised. No, I would be much more surprised if this did not happen.”

585a

“Well, think about this,” said I. “Are not hunger and thirst and the like a sort of deficiency in the state of the body?” “Indeed.” “And are not ignorance and stupidity, in turn, a deficiency in the state of the soul?” “Very much so.” “And would not anyone who gets nourishment or who acquires intelligence be filled

up?” “Of course.”

585b

“And does the true filling up involve being filled with what is less real or more real?” “With what is more real, of course.” “And which of the kinds do you think partakes more of pure being? Is it the kind that includes food, drink, relish and every kind of nourishment, or the form that includes true opinion, knowledge, intelligence and, in short, all excellence? You need to decide the following question. Does that which holds to the unchanging, to the immortal and to truth, and is like this itself and originates in something like this, seem more real to you than what holds to the ever-changing and the mortal, and is like this itself and originates in this sort of thing?”

585c

“Whatever holds to that which is unchanging,” said he, “far exceeds the other.” “Now, does the being of the unchanging partake any more of being than of knowledge?” “Not at all.” “Or of truth?” “Not of truth either.” “And what partakes less of truth, also partakes less of being, does it not?” “Necessarily.” “So, in general, do not the kinds that are concerned with the care of the body partake less of truth and being than those that are concerned with the care of the soul?” “Much less.”

585d

“And do you not think the same holds for the body itself, in comparison with the soul?” “I do indeed.” “So, is not that which is filled with what is more real, and is itself more real, actually filled to a greater extent than something filled with what is less real, and is itself less real?” “It must be.”

585e

“In that case, if being filled with what naturally belongs to us is pleasure, then that which is filled more with things that really are, would make us enjoy true pleasure more really and more truly. But that which shares in things that are less real would be filled less truly and less certainly, and would share in a pleasure

that is less trustworthy and less true.” “This must be so,” said he.

586a

“So, those with no experience of wisdom or excellence, who are constantly involved in feasting and the like, are, it seems, moving downwards and then back to the middle again, and they spend their lives wandering like this. They have never transcended this and turned their gaze to what is truly above, nor have they ever yet been borne there, nor have they really been filled with what is or tasted pleasure that is certain and true.

586b

“Rather, like cattle with a constant downward gaze and their heads bowed towards the ground to their tables, they gorge themselves, feeding then mating, and out of sheer greed for all this, they kick and butt one another with horns and hooves of iron. They slaughter one another with weapons of war because their desire is insatiable, since they are not filling the real part of themselves with things that are, nor are they even filling the part that can contain these.” “Socrates,” said Glaucon, “you are describing most people’s lives in an utterly prophetic manner.”

586c

“Now, is it not inevitable that they live among pleasures that are mixed with pains, mere images and shadow-drawings of true pleasure, taking their colour from being placed alongside one another so that they each appear quite intense, and engender raging passions of their own in senseless people who fight over them, just as the heroes at Troy, according to Stesichorus, fought over the image of Helen, in ignorance of the truth?”¹¹² “Yes,” said he, “something like this is quite inevitable.”

586d

“What about this? Must not similar considerations apply to the spirited part whenever someone satisfies this, either through

envy because he loves honour, or through violence because he is ambitious, or through spirit because he is bad tempered? Is he not then pursuing the satisfaction of honour, victory and spirit, in the absence of and reason and intelligence?" "This sort of thing," said he, "is inevitable too, in that case."

586e

"Well, then," said I, "may we be so bold as to say that in the case of the ambitious, profit-loving part, there are a number of desires that adhere to knowledge and reason, and which pursue their pleasures in the company of these, only adopting those pleasures that intelligence approves of? Will not these desires adopt the truest pleasures they can attain to, because they are following truth itself and pleasures that belong to themselves, if indeed what is best for each is what most belongs to each?" "Yes, what most belongs to each indeed."

587a

"So, when the entire soul follows the lead of the part that loves wisdom, without being rebellious, and each part as a result performs its own function in every respect and is just, then above all does each part reap a rich harvest of pleasures that are its own, the very best pleasures and the very truest of which it is capable?"

587b

"Yes, precisely." "But when any of the other parts is in control, it is unable as a result to discover its own pleasure, and it compels the others to pursue an untrue pleasure that is alien to them." "Quite so," said he. "And would not the parts that stand furthest from philosophy and reason be most inclined to bring this about?" "Yes, they would be most inclined by far." "And whatever stands furthest from reason is furthest from law and from order?" "Of course." "And did not the passionate and tyrannical desires prove to be the ones that stood at the furthest remove?" "Yes, they stood at the furthest remove by far." "And the kingly and orderly desires stood closest?" "Yes."

587c

“Then I suppose the tyrant will stand furthest away from those pleasures that are true and are his own, while the king will stand closest.” “That is necessary.” “Then,” said I, “the tyrant will live the least pleasant life while the king will live the most pleasant one.” “This must be so.” “Now,” said I, “do you know how much less pleasantly the tyrant lives in comparison with a king?” “I would if you told me,” said he. “There are, it seems, three pleasures – one that is genuine, two that are fake. The tyrant has gone beyond the fake pleasures into another realm. Fleeing from law and from reason, he lives with a bodyguard of slavish pleasures, and it is not at all easy to say how much worse off he is, except perhaps in the following way.” “How?” he asked.

587d

“The tyrant, I believe, was at a third remove from the oligarchic type, and the democratic man was in between them.” “Yes.” “And if what we said previously is true, will he not live with an image of pleasure that is at a third remove, in terms of truth, from the oligarch’s pleasure?” “Quite so.” “And yet the oligarchic type is, again, at a third remove from the kingly type if we designate the aristocratic and kingly types as the same.” “A third, indeed.” “So,” said I, “the tyrant stands three times three in number removed from true pleasure.” “So it appears.”

587e

“In that case,” said I, “the image of pleasure that the tyrant has, numerically in terms of length, would, it seems, be a square.” “Precisely.” “And by squaring and cubing, it is obvious what the extent of the interval becomes.” “Of course,” said he, “to a mathematician anyway.” “And if someone does this the other way around and tries to say how far the king stands from the tyrant in terms of the truth of their pleasure, he will find, on completing the calculation, that the king lives 729 times more pleasantly, while the tyrant lives more wretchedly by the very

same interval.” “You have,” said he, “poured forth a massive stream of calculation of the difference between these two men, the just and the unjust, in relation to pleasure and pain.”

588a

“Yes, and it is also a true number, appropriate to their lives,” said I, “if days and nights, months and years are indeed appropriate to them.” “But of course they are appropriate,” said he. “Now, if the good and just man wins out over the bad, unjust man to this extent in terms of pleasure, will he not win out to an enormously greater extent in the refinement of his life and in terms of beauty and excellence?” “Enormously indeed, by Zeus,” said he.

588b

“So be it then,” said I. “Since we have come to this point in the argument, let us go back to the initial statements that got us here. It was said, I believe, that acting unjustly is beneficial to the completely unjust man, provided he has a reputation for being just. Is this not what was said?” “It was, indeed.” “Then,” said I, “let us discuss this now, with its proponent, since we have come to agreement on the power that acting unjustly and doing what is just each possesses.” “How?” said he. “By fashioning an image of the soul in words, so that the person proposing this may see for himself what he is talking about.” “What sort of image?” he asked.

588c

“An image,” said I, “like one of those creatures that are referred to in myths of old – Chimaera, Scylla, Cerberus, and certain others that are spoken of, in which many forms have grown together and become one.” “Yes, so they say,” said he. “Then fashion a single form, the form of a complex, many-headed beast that has heads of wild and tame beasts all in a circle and is able to change all these and make them grow out of itself.” “That is a task for an ingenious craftsman,” said he. “Nevertheless, since it is easier to fashion speech than wax or

the like, let it be fashioned like this.”

588d

“Then fashion one other form, the form of a lion, and then the form of a man, and let the first be the largest by far, and the second, second largest.” “These are easier to fashion,” said he. “It is done.” “Then join these three together into one so that, still being three, they somehow grow together.” “They have been joined,” said he.

588e

“Now fashion an image of one of them round about them all, on the outside, an image of a human being, so that to anyone who is unable to see what is inside and only sees the external shell, it appears to be one creature, a human being.” “The surrounding shell has been fashioned,” said he.

589a

“Then let us say to whoever maintains that acting unjustly is beneficial to this human being, and doing what is just is not advantageous, that he is really claiming that it is beneficial to the person to feed the complex beast well, and make it strong, and the lion too, and its entourage, while he starves his human part and makes it so weak that it is dragged wherever either of the other two may lead it. And it leaves them to themselves to bite, fight with and devour one another rather than getting them accustomed to one another or turning them into friends.” “Absolutely,” said he, “that is just what someone who praises unjust action would be advocating.”

589b

“Then again, would not someone who says that what is just is beneficial be maintaining that it is necessary to do and to say whatever puts the inner human being most in control of the person, whatever ensures that the human part will attend to the many-headed beast, like a husbandman, by nurturing and taming the gentle elements while preventing the wild ones from growing, making an ally of the lion nature, and caring in

common for them all, and making them friends to one another and to itself? Is that not how it will nurture them?"

589c

"Yes, that again is exactly what someone who praises justice asserts." "So, someone who praises justice would be speaking the truth in every respect, while someone who praises what is unjust would be speaking falsehoods. Indeed, from the perspective of pleasure or reputation, or the benefit it confers, whoever praises justice is speaking the truth, while someone who criticises it is unsound in his criticism and does not even know what he is criticising." "Does not know at all, in my view," said he.

589d

"Well, since he is not falling into error deliberately, let us persuade him gently by asking him, 'Good man, would we not say that whatever is regarded as noble or as disgraceful has come to be so for reasons such as these: whatever is noble makes the savage part of our nature subject to the human part, or perhaps to the divine part, and whatever is disgraceful makes the gentle part a slave to the wild part?' Will he agree, or not?" "He will, if he listens to me," said he.

589e

"Now, based on this argument," said I, "is there anyone who benefits from acquiring gold unjustly if, in getting the gold, he enslaves the very best part of himself to the most base part at the same time? Or, if in the process of getting gold he enslaved his own son or daughter to wild and evil men, that would not benefit him no matter how much money he might get for this. But if he enslaves the most divine part of himself to the most godless and corrupt part, and shows no mercy, is he not ^{590a} wretched as a result, and is he not accepting a gift of gold in return for much more terrible ruination than Eriphyle experienced when she took a necklace in return for the soul of her husband?"¹¹³ "Much more terrible indeed," said Glaucon,

“for I will answer your question on his behalf.” “Do you not also think that is why unrestrained behaviour has long been criticised? Is it not because such behaviour lets loose that horror, that huge multiform beast, beyond the proper measure?” “Of course,” said he.

590b

“And wilfulness and discontent are censured, are they not, whenever they cause the lion-like, snake-like part to increase and intensify beyond all proportion?” “Very much so.” “And luxury and softness are censured too, are they not, for loosening and relaxing this same aspect, when they induce cowardice in it?” “Indeed.”

590c

“Are not flattery and servitude censured when someone puts this same spirited aspect in subjection to the unruly beast and degrades the lion, all for the sake of money, to fulfil the beast’s insatiable desires, getting it accustomed from its earliest years to being more of an ape than a lion?” “Indeed so,” said he.

590d

“And why do you think lowly manual labour is subject to reproach? Or is it simply because it is associated with someone whose very best part is, by nature, weak, so that he is unable to rule the beasts within himself, fosters them instead, and is unable to understand anything else except how to flatter them?” “So it seems,” said he.

590e

“Now, so that such a person may be ruled by something similar to what rules the best person, are we to say that he should be a slave of that best person who is ruled by the divine element, and we should not adopt Thrasyarchus’ view that a slave should be ruled to his own detriment? Do we not think it best that everyone be subject to divine wisdom, preferably residing within himself or else established externally, so that we may all be as much alike as possible, and friends too, because we are all

governed by the same thing?” “And rightly so,” said he.

591a

“And the law, being the ally of everyone in the city, makes it clear that it also intends something of this sort. This is also the purpose of the authority we exercise over children, not allowing them to be free until we have established a system within them, like the system of government in our city, and, by caring for their best part with the best part in us, we install guardians and rulers in them similar to our own, and then proceed to set our children free.” “Yes, that is clear,” said he.

591b

“In which case, Glaucon, how, and based upon what argument, can we maintain that acting unjustly or without restraint or doing something shameful is of benefit to anyone when he will actually be a worse person as a result, despite having a bit more money and power?” “We cannot maintain this at all,” said he. “And is acting unjustly, escaping detection and avoiding punishment beneficial in any way? Or does not someone who escapes detection become even more degenerate, while in the case of someone who does not escape and is punished, his brutish part is made calm and gentle and his gentle part is set free. His entire soul is restored to its very best state and attains a more honourable condition because it has acquired sound-mindedness and justice, accompanied by understanding. Indeed, to the extent that soul is more honourable than body, soul attains a more honourable condition than a body that has acquired strength and beauty along with health.” “Entirely so,” said he.

591c

“Now, will not any intelligent person live his life with all his resources directed to this end, respecting, first and foremost, the branches of learning that will make his soul like this and showing no respect for any others?” “Of course,” said he.

591d

"Then," said I, "he does not give over the condition of his body, or its nurture, to brutish, irrational pleasure, and turn his life in that direction, nor does he look to its health or attach importance to being strong or healthy or beautiful unless he is going to become sound-minded as a result. Rather, he is always to be found attuning the harmony of his body for the sake of the concord of his soul." "Yes, entirely so," said he, "if he is going to be a musician, in truth."

591e

"And," said I, "will he not also bring this order and concord to his acquisition of wealth? He will not increase the sheer size of his fortune beyond all bounds, and his troubles too, because he is in the thrall of popular views on what he should be grateful for." "No, I do not think he would," said he. "Rather," said I, "he will add to or expend his wealth while looking to and guarding the city within himself to the best of his ability. He steers his course in this way in case anything might disturb the elements within him through excess or deficiency of wealth." "Yes, exactly," said he.

592a

"And when it comes to honours, looking to the same principle, he will willingly partake of and taste those that, in his view, will make him better, but he will flee from private or public honours that undo the proper order." "In that case," said he, "if this is his concern, he will not wish to engage in civic affairs." "By the dog, he will," said I, "in the city within himself, very much so, but probably not in his own fatherland, unless some divine good fortune intervenes." "I understand," said he, "you are referring to the city we have now described and are founding, the one that is laid out in words, since I do not think it exists anywhere on earth."

592b

"But perhaps a pattern is laid up in heaven," said I, "for anyone who wishes to behold it and to found himself based on what he

sees. And it makes no difference whether it exists somewhere or will ever exist, for he would engage in the affairs of that city alone and of no other.” “Quite likely,” said he.

BOOK X

595a

”Yes, indeed,” said I, “I have all sorts of ideas in mind as to why our city has been founded in the best possible way. I say this particularly when I reflect upon poetry.” “What aspect?” he asked.

595b

“Our refusal to admit any poetry that employs imitation. Indeed, now that the various parts of the soul have each been distinguished, it is even more evident, in my opinion, that this should not be admitted.” “What do you mean?” “Well, between ourselves, since you won’t denounce me to the tragic poets and all the other imitators, everything of this sort seems to be a mutilation of the minds of those who hear it without possessing the antidote of knowing things as they actually are.” “What exactly do you have in mind when you say this?” he asked.

595c

“This must be spoken,” I replied, “even though the love and reverence that I have for Homer since my childhood prevents me from speaking. Indeed, he seems to have been the first teacher of all the beauties that tragedy possesses, and the leader too. But no man is to be honoured before the truth, so, as I say, this must be spoken.” “Yes, certainly,” said he. “Then listen, or, more to the point, answer my questions.” “Just ask.” “Can you tell me, in general, what precisely imitation is? For I myself do not fully understand what it wants to be.” “And do you think I shall somehow understand it?” said he.

596a

“That would be nothing strange,” said I, “since those with poorer eyesight often see things before those whose vision is sharper.” “That is so,” said he, “but in your presence, I wouldn’t be at all eager to say what it is like, even if something did occur to me. So look for yourself.” “Would you like us to begin then by considering this by our familiar method? For we are presumably accustomed to proposing some one particular form, related to each of the various multiplicities to which we apply the same name. Do you understand?” “I understand.” “Then, let’s propose this now for any of the multiplicities that you want, beds and tables for example, if you like. There are, presumably, many of these.” “Of course.”

596b

“But there are, I presume, two forms related to these items, one form of bed and one form of table.” “Yes.” “Aren’t we also accustomed to saying that the artificer producing either of the items is looking towards the form, and in this way he makes the beds and tables that we use, and the same applies 596c to other items? Indeed, none of the craftsmen, I presume, produces the form itself.” “How could he?” “Not at all, but let’s see what you call the artificer in the following case.” “What artificer?” “The one who makes everything that each particular craftsman makes.” “You are speaking of a clever and most amazing man.” “I’m not finished yet. You’ll soon say so all the more, for this same craftsman is not only able to make all manufactured items, but he also makes everything that springs from the earth, and he fashions all the living creatures, and everything else too, and himself, and, in addition to these, earth, heaven and gods, and he fashions everything that’s in heaven and in Hades under the earth.” “You are speaking,” said he, “of an absolutely amazing sophist.” “Don’t you believe me?” I asked. “Well, tell me, do you think that an artificer like this doesn’t exist at all, or do you think that there could, in a way, be a maker of all these things, although in another way there could not? Or are you not aware

that even you, yourself, would be able to make all these in a way?" "And what," he asked, "is this 'way'?"

596d

"It's not difficult," said I. "This crafting is done quickly in many ways, but it is surely quickest if you are prepared to take a mirror and carry it around wherever you go. Then you will quickly make a sun and whatever is in the sky, you will quickly make earth, quickly make yourself and the other creatures too, manufactured items, plants, and whatever else was mentioned just now." "Yes," said he, "they are appearances that do not, I take it, exist in truth."

596e

"Excellent," said I, "that's just what the argument needs. For a painter, I believe, is an artificer of this sort. Is this so?" "Of course." "But you will maintain, I imagine, that what he makes is not true. And yet, the painter does in a way make a bed, does he not?" "Yes," said he, "he too makes an appearance of a bed anyway." "What about the bed-maker? Didn't we say earlier that he does not make the form, which, according to us, is what bed is? He makes some particular bed." "Yes, so we said." "Now, isn't it the case that if he does not make what it is, he would not be making what is, would he? Although, something of this sort is like what is, but is not what is. So, if someone were to maintain that what the work of the artificer of the bed, or of any other artificer produces, 'is' in the most complete sense, he is unlikely to be speaking the truth."

597a

"Yes," said he, "at least that would be the opinion of those who spend their time on arguments of this sort." "Then, we should not be at all surprised if the manufactured bed also proves to be somewhat obscure in comparison with truth." "Indeed not." "So," said I, "would you like us to use these particular examples to enquire into what precisely this imitator is?" "As you wish," said he. "It turns out then that there are these three beds, first

is the one that is in nature, which we would maintain, I believe, was produced by God, or is there someone else?" "No one else, in my view." "Then there is the one that the carpenter produced." "Yes," said he. "And the one the painter produced. Is this so?"

597b

"So be it." "Then, the painter, the bed-maker and God, these three are responsible for three forms of bed." "Yes, three."

597c

"Now, God made only one bed, itself, what bed is, either because he did not want to make more or because some necessity was laid upon him to fashion just one bed in nature. Two or more beds of this sort were not planted by God, nor will they ever grow naturally." "Why is that?" he asked. "Because," said I, "if he were to make only two, another one would make its appearance, whose form both those others would possess, and that third bed, and not the other two, would be 'what bed is'." "Correct," said he.

597d

"So God, knowing all this, I imagine, made it one by nature because he wanted actually to be a maker of a bed that actually is, and not a maker of some particular bed, or another mere bed-maker." "Quite likely." "Now, do you want us to refer to him as its natural maker or something of that sort?" "That's the right name," said he, "especially since he has made this and everything else, through nature." "What about the carpenter? Won't we call him the artificer of a bed?" "Yes." "And shall we refer to the painter as an artificer and maker of this sort of thing?" "Not at all." "Then, what shall we say he is in relation to the bed?"

597e

"I think," said he, "that it is most reasonable to refer to him as an imitator of whatever those others are artificers of." "So be it," said I. "Are you to call the person whose product is at a third

remove from nature, an imitator?” “Yes, certainly,” said he. “So this will include the maker of tragedies if he is indeed an imitator. He is naturally at some third remove from the king and from the truth, as are all the other imitators.” “Quite likely.”

598a

“We have agreed then about the imitator. But tell me something about the painter. Does he attempt to imitate the thing itself, the thing in nature in each case, or does he imitate the works of the artificers?” “The works of the artificers,” said he. “As they are or as they appear? You still have to make this distinction.” “How do you mean?” he asked. “As follows. If you look at a bed from the side or from the front, or in any other way, does it differ from what it, itself, is? Or does it not differ at all even though it appears different, and does the same hold for everything else too?” “That’s it,” said he, “it appears different but doesn’t differ at all.”

598b

“Then, consider this very issue. What is painting directed towards in each case? Is it directed towards imitating what is as it is, or towards imitating what appears as it appears? Is it an imitation of an appearance or of truth?” “Of an appearance,” said he. “So, imitation is surely at a far remove from the truth, and it seems it can fashion everything because it gets hold of some small part of each, and this is an image. For instance, our painter, we ^{598c} say, will paint a cobbler for us, or a carpenter or any other artificer, without knowing anything about any of their skills. But nevertheless, if the painter were a good one and he painted a carpenter ^{598d} and showed it from afar to children, or men devoid of intelligence, he would deceive them into thinking that it was, in truth, a carpenter.” “Of course.” “And in general, my friend, there is, in my view, something we should keep in mind in relation to everything of this sort. If someone ever tells us that he has met a person who is knowledgeable

about craftsmanship of every sort and who knows whatever anyone else knows with greater precision than anyone else, we should reply to someone like this that he is a simple-minded fellow who has, it seems, met up with a beguiler and an imitator, and has been deceived into thinking that the man is wise beyond all measure because he himself is unable to test knowledge, lack of knowledge, and imitation.” “Very true,” said he.

598e

“So, after this,” said I, “mustn’t we consider tragic poetry and its leader, Homer, since we hear from some people that these poets know everything, all skills, all human affairs relating to excellence and vice, and, indeed, all matters divine? For they say that it is necessary for the good poet to compose whilst possessed of knowledge, if he is going to compose well on whatever he is writing about, or else be unable to compose at all. We need to consider carefully then whether these people have met with imitators of this sort and have been deceived. Are they looking at the products of imitators without being aware that these are at a third remove from what is, and are easy to make without knowing the truth, because they are producing appearances, not things that are? Or do they actually have a point? Do the good poets really have knowledge of these subjects when they impress so many people with their eloquence?”

599a

“This certainly must be tested,” said he. “Now, do you think that if someone were able to make both the original and the image, he would devote himself seriously to crafting images and make this the primary concern of his own life, his most prized possession?” “I do not.”

599b

“But, I imagine, if he were knowledgeable, in truth, about the objects he is imitating, he would much prefer to engage

seriously with real work rather than making imitations. He would endeavour to leave behind various beautiful works of his own as memorials, and he would be more eager to receive praise than to give praise.” “I think so,” said he, “since the honour and the advantage are not equal.”

599c

“Well, we shall not demand an account from Homer or any of the other poets on other subjects by asking them if any of them was ever a medical expert rather than a mere imitator of medical terminology; whether any poet, ancient or modern, is said to have made someone healthy, just as Asclepius did,¹¹⁴ or what students of medicine they have left behind in the way that Asclepius left successors. Nor indeed should we ask them about any other skill. No, we should leave all that.

599d

But when it comes to the most important and sublime matters about which Homer attempts to speak, such as warfare, military strategy, the governing of cities and the education of the person, it is only right, I believe, to question him and ask, ‘Dear Homer, if you are not actually at a third remove from the truth about excellence, a mere craftsman of an image, someone we defined as an imitator, but if you are indeed at a second remove and would be able to recognise what sorts of activities make people better or worse personally and as citizens, then tell us which cities have been better governed because of you, as Sparta was because of Lycurgus?¹¹⁵ And lots of other cities too, some large, some small, were they better governed because of numerous others? What city celebrates you for being a good lawgiver and for being of service to them? Italy and Sicily celebrate ^{599e} Charondas,¹¹⁶ we celebrate Solon,¹¹⁷ but who celebrates you?’ Will he have anything to say?” “I do not think so,” said Glaucon. “At any rate, even the Homeric band¹¹⁸ themselves have nothing to say on the matter.”

600a

“And, indeed, was any war in Homer’s time said to have been well conducted under the command or advice of the man himself? Does anyone remember one?” “Not a one.” “Well then, what about the works of a wise man, the insights and innovations into human skills and activities in general, the sort that Thales the Milesian or Anacharsis the Scythian introduced?¹¹⁹ Are there reports of this sort of thing?” “Not at all, nothing of this sort.”

600b

“In that case, if this did not happen in the civic realm, in private was Homer himself, during his lifetime, said to have taken on a role as leader of their education, for some people? Did they then love being with him so much that they passed on a certain Homeric way of life to those who came after them? Was he, therefore, like Pythagoras, who was loved for this very reason and whose followers even now refer to their manner of life as Pythagorean, and seem somehow to stand out from everyone else?”

600c

“No,” said he, “nothing like this is reported either. Indeed, Socrates, perhaps Homer’s disciple, Creophylos,¹²⁰ would prove to be more ridiculous for his education than for his name if all that is said about Homer is true, since it is reported that Homer, even during his own lifetime, was largely ignored by this fellow.” “Yes,” said I, “that is what is reported. But, Glaucon, if Homer really had been able to educate people and make them better, because he had the ability not just to imitate but to understand the matters in question, don’t you think he would have produced large numbers of disciples and been honoured and loved by them? While Protagoras of Abdera and Prodicus of Ceos,¹²¹ and very many ^{600d} others, are able to convince their contemporaries in private conversations that they will not be able to manage their own household or city unless they entrust their education to them. And in return for this wisdom, their

disciples love them so much that they are just about ready to carry them around, head high. Yet, are we to say that although he really was able to help them towards excellence, the people of his own time allowed Homer, and Hesiod too, to travel about reciting poems ^{600e} and did not hold them close, more closely than gold, and compel these poets to dwell with them in their homes? And if they did not persuade them, wouldn't they themselves have escorted them wherever they went until they had received an adequate education?" "I think, Socrates," said he, "that what you are saying is absolutely true." "So, should we propose that all poetic types, beginning with Homer, are imitators of images of excellence, and of anything else they write poems about, but they have no contact with the truth? Aren't they rather, as we said just now, like the painter, who, without knowing anything about cob- ^{601a} bling himself, will produce what seems to be a cobbler to those who also know nothing about this and merely look at the colours and shapes?" "Yes, certainly." "In this way then, I imagine we shall maintain that the poetic type too applies certain colours to the various skills with his words and phrases, even though he himself knows nothing except how to imitate. As a result, other people like himself, who only look at the words, think he is speaking extremely well, whether he is speaking with metre, rhythm and harmony about cob- ^{601b} bling, or about military strategy, or about anything else at all, so great is the natural enchantment that these three possess. But when these poetic productions are stripped of their musical colouration and are spoken unadorned, I think you know the show they put on, since I presume you have seen this yourself." "I have," said he.

^{601c}

"Are they not," said I, "like the faces of youths who are in their prime, but not beautiful when their bloom of youth is gone?" "Absolutely," said he. "Come on then, consider this carefully. The maker of the image, the imitator, according to us knows

nothing of what is, but does know what appears. Isn't this so?" "Yes." "Well, we shouldn't leave this half-said; we should look at it properly." "Speak on," said he. "Don't we say that the painter paints the reins and the bit in the mouth of a horse?" "Yes." "But the leatherworker and the blacksmith will make them." "Indeed." "Now, does the painter know what qualities the reins or the bit should have, or is this unknown even to the smith and the leatherworker who make them? Is it only the person who knows how to use these, the horseman, who knows what qualities they should have?" "Very true."

601d

"Won't we say that this applies in all cases?" "How?" "In each case, are there these three skills – using, making and imitating?" "Yes." "Now, isn't the excellence, beauty and correctness of each manufactured item, living creature or activity related solely to the use for which each has been made, or naturally produced?" "So it is." "So, it is quite necessary that the user be most experienced with the particular item, and that he be the one who reports to the maker the good and bad qualities that it manifests when used by the user. The flautist, for example, presumably reports back to the flute-maker as to which flutes serve his purpose when he plays them, and he instructs him as to how they should be made. Then the flute-maker will serve his need." "Of course."

601e

"So, doesn't one person report back, knowledgeably, about the good and bad qualities of the flutes, while the other believes him and makes them?" "Yes." "So, in relation to the same item, the maker will have a correct belief about its excellence or deficiency by associating with someone who knows, and by being compelled to hear what he has to say. But it is the user who will have knowledge." "Certainly."

602a

“Now, will the imitator, from using them, have knowledge of whether or not the things he paints are good and right, or will he have right opinion because he is required to associate with the person who knows, and be instructed as to how he is to paint them?” “Neither.” “So the imitator will neither know, nor have right opinion, concerning what’s beautiful or bad about whatever he is imitating.” “It seems not.” “The poetic imitator would have a charming relationship with the wisdom of whoever he writes about.” “Not really.”

602b

“But he will proceed to imitate nevertheless, without knowing how the object in question may be good or bad. It seems, rather, that he will imitate the sort of thing that seems beautiful to most people, people who don’t know anything about it.” “What else can he do?” “Well then, it looks as if all this has been reasonably well agreed between us: the imitator knows nothing worth mentioning about the things he imitates; the imitation is a mere plaything devoid of seriousness; and those who are involved in tragic poetry, whether in iambic or epic metre, are all imitators, through and through.” “Yes, certainly.”

602c

“By Zeus,” said I, “this business of imitation is concerned with something at a third remove from the truth. Isn’t it so?” “Yes.” “And what aspect of the person does it have the power to influence?” “What sort of aspect are you referring to?” “As follows. The same magnitude seen from near and then from afar does not appear equal to us.” “It does not.”

602d

“And the same objects appear bent or straight when they are viewed in or out of water; concave or convex objects look flat to our eyes because of the play of colours, and all such confusion is obviously itself present in us, in the soul. And shadow-drawing, taking advantage of this tendency in our nature, is nothing short of sorcery, and so too are conjuring and many other

clever contrivances of this sort.” “True.” “Now, weren’t measuring, counting and weighing invented as intelligent safeguards against all this so that we might not be dominated by what appears greater or less, or more or heavier, but by that which has been calculated, measured or, indeed, weighed?” “Of course.”

602e

“But this function would belong to the calculating part of the soul.” “Yes, it belongs to this part.” “But when this part has done its measuring and has indicated that some objects are greater than or less than or equal to others, the contrary qualities often present themselves at the same time in relation to the very same objects.” “Yes.” “Now, didn’t we say that it is impossible for the same thing to hold contrary views about the same thing at the same time?” “And we were right to say so.”

603a

“So, the part of the soul that is forming opinions contrary to the measurements would not be the same as the part that does so on the basis of the measurements.” “No, it would not.” “But the part that trusts in measurement and calculation would be the best part of the soul.” “Indeed.” “So, the part that is opposed to this would be one of the lesser elements in us.” “Necessarily.”

603b

“Well, this is what I wanted us to agree upon when I was saying that painting and imitation generally fashion a product that is far removed from the truth. And the part in us that it consorts with is, in turn, far removed from intelligence, and imitation is its companion and friend for no sound or true purpose.” “Entirely so,” said he. “So, imitation, which is something lowly, generates lowly offspring by associating with something lowly.” “So it seems.” “Does that,” said I, “apply only to imitation we can see, or does it also apply to that which we can hear, the imitation we call poetry?” “It is likely,” said he, “to apply to poetry too.”

603c

“Well,” said I, “let’s not put our trust only in what’s likely by analogy with painting. Let’s take a look, rather, at the very part of the mind with which poetic imitation consorts, and see whether it is lowly or superior.” “Yes, that’s what’s needed.” “Then let’s propose the following. Imitation, we say, imitates human beings performing actions under compulsion or voluntarily, thinking that they have done well or done badly as a result of the activity and experiencing pain, or being delighted in all these. Is there anything more to it than this?” “Nothing.”

603d

“Now, is the person in a unified state of mind in all of these cases? Or is there faction, just as there was in the case of seeing, when he held opposite opinions within himself about the same objects at the same time? Is it the same in the case of these activities; is there faction and does he fight with himself? But I recall that there is no longer any need for us to agree on this issue. Indeed, we agreed all of this quite adequately in the previous arguments; our souls are teeming with countless contradictions of this sort, arising at the same time.” “Correct,” said he. “Correct, indeed,” said I, “but I think we now need to recount in detail something we omitted at the time.” “What is it?” he asked.

603e

“We also said earlier, I believe, that when a reasonable man meets with a misfortune, such as the loss of a son or something that is very important to him, he will bear this loss more easily than other people.” “Entirely so.” “But now let’s consider whether he will experience no distress, or, this being impossible, he will somehow keep measure in relation to the pain.” “More the latter,” said he, “that’s the truth.” “Now, tell me this about him. Do you think he will struggle more against the pain, and resist it, when he can be seen by his fellows or when he is alone just by himself?” “Presumably,” said he, “he

will fight it much more when he is seen by others.”

604a

“But when he is on his own, I imagine, he will dare to utter lots of things which he would be ashamed of if anyone were to hear him. He will also do lots of things which he would not allow anyone to see him doing.” “So he would,” said he. “Don’t reason and law exhort him to resist, while the feeling itself draws him to the pain?” “True.”

604b

“But when a contrary tendency arises in a person about the same thing, at the same time, we maintain that the person must have two elements within him.” “Of course.” “Isn’t one of them ready to obey the law and follow its guidance?” “How?”

604c

“The law declares, I presume, that the very best course of action is to be at peace in the face of misfortunes, and not be distressed, because the good or bad of such situations is not obvious. There is no future advantage in taking things badly; nothing in human affairs deserves to be taken seriously, and being pained acts as an impediment to the very thing whose assistance we need as quickly as possible in these cases.” “What,” said he, “are you referring to?” “To deliberation,” said I, “about what has happened and to arranging one’s own affairs in the way that reason deems best, as if responding to the fall of the dice, without wasting time like children who have had a fall, crying and holding on to the hurt. We should continually accustom the soul to turn as quickly as possible to the process of healing and to ensuring that whatever has fallen or ^{604d} become diseased is put right, banishing lamentation by means of the healing art.” “This,” he said, “is certainly the right way for someone to deal with life’s misfortunes.” “So, according to us, our very best part is prepared to follow this reasoning?” “Of course.” “But the part that leads us back towards our memories of what happened and to our lamentations about it, and has an

insatiable desire for these, is irrational and idle and a friend of cowardice. Isn't this what we shall say?" "We shall indeed."

604e

"Now, one of these, the troubled one, is highly susceptible to imitation in all sorts of ways, while the intelligent peaceful disposition, because it is always much the same as itself, is neither easy to imitate nor, when it is imitated, is it easily understood, especially not by a large crowd of people of all sorts gathered together in a theatre. For the imitation is of an experience that is somehow alien to them."

605a

"Entirely so." "Then, it is obvious that the imitative poet has no natural affinity with the good part of the soul, and his wisdom is not designed to please this if he is going to be well regarded among the general population. He has, rather, an affinity with the troubled and complex character because it is so easy to imitate." "Obviously."

605b

"Isn't it only right that we set him aside at this stage and put him with the painter as his counterpart? In fact, he resembles him by producing products that are inferior in terms of their truth. But he is similar to him too in appealing to that other part of the soul rather than to the best part. Accordingly, we would already be justified in denying him admission into a city that is to be well regulated, because he rouses this part of the soul and nurtures it, and by making it strong he destroys the rational part. It's as if, in the case of a city, someone were to put degenerate people in charge, entrust the city to them, and destroy the better sort. Shall we maintain that the imitative poet does the same by establishing an evil form of government privately in the soul of each individual, grat- 605c ifying the irrational part that cannot even distinguish what's large from what's small, and believes that the same things are now big, now little? Is he not a maker of images, images that are very far

removed from the truth?" "Entirely so." "But we have not yet brought our significant accusations against poetry. For its ability to do harm, even to people of the best sort, with very few exceptions, is terrible in the extreme." "Inevitably, if it actually does this." "Listen and consider. Indeed, even the best of us, I presume, has had the experience of listening ^{605d} to Homer or one of the other tragic poets, imitating one of the heroes, grief-stricken, delivering a speech that stretches out into lengthy lamentations, or even singing and beating his breast. You know that we are delighted, we surrender ourselves, we follow along and feel what they feel, and in all seriousness we praise whoever is best able to give us such an experience and call him a good poet." "I know, of course."

^{605e}

"But when some personal misfortune befalls any of us, you realise, in this case, that we pride ourselves on the opposite response, on being able to remain at peace and to endure it, since this is the response of a man, while the other, the one we just praised, is a woman's response." "I realise this," said he. "Now," said I, "is there anything good about this praise? When someone sees a man like this, a man he himself would be ashamed to be like and would not accept, should he be delighted and praise him rather than being filled with loathing?" "No, by Zeus," said he, "that does not seem reasonable."

^{606a}

"Yes," said I, "especially if you were to consider it in this way." "In what way?" "Well, if you were to consider that the poets now satisfy and gratify the part that is restrained by force when dealing with private misfortunes and which hungers for its proper fill of crying and lamenting and has a natural desire for these. But the best part of us, by nature, has not been sufficiently educated by reason and habit, so it relaxes its guardianship of this mournful part since the man is looking at the suffering of other people, and he himself feels no shame if

someone else claims to be good, but engages in inappropriate lamentation. So he praises and pities this person, thinking there is advantage in that. It is a pleasure he will not be deprived of by despising the whole poem. Indeed, in my view, there are few who are capable of working out that whatever enjoyment we derive from the affairs of others necessarily affects our own. For having indulged pity to the full with the misfortunes of others, it is not easy to restrain it in the face of our own."

606b

"Very true," said he. "Now, doesn't the same argument apply to laughter? If you are absolutely delighted when jokes you would be ashamed to make yourself are acted out on the comic stage, or heard in private, and you don't detest them for their baseness, aren't you doing exactly what we described in the case of pity? For something within you wanted to make a joke and you restrained it then for fear of seeming like a clown. But now you are letting it loose, and having allowed it free rein you will frequently give in to this, unwittingly, in private, and so become a comic poet yourself." "Very much so," said he.

606c

"And poetic imitation affects us in various ways in the case of sexual desires, anger, and all the appetites, pleasures and pains of the soul, which, we maintain, accompany every action of ours. It actually nurtures these and waters them when they should be left to wither, and sets them up as rulers when they should be under authority, so that we may become better and happier rather than worse and more wretched." "I cannot disagree," said he.

606d

"In that case, Glaucon," said I, "whenever you come across Homer's eulogists declaring that this poet has educated Greece, that he deserves to be adopted and studied both for the management and for the education of human affairs, and that everyone should live his own life under the arrangements

suggested by this poet, you should embrace them and love them for doing their very best, and concede that Homer is highly poetic and our foremost tragic poet. But you must understand that the only poetry we can admit into our city are hymns to the gods and praises of good people.

606e

And if you admit the voluptuous Muse, in lyric or epic form, pleasure and pain will be kings of your city instead of law and the reasoning that always seems best to the community.”

607a

“Very true,” said he. “Well,” said I, “now that we have revisited the question of poetry, let this be our defence. We were, after all, acting reasonably when we banished it from our city, since this is what it is like. The argument proved this to us. But in case poetry accuses us of a certain harshness and lack of refinement, let’s explain to it that a dispute between philosophy and poetry is of ancient date. Indeed, there are signs of this long-standing opposition in expressions such as, ‘the yelping hound that ^{607b} bays against her master’, and ‘paramount in the empty talk of fools’, and ‘the mob that rules the over-wise’, and ‘the subtle thinkers who turn out to be poor’, and there are scores of others. Nevertheless, let’s declare that if someone is able to put forward an argument as to why there should be poetry and imitation, whose aim is pleasure, in a well-regulated city, we would gladly receive these back again because we realise that we are still charmed by them. But it is an unholy act to betray what you think to be true. Is this so, my friend? Aren’t you charmed by poetry too, especially when you meet it through Homer?” “Very much so.”

607c

“Then, isn’t it only right that we allow poetry back under these circumstances, once it has defended itself in lyric or in some other metre?” “Yes, entirely so.”

607d

“And we would, presumably, also allow its supporters who are not poetical but who do love poetry to make a case on its behalf, devoid of poetic metre, arguing that it is not only a source of ^{607e} pleasure to civic society and to human life, but a source of benefit too. And we would listen fairly, since we would surely gain an advantage if poetry proved to be beneficial rather than merely pleasant.” “Yes,” said he, “the advantage would inevitably be ours.” “But if not, my dear friend, we must act like those who have fallen in love with someone but forcibly restrain themselves, nevertheless, because they believe that the love is not beneficial. Because of ^{608a} the love of such poetry, engendered by our upbringing under our good systems of government, we shall be well disposed to a proof that it is utterly good and true. But as long as it is unable to offer a defence, we shall listen to it while chanting this argument to ourselves, the one we are stating, this charm of ours, as a precaution against falling once more into the childish love that most people have for such poetry. But we are now aware that it must not be taken seriously, as something serious ^{608b} that lays hold of the truth. Rather, whoever hears poetry should be careful about it, out of fear for the city within himself, and should heed whatever we have said about poetry.” “I agree entirely,” said he. “Yes, dear Glaucon,” said I, “the struggle is a great one, greater than you think. What’s at stake is becoming good or bad, and so we should not neglect justice, and excellence in general, because we are excited by honour, money, or any power whatsoever, or indeed by poetry.”

^{608c}

“I agree with you,” said he, “on the basis of all we have recounted, and I think anyone else would agree too.” “And yet,” said I, “we have not recounted the greatest rewards of excellence, and the prizes that are on offer.” “You are referring to something great beyond measure,” said he, “if it is greater than what we have spoken of.” “Could anything great happen in

a short period of time?" I asked. "Indeed, the entire span of time, from childhood to old age, would presumably be short in comparison with all time." "Nothing," said he. "Well then, do you think something immortal should take a short time span like this seriously, but not be serious about all time?"

608d

"I think it should be serious about all time," said he, "but why are you saying this?"

608e

"Are you not aware", said I, "that our soul is immortal and is never destroyed?" And he looked at me, in amazement, and said, "By Zeus, I am not, but are you able to say this?" "I can," said I, "and I think you can too. It's not difficult." "It is for me," said he, "but as it's so easy for you, I would like to hear about it from you." "Hear you shall," said I. "Speak on," said he. "Is there something you call good," I asked, "and something you call bad?" "There is." "Now, do you think about them as I do?" "In what way?" "That which destroys and corrupts everything is what's bad, while that which preserves and confers benefit is what's good." "This is what I think, at any rate," said he.

609a

"What about this? Do you say that there is some particular good or bad that belongs to each individual thing, just as ophthalmia belongs to the eyes, disease to the entire body, mildew to grain, rot to wood, and rust to bronze and iron? I mean, in almost all cases, do you say that there is some badness or disease that belongs to each?" "I do," said he. "Isn't it the case that whenever any of these gets attached to something, it makes whatever it is attached to degenerate, and in the end breaks it down completely and destroys it?" "It must be so."

609b

"So, the bad and the degeneracy that naturally belong to each, destroys each, or if these do not destroy it, there is nothing else that could still corrupt it. For the good will never destroy

anything, nor indeed will that which is neither good nor bad.” “No, how could it?” said he. “So, if we find anything at all which has a specific badness that makes it worse but is unable to dissolve and destroy it, won’t we know at this stage that no destruction belongs to something of such a nature?” “Quite likely,” said he.

609c

“Well then,” said I, “does soul have something particular that makes it bad?” “Very much so,” said he, “everything we were listing just now – injustice, lack of restraint, cowardice and ignorance.” “Now, do any of these dissolve and destroy the soul? And consider carefully in case we are misled into thinking that the unjust and unreasonable person, when caught in his unjust act, is destroyed by that very injustice, even though it is a degeneracy of the soul. Think of it, rather, in the following way. Just as disease, the vice of the body, wastes it away, dissolves it, and brings it to a stage where it is no longer a body, so too, in all the cases we just mentioned, when their own particular badness attaches itself to them or is present in them, they are corrupted by this and eventually cease to exist. Isn’t this so?” “Yes.”

609d

“Come on then, and consider soul in the same manner. Do injustice and vice in general, when present in the soul, corrupt and waste it away by their presence and by attaching to it until they bring the soul to death and separate it from the body.” “No,” said he, “this does not happen at all.” “But it is also unreasonable,” said I, “that something could be destroyed by the degeneracy of another, but not by its own.” “Unreasonable.”

609e

“Yes, Glaucon,” said I, “think about it. We do not think that a body could be destroyed by the degeneracy that belongs to foods themselves, be it staleness, rottenness or anything else. But once the degeneracy of the foods themselves produces a poor condition of the body, in the body, we shall maintain that

because of the foods, it has been destroyed by its own badness, namely, ^{610a} disease. But since the foods are one thing and the body is another, we should never expect the body to be corrupted by their alien badness unless their degeneracy produces its own degeneracy in the body.” “Quite right,” said he. “Well, by the same argument,” said I, “unless degeneracy of the body produces degeneracy of soul, in the soul, we would not expect soul to be destroyed by the alien badness of the body, a badness that belongs to something else, in the absence of soul’s own particular degeneracy.” “Indeed,” said he, “that is reasonable.”

^{610b}

“Well, we should either refute these assertions because we were wrong, or, as long as they stand unrefuted, we should not declare that the soul is ever destroyed in any sense by fever or any other disease, by slaughter, or even if someone chops the body up into tiny pieces, until someone proves that soul itself becomes more unjust, or more unholy because these things happen to the body. We ^{610c} should not allow anyone to maintain that soul or anything else is destroyed when an alien badness arises in it, in the absence of its own particular badness.” “But you may be sure,” said he, “that no one will ever prove that the souls of those who are dying become more unjust because of death.” “But,” said I, “suppose someone is bold enough to attack this argument so that he will not be forced to accept that souls are immortal. If he says that the dying person does become more degenerate and more unjust, we shall, presumably, maintain that if this is true, then injustice is fatal to its possessor, just as fatal as disease. So by its own nature it would kill those who catch it, killing those ^{610d} who have more of it quite quickly, and those who have less of it more gradually. This would be unlike the present situation where the unjust die because of their injustice, but at the hands of others who are imposing a penalty upon them.” “By Zeus,” said he, “if injustice

is going to be fatal to its possessor, it will turn out not to be so terrible after all, for it would be a release from evils. But I think it is more likely to ^{610e} turn out to be the exact opposite. It kills others, if that is actually possible, while making its possessor more lively, and in addition to being more lively, more awake too. And so, in my view, it seems nowhere near to being fatal.” “You are right,” said I. “In fact, when its own particular degeneracy and its own particular badness is not sufficient to kill or destroy soul, then badness assigned to the destruction of something else will hardly destroy soul, or anything else for that matter, except that which it is assigned to destroy.” “Hardly likely, indeed,” said he.

^{611a}

“In that case, since it is not destroyed by any badness, either its own or an alien one, it obviously must be something that always is, and since it always is, mustn’t it be immortal?” “It must,” said he. “Well,” said I, “this is how matters stand, and since this is so, you may note that the souls must always be the same. For their number could not become less, I presume, since none are destroyed, nor could there be more of them since you know that any increase in number among any immortal things would come from the mortal, and everything would, in the end, be immortal.” “True.”

^{611b}

“But,” said I, “let us not think that this is so, for the argument will not allow it. Nor again, should we think that soul, in its truest nature, is the sort of thing that is itself full of variation, dissimilarity and divergence, with respect to itself.” “How do you mean?” he asked. “It is not easy,” said I, “for something to be everlasting when it is composed of many things and they have not been put together in the best possible way, which is how the soul appeared to us just now.” “No, that is not likely to be easy.”

^{611c}

“Well, although our earlier argument, and others, would compel us to accept that soul is immortal, we should still behold what it is like in truth, not mutilated by its association with the body and other bad influences, which is how we behold it now. We should, rather, use reason to see it properly, as it is when it has been purified, and we shall find that it is much more beautiful, and we shall discern justice and injustice with greater clarity, and everything else we have just described. We have now spoken the truth about it, as it appears at the moment. But although we behold it in this condition, we are like people looking at the sea god, Glaucus, who are still unable, easily, to ^{611d} see his ancient nature because the original parts of his body have been broken off, smashed and mutilated by the waves. And other things have attached themselves to him, such as shells and seaweed and rocks, so that he seems more like some wild animal rather than what he is by nature. That’s also how we behold the soul, in a condition that results from countless bad influences. But, dear Glaucon, we should look elsewhere.” “Where?” said he.

^{611e}

“We should look to soul’s love of wisdom and consider what it is in contact with, and the sort of thing it strives to associate with, because it is akin to the divine, the immortal, and what always is. We should consider what it would become like by directing itself entirely to this sort of thing, when it has lifted itself by this effort out of the sea that it now resides in and has knocked off the stones and shells that now encrust it, since it is feasting on earth and is surrounded by a wild profusion of earth and stone, because of the feasting that is generally called happiness. Then one would see soul’s true nature, what it is like, and how it is so, and whether its form is multiple or just one. But we have now described what happens to it, and the forms it takes in human life, in what I regard as a satisfactory manner.” “Entirely so,” said he.

612a

"In that case," said I, "did we not do away with the other criticisms in the course of our argument without praising the rewards and good reputation that are associated with justice, as you say Hesiod and Homer do? Have we not found that justice itself is best for soul itself, and that soul should perform just actions whether it possesses the ring of Gyges or not, and the helmet of Hades too, in addition to that famous ring?"¹²² "Very true," said he.

612b

"Well then, Glaucon," said I, "at this stage there should, in addition, be no reluctance about restoring to justice, and to excellence in general, any rewards of any kind that they afford to the soul, either from humanity or from the gods, during a person's life or after he dies." "Absolutely," said he. "In that case, will you restore to me what you borrowed in the argument?" "What precisely?"

612c

"I conceded to you that the just man might be reputed unjust, and the unjust man might be reputed just. You made this request, and even if these cannot go unnoticed by gods and mankind, the concession had to be made nevertheless for the sake of the argument, so that justice itself might be judged alongside injustice itself. Don't you remember?" "It would be an injustice on my part," said he, "if I did not."

612d

"Well," said I, "now that they have been judged, I demand, on behalf of justice, that you restore ^{612e} its good reputation among gods and men, and that we too should concur that it is held in such high repute so that justice may carry off the victory prizes that come from being reputed to possess justice, prizes it bestows upon those who possess it in truth. Indeed, justice has already proved that it bestows the goods that come from actually being just, and is not deceiving those who really do

attain to it.” “A just demand,” said he. “Would you concede, firstly,” said I, “that the gods certainly are not unaware of what these two, justice and injustice, are like?” “We shall concede that,” said he. “But if there is awareness of both, then one would be loved by the gods and the other hated by the gods, as we agreed at the outset.” “Quite so.”

613a

“And won’t we agree that for the person who is loved by the gods, whatever comes from the gods, at any rate, is all for the best, unless some unavoidable badness accrues to him from a former transgression?” “Certainly.” “So, in the case of the just man, we may presume that whether poverty or disease or one of the so-called evils befalls him, these will end in some good for this man during his lifetime or after his death. For the gods certainly will never neglect someone who has an eager desire to become just ^{613b} and to become as much like unto God as a human being possibly can by pursuing excellence.” “Yes,” said he, “a person like this is hardly likely to be neglected by his like.” “And shouldn’t we presume that the exact opposite of all this applies to the unjust person?” “Very much so.” “These, then, would be the sorts of prizes the gods give to the just man.” “Well, that is what I think anyway,” said he.

613c

“But what prizes,” said I, “does he receive from mankind? If we are to describe the situation as it is, isn’t it somewhat as follows. Don’t the clever but unjust people behave like runners who run well when going up the track, but not in the other direction? At first they sprint away at a brisk pace, but in the end they become laughing stocks as they run off the track without the victory wreath, with their ears drooping down to their shoulders. But the true runners keep going to the very end, collect their prizes, and are crowned as victors. Isn’t this also how things turn out, for the most part, in the case of just people? Towards the end of each undertaking or association, or

their entire life, are they not well regarded, and don't they carry off the prizes that their fellow men bestow?" "Yes, indeed."

613d

"So, will you put up with it if I say the same things about these people as you said about unjust people? For I shall say that when the just people get older, they take up positions of authority in their own city if they wish, they marry from whatever families they wish, and marry their children into any families they please. In fact, I am now saying about these people everything you then said about those people. And furthermore, I shall say that the unjust, in most cases, even if they go undetected when young, are caught at the end of their course and become figures of fun. In old age they are trampled upon like wretches by strangers and by their own people, they are whipped ^{613e} and they suffer everything you rightly described as brutal. I won't repeat the details, so just assume that you have heard me list them and tell me if you will put up with my saying this." "Yes, indeed," said he, "it's only right that you say so."

614a

"These, then," said I, "would be the sorts of prizes, rewards and gifts that the just person receives from gods and his fellow men during his own lifetime, in addition to those goods that justice itself bestows." "Noble and secure rewards, indeed," said he.

614b

"Well, they are nothing," said I, "in number or extent in comparison with those that await the just and the unjust after death. These should now be heard so that each of them may hear in full what they deserve to hear from the argument." "Speak on," said he, "as there are not many things I'd be more pleased to listen to." "I shan't," said I, "tell you the long tale that Alcinous told, but a story of a brave man, Er, the son of Armenius, a Pamphylian by race. "Once upon a time, he met his death on the battlefield, and when the corpses were being gathered after ten days, already decomposing, his body was

found in good condition. He was brought home, and on the twelfth day, as the funeral was about to begin and he was lying on the pyre, he revived, and having come back to life he described what he had seen there, in that other place.

614c

“He said that when his soul went forth, it proceeded along with many others, and they arrived at a mysterious region in which there were two openings in the earth, side by side, and two others in the heaven above, directly opposite them. Judges were seated between these, and once they had passed judgement they ordered the just to proceed upwards to the right, through the heaven, with signs attached in front of them indicating the judgements that had been passed, while they ordered the unjust to proceed downwards to the left, also wearing signs behind them indicating all they had done. But when he himself came forward, they told him that he must be a messenger to humanity to tell of what went on there, and they directed him to listen and to observe everything in the place.

614d

“He said that he saw souls there, departing through one opening in the heaven and one in the earth after judgement had been passed upon them. Through the other two openings, souls came up out of the earth in one case, full of squalor and filth, while from the other opening other souls descended from the heaven, purified. They arrived continually, looking as if they had completed a lengthy journey, and they made their way gladly to the meadow and encamped there, as if at a religious festival. Those who recognised one another embraced, and those who had come out of the earth enquired from the others about what went on there in the other place, while those who had come from the heaven asked about what went on below. They swapped stories with one ^{614e} another, one group wailing and lamenting as they recalled whatever they had suffered and seen, and what it was like on their journey beneath the earth,

which was a journey of a thousand years, while those who had come from the heaven, for their part, described pleasant experiences and scenes beautiful beyond measure.

615a

“To recount the many details, Glaucon, would take a long time, but the summation”, he said, “was as follows. However many wrongs the person had done, to however many people, he paid a just penalty for them all in turn, a tenfold penalty for each, that is, a period of one hundred years in each case, which is the span of a human life, so that the penalty paid would be ten times the unjust act. For instance, if someone had been responsible for many deaths by betraying entire cities or armies and reducing them to slavery, or had been responsible for some other enormity besides, they would receive back the pain of all these multiplied tenfold for each. Then again, if ^{615b} someone had done good deeds and had become just and holy, they would receive their deserved reward on the same basis. And he also made comments, not worth recalling, about those who died as soon as they were born, or lived for but a short time. And he described even greater penalties in cases of disrespect and respect for gods and for parents, and slaying with one’s own hand.

615c

“Now, he said that he was present when one person asked another, ‘Where is Ardiaeus the Great?’ This Ardiaeus had been tyrant of some city in Pamphylia a thousand years before then, and he had murdered his aged father and his elder brother, and was said to have done many other unholy deeds too. Er said that the person who was questioned replied, ‘He has not come here, nor ^{615d} will he ever come here. In fact, this was one of the terrible scenes that we beheld. When we were close to the mouth of the chasm and about to come out after all that we had been through, we suddenly caught sight of him, and others too, most of them surely tyrants, but there were also some ^{615e} private citizens who had committed great crimes. Just when

they thought they were going to go up, the mouth of the chasm did not let them, but it gave a roar whenever someone in such an incurable condition of degeneracy or someone who had not paid the penalty in full tried to come up. Then,' said he, 'wild men of fiery aspect, who had been standing by, recognised the sound, took hold of some of them and led them away. But they bound Ardiaeus and others, hand, foot and ^{616a} head, flung them down and flayed them, dragged them to the side of the road to strip their skin on thorns, indicating to those who kept passing by why they were taking them away and that they were about to throw them into Tartarus.'¹²³ Then, although they had already met with many terrors of all sorts, the man said that this exceeded them all, the fear that this voice might emerge in their case when they went up. And each went through with great delight as the voice was silent.

^{616b}

"Such were the just penalties and punishments that Er described, and the blessings were the counterparts of these. But once seven days had elapsed for each group in the meadow, they had to get up on the eighth day and go on a journey from there. In four days they arrived at a place where they beheld a light extending straight from above, through all heaven and earth, like a pillar bearing a strong resemblance to a rainbow, but brighter and purer. This they arrived at after a ^{616c} further day's travel, and there, at the light's centre, they saw the extremities of its bonds extending from the heaven, for this light is what binds the heaven together, like the braces under a trireme, holding the entire revolution of the heaven together in this way. The spindle of Necessity, by which all the heavenly revolutions are turned, was extending from the extremities. Its shaft and its hook were made of adamant, and its whorl from a mixture of this and of other materials.

^{616d}

“The nature of the whorl was as follows. Although its shape was like what we have here – you should recognise what it was like from what he said – it was as if one large whorl, hollow and scooped out thoroughly, had another one just like it, but smaller, fitting neatly inside it, like jars that fit inside one another, and a third and a fourth, and four others. In fact, there were eight whorls ^{616e} altogether, lying inside one another, and their rims looked like circles when viewed from above. From the back, these formed the uniform surface of a single whorl, centred on the shaft which had been driven right through the centre of the eighth whorl. “The first and outermost whorl had the widest circular rim, the rim of the sixth was second, that of the fourth was third, that of the eighth was fourth, that of the seventh was fifth, that of the fifth was sixth, that of the third was seventh, while that of the second was eighth. The rim of the largest whorl was spangled, that of the seventh was brightest, while the rim of the eighth derived ^{617a} its colour from the seventh which shone upon it. The colours of the second and fifth were quite similar to one another and yellower than the previous two, the third had the whitest colour, the fourth was reddish, while the sixth was the second whitest. “Although the whole spindle revolved, turning with the same motion within the overall revolution, the seven inner circles revolved gently in the opposite direction to the overall revolution.

^{617b}

Of these inner circles, the eighth travelled fastest; second fastest in pace with one another were the seventh, sixth and fifth. The fourth moved third fastest and it seemed to them to be revolving backwards. The third was fourth fastest and the second was fifth. The spindle turned in the lap of Necessity, and perched on top of each of the circles was a Siren, revolving along with the circle, sending forth a single sound on a single note, and from them all, all eight, came a single concordant harmony. There were three other women round about, at an

equal distance from one another, each ^{617c} seated upon a throne. These were the Fates, Lachesis, Clotho and Atropos, the daughters of Necessity, dressed in white with garlands upon their heads, singing in harmony with the Sirens. Lachesis sang of what had come to pass, Clotho of things that are, Atropos of what is to come.

^{617d}

Clotho, with a touch of her right hand, was helping turn the outer revolution of the spindle, pausing from time to time, while Atropos, with her left hand, did the same for the inner revolutions, and Lachesis lent a hand to each revolution in turn, with each hand in turn. “Now, once they had arrived, they had to go immediately to Lachesis, where a prophet first divided them into ranks, then took tokens and patterns of lives from the lap of Lachesis, ascended a lofty platform and proclaimed, ‘This is the word of Lachesis, maiden daughter of Necessity. Souls that live for a day, now begins another death-bearing cycle for your mortal race. No daimon shall be assigned to you by lot, but you shall choose your daimon. Let the one who is allotted first place be the first to choose a life which he will, necessarily, abide by. Excellence has no master, but each will have more of it or less of it as he honours it or dishonours it. The responsibility lies with the one who chooses. God is not responsible.’

^{617e}

“Having said all this, he threw down the lots among them all and each picked up the one that fell beside him, except for Er, who was forbidden to do so, and the number that each had drawn was obvious to the person who had picked it. After this he proceeded to place the patterns of lives on the ground in front of them, and there were many more of these than the number of people present. There were lives of every variety, for lives of all living creatures, and indeed all human lives, were included. There were tyrannies among them, some that endure to the end, others that are destroyed in the middle of their

course, ending in poverty, exile or beggary. There were lives of famous men, some famous for their appearance and beauty and for their general strength and prowess, some for their lineage and the excellence of their ancestors, while others were infamous for the same reasons. The same applied to women too. But because of the requirement that a soul become a different kind of soul by choosing a different life, the arrangement of soul was not inherent. But everything was commingled with everything else, and with wealth, poverty, disease and health, and anything in between.

618a

“And this, dear Glaucon, it seems is the moment of extreme danger for a human being, and because of this we must neglect all other studies save one. We must pay the utmost attention to how each of us will be a seeker and student who learns and finds out, from anywhere he can, who it is who will make him capable and knowledgeable enough to choose the best possible life, always and everywhere, by distinguishing between a good life and a degenerate one. Who will make him know- 618b edgeable enough to know what bad or good will be brought about by beauty when it is combined with poverty or prosperity, along with what sort of disposition of soul, doing so by taking account of everything we have mentioned and how their combinations with one another, and separations from one another, contribute to the excellence of a life? Who will make him knowledgeable enough to know what is brought about by the various inter-combinations with one another of good or evil birth, private station or public office, strength or weakness, ease of learning or difficulty in learning, 618c and everything else like this that belongs naturally to the soul, or is acquired? He will do all this so that he is able to make his choice reasonably, between the worse life and the better one, by looking to the nature of the soul and calling the life that leads soul to become more unjust, the worse life, and the one that leads it to become more just, the

better life. All other studies he will set aside, for we have seen that in life and after death this is the supreme choice.

618d

“He must go then to Hades holding to this view with an unbreakable resolve, so that even there he would not be dazzled by wealth and other such bad influences, fall in with tyrannies and activities like that, inflict a whole host of incurable evils, and experience even greater evils himself. He would decide, rather, that he should always choose the life that is midway between such extremes, and flee the excesses from either direction as best he can in this life and in all that is to 618e come, for that is how a human being attains the utmost happiness. And, indeed, the messenger 619a from there reported that the prophet then said, ‘Even for the person who comes up last but chooses intelligently and lives in a disciplined way, an acceptable life rather than a bad one awaits. The first to choose must not be careless, and the last must not be despondent.’

619b

“He said that once the prophet had made this announcement, the person who had been allotted first place came up immediately and chose the most extreme tyranny. Out of stupidity and 619c greed, he had made his choice without considering all the details properly, so he did not notice that it involved being destined to devour his own children, and other evils. Once he had time to look at it, he beat his breast and lamented his choice, without being true to the earlier pronouncements of the prophet, for he did not blame himself for the evils, but chance and the spirits and everything else except himself. He was one of the people who had come from the heaven and had 619d lived his previous life under an orderly system of government, where any share of excellence he had came from habit in the absence of philosophy. And, generally speaking, those who had come from the heaven were more likely to be caught out in this way since they had no training in

dealing with suffering, while those who had come out of the earth, for the most part, having had experience of suffering themselves and having seen others suffer, did not make their choices in a hurry. This, and the element of chance from the lot, is why most souls undergo an interchange of what is good and what is bad. Yet if someone were to engage in philosophy, consistently, in a sound manner, ^{619e} whenever he comes back to live in this world, unless he is among the last to choose it is likely not only that he would be happy whilst here, but also that his journey from here to there, and back here again, would be a smooth journey through the heaven, rather than rough and underground. So say the pronouncements from the other realm.

^{620a}

“Indeed, he said that the scene as the souls each chose their lives was well worth beholding, for it was a pitiful, comical and amazing sight to see. In fact, most of them made their choice based upon the habits of the previous life. And so he saw the soul that had once been Orpheus¹²⁴ choosing the life of a swan out of hatred for womankind, because, having met his death at their hands, the soul was unwilling to be conceived and born of woman. He saw that Thamyras¹²⁵ soul had chosen the life of a nightingale, and he saw a swan changing its choice to the life of a human, and other ^{620b} musical animals acted in like manner. The soul that had been allotted twentieth place chose the life of a lion. This was the soul of Ajax,¹²⁶ son of Telamon, and it was fleeing from embodiment as a human because it remembered the decision over the armour of Achilles. Next came Agamemnon’s¹²⁷ soul. This soul, too, was hostile to the human race because of its past experiences, and so it changed to the life of an eagle. The soul of Atalanta¹²⁸ had been allotted a place in the middle, and when it saw the huge honours that accompany the life of a male athlete, it could not ^{620c} pass this by, and so it grabbed that life. After this, Er saw the soul of Epeius,¹²⁹ the son of Panopeus, adopting the nature of a highly skilled woman. In

the distance, among the last to choose, he saw the soul of Thersites,¹³⁰ the joker, entering into a monkey. As it happened, the soul of Odysseus¹³¹ was allotted the last choice of all. When his turn came, he remembered all his former troubles, gave up the love of honour he had held previously, and went about for a long time seeking the life of an ordinary man with a private station. And he found it with difficulty, lying about somewhere, 620d neglected by everyone else. And he said when he saw it that he would have done the same thing even had he been given first choice, and he chose it gladly. And similarly, the other beasts entered into human beings or into one another; the unjust changed into wild creatures, while the just changed into tame ones, and there were mixtures of all sorts.

620e

“Now, once all of the souls had chosen their lives, they went up to Lachesis in the allotted order and she sent them on their way, with the daimon that each had chosen as the guardian of the life who fulfils what has been chosen. The guardian first led the soul to Clotho to ratify the fate it had chosen, as allotted beneath her hand as she turned the revolving spindle. Once the fate had been confirmed, the guide led it on again to Atropos and her spinning to make the web of destiny 621a unalterable. From there it went, inexorably, beneath the throne of Necessity, and when it had gone through, since the others had also gone through, they all proceeded to the Plain of Forgetfulness through terrible burning, stifling heat, for the place is devoid of trees or anything that springs from the earth. Evening was coming on by then, so they encamped beside the River of Heedlessness, whose water no vessel can contain. Now, it was necessary for all of them to drink a measure of the water, but some, who were not protected by wisdom, drank more than the measure, and as he drank, each forgot everything.

621b

“When they had fallen asleep, at midnight there was thunder and an earthquake, and each was suddenly borne upwards, this way and that, to their birth, like shooting stars. He himself had been prevented from drinking the water, yet he did not know by what manner or means he arrived back in the body, but he suddenly looked about and saw himself already lying on the funeral pyre at dawn.

621c

“And that, dear Glaucon, is how the story was saved and not lost, and it may save us too if we heed its advice, and we shall safely cross over the River of Forgetfulness without defiling our soul. But if we are persuaded by me, we shall regard the soul as immortal and capable of bearing everything bad, and everything good too, and we shall hold always to the upward path, practising justice, 621d accompanied by wisdom, in every way possible so that we may be friends to ourselves and to the gods, both during our stay here and when we receive the rewards of justice, carrying them off like prize-winners in the games, and both here and in the journey of a thousand years that we have described all may be well with us.”

NOTES

1. Glaucon, son of Ariston, was Plato's older brother.
2. This is a reference to the Thracian lunar goddess Bendis, a cult to whom had recently developed in the Piraeus, a harbour town and the main port of Athens.
3. Adimantus, son of Ariston, was an older brother of Plato.
4. Lysias was a famous speechwriter and orator. In Plato's *Phaedrus*, the eponymous character is depicted as having come from a conversation with Lysias.
5. Thrasyarchus was a sophist from Chalcedon who is also mentioned in Plato's *Phaedrus*.
6. Clitophon was an oligarch and statesman. There is a potentially spurious Platonic dialogue that bears his name.
7. Cephalus was a wealthy Syracusan arms manufacturer who lived in Athens.
8. *Iliad* xxii.60, xxiv.487; *Odyssey* xv.246, 348, xxiii.212.
9. *Odyssey* xvii.218.
10. Sophocles was an Athenian tragedian.
11. Themistocles was an Athenian politician and general.
12. Pindar was a lyric poet from Thebes who lived a generation before Plato. Fragment 214, Snell.
13. Simonides was a lyric poet from the island of Ceos. One of his poems serves as a basis for discussion in Plato's *Protagoras*.
14. *Odyssey* xix.392-398.
15. Bias of Priene was a wise man renowned for his probity. Pittacus was a military general from Mytilene on the island of Lesbos. Bias and Pittacus were two of the Seven Sages of Greece, a group of 7th-6th-century philosophers and statesmen who were known for their wisdom.
16. Periander, Perdiccas and Xerxes were tyrants from Greece and Persia. Ismenias was a Theban politician who managed to amass a great deal of money.
17. Pancration was a sport that combined boxing and wrestling.
18. Gyges was a king of Lydia, a kingdom in Asia Minor. The story Glaucon tells is about an ancestor of Gyges and his rise to the Lydian throne.

Herodotus, *Histories* 1.8-13 tells a different story of Gyges' rise to power.

19. Aeschylus, *Seven Against Thebes* 592-594. The quote is elaborated and expanded below.

20. *Odyssey* xvi.97-98.

21. Hesiod, *Works and Days* 323 ff.

22. *Odyssey* xix.109 ff, Lattimore.

23. Musaeus of Athens was a legendary poet and polymath who was closely associated with the religious mysteries. He is also mentioned in Plato's *Apology* (41a).

24. Hesiod, *Works and Days* 287-289.

25. *Iliad* ix, 497-501.

26. Selene was goddess of the moon.

27. Archilochus was a lyric poet from the island of Paros who was known for his versatile use of poetic metre. The reference here is to his fable about a fox and a hedgehog.

28. Hesiod, *Theogony* 154-210, 453-506.

29. The first three quotes are from *Iliad* xxiv.527-532. The source of the fourth quote is unknown.

30. Athena is depicted encouraging Pandarus to violate oaths at *Iliad* iv.73-103. This Aeschylus quote is of unknown origin.

31. This is likely a reference to works of Aeschylus in a play called *Niobe*, only fragments of which survive.

32. *Odyssey* xvii.485-486.

33. Inachos was a river god and king of Argos. The source of the line quoted here is unknown.

34. In *Iliad* ii.1-34, Zeus sends a dream to Agamemnon with the false promise of victory if he lays siege to Troy immediately. The source of the Aeschylus quote is unknown. Trans. Shorey; Loeb edition of the *Republic*.

35. *Odyssey* xi.489-491, Lattimore.

36. *Iliad* xx.64-65, Lattimore.

37. *Iliad* xxiii.103-104, Lattimore.

38. *Odyssey* x.494-495, Lattimore.

39. *Iliad* xvi.856-857, Lattimore.

40. *Iliad* xxiii.100-101, Lattimore.

41. *Odyssey* xxiv.6-9, Lattimore.
42. 'Cocytus' means lamentation and was the river of wailing in the underworld. 'Styx' means river of gloom and it formed the boundary between the earth and the underworld.
43. *Iliad* xxiv.9-12, Lattimore.
44. *Iliad* xviii.23-24, Lattimore.
45. *Iliad* xxii.414-415, Lattimore.
46. *Iliad* xviii.54, Lattimore.
47. *Iliad* xxii.168-169, Lattimore.
48. *Iliad* xvi.433-434, Lattimore.
49. *Iliad* i.599-600, Lattimore.
50. *Odyssey* xvii.383-384, Lattimore.
51. *Iliad* iv.412, Lattimore.
52. In our version of Homer, this is *Iliad* iii.8 and iv.431, Lattimore.
53. *Iliad* i.225, Lattimore.
54. *Odyssey* ix.8-10, Lattimore.
55. *Odyssey* xii.342, Lattimore.
56. *Odyssey* viii.266 ff.
57. *Odyssey* xx.17-18, Lattimore.
58. The source of these lines is unknown. Trans. Shorey.
59. *Iliad* xxii.15, 20, Lattimore.
60. *Iliad* xxiii.141-151, Lattimore.
61. *Iliad* xxiv.14-18.
62. *Iliad* xxiii.175.
63. Thought to be from Aeschylus' play *Niobe*, which survives only in fragmentary form. Trans. Shorey.
64. *Iliad* i.15-16, Lattimore.
65. The dithyramb was a hymn sung or danced in honour of the god Dionysus.
66. Marsyas was a satyr who challenged Apollo to a musical competition. Marsyas lost the competition and was flayed alive by Apollo.
67. Damon of Athens was a noted musicologist and teacher of Pericles.

68. *Iliad* xi.580, 828-836, and 624-650.
69. Herodicus was a renowned physician, sophist and gymnastic expert.
70. Phocylides was a gnomic poet from Miletus.
71. *Iliad* iv.218-219, Shorey.
72. Midas was a Phrygian king who, according to legend, could turn all he touched into gold.
73. Pindar, *Pythians* 3.55-58.
74. *Iliad* xvii.588.
75. Phoenicia was an ancient civilization located in modern-day Lebanon.
76. *Odyssey* i.351-352.
77. The Hydra of Lerna was a serpentine monster. The many heads of the beast were regenerative in that when one was severed, two would grow in its place. It was eventually killed by Heracles.
78. There was a tradition in the Greek world that Delphi was the centre of the earth. The spot was marked by a stone called the omphalos. The priestess of Apollo, the Pythia, would deliver her pronouncements from a hidden chamber within the temple of Apollo.
79. The four virtues were wisdom, courage, sound-mindedness or temperance, and justice.
80. *Odyssey* xx.17-18.
81. This question is eventually answered in Book VIII.
82. Adrasteia was a name for Nemesis, the goddess of vengeance, who exacts retribution against those who succumb to hubris.
83. This is a reference to the mythical story of the poet Arion who was fabled to have been kidnapped by pirates and rescued by a dolphin.
84. This is a variation on a line from Pindar, "plucking the unripe fruit of wisdom"; *Fragment* 209, Snell.
85. Hesiod, *Works and Days* 40.
86. *Iliad* vii.321.
87. *Iliad* viii.162.
88. Hesiod, *Works and Days* 122, Shorey.
89. The riddle, apparently, went as follows. A man, who is not a man, saw and did not see a bird that was not a bird in a tree that was not a tree; he hit and did not hit it with a stone that was not a stone. The answer was

that a eunuch with poor vision saw a bat on a rafter, threw a pumice stone at it and missed.

90. Plato coins this word using the Greek word for ‘opinion’ (*doxa*). It means ‘opinion loving’ in contrast to ‘wisdom loving’.

91. Momus was the personification of satire and mockery. His name is associated with blame and disgrace.

92. The phrase ‘necessity of Diomedes’ or ‘diomedan compulsion’ is thought to have come from a Homeric story according to which Diomedes, a great warrior, who had prevented Odysseus from killing him, decided against punishing Odysseus. Since Odysseus was so central to the defeat of Troy, the phrase came to refer to one who foregoes personal gain in the interest of the greater good.

93. The phrase ‘bridle of Theages’ later became proverbial for an undesired but perhaps fortunate restraint from doing something. See also the dialogue *Theages*.

94. Socrates tells us in the *Apology* (31c-32a) that his daimonic sign only admonished him not to do certain things.

95. It was reported that Heraclitus believed that the sun is new every day (Aristotle, *Meteorologica* 355a14).

96. *Iliad* i.131 and *Odyssey* iii.416.

97. The Greek for ‘interest’ and ‘offspring’ is the same. Socrates plays upon the dual sense of the word here. The pun extends to the end of Socrates’ statement where he plays upon the word ‘account’ as being either an interest calculation or the expression of a philosophical position.

98. There is a play here in the Greek text upon the words for sky and visible which is hard to capture in English and is omitted from this translation.

99. *Odyssey* xi.489-490.

100. Palamedes is depicted as a major figure in the events surrounding the Trojan War. It is he who discovered number and arranged the ranks of the army at Troy, counted the ships and everything else.

101. Daedalus was a skilled architect and craftsman, said to have sculpted figures so real that they appeared to live and move.

102. Solon was an Athenian statesman and legislator who is credited with laying the foundation for the Athenian democracy.

103. *Odyssey* xix.163.

104. *Iliad* xvi.112-113.

105. This text is difficult, and there is general disagreement about the value of Plato's 'entire geometrical number'. The most frequent value suggested is 216, but 3,600 and 12,960,000 have also been mooted.

106. Hesiod, *Works and Days* 109-202.

107. *Iliad* vi.211.

108. Possibly an adaptation of *Seven Against Thebes* 451.

109. Plutus, the god of wealth, was depicted by Aristophanes as having been blinded.

110. Herodotus 1.55. Croesus was a king of Lydia who was noted for his wealth. He asked the oracle at Delphi whether his reign would be long.

111. *Iliad* xvi.776.

112. Stesichorus was a lyric poet who was reputed to have been blinded for writing unflatteringly about Helen of Troy, and regained his sight after writing an encomium to Helen (the *Palinode*). In Stesichorus' *Palinode*, the combatants in the Trojan war actually went to battle over a phantom of Helen, while the real Helen went to Egypt.

113. Eriphyle accepted a necklace from Polynices, and in exchange persuaded her husband Amphiaraus to join the expedition of 'Seven Against Thebes', which led to his death. Eriphyle was ultimately murdered by her son Alcmaeon.

114. Asclepius was the god of medicine.

115. Lycurgus was a legendary statesman who is credited with the militaristic reform of Spartan society.

116. Charondas was a lawgiver who lived in Catania, Italy.

117. Solon was an Athenian statesman and lawgiver who is credited with laying the foundation for the Athenian democracy.

118. This refers to the contemporary rhapsodes who travelled around the Greek world reciting Homer's epic poems.

119. Thales of Miletus was a noted pre-Socratic philosopher and one of the Seven Sages. He was from Miletus in Ionia. Anacharsis was a Scythian philosopher from Scythia, which lay to the north of the Black Sea, who travelled to Athens. None of his works survives.

120. Creophylos was an epic poet from Samos or Chios and a contemporary of Homer. His name, which is odd, is formed from the Greek words for 'meat' and 'kind' or 'race'.

- 121.** Protagoras and Prodicus were influential 5th-century sophists.
- 122.** The ring of Gyges and the helmet of Hades were thought to confer invisibility upon the wearer.
- 123.** Tartarus is the abyss in which the wicked are tormented.
- 124.** Orpheus was a legendary bard, musician and prophet. He was supposedly killed by a group of Maenads, female followers of Dionysus, for not honouring the god.
- 125.** Thamyris was a legendary Thracian musician who boasted that he could beat the Muses in a competition. When he lost they blinded him and took away his ability to compose poetry.
- 126.** Ajax was a hero who was depicted in the *Iliad* as second only to Achilles in courage. After the death of Achilles, Ajax and Odysseus competed against one another for Achilles' armour. Ajax lost the competition and took his own life.
- 127.** Agamemnon was the king of Mycenae. He led the army against Troy after Helen, the wife of his brother Menelaus, was taken there by Paris.
- 128.** Atalanta was a huntress. It had been prophesied that marriage would be her undoing, so when her father attempted to arrange a marriage for her she stipulated that she would only marry one who could defeat her in a foot race. Eventually Hippomenes was able to beat Atalanta by tempting her with three golden apples provided by Aphrodite, who was offended by Atalanta's rejection of the love of the suitors.
- 129.** Epeius was credited with building the Trojan Horse with the help of Athena. The Warriors hid inside it and stormed the city. *Odyssey* viii.493.
- 130.** Thersites was an unremarkable soldier in the Achaean army during the Trojan War. In *Iliad* ii.211-277 he is depicted interrupting and berating Agamemnon as he is rallying the troops. In response, Odysseus beats and rebukes Thersites for his insolence.
- 131.** Odysseus was the king of Ithaca. He was a leading warrior for the Achaeans in the Trojan War. His ten-year journey back to Ithaca from Troy is recounted in Homer's *Odyssey*.

scene: continuation of the Theaetetus, the day after that conversation

216a

Theodorus: Well, Socrates, as agreed yesterday,¹ we have come in person, and appropriately we are bringing this stranger, one of the people from Elea, an associate of those who follow Parmenides and Zeno.² He is a man with a great love of wisdom.

Socrates: In that case, Theodorus, are you unwittingly bringing in some god rather than a stranger, as Homer's phrase would have it, when he says that the gods in general, and the god of strangers in particular, become the companions of people who partake of true righteousness, to behold the excesses and the good order of humanity?³ So, perhaps this companion of yours may indeed be one of those higher powers, who is going to watch over and refute our sorry predicament in these arguments, as he is a god of refutation.

216b

Theodorus: That is not the manner of this stranger, Socrates. No, he is more moderate than those who take controversies seriously. Indeed, the man does not seem to me to be a god at all, though he is certainly divine, for I refer to all philosophers as divine.

216c

Socrates: And rightly so, my friend. In fact, you could say that this kind is just as difficult to discern as that of the god. Because most people do not recognise them, they go in and out of the cities in all sorts of guises.⁴ And the actual philosophers, not the artificial ones, looking down from on high at the life of those

below seem to some quite worthless, and to others most precious. Sometimes they appear as statesmen, at other times as sophists, and then again to some people they give the appearance of being utterly insane. Now, if it is acceptable to our stranger, I would like to find out from him what the people in his country think about these, and what names they use.

217a

Theodorus: What are you referring to?

Socrates: Sophist, statesman and philosopher.

Theodorus: What do you want to ask? What exactly is puzzling you about them?

Socrates: This: whether they regard all of these as one or two, or, as the names imply, three, also distinguishing three kinds and applying a name individually to each.

217b

Theodorus: Well, I don't think that he is at all reluctant to give an account of these. But what does our stranger say?

Stranger: Just that, Theodorus. There is no reluctance at all, nor is there a problem stating that my people believe there are three. But to define what exactly each of them is would not be a simple or easy task.

Theodorus: Well now, Socrates, by chance you have introduced questions much like those we happened to be asking him before we came here, and he gave the same excuse to us at the time as he gave to you just now. However, he does say that he has heard enough, in detail, and has not forgotten it.

217c

Socrates: Then, stranger, do not deny us the first favour we ask, and tell us this much. Do you usually prefer to deliver a lengthy oration expressing what you wish to present to someone, in your own way? Or do you work through questioning, as Parmenides once did in my presence, as he expounded glorious

arguments when I was young, while he was, by then, quite an elderly man indeed?⁵

Stranger: Well, Socrates, this interactive approach is easier with someone who converses mildly and co-operatively, but otherwise it is better to do the talking oneself.

Socrates: Then you may select any member of the company you wish, for they will all respond gently to you, though if you take my advice you will choose one of the young men – Theaetetus here – or any of the others whom you prefer.

217d

Stranger: Socrates, I feel a certain shame now at our first encounter for not making conversation based on short word-for-word exchanges instead of expounding a lengthy and prolonged oration all by myself, or with a respondent, as though I were putting on an exhibition. In fact, there is more to this than one might imagine from your question, and any account of it must be an extremely lengthy one. Then again, it seems to me discourteous and uncivil not to oblige you and these people, especially when you express it in this way. As for Theaetetus, well I unreservedly accept him as a partner in discourse, based on my own previous conversation, and your present recommendation.

217e

Theaetetus: Go ahead, dear stranger, and, as Socrates says, you will be doing us all a favour.

Stranger: There is probably no more to be said on these issues, and from now on the discussion should be with you, Theaetetus. So, if the length of it causes problems, do not blame me for that. Blame these friends of yours instead.

Theaetetus: Well, at the moment I don't think I shall give up on that account. However, if something like that does happen, we could involve Socrates here, the namesake of 'the' Socrates, as

he is the same age as I am, we train together, and he is well used to working with me.

218a

Stranger: Well said, and you can make that decision for yourself as the discussion proceeds. But you and I should now investigate this together, beginning firstly, I believe, with the sophist, searching and clarifying through argument what precisely he is. Indeed, at the moment our only common possession is his name, though perhaps we have the function upon which we both confer that name, privately within ourselves. But we should always come to agreement on the issue itself through arguments rather than a mere name in the absence of argument. We intend to investigate this kind, the sophist, but it is not the easiest thing in the world to comprehend what precisely he is. Now, whenever major issues need to be worked out properly, everyone has traditionally agreed that in such circumstances we should practise first with small and simple things before moving on to the greater. So now, Theaetetus, I am advising us, in view of the difficulty and elusiveness of the sophistic kind, to practise the method first on something simpler, unless you can suggest an easier way.

218d

Theaetetus: No, I cannot.

218e

Stranger: In that case, do you want us to resort to some ordinary example, and attempt to position it as a model for what's more important?

Theaetetus: Yes.

Stranger: Well then, what should we choose first as something minor and well known, and yet having an account no shorter than the important items? What about an angler, since he is readily recognisable to everyone without being of any great significance?

Theaetetus: Just so.

219a

Stranger: Well, I hope he provides us with a method and an account that is suitable to our purposes.

Theaetetus: That would be good.

Stranger: Come on, let's begin as follows. Tell me whether we should propose that he is a skilled person or someone who is unskilled, but has some other power.

Theaetetus: He is certainly not unskilled.

Stranger: Well then, all skills belong basically to two forms.

Theaetetus: How so?

219b

Stranger: Farming and the general care of any mortal creature, also the assembling or moulding of what we call household goods, and the imitative skill, may all be most properly referred to by a single name.

Theaetetus: How? What is it?

Stranger: When a person brings something into being which previously was not, we usually say that he who brings it into being produces it, and whatever is brought into being is produced.

Theaetetus: Correct.

Stranger: And the power of everything we just mentioned is directed towards production.

Theaetetus: That is indeed their direction.

Stranger: Then we may refer to these by the general term 'productive'.

219c

Theaetetus: We may.

Stranger: Now, besides this, there is the whole form that includes learning, knowledge acquisition, finance, sport and hunting. Although none of these actually manufacture anything, some manipulate by speech and action what has come into being or already exists, while others prevent anyone else from manipulating them. On this basis, all these subdivisions may very properly be said to constitute an acquisitive skill.

Theaetetus: Yes, that would be appropriate.

219d

Stranger: Then, since all skills are either productive or acquisitive, in which of the two should we place angling, Theaetetus?

Theaetetus: In the acquisitive. I suppose that is obvious.

Stranger: But are there not two forms of the acquisitive, one being an exchange between willing participants through gifts, hire or purchase, while the rest includes all manipulation based upon word or deed, and this would be the manipulative skill?

Theaetetus: It appears so anyway, from what has been said.

Stranger: But what about this? Shouldn't the manipulative skill be divided into two?

Theaetetus: In what way?

219e

Stranger: By designating all overt manipulation as competitive, and all manipulation by stealth as hunting.

Theaetetus: Yes.

Stranger: However, it would be unreasonable not to divide hunting in two.

Theaetetus: Tell me how.

Stranger: By categorising it as the hunting of living or lifeless prey.

Theaetetus: Why yes, if there are indeed both.

220a

Stranger: How could there not be both? Though it is best to disregard the hunting of the inanimate, as it does not even have a name, except for certain parts of diving and other trifling activities of that sort. However, we should refer to the hunting of living creatures as animal hunting.

Theaetetus: So be it.

Stranger: Can't we also say, properly speaking, that animal hunting is twofold in form? One kind involving land animals is divided into many forms and names, while the other includes the swimming creatures and is generally called water animal hunting.

Theaetetus: Yes, certainly.

220b

Stranger: Now, we observe that one class of swimming creatures has wings, while the other lives in the water.

Theaetetus: Obviously.

Stranger: And the hunting of the winged kind is generally referred to as fowling, I suppose.

Theaetetus: Yes, that's what it's called.

Stranger: While the hunting of the water dwellers is, in general, termed fishing.

Theaetetus: Yes.

Stranger: What about this? Can't we also divide this hunting again into two broad significant parts?

Theaetetus: Based upon what?

220c

Stranger: Based on whether they conduct the hunt with traps or by striking.

Theaetetus: What do you mean? And how do you distinguish between these?

Stranger: Well, whatever encloses something, and completely surrounds it to imprison it, may properly be called a trap.

Theaetetus: Yes, certainly.

Stranger: So, baskets, nets, snares, nooses and the like must obviously be referred to as traps.

Theaetetus: Indeed.

Stranger: Then we shall say that this part of hunting is trapping, or something of that sort.

Theaetetus: Yes.

220d

Stranger: But, Theaetetus, hunting effected by impact with hooks or tridents is different from this, and should now be referred to by the single word 'striking', unless someone has a better suggestion.

Theaetetus: Let's not bother about the name, this one will suffice.

Stranger: Well, I believe that striking that occurs at night by firelight is referred to by the hunters themselves as fire-hunting.

Theaetetus: It is, indeed.

Stranger: While striking conducted in daylight is generally termed barbing, as both the tridents and the hooks are barbed at the tip.

Theaetetus: Yes, that's what it is called.

220e

Stranger: Now, this striking by barbing, when performed from above upon prey which is below, is called tridentry, I believe, as it is usually done using tridents.

Theaetetus: Well, that's what some people call it.

Stranger: However, there is, so to speak, only one form still left.

Theaetetus: What is it?

221a

Stranger: The kind which delivers the blow which is opposite to the trident and is effected with a hook, but not to any random part of the body of the fish, but always to the head and mouth of the victim, pulling him upwards from below with rods or sticks. By what name shall we say this process should be called, Theaetetus?

Theaetetus: Well, we proposed earlier that we needed to discover something, and I think our search has just been concluded.

221b

Stranger: So, now you and I have come to agreement not just about the name of angling, but we have also acquired a satisfactory account of the function itself. Indeed, from the totality of skills, one half was acquisitive, half of the acquisitive was manipulative, and half of manipulative was hunting. Half of hunting was animal-hunting, and half of animal-hunting was water animal-hunting. The lower division of water animal-hunting was fishing, and half of fishing was striking, and half of striking was barbing. Now, the barbing by a blow which pulls upwards from below has a name which reflects this activity, and this is the angling for which we have been seeking.

221c

Theaetetus: Yes, that has certainly been made abundantly clear.

Stranger: Come now, let's try to find out what exactly a sophist is, based upon this model.

Theaetetus: Yes, certainly.

Stranger: Now, the first question we asked was whether we should regard the angler as an ordinary man, or as someone with a skill.

Theaetetus: Yes.

221d

Stranger: And shall we now propose, Theaetetus, that this other man is an ordinary man, or in truth utterly wise?

Theaetetus: He is certainly not an ordinary man. However, I understand what you mean, as he falls far short of the wisdom which his name implies.⁶

Stranger: But it seems we must propose that he has some skill.

Theaetetus: Well, in that case, what precisely would it be?

Stranger: By the gods, have we ignored the fact that this man is related to the other man?

Theaetetus: Who is related to whom?

Stranger: The angler to the sophist.

Theaetetus: In what way?

Stranger: To me they are both quite obviously hunters of some sort.

221e

Theaetetus: What is the hunt of the sophist? We have said what the other man hunts.

Stranger: We somehow divided all hunting into two parts just now, one of swimming creatures and the other of land creatures.

Theaetetus: Yes.

Stranger: And we went on to discuss those swimming creatures who live in water, while we left the land animals undivided, though we said there were many forms.

222a

Theaetetus: Certainly.

Stranger: So, beginning with the acquisitive skill, the sophist and the angler proceed together up to this point.

Theaetetus: So it seems, anyway.

Stranger: However, they diverge when it comes to animal hunting, and one will hunt animals in seas, rivers and lakes.

Theaetetus: Of course.

Stranger: While the other will hunt by land, and in quite different rivers of wealth and youth, which are like abundant meadows, in order to manipulate the creatures in them.

222b

Theaetetus: What do you mean?

Stranger: There are two significant parts of land animal hunting.

Theaetetus: What are they?

222c

Stranger: One is of the tame and the other of the wild.

Theaetetus: Is there any hunting of tame animals?

Stranger: Yes, if man is indeed a tame animal. But propose whatever you like, either that no animal is tame, or that some other animal is tame while man is wild, or that man is actually tame but in your opinion there is no hunting of men whatsoever. Make whatever one of these statements pleases you, and let that be our definition.

Theaetetus: Well, I believe that we are tame creatures, and I say that there is hunting of men.

Stranger: Let's declare that tame animal hunting also has a twofold division.

Theaetetus: On what basis is that said?

Stranger: By defining piracy, enslavement, tyranny, and everything military under the single heading of violent hunting.

Theaetetus: Good.

222d

Stranger: And by then referring to skill in winning court cases, speaking to crowds, and general conversation, all together, as the single skill of persuasion.

Theaetetus: Correct.

Stranger: Now, we should say that there are two kinds of persuasion.

Theaetetus: What are they?

Stranger: One operates in private, the other in public.

Theaetetus: Yes, each of these does constitute a form.

Stranger: Now, isn't the hunting of private persons, for its part, either reward-accepting or gift-bearing?

Theaetetus: I do not understand.

Stranger: It seems you have not yet paid attention to the hunting carried out by lovers.

Theaetetus: To what aspect?

222e

Stranger: That besides everything else, they bestow gifts on those whom they hunt.

Theaetetus: Very true.

Stranger: Well, let this form then be called the skill of love.

Theaetetus: Certainly.

Stranger: But the form which accepts reward converses for the sake of gratification, and lays its bait entirely through pleasure, demanding only its own sustenance as a reward. And I think we would all refer to this as flattery, a skill in making things pleasant.

Theaetetus: Yes, what else could it be?

223a

Stranger: However, when it professes to carry on its discourse as though for the sake of excellence, and exacts a financial reward, doesn't that kind deserve a different name from the previous one?

Theaetetus: Yes, it must.

Stranger: What name? Try to say.

Theaetetus: Well, it's obvious. Indeed, we seem to me to have discovered the sophist. So, having said that, I think I would be calling it by the appropriate name.

223b

Stranger: Then it seems, Theaetetus, based on the present account, that what must be referred to as sophistry is an acquisitive skill of hunting live, land-dwelling prey, hunting humans privately for money payment, which seems to be educational, and is a hunt for rich and famous young men. That is what our current argument concludes.

Theaetetus: Entirely so.

Stranger: Let's take a further look at this. For what we are pursuing belongs to no ordinary skill but to an extremely variegated one. And, indeed, in our previous deliberations, the appearance is given that it is not what we are now saying it is,

but is a different kind.

223c

Theaetetus: In what way?

Stranger: The acquisitive skill somehow was a twofold form, one part was hunting and the other exchange.

Theaetetus: It was, indeed.

Stranger: Should we now declare that there are two forms of exchange, one based on gifts, the other on purchase?

Theaetetus: Let's say so.

Stranger: And we shall actually go on to say that purchasing is divided in two.

223d

Theaetetus: How?

Stranger: By distinguishing between the sale of one's own productions, which is 'self-selling', and dealing in the productions of others, which is barter.

Theaetetus: Yes, certainly.

Stranger: What about this? Don't we refer to barter within the city, which is roughly half of it, as retailing?

Theaetetus: Yes.

Stranger: And the barter between one city and another, by sale and purchase, as trading?

Theaetetus: Of course.

223e

Stranger: Have we not observed that there is trading which, in one case, exchanges for money whatever sustains and provides for the body, and, in another case, whatever sustains and provides for the soul?

Theaetetus: What do you mean by that?

Stranger: Perhaps we don't recognise this in relation to the soul, though we do presumably understand the other instance.

Theaetetus: Yes.

224a

Stranger: Well, let's speak about music and skills in general, which are constantly going from city to city, being bought in one place, brought somewhere else and sold. Paintings, entertainments and much else besides are brought in and sold, some for the delight, others for the more serious intent, of the soul. Now, a buyer or seller of these has as much right to be called a trader as those who sell food and drink.

Theaetetus: What you say is very true.

224b

Stranger: And shouldn't a man who buys up items of knowledge, and goes from city to city exchanging them for money, also be called by the same name?

Theaetetus: Quite emphatically.

Stranger: Now, one part of this trading for the benefit of the soul may properly be called exhibiting, and the other part is just as ridiculous, but nevertheless, since it is the actual sale of knowledge, it must be assigned a name relevant to this activity. Is this not so?

Theaetetus: Yes, certainly.

224c

Stranger: Therefore, the part of this knowledge-selling which relates to the subjects of the other skills should be called that, while the part which deals with the subject of excellence should be called something else.

Theaetetus: Of course.

Stranger: Well, in the case of the other subjects, skill-selling would be an appropriate name. Now, you must try to give the

name of the part which deals with excellence.

Theaetetus: Indeed, it is the very object of our search! What other name could you safely utter? It is the sophistic kind.

224d

Stranger: None other. Come on, we shall summarise this now by saying that sophistry has made its second appearance as part of the acquisitive skill, which exchanges by purchasing through trading, which is for the benefit of the soul, and traffics in words and knowledge concerning excellence.

Theaetetus: Exactly.

224e

Stranger: Actually, I think you have a third instance. For if one of them settled down in the city and proposed to make a living by buying some knowledge, and also fabricating his own knowledge on the same subjects, and making sales, presumably you would call him by the exact same name as you used just now.

Theaetetus: I would have to.

Stranger: And so, the part of the acquisitive skill which involves exchange by purchasing, whether by retailing or self-selling, in either case whatever involves selling knowledge in this way, you would presumably refer to, always, as sophistic.

Theaetetus: I must, for I need to keep following the argument.

225a

Stranger: Then let's proceed to consider if the kind which we are pursuing actually bears a resemblance to something like this.

Theaetetus: Like what?

Stranger: We said that the acquisitive skill had a competitive part.

Theaetetus: Yes, we did.

Stranger: So, quite predictably, we divide it in two.

Theaetetus: Tell me how it is done.

Stranger: By designating one part as contentious and the other as combative.

Theaetetus: That's it.

Stranger: Is it quite reasonable and appropriate then, to assign a name such as 'violent' to the part of the combative which pitches bodies against one another?

Theaetetus: Yes.

225b

Stranger: And when it is one argument against another, what else can we call it, Theaetetus, except disputatious?

Theaetetus: Nothing.

Stranger: And we should propose that the part concerned with disputes is twofold.

Theaetetus: How so?

Stranger: Well, when it is conducted in public, with one long speech opposing another, and the concern is justice and injustice, then it is a judicial dispute.

Theaetetus: Yes.

Stranger: However, when it is done in private, and has been broken up into questions and answers, is there anything else we usually call it except contradiction?

Theaetetus: Nothing.

225c

Stranger: And the sort of contradiction which argues about contracts and proceeds at random and without skill, this should

be designated as a particular form, since the discussion recognises it as separate. However, our predecessors never gave it a name, nor would it be worth our while to do so now.

Theaetetus: True, for it has such minute and multifarious sub-divisions.

Stranger: But when it does involve a skill, and disputes comprehensively about justice itself and injustice and about other matters, don't we usually refer to it as argumentative?

Theaetetus: What else could we call it?

225d

Stranger: Now, there is a form of the argumentative which wastes money, and a form which makes money.

Theaetetus: There certainly is.

Stranger: Well, let's try to say what names should be given to each of them.

Theaetetus: Yes, we should do that.

Stranger: Now, I think that when the pleasure of engaging in these leads to neglect of one's own affairs, and the speech affords no pleasure to the many people who hear it, then in my opinion it is nothing other than talkativeness.

Theaetetus: Yes, that's the sort of thing that is said about it.

225e

Stranger: Then, the opposite of this makes money from private arguments, and it is now your turn to try to name it.

Theaetetus: Indeed, what else can one say without falling into error, except that a wondrous creature has turned up again for the fourth time, the object of our pursuit, the sophist.

226a

Stranger: So, our argument has now revealed further that the sophist is none other than the money-making kind, as it seems,

belonging to the argumentative, contradictory, disputatious, combative, competitive skill in acquisition.

Theaetetus: Yes, certainly.

Stranger: Now do you see how true it is that this is a creature of many aspects who will not be "captured with one hand", as the saying goes?

Theaetetus: Then we must use both!

226b

Stranger: Yes, we must. And we should do this to the best of our ability by pursuing a particular mark of his. Tell me, then, do we have certain names for common household tasks?

Theaetetus: Indeed there are many, but what sort of tasks are you asking about?

Stranger: We refer to tasks such as filtering, sifting, sieving and winnowing.

Theaetetus: Of course.

Stranger: And in addition to these, there is dressing wool, spinning, adjusting the web, and we know countless other such terms which are involved in the skills. Is this so?

226c

Theaetetus: What quality of them do you wish to demonstrate when you give these examples and ask about them all?

Stranger: All of these terms somehow refer to discrimination.

Theaetetus: Yes.

Stranger: Then, according to my argument, we should assign one name to the single skill which is involved in them all.

Theaetetus: What shall we call it?

Stranger: Discrimination.

Theaetetus: So be it.

Stranger: Well, let's see if there is any way that we can proceed to discern two forms of this.

Theaetetus: You are asking me to think very quickly.

226d

Stranger: And yet in the distinctions we described, one separated worse from better, another like from like.

Theaetetus: When you put it like that it appears so anyway.

Stranger: Now, I do not have a name for the second one, but I do have a name for discrimination, which leaves the better and discards the worse.

Theaetetus: Say it.

Stranger: All such discrimination is, as I understand it, referred to by everyone as purification.

Theaetetus: Yes, that's what it is called.

226e

Stranger: And couldn't everyone see that purification has two forms?

Theaetetus: Given time, perhaps. However it is not obvious to me at the moment.

Stranger: Well, it is surely appropriate to comprehend the many forms of bodily purification under a single name.

Theaetetus: What are they? And what is this name?

227a

Stranger: There are those which apply to living creatures and effect purification within the body, making proper divisions by means of gymnastics or medicine, and outside the body through the process of bathing. These we regard as commonplace. There are also those affecting inanimate things which are cared for by

wool-dressing and adorning in general, and are given numerous trivial and apparently ridiculous names.

Theaetetus: Very much so.

227b

Stranger: They certainly are, Theaetetus. However, it is of no particular concern to the method based on arguments, whether purification by washing or medication benefits us much or little. For it endeavours to discern the inter-relation and non-relation of all the skills, with the aim of acquiring intelligence, and to that end it respects them all equally. Indeed, because of their similarity, this method does not believe that one is more ridiculous than another. And it does not regard a person as more important if he exemplifies his skill in hunting through generalship, rather than louse-catching, though it will probably regard him as more pretentious.

Now, let's go back to the question you asked. What name shall we assign to the collective capacities whose function is to purify living and lifeless bodies? And it will make no difference to this method whether the title sounds impressive or not, as long as it separates out whatever purifies the soul, and combines whatever purifies anything else. Indeed, if we do in fact understand its intention, this method has attempted to separate mental purification from the others.

227c

Theaetetus: But I do understand, and I agree that there are indeed two forms of purification, though one form is concerned with the soul, which is separate from the one concerned with the body.

Stranger: Really excellent! Now, listen to the next aspect, and try in turn to cut that form in two.

Theaetetus: I shall try to make this division on whatever basis you suggest.

Stranger: Do we say that vice in the soul is something different from excellence?

Theaetetus: What else could we say?

227d

Stranger: And purification was the casting aside of whatever was in any way base, leaving the other part.

Theaetetus: Yes, it was.

Stranger: So then, to whatever extent we discern any removal of badness from the soul, we may properly refer to that process as purification.

Theaetetus: Very much so.

Stranger: Now we should state that there are two forms of badness of the soul.

Theaetetus: What are they?

Stranger: One is like a disease in the body, while the other is like a deformity that arises.

Theaetetus: I do not understand.

Stranger: Perhaps you think that disease and discord are not the same?

Theaetetus: Again, I do not know how to respond to this.

228a

Stranger: Do you believe that discord is anything other than disagreement, born of some corruption, among naturally kindred elements?

Theaetetus: Nothing other.

Stranger: And is deformity anything other than the absence of measure, a characteristic which is ugly in every case?

Theaetetus: Nothing else.

Stranger: What about this? In the souls of base people, don't we observe that opinions are opposed by desires, spirit by pleasures, and reason by aversions, and that all these are opposed to one another?

Theaetetus: Very much so.

228b

Stranger: However, all of these are necessarily kindred.

Theaetetus: Of course.

Stranger: So, we shall be right in referring to vice as discord and disease of the soul.

Theaetetus: Absolutely right.

228c

Stranger: What about this? If things that partake of motion and have been assigned some target wander off that target with every attempt, and miss the mark, would we say that this happens to them through proper measure in relation to one another, or alternatively through lack of measure?

Theaetetus: Obviously through lack of measure.

Stranger: Now, we do know that any soul which is ignorant of anything is ignorant unwillingly.

Theaetetus: Very much so.

228d

Stranger: And, indeed, ignorance is nothing but the disordered thinking of a soul, intent upon truth, whose understanding goes astray.

Theaetetus: Yes, certainly.

Stranger: So we must propose that an ignorant soul is deformed and lacking in measure.

Theaetetus: So it seems.

Stranger: Now, there are, it appears, two kinds of badness in the soul. One, which most people call vice, is clearly a disease of the soul.

Theaetetus: Yes.

Stranger: The other they call ignorance, but they are unwilling to agree that it is a badness arising only in the soul.

228e

Theaetetus: It certainly should be conceded, though I doubted it now when you said that there are two kinds of badness in the soul, and that cowardice, lack of restraint, and injustice should all be regarded as a disease within us, while the many varieties of ignorance should be designated as deformity.

Stranger: Now, in the case of the body, aren't there two skills relating to the two conditions?

Theaetetus: What are the two?

229a

Stranger: Gymnastic for deformity and medicine for disease.

Theaetetus: Clearly.

Stranger: And when it comes to violence, injustice and cowardice, surely punishment is the skill which is naturally closer to justice than any other?

Theaetetus: Quite likely. At least that's what people think.

Stranger: What about the other case? Could anyone prescribe anything more appropriate than teaching to remedy ignorance in its entirety?

Theaetetus: Not at all.

229b

Stranger: Come now. Should we say that there is only one kind of teaching, or are there more, two of which are the most significant? Consider this.

Theaetetus: I am considering it.

Stranger: Well, I think the quickest way for us to find out would be as follows.

Theaetetus: How?

Stranger: By seeing whether ignorance has somehow got a division in the middle of it. For if it is twofold, it is obvious that teaching must also have two parts, one corresponding to each kind of ignorance.

Theaetetus: Yes, but is the division we are now looking for becoming evident to you?

229c

Stranger: Well, I think I can discern a distinct form of ignorance which is extensive and problematic, and as weighty as all the other parts put together.

Theaetetus: What is it?

Stranger: Being of the opinion that you know something when you do not know. It is likely that this is how all mistaken thinking arises in everyone.

Theaetetus: True.

Stranger: And, indeed, it is only this form of ignorance which is given the name of foolishness.

Theaetetus: Yes, certainly.

229d

Stranger: Now then, what should we call the part of teaching which does away with this foolishness?

Theaetetus: Well, stranger, I believe that the other part of it is called technical instruction, while this part, among ourselves in the city at any rate, is called education.

Stranger: Almost all the Greeks do the same, Theaetetus. However, we shall still need to consider whether education is completely indivisible, or has some subdivision worth naming.

