Socrates: But why? Were you not saying that the virtue of a man was to order a state, and the virtue of a woman was to order a house?

Meno: I did say so.

73a

Socrates: And can either house or state or anything be well ordered without temperance and without justice?

Meno: Certainly not.

Socrates: Then they who order a state or a house temperately or justly order them with temperance and justice?

Meno: Certainly.

Socrates: Then both men and women, if they are to be good men and women, must have the same virtues of temperance and justice?

Meno: True.

Socrates: And can either a young man or an elder one be good, if they are intemperate and unjust?

73b

Meno: They cannot.

Socrates: They must be temperate and just?

Meno: Yes.

Socrates: Then all men are good in the same way, and by participation in the same virtues?

Meno: Such is the inference.

Socrates: And they surely would not have been good in the same way, unless their virtue had been the same?

Meno: They would not.

73c

Socrates: Then now that the sameness of all virtue has been proven, try and remember what you and Gorgias say that virtue is.

Meno: Will you have one definition of them all?

Socrates: That is what I am seeking.

Meno: If you want to have one definition of them all, I know not what to say, but that virtue is the power of governing mankind.

73d

Socrates: And does this definition of virtue include all virtue? Is virtue the same in a child and in a slave, Meno? Can the child govern his father, or the slave his master; and would he who governed be any longer a slave?

Meno: I think not, Socrates.

Socrates: No, indeed; there would be small reason in that. Yet once more, fair friend; according to you, virtue is ‘the power of governing,’ but do you not add ‘justly and not unjustly’?

Meno: Yes, Socrates; I agree there; for justice is virtue.

Socrates: Would you say ‘virtue,’ Meno, or ‘a virtue’?

Meno: What do you mean?

Socrates: I mean as I might say about anything; that a round, for example, is ‘a figure’ and not simply ‘figure,’ and I should adopt this mode of speaking, because there are other figures.

Meno: Quite right; and that is just what I am saying about virtue — that there are other virtues as well as justice.

74a

Socrates: What are they? tell me the names of them, as I would tell you the names of the other figures if you asked me.

Meno: Courage and temperance and wisdom and magnanimity are virtues; and there are many others.

Socrates: Yes, Meno; and again we are in the same case: in searching after one virtue we have found many, though not in the same way as before; but we have been unable to find the common virtue which runs through them all.

74b

Meno: Why, Socrates, even now I am not able to follow you in the attempt to get at one common notion of virtue as of other things.

Socrates: No wonder; but I will try to get nearer if I can, for you know that all things have a common notion. Suppose now that some one asked you the question which I asked before: Meno, he would say, what is figure? And if you answered 'roundness,' he would reply to you, in my way of speaking, by asking whether you would say that roundness is 'figure' or 'a figure;' and you would answer 'a figure.'

Meno: Certainly.

Socrates: And for this reason — that there are other figures?

Meno: Yes.

Socrates: And if he proceeded to ask, What other figures are there? you would have told him.

Meno: I should.

74c

Socrates: And if he similarly asked what colour is, and you answered whiteness, and the questioner rejoined, Would you say that whiteness is colour or a colour? you would reply, A colour, because there are other colours as well.

Meno: I should.

Socrates: And if he had said, Tell me what they are? — you would have told him of other colours which are colours just as much as whiteness.

Meno: Yes.

74d

Socrates: And suppose that he were to pursue the matter in my way, he would say: Ever and anon we are landed in particulars, but this is not what I want; tell me then, since you call them by a common name, and say that they are all figures, even when opposed to one another, what is that common nature which you designate as figure — which contains straight as well as round,

and is no more one than the other — that would be your mode of speaking?

Meno: Yes.

Socrates: And in speaking thus, you do not mean to say that the round is round any more than straight, or the straight any more straight than round?

Meno: Certainly not.

Socrates: You only assert that the round figure is not more a figure than the straight, or the straight than the round?

Meno: Very true.

74e

Socrates: To what then do we give the name of figure? Try and answer. Suppose that when a person asked you this question either about figure or colour, you were to reply, Man, I do not understand what you want, or know what you are saying; he would look rather astonished and say: Do you not understand that I am looking for the ‘simile in multis’? And then he might put the question in another form: Meno, he might say, what is that ‘simile in multis’ which you call figure, and which includes not only round and straight figures, but all? Could you not answer that question, Meno? I wish that you would try; the attempt will be good practice with a view to the answer about virtue.

75b

Meno: I would rather that you should answer, Socrates.

Socrates: Shall I indulge you?

Meno: By all means.

Socrates: And then you will tell me about virtue?