Theaetetus: Yes, we should consider that.

Stranger: It seems to me that there is a way of dividing this further.

Theaetetus: On what basis?

229e

Stranger: There seems to be a part of teaching in discourse, which is a rougher method, and another one, which is smoother.

Theaetetus: Can we say what sort of methods they are?

Stranger: Well, there is the traditional method which fathers use towards their sons, a method still used by many today whereby they either get angry with them whenever they fall into error, or else resort to more gentle exhortation. This may in general most correctly be called didactic.

Theaetetus: So it is.

230a

Stranger: However some people, having considered this for themselves, seem to conclude that all ignorance is involuntary, that no one who thinks that he is wise will ever wish to learn about matters of which he thinks himself knowledgeable, and that after a lot of trouble, the didactic form of education accomplishes little.

Theaetetus: A correct conclusion.

Stranger: Accordingly, they set about the eradication of this opinion in another way.

Theaetetus: What way?

230b

Stranger: They question him on matters about which he believes he is talking sense, when he is talking nonsense. They readily discover that his opinions are quite confused. So, by arguments, they gather the opinions together and place them side by side, and then they show him that these contradict themselves, about the same issues, in the same ways, and on the same basis. And those who recognise this become angry with themselves and gentle towards others, and they are liberated by this method from their exalted and fixed views about themselves. Their liberation brings the greatest delight to those who hear it, and constancy to those who experience it.

Indeed, dear child, the physicians of the body recognise that the body derives no benefit from any food it is offered until the internal impediments are first removed. So too these purifiers of the soul understand that the soul will obtain no advantage from any learning which it is offered until someone resorts to refutation, and brings the man who is refuted to a condition of humility where the impediments to learning have been removed, he is rendered pure, and he thinks that he knows only what he does actually know, and nothing more.

230d

Theaetetus: And this is surely the best and most sound-minded condition to be in.

230e

Stranger: Now, on account of all this, Theaetetus, we must also state that refutation is the greatest and most powerful of

purifications, and we must realise that the unrefuted man, even if he happens to be the Great King,⁷ is utterly unpurified, and is both uneducated and deformed, where a man who intends to be truly happy should be most pure and good.

Theaetetus: Entirely so.

231a

Stranger: Well then, what shall we call those who employ this skill? Indeed, I am afraid to say sophists.

Theaetetus: Why is that?

Stranger: In case I assign them too much honour.

Theaetetus: But surely the people we are discussing bear some resemblance to sophists.

Stranger: Yes, and so does a wolf to a dog, the fiercest animal to the tamest. And a cautious man must always be on his guard, especially when dealing with resemblances, for they are a most slippery class. Anyway, let them be called sophists, for I don't think that disputes over minor distinctions will arise once people are sufficiently vigilant.

231b

Theaetetus: No, it is quite unlikely.

Stranger: So let there be a purificatory part of the skill of discrimination, and from purification let us separate out the part which deals with the soul. Let teaching be part of this, and let education be part of teaching, and let us say that the part of education which brings about refutation of a vain presumption to wisdom turns out in our present argument to be nothing other than the noble kind of sophistry.

231c

Theaetetus: Well, let's say so. But on account of the multiplicity of manifestations, I am now perplexed about what exactly I should say that the sophist really is with any confidence that I

am speaking the truth.

Stranger: Your perplexity is to be expected. But you must also appreciate that the man himself is intensely perplexed by now as to how he will continue to evade this argument. Indeed, the proverb is right in saying that "it is not easy to escape all the grips of the wrestler". So now is the very best moment, and we must set upon him.

Theaetetus: Well said.

231d

Stranger: Well, now that we have stopped, let's catch our breath first, and while we are resting let's count up for ourselves how many times the sophist has appeared to us. Now, I think he was first discovered as the paid hunter of the young and wealthy.

Theaetetus: Yes.

Stranger: And secondly as a trader in things which are learned by the soul.

Theaetetus: Yes, certainly.

Stranger: And didn't he appear for the third time as a retailer of the same things?

Theaetetus: Yes, and for the fourth time selling his own knowledge himself.

231e

Stranger: Your recollection is correct. Now I shall try to remember the fifth. Indeed, he was a contestant in verbal competitiveness, specialising in the argumentative skill.

Theaetetus: He was, indeed.

Stranger: Well, although the sixth was actually disputed, we agreed nevertheless to propose that he is a purifier of souls from opinions that are an impediment to learning.

Theaetetus: Yes, entirely so.

232a

Stranger: Well, do you appreciate that when someone appears knowledgeable about many subjects but is called by the name of a single skill, this appearance is not sound? Rather, it is obvious that whoever experiences this in relation to any skill is unable to discern clearly that aspect of the skill that all these understandings look to. Consequently he assigns multiple names, rather than one, to whoever possesses them.

Theaetetus: It's likely that this happens in exactly the way you describe.

232b

Stranger: Let's ensure that it does not happen to us in our search, due to laziness. Rather, let us first take one of the statements about the sophist again, as there was one which did seem particularly revealing to me.

Theaetetus: Which one?

Stranger: We said that he was a contradictor.

Theaetetus: Yes.

Stranger: What else? Isn't he also a teacher of others, in this particular skill?

Theaetetus: Yes, indeed.

232c

Stranger: Let's consider this. In what realm do these men claim that they can turn people into contradictors? Our enquiry should begin as follows. Do they render people competent in contradicting about the divine realm which is unmanifest to the multitude?

Theaetetus: Well that is what people say, anyway.

Stranger: And what about the manifest realm of earth and sky, and the subjects associated with them?

Theaetetus: These too.

Stranger: In fact, whenever something is said in private gatherings concerning the entire field of becoming or being, we are aware, aren't we, that these men are brilliant at arguing against it, and they enable others to do the same.

Theaetetus: Entirely so.

232d

Stranger: And again, don't they also promise to enable people to dispute about laws, and affairs of state in general?

Theaetetus: Indeed, no one, or hardly anyone, would converse with them unless they made that promise.

Stranger: Indeed, for each and every skill, what is needed in each case to argue against the practitioner himself has presumably been composed, written down, and published for anyone who wishes to learn.

232e

Theaetetus: You seem to me to be referring to the writings of Protagoras,⁸ on wrestling and the other subjects.

Stranger: And of many others besides, blessed man. However, doesn't this skill in contradiction seem, in short, to be a power which is up to the task of disputation on all subjects.

Theaetetus: Well, there is nothing it seems to leave out.

233a

Stranger: Well, by the gods, child, do you think this is possible? For perhaps you young people may view this matter with more insight, while we older men are more dim.

Theaetetus: What matter? What exactly are you referring to? I do not quite understand what you are asking me now.

Stranger: Whether it is possible for a human being to know all things.

Theaetetus: In that case, stranger, the human race would indeed be blessed.

Stranger: Then how could someone who is not knowledgeable himself ever say anything worthwhile when he contradicts a person who knows?

Theaetetus: He simply cannot do so.

233b

Stranger: Well, what on earth can this wondrous sophistic power be?

Theaetetus: Wondrous in what way?

Stranger: In the way that they are somehow able to arm young people with the belief that they are wiser than everyone about everything. For it is obvious that if the sophists neither contradicted properly nor gave that appearance to the young, or again if they did give that appearance but were not regarded as more learned due to this disputatiousness, then according to you hardly anyone would want to pay money to become their pupils in these subjects.

233c

Theaetetus: Hardly anyone indeed.

Stranger: But nowadays they want to do this.

Theaetetus: Very much so.

Stranger: Presumably because the sophists are believed to be knowledgeable themselves with regard to whatever they contradict.

Theaetetus: That must be so.

Stranger: And are we saying that they may contradict every proposition?

Theaetetus: Yes.

Stranger: So they will appear to their pupils to be wise about everything.

Theaetetus: They must.

Stranger: But they are not, for this turned out to be impossible.

Theaetetus: Yes, it must be impossible.

Stranger: So our sophist has turned out to have an opinion-based knowledge about everything, but not truth.

233d

Theaetetus: Yes, certainly. And what we are now saying is probably the most accurate thing we have said about these fellows.

Stranger: Well, let's take a clearer example of this.

Theaetetus: What sort of example?

Stranger: As follows. Apply your mind to this and try to answer really well.

Theaetetus: Answer what?

Stranger: If someone were to maintain that on account of a single skill he knew not how to speak and argue, but how to do and make everything there is...

233e

Theaetetus: What do you mean by everything?

Stranger: You immediately fail to understand the point of what was said. In fact, it seems you do not understand the phrase 'everything there is'.

Theaetetus: No, I do not.

Stranger: Well, I am saying that you and I are included in 'everything', as well as all the other animals and plants.

Theaetetus: What do you mean?

Stranger: If someone said he was going to make you and me, and all the other creatures...

234a

Theaetetus: What could he mean by 'making'? Indeed, you are not actually referring to some sort of farmer, since you are also talking about a maker of animals.

Stranger: And also of sea and earth, sky and gods, and everything else there is. What's more, he makes them quickly and sells each of them for very little money.

Theaetetus: You are describing some sort of game.

Stranger: Indeed. Mustn't you regard it as a game when someone says that he knows everything and would teach this to someone else for a small sum in a short time?

Theaetetus: Entirely so.

234b

Stranger: And do you know of any form of game more skilled and elegant than that of imitation?

Theaetetus: Not at all. Indeed, you have proposed a very extensive form, all captured in a single word, more diverse than almost anything else.

Stranger: And so we appreciate that a man who professes to be able to make everything by means of a single skill, will be able to make imitations with the same names as the real objects by means of the skill in painting, and to deceive the less intelligent of the young children, who view the paintings from afar, into believing that he is entirely competent to complete any task he wishes.

234c

Theaetetus: How could he fail?

Stranger: Now, shouldn't we presume that there is some other skill involving words by which one could beguile the young through their ears with words, while they are still at a far remove from matters of truth, showing them verbal images of everything so as to make the statements seem true, and the speaker seem the wisest of all men on every issue?

234d

Theaetetus: Yes, there would be another skill like this, wouldn't there?

Stranger: Now, Theaetetus, most of those when they hear this, must, given enough time and advance in years, encounter things that are, and be compelled through their experiences to get a clear apprehension of things that are. This changes the opinions they once held, so that what was significant will appear trivial and what was easy will appear difficult, and all the illusions created by words will be turned completely upside down by the practical situations which they encounter. Is this so?

Theaetetus: Yes, as far as I can judge at my age anyway. But I believe that I am one of those who are "still at a far remove from matters of truth".

234e

Stranger: In that case, all of us here will try, and indeed are trying, to draw you as close as possible to the truth in the absence of these experiences. So now, tell me something about the sophist. Is it clear by now that he is a sort of beguiler who imitates things that are, or are we still hesitating, in case he truly possesses as many items of knowledge as the number of subjects on which he seems to be able to practise contradiction?

Theaetetus: How could he, stranger? No. It is fairly clear by now from what has been said, that he is one of the huge number of people involved in entertainment.

235a

Stranger: Well, in that case, we should propose that he is a beguiler and a sort of imitator.

Theaetetus: What else could we propose?

Stranger: Come now, our task at this stage is to make sure that the creature does not get away. Indeed, we have almost captured him in a sort of web of devices involving our statements about these matters. Consequently, he will never escape the next proposal.

Theaetetus: What is it?

235b

Stranger: That he is someone who belongs to the wonder-working kind.

Theaetetus: And I agree with that statement about him at least.

Stranger: It is accepted then that we should divide the image-making skill immediately, and descend into it, and if the sophist opposes us there, arrest him on the orders of lordly reason, hand him over to that king, and publicise his capture. But if he should somehow dive down into the subdivisions of the skill of imitation, we shall follow along, and continually divide the part which contains him until he has been caught. There is no way that this, or any other kind, will ever boast of escaping the method of those who are thus able to proceed in this way, based upon both the particular and the general.

235c

Theaetetus: Well said! We should do as you say.

Stranger: Now, based upon the process of division we have been using, it seems to me that I can now discern two forms of imitative skill, but I don't think that I can yet figure out which of them contains the object of our search.

Theaetetus: You should first say what the two forms are, and then make the division for us.

235d

Stranger: I can see one skill within it, the skill in making imitations. This is most in evidence when someone produces the imitation according to the proportions of length, breadth and depth of the original, with the appropriate colours being assigned to each part.

Theaetetus: Yes, but isn't that what all imitators try to do?

Stranger: Not in the case of those who somehow fashion or draw huge works of art. Indeed, if they were to give true proportions to the limbs, you know that the upper parts would appear smaller than they should and the lower parts larger, because one is viewed from a distance and the other from close up.

235e

Theaetetus: Yes, certainly.

Stranger: So these craftsmen nowadays set the truth aside, and fashion into their images not the actual proportions, but those which will seem to be beautiful, do they not?

236a

Theaetetus: Entirely so.

Stranger: So, in the first case, where it is different but like, is it fair to call it a likeness?

Theaetetus: Yes.

236b

Stranger: And the part of the skill of imitation that deals with this should be called what we called it before, likeness-making.

Theaetetus: Yes, it should be called that.

Stranger: But what about something that appears to resemble the beautiful, because the viewpoint is unfavourable, but is not

like what it is said to be like, once someone is able to get a proper view of such an object? What should we call this? Well, since it appears to be like, though it is unlike, should we call it an appearance?

Theaetetus: Yes, indeed.

236c

Stranger: And isn't this very common in painting, and in imitation generally?

Theaetetus: Of course.

Stranger: And wouldn't it be best if we referred to the skill which produces appearances rather than likenesses as appearance-making?

Theaetetus: Very much so.

Stranger: Now, these are the two forms of image-making I was talking about – likeness-making and appearance-making.

Theaetetus: Correct.

236d

Stranger: And yet, even now I am not able to see an obvious solution to the issue that bothered me earlier, in which of these two should the sophist be placed. Yes, the man is really wondrous, and extremely hard to catch clear sight of, since even now he has taken refuge very nicely and cleverly in a form which is hard to examine thoroughly.

Theaetetus: So it seems.

Stranger: Now, are you agreeing because you recognise this, or have you been drawn along by the force of the argument to agree quickly out of habit?

Theaetetus: How? What are you referring to?

236e

Stranger: We really are involved in an extremely difficult investigation, my friend. Indeed this appearing, and seeming without being, and saying things which are not actually true, all these are now full of difficulties, and they always have been. For it is extremely difficult, Theaetetus, to maintain that there really is false speech and false thinking, without being involved in contradictions as soon as this is said.

Theaetetus: What contradictions?

237a

Stranger: This statement has dared to propose that what is not, is. For otherwise falsehood would not have come into being. But, my boy, beginning when we were children up until his death, the great Parmenides emphasised this to us, stating in prose what he also says in verse.

*"Never shall this be proved that things that are not, are, but do thou, in thine enquiry, hold back thy thought from this way."*⁹

So that is the testimony of the great man. But in fact, the statement itself would reveal most if it were probed moderately. So first let's spend a while looking at this, if it makes no difference to you.

237b

Theaetetus: I accept anything you propose. So just proceed by considering how the argument may best unfold, and lead me also along that path.

Stranger: Well, that's what must be done. So tell me, would we dare to use the expression 'that which in no way is'?

Theaetetus: Well, why not?

237c

Stranger: If one of his pupils who had considered this were asked, not for the sake of argument or sport, but seriously, to tell us to what the expression 'what is not' should be applied, what do we think he would say? To what sort of thing would he apply the phrase himself? To what would he apply it, and how would he explain this to the questioner?

Theaetetus: You have asked a difficult question, and it is almost completely impossible for someone like me to answer it.

Stranger: Well, isn't it obvious in any case that the term 'what is not' may not be applied to any of the things that are?

Theaetetus: No, how could it?

Stranger: Then, since it is not actually applicable to what is, neither may it be applied to something.

Theaetetus: Indeed not.

237d

Stranger: And presumably it is clear to us that we always use the word 'something' in relation to what is, for it is impossible to use this word on its own, naked and isolated from all of the things that are. Is this so?

Theaetetus: Yes, it's impossible.

Stranger: Do you agree because you recognise that when speaking of 'something' we must be speaking of some one thing?

Theaetetus: That's right.

Stranger: Yes, indeed. And you will agree that 'some thing' indicates one, and 'some things' indicates two or many.

Theaetetus: How could I disagree?

Stranger: Well then, when not speaking of something, it is most necessary, it seems, that we are speaking of absolutely nothing.

Theaetetus: Yes, it is most necessary.

237e

Stranger: Could we ever agree that such a person is speaking at all, when he is speaking of nothing? No, we should not even say that a man is speaking when he tries to utter what is not.

Theaetetus: This argument should end our perplexity anyway.

Stranger: Don't make extravagant claims yet, my friend, for there are other perplexities. Indeed, the greatest and first of them actually relates to the very principle involved here.

Theaetetus: What do you mean? Speak, and do not hesitate at all.

Stranger: If we take something that is, I presume we may add to it something else that is.

Theaetetus: Of course.

238a

Stranger: But shall we say that it is ever possible to add anything which is, to what is not?

Theaetetus: No, how could we?

Stranger: Now, we include number in general among things that are.

Theaetetus: Well, if we propose that anything is, we must surely propose that number is.

Stranger: Therefore we should not even attempt to apply number, be it multiple or be it one, to 'what is not'.

238b

Theaetetus: Well, the argument does seem to indicate that it would not be appropriate to attempt this.

Stranger: How, then, could anyone either utter through the mouth, or in any way comprehend in thought, things that are

not, or what is not, in the absence of number?

Theaetetus: Tell me why not.

Stranger: Well, whenever we say 'things that are not', aren't we trying to attribute multiplicity of number to them?

Theaetetus: Yes, indeed.

Stranger: But whenever we say 'what is not', we attribute one in that case, do we not?

238c

Theaetetus: Well, that is very clear, anyway.

Stranger: And yet we have been saying that it is neither proper nor correct to try to attach being to non-being.

Theaetetus: What you are saying is perfectly true.

Stranger: Do you appreciate then that it is not possible to utter correctly, or speak of or think of non-being just by itself? It is rather unthinkable, unspeakable and unutterable, and there is no account thereof.

Theaetetus: Entirely so.

238d

Stranger: In that case, wasn't I mistaken earlier when I said that I was going to state the greatest perplexity involved here, when another even greater perplexity may be stated?

Theaetetus: What perplexity?

Stranger: You surprise me! Do you not realise from what has already been said, that 'what is not' reduces even the person who tries to refute it to such perplexity that it forces him to contradict himself on the issue?

Theaetetus: What are you saying? Make this a bit clearer.

238e

Stranger: Don't look to me for clarity. For although I am proposing that what is not must partake neither of one nor of many, I said, both then and now, that it is one, for I said 'what is not'. Do you understand?

Theaetetus: Yes.

Stranger: And what's more, I actually said a little earlier that it is unutterable, unspeakable, and there is no account thereof. Do you follow?

Theaetetus: Yes, of course.

239a

Stranger: So in trying to associate 'being' with this, am I not contradicting what I said before?

Theaetetus: It appears that you are.

Stranger: Then again, when I applied the word 'that' to it, wasn't I referring to it as one?

Theaetetus: Yes.

Stranger: And, indeed, in saying that there is 'no word' for it, and it is 'unspeakable' and 'unutterable', I used a statement that implies one.

Theaetetus: Of course.

Stranger: And yet we say that properly speaking it should not be defined as one, or many, or be called 'it' at all, for the use of this phrase would attribute the form of one.

Theaetetus: Entirely so.

239b

Stranger: Well, what is to be said about me? It turns out that the refutation of non-being is again defeating me. So, as I said, we should not look to my pronouncements for the correct manner of speaking about 'what is not'. Instead, let it be your turn, and let's consider what you say.

Theaetetus: What are you referring to?

Stranger: Since you are young, you should come before us, fair and noble, exert yourself, and try your very best to make some correct utterance about this without attributing being, or one, or numerical multiplicity to what is not.

239c

Theaetetus: It would be strange if I had any great desire to attempt this myself in the light of what has happened to you.

Stranger: Well, if that's what you think, then let's forget about you and me. Until we encounter someone who can do what I asked you to do, we should say that the sophist has very cunningly dived down into a place we cannot enter.

Theaetetus: That is certainly how it seems.

239d

Stranger: Well, in that case, if we say that he has some skill which involves appearances, he will readily attack us for this usage of words, and turn those words against us by asking what precisely we mean at all by 'image' when we refer to him as an image-maker. So consider, Theaetetus, how we should respond to this impetuous questioning.

Theaetetus: Obviously we are talking about images both in water and in mirrors, and also paintings, sculptures, and all the other varied productions of this sort.

239e

Stranger: Apparently, Theaetetus, you have never seen a sophist.

Theaetetus: Why do you say that?

Stranger: He will have you thinking that his eyes are shut or that he has no eyes.

Theaetetus: How?

Stranger: If you were to answer him in that way and refer to mirror images or fashioned images, he would laugh at your words for speaking as though he was a man who could see. He would pretend that he recognised neither mirror nor water, nor had any sight at all, and would just ask you something about your words.

240a

Theaetetus: What would he ask about?

Stranger: In all these instances, and you say that there are many, you decided to employ a single word, and you used the word 'image' as one term applicable to all the instances. So defend this. Speak, and do not yield any ground to this fellow.

Theaetetus: Well, stranger, what else can we say an image is except another sort of object made like the true object?

240b

Stranger: Are you speaking of another sort of true object? Or what do you mean by 'sort of object'?

Theaetetus: It is not true at all, but like the true.

Stranger: Are you saying that the true object actually is?

Theaetetus: Just so.

Stranger: And what about this? Is the not true opposite to the true?

Theaetetus: Of course.

Stranger: So, are you saying that the likeness actually is not, if you say that it is not true?

Theaetetus: Yet somehow or other it is.

Stranger: Though you are not saying that it truly is.

Theaetetus: Indeed not. However, it is actually an image.

240c

Stranger: So, while it actually is not, it is actually what we call an image.

Theaetetus: It really seems that something like this combines what is with what is not, and is very strange.

Stranger: Indeed, how could it be otherwise? And now you may see that our many-headed sophist, by means of this interchanging, has compelled us against our will to agree that what is not somehow is.

Theaetetus: I see it, indeed.

240d

Stranger: And now, shall we be able to define this skill of his without contradicting ourselves?

Theaetetus: In what way? What sort of contradictions are you afraid of?

Stranger: Whenever we say that he is deceiving us about the appearance, and his skill is one of falsification, shall we say that our souls form false opinion at that time, on account of the skill of this man? Or what precisely shall we say?

Theaetetus: That's it! What else could we say?

Stranger: What's more, false opinion will be thinking the opposite of things that are. Is this so?

Theaetetus: Just so. It will be thinking their opposite.

240e

Stranger: So are you saying that false opinion thinks things that are not?

Theaetetus: It must.

Stranger: Does it think that things that are not, are not? Or does it think that things that are not at all, somehow are?

241a

Theaetetus: Things that are not must somehow be, if anyone is ever to speak falsely, even a little.

Stranger: What about this? Doesn't false opinion also think that things that entirely are, are not at all?

Theaetetus: Yes.

Stranger: And this too is false?

Theaetetus: This too.

Stranger: And so I presume, on this basis, a statement will be considered false if it says that things that are, are not, or that things that are not, are.

Theaetetus: Yes, how else could a statement of this sort arise?

241b

Stranger: Hardly at all, but the sophist will deny this. Or is there any way that a right-minded person would accept these formulations in the light of what we agreed before? Do we understand what agreements are meant, Theaetetus?

Theaetetus: Indeed, how could we fail to understand? He will claim that we are saying the opposite of what we said a moment ago, once we dare to state that there is falsity both in opinions and based upon words. For we are constantly compelled to associate what is with what is not, despite having agreed just now that this is utterly impossible.

Stranger: Your recollection is correct. But now we really must consider what to do about the sophist. For you see that we are well supplied with many objections and perplexities, once we propose to track him down in the skill of falsification and beguilement.

Theaetetus: I do, indeed.

Stranger: And we have elaborated only a small portion of the problems which are almost limitless.

241c

Theaetetus: Well, if that is the case, it would seem to be impossible to capture the sophist.

Stranger: What next? Shall we become cowards, and give up now?

Theaetetus: I say that we should not do that if we are somehow able to get even the slightest grip on this fellow.

Stranger: Then you will have to be quite forgiving, and, as you have just said, be satisfied if we can somehow make even minor inroads against such a powerful argument.

Theaetetus: How could I refuse?

241d

Stranger: In that case, I have a further request of you.

Theaetetus: What is it?

Stranger: Do not presume that I am becoming some sort of parricide.

Theaetetus: What do you mean?

Stranger: It will be necessary in defending ourselves to probe the statement of Parmenides, our father, and force the assertion that in some respect what is not, is, and again what is, in some way, is not.

Theaetetus: It is evident that some such contention must feature in these discussions.

241e

Stranger: Yes, mustn't this be evident even to a blind man, as they say? For if these statements are neither refuted nor accepted, it will hardly be possible for someone to speak about false statements or false opinions being either images, likenesses, imitations or appearances – or to speak of any skills associated with them – without looking ridiculous by being

forced to contradict himself.

Theaetetus: Very true.

242a

Stranger: Well, for these reasons we must dare to attack the paternal maxim. Or if some scruple hinders us from doing this, we should abandon the matter entirely.

Theaetetus: Well, this should not hinder us at all.

Stranger: Then I shall still make a third small request of you.

Theaetetus: Just name it.

242b

Stranger: When I spoke just now, I indicated that I have always been daunted by the refutation of these, and this is especially so right now.

Theaetetus: You did say that.

Stranger: Now, I am afraid that because of what I have said, you will think that I am mad for changing my stance back and forth. After all, we are taking on the refutation of the proposition¹⁰ for your sake, if we do actually refute it.

Theaetetus: Well, in my opinion, there is no problem at all if you embark upon this refutation and proof. Have no concern on my account.

242c

Stranger: Come now, where should one begin this audacious discourse? Indeed, my boy, I think that there is a certain inevitable path for us to follow.

Theaetetus: What is it?

Stranger: We should first investigate the matters that seem clear to us now, in case we have somehow been confused about them, and yet agree with one another as readily as though we had a good understanding.

Theaetetus: Explain your meaning more clearly.

Stranger: It seems to me that Parmenides has conversed with us quite casually, and so has anyone who has ever set about specifying how many, and of what sort, are things that are.

Theaetetus: In what way?

242d

Stranger: Each of them appears to me to be telling us a story, as though we were children. One says that things that are, are threefold, and some of them on occasion conduct some sort of battle with one another, and at other times become friends, marry, have children and look after their offspring. Another says there are two factors, wet and dry or hot and cold, and he sets up a household for them and marries them off, while we Eleatic folk, beginning with Xenophanes or even earlier, recount our stories as though what we refer to as 'all things' are actually one. But some Ionian and, later, some Sicilian Muses consider it safest to combine both stories, and say that what is, is both many and one, and is held together by enmity and friendship.¹¹ "Though it is separating, it is continually combining", say the more severe of these Muses.¹² But the milder ones relaxed the requirement that it always be this way, and they say that it alternates, and that the all is sometimes one and is friendly on account of Aphrodite, at other times it is many and at war with itself due to some strife. Now, some of these men may have spoken the truth in all this, or they may not, though it is difficult and problematic to attribute such a serious failing to famous men of old. But we can say one thing without reproach.

242e

Theaetetus: What is it?

Stranger: That they have shown no regard for common folk, and they despise us. For each of them pursues his own line of

argument without considering at all whether we are following what they say or are being left behind.

Theaetetus: What do you mean?

243a

Stranger: Whenever one of them speaks and says that many or one or two is, or has become, or is becoming; or again, that heat is mixed with cold; or elsewhere proposes divisions and combinations; by the gods, Theaetetus, can you ever understand what they are saying? Indeed, when I was younger and someone mentioned what is not – the phrase that is puzzling us now – I thought I understood perfectly. But you see now just how perplexed we are about this issue.

243b

Theaetetus: I see.

Stranger: But when it comes to 'what is', the soul may well be in the grip of a similar predicament. We profess to be unconcerned about this and to understand this and not the other whenever someone mentions it, yet we may be equally perplexed about both.

243c

Theaetetus: Quite likely.

Stranger: And, indeed, the same may be said of anything else we discussed previously.

Theaetetus: Yes, indeed.

243d

Stranger: Well, we shall consider all those other matters later on, if you wish. But we must now investigate the important, fundamental and primary issue.

Theaetetus: Which one do you mean? Or is it obvious that you are saying that we must first examine 'what is', and what exactly those who use the phrase think that it indicates?

Stranger: You have understood precisely, Theaetetus. For I am saying that this is indeed the approach we should adopt. We should resort to close questioning, as though the men were actually present, and say, "Come on, all you who say that hot and cold, or any pairs like that, are all things. What precisely are you attributing to both when you say that both are and each is? What should we understand by this 'is' of yours? Is it a third factor in addition to the other two, and should we propose on your behalf that the all is no longer two but three? For presumably you do not take one of the pair and call it being, and say that both of them equally 'are', for in either case they would effectively be one and not two."

243e

Theaetetus: What you say is true.

Stranger: "Well then, do you want to call the pair of them being?"

Theaetetus: Perhaps.

244a

Stranger: Then we shall say, "But, friends, even with this formulation you would be stating unambiguously that the two are one."

Theaetetus: What you have said is absolutely correct.

Stranger: "Now, since we have become perplexed, you must clarify adequately, to our satisfaction, what precisely you wish to indicate whenever you use the word 'being'. For you have obviously known this all along, while we thought that we knew at one stage but have now become perplexed. So, explain this point to us first so that we may not presume to understand your doctrines when the very opposite is the case." Surely there would be nothing wrong, child, in saying these things, and putting them to these men, and to anyone else who maintains that all is more than one?

244b

Theaetetus: Not in the least.

Stranger: And what about those who say that the all is one? Shouldn't we find out, as best we can, what precisely they mean by 'being'?

Theaetetus: How could we do otherwise?

Stranger: Then let them answer this question. "Do you say that one alone is?" To which they will reply, "We do say so", won't they?

Theaetetus: Yes.

Stranger: "And is there something which you call being?"

Theaetetus: Yes.

244c

Stranger: "And is it what you call one? Are you using two names for the same thing, or how does this work?"

Theaetetus: What answer will they give next, stranger?

Stranger: Obviously, Theaetetus, it is not at all easy for someone who has proposed this hypothesis to respond to what we have just asked, or any other question for that matter.

Theaetetus: Why so?

244d

Stranger: Well, to agree that there are two names when you have proposed that there is nothing except one, is presumably ridiculous.

Theaetetus: Yes, it must be.

Stranger: And it would be altogether ridiculous to accept the assertion that there is a name, when it does not possess an account.

Theaetetus: What is ridiculous about it?

Stranger: Well, in proposing that the name is different from the object, he is presumably referring to two things.

Theaetetus: Yes.

Stranger: And, indeed, should he propose that the name is the same as the object, he will either be compelled to say that it is the name of nothing, or he will say it is the name of something, and the name will turn out to be the name of a name and of nothing else.

Theaetetus: Just so.

Stranger: And the one will be the name of one, as there is only one, and also the one of the name.

Theaetetus: It must be.

244e

Stranger: What about this? Is the whole different from what is one, or will they say it is the same as this?

Theaetetus: They will have to say it is the same, and they do say so.

Stranger: If it is a whole, and is, as Parmenides says, equally balanced in all directions from the centre, like the mass of a well-rounded sphere, for it must not be more in one place and less in another. Then, since what is is like this, what is will have a centre and extremities. And since it has these, it certainly must have parts, must it not?

245a

Theaetetus: So it must.

Stranger: Moreover, there is nothing to prevent whatever is divided into parts from having the characteristic of the one associated with all its parts, and in this way, being all, it could also be one whole.

Theaetetus: Why not, indeed?

Stranger: But isn't it impossible for something with these characteristics to be just the one itself?

Theaetetus: How?

Stranger: Presumably what is truly one must be described as entirely without parts, according to the correct account.

Theaetetus: Yes, it must be.

245b

Stranger: But the sort of one which consists of many parts will not accord with this account.

Theaetetus: I understand.

Stranger: Now will 'what is' be both one and whole, as it possesses the character of the one, or should we utterly deny that 'what is' is a whole?

Theaetetus: That's a difficult choice you are offering.

Stranger: Well, that is certainly true. For 'what is', having been somehow characterised as one, will appear not to be the same as the one, and so all things will be more than one.

Theaetetus: Yes.

245c

Stranger: However, if 'what is' is not a whole on account of being characterised as one, and yet the whole itself is, then 'what is' turns out to be missing part of itself.

Theaetetus: Certainly.

Stranger: And based upon this argument, 'what is' will be non-being, as it is deprived of itself.

Theaetetus: Just so.

Stranger: Furthermore, all things become more than one, as both 'what is' and the whole have each acquired a separate, distinct nature.

Theaetetus: Yes.

245d

Stranger: But if the whole is not at all, then the very same applies to 'what is', and so in addition to its not being, it could never come into being either.

Theaetetus: Why so?

Stranger: Whatever has come to be has always come to be as a whole. Consequently, we cannot talk about being or becoming as if they are without including the one or the whole among things that are.

Theaetetus: That certainly seems to be the case.

Stranger: And, indeed, whatever is not a whole cannot be something with any number at all. For if it had number, whatever that number might be, it would have to correspond to that number as a whole.

Theaetetus: Precisely.

245e

Stranger: And, indeed, a myriad of other issues, each involving endless perplexities, will present themselves to anyone who maintains that 'what is' is either some two or only one.

Theaetetus: Yes, the issues that are now arising make this quite evident. One leads on to another, bringing a larger and more problematic lack of direction to whatever has already been said.

246a

Stranger: Now, we have not talked about everyone who gives a precise account of being and non-being, but let this be enough. Next, we should consider those who give a more general account, so that we may see, by reviewing them all, that it is no easier to say precisely what 'what is' is than to say what 'what is not' is.

Theaetetus: Yes, we should proceed to consider these too.

Stranger: And, indeed, there seems to be a sort of battle between gods and giants among them in their dispute with one another about being.¹³

Theaetetus: How?

246b

Stranger: Well, some are dragging everything from heaven and the unseen down to earth, literally grabbing trees and rocks in their hands. Indeed, they lay hold of all such objects and strenuously maintain that that alone is, which gives rise to some contact and touch. They define body and being as the same, and if any of the others say that there is anything without a body, they are utterly contemptuous and they want to hear no more.

Theaetetus: Yes, you are describing fearsome men, and indeed I myself have met many of them before.

246c

Stranger: Yes. That's why those who oppose them conduct their defence very cautiously, from above, from the unseen, maintaining forcibly that true being consists of certain bodiless forms which can be known by reason. And they gradually break the bodies of those other men into little pieces in their discussions, and what the others maintain to be true they refer to as a sort of becoming in motion, rather than being. And there is always a huge battle going on between both parties about these issues, Theaetetus.

Theaetetus: True.

Stranger: Then let's obtain, from both sides in turn, the account of being that they favour.

Theaetetus: How shall we obtain them?

246d

Stranger: It will be easier in the case of those who propose that being consists of forms, for they are gentler people. However, it

is more difficult, perhaps almost impossible, from those who drag everything by force to the physical. But I think they should be dealt with as follows.

Theaetetus: How?

Stranger: The best thing would be to make better people of them, if that were somehow possible. But if this is not to be, let's make up a story, assuming that they would be willing to answer questions more fully than now. For agreement with reformed individuals will be preferable to agreement with worse. However, we are not interested in the people themselves. We are seeking the truth.

246e

Theaetetus: Quite so.

Stranger: Then call upon these reformed folk to answer you, and you should interpret what is said.

Theaetetus: I shall.

Stranger: Well, let them say whether they maintain there is such a thing as a mortal, living being.

Theaetetus: How could they deny this?

Stranger: And won't they agree that this is a body with a soul in it?

Theaetetus: Yes, certainly.

247a

Stranger: And do they include soul among things that are?

Theaetetus: Yes.

Stranger: What about this? Don't they agree that a soul can be just or unjust, and can be wise or ignorant?

Theaetetus: Of course.

Stranger: But isn't it from the possession and presence of justice and wisdom that each of these souls becomes like this, while their opposites do the opposite?

Theaetetus: Yes, they agree with all this too.

Stranger: And they will surely agree that whatever is capable of being present or absent is something.

Theaetetus: They do say so.

247b

Stranger: So, if they accept that there is justice, wisdom and excellence in general, and their opposites, and also soul in which they arise, do they say that any of these is visible and tangible, or are they all unseen?

Theaetetus: Hardly any of these is visible.

Stranger: What about this? Do they say that anything of this sort has a body?

Theaetetus: They do not answer the entire question in the same way. Although they think that the soul has acquired a body of some sort, when it comes to wisdom and the other qualities you asked about, they are ashamed either to admit that these are not included among things that are, or to maintain emphatically that they are all physical.

247c

Stranger: Well, Theaetetus, we can see that these men have been reformed. For the original stock, their earth-born ancestors, would not have been ashamed of anything. Instead, they would insist that whatever they are unable to squeeze with their hands is nothing at all.

Theaetetus: Yes, you have expressed their attitude fairly well.

247d

Stranger: Then let's question them once more. Indeed, if they are prepared to concede that there is even a small non-physical

portion of things that are, that is sufficient. For they must explain the shared nature that has arisen simultaneously in the non-physical, and also in anything physical, with reference to which they say that they both are. Perhaps this may leave them perplexed. And if that is what happens to them, then consider this. Would they be willing to accept a suggestion from us and agree that 'what is' is as follows?

Theaetetus: What is the suggestion? Tell us and we shall know immediately.

247e

Stranger: Well, I am saying that anything actually is, once it has acquired some sort of power, either to affect anything else at all, or to be affected, even slightly, by something totally trivial, even if only once. Indeed, I propose to give a definition, defining things that are as nothing else except power.

Theaetetus: Then, since they do not have anything better to suggest right now, they accept this.

248a

Stranger: Very well, though perhaps a different suggestion may occur both to us or them later. For the present, let this stand as it has been agreed by both parties.

Theaetetus: Let it stand.

Stranger: Now, let us move on to the others, the friends of the forms, and you should interpret their doctrines for us too.

Theaetetus: I shall.

Stranger: "Presumably you make a distinction between becoming and being, and you refer to them as separate. Is this so?"

Theaetetus: "Yes."

Stranger: "And you say our communion with becoming is through the body, by means of sense perception, while it is by means of reasoning through the soul that we commune with actual being, which you say is always just the same as it is, while becoming is always changing."

248b

Theaetetus: "Yes. That is what we say."

Stranger: "Now, best of all men, the communing which you ascribe to both, isn't it what we mentioned a moment ago?"

Theaetetus: What was that?

Stranger: "An action or an effect arising from some power, from their coming together with one another." You probably do not hear their response to this so clearly, Theaetetus, but perhaps I can hear it, as I am quite familiar with them.

Theaetetus: What then? What account do they give?

248c

Stranger: They do not agree with what we said just now to the earth-born men about being.

Theaetetus: What was that?

Stranger: We somehow proposed an adequate enough definition of things that are: whenever the power to be affected or to affect, even to the slightest extent, is present in something, that something is something that is.

Theaetetus: Yes.

Stranger: Now to this they reply that the power to be affected and to affect is a feature of becoming, but they say that neither power attaches to being.

Theaetetus: Don't they have a point?

248d

Stranger: A point which makes us say that we still need to find out more clearly from them whether they also concede that the soul knows, and that being is known.

Theaetetus: They will surely assent to that.

Stranger: "What about this? Do you say that the knowing, or being known, is an action, an effect, or both? Or is one an action, and the other an effect? Or do neither of them have anything to do with action and effect?"

Theaetetus: Obviously they would say neither, otherwise they would be contradicting what they said before.

248e

Stranger: I understand. Instead, they would say that if knowing is indeed some action, it follows that whatever is known must, for its part, be affected. Indeed, based on this account, since being is known by the act of knowing, insofar as it is known, it is changed to that extent because it is affected, which we insist does not happen to the quiescent.

Theaetetus: Correct.

Stranger: But, by Zeus, what are we saying? Are we actually going to be persuaded so easily that change, life, soul and thought are absent from what altogether is, that it neither lives nor thinks, but abides unchanging, solemn and pure, devoid of intelligence?

249a

Theaetetus: No, stranger. That would be an awful proposition were we to accept it.

Stranger: But would we say that it has intelligence, but does not have life?

Theaetetus: How could we?

Stranger: But if we say that both of these are within it, shall we then deny that it has them in a soul?

Theaetetus: How else could it have them?

249b

Stranger: But if it actually has intelligence, life and soul, does it remain totally unchanging, although it has a soul?

Theaetetus: This all sounds unreasonable to me.

Stranger: And, of course, we must concede that change, and what is changed, both are.

Theaetetus: How could we deny it?

Stranger: It follows, therefore, Theaetetus, that if there is no change, there is no intelligence in anything, or about anything at all.

Theaetetus: Certainly.

249c

Stranger: And yet, if we concede instead that everything is moving and changing, by this argument too we shall be removing intelligence from things that are.

Theaetetus: How?

Stranger: Do you think there could ever be sameness of characteristics or manner or relation, without rest?

Theaetetus: Not at all.

Stranger: But in the absence of these, can you see how there could be intelligence, or how it could ever come into being anywhere?

Theaetetus: Not in the least.

249d

Stranger: Well then, we must do battle, using every possible argument, against the man who would make strong assertions

about anything at all, having done away with knowledge, thought and intelligence.

Theaetetus: Definitely.

Stranger: Now, all these issues are necessarily, it seems, of the utmost importance to the philosopher, and because of these he must not accept that the universe is at rest, whether it is said to be one or to consist of many forms. Nor should he listen at all to those who say that 'what is' is changing everywhere. Instead, he should invoke the childish prayer, 'I want everything', and should say that 'the all' and 'what is' are a combination of both the unchanging and the changing.

Theaetetus: Very true.

249e

Stranger: Well then, is it likely that we have at last come to grips with 'what is' by this argument?

Theaetetus: Yes, certainly.

Stranger: Oh dear, Theaetetus, perhaps not! I think that we are just about to appreciate the perplexity involved in this enquiry.

Theaetetus: How? Why have you said this?

Stranger: Bless you! Do you not realise that we are now in utter ignorance about this, though we seem to ourselves to be talking sense?

Theaetetus: Well, so it seems to me, but I do not quite understand how we got into this condition without noticing it.

250a

Stranger: Well, in agreeing with what has been said, consider carefully whether we may justifiably be open to the very questions which we ourselves put previously to those who say that the universe is heat and cold.

Theaetetus: What questions? Remind me.

Stranger: Yes, certainly. And I shall try to do this at any rate by questioning you, just as we questioned the others, so that we may also make some progress at the same time.

Theaetetus: Right.

Stranger: Very well then. Don't you say that motion and rest are completely opposite to one another?

Theaetetus: They must be.

250b

Stranger: And do you also say that in like manner they both are, and that each of them is?

Theaetetus: Yes, I do say that.

Stranger: And when you accept that they are, do you mean that both of them and each of them is moving?

Theaetetus: Not at all.

Stranger: Then, in saying that both of them are, are you indicating that they are both at rest?

Theaetetus: No, how could they be?

Stranger: So, are you proposing that being is some third thing in the soul besides these two, and having understood that both rest and motion are encompassed by this, do you look to their commonality of being, and thus make the statement that they both are?

250c

Theaetetus: Yes. It is quite likely that we do, in truth, have an intuition that 'what is' is some third entity, whenever we say that motion and rest are.

Stranger: So 'what is' is not the two together, motion and rest, but something different from them.

Theaetetus: So it seems.

Stranger: Then, based upon its own nature, 'what is' is neither at rest nor in motion.

Theaetetus: Hardly.

Stranger: Well then, where is there still left for someone's mind to turn who wishes to establish anything clear and certain about this for himself?

Theaetetus: Where indeed?

250d

Stranger: I do not think there is any easy option left, for if something is not moving, how can it not be at rest? Or if it is not at rest at all, then how can it not be moving? Yet 'what is' has just appeared before us, outside of both motion and rest. But is this possible?

Theaetetus: No, it is totally impossible.

Stranger: However, it would be right to recall something about these.

Theaetetus: What is it?

Stranger: That we ended up in utter perplexity when we were asked what precisely the phrase 'what is not' should be applied to. Do you remember?

Theaetetus: How could I forget?

250e

Stranger: And are we now in any less perplexity in relation to what is?

Theaetetus: Well, stranger, it seems to me that we are in even greater perplexity, if that is possible.

Stranger: Let's take it, then, that this is where our difficulty lies. However, since what is and what is not are equally involved in perplexity, there is now some hope. For as one of them becomes more dimly or clearly evident, the other will do the

same. And if we prove unable to discern either, we shall scrutinise the description of both at once, as appropriately as we can.

251a

Theaetetus: Very good.

Stranger: Then let's explain how it happens that we refer to the same thing by many names, depending on the occasion.

Theaetetus: What sort of thing do you mean? Give an example.

Stranger: You know that we speak of a man, calling him lots of different things, attributing colours to him, and also shapes, dimensions, excellences and vices. In all these cases, and numerous others, we are saying not only that he is a man, but also that he is good, and countless other things. And in other cases, by the same argument, we propose that each is one, and then refer to it as many, and so we describe it by many names.

251b

Theaetetus: What you say is true.

Stranger: Well, at any rate, I believe we have provided a feast for the young and for the old men whose learning came late in their lives. For it is easy for anyone to appreciate quite readily that it is impossible for the many to be one and also for one to be many, and indeed they delight in forbidding man from being called good, and they only allow good to be called good and man to be called man. Indeed, Theaetetus, I imagine you have often met those who take this sort of thing seriously. Sometimes older men who are amazed at such marvels, due to the poverty-stricken state of their intellect, actually believe that they have discovered the very repository of all wisdom.

251c

Theaetetus: They certainly do.

Stranger: Then, so that our discussion may be all inclusive, we should direct our questioning now to all those who have ever

discoursed on being in any way at all, and to those with whom we discussed this earlier.

Theaetetus: And the questions are?

Stranger: "Whether we may neither attach being to motion and rest, nor attach anything at all to anything else, and should we therefore propose, in our own discussions, that these are unmixed, and it is impossible for them to participate in one another? Or should we have grouped them all together as the same, in their capacity for communion with one another? Or can some have this capacity while others do not?" Well, Theaetetus, can we say which of these options they would choose?

251d

Theaetetus: I cannot answer these questions on their behalf at all.

Stranger: Then why don't you answer them one by one, and see what the consequences are in each case?

Theaetetus: A good suggestion.

Stranger: First, if you wish, let's propose that they say that nothing has any power of communion with anything else at all. In that case, movement and rest will have no share of being, will they?

Theaetetus: Not in that case.

Stranger: But will either of them be, if they have no communion with being?

Theaetetus: They will not.

251e

Stranger: Well, all parties have been instantly overthrown by this concession it seems, including the 'universe is motion' people, those who say it is one and at rest, and anyone who

maintains that things that are consist of forms which are always just the same as they are. Indeed, all of these people associate being with something, some by saying that the universe is actually movement, others by saying that it is actually rest.

Theaetetus: Quite so.

252a

Stranger: And, indeed, those who propose to combine all things at one time and to separate them at some other time, either by having unlimited things coming from one and returning to one, or else by dividing all things into finite elements and making combinations of these, regardless of whether they propose that this happens successively or continuously, these people would be talking nonsense in all cases, if, in fact, there is no comingling.

Theaetetus: Correct.

252b

Stranger: And what's more, the people who pursue this question, in the most ridiculous manner, are those who allow nothing to be referred to as different because it shares a different characteristic.

Theaetetus: How?

Stranger: Well, presumably they are compelled to use 'to be' in relation to everything. They cannot help employing 'apart' and 'the others' and 'itself', and very many more expressions, and connecting them when they speak, and so they are refuting themselves. The enemy and future opponent is within themselves, as the saying goes, and they walk about carrying his voice inside them like the strange ventriloquist, Eurycles.¹⁴

252d

Theaetetus: The comparison you make is both accurate and true.

Stranger: Well then, should we concede to all things the capacity for intercommunion with one another?

Theaetetus: Even I would be able to do away with that suggestion.

Stranger: How?

Theaetetus: Well, movement itself would be totally at rest, while rest itself would, in turn, be moving if they were to come together with one another.

Stranger: And, presumably, it must be utterly impossible that movement be at rest, and rest in motion?

Theaetetus: It must be.

Stranger: Only the third option is left then.

Theaetetus: Yes.

252e

Stranger: Well, it must be some one of the following: either everything will mix together or nothing will, or some will and others will not.

Theaetetus: There are no other options.

Stranger: And yet the first two were found to be impossible.

Theaetetus: Yes.

Stranger: So anyone who wishes to give the right answer will select the last of the three.

Theaetetus: Exactly.

253a

Stranger: Now, since some things will do this and others will not, they would be behaving much like the letters of the alphabet, for some of them will not fit together with one another, while others will fit together.

Theaetetus: Of course.

Stranger: And the vowels are better at this than the other letters. They are like a bond running through them all so that it is impossible for one of the others to attach to anything else without at least one of the vowels.

Theaetetus: Certainly.

Stranger: Does everyone know what letters can combine with what, or is a skill required by someone who is to do this properly?

Theaetetus: There is a skill.

Stranger: What is it?

Theaetetus: Grammar.

253b

Stranger: And isn't it the same where high and low notes are concerned? Does the musical person have the skill to recognise which notes go together and which do not, while the unmusical person does not understand this?

Theaetetus: Yes, it is the same.

Stranger: And we shall find that similar distinctions between skill and lack of skill apply to other subjects.

Theaetetus: Of course.

Stranger: Yes. And since we have agreed that the kinds can also mix with one another in this same way, mustn't a man who is going to show correctly which of the kinds accord with one another or reject one another proceed through the arguments with some knowledge? And will he also need some knowledge to show whether there are certain kinds which pervade all the kinds and keep them together, so that they can be mixed together, and again, in the case of division, whether the causes of division are entirely different?

253d

Theaetetus: How could he do it without knowledge, perhaps even the supreme knowledge?

Stranger: Well now, Theaetetus, what are we going to call this knowledge? Or, by Zeus, have we stumbled unwittingly upon the knowledge belonging to free men? And is it possible that we have found first the philosopher, whilst looking for the sophist?

Theaetetus: What do you mean?

Stranger: This division on the basis of kinds, without thinking that the same form is a different form or that a different one is the same, should we not say that this belongs to dialectical knowledge?

Theaetetus: Yes, we should.

Stranger: Therefore, someone who can do this readily discerns one characteristic extending entirely through many things, each of which is separate and one; and many characteristics which are different from one another, encompassed externally by one characteristic; furthermore, one characteristic connected in one kind through multiplicities that are wholes; and many characteristics which are distinct and completely separate. This is knowing how to distinguish, kind by kind, which way they commune and which way they do not.

Theaetetus: Entirely so.

253e

Stranger: And I am sure that you will never grant this dialectical skill to anyone except a man who loves wisdom, purely and righteously.

Theaetetus: Indeed, how could one grant it to anyone else?

Stranger: It is in some such place as this that we shall find the philosopher, both now and hereafter, if we search for him. It is, indeed, difficult to see this person plainly, but the difficulty of

seeing the sophist is of a different sort from this.

Theaetetus: How?

254a

Stranger: Well, the sophist runs away into the darkness of non-being, attaching himself to this by practice, and he is hard to discern because of the darkness of the place. Is this so?

Theaetetus: So it seems.

Stranger: However the philosopher is always devoted, through reasoning, to the characteristic of what is. And he is also not at all easy to see because of the brightness of that region, as it is impossible for the eyes of the common soul to sustain the gaze that looks towards the divine.

Theaetetus: Yes, all this is no less likely to be so than what was said about the sophist.

254b

Stranger: Well, we shall consider the philosopher in more detail presently, if we so desire. But it is obvious, I presume, that we must not give up on the sophist until we can see him properly.

Theaetetus: Very good.

254c

Stranger: Indeed, we have actually agreed now that some of the kinds will combine with one another, while others will not, and some will combine with few, others with many, and also that some are all-pervasive and are allowed to combine with everything. So we should proceed to the next issue by considering the following question, not about all the forms, lest we get confused by the multiplicity, but selecting some of those which are said to be the most important. We should first ask what sort each is, and then what their power to commune with one another is. In this way, we shall at least understand something about being and non-being, as far as our current

method of enquiry allows, even if we cannot apprehend them with total clarity, and we may somehow be allowed to say that 'what is not', is actually non-being, and avoid reproach.

Theaetetus: Yes, we must do this.

254d

Stranger: Now, the most important kinds are those we have just mentioned – being itself, rest and motion.

Theaetetus: Very much so.

Stranger: And we also say that two of them do not mix with one another.

Theaetetus: They do not.

Stranger: And yet being mixes with both, for presumably both are.

Theaetetus: Of course.

Stranger: So there are these three.

Theaetetus: Of course.

Stranger: And of these, each of the two is different from the other, and the same as itself.

254e

Theaetetus: Quite so.

255a

Stranger: Well now, what precisely are the 'same' and the 'different' which we have just mentioned? Are they two additional kinds, apart from the first three, two kinds which must necessarily combine with the three, and should we investigate them as though there were five and not three? Or is this 'same' and 'different' something belonging to the other three, which we are referring to without noticing it?

Theaetetus: Perhaps.

Stranger: But of course, motion and rest are neither different nor the same.

Theaetetus: How so?

Stranger: Whatever we attribute to motion and rest jointly cannot itself be either of the two.

Theaetetus: Why is that?

255b

Stranger: Because motion would then be at rest, and rest would be moving. For the involvement of either of the two with both of them will compel the other one to change to the opposite of its own nature, since it is partaking of its opposite.

Theaetetus: Exactly.

Stranger: However, both partake of the same and the different.

Theaetetus: Yes.

Stranger: Therefore, we may not say that either motion or rest is the same or the different.

Theaetetus: No.

Stranger: Well then, should we think of 'what is' and 'the same' as one thing?

Theaetetus: Perhaps.

255c

Stranger: But if 'what is' and 'the same' do not signify anything different, then saying once more that motion and rest both are will amount to referring to them both as the same.

Theaetetus: Yes, but that is impossible.

Stranger: So it is impossible for 'the same' and 'what is' to be one.

Theaetetus: Quite.

Stranger: Well, should we propose that the same is a fourth form in addition to the other three?

Theaetetus: Yes, certainly.

Stranger: Yes, but should we say that the different is a fifth? Or must we think of the different, and what is, as two names for one kind?

Theaetetus: Perhaps.

Stranger: But I think you concede that some things that are, are always spoken of just by themselves, while some are always spoken of in relation to others.

Theaetetus: So they are.

255d

Stranger: And different is always in relation to another. Is this so?

Theaetetus: Just so.

Stranger: But this would not be the case if what is and different were not utterly distinct. But if different, like what is, were to partake of both relations, some of the different things would sometimes be different, but not in relation to another. But now we find, simply, that whatever is different necessarily turns out to be the very thing it is, namely, different from something else.

Theaetetus: It is exactly as you say.

255e

Stranger: Then we must say that the nature of the different is a fifth form among these forms we are selecting.

Theaetetus: Yes.

Stranger: And we shall say that this pervades all the others, for each one is different from the others, not because of its own nature, but because of participation in the characteristic of different.

Theaetetus: Yes, precisely.

Stranger: Now, let us say the following about these five, taking them up one by one.

Theaetetus: What?

Stranger: First, that motion is completely different from rest. Is this so?

Theaetetus: It is so.

Stranger: So it is not rest.

Theaetetus: Not at all.

Stranger: And yet, because of participation in being, it is.

Theaetetus: It is.

256a

Stranger: Then again, motion is different from the same.

Theaetetus: I dare say.

Stranger: So it is not the same.

Theaetetus: No, it is not.

Stranger: And yet it is the same as itself, because everything partakes of the same.

Theaetetus: Yes, indeed.

Stranger: So we should accept that motion is the same and not the same, without making difficulties. For when we say it is the same and then not the same, we are not speaking in a similar manner. Rather, when we say it is the same, it is because of its participation in the same in relation to itself. And when we say it is not the same, it is because of its communion with different, a communion by which it is separated from the same and becomes not the same but different. So that it is correct, in turn, to say that it is not the same after all.

256b

Theaetetus: Yes, certainly.

Stranger: Yes, and if motion itself were somehow to partake of rest, it would not be strange to say that motion was resting.

Theaetetus: And that is perfectly valid, provided we are going to accept that some of the kinds will mix with one another, and some will not.

Stranger: And, indeed, we arrived at a proof of this before now, establishing that this process is in accordance with nature.

Theaetetus: Of course.

256c

Stranger: Then let's say this once more. Motion is different from the different, just as it was other than the same and rest.

Theaetetus: Yes, it must be.

Stranger: So, in a sense then, it is not different and it is different, according to the current argument.

Theaetetus: True.

Stranger: Then, what about the next point? Shall we say that motion is different from three of the kinds but not from the fourth, though we have agreed that there are five items concerning which, and among which, we propose to conduct our enquiry?

Theaetetus: How could we? For we cannot accept that their number is less than what was shown a moment ago.

256d

Stranger: So, should we persist fearlessly in maintaining that motion is different from being?

Theaetetus: Yes, with no fear at all.

Stranger: Well then, it is clear that motion is actually 'non-being'. And yet it is, since in fact it partakes of being.

Theaetetus: Yes, that is perfectly clear.

256e

Stranger: So, of necessity, what is not is, both in the case of motion and all of the kinds, for in all cases the nature of the different, by rendering each different from what is, makes it what is not. And, indeed, in this way, we are right to say, on the same basis, that all of them are not, and again, because they partake of being, that they are and have being.

Theaetetus: Very likely.

Stranger: So, in the case of each of the forms, 'what is' is many, and 'what is not' is unlimited in multiplicity.

Theaetetus: So it seems.

257a

Stranger: Well then, we must also say that what is, itself, is different from the others.

Theaetetus: We must.

Stranger: And we also found that as many as the others are, to that extent what is, is not. For on the one hand, not being those others it is itself one, and furthermore, it is not, in respect of number, those unlimited others.

Theaetetus: Quite so.

Stranger: Now, we should not make difficulties over these either since the nature of the kinds involves communion with one another. But if anyone does not accept this, he must prevail over our previous arguments and then take on their consequences.

Theaetetus: What you propose is very fair.

257b

Stranger: Well, let us note the following.

Theaetetus: What?

Stranger: When we speak of 'what is not', it seems we are not speaking of something opposite to 'what is', but only of something different.

Theaetetus: In what way?

Stranger: For example, when we say that something is 'not large', are we indicating by this phrase that it is small rather than equal? Is that how it seems to you?

Theaetetus: How could it?

257c

Stranger: So, whenever it is said that a negative signifies an opposite, we shall not accept that. We shall only go so far as to say that prefixing 'not' or 'non' indicates something else apart from the words which follow, or rather, apart from the things to which the words uttered after the negatives may refer.

Theaetetus: Entirely so.

Stranger: Let's think this through as follows, if you agree.

Theaetetus: In what way?

Stranger: It seems to me that the nature of different is broken up in the same way that knowledge is.

Theaetetus: How?

Stranger: Well, presumably knowledge is one, and so is the nature of different, but each portion of knowledge applicable to something in particular has been separated off and given its own particular title. That's why so many skills and branches of knowledge are referred to.

257d

Theaetetus: Yes, certainly.

Stranger: And although the nature of different is one, the same thing happens to the parts.

Theaetetus: Very likely, but how should we describe it?

Stranger: Is there some part of different which contrasts with beauty?

Theaetetus: There is.

Stranger: Now should we say that this is nameless, or does it have a title of its own?

Theaetetus: It has. For each time we mention 'non-beauty', this is different from the nature of beauty, and from nothing else.

257e

Stranger: Come now, tell me this.

Theaetetus: What?

Stranger: On this basis, has non-beauty turned out to be some distinct part of a single kind among things that are, and does it, in turn, stand in contrast to another kind among things that are?

Theaetetus: It does.

Stranger: Then it seems non-beauty turns out to be a contrast of 'what is' with 'what is'.

Theaetetus: Quite right.

Stranger: Well then, based on this account, is beauty more included among things that are, and non-beauty less so?

Theaetetus: It is not.

258a

Stranger: So, should we say, on the same basis, that there is non-largeness and largeness itself?

Theaetetus: On the same basis.

Stranger: And should we therefore place non-justice in the same relation towards justice, in that one is no more than the other is?

Theaetetus: Of course.

Stranger: Well, we shall also describe the others in the same way. Since, in fact, the nature of different has been shown to be included among things that are, and since it is, we must necessarily propose that the parts of it are also things that are, no less.

Theaetetus: Yes, we must.

258b

Stranger: Therefore, it seems, when part of the nature of different, and part of the nature of 'what is' are set against one another, the contrast is no less being than what is, itself, if such a statement is legitimate, and this contrast is not indicating the opposite of 'what is', but only something different from that.

Theaetetus: Yes, that is very clear.

Stranger: So, what should we call this?

Theaetetus: Obviously it is 'what is not', the very thing we were seeking because of the sophist.

258c

Stranger: And does it, as you say, have no less being than anything else? And should we now declare boldly that 'what is not' certainly is, and has its own nature? And just as largeness was large and beauty was beautiful, and the same applied to non-largeness and non-beauty, should we say on the same basis that 'what is not' was and is 'what is not', a single form counted among the many things that are? Do we still have any doubt about this, Theaetetus?

Theaetetus: Not at all.

258d

Stranger: Now, do you realise that we have shown little regard for Parmenides' prohibition?

Theaetetus: In what way?

Stranger: In our previous enquiry, we have forged ahead in our search, and presented the man with something he forbade us to consider.

Theaetetus: How?

Stranger: Well, he says, *"For never shall this be proved that things that are not, are, but do thou, in thine enquiry, hold back thy thought from this way."*

258e

Theaetetus: Yes, that is what he says.

Stranger: Yet we have shown not only that things that are not, are. We have also revealed the form upon which 'what is not' happens to be based. In fact, having shown that the nature of different is, and is divided up among all things that are in relation to one another, we have dared to maintain that each part of different that contrasts with what is, is really 'what is not'.

259a

Theaetetus: Yes, stranger, and the statements we have made seem to me to be entirely true.

Stranger: Then let no one say that we have dared to maintain that 'what is not' is the opposite of 'what is'. For we long since said farewell to talk of opposite of 'what is', whether there is or is not such a thing, and whether it has an account or is utterly devoid of one. Now, in relation to 'what is not' which we have proposed to be, let someone refute us, and either persuade us that we have not formulated it correctly, or, until he is able to refute it, he must say what we say, that the kinds combine with one another, and 'what is' and the different go through them

all, and through one another, and the different, by partaking of 'what is', is, because of that participation, although it is not what it partakes of, but is different. And being different from 'what is', clearly it must be possible for it to be 'what is not'. And, in turn, 'what is', by partaking of the different, will be other from the other kinds, and since it is different from all of them, it is not each of them, nor all of them together except for itself. Consequently, 'what is' undoubtedly is not, in countless instances, and the others, individually and collectively, are in many cases, but are not in many cases.

259c

Theaetetus: True.

Stranger: And one who is at a loss to believe these contradictions must consider these matters for himself and offer a better account than we have just given. But if he has taken hold of something difficult, and finds pleasure now in dragging the arguments to one extreme and now to another, his exertions are not worth taking very seriously, as our current arguments would suggest. For this is neither inventive nor difficult to discover. But what is difficult, and beautiful, is something else.

Theaetetus: What is it?

259d

Stranger: What we said before, allowing such considerations as ineffective; to be able to follow what is said, refuting it stage by stage; if anyone proposes that the different is somehow the same, or the same different, in the very respect in which, and the very way that he says one experiences the other. But by saying that the same is somehow different, and the different is the same, and the great is small, and the like is unlike, and to derive pleasure from constantly bringing forward such oppositions in arguments, this is no real refutation. Indeed, it is obvious that someone who has just appeared on the scene is

grasping at a beginning understanding of things that are.

259e

Theaetetus: Yes, that is so.

Stranger: Well now, my friend, the attempt to separate everything from everything else is, in general, an inappropriate response and is, in fact, the activity of someone who is uneducated and unphilosophical.

Theaetetus: Why is that?

Stranger: Yes, this very approach of dissociating each thing from everything else is the total disappearance of all argument. Indeed, the interweaving of forms with one another is the basis from which our discourse arises.

260a

Theaetetus: True.

Stranger: So, consider the timely battle which we waged just now against people like that, and how we have compelled them to allow one to mix with another.

Theaetetus: To what end?

Stranger: So that argument may continue to exist for us. For we would have been deprived of this if we had also deprived ourselves of the interweaving of forms with one another. Indeed, our argument has somehow arisen for us from the interweaving of forms with one another.

260b

Theaetetus: True.

Stranger: Now since we have got rid of this difficulty, but at the same time agreed that being is to be associated with non-being, perhaps we should now try to consider speech.

Theaetetus: How so?

Stranger: If 'what is not' has nothing to do with speech, all argument is necessarily false, while in fact it has been associated with it, and so there is false speech, and false thinking.

Theaetetus: Just so.

Stranger: But if there is falsity, deception arises.

Theaetetus: Yes.

260c

Stranger: And if there is deception, everything is necessarily full of images, likenesses and appearances.

Theaetetus: Of course.

Stranger: And we said that the sophist took refuge in some such place, but he completely denied that there is falsity at all. For he said that 'what is not' could not be thought or stated, since 'what is not' does not partake of being in any way.

Theaetetus: Just so.

Stranger: And now it has appeared that 'what is not' partakes of being, so he probably will not contest the matter further on that basis. Yet he might say that some of the forms partake of 'what is not', while others do not, and speech and opinion are among those which do not. So in opting again for the contention that the skills of image-making and appearance-making, in which we said he was contained, do not exist at all, he might also argue that there is no false opinion or speech. For opinion and speech have no communion with 'what is not'. And in the absence of this association, there is no possibility of any falsity. That's why we must first investigate speech, opinion and appearance, to see precisely what they are, so that, having seen them, we shall recognise their communion with 'what is not', and having recognised this, we shall prove that there is falsity, and having proved this, we shall imprison

the sophist there, if we can keep our hold of him, and if we cannot, we shall release him and search in another kind.

261a

Theaetetus: Stranger, this expression about the sophist at the outset did indeed appear to be true, that this kind is hard to hunt. For he turns out to be replete with stratagems, and whenever he employs them, he must be vanquished before he can be caught. But now, although he has barely been overcome, he is already objecting that 'what is not', is not. For he is a wonder.

Stranger: Well, my friend, it is the man with greater experience who will be best able to give the more accurate account, since whoever has been confounded for the longest time, often, is more vexed.

261b

Theaetetus: A good point.

Stranger: Well, let's continue with the present argument and not get vexed.

Theaetetus: Why should we?

Stranger: Indeed, what comes first, in my view, is the question of speech, just as it was earlier in the case of the forms. For this is what we need to consider now: is 'what is not' associated with this too, or is speech entirely true, with no falsity ever arising in this?

Theaetetus: Yes, this is what we should consider.

261c

Stranger: Come now, since we said as much in relation to the forms and letters of the alphabet, let's consider names again in the same way.

Theaetetus: Yes, but what should we look for in them?

Stranger: Whether they all combine with one another, none of them combine, or some can do so, while others cannot.

Theaetetus: Well, this is clear in any case: that some can and some cannot.

Stranger: Perhaps you mean the following: that any words which are uttered in succession and indicate something are combined, while those which are not significant when uttered in succession are not combined.

261d

Theaetetus: What you say? Why?

Stranger: I imagined that you were making the same response that I have actually had in mind. Indeed, we recognise two kinds of vocal expressions about being.

Theaetetus: How?

Stranger: One is referred to as a name, and the other as a verb.

Theaetetus: Tell me what each of these is.

261e

Stranger: The expression that applies to actions, we presumably refer to as a verb.

Theaetetus: Yes.

Stranger: While the vocal label applicable to those who perform such actions is a name.

Theaetetus: Quite so.

Stranger: Well, no statement can ever arise from a string of names that are uttered in succession, or even of verbs separated from names.

Theaetetus: I do not understand.

262a

Stranger: Yes, it was clear when you responded just now that what I am saying is different. For my point was that the sequence does not constitute a statement.

Theaetetus: How?

Stranger: Take for instance "walks, runs, sleeps", and the other verbs which signify actions: even if someone were to recite them all in turn, that would not constitute any statement at all.

Theaetetus: Why not?

Stranger: So again, when "lion, stag, horse" are uttered, and any other names of those who perform actions, this sequence does not constitute a statement either. Indeed, neither in the first case nor in this one are the spoken words associated with any action, or in actuality, of one who acts or does not act. Nor will it ever do so, until someone mixes verbs with names. And as soon as he does so, the joining together produces a statement, the first and the smallest of statements, I dare say.

262c

Theaetetus: What do you mean by this?

Stranger: Whenever someone says, "a man understands", do you say that this is the shortest and the first statement?

Theaetetus: I do.

Stranger: Indeed, it now provides some information about what is, becomes, has become or is to become, and not just naming, but enacting something by combining verbs with names. That is why we have said that it has spoken, and not merely named. And what is more, this combination is the very thing to which we attached the title 'speech'.

Theaetetus: Correct.

262d

Stranger: Now, just as some things fit together with one another, while others do not, the same applies to vocal expressions, some of which do not fit together, while those that do fit together produce statements.

Theaetetus: Just so.

Stranger: But there is still one further consideration.

Theaetetus: What?

Stranger: Whenever there is a statement, it must be a statement about something. Indeed, a statement about nothing is impossible.

Theaetetus: Just so.

Stranger: And it must, of course, also have a particular quality.

Theaetetus: Of course.

Stranger: So now, let's take note of ourselves.

Theaetetus: Yes, we should.

262e

Stranger: Then I shall make a statement to you, putting things and actions together by means of a name and a verb. You should indicate to me what the statement is about.

Theaetetus: Yes, just as far as I can.

Stranger: "Theaetetus is sitting." Surely that is not a long statement?

Theaetetus: No, it has just the right measure.

Stranger: Now it is your turn to say what it is about, and to whom it refers.

Theaetetus: Quite clear that it is about me, and refers to me.

263a

Stranger: Then what about this one?

Theaetetus: What?

Stranger: "Theaetetus, with whom I am conversing right now, is flying."

Theaetetus: No one could deny that this too is mine, and refers to me.

Stranger: And we maintain that each of these is necessarily of some quality.

Theaetetus: Yes.

Stranger: Now, what quality should we say each of these has?

Theaetetus: One is false, the other true.

Stranger: And the true one indicates the things that are, as they are, in your case.

263b

Theaetetus: Just so.

Stranger: While the false one indicates things that are different from things that are.

Theaetetus: Yes.

Stranger: Then it speaks of things that are not, as if they are.

Theaetetus: Just so.

Stranger: But it speaks of things that are, though they are different from things that are about you. For we have said, you remember, that in the case of each, there are many things that are, and also many that are not.

Theaetetus: Entirely so.

263c

Stranger: Now, the second statement I made about you, in the first place, based on the way we have defined statement, must necessarily be one of the shortest.

Theaetetus: Well, that's how it was agreed just now anyway.

Stranger: And, then, in turn, the statement must be about someone.

Theaetetus: Yes.

Stranger: And if it is not about you, surely it is not about anyone else.

Theaetetus: Indeed not.

Stranger: And it would not even be a statement at all if it were about no one. For we showed that it was impossible for there to be a statement which is a statement about nothing.

Theaetetus: Quite right.

263d

Stranger: Then, in this statement about you, when different things are stated as the same and 'what is not' as 'what is', it appears that the combination of verbs with names absolutely turns out to be a real and true false statement.

Theaetetus: Very true.

Stranger: Now, what about thought, opinion and appearance? Isn't it already clear that all of these become both true and false in our souls?

Theaetetus: How?

263e

Stranger: You will recognise this more easily if you first realise what each of these is, and how each differs from one another.

Theaetetus: Just tell me.

Stranger: Now, are not thought and speech the same, except that the silent dialogue of the soul with itself has been given the name 'thought'?

Theaetetus: Quite so.

Stranger: And the flow from the soul to the mouth which is vocally expressed has been given the name 'speech'.

Theaetetus: True.

264a

Stranger: And what's more, we know that the following arises in speech.

Theaetetus: What is that?

Stranger: Affirmation and denial.

Theaetetus: Yes, we know that.

Stranger: So when this happens in the soul through thought, in silence, can you call it anything other than opinion?

Theaetetus: What else?

Stranger: What about this? Whenever such an experience arises in someone, not through himself but on account of perception, is there another appropriate name for this experience, except 'appearance'?

Theaetetus: There is not.

264b

Stranger: Then, since speech turned out to be both true and false, and we showed that thought is the discourse of the soul with itself; and that opinion is the conclusion of thought; and what we mean by 'it appears' is a combination of perception and opinion; isn't it the case that any of these must be false sometimes since they are kindred to speech?

Theaetetus: Of course.

264c

Stranger: Then do you appreciate that there has been an earlier discovery of false opinion and speech than was expected, when we feared that we were taking on an entirely impossible task by setting out in search of it?

Theaetetus: I do.

Stranger: Then we should not become disheartened by what remains. For since these have become apparent, we should recall the previous divisions on the basis of forms.

Theaetetus: Which ones?

Stranger: Well, we divided image-making into two forms: likeness-making and appearance-making.

Theaetetus: Yes.

264d

Stranger: And we said that we were perplexed about which of these we would place the sophist in.

Theaetetus: So we did.

Stranger: And while we were unsure about this, even greater confusion arose for us, with the appearance of the argument which would dispute these, and maintain that there is no such thing as a likeness, image or appearance, since in no case at all is there any falsity, either in any way or at any time.

Theaetetus: What you say is true.

Stranger: But now, since false speech and false opinion have appeared, it is possible for there to be imitations of things that are, and from this disposition, a skill in deception arises.

264e

Theaetetus: Yes, it is possible.

Stranger: And, indeed, we agreed earlier that the sophist was located in one of the divisions mentioned.

Theaetetus: Yes.

Stranger: Then let's try again, take the proposed kind and divide it in two, all the while proceeding to the right-hand part of what is being divided, holding on to the communion of the

sophist, until we strip away whatever is common to the others, leaving only his own particular nature, which we shall display, first to ourselves, and then to those who are by nature most kindred to such a method.

265a

Theaetetus: Right.

Stranger: Now, didn't we begin by dividing skill at that time into productive and acquisitive?

Theaetetus: Yes.

Stranger: And the sophist appeared to us in the acquisitive parts of hunting, contest, retailing, and certain kinds of that sort.

Theaetetus: Yes, certainly.

265b

Stranger: But now, since he has been included under the skill of imitation, it is clear that we should first divide the productive skill in two. For presumably the skill of imitation is some kind of making, except that we shall say that it makes images, but not actual things. Is this so?

Theaetetus: Yes, entirely so.

Stranger: Now, in the first place, let there be two parts of the productive skill.

Theaetetus: What are they?

Stranger: The divine and the human.

Theaetetus: I do not yet understand.

Stranger: If you remember what was said at the start, we said that all production is the power which gives rise to whatever was not, previously.

Theaetetus: We remember.

265c

Stranger: Now, with regard to all mortal animals, and as for all things that grow on earth from seeds and roots, and the lifeless bodies, with or without souls, that are formed within the earth: shall we say that some other than god is the producer who gives rise to them from non-being? Or are we to say what most people say and accept?

Theaetetus: What?

Stranger: That nature gives rise to them through some spontaneous cause that produces them without intelligence. Or are they produced with reasoning and divine knowledge that comes from god?

265d

Theaetetus: I myself, perhaps due to my age, often shift my views from one of these positions to the other. However, looking at you now, and noticing that you think that these things have arisen through divine agency, I myself also believe this is the case.

Stranger: Good, Theaetetus, and if we thought that you were one of those people who would think differently in the future, we would now try, by means of an argument involving compelling persuasiveness, to make you agree. But since I am aware of your nature and recognise that even without our arguments, it is moving on by itself in the direction you say it is now inclined, I shall let the matter rest, for it would be a waste of time. Instead, let me propose that what are said to be the products of nature are produced by divine skill, while products that come from these products and are produced by humans, are produced by human skill. And, based on this account, there are two kinds of productive skill, the human and the divine.

265e

Theaetetus: Right.

Stranger: Now, since there are two of these, divide each of them again in two.

Theaetetus: How?

Stranger: As though you were dividing the whole production skill widthwise just now, divide it lengthwise this time.

Theaetetus: Take it as done.

266a

Stranger: In this way, there are now four parts in total: the two human parts on our side, and the two divine parts on the side of the gods.

Theaetetus: Yes.

Stranger: And, in turn, when divided in the other way, one part of each section is itself a making, while what remains in both cases is most accurately referred to as an image-making, and so production becomes two-fold again.

Theaetetus: Tell me again how this division goes.

266b

Stranger: Well, presumably we ourselves, and the other animals, and the things from which natural objects come – fire, water and their kindred – we know that all of these are produced by the god, who has made each of them. Is this so?

Theaetetus: Yes.

Stranger: Following each of these, there are images, not the things themselves, and they have also come about through divine ingenuity.

Theaetetus: What are they?

Stranger: The phantoms that appear in dreams, and those that arise of their own accord during the day, such as a shadow when darkness occurs in firelight, and the doubles produced when one's own light, falling on bright and smooth surfaces,

encounters the light from objects facing it, gives rise to an appearance opposite to the usual sight.

266c

Theaetetus: These two are, indeed, products of divine making: the actual object and the image which follows in each case.

Stranger: What about our skill? Won't we say that on the one hand it produces the house itself by the skill of building, while on the other, by the skill of painting, it produces another, which is some sort of human-made dream for those who are awake.

Theaetetus: Just so.

Stranger: Then, on the same basis, all the other products of our productive activity also come in twos according to our account: there is the thing itself produced by the making skill, and the image produced by the image-making skill.

266d

Theaetetus: I understand better now. And I now propose that there are two twofold productive skills: the divine and the human, based on one division, and the other yields the things themselves and a sort of likeness of these.

Stranger: Now let's recall that we said there are two forms of image-making: one is likeness-making, while the other is appearance-making, provided false had been shown to be truly false, and to belong by nature, among things that are.

Theaetetus: Yes, it was so.

Stranger: And this has appeared, and so on this basis shall we now propose, without dispute, that there are two forms?

Theaetetus: Yes.

266e

Stranger: Then let's divide the appearance-making, in turn, in two.

Theaetetus: How?

Stranger: One is the appearance produced by instruments, while the other is when the maker of the appearance presents himself as the instrument.

Theaetetus: What do you mean?

Stranger: Whenever someone uses his own body or voice to make something appear like your body or your voice, I think this part of appearance-making is, in general, called imitation.

Theaetetus: Yes.

267a

Stranger: Let us call this part imitation, and set it aside, and we shall be lazy and entrust the entire remainder to someone else, to make this one into one form and assign it an appropriate name.

Theaetetus: Yes, that's how we should distinguish them and pass on the other.

Stranger: And yet, Theaetetus, it is appropriate to think of this also as two-fold. Now consider the reason why.

Theaetetus: Tell me.

Stranger: Of those who imitate, some do so with knowledge of what they imitate, others without knowledge of it. And what distinction shall we make that is greater than that between knowledge and ignorance?

Theaetetus: None.

267b

Stranger: Now, the imitation we just mentioned belonged to those who know. For someone who knows you and your character would imitate you.

Theaetetus: Of course.

Stranger: But what about the appearance of justice and excellence in general? Don't many, who are ignorant of these but somehow have some opinion about them, give the appearance of inhabiting them by being eager to imitate what they themselves think, in word and deed, as much as possible?

Theaetetus: Yes, there are very many indeed.

Stranger: So, do they all fail in seeming to be just, although they are not at all? Or is the opposite the case?

Theaetetus: Quite the opposite.

267c

Stranger: I think then, we should say that this person is an imitator who is different from the other, the ignorant one from the one who knows.

Theaetetus: Yes.

Stranger: Now, where should we look for an appropriate name for each of them? Or is it obvious that this is somehow difficult, because there was some long-standing ignorance among the men of old when it came to dividing the kinds into forms, so that no one ever even bothered to make any division, and so it must be the case that names are not very abundant. However, even if it is somewhat rash to do so, let us, for the sake of the distinction, call the imitation based upon opinion, opinionative imitation, while the imitation based on knowledge is a kind of knowledgeable imitation.

Theaetetus: Let it be so.

267d

Stranger: Well, we should use the former, for the sophist did not belong with those who know, but with those who imitate.

Theaetetus: Yes, certainly.

Stranger: Then let's examine this opinionative imitator, just like a piece of iron, to see whether he is sound or whether there is still some flaw in him.

Theaetetus: We should examine him.

Stranger: Indeed, there is a really very significant flaw. For one of them is naive, thinking that he knows the matters about which he holds opinions, while the disposition of the other has had a great deal of involvement in arguments, and his very disposition gives rise to misgivings and fears that he does not know what he pretends to know in the presence of others.

267e

Theaetetus: Yes, certainly. There are indeed both kinds you describe.

Stranger: So, should we propose that one is a simple imitator while the other is an ironical imitator?

Theaetetus: That's likely.

Stranger: And should we, in turn, say that the form of this fellow is one, or two?

Theaetetus: Consider it yourself.

Stranger: I am considering it, and there appear, to a great extent, to be two. One I see, who is able to dissemble openly in lengthy speeches before large numbers, while the other does this in private, in short discourses, and forces the person who is conversing with him to contradict himself.

268a

Theaetetus: What you say is perfectly correct.

Stranger: Now, who should we propose is the more long-winded type? Is he a statesman or a popular orator?

Theaetetus: A popular orator.

Stranger: And what shall we call the other? A wise person, or a sophist?

Theaetetus: A wise person is impossible, since we proposed that he was ignorant, but since he is an imitator of a wise person, it is clear that he will have a name derived from his, and now I am almost in a position to recognise that we must really and truly refer to this person as the man who is sophist in every sense.

268b

Stranger: Then shall we put together his name, as we did before, weaving it together from end to beginning?

Theaetetus: Quite so.

Stranger: Now, the contradiction-making, ironical part of opinionative imitation belongs to the appearance-making kind, which is part of image-making and is marked off as the human, not the divine, part of production in the realm of word-making and wonder-working. So, anyone who says that the true sophist is "of that lineage and blood"¹⁵ will, it seems, speak the absolute truth.

268d

Theaetetus: Entirely so.

NOTES

1. A reference to the conversation in the Theaetetus, which concluded the previous day. At the end of that dialogue (Theaetetus 210d), Socrates arranged to meet Theaetetus and Theodorus again on the following morning.
2. Elea was a Greek colony in southern Italy, home to the philosophers Parmenides and Zeno, whose teachings emphasised the unity and unchangeability of being. The Eleatic Stranger is presented as a follower of this philosophical tradition.
3. A loose reference to Homer, *Odyssey* ix.270–271, where the god Zeus is described as the protector of strangers and suppliants who watches over human affairs.
4. A reference to Homer, *Odyssey* xvii.485–487, where gods in the likeness of strangers from afar are said to wander the cities of men, observing their behaviour.
5. A reference to Plato's dialogue *Parmenides*, in which the young Socrates engages in conversation with the elderly Parmenides and his associate Zeno.
6. The Greek word 'sophistes' is derived from 'sophos' (wise or clever). The stranger here plays on the etymology, observing that the sophist's name implies a wisdom which he does not in fact possess.
7. 'The Great King' was the standard Greek term for the King of Persia, ruler of the vast Persian Empire and traditionally regarded as the most powerful and wealthy man in the known world.
8. Protagoras of Abdera (c. 490–420 BCE) was one of the most famous of the early sophists. He is the principal figure in Plato's dialogue *Protagoras*, and his views on knowledge and perception are discussed extensively in the *Theaetetus*.
9. Parmenides, Fragment 7, lines 1–2. This same passage is quoted again by the Stranger at 258d as the 'paternal maxim' which they must refute.
10. A reference back to the paternal maxim of Parmenides quoted at 237a, which forbids the proposition that 'things that are not, are'.
11. The 'Ionian Muses' is taken to refer to Heraclitus of Ephesus, and the 'Sicilian Muses' to Empedocles of Acragas. Empedocles maintained that the cosmos was governed by the alternating forces of Love (combining) and Strife (separating).

12. A reference to Heraclitus, Fragment 51, expressing the doctrine that opposites are simultaneously in tension and harmony – combining even as they separate.
13. A reference to the mythical battle between the Olympian gods and the Giants, in which the Giants attempted to overthrow the gods by piling mountains upon one another to scale heaven. The story is recounted in Hesiod's *Theogony* 675–715 and elsewhere.
14. Eurycles was a famous Athenian ventriloquist and soothsayer who appeared to have a voice speaking from within his belly. Reference is made to him in Aristophanes, *Wasps* 1017–1020.
15. A formulaic Homeric phrase used when concluding a genealogy or lineage. The Stranger is using it ironically to mark the completion of the sophist's pedigree of definitions. Compare *Iliad* 6.211.

persons in the dialogue:

SOCRATES of Alopecce, son of Sophroniscus

THEODORUS of Cyrene, geometer

STRANGER from Elis in Italy

YOUNG SOCRATES of Athens

scene: in the Athenian gymnasium where the Theaetetus was set

257a

Socrates: Well, Theodorus, I owe you a great debt of gratitude for the acquaintance of Theaetetus, and of the stranger too.

Theodorus: And yet, Socrates, you will soon be three times more grateful once they have completed the statesman for you, and the philosopher too.

Socrates: What is this, Theodorus? Are we to say that we have heard our supreme reasoner and geometrician expressing the matter in this way?

257b

Theodorus: In what way, Socrates?

Socrates: By assigning equal worth to each of the men when they stand so far apart in value that they are completely out of the proportion that your skill deals with.

Theodorus: By our god Ammon,¹ Socrates, you have rebuked me nicely, and with justification, for the error in the calculations, and you demonstrated your excellent memory in the process. I'll get back to you on these issues some other time. As for you, stranger, you should never tire of gratifying us, and whether you prefer to take the man who is a statesman or the one who is a philosopher first, make your selection and go through it in detail.

257c

Stranger: That's what we should do, Theodorus, since once we have taken them on we should not give up until we have

brought them to a conclusion. However, what should I do about Theaetetus here?

Theodorus: In what sense?

Stranger: Should we rest him for a while and substitute his training companion, this young Socrates? What would you advise?

Theodorus: Make the change you just suggested, for they are both young and will bear all the exertion more readily if they are rested.

257d

Socrates: And, indeed, stranger, they would both seem to have a certain kinship with me. In one case you claim that he looks similar to me based on the nature of his face, while in the other case the fact that he is addressed by the same name provides some relationship. Of course, we should always be eager to get to know our kindred through discourse. So, I myself had dealings with Theaetetus in discussion yesterday, and I have now heard him answering questions too.² However, in the case of Socrates, I have done neither. This fellow should be tested too, so let him respond to you now, and to me on some other occasion.

258a

Stranger: So be it. Well, Socrates, are you listening to Socrates?

Young Socrates: Yes.

Stranger: And do you agree with what he is proposing?

Young Socrates: Very much so.

Stranger: It appears there is no impediment on your side, and there should probably be even less on my side. Anyway, after the sophist, it is necessary in my view that the two of us seek out the man who is a statesman. So tell me, should we place him in the rank of those who are knowledgeable, or not?

Young Socrates: As you suggest.

258b

Stranger: In that case, should we divide knowledge just as we did when we investigated the previous personage?³

Young Socrates: Perhaps so.

Stranger: So be it. Well, Socrates, I think I see a division, although it is not on the same basis.

Young Socrates: What then?

Stranger: It is on a different basis.

Young Socrates: Quite likely.

Stranger: So, where may one discover the statesman-like path? For it is necessary to discover it and, having set it apart from the others, to impose one character upon it, and by assigning one distinctive form to the other branches, make this soul of ours regard all knowledge as being of two forms.

Young Socrates: This is now turning out to be a task for you, stranger, rather than for me.

Stranger: And yet it should be yours too, Socrates, once it has become plain to us.

Young Socrates: Well expressed.

258c

Stranger: Now, aren't arithmetic, and certain other skills akin to it, devoid of activity, as they simply provide knowing?

Young Socrates: This is the case.

Stranger: However, those concerned with carpentry and all sorts of manual labour have acquired their knowledge as if it were naturally inherent in the actions, and they use it to bring to completion the objects they generate, things that did not previously exist.

Young Socrates: What of it?

Stranger: Well, all knowledge may be subdivided in this way, by designating one part as involving action, and the other as only cognitive.

258d

Young Socrates: I grant that these two kinds belong to a single whole – knowledge.

Stranger: Now, shall we designate the statesman, the king, the master, and even the estate manager, as one, when we are referring to them all, or should we declare that the skills are just as many as the names that are spoken? But it is better for you to follow my lead here.

Young Socrates: In what way?

Stranger: As follows. If someone is competent to advise one of our public physicians, he himself being a private citizen, wouldn't it be necessary to refer to him by the name of the same skill as the person he is advising?

Young Socrates: Yes.

259a

Stranger: What about this? Shouldn't we say that a person who is a skilled adviser to a man who is exercising kingship over a country, being himself a private citizen, possesses the knowledge that the ruler himself should have acquired?

Young Socrates: We should say so.

259b

Stranger: But, of course, the skill of a true king is kingship.

Young Socrates: Yes.

Stranger: And won't someone who has acquired this skill, whether he happens to be a ruler or a private citizen, be correctly referred to as kingly, in any case, on the basis of the

skill itself?

Young Socrates: And it is right to do so.

Stranger: Therefore, should we put all these things together as one and the same, statesmanship and the statesman and kingship and the king?

Young Socrates: We clearly should.

Stranger: And, indeed, estate manager and a master are the same?

Young Socrates: Of course.

Stranger: What about this? Surely there isn't any difference between an impressively large household and a substantial but a small city when it comes to rulership.

Young Socrates: None.

259c

Stranger: And so, on the matter we were considering, it is evident that one knowledge applies to them all. And whether someone designates it as kingship or statesmanship or estate management, we should not argue with him.

Young Socrates: No, why would we?

Stranger: But this much is obvious anyway, that in order to hold power, any king is able to do very little by means of his hands, or his body as a whole, in comparison with the intelligence and force of his soul.

Young Socrates: Obviously.

259d

Stranger: Well, do you want us to assert that a king has more affinity with cognitive knowledge rather than with knowledge that involves manual skill, and is on the whole active?

Young Socrates: Of course.

Stranger: In that case, shall we place all these together into the same, as one – statesmanship and the statesman, kingship and the kingly person?

Young Socrates: Obviously.

Stranger: Wouldn't we be proceeding in an orderly manner if we were to make a division in the cognitive knowledge next?

Young Socrates: Very much so.

Stranger: Then apply your mind, in case we can discern some natural division in it.

Young Socrates: What sort is it? Tell me.

259e

Stranger: As follows. We agree, I presume, that there is a skill of calculation?

Young Socrates: Yes.

Stranger: In my view, it belongs entirely among the cognitive skills.

Young Socrates: How could it not?

Stranger: Now, once calculation has cognised the difference between the numbers, surely we would not assign it any other function over and above judging what it has cognised?

Young Socrates: No, why would we?

Stranger: And, indeed, any architect supervises workers but does not himself behave as a worker.

Young Socrates: Yes.

Stranger: Providing, I presume, the cognitive aspect but not the manual labour.

Young Socrates: Quite so.

260a

Stranger: Then he may rightly be said to partake of the cognitive knowledge.

Young Socrates: Entirely so.

Stranger: Yes, but in my view it belongs to this man, once he has made a judgement, neither to conclude the matter nor take his leave, in the way that the man who calculated took his leave, but to assign what's appropriate to each of the workers until such time as they have completed the assigned task.

Young Socrates: And rightly so.

260b

Stranger: Therefore, all such branches of knowledge are cognitive, and so are any that accompany calculation, yet these two kinds differ from one another when it comes to judging and directing.

Young Socrates: Apparently.

Stranger: Now, if we were to divide cognitive knowledge, referring to one part as directive and the other as judgemental, would we say it had been divided appropriately?

Young Socrates: Yes, in my view anyway.

Stranger: Now those who are engaged in a common task should be content if they themselves are like-minded.

Young Socrates: They should.

Stranger: Then as long as we are sharing a task, we should bid farewell to the viewpoints of anyone else.

Young Socrates: Of course.

260c

Stranger: Come on then, among which of these two skills should we include the kingly person? Is it among the judgemental, just like a spectator, or does he belong more to the directive skill insofar as he is exercising mastery? Shall we place

him there?

Young Socrates: More in the second, of course.

Stranger: Then we should see once more whether the directive skill divides in any way. Indeed, it seems to me that it does so as follows. Just as the skill of retailers is distinguished from the skill of those who sell their own produce, so too is the kingly class, seemingly, set apart from the class of public messengers.

Young Socrates: How so?

260d

Stranger: The retailers first receive products that are not their own, and then sell once more what had previously been sold to them.

Young Socrates: They certainly do.

Stranger: So too, messengers take other people's ideas as directions, and then direct others once more with the directions imparted to them.

Young Socrates: Very true.

Stranger: What now? Shall we mix together kingship, interpretation, instructing rowers, prophecy, imparting messages, and various other skills related to these, as if they were the same, because they all involve giving directions? Or, since we devised a likeness just now, would you like to devise a name, in an analogous manner, since the class of those who are 'own-directing' is effectively devoid of a name? We could then distinguish these activities in this way, placing the class of the kings with the 'own-directing' skill, paying no regard to all the rest, and allowing someone else to assign them a name, since our method is concerned with the ruler and not with his opposite.

Young Socrates: Entirely so.

260e

Stranger: Therefore, since this has been set apart from the rest in a measured way, defined by the contrast between otherness and kingship, it is necessary to go on and divide this once more, if we find that it still yields us a cut.

Young Socrates: Entirely so.

Stranger: And indeed we appear to have one. Just follow along and make the cut with me.

261a

Young Socrates: In what way?

Stranger: In the case of all those we may recognise as ruling by issuing direction, we shall find, won't we, that they are issuing commands for the sake of the generation of something?

Young Socrates: Of course.

Stranger: And, indeed, it is not enormously difficult to divide all that is generated into two.

Young Socrates: In what way?

261b

Stranger: Considering them all together, some, I presume, are soulless, while others are ensouled.

Young Socrates: Yes.

Stranger: And it is just on the basis of these that we shall make a cut in the directing part of purely cognitive knowledge, if we do actually wish to cut it.

Young Socrates: Based on what?

261c

Stranger: By aligning one part of it with the generation that relates to the soulless, and the other with the generation that relates to the ensouled. And in this way the entire, at that stage, can be separated into two.

Young Socrates: Absolutely.

Stranger: Then let us leave one of these parts aside and take up the other one. But having taken it up, we should make a twofold division of all of it.

Young Socrates: Which of the two parts are you saying should be taken up?

Stranger: Presumably the one that issues directions relating to living creatures since the kingly knowledge, unlike architectural knowledge, is of course never the supervisor of the soulless. No, it is nobler, and always has its power over living creatures, and is concerned just with these.

261d

Young Socrates: Correct.

Stranger: However, in the case of living creatures, their coming into being and their nurture may be seen in some cases to be nurture of one animal, while in other cases it is the care, in common, of beasts in herds.

Young Socrates: Correct.

Stranger: But we shall not find the statesman engaging in individual nurture, like an ox driver or a horse trainer. Rather, he bears more resemblance to a horse rancher or a cattle farmer.

Young Socrates: So it appears anyway, when you put it like that.

261e

Stranger: Now in the case of the nurture of living creatures, should we call common nurture of many of them together either herd nurture or nurture in common?

Young Socrates: Whichever occurs to us in the course of the argument.

Stranger: Well said, Socrates! And if you preserve this lack of seriousness towards names, you will prove to be wealthier in wisdom as you approach old age. And we should do exactly as you have directed us. But with regard to herd nurture, can you think of some way that we could show that it is twofold so that what we are now searching for among the pair may be sought thereafter in one of the halves?

262a

Young Socrates: I am eager to do so, and it seems to me that there is a particular sort of nurture concerned with human beings, and a different one concerned with beasts.

Stranger: You made that distinction with enormous eagerness and the utmost courage. However, as best we can, let's not allow this to happen to us again.

Young Socrates: What are you referring to?

262b

Stranger: Let's not separate off one small part relative to many large ones, or proceed without forms. Rather, let the part simultaneously possess form. Indeed, it is all very well to separate immediately what is being sought from the rest, provided it is done properly, just as you thought that you had the division a moment ago when you rushed the argument once you saw that it was moving in the direction of human beings. However, my friend, it is not safe to work with fine divisions. Rather, it is safer to proceed by cutting through the mid-points, for then you would be more likely to encounter forms. This makes all the difference to such enquiries.

262c

Young Socrates: What do you mean by this, stranger?

Stranger: We should attempt to express this even more clearly, Socrates, out of respect for your nature. Now, under the present circumstances it is impossible to present comprehensively, yet I

should endeavour to advance the issue a little further for the sake of clarity.

Young Socrates: Well then, what are you saying we did incorrectly just now, when we were making our divisions?

Stranger: It is as if someone, attempting to divide the human race in two, were to make the division, just as most people in our part of the world make the distribution, separating the Greek race, as one, separate from them the rest, while referring to all the other races together by one name, non-Greek, even though they are unlimited in number, do not mix, and do not share a common language. And on account of this one name, they also presume it to be one race. Or, it's as if someone were to believe he was dividing number on the basis of two forms by cutting off the number ten thousand from all the others, separating it off as one form, and assigning one name to all the remainder. And then, because of the name, went on to presume that this class, a different one from the other one, had come into being. But presumably he would make better divisions, more on the basis of forms, and into two, if he were to cut number into odd and even, and the human race in turn into male and female. He would only split off Lydians or Phrygians,⁴ or any others, from everything else in situations where he was at a loss to discover a part that is, at the same time, also a class for each of the two parts that had been split off.

262e

Young Socrates: Absolutely correct. But just explain this, stranger. How might one recognise more plainly a class and a part as not the same, but as different from one another?

Stranger: Oh, most excellent of men! The task you are assigning me is no ordinary one, Socrates. And although we have now wandered further than necessary from the argument before us, you are asking us to stray even further. Well, we should now do what is reasonable and resume the argument once more, and

come back to these other issues at our leisure, just as trackers do. However, you must be completely on your guard against ever presuming that you have heard me make this distinction plainly.

263a

Young Socrates: What distinction?

Stranger: That form and part are different from one another.

Young Socrates: What should I presume instead?

Stranger: That whenever there is a form of something, then this is also, of necessity, a part of the subject of which it is said to be a form, but there is no necessity whatsoever that a part be a form. You should always say that I formulate it like this rather than the other way.

Young Socrates: That's what I'll do.

263b

Stranger: Well, tell me what comes next.

Young Socrates: What is it?

Stranger: The point of departure of the digression that has led us here. Indeed, I have in mind, in particular, the point where you were asked how 'herd nurture' should be divided, and you replied very eagerly that there are two classes of living creatures, one human and another one consisting of all the rest of the beasts put together.

Young Socrates: True.

263c

Stranger: Well, you seemed to me anyway to believe that having taken away a part, you had left behind a remainder, which, in turn, was one class belonging to all of them, because you were able to assign the same name to them all and call them beasts.

263d

Young Socrates: That is indeed what happened.

Stranger: And yet, my utterly courageous friend, if there were some other animal that is intelligent, as the crane, for instance, or some other such creature seems to be, perhaps they would also assign names on the very same basis as you did, with cranes as a single class set against all other animals, making itself important. And having gathered all the others, along with human beings, into a single class, they would refer to them as nothing in particular, except perhaps beasts. So we should endeavour to be careful of all processes of this sort.

263e

Young Socrates: In what way?

Stranger: By not dividing the entire class of living beings, so that this may be less likely to happen to us.

Young Socrates: Indeed, it shouldn't happen at all.

Stranger: And in fact this is also the way in which we went wrong then.

Young Socrates: How exactly?

Stranger: Belonging to cognitive knowledge that was directive, there was for us, I believe, a part of the animal rearing class, of animals in herds that is. Is this so?

Young Socrates: Yes.

264a

Stranger: Well, at that stage all living creatures together had already been divided into domesticated and wild, for those whose nature is amenable to domestication are referred to as tame, while those that resist it are called wild.

Young Socrates: Good.

Stranger: And yet, the knowledge we are seeking was, and still is, applicable to the tame ones, and it should indeed be sought

among herded beasts.

Young Socrates: Yes.

264b

Stranger: However, let us not make the division just as we did before when we looked to all of them, nor should we hurry so that we may get quickly to statesmanship. Yes, that's what put us in the predicament described by the proverb.

Young Socrates: What predicament?

Stranger: By not being quiet and not making sound divisions, we have reached our destination more slowly.

Young Socrates: And our predicament is a good one, stranger.

Stranger: Be that as it may, let's try to divide common nurture once more from the beginning. For perhaps the detailed conduct of the argument itself will better reveal to you the very thing you are intent upon. Now, tell me something.

Young Socrates: What is it?

264c

Stranger: I want to know if you have often heard people referring to the fish cultivations on the Nile and in the Royal Ponds.⁵ Now, I know you won't have come across them yourself, although you may perhaps be aware of them in fountain pools.

Young Socrates: Yes, indeed, these I have seen, and the others I have heard about from many people.

Stranger: And even if you have not traversed the plains of Thessaly, you have surely learned of their goose farms and crane farms and believe that these exist.

Young Socrates: Of course.

264d

Stranger: The reason I am asking you all these questions is this: it's because the nurture of herds is either water-based or

land-based.

Young Socrates: It is, indeed.

Stranger: So, do you also agree that it is necessary to split the knowledge of common nurture in this way, allocating each of the two parts of it to either of these divisions, and referring to one as water-based nurture and the other as land-based nurture?

264e

Young Socrates: I think so.

Stranger: And, of course, we shall not enquire which of the two skills belongs to kingship, for that is obvious to everyone.

Young Socrates: Of course.

Stranger: Now, in the case of herd nurture, everyone would presumably further divide the land nurture part.

Young Socrates: In what way?

Stranger: By distinguishing the winged and those that go by foot.

Young Socrates: Very true.

Stranger: What about this? Should the statesman not be sought among the sort that goes by foot? Or don't you believe that even an utterly mindless person, so to speak, would accept this?

Young Socrates: I do.

265a

Stranger: And we should demonstrate the skill in managing those that go by foot being cut in two, just like an even number.

Young Socrates: Obviously.

Stranger: And, indeed, it appears that there are two clear approaches towards the part to which our argument is directed. One is quicker since it separates a small part from the large,

while the other is longer but adheres more to the principle we stated previously, whereby we should, for the most part, cut in the middle. So, we can proceed by whichever path we wish.

Young Socrates: Why? Is it impossible to take both?

265b

Stranger: At the same time? How extraordinary! But it is possible of course to take each in turn.

Young Socrates: In that case, I choose each in turn.

Stranger: That is easier, since there is little left for us to do. Yes, at the beginning, or indeed if we were midway through the process, this would be a difficult task for us. But now, since you want to do this, let's go the longer way first, since we shall pursue this more easily when we are fresher. Now, take note of the division.

Young Socrates: Tell me.

Stranger: Our tame creatures that go by foot and live in herds are, by nature, divided in two.

Young Socrates: On what basis?

Stranger: On the basis that some are hornless while the others are horn-bearing.

Young Socrates: Apparently.

265c

Stranger: Now, divide the skill of managing creatures that go on foot, and assign it to each of these parts. But have recourse to a description, for if you ever decide to name them, the issue will get more complicated than necessary.

Young Socrates: So how should it be described?

Stranger: As follows. Once the knowledge of managing those that go on foot has been divided in two, one part is assigned to the horn-bearing part of the herd, and the other to the hornless

part.

Young Socrates: Let them be described like this, for the point has been made abundantly clear.

265d

Stranger: And what's more, it is quite apparent to us that the king is shepherd to some stunted herd of hornless creatures.

Young Socrates: Yes, how could it not be obvious?

Stranger: Then we should break this up and try to grant him the part that belongs to him.

Young Socrates: Entirely so.

Stranger: Now, do you wish to divide it into split-hoofed and the so-called single-hoofed, or into mixed bred and pure bred? You understand, I presume?

Young Socrates: Understand what?

265e

Stranger: That horses and donkeys, by nature, breed from one another.

Young Socrates: Yes.

Stranger: And yet, the rest of the smooth herd of tame creatures do not interbreed with one another.

Young Socrates: Of course not.

Stranger: Well then, does the statesman appear to have the care of a mixed-bred nature or of something pure bred?

Young Socrates: He obviously has care of the unmixed nature.

Stranger: Then it seems we should break this in two, just as we did in the previous cases.

Young Socrates: Yes, we should do that.

266a

Stranger: And, indeed, the creatures that are tame and live in herds have been almost entirely divided up at this stage, except for two classes. Indeed, the class of dogs does not deserve to be counted among animals living in herds.

Young Socrates: Of course not. But by what are we to separate the two?

Stranger: The very thing by which yourself and Theaetetus may rightly make the division, since you have both taken to geometry.⁶

Young Socrates: By what?

Stranger: By the diagonal, I presume, and once more by the diagonal of the diagonal.

Young Socrates: What do you mean?

266b

Stranger: The nature which our class of human beings has acquired is surely adapted for motion, just like the diagonal which has the power of two feet?

Young Socrates: Just so.

Stranger: Then again, the nature of the remaining class, on the basis of power, is in turn the diagonal of our power, if by nature it is twice two feet.⁷

Young Socrates: How could it not be? And, indeed, I almost understand what you wish to demonstrate.

266c

Stranger: What's more, Socrates, do we see that something has happened to us in the course of these divisions which could be a theme for the greatest comedy?

Young Socrates: In what way?

Stranger: This human race of ours has shared the lot and run the course with the noblest, and at the same time, most

easy-going class of creatures.⁸

Young Socrates: I see. And it is unfolding in a most unusual manner.

Stranger: What about this? Aren't the slowest likely to arrive last?⁹

Young Socrates: Yes, I'll grant you that anyway.

266d

Stranger: And don't we observe that the king appears even more comical as he runs along with the herd, and proceeds down a shared course, as the man who for his part is better trained than anyone for an easygoing life.¹⁰

Young Socrates: Entirely so.

Stranger: And now, Socrates, the point that was made before, during our investigation into the sophist, is more obvious.¹¹

Young Socrates: What point?

Stranger: That in such a method of argument as this, there is no more concern for what is serious than what is not, and the trivial is given no less respect than the important. Rather, it always reaches the very truest by itself.

Young Socrates: So it seems.

266e

Stranger: After this, shall I proceed down the shorter path we mentioned before, the one that leads to the definition of the king, so that you don't have to ask me?

Young Socrates: Certainly.

267a

Stranger: Well, in that case, I say that those that go by foot should be assigned immediately to the two-footed or the four-footed class, and perceiving the human race still on its own, sharing the lot of those with feathers, we should cut the

two-footed herd once more into featherless and feathered. But once it has been cut, and the skill in managing humans has been made evident, we should take the statesman, the kingly man, like a charioteer, and establish him within it, bestowing upon him the reins of the city as his own, since this knowledge is his.

267b

Young Socrates: You have rendered this account beautifully, and as if I were in your debt, you have added on the digression by way of interest to fill it out.

Stranger: Come on, then. Let's draw together this account of the name of the statesman's skill, by going back over it from the beginning to the end.

Young Socrates: Certainly.

Stranger: Well, at the beginning we had a directive part of cognitive knowledge, and part of this was said, by comparison, to be 'own-directing'. Again, animal nurture, not the smallest of the classes, was split off from 'own-directing'; then a herd nurture form from animal nurture; and then command of those that go by foot from herd nurture; and in particular, from the management of those that go by foot, the skill in nurturing the hornless nature was cut off. But if we wish to construct one name for the subsequent part, it is necessary to weave together no less than three, and refer to it as the knowledge of the shepherding of the unmixed breed. And the cut from this, applied to the two-footed flock, still left the part concerned with the management of humans on its own. And this is already the very thing we sought, the same thing referred to at once as kingly, and as statesman-like.

267c

Young Socrates: Entirely so.

267d

Stranger: Is this really how the matter stands, Socrates? Has our task been accomplished, as you have just said?

Young Socrates: What task?

Stranger: The comprehensive description of the subject in an adequate manner. Yes, our search does lack one feature in particular, that it has somehow given us an account of the matter, but this has not been accomplished perfectly and comprehensively.

Young Socrates: What do you mean?

Stranger: I shall now try to make the very issue I am thinking of even more clear to both of us.

Young Socrates: Please proceed.

Stranger: Of the numerous skills of shepherding that were presented to us just now, was one of the skills statesmanship? And was it the care of one particular kind of herd?

Young Socrates: Yes.

267e

Stranger: Yes. And the argument determined this not as the nurture of horses, or of other beasts either, but as the knowledge of the common nurture of human beings.

Young Socrates: So it did.

Stranger: Let's look at the difference between all other herdsmen and kings.

Young Socrates: What sort of difference?

268a

Stranger: Let's see if any of the others, bearing the name of some other skill, claim to join with the king in the common nurture of the herd, and pretends to do so.

Young Socrates: In what sense do you mean this?

Stranger: Take, for instance, all traders, farmers and bakers, and in addition to these the gymnastic trainers and the class of physicians. Do you realise that these fellows would all battle comprehensively in argument against those shepherds, of all things human, whom we call statesmen, claiming that they are the ones who care for the nurture of humanity, and not only for herds of human beings, but for those who rule over them too?

Young Socrates: And wouldn't they be right to say so?

268b

Stranger: Perhaps. This we shall investigate, but we do know that no one will argue with an oxherd on any of these issues. No, the herdsman himself is the nurturer of the herd. He himself is the physician, and he himself is a sort of matchmaker, and when it comes to childbirth and bringing children into the world, he alone is knowledgeable about midwifery. Then again, insofar as the beasts are naturally able to participate in music and education, no one is more powerful than he at consoling them and charming them into quietude, best at performing the music belonging to his own flock, on instruments or with the unaided voice. And, indeed, the other herdsman have the same manner. Is this so?

Young Socrates: Quite right.

268c

Stranger: Now, how can our argument in relation to the king prove correct and flawless when we install him as the sole herdsman and nurturer of the human herd while singling him out from thousands of others who dispute this assertion?

Young Socrates: We cannot do so at all.

Stranger: In that case, we were right to be afraid a moment ago, suspecting that although we might indeed turn out to be describing some kingly figure, we might not yet have given an accurate portrayal of the statesman until we had stripped away

those who crowd about him and pretend to share his role. And once we had separated him from those fellows, we then revealed him pure and alone.

268d

Young Socrates: You're perfectly right.

Stranger: Then that's what must be done, Socrates, unless we want our argument to end up in disgrace.

Young Socrates: Well, that is something that we must never allow to happen at all.

Stranger: In that case, we need to proceed once more from another starting point based on some different approach.

Young Socrates: What sort of approach?

268e

Stranger: We should mix in some playfulness, since we need to make use in large part of a great story. And thereafter, just as we did previously, arrive at the pinnacle, the object of our search, by continually separating part from part. Isn't that what's needed?

Young Socrates: Yes, certainly.

Stranger: Anyway, apply your mind fully to the story just as children do, since you are not really too long out of your childhood years.

Young Socrates: Please proceed.

Stranger: Well, many events recounted from ancient times have occurred and will occur again, but especially the portent described in the dispute between Atreus and Thyestes. Indeed, I presume you have heard it, and can recall what is said to have happened.¹²

Young Socrates: You are probably referring to the sign of the golden lamb.

269a

Stranger: Not at all, but to the change in the rising and setting of the sun and the other stars. Yes, apparently the sun used to set then in the place where it now rises, and used to rise in the opposite place. However, once the god had borne witness in favour of Atreus, he actually changed this to the present arrangement.

Young Socrates: Yes, indeed, that's what they say too.

269b

Stranger: And what's more, we have also heard from many sources about the kingship that Cronus exercised.

Young Socrates: Yes, from very many.

Stranger: And what about the story that the people of former times were earth-born and were not born from one another?

Young Socrates: That is another one of the ancient accounts.

Stranger: Well, all these originated from the same circumstance, and so do countless others besides that are even more amazing. But due to the great passage of time some of them have been obliterated, while others have been recounted in piecemeal fashion, omitting any connection between them. But no one has explained the circumstance responsible for them all, so that must now be recounted. Indeed, once it has been stated, it will prove relevant to our exposition of the king.

269c

Young Socrates: You have expressed that excellently. Speak on and omit nothing.

Stranger: Please listen. For there is a time when God himself joins directly in guiding the movement of this universe and assists its circling motion, and another time when he lets it go once its revolutions have finally attained the appropriate measure of time, and it is, of itself, led around once more in the opposite direction because it is a living being, allotted

intelligence by the one who constructed it in the beginning. There's a particular reason why this ability to retrace its path is necessarily inherent in its nature.

Young Socrates: What reason?

269d

Stranger: It belongs only to all the most divine things to hold always to the same characteristics and manner, and to be the same, but the nature of body does not partake of this arrangement. And what we refer to as heaven and the universe has inherited numerous blessed qualities from its creator, and yet it does also have communion with body. As a consequence, it is impossible for it to be devoid of change in every respect, and yet to the best of its ability it moves as much as possible in the same place, with a single direction. Therefore, it has been allotted the reverse revolution because that is the smallest possible deviation from its own motion. But it is quite impossible for anything, except that which, for its part, directs the movements of everything, to turn itself continually by itself. But it is not ordained that this causes motion first in one direction and then again in the opposite direction. So, on the basis of all these considerations, we should not assert that the world itself continually turns itself, nor that it is turned entirely by a god in a pair of opposed revolutions, nor again that a pair of gods, whose thinking is opposed, turns it. Rather, the only remaining option is just what we stated earlier. It is guided along by an extraneous divine cause, acquires life once again, and adopts a restored immortality once more from its craftsman. But then, when it is let go, it proceeds by means of itself, having been let go at such a time that it travels in the opposite direction for many thousands of revolutions because, indeed, it is in motion, being most enormous and well-balanced, resting on the smallest pivot.

270a

Young Socrates: Well, it appears that everything you have recounted is very reasonable.

270b

Stranger: Then having reflected upon what has been said, let's come to an understanding of this circumstance, the one we declared to be the cause of all these wonders. In fact, this is it.

Young Socrates: What is it?

Stranger: That the course of the universe revolves at one time in the direction it does now, and at another time in the opposite direction.

270c

Young Socrates: How so?

Stranger: We need to realise that of all the turnings taking place about the heaven, this alteration is the greatest and most comprehensive.

Young Socrates: So it seems, anyway.

Stranger: In that case, we should also presume that at that time enormous changes happen to us who dwell within it.

Young Socrates: This also seems to be the case.

Stranger: And yet, we are also aware that the nature of living beings has difficulty in enduring lots of enormous changes of all sorts when they happen.

Young Socrates: Of course.

270d

Stranger: So, at that stage, enormous destructions are a necessary consequence for living beings in general, and in the case of the human race, only a few survive. Now, numerous other wondrous and novel circumstances befall these people, but there is a most significant one that follows upon the reversal of the motion of the universe whenever the turn,

opposite to what is now established, takes place.

Young Socrates: What is it?

270e

Stranger: Firstly, the ageing process of each of the creatures stood still in all cases, and anything mortal stopped getting older in appearance, but changed once more to the opposite condition, as if it was growing younger and more tender. And the white hair of the older people turned to black, and in the case of the bearded men, their cheeks became smooth once more, and each reverted to a former time of life. And the bodies of the youths, becoming smoother and smaller every day and every night, returned once more to the nature of a new born child, like unto that both in body and in soul. And thereafter, fading away completely, they vanished altogether. What's more, the dead body of anyone who came to a violent end during that era went through the same processes, quickly disappeared in a few days, and was done away with.

271a

Young Socrates: But, stranger, what was the origin of living creatures then? In what manner were they generated from one another?

Stranger: It is clear, Socrates, that generation from one another was not in the nature of things at that time. Instead, the earth-born race that is said to have once existed, the one that returns once more from the earth, was the race that existed in that age. This was remembered by our earliest ancestors, who were born at the beginning of this present age, bordering upon the very end of the previous revolution. Indeed, these ancestors became our proclaimers of these accounts of those earth-born people, accounts that are met with unjustified disbelief by many people these days. Indeed, in my view, we need to consider what else happens. For it follows, from the fact of the return of the old people to the nature of the child, that from those who have

died and are lying in the earth, people are reconstituted there, and coming back to life again they follow the direction of the opposite cycle of generation. And based upon that direction, they necessarily develop as earth-born and are named and described accordingly, except the ones whom God does not preserve for some other destiny.

271c

Young Socrates: Yes, this all follows quite well from what went before. But what about the life that you say is under the power of Cronus? Did that occur during those directions of the cycle, or during these? For it is evident that the change to the stars and the sun occurs during either of the two directions of the cycle.

271d

Stranger: You have followed along with my account quite well. But in relation to your question about the spontaneous generation of everything for humanity, this is least applicable to the present revolution. This also belongs to the previous one. For in that era, god ruled first, caring for the revolution itself as a whole. What's more, the same applied to the individual regions. The parts of the universe were entirely allocated under ruling gods. And, indeed, the living creatures, based on their classes and herds, were adopted by particular daimons, like divine shepherds, each self-sufficient in every respect for each of the creatures he tended, so that none was wild, nor did they eat one another, neither was there any war or discord whatsoever. But details of all the consequences of such an arrangement would be too numerous to recount.

271e

Stranger: Now, what was said about the spontaneous life of human beings was said for the following reason. A god presided over them and managed them himself. Just as humans nowadays, a different and more divine creature now tends upon other kinds of creatures lowlier than itself. While he tended

them, there were no constitutions or any possession of women or children, for they all came to life once more from the earth, remembering nothing of the past. And although this sort of thing was absent, they did have an abundance of fruit from trees, and from lots of other vegetation sent forth spontaneously from the earth, not a product of agricultural activity. They dwelt outdoors for the most part, living off the land, naked and without bedding, for their seasons were a blend, devoid of any distress, and they had soft beds of abundant grass sprung forth from the earth. Socrates, you are now hearing about the life of people under the dominion of Cronus. But the one that is said to be under Zeus, the present one, you are aware of because you are living in it. Now are you able, and indeed willing, to decide which of the two is happier?

272b

Young Socrates: Not at all.

Stranger: In that case, would you like me to make the judgement for you in some way?

Young Socrates: Yes, certainly.

272c

Stranger: Well, if the nurslings of Cronus, enjoying such extensive leisure and the ability to converse through words not only with humans but also with beasts, were to make use of all these advantages for philosophy, associating with beasts and with one another, and finding out from every nature whether any possessed some particular ability to discern something, over and above the others, in relation to the accumulation of understanding, it would be easy to decide that the people of that age vastly exceeded those of this age in happiness. However, if they were to stuff themselves full of food and drink, and converse with one another and the beasts, recounting the sort of tales told about them nowadays, this too, in my view of the matter anyway, would indeed be an easy decision. In any

case, let's set this aside until someone appears who is up to the task of informing us in which of the two ways the people of that age directed their desires regarding knowledge and the use of words.

272d

Stranger: But we should state the reason why we have revived this story, so that we may bring what follows to its conclusion. For when the time for all this had come to an end, and it was necessary for the change to occur – and indeed by then the entire earth-born race had been exhausted, each soul having rendered all its births, each falling to the earth as seed for its allotted number of times – at that stage the helmsman of the universe, as if letting go the handle of the helm, withdrew into his own viewing place, and the allotted and innate desire turned the universe once more in the opposite direction. So all the gods who shared the rule of the regions with the greatest daimon, recognising what was already taking place, withdrew in turn from the parts of the world under their own care. But the universe, in changing direction and being thrown together, the initial and final motions thrusting in opposite directions, produced a considerable convulsion within itself, and thus brought about another destruction of various living beings.

273a

Stranger: Once sufficient time had elapsed thereafter, so that the tumult and confusion had ceased and calm was restored after the convulsions, it adopted the order of its own accustomed course, itself assuming care and control of itself and whatever was in itself, remembering the teaching of its father and maker as best it could. Now, in the beginning this was achieved more precisely, but in the end it was more vague. And the cause of this was the bodily aspect of the combination, the ancient companion of its nature, which had partaken of much disorder before it arrived in the present world. For it has acquired all that is good from its maker, whereas anything that

is troublesome or unjust in the universe it retains from that previous condition, and it engenders this in the living beings. When it nurtures the creatures within itself in company with the helmsman, the baseness it generates is minor, while the good is enormous. However, once it is separated from him, it always deals with everything excellently, during the time closest to the letting go, but with the advance of time and the onset of forgetfulness in itself, the ancient condition of disharmony also exerts more power over it and comes to full bloom towards the end of that era. Then, mixing a little good with a considerable blend of its opposite, it gets to the point at which both itself and whatever is within it are in danger of destruction. Therefore, at that stage, the god who had once put it in order, discerning the difficulties it is in – concerned lest it be storm-tossed by tribulations, break apart, and sink beneath the boundless ocean of diversity – takes his seat once more at its helm, and having reversed the diseases and weaknesses from the former revolution when it was subject to itself, brings order, sets it right, and renders it immortal and unageing.

273e

Stranger: Now, although that concludes all there is to be said, it is sufficient, for the aspect that concerns the presentation of the king, to take note of the earlier part of the account. For once the universe had turned its course once more to the present process of generation, the direction of ageing stood still once more, and new processes opposite to the previous ones were imposed. Those creatures who were just on the point of vanishing due to their smallness grew larger, while the bodies that were new-born from the earth with grey hair, died once more and went back down into the earth. And everything else changed, imitating and following along with the tendencies of the universe. And, indeed, in the case of conception, birth and nurture, their imitation was of necessity in conformity with all else. For it was no longer possible in earth for living beings to be

brought forth through the agency of artificers other than themselves. Rather, just as the universe had been directed to be the independent ruler of its own course, so too, on the same basis, its parts were directed to come forth, be born and develop as best they could, under similar guidance.

274b

Stranger: The entire account was initiated for a purpose, and we have now attained it. Now, in the case of the other animals, it would be a complex and lengthy process to recount in each case what they changed from and what caused the change. However, in the case of human beings it would be shorter and more appropriate. For when we became bereft of the care of the daimon who had acquired and tended us, most of the animals whose natures are troublesome turned wild and preyed upon the humans, who had themselves become weak and unprotected, and in those early years were still devoid of ingenuity or skill, seeing that their spontaneous food source had failed them and they did not yet know how to provide for themselves because they had no compelling need to do so previously. They were facing enormous difficulties on account of all these issues. Hence, those gifts from the gods, described of old, have been bestowed upon us, along with the necessity for teaching and instruction: fire from Prometheus, skills from Hephaestus and his fellow artisan, seeds and plants in turn from other gods. And everything else that has helped the organisation of human life has arisen from these. When, as we said just now, the care of the gods for humanity had failed, they had to maintain guidance and care of themselves by means of themselves, just like the entire world, which we are imitating and following through all time as we live and grow, now in this manner, then in that other manner. So let that be the end of the story. But we shall now make use of it, in order to discern the extent of our error in presenting an account of the king and the statesman in the earlier discussion.

275a

Young Socrates: But how do you say our error occurred, and what was the extent of it?

Stranger: In one sense it was more trivial, but in another sense it was extremely significant, and much greater and more extensive than I thought at the time.

Young Socrates: In what way?

Stranger: When we were asked about the king and statesman belonging to the current revolution and manner of coming into being, we described the shepherd of the human herd belonging to the opposite cycle, and he was a god rather than a mortal, and in this way we went completely wrong. However, when we presented him as ruling the entire city, we did not state the manner of such rule, and in that sense, although we did speak the truth, it was not stated comprehensively or clearly, and therefore we were in error, but to a lesser extent than that.

275b

Young Socrates: True.

Stranger: Then once we have defined the manner of such rule over the city, we should expect accordingly to describe our statesman comprehensively.

Young Socrates: Very good.

Stranger: And it was for these reasons we included the myth, in order to point out not only that when it comes to herd nurture, everyone nowadays disputes over that title with the person we are looking for, but also to discern more clearly, based upon the example of shepherds and cowherds, the one person whom it is appropriate, in view of his care for the nurture of humanity, to deem worthy of this title alone.

275c

Young Socrates: Rightly so.

Stranger: And yet, Socrates, I really think that this figure of the divine herdsman is even greater than that of a king, while the statesmen of the present day have natures much more like those whom they rule over, and they share in an education and nurture closer to their subjects.

Young Socrates: Entirely so, I presume. I suppose that's true, on the whole.

275d

Stranger: Yet they should be sought out anyway, neither more nor less, regardless of whether they have the former or the latter nature.

Young Socrates: They must.

Stranger: Then let's go back once more to this point. We said that the 'own-directing' skill, as applied to living creatures, exercised its care not individually but collectively, and then we referred to it immediately as 'herd-nurture'. You do remember?

Young Socrates: Yes.

Stranger: Well, somehow we went badly wrong on this topic for we utterly failed to include the statesman or to name him. Rather he escaped our naming process without our noticing.

Young Socrates: How?

275e

Stranger: The various other herdsmen share in the nurture of their several herds, but although the statesman has no share in this process, we still applied that name, when we should have applied, to all of them, some name they had in common.

Young Socrates: What you say is true, if there happens to be such a name.

Stranger: Why wouldn't 'ministering' be somehow common to them all, since it is not defined in terms of nurture or any other

particular activity? But if we had called it 'herd-minding' or 'ministration' or 'caring', which is applicable to them all, we would have been able to include the statesman and the others simultaneously, and the argument indicated that this should be so.

276a

Young Socrates: Correct. But in what manner would the next division be made?

Stranger: Based on the same divisions as before, when we divided herd-nurture into foot-borne, un-winged, unmixed in breed, and hornless, and dividing 'herd-minding' on the same basis, we would presumably be encompassing kingship of today, and of the age of Cronus alike, in our account.

Young Socrates: Apparently, but I am still asking what comes next.

276b

Stranger: It is obvious that if the word 'herd-minding' had been used in this context, the contention that there is no care whatsoever would never have occurred to us, which is just what happened when it was rightly contended that in the case of humans, there is no skill worthy of the title 'nurturing'. And even if there were such a skill, many people have a prior and better claim to it than any of our kings.

Young Socrates: Correct.

276c

Stranger: But when it comes to the common care of humanity in its entirety, no other skill would wish to assert a prior and better claim than kingly rule, which is the rule of all human beings.

Young Socrates: What you say is correct.

Stranger: And yet, Socrates, after all this, do we recognise that a considerable further error was made at the very end?

Young Socrates: Of what sort?

Stranger: As follows. If we really did think that there was a skill of nurturing herds of bipeds, we should not have referred to it immediately as kingship or statesmanship with such finality.

Young Socrates: What then?

276d

Stranger: Firstly, as we are saying, we should have changed the manner of the name, orienting it towards care rather than nurture, and then made a cut in this. Indeed, it still has capacity for significant cuts.

Young Socrates: Of what sort?

Stranger: A cut, I presume, whereby we could have separated the divine shepherd and the human carer apart.

Young Socrates: Correct.

Stranger: And yet it was necessary to cut the caring which has been parted off into two once more.

Young Socrates: Into what?

Stranger: Into enforced and voluntary.

Young Socrates: Why so?

276e

Stranger: Well, I think this is how we went wrong previously when, proceeding more simplistically than we should, we treated the king and the tyrant as the same, although they are quite dissimilar in themselves and in the manner of their particular rule.

Young Socrates: True.

Stranger: But now, correcting ourselves once more, should we make a twofold division of the care of humanity into enforced and voluntary, just as I said?

Young Socrates: Yes, certainly.

Stranger: And presumably the herd-minding of subjects who are forced is tyrannical, while the voluntary herd-minding of willing two-legged creatures should be called statesmanship, and we should affirm that the one who, for his part, possesses this skill and care is really a king and statesman.

277a

Young Socrates: Indeed, stranger, it is likely that our exposition of the statesman may have reached a conclusion.

Stranger: That would be excellent for us, Socrates. But it is necessary for me to share these views with you, in common, so that they are not just your views. Right now, in my view anyway, it seems we have not yet arrived at a figure of the king that is complete. Rather, just as sculptors sometimes cause delay by rushing inappropriately to make greater and more numerous additions than necessary to parts of their work, so too have we, presumably with the aim of presenting a quick and high-sounding demonstration of the error in our previous process, considered it appropriate to apply elaborate examples to the king, and drawing upon a wondrous chunk of the myth, we were compelled to employ a greater part of it than was necessary. Therefore, we have made the exposition longer, and have failed to bring a conclusion to the story fully. Indeed, our account, just like a sketch of a living creature, has a fairly adequate outline, but has not yet been given actuality as it were, from pigments and the blending of colours. But for those who are able to follow, it is more fitting to reveal every living creature through speech and argument, rather than through drawing and all sorts of craftsmanship. But for everyone else, we should resort to craftsmanship.

277c

Young Socrates: That is correct. But please reveal the way in which, according to you, we have not yet described this

adequately.

Stranger: It is difficult, my divine friend, to present anything of significance in an adequate manner without recourse to exemplars. For it is likely that each of us knows all that we know as though in a dream, and then again, when we really are awake, are ignorant of everything.

Young Socrates: What do you mean by that?

277d

Stranger: Yes. In a strange way I seem at the moment to have raised the issue of the experience of knowledge within us.

Young Socrates: In what way?

Stranger: Blessed man, my example itself stands in turn in need of an example.

Young Socrates: Why so? Speak, and do not hesitate on my account.

Stranger: Speak I must, since you are ready to follow. We know, I presume, that children, whenever they are first developing their skill in writing...

Young Socrates: What do we know?

Stranger: That they adequately recognise each of the letters in the shortest and easiest syllables, and become capable of speaking the truth in relation to those.

Young Socrates: Of course.

277e

Stranger: And yet they are doubtful about the very same letters in other syllables, and their opinions and formulations are false.

Young Socrates: Yes, certainly.

Stranger: Now wouldn't the easiest and best way to lead them on to what they do not yet recognise be as follows?

Young Socrates: How is it done?

278a

Stranger: Firstly, to take them back to those instances in which their opinions on these same letters were correct, and having done so, then place these alongside the ones they do not yet recognise, and by comparing them, point out that there is the same common feature and characteristic present in both intertwinings, until such time as all the cases where their opinions are true have been shown, alongside all of those they don't know about. Accordingly, these act as examples that make them, in the case of all letters in all the syllables, refer to each as different insofar as it is different from the others, and as the same insofar as it is always the same as itself in the same respect.

278b

Young Socrates: Entirely so.

Stranger: So, have we fully appreciated that example has its origin when something that is the same is appreciated correctly in a different, separate context, and the two contexts, by being brought together, a single true opinion about each instance and both instances together is attained?

278c

Young Socrates: Apparently so.

Stranger: Well, would we be surprised if our soul, by nature, underwent this same process in relation to the letters of the universe, sometimes standing in a true relation to each one in a particular case, then again all at sea about all of them under different circumstances, somehow or other recognising some of the combinations correctly. But once these are transposed to the lengthy and difficult syllables of human affairs, it is ignorant once more of these same letters.

278d

Young Socrates: That would be nothing particularly surprising.

278e

Stranger: How could anyone, my friend, who begins from false opinion, arrive at even a small portion of truth and acquire understanding?

Young Socrates: That is well-nigh impossible.

Stranger: Well, if that's how things naturally operate, you and I would not go much astray if, having first attempted to discern the nature of example as a whole, we were to discern it in turn in a further minor example, and transposing these processes thereafter to the very important matter of the king, we were to apply the same format and proceed from the lesser. Thereafter, we should endeavour, through an example, by means of a skill, to understand the ministration towards those who live in a city so that it becomes a waking reality for us and no mere dream.

Young Socrates: That is surely correct.

279a

Stranger: Then we should take up that earlier argument once more, that since thousands dispute with the kingly class over the care of the city, it is necessary to separate off all these competitors and leave that single personage. And we said that, to this end, we do indeed need an example.

Young Socrates: Very much so.

279b

Stranger: Then, what example, an insignificant one, involving the same activity as the statesman, might someone set beside it and discover what we are seeking well enough? By Zeus, Socrates, do you want, if we have nothing to hand, at least to choose weaving? And if you agree, not all of it? In fact, the weaving of items made of wool will probably suffice. Indeed, if we select it, this part of it is likely to provide the evidence we desire.

Young Socrates: Yes, why not?

279c

Stranger: Then why not do just what we did before when we divided each object by cutting parts into parts. Let's do the same thing now in relation to weaving, and as best we can go over everything again as briefly as possible, and arrive at what is useful to us now.

Young Socrates: What do you mean?

Stranger: I shall make the exposition itself my answer to you.

Young Socrates: Excellent.

279d

Stranger: Well, in the case of everything we produce or acquire, some are for the purpose of doing something, while others are a defence against suffering something. Now, some of the defences are antidotes, whether divine or human, while others are barriers. And some of the barriers are military armaments, while others are screens. And some of the screens are covers, while others are protections against heat and cold. And some of the protections are shelters, others are blankets. And some of the blankets are carpets, while a different sort are garments. And some of the garments are cut from one piece, while a different sort are put together. And some of the put-together garments are sewn, while others are put together without sewing. And some of those that are unsewn are made from the fibres of plants from the earth, others from hair. And some of those made from hair are held together by water or earth, while others bind themselves together by themselves. Now, we give the name clothes to those blankets and defences produced from materials bound together by themselves, while the skill that is particularly concerned with clothes – in the exact same way that we once said statesmanship is concerned with the city – should we now refer to this as 'clothes-making', naming it after the activity itself? And should we also state that weaving, insofar as it is for the most part the production of

clothes, differs in nothing but name from that skill in clothes-making, just as in the other consideration kingship did not differ from statesmanship?

280a

Young Socrates: You are absolutely right about that anyway.

280b

Stranger: Yet we should recognise after this, that once the weaving of garments has been described in this way, someone might presume that it has been adequately described because he is unable to understand that although it has been distinguished from numerous other kindred skills, it has not yet been separated from its closest collaborators.

Young Socrates: What sort of kindred skills do you mean?

Stranger: It appears you did not follow what was said, so it seems we must go back once more and begin where we ended. Yes. If you understand me, we have already cut off its closest relations by separating the assembly of blankets into those that are wrapped around and those that are placed beneath.

Young Socrates: I understand.

280c

Stranger: And, indeed, we set aside all manufacturing out of flax or rushes and out of everything we described summarily just now as plant fibres. And furthermore, we set aside felt-making and the putting together that employs stitching and sewing, the most significant of which is shoe-making.

Young Socrates: Entirely so.

280d

Stranger: And what's more, leather-working ministers to blankets of one piece, and all those activities concerned with shelters, and any that are involved in house-building, in carpentry as a whole, and in other skills that protect against the influx of water. All these we set aside. Also, any skills concerned

with shelters, and which provide preventive products against theft and violent actions, and involve the making of lids and the fitting of doors, and are designated as parts of the skill of joinery. We also cut away the making of armaments, which was a significant and extensive division of the barrier-making power. And, indeed, at the very outset we separated off the entire skill of magic that is concerned with antidotes. And we are left with what we take to be a defence against cold weather, the very skill we were looking for, the one that manufactures a woollen barrier and has been given the name weaving.

280e

Young Socrates: Yes, that's how it seems.

Stranger: But, my boy, having said all this, it is still not complete, for the process involved at the start of the manufacture of clothing appears to do the opposite of weaving.

Young Socrates: How so?

Stranger: The process of weaving is presumably a kind of intertwining.

Young Socrates: Yes.

Stranger: And yet there is an initial process of breaking apart materials that have been combined and forced together.

Young Socrates: What sort of process do you mean?

281a

Stranger: The process associated with the skill of the carder of wool. Or shall we dare to refer to carding as weaving, or to the carder as though he were a weaver?

Young Socrates: Not at all.

Stranger: And, indeed, if anyone refers to the production of the warp and the woof as weaving, he is assigning a name that is both bizarre and false.

Young Socrates: He is, indeed.

281b

Stranger: What about this? Should we propose the entire skill of the fuller, and that of clothes-mending, are not in any sense either the care of clothes or attention to them, or shall we also refer to these as weaving skills?

Young Socrates: Not at all.

Stranger: And yet, these will all dispute with the power of the weaving skill about the attention to, and the production of, clothes, conceding the largest part to that power, while allocating important parts to themselves too.

281c

Young Socrates: Entirely so.

Stranger: Then, in addition to these claimants, it seems necessary that the skills that produce the instruments whereby the processes of weaving are accomplished will also pretend to be at least contributory causes of everything that is woven.

Young Socrates: Absolutely correct.

281d

Stranger: Now, will our account dealing with the part of weaving we have selected be definite enough, provided we position the skill as "the noblest and greatest of all those that are concerned with the care of woollen clothes"? Or would we be stating something true, but neither clear nor complete until we have also taken away all those skills that surround it?

Young Socrates: Correct.

Stranger: So, shouldn't we go on to do what we are saying so that our account may proceed in due order?

Young Socrates: Of course.

Stranger: Then we should first look at two skills that are involved in all activities.

Young Socrates: What are they?

Stranger: The contributory cause of the production, and also the cause itself.

Young Socrates: How so?

281e

Stranger: Contributory causes are those which do not produce the product itself, but provide instruments to those who do produce it, without which the activity allotted to each of the skills would never take place. However, those that bring the product itself into existence are causes.

Young Socrates: Well, that makes sense anyway.

Stranger: So after this, should we refer to all that is concerned with spindles, shuttles and any other instruments that are involved in the production of garments as contributory causes, and those that minister to and produce the garments themselves as causes?

Young Socrates: Quite right.

282a

Stranger: Now, in the realm of causes, since the skill of adorning is so extensive, it is probably best to include clothes-cleaning, clothes-mending and any ministration associated therewith as part of this, and assign all of it the name 'the skill of the fuller'.

Young Socrates: Very well.

Stranger: And, indeed, carding and spinning, and everything which for its part concerns the manufacture of the clothing itself, the parts of which we are describing, is a single skill, one whose name is familiar to everyone – wool-working.

Young Socrates: Of course.

282b

Stranger: Now there are two divisions of wool-working, and each of these is, at the same time, part of two skills.

Young Socrates: How so?

Stranger: Carding, and one half of the activity associated with the shuttle, and any processes that separate compounded things from one another – all these can presumably be said to belong, as one, to wool-working itself. And we said that there are two particular major skills applicable to everything, combination and separation.

Young Socrates: Yes.

282c

Stranger: Well, carding and all the activities we mentioned just now are parts of the skill of separating, for the separation into woof and warp, arising in one way by means of the shuttle, and in another way by means of the hand, has acquired as many names as we mentioned a moment ago.

Young Socrates: Entirely so.

Stranger: Then again, we should once more take a part of the skill of combining, a part that is at the same time a part of wool-working. Let's set aside the entire skill of dividing we find there, and cut wool-working into two parts, separative and combinative.

282d

Young Socrates: Let the division be made.

Stranger: Then, Socrates, you should go on to divide the part that at once involves combination and wool-working if we are going to properly apprehend the aforementioned skill of weaving.

Young Socrates: So that's what's needed.

Stranger: It is needed. So, let's say that one part of it is twisting while the other is intertwining.

Young Socrates: Do I understand you? You seem to be referring to the process involved in the production of the warp as twisting.

Stranger: Not only of the warp, but of the woof too. Or shall we expect to find some origin for the woof that avoids twisting?

Young Socrates: Not at all.

Stranger: Then you should also distinguish each of these two, for perhaps the distinction may prove opportune for you.

Young Socrates: In what way?

282e

Stranger: As follows. Are the products of the carding process, once they have been lengthened and have also acquired breadth, referred to as drawn wool?

Young Socrates: Yes.

Stranger: Well, any of this that has been twisted by the spindle and has become hard yarn, you call warp yarn, and the skill that directs this, warp-spinning.

Young Socrates: Correct.

Stranger: While any threads that for their part undergo a loose twisting and possess a measure of softness appropriate to being woven into the warp – in view of the force applied in the dressing of the cloth – these we call woof yarn, and the skill that presides over them we call woof-spinning.

283a

Young Socrates: Quite right.

Stranger: And so, the part of weaving which we have been pursuing is presumably evident to everyone by now. For whenever the combinative part that is involved in

wool-working produces a web by directly intertwining woof and warp, the entire web is referred to as a woollen garment, and the skill set over it as weaving.

Young Socrates: Quite right.

283b

Stranger: So be it. Now, why ever did we not reply straight away that weaving was the twining of woof and warp, instead of going around in a circle, pointlessly making a whole range of distinctions?

Young Socrates: Well, stranger, nothing that was said seemed pointless to me, anyway.

Stranger: That is no surprise, bless you, but perhaps in time it may seem so. Well, to counteract such a malady as this, in case it ever afflicts you in future – which would be no surprise – listen to an argument which it is appropriate to state concerning everything like this.

Young Socrates: Please state it.

283c

Stranger: Well, in the first place, let's look at all excess and deficiency so that we attribute praise and blame on a reasonable basis, on occasions when the speeches involved in discussions of this sort are longer than necessary, or the opposite.

Young Socrates: That's what's needed.

283d

Stranger: Well, if our discussion was about these issues themselves, I think it would be proceeding correctly.

Young Socrates: About what issues?

Stranger: About length and brevity and all excess and deficiency, for I presume that the skill of measurement is concerned with all these?

Young Socrates: Yes.

Stranger: Then we should distinguish two parts of this, since that's what is necessary for our present objective.

Young Socrates: Please tell us how to make the division.

Stranger: As follows. One corresponds to the shared interrelationship of greatness and smallness, and the other corresponds to the being necessary for becoming.

Young Socrates: What do you mean?

283e

Stranger: Well, don't you think it is natural that the greater should be referred to as greater than nothing else except the lesser, and the lesser for its part as lesser than nothing other than the greater?

Young Socrates: I do.

Stranger: What about this? Won't we say also that exceeding the nature of the measure, and being exceeded by it, be it in word or deed, does actually happen. And this is how those who are good and those who are bad among us are chiefly distinguished?

Young Socrates: Apparently so.

Stranger: So, we should propose then that things can be, and can be judged to be, great and small in these two ways. But we should not state, as we did a moment ago, that they only relate to one another. Rather, as we are now saying, we should declare that they relate to one another, but also to the measure. Would you like to understand why we should say so?

Young Socrates: Of course.

284a

Stranger: If we allow the nature of the greater to relate to nothing except to the lesser, it will never relate to the measure.

Is this so?

Young Socrates: Quite so.

Stranger: In that case, won't we destroy both the skills themselves and their products in their entirety by this argument, and what's more, obliterate the statesmanship we are now seeking and the weaving we have been describing? For all such skills are, somehow, vigilant about excess and deficiency of the measure, regarding it not as something that is not, but as something that is a difficult aspect of their activities, and indeed by so doing they preserve the measure and make everything good and beautiful.

284b

Young Socrates: Of course.

Stranger: And if we should obliterate statesmanship, our subsequent search for the knowledge of kingship will be blocked.

Young Socrates: Very much so.

Stranger: Then, just as in considering the sophist we compelled what is not to be when the argument got away from us on this issue, so too mustn't we now compel the more and the less, for their part, to come to be measured not only in relation to one another, but also in relation to the source of the measure? Indeed, unless this has been agreed, it is not actually possible that a statesman, or anyone else with knowledge of practical matters, should come into being in an undisputed manner.

284c

Young Socrates: In that case, as best we can, we must do the same thing now.

Stranger: This topic, Socrates, is more extensive than that earlier one, and you do remember how long that was. However, it is most appropriate to put forward the following hypothesis

about them.

Young Socrates: What is it?

284d

Stranger: That what has been said now will be needed some time for the demonstration of the utmost precision. But for our present purposes, what is being demonstrated beautifully and adequately seems to be supported magnificently by this argument of ours, according to which we should think that all the skills exist in like manner, and at the same time, that greater and less are to be measured not only in relation to one another, but also in relation to the source of the measure. For if this measure exists, then those skills exist, and if they exist, then this also exists, and if either of these doesn't exist, neither will ever exist.

Young Socrates: That's right. But what comes after this?

284e

Stranger: Obviously we would divide the skill of measurement in the manner stated, cutting it into two, and designating one part of it as all those skills that measure number, length, depth, breadth, and speed in relation to their opposites. While the other one measures them in relation to the measure, to what is appropriate, timely, necessary, and whatever else betakes itself away from the extremes towards the mean.

285a

Young Socrates: Yes. Each of the divisions you describe is significant, and very different from one another.

Stranger: Yes, Socrates. Many refined thinkers, believing themselves to be stating something wise, declare that measurement is concerned with everything that comes into being, and this is just what we are saying. For, in a sense, everything that involves a skill partakes of measurement. And yet, because people are unaccustomed to investigation by

dividing on the basis of forms, they immediately combine these together as the same, despite their degree of difference, since they regard them as similar. And they also do the opposite of this, separating what is different, but not on the basis of its parts. What is necessary is that when someone first perceives what is common to many, he should not desist until he beholds therein all the differences that repose within their forms. On the other hand, when he beholds the variety of dissimilarities in multiplicities, he must be incapable of getting disconcerted and stopping until, having brought all the kindred into one particular class of likeness, he encompasses them in being.

285c

Stranger: Now, let these statements concerning these matters suffice, and also those concerning deficiencies and excesses. However, let's just note carefully that two kinds of measurement concerning these have been discovered, and let us remember what we say they are.

Young Socrates: We shall remember.

Stranger: Well, after this account we should entertain another consideration concerning the very things we are seeking, and concerning all conduct of discussions of this sort.

Young Socrates: What is it?

285d

Stranger: Suppose someone were to ask us about students learning their letters. Whenever one of them is asked what letters make up a particular word, would we say that the query is presented to him on that occasion more for the sake of the word, the one he is presented with, or for the sake of his becoming more skilled in all words he comes across?

Young Socrates: Obviously it is for the sake of becoming skilled in all of them.

Stranger: And what about our present enquiry concerning the statesman? Has it been posed more for the sake of this person himself or for the sake of becoming more skilled in dialectic concerning everything?

Young Socrates: In this case too, it is obviously for the sake of everything.

285e

Stranger: Yes. I presume that no one in his right mind would wish to pursue this account of weaving for the sake of the subject itself. But I think most people overlook the fact that readily comprehensible, perceptible likenesses are naturally present for some of the things that are, and it is not at all difficult to present these when one wishes to give an easy demonstration to someone who asks for an account thereof which is uncomplicated and non-verbal. However, in the case of the most significant and revered of the things that are, there is no image at all wrought in clear view before humanity, by pointing to which someone who wishes to satisfy the soul of an enquirer may do so in an adequate manner by fitting it to some aspect of our sense perceptions. Therefore, it is necessary to practise being able to give and to receive an account of each. For the things that are devoid of body, being the most beautiful and the most significant, are shown clearly by the argument alone, and by nothing else, and all that we are now saying is said for the sake of those. But it is easier to practise anything on lesser matters rather than greater ones.

286b

Young Socrates: You have expressed that perfectly.

Stranger: Then let us recall the reasons why we have had so much to say about all this.

Young Socrates: What were they?

286c

Stranger: Not least was the aversion we felt over the lengthy account which dealt with weaving, and over the reverse-motion of the universe, and, in the case of the sophist, the being of non-being when we realised how very lengthy it was. And we rebuked ourselves over all of this, fearing that we might be stating something over-elaborate as well as lengthy. So we should declare that everything we have said so far was on account of these concerns, so that nothing of this sort should happen to us again.

Young Socrates: Be it so. Just say what comes next.

286d

Stranger: Well, I say that it is necessary for you and me, remembering what has just been said, to allocate censure and praise on each occasion for the brevity and, at the same time, the length involved in the expositions we so often deliver by judging their length not in relation to one another, but on the basis of the part of the skill of measuring that we said we should remember – namely, in relation to what is appropriate.

Young Socrates: Rightly so.

286e

Stranger: Yes. But this is not applicable in all cases, for we shall not have need of length which is added on for the sake of pleasure, except as a secondary consideration. And again, in relation to the enquiry into the issue before us, the argument directs us to favour the easiest and quickest approach as something we should seek out as a second priority, not as a first. First and foremost, we should respect the method itself, by which we are able to make divisions on the basis of forms. And, indeed, should a discussion prove inordinately lengthy, and yet place the hearer in a better position to make discoveries, we should take it seriously and be untroubled by its duration. And the same applies if it is very short. Furthermore, besides these considerations, someone who criticises gatherings of this sort,

due to the length of the discussions, and finds the circular course of the arguments hard to accept, should not be allowed to turn and go on the spot, in all haste, having levelled his criticism solely on the basis of the length of what was said. No, he should also prove that we should accept that the people present would have been rendered more skilled in dialectic – and better at discovering the exposition of things that are – by an account, had the process been made shorter. As for the other criticisms and praises based on other criteria, we should not think about them, or even seem to hear such arguments at all.

287a

Stranger: Anyway, that's enough on these issues, provided you agree with me on this. So we should go back to the statesman and apply to him the example of weaving as described before.

287b

Young Socrates: That is well expressed, and we should do as you say.

Stranger: Now, the king has at least been separated from the many skills that are kindred, or rather from all of those that are concerned with herds. What remains, we say, are the contributory causes, and the causes applicable to the city itself. And these we should first separate from one another.

Young Socrates: Correct.

287c

Stranger: Now, do you realise that it is difficult to cut these in two? The reason, I believe, will become evident anyway as we proceed.

Young Socrates: In that case, we should do as you say.

Stranger: Then let's divide it at its limbs, like a sacrificial animal. And since we are unable to make a division into two, it is necessary always to cut it into a number that is as close to two as possible.

Young Socrates: But how should we do so in this case?

Stranger: Just as we did before, when we designated all the skills that provide tools related to weaving as contributory causes.

Young Socrates: Yes.

287d

Stranger: And now we should do the same thing, but more extensively than before. Indeed, whatever skills produce any significant or insignificant tools for the city should all be designated as contributory causes, for, without these, neither city nor statesmanship would ever come into existence. Yet, on the other hand, I presume we shall not designate any of these as belonging to the work of the skill of kingship.

Young Socrates: No, indeed.

Stranger: And, indeed, we are undertaking a difficult task in separating this class from the others. For it is possible for someone to maintain that anything whatsoever is an instrument of something or other, and seem to be making a persuasive case. Nevertheless, we should mention a particular one of the city's possessions that is different.

Young Socrates: In what sense?

287e

Stranger: Insofar as it does not possess this ability to act as an instrument. For it is not constructed to act as a cause of some production, as is the case with an instrument, but constructed in order to preserve what has been produced.

Young Socrates: What sort of thing is this?

Stranger: Well, this is a variegated object, wrought for dry goods, for liquids, for use on the fire and for general use. We call it by a single name, 'vessel', and this very commonplace object does not, in my view, belong at all to the knowledge we are

looking for anyway.

Young Socrates: No, how could it?

288a

Stranger: Well, we should also take note of a third extensive object, different from these possessions of the city. It goes by land and by water, it wanders a lot and does not wander, it is worthy of reverence and unworthy of reverence. And yet it bears a single name, because all are intended for sitting upon, and always act as a seat for someone.

Young Socrates: What is it?

Stranger: I presume we call it a carriage, so it is not really the work of statesmanship, but much more of carpentry, pottery-making and bronze-working.

Young Socrates: I understand.

288b

Stranger: What about a fourth? Should we say that there is something different from those three, one that includes most of what we mentioned some time ago – all sorts of clothing, most armaments, walls, and all enclosures whether of earth or of stone, and myriads of others? Since all these are produced for defensive purposes, it would be most appropriate to refer to them as a whole as a barrier, and to regard this more correctly as belonging much more to the work of the builder's skill or to weaving, for the most part, rather than statesmanship.

Young Socrates: Yes, certainly.

288c

Stranger: And as a fifth, would we like to suggest adornment and painting and whatever imitations are effected through their use, and through music, which having been produced solely for our pleasure are quite rightly captured by a single name?

Young Socrates: What is it?

Stranger: We do use the term 'plaything', I presume.

Young Socrates: Of course.

288d

Stranger: Well, it will be appropriate to assign this one name to them all, for none of them has any serious purpose. Rather, they are all done for the sake of amusement.

Young Socrates: That too is something I understand fairly well.

Stranger: And that which provides all these with the materials from which, and in which, any of the skills mentioned just now do their work – a variegated sort that owes its origin to many different skills – shall we designate this as a sixth?

Young Socrates: What sort of thing are you referring to?

288e

Stranger: Gold and silver and anything whatsoever that is mined; and whatever all felling and lopping of trees provides to carpentry and basket-weaving, through the cutting process; and again, the stripping of bark from trees; and leather-working which strips the skins from the bodies of ensouled creatures, and any skills related thereto; and the ability to produce cork and papyrus and ropes. All these enable the manufacture of compounded forms from classes that are not compounded. Let's refer to it all as one, the primeval acquisition of humanity, uncompounded too, and in no way the work of kingly knowledge.

Young Socrates: Very well.

289a

Stranger: Then the acquisition of nutriment and whatever mixes into the body, and mixing parts of itself with parts of the body has some power to promote its health, should be called the seventh. And we should give the name 'nurture' to the totality,

if we don't have anything better to suggest. And if we place it entirely under farming, hunting, gymnastic, medicine and cookery rather than statesmanship, we shall be allocating it more correctly.

Young Socrates: Of course.

289b

Stranger: Well, I think anything pertaining to acquisition, except that of tame animals, has been quite well described under these seven classes. Let's review them. Indeed, it would be most appropriate to place the primeval form at the beginning, after this 'instrument', 'vessel', 'carriage', 'barrier', 'plaything' and 'nourishment'. But if we have omitted anything it can be included in one of these, provided it is something insignificant that has been overlooked, such as the class made up of currency, seals and stamps of all sorts. For these in themselves do not constitute a significant common class. But if some are dragged into the category of adornments, others into that of instruments, they will, despite the force, be entirely concordant therewith. Then everything concerned with the acquisition of tame animals, with the exception of slaves, turns out to have been encompassed by the herd-nurturing skill that we divided into parts earlier.

289c

Young Socrates: Entirely so.

Stranger: What remains are all slaves and underlings, among whom, I somehow anticipate, those who dispute with the king over the woven web itself will become evident, just as earlier those concerned with spinning and carding, and all the others we mentioned, disputed with the weavers. But all the others, the contributory causes as we called them, have been disposed of along with the works we listed just now, and they have been separated off from the activity of kingship and statesmanship.

289d

Young Socrates: So they seem, anyway.

Stranger: Come on, let's consider those who remain by getting closer to them, so that we may recognise them with more certainty.

Young Socrates: That's what's needed.

Stranger: Then, from this perspective, we shall find the greatest servants possessing the opposite habit and character to those we anticipated.

289e

Young Socrates: Who are they?

Stranger: Those who are bought, and constitute acquisitions in this sense, whom we may indisputably refer to as slaves, and who have the least pretensions to the kingly skill.

Young Socrates: Of course.

Stranger: But what about those who are free, but willingly assign themselves in servitude to the people we just mentioned by conveying the works of agriculture and the other skills to one another and distributing them out, some resorting to the marketplace, others travelling from city to city by sea and by land, exchanging money for goods and money for money, to whom we have given the name of money-changers, merchants, ship owners and retailers? Surely they will not lay any claim to statesmanship?

290a

Young Socrates: Except, perhaps, insofar as it relates to trading.

Stranger: But surely those whom we see so readily serving anyone at all, as hired labourers for payment, would never be found laying claim to kingship.

Young Socrates: No, how could they?

Stranger: But what about those who provide services of a different sort?

Young Socrates: What services do you mean, and to whom are you referring?

290b

Stranger: The people involved in communications, and those who become wise in written matters through their constant service, and some others who are well able to work out numerous other issues relating to public offices. What shall we call these people?

Young Socrates: Servants, as you explained just now. But they are not the people who rule in our cities.

Stranger: But I don't think, anyway, that I was in a dream when I said that those who assert the strongest claim to statesmanship would somehow make their appearance in this. And yet, it does seem most unusual to look for them in some subdivision of servitude.

Young Socrates: Quite so.

290c

Stranger: Then let's get into closer contact with those who have not yet been scrutinised. There are people who possess a portion of some serviceable knowledge of prophecy. Indeed, they are somehow regarded as interpreting from the gods to humanity.

Young Socrates: Yes.

Stranger: And there is also the class of priests, which, according to tradition, is knowledgeable in bestowing gifts from us upon the gods through sacrifices that are acceptable to them, and also in requesting from them the acquisition of good things for us through prayers. But both of these are part of a servile skill.

290d

Young Socrates: So it appears anyway.

Stranger: Well, at this stage we seem to me to have encountered a sort of footprint of the person we are pursuing. For the personage associated with priests and prophets is well stocked with exalted notions, and acquires a reputation for sanctity because of the importance of what he engages in, so that, in Egypt, the king is not permitted to rule without being a priest. And if even he attains the role in the first place by forcing his way in from some other class, it is still necessary for him to be initiated later on into the priestly class. And even among the Greeks, one would find that the performance of the most important sacrifices of this kind are assigned to the most important office holders. And, indeed, what I am saying is no less evident among yourselves here, for it is said that the performance of the most solemn and most traditional of the ancient sacrifices is allocated to the king,¹³ whom you choose by lot.

291a

Young Socrates: Entirely so.

Stranger: Then we should investigate these kings chosen by lot, who are also priests, and their servants, and another extensive crowd of people who have become evident to us, now that the previous candidates have been set aside.

Young Socrates: What people are you referring to?

Stranger: Some very unusual people indeed.

Young Socrates: Why so?

291b

Stranger: They appear, as I now see it, to belong to an extremely varied class. For many of these men resemble lions, centaurs and other such creatures; very many more are like satyrs, and those weak creatures that adopt many guises, and

they rapidly assume each other's characteristics and ability. And, indeed, Socrates, I think I have just appreciated who these men are.

Young Socrates: Please tell us, for you seem to have discerned something unusual.

291c

Stranger: Yes, for in all cases the unusual is a consequence of ignorance. Indeed, I also experienced this myself just now. I was suddenly thrown into doubt when I beheld the chorus concerned with the affairs of our cities.

Young Socrates: What did you see?

Stranger: The greatest beguiler among all the sophists and the person most experienced in this skill – someone who, despite the extreme difficulty of doing so, must be separated from those who really are statesmen and kings, if we are going to catch clear sight of what we are looking for.

Young Socrates: Then we really must not relent in this.

Stranger: Certainly not. Not in my view, anyway. So tell me this.

Young Socrates: What?

291d

Stranger: Isn't monarchy, for us, one of the modes of civic rule?

Young Socrates: Yes.

Stranger: I think someone might propose that the exercise of power by a few people comes after monarchy.

Young Socrates: Of course.

Stranger: And isn't the third form of constitution the rule of the multitude, referred to by the name 'democracy'?

Young Socrates: Entirely so.

Stranger: And being three, don't they in some sense become five, engendering two other names from themselves in addition to their own?

Young Socrates: What are they?

291e

Stranger: Nowadays, people focus upon the degree of compulsion and willingness, poverty and wealth, law and lawlessness arising in these. And dividing each of them into two, they refer to monarchy by two names on the basis that it constitutes two forms, the tyrannical and the kingly.

Young Socrates: Of course.

Stranger: And whenever the city is under the power of the few, it is called aristocratic or oligarchic.

Young Socrates: Entirely so.

Stranger: And yet, in the case of democracy, whether the multitude rules over the possessors of wealth by force or with their consent, or whether they pay close attention to the laws or not, it is not the usual practice for anyone to change its name.

292a

Young Socrates: True.

Stranger: What now? Do we think that any of these constitutions is the right one, when it is defined based on these distinctions between one, few and multitude, wealth and poverty, compulsion and willingness, and whether it happens to operate under written laws or without such laws?

Young Socrates: Is there any particular reason why not?

292b

Stranger: Well, consider it more clearly by following this argument.

Young Socrates: Which?

Stranger: Shall we stand by what we said at the outset or shall we dispute it?

Young Socrates: What are you referring to?

Stranger: We said, I believe, that kingly rule is one of the branches of knowledge.

Young Socrates: Yes.

Stranger: And it did not belong to all of them. Rather, we preferred one that was judged and one that was directive over the others.

Young Socrates: Yes.

292c

Stranger: And from the directive category we selected one that applied to inanimate products, and another that applied to living beings. And so, making divisions in this manner, we have been continually approaching this point where, without losing sight of knowledge, we are as yet unable to adequately describe precisely what the knowledge is.

Young Socrates: What you are saying is correct.

Stranger: So, do we appreciate this particular point, that the definition of these constitutions involves neither few nor many, willingness nor unwillingness, neither poverty nor wealth? Rather, if we are to be guided by our previous discussion, it involves some type of knowledge.

292d

Young Socrates: But of course. It is impossible to conclude otherwise.

Stranger: Then, it is now necessary to consider this issue in this way. In which of these constitutions, if any, does it turn out that knowledge of the rule of humanity, perhaps the most important

knowledge and the most difficult to acquire, arises? For we need to see this so that we may behold certain people who must be separated from the sagacious king, people who pretend to be statesmen and who persuade many others of this, but are not statesmen at all.

292e

Young Socrates: Yes, that's what must be done, since our argument has said so.

Stranger: Now, do you think that a large number of people in the city are able to acquire this knowledge?

Young Socrates: No, how could they?

Stranger: Well, in a city of a thousand men, could some hundred, or even fifty, acquire it in an adequate manner?

Young Socrates: On that basis anyway it would be the easiest skill of them all. Indeed, we know that among a thousand men you wouldn't even find that number of first-class draughts players, in relation to the other Greek cities, let alone kings. For based upon the previous argument, it is surely necessary for someone who possesses knowledge of kingship to be referred to as kingly anyway, whether he exercises rule or not.

293a

Stranger: You have remembered that very well. And following on from this, it is necessary, I believe, to look for right rule associated with one particular person, or two, or extremely few, whenever such rule arises.

Young Socrates: Why, of course.

Stranger: Yes. But these people, whether they rule over consenting or unconsenting subjects, whether on the basis of written laws or without written laws, whether they themselves be wealthy or poor, must be regarded as exercising whatever rule they exercise on the basis of a skill according to our present

view. And we do not regard physicians as less than physicians whether they cure us with our consent or without it, whether by cutting, burning or applying some other painful cure, whether they work from written guidelines or without them, whether they are poor or wealthy. In all these cases we declare that they are physicians nonetheless, as long as their directions are based upon a skill. This may involve purifying, or otherwise reducing, or even adding bulk to the body, but once these are directed to some good of our bodies, making them better when they were worse, the individual practitioners preserve the lives of the people they treat. On such a basis I believe, and on no other, shall we propose that this alone is the correct definition of the rule of medicine, and of any other rule whatsoever.

293c

Young Socrates: Exactly.

Stranger: And it must also be the case with constitutions, or so it seems. The one that is pre-eminently correct and is, alone, a constitution is the one in which we would find that the rulers are truly knowledgeable and do not merely seem so, whether they rule based upon laws or in the absence of laws, with their subjects' consent or without it, and whether they themselves be poor or wealthy. None of these should be taken into consideration as a correct criterion.

293d

Young Socrates: Very well.

Stranger: And whether they purify the city for its benefit by putting some people to death or casting them out, or even make it smaller by sending out colonies to somewhere like swarms of bees, or make it bigger by bringing others in from outside and granting them citizenship, as long as they have recourse to knowledge and to justice, preserve it from decline, and to the best of their ability make it better, we should declare that this constitution, in that situation and based upon such criteria, is

the only correct one. Any others we mention should not be referred to as genuine, as they are not really constitutions. No, they are imitations of this one. Those that we call well-ordered have imitated it better, while the others have imitated it quite badly.

293e

Young Socrates: For the most part, stranger, that seems to have been a reasonable description. However, hearing it said that we should rule without laws presented a greater difficulty.

294a

Stranger: You are a little ahead of me with your question, Socrates, for I was about to question you as to whether you would accept all this or had misgivings over some of what had been said. But it is now evident already that you will want us to discuss this issue of the rightness of exercising rule without laws.

Young Socrates: It is inevitable.

Stranger: Now, in a sense it is obvious that law-making belongs to kingship, yet the best course is not for the laws to prevail but for a man who is kingly and possesses wisdom to prevail. Do you know why that is?

Young Socrates: Please tell me. Why?

294b

Stranger: Because a law would never be able to encompass what is best and most just for everyone at the same time in precise terms, and then institute what is best. For the dissimilarities between people and their activities, and the fact that nothing in human affairs ever really comes to rest, prevents any skill whatsoever, in any situation, from proclaiming anything simple that is applicable under all circumstances and for all time. Presumably we are agreed about that?

Young Socrates: Of course.

294c

Stranger: And yet we see the law striving to do just this, much like a stubborn, unlearned person, who allows no one to do anything at variance with his instruction, or to ask any question, even if something new and better occurs to someone at variance with the pronouncement he has instituted.

Young Socrates: This is true. Indeed, the law actually behaves toward each and every one of us in the very manner you describe.

294d

Stranger: Isn't it impossible for something that is entirely simple to be adequately applied to situations that are never simple?

Young Socrates: Quite likely.

Stranger: Then why ever is it necessary to make laws, when the law is never perfectly right? We must find out the reason for this.

Young Socrates: Of course.

Stranger: Don't you also have here, as they do in other cities, courses of instruction for groups of people, relating to the running track or something else, motivated by a desire to win?

Young Socrates: Very much so. There are a lot of them.

Stranger: Come now, let's once again recollect the instructions of the skilled trainers when they are in such positions of authority.

Young Socrates: What sort of instructions?

294e

Stranger: They don't believe it is possible to go into detail about each individual case, and prescribe what is appropriate to

each particular body. Rather, they think it necessary to issue a rough guideline that is beneficial to bodies in general, and applies in most cases.

Young Socrates: Good.

Stranger: Accordingly, they usually assign equal physical exertion to entire crowds, urging them all on at the same time and stopping them all at the same time, whether they are running or wrestling or undertaking any other physical exertions.

Young Socrates: That's what they do.

295a

Stranger: Then we should also presume that the lawmaker who directs this herd of ours in matters of justice, and their dealings with one another, when giving orders to entire crowds of people, will never really be capable of giving every single person precisely what is appropriate.

Young Socrates: That sounds reasonable, anyway.

Stranger: Rather he will, I believe, set down a law for everyone anyway, and it will somehow, for the most part, be roughly appropriate to each individual. These he will issue in writing and in unwritten form, legislating by means of ancestral traditions.

Young Socrates: Correct.

295b

Stranger: Correct indeed, Socrates. For how could anyone ever arrange to sit beside each person, constantly, throughout their life, and instruct them precisely as to what is appropriate for them? In fact, if he were capable of doing this, it is hardly likely, in my view, that anyone who had actually acquired the knowledge of kingship would ever create obstacles for himself by writing down these laws we have referred to.

Young Socrates: Yes, stranger, on the basis of what we are now saying, anyway.

Stranger: And even more so, best of men, on the basis of what we are about to say.

Young Socrates: On what basis is that?

295c

Stranger: On some such basis as this. Let's take the example of a physician, or even a gymnastic trainer, who intends to be abroad and away from those he is looking after for a considerable time, or so he believes. If he thought that the sick people, or those undergoing training, would not remember his instructions, he would want to write down some reminders for them. Is this so?

Socrates: Quite so.

295d

Stranger: And what if he were to come back again, having been abroad for less time than expected? Would he lack the courage to propose alternatives to those written instructions if others turned out to be better for the sick people, because winds or something else from Zeus had somehow arisen unexpectedly in an unusual manner? Would he be stubborn and think that we should not step outside the ancient edicts once they have been set down – either by proposing alternatives himself or by the patient daring to act contrary to the written directions – these being the principles of medicine and health, and whatever is done differently is unhealthy and is not based upon those skills? Or would everything of this sort, at least when it occurs in the case of knowledge and true skill in all subjects, render such ordinances completely and utterly ridiculous?

295e

Young Socrates: Entirely so.

Stranger: Consider the case of the person who has written laws, or framed unwritten laws, concerning just and unjust behaviour, noble and base practices, good and bad actions, intended for herds of human beings, who are herded in their particular cities based upon the laws of these writers. Is it really not permissible for different instructions, at variance with these, to be issued by the person who has the relevant skill and has written them down, or someone else like him who arrives on the scene? Or would this prohibition, in truth, appear every bit as ridiculous as the previous one?

296a

Young Socrates: Of course it would.

Stranger: Now, do you know the argument that most people present in such a circumstance?

Young Socrates: Nothing relevant comes to mind at the moment.

Stranger: Well, it sounds plausible enough. For they declare that if someone realises that there are laws at variance with those of former generations, but better, he may institute his laws once he has persuaded his own city in each case, but not otherwise.

Young Socrates: What about that? Is it not the right way to proceed?

296b

Stranger: Perhaps, but what if someone were to enforce the better course without using persuasion? Tell me what the name of that enforcement will be. But no, not yet. Answer in relation to the previous example first.

Young Socrates: What are you referring to?

Stranger: Suppose some physician, in proper possession of the relevant skill but without persuading the patient, were to

compel a man, or even a woman or child, to do what is better in contravention of the written precepts. What will be the name of this kind of force? Won't it be far removed from the error we described as 'contrary to the relevant skill' and unhealthy? And the person who suffered such force may justifiably say anything at all about what happened, but may never say that he has suffered unskilled and unhealthy treatment at the hands of the physicians who forced him.

296c

Young Socrates: What you say is perfectly true.

Stranger: What, then, is the error that we refer to as being at variance with the skill of statesmanship? Isn't it baseness, evil and injustice?

Young Socrates: Entirely so.

296d

Stranger: Well, what about those who have been forced, contrary to written edicts and traditions, to perform other actions, more just, better and more noble than those prescribed of old? What, for his part, could a critic of such behaviour say about such use of force, if he is to avoid becoming utterly laughable? He may say anything at all, as the occasion demands, provided he never says that those who were forced to act in that way suffered baseness or evil or injustice at the hands of those who forced them.

Young Socrates: Very true.

296e

Stranger: But are the enforcements just if the person who exerts the force is wealthy, and are they unjust if he is poor? Or if the person, rich or poor, achieves something beneficial, either through persuasion or without persuasion, in conformity with the written laws or at variance with them, the truest definition of proper management of the city in this respect must surely be

this: the one that a wise and good man will employ to manage the affairs of his subjects. Just as a helmsman, being constantly vigilant for the welfare of the ship and its sailors, preserves his fellow sailors not by setting down written edicts, but by presenting his skill as law, so too, based upon the same approach as this, a constitution may become a proper one on account of those who are able to rule in this way, since through their skill they provide a force that is more powerful than the laws. And those who rule intelligently, no matter what they do, avoid error as long as they are vigilant of one major principle: that they always dispense perfect justice based upon reason and skill to the people of the city, and are able, as far as possible, to preserve them and make them better people than they were.

297b

Young Socrates: It is impossible to oppose what you have just said.

Stranger: Nor indeed should anyone contradict those other statements of ours.

Young Socrates: What are you referring to?

Stranger: That no large number of people of any sort would ever be able to acquire this kind of knowledge, and manage the city on the basis of reason. Rather it is in relation to something small, few, even the one, that we must seek for that single proper constitution, and we must designate the others as imitations thereof, and just as we stated a little earlier some imitate it quite well, others quite badly.

297c

Young Socrates: How am I to understand what you have said? In fact, I didn't really understand your earlier statement about imitations either.

Stranger: And, indeed, it would be no trivial matter if someone, having initiated this line of argument, were then to set it aside,

and not even develop it to demonstrate the error that is arising about this issue at the moment.

Young Socrates: What sort of error?

297d

Stranger: We need to look for the kind of thing that is not particularly familiar or easy to see, and we should endeavour to lay hold of it nevertheless. Come on, then. Consider this constitution we have described, the only correct one. You know that the other constitutions must have recourse to the written laws of this one, and be preserved in this way by acting in a manner that is praised nowadays, even though it is not entirely correct to do so.

Young Socrates: What is it that is not entirely correct?

297e

Stranger: The notion that no one in the city should dare to do anything at variance with the laws, and whoever dares to do so should be punished by death and all sorts of extreme penalties. And yet this is entirely proper and appropriate as a second preference, whenever there is a departure from the first, the one we have described just now. So let's explain the manner in which this so-called second-best system has come into being, shall we?

Young Socrates: Yes, certainly.

Stranger: Then let's revert once more to the images, to which it has frequently been necessary to compare the kingly rulers.

Young Socrates: What were they?

Stranger: The noble helmsman, and the physician who is worth as much as a thousand others. Yes, let's see if we can construct some outline based upon the people themselves.

Young Socrates: Of what sort?

298a

Stranger: As follows. Suppose we were all to form the notion that we are suffering outrageous treatment at the hands of these people, for they both, in like manner, preserve any of us whom they wish to preserve, and mistreat any whom they wish to mistreat. They do this by cutting us, burning us, and imposing charges to be paid to them, like a tax, out of which they spend a little or even nothing upon the patient, while they and their members make use of the rest. And what's more, they finally take money from relations, or some enemies of the patient, as payment, and then kill him. The helmsmen, for their part, perform countless other outrages of the same sort. They form conspiracies and abandon us on sea voyages, cause shipwrecks on the oceans and cast us into the sea, and perpetrate other misdeeds.

298b

Stranger: Now, suppose, bearing these afflictions in mind, we were to decide upon a resolution in this regard, no longer to entrust autocratic rule to either of these two professions, neither over slaves nor over free men, a resolution to convene an assembly of ourselves, either of the entire populace or of the wealthy people alone, and to permit private citizens and the various professions to contribute an opinion on sea-faring, and on disease, and on how we should employ drugs and medical instruments in relation to the treatment of the sick, and indeed about the ships themselves, and the nautical equipment we should use on those ships in the face of dangers affecting the voyage itself, from wind and sea or also from encounters with pirates, or even perhaps in a sea battle that has to be fought in longboats against other vessels of that kind, a resolution according to which the opinions of the majority on these matters, whether the advisers be physicians, helmsmen or private citizens, once written down on wooden or stone tablets, or established as unwritten traditional practices, are to be the basis for navigating ships and for treating the sick, now and

forever, for all time.

298e

Young Socrates: You have described some very odd notions.

Stranger: Yes. And rulers of the people are to be appointed annually, drawn either from the wealthy classes or from the general population. And the rulers, once appointed, should rule according to the written edicts in steering the ships and healing the sick.

Young Socrates: This is even more difficult to accept.

299a

Stranger: Then consider what happens after this. For in each case, once the annual term of the rulers has passed, it is necessary to set up a court consisting of men either preselected from the wealthy classes or chosen by lot from the general population. The outgoing rulers must be brought before these people for scrutiny of their conduct, and anyone who wishes may accuse them of not navigating the ships, during their year in office, in accord with the written edicts or in accord with the ancient practices of our ancestors. And the same goes for those who were treating the sick. And the court must decide what penalty or fine should be imposed upon those who are voted down.

299b

Young Socrates: Surely anyone who desires to rule, and is willing to do so under such circumstances, would fully deserve to suffer any penalty at all or be fined any amount whatsoever.

Stranger: And what's more, it will be necessary to institute a law, applicable to everything of this sort, according to which anyone who is found to be investigating helmsmanship, navigation, health, and the truth of medical science in relation to the breaths, or heat and cold, in a manner contrary to the written edicts, and is becoming in any way wise on such

matters, must in the first place be referred to neither as a physician nor as a helmsman, but as a star-gazer or a babbling sophist. Secondly, anyone who is permitted to do so may drag him into some courtroom, charged with corrupting younger people and persuading them to practise helmsmanship and medicine without regard to law, and ruling over ships and sick people in an autocratic manner. And if he is presumed to have persuaded anyone, young or old, to act contrary to the laws that have been written, he must be punished with the most extreme penalties, for none should be wiser than the laws. Nor indeed need anyone be ignorant of medicine and health, or helmsmanship and navigation, for anyone who wishes is permitted to learn the written enactments and the traditional practices that are in place.

299d

Stranger: Well, what if the requirements that we are describing were to apply in the case of these two branches of knowledge, Socrates, and also to generalship, to all forms of hunting whatsoever, and to painting or any part at all of the imitative arts, and to carpentry or to manufacturing as a whole regardless of the kind, or even to agriculture and to the entire skill that is concerned with plants? Or we might also imagine it applying to some kind of horse-keeping that proceeds upon written edicts, to the entire business of herd-minding, to prophecy and every aspect encompassed by service, to draughts-playing, or to the entire science of number, whether pure or as applied to flat surfaces, solids or moving objects. What precisely would the outcome be if all of these were conducted in such a manner as to operate on the basis of written edicts, and not on the basis of the relevant skill?

299e

Young Socrates: It is obvious that all of the skills would completely cease to exist for us, and could never come back into existence again because of this law prohibiting the conduct of

investigation, so that life, which is difficult even now, would at that stage not be worth living at all.

300a

Stranger: What about this? If we were to insist that each of the activities we mentioned be conducted according to the written edicts, and that someone be elected or chosen by lot to oversee those edicts, and yet this person, disregarding the edicts either for the sake of profit or to do some private favour, were to undertake a different course of action contrary thereto, devoid of understanding, wouldn't this evil be even greater than the previous evil?

Young Socrates: That's very true, anyway.

300b

Stranger: Indeed in my view, the laws rest upon considerable experience, and in each case certain advisers have given their counsel in a pleasing manner and have persuaded the populace to adopt them, so anyone who dares to act contrary to these would be perpetrating an even more grievous error, and would be subverting all human action to an even greater extent than any adherence to written laws.

Young Socrates: Yes, that is inevitable.

Stranger: Accordingly, the second-best course for those who enact laws and written edicts on any matter at all is to allow no single person or any group ever to do anything whatsoever that is contrary to those laws.

Young Socrates: Rightly so.

300c

Stranger: Wouldn't these be imitations of the truth, in each case, as received from those who know, and written down insofar as this can be done?

Young Socrates: It must be so.

Stranger: And, indeed, we said, if you remember, that the one who knows, the person who is actually a statesman, will use his skill to perform a great variety of actions relevant to his own activity, disregarding the written edicts whenever an alternative seems better to him, even if it is contrary to his own written directions to other people who are not present.

Young Socrates: Indeed, we said so.

300d

Stranger: Now wouldn't anyone at all, one person or any group of people, who is faced with established laws, and undertakes some different course of action contrary to those laws because such a course is better, be doing to the best of their ability the same thing that a true statesman does?

Young Socrates: Yes, certainly.

Stranger: Now, if they were to do this sort of thing without being knowledgeable, they would endeavour to imitate the truth, but would imitate it extremely badly. Alternatively, if they possessed the relevant skill, this is no longer an imitation, but that itself, the very truest.

Young Socrates: Entirely so, I suppose.

300e

Stranger: And, indeed, from our earlier discussion anyway, there is an agreement between us that no large group of people is capable of acquiring any sort of skill whatsoever.

Young Socrates: That agreement still stands.

Stranger: Therefore, if there is a kingly skill, wealthy people in general, and the entire populace, could not ever acquire this knowledge of statesmanship.

Young Socrates: No, how could they?

301a

Stranger: Then it seems that if such constitutions as these intend, as best they can, to be good imitations of that constitution ruled by a single person possessed of skill, they should never enact anything contrary to the written edicts and traditional practices, once their own laws are in place.

Young Socrates: What you have said is excellent.

Stranger: So, whenever the wealthy people imitate this, we then call a constitution of this sort an aristocracy; and when they pay no heed to the laws, we call it an oligarchy.

Young Socrates: Quite likely.

301b

Stranger: Yes, and whenever a single person, on the basis of the laws, imitates the one who knows, we call him a king, making no distinction by name between the one who exercises sole rule on the basis of the laws by means of knowledge, and the one who does so by means of opinion.

Young Socrates: That's what we are likely to do.

Stranger: Therefore, if a single person who really is knowledgeable happens to rule, he will unequivocally be given the same name, king, and no other. Consequently, the five names of what are now called constitutions become just one.

Young Socrates: So it seems, anyway.

301c

Stranger: And what about a situation in which a single person rules in accord neither with the laws nor the traditions, and pretends to be a person who knows by arguing that it is really necessary to act contrary to the written edicts and do what is best, and some passion and ignorance dominate this particular imitation? Mustn't we surely refer to any such person in that situation as a tyrant?

Young Socrates: Of course.

301d

Stranger: So we are saying that a tyrant arises in this way, a king too, as well as an oligarchy, an aristocracy, and a democracy: from the disgust of humanity with that one sole ruler, and their disbelief that anyone worthy of such rule could ever arise, someone who would be willing and able to rule with knowledge and excellence, dispensing just and sacred ordinances properly to everyone, rather than maltreating, murdering and inflicting evil upon whomsoever he wants, whenever he wants. But if a person such as we are describing were to arise, he would be loved and would dwell there as the benevolent helmsman of what is, strictly speaking, the only correct constitution.

Young Socrates: Of course.

301e

Stranger: But nowadays, when, as we say, a king does not arise in our cities in the way that a single queen bee springs up in a hive of bees – immediately distinct both in body and in soul – we need to gather together and write down our ordinances in pursuit, it seems, of the traces of the truest constitution.

Young Socrates: Quite likely.

302a

Stranger: So, Socrates, need we wonder at the extent of the evil that arises and will continue to arise in such constitutions when they are based upon such a foundation as this – the performance of actions in accord with written edicts and customs not accompanied by knowledge – when it is obvious to everyone that any other skill conducted in this way would ruin its very own productions? Or should we wonder instead at something else, at how naturally strong a city is? Of course, our cities have now been suffering under such behaviour for countless ages, and yet some in particular are stable and are not overthrown. However, on occasion, many of them flounder like

ships and perish, or have perished or shall yet perish, because of the depravity of the helmsmen and the sailors, who have attained a huge level of ignorance in relation to matters of the utmost importance, who are not knowledgeable about matters of statesmanship in any respect, but think that of all branches of knowledge, they have acquired this skill with the utmost clarity in every respect.

302c

Young Socrates: Very true.

Stranger: Now then, which of these improper constitutions is the least difficult to live under, accepting that all of them are difficult, and which is the most oppressive? Is this something we should look at even though it is a secondary consideration compared to what is now before us? And yet, on the whole it is likely that everything we do is motivated by such a consideration.

Young Socrates: We should do as you say, of course.

Stranger: Then we should declare that of those three constitutions, the same one is both exceptionally difficult and easy at the same time.

Young Socrates: How do you mean?

302d

Stranger: I am just saying that monarchy, rule of the few, and rule of the many, were the three constitutions we mentioned at the beginning of the current influx of discussion.

Young Socrates: They were, indeed.

Stranger: Then cutting each one of these in two we would produce six, keeping the correct one separate from these as a seventh.

Young Socrates: How?

Stranger: From monarchy we get the kingly and the tyrannical subdivisions. Then, in turn, from rule not involving many we get aristocracy, which we said has a good reputation, and also oligarchy. And furthermore, in the case of the rule of many, we proposed at the time simply to call it democracy, but now we must also propose a twofold aspect for this.

Young Socrates: In what way? And dividing it on what basis?

302e

Stranger: No differently from the others. Even if its name is already single, there is nevertheless rule according to law and rule contrary to law, both under this constitution and under the others.

Young Socrates: There is, indeed.

Stranger: Now, when we were searching for the right constitution, this division was not useful, as we demonstrated in our previous discussion. However, once we have set that constitution aside, and have proposed that the others are necessary, then the criteria of ruling contrary to law or lawfully, divide each of these constitutions in two.

Young Socrates: So it seems, now that you have presented this argument.

Stranger: Well then, monarchy, when yoked to good written ordinances which we call laws, is the best of the six. But when it is lawless, it is the most oppressive and difficult constitution to live under.

Young Socrates: Quite likely.

303a

Stranger: Then again, just as few are intermediate between one and many, so the rule of the 'not many' should be regarded accordingly as intermediate in both respects. The rule of the many, for its part, is weak in every respect, and in comparison

with the others is capable neither of great good nor of great evil, because public offices therein are distributed in minute subdivisions to many people. Therefore, when all of the constitutions are lawful, this proves to be the worst of them; and when they are all at variance with the law, it is the best; and when all of them lack restraint, the life in a democracy wins out; but when they are orderly, this is the last one you should live in. But life in the first is by far the best, with the exception of the seventh, for we must separate that one from all of the other constitutions, as we would separate a god from human beings.

303b

Young Socrates: It appears that these conclusions follow, and that's how matters stand. So we should do exactly as you say.

303c

Stranger: In that case, we should set aside those who have a common involvement in all these constitutions, except the one based on knowledge, as not being statesmen but seditious influences presiding over vast images. Indeed, they are such themselves, and being the greatest imitators and beguilers, they prove to be the greatest sophists of all the sophists.

Young Socrates: It seems that this epithet is being turned quite rightly against the so-called statesmen.

303d

Stranger: So be it. This has really been like a play for us. Some troop of centaurs and satyrs was coming into view, as we said earlier, and had to be separated from the skill of statesmanship. And it has now been separated in this extremely difficult manner.

Young Socrates: So it appears.

Stranger: But there is something remaining that presents an even greater difficulty than this, since it is more akin to the kingly class, and also harder to understand. Indeed, we appear

to me to be in a similar predicament to those who refine gold.

Young Socrates: How so?

303e

Stranger: Presumably those craftsmen firstly separate out the earth and stones and numerous other substances, and after this, valuable admixtures akin to gold remain – copper and silver, and, on occasion, adamant – which are separable only by fire. Once these have been separated with difficulty, by repeated proving and smelting, we are allowed to behold what we call unadulterated gold alone, just by itself.

Young Socrates: Yes indeed. That is how these processes are said to operate.

304a

Stranger: Well, according to the same account, it seems we too have separated off the others who are alien to, and lacking affinity with, the knowledge of statesmanship, leaving behind the valuable and the kindred. These presumably include generalship, legal affairs, and any rhetoric that cooperates with kingship, persuades people of what is just, and takes a share in steering the affairs of our cities. So, in what way may someone easily separate these off, and display that object of our search, naked and alone, just by itself?

Young Socrates: This is obviously what we should somehow try to do.

Stranger: Then, if it's only a matter of trying, he will be made evident, and we should attempt to reveal him by recourse to music. Tell me something.

Young Socrates: What is it?

304b

Stranger: There is presumably some process of learning music, and a knowledge of manual skills in general?

Young Socrates: There is.

Stranger: What about the further issue of whether it is necessary for us to learn any of these subjects or not? Shall we say that this, for its part, is also knowledge concerning the subjects themselves? What should we say?

Young Socrates: Just that. We should say that it is.

Stranger: Won't we agree that this form of knowledge is different from the previous ones?

Young Socrates: Yes.

304c

Stranger: And should none of these rule any of the others, or should the others rule this one, or should this one manage and rule all of the others?

Young Socrates: This one should rule them.

Stranger: So, are you of the view anyway that, according to us, the knowledge that decides whether we should learn certain subjects or not must rule over whatever knowledge is learned and taught?

Young Socrates: Very much so.

Stranger: And should the knowledge of whether it is necessary to persuade or not, rule over the knowledge of the ability to persuade?

Young Socrates: Of course.

304d

Stranger: So be it. Now, to what form of knowledge shall we assign the ability to persuade crowds and groups by telling them stories, rather than by teaching them?

Young Socrates: I think that this too is obvious. It should be assigned to rhetoric.

Stranger: And the issue of whether we should perform any action whatsoever towards anyone, by means of persuasion or by some use of force, or even leave them entirely undisturbed – with which form of knowledge shall we associate this?

Young Socrates: With the knowledge that rules over the knowledge of persuasion and speech.

Stranger: And that in my view would be nothing other than the power of the statesman.

Young Socrates: Well said.

304e

Stranger: Then it seems we have quickly separated this rhetoric from statesmanship, as being a different form, subservient to it.

Young Socrates: Yes.

Stranger: And what view should we hold, in turn, in relation to a power of the following kind?

Young Socrates: What kind?

Stranger: The power over how we should wage war against those whom we have chosen to fight. Does this involve a skill, or is it devoid of skill?

Young Socrates: But how could we regard it as devoid of skill, when it is a power exercised by generalship, and military science in its entirety?

Stranger: And the power that is able to deliberate knowledgeably on whether we should wage war or withdraw in friendship, should we understand this as different from that, or the same as that?

Young Socrates: To anyone following the previous discussion, it must be different.

305a

Stranger: In that case, shall we declare that it rules over the other one, if in fact we are going to understand it in a manner similar to the previous examples?

Young Socrates: I agree.

Stranger: Now, what exactly shall we undertake to put forward in like manner as mistress of a great and fearsome skill, the art of war in its entirety, unless it really is the skill of kingship?

Young Socrates: None other.

Stranger: So, we shall not propose that the knowledge belonging to the generals is statesmanship since it is subservient.

Young Socrates: Not likely.

305b

Stranger: Come on, then. Let's look at the power possessed by those judges who make their judgements correctly.

Young Socrates: Very well.

Stranger: Now, is this power able to do anything more than take the lawfully established ordinances that it receives from the lawmaker-king, and make judgements on the basis of these by considering which arrangements are just and which are unjust, bringing to bear its own particular excellence by which it would not be prepared to decide upon any issue between people in a manner contrary to the ordinances of the lawmaker, having been corrupted by some bribes, by fear or by lamentations, or any kind of enmity or friendship?

305c

Young Socrates: No, you have pretty well explained how far the function of this particular power extends.

Stranger: In which case we discover that the power possessed by the judges too is not kingship. Rather it is the guardian of the

law and hand-maiden of kingship.

Young Socrates: So it seems, anyway.

Stranger: So, we should recognise, on reviewing all of the kinds of knowledge we have mentioned, that not one of them turns out to be statesmanship. Indeed, kingship, as it really is, should not perform actions itself, but should rule over those who are able to perform actions, recognising the starting point and impetus of the most important matters in the city, with a view also to what is timely and what is not, while others carry out his instructions.

305d

Young Socrates: Rightly so.

Stranger: So, for these reasons, the skills we have just described rule neither over themselves nor one another, but each is concerned with some particular activity of its own, and has acquired a specific name that is appropriate to the particular nature of the activity.

305e

Young Socrates: Yes, that's what they seem to do.

Stranger: But the knowledge that rules over all of these, superintends the laws and all the affairs of the city, and weaves everything together perfectly, has a power that is comprehended in the name belonging to the common factor, and, it seems, may quite properly be referred to as statesmanship.

Young Socrates: Entirely so.

Stranger: Well, wouldn't we also like to take this further, based upon the example of weaving, now that all the classes relevant to the city have become evident to us?

Young Socrates: Yes, very much so.

306a

Stranger: Then it seems we should state what kind of process the kingly intertwining is, the manner in which it does the intertwining, and the sort of fabric it presents us with.

Young Socrates: Obviously.

Stranger: In that case, it has apparently become necessary to give an exposition of a difficult matter.

Young Socrates: There's no other option anyway. It should be delivered.

Stranger: Indeed, the assertion that a part of excellence is, in a sense, contrary in form to excellence in general is very easily assailed by those who are skilled in verbal disputation by an appeal to the opinions of the majority.

Young Socrates: I do not understand.

306b

Stranger: Then I'll restate it as follows, for I presume you regard courage, for us, to be one part of excellence.

Young Socrates: Entirely so.

Stranger: Yes. And self-control is different from courage, but this too is one part of that which courage is part of.

Young Socrates: Yes.

Stranger: Then we must dare to pronounce a wondrous doctrine in relation to these.

Young Socrates: Of what sort?

Stranger: That these two, in a certain sense, are very much enemies of one another, and they hold opposing positions in many actual situations.

Young Socrates: How do you mean?

306c

Stranger: The doctrine is not at all familiar, since in fact all the parts of excellence are usually said to be friendly towards one another in some sense.

Young Socrates: Yes.

Stranger: Should we then apply our minds diligently and consider whether this is simply the way it is, or is it more the case that some of these are in opposition to their own kindred in some respect?

Young Socrates: Yes, you should explain how we should consider this issue.

Stranger: It is necessary to investigate all of those circumstances in which we refer to things as good, but nevertheless assign them to two forms opposite to one another.

Young Socrates: Explain this more clearly.

306d

Stranger: Take acuity and speed, whether of body or soul, or in the delivery of a speech. Have you yourself ever praised any of these qualities themselves, either directly or in whatever images of them are provided by musical or pictorial imitation? Or have you ever been present to hear someone else praising them?

Young Socrates: Of course.

Stranger: And can you recall the manner in which they did so in each of these cases?

Young Socrates: Not at all.

Stranger: Now, I wonder if I'll be capable of using words to present to you exactly what is in my mind.

Young Socrates: But why not?

306e

Stranger: You seem to think that this sort of issue is easy. But we really should consider it in those cases in which the skills are opposed. For of course, on many occasions, when we are pleased by the speed, intensity or acuity of numerous actions, be they mental or physical or even vocal, we speak in praise of this by using a single designation, the word 'courage'.

Young Socrates: How so?

307a

Stranger: I am presuming in the first place that we say 'acute and courageous', and we also say 'quick and courageous', and the same goes for 'intense'. And in applying the name that I am uttering in common to all of these natures, we are praising them.

Young Socrates: Yes.

Stranger: Yes. But haven't we, on many occasions, also praised the form of gentleness that occurs in many activities?

Young Socrates: Yes, very much so.

Stranger: Of course, what we say about this is the opposite of what we say about those other qualities.

Young Socrates: In what way?

307b

Stranger: In the sense that in these cases we say 'calm' and 'sound-minded' when admiring activities in the mental realm; then again, 'slow' and 'gentle' when it relates to physical actions; and to 'smooth' and 'deep' in relation to the working of the voice and to all rhythmical motion and any music that makes opportune use of slowness. To all these activities we do not apply the term 'courage', but 'orderliness'.

Young Socrates: Very true.

307c

Stranger: And yet, on the other hand, whenever in our view they both occur inopportunely, we turn around and censure each of them, assigning them to their opposites by the names we use.

Young Socrates: In what way?

Stranger: By saying that those that occur with more acuity than is opportune, or appear too rapid or harsh are violent and manic, while those that are heavier, slower and more gentle are cowardly or sluggish. And we shall find generally, for the most part, that these qualities, along with the sound-minded nature and the courage associated with the opposite qualities, acting as if enmity was their fate, do not mix with one another in activities concerned with such issues. And if we pursue the enquiry further, we shall observe that those who hold them within their souls are at variance with one another too.

307d

Young Socrates: Where do you propose that we observe this?

Stranger: In all the cases we mentioned just now, and probably in many others besides. For on the basis of their own kinship with one set of qualities or the other, I think that they praise one as their own kindred, and censure those belonging to their adversaries as alien, and they adopt highly inimical stances towards one another on numerous issues.

Young Socrates: Very likely.

Stranger: Now, at this stage, the adversity between these forms is mere childishness. However, when it relates to matters of the utmost importance, it turns out to be the most virulent disease of all those that afflict our cities.

307e

Young Socrates: What sort of important matters are you referring to?

Stranger: This is likely to involve the entire planning for living. For of course, those who are especially orderly are always ready to live the quiet life alone, just by themselves, occupying themselves with their own activities. What's more, they interact in this manner with everyone in their home city, and likewise towards foreign cities, being ready to maintain some manner of peace by any means. And because this love of theirs is most inopportune, whenever they behave as they wish to behave, they overlook the fact that they themselves, by maintaining an unmilitary stance, also influence the young towards a similar disposition. Consequently, they are continually beset by adversaries, and it is not long before they themselves, their children and their entire city become slaves rather than a free people, often without them being aware of it.

308a

Young Socrates: What you are describing is harsh, and a terrible predicament indeed.

Stranger: But what about those who are more inclined towards courage? Aren't they constantly drawing their own cities into some war or other because of their excessively strong desire for such a life? And once they have made many powerful enemies, they either utterly destroy their own native land or reduce its people to slaves and underlings of their enemies.

308b

Young Socrates: Yes, that happens too.

Stranger: So how could we deny that in such situations these types always maintain a great deal, indeed a huge amount, of enmity and rivalry towards one another?

Young Socrates: There is no way at all we can deny it.

Stranger: In that case, haven't we found what we were looking for initially – that parts of excellence, of no minor significance, are naturally at variance with one another? And, what's more,

they make those who possess them behave exactly as they do?

Young Socrates: So it seems.

Stranger: Then there is another issue we should take up.

Young Socrates: Of what kind?

308c

Stranger: Does any knowledge concerned with putting things together willingly assemble even the most trivial of its own productions from inferior and serviceable materials combined? Or is it that any knowledge in any situation discards the inferior as best it can, retains what is suitable and serviceable, and, from these, be they similar or dissimilar, constructs a single power and form by bringing them all together into a unity?

Young Socrates: Of course.

308d

Stranger: Then neither will this statesmanship of ours, being natural and true, ever willingly assemble any city from serviceable people and bad people. Rather, it is quite obvious that it will test them first in play, and after that test it will go on to entrust them to those who are capable of educating them, and serving statesmanship in this respect, while for its own part it provides direction and superintendence, just as weaving pays close attention, and directs and superintends the carders – and those who furnish it with whatever it needs for its web – by indicating to each of them the sort of tasks it thinks it is appropriate for them to complete in relation to its own intertwining.

308e

Young Socrates: Entirely so.

Stranger: It appears to me that kingship does exactly the same thing. Retaining for itself the power of superintendence, it will not permit the lawful educators and nurturers to engage in any practice that does not bring about some characteristic that is

appropriate to the overall blend, and it exhorts them to educate on this basis alone. But those who are unable to share in courage and sound-mindedness, and any other characteristics that are conducive to excellence, but are thrust away by the force of an evil nature into godlessness, violence and injustice, these it casts out through execution, exile, or punishing them with significant loss of status.

309a

Young Socrates: Something of this sort is said to happen anyway.

Stranger: While those who wallow in ignorance and extreme baseness it subjects to the yoke of slavery.

Young Socrates: Quite right.

309b

Stranger: As for the others then, there are some whose natures are amenable to attaining nobility, if they obtain education and will accept being mixed with one another on the basis of a skill. Of these, it regards the ones who are more inclined towards courage as akin to warp threads due to their hard character, while those inclined to orderliness make use of a rich, soft, and, according to this image, a woof-like thread. These two natures, with their opposite inclinations, it attempts to bind and weave together in some such manner, as follows.

Young Socrates: How is it done?

309c

Stranger: First, based upon kinship, it joins together the ever-begotten part of their soul by a divine bond, and then after the divine, it joins the mortal part of them with human bonds.

Young Socrates: Again, what do you mean by this?

Stranger: Whenever opinion that is really true – concerning whatever is noble, just and good, and their opposites – arises in souls, accompanied by steadfastness, I say this is divine, and it

arises in a class that is almost divine.

Young Socrates: It is quite appropriate to say so.

309d

Stranger: Now, are we aware that it belongs to the statesman and the good lawgiver alone, by means of the kingly Muse, to be able to engender this particular opinion in those who have acquired education in the right way, the people we described just now?

Young Socrates: That sounds reasonable.

Stranger: Anyway, Socrates, we would never use the names we are now investigating to refer to anyone who was unable to perform this function.

Young Socrates: No.

Stranger: Well now, won't a courageous soul be made gentle once it has grasped this sort of truth, and, consequently, have more communion with whatever is just, if it so wishes? But if it has no share in this, won't it be more inclined towards a wild nature?

309e

Young Socrates: That is inevitable.

Stranger: But what about the orderly nature? If it shares in these opinions, doesn't it become genuinely self-restrained and wise, by the standard of civic life anyway? But if it does not share in the opinions we are describing, doesn't it quite rightly acquire a reprehensible reputation for folly?

Young Socrates: Entirely so.

Stranger: In that case, shouldn't we declare that this intertwining and binding will never become stable in bad people bound to their own kind, nor in good people bound to bad people, nor would any knowledge ever seriously use it in

such cases?

Young Socrates: Of course.

310a

Stranger: And yet, in those characters born with innate nobility from the very outset, whose upbringing accords with their nature, in these alone it is implanted by the laws, and this indeed is a remedy skilfully applied to them. And just as we said, this bonding together is more divine since it unites parts of excellence that are dissimilar by nature and tend in opposite directions.

Young Socrates: Very true.

Stranger: The remaining bonds are, of course, human, and once this divine bond is in place, it is not particularly difficult either to devise the others, or to implement them once devised.

310b

Young Socrates: How would you do so? And what are they?

Stranger: I mean bonds forged between communities through intermarriage and the community of their children, and those associated with private property exchange and marriage. Indeed, with respect to the procreation of children, most people make such arrangements in an incorrect manner.

Young Socrates: How is that?

Stranger: By the pursuit of wealth and power through such arrangements. But why would anyone seriously regard the censure of this as a worthy discussion topic?

Young Socrates: There is no reason.

310c

Stranger: No. It would be more correct to discuss those who pay attention to the families when making such arrangements, in case they do so in an inappropriate manner.

Young Socrates: Yes, that's reasonable anyway.

Stranger: In fact, they do not act based upon a single correct principle, for they pursue the easiest option available, embrace those who are much like themselves, and have no affection for those who are dissimilar. They assign the utmost significance to their feeling of displeasure.

Young Socrates: In what way?

310d

Stranger: The orderly people seek out their own characteristic, and as best they can they marry those types and bestow their own offspring upon such people again when giving them in marriage. And the courageous type do the very same, by pursuing their own nature, when both of these types should be really doing the exact opposite.

Young Socrates: In what way, and why?

Stranger: Because it is natural that courage, propagated for many generations without being mixed with a sound-minded nature, flourishes powerfully at first, but in the end bursts forth in utter madness.

Young Socrates: That is likely.

310e

Stranger: In contrast, the soul that is too full of moderation, bred over many generations without admixture of daring courage, grows unseasonably dull and ends up totally maimed.

Young Socrates: Yes. That is the likely outcome.

Stranger: Now, I said that these bonds were not difficult to forge once a single opinion about what is noble and good, held by both classes, was in place. For this is the sole function of the kingly weaving process as a whole: never to allow the sound-minded characters to stand apart from the courageous, but to weave them together through unanimity, by granting

privileges or withdrawing them, through reputation and the mutual exchange of sureties. He should then assemble them into what we call a well-woven fabric, and always entrust the public offices in our cities, in common, to these two.

311a

Young Socrates: In what way?

Stranger: When a single official happens to be required, it chooses someone possessing both to take charge, and when a greater number is needed, it combines together a portion of each of the two types. For when the sound-minded characters rule, they are extremely cautious, just and safe, and yet they lack a certain sharp, practical vigour.

Young Socrates: Yes. That's what seems to happen anyway.

311b

Stranger: But the courageous types, by contrast, although inferior to the other types when it comes to justice and caution, still possess exceptional vigour in practical situations. However, it is impossible for all the affairs of our cities, public as well as private, to proceed well without both these qualities being available to them.

Young Socrates: No, how could they?

311c

Stranger: And we may say that this disposition of the courageous and of the sound-minded people, once woven together in an even texture, constitutes the finished fabric of the activity of statesmanship whereby the skill of kingship, having brought these together through like-mindedness and friendship into a common life, and having completed the most magnificent and excellent of all fabrics, embraces all the other people in our cities, slaves and free, by clothing them in this woven web, and rules and superintends thereafter, omitting nothing that renders the city as happy as it belongs to any city

to be.

Socrates: Now, stranger, you have also completed for us a most beautiful account of the kingly man, the statesman.

NOTES

1. Theodorus was from Cyrene, a city in north Africa not far from Siwah, which was home to an oracle to the Egyptian god Ammon (Amun).
2. The conversation between Socrates and Theaetetus took place the previous day, and is depicted in Plato's dialogue, *Theaetetus*. The conversation between Theaetetus and the stranger took place earlier on this same day, and is depicted in Plato's dialogue, *Sophist*.
3. This refers to the sophist, the subject of the previous conversation today. Plato, *Sophist* 221c ff.
4. Lydia and Phrygia were two ancient kingdoms in western Anatolia.
5. This refers to the ponds belonging to the King of Persia.
6. Plato, *Theaetetus* 147c ff.
7. The argument operates by constructing squares and measuring their diagonals.
8. The creature in question is the pig. The pig does not have a split hoof.
9. A pun on the word for 'last' in this sentence confirms that the animal referred to above is indeed the pig.
10. This is a reference to the swineherd.
11. Plato, *Sophist* 227b.
12. Euripides, *Orestes* 986 ff.
13. This is probably a reference to an Athenian official called the King Archon who presided over legal issues concerned with religious matters. He was also responsible for certain sacrifices and ceremonies.

narrator: APOLLODORUS, a constant companion of Socrates; ARISTODEMUS, a follower of Socrates (the actual eyewitness whose account Apollodorus relays) persons in the dialogue:

PHAEDRUS *a friend of Eryximachus*

PAUSANIAS *a lover of Agathon*

ERYXIMACHUS *a physician*

ARISTOPHANES *a comedian*

AGATHON *a tragedian, beloved of Pausanias*

SOCRATES *of Alopecce, son of Sophroniscus*

ALCIBIADES *a famous and notorious politician and general*

DIOTIMA *a priestess and teacher, possibly Plato's invention (appears in flashback within Socrates' speech)*

scene: the house of Agathon in Athens, celebrating the victory for his first tragedy

172a

Apollodorus: I do not feel ill-prepared to meet this request of yours. In fact, just the other day I happened to be going up to the city from home in Phalerum when an acquaintance of mine, some way off, saw me from behind and called out in jest, "Man of Phalerum, you, Apollodorus, will you not wait?" So I stopped and waited, and he said,

172b

Companion: "Why, I was actually looking for you just now as I wanted to find out all about the gathering of Agathon,¹ Socrates and Alcibiades,² and the others who were present at the banquet, and about the speeches on love. What were they? For someone who heard about it from Phoenix, the son of Phillip, recounted it to me, and he said that you also knew the story. However, he himself could not come up with anything in detail, so you should tell me the story, for it is only right that you report the words of your friend. But first, tell me, were you yourself present at this gathering or not?"

172c

Apollodorus: I replied, “Whoever reported this quite evidently reported nothing detailed, if you imagine that the gathering you are asking about was so recent that I could have been present.”

Companion: “That is what I thought,” said he.

Apollodorus: “How could you, Glaucon?”³ I asked. “Do you not know that it is many years since Agathon lived in Athens, and it is not yet three years since I began associating with Socrates and made it my business, on a daily basis, to know what he says and does? Before this I was running around on the whim of the moment in the belief that I was achieving something, when, in fact, I was more miserable than anyone, not unlike yourself now, believing that I should engage in every imaginable activity rather than in philosophy.”

173a

Companion: “Do not mock me,” said he. “Just tell me when this gathering happened.”

Apollodorus: And I said, “Well, you and I were still children. It was when Agathon was victorious with his very first tragedy. On the day after, he himself and his chorus conducted the sacrifice for the victory festivities.”

Companion: “So apparently it was quite some time ago,” he said. “Then who told you the story? Was it Socrates himself?”

173b

Apollodorus: “Not at all, by Zeus,” I replied. “It was the same person who told Phoenix, a certain Aristodemus⁴ from Cydathenaeum, a small man who was always barefoot. He was present at the gathering, being foremost among Socrates’ lovers at the time, or so it seems to me. In any case, I did eventually ask Socrates about some aspects of what I had heard from this fellow, and he confirmed for me what I had been told.”

Companion: “Well, why not tell me the story?” he said. “The road into town is certainly well suited for talking and listening as we proceed.”

173c

Apollodorus: So we went on our way as he suggested, discussing the matter at the same time. Consequently, as I said at the outset, I am not ill-prepared. Therefore, since you people also need to be told the story, that is what I must do. In fact, it is extraordinary that whenever I contribute to philosophic discussions myself, or listen to other people, I am utterly delighted, quite apart from my belief in their benefits. But other discussions trouble me, especially those your wealthy money-makers engage in, and I pity you and your companions because you believe you are achieving something when you are achieving nothing. And you, for your part, probably think that I am in a sorry plight, and I believe your opinion is true. But in your case, I do not just believe it, I know it very well.

173d

Companion: Oh, you are always the same, Apollodorus.⁵ Yes, you are constantly denigrating yourself and everyone else. You give me the impression that you regard everyone, apart from Socrates, as wretched, beginning with yourself. Now, I do not know where exactly you got that nickname ‘manic’, yet that is how you always behave in discussions, railing against yourself and everyone else except Socrates.

173e

Apollodorus: Dear friend, of course it is obvious that if I have such an attitude towards myself and yourselves, I must be mad or out of my wits.

Companion: It is not worth arguing over this just now, Apollodorus. Instead, you should do what we asked you to do and no more. So, tell us about the speeches that were made.

Apollodorus: Well, they went somewhat as follows... But no, it is better that I try to tell you the story, from the beginning, in the same way that he told it.

174a

Aristodemus said that he met Socrates, who had bathed and was wearing sandals — two rare activities for the man — and he asked where he was going in such fine array. Socrates said,

Socrates: “To supper at Agathon’s house. In fact, I avoided the victory celebrations yesterday for fear of a crowd, but I agreed to make an appearance today. That is why I have adorned myself, so that beauty may go alongside beauty. What about you? How willing are you to come to supper uninvited?”

174b

Aristodemus told me that he said,

Aristodemus: “I will do whatever you tell me to do.”

Socrates: “Then follow me,” said Socrates, “and we will spoil the proverb by changing it: ‘Good men go of their own accord to the banquets of good men.’⁶ Indeed, Homer runs the risk not only of corrupting this proverb, but of showing contempt for it when he presents Agamemnon as a good man unsurpassed in warfare, and Menelaus as a ‘faint-hearted spearman’;⁷ yet when Agamemnon is conducting a sacrifice and celebrating, he has Menelaus arrive uninvited to the feast,⁸ a lesser man going to the feast of his superior.”

174c

Aristodemus: Aristodemus told me that when he heard this, he said, “Perhaps I too am running a risk here, Socrates, not the one you mentioned but the one depicted by Homer. I am an ordinary fellow going uninvited to the feast of a wise man. So, if you are bringing me with you, you need to decide what excuse you will offer, because I shall not confirm that I am there uninvited. I will say it is at your behest.”

174d

Socrates: As the two of us travel the road, one taking the lead,⁹ he said, “We shall consider what we are going to say. Anyway, let us go.”

Once they had discussed these matters, he told me that they set off. Then Socrates fell behind on the road, somehow directing his mind towards himself, and when Aristodemus waited for him he told him to go on ahead. When he reached Agathon’s house, he found that the door had been left open, and he told me that an amusing incident ensued there. For one of the slaves inside went up to him immediately and brought him to where the others were reclining, and he noted that they were already about to dine. As soon as Agathon saw him, he exclaimed,

174e

Agathon: “Ah, Aristodemus, you have arrived at just the right time to dine with us, and if you are here for any other purpose, defer the matter to another occasion. Yes, I was looking for you yesterday in order to invite you, but you were not to be found. Anyway, are you not bringing Socrates to us?”

Aristodemus: “I turned around,” said he, “and I saw that Socrates was not following me at all, so I explained that I had actually come here to supper with Socrates, at his invitation.”

Agathon: “Yes, it is good of you to do so,” he said, “but where is the man?”

175a

Aristodemus: “He was coming in behind me a moment ago, and I too am wondering where he might be.”

Agathon: “You, slave boy, look for Socrates and bring him in,” said Agathon. Then he said, “Aristodemus, you should recline beside Eryximachus.”

Aristodemus told me that one boy washed his feet so that he could recline, while another boy arrived and announced, “This

fellow Socrates has withdrawn into the neighbour's porch and is standing there." Despite the slave's request he did not want to come in.

Agathon: "Well, that is strange," he said. "Why do you not call him again, and do not let him off this time?"

175b

Aristodemus: Aristodemus told me that he said, "No, do not do that, just leave him. In fact, this is a habit of his. Sometimes he just withdraws, anywhere at all, and stands there. He will be here soon, believe me. Do not disturb him, just leave him."

Agathon: Agathon replied, "If that is what you think, then that is what we should do. You, slaves, entertain the rest of us. You always serve up whatever you please when there is no one in charge of you, so now — and this is something I have never done before — please regard myself and these other men as your invited dinner guests and attend upon us, so that we may have cause to praise you."

175c

After this, they dined, but Socrates did not come in. Agathon frequently gave an order that Socrates be sent for, but Aristodemus would not allow it. Now, it was not long before Socrates arrived, having spent less time there than usual, so they were about halfway through their meal. Then Agathon, who was reclining alone on the last couch, said,

175d

Agathon: "Come here, Socrates, and recline beside me so that, through contact with you, I may enjoy that piece of wisdom that came to you in the porch. Of course you found it and you have it, for you would not have come away without it."

Socrates then sat down and said,

Socrates: "It would be nice, Agathon, if wisdom were the sort of thing that flowed between us, from the fuller to the emptier

once we were in contact with one another, just as water in cups flows through wool from the fuller to the emptier one. Yes, if wisdom is like this too, then I greatly prize my position alongside you, for I believe I will be filled with a copious beautiful wisdom by your side. For my wisdom would be ordinary, even as questionable as a dream, while yours would be resplendent and would hold great promise, young as you are; and this shone forth mightily from you, just the other day, and was put on display before the eyes of more than thirty thousand Greeks.”

175e

Agathon: “Socrates, you are being contemptuous!” said Agathon. “Yet, in due course, you and I shall submit these matters to judgement on the issue of wisdom, resorting to Dionysus¹⁰ as our judge. For the moment, you should turn your attention to your supper.”

After this, he said that once Socrates had reclined and eaten dinner along with the others, and they had poured libations, sung praise to the god and performed the other traditional practices, they turned their attention to drink. He reported that Pausanias¹¹ then initiated an exchange that went somewhat as follows:

176a

Pausanias: “Well, gentlemen,” he said, “what is the least demanding way in which to drink our wine? Now, I am telling you that I really am in a bad way after the drinking yesterday. I need some breathing space, and I think the same also goes for most of you, since you were present yesterday. So let us consider the mildest manner in which we may drink our wine.”

176b

Aristophanes: Then Aristophanes¹² said, “Yes Pausanias, it is good that you mention this issue of introducing some mildness into our drinking habits, for I am one of those who was soaked

in it yesterday.”

He told us that when Eryximachus, the son of Acumenos,¹³ heard them, he said,

Eryximachus: “Yes, that is well expressed, but there is still one person I would like to hear from. Agathon, how is your strength for further drinking?”

Agathon: “No,” said he, “I am not at all strong enough either.”

176c

Eryximachus: “It seems like a godsend for us,” said Eryximachus, “for myself, I mean, and for Aristodemus, Phaedrus¹⁴ and these people, if the rest of you who are well able to drink have now given it up, since we are never up to it. And I will leave Socrates out of the reckoning, for he is able for either approach, so he will be satisfied regardless of what we do. Therefore, since I believe that none of the company is eager to drink a lot of wine, it may be less irksome if I tell you the truth about what drunkenness is actually like. One thing has become obvious to me from my practice of medicine: being drunk is bad for people. And I myself, given the choice, would have no desire to drink to excess, nor would I advise anyone else to do so, especially if they have a hangover from the previous day.”