Meno: I will.

Socrates: Then I must do my best, for there is a prize to be won.

Meno: Certainly.

Socrates: Well, I will try and explain to you what figure is. What do you say to this answer? — Figure is the only thing which always follows colour. Will you be satisfied with it, as I am sure that I should be, if you would let me have a similar definition of virtue?

Meno: But, Socrates, it is such a simple answer.

75c

Socrates: Why simple?

Meno: Because, according to you, figure is that which always follows colour.

(SOCRATES: Granted.)

Meno: But if a person were to say that he does not know what colour is, any more than what figure is — what sort of answer would you have given him?

75d

Socrates: I should have told him the truth. And if he were a philosopher of the eristic and antagonistic sort, I should say to him: You have my answer, and if I am wrong, your business is to take up the argument and refute me. But if we were friends, and were talking as you and I are now, I should reply in a milder strain and more in the dialectician's vein; that is to say, I should not only speak the truth, but I should make use of premises which the person interrogated would be willing to admit. And this is the way in which I shall endeavour to approach you. You will acknowledge, will you not, that there is such a thing as an end, or termination, or extremity? — all which words I use in the same sense, although I am aware that Prodicus might draw distinctions about them: but still you, I am sure, would speak of a thing as ended or terminated — that is all which I am saying — not anything very difficult.

Meno: Yes, I should; and I believe that I understand your meaning.

76a

Socrates: And you would speak of a surface and also of a solid, as for example in geometry.

Meno: Yes.

Socrates: Well then, you are now in a condition to understand my definition of figure. I define figure to be that in which the solid ends; or, more concisely, the limit of solid.

Meno: And now, Socrates, what is colour?

Socrates: You are outrageous, Meno, in thus plaguing a poor old man to give you an answer, when you will not take the trouble of remembering what is Gorgias' definition of virtue.

76b

Meno: When you have told me what I ask, I will tell you, Socrates.

Socrates: A man who was blindfolded has only to hear you talking, and he would know that you are a fair creature and have still many lovers.

Meno: Why do you think so?

76c

Socrates: Why, because you always speak in imperatives: like all beauties when they are in their prime, you are tyrannical; and also, as I suspect, you have found out that I have weakness for the fair, and therefore to humour you I must answer.

Meno: Please do.

Socrates: Would you like me to answer you after the manner of Gorgias, which is familiar to you?

Meno: I should like nothing better.

Socrates: Do not he and you and Empedocles say that there are certain effluences of existence?

76d

Meno: Certainly.

Socrates: And passages into which and through which the effluences pass?

Meno: Exactly.

Socrates: And some of the effluences fit into the passages, and some of them are too small or too large?

Meno: True.

Socrates: And there is such a thing as sight?

Meno: Yes.

Socrates: And now, as Pindar says, ‘read my meaning:’ — colour is an effluence of form, commensurate with sight, and palpable to sense.

Meno: That, Socrates, appears to me to be an admirable answer.

Socrates: Why, yes, because it happens to be one which you have been in the habit of hearing; and your wit will have discovered, I suspect, that you may explain in the same way the nature of sound and smell, and of many other similar phenomena.

Meno: Quite true.

Socrates: The answer, Meno, was in the orthodox solemn vein, and therefore was more acceptable to you than the other answer about figure.

Meno: Yes.

77a

Socrates: And yet, O son of Alexidemus, I cannot help thinking that the other was the better; and I am sure that you would be

of the same opinion, if you would only stay and be initiated, and were not compelled, as you said yesterday, to go away before the mysteries.

Meno: But I will stay, Socrates, if you will give me many such answers.

77b

Socrates: Well then, for my own sake as well as for yours, I will do my very best; but I am afraid that I shall not be able to give you very many as good; and now, in your turn, you are to fulfil your promise, and tell me what virtue is in the universal; and do not make a singular into a plural, as the facetious say of those who break a thing, but deliver virtue to me whole and sound, and not broken into a number of pieces: I have given you the pattern.

Meno: Well then, Socrates, virtue, as I take it, is when he, who desires the honourable, is able to provide it for himself; so the poet says, and I say too — ‘Virtue is the desire of things honourable and the power of attaining them.’

77c

Socrates: And does he who desires the honourable also desire the good?

Meno: Certainly.

Socrates: Then are there some who desire the evil and others who desire the good? Do not all men, my dear sir, desire good?

Meno: I think not.

77d

Socrates: There are some who desire evil?

Meno: Yes.

Socrates: Do you mean that they think the evils which they desire, to be good; or do they know that they are evil and yet desire them?