176d

Phaedrus: Phaedrus of Myrrhinus interrupted and said, “Yes, indeed. For my part, I am well used to taking your advice, especially when you speak on medical matters, and the rest of the company would now be well advised to do the same.”

176e

Well, once they had heard this, they all agreed not to have a drunken party on this occasion, but to drink just for pleasure.

Eryximachus: “Since this has been decided,” said Eryximachus, “and each person is to drink only as much as he wishes and there is to be no compulsion, I propose in addition that we allow

the flute-girl, who has just come in, to take her leave and perform for herself or, if she prefers, for the women of the house. We, for our part, should base today's gathering upon speeches and, if you want, I am willing to propose the sort of speeches we should make."

177a

They all said they wanted this and they demanded that he make the proposal.

Eryximachus: "Well," said Eryximachus, "the source of this proposal is, as Euripides' Melanippe says, 'not my own story'.¹⁵ No, what I am going to relate concerns Phaedrus here. For Phaedrus occasionally makes a complaint to me: 'Is it not awful, Eryximachus,' says he, 'that while there are hymns and praises composed by the poets to some other gods, not even one of our many notable poets has yet composed a single song of praise to Eros, Love, despite that god's venerable age and greatness? Then again consider, if you please, the worthy sophists, the most excellent Prodicus for instance, who wrote prose works praising Heracles and others. Well, that is not so marvellous, but I once came across a book by a wise man in which salt was given amazing praise for its usefulness, and you may have seen lots more subjects of this sort being given praise. This great god has been neglected to such an extent that to this very day no man has ventured to praise him worthily, and yet they turn this sort of thing into a major issue, so I think that Phaedrus is making good points here. Therefore, I wish to make a contribution of my own and to gratify Phaedrus at the same time. What is more, it seems to me appropriate at present that this company honour the god. So, if you share this view we could occupy ourselves quite adequately with speeches. I think that each of us should deliver a speech in praise of Eros, Love, the most beautiful one he can make, proceeding from the right, beginning first with Phaedrus, since he is reclining in the first

position and he is also, at the same time, the father of the proposition.”

177d

Socrates: “No one will cast a vote against you, Eryximachus,” said Socrates. “Nor indeed could I conceivably deny your request, I who declare that I know nothing other than matters of love; nor could Agathon and Pausanias; nor could Aristophanes, whose entire occupation is concerned with Dionysus and Aphrodite; nor could anyone else whom I see here. However, we who are reclining in last place are at a disadvantage. Yet, if those who speak before us speak adequately and beautifully, that should be enough for us. So good luck to Phaedrus. Let him begin and let him sing the praises of Eros.”

178a

So the others all concurred, and they too made the same request that Socrates had made. Now, although Aristodemus did not fully recall everything each person said, nor do I, for my part, remember everything that he told me, nevertheless, I shall recount to you the parts of each person’s speech that I deem most worthy of mention.

First then, as I was saying, he told me that Phaedrus began by making the general point that Eros is a great god, a wonder to men — and even to gods — in all sorts of different ways, but especially in respect of his origin.

178b

Phaedrus: “The god,” said he, “is revered as most ancient and the evidence for this is as follows: Eros does not have any parents, nor are they mentioned by anyone, either poet or common man, and Hesiod¹⁶ says that Chaos arose first, ^{178c} ...and after that broad-bosomed Earth, the steadfast eternal seat of all, and Love.

Phaedrus: “And Acusilaus¹⁷ says, along with Hesiod, that these two, Earth and Love, arose after Chaos. Parmenides¹⁸ too describes his origin: The first of all the gods he devised was Love.

Phaedrus: “Thus, it is accepted by numerous authorities that Love is most ancient. And being most ancient, he is responsible for the greatest benefits we receive. Indeed, I cannot say that there is any greater benefit from one’s youth upwards than a worthy lover, or, for a lover, than a worthy favourite. For the element needed to guide people throughout their lives if they intend to live noble lives is not something that family connections or honours or wealth or anything else can engender so well as Love. What am I referring to? Shame in the case of disgraceful actions, and love of honour in the case of noble actions, for in the absence of those two, it is not possible for a city or an individual to accomplish great and noble deeds. I declare then that a man who is in love and is exposed doing some disgraceful action, or submitting, through cowardice, to disgraceful treatment by another, would not be as concerned at being seen by his father, his companions or anyone else, as much as by his favourite. The same applies to the beloved. We observe that if he is ever detected in some shameful act, he is especially ashamed before his lovers.

178d

Phaedrus: Therefore, if it could be arranged that a city or an army be composed of lovers and their beloveds, what better way might they organise their affairs than by abstaining from all shameful actions and prizing honour in one another’s eyes? And if such people were to fight alongside one another, even a few of them might, to coin a phrase, conquer the whole human race. For a man in love who was breaking rank or throwing away his weapons, would of course much rather be seen by anyone else at all than by his beloved. Instead of that he would

choose to die many times.

179a

Phaedrus: “As for abandoning his favourite or not assisting him in the hour of danger, well there is none so base that Eros could not inspire him towards excellence, to be equal by nature to the very best. Homer says that the god ‘breathes might’ into some of the heroes and this, in truth, is what Eros actually does to those who are in love.¹⁹

179b

Phaedrus: “What is more, lovers alone are willing to die for the beloved, not only men but women too. For us Greeks, the case of Pelias’ daughter, Alcestis, provides enough evidence in support of my claim, since she alone was prepared to die for her husband, and although he had a father and a mother, she, his wife, because of her love, exceeded them in affection to such an extent that she proved them to be strangers to their own son, relatives in name only.²⁰ And once she had performed this deed, her action was regarded as noble, not only by humanity but also by the gods. Accordingly, although many noble deeds are performed by so many people, there is a blessing the gods grant to very few: that their soul be sent back from Hades once more. But they did send her soul back, so delighted were they with her action. Such is the honour the gods bestow, especially upon the zeal and excellence associated with Love.

179d

Phaedrus: But they sent Orpheus,²¹ the son of Oeagrus, out of Hades as a failure, presenting him with a phantom of the woman he came to retrieve, without giving him the woman herself, because they deemed him faint-hearted, a harp player who, unlike Alcestis, did not dare to die for the sake of Love, but contrived to enter Hades whilst still alive. And so, for these reasons they imposed a punishment upon him: that his own death be at the hands of women. They did not grant him the same respect as they gave to Achilles, the son of Thetis, whom

they sent to the Isles of the Blest, because having learned from his mother that he would be slain once he killed Hector, and would return home and die in old age if he did not do so, he made the daring choice, came to the aid of his lover Patroclus, and avenged him, choosing not merely to die for him but to follow his dead lover directly into death. Accordingly, the gods were so hugely delighted that they honoured him in a special way because he granted such importance to his lover.

180a

Phaedrus: And Aeschylus is talking nonsense when he says Achilles was the lover of Patroclus, when he was not only fairer than Patroclus, but fairer also than all the other heroes, and still beardless since he was much younger, as Homer tells us.²² Anyway, the fact is the gods most honour the virtue associated with Love, yet they are more astounded, delighted and generous when the beloved loves the lover than when lovers love their favourites. For a lover is more divine than a favourite; in fact, he is inspired. That is why they honoured Achilles more than Alcestis and sent him to the Isles of the Blest.

180b

Phaedrus: “And so I declare that Love is the most ancient and revered of the gods, and supreme when it comes to the human acquisition of excellence and blessedness in life and after death.”

180c

He told me that this was the sort of speech Phaedrus delivered, and that after Phaedrus there were a number of others that he did not much remember. Leaving them aside, he recounted Pausanias’ speech.

Pausanias: Pausanias said, “Phaedrus, I do not think our proposal to sing the praises of Love purely and simply has been presented in a proper manner. Indeed, if there were only one Eros, all would be well, but it so happens there is not just one.

Since there is not only one Eros, it is better to declare, at the outset, which sort of Love we should praise. Now, I shall try to put this right, firstly by stating which Love we should praise, and then by delivering the praise in a manner worthy of the god. Indeed, we all know that there is no Aphrodite without Love. Therefore, if she were one, Love would be one, but since there are two Aphrodites, there must be two Loves. How could there not be two goddesses? One, the daughter of Uranus, is presumably the elder. She has no mother, and we give her the name 'Heavenly', while the other is younger, born of Zeus and Dione, and we call her 'Common'. So it is also necessary that the Love who works with the latter be called Common, while the other Love be called Heavenly, and it is right to do so.

180e

Pausanias: Now, although it is necessary to praise all the gods, I should also attempt to explain what has been allotted to each of these Loves. For the following principle applies to every action: its performance, in its own right, is neither noble nor disgraceful. For example, what we are doing now, whether we drink, sing or converse, not one of these is noble in itself. No, they turn out like that in action, according to how the action is performed. When performed nobly and rightly it becomes good, and when not performed rightly it becomes disgraceful. This also applies to loving and to Love. Not all Love is noble and worthy of paeans of praise, only that which exhorts us to love in a noble manner.

181b

Pausanias: "Now, the Eros belonging to the Common Aphrodite is truly common. He behaves in whatever manner occurs to him, and he is the Love that the ordinary people experience. And such people, in the first place, love women no less than boys; secondly, they love the bodies of those whom they love, rather than their souls; and finally, with a view only to consummation, they engage with the least intelligent people

they can find, heedless of whether they are acting nobly or not. Consequently, they do whatever occurs to them to do, regardless of whether it is good or not. For he comes from the goddess who is much the younger of the two, and, by birth, she partakes of the female as well as the male. But the Love belonging to the Heavenly goddess firstly partakes not of the female but of the male only, and so this love is the love of boys. Secondly, it is older with no trace of wantonness. Hence, those who are inspired with this Love are inclined towards the male, admiring the one who is naturally stronger and possesses more intelligence.

181d

Pausanias: “Indeed, one may recognise those who are impelled to boy-loving itself, in a pure manner, by this kind of love; for they do not love young boys, but only those who have begun to acquire intelligence, approaching the stage when the beard begins to grow. Yes, I think that those who love them at this stage are equipped to love them throughout their entire life, being with them and sharing a life together, without deceiving them because they trapped them when foolish and young, and making fools of them by leaving them to run off with someone else. There should also be a law against loving mere boys, so that a great deal of effort be not expended upon an unpredictable outcome, for it is unpredictable as to how young boys will turn out, for better or worse, in soul or in body. Now, although good men willingly impose this law upon themselves, it is also necessary to force the common sort of lovers to behave similarly, just as we, to the best of our ability, restrain them from loving free-born women. These are the people who have given rise to the criticism whereby some dare to suggest that it is shameful to gratify lovers. But they say this when they look at these lovers and behold their inappropriate and unjust behaviour, since it would, of course, not be right to censure any action performed in a respectable and lawful manner.

182a

Pausanias: “Furthermore, in other cities, the law relating to love is easy to understand because it has been simply defined. Yet here, and in Sparta, it is complicated. Now, in Elis and Boeotia, and wherever people are not clever speakers, it has been simply decreed that the gratification of lovers is good, and no one, old or young, would suggest that it is a disgrace. This, I presume, is to save them the trouble of trying to persuade the young people when they are such inadequate speakers. On the other hand, in Ionia, and lots of other places where they live under non-Greek rule, the gratification of lovers is regarded as shameful. For among the non-Greeks, this, along with philosophy and love of gymnastics, is shameful because the cities are under tyrannical rule. For I suppose it is not to the advantage of the rulers that enlarged views be engendered among the citizenry, nor strong friendships and associations either, and this is exactly what all these activities, and especially love, are inclined to bring about. Our own local tyrants learned this by experience, for Aristogeiton’s love and Harmodius’ friendship, which became steadfast, brought an end to the tyrants’ regime.²³ Accordingly, wherever it is decreed that it is disgraceful to gratify lovers, the decree is there because of the bad state of those who established it, avarice on the part of the rulers and cowardice on the part of the citizenry. And wherever it is simplistically designated as noble, that is due to indolence in the souls of those who make the decree.

182d

Pausanias: “Here in Athens we have made much better regulations about this, but as I said, they are not easy to understand. Consider the fact that being openly in love is said to be more noble than being secretive, especially in loving the noblest and the most excellent types, even if they are uglier than others. Note also the wonderful encouragement given to a lover by everyone, so it is not as if he is doing something

shameful, and if he captures the beloved we think it noble, and if he does not we think it a shame. And when it comes to his attempts to make a capture, the law grants freedom to the lover to perform extraordinary deeds, and be praised for doing so, deeds which, if anyone else dared perform them in pursuing or wishing to accomplish anything else apart from this, would incur the considerable reproaches of philosophy. Indeed, if anyone who wanted to get money from someone, or to hold high office or a position of power, were prepared to behave as lovers do towards their favourites, including supplications and prayers in their lovers' pleas, swearing oaths, sleeping in doorways, willing to be subjected to slavery of a kind that even a slave would not accept, he would be prevented from adopting such a course of action by friends and foes alike, his enemies censuring him for his fawning and unworthy behaviour, his friends rebuking him and feeling ashamed on his behalf. Yet, when a lover engages in all these activities, he is viewed favourably, and the law allows him to proceed without censure, as if he were engaged in some utterly noble exploit. But the most bizarre aspect is that even when he swears an oath and breaks the terms of that oath, he is forgiven by the gods for, as the multitude declares, an oath of passion is no oath.

183c

Pausanias: “Accordingly, both gods and men have granted total freedom to the lover, as the laws here proclaim, and on this basis someone might presume that in this city, both loving and being friendly to lovers is regarded as entirely noble. But when people see fathers appointing tutors over beloved boys, forbidding them from conversing with their lovers and passing these instructions on to the tutors, when they see the boy's peers or his companions criticising him for such behaviour, and his elders doing nothing to hinder the critics or reproach them for impropriety, anyone who sees this might well conclude, once again, that such behaviour is considered utterly

disgraceful in this city. But I think the situation is as follows. As I said at the outset, it is not a simple matter. The behaviour, just by itself, is neither noble nor disgraceful, rather, if it is conducted nobly it is noble, if conducted disgracefully it is disgraceful. Now, by disgracefully I mean that he gratifies a degenerate person and does so in a degenerate manner; by nobly I mean that he gratifies a worthy person in a noble manner. And that common lover is degenerate. He loves the body rather than the soul, and, indeed, he is not constant, since the object of his love is not constant either. For, as soon as the bloom of the body, the very object of his love, fades, 'he takes wings and departs',²⁴ dishonouring his many words and promises, while he who loves the character of a worthy person remains for life, since he melts into unity with the constant.

184a

Pausanias: Now, our law wishes to test these two lovers well and truly, to gratify the one and avoid the other. So, that is why it encourages lovers to pursue, and favourites to flee, presiding over a contest to test exactly to which of the two types the lovers belong, and to which of the two types the loved ones belong. So, for this reason, firstly, it is regarded as a disgrace for the beloved to be taken quickly, so that there may be some lapse of time, and time is, in general, a good test. Secondly, it is considered a disgrace to be taken by money or political power, either when the beloved is terrified of suffering misfortune and lacks endurance or fails to despise favours that involve money or political outcomes. For none of these seem to be either certain or constant, quite apart from the fact that genuine friendship does not naturally arise from them. So, under our law, there is only one way left, if favourites are to gratify lovers in a noble manner. Indeed, our law is like the one whereby any form of consensual slavery of lovers to their favourites was not regarded as flattery or as blameworthy. Accordingly, there is also only one other consensual form of slavery left that is not

blameworthy: the form concerned with excellence. For among us, if someone is prepared to tend upon another, expecting to be improved through his agency in wisdom or in any other aspect of excellence, this consensual slavery, for its part, is not regarded as disgraceful or as flattery.

184d

Pausanias: Now, it is necessary to combine these two laws together, the one concerned with loving boys and the one about loving wisdom and about excellence in general, if the gratification of a lover by his favourite be noble. For when lover and favourite get together, each having a law, one maintaining that he is justified in serving his obliging favourites in any way at all, the other that he is justified in rendering any services whatsoever to the person who makes him wise and good; the one able to contribute to intelligence and general excellence, the other wishing to acquire education and wisdom in general; then, when these two laws coincide and under those circumstances alone, is it noble for a favourite to gratify a lover, and not otherwise. In this situation, it is no disgrace even to be deceived, but in all other situations this gratification brings shame on a person whether he is deceived or not. For if someone who gratified a lover for the sake of his wealth, on the assumption that he was rich, were deceived and obtained no money because the lover turned out to be poor, this would be disgraceful nonetheless. For a person of this sort seems to show us something about himself, that he would render any service whatsoever to anyone at all for the sake of money, and this is not noble. Now, by the same argument, if someone who gratified a lover, on the assumption that he was good and that he himself was going to be improved by the friendship of the lover, were to be deceived because the fellow turned out to be bad and not possessed of excellence, the deception would be noble nevertheless. For that person, in turn, also seems to have revealed something about himself, that he would be eager to do

anything for anyone for the sake of excellence and becoming a better person, and this, by contrast, is the most noble motivation of all. Thus, any gratification of any kind for the sake of excellence is noble.

185b

Pausanias: This is the Love belonging to the heavenly goddess. It too is heavenly and of great value to the city and the citizenry, compelling the lover himself, and the beloved, to pay much attention to excellence. But all the others belong to the other goddess, the common one. There it is, Phaedrus. This is what I can contribute, extempore, on the subject of Love.”

185c

Pausanias paused. “Yes, the sophists have taught me to use these balanced phrases.”

Then Aristodemus told me that Aristophanes was due to speak next, but it so happened, due to overeating or for some other reason, he had an attack of hiccups and was unable to speak, but he did say to Eryximachus, the physician, who was reclining on the next couch along from him,

Aristophanes: “Eryximachus, it is only right that you put a stop to my hiccup or speak in my place while I stop it myself.”

185d

Eryximachus: Eryximachus replied, “Well, I shall do both, for I am going to speak in your place, and once you have stopped the hiccups, you will speak in mine. While I am speaking, if you hold your breath for a long time the hiccup may stop, otherwise gargle with water. And if it proves to be very persistent, grab anything at all to tickle your nose with, then sneeze. And if you do this once or twice it will stop, even if it is very persistent.”

Aristophanes: “You should get on with your speech,” said Aristophanes, “while I do what you suggest.”

185e

Eryximachus: Eryximachus said, “Well, Pausanias began the speech nicely but did not finish it properly, so it seems that I am the one who must attempt to give it an ending. Indeed, I think he has distinguished the twofold Love nicely. But Love is present not only in the souls of human beings, and not only towards beautiful people. No, it is also towards much else, and is in other things too, in the bodies of all living beings, in whatever grows in the earth and, in a sense, in all of the things that are. I think it is most evident to me from my own profession, medicine, that the god is great and wonderful and extends over everything, over human affairs and divine affairs too.

186a

Eryximachus: “I shall begin by speaking about medicine so that we may give a venerable status to that profession. For the nature of bodies involves this twofold Love, since it is accepted that the health and disease of the body are different and dissimilar, yet what is dissimilar desires and loves dissimilar. So, the Love present in a healthy body is one thing, that present in a sick body is another. And what Pausanias said a moment ago, that it is noble to gratify good people and a disgrace to gratify those who lack restraint, also applies in the case of our bodies themselves. It is noble to gratify what is good and healthy in each body, and we should do so, and the word ‘medically-skilled’ is associated with this process, whereas it is a disgrace to gratify the bad and the diseased, and these should be shown no favour if someone is to exercise this skill. For medical skill may be summed up as the knowledge of the loving disposition of the body towards being filled or emptied, and whoever has a thorough understanding of the noble and shameful Love involved in these is supreme in medical skill, while the person who can effect a transformation so that one love is acquired instead of another, or who knows how to engender it in cases where it is absent but should be present,

and get rid of it when it should not be, he would be a good practitioner. For what is required is the ability to turn the most hostile elements that are in the body into friends that love one another, and the most hostile elements are the complete opposites: cold to heat, bitter to sweet, dry to moist, and everything of that sort. Once he knew how to engender Love and unanimity in these, our progenitor, Asclepius, instituted this profession of ours, according to the poets here whom I believe.

187a

Eryximachus: “Now, I maintain that all medical skill is regulated through this god, and the same goes for gymnastics and agriculture, and it is obvious to anyone who pays it the slightest attention that the same principle applies to music, as Heraclitus perhaps wished to explain, although his words do not express it very well. For he says that the one, when diverging from itself, converges like the harmony of a bow and a lyre.²⁵ But it is highly irrational to state that a harmony diverges, or comes from whatever is still diverging. No, what he probably meant to say was that the harmony arose from the previously divergent high and low notes when they later came into agreement under the influence of musical skill. For there would not, I presume, be harmony from high and low notes that are still diverging, since harmony is concord, and concord is an agreement, and it is impossible that there be agreement from whatever is diverging, as long as they are diverging. Yet it is impossible, by contrast, to harmonise what is diverging and not in agreement, just as rhythm too arises from fast and slow, which were previously divergent and later came to agreement. Here it is music that instils agreement in all these by engendering Love and unanimity between them, just as medicine did in the other instance, and music, for its part, is knowledge of love’s role in relation to harmony and rhythm.

187c

Eryximachus: Now, in the actual establishment of harmony and rhythm there is no difficulty in recognising the role of love, although the twofold Love is not yet present in these cases. But there is indeed a difficulty, and a good artificer is required, once it is necessary that rhythm and harmony be applied to humanity, either by composing them, which is called musical composition, or by making proper use of the melodies and measures that have already been devised, which is called education. For the same argument presents itself once more: that one should gratify the orderly people and do so in such a way that those who are not yet orderly may become more orderly, and one should safeguard the love of these people, and this is the noble one, the Heavenly One, the Love belonging to the Heavenly Muse. The other one, the Common One, belongs to Polyhymnia,²⁶ and this should be applied cautiously wherever it is applied, so that one may reap the pleasure thereof yet engender no lack of restraint. Indeed, it is a major task in our profession to make good use of the desires associated with the culinary arts, so that a person may reap the pleasure without the ill-health. So, in music and in medicine and in everything else both human and divine, as far as practicable, we should be on the lookout for either kind of Love, for both are present.

188a

Eryximachus: “Then too, the structure of the seasons of the year is dominated by these two Loves, and when the opposites just mentioned, heat and cold, dry and moist, attain an orderly Love for one another and acquire a moderate blend and harmony, they come bearing abundance and health to humanity and to the other creatures and plants, and they do no wrong. But whenever the wanton Love dominates the seasons of the year, he wreaks much destruction and much wrong. For plagues are inclined to arise under such conditions, and a variety of other diseases too among both animals and plants, and indeed frost, hail and mildew also arise from the mutual

excesses and disorders of such love-based interactions as these, knowledge of which, associated with the motions of the stars and seasons of the year, is called astronomy. Then again, all sacrifices and the matters entrusted to the seer, both of which involve the intercommunion of gods and of men, are concerned with nothing else except protecting and curing Love. Indeed, all irreverence tends to arise when someone fails to gratify the orderly Love, does not honour him and venerate him in every action, but venerates the other kind in dealing with parents, living or dead, and with the gods.²⁷ Now, in these cases, the task of watching over and curing those who are in love has been assigned to the seer, and this skill is an artificer of friendship between gods and us humans, because it knows which loving relationships of humanity incline us towards obedience and reverence.

188d

Eryximachus: “And so Love, altogether in its totality, possesses great and extensive power. More so, it is all powerful. But the Love associated with what is good, the one perfected in consort with sound-mindedness and justice, both among ourselves and among the gods, this possesses the greatest power, and provides us with all blessedness, enabling us to associate with and be friends with one another and with the gods, our superiors. Now it may well be that in my praise of Eros, I too have omitted a great deal, but that was not my actual intention. Anyway, if I have left anything out it is your job, Aristophanes, to make up the deficiency. Or if you intend to hymn the praises of the god in some other way, then please do so, since your hiccup has now stopped.”

189a

Then Aristodemus told me that Aristophanes took his turn and said,

Aristophanes: “It has stopped indeed, but not before the sneezing remedy was applied to it. So, I am surprised that the body’s good order has a desire for the sort of noises and tickling that sneezing represents, for it stopped the very moment I applied the sneezing remedy.”

189b

Eryximachus: Eryximachus replied, “Dear Aristophanes, watch what you are doing. You are making jokes when you are just about to speak, and although it is open to you to speak in peace, you are forcing me to be on the lookout for anything comical in your speech.”

Aristophanes: Aristophanes responded, with a laugh, “Well spoken, Eryximachus, I will take back anything I have said. But please do not go on the lookout, as I am fearful over what I am about to say, not in case I say something comical, since that would be a profitable outcome, the custom of our comic Muse. No, I am afraid of saying something ridiculous.”

189c

Eryximachus: “Aristophanes,” said he, “you have fired a dart and you think you can make your escape. Well, pay attention. You will have to defend yourself. Speak accordingly, although perhaps I may let you off, if I see fit.”

Aristophanes: “Very well, Eryximachus,” said Aristophanes. “I do intend to speak in a somewhat different manner from yourself and Pausanias, for people seem to be entirely unaware of the power of Love, since if they were aware of this they would provide huge temples and altars for him and perform enormous sacrifices, unlike what happens nowadays where none of this occurs in the case of Love, though he deserves it most of all. Indeed, among the gods he is the best friend to humanity, being the protector of humans and healer of those ills whose cure would constitute an enormous blessing for the human race. So I shall endeavour to explain his power to you, and you may then

be the teachers to everyone else.

189d

Aristophanes: “First, you should learn the nature of humanity and what has happened to that, for in times past our nature was not the same as it is now, but otherwise. For in the first place there were three kinds of human being and not two as nowadays, male and female. No, there was also a third kind, a combination of both genders, but that has disappeared and only its name remains. For at the time, man-woman was a single form and a single name combining both male and female, but it does not exist today, even though the name persists as a term of reproach. Secondly, the shape of each human being, as a whole, was round with its back and sides forming a circle, each having four hands, the same number of legs as hands, and two identical faces situated on its opposite sides, four ears, two sets of genitalia, and you may deduce all the other details from what I have said. It also went about upright, as we do today, moving in either direction as it wished, and when it decided to embark upon a high-speed run, it pushed off with its eight limbs and moved with a rapid circular motion, just like acrobats who set their legs upright and travel around by tumbling with a circular motion.

190b

Aristophanes: “There were these three types, and they were like this because the initial birth of the male was from the sun, the female from the earth, and the one that partakes of both was from the moon, seeing that the moon also partakes of male and female. They themselves were circular and so was their motion, on account of their similarity to their parents. Now, their strength and power was terrifying, and they had such enormous ambitions that they even turned upon the gods, and what Homer says about Ephialtes and Otus relates to these humans: that they attempted to make an ascent to heaven so as to grapple with the gods. Zeus and the other gods deliberated as

to what they should do, and they were at a loss, for they were not in a position to slaughter them and obliterate the race with thunderbolts as they had done to the Giants, since the honours and sacrifices that came from humanity would be obliterated too. Neither could they tolerate this outrageous behaviour.

190c

Aristophanes: “Then Zeus, having considered the matter at length, said, ‘I think I have come up with a device whereby human beings may still exist, and yet their unrestrained behaviour may cease because they will be weaker. For I shall now split each of them in two, and they will immediately be weaker and, at the same time, of more use to us gods because their number will increase. They will walk upright on two legs, but if they still seem to be behaving outrageously and are unwilling to be peaceful, I shall split them in two once more so that they will have to get around by hopping on one leg.’ Once he had said all this, Zeus split the humans in two in the same way that people cut sorb-apples when they are going to preserve them, or cut eggs with hairs. He instructed Apollo to turn the face and the half-neck around towards the cut so that the person, on seeing their own cut, would be more orderly. He also directed him to heal everything else.

190e

Aristophanes: “He turned the face around, drew the skin together from all sides over what is now called the stomach, as though he were tying a purse, and he tied up the single opening in the middle of the stomach to make what they call the navel. He also smoothed out the many other wrinkles, and articulated the chest using an instrument like the one that leather workers use when smoothing out the wrinkles in the leather with a last. A few wrinkles were left around the stomach itself and around the navel as a reminder of that ancient affliction. Now, since our nature had been cut in two, each half, longing for the half of itself, would go back to that, and throwing their arms around

each other, embracing in an effort to grow back together again, they were dying out due to hunger and their general inactivity because they had no wish to do anything without one another. And whenever either of the halves died, the remaining half looked for another and embraced it, either encountering half of a woman, which we now refer to as a woman, or encountering the half of a man. Consequently, they were dying out. But Zeus took pity on them, came up with an alternative arrangement, and repositioned their genitalia to the front, for until then these were on the original outside, and they used to procreate and bear children not upon one another but upon the earth like the cicadas. So, he relocated their parts to the front in this way and thereby brought about generation in one another, by the male in the female.

191c

Aristophanes: “This ensured that if male were to meet female in this embrace, there would be procreation and their race would continue. And, at the same time, if male were to meet male, at least there would be satisfaction from their intercourse. Their search would cease, and they could return to their activities and get on with the rest of their lives. So, love of one another is inherent in humanity from those past ages, reconstituting our ancient nature, endeavouring to make one out of two and cure the defect in the nature of humanity. Therefore, each of us is a counterpart of a human being since we have been cut in half and are like flat-fish, two produced from one, each constantly searching for the particular counterpart of itself. Now, those men who are a section cut from the combined type, the one that was then called a man-woman, they are lovers of women, and most adulterers have arisen from this type. So also have any women who love men and those who are adulteresses.

191e

Aristophanes: Any women who are a section cut from the female type do not pay much heed to men but are more inclined towards women. Female companions have arisen from this type. Those who are sections cut from the male type, pursue males and, while they are still boys, they love men and delight in lying with and being embraced by men, since they are slices of the male. These indeed are the very best of boys and youths, since they are by nature extremely manly. And although some people refer to them as shameless, this is a lie, for they do not behave as they do out of shamelessness. No, it is out of daring, courage and manliness that they cleave to those who are like themselves. There is ample proof of this. In fact, on reaching maturity, it is only this sort who prove themselves as men when it comes to civic affairs. Once they reach manhood they are lovers of boys and they do not, by nature, have an interest in marriage and begetting children, although they are forced into this by convention. Yet they are content to live with one another without marrying. Such a person indeed becomes, in every respect, a lover of boys or a boy who is affectionate to his lover, constantly cleaving to his own kind.

192b

Aristophanes: “Now, whenever the lover of boys, or of anyone else, encounters the very person who is the half of himself, they are wonderfully overcome by friendship, affinity and love, and are scarcely willing to be parted from one another even for a short time. These are the ones who continue with one another throughout their lives, although they would be unable to say what they want from one another for themselves. No one would presume that intercourse is the reason each takes such great eager delight in being with the other. No, the soul of each evidently wants something else which it is unable to express, yet it does have a sense of what it wants, but words fail. And if Hephaestus²⁸ were to stand over them, tools in hand, when they were lying together, and were to ask, ‘Humans, what is it that

you want for yourselves from one another?’ And if they were at a loss and he were to ask again, ‘Well, is this what you desire: to be together with one another as much as possible, so that you do not leave one another, day or night? For if that is what you long for, I am prepared to fuse you into one and weld you together so that you may become one rather than two and, being one, you could both live in communion for the duration of your life. And when you die, even there in Hades you could be one rather than two, having shared a common death. So, take a look and decide whether you desire this and would be content if you got it.’ Having heard all this, we know that there is no one who would turn down the offer, nor indeed would anyone want anything else. Each would literally believe they had heard a description of what they had desired all along: to come together and merge with the beloved and from two become one.

193a

Aristophanes: “So this is the explanation. It is because our original nature was as I described it and we were whole, and the name of the desire and pursuit of the whole is Love. Before that, I say, we were one, but we have now been scattered abroad by the god on account of our behaviour, just as the Arcadians were dispersed by the Spartans.²⁹ So, there is a fear that if we are not well behaved towards the gods we may be sliced in two once more and go about like figures in profile on gravestones, sculpted in relief, sawn through along the line of our noses, mere half dice. That is why every man should encourage piety in relation to the gods in all matters, so that we may avoid that outcome and attain the other, with Love as our leader and commander.

193b

Aristophanes: “Let no one act in opposition to Love; acting in opposition means being hated by the gods, for having befriended the god and being reconciled to him, we shall find and meet up with the favourites that are our own, which is a

rare achievement nowadays. Now, Eryximachus should not interject here, treating my speech as a comedy on the assumption that I am referring to Pausanias and Agathon. Perhaps these men do, in fact, belong to this category and are both male by nature, but what I am saying applies to everyone, both to men and to women, that our human race may attain blessedness provided we bring love to completion. We each find the beloved that is our own and go back to our original nature. So if this is the best arrangement, it must follow that, these days, the arrangement that comes closest to this is the best. This involves meeting a favourite who is naturally congenial to oneself. And the god who is responsible for this deserves our hymns of praise, and that god is Eros who is, at present, our greatest benefactor, leading us to our own, and providing us hereafter with great hope that, once we show due reverence to the gods, he will bring us back to our original nature, heal us and make us happy and blessed.

193d

Aristophanes: “So, Eryximachus,” he said, “this is my speech about Love, quite different from yours. Now, remember what I asked of you. Please do not turn it into a comedy, so that we may also hear what each of the remaining speakers will say — the two remaining speakers in fact, since only Agathon and Socrates remain.”

193e

I am told that Eryximachus said,

Eryximachus: “Well, I will grant your wish since, in my view, your speech was most agreeably delivered. And if I was not a party to the fact that Socrates and Agathon are formidable when it comes to love, I would be quite afraid that they might be stuck for words because of the extent and variety of what has been said already. But now I am confident after all.”

194a

Socrates: Then Socrates said, “Eryximachus, you have contributed admirably to the competition, but if you were in my position, or more to the point, the position I will probably be in once Agathon has delivered a nice speech, you would be even more afraid and every bit as frightened as I am now.”

Agathon: “You want to put a spell on me, Socrates,” said Agathon, “so that I will be in turmoil, thinking that the audience has a strong expectation that I am going to speak well.”

194b

Socrates: “I would be a very forgetful man, Agathon,” said Socrates, “if I were to believe that you would be in turmoil over a handful of people like us, when I saw your confidence and self-assurance as you ascended the stage with your actors, looked that vast audience straight in the eye, all set to present your own words to them, without any concerns whatsoever.”

Agathon: “What is this, Socrates?” said Agathon. “Surely you do not believe that I am so obsessed with the theatre as to be unaware that, to a man of sense, a few intelligent people give more cause for fear than a crowd of stupid ones?”

194c

Socrates: “Agathon,” said he, “I would certainly not be doing the right thing by you if I were to presume any lack of refinement on your part. Rather, I know full well that if you were to meet some people whom you regarded as wise, you would have more respect for them than all the rest. Anyway, we would not be the wise folk, since we were there in the theatre along with the rest of the crowd, but if you did meet up with others who were actually wise, perhaps you would feel ashamed in front of them if you thought you were perhaps doing something disgraceful. Or what do you yourself say?”

Agathon: “What you say is true,” he replied.

Socrates: “Whereas, in front of some crowd, you would not feel ashamed if you thought you were doing something disgraceful, would you?”

194d

Phaedrus: Then he said Phaedrus interrupted saying, “Dear Agathon, if you respond to Socrates it will no longer make the slightest difference to him how our plan unfolds, as long as he has a partner in dialogue, especially someone handsome. Now, I enjoy listening to Socrates in dialogue, but I need to supervise our praises of Eros and ensure that I receive a speech from each one of you. So, once you have both bestowed such praises upon the god, you may at that stage engage in a dialogue.”

194e

Agathon: “Well said, Phaedrus,” retorted Agathon. “Indeed, there is no reason why I should not speak since there will be lots of opportunities for a dialogue with Socrates afterwards.

Agathon: Now, I first propose to explain the manner in which I need to speak and then to deliver my speech. For all the previous speakers, in my opinion, have not sung the praises of the god, but have congratulated humanity on the benefits for which the god is responsible in their case. But no one has stated what sort of god he is who has bestowed these benefits. Now, there is a single correct approach to any praise of anything: one should describe what the subject is like, in the light of the sort of outcome he produces. Accordingly, it is right that we also praise Love, firstly for his characteristics, and then for his benefactions. So although all of the gods are blessed, Love, if such an utterance is allowed and will incur no retribution, is the most blessed of them all, being the most beautiful and the best.

195a

Agathon: “He is the most beautiful because he has the following characteristics. First, he is the youngest of the gods, Phaedrus, and he himself provides strong evidence for this by fleeing from

and evading old age, fast as it obviously is. Anyway, it comes to us faster than we would like. Love naturally hates this and does not go anywhere near it. He constantly keeps company with the young and he himself is young. Indeed, the old saying captures it well, that like is always drawn to like.³⁰ And I agree with Phaedrus on many issues but I do not agree that Eros is more ancient than Cronus and Iapetus. No, I say that he is the youngest of the gods, and ever young, and the ancient events involving the gods, as described by Hesiod³¹ and Parmenides, if these men are speaking the truth, occurred through Necessity and not through Love. For the castrations, imprisonments and the other acts of violence towards one another would not have occurred had Love been among them. Rather, there would have been friendship and peace, as there is now, since Love reigns among the gods.

195c

Agathon: “So, he is young, and as well as being young he is delicate, yet he stands in need of a poet the like of Homer, to portray his delicacy as a god. For Homer declares that Atē is a god and delicate too, or that her feet are delicate anyway, when he says: Yet delicate are her feet for on the ground She speeds not, only on the heads of men.³²

195d

Agathon: “Now, I think he uses a nice piece of evidence to demonstrate her delicacy: the fact that she doesn’t walk on what is hard but upon what is soft. So I shall have recourse to the same proof that Love is delicate, for he walks not upon the earth or upon our skulls which are not particularly soft, but he walks and dwells in the softest things of all. Indeed, he makes his home in the characters and the souls of gods and humans, and what’s more, not just in any random souls. No, if he encounters any soul possessing a hard character he departs, and if it has a soft character he dwells there. Therefore, since he touches the very softest of the very softest, both with his feet

and with his entire being, he must be extremely delicate. Yet, although he is the youngest and the most delicate, he is supple in form as well. For if he was hard, he would not be able to envelop us completely, or to go unnoticed as he first enters into an entire soul and then re-emerges. Strong evidence for his measured and supple character is the gracefulness which, everyone agrees, Love possesses in abundance, for gracelessness and Love are constantly at war with one another.

196a

Agathon: “His beauty of complexion indicates that this god dwells among blossoms, for Love does not settle in a body or soul or anything whatsoever that does not blossom, or has faded, but he does settle and abide in a place of pretty flowers and sweet scent.

196b

Agathon: “Now, that is enough about the beauty of the god, although there is a great deal left to say, but we need to follow this with an account of his excellence. His greatest excellence is that he neither does injustice to god or man, nor suffers injustice at the hands of god or man. For if he experiences anything, he does not experience violence. Violence has no contact with Love, nor does he enact it either, for everyone serves Love willingly in everything, and whatever is willingly agreed by willing participants is just, as ‘the laws, sovereign of the city’³³ declare. In addition to this virtue of justice, he partakes of an abundance of sound-mindedness. For it is agreed that sound-mindedness is mastery over pleasures and desires, and that there is no pleasure stronger than Love, and since they are weaker, they would be mastered by Love, and he would be master and being master over pleasures and desires, Love would be pre-eminently sound-minded. In fact, when it comes to courage not even Ares, the god of war, can stand against Love.³⁴ For Ares does not possess Love, rather Love possesses Ares, Love for Aphrodite that is, according to the story.³⁵ The possessor is

more dominant than the possessed, and since Love dominates the god who is most courageous of them all, he himself would be the most courageous.

196d

Agathon: “Now that we have described the justice, sound-mindedness and courage of the god, what remains is to describe his wisdom, and as far as possible we should endeavour not to be found wanting. And firstly, so that I, for my part, may exalt my own profession just as Eryximachus exalted his, I say that the god is a poet, so wise that he can make a poet of someone else. In any case, whoever is touched by Love becomes a poet even if he had previously been devoid of the Muse.³⁶ So, we may fittingly use this as evidence that, in general, Love is a good poet whose creativity extends to the entire realm of the Muses. For one can neither bestow upon another, nor teach another, what one does not possess or does not know. And, indeed, who would oppose the claim that, in the case of the production of all living creatures, it is by Love’s wisdom that living creatures come into being and grow? Again we know, do we not, that any artificer involved in the other professions, who has this god as his teacher, turns out to be highly regarded and illustrious, while the one whom Love does not touch suffers oblivion? In fact, Apollo discovered archery, medicine and prophecy under the direction of desire and Love, so he too was the pupil of Love, as were the Muses in music, Hephaestus in metal-working, Athena in weaving, and Zeus in the rulership of gods and men. Therefore, these activities of the gods were indeed established once Love had been engendered, Love of beauty obviously, for there is no love of ugliness. Before that, as I said at the outset, endless calamities befell the gods, as we are told, because of the sovereignty of Necessity, but since this god was born, all that is good among gods and men has arisen from their love of beauty.

197c

Agathon: “Accordingly Phaedrus, in my view, Love himself is first, unsurpassed in beauty and goodness, and he is thereafter responsible for other qualities of this sort in others. I am moved to say something in verse, declaring that he is the one who brings Peace to humanity, Stillness and calm to the sea, Rest to the winds and Sleep in the midst of grief.³⁷

197d

Agathon: “He it is who purges us of hostility and fills us with friendship; who makes us come together at gatherings of various kinds; who acts as our leader at festivals, at ceremonies and at sacrifices, bringing gentleness, banishing crudity, bestowing goodwill, withholding ill will, gracious and gentle; to the wise, a vision; to the gods, a marvel; envied by those with no portion of him; prized by those who have a fair share; father of luxury, splendour, ornament, graces, desire and longing; careful of the good, neglectful of the bad; helmsman, defender, ally, and saviour supreme in travail and fear, in yearning and in discourse; the adornment of all of the gods and of humanity; the best and most illustrious leader, whom every man should follow, singing beautiful hymns of praise, sharing in the song he sings, as he enchants the thought of every god and man.

197e

Agathon: “That is my speech, Phaedrus,” he said. “Partly playful, yet serious in due measure, to the best of my ability I lay it before the god.”

198a

According to Aristodemus, everyone who was there applauded when Agathon finished speaking because the young man’s words had been so appropriately spoken, both with respect to himself and with respect to the god. Then Socrates looked at Eryximachus and said,

Socrates: “Dear son of Acumenus, do you still think the fear I felt a while ago was unfounded? Surely what I said at the time

was prophetic, that Agathon was going to speak wonderfully and that I would be at a loss.”

198b

Eryximachus: “To a certain extent,” said Eryximachus. “I think you did state prophetically that Agathon was going to speak well, yet I cannot accept that you could be at a loss.”

Socrates: “Blessed man,” said Socrates, “how can I help but be at a loss, I or anyone else who is about to speak just after the delivery of such a beautiful, variegated speech as that? Although the rest of it was not quite so wonderful, who could avoid being awestruck towards the end on hearing the beauty of its words and phrases? Yet I myself, arriving at the conclusion that I would be unable to say anything that came anywhere near the beauty of his words, almost ran away, and would have fled out of shame had I anywhere to run to. In fact, the speech reminded me of Gorgias, and my predicament was much like what Homer describes.³⁸ I was afraid in the end lest Agathon, in his speech, had sent the head of Gorgias,³⁹ so formidable in speech, against my own speech and would turn me into speechless stone. And I then realised how ridiculous I was when I agreed to take my turn with the rest of you in giving praise to Love and when I said that I was proficient in all that belongs to love,⁴⁰ although, as it turns out, I knew nothing about the process whereby anything at all should be given praise. For I was simple-minded enough to think that one should speak the truth about each of the subjects that are to be praised and, with this as a basis, select the most beautiful aspects thereof and present them in the most appropriate manner possible. And so I had very great expectations that I was going to speak well, on the presumption that I knew the true way to praise anything whatsoever.

198e

Socrates: But it turns out, it seems, that this is not the way to praise anything beautifully. Instead, one should attribute the most exalted and beautiful qualities to the object, whether it possesses them or not, and if it is a lie, well that does not matter. Indeed, it was stated at the outset, it seems, that each of us should merely seem to praise Love rather than actually praising him. That is why, in my view, you marshal every possible expression and attribute it to Love, proclaiming him to be such and such, and the cause of all manner of things, so that he may appear to be unsurpassed in beauty and excellence to people who do not recognise him of course, but surely not to the people who know. And the praise sounds beautiful and impressive too, yet I did not actually realise that this was the way to deliver praise, and in my ignorance, I too agreed to take my turn with you in this process.

199a

Socrates: “So, my tongue made a promise but my mind did not.⁴¹ Let’s bid it farewell then. Indeed, I am not going to give praise in that way, since I would not be able to do so. Yet I am prepared to speak the truth in my own way, if you want me to, rather than competing with your speeches and attracting ridicule. Therefore, you should decide whether a speech of this sort is needed, Phaedrus, whether it is necessary to hear the truth about Love, spoken with whatever sort of words and arrangement of phrases happens to occur to me.”

199b

So Phaedrus agreed, and the others called upon Socrates to speak in whatever manner he himself thought he should speak.

Socrates: “Well, Phaedrus,” said he, “even now, let me put a few little questions to Agathon so that I may agree something with him, and then proceed to speak.”

199c

Phaedrus: “Yes, I will allow it,” said Phaedrus. “Just ask.”

After that, according to Aristodemus, Socrates began somewhat as follows.

Socrates: “Yes, indeed, dear Agathon, I thought you began your speech very nicely by saying that one should first describe the sort of god Eros himself is, and then describe what he does. This introduction pleases me greatly. So come on, since you have described beautifully and magnificently what he is like in general, tell me this too: is Love characterised as love of something or of nothing? Now, I am not asking if Love is love of a father or of a mother, for asking if Love is the love of father or mother would be ridiculous. No, it is as if I were asking about this father in itself. Is the father a father of someone or is he not? Presumably you would tell me, if you wished to answer properly, that the father is the father of a son or a daughter, would you not?”

Agathon: “Very much so,” replied Agathon.

Socrates: “Does not the same go for a mother?”

He also agreed with this.

199e

Socrates: “Well, then,” said Socrates, “answer just a few more questions so that you may understand better what I mean. For if I were to ask, ‘What about this? Is brother just what brother is, a brother of someone, or is he not?’”

He said that he is.

Socrates: “Is he not a brother of a brother or a sister?”

He agreed.

Socrates: “Now,” said he, “try also to describe Love. Is Love the love of nothing or of something?”

Agathon: “He is certainly love of something.”

200a

Socrates: “Well, then,” said Socrates, “keep to yourself the memory of what it is love of, and tell me this: does Love desire that which he is the love of, or does he not?”

Agathon: “He certainly does,” said Agathon.

Socrates: “Does he have what he desires and loves, and then love it, or does he not have it?”

Agathon: “He does not have it, or so it seems, at any rate,” he replied.

200b

Socrates: “Think about this,” said Socrates. “Rather than being likely, is it not necessarily the case that the one who desires, desires that which he lacks, and does not desire that which he does not lack? It seems to me, Agathon, that this is necessarily the case, strikingly so. How does it seem to you?”

Agathon: “That is how it seems to me too,” he replied.

Socrates: “Well said! Now, would someone who is tall wish to be tall, or would someone strong wish to be strong?”

Agathon: “Based upon what has been agreed, that is impossible.”

Socrates: “Because, being what he is, he would presumably not be lacking these qualities.”

Agathon: “What you say is true.”

200c

Socrates: “But suppose someone strong were to wish to be strong, or a fast person to be fast, or a healthy person to be healthy,” said Socrates. “For perhaps someone might believe that in such cases and all similar cases, these people and those like them who have these qualities also desire the very qualities they have. Therefore, I am mentioning this so that we do not get misled. For if you think about it, Agathon, these men must, at

that moment, have each of the qualities they have, regardless of what they wish, and surely no one would desire what he has? So, whenever someone says that I am healthy and I also wish to be healthy, or I am rich and I wish to be rich, and so I desire the very things that I have, we would say to him, 'You, my good man, having acquired wealth, health and strength, also wish to retain them in the future since, at the present moment, you have them regardless of what you wish. So, consider the matter. Whenever you say, "I desire what I already have", you are actually saying "I wish to have in future whatever I already have now".' He would have to agree would he not?"

200e

Aristodemus said that Agathon concurred.

Socrates: Then Socrates said, "Does this not involve loving that which is not immediately available to him, namely the future preservation and presence of these qualities?"

Agathon: "Very much so," he replied.

Socrates: "So, it turns out that this person, and anyone else who has a desire, desires what is not immediately available and not present, something he does not have, something he himself is not and which he therefore lacks. It is for things of this sort that there is desire and Love."

Agathon: "Entirely so," he replied.

201a

Socrates: "Come on, then," said Socrates, "we should recapitulate what has been stated. Is not Love firstly a love of certain things, and secondly of things in which he is lacking?"

Agathon: "Yes," he said.

Socrates: "Now, as well as this, please remember what you said in your speech about what love is of. If you like I will remind you; for I think you said something to the effect that the various

activities were established by the gods through their love of beauty. Is this not what you said?"

Agathon: "Yes, I said that," Agathon responded.

Socrates: "And it is reasonable for you to say so, my friend," said Socrates. "And if this is the case, would not Love be love of beauty and not of ugliness?"

He agreed.

201b

Socrates: "Now, did not we agree that he loves what he lacks and does not have?"

Agathon: "Yes," said he.

Socrates: "Then Love is lacking in beauty and does not have it."

Agathon: "Necessarily," said he.

Socrates: "What about this? Would you say that something that lacks beauty, and has not acquired it, is beautiful?"

Agathon: "Not at all."

Socrates: "So, do you still accept that Love is beautiful, if the things we have said hold good?"

Agathon: And Agathon replied, "Socrates, it looks as if I did not know what I was talking about at the time."

201c

Socrates: "And yet, you did speak beautifully, Agathon," he said. "Please tell me a little more. Do you not think that anything good is also beautiful?"

Agathon: "I do."

Socrates: "So, if Love is lacking in what is beautiful, and anything good is beautiful, then Love would also be lacking in what is good."

Agathon: “I would not be able to argue against you, Socrates,” he said, “so let it be as you say it is.”

Socrates: “On the contrary, beloved Agathon,” said he, “you are unable to argue against the truth, since there is no difficulty in arguing against Socrates.”

201d

Socrates: Socrates said: “I am going to leave you be at this stage, and I shall attempt instead to recount to you a discourse concerning Love that I once heard from a woman of Mantinea, Diotima. She was wise in these matters and in many others, and on one occasion she secured a ten-year postponement of the plague for the people of Athens when they performed their sacrifices. She is the one who taught me about all that belongs to love, and the discourse is hers. Based upon what has been agreed by Agathon and myself, I shall attempt to recount it on my own, in whatever way I can. Now, as you explained, Agathon, what I should do first is describe Love himself, what he is and how he is characterised, and then go on to describe his works. So, I think it is easiest to recount the manner in which the stranger from Mantinea went about it at the time, since she questioned me closely. I used different words, but what I said to her was much the same as what Agathon said to me just now, that Love is a great god and it is love of whatever is beautiful. She then refuted me with the very arguments with which I refuted Agathon, showing that according to my own argument Love was neither beautiful nor good.

201e

Socrates: “So I said, ‘Diotima, what are you saying? Is Love, in fact, ugly and bad?’

Diotima: She replied, ‘Show some respect, or do you think that something that is not beautiful would necessarily be ugly?’

202a

Socrates: ‘Very much so.’

Diotima: ‘And would someone who is not wise be ignorant? Or do you not realise that there is something in between wisdom and ignorance?’

Socrates: ‘What is that?’

Diotima: ‘Are you not aware,’ said she, ‘that holding right opinions, even without being able to give an account, does not involve knowing, for how could something that is unreasoned be knowledge? Neither is it ignorance, for how could something that corresponds with what is, be ignorance? And surely right opinion is something of this sort, between understanding and ignorance.’

Socrates: ‘What you say is true,’ I replied.

202b

Diotima: ‘Then do not insist that what is not beautiful must be ugly or that what is not good must be bad. And in the case of Love, when you yourself agree that he is neither good nor beautiful, do not presume further that he must be ugly and bad, but something between these two,’ said she.

Socrates: ‘And yet,’ said I, ‘certainly it is agreed by everyone that he is a great god.’

Diotima: ‘Do you mean by everyone who does not know him, or also by those who know him?’ she asked.

Socrates: ‘By all of them,’ said I.

202c

Diotima: She laughed and asked, ‘And how, Socrates, could those who maintain that he is not even a god agree that he is a great god?’

Socrates: ‘Who are these people?’ I asked.

Diotima: ‘You are one of them,’ said she, ‘and I am another.’

Socrates: ‘How can you say this?’ I asked.

Diotima: ‘Quite easily,’ she replied. ‘Yes. Tell me, do you not agree that all gods are happy and beautiful? Or would you dare to deny that any of the gods are beautiful and blessed?’

Socrates: ‘By Zeus, I would not,’ said I.

Diotima: ‘And do you agree that the blessed are those who have acquired what is good and beautiful?’

Socrates: ‘Entirely so.’

202d

Diotima: ‘And yet you have agreed that Love, because of a lack of whatever is good and beautiful, desires whatever he lacks.’

Socrates: ‘Yes, I have agreed.’

Diotima: ‘So, how could someone with no portion of what is beautiful and good be a god?’

Socrates: ‘In no way at all, as it seems.’

Diotima: ‘Can you now see’, she asked, ‘that you yourself do not regard Love as a god?’

Socrates: ‘What can Love be then?’ I asked. ‘Is he a mortal?’

Diotima: ‘Not in the least.’

Socrates: ‘Then what is he?’

Diotima: ‘As in the previous examples,’ said she, ‘in between mortal and immortal.’

Socrates: ‘What then, Diotima?’

202e

Diotima: ‘A great spirit, Socrates. In fact, the entire realm of spirit lies between the divine and the mortal.’

Socrates: ‘What power does he have?’ I asked.

Diotima: ‘The power of interpreting and conveying entreaties and sacrifices from humanity to the gods, and any commands

from the gods to humanity, and their favours too in return for our sacrifices. This realm lies between these two, filling up that space so that it binds the whole together with itself. Through this proceeds all prophecy, the craft of the priests concerning sacrifices, rituals and hymns, and all divination and enchantment. God does not mix with humanity, so any interaction and converse between gods and humanity, asleep or awake, is through spirit. He who is wise in such matters is a man of spirit, while he who is wise in anything else, based upon some expertise or dexterity, is base. Many and varied are these spirits, and Love is, indeed, among them.'

203a

Socrates: 'From what father and mother was he born?' I asked.

Diotima: 'The story is somewhat lengthy but I will tell you nevertheless,' she replied. 'When Aphrodite was born, the gods held a feast, and among them was Resource, the son of Cunning. Once they had dined, Poverty arrived, begging as she usually did at such festivities, and she hung about the doorways. Resource was drunk on nectar — indeed there was no wine in those days — so he went out into the garden of Zeus, was overcome with heaviness and fell asleep. Now, Poverty, because she herself was devoid of resource, contriving to have a child by Resource, lies down beside him, thus conceiving Love. That is why Love is also a follower and attendant of Aphrodite. Begotten at her birthday festivities, he is a lover by nature, drawn to beauty because Aphrodite is beautiful.

203c

Diotima: 'Now, since Love is the son of Resource and Poverty, he finds himself in the following circumstances. Firstly, he is always poor and far from being delicate and beautiful as so many people believe; rather he is hard, squalid, barefoot and homeless, always sleeping on the ground without covers, lying in the open air in doorways or on the streets, possessed of his

mother's nature, dwelling ever alongside lack. Then again, because of his father, he has designs upon anything beautiful and good; he is courageous, energetic and intense, a formidable hunter, always devising some schemes. He desires understanding and is resourceful in obtaining it. He is a life-long lover of wisdom,⁴² a clever enchanter, sorcerer, and sophist, by nature neither immortal nor mortal. Rather, on the self-same day he thrives and is alive at one moment whenever he is well resourced, but the next moment he is dying; yet he comes back to life again because of his father's nature. Whatever resources he obtains are constantly slipping away, and so he is neither devoid of resources nor wealthy, and what is more he is midway between wisdom and ignorance.

203e

Diotima: 'This is how matters stand. None of the gods love wisdom, or desire to become wise, for they are wise already. Nor does anyone else who is wise, love wisdom. Neither do the ignorant, for their part, love wisdom or desire to become wise. Indeed, that is the very problem with ignorance: that someone who is neither noble nor good nor intelligent thinks that he himself has enough nobility, goodness and intelligence, and a person who does not think he lacks anything has no desire for what he thinks he has.'

204a

Socrates: 'Who then are those who love wisdom, Diotima,' I asked, 'if they are neither the wise nor the ignorant?'

Diotima: 'Surely this is obvious by now, even to a child,' said she. 'It's those who are in between these two, and Love would be among them. For wisdom is one of the supreme beauties, and Love is love of beauty, so Love necessarily loves wisdom, and since it loves wisdom it is between wisdom and ignorance. His origin explains why he is like this too, for his father is wise and well resourced, while his mother is unwise and ill-resourced.'

Such then is the nature of this spirit, beloved Socrates, and it is no wonder you thought that Love was as you said he was. And you thought, and what you are saying seems to prove this, that Love is what is loved rather than that which loves. That is presumably why Love seemed utterly beautiful to you. And, in fact, the object of love is what is really beautiful, delicate, perfect and revered, whereas that which loves has a different character, of the kind I have just described.'

204c

Socrates: I then said, 'So be it, dear stranger, for you have explained this very well. Since Love is like this, what use is he to humanity?'

204d

Diotima: 'That, Socrates,' said she, 'is what I shall endeavour to teach you next. Now, although Love is like this and has come into being in this way, he is nevertheless, as you agree, the love of what is beautiful. So, what if someone were to ask us, "Socrates and Diotima, in what sense is Love a love of what is beautiful? Or to put it more clearly, if a person who loves has love of what is beautiful, what does he love?"'

Socrates: 'To obtain them,' said I.

Diotima: 'But your answer raises a further question of the following kind,' she said. 'What will someone obtain, should he obtain what is beautiful?'

Socrates: 'That', said I, 'is a question to which I am, as yet, unable to give an immediate answer.'

204e

Diotima: 'Well,' said she, 'if someone were to substitute the word beauty with the word good, and ask you, "Come on, Socrates, what does a person who loves whatever is good, love?"'

Socrates: 'To obtain it,' I replied.

Diotima: ‘And what will someone obtain, should he obtain whatever is good?’

Socrates: ‘I am in a better position to answer this,’ said I. ‘He will be happy.’

205a

Diotima: ‘Yes,’ she said. ‘It is through the acquisition of whatever is good that those who are happy, are happy. And is it the case that there is no need to ask further why someone who wishes to be happy, wishes to be so? Your answer seems to be final.’

Socrates: ‘What you say is true,’ said I.

Diotima: ‘Now, do you think this wish, and this love, is common to all people, and that everyone always wishes that whatever is good be his, or what would you say?’

Socrates: ‘Just that,’ I replied. ‘This wish is common to all.’

205b

Diotima: ‘In that case, Socrates,’ she asked, ‘since everyone loves the same thing all the time, why do we not also say that everyone loves rather than saying that there are some who love and some who do not?’

Socrates: ‘I too wonder about this,’ said I.

Diotima: ‘There is nothing to wonder about,’ said she, ‘for we actually separate out a form of Love and we give it a name, assigning to it the name of the whole, Love, and we use other names for the other forms of Love.’

Socrates: ‘Can you give an example?’ said I.

205c

Diotima: ‘For instance, you are aware that there are varieties of composition, for the cause by which anything whatsoever passes from non-being into being is composition in general. And so anything that is wrought by any skill whatsoever is a

composition, and the artificers thereof are all poets.’⁴³

Socrates: ‘What you say is true.’

Diotima: ‘Nevertheless,’ said she, ‘you know that they are not all called composers. They have other names, since one portion has been distinguished from composition in its entirety, namely the part concerned with music and metre, and this has been referred to by the name of the whole, for this portion alone is called composition, and only those who hold to this aspect of composition are called composers.’

Socrates: ‘What you say is true,’ said I.

205d

Diotima: ‘Well, the same consideration also applies to Love. To sum up, any desire in anyone for whatever is good, and for being happy, is Love, “great and treacherous”. But those who have recourse to him in a variety of other ways, through money-making, or their love of gymnastics, or of wisdom, are not said to demonstrate love or to be lovers, while those who have recourse to one particular form, and apply themselves to that, adopt the name of the whole, Love, and are said to demonstrate love and to be lovers.’

Socrates: ‘That is probably true,’ said I.

205e

Diotima: ‘And although a story is told, according to which those who demonstrate Love are seeking the other half of themselves, my own account declares that love is neither of a half nor of a whole, unless these somehow happen to be good, my friend, since people are willing to have even their own feet and hands cut off, if they think these are detrimental to themselves. Indeed, in my view, people do not cling to their possessions except in cases where a person refers to the good as familiar, and as his own, and to the bad as alien, since there is nothing else that people love except the good. Or do you think there is?’

Socrates: ‘By Zeus, I do not,’ said I.

206a

Diotima: ‘Well, then,’ said she, ‘may we declare, without reservation, that people love the good?’

Socrates: ‘Yes,’ I replied.

Diotima: ‘What about this: should we not also propose that what they love is to have the good?’

Socrates: ‘We should also propose that,’ said I.

Diotima: ‘And indeed not just to have it,’ said she, ‘but to have it always?’

Socrates: ‘That too,’ I replied.

Diotima: ‘Then to sum up, love is the love of having the good always.’

Socrates: ‘What you say is very true,’ said I.

206b

Diotima: ‘Now, since this is what Love always is,’ said she, ‘through what activity should those who pursue its object pursue it, if their eagerness and exertion is to be referred to as Love? What exactly is this act? Can you say?’

Socrates: ‘No, I cannot, Diotima. If I could, I would not be in awe of you and your wisdom, your constant visitor, intent on learning these very things from you.’

Diotima: ‘Then I shall tell you,’ said she. ‘It is the act of bringing forth in beauty, both in respect of the body and in respect of the soul.’

206c

Socrates: ‘Some prophetic power is needed to appreciate exactly what you mean,’ I said. ‘I do not understand.’

Diotima: ‘Then,’ said she, ‘I shall speak with greater clarity. Indeed, Socrates,’ said she, ‘all people are pregnant either in respect of the body or in respect of the soul, and once we attain a certain age our nature has a desire to bring forth. But it is not able to bring forth in ugliness, only in beauty. In fact, the intercourse of man and of woman is a bringing forth. This is something divine and, among mortals, this pregnancy and begetting is an immortal element within them. But this cannot arise in anything unsuitable, and ugliness is ill-suited to all that is divine, while beauty suits it well. So, for coming into being, Beauty is Destiny and the goddess of childbirth too. That’s why whenever the pregnant one associates with beauty, it becomes gracious and, being gladdened, it melts, brings forth and begets. Yet whenever it associates with ugliness, it becomes sullen and, being pained, it contracts, turns away, shrinks back and does not beget; rather it holds onto its conception and carries it with difficulty. And so the pregnant one, who by now is swollen and ripe, becomes highly emotional when in the vicinity of the beautiful because it is freed of its great travail by the bearer of beauty. For love, Socrates, is not love of the beautiful as you seem to think.’

206e

Socrates: ‘What is it then?’

Diotima: ‘It is love of the begetting and the bringing forth in beauty.’

Socrates: ‘Let it be so,’ said I.

Diotima: ‘Very much so,’ she said. ‘But why ever is it a love of begetting? Because for a mortal creature begetting is eternal and immortal, and from what we have agreed, since love is of the everlasting possession of the good, it is necessary to desire immortality along with the good. So, based upon this argument, love is, of necessity, also of immortality.’”

207a

Socrates: “Now, she taught me all this on the occasions when she presented discourses about love, and she once asked me, ‘Socrates, what do you think is the cause of this love and this desire? Have you not noticed that all animals are afflicted dreadfully when they have a desire to beget? Whether they are winged or go by foot, they are all laid low and afflicted by love, firstly for intercourse with one another, and then for the nurture of their offspring. Even the weakest are ready to do battle against the very strongest on behalf of their offspring and to die for them, being racked with hunger themselves so as to feed them, and prepared to do anything else at all. You might think that human beings do this based upon their reasoned calculation,’ she said, ‘but why are animals afflicted in this way by love? Do you have something to say?’

207c

Socrates: “And I said, once more, that I did not know, and she said, ‘How will you ever become expert in whatever belongs to love if you do not reflect on these questions?’

Socrates: ‘Well, as I just said, that is the very reason I have come to you, Diotima. I realise that I need teachers. So, tell me the reason for this too, and for whatever else is involved in all that belongs to love.’

207d

Diotima: ‘Well,’ she said, ‘if you accept that by nature love is for what we have so often agreed it is for, this should be no surprise. The same argument applies in both cases. The mortal nature seeks, as best it can, to exist forever and to be immortal. And this is possible in only one way, through generation, because that continually leaves behind another new creature in place of the old. Since, even for the span of time that each individual creature is said to be alive and to be the same, for example a person is referred to as the same creature from childhood until old age, even though it never actually remains

the same in itself, nevertheless it is referred to as the same. Rather, some parts are continually becoming new, while others are being lost. This applies to hair, flesh, bone, blood, indeed to the entire body, and not just to the body. For in the case of the soul too, its tendencies, habits, opinions, desires, pleasures, pains, fears, each of these is present to each of us, but they are never the same. Rather, as some of them are arising in us others are being lost. Much stranger even than these instances are the various things that we know. Not only are some arising in us while others are being lost, so that based on the various things that we know we are never the same, but the same thing also happens to every single thing that we know. So, what we call practice exists on the presumption that there is a shedding of knowledge, for forgetting is a departure of knowledge, while practice preserves the knowledge by engendering a new memory within us once more in place of what is leaving, so that the knowledge seems to be the same. Indeed, this is how anything mortal is preserved, not by being the same in every respect, like the divine, but by leaving behind something else, something new, something that is like what it was, in place of whatever is being lost through its old age. This, Socrates,' she said, 'is the mechanism by which the mortal partakes of immortality, both in body and in every other respect. The immortal does so in a different way. So, do not be surprised that every creature naturally reveres its own offspring, since this eagerness and love attends upon everything for the sake of immortality.'"

208b

Socrates: "And when I had heard this account I was amazed, and I exclaimed, 'Is this so, wisest Diotima? Is this the truth of the matter?'"

208c

Diotima: "And just like an accomplished sophist, she replied, 'Doubt it not, Socrates, since even among humans, if you'd care

to look at their love of honour, you would be astonished at their irrationality in the cases I have described unless you keep in mind, on reflection, the terrible state they get into over their love of being renowned and of “storing up immortal fame for all time.” On account of this, they are prepared to risk any dangers at all, even more than they would for their own children, to spend their money, endure any hardship whatsoever and even to die for the sake of this. Do you really think Alcestis would have died in place of Admetus, or that Achilles would have followed Patroclus into death, or that your own Codrus⁴⁴ would have died in defence of the kingdom of his children, unless they believed there would be immortal memory of their own excellence, a memory we now possess? Far from it,’ she said. ‘No, I believe they all do all these deeds for the sake of immortal excellence and a glorious reputation of that sort, and the better people do this to a greater extent, because they love immortality.

208e

Diotima: ‘Now,’ she said, ‘those who are pregnant in their bodies are more inclined towards women and are affected by love in this way, believing that they will secure immortality, fame and happiness for themselves for all time by begetting children. While as far as soul is concerned,’ said she, ‘those who are pregnant in their souls, even more than in their bodies, conceive and bring forth what belongs to the soul. So, what belongs to the soul? Understanding and excellence in general are indeed begotten by all the poets and by any artificers who are regarded as creative. Yet the most extensive and most beautiful understanding, by far, is the setting in order of our cities and our households, and its name is sound-mindedness and justice. What is more, when someone is pregnant with these in soul from a young age, being divine, and reaching an age where he develops a desire to bring forth and beget, he then, I presume, goes around searching for the beauty in which he may

beget, for he will never beget in ugliness. Since the person is pregnant, he welcomes beautiful bodies rather than ugly ones, and should he also encounter a beautiful, noble and well-developed soul, he welcomes the twofold combination all the more. And towards this person he is immediately well resourced with words about excellence, and what a good man should be like, and how he should behave, and he sets about educating him. For being in contact with the beautiful one, and consorting therewith, what was conceived in times past is brought forth and begotten when the beautiful one is present, and when he is absent but remembered. And he joins with that person in the shared nurture of what they have begotten, so that such people maintain a much greater communion with one another, and a more constant friendship than children would afford, since their communion involves children who are more beautiful and more immortal. And everyone would prefer to have such children as these rather than the human kind, and looking at Homer and Hesiod and the other good poets, they envy the offspring of themselves that these poets leave behind, which furnish the poets with immortal glory and fame, since that is what the offspring itself is like. Or if you prefer,' said she, 'look at the sort of children Lycurgus⁴⁵ left behind him in Sparta, saviours of Sparta and, in a sense, of Greece. Solon⁴⁶ too is revered among yourselves as the begetter of your laws, as are other men in many other places, among Greeks and non-Greeks, for their display of so many noble deeds, and for begetting excellence of every kind. Many shrines have already been established for them because they had such children as these, but this has never yet happened because of human children.

209e

Diotima: 'Now, Socrates, you too could probably be initiated into all that belongs to love, yet I do not know if you are able for the final initiation and vision which is the aim of all this, provided the aspirant proceeds aright. So, I will tell you,' said

she, 'and my eagerness shall not be found wanting. Try to follow me, if you can.

210a

Diotima: 'Indeed,' said she, 'whoever embarks upon this endeavour in the correct manner should begin, whilst young, by approaching beautiful bodies. Firstly, if his guide guides him aright, he should love a single body, beget beautiful words with that, and then recognise that the beauty in any body whatsoever is akin to that in any other body, and if he must pursue beauty associated with form, it would be most irrational not to regard the beauty in all the bodies as one and the same. Once he has recognised this, he should become a lover of all beautiful bodies and relax his intensity towards a particular one, despising it and regarding it as a trifle. After this, he should regard the beauty in souls as more honourable than the beauty in bodies, so it would be quite enough for him if someone fair of soul had even a little physical bloom. He would love that person, care for him, and bring forth and seek out such words as make young people better, so that he is compelled, in turn, to behold the beauty present in activities and in laws, and see that it is all completely interrelated, and come to regard beauty of body as something trivial. After the activities, he should be led on to knowledge, so that he might then see the beauty of knowledge, and looking then towards the vast beauty, be no longer delighted, like a slave in base and trivial servitude, by the beauty of some particular boy or man, or by a single activity. Turning instead to the open sea of beauty and contemplating that, he brings forth beautiful and magnificent words and reflections aplenty, in an ungrudging love of wisdom, until, strengthened and developed in that, he recognises a single knowledge of this kind, knowledge of a beauty I shall now describe.

210e

Diotima: ‘Try’, said she, ‘to give me your fullest attention. For whoever has been instructed as far as this concerning love, contemplating the beauties properly and in due order, approaching then the final objective of all that belongs to love, will suddenly behold a beauty, wondrous in nature, for whose sake, Socrates, all his previous toils were undertaken; a beauty that first of all always is, and neither comes into being nor passes away, neither grows nor decays; a beauty that is not beautiful in one respect and ugly in another, nor beautiful at one moment and not so the next, nor beautiful in relation to one thing but ugly in relation to another, nor beautiful in this place but ugly in that, because it is beautiful to some people but ugly to others; nor again will beauty appear to him like some face or hands or anything at all that partakes of body, nor like some word, or some knowledge, nor as being located in something different, such as an animal or in earth or in heaven or in anything else, but rather as being always just by itself, of one form with itself, while all the other beauties share in this, in such a manner that somehow, in spite of their coming into being and passing away, this beauty undergoes neither increase nor decrease, nor is it affected at all. So, whenever someone, by being a lover of youths in the correct manner, ascends upwards from those beauties and begins to get clear sight of that beauty, he would almost be in touch with the final goal.

211c

Diotima: ‘This, then, is indeed the correct manner of embarking upon whatever belongs to love or of being guided by someone else: beginning from these beauties to ascend ever upwards for the sake of that beauty, using these beauties as steps of ascent, from one to two, and from two to all beautiful bodies, and from beautiful bodies to beautiful activities, and from the activities to beautiful teachings, and from the teachings, finally to that teaching which is the teaching of that beauty itself and of no other, and ending with the realisation of what beauty itself is.

211d

Diotima: ‘Here, above all, is our life worth living, my dear Socrates,’ said the stranger from Mantinea, ‘beholding beauty itself, a beauty which, once seen, will bear no comparison in your eyes with the gold or raiment or pretty boys and youths that so astound you now. Indeed, you and so many others, on seeing your favourites and being constantly in their company, would, if you possibly could, forgo even food and drink just to look at them and be with them.

211e

Diotima: ‘Well, then,’ said she, ‘what if someone were to attain the sight of beauty itself, simple, pure and unalloyed, uncluttered by human flesh, by colours and all the other trappings of mortality, but was able to see clearly the divine beauty itself, single in form? Would you think this is a mediocre life for a human being,’ she said, ‘looking to that place and contemplating that beauty with that which is suited to do so, and being with it? Or do you not recognise,’ said she, ‘that there alone, beholding beauty with that with which one sees it, he would be enabled to bring forth not images of excellence, but true excellence, since he is in touch with true beauty, not an image? And bringing forth and nourishing true excellence, he is allowed to become a friend to the gods, and if any human being may be immortal, it is he.’”

212b

Socrates: “Well, Phaedrus, and everyone else too, that is what Diotima said, and I am persuaded by her, and having been persuaded I endeavour to persuade others that in acquiring this possession they will not easily obtain a better collaborator with human nature than Love. And so I declare that every man must honour Love, and I myself honour whatever belongs to love, and practise that above all else and call upon others to do so, and as best I can I praise the power and courage of Love, now and always.

212c

Socrates: “So, Phaedrus, that is my speech. You may regard it as a hymn of praise to Love, if you wish, otherwise call it whatever it pleases you to call it.”

Once Socrates had said all this, there was general praise, and Aristophanes was trying to explain that Socrates’ speech had made mention of his own speech. Suddenly there was a loud banging at the outer door, as though revellers had arrived, and the voice of a flute-girl was heard. So Agathon said to the slaves:

Agathon: “Please investigate this, and invite them in if they are acquaintances and, if not, tell them that we are not drinking and are already drawing to a close.”

212d

Not much later, they heard Alcibiades’ voice in the hall — extremely drunk, shouting loudly — and asking where Agathon was, and demanding to be brought to Agathon. He was led to the gathering by the flute-girl who was supporting him, and by some of his followers, and he stood in the doorway, garlanded in a thick wreath of ivy and violets with a vast quantity of ribbons on his head, and said,

Alcibiades: “Greetings, gentlemen. Will you accept a drunk man, totally and extremely so, as your companion in drink? Or should we just leave once we have crowned Agathon, which was the reason why we came? You see,” he said, “I was not able to get here yesterday, but now I have come with ribbons on my head, so that I may crown the head of the wisest and fairest, if I so describe him, with ribbons from my own head. So, will you laugh at me because I am drunk? But even if you laugh, I know quite well that I am speaking the truth anyway. These are my terms, so just tell me, here and now, shall I come in or not? Shall we drink together, or not?”

213a

Everyone applauded, and bade him enter and take a couch, and Agathon called him over. In he came, led by his cohort, untying the ribbons as he went so as to crown Agathon. Because the ribbons were in front of his eyes, he did not get a clear view of Socrates, but sat down beside Agathon, between him and Socrates, for Socrates had moved over when he saw him coming. As he sat down, he embraced Agathon and crowned him with the ribbons.

213b

Agathon: Then Agathon said, “Slaves, please take off Alcibiades’ sandals so that the three of us may recline on the couch.”

Alcibiades: “Of course,” said Alcibiades, “but who is our third companion in drink?” And as he said this he was turning around to look, saw Socrates, jumped up and exclaimed, “By Heracles! What have we here? This fellow Socrates? What is more, you were lying here to ambush me, making a sudden appearance, as you usually do, wherever I least expected you to be. So, why are you here now? And, more to the point, why are you reclining there? You did not recline beside Aristophanes or someone else who is deliberately comical. Oh no, you contrived to be beside the handsomest person in the place.”

213c

Socrates: And Socrates said, “Agathon, see if you can defend me, as my love for this man has become a significant issue for me. Indeed, from the very moment I came to love him, no longer am I allowed even to glance at or speak to a beauty, not even one, or else this fellow gets jealous and envious, acts outrageously, abuses me verbally and can barely restrain his fists. Watch out, even now, in case he does something. Reconcile us, and should he attempt to use violence please defend me, as I am in utter dread of his mad devotion to his friends.”

213d

Alcibiades: “No,” said Alcibiades, “for you and me there is no reconciliation, and I will get my revenge on you for all this some other time. For now, Agathon,” he said, “give me back some of those ribbons so that I may crown this, this wondrous head of his. Then he will not rebuke me because I crowned you and did not crown him when he, for his part, is victorious over everybody with his words always, not just the day before yesterday like you.” And as he said this he took the ribbons, crowned Socrates, and lay back on the couch.

213e

Alcibiades: Once he had settled back he said, “Well, gentlemen, it seems that you are sober. That is not allowed. You should drink, since that is what we agreed. So, I am appointing myself the person in charge of drinking, until you have all drunk enough. So Agathon, let someone bring a large drinking-cup, if there is one. No, we do not need that, slave. Bring that wine-cooler instead,” he said, having noted that it held more than half a gallon. Once this had been filled, he first quaffed its contents himself and then directed that it be refilled for Socrates. As this was happening, he said, ^{214a} “With Socrates, gentlemen, my cleverness comes to nothing. Yes, however much anyone orders him to drink, that he drinks in full without even getting the slightest bit drunk.”

214a

The slave filled the cup and Socrates drank it, and Eryximachus said,

214b

Eryximachus: “Alcibiades, whatever are we doing? Are we simply going to drink like men with a thirst on them, without either speaking or singing over our drinking cup?”

Alcibiades: So Alcibiades said, “Greetings to you Eryximachus, the best son of the best and most sound-minded of fathers.”

Eryximachus: “And the same to you,” said Eryximachus, “but what are we to do?”

Alcibiades: “Whatever you say. Yes, we should be persuaded by you, ‘for one medical man is worth just as much as many others.’⁴⁷ So prescribe whatever you wish.”

214c

Eryximachus: “Then listen,” said Eryximachus. “Before you came in we decided that each of us in turn, from left to right, should deliver a speech on Love, the fairest we could, and sing his praises. Now, everyone else has spoken, and since you have not spoken, but have finished drinking, it is only right that you speak, and having done so, give Socrates any instruction you like, and he should do the same to the person on his right, and so on.”

Alcibiades: “Well, Eryximachus,” he said, “that is a nice formulation, yet it would not be fair to pit a drunken man’s speech against speeches from sober men. What is more, my friend, do you believe anything of what Socrates said earlier? Are you aware that the facts are the complete opposite of what he said? Indeed, if I praise anyone other than himself, god or human, when the fellow is present, he will not restrain his hands from me.”

214d

Socrates: “Can you not mind your words?” said Socrates.

Alcibiades: “By Poseidon,” said Alcibiades, “do not oppose me, for there is no one else at all whom I would praise when you are present.”

Eryximachus: “Then do so, if you want to,” said Eryximachus. “Praise Socrates.”

214e

Alcibiades: “What are you saying?” said Alcibiades. “Do you think I should do this, Eryximachus? Attack him and punish the

man in front of you all?”

Socrates: “You! What have you in mind?” said Socrates. “Will you praise me for amusement, or what are you going to do?”

Alcibiades: “I am going to speak the truth, if you will allow me to. Will you?”

Socrates: “Yes, of course, the truth I allow, and even command you to speak.”

215a

Alcibiades: “I shall not delay then,” said Alcibiades, “and yet, there is something you need to do. If I say anything that is not true, stop me in mid-sentence if you wish, and say that I am telling a lie, for, I shall not tell lies deliberately. And yet, if my recollection flits hither and thither as I speak, do not be surprised; for, in my condition it is no easy matter to detail your strangeness fluently, and in due order.

Alcibiades: “By means of images, gentlemen, that is how I shall attempt to praise Socrates. Now, although he himself will probably think that this is for amusement, the image will actually be for the sake of truth rather than amusement. Indeed, I declare that he is just like those statues of Silenus⁴⁸ the craftsmen make, the ones that are found in statue shops, holding pipes or a flute, which when opened into two halves are found to contain images of the gods within them. What is more, I declare that he resembles Marsyas, the Satyr.⁴⁹ Yes, even you, Socrates, would presumably not dispute the fact that you resemble these creatures in form. But now, hear how you also resemble them in other respects. You are insolent, are you not? Indeed, if you do not agree I shall provide witnesses. But are you not a flute player? Yes, a more amazing player than that fellow anyway. He enchanted people by means of his instruments, with the power from his mouth, and so does anyone today who plays his compositions on the flute, and I say that whatever

Olympus played belonged to Marsyas, who taught him. Anyway, his compositions alone render the hearers possessed, whether played by a good flute player or a mediocre flute-girl, and because they are divine, they show us who stands in need of the gods and their initiations.

215c

Alcibiades: “Now, you differ from Marsyas in one respect only. You can do the very same thing without instruments, by means of bare words. At any rate, whenever we hear someone else, even an extremely good speaker, speaking other words, it is of no real interest to anyone. Yet when someone hears you, or hears your words spoken by someone else, even by an utterly abysmal speaker, regardless of whether a woman, a man, or a youth hears them, we are astounded and possessed. I myself, gentlemen — except that I would seem completely drunk — would have told you, on oath, how I have been affected by the words of this man and am still affected even now. For whenever I hear him my heart leaps more than that of the frenzied Corybantes,⁵⁰ and tears flow because of this man’s words, and I see that a whole host of others are affected in the same way. Now, when I heard Pericles, or the other good speakers, I thought they spoke well, but I did not experience anything of this kind, nor was my soul troubled, nor was I angered at my condition of slavery. Yet this Marsyas here has often brought me to the point where life did not seem to be worth living, because of the state I was in. Yes, Socrates, and you will not deny that this is true. And even now I myself know full well that if I were prepared to give him a hearing I could not hold firm, but would experience the same effects. For he compels me to accept that although there is much that I lack, I neglect myself, and am busy with the affairs of the Athenian populace. So I block my ears forcibly as though I were hearing the Sirens.⁵¹ I depart and am gone, for fear that I might grow old seated alongside him.

216a

Alcibiades: “There is something you might think that I do not have within me, a feeling of shame towards any other person. Well, I experience this towards him and no one else. Only towards him do I feel shame. For I am fully aware that although I am unable to argue against him and to evade doing what he directs me to do, yet when I get away from him, reputation in the eyes of the populace gets the better of me. So, I take to my heels and run away, and whenever I see him, our mutual agreements reduce me to shame. Yes, on many occasions I would have been pleased to see him no longer among us, and yet if that were to happen, I know quite well that I would be in far greater distress. So I just do not know how to deal with the man.

216c

Alcibiades: “That is how the flute songs of this satyr have affected me and many others. Hear now from me how closely he resembles the figures I likened him to, and how wondrous is the power he possesses. For mark my words, not one man among you knows him, but since I have begun, I will show you. Note the fact that Socrates has a loving disposition toward the beautiful ones, constantly associates with them, and is smitten, and what is more, he is in ignorance about everything, and knows nothing. That is his outward appearance. Is this not what a Silenus is like? Very much so. So this is the external guise he dons, just like the carved Silenus. But on the inside, my comrades in drink, once he is opened, can you even imagine how full of sound-mindedness he is? Take it from me, it is of no interest to him if someone is handsome. No, he despises this more than anyone could ever imagine. Nor does it matter if someone is wealthy or possesses any other honour that the multitude counts as a blessing. He thinks that all these acquisitions are worth nothing and that we are nothing. Mark my words. He is ironical too and spends his entire life playing

games with people. But when he has become serious and open, I do not know if anyone has seen the delights that lie within. But I did see them once, and to me they seemed so divine and golden, so utterly beautiful and wondrous, that I simply had to do whatever Socrates told me to do.

217a

Alcibiades: “I thought that he was in earnest about my youthful charm, and I regarded it as a god-send and wondrous piece of good luck for me, that by gratifying Socrates I might be able to hear everything the man knew, for I had an amazingly high opinion of my youthful attractions. Now, once I had thought about all this, although I was not previously in the habit of being alone with him with no attendant present, I then began sending the attendant away and being alone with him. Yes, I must tell you the truth in its entirety, so you should pay attention and, Socrates, contradict me if I lie. Anyway, gentlemen, I was all alone with him, and I thought he would immediately converse with me in solitude, as a lover does to his beloved. I was glad. But nothing of this sort happened at all. No, he would converse with me as usual, and after we had spent the day together he would depart and be gone. After this I invited him to join me in the gymnasium and I did exercise with him hoping to make some progress there. Now, he exercised with me and we wrestled many times when there was no one around, and... how should I say this? I still made no progress!

217c

Alcibiades: “Since I was achieving nothing with this approach, it seemed to me that I should approach the man with force, and not relent, and since I had set about this in the first place, I should now find out what the problem was. So I invited him to dine with me, just like a lover contriving after his beloved. Even then he was slow to accept my invitation, but nevertheless he was persuaded after a while. The first time he came he wanted to leave as soon as dinner was over, and on that occasion, I let

him go, out of shame. Next time I had a plan. Once we had dined I kept the conversation going far into the night, and when he wanted to leave I made the excuse that it was too late, and I forced him to stay over. He lay down on the couch beside mine, the one he had reclined on at dinner, and no one else was sleeping in the house besides ourselves. Up to this point I could properly tell the story to anyone, but you wouldn't hear the next part from me were it not, firstly, for the fact that, as the saying goes, 'the truth comes from wine and from children', and also because it does not seem right to me, now that I am praising Socrates, to hush up a splendid deed of his. And yet, I too have experienced being bitten by the viper. Indeed, they say, I believe, that someone who experiences this is unable to describe what it is like. No one can do so except the people who have been bitten. They alone can understand and be forgiving if people are inclined to do or say anything at all on account of the agony. Now, I have been bitten by something more painful, bitten too in the most painful part of me, in my heart or soul or whatever it should be called. There I have been assailed and bitten by philosophical arguments, which take hold, more fiercely than a viper, of a young soul not devoid of talent, grab it and make it do and say just about anything. I see Phaedrus here, Agathon too, Eryximachus, Pausanias, Aristodemus and Aristophanes, not to mention Socrates himself and anyone else who is present. Yes, you have all shared in the madness and frenzy of philosophy, so you should all listen to me. Indeed, you will forgive me for doing what I did then and for saying what I am saying now. The slaves and anyone else who is profane and crude should affix some very large doors to their ears.

218c

Alcibiades: "Well then, gentlemen, once the lamp had been extinguished and the slaves were out of the room, I decided I should dispense with the verbal niceties and speak my mind to him freely. So I shook him and said, 'Socrates, are you asleep?'"

Socrates: 'Not at all,' he replied.

Alcibiades: 'Well, do you know what I have been thinking?'

Socrates: 'What is it?'

Alcibiades: 'I think that you alone are worthy to become my lover,' I said, 'and it appears to me that you are reluctant to raise the matter with me. My position is as follows. I believe it would be utterly senseless of me not to gratify you in this respect and in respect of any property you might ask of me or of my friends. Indeed, for me nothing takes precedence over my becoming as good as I possibly can, and in this I believe I have no ally more accomplished than you. If I failed to gratify a man like you, I would feel far more shame before the men of understanding than I would before the mindless rabble.'

218d

Alcibiades: "Having heard all this, loaded with irony and very much himself, he said, in his accustomed manner,

Socrates: 'Dear Alcibiades, you must in truth be no ordinary man if what you say about me happens to be true, and there is some power in me that can make you a better person. For in that case, you are seeing a boundless beauty in me which is vastly superior to your fine features. Now, if you have seen it and you are trying to associate with me and exchange one beauty for another, then you are planning to get the better of me to no small extent. Rather, you are trying to acquire the truth of beauties instead of an opinion, and you are really thinking to exchange gold for brass.⁵² But you should take a better look, bless you, in case I am nothing, and you do not notice this. I tell you, keen vision at the mental level begins when the vision of our eyes starts to go into decline, and you are still a long way from that.'

219a

Alcibiades: “Once I had heard this, I said: ‘I have said what I have to say and I have spoken my mind, so you yourself should now consider what you believe is best for you and for me.’

Socrates: ‘Yes, that is well expressed,’ he said. ‘Indeed, from now on we will deliberate and do whatever appears best for both of us in relation to these issues or any others.’

219b

Alcibiades: “Well then, after this exchange, and having fired my darts at him, I thought I had wounded my quarry. Anyway, I stood up, gave him no further opportunity to speak, wrapped my own garment around him for it was winter, lay down under his short cloak, threw both arms around this truly supernatural and wonderful person, and lay there all night. And you will not say that I am lying about any of this either, Socrates. And yet, after my having done all this, he was so superior, contemptuous and overbearing as to laugh at my youthful charm, and, gentlemen of the jury, I did hold that in very high regard. Yes, you will be judges of the arrogance of Socrates for, mark my words ye gods and goddesses, I got up after sleeping with Socrates and nothing more had taken place than if I had slept with my father or elder brother.

219d

Alcibiades: “What state of mind do you think I was in after this episode? Although I felt disrespected, I still admired his nature, his sound-mindedness and his courage, for I had encountered the sort of man I had not believed I would ever encounter: such intelligence, such restraint! And so, although I was unable to be angry with him and be deprived of his company, I was still at a loss as to how to lead him on. Indeed, I knew full well that he was much more invulnerable to wealth than Ajax was to weapons of iron,⁵³ completely so, and he had evaded the only means whereby I thought I could capture him. So I was at a loss, and I went about, a more abject slave to the man than anyone

else on earth.

219e

Alcibiades: “Well, this all happened to me at an earlier date, and afterwards we were together on the military campaign at Potidaea⁵⁴ and we shared the same mess there. Now, in the first place, in hard times he was superior not only to me but to everyone else. When we were forced to go without food because we had been cut off somehow, as happens on such campaigns, the endurance of the others was nothing in comparison with his. And yet, in times of plenty, he alone was able to enjoy them, and in particular when it came to drinking, despite his unwillingness, he could defeat everyone if he was ever compelled to do so, and what is most amazing of all, no man alive has ever yet seen Socrates drunk. Yes, and I think that will be verified quite soon. Now, when enduring the winter — indeed the cold season up there is awful — he worked wonders, especially when on one occasion there was a terrible frost, and everyone either refused to go out or, if they did go out, they were clothed to a wondrous extent, wore shoes and swathed their feet in felt and wool. Yet this man went out among them wearing the sort of cloak he used to wear before it got cold, traversed the ice more easily than everyone else because he wore no shoes, and all the soldiers looked askance at him because they thought he despised them. Be that as it may, it is also worth hearing ‘what this man of endurance dared to do’⁵⁵ on one occasion while we were there on campaign. He began reflecting upon something one morning, standing there considering it, and when he was unsuccessful he did not give up, but stood there and kept enquiring. By midday people had noticed, and they said to one another, in amazement, that Socrates had been standing still since dawn thinking about something. Finally, when evening came, some Ionians came out after supper, for it was summertime, brought their pallets with them so as to sleep in the cool air, and at the same time, keep

watch to see if he would stand there all night. There he stood until dawn came and the sun had risen. Then he uttered a prayer to the sun and went on his way.

220d

Alcibiades: “Would you like to hear about the battle? Well, it is only right to give him due credit in this area too. In fact, when the battle took place, the one for which the generals gave me the award for bravery, it was he of all men who saved my life. I was wounded and he could not bring himself to desert me. No, he helped rescue both myself and my armour. Now, Socrates, at the time I called upon the generals to give the award for bravery to you, and you cannot rebuke me for saying this, nor can you claim that I am lying. Anyway, when the generals wanted to give me the award in view of my status, you yourself were more eager than the generals that I should have it rather than you.

221a

Alcibiades: “Then again, gentlemen, Socrates was a sight worth seeing when the army was in retreat at the battle of Delium.⁵⁶ Yes, as it happened, I was there on horseback, while he was on foot, in armour. At that stage everyone had scattered and he was retreating along with Laches, the general. I came upon them, and as soon as I saw them I called upon them both to be courageous, and I said that I would not desert either of them. Here I had even a finer perspective on Socrates than I had at Potidaea, for I had less fear because I was on horseback. Firstly, I could see how superior he was to Laches in composure, and what is more he seemed to me — if I may use your phrase, Aristophanes — to be proceeding, even on the battlefield, just as he does in the city, ‘head held high and darting his eyes’,⁵⁷ calmly observing friends and enemies, making it obvious that whoever touched this man would meet with some tough resistance. That is why he and his companion made their retreat in safety. As a general rule, those who behave in this manner on

the battlefield are never touched; no, it is the soldiers who are fleeing headlong who are pursued by the enemy.

221c

Alcibiades: “Now, I could find many other points on which to praise Socrates, and many more wonders too, although if I reflect on his conduct in general, such behaviour could probably be attributed to other people too. Yet the fact that he is like no other man of past ages, or anyone alive today, that’s what merits our unbounded amazement. Asked who Achilles was like, you could compare him to Brasidas⁵⁸ and others, and you could liken Pericles to Nestor or Antenor,⁵⁹ and there are others too, and you could make other comparisons on the same basis. But whom is this person like? He is so strange, that try as you might, you would not find anyone who even approaches the man himself or his words, either nowadays or in times past. You’d have to compare him to the creatures I mentioned, to the Sileni and satyrs, rather than to any human being, both himself and his words too.

221d

Alcibiades: “Yes, and this is what I omitted saying at the outset, that even his words are very like the Sileni that can be opened. If anyone were willing to listen to Socrates’ words, they would appear highly comical at first, words and phrases that clothe his speech, like the skin of some wanton satyr. Yes, he speaks of pack-asses and smiths, cobblers and tanners, and he seems to be continually making the same points about the same issues, so that any inexperienced or ignorant person would laugh at what he says. But, if you were to behold them when they are opened, and get inside them, you would find, firstly, that these words alone have intelligence within them, and that they are utterly divine, containing within themselves a vast number of elevated images of excellence, so far-reaching that they extend to everything that should properly be considered by anyone who intends to be noble and good.

222a

Alcibiades: “These, gentlemen, are my praises of Socrates, and I have also added my criticisms by telling you the wrongs he has done me. Yes, and I am not the only one to whom he has done this; no, he deceives Charmides, the son of Glaucon, Euthydemus, the son of Diocles, and many others in his guise as a lover, while he himself becomes more a beloved than a lover. I am making these points particularly to you, Agathon, lest you be deceived by him. Mind that you learn from our experiences and don’t learn through suffering, like the fool in the proverb.”⁶⁰

222c

Once Alcibiades had said all this, there was laughter at the frankness of the man because he still seemed to be in love with Socrates. Then Socrates himself said:

Socrates: “It seems to me, Alcibiades, that you are sober, or else you would not have attempted to conceal the real reason why you are saying all this by wrapping it up so cleverly, slipping it in at the end as a mere verbal aside, as if you didn’t say everything for one reason alone: to set myself and Agathon at variance with one another, on the presumption that I should love you and no one else, and that Agathon should be loved by you and by no one else. But you did not get away with it. No, your Satyr-play or Silenus-play has been exposed. But, my dear Agathon, do not let him make any more headway, but instead, see to it that no one sets you and me at odds.”

222d

Agathon: So Agathon replied, “Yes, indeed, Socrates, you are probably speaking the truth, as evidenced by his reclining between you and me in order to keep us apart. But he will get no further. I will go over and recline beside you.”

Socrates: “Very well,” said Socrates. “Recline here, below me.”

Alcibiades: “By Zeus,” said Alcibiades, “there is no end to what I must suffer at this man’s hands. He thinks he has to get the better of me in every respect. But, blessed man, if you will not allow anyone else to recline between us, why not allow Agathon to do so?”

222e

Socrates: “Impossible,” said Socrates, “for once you have praised me, I must praise the person on my right. So, if Agathon reclines below you, will he not presumably praise me again before he has received praise from me, as he should? So let it be, my friend, and do not envy the young man because he receives praise from me, for I am indeed extremely eager to sing his praises.”

223a

Agathon: “Yes, yes!” exclaimed Agathon. “There is no way I can remain here, Alcibiades. No, it is much better that I change places so that I may be praised by Socrates.”

Alcibiades: “This is what always happens,” said Alcibiades. “When Socrates is around it is impossible for anyone else to share the company of the beautiful ones. Even now, see how resourceful he is at finding a convincing excuse, so that this handsome fellow may recline beside Socrates himself.”

223b

Now, Agathon was getting up in order to recline beside Socrates when a whole crowd of revellers suddenly arrived at the doors and finding that they had been left open by someone who had left, they came right into our party and reclined on the couches. There was total confusion, all order was lost, and everyone was forced to drink vast quantities of wine. Aristodemus told us that Eryximachus, Phaedrus and a few others got up and left, while he himself fell asleep, and slept for quite some time, for the nights were long at that time of year. Towards daybreak, he awoke to the crowing of the cocks, and saw that everyone else

was either asleep or departing. Agathon, Aristophanes and Socrates were the only ones still awake, drinking from a large cup that they passed from left to right as Socrates engaged them in discussion. Aristodemus said that he did not recall most of the discussion because he had missed the start of it, and he was beginning to doze off anyway. Yet he did say, by way of summary, that Socrates was compelling them to agree that the man who knows how to compose comedies also knows how to compose tragedies, and that the skilled tragedian is also a comic poet. Well, as they were being pressed on these points, they were not following particularly well and they were nodding off. Aristophanes was the first to fall asleep, and, as day was breaking, so too did Agathon. Then Socrates, having lulled them to sleep, got up and went out, and Aristodemus followed him as usual. When he got to the Lyceum⁶¹ he washed himself, spent the day just like any other, and having done so, he went home in the evening to rest.

NOTES

1. Agathon was a tragic poet from Athens. None of his works survives. He is a major character in Aristophanes' *Thesmophoriazusae*.
2. Alcibiades was a prominent and controversial Athenian statesman, orator and general. He was a close associate of Socrates, and two dialogues that bear his name have been attributed to Plato.
3. Glaucon was one of Plato's brothers. He appears as a major interlocutor in Plato's *Republic*.
4. Aristodemus was a follower of Socrates. He is also mentioned in Xenophon's *Memorabilia* and in a fragment from Aristophanes' comedy *Banqueters* (fr.242).
5. Apollodorus was a follower of Socrates. He is mentioned in Plato's *Apology* and *Phaedo* as having been present at Socrates' defence speech, and at his execution.
6. The name Agathon means 'good man'. The original proverb was "Good men go uninvited to an inferior man's feast." (Eupolis, Fragment 289, Kock).
7. *Iliad* xvii.587-588.
8. *Iliad* ii.408.
9. An adaptation of *Iliad* x.224.
10. Dionysus was the god of wine and fertility.
11. Pausanias was a lover of Agathon. He also appears briefly in Plato's *Protagoras* (315d-e).
12. Aristophanes was an Athenian poet and comic playwright. He satirised the figure of Socrates in his play *Clouds*.
13. Eryximachus was an Athenian physician. He and his father Acumenos are both also mentioned in Plato's *Phaedrus* (227a, 268a).
14. Phaedrus was an aristocratic Athenian from the deme of Myrrhinus. He is vividly depicted as the main interlocutor in Plato's *Phaedrus*.
15. Euripides was an Athenian tragedian. He wrote two plays about Melanippe, *Melanippe Wise* and *Melanippe Captive*, which survive only in fragmentary form. The fragment quoted here (Fragment 488) is from the former.
16. Hesiod, *Theogony* 116 ff.
17. Acusilaus was an early compiler of genealogies.

18. Parmenides, Fragment 132 (B13, Diels-Kranz).
19. *Iliad* x.482, xv.262; *Odyssey* ix.381.
20. According to legend, Alcestis sacrificed herself in order to save her husband, King Admetus, something not even his own parents were willing to do. A version of this story was retold in Euripides' play, *Alcestis*.
21. Orpheus was a legendary poet and musician who managed to gain entrance to the underworld to rescue his wife, Eurydice.
22. Aeschylus, *Myrmidons*, Fragment 228 ff; *Iliad* xi.786 ff.
23. Harmodius and Aristogeiton were two lovers who became known as the 'Tyrannicides' for having killed Hipparchus, the brother of the Athenian tyrant Hippias, for which they were executed. Although they did not directly bring down the tyranny, it fell three years later, paving the way for Athenian democracy.
24. *Iliad* ii.71.
25. Heraclitus of Ephesus, sometimes referred to as 'the obscure', was a philosopher known for such gnomic utterances. The one quoted here is found elsewhere in a slightly modified version (Fragment B51, Diels-Kranz).
26. In Greek mythology, Polyhymnia was the Muse of sacred poetry.
27. *Iliad* v.385 ff.; *Odyssey* xi.305 ff.
28. Hephaestus was the god of blacksmiths, metalworkers, carpenters, and other craftspeople. He performed all of the blacksmithing for the other gods on Olympus. *Odyssey* viii.266 ff.
29. Arcadia was home to the city of Mantinea, which opposed Sparta. As retribution, the city had its population divided; Xenophon, *Hellenica* 5.2.5-7. Some scholars regard this reference as an anachronism because this event did not take place until 385, long after the dramatic date of this dialogue.
30. *Odyssey* xvii.219.
31. Hesiod, *Theogony* 176 ff, 746 ff.
32. *Iliad* xix.92-93, Lamb. Atē is the personification of Delusion.
33. A common adage, which Aristotle (*Rhetoric* 1406a17-23) attributes to the sophist and rhetorician Alcidas.
34. Adapted from Sophocles' *Thyestes*, Fragment 235b, Dindorf.

35. *Odyssey* viii.266-366. Hephaistos, the husband of Aphrodite, devised a trap that caught Ares in bed with his wife.
36. Euripides, *Stheneboea*, Fragment 663, Nauck.
37. The author of these lines is unknown. It is possible that Agathon himself composed them; cf. *Odyssey* v.391.
38. *Odyssey* xi.635.
39. By referring to the 'head of Gorgias', Socrates is punning on the 'head of a Gorgon', which was reputed to be capable of turning a man to stone. Gorgias' style, which Agathon emulated in his speech, was supposed to be utterly enchanting.
40. See 177d.
41. Euripides, *Hippolytus* 612.
42. He is a philosopher.
43. The Greek word *poiēsis* is often translated as 'poetry', but it also has the wider sense of production or making in general, as well as the narrower sense of a specifically literary production. Here Diotima moves between these two senses.
44. Codrus was a legendary king of Athens who, in fulfilment of a prophecy, willingly submitted to death to save Athens from invaders.
45. Lycurgus was a legendary king of Sparta who is credited with establishing the Spartan constitution.
46. Solon (c.630-560) was a famous and respected Athenian legislator.
47. *Iliad* xi.514.
48. Silenus was the oldest, wisest and most drunken of the Satyrs (male spirits who were sometimes depicted with horse ears and tails, or with goat-like features and often with large erections) who accompanied Dionysus. Intoxication inspired him with special knowledge and powers of prophecy.
49. Marsyas was an expert at playing the pipes. According to legend, he challenged Apollo to a musical contest and lost. As a punishment for his hubris he was flayed alive.
50. The drum and pipe music of the Corybantes, worshippers of Cybele, induced a curative frenzy in those who were deranged.
51. Sirens lured sailors to their death with their enchanting song. *Odyssey* xii.37-54, 154-200.

52. *Iliad* vi.232-236, where Glaucus exchanges golden armour for brass.
53. Ajax was a Greek hero, the greatest after Achilles. His enormous shield rendered him virtually invulnerable to the weapons of his enemies.
54. Potidaea was a Thracian city and ally of Athens, which revolted at the prompting of Corinth. It was defeated after a lengthy Athenian siege.
55. *Odyssey* iv.242, 271.
56. Delium was a city on the coast of Boeotia where the Athenians did battle with and were defeated by the Boeotians. This battle at retreat is also mentioned in Plato's *Laches* 181b.
57. Aristophanes, *Clouds* 362.
58. Brasidas was an extremely effective Spartan commander during the Peloponnesian War. He was killed in Amphipolis, a battle at which the Spartans defeated the Athenians.
59. Nestor, a Greek, and Antenor, a Trojan, were both wise counsellors to their respective sides during the Trojan War. *Iliad* i.248 and iii.148-151.
60. *Iliad* xvii.32.
61. The Lyceum was a gymnasium, which was situated to the east of Athens, outside the city walls.

Theaetetus

persons in the dialogue:

EUCLIDES *founder of Megarian school*

TERPSION *of Megara, friend of Euclides*

MALE SLAVE *of Euclides, oral reader*

THEODORUS *of Cyrene, geometer*

THEAETETUS *of Sounion, mathematician, geometer*

SOCRATES *of Alopecce, son of Sophroniscus*

scene: at the house of Euclides in Megara / in a gymnasium in Athens

142a

Euclides: Ah, Terpsion, have you arrived from the country just now, or was it some time ago?¹

Terpsion: Quite some time ago. Indeed, I was looking for you around the marketplace and was surprised that I could not find you.

Euclides: Actually, I wasn't in the city.

Terpsion: Where were you then?

Euclides: As I was going down to the harbour, I came across Theaetetus being carried back to Athens from the army camp at Corinth.²

Terpsion: Was he alive or dead?

Euclides: Alive, but just barely so. He is in a bad way on account of his wounds, but worse still, he has caught the disease that broke out in the army.

142b

Terpsion: Oh, the dysentery?

Euclides: Yes.

Terpsion: What a man he is! And you say he is in peril of his life?

Euclides: A noble and good man, Terpsion. In fact, I also heard some people just now, full of praise for his role in the battle.

Terpsion: That is nothing particularly unusual. Indeed, it would have been much more surprising if he hadn't played such a role. More to the point, why did the man not stay here in Megara?

142c

Euclides: He was in a hurry to get home. Indeed, I asked him myself and advised him to stay, but he did not want to. So, I saw him on his way, and as I was coming back I was reminded of Socrates, and how prophetically he spoke in general, and about Theaetetus in particular. Socrates met him as a young man, I believe, shortly before his own death, and from the company and the discussions he was very pleased with his character. He recounted their discussions to me when I arrived in Athens, and they are well worth hearing, and he said that Theaetetus really must become famous, if he actually lived long enough.

142d

Terpsion: Well, it seems he was right about that anyway. But what were these discussions? Can you recount them?

143a

Euclides: No, by Zeus, not from memory at any rate. But I made notes at the time as soon as I arrived home, and later on I recollected them at my leisure and wrote them out. And whenever I went to Athens, I would ask Socrates again about whatever I did not remember, and once I got back here I would make corrections, so that I have now written out almost the entire discussion.

Terpsion: Yes, I have heard you say that before, and in fact I had always intended to ask you to present it, but I have put it off until now. But why don't we go through it now? Having just come in from the country, I really need to rest.

143b

Euclides: Actually, rest is not an unpleasant prospect for me either, as I accompanied Theaetetus as far as Erineos. So let's go inside, and this servant can read to us while we rest.

Terpsion: Well said.

Euclides: Now, this is the book, Terpsion. See the way I wrote the account not as Socrates recounted it to me, but as a dialogue with the men he was talking to, and he said these were the geometers Theodorus and Theaetetus. I wished to avoid inserting phrases between the words that were spoken, such as 'and I declared' or 'said', whenever Socrates spoke, or again 'he concurred' or 'he disagreed', whenever the respondent spoke. For this reason I wrote it as direct discourse, omitting all such phrases.

143c

Terpsion: There is no problem with that, Euclides.

Euclides: Well then, take the book and read it, boy.

143d

Socrates: Theodorus, if I cared more about people in Cyrene,³ I would ask you about its affairs and its populace, and whether any of the young folk there are showing any interest in geometry or any other branch of wisdom. But, in fact, my love for them is less than for the Athenians, so I am more eager to know which of our young people are likely to turn out well. I watch out for such young men myself as best I can, and I also ask others, once I see that the young want to associate with them. Of course, they come to you in no small numbers, and rightly so, as you deserve it in general, and also because of your knowledge of geometry. So, if you have come across anyone worthy of report, I would be glad to hear about them.

143e

Theodorus: Well, Socrates, I have come across one such young man among your citizenry, and it is well worth hearing what I

have to say about him. Now, if he were handsome, I would be afraid to speak enthusiastically lest I might seem to have feelings for him. Now, and I hope I don't upset you when I say, he is not handsome and he is quite like you, with the snub nose and bulging eyes, though they are less pronounced in his case. So I am speaking without fear. You may rest assured that of all the youths I met previously – and there have been many – I have seen none with such wonderful natural endowments. I never imagined that a man who learns so keenly what others find difficult could still be extremely modest and also as manly as anyone else, and I do not see this happening elsewhere. But those who are sharp-witted and intelligent and have good memories, like this fellow, are often quick to anger and are borne hither and thither like ships without ballast, being more mad than manly, while the slower sort approach study with some reluctance and are full of forgetfulness. But this youth takes to learning and enquiry so smoothly, steadily and productively, with great modesty, like a stream of silently flowing oil, that you are amazed that one so young could achieve so much.

144b

Socrates: That is good news. But which of our citizens is his father?

Theodorus: I have heard his name, but do not remember it. But look, he is the one in the middle of the group coming towards us. The young man and these companions of his were oiling themselves a moment ago on the running track outside, and they seem to have finished that now, so they are coming in here. See if you recognise him.

144c

Socrates: I do recognise him. It is the son of Euphronios of Sounion,⁴ a man who was very like the boy you described and generally well regarded; and, indeed, he also left quite a

substantial inheritance. But I do not know the young man's name.

Theodorus: Socrates, his name is Theaetetus. However, I believe that the inheritance has been squandered by the trustees. But, nevertheless, he is wonderfully generous with his money, Socrates.

144d

Socrates: You are describing an excellent man. Ask him to come here and sit beside me.

Theodorus: I shall. Theaetetus, sit here beside Socrates.

Socrates: Yes, indeed, Theaetetus, so that I can scrutinise for myself the sort of face I have, for Theodorus says that I have a face like yours. However, if we both had lyres, and he said that they were tuned in like manner, would we just believe him or would we find out whether he was speaking as a musician?

144e

Theaetetus: We would find that out.

Socrates: We would believe him, would we not, if we discovered he was a musician, but we would be unconvinced if he were not?

Theaetetus: True.

Socrates: Now, I presume that if the similarity of our faces is of any concern to us, we would ask if the speaker was a portrait artist or not.

145a

Theaetetus: I think so.

Socrates: And does Theodorus know portraiture?

Theaetetus: Not as far as I know anyway.

Socrates: Nor geometry either?

Theaetetus: He certainly does know geometry, Socrates.

Socrates: What about astronomy, calculation, music and the various branches of education?

Theaetetus: Well, I think so.

Socrates: Well then, if he says that there is some physical resemblance between us, which he either praises or criticises, it is not worth paying much attention to him.

Theaetetus: Perhaps not.

Socrates: However, what if he were to praise either of our souls for wisdom or excellence? Wouldn't it be good for the recipient of the praise to exhibit his quality eagerly, while the other watches him closely?

145b

Theaetetus: Yes certainly, Socrates.

Socrates: Now, the time has come, dear Theaetetus, for you to give your demonstration whilst I watch closely, since, mark my words, Theodorus has praised many strangers and citizens to me, but never in the way that he praised you just now.

Theaetetus: That's all very well, Socrates, but take care that he was not speaking in jest.

145c

Socrates: No, that is not Theodorus' way. But do not be hesitant about our agreement by pretending that this man is jesting, in case we have to call him as a witness. No one will doubt his words, so just stand bravely by our agreement.

Theaetetus: Well, if it seems right to you, that is what I must do.

Socrates: Now, tell me this. I presume you are learning some geometry from Theodorus?

Theaetetus: I am indeed.

145d

Socrates: And astronomy, harmony and calculation?

Theaetetus: Well, I am trying to, anyway.

Socrates: Yes. And so am I, my boy, from Theodorus and others who, I believe, have some knowledge of these topics. And although I fare quite well with them in most respects, I am perplexed over a minor issue that I must consider with you, and our friends here. Now, tell me. Does learning not consist in becoming wiser about whatever one is learning?

Theaetetus: How could it be otherwise?

Socrates: And it is on account of wisdom, I imagine, that the wise are wise.

Theaetetus: Yes.

145e

Socrates: And does this differ in any way from knowledge?

Theaetetus: Does what differ?

Socrates: Wisdom! Aren't people wise in the matters in which they are knowledgeable?

Theaetetus: Of course.

Socrates: So are knowledge and wisdom the same?

Theaetetus: Yes.

146a

Socrates: Well now, this is what perplexes me, and I cannot grasp adequately for myself what knowledge actually is. So now can we speak of this? What do you say? Which of us will speak first? If he goes wrong he will sit down, and whoever goes wrong after him will also sit down and be 'donkey', as the children say in the ball game. But whoever comes through without error will be our king, and may order us to answer any question he likes. Why are you silent? Hopefully I am not being ill-mannered, Theodorus, due to my love of discourse, and

eagerness to make us engage in discourse, and become friendly and familiar with one another.

146b

Theodorus: Oh there is nothing ill-mannered about that, Socrates. But direct one of the young men to respond to you, since I am unaccustomed to such discussions as these, and I am too old to get used to them now. It would be suitable for these chaps, and they would make much more progress, since in truth the young make more progress in everything. So go on, just as you began. Don't give up on Theaetetus. Question him.

Socrates: Now, Theaetetus, you hear what Theodorus is saying, and I doubt if you would wish to disbelieve him, nor is it proper for a younger man to disobey the directions of a wise man in such matters. Come on, declare clearly and nobly what you think knowledge is.

146c

Theaetetus: Well, Socrates, I must, since you are both telling me to do so. In any event, if I make any error you will correct it.

Socrates: Yes, certainly, if we are able to.

Theaetetus: I think that whatever one learns from Theodorus is knowledge – geometry and those subjects you listed just now – and so also is cobbling and the other manufacturing skills. Each of these and all of these are knowledge, and not something else.

146d

Socrates: How noble and generous, my friend. You are asked for one thing and you provide many, favouring variety over simplicity.

Theaetetus: Why do you say that, Socrates?

Socrates: Well, perhaps it is nothing, but I shall tell you what I think anyway. Whenever you refer to cobbling, are you talking about anything other than the knowledge of making shoes?

Theaetetus: Nothing else.

Socrates: And what about carpentry? Do you mean anything other than the knowledge of making wooden objects?

146e

Theaetetus: No, that's it.

Socrates: In both cases, aren't you defining what each is knowledge of?

Theaetetus: Yes.

Socrates: But, Theaetetus, you were not asked what knowledge is of, or how many kinds there are. That was not the point. Indeed, we did not ask the question from a desire to count them, but we wanted to know what knowledge itself actually is. Or am I making no sense?

Theaetetus: No, you are absolutely correct.

Socrates: Well, consider this also. If someone were to ask us about one of the ordinary things around us – for example, what clay is – would we not be silly to answer potters' clay, ovenmakers' clay, brick-makers' clay?

147a

Theaetetus: Surely.

Socrates: Firstly, we would be silly to imagine that the questioner understands anything from our answers whenever we say 'clay', whether we add 'of modellers' or of any other craftsmen. Or do you think anyone understands any name of anything without knowing what that thing is?

147b

Theaetetus: Not at all.

Socrates: Then neither does anyone understand knowledge of shoe-making who does not know knowledge.

Theaetetus: He does not.

Socrates: So, whoever is ignorant of knowledge does not understand cobbling or any other skill.

Theaetetus: That's it.

Socrates: So, when we respond with the name of some skill when we are asked what knowledge is, that is a ridiculous answer. Indeed the answer says 'knowledge of something', and that does not answer the question.

147c

Theaetetus: So it seems.

Socrates: Well then, we seem to be going the long way around instead of answering plainly and briefly. Thus, on the question about clay, we could say, plainly and simply, that it is earth mixed with water, regardless of whose clay it is.

Theaetetus: Oh it seems easy when you put it like that, Socrates. However, it is very likely that what you are asking about is like what came up recently in conversation between myself and your namesake here, Socrates.⁵

147d

Socrates: Like what, Theaetetus?

Theaetetus: Theodorus here was illustrating something about powers to us, showing that a threefoot square and a five-foot square do not have a common measure with respect to a single foot. He dealt with each in this way until he reached seventeen, and then he stopped for some reason. Now, since the number of powers appeared unlimited, it occurred to us to try to comprehend them into a unity by which we could refer to all these powers.

147e

Socrates: And did you find something like this?

Theaetetus: I think that we did. But see if you agree.

Socrates: Tell me.

Theaetetus: We divided all number into two. Those that arise by multiplying equal numbers we likened to a square shape, and called them both square and equilateral numbers.

Socrates: Yes, that's good.

Theaetetus: However, between these numbers are all those, such as three and five, which cannot be generated by multiplying equal numbers. These are produced by multiplying greater by lesser, or lesser by greater, and the sides that enclose them are of different lengths, so we likened them to an oblong shape, and called them oblong numbers.

148a

Socrates: Excellent. But what did you do next?

Theaetetus: Whatever lines form an equilateral flat number⁶ when they are made into squares, we defined as magnitudes, while the lines whose squares form an oblong flat number, we defined as powers, as they do not have a measure, common in magnitude, with the other magnitudes, though the flat numbers they can form do have such a measure. Similar considerations apply to solid structures.

148b

Socrates: Well that is excellent, my boys, and I don't think that Theodorus will be open to a charge of perjury.

Theaetetus: Very well, Socrates, but I would not be able to answer what you are asking about knowledge in the very way I spoke about magnitudes and powers. However, I think that's the sort of wording you are looking for, so Theodorus may prove false after all.

148c

Socrates: Well, suppose he had praised you as a runner, saying that he had never come across a young man who could run like this, and you were then beaten in a race by the champion in his prime. Do you think that his praise would be any less true?

Theaetetus: I do not.

Socrates: And do you think that the search for knowledge, in the manner I have just described, is something trivial, or a task for those at the pinnacle in every respect?

Theaetetus: Oh, by Zeus, I really believe it is for those at the absolute pinnacle.

148d

Socrates: Well then, be confident about yourself. Believe that Theodorus is right, and exert yourself in every way, both in general and to arrive at an account of what knowledge actually is.

Theaetetus: If exertion is all we need, Socrates, it will come to light.

Socrates: Go on then. Indeed, you showed the approach very nicely just now, so try imitating your answer about powers. Just as you encompassed the many powers in a single form, so also describe the many types of knowledge in a single account.

148e

Theaetetus: Be assured, Socrates, that I have embarked upon this enquiry many times on hearing reports of the questions you ask. However, I am never able to persuade myself that I have anything useful to say, nor have I heard anyone else speaking in the way you are exhorting me. Then again, I can't give up the preoccupation either.

Socrates: For you are in labour, dear Theaetetus, because you have conceived and are not barren.

149a

Theaetetus: I don't know about that, Socrates. I am only describing what I experience.

Socrates: How comical! Have you not heard that I am the son of a fine, burly midwife named Phaenarete?⁷

Theaetetus: Yes, I heard that before.

Socrates: Now, have you also heard that I practise the same skill?

Theaetetus: Not at all.

Socrates: Well it is true, believe me! But you must not tell everyone else about me, my friend, as they are unaware that I have this skill. And since they do not know this about me, they never say it. But they do say that I am very strange, and that I make men perplexed. Surely you have also heard that?

149b

Theaetetus: I have, indeed.

Socrates: Well, shall I tell you the reason?

Theaetetus: Yes, certainly.

Socrates: Well, if you consider the status of all midwives overall, you will understand what I mean more easily. Indeed, I presume you know that no women, who are themselves still conceiving and bearing children, act as midwives to others, but only those who can no longer bear children.

Theaetetus: Yes, certainly.

Socrates: Artemis is responsible for this, so they say, because she has been allotted responsibility for child-bearing, though she is childless.⁸ So she did not give the midwife's role to those who are barren, since human nature is too weak to understand a skill of which it has no experience. Instead, she assigned it to those who are past child-bearing age, in honour of their likeness to herself.

149c

Theaetetus: Quite likely.

Socrates: And isn't it both likely, and necessarily the case, that the midwives recognise, better than anyone, which women are

with child and which are not?

Theaetetus: Yes, indeed.

Socrates: And, indeed, the midwives are able to arouse the pangs or allay them as they so wish by administering potions or incantations. They can deliver difficult births, and if they believe the embryo should miscarry, they bring on miscarriage.

149d

Theaetetus: This is so.

Socrates: Well, have you noticed something else about them? That they are the most ingenious matchmakers since they are omniscient when it comes to knowing the types of men with whom various women should consort to produce the most excellent children?

Theaetetus: No, I didn't know that at all.

Socrates: Then rest assured that they value this skill more than the cutting of the umbilical cord. Yes, think about it. Do you believe that tending and harvesting the fruits of the earth is the same skill as knowing the types of plants that should be sown in various types of soil?

149e

Theaetetus: It is the same skill.

Socrates: And with a woman, my friend, do you think there is one skill dealing with types and another dealing with offspring?

Theaetetus: That is not very likely.

Socrates: No, it is not. However, because men and women are brought together in an improper and unskilled manner, which is called procuring, the midwives shun matchmaking, as they are respectable women who fear that through involvement in matchmaking they may be accused of procuring. Yet proper matchmaking is somehow a role only for the true midwives.

150a

Theaetetus: So it appears.

Socrates: Such is the role of the midwives, but it is a lesser role than mine. Indeed, it is not the custom of women to bring forth images on some occasions, and at other times true offspring, which are not easy to distinguish. If women did this, the greatest and noblest task of midwives would be to decide which was true and which was not. Do you not agree?

150b

Theaetetus: I do, indeed.

Socrates: Now, my skill of midwifery is, in general, similar in character to theirs, but it differs by delivering men and not women, and by looking after their souls rather than their bodies when in labour. But the greatest thing about my skill is that it is able to test, in every respect, whether the mind of the young man is bringing forth an image and a lie, or something genuine and true. Now, I do have this in common with the female midwives: I bring to birth no wisdom. And many people reproach me for this, since I ask questions of others while I myself proclaim nothing about anything, because I have no wisdom. Their reproach is true, but the reason is that the god compels me to act as a midwife and has prevented me from giving birth. So, of course, I myself am not at all wise, nor have I any invention that is born of my own soul. However, it is different for those who associate with me. Some of them also appear quite ignorant at first, but as our relationship proceeds, all whom the god allows, progress to a wonderful degree. Such is their own belief and that of others, and it is obvious that they have never learned anything from me. Rather, they have discovered from themselves much that is beautiful, and have brought it to birth. However, both I and the god are responsible for the delivery. The proof is that over the years, many who were ignorant of this regarded themselves as responsible,

despised me, and went away sooner than they should, persuaded either by themselves or by others. But once they had left me, they miscarried whatever remained within them through bad company, and destroyed through improper care whatever fruits I had delivered from them. Placing more value on images and lies than upon the truth, they ended up being regarded as ignorant both by themselves and by everyone else. One such person was Aristides, the son of Lysimachus,⁹ and there have been many others. If these men ever come back again, imploring my company with extraordinary imprecations, the familiar daimon¹⁰ forbids me from associating with some of them, while it allows me to associate with others, and these men make progress once more. Now, my associates have another experience in common with women in childbirth. They are pained and full of distress both night and day, even more than the women, but my skills can arouse or relieve this pain, and that is the plight they are in. But, Theaetetus, some who seem to me to have nothing within them to bring forth, I matchmake favourably with someone else, and with God's help I guess quite competently whose company will benefit them, knowing that they have no need for me. I have handed many over to Prodicus,¹¹ and many to other wise and inspired men. Now, excellent friend, the reason I am speaking to you at such length is that I suspect, as you yourself believe, that you are pained by something you are carrying within. So come to me, the son of a midwife, who is skilled in the midwife's art, and strive to answer my questions as best you can. And if I consider something you have been saying to be an image and untrue, and I take it out and discard it, do not be angry with me like new mothers over their children. Indeed, many before you, dear friend, had such an attitude towards me as to actually bite me whenever I take something nonsensical away from them. They do not believe that I do this with good intentions, and they are far from realising that no god ever intends harm towards humanity, nor

do I act in this way from ill intentions. But I am not allowed to accept falsehood or to conceal the truth. So start again, Theaetetus, and try to state what knowledge actually is. And do not say that you are not able, for if God wills it and you summon up your manhood, you will be able.

151d

Theaetetus: Well now, Socrates, with such encouragement from you, it would be a disgrace if a man did not strive to the utmost to say what he can. So then, it seems to me that whoever knows something perceives that which he knows. So, for now anyway, it appears that knowledge is nothing other than perception.

151e

Socrates: Spoken nobly and courageously, my boy. That is how you should speak when proclaiming your views. Come on, let us examine it together and whether it happens to be genuine or a wind-egg. Are you saying that knowledge is perception?

Theaetetus: Yes.

Socrates: Now, it really seems that you have made no ordinary statement about knowledge, but one that Protagoras¹² also made, though he said the same things in a somewhat different way. He says, as you know, that man is the measure of all things: of those that are, that they are, and of those that are not, that they are not. Indeed, I presume you have read this?

152a

Theaetetus: Yes, I have read it many times.

Socrates: Does this not somehow mean that, in each case, as something appears to me, so it is for me, and again, as it appears to you, so it is for you – you and I being ‘man’.

Theaetetus: Yes, this is what it means.

Socrates: Now, a wise man is not likely to talk nonsense, so let us follow his argument. Is it true that sometimes when the same

wind is blowing, one of us may be cold while the other is not, or one of us a little cold while the other is very cold?

152b

Theaetetus: Of course.

Socrates: Now, at that time, can we say whether this wind, in itself, is cold or not? Or should we accept from Protagoras that it is cold for the person who feels cold, but not for the person who doesn't?

Theaetetus: It seems we should.

Socrates: And is that how it appears to each person?

Theaetetus: Yes.

Socrates: But does 'it appears' mean 'it is perceived'?

Theaetetus: It does.

Socrates: Then appearance and perception are the same in the case of warmth, and all such matters. Indeed, how things are perceived is how things are likely to be for each person.

152c

Theaetetus: So it seems.

Socrates: So, perception is always of what is, and it is not false since it is knowledge.

Theaetetus: So it appears.

Socrates: Well then, by the Graces, was Protagoras an utterly wise person who spoke this riddle to us common crowd while he divulged the truth¹³ to his disciples in secret?

Theaetetus: Whatever do you mean by that, Socrates?

152d

Socrates: I shall tell you, and this is surely no ordinary account. It states that nothing just by itself is one, nor may you correctly refer to it as some thing, nor as any kind of thing. But if you say

it is large, it will also appear to be small; and if you say it is heavy, it will also appear light; and so it is for everything, because nothing is one, or some thing, or of a particular kind. In fact, everything arises from movement and change and intermingling, and we actually say that these things are, but we are not referring to them correctly, for nothing ever is, but is always becoming. The entire tradition of the wise, except Parmenides, also agrees about this, including both Protagoras and Heraclitus, and Empedocles and the supreme poets from each branch of poetry – Epicharmus of the comic, and Homer of the tragic.¹⁴ And when Homer said, “Ocean is the source of the gods, and Tethys is their mother”,¹⁵ he meant that everything is born from flux and change. Or don’t you think this is what he meant?

152e

Theaetetus: I do, indeed.

153a

Socrates: Is there anyone who could do battle against such a vast army, with Homer as their general, and not become a laughing stock?

Theaetetus: That would not be easy, Socrates.

Socrates: It would not, Theaetetus, as there are also the following cogent indications that the account is correct, since movement produces becoming and what seems to be, while inactivity produces non-being and destruction. Indeed, heat and fire, which actually generate and regulate everything else, are themselves generated from movement and friction, and these are both activities. Aren’t these the origins of fire?

153b

Theaetetus: They certainly are.

Socrates: And, indeed, the race of living creatures is sprung from the same processes.

Theaetetus: It must be.

Socrates: And isn't the condition of our bodies corrupted by inactivity and idleness, but preserved for the most part by exercise and movement?

Theaetetus: Yes.

Socrates: And what of the condition of the soul? Isn't it through instruction and attention, which are activities, that it acquires learning and is preserved and becomes better, while through inactivity, which is both lack of attention and ignorance, it does not understand anything and forgets whatever it does understand?

153c

Theaetetus: It certainly does.

Socrates: So, activity is good for both body and soul, while inactivity is the opposite.

Theaetetus: So it seems.

Socrates: I can tell you more about such matters as absence of wind and calm seas, where the stillness decays and corrupts things, while different conditions will preserve them. But in addition to this, the ultimate evidence I bring forward is the golden cord that Homer declares to be the very sun itself, and he explains that as long as the heavens and the sun are in motion, all things are, and are preserved among both gods and men. However, should this cease and be tied down, everything would be destroyed, and as they say the world would be turned upside down.¹⁶

153d

Theaetetus: Yes, Socrates, it seems to me that that is exactly what he is explaining.

Socrates: Therefore, my friend, you must appreciate to begin with that in the case of the eyes, what you refer to as white

colour is not something separate outside of your eyes, nor is it in your eyes, nor should you assign any location to it, for it would then be abiding in that place and would not be in the process of becoming.

153e

Theaetetus: But how does it work?

Socrates: Let us pursue the current argument by proposing that nothing just by itself is one. And thus it will be evident that black or white or any other colour has arisen from the eyes hitting upon the relevant motion. Indeed, each so-called colour will be neither that which strikes nor that which is struck, but something that has arisen in between, private to each. Or would you maintain that each colour appears to you just as it does to a dog, or any other animal?

154a

Theaetetus: By Zeus, I would not!

Socrates: What about this? Does anything at all appear similar to you and to another person? Are you certain of this? Or are you even more certain that it does not appear the same even to yourself, because you are never in the same state as yourself?

Theaetetus: That's even truer than your first example.

Socrates: Now, if whatever we measured ourselves by, or touched, was large or white or hot, it would never become different through encountering something else, unless it itself actually changed. But on the other hand, if whatever is measuring or touching was large or white or hot, it would not have become different when another thing drew near or underwent some process, while nothing happened to itself. As things stand now, my friend, we are forced so easily into extraordinary and comical utterances, as Protagoras, and anyone who tries to make the same point as he does, would maintain.

154b

Theaetetus: What sort of utterances do you mean?

Socrates: Take a simple example, and you will know all that I have in mind. Presume there are six dice and you introduce four dice beside them. We say that they are more than the four, indeed one-and-a-half times the four. However, if you introduce twelve dice, the six will be fewer, in fact half of twelve, and that is the only acceptable description. Or would you accept any other?

154c

Theaetetus: I would not.

Socrates: Well then, what if Protagoras or someone else were to ask you, ‘Theaetetus, is there any way for something to become bigger or more numerous, other than by being increased?’ What would be your response?

Theaetetus: Socrates, if I were to give my immediate opinion on this question, I would answer that it is not possible. But based on your previous question, being wary of contradicting myself, I would say that it is possible.

154d

Socrates: By Hera, my friend, a good and divine response. However, it seems that if you do say that this is possible, the consequences of Euripides’ words will befall you, for your tongue will be beyond refutation, but your heart will not.¹⁷

Theaetetus: True.

Socrates: Now, if you and I were clever and wise, and had searched all the contents of our hearts, we would now spend the remaining time probing the abundant resources at our disposal, as we joined in some sort of sophistical contest, banging our arguments against one another. But now, seeing that we are common men, we shall first prefer to review, in their own terms, the exact thoughts that we ourselves are thinking, and

whether they seem to us to be concordant with one another or entirely discordant.

154e

Theaetetus: Yes, certainly, I would prefer that.

Socrates: And so would I. Now since that is so, shall we examine ourselves faithfully and patiently, considering once more what these appearances within us actually are? On considering the first of them, I believe we shall say that nothing would ever become greater or lesser, either in bulk or numerically, as long as it is equal to itself. Isn't this the case?

155a

Theaetetus: Yes.

Socrates: And the second of them will have us say that if nothing is either added to or removed from something, it will neither increase nor diminish, but it will remain equal.

Theaetetus: Yes, certainly.

155b

Socrates: And won't the third have us say that nothing can be what it was not before, without becoming and a process of becoming?

Theaetetus: It certainly seems so.

Socrates: Now, I believe that these admissions are battling with one another in our soul, whenever we discuss the matter of the dice, or whenever we say that I, who at my age am neither getting bigger nor going in the opposite direction, am now taller than a youth like you, but later on that I am shorter, over the course of one year. This happens without my frame being reduced, but through yours becoming bigger. But note that I am, at a later time, what I was not before, though I have not undergone a process of becoming. But without such a process it is impossible to become smaller, and without losing any of my bulk I would not have become shorter. And there are, of course,

thousands upon thousands of such instances once we accept all this. I presume you are following, Theaetetus. You actually seem to have some familiarity with such issues.

155c

Theaetetus: I am, Socrates, and by the gods, I wonder intensely what they actually mean. And the truth is I sometimes get dizzy from looking at them.

155d

Socrates: Well, my friend, Theodorus here seems to have made no poor estimate of your endowments. Indeed, this wonder is the particular characteristic of a philosopher, since philosophy has no other origin than this, and it seems that whoever said that Iris was born from Thaumas was not a bad genealogist.¹⁸ But do you now understand why these things are so, based on the statement we are attributing to Protagoras? Or is it not yet clear?

Theaetetus: It is not clear to me yet.

Socrates: Now, will you feel grateful to me if I assist you in a thorough examination of the truth hidden in the thought of a famous man? Nay, of famous men?

155e

Theaetetus: How could I feel anything other than huge gratitude?

Socrates: Then look about, and take care lest any of the uninitiated is listening in. These are the fellows who believe that there is nothing except what they can hold fast with both hands and do not accept that activities and processes, and all that is unseen, have a share in being.

156a

Theaetetus: Yes of course, Socrates. You are describing some quite tough and obstinate characters.

Socrates: Yes, my boy, they are indeed most ill-educated. But there are others, much more refined, whose mysteries I am about to reveal to you. Now, their first principle, on which hangs all we have been discussing just now, is that all is motion and there is nothing else besides this. The motion has two forms, and each is unlimited in multiplicity, though one has an active power while the other is passive. From the mutual intercourse and friction of these two with one another, numerous offspring arise that are limitless in number but always twins. One twin is the perceptible, and the other is the perception that constantly accompanies the perceptible and is born along with it. For the perceptions, then, we have such names as seeings and hearings, smellings, cold and hot, and of course pleasures and pains, desires and fears, as they are called, and others. Indeed, those without names are innumerable, and those that have been given names are very numerous. On the other hand, the category of perceptibles has, in turn, a common origin with each of the perceptions, so with variegated seeings there are variegated colours, and the same applies to hearings and sounds, and for the other perceptions the other kindred perceptibles arise. Now, Theaetetus, what does this story tell us about the previous subjects? Can you see?

156c

Theaetetus: Not very well, Socrates.

Socrates: Well, let us see if we can bring it to a conclusion. It does indeed mean, just as we are saying, that all things are in motion, though some are quick in their movements and others are slow. Now, anything slow has its motion in the same place and relative to whatever comes near, and it produces offspring in this way. But whatever is produced is quicker, and moves from place to place, and its motion naturally involves a place to place movement. Therefore, whenever an eye and something that can be evaluated by it draw near and generate whiteness

and its associated perception – neither of which would ever have arisen if either of them had encountered something different – there is movement between them at that time. This movement is sight on the part of the eyes, and whiteness on the part of whatever joins in the production of the colour. So the eye becomes full of sight, and then it sees and becomes not sight but a seeing eye, while its partner in the production of colour is saturated in whiteness and becomes, for its part, not whiteness but something white, be it wood or stone or anything else that happens to be coloured with a colour of this sort. And this is actually how things work in general. Hard and hot and all else should be understood in the same way, to be nothing just by itself, as we were saying before, but in their mutual intercourse everything of every kind arises from the movement, since there is actually no firm basis for thinking that the active or passive is something in isolation. For there is not an active until it is joined to a passive, nor a passive until it is joined to an active. And that which joins one thing and is active turns out to be passive when it encounters something else. And the consequence of all this, just as we were saying at the beginning, is that nothing just by itself is one, but is constantly coming into being with something, and ‘to be’ should be entirely removed from use, not that we have not been compelled to use it just now, through habit and ignorance. But the account of these wise men says we must not do this, nor should we accept the word ‘something’ or ‘of something’ or ‘mine’ or ‘this’ or ‘that’ or any other name that would make it fixed. Instead we should declare, in accord with nature, that they are coming into being, being produced and being destroyed or changed, since if anyone fixes anything with a word, whoever does this will be easily refuted. This is also how we should refer to particulars and to aggregates of many, aggregates that are designated as ‘man’ or ‘stone’, and each living creature and form. Now, Theaetetus, don’t you think this is delightful, and so delicious that you could

eat it?

157c

Theaetetus: Well, I don't know, Socrates. Indeed, I cannot understand you, and whether you believe what you are saying or testing me.

Socrates: My friend, you are forgetting that I know nothing of such matters, nor do I regard them as my own offspring, since I am barren. However, I am acting as midwife to you, and on this account I am charming you, and offering pieces of wisdom for you to taste until I draw out that belief of yours into the light. Once it is out, I shall evaluate whether it shows itself to be a wind-egg or a genuine birth. So take heart, and persist! Answer truly and courageously, and tell us how things appear to you, no matter what I ask you about.

157d

Theaetetus: Very well, ask me.

Socrates: Then tell me if you agree that nothing is good or beautiful, or anything else we just mentioned, but is constantly becoming so.

Theaetetus: Well, I think so, since it appears marvellously reasonable when I hear you describing it like this, and it should be accepted exactly as you have recounted it.

157e

Socrates: In that case, let us not leave out anything that is missing from it. What is missing is consideration of dreaming, diseases in general, and also madness, and the extent to which we are said to err in hearing and seeing and in our other perceptions. Indeed, you know that in all these cases the account we gave just now seems to be proved wrong by common consent, as false perceptions certainly arise in us under such circumstances, and so for each person the appearances are far removed from what is. Rather, on the

contrary, nothing at all that appears to be, is.

158a

Theaetetus: What you say is perfectly true, Socrates.

Socrates: Well then, what argument is left for the one who proposes that perception is knowledge, and that for the person to whom they appear, whatever appears to be, is, in each case?

Theaetetus: Well, Socrates, I hesitate to say that I don't know what to say, since you rebuked me for saying that just now. Yet the truth is that I could never dispute that madmen and dreamers have false opinions, when one group believes they are gods, or the others, in their sleep, think that they have wings and are flying.

158b

Socrates: Are you not aware of a similar dispute about these, and about sleeping and waking in particular?

Theaetetus: What sort of dispute?

Socrates: It is a question that I believe you have heard asked many times. What proof could you provide if someone were to ask, right now, whether we are asleep at present and are dreaming everything that we are thinking, or awake and talking to one another in the waking state?

158c

Theaetetus: Yes, indeed, Socrates, I am at a loss as to what sort of proof should be provided since they both correspond so closely, just like mirrored dance movements. Indeed, there's no reason why our present conversation couldn't be a discussion with one another imagined in sleep. And, of course, whenever we are asleep, and imagine we are recounting dreams, the resemblance of one to the other is uncanny.

Socrates: You see then that there is plenty of room for dispute, when it is even disputed whether we are awake or asleep! And, indeed, as we spend a similar amount of time asleep and awake,

in either state our soul contends that the opinions held at that time are completely true. Consequently, we spend an equal time asserting that this realm is real, and we are equally confident in each case.

158d

Theaetetus: Entirely so.

Socrates: Doesn't the same argument apply to madness and disease, except that the durations are not equal?

Theaetetus: Correct.

Socrates: Well then, is truth to be determined by longer or shorter duration of time?

158e

Theaetetus: That would be entirely ridiculous.

Socrates: Well, have you any other obvious way of demonstrating which of these sets of opinions are true?

Theaetetus: I don't think so.

Socrates: Then you can hear from me how people talk about these matters when they designate the appearances of the moment as true for the person to whom they appear. I believe they would ask a question such as, "Theaetetus, would something that is completely different have the same capacity as that from which it is different? And let us not assume that we are asking about something that is the same in one respect but different in another. No, this is completely different."

159a

Theaetetus: In that case, it cannot have anything that is the same, either in capacity or anything else whatsoever, once it is altogether different.

Socrates: Now, must we not concede that such a thing is also unlike?

Theaetetus: Well, I think so.

Socrates: And if it happens to become like or unlike something, either itself or another, shall we say that in becoming like, it is becoming the same, while in becoming unlike, it is becoming different?

Theaetetus: It must be so.

Socrates: And didn't we say before that there are many – indeed, unlimited – active elements, and that the same applies to passive elements?

Theaetetus: Yes.

Socrates: And also that anything that is paired with one thing and then with another will not produce the same things but different things.

Theaetetus: Yes, certainly.

159b

Socrates: Now, let us discuss me and you and things in general, based upon the same argument. Take Socrates when healthy and Socrates when ill. Shall we say they are like one another or unlike one another?

Theaetetus: Are you referring to the unhealthy Socrates as a whole compared to the healthy Socrates as a whole?

Socrates: You have understood perfectly. I mean just that.

Theaetetus: Then of course they are unlike.

Socrates: And is he different then to the extent that he is unlike?

Theaetetus: He must be.

Socrates: And will you say the same about Socrates asleep, and in all the other conditions we mentioned just now?

159c

Theaetetus: I think so.

Socrates: Now, will each of the things whose nature is to act upon something else treat me in one way when it encounters healthy Socrates, and in a different way when it encounters unhealthy Socrates?

Theaetetus: Inevitably.

Socrates: Then is it the case that I who am passive, and this active, will produce different outcomes in each case?

Theaetetus: Indeed.

Socrates: So when I drink wine when healthy, would it appear pleasant and sweet to me?

Theaetetus: Yes.

Socrates: Indeed, based upon what we agreed before, the active and the passive, both moving simultaneously, produce both sweetness and perception. Since perception is associated with the passive, it turns the tongue into something that perceives, while the sweetness associated with the wine moves about it and makes the wine both appear sweet and be sweet to the healthy tongue.

159d

Theaetetus: Yes. What we said before certainly concurs with this.

Socrates: But when it encounters the unhealthy Socrates, is that in truth someone different, and not the same person? Indeed, it approaches something that is unlike the first.

Theaetetus: Yes.

Socrates: Now, a Socrates such as this, along with the draught of wine, gives rise to different outcomes, a perception of bitterness in the region of the tongue, while in the region of the wine, bitterness arises and moves, and so the wine becomes not

bitterness but bitter, while I become not perception but a perceiver.

159e

Theaetetus: Yes, indeed.

Socrates: So, I shall never come to perceive any other thing in this way, for there is another perception of the other thing, and this makes the perceiver different, and different in kind. Nor would that which is active towards me ever produce the same thing, or itself be the same sort of thing, in its encounter with something different. For having produced another from another, it will become different in kind.

160a

Theaetetus: This is so.

Socrates: Nor indeed shall I become such a perceiver by myself, nor will the active element become different by itself.

Theaetetus: No, it will not.

Socrates: No. But whenever I come to be perceiving, I must be perceiving something, for it is impossible to come to be perceiving and yet be perceiving nothing. And whenever sweet or bitter or such like arise, they must arise for some person, for it is impossible to become sweet, but sweet to no one.

160b

Theaetetus: Entirely so.

Socrates: What remains for us then, I believe, is that if we are, we are for one another, and if we become, we become for one another, since in fact necessity conjoins our being, yet it binds us to none of the others, or even to ourselves. So it leaves us bound to one another. Consequently, if someone says that something is, or becomes, he should say that 'it is or becomes for someone' or 'of something' or 'in relation to something'. But he should never say, nor allow someone else to say, that it is or becomes just by itself. That is what the argument we have been

expounding indicates.

160c

Theaetetus: Entirely so, Socrates.

Socrates: Now, since whatever is active towards me, is for me and for no one else, mustn't I also perceive it and no one else?

Theaetetus: It must be so.

Socrates: So, my perception is true for me, for it always belongs to what I am, and as Protagoras says, I am judge of the things that are for me, that they are, and also of the things that are not, that they are not.¹⁹

Theaetetus: So it seems.

160d

Socrates: Now, if I am not being deceived or erring in my thinking about things that are, or things that become, how could I fail to have knowledge of the things that I perceive?

Theaetetus: There is no way this could happen.

Socrates: Knowledge is nothing other than perception. That was an excellent saying of yours! So the various accounts turn out to be the same. Homer and Heraclitus and all their tribe say everything changes like a flowing stream; Protagoras, the wise, says man is the measure of all things; and now Theaetetus says that since these things are so, knowledge turns out to be perception. Is this so, Theaetetus? Shall we declare that this is like your newborn baby, which I have brought to birth? What do you say?

160e

Theaetetus: It must be so, Socrates.

Socrates: So, it seems that this is what we have at last produced with some difficulty, whatever it turns out to be. After the birth comes its infant ceremony, and we should faithfully carry it around the hearth²⁰ in the circle of discussion, on the lookout

lest the offspring be unworthy of rearing, since it is false and a wind-egg. Or do you believe that your offspring should be reared in any case, and not be set aside? Could you endure seeing it tested in argument, and not get violently angry if someone were to take away this, your first-born?

161a

Theodorus: Socrates, Theaetetus will endure, for he is not at all bad-tempered. But by the gods, do tell us exactly why this is not the case.

Socrates: You are a veritable lover of discourse, Theodorus, and it is kind of you to believe that I am some bag of arguments and will easily pull one out to explain that all this is not the case after all. But you do not understand what is going on, that none of these arguments ever comes forth from me, but from the one who is conversing with me, and I know nothing more than the little matter of how to take some argument from someone wise and receive it appropriately. This is what I shall now try to test from this young man, while I myself proclaim nothing.

161b

Theodorus: You are putting that very well, Socrates. Go ahead and do as you say.

Socrates: Now, Theodorus, do you know what amazes me about your friend, Protagoras?

Theodorus: What is it?

Socrates: Well, in general I am very pleased with his statement that for each person, what seems, also is. However, I wonder why he did not say at the beginning of ‘Truth’ that pig is the measure of all things, or baboon, or some other more unusual creature that has perception, is the measure. He could then have begun to speak to us grandly and contemptuously, demonstrating that while we admired him for his wisdom, like a god, he was actually no more intelligent than a tadpole, let

alone another human being. How else can we express this, Theodorus? For if the opinions formed through perception are indeed true for each person, and no one judges a person's experience better than himself, nor is anyone superior in deciding if the opinion of another is right or wrong, but as we have said many times, each person is himself the sole judge of his own affairs, and all these opinions are right and true, what, my friend, is the status of wise Protagoras? Does he properly deserve to be the teacher of others, for huge fees, and should we, in our relative ignorance, have recourse to Protagoras when each of us is himself the measure of his own wisdom? Should we conclude that Protagoras is saying all this in a popularist vein? I am staying quiet about myself and my art of midwifery for fear of the ridicule we shall incur, as will the conduct of dialectic in its entirety. For it is a vast and vain pursuit, is it not, to undertake the scrutiny and refutation of each other's notions and opinions, if the 'Truth' of Protagoras is true and each of us is right, and this truth is not a jest uttered from the inner sanctuary of the book.

162a

Theodorus: Socrates, as you said just now, Protagoras was my friend, so I could not bear to cooperate in his refutation. Nor, however, could I oppose you, contrary to my own opinion. So involve Theaetetus once more. He seemed to be responding very appropriately just now.

Socrates: Well, Theodorus, if you were to go to Sparta, would you have the right to watch other men, some quite paltry, exercising naked in the wrestling schools and not undress yourself and expose your own form alongside theirs?

162b

Theodorus: But why ever not, if they were prepared to trust me and be persuaded by me? Just as I think that I shall persuade you now to let me watch and not drag me into the gymnasium,

stiff with age, when you can wrestle with a younger, healthier man.

Socrates: Well, Theodorus, whatever pleases you does not displease me, as the proverb says, and so we should go back again to wise Theaetetus. First, Theaetetus, tell us about what we were saying just now, and whether you are surprised at suddenly proving to be just as wise as anyone else, whether man or god. Or would you say that the Protagorean measure applies any less to gods than to humans?

162c

Theaetetus: By Zeus, I would not. And to answer your question – yes, I am very surprised. Indeed when we recounted how men argue, when they assert that whatever seems, also is, for the person who thinks so, this sounded very good to me, but now the very opposite suddenly turns out to be the case.

162d

Socrates: Well, you are young, dear boy, so you listen intently to common talk and you believe it. Indeed, Protagoras or any of his spokesmen will reply to these arguments and say, “Noble youths and elders, you sit together indulging in common talk and you bring in the gods, whose existence or non-existence I exclude from my discourses and from my writings.²¹ And you say things that the multitude would accept when they hear them, like how terrible it would be if every person differed not in wisdom from the cattle in the fields. But proof and necessity never enter your pronouncements, and you rely on likelihood.” Yet, if Theodorus, or some other geometer, decided to use this method in geometry, he would not be worth one jot. So, in such important matters as these, both you and Theodorus must consider whether you will accept arguments based on persuasiveness and likelihood.

163a

Theaetetus: No, it's not right, Socrates. You would not say so, and neither would we.

Socrates: Then it seems we should think in a different way, based on the word of yourself and Theodorus.

Theaetetus: A different way. Yes, certainly.

Socrates: So, let us consider, in this different way, whether knowledge and perception are the same or different. Indeed, our entire discussion has somehow been dealing with this question, and for the sake of this we set in train this plethora of strange topics. Is this not true?

163b

Theaetetus: Entirely so.

Socrates: Shall we agree then that whatever we perceive by seeing or hearing is also known at the same time? In the case of foreigners, before we learn their language, shall we either maintain that we do not hear them when they speak or that we hear them and know what they mean? Or again, if we look at writing with no knowledge of it, shall we assert that we do not see it or that we know it if we actually see it?

Theaetetus: Socrates, we shall say that we know this about them anyway, what we see and hear. Their form and their colour are both seen and known, while high and low pitch are heard and also known at the same time. But whatever the scribe or the linguist teaches about these, we neither perceive by seeing nor by hearing, nor do we know it.

163c

Socrates: Excellent, Theaetetus, and it is best not to argue that point with you in order that your development may continue. But look, there is another issue looming. Figure out how to keep this one at bay.

Theaetetus: What sort of issue?

163d

Socrates: Something like this. If someone were to ask, “Suppose someone comes to know something at a certain time and still retains and preserves memory of that very thing, is it possible for him not to know it when he is remembering that very thing?” It seems I am being very long-winded, when I just want to ask if someone who has learned something could be remembering it, but not know it.

Theaetetus: How could he, Socrates? What you are describing would be bizarre.

Socrates: Am I talking nonsense then? But consider this. Don’t you say seeing is perceiving, and sight is perception?

Theaetetus: I do.

163e

Socrates: And someone who has seen something has acquired knowledge of that which he has seen, according to what we said just now.

Theaetetus: Yes.

Socrates: What about this? Do you agree that there is such a thing as memory?

Theaetetus: Yes.

Socrates: And is it memory of nothing or of something?

Theaetetus: Of something surely.

Socrates: Of things one has learned or perceived. Isn’t it memory of things of this sort?

Theaetetus: What else could it be?

Socrates: Does a person, on occasion, remember what he has seen?

Theaetetus: He remembers.

Socrates: And does he forget it when his eyes are closed?

Theaetetus: What an odd thing to say, Socrates!

Socrates: Yet we must say so if we are to salvage our previous argument, otherwise it is eliminated.

164a

Theaetetus: Yes, by Zeus, that's what I suspect too. But I don't quite understand why, so you tell me.

Socrates: Well, we say that whoever is seeing comes to have knowledge of that which he is seeing, for we have agreed that sight, perception and knowledge are the same.

Theaetetus: Yes, indeed.

Socrates: And yet the person who sees, and has come to have knowledge of what he has seen, does not see it when his eyes are closed though he does remember it. Is this so?

Theaetetus: Yes.

Socrates: But 'does not see' is the same as 'does not know', if in fact 'to see' is 'to know'.

164b

Theaetetus: True.

Socrates: So, it turns out that someone who has come to know something, and still remembers it, does not know it since he does not see it. And we said it would be bizarre if this were the case.

Theaetetus: What you say is very true.

Socrates: Then an impossible conclusion appears to follow if someone says that knowledge and perception are the same.

Theaetetus: So it seems.

Socrates: So, we have to say that they are different.

Theaetetus: Very likely.

Socrates: Well in that case, whatever is knowledge? It seems we must discuss this again from the beginning. But, Theaetetus, what on earth are we trying to do?

164c

Theaetetus: What are you referring to?

Socrates: We seem to me like uncouth fighting cocks that turn away and start to crow before we have won a victory over this argument.

Theaetetus: How do you mean?

Socrates: We seem to be satisfied that we have defeated the proposition by coming to an understanding, quite argumentatively, about the similarities between words. We claim to be philosophers, not debaters, yet we behave unconsciously just like these clever fellows.

164d

Theaetetus: I still do not understand what you are saying.

Socrates: Well, I shall try to clarify my own thoughts on the matter in any case. Now, we were asking if someone who has learned something and is remembering it could fail to know it, and we took the example of a person who has seen something and closed his eyes and is remembering it. We demonstrated that he does not know, and at the same time is remembering, and we said that that is impossible. And so, the Protagorean story met its downfall, and yours too – your statement that knowledge and perception are the same.

Theaetetus: So it appears.

164e

Socrates: My friend, I believe this would never have happened if the father of that other proposal were alive, since he would have defended it in all sorts of ways. But now we are mistreating

his orphan, and even the trustees left by Protagoras have no desire to help it, Theodorus here being one of them. Well then, for the sake of justice, we ourselves must come to its aid.

165a

Theodorus: Yes, Socrates, since I was not Protagoras' trustee. That was Callias, the son of Hipponicus.²² I somehow turned quickly away from pure discourse and inclined towards geometry, though I would be grateful to you if you came to his aid.

Socrates: Well spoken, Theodorus. Now consider the aid I shall proffer. For we could agree to even stranger things than before if, in our usual fashion, we do not pay attention to what we are saying in our affirmations and denials. Shall I explain this to you or to Theaetetus?

165b

Theodorus: No, explain it to the company. But let the younger man respond to you since he will be less shamed if he goes wrong.

Socrates: Let me then put the most formidable question, that goes something like this: Is it possible for the same person to know something and not know the thing that he knows?

Theodorus: Well, what answer shall we give, Theaetetus?

Theaetetus: Presumably it is impossible, in my opinion anyway.

Socrates: Not if you propose that seeing is the same as knowing. For how will you respond to the inescapable question that, as they say, traps you in a well shaft, when some audacious fellow puts his hand over one of your eyes and asks if you can see his cloak with that covered eye?

165c

Theaetetus: I think I would say that I cannot see it with that eye, but I can see it with the other one.

Socrates: So, do you both see and not see the same thing at the same time?

Theaetetus: Yes, in the way we have described it anyway.

Socrates: “That is not the question I put to you,” he will say. “I was asking if you do not know the thing that you know, regardless of how this occurs. What is not seen now turns out to be seen, yet you happen to have agreed that seeing is knowing, and not seeing is not knowing. Now work out the conclusion from all this.”

165d

Theaetetus: I am coming to conclusions contrary to what I was proposing before.

Socrates: Yes, my friend, and perhaps you would have had more experiences like this, if someone had gone on to ask you if it is possible to know accurately and dimly, or to know from close up but not from afar, or know the same thing thoroughly and vaguely. There are lots of other questions that a combative professional debater, lying in wait, would ask you, once you propose that knowledge and perception are the same. He would go on to attack hearing and smelling and all such perceptions, and would keep refuting you relentlessly until you were in awe of his enviable wisdom and totally entangled by him. And once he had overpowered you and tied you up, you would be released for a ransom amount that you both agreed upon. Perhaps you may ask what argument Protagoras will now proffer in defence of his own proposition. Shall we try to state it?

165e

Theaetetus: Yes, certainly.

166a

Socrates: Well, no doubt he will say all the things we say in his defence, and I believe he will also engage in dispute, despising us and saying:

“This Socrates, the simpleton! He tries to argue that I am the one who is ridiculous, because some little boy is frightened when Socrates asks him if the same person can remember something and not know it at the same time, and the boy, out of fear, says no because he cannot foresee the consequences. But the position is as follows, O idle Socrates! Whenever you investigate any of my propositions through questioning, then I am refuted only if the person questioned is defeated while answering exactly as I would answer. But if he answers in another way, it is the actual person questioned who is refuted.

“In this instance, do you think anyone will agree that someone’s present memory of things that he experienced is anything like the experience he was having at the time, and is no longer experiencing? Far from it. Or again, would anyone be reluctant to agree that the same person can both know and not know the same thing? Or even, if he was afraid of that proposition, would he ever concede that someone who is becoming unlike is the same as he was before becoming unlike? Indeed, if he must be on the lookout for the verbal traps that we each lay, will he ever agree there is a single person, and not a number of persons, and that these become unlimited, as long as the process of becoming unlike actually continues.

“Dear fellow,” he will say, “come to terms generously with what I actually propose, and prove if you can that private perceptions are not arising for each of us, or that if the perceptions that arise are private, what appears is not something that especially arises only for that person, or ‘is’ for that person, if we must use the word ‘is’.

“Now when you refer to pigs and baboons, you not only act like a pig yourself, but you persuade your hearers to treat my writings as you do, which is most improper.

“Indeed, I assert that what I have written is the truth, that each of us is indeed the measure of things that are and are not. However, there are countless differences between one person and another in this respect, because to one person certain things are and appear, while to another other things are and appear. I am far from denying that there is wisdom or a wise man, but the particular man whom I call wise is one who brings about change, and will make things appear and be good to us, when they both appear, and are, bad. And again, do not go chasing after this argument based on how I have expressed it, but note this clarification of what I mean. Recall how this was expressed in the earlier conversation, that to a sick man whatever he eats appears sour and is sour, while the opposite appears to be the case, and is the case, for a healthy man. Now, we should not portray one as wiser than the other, nor could we. Neither should we allege that the infirm man is ignorant because he holds such opinions, nor that the healthy man is wise because his views are different. No, one condition should be changed to the other because the other is better. And in education too, we should effect just such a change from one particular condition to a better one. And while the doctor effects the change with medicine, the sophist does it with his words. Indeed, no one ever made a man hold true opinions who previously held false opinions, for it is not possible either to think of things that are not, or of anything outside of what is experienced, and these are always true. I believe rather that in a degenerate condition of the soul he holds opinions appropriate to that condition, while in a sound

condition of the soul he is made to hold opinions of a different sort – a set of appearances that some naively refer to as true. However, I say that one set is better than the other, but not any truer.

“My dear Socrates, I am far from referring to the wise as tadpoles, but when it comes to the body I call them doctors, and when it comes to plants I call them farmers. Indeed, I say that these farmers engender sound, healthy and true perceptions in the plants whenever they are sick, in place of the degenerate perceptions, while the good and wise orators make whatever is beneficial rather than degenerate seem right to cities. Now, whatever seems right to each city is good and right for that city, as long as it is believed. But the wise man makes whatever is beneficial rather than degenerate seem right and be right for them, in each case. And on the same basis, the sophist is wise, and worth his large fees, as he too can educate pupils in this manner. And this is how some people are wiser than others while no one holds a false opinion, and you must put up with being a measure, whether you like it or not, as the salvation of this argument lies in these assertions.

“Now, if you intend to contradict it all over again, conduct your disputation by presenting a complete argument. Or if you prefer to use questions, then use questions, for we should not avoid that method either. Indeed an intelligent person should follow that approach rather than any other.

“However, heed the precept that your questioning be not unjust, as it is very unreasonable that a man who says that he cares about excellence should constantly pursue an unfair line of argument. Now, it is unfair in this context for someone to carry on this business without distinguishing between

disputation and dialogue. In disputation he may play and trip up his opponent as often as he can, but in dialectic he should be serious and also set his partner back on his feet, pointing out to him only those pitfalls into which he has been misled by himself or his former acquaintances. Once you act in this way, whoever spends time with you will blame themselves for their confusion and perplexity, and not you. And they will follow you and love you, and will hate themselves and flee from themselves into philosophy, so that they may become different people and be freed from what they were before. But if you do the opposite, as do most people, the consequences will be opposite, and instead of philosophers you will produce followers who hate the subject once they become older.

“Now if you listen to me, as I said before, you will settle down, without impatience and aggression but with a gracious mind, and really consider what precisely we mean when we proclaim that everything is motion, and that for each person, or city, whatever seems, also is. And based on this, you will reflect on whether knowledge and perception are the same or different, but not as you did just now, on the basis of familiar expressions and terminology that many people employ, in whatever manner occurs to them, causing endless confusion to one another.” Theodorus, this is the best I can do from my slender resources to offer assistance to your friend, but if the man himself were alive he would have defended his offspring more expansively.

168c

Theodorus: You are joking, Socrates. You have defended the man most vigorously.

168d

Socrates: It is nice of you to say so, my friend. But tell me, did you note what Protagoras was saying just now when he

reproached us for directing our arguments against a little child and using childish fear in refuting his views? He accused us of mere cleverness, extolled ‘the measure of all things’, and urged us to be serious about his argument.

Theodorus: How could I fail to notice that point, Socrates?

Socrates: In that case, do you think we should heed his injunction?

Theodorus: I certainly do.

Socrates: You see then that all the people here, except you, are small children. So if we are going to obey the man, you and I must be serious about this argument, as we ask and answer one another. Then at least we shall not be accused of boyish sport as we reconsider the argument.

168e

Theodorus: What? Surely Theaetetus could follow the scrutiny of an argument better than many a man with a long beard?

Socrates: Not better than you however, Theodorus. So do not presume that I should make every effort to defend your deceased companion while you do nothing. Come now, my friend, follow me for a while, at least until we establish whether it turns out that you are the measure when it comes to diagrams, or whether everyone is just like you, and sufficient unto themselves in astronomy and those other subjects in which you are indeed said to excel.

169a

Theodorus: Socrates, it is not easy for someone to avoid entering into an argument when they are sitting beside you, and I spoke nonsense just now, saying that you would not force me to undress and wrestle as the Spartans do, but would leave the decision up to me. No, you are inclined to the trickery of Sciron!²³ Indeed, the Spartans ask you to undress or go away, but you behave more like Antaeus, for once someone draws

near you won't let him go until you have undressed him and forced him into a verbal wrestling match.²⁴

169b

Socrates: Theodorus, you have presented an excellent image for the malady that afflicts me. However, I am even more stubborn than the characters you mention. Many a Heracles and Theseus have crossed my path, powerful speakers who have taken me apart, but I shall never back down at all, such is the awful passion for these exercises that has gripped me. So do not refuse to enter the ring with me, as you will benefit yourself as well as me.

169c

Theodorus: I have no argument against this, so lead me wherever you wish. I must fully accept the destiny you decree in these matters, and submit to being cross-examined. However, I shall not be able to surrender myself to you beyond what you are proposing.

Socrates: Well, that is far enough. Now, there is one thing you must help me to guard against. We should not slip into a childish form of discussion and be reproached again for this.

169d

Theodorus: Well, I shall do the best I can.

Socrates: In that case, let us take this up again at the same point as before, and see if we were right or wrong to find fault in and criticise this proposition because it made each person self-sufficient in intelligence, and made Protagoras concede to us that, in matters of better and worse, some excel over others, and these are, in fact, wise. Isn't this where we were?

Theodorus: Yes.

Socrates: Now, if Protagoras himself were actually present and had agreed, and we had not made this concession on his behalf in order to help him, there would be no need to seek certainty

by resuming the discussion. But now, perhaps, someone will suggest that we lack authority to agree on his behalf, and that it would be better to agree this particular point fully with greater clarity, because whether or not this is the case is no small matter.

169e

Theodorus: What you say is true.

Socrates: Then let us get this agreement as concisely as possible from his own argument rather than anything else.

170a

Theodorus: How?

Socrates: As follows. He says, I believe, that whatever seems also is, for the person to whom it seems.

Theodorus: Yes, he does say that.

Socrates: So then, Protagoras, we too are describing the opinions of a man, in fact of all men, and we declare that there is no one who does not believe himself wiser than others in some respects, while others are wiser in other respects. Indeed, in the greatest dangers, whether in battle or disease or storms at sea, they will regard those in authority as gods, who are expected to act as saviours, though their superiority lies in knowledge and in nothing else. And the entire human race is full of people in search of teachers and leaders for themselves, for other creatures, and for their activities, while others think themselves capable of teaching and leading. Now, in all these cases, what else can we say except that the people themselves believe that there is wisdom and ignorance among them?

170b

Theodorus: Nothing else.

Socrates: Don't they believe that wisdom is true thought, while ignorance is false opinion?

170c

Theodorus: Of course.

Socrates: So what will become of the proposition, Protagoras? Should we say that people always think what is true, or do they sometimes think what is true and at other times what is false? Indeed, it seems to follow from either option that people do not always think what is true. Rather, they think both. Consider this, Theodorus. Would you yourself, or any follower of Protagoras, be prepared to contend that no one ever believes that someone else is ignorant and thinks falsely?

Theodorus: No one would accept that, Socrates.

170d

Socrates: And yet this is where the proposition inevitably leads, the proposition which states that man is the measure of all things.

Theodorus: How so?

Socrates: Whenever you have formed a judgement by yourself, and you present an opinion to me about something, we should say that this opinion is true for you, based upon Protagoras' proposition. But don't the rest of us become judges of your judgement? Or do we decide that you always form true opinions? Or do thousands who hold different views oppose you every time, in the belief that your thought and judgement is false?

170e

Theodorus: They do indeed, by Zeus, Socrates – thousands, and more, as Homer says,²⁵ who inflict all the troubles of mankind upon me.

Socrates: What then? Do you like us to say that in this case, you are forming opinions that are true for you, but false for thousands?

Theodorus: It seems that this must follow from the proposition.

Socrates: And what about Protagoras himself? Mustn't it follow that if he himself did not believe that man was the measure, nor did the world in general – which, in fact, it does not – this truth that the man has written down would be true for no one? However, if he believed it himself but the majority did not agree, note firstly that insofar as more people disagree than agree, to that extent it is more not so than so.

171a

Theodorus: It must, if it is to be so, and not so, based upon individual opinion.

Socrates: Secondly – and this is the cleverest aspect – since Protagoras agrees that everyone thinks things that are, presumably he accepts as true the thinking of those who hold a view contrary to his own thinking, and they think that Protagoras is speaking falsely.

Theodorus: Yes, certainly.

171b

Socrates: Wouldn't he be accepting that his own thinking is false, if he agrees that the thinking of those who believe him to be speaking falsely, is true?

Theodorus: He must.

Socrates: And yet the opponents do not accept that they themselves are speaking falsely.

Theodorus: No, they do not.

Socrates: While Protagoras again agrees that this opinion is true on the basis of what he has written.

Theodorus: So it appears.

171c

Socrates: Then it will be disputed by everyone, beginning with Protagoras, who adds his own agreement whenever he concedes that someone who says the very opposite is forming a true

opinion. In that case, Protagoras himself will be accepting that neither a dog, nor any random person, is the measure of anything which he has not learned. Isn't this so?

Theodorus: It is so.

Socrates: Well, since it is disputed by everyone, the 'Truth of Protagoras' would be true for no one, neither for the man himself nor for anyone else.

Theodorus: We are running my old friend too hard, Socrates!

Socrates: But it is not actually clear whether we are running along the right course. Now, it is quite likely that the man is wiser than we, since he is older. And if he suddenly popped his head up from below, as far as the neck, he would expose me as talking a lot of nonsense – yes, that is likely; you too for agreeing with me – and then he would dive back down, disappear and be gone. However, I think that we must accept ourselves just as we are, and always state how things seem to us. Accordingly, shouldn't we declare that any person at all will probably agree that some men are wiser than others, and some are more ignorant than others?

171d

Theodorus: Well, I think so anyway.

Socrates: Yes. The best way to establish the argument is by means of the addition we made as we defended Protagoras. We said that in most cases, such as hot, dry, sweet, and any matters of that sort, as it seems to each, so it also is for each. However, if the argument is somehow to concede that one person excels over another in some matters, it will prefer to state that when it comes to health and disease, it is not every woman, child or beast who is competent to cure itself and realise what is healthy for itself, but in these cases, if any, one person does excel over another.

171e

Theodorus: That is how it seems to me, anyway.

Socrates: However, in civic affairs, concerning what is noble and disgraceful, just and unjust, sacred and profane, whatever each city believes and designates as lawful for itself is, in truth, lawful for that city. And in these matters, no citizen is wiser than another citizen, nor is any city wiser than another city. But when it comes to deciding what is advantageous or disadvantageous for itself, in these cases, if at all, the argument will accept that one adviser is superior to another, and the opinion of one city is in truth better than that of another, and would never dare to propose that whatever a city believes to be to its own advantage, and designates as such, will certainly turn out that way. But in the cases I referred to before, just and unjust, sacred and profane, people wish to insist that there is not one of them which by nature has an existence of its own. Instead, they say that whatever seems so to the people becomes true at the time that it seems so, and for as long as it seems so. And even people who do not entirely hold to Protagoras' argument somehow regard this formulation as wisdom. Argument after argument is descending upon us, Theodorus, and larger is emerging from smaller.

172c

Theodorus: But haven't we plenty of free time, Socrates?

Socrates: It appears that we do, yes. And I have often reflected, my blessed friend, at one time or another, and indeed just now, that those who spend a lot of time in philosophic pursuits naturally prove to be amusing speakers if they end up in courts of law.

Theodorus: What do you mean by that?

Socrates: Those who have been hanging around law courts and such places from their younger years will surely seem like slaves rather than free-born men when compared to those

brought up in philosophy and kindred pursuits.

172d

Theodorus: But in what way?

Socrates: In the sense that the philosophers have the free time, which you mentioned, and they hold their discussions peacefully and in their own time, just as we are doing now, taking up argument after argument. Indeed, we are already on our third. They can do exactly the same as us if a new topic interests them more than the current one, and they will not care at all whether the discussion be long or short, if only they may encounter what is.

But the other sort always speak under pressure of time, from the water that flows from the clock,²⁶ and they are not allowed to make speeches on matters close to their hearts. Their opponent stands over them, armed with compulsion and a written document that deals with every issue, from which they cannot depart. Their words are always about a fellow slave, addressed to a master who sits with some charge in his hands, and their disputes are not of a general nature, but the issue is always personal, and his life is often at stake. And in consequence of all this they become intense and shrewd, knowing how to flatter their master in words and beguile him in deed, but their souls become small and warped.

Slavishness from youth upwards has removed their growth, uprightness and freedom, and forced them into crooked ways, casting huge perils and trepidations on their still tender souls, which they are unable to bear with justice and truth. They turn directly to falsehood and mutual injustice, and are utterly bowed down and confined. The result is that they turn out as men who from childhood upwards are devoid

of health of mind, though they believe that they have become clever and wise. So that is the sort of men they are, Theodorus. But what do you want to say about men of our sort? Do you want us to describe them, or leave the matter and return again to the argument in case we very much abuse this freedom in switching between topics that we referred to just now?

173c

Theodorus: Certainly not, Socrates. I want us to describe them! Indeed, you expressed this very well. We who move in such circles are not servants to these arguments, but our arguments are just like our servants, and each of them must wait to be concluded whenever we see fit. Nor, in fact, is there any jury or audience evaluating or dominating us, as if we were playwrights.

Socrates: Well, since that is your view, it seems we should talk about the best of them, for what could anyone say about the mediocre exemplars of philosophy anyway? But the best of them, from their early years, do not even know the way to the Agora, nor the whereabouts of the law courts or the Council Chamber or any other public meeting place in the city. They neither hear the edicts being proclaimed nor look at the laws when they are written. They would not even dream of involvement with political parties struggling for power, alliances, banquets or revelling with flute-girls. Whether someone in the city is high-born or low-born, or there is some problem with their ancestry, male or female, concerns him no more than the number of pints in the ocean, as they say. Indeed, he does not even know that he does not know about these matters, for he does not avoid them for the sake of reputation, but in truth it is only his body that is situated in the city as a visitor, while his mind regards all this as small and insignificant, despises it and takes flight, as Pindar says, “above the heavens

and beneath the earth”, measuring the earth’s vast surfaces, studying the stars, and searching out in every way the complete nature of each whole among the things that are, never lowering itself to anything that is near at hand.

174a

Theodorus: What do you mean by this, Socrates?

Socrates: One example, Theodorus, is the case of Thales,²⁷ who fell into a well as he was gazing up at the stars, and some clever and witty Thracian maidservant mocked him, saying that he was so eager to know what was in the sky that he forgot about what was right there under his feet. Now, the same gibe will apply to everyone whose life is spent in philosophy. Indeed, such a person will actually be unaware of his next-door neighbour, not only of what the man does, but even whether he is human at all, or some other creature. What precisely man is, and what action or response is appropriate to human nature and distinguishes man from other creatures? This is his search, and these are the questions he is at pains to answer. I presume you understand now, Theodorus. Do you?

174b

Theodorus: I do indeed, and what you are saying is true.

174c

Socrates: Therefore, my friend, such a person will provide amusement not only to Thracian girls but to the world in general, when he meets someone privately or in public, as I said in the beginning, and is compelled to discuss matters under his feet or before his eyes, in a courtroom or anywhere else. Through inexperience he falls into wells, and all manner of perplexity, and his clumsiness is terrible, giving rise to a reputation for silliness. Of course when it comes to slander, he has nothing special to say against anyone since he does not know anything bad about anyone, having never been interested in such matters, and being at a loss he becomes a

figure of fun. When he hears the praises and the proud boasts of others, he is conspicuous for his unfeigned, genuine laughter that makes him seem ridiculous. And, indeed, when a tyrant or king is being praised, he believes he is hearing one of the stock-keepers, such as a swineherd or shepherd or some dairyman, being congratulated on a high milk yield, and he thinks that the rulers tend and exploit a more difficult and treacherous creature than the stock-keepers, and that his own busyness renders a king as uncouth and ill-educated within his city walls as any shepherd in a mountain enclosure.

Whenever the philosopher hears that someone has acquired an astonishing amount of land, as he has acquired thousands of acres or even more, he thinks it but a trifle, as he is accustomed to viewing the earth in its entirety. And when they sing the praises of families, as though someone is a nobleman if they have seven wealthy grandfathers to their credit, he thinks that the speaker is utterly dim, and partial in his view, as his lack of education renders him unable to see the universal, or to figure out that each person has had countless thousands of grandfathers and ancestors. Among them, in every case, there were often rich and poor, kings and slaves, non-Greeks and Greeks, in their thousands. So boasting about a list of twenty-five ancestors stretching back to Heracles, the son of Amphitryon, appears remarkably small-minded to him, and he laughs because they cannot banish petty vanity from their unthinking soul by working out that the twenty-fifth descendant of Amphitryon was such a man as fate decreed he should be, and the fiftieth will be so too.

Now, in all these cases the philosopher will be derided by the world, partly because he seems to be above it all, and partly

due to his ignorance and perplexity in the particulars of daily life.

175b

Theodorus: You are describing the situation very comprehensively, Socrates.

Socrates: However, my friend, the philosopher may sometimes draw someone upwards, and the person may wish, through him, to go beyond “What injustice have I done to you, or you to me?”, in favour of examining justice and injustice themselves, what each is in itself, and what distinguishes them from all else and from one another. Or he may go beyond “Is the king happy?”, “Is a wealthy man happy?”, and enquire into kingship and human happiness and misery in general, and what sort of states they both are, and the manner in which it is appropriate for a human being to acquire the one and avoid the other. Now, when that shrewd and litigious little soul must in turn give an account of all these matters, then the situation is again reversed. He is dizzy and suspended from on high. Looking down from the sky above, he is both troubled and perplexed by the strange experience. And his stammering provides no amusement to the girls from Thrace or any uneducated folk, since they are unaware of his plight. No, he amuses all who have been brought up, not in the manner of slaves, but the exact opposite.

There they are, Theodorus, the dispositions of the two types of men. One has been truly brought up in freedom and leisure, and you obviously call him a philosopher, to whom it is no disgrace to seem simple-minded and of no account when he encounters the menial tasks of a slave, and does not know how to tidy up bedclothes or make flavoursome food or a flattering speech. The other type can render all such services

efficiently and promptly, but knows not how to dress like a free man or take the harmony of discourse, and sing the praises of the life of the gods or of blessed men.

176a

Theodorus: Socrates, if you were to persuade everyone with your words, as you have persuaded me, there would be more peace and less trouble among men.

Socrates: But evils cannot be eradicated, Theodorus, for there must always be something in opposition to the good. Neither can they be situated among the gods, but they must haunt the mortal nature and prowl about the earth. So we should endeavour to flee from here to there as quickly as we can, and to flee is to be as like unto God as we can, and to be like God is to become just and holy with the help of wisdom. However, my friend, it is not very easy to convince people that the reasons we should be pursuing excellence and avoiding vice are not the reasons the world gives – namely, that we should practise the one and avoid the other so that we are reputed to be good men and not bad. This actually sounds to me like the idle talk of old women, as they say. So, we should speak the truth, which is that God is not unjust in any way whatsoever, but is as just as it is possible to be, and there is no one more like unto God than the person among us who has, in turn, become as just as possible. And therein lies the true measure of a man's accomplishment, and indeed his worthlessness and inhumanity, for knowledge of this is wisdom and true excellence, while ignorance of this is folly and manifest vice. Any other seeming accomplishment or wisdom is vulgar in the case of political sovereignty, and commonplace when it comes to the other arts. Therefore, it is best by far not to concede to an evildoer, or one whose words or deeds are unholy, that his roguery is an accomplishment, for they delight in that reproach and fancy they are hearing not that they are ridiculous burdens to the earth, but men well

fitted for survival in the city. So the truth must be spoken, that they are the sort of people they believe they are not, and all the more so because they do not believe so. Indeed, they are ignorant of the penalty for injustice, which is the last thing they should be ignorant of. For the penalty is not what they think it is, scourging or execution, which offenders sometimes avoid suffering. No, this is a penalty that cannot be avoided.

176e

Theodorus: What penalty do you mean?

Socrates: There are two patterns established in what is – one of divine blessedness, the other of godless wretchedness – but they do not see that this is how things are. So, through their foolishness and utter mindlessness, they fail to realise that because of unjust actions they are becoming like one pattern and unlike the other. So their lives are like the pattern they resemble, and that is the penalty they pay. But if we should tell them that unless they set aside their accomplishment, the place that is pure of evils will not receive them when they die – but they will continue in their own pattern of living, evil men among their own kind – they will listen to us as though we were mindless folk addressing clever rogues.

177a

Theodorus: They certainly will, Socrates!

177b

Socrates: Yes, my friend, I know. However, there is one thing that happens to them in private whenever they must present an argument, and accept one in return, about the matters they disparage, and are prepared to persist manfully for an extended duration without running away like cowards. Strangely, my dear friend, they end up dissatisfied with what they themselves are saying, and their eloquence somehow dries up, so that they seem no different from children. Now, let us call a halt, since this is really a digression. Otherwise, the continued influx of

issues will overwhelm our initial discussion. So if you agree, let's return to the previous topic.

177c

Theodorus: A digression like this makes quite pleasant listening for me, Socrates, since it is easier to follow at my age. However, let us go back to the other discussion again if you think fit.

Socrates: Well, I believe we were at a point in the discussion at which we said that the people who declare that being is in motion – and that whatever seems is for the person to whom it seems – are in general prepared to assert this confidently. And especially in the case of justice, they state most emphatically that whatever a city regards as just, and decrees to be just, is just for that city for as long as the decree remains in force. However, when it comes to what's good, there is no one so heroic that he would also dare to contend that whatever a city believes to be beneficial for itself, and decrees to be so, is actually beneficial for as long as the decree stands, unless he is referring to the mere name. But that would be making a joke of our discussion, wouldn't it?

177d

Theodorus: It surely would.

177e

Socrates: Yes, he should not refer to the mere name, but should consider the thing that is being named.

Theodorus: Of course.

Socrates: But whatever name it is given, a city surely legislates and enacts all the laws with the aim of maximising the benefit to itself, according to its understanding and ability. Or does it look to some other factor when it legislates?

Theodorus: Not at all.

178a

Socrates: Now, does each city always succeed, or do they also frequently miss the mark?

Theodorus: Well, I think they also miss the mark.

Socrates: Then again, anyone at all might accept these same points more readily if someone were to ask about the entire kind to which benefit also belongs, and that, I believe, involves future time. For whenever we legislate, we enact laws that will be beneficial in time to come, and this we would properly designate as ‘future’.

Theodorus: Yes, certainly.

178b

Socrates: Come on. Let us question Protagoras in this way, or anyone who says the same thing he says. “You say, Protagoras, that man is the measure of everything, including white, heavy, light, and everything like that, without exception. For having the criterion of these within himself as he experiences them, so he thinks they are, and what he thinks is true for him, and is so for him. Isn’t this so?”

Theodorus: Just so.

Socrates: “And what about future events, Protagoras? Shall we say that he has the criterion of these within himself, and that as he thinks they will be, so they also turn out for the person who thinks so? In the case of heat, suppose a layman thinks he is about to get a fever and will have a temperature, while his doctor thinks the opposite. Which opinion should we say that the future will confirm? Or will it confirm both, and for the doctor neither temperature nor fever will arise in the man, while for the man himself there will be both?”

178c

Theodorus: That would be ridiculous.

Socrates: “Yes, and I think that the farmer’s opinion about wine, rather than the lute-player’s, is superior regarding the sweetness or bitterness of the future product.”

178d

Theodorus: Of course.

Socrates: “Nor again would the trainer judge better than the musician about what will be discordant or melodious, and what will seem to be melodious even to the trainer himself when he hears it.”

Theodorus: Not at all.

Socrates: “Or suppose that a meal is being prepared. The judgement of a waiting guest with no knowledge of cookery is inferior to the judgement of the cook about how pleasant the meal will be. So, let us not dispute about present pleasure or past pleasure for each person at this stage in the discussion. Let us discuss the future, and whether the person himself is the best judge of how things will seem, and what will be, and whether you, Protagoras, could at any rate anticipate better than any amateur, what speeches would be persuasive to any of us in a courtroom?”

178e

Theodorus: And, indeed, Socrates, he professed quite strongly to be better than anyone in that respect anyway.

179a

Socrates: Yes, by Zeus, dear friend, otherwise no one would have paid vast sums of money to talk to him. He must have persuaded them that no prophet, or anyone else, could judge better than himself how things will be in the future, and how they will seem.

Theodorus: Very true.

Socrates: Well, are legislation and benefit both concerned with the future? And would everyone agree that when a city

legislates it must frequently fall short of obtaining the greatest possible benefit?

Theodorus: Yes, indeed.

179b

Socrates: So, I think it would be reasonable for us to put it to your teacher that he must agree that one person is wiser than another, and that such a person is the measure, while I, in my ignorance, must not become the measure of anything at all, though the argument, entered on his behalf just now, compelled me to be a measure whether I wanted to or not.

Theodorus: I think his argument, Socrates, is defeated convincingly by that, and it is also defeated by giving authority to the opinions of others, opinions which state that, in their view, Protagoras' argument is not true at all.

179c

Socrates: An argument like this, Theodorus, that every opinion of every person is true, could be disproved in many other ways. But it is harder to grasp the untruth of the immediate experience of each person, from which perceptions and opinions about it arise. But perhaps I am talking nonsense and these cannot actually be challenged, and those who say that perceptions are self-evident and constitute knowledge may be describing the way things are, and Theaetetus here was not far wide of the mark in proposing that knowledge and perception are the same. So we should get closer and inspect this moving being, as Protagoras' proxy argument directs us, and tap it and test whether it rings hollow or true. Anyway, it is no minor dispute that has arisen over this, and there are quite a few participants.

179d

Theodorus: Yes, it is far from being minor. In fact, it is spreading all over Ionia, as the followers of Heraclitus lead the chorus for this argument most vigorously.

179e

Socrates: Well, in that case, dear Theodorus, we should consider it all the more from its very origin, just as they themselves present it.

Theodorus: Entirely so, Socrates. And in fact you could no more conduct a discussion on these Heraclitean doctrines, or the Homeric or more ancient ones you mention, with any of the Ephesians²⁸ who profess to be experts, than you could with madmen. Indeed, they simply keep moving as their doctrines say they should, while staying with a proposition or question, and quietly asking and answering in turn means less than nothing to them. Well, ‘less than nothing’ is an exaggeration, but there is no rest whatsoever in these men. Rather, if someone asks a question, they pull out enigmatic aphorisms like arrows from a quiver and shoot them off, and if you seek an explanation of something they have said, you get struck with a new piece of wordplay. You will never make any progress with any of them, nor do they get anywhere with one another, but they are very careful not to permit anything certain in an argument, or in their own souls, believing, I presume, that this is fixity, their worst enemy, which they try as best they can to banish from the world.

180b

Socrates: Perhaps, Theodorus, you have seen these men when they are being combative, and have not associated with them when they are at peace. Indeed, they are no friends of yours! But I think they do impart such matters, at leisure, to the pupils whom they want to make like themselves.

Theodorus: By heavens, what pupils? One of these fellows does not become the pupil of another. No, they grow up as they will and each of them takes inspiration from anywhere at all, and one man thinks that the other man knows nothing. As I was about to say, you would never get a rational account from these

people, either willingly or under compulsion. Instead, we must investigate the question ourselves as if we were taking on a mathematical problem.

180c

Socrates: Well, that sounds reasonable at any rate. Haven't we taken on the problem from the ancients, who used poetry to conceal from the multitude that the origin of everything else is Oceanus and Tethys, which are streams, and that nothing is fixed? Don't we have it from the moderns, who, being wiser, put on a more open display so that even cobblers pick up the wisdom of these men and give up their silly belief that some things are at rest while others are in motion, learn that everything is in motion, and come to respect these teachers? But, Theodorus, I had almost forgotten that others, for their part, proclaim opposite views to these. "All should only be called unmoving", they say. And there is much else that the opponents of these doctrines say, when, like Melissus²⁹ and Parmenides, they assert that all is one, established within itself with no place to move in. So what are we to make of all this, my friend? For moving forward, little by little, we have unwittingly ended up between the two sides, and if we do not defend ourselves and escape, we shall pay for it, like men playing in the wrestling ground who are caught by both sides and dragged in opposite directions across the line. Now, I think we should consider the people we began with, the men of flux, and if they appear to be talking sense, we shall help them to drag us to their side and try to escape the others. However, if the words of those who say that all is at rest sound truer, we shall fly to them, away from the men who move the unmoving. But if they both appear to be unreasonable, we shall be amusing in our belief that we common folk have something to say, when we have spurned the ancients and the utterly wise men. Well, Theodorus, do you think it is better to keep going in the face of such a danger?

181b

Theodorus: It would be quite unacceptable, Socrates, not to investigate what each of these groups is saying.

Socrates: Let us investigate it since you are so enthusiastic. Now, I think that our investigation of motion starts by considering the sort of thing people actually mean when they say that all things are in motion. I want to ask whether they mean there is one form of motion, or, as it appears to me, two forms. But this should not be my opinion alone. You should join in too, so that whatever the outcome, we go through the process together. So tell me, when something changes from one location to another or when it revolves in the same place, do you call that motion?

181c

Theodorus: I do, indeed.

Socrates: Then let that be one form of motion. But whenever something remains in the same place, yet grows old or goes from white to black or soft to hard or undergoes some other alteration, doesn't that deserve to be called another form of motion?

181d

Theodorus: I think so.

Socrates: So I am saying that there are two forms of motion – alteration and transposition.

Theodorus: And what you say is correct.

Socrates: So, having divided motion in this way, let us now engage in discussion with those who say that all things are in motion, and ask them whether everything exhibits both forms of motion, transposition and alteration, or do some things exhibit both, while some exhibit only one?

181e

Theodorus: By Zeus, I really cannot say, but I believe they would reply that everything exhibits both.

Socrates: Yes, my friend, otherwise for them everything will turn out to be both moving and at rest, and it will be no more correct to say that all things are moving than all things are at rest.

Theodorus: What you say is perfectly true.

182a

Socrates: Well then, since they must be in motion, and absence of movement is not possible for anything, everything is continually exhibiting every kind of motion.

Theodorus: It must be so.

Socrates: Now consider the following aspect of their proposition with me. Didn't we say that they propose something like this about the origin of heat and whiteness and the like, that each of these is moving, along with perception, between the active and the passive, and that the passive becomes a perceiver, but not perception, while the active becomes something with a certain quality, but does not become a quality? But perhaps 'quality' seems like a strange term that you do not understand from common usage,³⁰ so listen to a few examples. Indeed, the active element does not become heat or whiteness, but hot or white, and the same applies to all else. For I presume you recall what we said before, that nothing just by itself is one, neither an active nor a passive, but from the mutual association of both of them, perceptions and perceptible things are brought to birth, and the active become things with qualities while the passive become perceivers.

182b

Theodorus: I remember. How could I forget?

182c

Socrates: So let us set aside whatever else they say, whether it accords with this or not, attend only to this one topic of our discussion and ask them, “Do you say that all things are in motion and flux? Is this so?”

Theodorus: Yes.

Socrates: Now are they moving with both motions, which we defined as transposition and alteration?

Theodorus: They must be, if they are to be completely in motion.

Socrates: And if they were only transposed, and not altered, I presume we would be able to say what sort of things are being transposed in flux, or is this how we should refer to it?

Theodorus: Yes, this way.

182d

Socrates: But since this is not stable either, the flux does not flow white, but changes so that there is also flux of this very whiteness, and it transforms into another colour lest it be convicted of being stable in this respect. So how can we ever refer to a colour and call it by its proper name?

Theodorus: Yes, how can we do it, Socrates? Or how can we refer to anything else of that kind, if in fact it is constantly slipping away as we are speaking because it is in flux?

182e

Socrates: But what if we ask about any perception at all, like that of seeing or hearing? Does it ever remain stable as just seeing, or just hearing?

Theodorus: No, it must not, if in fact all things are in motion.

Socrates: So it should no more be referred to as seeing than as not seeing, nor should any other perception be called perception rather than non-perception, if all things are in every

kind of motion.

Theodorus: No, it should not.

Socrates: And yet, Theaetetus and I have stated that perception is actually knowledge.

Theodorus: Yes, that is what you said.

Socrates: So, when we were asked what knowledge is, we gave an answer that is no more knowledge than not knowledge.

Theodorus: It seems so.

183a

Socrates: The correction to the answer may turn out well for us who were so keen to show that all things are in motion, so that our original answer would prove to be correct. But now it seems to be the case that if all things are in motion, every answer that anyone gives on any subject is equally correct, whether it proclaims ‘this is so’ or ‘this is not so’, or if you prefer, we could say ‘becomes so’, in case we stabilise these fellows with the word ‘is’.

Theodorus: What you say is correct.

Socrates: Yes, Theodorus, except that I said ‘so’ and ‘not so’. But the word ‘so’ should not be uttered, for what is ‘so’ is no longer in motion, nor again should we say ‘not so’, for it is not in motion either. Instead, those who propose this doctrine must establish some other language, since they do not currently have words appropriate to their hypothesis, unless perhaps ‘not even thus’, an indefinite phrase, would best suit their purposes.

183b

Theodorus: Yes, that might well be the most appropriate language for them.

Socrates: Well then, Theodorus, we have freed ourselves from your friend and do not yet agree with him that every man is the

measure of all things, unless the man has understanding. And we shall not concede that knowledge is perception, not on the basis of the 'all things are in motion' approach anyway, unless Theaetetus here has another way of expressing it.

183c

Theodorus: I am glad you said that, Socrates, for with these issues concluded I too am freed from answering your questions, as we agreed, since the discussion of Protagoras' proposition has come to an end.

Theaetetus: No, Theodorus, not until Socrates and yourself have dealt with those who assert that all is at rest, as you proposed earlier.

183d

Theodorus: Is a young man like you, Theaetetus, teaching his elders to be unjust and break their agreements? Prepare yourself instead to respond to Socrates for the remainder of the discussion.

Theaetetus: I shall, if he wants me to. However, I would much rather listen to the other topic mentioned.

Theodorus: Calling Socrates into an argument is like calling cavalry to fight on open ground. So just ask, then sit back and listen.

Socrates: But, Theodorus, I do not think that I shall be persuaded to do what Theaetetus is asking.

183e

Theodorus: Why won't you be persuaded?

Socrates: I would be ashamed if we gave only cursory consideration to Melissus and the others who declare that all is at rest, but the shame would be greater in the case of the One – Parmenides. Parmenides appears to me, in Homer's phrase, to be at once 'venerable' and 'formidable'.³¹ Indeed, I met the man when I was very young and he was very old, and he seemed to

me to have depth and total nobility.³² I am afraid that we may not come to terms with what he said, and that his intention in saying so may escape us all the more. Also, the major topic that began this discussion – namely, what exactly knowledge is – may go uninvestigated if we allow this disordered influx of propositions, especially since the subject we are now raising is really immense and would not deserve to be investigated as a mere side issue. However, if we give it what it deserves, it will obscure our discussion about knowledge. So we should do neither. Instead, we should endeavour, through the midwife's art, to deliver Theaetetus of his conceptions about knowledge.

184b

Theodorus: Well, if that's what you think, that's what should be done.

Socrates: In that case, Theaetetus, let us consider this additional point in relation to what has been said. You gave an answer whereby perception is, in fact, knowledge. Is this so?

Theaetetus: Yes.

Socrates: Now if someone were to ask you, "With what does a person see black and white, and with what does he hear high and low pitch?", I presume you would say "with eyes and with ears".

Theaetetus: I would indeed.

184c

Socrates: A laxity in the use of words and phrases without any precise scrutiny is, for the most part, quite gentlemanly. Indeed, it is the opposite approach that is illiberal, though it is sometimes necessary, as in the present case, where we must take the answer you gave and consider a problem with it. Which answer is more correct, that the eyes are that with which we see, or by means of which we see? Are the ears that with which we hear, or by means of which we hear?

Theaetetus: I think that we perceive by means of eyes and ears, rather than with them.

184d

Socrates: Yes, my boy, it would surely be strange if there were lots of senses lodged inside us, like soldiers in the Wooden Horse, and everything did not converge on some single form, be it soul or whatever it should be called, with which by means of the senses, as if they were instruments, we perceive whatever is perceptible.

Theaetetus: Yes, I think it is better to put it that way, rather than the other way.

Socrates: Now, I am being so precise with you about this for the following reason: I want to ask if there is some part of ourselves that is the same, with which we conclude by means of the eyes that things are white or black, or by means of the other sense organs that things have various qualities. If you were asked, would you be able to refer all such processes to the body? But perhaps it is better that you give the answer to the question rather than me doing the job for you. So tell me, by means of what do we perceive hot, hard, light and sweet? Wouldn't you propose that it is by means of the body that you perceive each of them? Or is it by something else?

184e

Theaetetus: Nothing else.

185a

Socrates: And are you prepared to agree that whatever can be perceived by means of one faculty cannot be perceived by means of a different faculty, so you cannot see sounds or hear sights?

Theaetetus: How could I disagree?

Socrates: So, if you think something of both, you could not be perceiving them both through only one or the other of the

sense organs.

Theaetetus: I could not.

Socrates: Now in the case of sound or colour, do you first think this about both of them, that they both are?

Theaetetus: I do.

Socrates: And then, that each is different from the other, and the same as itself?

185b

Theaetetus: Indeed.

Socrates: And that both together are two, while each is one?

Theaetetus: That also.

Socrates: And can you also consider whether they are like or unlike one another?

Theaetetus: Perhaps.

Socrates: Now, by means of what do you think all these things about them both? Indeed, whatever is common to them cannot be apprehended by means of hearing or seeing. And there is also further evidence for what we are saying, for if it were possible to consider whether both are salty or not, you know you could say what you would use to investigate this, and that is evidently neither seeing nor hearing, but something else.

185c

Theaetetus: Yes, of course, it is the capacity that is exercised by means of the tongue.

Socrates: Well expressed! But now, by means of what comes the power to show you what is common to these, and to everything, including what you refer to as 'is' and 'is not', and whatever we were asking about just now? What sort of organ will you assign to all these, by means of which our perceiving part perceives each of them?

Theaetetus: You mean being and not being, likeness and unlikeness, same and different, as well as one, and number in general, associated with them. And obviously you are asking about odd and even and whatever else is associated with them, and you want to know the physical organ by means of which we perceive these with the soul.

185d

Socrates: You are following excellently, Theaetetus. Those are the very things I am asking about.

Theaetetus: Well, by Zeus, Socrates, I am quite unable to answer, except that I do not think at all that their source is some particular organ as in the other cases, but it appears to me that the soul itself, by means of itself, investigates what is common to them all.

185e

Socrates: You are a beauty, Theaetetus, and not ugly as Theodorus said, for he who speaks beautifully is beautiful and good. Indeed, as well as being beautiful, you have done me a favour by saving me from a lengthy exposition, since it seems to you that the soul investigates some things itself, by means of itself, and other things by means of bodily powers. That is actually what I was thinking myself, but I wanted you to think so too.

Theaetetus: Well, that's how it appears anyway.

186a

Socrates: Now, in which of the categories do you place 'being'? For it is surely common to everything.

Theaetetus: I place it among those things that the soul reaches for, just by itself.

Socrates: Along with like and unlike, same and different?

Theaetetus: Yes.

Socrates: And what about beautiful and ugly, good and bad?

Theaetetus: Yes, I think the soul considers the being of these in particular, in relation to one another, as it reflects within itself upon past and present in relation to the future.

186b

Socrates: Hold on! Won't the hardness of anything hard, and the softness of anything soft, be perceived by means of touch?

Theaetetus: Yes.

Socrates: But the soul, by reviewing them and comparing them to another, tries to determine for us their being, that they both are, and their oppositeness to one another, and again, the being of the oppositeness.

Theaetetus: Yes, certainly.

Socrates: Now as soon as they are born, man or beast is naturally capable of perceiving whatever experiences are referred to the soul by means of the body. But reflection upon the being of these, and their benefit, arises gradually over time through much application and education on the part of those who actually attain it.

186c

Theaetetus: Entirely so.

Socrates: Now, can someone encounter truth who has not even encountered being?

Theaetetus: Impossible.

Socrates: And if someone does not encounter the truth of something, will he ever have knowledge of it?

186d

Theaetetus: How could he, Socrates?

Socrates: So knowledge is not in these experiences, but in the process of reasoning about them, for it seems that we are able to

apprehend truth and being in this way, but not through the experiences.

Theaetetus: So it appears.

Socrates: Well then, should you call them both by the same name when they are so different?

Theaetetus: No, that would not be right.

Socrates: Then what name do you give to the first, to seeing, hearing, smelling and feeling cold or hot?

186e

Theaetetus: I call it perception, Socrates. Is there another option?

Socrates: So you refer to it collectively as perception?

Theaetetus: I must.

Socrates: And we say it has no share in the apprehension of truth, for it has no share in the apprehension of being.

Theaetetus: No.

Socrates: Then, Theaetetus, perception and knowledge could never be the same.

Theaetetus: Apparently not, Socrates, and now it really has become abundantly clear that knowledge is different from perception.

187a

Socrates: But this was not the reason we embarked upon our discussion. Its aim was to find out what knowledge actually is, not what it is not. Nevertheless, we have made enough progress not to look for it in perception at all, but in what the soul is engaged in when it is concerned, just by itself, with things that are, whatever we call it.

Theaetetus: Yes, Socrates, and I believe this is called forming opinions.

187b

Socrates: Yes, your belief is correct, my friend. And now review this again from the beginning. Wipe all our previous discussion from your mind and see if you have a better perspective having made this much progress. Say once more what knowledge actually is.

Theaetetus: Well, Socrates, I cannot say that it is all opinions, since there is false opinion, so knowledge is most likely to be true opinion. Take that as my answer. However, as we proceed, if that turns out to be incorrect, as happened just now, we shall try another way of putting it.

Socrates: Now, that is how you should speak, Theaetetus, eagerly, rather than answering hesitatingly as you did at first. For if we act like this, there are two possibilities: either we shall find what we are pursuing, or be less inclined to think that we know what we do not know at all, and an outcome like that would actually be no poor recompense. So what are you saying now? Are there two kinds of opinion, one true and the other false, and do you define knowledge as true opinion?

187c

Theaetetus: I do, that's how it seems to me at the moment.

Socrates: Then is it worth taking up an issue concerning opinion?

Theaetetus: What sort of issue?

187d

Socrates: It is somehow bothering me now, and has done so many times before, generating great perplexity in relation to myself and others, since I am unable to say what precisely this experience of ours is, and how it arises in us.

Theaetetus: What are you referring to?

Socrates: The formation of false opinion. Thinking about it now, I am even more hesitant as to whether we should accept it, or investigate it in a different way than we did a while ago.

Theaetetus: Why not, Socrates, if it seems at all necessary? For what yourself and Theodorus said earlier about leisure was quite true, in matters of this sort there is no hurry.

Socrates: You are right to remind me, for perhaps this is not a bad time to retrace our steps. Better, indeed, to accomplish a little and do it well than to do a great deal but do it inadequately.

187e

Theaetetus: Of course.

Socrates: How shall we proceed? What do we actually mean? Are we saying that whenever there is false opinion, one of us forms a false opinion, while someone else, by contrast, forms a true one, as this is the natural state of affairs?

Theaetetus: Yes, that is what we are saying.

Socrates: Now, isn't each and everything we encounter either known by us or not known? Indeed, at the moment, I am omitting mention of the intermediate states of learning and forgetting, for they are not relevant to us just now.

188a

Theaetetus: Well, in that case, Socrates, there is nothing else left in each case, apart from knowing or not knowing.

Socrates: Then whoever forms an opinion must form an opinion, either about what he knows or what he does not know.

Theaetetus: He must.

Socrates: And, indeed, isn't it impossible for someone who has come to know something, not to know that same thing, or for someone who does not know, to know?

188b

Theaetetus: This must be so.

Socrates: So then, does someone who forms false opinions think that things that he knows are not those things, but different things that he knows, and having known both, does he then fail to recognise either?

Theaetetus: No, that would be impossible, Socrates.

Socrates: Well, could he think that things that he does not know are other things that he does not know, and is it possible that someone who knows neither Theaetetus nor Socrates could take a notion that Socrates is Theaetetus, or that Theaetetus is Socrates?

Theaetetus: How could he?

188c

Socrates: Nor indeed does he think that things he knows are somehow things he does not know, nor that things he does not know are things that he knows.

Theaetetus: No, that would be very strange.

Socrates: So how could someone ever form a false opinion? For it is impossible to form an opinion based on anything but these options, seeing that everything is either known or not known, but based on these considerations, it seems impossible to form false opinion.

Theaetetus: Very true.

Socrates: So then, we should not investigate what we are looking for in this way, on the basis of knowing and not knowing. Should we proceed instead on the basis of being and not being?

188d

Theaetetus: What do you mean?

Socrates: Perhaps it is as simple as this. Whoever, on any subject, is thinking things that are not, will inevitably form false opinions, whatever the general state of his mind may be.

Theaetetus: Quite likely, Socrates.

Socrates: But how? What would we reply, Theaetetus, if someone were to ask, “Is it possible for anyone to do what you are saying, and is there some person who could think what is not, either just by itself, or about some of the things that are?” And it seems we would say in reply, “Yes, whenever he thinks and thinks what is not true.” Is that how we would answer?

188e

Theaetetus: Just so.

Socrates: Now, does that sort of thing happen in any other instances?

Theaetetus: What sort of thing?

Socrates: Well, that a person sees something yet sees nothing.

Theaetetus: How could he?

Socrates: Well then, if he sees any one thing, he sees something that is, or do you imagine that one is ever included among things that are not?

Theaetetus: I do not.

Socrates: So a person who sees any one thing, sees something that is.

Theaetetus: Apparently.

189a

Socrates: And so, a person who hears something is hearing some one thing, something that is.

Theaetetus: Yes.

Socrates: And a person who touches something is also touching some one thing, something that is, since he is touching one.

Theaetetus: That is also true.

Socrates: And doesn't a person who is thinking, think some one thing?

Theaetetus: He must.

Socrates: And in thinking one thing, he is thinking something that is.

Theaetetus: I agree.

Socrates: So, a person who is thinking what is not, is thinking nothing.

Theaetetus: So it appears.

Socrates: However, a person who is thinking nothing, is not thinking at all.

Theaetetus: That seems obvious.

189b

Socrates: So it is not possible to think what is not, either just by itself, or about things that are.

Theaetetus: Apparently not.

Socrates: Then forming false opinions is different from thinking what is not.

Theaetetus: Yes, they seem to be different.

Socrates: So we have not found false opinion within ourselves based on this approach or the previous one.

Theaetetus: No, we have not.

Socrates: Then, does so-called false opinion arise in the following way?

Theaetetus: How?

189c

Socrates: We say that false opinion is a confusion of thought whereby someone says that one of the things that are is actually another of the things that are, having mixed them up in his mind. For in this way, though he always thinks what is, he thinks that one thing is another, falls into error in the investigation, and may properly be said to form a false opinion.

Theaetetus: What you have just said sounds perfect to me. For whenever someone thinks beautiful to be ugly, or conversely, ugly to be beautiful, then he truly is forming false opinions.

Socrates: Theaetetus, you obviously hold me in contempt rather than awe.

Theaetetus: What exactly do you mean?

189d

Socrates: I suppose you think I shall not pick you up on this ‘truly false’, and ask about the ‘slowly fast’ or the ‘heavily light’ or some other opposite, and whether it is possible for something to behave oppositely to itself, and not according to its own nature, but according to the nature of its opposite. Yet I shall let that go so that your spiritedness will not be in vain. However, you are satisfied, you say, that forming false opinions is a confusion of thought.

Theaetetus: I am.

Socrates: So according to your opinion, it is possible for the mind to posit that something is different from what it is.

Theaetetus: Yes, indeed.

189e

Socrates: Now, whenever the mind does this, mustn’t it actually be thinking of both things, or one or other of them?

Theaetetus: Yes it must, either both together, or in succession.

Socrates: Excellent! But do you call thinking what I call thinking?

Theaetetus: What do you call thinking?

Socrates: Speech that the soul itself carries on with itself about the matters it is considering. I am demonstrating my ignorance here, yet it seems to me that when the soul is engaging in thought, it is really engaging in discourse, asking questions to itself and answering them, and making assertions or denials. But when it has come to a determination, whether slowly or through sudden realisation, and it unwaveringly asserts the same thing, that we designate as its opinion. So then, I, for my part, refer to thinking as speaking, and opinion as speech, not spoken to another person or voiced, but delivered in silence to oneself. What do you say?

190a

Theaetetus: I agree.

Socrates: So whenever someone thinks of one thing as another, he also seems to be telling himself that one thing is the other.

Theaetetus: Indeed.

190b

Socrates: Now, try to recall if you have ever said to yourself that beauty is most assuredly ugly, or that injustice is just. In short, consider whether you ever tried to persuade yourself that one thing is in fact another. No, on the contrary, you have never dared, even in your sleep, to say to yourself that odd is even, or anything of that sort.

Theaetetus: What you say is true.

Socrates: And do you think that anyone else, sane or insane, ever seriously tried to tell himself, with any conviction, that an ox must be a horse or that two must be one?

190c

Theaetetus: By Zeus, I don't think so.

Socrates: Now, if speaking to yourself is thinking, no one who speaks and thinks of two things and is apprehending both with the soul, would say or think that one is the other. And you must allow me to use that expression, for what I mean is that nobody thinks that ugliness is beautiful, or anything else of that sort.

190d

Theaetetus: Yes, Socrates, I shall allow it and I agree with what you say.

Socrates: So when thinking of both, it is impossible to think that one is the other.

Theaetetus: So it seems.

Socrates: However, thinking about only one, and not thinking of the other at all, he would never think that one is the other.

Theaetetus: What you say is true, for in that case he would also have to be apprehending the one he is not thinking about.

Socrates: So confusion of thought is not possible, either through thinking of both of them, or of one of them. So then, anyone who defines false opinion as thinking that one thing is another would be talking nonsense, for there is evidently no false opinion in us, either on this basis or on the basis of our previous discussions.

190e

Theaetetus: It seems not.

Socrates: However, Theaetetus, if we cannot show that there is false opinion, we shall be forced to admit a number of absurdities.

Theaetetus: What sort of absurdities?

Socrates: I shall not tell you until I have tried to explore this in every way possible. Indeed, I would be ashamed on our behalf if

in our present difficulty we were forced to agree with anything I am saying. However, if we find what we are seeking, and become free, then we shall discuss this as something that happens to others while we stand aloof from the ridicule. But if we become utterly perplexed and humbled, I think we shall surrender to the argument and let it walk on us and do with us as it will, as though we had come down with an illness. Now listen, I find there is still one way of enquiry open to us.

191a

Theaetetus: Just tell me.

Socrates: I say that we were wrong when we agreed that it is impossible for someone to be deceived and think that the things that he knows are things he does not know, for in a way this is possible.

191b

Theaetetus: You are expressing what I suspected at the time, when we said that such a thing could happen. Is it that I, who know Socrates, see someone else at a distance whom I do not know and believe that person to be Socrates, whom I do know? For what you describe could happen in that way.

Socrates: Didn't we reject that idea, because it made out that we do not know the things we know when we have known them?

Theaetetus: Yes, certainly.

191c

Socrates: Well, let us not propose that but the following, which may be somewhat acceptable to us or may challenge us. But really, we are in such a state that we must thoroughly test every turn of an argument. Consider whether this makes sense. Is it possible to learn something that you did not know previously?

Theaetetus: It is, indeed.

Socrates: And then something else, and so on?

Theaetetus: Why not?

Socrates: Now assume, for the sake of the argument, that there is a block of wax in our souls, larger in some, smaller in others, some made of purer wax, others of more impure wax, some harder, others softer, while there are others with the proper balance.

191d

Theaetetus: I am assuming this.

Socrates: Let us declare that this is indeed a gift from Memory, the mother of the Muses, and that whatever we may wish to remember of what we see, or hear, or think up for ourselves, is stamped on the wax, like impressions on wax seals, by holding the wax under the perceptions or concepts. Whatever is imprinted is remembered and known for as long as its image may endure, while anything that is erased or that cannot get imprinted is forgotten and not known.

191e

Theaetetus: Let's accept that.

Socrates: Well, consider whether someone who has knowledge of things, and is considering something he has seen or heard, could form a false opinion in such a manner.

Theaetetus: In what manner?

Socrates: By believing that things that he knows are, at one time, things that he knows, and at another, things he does not know, occurrences that we improperly agreed to be impossible in our previous discussion.

Theaetetus: And what do you say now?

192a

Socrates: We must begin discussing the issues again, making the following distinctions. It is impossible for a person to believe that something he knows and has in memory in the soul,

and that he is not perceiving, is another thing he knows and whose wax stamp he also possesses, though he is not perceiving it. Nor again, can he believe that what he knows is something he does not know, and whose wax impression he does not possess. Nor could he think that something he doesn't know is another thing he does not know, nor something he does know. Neither could he imagine that something he is actually perceiving is another thing he is perceiving, nor that something he is perceiving is something he is not perceiving. Nor that something he is not perceiving is something else he is not perceiving, nor something he actually is perceiving. And furthermore, to believe that something he knows and is perceiving, and whose wax impression accords with his perception, is in fact another thing he knows and perceives, and whose impression accords with the perception, is even more impossible, if that is actually possible, than the other instances. And he cannot believe that what he knows and perceives and remembers properly is another thing he knows, nor another thing he perceives. Nor again, can he think that what he neither knows nor perceives is something else he neither knows nor perceives. Nor that what he neither knows nor perceives is something else he does not know. Nor that what he neither knows nor perceives is something else he does not perceive. All these instances compete in their inability to form any false opinion in anyone. Indeed, it is in the remaining instances, if anywhere, that false opinion must lie.

192c

Theaetetus: In what instances? Perhaps I would learn more from them, for at the moment I am not following.

Socrates: In cases where someone knows, but thinks the things are other things that he knows and perceives, or that he does not know but yet perceives. Or where he thinks what he knows and perceives are other things he knows and perceives.

192d

Theaetetus: Now I am even more adrift than before.

Socrates: Well, listen to this once more. I know Theodorus, and I remember within myself what he is like, and the same applies to Theaetetus. At certain times I see them, and sometimes I do not. At times I touch them, and other times not, or I hear them, or have other perceptions of them, while at other times I have no perception of them whatsoever. But do I remember you, nonetheless, and do I know you within myself?

Theaetetus: Yes, certainly.

192e

Socrates: Now this is the first point I wish to make clear, that someone can perceive or not perceive the things he knows.

Theaetetus: True.

Socrates: And in the case of things he does not know, he frequently cannot perceive them either, but often he can merely perceive them.

Theaetetus: This is true also.

Socrates: Let us see if you can follow me better now. If Socrates knows Theodorus and Theaetetus, but sees neither of them, nor has he any other present perception of them, he would never form an opinion within himself that Theaetetus is Theodorus. Am I making any sense?

193a

Theaetetus: Yes, this is true.

Socrates: Now this was the first of these instances I referred to.

Theaetetus: It was indeed.

Socrates: Then the second instance is that knowing one of you, not knowing the other, and perceiving neither of you, I would never think that the one I know is the one I do not know.

Theaetetus: Correct.

Socrates: And thirdly, neither knowing nor perceiving either of you, I would not believe that one whom I do not know is another whom I do not know. Now, assume you have heard again all the previous instances in which I never form a false opinion about you and Theodorus, if I know you both, or do not know you both, or if I know one and not the other. And the same argument applies to perceiving. Do you follow?

193b

Theaetetus: I follow.

Socrates: Then what remains is the formation of false opinion in cases where I know you and Theodorus, and have the imprints of both of you in that wax, just like the impressions from seals. Seeing you both from afar, but not very well, I hurry to match your particular imprint to your particular visual appearance, by fitting it precisely onto its own trace in memory in order to bring about recognition. But I get these wrong, and just like people who put their shoes on the wrong feet, I swap them around and set the appearance of one against the imprint of the other. Or my error is like what happens to the appearance of things in mirrors where left turns into right, and it is in these cases that varieties in opinion, and false opinion, occur.

193d

Theaetetus: That is quite likely, Socrates. You are giving a wonderful account of what happens to opinion.

Socrates: There is also the case where I know both of you and I am perceiving one and not the other, but my perception of the former does not accord with my knowledge. This is the case I was describing earlier, when you did not understand me.

Theaetetus: No, I did not.

193e

Socrates: Well, I was saying that if you know someone and perceive them and your knowledge of them accords with your perception, you will never think they are someone else whom you know and perceive, the knowledge of whom also, in turn, accords with your perception. Was that the point?

Theaetetus: Yes.

Socrates: What remains, I presume, is the current formulation in which we say that false opinion arises for someone who knows both of you, and sees or has some other perception of both without having the wax imprints in accord with his perception of them. And so he shoots wide of the target like a poor archer and misses the mark, and we have come to refer to this as falsehood.

194a

Theaetetus: And properly so.

Socrates: And whenever there is present perception corresponding to one of the imprints, but not to another, and the one whose perception is absent is matched with the present perception, in all these cases the mind is deceived. To sum up, in cases where one does not know, and has perceived, it seems there is no possibility of deception or false opinion if what we are saying is in any way sound. But it is in the particular cases where we both know and perceive that opinion twists and turns and becomes true or false, being true when it directly associates things in line with the proper impressions and imprints, but false when it goes crosswise to the wrong ones.

194b

Theaetetus: Isn't that beautifully described, Socrates?

194c

Socrates: When you have heard what is coming next you will say so all the more. Indeed, forming opinions is beautiful when they are true, but shameful when they are false.

Theaetetus: This must be so.

Socrates: Now they say that these differences arise in the following way. When the wax in a person's soul is deep and plentiful, smooth and evenly wrought, and the perceptions that come in through the senses are impressed upon this waxen heart of the soul, as Homer poetically calls its resemblance to wax,³³ then the impressions generated by the perceptions are clear, and as they have sufficient depth, they are enduring. And such people learn easily and then remember, since they do not confuse the imprints from the perceptions, but form opinions that are true. As the imprints are also clear and have abundant space, they quickly assign them to their own individual impressions, that are called things that are, and these people are called wise. Don't you agree?

194d

Theaetetus: I couldn't agree more.

194e

Socrates: But when a person's heart is rugged, a condition praised by the all-wise poet, or when it is sullied or made from impure wax, or is extremely soft or hard, those with soft wax learn readily but are prone to forgetfulness, while the opposite applies to those with hard wax. Those who have rugged and coarse hearts, somewhat stony with plentiful admixture of earth and filth, retain unclear impressions. And anyone whose wax is hard also retains unclear impressions, as there is no depth in them, while if their wax is soft the impressions quickly become indistinct as they melt into one another. And if, besides all this, they are jumbled together due to the confined space in someone's tiny little soul, they are even more unclear. All these people are inclined to form false opinions, for whenever they see or hear or think of anything, they are unable to assign it quickly to its proper imprint. Instead, they are slow, and as they assign them incorrectly, they mis-see, mishear and misconceive

most things, and are said, in turn, to be ignorant and deceived about things that are.

195a

Theaetetus: You are describing these men very accurately, Socrates.

195b

Socrates: So should we say that there are false opinions within us?

Theaetetus: Definitely.

Socrates: And true opinions?

Theaetetus: True also.

Socrates: Now, at this stage, do we think we have reached adequate agreement that there really are these two kinds of opinion?

Theaetetus: Very much so.

Socrates: But, Theaetetus, a talkative man is inclined to be truly formidable and disagreeable!

Theaetetus: Why? What are you talking about?

Socrates: I am annoyed about my own stupidity and how truly verbose I am. Indeed, what other word could you use for someone who drags discussions this way and that, and cannot be convinced because he is stupid and is hard to tear away from any proposal?

195c

Theaetetus: Oh, but why are you annoyed?

Socrates: Not only am I annoyed, but I am fearful about how I would respond if someone were to ask me, “Socrates, have you really discovered false opinion, that it lies neither in the relation of perceptions to one another, nor in the interrelationship of thoughts, but in the connection between

perception and thought?” I think I would agree, priding myself as though we had made a fine discovery.

195d

Theaetetus: Well, Socrates, I don’t think we need be ashamed of what we have just demonstrated.

Socrates: “In that case,” says he, “does that mean that we shall never believe that a man, whom we only think of but do not see, is a horse, which we neither see nor touch but only think of, though we perceive nothing else about it?” I presume I shall confirm that this is what we mean.

Theaetetus: And rightly so.

Socrates: “Well then,” he continues, “based on this account, one could never believe that the eleven that one merely thinks of are twelve, which again one merely thinks of.” Come on, you give the response this time.

195e

Theaetetus: Well, I reply that someone who is seeing them or touching them may think that the eleven are twelve. However, he would never form that opinion about the numbers which he holds in mind.

Socrates: What about this? Do you think anyone ever considered five and seven within himself, and I do not mean that he has five men and seven men in front of him or anything like that; I mean just five and seven themselves, which we say have memorial imprints in the wax, and cannot be the subject of false opinion? Now, if someone considered these numbers themselves, talking to himself and asking how much precisely they are, would one person say and think it is eleven, while another says twelve, or would everyone say and think that it is twelve?

196a

Theaetetus: No, by Zeus, there are obviously many who would say eleven, and in the case of larger numbers there are more errors, for I presume you are talking about all numbers.

196b

Socrates: Yes, your presumption is correct. Now consider what is happening in this instance, and whether twelve itself, imprinted on the wax, is thought to be eleven.

Theaetetus: So it seems.

Socrates: Hasn't our discussion arrived back at the initial proposals? For anyone involved in this error believes that something he knows is another thing that he also knows, and we said that this is impossible. Indeed, this was the very point which forced us to deny that there can be false opinion, lest the same person be constrained to know and not know the same things at the same time.

196c

Theaetetus: Very true.

Socrates: In that case, we must explain the formation of false opinion in some other way than by the misalignment of thought relative to perception. For if it was this, we would never be deceived in the internal thoughts themselves. But now, either there is actually no false opinion or it is possible for a person not to know the things which he knows. Which of these options would you choose?

Theaetetus: You are presenting an impossible choice, Socrates.

196d

Socrates: And yet the argument is not going to permit both of them. Nonetheless, should we risk everything and try something audacious?

Theaetetus: How?

Socrates: Let us decide to state what knowing is actually like.

Theaetetus: What is so audacious about that?

Socrates: You seem not to appreciate that our entire discourse from the beginning has been a search for knowledge on the basis that we do not know what it actually is.

Theaetetus: I do appreciate this.

Socrates: Then does it not seem audacious to be elucidating what knowing is like without knowing what knowledge is? But in fact, Theaetetus, we have been infected for some time by impure discourse. For we have repeatedly said ‘we realise’ and ‘we do not realise’, ‘we know’ and ‘we do not know’, as if we understood one another, though we still did not know about knowledge. Even now, if you don’t mind, at this very moment we resorted again to ‘not knowing’ and ‘understanding’, as if it were appropriate for us to use them, when we are actually deprived of knowledge.

196e

Theaetetus: But how could you conduct discourse at all, Socrates, if you avoided these phrases?

197a

Socrates: Well, I couldn’t, being the man I am, unless I was an argumentative fellow, the sort of man who, if he were here now, would tell us to avoid these phrases and would rebuke us fiercely for the deficiencies I am referring to. But since we are ordinary folk, would you like me to venture a statement on what knowing is like? It appears to me that this might be of some assistance.

Theaetetus: Venture away, by Zeus, and you will be generously forgiven if you do not avoid these phrases.

Socrates: Well, have you heard what they declare that knowing is these days?

Theaetetus: I probably have but I cannot recall just now.

197b

Socrates: I believe they say that it is ‘having knowledge’.

Theaetetus: True.

Socrates: Now, we shall change it slightly and say ‘the acquisition of knowledge’.

Theaetetus: But how can you say that this is different from the other wording?

Socrates: Perhaps it is not, but when you have heard what I think, then we shall examine it together.

Theaetetus: Yes, if I am actually able to.

Socrates: Well, having does not appear to me to be the same as acquiring. For example, if someone buys a cloak and it is at his disposal but he does not wear it, we would say that he has acquired it but does not have it.³⁴

Theaetetus: Quite right.

Socrates: Look now, is it also possible on this basis to acquire knowledge and not have it, just as if someone had captured wild birds, pigeons or the like, and provided an aviary at his home and reared them, we would probably say that in a certain sense he always has them because he has acquired them. Is this so?

197c

Theaetetus: Yes.

Socrates: And yet in another sense he does not have any of them but he has gained power over them, since he has made them available in an enclosure at home to catch and hold whenever he wishes, capturing the one he wants and releasing it again, and being able to do this as often as he wants.

197d

Theaetetus: This is so.

Socrates: Again, just as we provided the souls with some undefined lump of wax in our previous discussion, we are now building an aviary for a great variety of birds in each soul. Some of these are arranged in flocks and they keep apart from the rest, others form smaller groups, while some birds are solitary and fly as they will among all their fellows.

Theaetetus: Let the aviary be built. What happens next?

197e

Socrates: Well, we should say that while we are infants this structure is empty, and we should appreciate that the birds are things which are known. A person who has acquired knowledge confines it in the enclosure, and we say that he has learned or discovered the matter of which this is the knowledge, and that is what knowing is.

Theaetetus: So be it.

Socrates: Now, consider the process by which we recapture this knowledge whenever we wish, retain it, and then let it go again. Consider whether these deserve the same name as the initial acquisition, or a different name. You may understand my meaning more clearly from this example. Is there a subject you call arithmetic?

198a

Theaetetus: Yes.

Socrates: Now, assume that this is a hunt for items of knowledge about all odd or even numbers.

Theaetetus: I am assuming this.

Socrates: And I presume that, by means of this subject, a man has items of knowledge about number at his disposal, and also transmits them to someone else.

198b

Theaetetus: Yes.

Socrates: And we refer to transmitting as teaching, apprehending as learning, and having an acquisition within that aviary as knowing.

Theaetetus: Yes, certainly.

Socrates: Now pay attention to the following. Will the arithmetician who is perfect have knowledge of all number and nothing less, since he has the details of the knowledge of all numbers in his soul?

Theaetetus: Of course.

Socrates: Well, would a man like this, in mind, ever enumerate anything, either the numbers themselves, or external objects which have number?

198c

Theaetetus: Of course.

Socrates: And we shall propose that enumeration is the process of finding out what the relevant number actually is.

Theaetetus: It is.

Socrates: So we have agreed that this man knows all number, and yet he is trying to find out what he knows, as if he did not know it. Indeed, I presume you are aware of such contradictory statements.

Theaetetus: Yes, I am.

198d

Socrates: Now, when we compared this to the acquisition and hunting of pigeons, we said that the hunt had two aspects. The first is prior to the acquisition for the sake of acquiring something, and then, once acquired, there is capturing and having to hand whatever had previously been acquired. And in this way too, it is possible for a man to learn the same things again, things of which he had previous knowledge, having

learned them and known them. Can't he take up the knowledge of each of them again and retain it, knowledge which he does not have immediately in mind?

Theaetetus: True.

198e

Socrates: This is what I was asking earlier. What terms should be used to describe the arithmetician who sets about calculating, or the grammarian who goes to read something? In such cases, is a person who knows, going to learn again for himself that which he already knows?

Theaetetus: That would be strange, Socrates.

199a

Socrates: But should we say that he is going to read or compute things which he does not know, when we have conceded that he knows all letters and all numbers?

Theaetetus: No, that too is unreasonable.

Socrates: Well, would you like us to say that we do not care about names, and that someone can drag knowing and learning wherever they please? But since we have defined the acquisition of knowledge as one thing, and having it as another, it is impossible for someone not to have acquired that which he has acquired, and consequently it never happens that someone does not know that which he knows. However, we do say that it is possible to pick up a false opinion about it, for it is possible not to hold the knowledge of that, but another knowledge instead. This happens when someone is on the hunt for an item of knowledge which is flying about the aviary, but mistakenly grabs a different one instead of the one he wanted. So, in the case where he thought that the eleven was twelve, he had caught within himself the knowledge of the eleven rather than the twelve, like catching a dove instead of a pigeon.

199b

Theaetetus: Yes, that makes sense.

Socrates: But, whenever he catches what he is trying to catch, he is unerring and he thinks things that are. And so in this way there can be both true and false opinion, and the issues which troubled us earlier no longer present an obstacle. Perhaps you will agree with me, or will you take a different approach?

199c

Theaetetus: I take this approach.

Socrates: Well then, we are rid of the issue of people not knowing things that they know, for it can never turn out that we have not acquired the things we have acquired, whether we are deceived about something or not. But it seems to me that another more formidable issue is looming.

Theaetetus: What sort of issue?

Socrates: Whether the interchange of pieces of knowledge will ever give rise to false opinion.

Theaetetus: How so?

199d

Socrates: The first concern is that someone who has knowledge of something is ignorant of that very thing, not on account of ignorance, but on account of his own knowledge. Then comes the statement that he thinks that this thing is something different, and the different thing is this thing. Is it not very unreasonable that when knowledge is present, the soul knows nothing and is utterly ignorant? For based on this account, why couldn't the presence of ignorance enable us to know something, or blindness make us see, if knowledge ever really does make someone ignorant?

Theaetetus: Well, Socrates, perhaps we went wrong when we proposed that these birds stand only for items of knowledge, and we should also propose that there are ignorances flying

around in the soul at the same time, and the seeker sometimes gets hold of knowledge and sometimes of ignorance concerning the same thing. He then forms false opinions on account of the ignorance, and true opinions on account of the knowledge.

199e

Socrates: I can hardly refrain from praising you, Theaetetus. However, you should examine what you have said once more. Now, let it be as you say, that someone who gets hold of ignorance will form false opinions, according to you. Is that so?

200a

Theaetetus: Yes.

Socrates: Of course he will not think that he is forming false opinions.

Theaetetus: How could he?

Socrates: Indeed, he will think they are actually true, and he will adopt the stance of a man who knows on matters where he is in error.

Theaetetus: Yes, he will.

Socrates: So he will believe he is in possession of knowledge, not ignorance, because that is what he has hunted down.

Theaetetus: Obviously.

Socrates: Well, we are back again at our initial difficulty after a very circuitous diversion. Indeed, that disputatious man will laugh and say, "How does this work, my good fellows? Does someone who knows both believe that some item of knowledge which he knows is some ignorance which he also knows? Or does he know neither of them, and think that one which he does not know is another which he does not know? Or having known one and not the other, does he believe that the one he knows is the one he does not know, or that the one he does not know is the one he does know? Or again, will you go on to say to me that

there are additional knowledges about the items of knowledge and the ignorances, and that he acquires these knowledges and keeps them in some other ridiculous aviaries or in wax imprints? Does he know these as long as he possesses them, though he may not have them immediately at his disposal, in his soul? Well, are you going to be compelled to go through this same cycle indefinitely without getting anywhere?" How shall we respond to these questions, Theaetetus?

200c

Theaetetus: By Zeus, Socrates, I don't know what we should say.

Socrates: So in that case, my boy, was the argument right to rebuke us and show that we were wrong to set knowledge aside and seek false opinion first, something which it is impossible to understand until we have a proper grasp of what knowledge actually is?

200d

Theaetetus: As things stand, Socrates, we must believe what you are saying.

Socrates: So what are we to say that knowledge is? For I presume we are not going to give up yet.

Theaetetus: Far from it, unless you yourself have had enough.

Socrates: Tell me then, what definite statement can we make that involves us in the least selfcontradiction?

Theaetetus: The very proposition we tried before. In fact, it is the only one I have.

200e

Socrates: What is it?

Theaetetus: That knowledge is true opinion. Forming true opinions is, after all, a process which is supposedly free from error, and whatever arises on this basis is entirely noble and

good.

Socrates: The guide by the river bank says, “You will be shown the depth, Theaetetus”, and in this case, once we proceed with our search, perhaps something which turns up along the way may reveal what we are seeking, but if we wait, nothing will become clear.

201a

Theaetetus: You’re right, so let’s go ahead and consider this.

Socrates: Well, this will be a brief investigation, for there is a whole profession pointing out to you that true opinion is not knowledge.

Theaetetus: How is that? What profession?

Socrates: The profession of the wisest men of all, whom we call orators and advocates. For these men use their skill to persuade rather than teach, and they make people form the opinions they want them to form. Or do you believe that there are teachers so clever that they can adequately teach the truth about what happened to people whose money was stolen or who were otherwise assaulted to people who were not present? Can they do this in the little time allowed by the water-clock in the court?

201b

Theaetetus: I don’t believe that they can teach them at all, but they may persuade them.

Socrates: And don’t you say that persuading them is making them form an opinion?

Theaetetus: Of course.

Socrates: Now, when a jury is justly persuaded about matters that only an eyewitness and no one else could know, on that occasion they are judging from hearsay. They have caught hold of a true opinion, but haven’t they judged without knowledge,

having been persuaded of what is right, if their adjudication is actually sound?

201c

Theaetetus: Entirely so.

Socrates: But, my friend, if knowledge and true opinion are really the same, the best of jurors could never form a correct opinion in the absence of knowledge. So in that case, it seems they are different from one another.

Theaetetus: Oh, Socrates, I had forgotten something that I once heard someone saying, but I remember now. He said that true opinion along with an account is knowledge, while in the absence of an account it is outside the realm of knowledge. And whatever is without an account is not knowable – yes, that’s the very term he used – while anything that has an account is knowable.

201d

Socrates: Well said, but now explain how he distinguished the knowable things from the unknowable, for I may have heard the same things you have heard.

Theaetetus: Well, I don’t know if I can work that out. However, if someone else were to explain it, I think that I could follow.

201e

Socrates: Then listen to a dream in return for a dream, for I too imagined that I heard from some people that the primary so-called elements from which we and all else are compounded lack any account. For since each, just by itself, may only be named, and nothing else can be said of it, either that it is or that it is not, for in that case we would be assigning being or non-being to it, but we must apply nothing if we are to speak of itself alone. So we should not apply ‘it’ or ‘that’ or ‘each’ or ‘only’ or ‘this’ or the numerous other terms like them, for these are in circulation and are applied generally, being different

from whatever they are assigned to. But if it were possible to describe an element and it had its own particular account, it would have to be described without all of the others. But as things stand, it is impossible for any of the primals to be expressed in an account, for they can only be named, since name is all they have. But when things are compounded from the primals, their names are woven together just as they themselves are woven, and they generate an account, for the essence of an account is an interweaving of names. Thus, the elements have no account and are unknowable, and yet they are perceivable, while the compounds are knowable and describable and can be the object of true opinion. Now, whenever someone has acquired a true opinion of something, without an account, then his soul has arrived at the truth about it, but does not know it, for a man who can neither give nor receive an account of a thing is ignorant about it. But once he has acquired an account, all these other things can happen, and he is perfected in knowledge. Was your dream like that or was it different?

202c

Theaetetus: It was exactly like that.

Socrates: Are you satisfied then, and are you proposing that true opinion with an account is knowledge?

Theaetetus: Quite so.

Socrates: Well, Theaetetus, have we really captured something this very day that generations of wise men have sought and grown old without finding?

202d

Theaetetus: Socrates, I really believe that what we have just said is an excellent description.

Socrates: And that is quite likely so, for what knowledge could there be in the absence of an account and true opinion?

However, there is one thing we said which is bothering me.

Theaetetus: What is it?

Socrates: What seems like the cleverest statement of all: that the elements are unknowable, while the class of compounds is knowable.³⁵

202e

Theaetetus: What's wrong with that?

Socrates: Well, we need to know, for we are holding the patterns of the argument like hostages, patterns used by the very person who said all this.

Theaetetus: What patterns?

Socrates: The elements and syllables of writing, or do you imagine that the person who said all we are recounting had something else in view?

Theaetetus: No, only these.

Socrates: Now let us test them, and let us test ourselves in particular, as to whether we learned writing on this basis or not. Well, in the first place, do the syllables have an account while the letters do not?

203a

Theaetetus: Perhaps.

Socrates: That is certainly how it seems to me. If someone were to ask about the first syllable of 'Socrates', and said "Theaetetus, what is SO?", how would you respond?

Theaetetus: That it is S and O.³⁶

Socrates: And isn't that your account of the syllable?

Theaetetus: It is.

Socrates: Very well, now give an account of S in the same way.

203b

Theaetetus: But how could anyone speak of the letters of a letter? Actually, Socrates, the S is one of the voiceless letters, it is just a sound like a hissing of the tongue, while B, for its part, has neither voice nor sound, nor have most of the letters. So it is quite appropriate to say they have no account, when even the clearest of them, the seven vowels, have a voice alone, but no account at all.³⁷

Socrates: So, my friend, we have come to this conclusion about knowledge.

Theaetetus: It appears that we have.

Socrates: But what about this? Have we really shown that the elements are unknowable, though the syllables are knowable?

203c

Theaetetus: Quite likely.

Socrates: Well then, are we saying that the syllable is both letters, or all of them if there are more than two, or is it a single form which arises from putting them together?

Theaetetus: I presume we are referring to all of them.

Socrates: Then consider two, the S and the O. This pair is the first syllable of my name. Can someone who knows the syllable avoid knowing both letters?

203d

Theaetetus: Of course not.

Socrates: So he knows the S and the O.

Theaetetus: Yes.

Socrates: Yes, but does he know both without knowing one or the other?

Theaetetus: No, that would be bizarre and illogical, Socrates.

Socrates: However, if it really is necessary for someone to know each letter if he is to know both, then anyone who is ever going to know the syllable absolutely must have prior knowledge of the letters. On this basis, our nice proposition has taken to its heels and fled.

203e

Theaetetus: And very suddenly too!

Socrates: Yes, we are not being careful enough with it. Perhaps we should be proposing that the syllable is not the letters, but a single form arising from them, having a single form of its own that is different from the letters.

Theaetetus: Yes, indeed, and that is probably a better suggestion than the other one.

Socrates: We should consider this, and not give up like cowards on a significant and serious proposition.

Theaetetus: We should not.

204a

Socrates: Then let our present statement stand, that a syllable is a single form which arises from joining the individual elements together, such as occurs in writing and in all other situations.

Theaetetus: Yes, certainly.

Socrates: Therefore, it must not have parts.

Theaetetus: Why is that?

Socrates: Because the whole must be all the parts of anything which has parts, or do you also say that the whole is a single form that arises from the parts, and is different from all the parts?

Theaetetus: I do.

204b

Socrates: But do you refer to the entire and the whole as different from one another, or the same?

Theaetetus: I am not clear about that, but because you are asking me to respond readily, I'll take a chance and say that they are different.

Socrates: Well, Theaetetus, you have the readiness right, but we should consider whether the answer is right.

Theaetetus: Yes, we must do that.

Socrates: So wouldn't the whole be different from the entire, according to the current argument?

Theaetetus: Yes.

Socrates: What about this? Is there any difference between 'the entire' and 'them all'? For instance, when we say one, two, three, four, five, six, or twice three, or thrice two, or four plus two, or three plus two plus one, are we talking about the same thing or something different in all such cases?

204c

Theaetetus: The same.

Socrates: And is that different from six?

Theaetetus: No.

Socrates: Then, with each statement haven't we referred to all six?

Theaetetus: Yes.

Socrates: But if we say 'the entire', aren't we referring again to one thing?

Theaetetus: We must be.

Socrates: And is that a different thing from the six?

Theaetetus: No.

Socrates: So, in any cases involving number, do we refer to ‘the entire’ and ‘them all’ as the same?

204d

Theaetetus: It appears so.

Socrates: Then let us talk about them as follows: the number of a mile and a mile are the same, aren’t they?

Theaetetus: Yes.

Socrates: This also applies to the number of a furlong.

Theaetetus: Yes.

Socrates: Similarly, in the case of an army and the number of an army, and everything of that kind, the entire number is what each of them entirely is.

Theaetetus: Yes.

Socrates: But is the number of each, anything other than the parts?

Theaetetus: Nothing other.

204e

Socrates: And in so far as something has parts, it would consist of parts?

Theaetetus: It appears so.

Socrates: But we did agree that all the parts are the entire, if in fact the entire number is also the entire.

Theaetetus: So we did.

Socrates: Then the whole does not consist of parts, for if it were all the parts, the whole would be the entire.

Theaetetus: So it seems.

Socrates: But is a part, as such, part of anything other than a whole?

Theaetetus: Yes, of the entire.

Socrates: Well, you are putting up a brave fight, Theaetetus, but isn't the entire actually entire whenever there is nothing missing?

205a

Theaetetus: Necessarily.

Socrates: But won't that same thing from which nothing is missing be a whole? And that from which something is missing is neither whole nor entire; from the same effect, the same cause arises in both.

Theaetetus: It seems to me now that there is no difference between whole and entire.

Socrates: Were we not saying that for anything with parts, the whole and also the entire will be all the parts?

Theaetetus: Yes, indeed.

Socrates: Now, returning to my previous enquiry, if the syllable is not the letters, it must not have the letters as parts of itself, or else it will be the same as them and be just as knowable as they are. Is that it?

205b

Theaetetus: That's it.

Socrates: And to prevent this from happening, didn't we propose that it was different from the letters?

Theaetetus: Yes.

Socrates: Well then, if the letters are not parts of the syllable, can you propose other candidates that are part of the syllable, without, however, being the letters of the syllable?

Theaetetus: Certainly not, Socrates, for if I were to agree that it has some parts, it would be a bit ridiculous to ignore the letters and look for other candidates.

Socrates: Yes, entirely so, Theaetetus, based upon the current proposition, a syllable would be a single indivisible form.

205c

Theaetetus: So it seems.

Socrates: Now, my friend, do you remember a little while ago we accepted what we regarded as a sound proposal, that there is no account of the primals from which all else is compounded because each of them, just by itself, is uncompounded, and neither the terms 'is' nor 'this' can properly be applied to them as they describe different and distinct things, and this is the reason why a primal is indescribable and unknowable?

Theaetetus: I remember.

205d

Socrates: Well, is this the reason why it is uniform and indivisible, or is there another? Indeed, I can discern no other.

Theaetetus: No, it appears that there is no other.

Socrates: Doesn't the compound fall into the same category as the element, in fact it has no parts and is one form?

Theaetetus: Entirely so.

Socrates: So then, if the compound is many elements, and is a whole with the elements as its parts, the compounds will be just as knowable and expressible as the elements, since the many parts have turned out to be the same as the whole.

205e

Theaetetus: Certainly.

Socrates: But if, on the other hand, the compound is one and partless, the compound, like the element, will be just as indescribable and unknowable for the same reason. The unity and indivisibility will make them so.

Theaetetus: I cannot disagree with you.

Socrates: So we should not accept it when someone says that the compound is knowable and expressible while the element is not.

Theaetetus: No, indeed not, if we are persuaded by this argument.

206a

Socrates: Well then, would it be better to agree with someone who says the opposite, because of what you yourself discern in the process of learning to write?

Theaetetus: What do I discern?

Socrates: In learning to write, you have achieved no more than the ability to recognise each letter, just by itself, with your eyes and ears, so that its position in speech or writing does not confuse you.

Theaetetus: What you say is very true.

206b

Socrates: And isn't the perfectly trained lyre player able to follow each note and say what string it came from? And wouldn't anyone agree that these notes are the letters of music?

Theaetetus: They would.

Socrates: Now, if we had to generalise to others from the letters and syllables within our own experience, we would say that having knowledge of the elemental category is much more critical and important in the complete apprehension of each subject than knowledge of the compound. And if anyone says that the compound is knowable while the element is by nature unknowable, we shall assume that he is joking, either deliberately or unwittingly.

Theaetetus: We certainly will.

206c

Socrates: Now, I think even more proofs of this may turn up, but we must not forget the current issue because of them. We want to see what is meant by the statement that the most complete knowledge arises from the addition of an account to true opinion.

Theaetetus: Yes, we need to see that.

Socrates: Come then, what exactly are we supposed to understand by ‘an account’? For it seems to me to mean one of three things.

Theaetetus: What are they?

206d

Socrates: The first would involve making one’s thoughts manifest in sound, using verbs and nouns, forming the opinion into an image in the stream issuing from the mouth, just like an image in a mirror or in water. Or don’t you think that an account is something of that sort?

Theaetetus: I do. Anyway, we do say that a person who is doing this is giving an account.

Socrates: What is more, this can actually be done quite easily by everybody, so anyone who is not born deaf and dumb can explain what they think about every issue. This being the case, anyone who forms a right opinion will turn out to have that opinion with an account, and right opinion without knowledge will never arise at all.

206e

Theaetetus: True.

Socrates: Well, we should not be too quick to accuse the person who made the statement about knowledge, which we are now considering, of talking nonsense, for perhaps he did not mean this, but did not have the ability to give an answer in terms of the elements when asked what anything is.

207a

Theaetetus: Can you give an example, Socrates?

Socrates: Yes, it is like Hesiod referring to “the one hundred wooden parts of a wagon”.³⁸ Now, I could not say what they are, nor, I imagine, could you, but if we were asked what a wagon is, we would be satisfied if we could say “wheels, an axle, body, rails and yoke”.

Theaetetus: Yes, certainly.

Socrates: And yet, he might think we were ridiculous, just as if we responded based upon the syllables when asked what your name was. Ridiculous because, although what we said was correctly conceived and expressed, we thought we were grammarians who had a grammatical account of Theaetetus’ name and were expressing it. Whereas, it is not possible to give a knowledgeable account of anything until you can describe that by means of the elements combined with true opinion, as I think we said before.

207b

Theaetetus: Yes, we said that.

Socrates: Now, he will accept that while we really do have true opinion about the wagon in this way, someone who is able to describe its being by means of those one hundred parts, once he has also attained this, has added an account to the true opinion, and becomes expert and knowledgeable about the being of the wagon rather than merely opinionated, as he has described the whole by means of the elements.

207c

Theaetetus: Don’t you think this is sound, Socrates?

Socrates: Tell me whether you think so, my friend, and whether you accept that a description of anything based upon the elements is an account, while it is not an account if it is based on compounds or larger units. Tell me so that we can consider it.

207d

Theaetetus: Yes, I certainly accept this.

Socrates: And do you regard anyone as knowledgeable about something when he thinks that the same element is part of something at one moment, and part of something different the next, or when he thinks one element, and then a different element, belongs to the same thing?

Theaetetus: By Zeus, I do not.

Socrates: Then, are you forgetting that this is what you and the other boys did when you began learning to read and write?

Theaetetus: Do you mean that we first believed that one letter, then a different letter, belonged to the same syllable, or we placed the same letter sometimes in the appropriate syllable, and at other times in a different one?

207e

Socrates: That is what I mean.

Theaetetus: By Zeus, I certainly have not forgotten, nor do I regard people as knowledgeable when they are at that stage.

Socrates: What about a situation where someone is writing 'Theaetetus' and writes TH and E because he thinks he should, but when he goes on to try to write 'Theodorus', he writes T and E because he thinks he should?³⁹ Shall we say that this fellow knows the first syllable of both your names?

208a

Theaetetus: No, we have already agreed that when a person is at that stage he does not yet know.

Socrates: And could he be in a similar predicament about the second syllable, and the third and the fourth?

Theaetetus: There is no reason why not.

Socrates: Therefore, when he has a description based on the letters, he will write 'Theaetetus' with right opinion, once he writes it in the proper sequence.

Theaetetus: Obviously.

208b

Socrates: Isn't he still devoid of knowledge, though he is forming a right opinion according to us?

Theaetetus: Yes.

Socrates: Yet he has an account along with right opinion, for he was writing using an approach by means of the elements, and we agreed that this constitutes an account.

Theaetetus: True.

Socrates: So, my friend, here we have right opinion combined with an account that should not yet be called knowledge.

Theaetetus: I'm afraid so.

Socrates: Well, it seems our wealth was but a dream when we imagined we had a perfectly true account of knowledge. But are we condemning it too soon? Perhaps an account should not be defined like this, for there were three options available to a person who defines knowledge as right opinion together with an account, and the last of the three still remains.

208c

Theaetetus: You are right to remind me. Yes, there is one remaining option. The first was an image of thought expressed in speech, the one we have just discussed was the approach to the entire based upon the elements. Now, what do you say the third option is?

Socrates: Exactly what most people would say it is – being able to express some indication by which the item in question is distinguished from everything else.

Theaetetus: Can you give me an example of an account of something?

208d

Socrates: If you wish. For instance, the statement that the sun is the brightest of the heavenly bodies moving round the earth would, I believe, be quite acceptable to you.

Theaetetus: Yes, certainly.

Socrates: Now, understand why such a statement is made, and in fact we have just given the reason. Once you understand the distinguishing characteristic by which something is distinguished from others, you will, some say, have obtained an account of it. But as long as you apprehend some common feature, your account will relate to whatever entities have this in common.

208e

Theaetetus: I understand, and I think it is appropriate to refer to this sort of thing as an account.

Socrates: Once someone with right opinion about any one of the things that are also grasps its distinction from the others, he will become knowledgeable about that of which he was previously just opinionated.

Theaetetus: So we say anyway.

Socrates: Well now, Theaetetus, since I have come closer to this statement, I understand it even less. It is like those shadow drawings which only seem to make sense as long as you stand far away from them.

Theaetetus: What do you mean?

209a

Socrates: I shall tell you if I can. I have right opinion about you, and if I also obtain an account of you, I shall actually know you, but otherwise I shall only be forming opinions.

Theaetetus: Yes.

Socrates: But the account is an explanation of your distinctiveness.

Theaetetus: So it is.

Socrates: Therefore, while I was only forming opinions, I had no mental grasp of anything at all by which you are distinguished from others.

Theaetetus: Apparently not.

Socrates: So, I had some common qualities in mind that you, as well as anyone else, possess.

Theaetetus: So you must.

209b

Socrates: Come, by Zeus, in that case how did I ever form an opinion about you rather than anyone else? For I suppose I am thinking that this is Theaetetus, who is human and has a nose, eyes and mouth, and so on for each of the organs. Will these ideas themselves enable me to think of Theaetetus rather than Theodorus, or any out-and-out Mysian, as the saying goes?

Theaetetus: How could they?

Socrates: However, if I do not think only of people with a nose and eyes, but of those with a snub-nose and protruding eyes, won't I form an opinion, in that case, which applies to you as much as to myself or anyone else like us?

209c

Theaetetus: Yes.

Socrates: In fact, Theaetetus will register no opinion within me until this snub-nosedness forms a distinct record imprinted within me, which is different from the record of any other snubnosedness which I have seen. The same goes for your other characteristics, and this imprint will act as a reminder if I meet

you tomorrow, and will enable me to form a correct opinion about you.

Theaetetus: Very true.

Socrates: So, in each case, right opinion would be concerned with distinctiveness.

209d

Theaetetus: Apparently.

Socrates: In that case, what more can the account add to right opinion? For if you say it adds an opinion by which something is distinguished from the others, then the process becomes quite ridiculous.

Theaetetus: How?

Socrates: When we have right opinion of things, by which they are distinguished from the others, we are asked to add another right opinion of the same things, by which they will differ from the others. So, the circuitousness of a roller, or a pestle, or anything like that, would be nothing in comparison to this process which may properly be called the directions of a blind man. Indeed, asking us to acquire what we already have so that we may understand the things about which we form opinions, is really and truly a deed of darkness.

209e

Theaetetus: Is there another option? What else were you going to suggest a moment ago?

Socrates: Well, my boy, if adding an account means knowing the distinctiveness, rather than having an opinion about it, our most perfect account of knowledge would be an oddity indeed. For knowing presumably means acquiring knowledge, doesn't it?

210a

Theaetetus: Yes.

Socrates: Therefore, it seems that when asked what knowledge is, this account replies that it is right opinion along with knowledge of distinctiveness, for that is what acquisition of an account is according to this.

Theaetetus: So it seems.

Socrates: And it is really quite simple-minded, when we are in search of knowledge, to say that it is right opinion along with knowledge, be it of distinctiveness or anything at all. So, Theaetetus, knowledge turns out to be neither perception nor true opinion, nor an account along with true opinion.

210b

Theaetetus: It seems not.

Socrates: Well then, my friend, are we still pregnant or in labour in relation to knowledge, or have we brought forth all there is?

Theaetetus: Oh yes, by Zeus, because of you I have spoken more than I had within myself.

Socrates: Isn't our art of midwifery saying that all these are wind-eggs and not worth rearing?

Theaetetus: Most emphatically.

210c

Socrates: Well, Theaetetus, if you attempt to conceive other thoughts in future, if you do conceive, you will be filled with better thoughts because of our present enquiry. But should you remain barren, you will be less oppressive to your associates, and gentler, as you will refrain, wisely, from thinking that you know what you do not know. This is as much as my skill can accomplish, it can do no more, and I know nothing that is known by the great and wonderful men of the past or the present. This midwifery has been allotted to me and my mother, by God, she for women, and I for the

young and noble and all who are good.

Now, I must go to the Royal Stoa to answer the charge which Meletus has laid against me.⁴⁰ But in the morning, Theodorus, let us meet here again.

NOTES

1. The dialogue's first two speakers, Euclides and Terpsion of Megara, were both followers of Socrates. Euclides is credited with having founded the Megarian school of philosophy.
2. Theaetetus was mortally wounded in the war between Athens and Sparta.
3. Cyrene, Theodorus' home town, was a Greek city in north Africa.
4. The Cape of Sounion marks the southernmost part of Attica, the territory belonging to Athens.
5. Socrates the Younger was a companion of Theaetetus, later a member of Plato's Academy. He is also mentioned in the two dramatic successor dialogues to the *Theaetetus* – the *Sophist*, in which he is mentioned briefly, and the *Statesman*, in which, together with the Eleatic Stranger, he is one of the main interlocutors.
6. A flat number is a square whose area is equal to the number, and so the side of the square, here called the line, is equal to the square root of the number. So, in the examples given, 3 as a flat number has a common measure with 4, but the side of the flat number 3 is $\sqrt{3}$, while the side of the flat number 4 is 2, and they have no common measure since $\sqrt{3}$ cannot be expressed as a fraction so as to yield a simple numerical ratio of 2. The term irrational is used to describe $\sqrt{3}$, but the entire process here is being described geometrically rather than arithmetically, and the lack of a common measure, called incommensurability, captures the essence of the problem. Contrast 4 and 9 where the sides (of the square) or magnitudes are 2 and 3, and so they have a common measure, and relate as $2/3$, as also do 16 and 36: $\sqrt{16} = 4$, $\sqrt{36} = 6$, $4:6 \rightarrow 2:3$. However, this process will not work with, for example, 15 and 36.
7. Socrates' mother's name means 'she who brings excellence to light'.
8. Artemis, goddess of the hunt and sister of Apollo, was the protectress of young animals and of women, particularly at the time of childbirth.
9. Aristides II was the grandson of a famous Athenian military and political leader of the same name. His education by Socrates is part of the subject matter of Plato's *Laches*.
10. Socrates describes his daimon as the usual sign that comes to him and always holds him back from something he is about to do. Plato, *Apology* 31c-e, 40a-c, 41d.

11. Prodicus, a contemporary of Socrates, was a distinguished sophist from Ceos who taught semantics and rhetoric. He is portrayed in Plato's *Protagoras*, and is mentioned in quite a few of Plato's other dialogues.

12. Protagoras of Abdera was a renowned sophist who taught rhetoric and virtue, and wrote several books. He is depicted extensively in Plato's *Protagoras*.

13. This seems to have been the title of one of Protagoras' books.

14. Parmenides from Elea in Italy, Heraclitus from Ephesus in Ionia, and Empedocles from Sicily were all influential pre-Socratic philosophers. Epicharmus was a comic poet from Syracuse in Sicily. Homer was a bard and epic poet, composer of the *Iliad* and the *Odyssey*.

15. *Iliad* xiv.201, 302.

16. *Iliad* viii.17-27. Zeus says he could bind everything in a golden cord and tether it to Mount Olympus, leaving it to hang in mid-air.

17. The reference is to Euripides, *Hippolytus*, line 612. Hippolytus says of an oath he has made but not kept, "my tongue has sworn, but my mind is unsworn".

18. Hesiod, *Theogony* 265. Thaumás means 'wonder', and Iris is the personification of the rainbow and a messenger of the Olympian gods.

19. This is, in essence, the dictum attributed to Protagoras at 152a, with the addition of 'for me'.

20. Once a newborn baby reached five days old, it was carried round the family hearth as a symbolic introduction to the household gods and a request for their protection.

21. This is a reference to Protagoras' statement: "Concerning gods I am unable to know whether they exist or do not exist, or what they are like in appearance; for there are many hindrances to knowledge, the obscurity of the subject and the brevity of human life". Diogenes Laërtius, *Lives of Eminent Philosophers* ix.51.

22. Callias III, son of the richest man in Greece, was a student of Protagoras, Prodicus and Hippias, all prominent sophists.

23. Sciron was a legendary brigand on the coastal road at the Isthmus of Corinth. He had a reputation for kicking travellers off the cliffs into the sea, where they were eaten by a giant turtle. The hero Theseus, on his way to Athens, dispatched him in the same way.

24. Antaeus was reputed to have been a giant who forced all passers-by to wrestle with him. He drew his invincible strength from the earth, but was

finally defeated by Heracles, who lifted him in the air and then crushed him to death.

25. *Odyssey* xvi.121.

26. In law courts and elsewhere, speeches were timed by means of a water clock. Water flowed from one vessel to another and measured out the desired time.

27. Thales from Miletus in Ionia was the first of the Greek natural philosophers. He was an engineer, geometer and astronomer, and was counted among the Seven Sages.

28. The inhabitants of Heraclitus' home city of Ephesus.

29. Melissus, from the island of Samos off the coast of Ionia, was a pre-Socratic philosopher in the tradition of Parmenides.

30. This is the first usage of the Greek term *poiōtēs*, which literally means 'what-sort-ness' but is usually rendered in English as 'quality'.

31. *Iliad* iii.172; *Odyssey* viii.22, xiv.234.

32. This encounter, whether it is historically accurate or not, is depicted in Plato's *Parmenides*.

33. *Iliad* ii.851, xvi.554. The Homeric word for heart is *kear* or *ker*, which superficially resembles the word for wax, *kēros*.

34. The Greek verb for 'I have' can mean not only 'I possess', but also 'I have hold of it' or 'I have it on', e.g. in the case of an article of clothing.

35. The Greek word for element and letter is the same. The initial reference here is to a response based upon syllables rather than letters or elements.

36. Theaetetus actually says, "That it's sigma and omega", using the names of the first two Greek letters in Socrates' name.

37. The 'seven' are the seven vowels of ancient Greek, as contrasted with two classes of consonant – mutes like B, which cannot be pronounced without a vowel, and semi-vowels like S, which can.

38. Hesiod, *Works and Days* 456.

39. Socrates actually says, "he thinks he should write *theta* and *epsilon*", using the names of the Greek letters in the first syllable of Theaetetus' name. There are only two such letters because Greek represents the sound 'th' by the single letter *theta*. Moreover, this sound was a plosive (as in English 'fathead') rather than a fricative (as in English 'thin'), and so easy enough to confuse with 'te'.

40. The Stoa Basileios (Royal Stoa) housed the office of Athens' chief religious officer. Here Meletus made his formal accusation of impiety against Socrates in front of the King Archon.

Timaeus

narrator: TIMAEUS from Locri Epizephyrii, South Italy

persons in the dialogue:

CRITIAS of Athens

SOCRATES of Alopecce, son of Sophroniscus

HERMOCRATES of Syracuse

scene: house of Critias during the Panathenaea

17a

Socrates: One, two, three... But my dear Timaeus, where is the fourth of our banqueters from yesterday¹ who will now provide the feast?

Timaeus: Some illness has befallen him, Socrates, for he would not have missed this gathering deliberately.

17b

Socrates: Then you and your friends here have the task of supplying the part of the absentee.

Timaeus: Entirely so, and indeed we shall do our best not to be found wanting, since it would not be right if those of us who are left did not repay you lavishly when we were entertained with such fitting hospitality yesterday.

Socrates: Now, do you remember what I assigned you to speak about and what the topics were?

Timaeus: We remember some of them, but since you are here you will remind us of the others. Better still, if it's not a problem for you, go over them again briefly from the beginning so that we can be more sure of them.

17c

Socrates: So be it. I believe the discussions I was involved in yesterday were mainly concerned with the political system, what kind seemed best to me and what sort of men constitute it.

Timaeus: And what you said, Socrates, seemed very reasonable to us all.

Socrates: Didn't we first separate people engaged in farming or any other skills within the citizen-body from the warrior class?

Timaeus: Yes.

17d

Socrates: And so, based upon their nature, we assigned each a single occupation appropriate to themselves, one skill to each. We said that those who must fight on behalf of everyone else were the only ones who should be guardians of the city. And if anyone from outside, or even from within, should proceed against it with ill intent, they should judge them gently if they were our own subjects and natural friends, and harshly if they encounter them in battle among our enemies.

18a

Timaeus: Absolutely.

Socrates: Indeed, I think we said that something in the nature of the soul of the guardians must be both especially spirited but also philosophic at the same time so that it may be appropriately gentle or harsh to either party as required.

Timaeus: Yes.

18b

Socrates: What of their education? Aren't they to be educated in music and gymnastic and in all subjects proper to guardians?

Timaeus: Entirely so.

Socrates: Yes, and it was said, I think, that those who have been educated in this way would never regard gold or silver or anything else as their own private possession, but, like soldiers who receive their guardians' pay from the people they protect, in measure appropriate to sound-minded men, they would spend it communally and live shared lives together, careful to

ensure excellence in all their affairs whilst holding themselves aloof from other pursuits.

Timaeus: We said all that too.

18c

Socrates: What is more, we also mentioned women, and said that their natures would be formed like the men's, and all the responsibilities would be allocated to all the women on a shared basis, whether they related to war or to everyday life.

Timaeus: That too was stated.

Socrates: Now, what did we say about the procreation of children? Or is that easy to remember because what we said was so unusual? We proposed that all wives and children should be common to everybody, and we contrived that no one would ever recognise their own particular offspring, but they would all consider everyone else as their relatives, regarding them as brothers and sisters if they were within the appropriate age range, as parents and grandparents if they were older, and as children and grandchildren if they were younger.

18d

Timaeus: Yes, and as you say, that is easy to remember.

Socrates: But, of course, you also recall how they were to be born with the most excellent natures possible. We said that the male and female rulers must secretly arrange the marriage unions so that bad men and good men are assigned, by some lottery, exclusively to women of their own kind. No controversy would be created by this since they would assume that chance was responsible for the outcome.

Timaeus: We remember.

Socrates: What is more, we actually said that the offspring of good people should be reared, whilst the offspring of bad people should be secretly handed over to another city. However, as

they grow up, the rulers should be ever watchful to take the deserving ones back again, and let the undeserving ones among their own number take the place of those who have returned.

18e

Timaeus: So we said.

Socrates: So, dear Timaeus, now that we have gone over the main points once more, have we now recounted exactly what was said yesterday or is there anything we still need to say because it was omitted?

19a

Timaeus: Not at all, Socrates, these were the very things that were said.

Socrates: After all that we have recounted about the political system we have described, I would like you to hear the sort of feeling I have about it. Well, the feeling is something like this. It is as if someone who has seen beautiful animals, either in a picture or actually alive but remaining at rest, were to develop a desire to see them moving and also competing in a contest which seemed suited to their nature. I, too, feel just the same about the city we described. I would gladly listen to someone telling a story of contests the city engages in as it struggles against other cities, how it enters into war in the proper spirit and, in the conduct of the war, exhibits towards the various cities the qualities appropriate to its education and nurture both in its actions and negotiations, in what it does and in what it says. Now, in all this, Critias and Hermocrates, I have come to realise that I myself am quite unable to sing the praises of these men and this city adequately. In my own case, this is no wonder, but I have also come to have the same opinion of the poets, both ancient and modern. It is not that I disrespect poets as a class, but it is obvious to everyone that the imitative folk will imitate whatever they have been brought up in most easily and excellently. However, anything that lies outside their own

upbringing is difficult for them to imitate well in action, and even more difficult in words.

19e

Socrates: And I believe the sophists as a class, for their part, are very experienced in long speeches and other fineries. Yet, because they wander from city to city and have no city of their own, I fear that they may somehow misunderstand men who are at once both philosophers and statesmen, and all that such men would be able to do and say as they engage actively in war and fight battles or communicate verbally with others. What is left then is the class with your disposition, which, by nature and upbringing, possesses both characteristics simultaneously.

20a

Socrates: Indeed, Timaeus here is from Locri, the best governed city in Italy, and he is superior to any man there in property and family connections. He has been involved in the highest offices and honours of that city, and he has also, in my opinion, reached the very pinnacle in matters of philosophy. And I presume everyone in this city knows that Critias is no amateur in the matters we are discussing. As for Hermocrates, we must believe the many witnesses who say that he is competent in all these matters, both by nature and by his upbringing.

20b

Socrates: Now, this is what I had in mind yesterday when you asked me to speak about the political system in general, so I agreed readily since I knew that no one would present a better account of the next topic than yourselves, if you were willing. Indeed, you are the only men today who could engage the city in some suitable war and display all the qualities appropriate to it. So when I had finished speaking on my assignment, I, in turn, assigned you the topics I am now describing. So, having considered this together among yourselves, you have now agreed to pay me back with a feast of words. Here I am then, adorned for the occasion, and more ready than anyone to

receive your gift.

20c

Hermocrates: Yes indeed, Socrates, just as Timaeus here says, we shall not be short of enthusiasm, nor have we any excuse whatsoever for not doing as you ask. Accordingly, we considered these very issues as soon as we left here yesterday and arrived at Critias' guest quarters where we are staying, and even before that, on the road. In fact, he told us a story which he heard long ago. Tell the story to Socrates now, Critias, so that he can help us decide whether it is relevant to our assignment or irrelevant.

20d

Critias: That's what I must do if our third companion, Timaeus, also agrees.

Timaeus: I certainly agree.

Critias: Then listen, Socrates, to a story which is strange and yet entirely true, as Solon,² the wisest of the Seven Sages, once declared. He was a kinsman and close friend of our great-grandfather Dropides, as he himself also says many times in his poetry. Dropides then told it to Critias, our grandfather, and the old man, in turn, used to recount it to us. The story recounts that the ancient deeds of this city of ours were wonderful and great, but they have been obliterated by time and the destructions of humanity. It would be appropriate for us to recall one of these deeds now, the greatest of them all, in order to show our gratitude to you and, at the same time, to praise the goddess rightly and truly on her festival,³ as though we were singing a hymn.

20e

Socrates: That is all very well, but what was this ancient deed of this city of ours, a deed no longer mentioned, which Critias recounted on the authority of Solon as actual fact?

21a

Critias: I'll tell you an ancient tale which I heard from a man no longer young. Indeed, Critias was then, as he said, already close to ninety years old, while I was, at the most, ten. It happened to be the children's day of the festival of Apaturia,⁴ and the traditional event of the festival was also held as usual for the children, at which our fathers arranged a recitation contest for us. Many poems by many poets were recited, but since Solon's poems were new at the time, many of the boys chanted them. One of the clansmen said – either because he believed it or even to pay a compliment to Critias – that he thought that Solon was the wisest of men in every respect, but also, in view of his poetry, the noblest of all poets. Then the old man – yes indeed, I remember it so vividly – was very pleased, and he smiled and said, ^{21c} "Amynander, if Solon had not treated poetry as a distraction but had worked at it as others do and completed the story which he brought here from Egypt, and had not been forced to neglect it due to the conflicts and the other problems he found here when he returned, then in my opinion neither Hesiod nor Homer nor any other poet would ever have been more famous than he."

^{21c}

Critias: "What was the story, Critias?" he asked.

Critias: "It concerns the greatest deed this city has ever performed," he replied. "It deserves to be its most renowned achievement, but through lapse of time and the destruction of those who were involved, the story has not survived here."

^{21d}

Critias: "Tell it from the beginning," he said. "What story did Solon tell, and how did he hear it and who told him it was true?"

^{21e}

Critias: "In the Egyptian Delta," Critias said "near where the stream of the Nile divides at its estuary, there is a region called the Saïtic, and the largest city of this region is Saïs. King Amasis

came from there. The god who founded the city is called Neith in Egyptian, and those people say this is Athena in Greek. They are great lovers of Athens and they claim to be related to us in some way. In fact, Solon said that when he travelled there they held him in great respect. And what's more, on one occasion, when he put a question about ancient times to the priests with most experience of such matters, he discovered that, in a sense, neither he nor any other Greek whatsoever knows the slightest thing about them. Once, Solon wanted to draw them into a discussion about antiquity, so he began to relate the most ancient stories from Athens, about Phoroneus, who is said to be the first man, and about Niobe. And he went on to tell the story of the flood and how Deucalion and Pyrrha survived it,⁵ and the family histories of these people, and he tried to estimate the time periods by recalling the exact number of years since the events he described.

22a

Critias: "Then, one of the priests, who was a very old man, said, 'O Solon, Solon, you Greeks are ever children! There is no Greek who is an old man.' When he heard this, Solon asked: 'How can you say this?' ^{22b} "You are all young in soul,' the priest said. 'Your souls do not possess a single doctrine heard of old, or any teaching grey with age. The reason is as follows. There have been, and will be, many destructions of humanity by various means, the most significant being by fire and water, the lesser kinds by myriad other means. In fact, you Athenians also have the story of how Phaethon, the child of the Sun, once harnessed his father's chariot, but because he was not able to drive it along the path of the Sun, he brought fire upon the Earth and was himself killed by a thunderbolt. Now, this is told in the form of a myth, but the truth is that there is an alteration of the motion of the heavenly bodies travelling around the Earth, and at regular long intervals destruction is wrought upon the Earth's surface by an enormous fire. When this happens, those who live

in mountains or high places or dry places suffer greater destruction than maritime or river-dwelling folk.

22d

Critias: "The Nile, which is always our saviour, also saves us from this difficulty on such occasions by its rising. But whenever the gods flood the Earth with water to purify it, the shepherds and herdsmen in the mountains are saved, while those who dwell in your cities are swept out to sea by the rivers. However, in this land of ours, water does not pour down on the fields from above – not then, not ever – but on the contrary, it all comes up naturally from below. That's the reason why the records preserved here are said to be most ancient of all. The truth is that in all places where excess heat or cold do not prevent it, there is always a human race, sometimes in greater numbers, sometimes in lesser. And whatever events we hear about in your country or in ours, or anywhere else, that are somehow noble or significant or special in some other way, have all been written down in the temples here from ancient times and preserved.

23b

Critias: "But in the case of yourselves and the other cities, as soon as you have been equipped with writing and whatever else a city requires, every time, after the usual cycle of years, the flood from Heaven arrives once more, bearing down upon you like a plague, leaving only the illiterate and uncultured among you, so that you become like children all over again, with no knowledge of events of ancient times, either here or among yourselves. Take the genealogies you have just recounted about your own people, Solon. These are little better than children's stories. In the first place, you remember only one flood, though many occurred before that, and then you do not realise that the noblest and most excellent race in the history of humanity once lived in your own country. You and your entire city are descended from this race, from a small remnant of their seed,

but you are unaware of this because, for many generations, those who survived left no written records when they died. But there was once a time, Solon, before the greatest ever destruction by water, when the city that is now Athens was better than any in war, and supremely well governed in every respect. Its deeds were reputed to have been the noblest, and the conduct of its affairs the fairest of any city we have heard of under Heaven.' ^{23d} "When he heard this, Solon said he was amazed, and in all earnestness he asked the priests to recount everything about the ancient citizens of Athens, precisely and in due order. The priest replied, 'No one will grudge you this, Solon, so I shall tell you the story for your sake and for the sake of your city, but especially in gratitude to the goddess who has adopted, nurtured and educated your city and ours. Your city was first by a thousand years, taking your seed from earth and Hephaestus, while our city here came later. The civilisation here is recorded in our sacred writings as being eight thousand years old. So I shall be giving you a brief overview of your citizens from nine thousand years ago, their laws, and the most splendid of the deeds they performed. But we shall go over everything in detail and due order some other time at leisure when we access the actual records.

^{24a}

Critias: "Now, compare your laws with ours, for you will find many examples of your ancient laws in operation here today. Firstly, the priestly class is kept apart from the others. Then, the class of manufacturers works by itself and does not mix with another, and the same applies to herdsmen, hunters and farmers. What's more, the warrior class here, I presume you have noticed, is kept apart from all the other classes, as they are enjoined by law to be concerned with nothing except military matters. And even the style of our armour is based on shields and spears which we were the first people in Asia to adopt, as the goddess instructed us in this, just as she first instructed you

in your region.

24b

Critias: "Furthermore, I presume you observe the extent to which tradition in Egypt has been concerned, from the very outset, with wisdom and the Universe, discovering everything right down to prophecy and medicine for health by applying those divine considerations to human concerns, and mastering all other learning that derives from these. Now, this is, in fact, the overall structure and regulation which the goddess devised at the time she first founded your city, selecting the place in which you were born because she saw that the temperate climate there would produce the wisest men. Seeing that the goddess was a lover of war and a lover of wisdom, she chose the place likely to produce men who were most akin to herself, and there she first founded a city where you dwelt, adopting such regulations as these. Indeed, you were even better regulated, having surpassed all other peoples in every kind of excellence, just as you would expect from a people born from and educated by the gods.

24d

Critias: "Now, the numerous great deeds of your city that are recorded here are a wonder, but there is one which surpasses them all in importance and excellence. For our records tell how great a power it was that once surged forth from the Atlantic Ocean and proceeded violently against all of Europe and Asia at the same time, a power which your city stopped. In fact, the ocean in the area was navigable then, and there was an island in front of the strait which your people tell me they call the Pillars of Heracles.⁶ This island was bigger than Africa and Asia together, and it was possible in those days for travellers to get from there to the other islands, and from the islands to the entire adjacent continent which surrounds that real ocean. For these places that are inside the strait we are speaking of resemble a harbour with a narrow entrance, but the ocean

outside is a real ocean, and the land that surrounds it may truly and correctly be termed a continent.

25a

Critias: "Now on this island of Atlantis, a great and wonderful kingly power was established which ruled the entire island, many other islands and part of the continent. What's more, even within the straits, they ruled Africa as far as Egypt, and Europe as far as Tuscany. This entire kingdom once constituted itself as one united force, and tried in a single onslaught to enslave your land and ours, and indeed the entire territory inside the strait. It was then, Solon, that the power of your city shone forth before all mankind in excellence and strength, as it stood pre-eminent above all in nobility of spirit, as well as skill in military affairs. For a time it led the forces of the Greeks, but when the others had given up, it had to stand alone facing extreme danger, triumphed over the invaders, set up a monument, saved from slavery those who had not yet been enslaved, and ungrudgingly freed all the others who dwell inside the Pillars of Heracles.

25c

Critias: "Sometime later there was a huge earthquake and deluge, and there came a single grievous day and night in which your entire warrior class was suddenly swallowed by the Earth, and the island of Atlantis, in like manner, sank beneath the sea and disappeared. Because of this, the sea in those parts has now become impassable and unnavigable, since it is blocked, just below the surface, by mud which was left by the island as it sank."

25d

Critias: Now, Socrates, you have heard a shortened version of the account given by old Critias based on what Solon had heard. However, yesterday when you were talking about the political system and the men you mentioned, I was amazed to be reminded of the very details I have recounted just now, as I

realised that, miraculously, by some chance, your account was in broad agreement with what Solon had recounted. I was reluctant to say anything immediately, because it was a long time ago and I did not remember the story well enough. So I decided that I would first need to recollect everything properly for myself, and then tell the story. Accordingly, I quickly agreed to your assignments yesterday, being of the view that the biggest task in all such situations is to deliver a speech which fits the purpose, and that we were well equipped for this. So it was, as Hermocrates said, that as soon as I left here yesterday, I told these men the story I had remembered, and after I left them I went back over it during the night and remembered almost everything. Well, I tell you, as the saying goes, the lessons of childhood have an amazing grip on the memory. In fact, I do not know if I would be able to recall to memory everything I heard yesterday, and yet I would be completely surprised if any detail of that story which I heard so long ago has escaped me. I heard it with so much pleasure and delight at the time, and the old man taught me so enthusiastically because of my constant questioning, that it has become like burnt-in impressions of indelible writing abiding within me. And, in fact, I recounted these very details to our friends here first thing this morning so that they too would be well provided with stories to tell.

26c

Critias: So, Socrates, I am now ready to explain the reason why I have related all this, not just in summary only, but in detail, just as I heard it. We shall now transpose the citizens and the city which you described to us yesterday as a myth to a true situation by locating that city here, as if it were our city, Athens, and those citizens whom you imagined, we shall declare to be our true ancestors whom the Egyptian priest described. The two stories will harmonise completely, and we shall strike no discordant note in declaring that your citizens are the

Athenians of ancient times. Working together and with each taking a part, we shall all endeavour, as best we can, to present an appropriate response to the tasks you assigned us. Well then, Socrates, you must consider whether this account of ours accords with your intention, or we should look for another instead.

26e

Socrates: Why, Critias, what account would we choose in preference to this one, when it is so especially appropriate to the festival of the goddess because of its connection to her? And the fact that it is no invented story, but a true account, is all important, I presume. How and from where shall we ever find alternatives if we let these go? It's impossible. So you must speak, and good luck with it, while I must now remain quiet and take a turn at listening, in contrast to my speaking role yesterday.

27a

Critias: Behold the order of the feast we have arranged for you, Socrates. It seemed to us that Timaeus should speak first since he is the best astronomer among us, and has made it his principal task to understand the nature of the Universe. He will begin with the creation of the Universe and conclude with the nature of human beings. After this, I shall proceed as if I have received human beings from Timaeus created in his story, and from you some who have been specially educated, and bring them before us as if before judges, in accordance with Solon's account and his law, and make them citizens of this city of ours, since they are, in fact, the ancient Athenians whose disappearance was revealed by the record of the sacred writings. From then on they should be referred to as Athenians, our fellow citizens.

27b

Socrates: It seems that I am going to be repaid, fully and magnificently, with a feast of discourse. Apparently, it is your

turn to speak next, Timaeus, once you have invoked the gods in the customary manner.

27c

Timaeus: Well, Socrates, that is just what anyone with even a little sound-mindedness does before they embark upon any undertaking, great or small. They always, I presume, call upon God. And we who are somehow going to make speeches about the Universe, how it has been generated or whether it is actually ungenerated, if we are not to go entirely astray, must call upon the gods and goddesses and pray that everything be spoken acceptably to them in particular, and less importantly, to ourselves. Now, let that be our invocation to the gods, but we must also invoke that which is ours so that you may learn easily, and I may expound my thoughts on the subjects before us as best I can.

27d

Timaeus: In my opinion, we must certainly make this distinction first. What is 'that which always is' and has no becoming, and what is 'that which is always becoming' but never is? Now, the former, being ever the same, is comprehended by the activity of nous, together with an account, the latter by opinion, together with sense perception devoid of an account. It comes into being and passes away and never actually is. Again, all that comes into being must come into being from some cause, for it is impossible for anything to be generated without a cause. Now, whenever a craftsman, looking always to the unchanging, refers to something like this as his model, he will reproduce its form and character, and all that he fashions in this way will necessarily be beautiful, but if he looks to something that has come to be and uses a generated model, the product will not be beautiful.

28b

Timaeus: Now, there is something which must be considered first about the entire Heaven or Universe. In fact, let's call it by

whatever name it most readily accepts. This is a fundamental question that must be considered at the outset in relation to anything, whether it always was, with no beginning in generation, or whether it has come to be, having originated from some beginning. It has come to be, for it is both visible, tangible, and it has a body, and all such things are perceptible, and perceptibles are grasped by opinion and the senses, and, as we saw, come into being and are generated. What's more, we say that a thing which has come to be has, of necessity, come to be through some cause. Now, to discover the maker and father of this Universe is a task indeed, and, having discovered him, it is impossible to describe him to everyone.

28c

Timaeus: In any case, there is a question we must consider once more in relation to the Universe. With respect to which of the models did its artificer fashion it? Was it with respect to that which remains the same and unchanging, or with respect to a generated model? If, indeed, this Universe is beautiful and the craftsman is good, then clearly he looked towards the everlasting; otherwise, if that's not the case, although no one may legitimately say this, then he looked towards a model which has come to be. It is surely obvious to everyone that the model was everlasting, since the Universe is the most beautiful of created things, and the craftsman is the most excellent of causes. So, having come into being in this way, it has been made to resemble that which is comprehended by reason and intelligence, and remains the same. Furthermore, since this is the case, it is entirely necessary that this Universe be an image of something.

29b

Timaeus: Now, on every subject it is most important to begin at the natural beginning. So, there is a distinction we must make in relation to an image and its model. Accounts are also akin to the very subjects they expound, so accounts of anything stable

and certain and discernible by nous will be fixed and unchanging, and such accounts must be irrefutable and incontrovertible, and insofar as this is possible, appropriate for accounts, they should not fall short of this. However, accounts of something copied from that model, something which is therefore a likeness, are likely accounts, and stand in a relation to the other accounts; as being is to becoming, so too is truth to belief. Therefore, don't be surprised, Socrates, if in many cases on numerous subjects such as the gods or the creation of the Universe, we prove unable to furnish accounts that are entirely and in every way consistent with themselves and exact. Indeed, if we can offer an account that is as likely as any other, we should be content, remembering that I who speak, and you who judge, possess a human nature, and so, accepting the likely story about these matters, it is appropriate to seek nothing beyond that.

29d

Socrates: Excellent, Timaeus. Indeed, as you say, we must accept it unreservedly. We have enthusiastically accepted the prelude from you in wonder, so please proceed now to the main theme.

Timaeus: Well, let us state the reason why becoming and the Universe were constructed by the artificer.

29e

Timaeus: He was good, and in the good no envy ever arises about anything, and being devoid of envy he desired that all things be as much like himself as possible. We would then be absolutely right to accept from men of understanding that this is the supreme source of becoming and of the Universe. For the god desired that all be good and, as far as possible, nothing be imperfect. He therefore took everything that was visible, which was not at rest but moving discordantly and randomly, and he led it from disorder to order, regarding order as entirely

superior to disorder. But it was not then, nor is it now, lawful for the supreme to enact anything except the supremely beautiful. So, on reflection, he discovered that in the realm of whatever is naturally visible, nothing that is made without nous is, on the whole, ever better than something which possesses nous, and furthermore, that nous cannot be present in anything in the absence of soul. Based on this reflection, having placed nous in soul, and soul in body, he constructed the Universe so that, once completed, it would naturally be as beautiful and excellent a piece of work as was possible. Accordingly, based upon the likely account, we must state that this Universe is a living creature with soul and nous that has, in truth, come into being through the providence of God.

30c

Timaeus: This being the case, we should go on to state the next topics. In the likeness of which of the living creatures did the maker construct the Universe? Let us not degrade it to something which, by nature, is a part, for that is incomplete, and the likeness of something incomplete would never be beautiful. Instead, we propose that the Universe resembles, more than anything else, whatever all other species and classes of living beings, individually or on the basis of kinds, are parts of. In fact, that Universe contains within itself all living things that can be discerned by nous, just as this Universe contains us and all creatures which can be discerned by sight. The god wished the Universe to resemble the most beautiful and entirely perfect of all that nous perceives, so he constructed a single, visible, living creature containing within it all creatures that are by nature kindred to it.

31a

Timaeus: Have we been right to speak of one single Universe, or is it more correct to refer to many, indeed an unlimited number? If, in fact, it is to be crafted in accordance with the model, there will be one. For that which encompasses all living

creatures discernible by nous could not ever be one of a pair. If it were so, an additional living being would be needed to embrace both of these, and the two would be parts of this living thing. It would then be more correct to say that the Universe resembles not the two creatures, but the creature which contains them both. Therefore, so that it would resemble the all-perfect creature in respect of its uniqueness, the maker, accordingly, did not make two or infinitely many universes; rather, this only begotten Heaven has come into existence, and it is one, and one it shall be hereafter.

31b

Timaeus: Now, whatever has come to be must have bodily form and be visible and tangible, but nothing could ever have become visible without fire, or tangible without something solid, nor solid without earth. Hence, as he began to construct the body of the Universe, God made it from fire and earth. Now, it is not possible for two things to be combined well on their own without a third, for some bond is required between the two to draw them together. The very best bond is that which, as much as possible, makes itself and the conjoined entities one, and it is proportion that, by nature, best accomplishes this. So, whenever the middle item of three numbers or volumes or power is such that the first is to the middle as the middle is to the last, and again, that the last is to the middle as the middle is to the first, then the middle becomes first and last, and the last and first for their part both become middles. Accordingly, it follows, of necessity, that they all turn out to be the same, and since they have all become the same as one another, they will all be one.⁷

32b

Timaeus: So then, if the body of the Universe had to come into being having surface but no depth, a single mean would have sufficed to bind its constituents together with itself. But now, since it has a solid structure, and solids are never conjoined by

one middle term but by two, God therefore placed water and air between fire and earth, and insofar as it was possible he arranged that they have the same proportion to one another, so that as fire is to air, air is to water, and as air is to water, water is to earth.⁸ These he bound together and constructed a visible and tangible Heaven. And, for these reasons and from such constituents as these – four in number – the body of the Universe was generated, having been harmonised by proportion and endowed from these with affection, so that having come to sameness with itself, it was rendered indissoluble by anyone except the one who conjoined it.

32c

Timaeus: Now, the construction of the Universe actually consumed each one of these four elements entirely. For the artificer constructed it from all of the fire and water, and also the air and earth, not one part, or power, of any of them being left outside of it. He decided this for the following reasons: firstly so that it would be as whole and perfect a living being as possible, made from perfect parts; in addition to this, it was to be one, since there would be nothing left over from which something else of this kind could be generated. It was also to be free from old age and disease, as he realised that if a composite body is surrounded by heat or cold, or any powerful forces outside it, they attack it and bring it to an untimely end, and by inducing disease and old age they make it waste away.

33b

Timaeus: So, for this reason, and based upon this consideration, he fashioned it whole, composed of all these wholes – one, perfect, ageless and incorruptible – and he gave a shape to it that was appropriate and belonged to its nature. The shape, which contains all other shapes within itself, was appropriate for the living being that is going to embrace all other living beings within itself, so he turned it to make it circular, a spherical shape having all of its extremities equidistant from its

centre. This is the most perfect of all shapes and the one most uniform with itself, and uniformity he regarded as infinitely better than non-uniformity. And so, he polished it all smooth and round on the outside for many reasons.

33c

Timaeus: It had no need of eyes, for there was nothing to be seen outside it, nor hearing, for there was nothing to be heard. There was no air around about it which it needed to breathe, nor did it require any organ by which it might receive food into itself, or indeed expel it again once it had been digested. In fact, nothing went out or came in from anywhere, for there was nothing. Indeed, it was contrived by design so as to provide its own food from its own waste, and to experience everything within itself and enact everything by itself, because he who assembled it thought it would be better for it to be self-sufficient rather than being dependent on others. He did not think it necessary to attach hands to it when they were not needed to grasp with or to ward off anything, nor feet neither, nor any support to stand upon, for he assigned it a movement natural to its body, the most reasonable and intelligent of the seven kinds of motion. Accordingly, he caused it to move by revolving in a circle, leading it around in the same way, in the same place, within itself, and he took all the other six motions away and fashioned it without their wanderings.⁹ Seeing that it did not need feet for this circular motion, he brought it forth without legs or feet.

34a

Timaeus: This was the entire thinking of the god who is always about the god that was soon to be, and based on this thinking he made it smooth and uniform, everywhere equal from the centre, a complete perfect body composed of perfect bodies. He placed soul in the middle of it and stretched it through the entire body, and even covered the outside of the body with it, and established one single, solitary, round Heaven revolving in

a circle. It was able, because of its excellence, to interact with itself, having no need of any other as it was acquaintance and friend enough to itself. For all these reasons, what he created was a blessed god.

34c

Timaeus: But although we are now endeavouring to speak of the soul after our description of the body, the god did not, accordingly, contrive that the soul be younger, for when he combined them he would not have allowed the elder to be ruled by the younger. But we, with our accustomed degree of casualness, speak in this somewhat random fashion. In fact, he constructed the soul to be elder and prior to the body in birth and in excellence, its mistress and ruler.

35a

Timaeus: He made the soul from the following constituents and in this manner. From being that is undivided and ever the same, and being which, by contrast, comes into existence apportioned to bodies, he formed a third intermediate form of being from both of them. From the nature of same and other, in like manner, he made a third intermediate form between their undivided form and their form as apportioned to bodies. He then took these three mixtures¹⁰ and mixed them all into one, and as the nature of other was difficult to mix, he blended it with same by force. Then, having mixed this, with the help of Being, and made one from the three, he apportioned this whole once more into as many parts as was fitting, each part being a mixture of same, other and being.

35b

Timaeus: He began to divide it as follows. First, he separated one part from the entire; after this he separated a part double the first; and next a third, which was one-and-a-half times the second and three times the first; a fourth part, double the second; a fifth, three times the third; a sixth, eight times the first; and a seventh, twenty-seven times the first. After this, he

filled up the double and triple intervals, cutting off further sections of the mixture and placing these in between them, so that in each interval there were two means – one exceeding its extremes and being exceeded by them by the same portion, the other exceeding one extreme and being exceeded by the other extreme by an equal number.¹¹ These connections gave rise to intervals of $3/2$, $4/3$ and $9/8$ between the previous intervals. All the $4/3$ intervals were filled up by the $9/8$ intervals, leaving a portion of each of them, and the interval associated with this remaining portion had the numerical relation $256/243$. What's more, the mixture from which these were cut was at that stage entirely used up in the process.

36c

Timaeus: He then cut this entire compound along its length into two, and situated the middles of each together like the letter χ (chi), bent each into a circle and attached each to itself and to the other one at the point opposite to where they overlap, included them in that kind of motion which turns around uniformly in the same place, and made one of the circles inner and the other outer. The outer movement he designated as the movement of same, the inner as the movement of other. He set the movement of same revolving sideways and to the right, and that of other diagonally and to the left, and he granted supremacy to the movement of same and similar, for he left it one and undivided. However, he divided the inner circle six times, producing seven circles based on the double and triple intervals, there being three of each. He commanded the circles to go in opposite directions to one another, three at similar speeds, four at speeds dissimilar to one another and to the other three, but their movements were proportional.

36d

Timaeus: When the entire construction of the soul had been completed in accordance with the reasoning of the one who constructed it, he then fashioned within it all that has bodily

form, and having brought both together, he fastened them centre to centre. And soul, being woven entirely throughout the Heaven from centre to extremity, enfolding it in a complete circle on the outside and revolving in itself, initiated a divine beginning of unceasing and intelligent life for all time. Now, while the body of the Heaven had come into existence and was visible, soul, for its part, was invisible, partaking of reason and harmony, the best of created things created by the very best of all that is eternal and known by nous.

37a

Timaeus: Now, since soul is blended from these three components (the natures of same, other and being), is divided and combined proportionally, and circles back upon itself, then whenever it touches upon something whose being is scattered, or something whose being is undivided, it is moved throughout its entire self, proclaims what precisely that is the same as, and what it is different from, and also the sense, manner and occasion that each is so and is characterised as such, either in relation to things that come to be, or in relation to the unchanging and eternal. And the account which arises, being equally true, whether it concerns that which is other or same, is borne along without utterance or sound in that which is moved by itself. Whenever it arises concerning perceptible things, and the circle of other, running true, announces it through the entire soul, opinions and beliefs arise which are certain and true. But whenever, in contrast, it arises concerning the things of reason, and the circuit of same, running well, makes these things known, nous and knowledge are the necessary outcome. If anyone should ever say that these two arise in anything other than soul, he will be speaking entirely contrary to the truth.

37c

Timaeus: When the father who brought it into being realised it was moving and living, a delight created for the everlasting gods, he too was delighted, and in his rejoicing he decided to

make it even more like its model. Now, since the model is an everlasting, living creature, he also undertook, accordingly, to render this Universe as much like that as possible. Now, in fact, the nature of the living creature was everlasting, and it was not actually possible to completely impart eternity to the created entity, so he decided to make a moving image, and as he ordered the Heaven, he made an everlasting image of eternity abiding in unity, moving according to number, an image we have called time, for there were no days or nights, months or years, before the Heaven came to be. Then, at the same time as the Heaven was constructed, he arranged the creation of these. All of these are but parts of time and 'was' and 'will be' are forms of time which have been generated, although we do not notice this and apply these incorrectly to everlasting being. We do indeed say 'was', 'is' and 'will be', when 'is' alone is appropriate to it according to the true account, while it is more fitting to say 'was' and 'will be' of generation which unfolds in time, for both of these are movements. It does not belong to what is always the same and unmoving to become older or younger in the course of time, nor to have ever come into being, nor to have come into being now, nor to be about to exist in future. And, in general, nothing that generation attaches to motions in the sensory realm belongs to it, for these have come into being, forms of time, time which imitates eternity and revolves according to number. What's more, we even say such things as, "what has come to be 'is' what has come to be", and "what is coming to be 'is' coming to be", and again, "what will come to be 'is' what will come to be", and "what is not 'is' what is not", but none of these statements are accurate. Perhaps, though, it is not the right time now for a precise discussion of these issues.

38b

Timaeus: In any case, time came into being along with the heavens, so that having been generated simultaneously they

would also be dissolved simultaneously, if they were ever dissolved, and it was based on the model of the eternal nature so that it would be as much like it as possible. For, indeed, the model is through all eternity, while the Heaven, for its part, having come into being, is, and will be, throughout all time.

38c

Timaeus: Based on such reasoning and consideration of the god about the creation of time, in order that time might come into being, the Sun, Moon and five other stars, which are called wanderers,¹² were generated to define and protect the numbers of time. Having made the bodies of each of these, the god placed them in the orbits in which the circuit of other was moving – seven bodies in seven orbits. The Moon he placed in the first orbit around the Earth, the Sun in the second above the Earth, the Morning Star too,¹³ and the one said to be sacred to Hermes¹⁴ he set moving in circles at an equal speed to the Sun, but allotted a power opposite to it so that Sun, Mercury and Venus alike overtake and are overtaken by one another. As for the other planets, if someone were to recount everything about them and the reasons he established them, the story, though a subsidiary one, would prove to be a greater task than our main undertaking. Indeed, all this may perhaps get proper attention later, at our leisure.

38e

Timaeus: In any case, when each had occupied its own proper course as needed to help in the production of time, these bodies were bound with bonds of soul and became living creatures and learned their assigned duties, each moving in actual accord with the sideways motion of the circuit of other, which revolves within the circuit of same and is ruled by it, some traversing a greater circle, some a lesser, those in the lesser circle revolving faster, those in the greater revolving more slowly. Due to the motion of same, those which went around fastest seemed to be overtaken by the slowest, though they actually overtook the

slowest. For the movement of same, which is the swiftest of all motions, turned all their circles in a spiral due to their divided, and also opposite, forward motion, and it made that which moves away from itself most slowly seem closest to it in speed.

39b

Timaeus: So that there might be some obvious measure of their relative slowness or swiftness, and so that the eight courses might proceed, the god kindled a light in the second of the orbits from the Earth, a light we now call the Sun, so that it would shine with all its might through the entire Heaven, and all deserving creatures would have a share in number, having learned it from the revolutions of same and similar. So this is how and these are the reasons why day and night, the revolution of the single most intelligent circuit, have come into being. However, when the Moon traverses its own circuit and overtakes the Sun, a month is generated, and whenever the Sun completes its own circuit, a year is generated. Men, save a few of them, have not understood the periods of the other planets, nor have they named them, nor have they measured them against one another through numerical investigation. Consequently, they do not really understand that the numerous, complex and wonderfully intricate wanderings of these planets actually constitute time. Yet it is possible, nevertheless, to understand that the perfect number of time fulfils the perfect year, when the speeds with respect to one another belonging to all eight orbits are concluded simultaneously and they have attained completion as measured by the circuit of same, and similarly moving. So, based on these principles and for these reasons, the stars came into being, those which have their turnings and proceed through Heaven, so that this Universe might be as much like the perfect, intelligible creature as possible in its imitation of the eternal nature.

39e

Timaeus: Now, in other respects, including the creation of time, the Universe was already fashioned very like the model it was imitating. However, it was still unlike it in one respect, as it did not yet contain, generated within itself, all the living creatures. He set about this remaining task by moulding the Universe towards the nature of the model. In the same way that nous beholds how many and what kind of forms are contained in that actual living being, he decided that this Universe too should possess such kinds as these, in such numbers. Now, there are four kinds, one the heavenly race of gods, another winged and airborne, a third type dwelling in water, and a fourth traversing dry land on foot.

40a

Timaeus: The form of the divine race he made mostly from fire so that it would be the brightest and most beautiful to behold, and to make it resemble the Universe, he made it well rounded. He placed it in the intelligence of the dominant circuit to follow that path, and distributed it around the entire Heaven in a circle, to be a true adornment to it, embroidered over the whole. He assigned two movements to each, one an unchanging movement in the same place, always thinking to itself the same thoughts about the same things, the other a forward motion dominated by the revolutions of same and similar.¹⁵ They are devoid of the other five motions and are at rest, so that each of them may become as excellent as possible.¹⁶ From this cause, all the un-wandering stars have come into being – divine, everlasting creatures which abide forever, revolving in the same way in the same place. But those that turn back and keep wandering in this fashion have come into being in the manner we described before. And Earth, our nurse, packed about the axis stretching through the Universe, he devised as guardian and artificer of night and day, the first and eldest of all the gods that have come into existence within the Heaven.

40c

Timaeus: As for the dances of the gods themselves and their juxtapositions with one another, the backward revolutions of the circuits upon themselves and their advances which are in line with each other during conjunctions, and how many are behind and what each is hidden by, both from themselves and from us so that when they reappear they send terrors and portents of things to come to men who are not capable of reasoning..., to describe this without a visible model of the movements would be a vain task. Rather, we should be satisfied at that and let our discussions about the nature of the visible and generated gods come to an end.

40d

Timaeus: To describe and understand the origin of the other divinities is beyond us, so we must believe those who have already spoken and who claim to be the offspring of the gods, and presumably know their own ancestors very well. Now, it is impossible to disbelieve the children of gods even though they speak without any probable or compelling evidence; yet they speak as though they are describing family matters, so we should follow custom and believe them. Accordingly, let us accept their version of the generation of those gods and let us describe it. Ocean and Tethys were born children of Earth and Heaven, and from these were born Phorcys, Cronus and Rhea, and all their companions. From Cronus and Rhea came Zeus, Hera, and all those we know by report as their brothers and sisters, and a further generation born from these.

41a

Timaeus: In any case, when all the gods had come into being, both those who wander about conspicuously and the ones who appear only as often as they wish, he who had generated this Universe spoke to them and said, "Gods of gods, works of which I am the maker and father, what I have brought into being is indissoluble unless I so desire. Now, anything that is bound together can indeed be dissolved, but only bad would wish to

dissolve something which has been beautifully harmonised and is in good order. Since you have come into being, you are not truly immortal or entirely indissoluble, and yet there is nothing which will dissolve you, nor will the fate of death befall you, because in my will you have an even greater and more powerful bond granted you than those by which you were bound together at birth. Therefore, understand the declaration I am now making to you. There are three types of mortal creatures yet to be created. If these are not brought into existence, the Heaven will be incomplete for it will not have within itself all types of creatures, and it must have these if it is to be complete in an adequate manner. But if they were brought into being and partook of life through my agency, they would be equal unto gods. Therefore, so that they may be mortal and this Universe truly universal, betake yourselves, as is natural to you, to the production of living creatures, imitating the power by which I brought you into being.

41d

Timaeus: "Now, I shall begin by sowing the seed and handing over to you the part of the creatures which rightly shares the same name as the immortals, the part which is called divine and which rules supreme in those who desire always to follow justice and yourselves. You must do the rest – make the living creatures by weaving the immortal with the mortal, give them birth, nourish them and make them grow, and when they perish, receive them back again."

Timaeus: The maker of the Universe said this and went again to the mixing bowl in which he had previously mixed and blended the soul of the Universe. He poured in the remainder of the former mixture, blending it in somewhat the same manner, but it was no longer pure in the same way as before, but second or third in degree of purity. When he had compounded the entire, he divided it into souls equal in number with the stars, allocated

each soul to its particular star, and, having mounted them as though in a chariot, he showed them the nature of the Universe and told them the laws of destiny: that the first birth would be arranged the same for everyone so that no one would be disadvantaged at his hands; that they should be dispersed to the instruments of time appropriate to each to grow as the most god-revering of creatures; and the nature of humanity being twofold, the stronger would be the kind which should hereafter be called man. Once the souls were, of necessity, implanted in bodies, and there was a process of addition and removal of portions of their bodies, in the first place an innate sense perception would necessarily arise in all, produced from forceful impressions; second would be love mixed with pleasure and pain, and, in addition to these, fear and desire and all that follows in their train, and whatever stands in natural opposition to these. If they should conquer these they would live justly, but if conquered by them, unjustly. Whoever lived well during his assigned period of life would journey again to his native home, which is his kindred star, to live a happy life in conformity with his nature. But if he should fall short of this, he would transform into a woman's nature in his second birth. And if in this form he still does not desist from wrongdoing, as is the manner of his corruption so also is his transformation into an animal nature that resembles his evil tendency. He will not cease from these painful transformations until he draws into the circuit of same and similar that is within himself, the vast accretion composed of fire and water, earth and air, which has grown about him of late, has conquered its turbulence and irrationality by reason, and returns again to the form of his original and most excellent condition.

42d

Timaeus: When he had prescribed all these laws for humans so that he would be blameless of their future evil doings, he sowed some of them in the Earth, some in the Moon, and some in the

other instruments of time. But when the sowing was complete, he handed over the making of mortal bodies to the young gods, and, as well as that, the fashioning of all the parts of human souls that still had to be added, and all that goes along with them. And they were also to govern this mortal creature and guide it as beautifully and excellently as they could, unless it should become a source of evil to itself.

42e

Timaeus: He who had decreed all this remained as usual in his own accustomed state, and as he so remained, the children understood the direction of their father and obeyed it. They took from him the immortal beginning of the mortal creature, and imitating their own artificer, they borrowed portions of fire, earth, water and air from the Universe, intending to return these again. What they had taken they bonded together into a unity, not with the indissoluble bonds with which they themselves had been conjoined, but fusing them together with myriad tiny invisible pegs. Fashioning each body as a unity from all the elements, they bound the circuits of the immortal soul within the inflowing and out-flowing body. These orbits, which were bound within an enormous stream, neither dominated it nor were dominated by it, but they brought about and suffered violent motion. So the entire creature was moved, and it advanced, randomly and irrationally, in any way at all, exhibiting all six types of movement at once as it progressed forward and backward, and then right and left, down and up, as it went wandering in all six directions. The surge which poured in and gushed out and brought nutriment was mighty indeed, but greater yet was the disturbance to each wrought by all the impinging sensations when the body happened to collide with fire from something external and alien, or with a hard lump of earth or smooth sliding waters, or was carried away by a storm of winds borne by the air. And the movements caused by all these, being borne through the body, fell upon the soul. Indeed,

on account of all this, such movements were called sensations thereafter and are still so called today.¹⁷ Furthermore, at that particular time these were the source of the greatest and most varied movement, and along with the constantly flowing stream they moved and shook the revolutions of the soul violently, completely blocked the revolution of same by flowing against it, and prevented it from ruling and proceeding. And what's more, they threw the revolution of other into confusion, turning each of the three double and triple intervals and the $3/2$, $4/3$ and $9/8$ middle terms and connections in all directions, and although they could not be entirely undone save by their maker, they caused all manner of fractures and deformations of the circles so that they moved along, but barely holding themselves together, borne irrationally, sometimes in opposite directions, sometimes sideways, sometimes upside down.

43e

Timaeus: Just as whenever someone is propped upside down, his head on the ground, his feet pressed against something, in that predicament what is right for the person will appear as left to his observers, and what is left for him will appear right for them. So when the circuits are undergoing this experience, and others like this, in an intense manner, whenever they happen upon something external of the class of same or of other, they then declare it to be same as something or other than something, in direct opposition to the truth, having become false and devoid of intelligence, without even one orbit ruling and leading among them at that time. Indeed, should some sense impressions, carried from outside to the orbits of the soul and impinging on them, draw the entire vessel of the soul along with them, then although the orbits seem to be dominating themselves, they are being dominated by the senses. And, indeed, because of all these experiences, the soul now, as in the beginning, becomes devoid of nous at first whenever it is bound within a mortal body. But whenever the stream which brings

growth and nourishment lessens its influx, and the orbits become calm again, traverse their own paths and become more stable with the passing of time, then at that stage the orbits are kept in line with the course of the natural motion of each of the circles, they proclaim other and same correctly, and cause their possessor to become intelligent. And, indeed, if some right nurture should also play a role in his education, he becomes completely unblemished and sound, having escaped the worst possible disease. However, if he neglects this, he limps his way through life and returns once more to Hades, incomplete and devoid of intelligence.

44c

Timaeus: Of course, this all happens later on. However, we must deal more precisely with the issues before us now, and issues prior to these concerning the generation of the body part by part, and of the soul too, and the reasons and intentions of the gods in producing them. This we must recount in detail, holding to the most likely account and proceeding on that basis.

44d

Timaeus: Now, there are two divine revolutions which imitate the round shape of the Universe, which is spherical, and they bound these within a spherically shaped body which we now call the head. It is our most divine part, and it rules over all else within us, and to this the gods granted the entire body which they had assembled to be its servant, realising that it would be involved in every kind of motion that would ever be. They gave this chariot and means of transport to the head so that it would not go rolling about the Earth with its various hills and hollows, unable to get over the one or out of the other. On account of this, the body is tall and has grown four flexible and extensible limbs devised by the god for conveyance. Assisted and supported by these, the body is capable of traversing all terrains, bearing aloft the dwelling place of that most divine and sacred part of us. So that is how and why legs and feet have

been attached to everyone. And regarding the front of the body as nobler and more fitted for leadership than the rear, the gods assigned most of our movement to be in that direction. So it was necessary for the front of the human body to be distinct and different. Therefore, they first put the face in position on that particular side of the vessel of the head, affixed onto it the organs for complete providence of the soul, and assigned the role of leadership to that natural front.

45b

Timaeus: The first of the organs fabricated were light-bearing eyes which they fixed in place for the following reason: they contrived to create a body from fire which does not burn but provides a gentle light, kindred to the light of each day. So they caused the pure fire within us, which is brother of this light of day, to flow through the eyes, and they compressed the whole eye, but especially the centre, to be smooth and dense so as to retain all the coarser fire and filter through only this kind of pure fire by itself. Then, if ever there is daylight surrounding this stream of vision, like meets with like, joins together and establishes a single kindred body along a straight line from the eyes to wherever the stream from within is obstructed by the outside objects on which it impinges.

45c

Timaeus: Because the entire body is similar, the effects are similar throughout. So once this body of light touches something or is touched by something, it transmits motions from these through the entire body as far as the soul and furnishes perception, and we call this 'seeing'. But when the kindred fire goes away at night, the stream of vision is cut off, for when it travels out into something dissimilar it is altered and extinguished, no longer merging with the adjacent air since it contains no fire. So it stops seeing, and, what's more, it becomes an inducement to sleep. For the eyelids, devised by the gods as the natural protector of vision, confine the power of

that fire within whenever these are closed. This dissolves and equalises the inner movements, and once these are calmed, peace arises, and when there is great peace there falls an almost dreamless sleep. However, if any significant movements of any sort remain in any location, they produce images which are like these movements in type and quantity, images which are copied within and are remembered externally upon awakening.

46a

Timaeus: Now, there is no particular difficulty in understanding the production of images in mirrors or anything smooth and reflective. For all such images necessarily make their appearance from the communion of the inner and outer fire with one another, and then, whenever this in turn unites on the smooth surface and is transformed in different ways, and the fire from the reflected face coalesces with the fire of sight on the smooth and bright surface, left then appears to be right because opposite parts of the beam of sight make contact with the corresponding parts in a manner contrary to the normal manner of contact. However, right appears as right and left as left whenever light changes side in the process of merging. This happens when the smooth surface of the mirrors is raised on each side, and the right part of the beam of sight is repelled to the left and the left to the right. When the same mirror is turned lengthwise to the face, it makes all appear upside down by repelling the bottom of the beam to the top, and the top to the bottom.

46c

Timaeus: Now, all these are contributory causes which the god employs as servants in perfecting the most excellent form that is possible. But they are regarded by most people not as contributory causes, but as the cause of everything – cooling and heating, solidifying and melting, and all such processes. Yet these are unable to think or reason to any end. For we must declare that among things that are, it belongs to soul alone to

acquire nous, and this is invisible, while fire, water, earth and air are all visible bodies. And the lover of nous and knowledge first needs to investigate the causes which belong to the intelligent nature, and secondly, those causes which are moved by others, and of necessity become a source of motion to other objects. We too should act in accordance with these principles. We must, indeed, describe both types of causes, yet distinguish those which, in consort with nous, are artificers of beauty and good from those which, being bereft of intelligence, consistently bring about randomness and disorder.

46e

Timaeus: Let that be enough about the ancillary, contributory causes for which the eyes have been assigned the power they now possess. However, along with this we must also state the greatest of their beneficial effects, the reason the god gave them to us. According to my account, sight is responsible for the greatest benefit to us, because not one of the accounts we are relating about the Universe would ever have been spoken without seeing the stars or the Sun or the Heaven. But now that day and night have been seen, months and the annual cycle too, and equinoxes and solstices, number has been devised, and the concept of time and the investigation of the nature of the Universe have been given to us. From this we have acquired philosophy in general, and no greater good has ever or will ever come to mortal creatures as a gift from the gods than this. So I declare this to be the greatest good of eyes. As for the other lesser sights, why should we praise benefits for which someone who is no philosopher, weeping in vain,¹⁸ might lament if he lost the sight of them? Rather, let us declare for the following reasons that sight is the cause of this benefit. Sight was invented and bestowed upon us by the god so that we, beholding the revolutions of nous in the Heaven, could apply them to the orbits of thinking within ourselves, for these, though troubled, are kindred to those untroubled revolutions.

And, indeed, by learning these thoroughly and properly in accord with their nature, we could stabilise the wandering motions within ourselves by imitating the entirely stable orbits of the god. And in the case of sound and of hearing, the account is the same; they were bestowed by the gods for the same reasons and with the same intentions as they gave sight. Indeed, speech too was instituted for these very purposes, and it contributes the greatest portion thereto, and so too does any music which works through sound and hearing, and is given for the sake of harmony. Harmony, whose movements are kindred to the orbits in our own soul, has been given by the Muses to those who resort to them intelligently, not for the irrational pleasure thought to be so useful nowadays, but as an ally against the inharmonious orbit of the soul which has arisen in us, to bring it to order and concord with itself. Rhythm, too, was given to us for the same reasons, by the same gods, as an aid, because of the unmeasured condition and lack of grace which, for the most part, prevails in us.

47e

Timaeus: Now, everything we have said so far, with few exceptions, has expounded the productions of nous.¹⁹ However, we must also set alongside it an account of what comes into being through Necessity. For the generation of this Universe originated indeed in a mixture produced from the combination of Necessity and nous. Nous ruled over Necessity by persuading it to lead most of what comes into being towards the very best. And so, this Universe was constructed in this way and on these principles in the beginning, through the subjugation of Necessity by intelligent persuasion. Therefore, if anyone is to state truly how the Universe came into being, based on these principles, he must include also the form of the wandering cause and how it is naturally involved. So, we should retrace our steps once more, and, adopting a different and appropriate fresh starting point from these themselves, we must now begin

again from the beginning, based on these factors just as we did before.

48b

Timaeus: We should look to the nature itself of fire and water, and also air and earth, before the generation of the Heaven and the condition they were in prior to that. For, to this day, no one has yet disclosed their origin, but we speak as if we know what precisely fire and each of the others is – proposing that they are the principles and letters of the Universe – when to a man of even a little intelligence it is probably not appropriate even to liken them to syllables. So let our statement on the matter be as follows: we should not speak now of the beginning of all things, or the beginnings, or the way we think about them, for no other reason than the difficulty of presenting our opinions based upon the present manner of exposition. Nor should you believe that I need to address this topic, nor would I, for my part, be able to persuade myself that I would be right in attempting to burden myself with such a task. So, paying special heed to our initial statement about the capability of the likely accounts, I shall endeavour to give an account no less likely than before – indeed, more so – from the beginning about each and everything.

48e

Timaeus: Clearly we should now begin again, once we have called upon the god, our saviour, at the very outset of our deliberations, to see us safely out of an unusual and unaccustomed exposition to the doctrine of things probable. In any case, our fresh start concerning the Universe should be more elaborate than before, for we distinguished two forms then, but now we must present a third kind. Two were sufficient for our previous descriptions, one designated as a sort of a model discernible by nous and ever the same, while the second was a copy of the model, involved in becoming, and visible. We did not distinguish a third kind at the time as we thought it

enough to have these two, but now the argument seems to compel us to try to manifest a difficult and obscure form in words. What should we understand its power and nature to be? This in particular – it is the receptacle of all coming into being, like its nurse.

49a

Timaeus: Now, although the truth has been spoken, a clearer statement about it is still required, but it is difficult to do so, particularly because it is necessary for the sake of this to raise a preliminary problem about fire and its accompaniments. It is difficult in the case of each of these to state what sort should actually be called water rather than fire, and what sort should be referred to as anything in particular rather than as everything individually, in such a manner as to employ language which is trustworthy and certain. How, then, may we speak about them in a likely manner, and in what way, and what can we say about them when faced with this problem? First, we see what we now call water being condensed and becoming stones and earth, or so we think, and when melted or dispersed, the same substance in turn becomes wind and air, and air when burned becomes fire. When this is combined once more and the fire is extinguished, it returns again to the form of air, and air comes together again, becomes dense and forms cloud and mist, and by compacting these even more we get flowing water, and from water we go on to get earth and stones. And their coming into being appears to be a cycle where they interchange with one another in this way.

49d

Timaeus: Accordingly, since none of these ever appears the same, which of them can a person firmly assert to be 'this something or other' and not something else, without embarrassing himself? It is not possible, and by far the most cautious approach when making assertions about these is to speak as follows: whatever we observe continually becoming in

different ways at different times – fire, for instance – we should consistently refer to²⁰ not as 'this' but as 'like this'; and we should not refer to water as 'this' but always as 'such as this'; nor ever refer to anything else as something possessing fixity by using the terms 'this' and 'that' and presume that we are pointing to anything. For they take flight and do not wait for the 'this' and the 'that' and the 'thereby', and whatever expressions indicate that they are constant. So we should not use these terms about them, but in relation to each of them, and all of them together, we should describe them as 'such as this, ever recurring alike'. And, indeed, we should call fire that which is such as this throughout, and so for all things that involve coming into being. But we should refer only to that in which each of these makes its appearance and into which each dissolves again thereafter, by using the terms 'this' and 'that'. However, anything with some sort of quality, be it hot or white, or any of the opposites, or anything derived from these, should be referred to by none of these terms.

50a

Timaeus: But I must make an effort to explain this anew even more clearly. Indeed, if someone, having moulded all manner of shapes out of gold, were to keep on remoulding each shape into all the others without stopping, and someone were to point to one of them and ask what it is in truth, the safest answer is gold. But the triangle, and all the other shapes arising in it, we should never refer to as 'these' as if they were things that are, for they change even as we make the assertion. Rather, we should be content if they deign to accept the cautious designation 'such as this'. Then we must also give the same account of the nature of the recipient of all these bodies; we must assert that it is always the same, since it never departs at all from its own capacity. For it is always receiving everything, but it never adopts a shape similar to the things which enter into it in any way at all. There it lies, the natural recipient of all impressions, moved and

shaped by the things that enter it, seeming to change from time to time because of these. What enters it and leaves it are imitations of the things that are always, modelled upon them in some manner which is hard to describe and extraordinary, which we shall deal with on another occasion.

50c

Timaeus: Leaving that aside, we must now conceive of three kinds: that which comes into being; that in which it comes into being; and the original, in the likeness of which that which comes into being grows. What's more, it is appropriate to liken the recipient to a mother, the original to a father, and the nature arising between these to an offspring. And we must also understand that if the recipient of impressions is to display all the varieties of embellishment, this entity in which the impressions will be set would need to be well prepared, and this will not occur unless it is devoid of all of those characteristics which it is about to receive from elsewhere. For if it were similar to anything that entered it, then whenever something of an opposite or completely different nature entered and was received, the receptacle would present a bad likeness as its own feature would intrude. Therefore, that which receives all forms into itself must also be devoid of all qualities, just as skilled perfumers contrive firstly to do just this, making the oil which will receive the scents as odourless as possible. And whoever turns his hand to moulding shapes in some soft material allows no shape at all to be present beforehand, but they even it out first, and render it as smooth as possible. In the same way, it is fitting that whatever will continually, throughout its entire self, receive the likenesses of all that is known by nous, and is always, should also be naturally devoid of all forms. So, then, the mother and receptacle of what is generated, visible and in every respect perceptible, should not be called earth or air or fire or water, or anything that they produce or that from which they arise. Yet, we shall not deceive ourselves if we say it is an

invisible and shapeless form, all-receiving, participating in a most baffling way in that which can be known by nous, and hard to understand. Insofar as it is possible to arrive at its nature from our previous deliberations, it would be most correct to describe it as follows: the part that has become fiery appears at the same time as fire, the moistened part as water, and as earth and air also, to the extent that it receives imitations of these.

51b

Timaeus: And yet, we must investigate this further through argument by making distinctions about these. Is there such a thing as fire just by itself, and everything that we constantly refer to in this way, each as things in themselves? Or is it only what we look at, and anything else we perceive through the body, that possesses this sort of truth, and is there nothing else besides these in any sense whatsoever? And do we speak idly every time we declare that there is a form of each, discernible by nous? Is this, in the end, nothing but a word? Now, it would be appropriate neither to dismiss the present issue by asserting that this is how matters stand without any deliberation or judgement, nor should we insert another lengthy, secondary topic into an already lengthy discourse. Yet, if it proved possible to make a significant distinction quite briefly, that would be most appropriate to our purpose. So, I cast my own vote as follows: if nous and true opinion indeed represent two kinds, then, definitively, there are these forms, just by themselves, incapable of being perceived by our senses, known by nous alone. However, if, as it appears to some, true opinion does not differ at all from nous, then by contrast, everything that we perceive by means of the body must be designated as most certain. Well, we must declare that these are two, because they have arisen independently and have dissimilar characteristics. One of them is engendered through instruction, the other through persuasion; one always arises along with a true

account, while the other is devoid of an account; and one is unmoved by persuasion, while the other is amenable to persuasion. Indeed, all men may be said to partake of opinion, but only the gods and some small class of humanity partake of nous.

52a

Timaeus: Since this is how matters stand, we must agree that the form which is always the same is one, ungenerated, undecaying, neither receiving anything into itself from anywhere else, nor entering into anything else anywhere, invisible and imperceptible. Nous has been assigned the task of investigating this. The second bears the same name as that and is similar thereto – perceptible, generated, constantly being moved, coming into being in some location, then perishing out of that place once more. It is apprehended by opinion accompanied by sense perception. The third kind is space, which is always, not accepting destruction, providing a basis for everything that comes into being, itself apprehended without involving the senses by some spurious reasoning difficult to believe in. This, indeed, we look towards and we engage in dreams, declaring that whatever is must presumably be in some location and occupy some space, and whatever is not, somehow either on Earth or in Heaven, is nothing. On account of this dreaming, we become unable, on awakening, to make these distinctions and others akin to them, even in relation to the unsleeping and truly subsisting nature, and to state the truth that in the case of an image, since it does not itself even possess the very thing it has been fashioned after, but always bears an appearance belonging to something else, it is appropriate for these reasons that it come into being in something different, clinging onto being in some way or other lest it be absolutely nothing. However, in support of what actually is, the precise and true account states that as long as one thing is different from another, neither can ever come into being in the other so

that they simultaneously become one and the same, and two.

52d

Timaeus: So let this concisely argued account be the one that receives my vote. There is being, space and becoming, these three, even before the Heaven comes into being. And yet the nurse of becoming, rendered watery and fiery, and receiving the forms of earth and air and adopting whatever other characteristics are a consequence of these, presents a variegated appearance. And because of being filled with powers that are neither similar nor equally balanced, no part of it is equally balanced. Rather, being swayed irregularly in all directions, it is shaken by those powers, and, as it moves, it in turn shakes them once more. And as they move, borne continually in one direction or another, they are separated, just like materials shaken and sifted by sieves and instruments for purifying grain; the dense and heavy components go one way, while the loose and light components are carried to a different place and settle there. The four kinds were then shaken in this way by the receptacle, itself moving like an instrument for shaking, separating the most dissimilar as far apart as possible from one another, while forcing the most similar together into the same place. And so it was that these different kinds each occupied a distinct space, even before the Universe organised from them had come into being. Indeed, prior to this they all behaved in an irrational and unmeasured manner. However, when the Universe was brought to order, fire, water, earth and air did possess some traces of themselves, and yet they were entirely in the sort of state that anything is likely to be in when god is absent from it. Such being their nature at the time, the god first gave them a structure by means of forms and numbers. Let this, above all, be our constant assertion: the god constructed them to be as beautiful and excellent as possible, but this was not their previous condition. But now I must attempt to show you the structure of each of them, and their

origin, by means of an unfamiliar account. And yet, since you have been involved in the courses of education that I must draw upon to demonstrate my assertion, you will follow me.

53c

Timaeus: Now, in the first place, fire and earth, water and air are bodies, as is obvious to everyone I presume, and the form of every body also possesses depth. And it is absolutely necessary that depth, in turn, be contained by a flat surface, and any straight-sided flat surface is constructed from triangles. All triangles originate from two triangles, each of which possesses a single right angle while the others are acute. One of them has half a right angle on either side, divided by equal sides, while in the other case the portions of the right angle are unequal, apportioned by unequal sides.²¹ So, proceeding on the basis of the likely account, accompanied by necessity, we propose this as the origin of fire and the other bodies, but any origins still higher than these god knows, and so do any men who are dear to him. So we need to state what the most beautiful bodies would be, four in number, dissimilar to one another, and yet capable of arising from one another in some cases when they are broken apart. For once we accomplish this, we are in possession of the truth concerning the generation of earth and fire and whatever lies between them in a proportion. Indeed, we shall not concede to anyone that there are visible bodies more beautiful than these anywhere, each based upon a single kind.

54a

Timaeus: So we must be eager to construct the four types of bodies that excel in beauty, and to declare that we have sufficiently understood their nature. In the case of the pair of triangles, there is only one type of isosceles triangle but an unlimited number of scalenes. Therefore, we must proceed to select the most beautiful from this unlimited number if we intend to begin methodically. Yet if anyone can declare that he has chosen something more beautiful for the construction of

these bodies, he will be victorious, not as an enemy but as a friend. And so, passing over the others, we propose one of the numerous triangles as the most beautiful, the one from which the equilateral triangle is constructed as a third. The explanation for this is a longer story, but if anyone refutes this and discovers that it is not the case, the prize is his, as a friend.

54b

Timaeus: So we shall select two triangles from which the bodies of fire and of the others have been devised. One is the isosceles, while the other has a long side that is always triple the short side when they are squared. However, something stated earlier in an imprecise manner should now be made more definite, for when it appeared that the four kinds all underwent generation from one another and into one another, the appearances were incorrect. The four kinds do indeed arise from the triangles we selected, and while three are constructed from the one that has unequal sides, the fourth one alone is constructed from the isosceles. So it is not possible for them all to be generated from one another when they are broken apart so that a few large kinds are produced from numerous smaller kinds and vice versa. Only three of them can do this because they arise naturally from a single triangle, and, by breaking up the larger bodies, numerous smaller bodies can be formed from the same triangles as the bodies take on the shapes appropriate to themselves. Then again, the small bodies, when dispersed into their constituent triangles, would give rise to another large single form once they constitute a single number belonging to a single volume.

54d

Timaeus: Now, that is enough said about their generation from one another. Next, we should explain what the form of each of them is like and the numbers that come together to constitute it. Now, we begin with the construction of the first and smallest form. Its element of composition is the triangle having its

hypotenuse double the shortest side in length. If a pair of such triangles is placed along a diagonal, and this is done three times, with the diagonals and the short sides fixed to the same point as though it were a centre, then from these, six in number, a single equilateral triangle is produced. And when four equilateral triangles are combined based on three flat angles coming together, a single solid angle is produced, the one that comes next after the most obtuse of flat angles.²² And when four such solid angles have been completed, the first solid form that apportions the entire surface of a sphere into equal and similar parts is constructed.²³

54e

Timaeus: The second is composed of the same triangles but arranged into eight equilateral triangles which produce a single solid angle from four flat angles, and when six solid angles like this have been generated, the second solid form is, in turn, brought to completion. The third is composed of one hundred and twenty of the elemental triangles combined together. It has twelve solid angles, each bounded by five flat equilateral triangles, and twenty faces consisting of equilateral triangles. Now, this elemental triangle was released from duty once it had produced these three forms, and the isosceles triangle then produced the fourth kind when it was assembled in groups of four, with their right angles joining at the centre to form a single equilateral quadrangle.²⁴ And six such surfaces when brought together produced eight solid angles, each consisting of three flat right angles, and the shape of the assembled body was the cube with its six flat equilateral quadrangular faces. One construction still remained, the fifth, and God used this in order to embroider shapes upon the Universe.²⁵

55c

Timaeus: Now, suppose someone considering all this with due measure were to become perplexed over whether we should say there are an unlimited number of universes or that there is

some limit. He would regard the opinion that the number is unlimited as belonging to someone who is actually inexperienced on issues about which he should be experienced, but, on the other hand, the question of whether it is in truth ever appropriate to say that there is naturally one universe or five, if he were to stop there, would provide more reasonable grounds for perplexity. Now, our approach, based upon the likely account, reveals that it is by nature a single god, but someone else, in view of some other considerations, may form different opinions.

55d

Timaeus: Now, we should dismiss this fellow and allocate the four types that have been generated to fire, earth, water and air. So let's assign the cubic form to earth, since earth is the most immobile of the four types and it is the most malleable of bodies, so it is especially necessary that this be the sort that has the most stable bases. And of the two triangles we proposed at the outset, a base made from the one with equal sides is naturally more stable than a base made from the one with unequal sides; and in the case of the equal-sided surfaces constructed from either triangle, the square is necessarily more resistant to motion than the equilateral triangle, both as a whole and according to its parts. Therefore, we shall preserve the likely account by assigning this form to earth, and of those that remain the hardest to move is assigned to water, the easiest to move to fire, and the intermediate kind to air. Again, the smallest body is assigned to fire, the largest to water, and the intermediate to air; and the sharpest again to fire, the second sharpest to air, and the third sharpest to water. Now, in all these cases, the one that has the fewest bases is necessarily the most mobile by nature, since it is the most incisive and the sharpest of them all in every respect, and also the lightest since it is composed of the fewest identical parts. The second lies in second place based on these same factors, while the third lies in

third place.

56b

Timaeus: So, in accordance with the correct and likely account, let the solid form that constitutes a pyramid be the element and seed of fire, and we may say that the second in order of generation belongs to air, and the third to water. Now, we need to realise that these are all so small that an individual particular of each kind is invisible to us due to its extreme smallness, and yet, when a large number are aggregated together, their bulks are visible. As for the proportions associated with their multiplicity, movements, and their other capacities, insofar as the nature of Necessity allowed under willing persuasion, we must realise that God fitted them together entirely in due proportion once he had precisely perfected them in this comprehensive manner.

56d

Timaeus: Now, from all that we have said earlier about the kinds, they would be most likely to behave as follows. Earth, on encountering fire and being broken apart by its sharpness – regardless of whether it is in fire itself when it gets broken up, or in a mass of air or water – would travel along until such time as it somehow meets up with its own parts, which, once fitted together with themselves, become earth again, for they could never have adopted any other form. Water, when broken apart either by fire or air, is capable of combining to constitute one body of fire and two of air, while the components of air, when a single portion is broken up, would become two bodies of fire. And again, when a little fire is surrounded by a lot of air or water, or even by some earth, and is in motion within them, does battle, gets defeated and is shattered, two bodies of fire combine into a single figure of air. And if air is defeated and broken in pieces, one whole figure of water will be compounded from two and a half of air.

57a

Timaeus: In fact, we may consider them again as follows. Whenever one of the other types is surrounded by fire and is cut by its sharp corners and edges, it stops being cut once it recombines into the nature of fire. For in each case, a kind that is the same and similar is unable to effect any change in or be affected by anything that is the same as itself and has similar characteristics. However, as long as it transforms into something else, as a lesser contesting against a stronger, its dissolution is unceasing. And furthermore, whenever a few smaller units, being surrounded by many that are larger, are broken apart and quenched, then, if they recombine and adopt the form of the dominant units, their quenching ceases and air arises from fire, or water from air. But if, as they are going in this direction, one of the other kinds comes upon them and attacks them, there is no end to their dissolution until they are either completely broken up by the pressure and take flight towards their kindred, or they are overcome, and out of the multiplicity constitute a unit like unto their conqueror and abide thereafter as its neighbour. And, indeed, during these processes they all exchange their locations, for although the vast bulk of each kind is set apart in its own place because of the motion of the receptacle, those that are in the process of becoming unlike themselves, but like others, are borne by the shaking towards the place belonging to the kinds they are becoming like.

57c

Timaeus: Now, it is through such causes as these that the unmixed and primary bodies have arisen, and yet the different types that exist within the forms of these four must be attributed to the construction of the two elementals. This initially produced a triangle in each case that was not of one size only; rather, some were smaller, some larger, and the number of different sizes corresponded to the number of different types among the four kinds. And so, as they combine

with themselves and one another, their diversity is unlimited, a diversity that must be contemplated by anyone who intends to have recourse to the likely account in relation to natural phenomena.

57d

Timaeus: Now, if there is not some agreement on the origin of motion and rest and the manner in which they arise, our subsequent reasoning would be much impeded. And although something has been said about them already, the following should still be added. Where there is uniformity, motion is never inclined to arise. For it is difficult, impossible really, that there be something moved without that which moves it, or for something to be a mover without something that is moved. In the absence of these there is no movement, yet it is impossible for them ever to be uniform. So, accordingly, we should always propose that there is rest in uniformity, and motion in non-uniformity. And, furthermore, the cause of the non-uniform nature is inequality.

57e

Timaeus: We have, indeed, described the origin of inequality, but we have not said precisely why there is not a cessation of their motion and mutual interchange once each of the four has been separated according to their kinds. We shall resume our account of this topic now. Since the circuit of the Universe encompasses these four kinds, and, being circular, is also inclined by nature to revert towards itself, it compresses them all and tends to allow no empty space to remain. Therefore, fire has indeed penetrated everything else to the greatest extent, air to the second greatest extent since it is by nature second in degree of fineness, and so on for all the others. For those formed from the largest components leave the most empty space in their structure, while the smallest leave the least. So the coming together, or compression, forces the smaller into the spaces in the larger. Now, when the smaller are placed alongside the

larger and the lesser split the greater apart, or the larger force the lesser to combine, they are all borne in one direction or another towards their own locations, for as each changes in size, it also changes the position of the location that belongs to it. In this way, and on account of all this, the generation of non-uniformity is always preserved, and it continually produces the unceasing alteration of these bodies, now and in the future.

58c

Timaeus: As well as this, we need to realise also that numerous types of fire exist, flame for instance, and also that which is emitted by flame which does not burn and yet provides light to the eyes, and also that which remains in the glowing embers when the flame is extinguished. The same goes for air, the brightest is referred to as ether, the murkiest as mist and darkness, and there are other forms without names, generated through the inequality of the triangles. The forms of water are first divided in two, one form of it is liquid, the other liquefiable. Now, the liquid form, because it partakes of the kinds of water that are small and unequal, is readily moved, either just by itself or by something else, due to the non-uniformity and the characteristic associated with its shape. However, the one composed of large and uniform kinds is more immobile than the liquid, and since it is rendered solid by its uniformity, it is heavy. Yet if it is penetrated and broken apart by fire, it loses its uniformity, and once this is undone it is more inclined towards motion, and once it becomes mobile it is extended out upon the earth under the pressure of the surrounding air. Each of these processes has acquired a name. 'Melting' is the disintegration of the bulk, and 'flowing' is the spreading upon the earth. But when the fire is expelled from there again, it does not emerge into a void; the surrounding air is pressurised, and it compresses the still mobile liquid mass into the positions that belonged to fire, thus mixing it together with itself. And once this is compressed it acquires its uniformity again, and since

fire, the artificer of its non-uniformity, has withdrawn, it reverts to sameness with itself. Being quit of fire is termed 'cooling', while the contraction that follows its departure is termed 'being in a solid state'.

59b

Timaeus: Now, of all these liquefiable kinds of water, as we have called them, the most dense arises from the finest and most uniform components. It is of one form only, glistening and yellow in colour, a most revered possession – gold, filtered through rock and solidified, while the offspring of gold, which is very hard and black due to its density, is called adamant. The kind whose parts bear the closest resemblance to gold has more forms than one. In density, it is in a way more dense than gold and it contains a small, fine portion of earth, and so it is harder, yet in another way it is lighter since it contains larger interstices within itself. This compound is copper, one form of the bright and solid types of water. But as the two components of the mixture age, they separate from one another again, and the earth that is in the mixture appears on the surface and is called rust.

59c

Timaeus: It should no longer be a complex matter to work out the features of the other substances of this kind whilst adhering to the structure of likely stories. In this regard, whenever someone, for the sake of relaxation, laying aside discussions concerning things that always are, gives consideration to likely accounts concerned with becoming, and derives a pleasure he will not later regret, he would be introducing a measured and sensible pastime into his life. So, having indulged in this just now, dealing with the same issues, we shall proceed with the likely accounts that follow this in due order in the following way. Water that is mixed with fire and is fine and liquid is called liquid due to its motion and the course it takes as it rolls along the ground. Now, it is also soft because its bases are yielding,

being less stable than those of earth, and whenever it separates off from fire and air, and is on its own, it becomes more uniform and is compressed into itself by the emerging substances, and it is solidified in this way. When this happens to it well above the earth it is hail, when on the earth it is ice, and when it happens to a lesser extent and it is still half-solidified, it is snow when above the earth, and when it is compacted from dew upon the earth it is called frost.

59e

Timaeus: Now, most types of water are mixed with one another, and because this category in general is filtered through the plants of the earth, they are called juices. Although each involves dissimilarity on account of the intermixtures, and while the differences give rise to numerous kinds that are nameless, four types containing fire are particularly evident and these have received names: wine, that can heat the soul as well as the body; an oily sort that is smooth and splits the beam of sight and so appears glittering and bright to behold – resin, castor oil, oil itself and any others with the same capacity. There is one that can relax the passageways of the mouth back to their natural condition, and by this capacity furnishes sweetness; it is generally referred to as honey. The last kind corrodes the flesh by burning; it is a foamy sort secreted from all other juices and it is called sour-juice.

60b

Timaeus: As for the forms of earth, that which is filtered through water becomes a strong material in the following manner. Whenever the water that is mixed in with it is broken up in the commingling process, it transforms into the figure of air, and once it has become air it rises up to its own region, but there isn't a void above them, so the air in the vicinity is pressurised. And since it is heavy, it presses down and pours around the mass of earth, squeezes it intensely and compresses it into the positions from which the newly formed air had

arisen. And earth, when compressed by air, constitutes stone that is indissoluble in water. The superior kind composed of equal and uniform parts is transparent, while the opposite applies to the inferior kind. The one from which all the moisture has been forced out by the rapid action of fire, and is a more brittle compound than the other, is the kind to which we have given the name 'potters' clay'. And on occasion, when some moisture is left behind and the earth has been melted by fire and then cooled down, the black-coloured substance constitutes [lava] stone. Similarly, there are two more that are extracted from the mixture containing a great deal of water. They are composed of finer particles of earth and are salty, and being semi-solid they are soluble once more in water. One is soda, which can cleanse us of oil and earth, while the other is salt, which blends well in the interactions associated with sense perception of the mouth, and, according to tradition, is beloved of the gods. The compounds of both earth and water that can be dissolved by fire but not by water are compacted in that way for the following reason. A mass of earth is not broken up by fire or air, since their particles are naturally smaller than the structure of its interstices. So they pass through the considerable open spaces without exertion, leaving the earth undissolved and rendering it indissoluble. However, since the particles of water are naturally larger, they make their way through by force, loosening the earth and breaking it apart. So earth that is not forcibly solidified in this way is dissolved only by water, yet when it has been so solidified, it is dissolved by nothing but fire, for no way is left for anything to enter it except fire.

60e

Timaeus: Water, for its part, when compressed with extreme force, is dispersed by fire alone, but if the force of compression is weaker, it is dispersed by both fire and air. Air acts upon the interstices, fire upon the elemental triangles. And when air is forcibly solidified, nothing dissolves it except by acting upon its

elemental triangles, and when the solidification is not forceful, only fire can break it apart.

61a

Timaeus: In the case of the mixed bodies composed of earth and water, as long as water occupies its interstices and these are forcibly pressed together, the particles of water arriving from outside, having no way of entering, flow around it leaving the entire mass intact. Yet the particles of fire entering the interstices of the water and acting upon it – fire acting on water as water acted upon earth – constitute the sole causes whereby the compound body is broken apart and flows. Some of these, the entire category associated with glass and any stones that we call liquefiable, happen to have less water than earth. Others – all materials that are wax-like or useful as incense – have, for their part, more water.

61c

Timaeus: Although the variegated forms originating from the commonalities in the shapes and their transformations into one another have been presented quite well at this stage, we should nevertheless attempt to indicate the causes by which the characteristics they possess have arisen. Firstly, the characteristics we are discussing throughout must be perceptible, even though the origin of flesh and its accompaniments, and of the mortal part of soul, have not yet been described. In fact, it is not possible for these to be adequately discussed without reference to those characteristics that are amenable to sense perception, or to discuss the characteristics without reference to the senses, while it is nigh impossible to treat of both at the same time. So, we should first make assumptions about one or the other of them, and then return to those assumptions hereafter. So, let us initially make an assumption about whatever is relevant to body and soul, so that, having described the various kinds we may next speak of their qualities.

61e

Timaeus: Now, let's first look at why we refer to fire as hot by considering the splitting and cutting we notice it bringing about in our bodies. Indeed, we all perceive that the effect is a piercing one, yet we must deduce the fineness of the edges, the sharpness of the angles, the smallness of the particles and the rapidity of its motion, all of which render it intense and incisive, always cutting acutely into whatever it encounters. We deduce this by remembering the origin of its shape, whereby this substance and no other, by splitting our bodies and cutting them up minutely, is likely to provide the characteristic we now call heat and its name too.²⁶ Although what is opposite to these is obvious, it deserves to be described anyway. Now, when the liquids consisting of larger particles surrounding the body make their way in, they force the smaller particles out, but are unable to settle into the positions thus vacated. They compress the moisture within us, rendering it immobile and solid due to the uniformity and the pressure, whereas it had previously been non-uniform and mobile. But anything that is unnaturally contracted naturally resists the process by pushing back in the opposite direction. This resistance and shaking is called shuddering or shivering, while the entire effect as a whole, and that which brings it about, has the name 'cold'. 'Hard' designates anything to which our flesh yields, while 'soft' designates anything which yields to the flesh, and they are also designated in this way with respect to one another. Whatever rests upon a small base tends to yield, and whatever is constituted of square bases is the most rigid form, since it is established firmly, and anything compressed to an extreme density would also be especially resistant.

62c

Timaeus: The nature of heavy and light may be presented most clearly by considering them along with the expressions 'up' and 'down'. Indeed, it is not at all correct to regard the Universe as

naturally divided into two distinct opposite regions; 'down' being the one towards which anything with any bodily bulk is borne; 'up' being the direction in which everything moves against its will. For since the entire Heaven has a spherical form, any extremities are situated at an equal distance from the centre, and these by nature must be extremities in the same way, while the centre, being situated at an equal distance from all the extremities, must be regarded as being in the opposite position to all of them. Now, since the world is naturally like this, which of the locations we have described may be designated as 'up' or 'down' without being regarded, quite rightly, as using a name that is not appropriate? For the central location within it is not rightly described as either 'up' or 'down'. No, it is just in the centre, while the periphery is obviously not the centre, nor does any part thereof differ in its relationship to the centre, nor to any of the points on the opposite side. But what sort of opposing names may be applied to something that is similar in every respect, and in what way might it be properly described? Indeed, even if a solid body were equipoised at the centre of the Universe, it would never be borne towards any particular extremity since they are all similar in every respect. No, even if someone were to proceed around it in a circle, repeatedly standing with his feet in opposite situations, he would refer to the same point on it as both 'up' and 'down'. Indeed, as we said just now, the whole is spherical in form, so it is not sensible to describe one location as 'up' and another as 'down'. As for the origin of these names and the actual circumstances to which they apply, by reason of which we are accustomed to refer to the entire Universe by dividing it in this way, these issues we must agree upon by making the following supposition. Suppose someone in the region of the Universe that is assigned predominantly to fire, where most of it gathers and towards which it is borne, were to stand up there and had the ability to take portions of fire, place

them on a scale and weigh them, raising the beam and dragging the fire forcibly into the dissimilar region of air, a lesser quantity of fire obviously would be forced more easily than a greater. For if two things are raised aloft by a single effort, the lesser must presumably go along with the force to a greater extent, and the greater to a lesser extent as it resists the process. So, the large volume is said to be heavy and to be borne downwards, while the small one is said to be light and borne upwards.

63b

Timaeus: Well, we need to discover ourselves doing the very same thing in our own region. Indeed, when we stand upon the earth, weighing earthy substances and sometimes earth itself, we are dragging them forcibly and contrary to nature into the dissimilar region of air. In both cases they cling to their own kindred, but the smaller bulk co-operates with the compulsion more easily and is first to follow it into the dissimilar region. Accordingly, we refer to it as 'light', and the region into which we compel it as 'up', and the characteristics opposite to these as 'heavy' and 'down'. Consequently, these must behave differently relative to one another because the vast bulk of the four types occupy regions opposite to one another. Indeed, on comparing what is light in one region with light in the opposite region, heavy with heavy, down with down, and up with up, all sorts of direct or indirect oppositions and differences relative to one another will be discovered, some present, some coming into being. However, there is one factor to be kept in mind in all of these cases. The course towards what is kindred to each renders whatever transverse it, heavy, and the region into which something like this is borne, down. The other terms are applied to those that take the other course. So, let's declare that these are the explanations of those characteristics. As for roughness and smoothness, I presume that anyone would be able to discern their causes and relate them to someone else, for one is

produced by hardness combined with non-uniformity, and the other by uniformity combined with density.

64a

Timaeus: The most significant remaining issue concerning the experiences shared by the entire body is the cause of the pleasures and the pains in those processes we have already described, and in any cases where sense perceptions acquired through our body parts are also accompanied by pains and pleasures in the parts themselves. Now, we should come to an understanding of the causes of any effect, perceptible or imperceptible, by recollecting the distinction we made earlier between the mobile and the immobile nature. Yes, anything we intend to discover must be pursued in this way. Whenever an impression, even a slight one, is made upon anything that is mobile by nature, it is transmitted around, one part bringing about the same effect upon the next until it reaches the thinking and proclaims the characteristics of whatever made that impression. While in the opposite case, where the object is unmoving, there is no outward motion, and the object alone is affected without moving anything else in its vicinity, so that the initial impression is not transmitted from one part to another, does not move into the living creature in its entirety, and renders the impression imperceptible. These considerations apply to bone and hair and any other predominantly earthy parts of our bodies, while the previous considerations apply mainly to parts concerned with sight and hearing because of the significant function of fire and air within them.

64c

Timaeus: Now, we should think about pleasure and pain as follows. When a sudden, forceful impression contrary to our nature is made upon us, it is painful, while the sudden return once more to the natural condition is pleasant. Any impression that is gentle and gradual is imperceptible, but the opposite goes for the opposite impressions. Anything that happens easily

is undoubtedly perceptible, and yet it does not involve pain or pleasure – experiences associated with the beam of sight itself, for instance, which, as we said previously, constitutes a body that coalesces with our own in the daytime. For cuts and burns, and whatever else the beam of light undergoes, do not produce pain or pleasure either when it returns once more to the same configuration. Yet there are significant and detailed sense impressions corresponding to whatever affects it, and to anything that it impinges upon or comes into contact with, for there is no force whatsoever involved in its dispersal or reconstitution. However, bodies composed of larger particles yield with difficulty to whatever acts upon them, transmit the effects throughout their entirety, and involve pleasures and pains; pains when they are being altered from their normal state, pleasures when they are being established once more in their original condition. In cases where they undergo gradual depletion and emptying but the refilling is sudden and extensive, the emptying process is imperceptible and the filling process is perceptible, and this induces no pains in the mortal part of the soul, only enormous pleasures. An obvious example is our experience of pleasant odours. But cases in which they are suddenly altered from their usual condition, and re-established only gradually and with difficulty in their own original state, bring about outcomes completely opposite to the previous cases. This is evident in circumstances in which the body is cut or burned.

65b

Timaeus: Although the experiences common to the body as a whole and any names bestowed upon whatever produces them have been described fairly well, we should still attempt to explain, if we can somehow do so, what happens in various parts of our bodies, the associated effects, and furthermore the causes involved in their production. First, we should clarify as best we can whatever we omitted from our earlier discussion

about tastes – namely, the particular experiences that involve the tongue. These experiences appear to originate, as indeed do most others, from certain constrictions and expansions, and, additionally, they rely more than the others upon roughness and smoothness. For any earth particles that enter in around the veins that act like probes for the tongue, extending as far as the heart, fall upon the moist, soft flesh, get dissolved, constrict the veins and dry them up. These appear harsh to us if they are particularly rough, dry if they are less rough. But anything that cleanses these veins, and anything that rinses the region of the tongue, is referred to as bitter when it exceeds the measure of its activity so that it attacks and melts away the substance of the tongue itself. Soda has this sort of effect, while those that are milder than soda and exercise their cleansing effect in due measure appear salty to us and more agreeable in the absence of that bitter roughness. Those which combine with the heat of the mouth and are rendered smooth become inflamed along with it, and in turn burn the very thing that warmed them up. Then, being carried upwards by their lightness towards the sense organs in the head, they cut apart whatever they impinge upon, and because they possess these powers, all such substances are called pungent. Those particles that have become thin through decay sink down into the narrow veins and are duly proportioned to particles of earth and air that are in there already, so that they set them moving around one another and stir them up. Being stirred up, they form an enclosure, and as one kind of particle sinks into another they produce hollows stretched around the particles that enter. So when a hollow of moisture, earthy or pure, is stretched about air, it forms watery vessels of air. Those enveloped by pure water are transparent and are called bubbles, while in cases where the moisture is earthy so that it moves and rises in a mass, we use the terms foaming and fermentation, and that which causes these experiences is called acid.

66c

Timaeus: An effect opposite to all those we have been describing is produced by an opposite cause. Whenever the configuration of the particles entering into liquids has a natural affinity with the normal condition of the tongue, smoothes it out and covers over its roughness, contracts the parts that have been unnaturally dilated, relaxes those that have been unnaturally constricted and settles them all as much as possible into their natural condition, anything of this sort constitutes a pleasant and agreeable remedy for those violent experiences, and is called sweet.

66d

Timaeus: Well, that is enough on this topic. Now, in the case of the power that belongs to the nostrils there are no distinct forms, for all of the smells are half-breeds and no single form proves to possess symmetry corresponding to any smell. Rather, the veins within us that are involved in these processes are more narrowly constructed than the kinds of particle belonging to earth and water, and are wider than those of fire and air, so no one has ever perceived a scent from any of these four. No, odour arises from the moistening, decaying, liquefaction or evaporation of substances. Indeed, odours arise at the intermediate stage when water is being transformed into air or air into water, and they are all smoke or mist. The one proceeding from air to water is mist, while the one proceeding from water to air is smoke. Therefore, all odours are less dense than water and yet more dense than air. This is most evident when someone impedes the inward breath and then draws his breath forcibly, for when he does this no accompanying odour whatsoever is filtered through, and the breath alone enters in, devoid of odours. Now, the varieties of scents fall into two categories which are without names, and consist neither of numerous forms nor of a simple few. Rather, we should speak only of an immediate, distinct, twofold division into the

pleasant and the painful: one roughens and does violence to the entire vessel that lies between our navel and the top of our head, while the other soothes this same region and lovingly restores it once more to its natural condition.

67a

Timaeus: The third part of sense perception within us, the one concerned with hearing, should be investigated, and the causes of the experiences associated therewith should be stated. Now, we may propose, in general, that sound is an impact transmitted by the air through the ears, brain and blood as far as the soul, and that hearing is the motion produced by this, a motion beginning in the head and ending in the region around the liver. If the motion is rapid the sound is high-pitched, if slow it is low-pitched, if it is uniform the sound is even and smooth, and in the opposite case it is harsh. If the motion is extensive, the sound is loud, and in the opposite case it is faint. However, the factors involved in the concord of sound must be dealt with in later deliberations.

67c

Timaeus: Well, there remains a fourth kind of sense perception, and it is necessary to subdivide this since enormous variations are included within it, which we refer to collectively as colour, a flame emanating from bodies, having particles proportionate to the beam of sight so as to bring about perception. And in the earlier accounts the causes that generated the visual beam were simply stated. Therefore, it would be most reasonable and appropriate to present a suitable account dealing with colours as follows. Particles borne from the various objects and impinging upon the beam of sight may be smaller, larger, or indeed equal in size to the particles belonging to the visual beam itself. Now, those that are equal in size are imperceptible, and, indeed, we say they are transparent. The larger and the smaller constrict the beam in one case, and disperse it in the other, and these are related to the particles that warm and cool

the flesh, the astringent ones associated with the tongue, and those we referred to as pungent due to their warming effect. White and black constitute identical experiences to these, but in a different medium, and for these reasons the phenomena appear different. Therefore, they should be referred to accordingly – that which disperses the beam of sight is white, and its opposite is black. And when the more rapid motion belonging to a different kind of fire impinges upon the beam of sight and disperses it right up to the eyes, forcibly compressing and cutting the very passageways of the eyes themselves, it causes a volume of fire and water, which we call a tear, to pour out of them. This more acute motion, being itself fire, encounters fire coming from the opposite direction which leaps out as if coming from a flash of lightning, while the incoming fire is being extinguished in the moisture, and in this turmoil a whole variety of colours is generated. We refer to the effect as dazzling, and we call whatever brings this about bright and glistening.

68a

Timaeus: The kind of fire that is intermediate between these other two is not glistening, despite reaching the moisture of the eyes and mixing with it, and the beam of fire shining through the moisture with which it is mixed produces a blood colour that we call red. Bright mixed with red and white becomes orange, but it would not be sensible to state the extent of the measure involved in these, even if we knew it, since we would not be even moderately capable of proposing any necessity or any likely account thereof. And yet, red mixed with black and white is purple, or it is violet whenever these components are burned and more black is mixed in with them. Orange arises from a mixture of yellow and grey, while grey comes from white and black, and ochre from white mixed with yellow. White mixed with bright and steeped in an intense black produces a dark blue colour, and dark blue mixed with white is light blue,

while orange mixed with black is green. As for the other colours, it is fairly obvious from these examples what mixtures they should be attributed to if we are to preserve our likely account. Yet if someone were to put these matters to the test through practical investigation, he would be acting in ignorance of the distinction between human and divine nature. God has sufficient knowledge and power to combine the many into one, and then again, to separate the one into many, but no human being is now, or ever shall be, adequate to either of these undertakings.

68e

Timaeus: So, at this stage, all these have developed in this way out of necessity. The artificer of the most beautiful and best of whatever comes into being took these over when he was bringing the self-sufficient and perfect god to birth, employing the causes associated with these as subservient, while he himself fashioned the good in whatever comes into being. Therefore, we should distinguish two kinds of cause, one necessary, the other divine, and we should seek the divine in all things for the sake of attaining a life that is as happy as our nature will admit. And we should seek the necessary for the sake of the divine, reckoning that without these necessities, those divine objects, our serious concern, are incapable of being discerned on their own, nor can they be apprehended or shared in at all.

69a

Timaeus: Now that the two kinds of cause have been duly separated and lie before us like materials for a carpenter, we must weave the remaining account together from these two. Let's briefly go back again to the beginning, proceed quickly from there to the stage we have just arrived at, and attempt to give a conclusion to our story at that stage, a crown befitting all that has gone before. Indeed, just as we said at the outset, these were all in a disorderly state when the god engendered

symmetry in each of them, each in relation to itself and all in relation to one another, to the extent that, and in the manner that, it was possible for them to be proportionate and symmetrical. For at that time nothing had a share in these proportions save by chance, and there was nothing at all worthy of being called by the names we now use, such as fire or water or any of the others. Rather, he first set all of these in order, then constructed this Universe from them, a single living being containing within itself all living beings, both mortal and immortal. He himself became the artificer of the divine beings and he commanded his own offspring to undertake the creation of the mortals. And they, imitating their father, received the immortal beginning of soul, then fashioned a mortal body in a globe around it and bestowed the entire body as its vehicle, and also built another form of soul in the body – the mortal form. This contains fearsome, necessary experiences within itself; first, there are pleasures, the greatest lure to evil; then, there are pains, taking flight from the good; there is also rashness, and fear, two unintelligent advisers; anger that is so hard to appease; and hope, so easily led astray. Mixing these together with irrational sense perception, and a love that will turn its hand to anything, they compounded the mortal kind of soul in a necessary manner. And fearing that these might pollute the divine part, unless this was absolutely unavoidable, they housed the mortal part of soul separately from that in a different dwelling place in the body, by constructing an isthmus and a boundary between the head and the chest, the neck, which they put in place so as to keep them separated.

69e

Timaeus: Then they fastened the mortal kind of soul within the chest, or thorax as we call it, and since one part of this is naturally better and another part worse, they built the vessel of the thorax, making a division therein as if they were separating the men's quarters from the women's by placing the midriff as a

barrier between the two. Then they housed the part of the soul that partakes of courage and spirit, the part that is fond of victory, closer to the head between the midriff and the neck, so that it could hearken to reason, and share with it the task of forcibly restraining the tribe of desires on occasions when they would not willingly consent in any way to obey the injunction of reason issuing from the Acropolis. So, in the sentry house they situated the heart, a knot of veins and a fountain for the blood that is borne relentlessly through all the limbs. Consequently, whenever the force of spirit boils up because reason proclaims that some unjust action is affecting them from the outside, or even from the internal desires, every sensible part of the body rapidly becomes aware of the exhortations and threats communicated through all the narrow veins, heeds them and follows them unreservedly, and, accordingly, the very best part is allowed to rule among them all.

70c

Timaeus: Considering the pounding of the heart, due to expectation of terrors or the awakening of spirit, and anticipating that this sort of swelling of the spirited parts was going to arise through fire, they devised a protection for the heart by implanting the structure of the lung. First and foremost this is soft and bloodless, and it also has cavities bored through it like a sponge so that it may receive air and liquid, have a cooling effect, and provide respite and ease amid the burning heat. Accordingly, they cut the channels of the windpipe as far as the lungs, and wrapped the lungs around the heart like a buffer so that when spirit bursts forth within the heart, it would pound against something yielding and be relieved, and being less troubled it would be more able to join with spirit in the service of reason.

70d

Timaeus: As for the part of the soul that is desirous of food and drink, and whatever else is held to be lacking on account of the

nature of the body, that part they housed in between the midriff and the boundary near the navel, occupying the entire region, building there a sort of feeding trough for the nourishment of the body. And there they tethered this part, like a conjoined wild beast that needed to be nourished if there was ever going to be a mortal race. So they allocated this location to it so that, grazing constantly at the feeding trough, housed as far away as possible from the part that deliberates, producing the least possible commotion and noise, it would allow the supreme part to deliberate in peace about what best serves the individual and the entire community. And they realised that it was not going to understand reason, and even if it were somehow to attain some appreciation thereof, it would not be in its nature to be concerned about any words, but would be utterly enchanted night and day by images and phantoms. God, seeking to exploit this particular weakness, assembled the structure of the liver and placed it in that very dwelling place, arranging that it be dense, smooth and bright, possessing both sweetness and bitterness. It was intended that the power belonging to the concepts emanating from nous, moving in the liver as if in a mirror that receives impressions and produces visible images, would strike fear into the appetitive part. So, whenever this power makes use of a kindred portion of the liver's bitterness, bears down upon it strongly and threateningly, and rapidly spreads the bitterness over the entire liver, it projects bilious colours, contracts it and makes it all shrivelled and rough. What's more, it also bends the lobe of the liver from its proper state, constricts it, blocks and closes its ducts and apertures, and brings about pain and nausea. And yet, when some breath of gentleness emanating from mind paints pictures of an opposite sort, it provides respite from the bitterness by refusing to set in motion or even to touch the nature that is opposite to itself. Then, making use of the very sweetness that is natural to the liver, it restores all its parts to their proper, smooth and free

condition, and renders the part of the soul housed in the region of the liver kind and gentle, spending the hours of night in due measure by having recourse to prophecy whilst sleeping, since it does not have a share in reason or intelligence.

71d

Timaeus: Indeed, those who fashioned us, remembering the injunction of their father when he directed them to make the mortal race as excellent as possible, even corrected the degenerate part of us in this way by establishing the prophetic power in the liver so that it would have some contact with truth. And there is sufficient indication that God has bestowed prophecy upon unintelligent humanity from the fact that no one in possession of nous attains to God-inspired true prophecy, but only someone whose power of intelligence is fettered in sleep or who is disturbed by disease or some frenzy. Rather, it is the role of the intelligent person to recollect and reflect upon the utterances from the prophetic or frenzied state, waking or dreaming, and upon any visions that were seen, and to decide by reasoning how and for whom these all indicate some present, past or future good or evil. However, it is not a task for the person who still remains in the prophetic state to judge the visions and utterances originating from himself. No, it has been well stated of old that it belongs only to the sound-minded person to know himself and do what is his own. Hence, it is the custom to set a group of interpreters as judges over the God-inspired prophecies, interpreters whom some refer to as prophets in their own right, being totally unaware that these people are interpreters of the enigmatic utterances or visions, and may not rightly be called prophets, but interpreters of those who engage in prophecy.

72b

Timaeus: So then, it is for the sake of prophecy that the liver has a nature of this sort and is located in the place we have described, and, while each creature is still alive, such an organ

as this retains more vivid indications, but when deprived of life it becomes blind and its prophecies are too obscure to indicate anything definite. Furthermore, it is for the sake of the liver, in order to keep it always bright and clean, that the organ next to it has the composition it has and is positioned to the left, like a cloth supplied for a mirror, always lying ready by its side. So, whenever any impurities arise in the region of the liver due to bodily diseases, they are all purified and absorbed by the loose texture of the spleen, since its fabric is porous and devoid of blood. Accordingly, as it fills up with impurities, it waxes large and it festers, but then again, once the body has been purified, it reduces in size and subsides to its former condition.

72d

Timaeus: As for the soul, the extent to which it is mortal and the extent to which it is divine, and how, in what company, and for what reasons these two parts are housed separately, we could only ever insist that what we have asserted is true if God were to confirm it. But we should dare to assert, even at this stage, that what has been said is likely, and will prove more so on further investigation, so let that be our statement. Well, the topic that follows from these should be pursued on the same basis. This concerns the manner in which the rest of the body came into being. It would be most appropriate to attribute its construction to reasoning of the following sort. The race of gods who framed us knew that we would show a lack of restraint with regard to food and drink, and would consume them greedily beyond due measure or necessity. So, to prevent our rapid destruction through diseases, and avoid the immediate demise of the still immature race of mortals, they anticipated these problems and put in place the receptacle we call the abdomen to retain the excess food and drink. They twisted the structure of the entrails around inside this so that food would not pass through so rapidly that it would immediately compel the body to need food once again, thus producing insatiable

desire and rendering our entire race unphilosophic and uncultured due to gluttony, heedless of our most divine part.

73b

Timaeus: In relation to bones, flesh and any substances of this sort, the following account applies. The origin of all these is the production of marrow, for whilst the soul is conjoined with the body, the bonds of life, bound fast in marrow, are the secure roots of the mortal race. And yet the marrow itself has come into being from other materials. For the god separated out those primary triangles that were unwarped and smooth and best able to produce fire, water, air and earth in a precise manner, and set each of these apart from their own kinds. Having mixed these with one another in due proportion, he devised a universal seed-mixture for the entire mortal race by fashioning marrow from them, and after that he planted therein the various kinds of soul and bound them fast. In his initial allocation, he divided the marrow immediately into shapes corresponding in number and type to the shapes that were to belong to the particular forms of soul. He moulded into a complete sphere the portion of marrow that was about to receive the divine seed into itself, as if it were ploughed land, and this he called the brain, implying that the head²⁷ was going to become the container for the brain once the construction of each living creature had been completed. Furthermore, he divided the portion of marrow that was to retain the remaining part of soul, the mortal part, into shapes that were both round and elongated at the same time, and yet he referred to them all as marrow. He also cast out fetters of the entire soul from these as if they were being thrown from anchors, and then fashioned all of this body of ours around the marrow after he had constructed a complete covering of bone to surround it.

73e

Timaeus: He constructed bone as follows. He sifted out earth that was pure and smooth, kneaded it, soaked it in marrow, then

placed it in fire, and after that he plunged it into water, again into fire, and then into water once more. So, by constantly transferring it in this way from one medium to the other, it was rendered indissoluble by either of them. Making use of this, he turned a sphere of bone around the brain of the creature and he left a narrow opening in the sphere. He also moulded vertebrae out of bone to surround the marrow that runs through the neck and down the spine, arranging them vertically like pivots beginning from the head and running down the whole trunk. And so they preserved the entire seed by fencing it about with a stone-like enclosure, creating joints and making use of the quality of difference within these as an intermediate power, introduced for the sake of motion and flexibility.

74a

Timaeus: Furthermore, he recognised the tendency of the bony material to be more brittle and inflexible than it should be, prone to become inflamed and then cool down again, thus developing gangrene and bringing rapid destruction to the seed within. On account of these tendencies, he devised the sinews and the flesh so that sinews would bind all the limbs together and would enable the body to bend and stretch by contracting and relaxing about the pivots, while the flesh was to be a barrier against heat and a protection against cold, and against falls too, because it would yield softly and gently to objects, just like garments of felt. It also contains warm moisture within itself that breaks out in sweat, providing a coolness of its own to the entire body by moistening it on the outside in the summer. Then again, in winter it uses this same fire to provide a measure of defence against the onslaught of the prevailing frost that surrounds it. Bearing this in mind, he who shaped us mixed water, fire and earth together, harmonised them, and compounded a ferment from acid and brine which he added to the mix, thus producing soft, succulent flesh. And he compounded the sinews from a blend of bone and unfermented

flesh, a single substance with qualities intermediate between the two, to which he added a yellow colour. Hence, the sinews acquired the quality of being tighter and tougher than flesh but softer and more moist than bone. The god enclosed the bones and the marrow within these sinews, used them to bind the bones together, and then placed a covering of flesh over them all.

74e

Timaeus: Now, whatever bones were most possessed of soul he fenced about with the least amount of flesh, while those that had least soul received most flesh, and that was extremely dense. And, indeed, he caused very little flesh to grow at the joining of the bones unless reason indicated some necessity that it be there. This was to prevent flesh from acting as an impediment to the bending of the joints, thus making the body stiff and hard to move. Furthermore, lots of dense and extremely compressed flesh would be so hard that it would make perception difficult and render the mental faculties unretentive and dull. Because of this, the thighs and shins are fully endowed with flesh, and so is the area around the hips and the region of the upper arms and forearms, any other unjointed parts of our bodies, and any internal bones that are deficient in intelligence due to the paucity of soul in their marrow. The parts possessing intelligence are less endowed, except when he somehow fashioned flesh just for the sake of perception itself, like the structure of the tongue, but in most cases it is as I have said. Indeed, the nature that arises from necessity and develops along with it does not in any way allow dense bone and lots of flesh to be simultaneous with keen sense perception. For if these two qualities were actually willing to occur simultaneously, it would be best of all for the structure of the head to possess them, so that the human race, bearing upon itself a fleshy, sinewy and strong head, could attain a life twice or many times as long as the present one, healthier too, and

more free from pain.

75b

Timaeus: But it so happened that the artificers responsible for bringing us into existence, deliberating on whether they should produce a long-lived inferior race or a short-lived superior race, decided that the shorter, better life should be chosen unreservedly for everyone, in preference to the longer and inferior life. Accordingly, they covered the head completely with thin bones, but not with flesh or with sinews either, since it does not possess any joints. So, based on all these considerations, a more perceptive, more intelligent, but much weaker head was placed upon the body of every person. For these reasons, the god situated the sinews at the base of the head in a circle around the neck and glued them on by means of uniformity, and to these he attached the extremities of the jaws under the structure of the face. The rest of the sinews he distributed among all of the limbs, connecting them together joint by joint. And indeed, those who brought order to the features of our mouth arranged it as it now is, fitting it with teeth, a tongue and lips for the sake of all that is necessary and all that is most exalted, thus devising an inward passage with a view to the necessary, and outward passage with a view to the most exalted. Indeed, all that passes in bringing nourishment to the body is necessary, while the stream of words flowing outwards in the service of understanding is the most beautiful and exalted of all streams.

75d

Timaeus: Furthermore, due to the excesses of the various seasons, it was not possible to leave the head only as bare bone, or, on the other hand, to let it become dull and unperceptive because it was overborne by a mass of flesh. So, from the fleshy material that was not dried up, an excessively loose film was separated out which we now refer to as skin. Because of the moisture around the brain, this skin combined with itself, grew

in a circle and completely enveloped the head. Then the moisture emerging from the sutures watered it and closed it in at the crown, drawing it all together into a kind of knot, and the structure of these sutures became variegated due to the effect of the inner orbits and of the nutriment; the greater the conflict between the two orbits, the more sutures there were, the lesser the conflict, the fewer the sutures.

76b

Timaeus: Now, the divine part²⁸ pierced this skin all around, and once it had been perforated, any pure moisture and pure heat in the liquid that emerged from it evaporated, while the mixed substance that the skin was also made from rose up on account of the movement, and stretched out at some length. It was as fine as the tiny piercings, yet because it was slow moving it was pushed back under the skin again by the external air that surrounded it, coiled around itself, and took root. So the hair grew on the skin due to these effects, kindred thereto because it was fibrous, yet harder and more dense due to the solidification that derived from the cooling process which cooled and compressed each hair as it separated from the skin. With this, our maker made the head woolly by making use of the factors we have described, intending that hair, rather than flesh, should be the cover for the area around the brain to ensure its safety, still providing sufficient shade in summer and shelter in winter without becoming an impediment that would prevent proper perception.

76d

Timaeus: From the combination of sinew, skin and bone, dried out to form a single substance from all three, a hard skin developed, twined around the end of the fingers. Although it was produced by these three subsidiary causes, it was wrought nevertheless by an ultimate intentional cause with a view to subsequent generations, for those who framed us knew that at some stage women and the beasts would arise from men, and

they also understood that many of the animals would require the use of claws or talons for numerous purposes. Therefore, as soon as humans came into existence, they gave them traces of the structure of claws. So, based on this reasoning, and with these motives, they caused skin, hair and nails to grow at the extremities of the limbs.

77a

Timaeus: Once all the parts and limbs of the mortal creature had developed into a natural unity, and it proved necessary for such creatures to spend their lives exposed to wind and fire, be wasted and depleted by these and perish as a result, the gods devised a means of helping them. By mixing various characteristics and kinds of perception, they brought about the development of a nature akin to human nature, a living being of a different sort. These are the domesticated trees, plants and seeds that have been trained by husbandry into the cultivated forms that we possess. Before that, there were only the uncultivated forms which are older than our cultivated varieties. Indeed, anything that partakes of life may justifiably and correctly be described as a living being,²⁹ yet that which we are speaking of now partakes of the third form of soul, the form that our account situated between the midriff and the navel, the form that has no involvement with opinion, reasoning or nous, but only with pleasant and painful sensations and their accompanying desires. For it is always completely passive, and its origin has not given it the natural ability to reflect upon and discern any aspects of itself by turning inwards, being concerned with itself, shunning external motion and having recourse to its own motion. So it is alive, and although it is a living creature it is stationary, rooted to the spot, stuck because it is bereft of motion of its own.

77c

Timaeus: Now, once the superior beings had caused everything of this sort to grow as nutriment for us lesser creatures, they

made conduits through the body itself, as if they were cutting channels in gardens, so that it would be watered by a sort of incoming stream. In the first place, seeing that the body has a twofold structure with a left side and right side, they cut two veins along the back to act as channels hidden beneath the conjunction of the skin with the flesh. They also brought these down along the spine, enclosing the reproductive marrow between them so that this would flourish to the greatest extent possible, and so that the influx of liquid that flowed so easily from there because of the downward course would provide uniform irrigation to the other regions. Then, having split apart the veins around the head, they intertwined them and sent them in opposite directions, so that those on the left were bent to the right side of the body, those on the right, to the left. This, along with the skin, was to act as a bond between the head and the body since there were no sinews all around the crown of the head. What's more, it would also enable the experience of the sense impressions coming from either of the two sides to be fully revealed to the entire body.

77e

Timaeus: At that stage they facilitated the transport of liquid in the manner we shall now describe, but it will be easier to see this once we have first come to an agreement on the following point. Anything composed of smaller particles repels the larger particles, while those composed of larger particles are unable to repel the smaller particles. Fire consists of the smallest particles of them all, so it passes through water, earth, air, and anything composed of these, and nothing is able to repel it. Well, we should bear the same principle in mind in relation to our own abdomen; it retains any food or drink that falls into it, yet it is unable to retain air or fire because these consist of particles that are smaller than its own structure. Therefore, the god made use of air and fire for the distribution of moisture from the abdomen to the veins by weaving a mesh, like a fish trap, having

two ducts at its entrance, one of which he proceeded to weave once more into a forked structure. Then he extended cords of some sort from the ducts in a circle throughout the entire mesh as far as its extremities. He constructed everything within the mesh from fire; the ducts and the vessel he constructed from air.

78c

Timaeus: He then took this structure and positioned it around the creature he had fashioned, in some such manner as follows. He let the part consisting of funnels down into the mouth, and since it had a twofold structure, he lowered one part into the lungs by way of the windpipe, and the other alongside the windpipe into the abdomen. He divided the first of these in two and gave each part alike an entrance through the channels of the nose, so that when the other channel through the mouth was not working, all of its streams would be filled up from this one. He caused the rest of the vessel that constitutes the fish trap to grow around the hollow part of the body and made it all flow together gently into the ducts, since these were made of air. And then he made the ducts flow back out again. Because the body is porous, the mesh sinks into it and emerges once more, while the rays of fire bound fast within it follow both movements of the air, and this does not cease as long as the mortal creature holds together. And we say that the name-giver has called it inhalation and exhalation. And indeed, the overall process and its effect acts as a source of nourishment and life to our bodies by irrigating and cooling them. For whenever the breath passes in or out, the inner fire connected to it follows along, and as it continually moves back and forth it passes into the abdomen, seizes upon the food and drink, dissolves them, divides them into tiny particles, draws them through the passages in the same direction it is proceeding, pours them into the veins like water going from a spring into channels, and sets the currents of the veins flowing through the body as if they

were flowing through a pipe.

79a

Timaeus: But we should look again at the process of respiration and the reason why this occurs as it now does. It is as follows. Since there is no void into which any moving body would be able to enter, yet the breath does come out of our body, one consequence is surely evident to everyone. It does not emerge into a void but displaces whatever is adjacent from its position. But whatever is displaced continually drives out whatever is adjacent to itself, and on the basis of this cycle of necessity, everything is driven around again to the position from which the breath emerged, enters in, and fills it. Because there is no void, this all happens at the same time, like the revolving of a wheel. Therefore, once the chest and lungs exhale the breath, they are filled up once more by the air surrounding the body which is driven around and sinks in because the flesh is so soft. Then again, when the air is turned in the other direction and is coming out through the body, it pushes the breath around and inwards by way of the passage of the mouth and the nostrils.

79d

Timaeus: We should presume that what is responsible for initiating these processes is this. In every living creature, the warmest of its internal parts are situated close to the blood and the veins which are like a fountain of fire residing within. This, of course, we likened to the mesh of the fish-trap, extending through the middle thereof and woven entirely from fire, while everything outside of that was made of air. Now we must accept that heat naturally proceeds outwards to its own region and towards its kindred. But there are two ways out, one emerging by way of the body, the other by way of the mouth and nostrils, so whenever it rushes one way it pushes the air around the other way, and when this is pushed around and falls into the fire it is warmed, but when it travels outwards it is cooled. Now, when the heat is changing its location and the air currents

proceeding by one of the exits become warmer, the warmer air tends to go back by way of that exit once more and travels towards its own kind, pushing the air using the other exit and driving it around. The same effect and the same response keep recurring, thus setting up a cycle that oscillates back and forth and brings about inhalation and exhalation.

80a

Timaeus: What's more, this is how we should also go about explaining the effects of medical cupping instruments, the causes of swallowing, and the behaviour of projectiles that are discharged into the air and those that travel along the ground, also any sounds that are rapid or slow, and therefore appear sharp or dull, sometimes discordant in their movement due to the lack of uniformity of the motion they produce in us, sometimes concordant due to its uniformity. Indeed, the slower motions overtake the more rapid motions that precede them, as the rapid motions are coming to a halt and have already attained uniformity with those which the slower motions impart to them when they arrive later. As the slower overtake the quicker, they do not impose another motion and cause disturbance. Rather, they initiate a slower motion based upon the faster motion which is dying away, introducing uniformity and blending together a single experience consisting of sharpness and dullness. Consequently, while these provide some pleasure to the dimwitted, they delight the enlightened folk because they provide an imitation of divine harmony arising amidst the movements of mortal beings. And consider, in particular, all the flowings of water, the descent of thunderbolts and the wondrous drawing power of amber and lodestones. In none of these cases is there any attractive force. Rather, it will be evident to anyone who investigates them methodically that there is no void, that these entities push themselves around into one another, and while they are all being divided up and combined together, each changes its

position and moves towards its own region, and by interweaving these processes with one another we get those wonderful phenomena.

80d

Timaeus: As for the effect of respiration from which our account digressed, this has arisen on the basis of these principles and through those processes. As the fire cuts up the food by rising up inside us, following along with the breath, it fills up the veins from the abdomen by the rising process which floods them with the minute particles from there. And so it is that the streams of nutriment have been set flowing throughout the whole body of every creature. The newly formed particles come from kindred substances, from fruits and vegetables, which the god caused to grow for our particular benefit to nourish us. These have taken on a variety of colours due to the commingling, yet the colour red is predominant throughout, a quality brought about by the cutting effect of fire and the impression it makes on liquid. Hence, the stream flowing through the body, the one we call blood, has the colour we have described. It is pasture for flesh and for the entire body, and each part draws liquid from there and replenishes any place that has been depleted. The process of replenishment and depletion takes place in the same way that the motion of everything in the Universe takes place, a motion that draws everything towards its own kindred. Of course, our external surroundings continually cut us up and break us apart, dispatching each form towards its own kind, while the contents of the blood, for their part, having been cut up inside us into small pieces and being surrounded by the structure of each creature as though by an enveloping Heaven, are compelled to imitate the universal motion. So each of the particles within the blood, being borne towards its kindred, replenishes once more the space that has been left empty.

81b

Timaeus: Now, whenever more is going out than is coming in, all things decay, but when less is going out they grow. So when the entire structure is young and the elemental triangles of its constituents are still new, like fresh wood, the bond holding them together is strong, and yet the overall construction is soft since it has been newly formed from marrow and nourished with milk. So when the surrounding triangles come into it from outside, the ones that the food and drink are made from, these are older and weaker than its own triangles, so it overpowers these older triangles with the new ones, cuts them up, and makes the creature grow large by nourishing it with an abundance of substances similar to its own. However, when the root of the triangles is slackened because of numerous such contests fought against many opponents over a long period of time, they are no longer able to cut the entering triangles and assimilate them to themselves. On the other hand, they themselves are easily split apart by those triangles that are coming in from outside. Every creature in this situation is overpowered and decays and the condition is called old age. And in the end, once the conjoining bonds of the triangles around the marrow endure no longer under the strain and are split apart, they in turn release the bonds of the soul, and once it is set free in accordance with nature, it flies away with pleasure. Indeed, everything contrary to nature is painful, while anything that arises naturally is pleasant. The same goes for death. When it happens as a result of disease or injury it is painful and violent, but when it comes with old age, an ending that accords with nature, it is the least painful of deaths, attended more by pleasure than by pain.

82a

Timaeus: The origin of diseases is presumably obvious to everyone. For since the body has been constructed from four constituents – earth, fire, water and air – any unnatural excess or deficiency or any removal from their own place to

somewhere alien causes disorder and disease. Furthermore, since there is more than one kind of fire and of the other constituents, the acquisition by the body of an inappropriate variety, and all phenomena of this sort, have the same effect. For when any of these arises or changes its location unnaturally, anything that was previously being cooled is warmed, what was dry becomes moist, the same goes for light and heavy, and everything changes in all sorts of ways. In fact, I maintain that only the addition or removal of same from same, on the same basis and in due proportion, will allow something to remain the same as itself, sound and healthy, while anything entering or leaving that strikes a discordant note by transgressing any of these requirements will engender a whole variety of alterations and countless diseases and corruptions.

82c

Timaeus: Furthermore, since secondary structures have been established in the course of nature, a second means of considering diseases arises for someone who wishes to contemplate them. For marrow, bone, flesh and sinew have been compounded from those four constituents, and blood has arisen from them too but in a different way, and the majority of diseases arise from the same causes we just mentioned. However, the most grievous diseases come about when the generation of these substances proceeds in reverse and they then undergo decay. For in the course of nature, flesh and sinew arise from blood, sinew from its fibres because it is akin to these, and flesh from the solidified material that forms when fibre is removed from blood. What's more, the sticky oily material that emerges from the sinews and flesh glues the flesh to the structure of the bones and also nourishes the very bone that surrounds the marrow and makes it grow.

82d

Timaeus: What's more, because of the density of bone, whatever is filtered through it consists of the purest kind of

triangles, and being extremely smooth and oily, it pours drop by drop from the bones and waters the marrow. And when each of these substances comes into being based on these processes, the consequence for the most part is health, but when they are reversed, the result is disease. For whenever flesh is decomposed and releases decomposed matter back into the veins once more, then a lot of variegated blood, mixed with air, adopts multifarious colours and bitterness, as well as acidic and saline properties, and retains all sorts of bile, serum and phlegm. Once these substances have become perverted and corrupted, they first destroy the blood itself, and although they themselves do not provide any nourishment at all to the body, they are borne in all directions through the veins, no longer holding to the natural arrangement of the cycles, at enmity towards themselves because they afford no advantage to themselves, and hostile to any part of the body that stands firm and holds its position. This they destroy and corrupt.

83a

Timaeus: Now, when any extremely old flesh is corrupted, it is difficult to assimilate, is blackened by the prolonged burning process, and being bitter due to the overall corrosion, it most grievously assaults any part of the body that has not yet been corrupted. Yet, on occasion, once the bitter substance has been diluted to some extent, the black-coloured substance takes on acidity rather than bitterness. At other times, when the bitterness has for its part been immersed in blood, it adopts a redder colour, and when the black colour is mixed with this, it goes yellow. And the yellow colour, in turn, mixes with the bitterness whenever the flesh that is decomposed by the flame around the fire is new flesh.

83c

Timaeus: The shared name, bile, has been assigned to all these, presumably by some physicians or even by someone capable of looking at numerous dissimilar entities and discerning among

them a single internal category that deserves to be given a name, while any other forms of bile we mention have a description of their own, based in each case upon their colour. Serum is mild when it is a whey-like product of blood, but aggressive when it comes from black acid bile that is combined with a saline quality by the action of heat, a type called acid phlegm. There is also the decomposition product formed from young tender flesh in the presence of air. This can be filled up with air and enveloped in moisture, producing bubbles in the process. These are not visible individually since they are too small, but they combine together to produce a mass that is visible and has a white colour due to the generation of foam. This entire decomposition process by which soft flesh is compounded with air, we refer to as white phlegm. Of newly formed phlegm there is, in turn, a whey-like part – sweat, tears and any other substances of this sort that flow from the body every day to purify it. And yet these actually become instruments of disease whenever blood is not replenished from food and drink in accordance with nature, but contrary to the natural order, acquires its mass from opposites instead.

83e

Timaeus: Now, when the flesh in the various regions is being assailed by diseases, yet the foundations still remain in place, their affliction is only half as strong, for an easy recovery can still be achieved. However, when the material that binds flesh to bone gets diseased and no longer nourishes the bone, nor acts as a bond between flesh and bone because it is separating off from both of these and from the sinews too,³⁰ and instead of being oily and smooth and sticky it becomes rough and saline, parched by a degenerate lifestyle, then any kind of material that suffers these effects crumbles away beneath the flesh and the sinews, separates from the bones along with the flesh which falls away at its roots, and leaves the sinews exposed and full of brine. The flesh then falls back into the blood-stream making

the diseases we mentioned earlier more intense.

84a

Timaeus: Although these are grievous afflictions of the body, those affecting the more basic parts are even worse. These occur when bone does not breathe in properly because of the density of the flesh, heats up on account of the mouldiness, decays, does not assimilate nutriment but proceeds instead in the opposite direction, and is disintegrated into that nutriment once more. That passes into flesh, and the flesh, falling into the blood-stream, renders all the diseases more severe than those described previously. And the most extreme case of all occurs when the substance of the marrow becomes diseased on account of some deficiency or excess. This brings about the most powerful and formidably fatal diseases, in which the entire nature of the body flows of necessity in the opposite direction.

84c

Timaeus: There is also a third form of these diseases which should be regarded as arising in three ways – from breath, from phlegm or from bile. For whenever the lungs, the dispensers of breaths to the body, are fenced in by some flux or other, the breath, being unable to go in one direction, goes in another direction in greater volume than appropriate. Then the parts that do not receive breath's cooling effect become corrupted, while it proceeds to force itself into the veins, contorts them and dissolves the body, stopping at the barrier at its centre where it gets closed in. These processes cause a huge number of painful diseases, often accompanied by copious sweating. And on occasion, when flesh breaks down within the body, breath is produced but is unable to make its way out, and therefore causes the same travails as the breath that comes from outside. These are at their worst when the breath surrounding the sinews and small veins there swells up, and in the process stretches backwards the tendons and the sinews attached to them. Indeed, it is from the tense condition arising from there

that the diseases have come to be referred to as tetanus and opisthotonos.³¹ These are difficult to cure. In fact, when such diseases arise, fever offers the most relief. The white phlegm is troublesome when confined within because of the air in its bubbles, but it is milder when it finds passage to the outer part of the body, where it produces a variety of colours and white markings and engenders the diseases related thereto. When combined with black bile, it can spread over the orbits that are in the head and throw them into confusion. Now, if this comes to us in sleep it is quite mild. However, if it visits us whilst awake it is harder to get rid of, and being a disease of a sacred substance, it is quite rightly referred to as 'the sacred disease'.³² Phlegm that is acidic and salty is the wellspring of all diseases that produce catarrh, and because the flow takes place from a variety of locations, they have acquired all sorts of names.

85b

Timaeus: Whatever parts of the body are said to be inflamed due to burning and inflammation have all become so on account of bile. Now, if the bile finds an external vent, it boils and sends forth all sorts of growths. However, if it is confined within, it engenders numerous inflammatory diseases. The worst of these occurs when bile is mixed together with pure blood and prevents the blood fibres from exercising their assigned role. For these have been dispersed in the bloodstream so that it may retain a balanced measure of thickness and thinness, and neither flow out through the pores of the body because it is liquefied by the heat, nor on the other hand, have difficulty in circulating through the veins because it is dense and immobile. The fibres by their natural structure preserve a balance of these qualities, but when someone dies and their blood is cooling down, the rest of the blood is liquefied once the fibres coagulate together. However, if the fibres are left as they are, they act in consort with the cool surroundings and quickly congeal the blood. Now, since fibres have this capacity in relation to blood,

when bile, which is a natural product of old blood, dissolves from the flesh back into the blood once more, the warm, moist bile gradually solidifies when it first falls into the blood because of the capacity of the fibres, and as it congeals and is forcibly extinguished it produces cold and shivering within. But when it flows in more voluminously, it boils up, and the heat it possesses overpowers the fibres and shakes them into disorder. And if there is so much bile that it becomes completely dominant, it passes through to the substance of the marrow, immediately undoes the 'ship's cables' of the soul by burning them, and sets it free. If there is less of it and the body resists the process of dissolution, the bile itself is overpowered and is expelled over the entire body surface, or compressed through the veins into the lower or upper abdomen, and is expelled from the body like fugitive elements from a city beset by faction. This produces diarrhoea, dysentery, and a whole range of similar diseases.

86a

Timaeus: When the body is diseased, mainly due to excess fire, continuous high-temperatures and fever are induced; when it is due to excess air, the fevers are quotidian; when due to water they are tertian because water is more sluggish than air or fire; when it is due to earth, the fourth most sluggish of these four, it takes four times as long to purge away and produces quartan fevers that are hard to shake off.

86b

Timaeus: So, the diseases of the body come about in this way, while diseases of the soul, due to the condition of the body, come about in the following way. We must agree that mindlessness is a disease of the soul. However, there are two kinds of mindlessness – madness and stupidity. Therefore, any experience that a person undergoes in which either of these two qualities is involved should be referred to as a disease, and excessive pleasure or pain should be ranked as the most

powerful diseases of the soul. For when a person is elated, or indeed is experiencing the opposite condition because he is in pain, he hastens in an untimely manner to grasp the one and flee from the other, and is unable either to see or to hear aright. He is raving, and in that moment he is least capable of exercising reason. And when the seed associated with the marrow becomes plentiful and free-flowing, and is just like a tree that is fruitful beyond its natural measure, numerous recurrent pangs and just as many pleasures are his lot, born of desires and the consequences thereof. For most of his life he is driven mad by the greatest pleasures and pains; his soul is kept diseased and senseless by the body, yet he gets a reputation for being deliberately degenerate rather than being a sick man. But in truth, lack of sexual restraint is, for the most part, a disease of the soul arising from an abundant and fluid condition of a single substance in the body due to porosity in the bones. And, indeed, almost all those who are unrestrained with respect to pleasure, and are said to be blameworthy because they are willingly bad, are censured unjustly. For no one is willingly bad, rather the bad become bad because of some degenerate condition of the body and the lack of an educated upbringing, both of which are afflictions that come to any person against his will.

87a

Timaeus: Then again, in the case of pain, and based upon the same factors, the soul derives a great deal of its degeneracy from the body. For when acidic or saline phlegm, or any bitter and bilious humours that go wandering about the body, are unable to find a vent to the outside and are trapped inside, they blend their own vapour together with the motion of the soul and get them both mixed up. These engender a whole variety of diseases in the soul, some more intense, some less so, some more extensive, some less so, which are then borne towards the three regions of the soul. Depending upon the region they

assail, they produce multifarious forms of ill-temper and despondency in one case, rashness and cowardice in another, and sometimes a combination of forgetfulness and dullness.

87b

Timaeus: What's more, when men set in such bad ways dwell in cities with bad forms of government, and public and private discourse accords therewith, and yet from childhood upwards they learn nothing to cure these ills, that's how the bad among us become bad, due to these two involuntary factors. For these we should blame the begetters rather than the begotten, and the nurturers rather than those who are nurtured. However, we should be eager in any way we can, through nurture, through activity, and through learning, to flee from badness and embrace its opposite, although these topics obviously belong to discussions of a different sort.

87c

Timaeus: However, it is reasonable and appropriate to present an exposition, the counterpart of these, setting out, in turn, the treatment that will preserve our bodies and our thinking processes in good health. Indeed, it is preferable that our discussion holds to the theme of what is good rather than what is bad. Now, all that is good is beautiful, and beauty is not devoid of measure, so a living being that is to exhibit such qualities must be well proportioned. But when it comes to proportions, we notice the minor ones and take them into account, while the most significant and important never enter our reckoning. Indeed, in the case of health and disease, virtue and vice, no single proportion or disproportion is more important than the relation of soul itself to body itself. In the case of these two, we neither observe nor recognise that whenever a weaker, lesser frame supports a soul that is strong and great in every respect, or, indeed, when the two are conjoined as opposites, the living being, as a whole, is not beautiful because the proportion it lacks is the most important proportion, while the alternative

arrangement is the most beautiful and beloved sight of all to those who are able to behold it.

87e

Timaeus: For instance, a body whose legs are too long, or is out of proportion with itself because of some other excessive tendency, is also inclined to be ugly, prone to much fatigue when it partakes in any exertions, and to a lot of awkwardness and falls, causing a whole range of difficulties to itself because of its abnormal movements. Well, we should also think about the twofold combination that we refer to as a living being in the same way. Indeed, whenever the soul within it is more powerful than the body and becomes passionate, it shakes up the entire body and fills it up with diseases from within, and when it embarks upon some intense study or enquiry it wears out the body. And again, when engaging in teaching and verbal disputation, both in public and in private, it makes the body feverish and troubled due to the strife that is generated and the associated thirst for victory, bringing on rheums and deceiving most so-called physicians into attributing the blame to the wrong cause.

88a

Timaeus: In contrast, whenever a large body that is too strong for the soul is conjoined with a small weak mind, the activities of the stronger dominate and strengthen their own desire. Now, there are two desires naturally associated with human beings – nutriment for our body, and understanding for our most divine part. So, activities of the body make the soul dull, slow to learn and unretentive, and engender within it the worst possible disease, stupidity. Now, there is a single safeguard against these two tendencies – neither to set the soul moving without moving the body, nor body without soul – so that both are protected and become balanced and healthy. Accordingly, a person who engages in mathematics or some other intense study involving the mind should also give the body its due measure of activity

through recourse to gymnastics, while the person who is careful about shaping his body should, in turn, impart a corresponding level of activity to the soul through recourse to music and philosophy in general, if he really intends to be referred to as noble and good in the proper sense.

88d

Timaeus: The parts of the body and soul should also be cared for on the same basis, in imitation of the frame of the Universe. For the body is warmed and cooled internally by whatever enters into it, and, again, is dried out and moistened by whatever is outside it, and suffers any consequences derived from both processes. So whenever someone remains at rest and submits his body to these processes, it is overpowered and destroyed. But if, on the other hand, someone imitates the nurturer and nurse of the Universe, as we call it, he would never allow his body to remain completely still but would move it, and by continually creating certain vibrations in it, maintain a constant, natural balance between the internal and external movements. By this measured shaking, he would order the affections and particles that wander about the body in accordance with their mutual affinity, into a mutual arrangement that reflects the description of the Universe we gave earlier, not allowing enemies to be placed side by side to engender strife and disease in the body, but ensuring the production of health by placing friend alongside friend.

89a

Timaeus: Now, when it comes to movements, the best movement is in oneself, by oneself, for this has most kinship with the movement of thought and of the Universe. Being moved by another is an inferior form of movement, but the worst form involves moving the body, part by part, by means of various agents, while it is lying still. Accordingly, the best way of purging or restoring the body is through gymnastic exercises, second is through the swaying motion of ships and any other

means of carriage that do not induce tiredness. There is a third form of motion, useful in cases of extreme necessity, which should not be accepted under any other circumstances by anyone possessed of intelligence – the use of purgative drugs for medical purposes. For diseases that do not pose a huge threat should not be incited with drugs. Indeed, in a way, the structure of any disease resembles the nature of a living being. In fact, the constitution of these beings involves an assigned span of life applicable to the species as a whole, and each particular creature is born with its own allotted life span, in the absence of the intervention of necessity. For the triangles belonging to each individual are constructed, from the very outset, with the capacity to endure for a certain period of time, and no creature could ever live beyond that limit. Now, the same tendency applies to the constitution of diseases. Whenever someone ignores their allotted time span and destroys them with drugs, minor diseases are inclined to become major, few to become many. Therefore, we should manage everything of this sort through our lifestyle insofar as leisure allows, and not irritate a troublesome malady through the use of drugs.

89d

Timaeus: That's enough said about the living creature as a whole and its bodily parts, and how a person may live in accord with reason, guiding and being guided by himself. But first and most importantly, we must somehow arrange for the part that will guide us to be as beautiful and excellent as possible for its guiding role. Now, to elaborate upon these matters in detail would constitute a task in its own right, yet we would not go much astray if we were to conclude our account by adding a secondary topic in accord with what has gone before, by considering the issue as follows. As we have stated on numerous occasions, there are three forms of soul dwelling in three regions within us, each possessing movements of its own.

Accordingly, we should now declare as briefly as possible, and on the same basis as before, that any form which continues in idleness and keeps quiet its own movements necessarily becomes weaker, while any that are exercised become stronger. Therefore, we should be careful that these movements retain a due proportion with respect to one another.

90a

Timaeus: As for the most lordly form of our soul, we should think of it in this way. It is as a daimon given to each of us by God, and it is said to dwell at the very pinnacle of our bodies to raise us up from Earth to our kindred in Heaven, we who are, properly speaking, a plant not of the Earth but of Heaven. Indeed, it is from there, the place from which soul first had her birth, that the divine agency suspends our head and root, making straight the entire body.

90b

Timaeus: Now, it is inevitable that in someone who is busy with desires and ambitions, and who labours intensely at these, all the opinions he forms are mortal, and insofar as it is possible for a person to become mortal, he takes on its full measure since he has swollen that part of himself. On the other hand, it is completely inevitable, I presume, that someone who has taken seriously to the love of learning and to true understanding, and has exercised these faculties within himself most of all, will think immortal and divine thoughts if he should actually attain truth. Furthermore, insofar as human nature is allowed to partake of immortality, he will obtain its full measure, and since he is constantly caring for the divine, and preserving the particular daimon associated with himself in good order, he will be especially blessed. But, of course, the one and only way of caring for everything is to bestow the nutriment and movement appropriate to each, and in the case of our divine part, the kindred movements are the thoughts and revolutions of the Universe. So, by adhering closely to these, setting aright the

orbits in our head which were corrupted around the time we were born, by coming to an understanding of the harmonies and revolutions of the Universe, each of us should bring our observing part into the likeness of what is observed in accord with the ancient nature, and in that likeness, finally attain the very best life prescribed by the gods for humanity with a view to time present and time future.

90e

Timaeus: And so today's initial assignment, to give a detailed account of the Universe as far as the birth of humanity, almost seems to have reached a conclusion. Of course, we must make brief mention of the manner in which the other living beings, for their part, came into existence, but it is not necessary to lengthen this. For in this way we may think ourselves to be more measured in our discussion of these matters. So let's discuss this as follows. According to the likely account, those who had been born as men and proved cowards, or lived their lives in an unjust manner, were changed in nature to women at their second birth. That's why the god framed the passion of intercourse at that time, fashioning one ensouled living being in us, another in women. Each of the two was made in the following way. They extended the exit passage of drink at the place where it receives the liquid that arrives by the lungs, through the kidneys into the bladder, and expels it along with the air that exerts the pressure. They carried this passage through into the marrow that has been fashioned to run from the head, down the neck and through the spine. Indeed, we said in our previous discussions that this is seed. And since this is ensouled and has a way of getting out at the place we mentioned, it engenders therein a lively desire to flow outwards, and produces the passion of procreation. So, it is that the sexual organ in men has become disobedient and self-willed, like a living creature with no regard for reason who attempts to dominate everything because of its raging desires.

91c

Timaeus: In women, for their part, the so-called matrix or womb is a living being within them, desirous of begetting children. Whenever this has become barren for a long time beyond its due season, it becomes troublesome and discontented. It wanders about the body in all directions, blocks up the exit passages of the breath, and by preventing respiration inflicts extreme distress and brings on a whole variety of other diseases until her desire and the male passion brings them together, and, as if stripping fruit from trees, sows the ploughed land of the womb with living beings, as yet unformed and so small that they are invisible, gives them distinctness once more, nurtures them within to a great size, and thereafter leads them into the light and completes the process of generating living creatures. So this is how women and all that is female came into being.

91d

Timaeus: Birds, as a class, were formed in a different way. Growing feathers rather than hair, they came from men who were harmless but unsubstantial, who studied the upper regions, but believed, due to their simple-mindedness, that the most definitive evidence concerning them comes from sight. The wild land animals, for their part, arose from those who had no recourse to philosophy or any awareness at all of the nature of the Heaven, because they did not make use of the revolutions in the head but followed the lead of the parts of the soul in the region of the chest. So, as a result of living in this way, they extended their forward limbs and their heads to the earth due to their kinship therewith, and settled there, having acquired elongated heads of all varieties, corresponding to the way in which their own revolutions had been pressed together on account of idleness. So that is the reason why this type of creature developed as four-footed or many footed; God placed more supports under those who were more mindless so that

they would be more drawn to the earth. The most mindless among them, in whom the entire body is stretched out upon the earth, no longer needed feet, so the gods made them without feet, to crawl in the dust of the earth. The fourth type arose in water from the completely unintelligent and unlearned. Those who fashioned them, deeming them no longer worthy to breathe pure air because they had an impure soul due to all-pervasive error, forced them to breathe the murky depths of water rather than fine, pure air. Hence, the race of fishes, of shellfish, and all the creatures that have come into being in water, have been assigned an extreme dwelling place as a penalty for their extreme stupidity.

92c

Timaeus: And it is on the basis of these principles that all living creatures, then and now, are transformed into one another; they are changed through the acquisition or loss of nous or stupidity. So, we may now declare that our discourse concerning the Universe has at last come to an end. This Universe has received mortal and immortal living beings and has been filled with them, and, accordingly, has become a visible, living being encompassing all that is visible, an image of whatever is known by nous, a perceptible god, supreme, excellent, sublime and perfect, this Heaven, only begotten and one.

NOTES

1. The gathering 'yesterday' was apparently that described in the Republic. There is much speculation as to the identity of the fourth, missing interlocutor.
2. Solon was the most famous early Athenian lawgiver, whose constitutional reforms in the 6th century brought an end to the great strife in the city.
3. The goddess in question is Athena. The reference to her festival is an indication that the discussion is taking place during the Panathenaea, which was held every year in Athens in honour of the patron goddess.
4. Apaturia were festivals held annually around the Greek world. In Athens, the Panathenaea was an opportunity for the Attic clans to meet to discuss various issues.
5. Deucalion and his wife Pyrrha were reputed to have been the only survivors of a cataclysmic flood sent by Zeus.
6. This is a reference to the Straits of Gibraltar.
7. (a) 2:4 :: 4:8 and (b) 8:4 :: 4:2, so (c) 4:8 :: 2:4. In (a) they are first/middle/last. In (b) the last has become first and the first last. In (c) the middle has become first and last and the last and first both middle. Hence, any of the three can become first, last or middle and so in that sense they are the same.
8. F:A :: A:W / A:W :: W:E, so there are now two middle terms, air and water in this example.
9. The circular motion by revolving on its own axis is assigned to the all. It alone involves no movement away from a fixed position and is thus termed 'un-wandering'.
10. The three mixtures are intermediate types of being, same and other, each formed by mixing their indivisible kinds with their divisible kinds.
11. The first mean is a harmonic mean, e.g. between 6 and 12 it is 8, which is $\frac{1}{3}$ greater than 6 and $\frac{1}{3}$ less than 12. The second mean is an arithmetic mean, e.g. in the case of 6 and 12 it is 9, which exceeds 6 by 3 and is 3 less than 12.
12. The Greek word for planets means wanderers, and refers to their irregular motion as compared to the 'fixed' stars.
13. This is a reference to the dawn-bearer (Venus).
14. This is Mercury.

15. Hence, the stars/gods rotate on their own axes and are also carried uniformly across the sky. These are the two assigned motions, the latter of which can be observed in the night sky.
16. The seven motions are rotation on an axis, movement to the right, left, up, down, forward and backward. Only the first two are exhibited by the stars/gods.
17. A connection is implied here between the Greek word for 'sensations' (aisthêseis) and the word for 'shaking' (aïssein).
18. This is a very close paraphrase of Euripides' *Phoenician Women*, 1762.
19. This sentence is evidence for equating nous with the Demiurge. The phrase 'with few exceptions' probably refers to the section on the mechanism of vision (45b–c).
20. Omitting *pur* at 49d6, following Cornford.
21. The former is the right-angled isosceles triangle. The latter is the right-angled scalene triangle.
22. This simply means that the three 60° angles that meet at the corner of a tetrahedron add up to 180°, which is not an obtuse angle but next after the most obtuse angle.
23. This refers to a tetrahedron inscribed within a sphere.
24. That is, a square.
25. This refers to the dodecahedron, which is the closest of all the solids to the spherical shape of the universe.
26. The reference here seems to be to a supposed connection between the Greek words for 'heat' and for 'cutting into pieces'.
27. The Greek word for brain translates literally as 'in the head'.
28. This is the brain itself.
29. The Greek word for living things, *zoa*, is often applied to animals. The point here is that plants, given that they are living things, have just as much right as animals to be called *zoa*.
30. The text is corrupt here. This translation follows Waterfield and Zeyl.
31. *Opisthotonos* is a spasm of the muscles around the neck and back often caused by severe tetanus, a bacterial disease that causes muscle rigidity.
32. Epilepsy was referred to as the sacred disease.

Hipparchus

ΙΠΠΑΡΧΟΣ

Plato

Socrates: And what is love of gain? What can it be, and who are the lovers of gain?

Friend: In my opinion, they are those who think it worth while to make gain out of things of no worth.

Socrates: Is it your opinion that they know those things to be of no worth, or do not know? For if they do not know, you mean that the lovers of gain are fools.

Friend: No, I do not mean they are fools, but rascals who wickedly yield to gain, because they know that the things out of which they dare to make their gain are worthless, [225b] and yet they dare to be lovers of gain from mere shamelessness.

Socrates: Well now, do you mean by the lover of gain such a man, for instance, as a farmer who plants something which he knows is a worthless herb, and thinks fit to make gain out of it when he has reared it up? Is that the sort of man you mean?

Friend: The lover of gain, as such, Socrates, thinks he ought to make gain from everything.

Socrates: Please do not speak so recklessly, as though you had been wronged by someone, but give me your attention and answer just as you would if I were beginning my questions over again. Do you not admit that the lover of gain has knowledge of the worth of the thing from which he thinks it worth while to make gain?

Friend: I do.

Socrates: Then who has knowledge of the worth of plants, and of the sort of season and soil in which they are worth planting — if we too may throw in one of those artful phrases which adroit pleaders use to trick out their speeches in the law courts? [225d]

Friend: For my part, I should say a farmer.

Socrates: And by “think it worth while to make gain” do you mean aught but “thinking one ought to make gain”?

Friend: I mean that.

Socrates: Then do not attempt to deceive me, who am now quite an elderly person, [226a] and you so young, by making, as you did just now, an answer that is not even your own thought; but tell me in all truth, do you suppose that any man who was taking up farming and who knew it was a worthless plant that he was planting, could think to make gain from it?

Friend: Upon my word, I do not.

Socrates: Or again, take a horseman who knows that he is providing worthless food for his horse; do you suppose he is unaware that he is destroying his horse?

Friend: I do not. [226b]

Socrates: So he does not think to make gain from that worthless food.

Friend: No.

Socrates: Or again, take a navigator who has furnished his ship with worthless spars and ropes; do you think he is unaware that he will suffer for it, and will be in danger of being lost himself, and of losing the ship and all her cargo?

Friend: I do not.

Socrates: So he does not think to make gain from [226c] that worthless tackle?

Friend: No, indeed.

Socrates: But does a general, who knows that his army has worthless arms, think to make gain, or think it worth while to make gain, from them?

Friend: By no means.

Socrates: Or does a flute-player who has worthless flutes, or a harper with a lyre, a bowman with a bow, or anyone else at all, in short, among ordinary craftsmen or sensible men in general, with any implement or other equipment of any sort that is worthless, think to make gain from it? [226d]

Friend: To all appearance, no.

Socrates: Then whoever can they be, your lovers of gain? For I presume they are not the people whom we have successively mentioned, but people who know their worthless things, and yet think they are to make gain from them. But in that case, by what you say, remarkable sir, no man alive is a lover of gain

Friend: Well, Socrates, I should like to call those lovers of gain who from insatiable greed consumedly long for things that are even quite petty and of little or no worth, [226e] and so love gain, in each case.

Socrates: Not knowing, of course, my excellent friend, that the things are worthless; for we have already convinced ourselves by our argument that this is impossible.

Friend: I agree.

Socrates: And if not knowing this, clearly they are ignorant of it, but think that those worthless things are worth a great deal.

Friend: Apparently.

Socrates: Now, of course lovers of gain must love gain?

Friend: Yes.

Socrates: And by gain you mean the opposite of loss? [227a]

Friend: I do.

Socrates: And is it a good thing for anyone to suffer loss?

Friend: For no one.

Socrates: Rather an evil?

Friend: Yes.

Socrates: So mankind are harmed by loss.

Friend: They are harmed.

Socrates: Then loss is an evil.

Friend: Yes.

Socrates: And gain is the opposite of loss.

Friend: The opposite.

Socrates: So that gain is a good.

Friend: Yes.

Socrates: Hence it is those who love the good that you call lovers of gain.

Friend: So it seems. [227b]

Socrates: At least there is nothing mad, my friend, about lovers of gain, as you describe them. But tell me, do you yourself love, or not love, whatever is good?

Friend: I love it.

Socrates: And is there anything good that you do not love, or must it then be evil?

Friend: Upon my word, nothing.

Socrates: In fact, I expect you love all good things.

Friend: Yes.

Socrates: Well now, ask me on my side whether I do not likewise: for I shall agree with you, for my part, that I love good things. But besides you and me, do you not think that all the rest of mankind [227c] love good things, and hate evil things?

Friend: It appears so to me.

Socrates: And we admitted that gain is good?

Friend: Yes.

Socrates: On this new showing, everyone appears to be a lover of gain; whereas, by our former way of arguing, no one was a lover of gain. So on which of the two arguments are we to rely, in order to avoid error?

Friend: What has to be done, I think, Socrates, is to conceive the lover of gain rightly. The right view of the lover of gain is that he is one who concerns himself with, [227d] and thinks fit to make gain from, things from which honest men do not dare to make gain.

Socrates: But you see, my sweet sir, we have just admitted that making gain is being benefited.

Friend: Well, what of that?

Socrates: There is the further point we have admitted in addition to this — that all men wish for good things always.

Friend: Yes.

Socrates: Then good men likewise wish to have all gains, if these are good things. [227e]

Friend: Not those gains from which they are bound, Socrates, to suffer harm.

Socrates: By “suffer harm” do you mean “suffer loss,” or something else?

Friend: No, I mean just “suffer loss.”

Socrates: Well, do men suffer loss from gain or from loss?

Friend: From both; for they suffer loss from loss and from wicked gain.

Socrates: Pray now, do you consider that any useful and good thing is wicked?

Friend: I do not. [228a]

Socrates: And we admitted a little while ago that gain is the opposite of loss, which is an evil.

Friend: I agree.

Socrates: And that, being the opposite of an evil, it is good?

Friend: That was our admission.

Socrates: So you see, you are attempting to deceive me, for you deliberately contradict what we agreed to just now.

Friend: No, on my honor, Socrates; on the contrary, it is you who are deceiving me, by twisting this way and that so perplexingly in your talk. [228b]

Socrates: Hush, hush! Why, surely it would be wrong of me not to obey a good and wise person.

Friend: Who is that? And to what are you referring now?

Socrates: I mean my and your fellow-citizen, Pisistratus's son Hipparchus, of Philaidae, who was the eldest and wisest of Pisistratus's sons, and who, among the many goodly proofs of wisdom that he showed, first brought the poems of Homer into this country of ours, and compelled the rhapsodes at the Panathenaea to recite them in relay, one man following on another, as [228c] they still do now. He dispatched a fifty-oared galley for Anacreon of Teos, and brought him into our city. Simonides of Ceos he always had about him, prevailing on him by plenteous fees and gifts. All this he did from a wish to educate the citizens, in order that he might have subjects of the highest excellence; for he thought it not right to grudge wisdom to any, so noble and good was he. And when his people in the city had been educated and were

admiring him for his wisdom, [228d] he proceeded next, with the design of educating those of the countryside, to set up figures of Hermes for them along the roads in the midst of the city and every district town; and then, after selecting from his own wise lore, both learnt from others and discovered for himself, the things that he considered the wisest, he threw these into elegiac form and inscribed them on the figures as verses of his own and testimonies of his wisdom, so that in the first place [228e] his people should not admire those wise Delphic legends of ““Know thyself”” and ““Nothing overmuch””, and the other sayings of the sort, but should rather regard as wise the utterances of Hipparchus; and that in the second place, through passing up and down and reading his words and acquiring a taste for his wisdom, they might resort hither from the country for the completion of their education. There are two such inscriptions of his: on the left side [229a] of each Hermes there is one in which the god says that he stands in the midst of the city or the township, while on the right side he says:”The memorial of Hipparchus: walk with just intent.

“There are many other fine inscriptions from his poems on other figures of Hermes, and this one in particular, on the Steiria road, in which he says: [229b] “The memorial of Hipparchus: deceive not a friend.

“I therefore should never dare, I am sure, to deceive you, who are my friend, or disobey the great Hipparchus, after whose death the Athenians were for three years under the despotic rule of his brother Hippias, and you might have heard anyone of the earlier period say that it was only in these years that there was despotism in Athens, and that at all other times the Athenians lived very much as in the reign of Cronos. And the subtler sort of people say [229c] that Hipparchus’s death was due, not to the cause supposed by most — the disqualification of the assassin’s sister from bearing the basket, for that is a

silly motive — but because Harmodius had become the favorite of Aristogeiton and had been educated by him. Thus Aristogeiton also prided himself on educating people, and he regarded Hipparchus as a dangerous rival. And at that time, it is said, Harmodius [229d] happened to be himself in love with one of the handsome and well-born youths of the day; they do tell his name, but I cannot remember it. Well, for a while this youth admired both Harmodius and Aristogeiton as wise men, but afterwards, when he associated with Hipparchus, he despised them, and they were so overcome with the pain of this “disqualification” that they slew Hipparchus.

Friend: It would seem, then, Socrates, either that you do not regard me as your friend, or if you do, that you do not obey Hipparchus. [229e] For that you are not deceiving me — though I cannot tell how you contrive it — in your talk, is more than I can believe.

Socrates: Well now, as though we were playing draughts, I am willing to let you revoke, as you please, anything you have said in carrying on the discussion, in order that you may not think you are being deceived. So tell me, shall I revoke for you the statement that all men desire good things?

Friend: No, thank you.

Socrates: Well, that suffering loss, or loss, is an evil?

Friend: No, thank you.

Socrates: Well, that gain, or making gain, is the opposite of loss, or suffering loss? [230a]

Friend: Nor that either.

Socrates: Well, that making gain, as the opposite of evil, is a good?

Friend: Nothing of all this do I bid you revoke for me.

Socrates: You think, then, it seems, that some gain is good, and some evil.

Friend: I do.

Socrates: Well then, I revoke so much for you; so let us assume that some gain is good, and some other gain evil. But the good sort is no more gain than the evil sort, is it?

Friend: What do you mean by this question?

Socrates: I will explain. Is there both good and evil food? [230b]

Friend: Yes.

Socrates: And is the one sort more food than the other, or are they both similarly this same thing, food, and in this respect does the one differ no wise from the other, in being food, but only in the fact of the one being good and the other evil?

Friend: Yes.

Socrates: And so with drink and every other class of things that exist, when some things in any class come to be good, and others evil, one thing does not differ from another in that respect whereby they are the same? For instance, [230c] one man, I suppose, is virtuous, and another wicked.

Friend: Yes.

Socrates: But neither of them, I conceive, is more or less man than the other — neither the virtuous than the wicked, nor the wicked than the virtuous.

Friend: What you say is true.

Socrates: Then are we to take the same view of gain also, that both the wicked and the virtuous sort are similarly gain?

Friend: Necessarily.

Socrates: So he who has virtuous gain is no whit the more a gainer than he who has wicked gain: neither sort [230d] is found to be more gain, as we agree.

Friend: Yes.

Socrates: For neither of them has addition of either more or less.

Friend: No, indeed.

Socrates: And how could one do or suffer anything more or less with a thing of this sort, that had neither of these additions?

Friend: Impossible.

Socrates: Since, therefore, both of these are gains and gain-making affairs, we must now consider what it can be that leads you to call both of them gain: [230e] what is it that you see to be the same in both? Suppose you were to ask me, in those instances that I gave just now, what it is that leads me to call both good food and evil food alike food, I should tell you — for this reason, because both are a dry sustenance of the body. For that, I am sure you would agree, is what food is, would you not?

Friend: I would.

Socrates: And so too about drink the answer would be on the same lines, that the wet sustenance of the body, [231a] whether it be wholesome or pernicious, has this name of drink; and likewise with the rest. Try therefore on your part to imitate my method of answering. When you say that virtuous gain and wicked gain are both gain, what is it that you see to be the same in them, judging it to be the actual element of gain? And if again you are yourself unable to answer, just let me put it for your consideration, whether you describe as gain every acquisition that one has acquired either with no expense, or as a profit over and above one's expense. [231b]

Friend: I believe that is what I call gain.

Socrates: Do you include a case where, after enjoying a banquet at which one has had much good cheer without any expense, one acquires an illness?

Friend: Upon my word, not I.

Socrates: And if one acquired health from attending a banquet, would one acquire gain or loss?

Friend: Gain.

Socrates: Hence gain is not just acquiring any acquisition.

Friend: No, indeed.

Socrates: Do you mean, not if it is evil? Or will one acquire no gain even if one acquires something good?

Friend: Apparently one will, if it is good. [231c]

Socrates: And if it is evil, will not one acquire loss?

Friend: I think so.

Socrates: You see, then, how you are running round again to the same old point? Gain is found to be good, and loss evil.

Friend: For my part, I cannot tell what to say.

Socrates: And not without good reason, sir. Now answer this further question: you say that if one acquires more than the amount one has spent, it is gain?

Friend: I do not mean, when it is evil, but if one gets more gold or silver than one has spent.

Socrates: Now, I am just going to ask you about that. Tell me, [231d] if one spends half a pound of gold and gets double that weight in silver, has one got gain or loss?

Friend: Loss, I presume, Socrates for one's gold is reduced to twice, instead of twelve times, the value of silver.

Socrates: But you see, one has got more; or is double not more than half?

Friend: Not in worth, the one being silver and the other gold.

Socrates: So gain, it seems, must have this addition of worth. At least, you now say that silver, though more than gold, is not worth as much, and that gold, though less, is of equal worth. [231e]

Friend: Assuredly, for that is the case.

Socrates: Then the valuable is what produces gain, whether it be small or great, and the valueless produces no gain.

Friend: Yes.

Socrates: And by the valuable you mean simply, valuable to possess?

Friend: Yes, to possess.

Socrates: And again, by what is valuable to possess, do you mean the unprofitable or the profitable?

Friend: The profitable, I presume.

Socrates: And the profitable is good?

Friend: Yes. [232a]

Socrates: And so, most valiant of men, have we not here once more, for the third or fourth time, the admission that what produces gain is good?

Friend: So it seems.

Socrates: Then do you remember the point from which this discussion of ours arose?

Friend: I think I do.

Socrates: In case you do not, I will remind you. You maintained against me that good men do not wish to make all sorts of gain, but only those gains that are good, and not those that are wicked.

Friend: Yes. [232b]

Socrates: And now the argument has compelled us to acknowledge that all gains, both small and great, are good?

Friend: Yes, it has compelled me, at least, Socrates, rather than persuaded me.

Socrates: Well, later on, perhaps, it might also persuade you. Now, however, whether you are persuaded or whatever is your feeling, you at least agree with me that all gains are good, both small and great ones.

Friend: Yes, I do admit it.

Socrates: And you admit that virtuous men all wish for all good things, do you not?

Friend: I do. [232c]

Socrates: But, you know, you stated yourself that wicked men love both small and great gains.

Friend: I did.

Socrates: And so, by your account, all men will be lovers of gain, whether they be virtuous or wicked.

Friend: Apparently.

Socrates: Hence it is not right to reproach anybody with being a lover of gain: for he who makes this reproach is actually such an one himself.

The Rival Lovers

THE RIVAL LOVERS.

SOCRATES I entered the grammar school of the teacher Dionysius, and saw there the young men who are accounted the most comely in form and of distinguished family, and their lovers. Now it chanced that two of the young people were disputing, but about what, I did not clearly overhear: it appeared, however, that they were disputing either about Anaxagoras or about Oenopides; at any rate, they appeared to be drawing circles, [132b] and they were imitating certain inclinations with their arms, bending to it and taking it most earnestly. Then I — for I was sitting beside the lover of one of the pair — nudged him with my elbow and asked him what on earth the two youngsters were so earnest about, and I said: Is it then something great and fine, in which they are so earnestly immersed?

Great and fine, indeed! he replied: why, these fellows are prating about the heavenly bodies, and babbling philosophy. [132c] Then I, surprised at his answer, said: Young man, do you consider philosophizing to be shameful? Else, why do you speak so sharply?

Then the other youth — for he chanced to be sitting near him, as his rival in love — when he heard my question and his rival's answer, said: You do yourself no good, Socrates, by pressing this fellow with a further question, as to whether he considers philosophizing to be shameful. Do you not know that he has spent the whole of his life in practising the neckhold, and stuffing himself, and sleeping? So why did you suppose he would make any other reply than that philosophy is shameful? [132d] Now this one of the two lovers had spent his time on humane studies, whereas the other, whom he was abusing, had spent his on athletics. So I decided that I had best relinquish the other, whom I had been questioning, since he did not even

himself set up to be experienced in words, but only in deeds; and that I should interrogate the one who set up to be wiser, in order that so far as I was able I might get some benefit from him. I said therefore: I addressed my question to both in common; but if you think you could answer more creditably than he, I put the same question to you as I did to him: do you consider philosophizing to be honorable or not? [133a] Then the two striplings, overhearing us speak somewhat like this, were silent, and ceasing from their own contention they became listeners to ours. What their lovers' sensations were, I do not know, but I myself, at any rate, was staggered; for every time I am staggered by handsome young people. It seemed to me, however, that my young friend too was in as great a flutter as myself; but nevertheless he answered me in a most ambitious spirit: Why, of course, Socrates, he said, if I should ever consider philosophizing to be shameful, I should not account myself so much as a man, [133b] nor anyone else either who was disposed to think so. Here he pointed to his rival lover, and spoke with a loud voice, in order that his favorite might hear every word.

Then I remarked: So philosophizing seems to you to be honorable?

Quite so, he said.

Well now, I said; does it seem to you possible to know whether anything is honorable or shameful without knowing what it is fundamentally?

No, he said. [133c] Then do you know, I went on, what philosophizing is?

Certainly I do, said he.

Then what is it? I asked.

Why, just what Solon called it; you know it was Solon who said: "And ever, as I older grow, I learn yet more and more;

“Solon Fr. 18 — and I agree with him that a man who intends to philosophize should in this way be ever learning something or other, whether he be younger or older, in order that he may learn as many things as possible in his life. Now at first I felt there was something in his reply, but then, on second thoughts, I asked him whether he considered philosophy to be much learning. [133d] To which he answered: Certainly.

And do you consider philosophy to be merely honorable, I asked, or good as well?

Good as well, he said: very much so.

Then do you observe this as peculiar to philosophy, or do you find it similarly in everything else? For example, do you consider the love of athletics to be not merely honorable, but good as well, or do you not?

Whereupon he, most slyly, gave a double answer: To him my statement must be “neither” ; but to you, Socrates, I acknowledge it to be both honorable and good: [133e] for I consider this the right view.

Then I asked him: Well now, in athletics, do you consider that much exercise is love of athletics?

To which he replied: Certainly, just as in philosophizing I consider much learning to be philosophy.

Then I said: And do you then consider that the lovers of athletics desire anything else than that which will cause them to be in good bodily condition?

Only that, he replied.

And does much exercise, I asked, cause them to be in good bodily condition? [134a] Yes, for how, he replied, could one be

in good bodily condition through little exercise?

Here I felt it was time to stir up the lover of athletics, in order that he might give me the support of his athletic experience; so I proceeded to ask him: And you then, pray, why are you silent, excellent sir, while your friend here is speaking thus? Do you agree that men are in good bodily condition through much exercise, or is it rather through moderate exercise?

For my part, Socrates, he said, I thought even a pig — [134b] as the saying is — would have known that moderate exercise causes them to be in good bodily condition, so why should not a fellow who is sleepless and unfed, with unchafed neck and slender, care-worn frame! And when he had said this the boys were delighted and laughed their approval, while the other lover blushed.

Then I said to him: Well, do you now concede that it is neither much, nor little, but moderate exercise that causes men to be in good bodily condition? Or do you bid defiance to the two of us on this point? [134c] To which he answered: Against him I should be only too glad to fight it out, and I am certain I should prove able to support the theory I have put forward, even had I put forward a weaker one; for he is naught. But with you I do not aim at winning an unscrupulous success; and so I admit that not a great but a moderate amount of athletics causes good condition in men.

And what of food? Moderate or much? I asked.

The same applied to food, he admitted. [134d] Then I went on and tried to compel him also to admit that everything else connected with the body when most beneficial, was the moderate thing, not the much or the little; and he admitted that it was the moderate thing.

And now, I said, as regards the soul; are moderate or immoderate things beneficial, as adjuncts of it?

Moderate things, he replied.

And are studies among the adjuncts of the soul?

He admitted they were.

So among these also it is the moderate that are beneficial, and not the much?

He agreed.

Then whom should we be justified in asking what sort of exercise or food is moderate for the body?

The three of us agreed that it must be a doctor or a trainer. [134e] And whom should we ask about the moderate measure in the sowing of seed?

In that matter, we agreed, it must be a farmer.

And whom should we be justified in asking as to the moderate degree and kind, in regard to the sowing and planting of studies in the soul?

At this point we all began to be full of perplexity; [135a] then I, mocking at them, asked: Do you mind, since we are in perplexity, if we ask these boys here? or perhaps we are ashamed, as Homer said the suitors were, and do not think it fit there should be someone else who will string the bow?

Then, as it seemed to me that they were losing their zeal for the argument, I tried to pursue the inquiry in another way, and said: But what, as nearly as we can guess, are the kinds of learning which the philosopher should learn, since he is not to learn all things or many things? [135b] At this the wiser one interjected: The finest and most suitable kinds of learning are those which will bring him the most reputation for philosophy;

and he will get most reputation if he appears well versed in all the arts, or if not in all, in as many of them, and those the most considerable, as he can, by learning so much of them as befits a free man to learn, that is, what belongs to the understanding rather than the handiwork of each.

Well now, do you mean, I asked, in the same way as in carpentry? For there, you know, you can buy a carpenter for five [135c] or six minae, but a first-rate architect cannot be got for even ten thousand drachmae; few such, indeed, could be found throughout the whole of Greece. Is it something of this sort that you mean? When he heard me say this, he admitted that something like this was what he himself meant.

I next asked him if it was not impossible for the same person to learn in this way merely two of the arts, not to speak of many or the principal ones; to which he replied: Do not conceive me, Socrates, [135d] to be stating that the philosopher must have accurate knowledge of each of the arts, like the actual adept in any of them; I mean only so far as may be expected of a free and educated man: that is, he should be able to follow the explanations of the craftsman more readily than the rest of the company, and to contribute an opinion of his own which will make him appear the cleverest and most accomplished of the company who may at any time be present at some verbal or practical exposition of the arts.

Then, as I was still unsettled in my mind as to the drift of his words, I asked him: Do I quite grasp the sort of man whom you mean by the philosopher? [135e] For you seem to me to mean someone like the all-round athletes in contest with the runners or the wrestlers: the former yield, you know, to the latter in their particular exercises, and are their inferiors in these, but are superior to the usual sort of athletes and beat them. I daresay it may be something of this sort that you would suggest as the effect produced by philosophy on those who make it their

pursuit: they yield to those who are first-rate [136a] in an understanding of the arts, but in taking the second place they surpass the rest; and in this way the man who has studied philosophy comes just next to the top in everything. That is the kind of person whom you appear to me to indicate.

You are quite right, it seems to me, Socrates, he said, in your conception of the philosopher's position, with your comparison of him to the all-round athlete. For it is precisely his nature not to be enslaved to any business, or to work out anything exactly, so as to let his application to that one matter make him deficient in the rest, [136b] as the craftsmen do, but to have a moderate contact with all of them.

Well, after this answer I was eager to know clearly what he meant, so I inquired of him whether he conceived of good men as useful or useless.

Useful, I should say, Socrates, he replied.

Then if good men are useful, are wicked men useless?

He agreed that they were.

Again, do you consider that philosophers are useful persons or not? [136c] He agreed that they were useful; nay, more, that he considered they were most useful of all.

Come now, let us make out, if what you say is true, where these second-best men are also useful to us: for clearly the philosopher is inferior to any particular adept in the arts.

He agreed.

Well now, I went on, if you yourself, or one of your friends for whom you feel great concern, should have fallen sick, would you fetch that second-best man into the house with a view to obtaining health, or would you summon a doctor? [136d] For my part, I should have both, he replied.

Please do not say “both,” I said, but which of the two you would prefer and also summon first.

No one, he replied, would make any question but that the doctor should be preferred and also summoned first.

And again, if you were in a ship that was making rough weather, to which would you rather entrust yourself and yours, the pilot or the philosopher?

I should choose the pilot.

And so it will be in everything else: so long as there is some craftsman, the philosopher will not be useful?

Apparently, he replied. [136e] So now we find that the philosopher is a useless person? For I suppose we always have craftsmen; and we have agreed that good men are useful, and bad ones useless.

He was obliged to agree to this.

Then what follows? Am I to ask you, or will it be too ill-mannered?

Ask whatever you please.

Well, my aim, I said, is merely to recall our agreements upon [137a] what has been stated. The matter stands somewhat like this. We agreed that philosophy is an honorable thing, and that philosophers are good; and that good men are useful, and wicked men useless: but then again we agreed that philosophers, so long as we have craftsmen, are useless, and that we always do have craftsmen. Has not all this been agreed?

Yes, to be sure, he replied.

Then we agreed, it seems, by your account — if philosophizing means having knowledge of the arts in the way you describe — that philosophers are wicked and useless so long as there are

arts [137b] among mankind. But I expect they are not so really, my friend, and that philosophizing is not just having a concernment in the arts or spending one's life in meddlesome stooping and prying and accumulation of learning, but something else; because I imagined that this life was actually a disgrace, and that people who concerned themselves with the arts were called sordid. But we shall know more definitely whether this statement of mine is true, if you will answer me this: What men know how to punish horses rightly? [137c] Is it those who make them into the best horses, or some other men?

Those who make them into the best horses.

Or again, is it not the men who know how to make dogs into the best dogs that know also how to punish them rightly?

Yes.

Then it is the same art that makes them into the best dogs and punishes them rightly?

It appears so to me, he replied.

Again, is the art that makes them into the best ones and punishes them rightly the same as that which knows the good and the bad ones, or is it some other?

The same, he said.

Then in the case of men also will you be prepared to agree that the art [137d] which makes them into the best men is that which punishes them rightly and distinguishes the good and the bad ones?

Certainly, he said.

And that which does this to one, does it also to many, and that which does it to many, does it also to one?

Yes.

And so it is also with horses and everything else?

I agree.

Then what is the knowledge which rightly punishes the licentious and law-breaking people in our cities? Is it not judicature?

Yes.

And is it any other art than this that you call justice?

No, only this. [137e] And that whereby they punish rightly is that whereby they know the good and bad people?

It is.

And whoever knows one will know many also?

Yes.

And whoever does not know many will not know one?

I agree.

Then if one were a horse, and did not know the good and wicked horses, would one not know which sort one was oneself?

I think not.

And if one were an ox and did not know the wicked and good oxen, would one not know which sort one was oneself?

That is so, he said.

And so it would be, if one were a dog?

He agreed. [138a] Well now, when one is a man, and does not know the good and bad men, one surely cannot know whether one is good or wicked oneself, since one is a man also oneself?

He granted this.

And is “not knowing oneself” being temperate, or not being temperate?

Not being temperate.

So “knowing oneself” is being temperate?

I agree, he said.

So this is the message, it seems, of the Delphic inscription — that one is to practise temperance and justice.

It seems so.

And it is by this same art that we know also how to punish rightly?

Yes.

Then that whereby we know how to punish rightly [138b] is justice, and that whereby we know how to distinguish our own and others’ quality is temperance?

It seems so, he said.

Then justice and temperance are the same thing?

Apparently.

And further, it is thus, you know, that cities are well ordered — when the wrongdoers pay the penalty.

That is true, he said.

Hence this is also statecraft.

He concurred.

Again, when one man governs a city rightly, is he not called a despot and king?

I agree.

And he governs by a kingly and despotic art?

That is so.

And these arts are the same as the former?

Apparently. [138c] Again, when a man singly governs a house aright, what is he called? Is he not a house-manager and master?

Yes.

Then would he also govern his house well by justice, or by some other art?

By justice.

Hence they are all the same, it seems, — king, despot, statesman, house-manager, master, and the temperate man and the just man; and it is all one art, — the kingly, the despotic, the statesman's, the master's, the house-manager's, and justice and temperance.

It is so, apparently, he said. [138d] Then, if it is disgraceful in the philosopher to be unable, when a doctor speaks about the sick, either to follow his remarks or to contribute anything of his own to what is being said or done, and to be in the same case when any other of the craftsmen speaks, is it not disgraceful that he should be unable, when it is a judge or a king or some other of the persons whom we have just instanced, either to follow their words or contribute anything to their business?

It must indeed be disgraceful, Socrates, to have nothing to contribute to subjects of such great importance! [138e] Are we then to say, I asked, that in these matters also he is to be an all-round athlete, a second-rate man, taking the second place in all the subjects of this art — he, the philosopher — and is to be useless so long as there is one of these persons; or that, first of all, he is to entrust his own house to nobody else and is not to take the second place in it, but is himself to judge and punish rightly, if his house is to be well managed?

He granted me that it must be so.

Secondly, I presume, whether his friends entrust him with an arbitration, or the state charges him to determine [139a] or judge any matter, it is disgraceful for him, my good friend, in such cases, to be found in the second or third place, and not to lead?

I agree.

Hence we see, my excellent sir, that philosophizing is very far from being much learning and that affair of busying oneself with the arts.

On my saying this the cultivated youth was silent, feeling ashamed for what he had said before, while the unlearned one said it was as I stated; and the rest of the company praised the argument.

Theages

Demodocus: Socrates, I was wanting to have some private talk with you, if you had time to spare; even if there is some demand, which is not particularly important, on your time, do spare some, nevertheless, for me.

Socrates: Why, in any case I happen to have time to spare, and for you, moreover, I have plenty. Well, you are free to say whatever you wish.

Demodocus: Then do you mind if we step aside here from the street into the portico of Zeus the Liberator?

Socrates: As you think best. [121b]

Demodocus: Let us go, then. Socrates, it would seem that all growths follow the same course, both those that grow from the earth, and the animals, including man. In regard to the plants, as you know, we who cultivate the earth find it the easiest part of our work to make all our preparations that are needed before planting, and to do the planting itself; but when the plant begins to grow, thenceforward we have a great deal of difficult and vexatious business in tending the new growth. [121c] Such, it seems, is also the case in regard to men: I take my own concerns as evidence for judging of the rest. For indeed I have found the planting, or the procreation — whichever one ought to call it — of this son of mine the easiest thing in the world; but his upbringing has been vexatious and a constant source of alarm, so great are my fears for him. Among the many instances that I could mention, the desire which occupies him at the moment is a thing that especially alarms me: for it is not an ill-bred desire, but a dangerous one, since here we have him, Socrates, as he says, desiring to become wise. [121d] My opinion is that some of his fellow-townsmen, about his own age, who pay visits to the city, excite him with accounts of certain discussions they have heard there; and in his envy of these he has long been pestering me with the demand that I should take

due thought for his needs, and pay fees to some sophist or other who will make him wise. Now I do not mind so much about the fees, but I believe he is running into no slight danger [122a] where he is hastening. I did for a time restrain him with good advice; but since I am no longer able to do so, I believe my best course is to comply with his request, in order that he may not resort, perchance, behind my back to somebody who will corrupt him. So I have come now on this very business of placing this youth with one of these sophists, or purveyors of wisdom, as they are held to be. It is a happy chance, therefore, that has thrown you in our way, as I should be particularly glad, with this plan of action in my mind, to ask your advice. Come, if you have any advice to give [122b] on what you have heard from me, you not only may, but should, give it.

Socrates: Well, you know, Demodocus, they do say that advice is a holy thing. And so, if ever it is to be accounted holy, it must be in this instance, in which you now seek it. For there is no more divine matter on which a mortal could take counsel than the education either [122c] of himself or of his relations. Now, first of all, let you and me come to an agreement as to what we suppose that this thing can be, on which we are taking counsel; for it may happen that I conceive it to be one thing, and you another, and then when we have proceeded some little way in our conference, we may perceive how ridiculous we are, I the adviser and you the advised, in having no common ground in our notions.

Demodocus: Why, I think you are right there, Socrates, and we should do as you suggest.

Socrates: Yes, I am right, but yet not entirely, because I have a slight change to make. For it occurs to me that [122d] this youngster may not be desiring the thing that we suppose him to desire, but something else, and there again we may be still more absurdly taking counsel on some other thing. Hence our most

proper course, it seems to me, is to begin with the youth himself, and inquire of him what it actually is that he desires.

Demodocus: It does rather look, in fact, as though our best way would be thus, as you suggest.

Socrates: Then tell me, what is the young person's goodly name: how are we to address him?

Demodocus: Theages is his name, Socrates. [122e]

Socrates: Goodly is the name, Demodocus, and holy-sounding, that you have bestowed on your son. Tell me, then, Theages, do you say you desire to become wise, and do you require your father here to find out a school of some man who is qualified to make you wise?

Theages: Yes.

Socrates: And which sort of man do you call wise, those who have knowledge of such and such a thing, whatever it may be, or those who have not?

Theages: Those who have knowledge, I say.

Socrates: Well now, has not your father taught and educated you in the subjects which form the education of everyone else here — all the sons of noble and honorable fathers — in letters, I mean, and harping and wrestling and the other sorts of contest? [123a]

Theages: Yes, he has.

Socrates: And you think you are still lacking in some knowledge which it behoves your father to provide for you?

Theages: I do

Socrates: What knowledge is it? Tell us on our side, that we may oblige you.

Theages: He knows it, as well as I, Socrates, since I have often told him; only he says this to you of set purpose, making as if he did not know what I desire. For he assails me too with other statements of the same sort, and refuses to place me with any instructor. [123b]

Socrates: Well, what you said to him before was spoken, as it were, without witnesses; but now you shall take me as a witness, and declare before me what is this wisdom that you desire. Come now; suppose you desired the wisdom whereby men steer a ship, and I happened to put this further question to you: Theages, what wisdom is it that you lack, when you blame your father for refusing to place you with people who would enable you to become wise? What answer would you have given me? What wisdom would you name? The steersman's art, would you not?

Theages: Yes. [123c]

Socrates: And if a desire to be wise in the wisdom whereby they steer chariots led you to blame your father, and I asked what wisdom this was, what would you name in reply? The charioteer's art, would you not?

Theages: Yes.

Socrates: And is that which you happen to be desiring now a nameless one, or has it a name?

Theages: I should say it has a name.

Socrates: Now do you know it, though not its name, or do you know its name as well?

Theages: I know its name as well.

Socrates: Then what is it? Tell me. [123d]

Theages: What other name, Socrates, can one give it but wisdom?

Socrates: And the driver's art too is wisdom? Or do you think it is ignorance?

Theages: I do not.

Socrates: You call it wisdom?

Theages: Yes.

Socrates: What use do we make of it? Is it not the art whereby we know how to govern a team of horses?

Theages: Yes.

Socrates: And the steersman's art too is wisdom?

Theages: I think so.

Socrates: Is not this the art whereby we know how to govern ships?

Theages: Yes, it is.

Socrates: And the wisdom that you so desire, what is it? [123e]
That whereby we know how to govern whom?

Theages: To govern men, I imagine.

Socrates: Sick men, do you mean?

Theages: Oh, no.

Socrates: For that is medicine, is it not?

Theages: Yes.

Socrates: Well, that whereby we know how to govern the singers in a chorus?

Theages: No.

Socrates: For that is music?

Theages: To be sure.

Socrates: Well, that whereby we know how to govern men in gymnastic training?

Theages: No.

Socrates: For that is gymnastics?

Theages: Yes.

Socrates: Well, to govern people who do what? Endeavor your best to speak, as I did to you at the beginning. [124a]

Theages: To govern the people in the city, I imagine.

Socrates: And are the sick people also in the city?

Theages: Yes, but I mean not these only, but all the rest who are in the city besides.

Socrates: Do I understand what art it is that you mean? For you strike me as meaning, not that whereby we know how to govern reapers and harvesters and planters and sowers and threshers, for it is the farmer's art whereby we govern these, is it not?

Theages: Yes. [124b]

Socrates: Nor, I suppose, do you mean that whereby we know how to govern sawyers and borers and planers and turners, as a class together; for is not that carpentry?

Theages: Yes.

Socrates: But perhaps it is that whereby we govern, not only all these, but farmers themselves also, and carpenters, and all craftsmen and ordinary people, whether men or women: that, perhaps, is the wisdom you mean.

Theages: That, Socrates, is what I have been intending to mean all the time. [124c]

Socrates: Then can you tell me whether Aegisthus, who slew Agamemnon in Argos, governed all these people that you mean

craftsmen and ordinary people, both men and women, or some other persons?

Theages: No, just those.

Socrates: Well now, did not Peleus, son of Aeacus, govern these same people in Phthia?

Theages: Yes.

Socrates: And have you ever heard of Periander, son of Cypselus, and how he governed at Corinth?

Theages: I have.

Socrates: Did he not govern these same people in his city?
[124d]

Theages: Yes.

Socrates: Or again, do you not consider that Archelaus, son of Perdiccas, who governed recently in Macedonia, governed these same people?

Theages: I do.

Socrates: And who do you think were governed by Hippias, son of Peisistratus, who governed in this city? Were they not these people?

Theages: To be sure they were.

Socrates: Now, can you tell me what appellation is given to Bacis and Sibyl and our native Amphilytus?

Theages: Why, soothsayers, of course, Socrates. [124e]

Socrates: That is correct. But try to answer me in that way regarding those others — Hippias and Periander: what appellation is given them on account of their government?

Theages: Despots, I suppose; it must be that.

Socrates: And when a man desires to govern the whole of the people in his city, he desires the same government as those did — despotism, and to be a despot?

Theages: Apparently.

Socrates: And it is this that you say you desire?

Theages: It seems so, from what I have said. [125a]

Socrates: You scoundrel! So you were desiring to govern us, all the time that you were blaming your father for not sending you to some seminary of despots! And you, Demodocus, are you not ashamed of having known all the time what he is desiring, and though you could have sent him where you would have made him an expert in the wisdom which he desires, actually grudging it to him and refusing to send him? But now, look here, as he has declared against you in my presence, shall you and I consult together on the question of whose school we shall send him to, and whose classes will help him to become a wise despot? [125b]

Demodocus: Yes, in faith, Socrates, let us certainly consult, as I feel this is a matter on which no slight counsel is needed.

Socrates: By and by, my good sir. Let us first cross-examine him thoroughly.

Demodocus: Examine him then.

Socrates: Well now, what if we called in Euripides to our aid, Theages? For you know Euripides says: "Despots are wise by converse with the wise.

"Soph. Fr. 14.15 Now, if someone should ask Euripides: Euripides, in what [125c] are these men wise, by whose converse you say that despots are wise? I mean, suppose he had said: "Farmers are wise by converse with the wise, "and we had asked him, — Wise in what? — what answer would he have given us? Surely none other than, — In

farming.

Theages: That, and none other.

Socrates: Or again, if he had said: "Piemens are wise by converse with the wise,
"and we had asked him, Wise in what? — what answer would he have given us? He would have said, — In the pie-making business, — would he not?

Theages: Yes.

Socrates: Or again, if he had said "Wrestlers are wise by converse with the wise,
"and we had asked him, Wise in what? — would he not reply,
— [125d] In wrestling?

Theages: Yes.

Socrates: But as he said: "Despots are wise by converse with the wise,
"? Soph. Fr. 14.1 and we ask him, — In what do you mean that the latter are wise, Euripides? — what will he reply? What sort of subjects will he mention here?

Theages: Why, upon my word, I for my part do not know.

Socrates: Well, do you mind if I tell you?

Theages: If you do not mind.

Socrates: They are the same subjects that Anacreon said Callicrite understood; or do you not know the ode?

Theages: I do.

Socrates: Well then, do you desire to partake in some instruction of that sort from any man [125e] who is a fellow-craftsman of Callicrite, daughter of Cyane, and knows all about despotism as she did, according to the poet, in order that you may become a despot over us and our city?

Theages: You are joking all this time, Socrates, and making fun of me.

Socrates: Why, do you not say that you desire that wisdom which will enable you to govern all the citizens? And in doing that, will you be anything else but a despot ?

Theages: I should indeed pray, I imagine, that I might become a despot, [126a] if possible, over all men, and failing that, over as many as might be; so would you, I imagine, and everybody else besides: nay, even more, I daresay, that I might become a god; but I did not say I desired that.

Socrates: Well, what on earth then is it that you do desire? Do you not say you desire to govern the citizens?

Theages: Yes, but not by force, or as despots do, but with their consent, as is done by all the other men of importance in the state.

Socrates: Do you mean, as by Themistocles and Pericles and Cimon, and by all those who have shown themselves able statesmen?

Theages: Yes, in good earnest, I mean those people. [126b]

Socrates: Then what if you chanced to desire to become wise in horsemanship? To whom would you have had to resort before expecting to be a clever horseman? To whom else but the horse-masters?

Theages: To none else, I am sure.

Socrates: And moreover, you would go to the actual men who are clever at the business, and who have horses and constantly use them in great numbers, both their own and other people's?

Theages: Obviously I should.

Socrates: And what if you wished to become wise in javelin-throwing? Would you not expect to get this wisdom by having resorted to those javelin-masters who have javelins and who constantly use javelins, [126c] both other people's and their own, in great numbers?

Theages: I think so.

Socrates: Then pray tell me, since it is your wish to become wise in state-matters, do you expect to get your wisdom by resorting to any other persons than those statesmen, who not only have their own ability in state-matters, but have constant dealings with other cities besides their own, by their intercourse alike with Greek cities and with foreign peoples? Or do you think to get wisdom in their business by resorting to any other persons than these particular men? [126d]

Theages: Well, Socrates, I have heard of the argument that you are said to put forward — that the sons of those statesmen are no better men than the sons of shoemakers; and in my opinion your words are very true, from what I am able to gather. Hence I should be an utter fool if I supposed that any of these men would impart his wisdom to me when he never was of any use to his own son, as he would have been, if he were able to be of use in this matter to anyone at all in the world.

Socrates: Then which way, most excellent sir, would you turn if, when you came to have a son, he should trouble you in the same manner, [126e] and tell you he desired to become a good painter, and should blame you, his father, for refusing to spend money on him for that very purpose, but at the same time should disregard the practitioners of that very thing, the painters, and decline to learn from them? Or the flute-players, when he wished to become a flute-player, or the harp-players? Would you know what to do with him, and where else you should send him if he refused to learn from these?

Theages: Upon my word, I should not. [127a]

Socrates: And do you now, when you are behaving in just the same way to your father, feel surprised and blame him for being at a loss what to do with you and where to send you? Why, we are ready to place you with any well-bred Athenian statesman you may choose, who will train you free of charge; and so not only will you be at no expense of money, but will gain far greater commendation amongst the mass of men than if you studied with anyone else.

Theages: But then, Socrates, are not you too one of our well-bred gentlemen? Indeed, if you will agree to instruct me, I am content and seek no other. [127b]

Socrates: What do you mean by that, Theages?

Demodocus: Nay, Socrates, there is nothing amiss in what he says, and you will oblige me at the same time; for I should count it the greatest possible stroke of luck if he should welcome your instruction and you also should consent to instruct him. Nay, indeed, I am quite ashamed to say how keenly I wish it; but I entreat you both — you, to consent to teach Theages, and you, to seek the teaching of no one else than Socrates; you will thus relieve me [127c] of a harassing load of anxiety. For just now I am sorely afraid of his falling in with some other person who is likely to corrupt him.

Theages: Have no more fears for me now, father, so long as you are able to persuade him to receive me as his pupil.

Demodocus: Very rightly spoken. Socrates, from now onward we must address ourselves to you; for I am ready, in short, to place both myself and all that I hold dearest of what is mine in your hands — whatever you may require, [127d] absolutely — if you will open your arms to Theages here, and do him any service that you can.

Socrates: Demodocus, your zeal is no wonder to me, if you suppose that I especially could be of use to him; for I know of nothing for which a sensible man could be more zealous than for his own son's utmost improvement. But how you came to form this opinion, that I would be better able to be of use to your son in his aim of becoming a good citizen than you would yourself, and how he came to suppose that I rather than yourself would be of use to him — this does fill me with wonder. For you, [127e] in the first place, are my elder, and further, you have held in your time many of the highest offices in Athens, and are respected by the people of Anagyrus above all your fellow-townsmen, and by the whole state as much as any man, whereas neither of you can notice anything like this about me. And moreover, if Theages here does despise the instruction of our statesmen, and is looking for some other persons who profess to be able to educate young people, we have here Prodicus of Ceos, Gorgias of Leontini, Polus of Acragas, [128a] and many more, who are so wise that they go to our cities and persuade the noblest and wealthiest of our young men — who have the choice of learning from any citizen they choose, free of charge — they persuade them to abandon that instruction and learn from them, with a deposit, besides, of a large sum of money as their fee, and to feel thankful in addition. Some of these persons might naturally have been chosen both by your son and by yourself, in preference to me; [128b] for I have no knowledge of those fair and beatific subjects of study: I only wish that I had. But what I always say, you know, is that I am in the position of knowing practically nothing except one little subject, that of love-matters. In this subject, however, I claim to be skilled above anybody who has ever lived or is now living in the world.

Theages: Do you see, father? Socrates does not seem to me to be at all willing now to spend his time on me; for there is readiness enough on my part, [128c] if he is willing. But he is only jesting

in what he has just told us. For I know of some of my equals in age, and some a little older, who were of no account before they learnt from him, but after beginning to learn from him have in a very short time proved themselves superior to all whose inferiors they were before.

Socrates: And do you know what the meaning of it is, son of Demodocus?

Theages: Yes, on my soul, I do — that, if it be your pleasure, I too shall be able to become such as those others are. [128d]

Socrates: No, good sir, the meaning of it escapes you; but I will tell it you. There is something spiritual which, by a divine dispensation, has accompanied me from my childhood up. It is a voice that, when it occurs, always indicates to me a prohibition of something I may be about to do, but never urges me on to anything; and if one of my friends consults me and the voice occurs, the same thing happens: it prohibits, and does not allow him to act. And I will produce witnesses to convince you of these facts. You know our Charmides here, who has grown so handsome, the son of Glaucon: [128e] he once happened to be consulting me on his intention of training for the Nemean races, and he had no sooner begun to say that he intended to train than the voice occurred, and I tried to prevent him, saying—“Just as you were speaking my spirit-voice has occurred: no, you must not train.” “Perhaps,” said he, “it indicates to you that I shall not win; but even if I am not to win, at any rate the exercise I shall get in the meantime will do me good.” So saying, he went and trained; and so you may as well inquire of him [129a] as to the results he got from his training. Or if you like, ask Cleitomachus, brother of Timarchus, what Timarchus said to him when he was going straight to the prison to meet his death, he and Euathlus the racing runner, who had harbored Timarchus as a fugitive; for he will tell you that the words he spoke to him were these:

Theages: What?

Socrates: “Cleitomachus,” he said, “I tell you I am going to my death now, because I would not take Socrates’ advice.” Now, why on earth did Timarchus say that? I will tell you. When Timarchus and Philemon, [129b] son of Philemonides, got up from the wine-party to kill Nicias, son of Heroscamandrus, those two alone had knowledge of the plot; and Timarchus, as he got up, said to me: “What say you, Socrates? Go on drinking, all of you; I have to get up and go somewhere, but I will join you a little later, if I get the chance.” Then occurred that voice of mine, and I said to him: “No, no, do not get up; for my accustomed spiritual sign has occurred to me.” [129c] So he stopped. Then after an interval of time he again started to go, and said: “Well, I am going, Socrates.” Again the voice occurred, and so again I constrained him to stop. The third time, wishing to give me the slip, he got up without saying another word to me; he gave me the slip by watching until my attention was turned elsewhere. Thus it was that he went right off and committed the deed which was the cause of his going then to his death. And hence it was that he spoke those words to his brother which I quoted to you just now, that he was going to his death because he had not taken my advice. [129d] And moreover, in regard to the Sicilian business, many will tell you what I said about the destruction of the army. As to bygones, you may hear from those who know: but there is an opportunity now of testing the worth of what the sign says. For as the handsome Sannio was setting out on campaign, the sign occurred to me, and he has gone now with Thrasyllus on an expedition bound for Ephesus and Ionia. I accordingly expect him to be either killed or brought very near it, and I have great fears for our force as a whole. [129e]

Now I have told you all this, because this spiritual power that attends me also exerts itself to the full in my intercourse with

those who spend their time with me. To many, indeed, it is adverse, and it is not possible for these to get any good by conversing with me, and I am therefore unable to spend my time in conversing with them. And there are many with whom it does not prohibit my intercourse, yet the intercourse does them no good. But those who are assisted in their intercourse by that spiritual power are the persons whom you have noticed; for they make rapid progress there and then. And of these, again, who make progress some find the benefit [130a] both solid and enduring; while there are many who, for as long a time as they are with me, make wonderful progress, but when they are parted from me relapse, and are no different from anybody else. This once befell Aristides, son of Lysimachus, son of Aristides. For by conversing with me he had made immense progress in a little time; and then he had to go on an expedition, and he went and sailed away. On his return he found that Thucydides, son of Melesias, son of Thucydides, had been conversing with me. Now Thucydides, the day before, had quarrelled with me [130b] over some arguments we had had. So when Aristides saw me, after greeting me and talking of other affairs, he said: "But Thucydides, I hear, Socrates, is somewhat on his dignity with you, and is annoyed as though he were somebody. "Yes, that is so," I replied. "Well, but does he not know," he said, "what a sad slave he was, before he associated with you?" "It seems not," I replied, "upon my soul." "But indeed I myself also," he said, "am in a ridiculous position, [130c] Socrates." "How exactly?" I asked. "Because," he replied, "before I sailed away, I was able to discuss things with anybody, and show myself inferior to none in argument, so that I even sought out the debates of the most accomplished people: but now, on the contrary, I shun them, wherever I notice there is anyone of education, so ashamed I am of my own ineptitude." "Tell me," I said, "did this power forsake you of a sudden, or little by little?" "Little by little," he replied. "And when it was

present with you,” I asked, [130d] “was it present through your having learnt something from me, or in some other way?” “I will tell you, Socrates,” he said, “what is incredible, upon my soul, yet true. For I never yet learnt anything from you, as you know yourself: but I made progress, whenever I was with you, if I was merely in the same house, without being in the same room, but more progress, when I was in the same room. And it seemed to me to be much more when I was in the same room and looked at you as you were speaking, than when [130e] I turned my eyes elsewhere: but my progress was far the greatest and most marked whenever I sat beside you and held and touched you. Now, however,” he said, “that condition has all oozed away.”

Such then, Theages, is the intercourse you would have with me: if God so wills, you will make very great and rapid progress, but otherwise, you will not. Consider, therefore, if it is not safer for you to be educated by one of those persons who have command themselves of the benefit which they bestow on mankind, rather than follow the course on which you may chance with me. [131a]

Theages: Well then, I decide, Socrates, that our plan shall be to make trial of that spiritual sign by associating with each other. Thus, if it leaves us free, that will be best of all; if it does not, it will be time then for us to consider, at the moment, what we shall do — whether we shall associate with someone else, or try to conciliate the divine sign itself that occurs to you with prayers and sacrifices and anything else that the seers may indicate.

Demodocus: In view of this, Socrates, say no more in opposition to the lad; for Theages is right in what he says.

Socrates: Well, if you consider that this is what we ought to do, let us do it.

Sisyphus

ΣΙΣΥΦΟΣ

Plato

Socrates: And we too waited a long time for you yesterday, Sisyphus, at the display made by Stratonicus, in order that you might, together with us, hear a clever man, who both by word and deed exhibited many and beautiful things; and when we thought you would no longer be present, we were by ourselves the hearers of the man.

Sis.: Truly by Zeus. For a want of leisure of rather a compulsory kind occurred to me, so that I neglected the display. For our rulers had a consultation yesterday, and they compelled me to consult with them. Now with us Pharsalians it is a law to obey the rulers, should they order any of us to consult with them.

Socrates: And honourable it is to obey the law and to be reputed by fellow-citizens to be a good counsellor, as you are [reputed to be a good counsellor as one of the Pharsalians]. But, Sisyphus, although I should not be able to enter upon a discussion against you on the subject of consulting correctly, conceiving it to be a work requiring much leisure, and a lengthy argument, still I would endeavour to converse with you first about consulting in the abstract, what it is. Can you then tell me what it is to consult in the abstract? Do not (tell) me what it is to do so well or ill or in any manner, but what kind of thing it is alone by itself. For you could well and easily tell, being so good a counsellor. But (I fear) lest it is a superfluous work for me to make of you the inquiry.

Sis.: Is it then unknown to you what it is to consult?

Socrates: It is, Sisyphus, to myself at least, if it be any thing else than for a person, who does not know any thing of those matters respecting which it is requisite to do some act, to speak like a diviner and off-handed, whatever may present itself, and to make a guess according to the same things for himself; like persons playing at odd and even, who, knowing nothing about the even and odd, which they hold in their own hands,

nevertheless happen by accident to say what is true about the same things. To consult then is oftentimes a thing of this kind, that a person, although knowing nothing of the matters, about which he is consulting, yet happens by accident to say what is the truth. If then it is a thing of this kind, I know what to consult is; if however it is not a thing of this kind, I should not know it at all.

Sis.: It is not of such a kind as not to know in reality any thing at all, but to know partly something of the matter in hand, and partly not to know at all.

Socrates: Do you mean that to consult is, by Zeus, a thing of this kind; that, as I seem to myself to divine somewhat your notions relating to the act of consulting well, it is the seeking to discover the best things for a person to employ himself in for his own benefit, but not to know them clearly, but for this to be, as it were, in some form of a thought? Do you not mean somehow in this way.

Sis.: I do.

Socrates: Whether do men seek such things as they know, or such as they do not know?

Sis.: Both.

Socrates: Do you mean by this something of this kind, that men seek both what they know and what they do not know? just as if a person should know Callistratus, who he is; but not know to find where he is, not who is Callistratus. Do you mean that to seek both is after this manner.

Sis.: I do.

Socrates: He then, who knows Callistratus, would not seek that matter, namely, to know him.

Sis.: He would not.

Socrates: But he would, where he might be.

Sis.: It seems so to myself at least.

Socrates: Nor would he seek even this, namely, where it was possible to find him, if he knew already; but he would find him forthwith.

Sis.: Yes.

Socrates: Men then do not seek the things, which they know, but, as it seems, what they do not know. But if this reasoning appears to you to be of a captious kind, and to have been spoken, not for the sake of a practical purpose, but for conversation merely, consider the matter in this way, if the case seems to be such as has been just now stated. Do you not know that this takes place in geometry? that by geometricians the diameter is not unknown, whether it be a diameter or not, — for this I well know is not sought to be discovered by them, — but how great it is in measurement in proportion to the sides of the space which it intersects? Is not this the very thing which is sought respecting it?

Sis.: So it seems at least to me.

Socrates: For it is that, which is unknown. Is it not so?

Sis.: Certainly.

Socrates: Know you not that the doubling of the cube is sought to be discovered by geometricians, how great it is by calculation? But the cube itself is not sought for by them, whether it is a cube, or not; for that at least they know well. Is it not so?

Sis.: Yes.

Socrates: Respecting the air likewise, do you not know that Anaxagoras and Empedocles, and the rest of those, who talk about meteorology, are all seeking whether it is boundless or

has a limit?

Sis.: Yes I do.

Socrates: But not the question, whether it is air. Is it not so?

Sis.: It is.

Socrates: Will you then agree with me that such is the case with all other things now that to no person is there any seeking after the things he knows, but rather after those which he does not know?

Sis.: I will.

Socrates: Did not the consulting appear to us to be this very thing, namely, that a person is seeking after the best things relating to what he would require to employ himself in for his own benefit.

Sis.: Yes.

Socrates: And the seeking was, like the consulting, about things to be done. Is it not so?

Sis.: Entirely.

Socrates: Must we not consider then at present, what impediment is in the way of those, who are seeking, to the discovery of the things, about which they are making the search?

Sis.: So it seems at least to me.

Socrates: Could we say that any thing else was an impediment to them except a want of knowledge?

(Sis. Nothing else).

Socrates: Let us, by Zeus, consider the matter very much, letting out, as the saying is, every rope, and sending out every voice. And view thou this point with me. Think you that a man

could consult about music, who knows nothing of music; or how he ought to play on the guitar, or to perform any thing according to the musician's art?

Sis.: Not I indeed.

Socrates: What then, as regards generalship, or piloting? Do you think that the person, who knows neither of those arts, would have it in his power to consult about either of those matters, as to what is to be done by him, and how, who knows not to act the general or pilot?

Sis.: I do not.

Socrates: Do you think then that the case is so respecting all other matters, of which a person knows nothing; that it is not possible for him even to consult, who knows nothing about them?

Sis.: I do.

Socrates: But it is (possible) for him to seek (to know). Is it not?

Sis.: Certainly.

Socrates: To seek then would not be the same as to consult.

Sis.: How could it?

Socrates: Because to seek is surely applied to the matters, which a person does not know; but it seems to be not possible for a person to consult about those matters, of which he is ignorant. Or has not this been said correctly?

Sis.: Very much so.

Socrates: Ye were then yesterday seeking to discover what was best for the state; but ye did not know it. For if ye had known, ye would not surely have been seeking it, just as we do not seek any thing amongst those which we know. Is it not so?

Sis.: It is.

Socrates: Whether does it seem to you, Sisyphus, if a person does not know, that he ought to seek or to learn?

Sis.: To myself at least it seems, by Zeus, to learn.

Socrates: And correctly does it seem so. But does it seem to you that he ought to learn rather than seek on this account, because a person would discover more quickly and easily, if he learnt from those, who know, than if he were to seek himself what he did not know? Or is it on some other account?

Sis.: On no other than this.

Why did ye not then yesterday, disregarding the act of consulting about matters, of which ye knew nothing, and of seeking to do the best for the state, learn from some one of those, who did know, how ye might do the best for the state? But ye seem to me to have been sitting the whole of yesterday and speaking off-hand, and prophesying about matters, of which ye were ignorant, and neglecting to learn, both the rulers of the state and you together with them. But perhaps you will say that this has been played off by myself against you for the sake of a conversation merely, and it has not been proved to you seriously. Consider then, by Zeus, this question at least for the present with seriousness. If it were conceded that to consult is something, and not, as now discovered, to be nothing else than a knowledge according to conjecture, and a speaking off-hand, making use of merely a more solemn name, but nothing else, do you think, that as regards the act of consulting well and being good counsellors, persons differ one from another on that point, as persons [differ one from another] on all the other kinds of knowledge, (such as) carpenters from carpenters, physicians from physicians, and hautboy-players from hautboy-players, and all the rest of handicraftsmen differ from each other? As then those engaged in these arts (differ), think you that in the act of consulting persons would differ at all in

this manner, one from another?

Sis.: Yes I do.

Socrates: Now tell me, do not all, both those who consult well, and those who do so ill, consult about matters that are about to be?

Sis.: Certainly.

Socrates: Is the future any thing else than what is not as yet?

Sis.: It is not.

Socrates: For if it were, it would not surely be still about", to be, but it would be already. Is it not so?

Sis.: Yes.

Socrates: Therefore that, which is not yet, in reality has not been produced.

Sis.: It has not.

Socrates: Therefore that, which is not and has not been produced, has no existence in reality.

Sis.: It has not.

Socrates: Do not all, then, who consult well or ill, consult about things which neither are, nor have been, and which have no existence, when they consult respecting things about to be?

Sis.: At least they seem so.

Socrates: Does it seem to you possible for a person to hit well or ill a thing, that does not exist?

Sis.: How say you this?

Socrates: I will explain, what I mean to say. Consider then. How would you distinguish out of many archers, which of them was the good and (which) the bad?

Sis.: Surely this is not difficult to know.

Socrates: 'For perhaps you would bid them shoot at some mark. Is it not so?

Sis.: Certainly.

Socrates: Would you not decide that he is the conqueror, who hits most often the mark in a direct way.

Sis.: Yes, I would.

Socrates: But if there were no mark laid down for them to shoot at, but each shot where he liked, how could you distinguish between the good and bad archer?

Sis.: Not at all.

Socrates: Would you then not be at a loss to distinguish between those consulting well or ill, if they did not know what they were consulting about?

Sis.: Yes, I should.

Socrates: Do not those then, who consult respecting things about to be, consult respecting things not in existence?

Sis.: Certainly.

Socrates: It is not therefore possible for any person to hit the thing not in existence. For how does any one seem to you to be able to hit, what is not in existence?

Sis.: Not at all.

Socrates: Since then it is not possible to hit, what is not in existence, no one would be able to hit any thing of those not in existence by consulting. For things that are about to be belong to those not in existence. Is it not so?

Sis.: So it seems at least to me.

Socrates: He then, who does not hit things about to be, would be amongst men neither a good counsellor, nor a bad counsellor.

Sis.: It seems he would not.

Socrates: Nor is a person (said) to be either a better counsellor, or a worse counsellor, not even if he should be more successful or less successful in hitting, what is not in existence.

Sis.: He is not.

Socrates: Looking then to what circumstance men call certain persons by the name of good counsellors, or bad counsellors, is it not worthy, Sisyphus, to think again upon this matter?

Sis.: (I say so).

Axiochus

ΑΞΙΟΧΟΣ

Plato

Soc.: When I had gone out on the road to Cynosarges,- and had arrived at the Ilissus, the voice of some one reached me, calling out, “ Socrates, Socrates.” And when on turning towards (the sound) I looked round to see from whence it might be, I beheld Clinias, the son of Axiochus, running towards the fountain Callirrhoe, together with Damon the musician, and Charmides, the son of Glaucon. Of these, one was the other’s music-master, and the other was, from a feeling of friendship, at once the loving and beloved. I determined therefore to give up the direct road, and to meet them, that we might come together in the easiest manner. And Clinias, with tears in his eyes, said — Now, Socrates, is the time for you to exhibit the wisdom ever bruited by you. For my father has at some sudden season become powerless, and is at the end of life, and with pain supports the idea of dissolution; although at a former period he used to ridicule those, who were afraid of the bugbear of death, and to rebuke them mildly. Come then, and console him as you are wont, in order that he may without a groan proceed on the road of fate, and that, together with the remaining acts of piety, this too may be done by me. In no moderate matter, Clinias, (said I,) shall you be disappointed in me; especially as you are inviting me to do a holy act. Let us then make haste; for if such is the state of affairs, there is a need of haste.

Clin.: On merely seeing you, Socrates, he will rally; for often has he been on his legs again after a (serious) symptom. Soc. When we had traversed rather quickly the road along the wall, at the Itonian gates — for he dwells near there, close to the pillar of the Amazon — we came upon him, when he had already recovered his senses, and his body some strength, although his mind was weak, and he stood greatly in need of consolation; and frequently did he raise himself up, and give vent to moans, together with the shedding of tears, and the noisy beating of his hands. On beholding him, Why is this, Axiochus? said I. Where are your former boastings and frequent praises of virtue, and

your boldness not to be broken down? since, like a cowardly combatant, you have exhibited yourself of noble bearing in the place of exercise, but have failed in the fight. Will not you, a man of so long a life, and the hearer of (the finest) reasonings, and, if nothing else, at least an Athenian, after surveying nature consider that this is surely a common (saying), and bruited amongst all, that life is a kind of sojourn (upon earth); and that we must pass through it in a reasonable and good-tempered manner, and take our departure, only not singing paeans on the road to fate; while to conduct yourself in so cowardly a manner, and to be torn with difficulty from existence, is to exhibit, like a child, a period of life not otherwise.

Axio.: This, Socrates, is true; and you appear to me to speak correctly. And yet I know not how, when I am at the very point of what is dreadful, those powerful and very clever reasonings unconsciously fall away, and are held in no honour; while in their stead a fear lays hold of me, tearing my mind in various ways, if I am to be deprived of this light here, and of the good things (of life), and to lie rotting, wherever it may be, unseen and unheard of, after passing into worms and nondescript creatures.

Soc.: Through your own ignorance, Axiochus, you are combining sensation with the want of sensation; and you are acting and speaking in a manner at variance with yourself; and you do not consider that you are at one and the same time lamenting your want of sensation, and pained at the idea of your rotting away, and of being deprived of what is pleasant, as if you are to die and live in another state, and not to pass into insensibility complete, and the same as that before you were born. As then none of the mischief during the political period of Draco and Clisthenes pertained to yourself — for you, to whom it might have pertained, did not exist at all — so it will not after death occur to you; for you, to whom it might occur, will not be

in existence. Throw aside then all silliness of this kind, and think upon this, that, after the union of soul with body has been once dissolved by the former being settled in its own home-place, what is left of the latter is of the earth and devoid of reason, nor is it a man. For we are soul, a thing of life and immortal, pent up in a mortal prison. And nature has for some mischief fitted round this tabernacle, to which pleasant things are in a recess, and on the wing, and mixed up with the majority of pains; but the things of sorrow are unmixed, and last a long time, and have no share in what is pleasant: (I say nothing) of diseases and inflammations in the sensoria and of internal ills, with which the soul, as if sown with pores, does, when it sympathizes, of necessity desire its congenial atmosphere of heaven, and feels a thirst for the life that is there, and a hankering after its dancing; so that a removal from this life is but a change from an evil to a good.

Axio.: Since then, Socrates, you consider life to be an ill, why do you remain in it? and this too, when you are a person of reflection, and excel us, the mass, in mind.

Soc.: You do not, Axiochus, testify truly in my case; but you conceive, as the mass of Athenians do, that, since I am searcher after facts, I am acquainted with something. And indeed I would pray to know all things of even a common kind, so much am I deficient in what are superior. But what I am now saying are the proclaimed doctrines of Prodicus the wise, that have been bought, some for half a drachm, others for two drachms, and others for four; for that person never teaches any thing for nothing, but his custom is perpetually to proclaim the sentiment of Epicharmus — Hand handwashes; give then something, 'and get something in return. And lately, when he was making a display at the house of Callias, the son of Hipponicus, he spoke so much against living, that I drew a line through (the word) life as a thing of the least value; and from

that time, Axiochus, my soul yearned for death.

Axio.: And what was said then?

Soc.: I will tell you all can remember. For what part of life, said he, is free from pain? Does not the infant cry at its first birth, beginning to live from pain? Nor is it deficient in any suffering, but is affected painfully either by the want of something, or excessive cold or heat, or a blow; and being unable to tell what it is suffering, it cries continually, possessing this voice alone of its discontentment. And when it reaches its seventh year, after having gone through many troubles, there are boy-leaders, and teachers of grammar, and drilling-masters tyrannizing over him. And as he grows bigger, there is a still larger- number of despots, who teach him correctness in composition, and geometry, and military tactics.

And when he is registered amongst the young men, there are, what is a worse fear, the Lyceum and Academy, and the Gymnasiarchs and their staves, and a measureless amount of ills. And the whole period of youth is under Moderators and the selection of those placed over young persons by the Council of the Areopagus. And when he is forced from them, cares straightway come upon him in secret, and considerations as to what road of life he is to tread; and (compared with) the after difficulties the first appear to be childish, and the terrors in truth of infants; for there are campaigns, and wounds, and continuous contests. And then old age stealthily and unconsciously comes on, to which flow together all that is on the verge of death and hard to be remedied. And should a person not pay, as a debt, his life rather quickly, Nature, like an usurer, stands near and takes as a pledge from one his eye-sight, and from another his hearing, and frequently both; and should he still delay, she brings on a paralysis, (or) a mutilation (or) a distortion of limbs; while they, who on the threshold of old age are still vigorous, in mind, become twice children, though

grown old. And hence even the gods, who take cognizance of human affairs, release more quickly from life those, on whom they set the greatest value. For example, Agamedes and Trophonius, who built up the close, sacred to the god at Pytlio, did, after praying that the best thing might befall them, lay themselves on their bed and never rise from it again. So too the sons of the priestess at Argos, after their mother had in like manner prayed for some honour to be paid them by Juno in return for their piety, when, through the pair (of mules) being too late, they undressed themselves, and drew her (in the car) to the temple, they did, after the prayer, change, during the night, their existence. And long would be the story to go through of the poets, who, with their more divine mouths, have told in holy hymns the tales relating to life, how they utter lamentations against living. Of one alone I will however remember me, the most worthy to be spoken of, who says, The gods for mortals, in a hapless state To live, in sorrow wove the web of fate — and, (II. xvii.,)

Of all that breathe and creep upon the earth, There's nought than man more wretched (from his birth).

And what does he say of Amphiraus? (Od. xv. .) Him heartily the Egis-bearing Zeus Loved, and Apollo with the feelings all Of friendship; yet he did not of old age The threshold reach.

And what does he appear to you, who bids us Weep for the ills, to which the new-born comes.

But I will stop here, lest, contrary to my engagement, I become prolix by making mention of others likewise. With what pursuit or art does not he, who has chosen it, find fault, and is discontented with his present state? Let us go to handicraftsmen and workers at a furnace, who labour from night to night, and with difficulty procure the necessities of life, and let (us hear) them bewailing their fate and filling up

their sleepless hours with lamentations and tears. Or let us reckon up the sailor's (life), passed in the midst of so many dangers', and which, as Bias has shown, is neither amongst the living nor the dead; for the man who belongs to earth, has, as if he were amphibious, thrown himself upon the sea, and become wholly in the power of fortune. But farming is at least a pleasant thing. Clearly so. But is it not wholly a sore, for ever finding for itself a pretext for sorrow? crying now at a drought; now at a continued rain; now at a burning up; now at a mildew; now at unseasonable heat or cold. And the much-honoured statesmanship — for many things I pass over — through revolutions how great is it driven, while it possesses a pleasure, like that of a state of fever, in its quiverings and palpitations, but a failure, full of pain, and worse than a thousand deaths. Who then living for the mob can be happy? even if he has been favourably received with a gentle buzz, or noisy hubbub, as the plaything of the people, (but afterwards) rejected, hissed, fined, put to death, and pitied. Tell me this, thou statesman, Axiochus, where died Miltiades? where Themistocles? where Ephialtes? and where recently the ten army-leaders? when I did not put (the question) to the vote; for it did not seem to me a solemn act to hold office in union with a maddened mob; whereas Theramenes and Callixenus did on the day after introduce secretly fictitious chairmen (of the meeting), and got against the men a vote of death without a trial; and yet did you (Axiochus) lawfully defend them and Euryptolemus likewise, while thirty thousand were at the general meeting.

Axio.: It is so, Socrates. And from that time I have had enough of the platform, and nothing has seemed to me more disagreeable than statesmanship. And this is plain to those who have been engaged in the business. And you indeed speak thus, as taking a view from a look-out; but we, who have made the experiment, know it more accurately. For the mob, my dear Socrates, is a thing ungrateful, satiated with the mere touch,

cruel, envious, uneducated, as being made up of a mass of persons brought together, violent (and) triflers; while he, who acts the courtesan to it, is more miserable by far.

Soc.: Since then, Axiochus, you lay down the science, which is the most free, as the least to be prayed for amongst the rest, what shall we think of the remaining pursuits? Are they not to be avoided? I once indeed heard Prodicus saying that death does not exist as regards either the living or those, who have changed their existence.

Axio.: How say you, Socrates?

Soc.: That as regards the living, it does not exist; while they, who are dead, do not exist; so that neither, as regards you, does it exist; for you are not dead; nor, should you suffer aught, will it exist, as regards you; for you will then not exist. Vain then is the sorrow in Axiochus grieving for Axiochus, touching a thing that neither is nor will be; and it is just the same, as if a person were to grieve for Scylla or the Centaur, which, as regards you, do not exist now, nor will they, after your close of life, exist. For what is fearful is so to those, who exist; but to those, who do not exist, how can it be so?

Axio.: These clever things you have said from the talkativeness, which is floating on the surface (of society) just now. For from thence is this idle speaking, which has been cleverly got up for the young men. But the deprivation of the good things of life is what gives me pain, even should you rattle out reasons, Socrates, still more plausible than those just now. For the mind, when it is wandering, thinks nothing of fine-spoken words; nor do these touch even its surface, which affect indeed a mere pomp and splendour of diction, but are wanting in truth. Now sufferings do not endure sophisms; and upon those things alone, that can reach the soul, rests there any aid.

Soc.: You are putting together, Axiochus, (words) without reason, in bringing the perception of things that are bad as opposed to the deprivation of things that are good, through your forgetting that you are dead. For the counter- suffering of ill pains him who is deprived of good; but he, who does not exist, does not lay hold even of deprivation. How then should there be a grief for that, which is about to furnish no knowledge of the things that will cause pain? For had you, Axiochus, at the beginning laid down (with me), in some way that there is no perception (to the dead), you would not, through your ignorance, have shuddered at death. But now you are turning yourself round, while fearing that you shall be deprived of soul, and place a soul round deprivation; and you fear that you shall not have a perception; and yet you imagine that you shall by perception comprehend a perception, that will not exist. In addition to their being many and beautiful reasons for the immortality of the soul. For a mortal nature would surely not have proceeded and been lifted up to such a greatness in action, as to despise the violence of superior wild animals, and to pass over seas, and to build cities, and to lay down forms of polity, and to look up to heaven and behold the revolutions of the stars, and the courses of the sun and moon, and their eclipses, and rapid return to their former state, and the equality of days, and the two tropical movements, during winter and summer, and the rising and setting of the Pleiades, and the winds, and the fall of rain, and the ill-fated trailing along of fiery meteors, and to lay down on a tablet what the universe is to undergo for ages, unless there had been in the soul some breath of divinity, through which he possessed the power of thinking upon and knowing subjects of so vast a kind; so that you are not, Axiochus, changing your existence for death, but for immortality; nor will you have a deprivation of good things, but a still purer enjoyment of them; nor pleasures mixed up with a mortal body, but unmixed with every pain. For you will,

when released from this prison, depart thither, where all is without trouble, and moanings, and old age, and life is a calm, and with no taste of ill, and where in a mild atmosphere of unruffled tranquillity you (will dwell), looking round upon Nature, and acting the philosopher not before a mob and a theatre, but in the presence of Truth, blooming around.

Axio.: You have by your discourse brought me round to a contrary point. For I have no longer a fear of death, but already a desire to say myself, in imitation of the orators, something still more; and for a long time I have been thinking upon things on high, and I will go through the eternal and divine course, since after my weakness I have collected my strength and am become a new man.

Soc.: (Hear too), if you are willing, another account which Gobryas related to me — a man of the Magi, (who) said that during the expedition of Xerxes, his grandfather, we thus recover a noun, required to govern Πλειάδων, but perceive likewise why the Pleiades are introduced here; since, as we learn from Hesiod Epy. and, both farmers and sailors were wont to pay attention to the rising and setting of the Pleiades, who was his namesake, was sent to Delos to watch over the island, where the two deities presided, according to some brazen tablets, that Opis and Hecaergus had brought from the Hyperboreans; and that he learnt that after the soul was released from the body, it departed to the uncertain spot, and some dwelling under ground, where is the royal palace of Pluto, not less than the hall of Zeus, inasmuch as the earth possesses the middle portion of the world, and the pole (of heaven) is spherical; of which the gods of heaven have obtained by lot one portion of the hemisphere, and the gods below the other, being some of them brothers, and others the children of brothers; and that the gates before the road to Pluto's domain are fast bound by iron locks and keys; and that the river Acheron receives him,

who has opened them, and, after it, Cocytus, both of which it is necessary for him to pass over, and to be led to Minos and Rhadamanthus, (where is) what is called the plain of Truth. There are they seated as judges to sift each of the comers as to what life he had led, and in what pursuits he had dwelt in the body; and that to tell a falsehood is out of his power. On such then as a kind daemon has breathed during life, these are located in the region of the pious. There without stint the seasons bloom with every kind of produce, and fountains of pure water flow; and every where are meadows made beautiful by flowers of varied hues, and places of discussions for philosophers, and theatres of poets, and cyclic choirs, and the hearing of music, and elegant banquets, and feasts self-furnished, and an unmixed freedom from pain, and a delightful mode of living. Nor is produced there violent cold or heat, but a well-tempered air is diffused around, mixed with the sun's mild beams. There is the seat of honour to those, who have shared in the Mysteries; for they perform together their holy rites even thither. How then is there not to you first a share in the honour, as being of the family of the goddesses? And there is a report that Heracles and Dionysus descended to Hades after having previously shared in the Mysteries here; and that they put on a boldness for the journey thither from the Eleusinian (rites). But they, whose life has been passed in a course of evil doings, are driven by the Furies to Erebus and Chaos through Tartarus, where is the region of the impious, and the unfilled urns of the daughters of Danaus, and the thirst of Tantalus, and the entrails of Tityus, and the uncompleted stone of Sisyphus, To whom begins again his labour's end. There too are persons licked round by wild beasts, and terrified by the torches of the Furies glaring around them; and enduring every kind of ignominious treatment, they are by eternal punishments worn down. This account did I hear from Gobryas; and you, Axiochus, can decide upon it. For carried along myself

by reason I know firmly this alone, that the soul is wholly immortal, and that, when it is removed from this spot, it is there without pain; so that it must needs be, Axiochus, that, if you have lived piously, you will be happy either below or above.

Axio.: I am ashamed, Socrates, to say a word. For so far am I from fearing death, that already I feel a desire for it; so greatly has this beautiful discourse of yours persuaded me, as if it were a heavenly one. And even now I have a contempt for life, as being about to remove to a better home. For the present then I will cast up quietly with myself what has been said; and at mid-day you will be with me, Socrates.

Soc.: I will do as you say. And for a while I will go back for a walk to Cynosarges, from whence I was sent for hither.

You are, Demodocus, requesting me to advise you on the matters, about which you are come together to deliberate. But it has come into my mind to consider, what avails this meeting of yours, and the eagerness of those, who think to advise with you, and the vote, which each of you thinks of giving. For, in the first place, unless it be possible to advise correctly and skilfully on the points, respecting which ye are come to deliberate, how is it not ridiculous for you to come together to deliberate on points, respecting which it is not possible to advise correctly? And in the second place, if it be possible to advise correctly and skilfully upon matters of this kind, still the knowledge, by which it is possible to advise correctly on them, is none. How then is it not out of place? But if there be any knowledge, by which it is possible to advise correctly on such matters, is it not necessary that there should be certain persons skilled to advise correctly on matters of this kind? And if there are certain persons, skilled to advise on those points, about which you are come together to deliberate, is it not necessary for you likewise to know how to advise on these matters, or not to know? Or that some persons should know, and some not? If then all of you know, what need is there for you to come together to deliberate? for each of you is competent to advise. But if, on the other hand, all of you do not know, how will you be able to deliberate? Or what advantage would there be to you in this meeting together, if you are not able to deliberate? But if some of you know, and others do not know, but these are in want of counsel, whether it is possible for an intellectual person to advise the unskilled, even a single person is sufficient to advise with those of you, who do know. Or do not all, who know, advise the same thing? so that it is fitting, after you have heard that person, to separate. But now you do not this; but you wish to hear many giving their advice; for you do not take upon yourselves to know those, who are attempting to advise with you on points, on which they are advising. For if you had taken upon yourselves to know those,

who were advising with you, it would have been sufficient for you to have heard one person alone. To come together then with the view of hearing those, who do not know, as if you were doing something of importance, how is it not a thing out of place? Respecting then this meeting of yours, I am in this way at” a loss.

And that too is a thing of difficulty relating to the eagerness of those, who think they can advise with you. For if, while advising, they do not give the same advice upon the same points, how can they all advise correctly, when they do not advise what he, who advises correctly, would advise? Or how can the eagerness of those, who are eager to advise on points, in which they are unskilled, not be out of place? for being skilled, they would not choose to advise incorrectly. But if, on the other hand, they advise the same, what need is there for them all to advise? for a single one of them would, if advising the same, be sufficient. To be eager then on such matters, as would be of no importance, how is it not ridiculous? Neither then would the eagerness of the unskilled be not out of place, when it is of such a kind; nor would men of sense feel an eagerness on such matters, knowing that even one of them would do the same thing by advising what was fitting; so that I am unable to discover how the eagerness of those, who fancy they are advising, is not ridiculous.

But as regards the vote which you are thinking to give, I am the most at a loss, what it can avail. For whether are you giving a judgment upon those, who know how to advise? But more persons will not advise at all any better than one, nor some one way and others another correctly upon the same matter; so that respecting them there will be no need for you to give a vote. But are you giving a judgment upon some, who are unskilled and who ought not to advise any persons? Surely it is not fitting to intrust to such persons, as if they were madmen, to advise. But

if you are to give a judgment upon neither the skilled nor the unskilled, upon whom are you to give it? But what need is there for other persons to advise with you at all, if you are competent to give a judgment upon such matters? But if on the other hand you are not competent, of what avail are your votes? Or how is it not ridiculous for you to come together, as if about to consult, when you yourselves are in want of advice, and are incompetent, and yet fancy that you ought to come together and give a vote, as if competent to form a judgment? For neither by being taken singly are you ignorant, and become sensible by being taken together; nor, on the other hand, are you at a loss individually, but by coming together are no longer at a loss. But do you become competent to see together what things are to be done by you? and this too, when you have neither learnt them from any one, nor discovered them yourselves; which is the most shocking thing of all. For being unable to see together, what is to be done, you will not be competent to give a judgment upon the party, who is advising you correctly upon these matters; nor, if a person, standing alone, as an adviser, should say this, that he himself will teach you what is to be done, is it in your power to form a correct judgment upon those, who are advising you correctly or not. Now this would be a state not less shocking than that. If then neither the meeting nor the (single) adviser is able to make you competent to give a judgment, what need is there to you for voting? Or how is this meeting of yours not opposed to your votes, and the vote to the eagerness of those advising you? For this meeting of yours is that of persons not competent, but in need of advisers; while the votes are given as of persons not wanting advisers, but able to form a judgment, and to advise; and the eagerness of those advising you, is as of persons who know; but the votes are given by you, as if the persons advising did not know. Now if any one were to ask you, who have voted, and the person advising you, respecting the matters on which you have voted — do you know

what will that be, for the sake of which you think of doing what you have voted? you would not, I think, be able to say. And even if that should take place, for the sake of which you have it in your thoughts to do every thing, do you know how it will benefit you? I think that neither you nor the party advising you would be able to tell this. But you conceive that some of those with intellect know somehow this. But if a person should ask you who is the party, I do not think you would agree on this point. When therefore both the things, about which you are consulting, are such as not to be manifest, and the persons likewise, who vote and advise, are unskilled, reasonably will you say that it often falls out that persons have no faith in, and repent of, those things, for which they have taken counsel and voted. Now such events it is not becoming to fall out to the sensible. For they know the things, about which they give advice, both of what kind they are, and that they exist firmly to the parties persuaded, for the sake of whom they give the advice, and that neither to themselves nor to the parties persuaded will there be a repentance for any thing senseless. On matters then of this kind I conceive that those, who possess any sense, should think it fit to give advice; but not about the matters on which you are requesting me to advise; for from their advice the result is good fortune, but from the trifling of these misfortune.

I was once present with a person while he was admonishing his friend, because the latter had trusted to an accuser, not having heard the other party making an apology for himself, but hearing only the accuser. He said that (the friend) had done a terrible thing, in deciding against the party without having been present himself, or having heard from the friends of the party, to whose statements it was reasonable for him to trust. For, after having heard both, he would not have so hastily trusted to the accuser; but that it was just, before conferring praise or blame, to hear the party make his defence, as well as

the accuser. · For how could any one decide correctly a suit, or judge in a proper manner between persons, without hearing the opposite parties? for that it is better that assertions, like a purple colour and gold-money, should be judged of by being placed side by side. Or for what purpose has time been allowed to both the opposite parties in a suit? or the judges sworn to hear both sides equally? unless the lawgiver conceived that suits would be decided more justly and better by the judges. But you seem to me to have not even heard of what is said by the multitude. What is it? said (the other).

Decide no suit, till both accounts you've heard.

And yet this would not have been thus circulated, if it had not been well said, and as is fitting. I advise you therefore, said he, for the future not to blame or praise persons so hastily. The other then said that it appeared to him an absurd thing, if it were impossible to know, when one person was speaking, whether he was telling the truth or a falsehood, and yet possible to know, when two persons were speaking; and impossible to learn from a person, when telling the truth, but possible to be taught by that very person and another, when telling a falsehood; and if one by speaking straightforwardly and truly should be unable to show what he is saying clearly, but that two, one of whom should tell a falsehood, and not speak straightforwardly, should be able to show clearly that, which the party speaking straightforwardly was not able to show clearly. And I am at a loss, said he; on this point likewise, how they are to show it clearly; whether by being silent, or speaking. For if they are to show it clearly by being silent, there would be a need of hearing neither, much less both. But if by speaking both are to show it clearly, and both parties speak according to no regular manner and time — for both think they have a right to speak in turn — how is it possible for both to show the matter clearly? For if both are showing the matter clearly at the same

time, both will be speaking together at the same time. But this they are not wont to do, nor do the laws permit it; so that if they are to show the matter clearly by speaking, each of them will do so by speaking; and when either party speaks, then either party will show the matter clearly; so that they will speak one before and the other after; and they will show the matter clearly, one before and the other after. Now if each party in turn shows the same matter clearly, what need is there to hear the latter? for the matter will have become clear by the party first speaking. But if both parties show clearly that matter, said he, how will not either of them have done so? for how would both be able to show clearly that, which one of them shall not have done so? But if either shall have shown it clearly, it is evident that the former will have spoken of it, and the former will have shown it clearly; so that how is it not possible for the person hearing him alone to know all correctly? On hearing them I was at a loss, and unable to decide. For the others, who were present, said that the first reasoning was true. If then you can advise me on this matter, whether it is possible, when one person is saying any thing, to know correctly what he is saying, say so; or whether there is need of a speaker on the opposite side, if a person would know which is speaking straightforwardly. Or whether it is not necessary to hear both parties? Or how do you think?

The day before yesterday a person was finding fault with another, because he was unwilling to lend money or to trust him; and the party, with whom he was finding fault, was defending himself; whereupon another person amongst those, who were present, inquired of the party finding fault – whether he, who had not trusted nor lent the money, had erred? and have not you too, said he, who did not persuade him to lend, erred? In what, said the other party, have I erred? Which of the two, said (the inquirer), seems to you to err? the person, who fails in what he wishes, or he, who does not (fail)? The person

who fails, said he. Have you then not failed in wishing to borrow; while he, who did not wish to give up (his money), has not failed in that point. Truly so, said he; but in what have I erred, even if he has not given it me? Because, said (the inquirer), if you have begged the things which you ought not, how do you think that you have not erred? while he has acted correctly in not giving them up; but if, on the other hand, you have begged what you ought, and failed in this point, how have you not of necessity erred? Perhaps so, said he; but how has he not erred, who did not trust me? If you had treated with him, said (the inquirer), as was fitting, you would not have erred at all. Not at all. But now you have not treated with him, as was fitting. I appear so, said he.” If then he was not persuaded, when you were treating with him, as was not fitting, how can you justly find fault with him? I am unable to say. Nor can you say that one must not pay attention to those, who conduct themselves ill? This (I can say) very much, said he. Do not then those persons seem to you to conduct themselves ill, who treat with a party in a manner that is not fitting? To me at least (they seem so), said he. In what then did he err, if he paid no attention to you, when conducting yourself ill? It appears, said he, in nothing. Why then, said (the inquirer), do persons find fault on such matters with each other, and blame those, who are not persuaded by them, because they are not persuaded, but do not find fault with themselves at all, because they have not persuaded them? Hereupon another party who was present, observed — When a person has conducted himself well towards any one, and has assisted him, and subsequently requests that party to conduct himself in a similar manner towards him, but does not meet with such conduct, how does he not reasonably find fault? Is not, said (the inquirer), the person whom the party requests to conduct himself in a similar manner, either able to conduct himself well, or unable? (Yes.) And if he is unable, how can he properly make the request, who requests him (to

perform) what he cannot? but if he is able, how did he not persuade him (to do so)? or how do persons, who speak in this way, speak correctly? But, said (the other), it is requisite, by Zeus, to find fault with such a person, in order that both he may for the remainder of his life conduct himself better, and the other mean fellows, who hear the party finding fault. Think you, said (the inquirer), that any persons will conduct themselves better when they hear a party speaking correctly, or when in error? When speaking correctly, said he. Now the party, who was speaking not correctly, did not seem to you to make a request correctly? Truly so, said he. How then will those, who hear a person finding fault in this way, conduct themselves better. Not at all, said he. For what purpose, then, would a person find fault in this way? He confessed lie could not discover. Some one was accusing a person of stupidity, because lie had given credence quickly even to parties he happened to meet with, while they were speaking. To fellow-citizens and familiar friends, when speaking, it is reasonable to trust. But to persons of that kind, whom he had never seen nor heard of before, to give credence, and this too when he was not ignorant that the majority of men are braggarts and knaves, was no little proof of silliness. When one of those present observed — For my part I thought that you considered a person of greater value, who could quickly understand even any one he met with, rather than him, who did so slowly. And so I do consider, said the other. Why then, said (the former), do you find fault, if a person gives credence quickly, even to those he meets with, when they speak the truth? But, said (the other), I do not find fault with this, but because he gives credence to those, who tell falsehoods. But, if after a longer period even to those not accidentally met with he had given credence, and suffered annoyance, would you not have found fault with him still more? Yes; I should have done so, said he. Is it, because he gave credence slowly, even to those not accidentally met with? No,

by Zeus, said he. For I suppose, said the other, you do not conceive that it is right to find fault with a person on this account, but because he gives credence to those, who state what is not credible. I do so, said he. Whether then, said (the other), do you think it is not right to find fault with him for giving credence slowly even to those not accidentally met with, but right (to do so) for giving credence quickly even to those accidentally met with? Not I indeed, said he. Why then do you find fault with him? said (the other). Because he errs in giving credence to persons accidentally met with, previous to making an inquiry. But if he had slowly given credence, previous to making an inquiry, he would not have erred. Not so, by Zeus, said he; but he would have erred even thus not the less; but I think one ought not to give credence to persons accidentally met with. But if, said (the other), you think one ought not to give credence to persons accidentally met with, how is it fitting to give credence quickly to persons unknown? and do you think that it is requisite to make an inquiry, whether they are speaking the truth? I think so, said he. Say then, said (the other), is it not requisite to make inquiry about familiar friends and acquaintances, whether they are speaking the truth? I should say so, said he. For perhaps, said (the other), some of these state what is not credible. And very much so, said he. Why then, said (the other), is it more reasonable to give credence to familiar friends and acquaintances than to persons accidentally met with? I cannot tell, said he. What then, if it is requisite (not) to give more credence to familiar friends than to persons accidentally met with, is it not requisite to consider them less trustworthy than persons accidentally met with? How not? said he. If then there are familiar friends to some persons, and persons unknown to others, how will it not be necessary to consider the same persons more trustworthy than the same? For it is requisite to consider familiar friends and persons unknown, as not equally trustworthy, as you say yourself. This

does not please me, said he. Equally, said (the former), do. some believe what is stated by them, but others disbelieve? And. this too is strange, said he. If then, said (the other), both familiar friends and persons accidentally met with state the same things, would not all things stated equally to all be credible or incredible (equally)? Necessarily so, said he. Must we not give credence then equally to those who state the same things? It is probable, said he.

On their conversing in this way, I was at a loss to whom one ought to give credence and to whom not, and whether to the trust-worthy and those who know what they are speaking about, or to familiar friends and acquaintances. Upon these matters then how think you?

Eryxias

ΕΡΥΞΙΑΣ

It happened by chance that Eryxias the Steirian was walking with me in the Portico of Zeus the Deliverer, when there came up to us Critias and Erasistratus, the latter the son of Phaeax, who was the nephew of Erasistratus. Now Erasistratus had just arrived from Sicily and that part of the world. As they approached, he said, Hail, Socrates!

Socrates: The same to you, I said; have you any good news from Sicily to tell us?

Erasistratus: Most excellent. But, if you please, let us first sit down; for I am tired with my yesterday's journey from Megara.

Socrates: Gladly, if that is your desire.

Erasistratus: What would you wish to hear first? he said. What the Sicilians are doing, or how they are disposed towards our city? To my mind, they are very like wasps: so long as you only cause them a little annoyance they are quite unmanageable; you must destroy their nests if you wish to get the better of them. And in a similar way, the Syracusans, unless we set to work in earnest, and go against them with a great expedition, will never submit to our rule. The petty injuries which we at present inflict merely irritate them enough to make them utterly intractable. And now they have sent ambassadors to Athens, and intend, I suspect, to play us some trick. — While we were talking, the Syracusan envoys chanced to go by, and Erasistratus, pointing to one of them, said to me, That, Socrates, is the richest man in all Italy and Sicily. For who has larger estates or more land at his disposal to cultivate if he please? And they are of a quality, too, finer than any other land in Hellas. Moreover, he has all the things which go to make up wealth, slaves and horses innumerable, gold and silver without end.

I saw that he was inclined to expatiate on the riches of the man; so I asked him, Well, Erasistratus, and what sort of character does he bear in Sicily?

Erasistratus: He is esteemed to be, and really is, the wickedest of all the Sicilians and Italians, and even more wicked than he is rich; indeed, if you were to ask any Sicilian whom he thought to be the worst and the richest of mankind, you would never hear any one else named.

I reflected that we were speaking, not of trivial matters, but about wealth and virtue, which are deemed to be of the greatest moment, and I asked Erasistratus whom he considered the wealthier, — he who was the possessor of a talent of silver or he who had a field worth two talents?

Erasistratus: The owner of the field.

Socrates: And on the same principle he who had robes and bedding and such things which are of greater value to him than to a stranger would be richer than the stranger?

Erasistratus: True.

Socrates: And if any one gave you a choice, which of these would you prefer?

Erasistratus: That which was most valuable.

Socrates: In which way do you think you would be the richer?

Erasistratus: By choosing as I said.

Socrates: And he appears to you to be the richest who has goods of the greatest value?

Erasistratus: He does.

Socrates: And are not the healthy richer than the sick, since health is a possession more valuable than riches to the sick? Surely there is no one who would not prefer to be poor and well, rather than to have all the King of Persia's wealth and to be ill. And this proves that men set health above wealth, else they would never choose the one in preference to the other.

Erasistratus: True.

Socrates: And if anything appeared to be more valuable than health, he would be the richest who possessed it?

Erasistratus: He would.

Socrates: Suppose that some one came to us at this moment and were to ask, Well, Socrates and Eryxias and Erasistratus, can you tell me what is of the greatest value to men? Is it not that of which the possession will best enable a man to advise how his own and his friend's affairs should be administered? — What will be our reply?

Erasistratus: I should say, Socrates, that happiness was the most precious of human possessions.

Socrates: Not a bad answer. But do we not deem those men who are most prosperous to be the happiest?

Erasistratus: That is my opinion.

Socrates: And are they not most prosperous who commit the fewest errors in respect either of themselves or of other men?

Erasistratus: Certainly.

Socrates: And they who know what is evil and what is good; what should be done and what should be left undone; — these behave the most wisely and make the fewest mistakes?

Erasistratus agreed to this.

Socrates: Then the wisest and those who do best and the most fortunate and the richest would appear to be all one and the same, if wisdom is really the most valuable of our possessions?

Yes, said Eryxias, interposing, but what use would it be if a man had the wisdom of Nestor and wanted the necessities of life, food and drink and clothes and the like? Where would be the advantage of wisdom then? Or how could he be the richest of

men who might even have to go begging, because he had not wherewithal to live?

I thought that what Eryxias was saying had some weight, and I replied, Would the wise man really suffer in this way, if he were so ill-provided; whereas if he had the house of Polytion, and the house were full of gold and silver, he would lack nothing?

Eryxias: Yes; for then he might dispose of his property and obtain in exchange what he needed, or he might sell it for money with which he could supply his wants and in a moment procure abundance of everything.

Socrates: True, if he could find some one who preferred such a house to the wisdom of Nestor. But if there are persons who set great store by wisdom like Nestor's and the advantages accruing from it, to sell these, if he were so disposed, would be easier still. Or is a house a most useful and necessary possession, and does it make a great difference in the comfort of life to have a mansion like Polytion's instead of living in a shabby little cottage, whereas wisdom is of small use and it is of no importance whether a man is wise or ignorant about the highest matters? Or is wisdom despised of men and can find no buyers, although cypress wood and marble of Pentelicus are eagerly bought by numerous purchasers? Surely the prudent pilot or the skilful physician, or the artist of any kind who is proficient in his art, is more worth than the things which are especially reckoned among riches; and he who can advise well and prudently for himself and others is able also to sell the product of his art, if he so desire.

Eryxias looked askance, as if he had received some unfair treatment, and said, I believe, Socrates, that if you were forced to speak the truth, you would declare that you were richer than Callias the son of Hipponicus. And yet, although you claimed to be wiser about things of real importance, you would not any the

more be richer than he.

I dare say, Eryxias, I said, that you may regard these arguments of ours as a kind of game; you think that they have no relation to facts, but are like the pieces in the game of draughts which the player can move in such a way that his opponents are unable to make any countermove. (Compare Republic.) And perhaps, too, as regards riches you are of opinion that while facts remain the same, there are arguments, no matter whether true or false, which enable the user of them to prove that the wisest and the richest are one and the same, although he is in the wrong and his opponents are in the right. There would be nothing strange in this; it would be as if two persons were to dispute about letters, one declaring that the word Socrates began with an S, the other that it began with an A, and the latter could gain the victory over the former.

Eryxias glanced at the audience, laughing and blushing at once, as if he had had nothing to do with what had just been said, and replied, — No, indeed, Socrates, I never supposed that our arguments should be of a kind which would never convince any one of those here present or be of advantage to them. For what man of sense could ever be persuaded that the wisest and the richest are the same? The truth is that we are discussing the subject of riches, and my notion is that we should argue respecting the honest and dishonest means of acquiring them, and, generally, whether they are a good thing or a bad.

Very good, I said, and I am obliged to you for the hint: in future we will be more careful. But why do not you yourself, as you introduced the argument, and do not think that the former discussion touched the point at issue, tell us whether you consider riches to be a good or an evil?

I am of opinion, he said, that they are a good. He was about to add something more, when Critias interrupted him: — Do you

really suppose so, Eryxias?

Certainly, replied Eryxias; I should be mad if I did not: and I do not fancy that you would find any one else of a contrary opinion.

And I, retorted Critias, should say that there is no one whom I could not compel to admit that riches are bad for some men. But surely, if they were a good, they could not appear bad for any one?

Here I interposed and said to them: If you two were having an argument about equitation and what was the best way of riding, supposing that I knew the art myself, I should try to bring you to an agreement. For I should be ashamed if I were present and did not do what I could to prevent your difference. And I should do the same if you were quarrelling about any other art and were likely, unless you agreed on the point in dispute, to part as enemies instead of as friends. But now, when we are contending about a thing of which the usefulness continues during the whole of life, and it makes an enormous difference whether we are to regard it as beneficial or not, — a thing, too, which is esteemed of the highest importance by the Hellenes: — (for parents, as soon as their children are, as they think, come to years of discretion, urge them to consider how wealth may be acquired, since by riches the value of a man is judged): — When, I say, we are thus in earnest, and you, who agree in other respects, fall to disputing about a matter of such moment, that is, about wealth, and not merely whether it is black or white, light or heavy, but whether it is a good or an evil, whereby, although you are now the dearest of friends and kinsmen, the most bitter hatred may arise betwixt you, I must hinder your dissension to the best of my power. If I could, I would tell you the truth, and so put an end to the dispute; but as I cannot do this, and each of you supposes that you can bring the other to an agreement, I am prepared, as far as my capacity admits, to

help you in solving the question. Please, therefore, Critias, try to make us accept the doctrines which you yourself entertain.

Critias: I should like to follow up the argument, and will ask Eryxias whether he thinks that there are just and unjust men?

Eryxias: Most decidedly.

Critias: And does injustice seem to you an evil or a good?

Eryxias: An evil.

Critias: Do you consider that he who bribes his neighbour's wife and commits adultery with her, acts justly or unjustly, and this although both the state and the laws forbid?

Eryxias: Unjustly.

Critias: And if the wicked man has wealth and is willing to spend it, he will carry out his evil purposes? whereas he who is short of means cannot do what he fain would, and therefore does not sin? In such a case, surely, it is better that a person should not be wealthy, if his poverty prevents the accomplishment of his desires, and his desires are evil? Or, again, should you call sickness a good or an evil?

Eryxias: An evil.

Critias: Well, and do you think that some men are intemperate?

Eryxias: Yes.

Critias: Then, if it is better for his health that the intemperate man should refrain from meat and drink and other pleasant things, but he cannot owing to his intemperance, will it not also be better that he should be too poor to gratify his lust rather than that he should have a superabundance of means? For thus he will not be able to sin, although he desire never so much.

Critias appeared to be arguing so admirably that Eryxias, if he had not been ashamed of the bystanders, would probably have

got up and struck him. For he thought that he had been robbed of a great possession when it became obvious to him that he had been wrong in his former opinion about wealth. I observed his vexation, and feared that they would proceed to abuse and quarrelling: so I said, — I heard that very argument used in the Lyceum yesterday by a wise man, Prodicus of Ceos; but the audience thought that he was talking mere nonsense, and no one could be persuaded that he was speaking the truth. And when at last a certain talkative young gentleman came in, and, taking his seat, began to laugh and jeer at Prodicus, tormenting him and demanding an explanation of his argument, he gained the ear of the audience far more than Prodicus.

Can you repeat the discourse to us? Said Erasistratus.

Socrates: If I can only remember it, I will. The youth began by asking Prodicus, In what way did he think that riches were a good and in what an evil? Prodicus answered, as you did just now, that they were a good to good men and to those who knew in what way they should be employed, while to the bad and the ignorant they were an evil. The same is true, he went on to say, of all other things; men make them to be what they are themselves. The saying of Archilochus is true: — ‘Men’s thoughts correspond to the things which they meet with.’

Well, then, replied the youth, if any one makes me wise in that wisdom whereby good men become wise, he must also make everything else good to me. Not that he concerns himself at all with these other things, but he has converted my ignorance into wisdom. If, for example, a person teach me grammar or music, he will at the same time teach me all that relates to grammar or music, and so when he makes me good, he makes things good to me.

Prodicus did not altogether agree: still he consented to what was said.

And do you think, said the youth, that doing good things is like building a house, — the work of human agency; or do things remain what they were at first, good or bad, for all time?

Prodicus began to suspect, I fancy, the direction which the argument was likely to take, and did not wish to be put down by a mere stripling before all those present: — (if they two had been alone, he would not have minded): — so he answered, cleverly enough: I think that doing good things is a work of human agency.

And is virtue in your opinion, Prodicus, innate or acquired by instruction?

The latter, said Prodicus.

Then you would consider him a simpleton who supposed that he could obtain by praying to the Gods the knowledge of grammar or music or any other art, which he must either learn from another or find out for himself?

Prodicus agreed to this also.

And when you pray to the Gods that you may do well and receive good, you mean by your prayer nothing else than that you desire to become good and wise: — if, at least, things are good to the good and wise and evil to the evil. But in that case, if virtue is acquired by instruction, it would appear that you only pray to be taught what you do not know.

Hereupon I said to Prodicus that it was no misfortune to him if he had been proved to be in error in supposing that the Gods immediately granted to us whatever we asked: — if, I added, whenever you go up to the Acropolis you earnestly entreat the Gods to grant you good things, although you know not whether they can yield your request, it is as though you went to the doors of the grammarian and begged him, although you had never made a study of the art, to give you a knowledge of

grammar which would enable you forthwith to do the business of a grammarian.

While I was speaking, Prodicus was preparing to retaliate upon his youthful assailant, intending to employ the argument of which you have just made use; for he was annoyed to have it supposed that he offered a vain prayer to the Gods. But the master of the gymnasium came to him and begged him to leave because he was teaching the youths doctrines which were unsuited to them, and therefore bad for them.

I have told you this because I want you to understand how men are circumstanced in regard to philosophy. Had Prodicus been present and said what you have said, the audience would have thought him raving, and he would have been ejected from the gymnasium. But you have argued so excellently well that you have not only persuaded your hearers, but have brought your opponent to an agreement. For just as in the law courts, if two witnesses testify to the same fact, one of whom seems to be an honest fellow and the other a rogue, the testimony of the rogue often has the contrary effect on the judges' minds to what he intended, while the same evidence if given by the honest man at once strikes them as perfectly true. And probably the audience have something of the same feeling about yourself and Prodicus; they think him a Sophist and a braggart, and regard you as a gentleman of courtesy and worth. For they do not pay attention to the argument so much as to the character of the speaker.

But truly, Socrates, said Erasistratus, though you may be joking, Critias does seem to me to be saying something which is of weight.

Socrates: I am in profound earnest, I assure you. But why, as you have begun your argument so prettily, do you not go on with the rest? There is still something lacking, now you have

agreed that (wealth) is a good to some and an evil to others. It remains to enquire what constitutes wealth; for unless you know this, you cannot possibly come to an understanding as to whether it is a good or an evil. I am ready to assist you in the enquiry to the utmost of my power: but first let him who affirms that riches are a good, tell us what, in his opinion, is wealth.

Erasistratus: Indeed, Socrates, I have no notion about wealth beyond that which men commonly have. I suppose that wealth is a quantity of money (compare Arist. Pol.); and this, I imagine, would also be Critias' definition.

Socrates: Then now we have to consider, What is money? Or else later on we shall be found to differ about the question. For instance, the Carthaginians use money of this sort. Something which is about the size of a stater is tied up in a small piece of leather: what it is, no one knows but the makers. A seal is next set upon the leather, which then passes into circulation, and he who has the largest number of such pieces is esteemed the richest and best off. And yet if any one among us had a mass of such coins he would be no wealthier than if he had so many pebbles from the mountain. At Lacedaemon, again, they use iron by weight which has been rendered useless: and he who has the greatest mass of such iron is thought to be the richest, although elsewhere it has no value. In Ethiopia engraved stones are employed, of which a Lacedaemonian could make no use. Once more, among the Nomad Scythians a man who owned the house of Polytion would not be thought richer than one who possessed Mount Lycabettus among ourselves. And clearly those things cannot all be regarded as possessions; for in some cases the possessors would appear none the richer thereby: but, as I was saying, some one of them is thought in one place to be money, and the possessors of it are the wealthy, whereas in some other place it is not money, and the ownership of it does not confer wealth; just as the standard of morals varies, and

what is honourable to some men is dishonourable to others. And if we wish to enquire why a house is valuable to us but not to the Scythians, or why the Carthaginians value leather which is worthless to us, or the Lacedaemonians find wealth in iron and we do not, can we not get an answer in some such way as this: Would an Athenian, who had a thousand talents weight of the stones which lie about in the Agora and which we do not employ for any purpose, be thought to be any the richer?

Erasistratus: He certainly would not appear so to me.

Socrates: But if he possessed a thousand talents weight of some precious stone, we should say that he was very rich?

Erasistratus: Of course.

Socrates: The reason is that the one is useless and the other useful?

Erasistratus: Yes.

Socrates: And in the same way among the Scythians a house has no value because they have no use for a house, nor would a Scythian set so much store on the finest house in the world as on a leather coat, because he could use the one and not the other. Or again, the Carthaginian coinage is not wealth in our eyes, for we could not employ it, as we can silver, to procure what we need, and therefore it is of no use to us.

Erasistratus: True.

Socrates: What is useful to us, then, is wealth, and what is useless to us is not wealth?

But how do you mean, Socrates? said Eryxias, interrupting. Do we not employ in our intercourse with one another speech and violence (?) and various other things? These are useful and yet they are not wealth.

Socrates: Clearly we have not yet answered the question, What is wealth? That wealth must be useful, to be wealth at all, — thus much is acknowledged by every one. But what particular thing is wealth, if not all things? Let us pursue the argument in another way; and then we may perhaps find what we are seeking. What is the use of wealth, and for what purpose has the possession of riches been invented, — in the sense, I mean, in which drugs have been discovered for the cure of disease? Perhaps in this way we may throw some light on the question. It appears to be clear that whatever constitutes wealth must be useful, and that wealth is one class of useful things; and now we have to enquire, What is the use of those useful things which constitute wealth? For all things probably may be said to be useful which we use in production, just as all things which have life are animals, but there is a special kind of animal which we call ‘man.’ Now if any one were to ask us, What is that of which, if we were rid, we should not want medicine and the instruments of medicine, we might reply that this would be the case if disease were absent from our bodies and either never came to them at all or went away again as soon as it appeared; and we may therefore conclude that medicine is the science which is useful for getting rid of disease. But if we are further asked, What is that from which, if we were free, we should have no need of wealth? can we give an answer? If we have none, suppose that we restate the question thus: — If a man could live without food or drink, and yet suffer neither hunger nor thirst, would he want either money or anything else in order to supply his needs?

Eryxias: He would not.

Socrates: And does not this apply in other cases? If we did not want for the service of the body the things of which we now stand in need, and heat and cold and the other bodily sensations were unperceived by us, there would be no use in this so-called

wealth, if no one, that is, had any necessity for those things which now make us wish for wealth in order that we may satisfy the desires and needs of the body in respect of our various wants. And therefore if the possession of wealth is useful in ministering to our bodily wants, and bodily wants were unknown to us, we should not need wealth, and possibly there would be no such thing as wealth.

Eryxias: Clearly not.

Socrates: Then our conclusion is, as would appear, that wealth is what is useful to this end?

Eryxias once more gave his assent, but the small argument considerably troubled him.

Socrates: And what is your opinion about another question: — Would you say that the same thing can be at one time useful and at another useless for the production of the same result?

Eryxias: I cannot say more than that if we require the same thing to produce the same result, then it seems to me to be useful; if not, not.

Socrates: Then if without the aid of fire we could make a brazen statue, we should not want fire for that purpose; and if we did not want it, it would be useless to us? And the argument applies equally in other cases.

Eryxias: Clearly.

Socrates: And therefore conditions which are not required for the existence of a thing are not useful for the production of it?

Eryxias: Of course not.

Socrates: And if without gold or silver or anything else which we do not use directly for the body in the way that we do food and drink and bedding and houses, — if without these we could satisfy the wants of the body, they would be of no use to us for

that purpose?

Eryxias: They would not.

Socrates: They would no longer be regarded as wealth, because they are useless, whereas that would be wealth which enabled us to obtain what was useful to us?

Eryxias: O Socrates, you will never be able to persuade me that gold and silver and similar things are not wealth. But I am very strongly of opinion that things which are useless to us are not wealth, and that the money which is useful for this purpose is of the greatest use; not that these things are not useful towards life, if by them we can procure wealth.

Socrates: And how would you answer another question? There are persons, are there not, who teach music and grammar and other arts for pay, and thus procure those things of which they stand in need?

Eryxias: There are.

Socrates: And these men by the arts which they profess, and in exchange for them, obtain the necessities of life just as we do by means of gold and silver?

Eryxias: True.

Socrates: Then if they procure by this means what they want for the purposes of life, that art will be useful towards life? For do we not say that silver is useful because it enables us to supply our bodily needs?

Eryxias: We do.

Socrates: Then if these arts are reckoned among things useful, the arts are wealth for the same reason as gold and silver are, for, clearly, the possession of them gives wealth. Yet a little while ago we found it difficult to accept the argument which proved that the wisest are the wealthiest. But now there seems

no escape from this conclusion. Suppose that we are asked, 'Is a horse useful to everybody?' will not our reply be, 'No, but only to those who know how to use a horse?'

Eryxias: Certainly.

Socrates: And so, too, physic is not useful to every one, but only to him who knows how to use it?

Eryxias: True.

Socrates: And the same is the case with everything else?

Eryxias: Yes.

Socrates: Then gold and silver and all the other elements which are supposed to make up wealth are only useful to the person who knows how to use them?

Eryxias: Exactly.

Socrates: And were we not saying before that it was the business of a good man and a gentleman to know where and how anything should be used?

Eryxias: Yes.

Socrates: The good and gentle, therefore will alone have profit from these things, supposing at least that they know how to use them. But if so, to them only will they seem to be wealth. It appears, however, that where a person is ignorant of riding, and has horses which are useless to him, if some one teaches him that art, he makes him also richer, for what was before useless has now become useful to him, and in giving him knowledge he has also conferred riches upon him.

Eryxias: That is the case.

Socrates: Yet I dare be sworn that Critias will not be moved a whit by the argument.

Critias: No, by heaven, I should be a madman if I were. But why do you not finish the argument which proves that gold and silver and other things which seem to be wealth are not real wealth? For I have been exceedingly delighted to hear the discourses which you have just been holding.

Socrates: My argument, Critias (I said), appears to have given you the same kind of pleasure which you might have derived from some rhapsode's recitation of Homer; for you do not believe a word of what has been said. But come now, give me an answer to this question. Are not certain things useful to the builder when he is building a house?

Critias: They are.

Socrates: And would you say that those things are useful which are employed in house building, — stones and bricks and beams and the like, and also the instruments with which the builder built the house, the beams and stones which they provided, and again the instruments by which these were obtained?

Critias: It seems to me that they are all useful for building.

Socrates: And is it not true of every art, that not only the materials but the instruments by which we procure them and without which the work could not go on, are useful for that art?

Critias: Certainly.

Socrates: And further, the instruments by which the instruments are procured, and so on, going back from stage to stage ad infinitum, — are not all these, in your opinion, necessary in order to carry out the work?

Critias: We may fairly suppose such to be the case.

Socrates: And if a man has food and drink and clothes and the other things which are useful to the body, would he need gold or silver or any other means by which he could procure that

which he now has?

Critias: I do not think so.

Socrates: Then you consider that a man never wants any of these things for the use of the body?

Critias: Certainly not.

Socrates: And if they appear useless to this end, ought they not always to appear useless? For we have already laid down the principle that things cannot be at one time useful and at another time not, in the same process.

Critias: But in that respect your argument and mine are the same. For you maintain if they are useful to a certain end, they can never become useless; whereas I say that in order to accomplish some results bad things are needed, and good for others.

Socrates: But can a bad thing be used to carry out a good purpose?

Critias: I should say not.

Socrates: And we call those actions good which a man does for the sake of virtue?

Critias: Yes.

Socrates: But can a man learn any kind of knowledge which is imparted by word of mouth if he is wholly deprived of the sense of hearing?

Critias: Certainly not, I think.

Socrates: And will not hearing be useful for virtue, if virtue is taught by hearing and we use the sense of hearing in giving instruction?

Critias: Yes.

Socrates: And since medicine frees the sick man from his disease, that art too may sometimes appear useful in the acquisition of virtue, e.g. when hearing is procured by the aid of medicine.

Critias: Very likely.

Socrates: But if, again, we obtain by wealth the aid of medicine, shall we not regard wealth as useful for virtue?

Critias: True.

Socrates: And also the instruments by which wealth is procured?

Critias: Certainly.

Socrates: Then you think that a man may gain wealth by bad and disgraceful means, and, having obtained the aid of medicine which enables him to acquire the power of hearing, may use that very faculty for the acquisition of virtue?

Critias: Yes, I do.

Socrates: But can that which is evil be useful for virtue?

Critias: No.

Socrates: It is not therefore necessary that the means by which we obtain what is useful for a certain object should always be useful for the same object: for it seems that bad actions may sometimes serve good purposes? The matter will be still plainer if we look at it in this way: — If things are useful towards the several ends for which they exist, which ends would not come into existence without them, how would you regard them? Can ignorance, for instance, be useful for knowledge, or disease for health, or vice for virtue?

Critias: Never.

Socrates: And yet we have already agreed — have we not? — that there can be no knowledge where there has not previously been ignorance, nor health where there has not been disease, nor virtue where there has not been vice?

Critias: I think that we have.

Socrates: But then it would seem that the antecedents without which a thing cannot exist are not necessarily useful to it. Otherwise ignorance would appear useful for knowledge, disease for health, and vice for virtue.

Critias still showed great reluctance to accept any argument which went to prove that all these things were useless. I saw that it was as difficult to persuade him as (according to the proverb) it is to boil a stone, so I said: Let us bid 'good-bye' to the discussion, since we cannot agree whether these things are useful and a part of wealth or not. But what shall we say to another question: Which is the happier and better man, — he who requires the greatest quantity of necessities for body and diet, or he who requires only the fewest and least? The answer will perhaps become more obvious if we suppose some one, comparing the man himself at different times, to consider whether his condition is better when he is sick or when he is well?

Critias: That is not a question which needs much consideration.

Socrates: Probably, I said, every one can understand that health is a better condition than disease. But when have we the greatest and the most various needs, when we are sick or when we are well?

Critias: When we are sick.

Socrates: And when we are in the worst state we have the greatest and most especial need and desire of bodily pleasures?

Critias: True.

Socrates: And seeing that a man is best off when he is least in need of such things, does not the same reasoning apply to the case of any two persons, of whom one has many and great wants and desires, and the other few and moderate? For instance, some men are gamblers, some drunkards, and some gluttons: and gambling and the love of drink and greediness are all desires?

Critias: Certainly.

Socrates: But desires are only the lack of something: and those who have the greatest desires are in a worse condition than those who have none or very slight ones?

Critias: Certainly I consider that those who have such wants are bad, and that the greater their wants the worse they are.

Socrates: And do we think it possible that a thing should be useful for a purpose unless we have need of it for that purpose?

Critias: No.

Socrates: Then if these things are useful for supplying the needs of the body, we must want them for that purpose?

Critias: That is my opinion.

Socrates: And he to whom the greatest number of things are useful for his purpose, will also want the greatest number of means of accomplishing it, supposing that we necessarily feel the want of all useful things?

Critias: It seems so.

Socrates: The argument proves then that he who has great riches has likewise need of many things for the supply of the wants of the body; for wealth appears useful towards that end. And the richest must be in the worst condition, since they seem to be most in want of such things.

On Justice

plato-scroll.com/s/onjust/

Can you tell us what is justice? or does it seem to you not worth entering into a discourse about it? To me at least (it seems) very much so. What is it then? What else than the things considered just. Do not (speak)' to me in this way; but, as if you had asked me — What is the eye? I should have said to you — It is that, by which we see; and if you should bid me to prove it, I would prove it. And if you should ask — To what is given the name of soul? I would say — To that, by which we know (something). And if again — What is the voice? I would answer — That, by which we converse. In this way then do you tell me that justice is that, which we use for something, as are the things, of which I was just now asking. I have it not in my power to reply in this way at all. But, since such is the case, perhaps we shall discover it more easily in this way. Come then, (say,) by what do we, on consideration, distinguish the greater and the less? Is it not by a measure? Yes. And together with a measure by what art? Is it not by that of measurement? Yes. And how things light and heavy? Is it not by weight? Yes. And together with a weight by what art? Is it not that of weighing? Certainly. Well then, by what instrument do we, on consideration, distinguish what is just and unjust? and together with the instrument, by what art previously? Is it not somehow manifest to you thus? No. But (let us consider it) again in this way. When we are disputing about things greater and less, who decides between us? Is it not the measurers? Yes. And when about things many and few, who are the persons to decide? Is it not the numberers? But what, when we are disputing with each other about things just and unjust, to whom do we come? and who are the persons to decide on each occasion between us? Say. Do you not, Socrates, mean the judges? You have correctly made the discovery. Come then and try to tell this likewise. By doing what do the measurers decide respecting things large and small? Is it not by measuring? Yes. And respecting things heavy and light? Is it not by weighing? Yes. And respecting things many and few? Is it not

by numbering? Yes. But how, respecting things just and unjust? Answer me. I cannot say. Say, by speaking. Yes. By speaking then do judges decide between us, when they are forming a judgment respecting things just and unjust. Yes. And by measuring, those skilled in measuring things small and great? for a measure is that, by which these things are judged. It is so. And by weighing, those skilled in weighing things heavy and light? for a weight is that, by which these things are judged. Yes, it is. And again by numbering, those skilled in numbering things many and few? for number is that by which these things are judged. It is so. But by speaking, as we just now agreed, the judges decide respecting things just and unjust. You speak correctly, Socrates. It is true then; and speech is that, it seems, by which things just and unjust are judged. What then are things just and unjust? As if a person had asked us — Since a measure, and the measuring art, and the person skilled in measuring, decide which is the greater and the less, what is the greater and the less? Shall we say to him that the greater exceeds, and the less is exceeded? and since a weight and the weighing art and the person skilled in weighing decide the heavy and the light, shall we say to him, that the thing going downwards in the scales is heavy, but the thing (going) upwards is light? In like manner if he should ask us — Since speech and the art of judging and the judge is the party who decides what is just and unjust, -what is the just and unjust? “What answer shall we have to give him? Or have we not a single word to say? We have not. Whether willingly or unwillingly do men, think you, have this injustice? I mean in this way. Think you that they do injustice [and are unjust] willingly or unwillingly? Willingly, I imagine, Socrates; for they are wicked. You conceive then that men are willingly wicked and unjust. I So; and do not you? No; at least if we are to be persuaded by the poet. What kind of poet? He who said — Not one is wicked willingly, nor blest Unwillingly.

But still on the other hand, Socrates, well is the old proverb, that Poets do many falsehoods sing. But I should marvel, if this poet has told a falsehood. Come then, if you are at leisure, let us consider, whether he is saying what is false or true. Nay, I am at leisure. Come then, (say,) do you deem it just to tell a falsehood, or to tell the truth? To tell the truth. To tell a falsehood then is unjust? Yes. But whether to deceive or to not deceive? To not deceive, assuredly. To deceive then is unjust? Yes. But what, is it just to hurt, or to benefit? To benefit. To hurt then is unjust? Yes. It is just then to tell the truth, and to not deceive, and to benefit; but to tell a falsehood, and to hurt, and to deceive, unjust. Yes, by Zeus, and greatly so. What, to do so to enemies? By no means. But it is just to do a hurt to enemies, but to do a benefit, unjust. Yes. It is then just by deceiving enemies to do them a hurt? How not? Well then, to tell a falsehood in order that we may deceive and do a hurt to enemies, is it not just? It is. But what, do you not say that it is just to do a benefit to friends? I do. Whether by not deceiving or by deceiving for their benefit? By deceiving even, by Zeus. But is it just to do a benefit by deceiving, and yet not by telling a falsehood? or by telling a falsehood? It is just by telling even a falsehood. To tell a falsehood and to tell the truth is, as it seems, both just and unjust. Yes. And to not deceive and to deceive is both just and unjust. So it seems. And to do a hurt and to do a benefit is just and unjust. Yes. All things of this kind are it seems the same, both just and unjust. To me at least they appear so. Hear then. I have, like other men, a right eye and a left. Yes. And a right nostril and a left. Certainly. And a right hand and a left. Yes. Hence, since after giving the same name, you say that some of my (members) are on the right side, and others on the left, would you not be able to say, if I asked you, on which side they were, that some on one side are the right, and others on the other side the left? Yes. Come then, likewise, to that point, since after giving the same name, you say that some acts are just, and

some unjust, can you tell which are the just, and which the unjust? To me then it now appears that each of these acts, taking place at a proper time, are just; but at not a proper one, unjust. And correctly does it appear to you. He then, who does each of these acts at a proper time, does what is just; but he, who does not at a proper time, (does) what is unjust. Yes. He then, who does what is just, is just; but he who does what is unjust, is unjust. It is so. Who then at a proper time is able to cut and burn and to make lean? The medical man. Because he knows, or for some other reason? Because he knows. And who (is able) at a proper time to dig, and to plough, and to plant? The land-tiller. Because he knows, or because he does not? Because he knows. And in this way as regards other matters, he who knows, is able to do what is proper at a proper time; but he who does not know, is not. Thus it is. And he who knows how to tell falsehoods, and to deceive, and to do a benefit, is able to do each of these things at a proper time; but he who does not know, is not. You say what is true. And he who does these acts at a fitting time is just. Yes. He does them then through knowledge. How not? The just man then is just through knowledge. Yes. The unjust man then is unjust through what is opposite to what is just. It appears so. Now the just man is just through wisdom. Yes. And the unjust man is unjust through the want of instruction. It seems so. That, which our ancestors left us, as wisdom, seems near to being justice; but that, which (they left) as want of instruction, to be injustice. It is likely. Are men uninstructed willingly, or unwillingly? Unwillingly. Unwillingly then they are unjust. It appears so. But the unjust are wicked. Yes. Unwillingly then persons are wicked and unjust. By all means. But they act unjustly through there being the unjust. Yes. Through an act of unwillingness. Certainly. But that, which is willing, does not take place through what is unwilling. It does not. But the doing of injustice takes place through the existence of injustice. Yes. Now injustice is an involuntary act.

Involuntary. Unwillingly then persons do an injustice, and are unjust and wicked. Unwillingly, as it appears. The poet then did not in this case tell a falsehood. It seems not.

On Virtue

ΠΕΡΙ ΑΡΕΤΗΣ

Plato

translated by George Burges

Plato Scroll · plato-scroll.com

plato-scroll.com/s/onvirt/

Is Virtue a thing to be taught, or to be not taught? but do men become good by nature, or by any other means? I cannot, Socrates, state at present. But let us consider the matter in this way. Come then, (say,) if a person wished to become good in the virtue, in which clever cooks are good, from whence would he become so? It is evident, if he learnt from good cooks. Well then, if a person wished to become a good physician, by going to whom would he become a good physician? It is evident, by going to some one of the good physicians. But if he wished to become good in the art, in which clever carpenters (are good)? To (some one) of the (good) carpenters.

If then he wished to be good in the virtue, in which men are good and clever, whither must he go and learn? I conceive to (some one) of the (good) men (to learn) this, if it is to be learnt; for from whence else? Come then, (say,) who are the men that have become good? in order that we may see whether these are the persons, who make men good, Thucydides, and Themistocles, and Aristides, and Pericles.

Have we it in our power to say who was the teacher of each of these? We have not; for it is not told. Well then, (can we mention) any pupil, either amongst strangers or citizens or any one else, either a free man or a slave, who assigns as the cause of his having become wise and good his intercourse with them? This too is not told. But they did not surely grudge to share their virtue with other persons. Perhaps so. Was it that there might not be rival artists, just as cooks, and physicians, and carpenters feel a jealousy; since it is not to their advantage for many rival artists to exist, nor for them to dwell amongst many similar persons. Is it then in like manner not an advantage for good men to dwell amongst many similar persons? Perhaps so. Are not the good and the just the same? Yes, they are. Is there the individual, to whom it is an advantage to live not amongst good persons, but amongst bad? I cannot tell. Can you not tell

this too, whether it is the work of good men to do a hurt, and of bad men to do a benefit, or the reverse'? The reverse. The good then do a benefit, the bad do a hurt. Yes. Is there a person who wishes to be hurt rather than to be benefited? By no means. No one therefore wishes to live amongst bad persons, rather than amongst good. It is so. Not one then of the good is so jealous of another, as (not) to make him a good person and similar to himself. From this reasoning it seems so. You have heard that Cleophantus was the son of Themistocles. I have heard it. It is evident then that Themistocles was not jealous of his son becoming the best possible; who (was jealous of) no one else, if indeed he was a good man; and (good) they say he was. Yes. You know then that Themistocles caused his son to be taught to be a clever and a good horseman. For instance he used to remain standing upright in the Meno, where Sydenham was the first to remark that this Thucydides was not the historian, but a political opponent of Pericles.

upon horses, and upright too hurled a javelin from (the backs of) the horses, and did many other wonderful feats, and taught him, and made him wise in many other things, such as are closely connected with a good education. Or have you not heard from elderly persons? I have heard it. No one then could find fault with the son's nature as being bad. Not justly so at least from what you have said. But what is this? that Cleophantus, the son of Themistocles, became; a good and wise man in the matters where his father was wise, have you ever heard from any younger or older person? I have not heard it. Do we then conceive that he wished to instruct his own son in these matters; but in the wisdom, in which he was wise himself, not to make him better than any of his neighbours, if virtue were a thing to be taught? It is not likely at least. Of such a kind then is this your teacher of virtue, to whom you have alluded? Let us then look to another, by name Aristides, who brought up Lysimachus, and instructed him the best of the Athenians on

such subjects as are connected with (good) teachers; and yet he made him a man no better than any body; for both you and I have seen and associated with him. It is true. You know too that Pericles brought up well his sons Paralus and Xanthippus, of the latter of whom you seem to me to have been the lover. These, as you know yourself, he taught to be horsemen inferior to none of the Athenians; and he instructed them to be inferior to no one in the rest of contests, and all the other things that are learnt by art. But did he not wish to make them good men? But perhaps, Socrates, they would have become so, had they not died young. You reasonably come to the aid of your beloved. But Pericles would have much rather made them clever in his own wisdom, than in music and contests, had virtue been a thing to be taught, and had he been able to make them good men. But (I fear) that it is a thing not to be taught; since Thucydides brought up well his two sons, Melesias and Stephanus, in behalf of whom you will not have it in your power to say, what you have done in behalf of the sons of Pericles; for one of these you surely know lived to old age, and the other much beyond. And yet their father taught them well other pursuits, and they wrestled the best of the Athenians. For he put one under Xanthias, and the other under Eudorus; and these were surely thought to wrestle the best of those of that period. Yes, they were. Is it not evident then, that he would not have taught his sons these things, where it was requisite to instruct them at an expense to himself, but those where without expending any thing it was requisite to make them good men. Now would he not have taught them this, if it were to be taught? It is likely at least. But perhaps Thucydides was a man of small means, and had not very many friends amongst the Athenians or their allies; and he was of a great family, and of great power in the state, and amongst the rest of the Greeks, so that if this had been a thing to be taught, he would have discovered a person amongst those of the country, or

foreigners, who would have made his son a good man, if he himself had, through his attention to state affairs, no leisure. But (I fear) that virtue is a thing not to be taught. Perhaps not. But if it is not to be taught, are the good naturally so from their birth? But this perhaps we shall discover by considering the matter in this way. Come then, (say,) do there exist the natures of good horses? They do exist. Are there not men, who possess an art, by which they know the natures of good horses, both as regards their body, with reference to running, and their feelings, which of them are full of spirit or devoid of it. Yes. What is this art, and what its name? Equestrian. Is there not in like manner an art relating to dogs, by which persons discriminate between the good and bad natures of dogs? There is. What is it? The hunter's art. There are too assayers amongst us of gold and silver, who, by looking, decide upon both the better and the worse (metal). There are. And what do you call them? Silver assayers. The boy-drillers moreover know, by examining the natures of the bodies of men, which of them are useful and which not, for each of their labours, and which of the bodies of persons older and young, are about to be worthy of note, and in which there is much hope of their executing works connected with the body. It is so. Whether then are good horses and dogs, and other things of such a kind, of more importance in states, or good men? Good men. Well then, do you conceive that, if the natures of men were good for virtue, that mankind would not have planned in every way to discover those natures? It is likely at least. Can you then mention any art, which has been exhibited and applied to the natures of good men, so as to enable persons to decide upon them? I cannot.' And yet the art would be worth much, and so too the parties possessing it. For they would have pointed out the young men, who, when they were still boys, were about to be good; and whom we should have taken and kept in the Acropolis for the public use, as if it were silver, and something more beautiful, in order that they

might not suffer any mischief, either in a fight or in any other danger, but be laid up as the saviours and benefactors of the state, since they should have arrived at a proper age. But it seems almost that virtue does not exist to mankind either by nature or instruction. How then, Socrates, would persons seem to become (good), if they do not become so by nature or instruction? By what other means could the good exist? This, I think, could not be shown easily; but I conjecture that the property (of goodness) is something especially divine, and that good men exist, as prophets do and oracle chaunters. For these exist neither by nature nor by art, but become such by the inspiration of the gods. And so too good men point out to states what is about on each occasion to happen, and what is about to be, from the inspiration of a god, much more, and more clearly, than oracle chaunters do: and even women somehow say that such a person is a divine man; and the Lacedaemonians too, when they praise in a very handsome manner, say that a man is divine, and often does Homer make use of the same expression, and the rest of poets likewise. When therefore a god wishes a state to do well, he causes some men in it to be good; but when a state is about to do ill, the god takes away the good men from it. Thus then it is likely that virtue is a thing not to be taught nor (derived) from nature, but exists by a divine allotment to those who possess it.

plato-scroll.com/s/defs/

Eternal — that which has existed formerly through all time, and is now not destroyed.

God — an immortal living-being, sufficient in itself for happiness; an eternal existence; the cause of the nature of the good.

Generation — a movement towards existence; a sharing through a change in existence; a progression towards existence.

The sun — a fire in heaven, which can alone be seen from morning to evening by the same; the greatest star, visible by day; a perpetually living being, possessing a soul. Time — a movement of the sun; a measure of progress.

Day — a journeying of the sun from its rising (east) to its setting (west); a light, the opposite to Night.

Morning — the beginning of day; the first light from the sun.

Mid-day — the time when the shadows of substances have the least length.

Evening — the close of day.

Night — darkness, the opposite to Day; a deprivation of the sun.

Chance — a proceeding from uncertainty to uncertainty, and from what is spontaneous; the cause of a fortuitous action.

Old Age — the wasting away of a thing with life, the result of time.

Wind — a movement in the air around the earth.

Air — an element, all of whose movements according to spabe are according to nature.

Heaven — a substance, surrounding all things perceived by the senses, except the uppermost air.

Soul — that which moves itself; the cause of vital motion in living beings.

Power — that, which is able by itself to produce an effect.

Vision — the (bodily) habit of distinguishing substances.

Bone — marrow, consolidated by heat.

Element — that, which combines and separates (particles) brought together.

Virtue — a (mental) constitution of the best kind; a habit of a mortal living being; the object of praise on account of itself; a habit, according to which that, which possesses it, is said to be good; a just communion of laws; a disposition, according to which that, which is constituted perfectly, is called steady; a habit, effective of a good state of law.

Discretion — a power effective by itself of the good fortune of man; a knowledge of things good and evil; a knowledge effective of felicity; a (mental) constitution, by which we determine what is to be done and what is not to be done.

Justice — an agreement of the soul with itself, and a correct arrangement of the parts of the soul towards each other and about each other; a habit, distributive to each person of that, which is according to worthiness; a habit, according to which he, who possesses it, can select what seems to him to be just; a habit in life, subservient to law; an equality that can share in common; a habit ministering to upright laws.

Temperance — a moderation of soul relating to the desires and pleasures, which exist in it according to nature; a fitness in, and correct ordering of, the soul, as regards its natural pleasures and pains; a harmony in the soul touching the states of ruling and being ruled; a self-acting according to nature; í [a well-ordering of the soul;] an intercourse of the soul, founded on reason, relating to things honourable and base; a habit

according to which he, who has it, can select and be cautious of what he ought.

Fortitude — a habit of the soul, not to be moved by fear; a boldness in war; a knowledge of the things relating to war; a command over the soul relating to things of fear and dread; a boldness subservient to discretion; a bold bearing under the expectation of death; a habit, preservative of right reasoning in dangers; a strength (of mind) balancing (the apprehension) of danger;”a strength, bearing up on the side of virtue; a tranquillity of soul with reference to things that appear, according to correct reasoning, to be full of dread and daring; the safe preservation of uncertain determinations relating to things of dread; a skill in war; a habit, that can abide in law.

Continence-a power enduring pain; a following of correct reasoning; a power not exceeded by that which is perceived by correct reasoning.

Self-sufficiency — a completion in the possession of good things; a habit, according to which they, who possess it, are the masters of themselves.

Reasonableness — a reduction in what is just and useful; a moderation in compacts; a well-ordering of the soul, founded on reason, as regards things honourable and base.

Endurance — the bearing-up against pain, for the sake of what is honourable; a bearing-up under labour for the sake of what is honourable.

Boldness — the non-expectation of an ill; an imperturbability in the presence of an ill.

Non-perception of pain — a habit, according to which we do not fall into sorrows.

The love of labour — a habit, that accomplishes what a person chooses (to do); a voluntary endurance; a habit not to be

cavilled at on the subject of labour.

Modesty — a voluntary shrinking from daring on just grounds towards what seems to be the best; a voluntary laying hold of the best; a cautious care of blame on just grounds.

Freedom — the ruling power of life; a power ruling by itself on every occasion; a power over that, which relates to oneself in life; an unsparingness in the use and possession of property.

Liberality — a habit in transacting money matters in a way that is fitting; the adding to, and possession of, property, as is meet.

Mildness — the settling down of an excitement arising from passion; a moderated temperament of soul.

Decorum — a voluntary yielding to what appears the best; a well-ordering respecting the movement of the body.

Felicity — a good composed of all good things; a power self-sufficient towards living well; a consummation as regards virtue; an utility self-sufficient for a living being.

Magnificence — the estimation according to correct reason of that which is the most worthy of respect.

Sagacity — a natural ability in the soul, according to which he, who possesses it, makes a conjecture in the quickest (time) relating to what needful; an acuteness of intellect.

Honesty — a simplicity in moral conduct in union with fair speaking; a steadiness in moral conduct.

Kalokagathia — a habit of selecting things that are the best.

High-mindedness — a gentlemanly use of accidental circumstances; a majesty of soul in union with reason.

Philanthropy — a habit of moral conduct that easily leads to a friendship with man; a habit of acting kindly towards men; the having thanks; a recollection with kind conduct.

Piety — -justice relating to the gods; a power paying attention to the gods willingly; a correct perception of the honour due to the gods; a knowledge of the honour due to the gods.

Good — that on account of itself.

Fearlessness — a habit, according to which we do not fall into fear.

Apathy — a habit, according to which we do not fall into sufferings.

Peace — a quietness as regards enmity in war.

Listlessness — an easiness of soul; apathy respecting the objects of anger.

Skilfulness — a habit, according to which he, who possesses it, is able to form a conjecture about the peculiar termination (of a thing).

Friendship — a union of sentiment, relating to things honourable and just; the choice of the same kind of life; a union in opinion on questions of sect and practice; a union in sentiment relating to a communion in life in combination with kind feelings; a communion in doing well and in suffering.

Nobility of birth — the virtue of a noble moral conduct; an easy leading of the soul to words and deeds.

Selection — a correct approval after examination.

Kind feeling — the selection of a person for the purpose of embracing by a person.

Familiarity — a sharing in the same family.