Meno: Both, I think.

Socrates: And do you really imagine, Meno, that a man knows evils to be evils and desires them notwithstanding?

Meno: Certainly I do.

Socrates: And desire is of possession?

Meno: Yes, of possession.

Socrates: And does he think that the evils will do good to him who possesses them, or does he know that they will do him harm?

Meno: There are some who think that the evils will do them good, and others who know that they will do them harm.

Socrates: And, in your opinion, do those who think that they will do them good know that they are evils?

77e

Meno: Certainly not.

Socrates: Is it not obvious that those who are ignorant of their nature do not desire them; but they desire what they suppose to be goods although they are really evils; and if they are mistaken and suppose the evils to be goods they really desire goods?

Meno: Yes, in that case.

Socrates: Well, and do those who, as you say, desire evils, and think that evils are hurtful to the possessor of them, know that they will be hurt by them?

Meno: They must know it.

Socrates: And must they not suppose that those who are hurt are miserable in proportion to the hurt which is inflicted upon them?

Meno: How can it be otherwise?

Socrates: But are not the miserable ill-fated?

Meno: Yes, indeed.

Socrates: And does any one desire to be miserable and ill-fated?

Meno: I should say not, Socrates.

78b

Socrates: But if there is no one who desires to be miserable, there is no one, Meno, who desires evil; for what is misery but the desire and possession of evil?

Meno: That appears to be the truth, Socrates, and I admit that nobody desires evil.

Socrates: And yet, were you not saying just now that virtue is the desire and power of attaining good?

Meno: Yes, I did say so.

Socrates: But if this be affirmed, then the desire of good is common to all, and one man is no better than another in that respect?

78c

Meno: True.

Socrates: And if one man is not better than another in desiring good, he must be better in the power of attaining it?

Meno: Exactly.

Socrates: Then, according to your definition, virtue would appear to be the power of attaining good?

Meno: I entirely approve, Socrates, of the manner in which you now view this matter.

Socrates: Then let us see whether what you say is true from another point of view; for very likely you may be right: — You affirm virtue to be the power of attaining goods?

Meno: Yes.

78d

Socrates: And the goods which you mean are such as health and wealth and the possession of gold and silver, and having office and honour in the state — those are what you would call goods?

Meno: Yes, I should include all those.

Socrates: Then, according to Meno, who is the hereditary friend of the great king, virtue is the power of getting silver and gold; and would you add that they must be gained piously, justly, or do you deem this to be of no consequence? And is any mode of acquisition, even if unjust and dishonest, equally to be deemed virtue?

Meno: Not virtue, Socrates, but vice.

Socrates: Then justice or temperance or holiness, or some other part of virtue, as would appear, must accompany the acquisition, and without them the mere acquisition of good will not be virtue.

Meno: Why, how can there be virtue without these?

Socrates: And the non-acquisition of gold and silver in a dishonest manner for oneself or another, or in other words the want of them, may be equally virtue?

Meno: True.

Socrates: Then the acquisition of such goods is no more virtue than the non-acquisition and want of them, but whatever is accompanied by justice or honesty is virtue, and whatever is devoid of justice is vice.

Meno: It cannot be otherwise, in my judgment.

Socrates: And were we not saying just now that justice, temperance, and the like, were each of them a part of virtue?

Meno: Yes.

Socrates: And so, Meno, this is the way in which you mock me.

Meno: Why do you say that, Socrates?

Socrates: Why, because I asked you to deliver virtue into my hands whole and unbroken, and I gave you a pattern according to which you were to frame your answer; and you have forgotten already, and tell me that virtue is the power of attaining good justly, or with justice; and justice you acknowledge to be a part of virtue.

79b

Meno: Yes.

Socrates: Then it follows from your own admissions, that virtue is doing what you do with a part of virtue; for justice and the like are said by you to be parts of virtue.

Meno: What of that?

79c

Socrates: What of that! Why, did not I ask you to tell me the nature of virtue as a whole? And you are very far from telling me this; but declare every action to be virtue which is done with a part of virtue; as though you had told me and I must already know the whole of virtue, and this too when frittered away into little pieces. And, therefore, my dear Meno, I fear that I must begin again and repeat the same question: What is virtue? for otherwise, I can only say, that every action done with a part of virtue is virtue; what else is the meaning of saying that every action done with justice is virtue? Ought I not to ask the question over again; for can any one who does not know virtue know a part of virtue?

79d

Meno: No; I do not say that he can.

Socrates: Do you remember how, in the example of figure, we rejected any answer given in terms which were as yet unexplained or unadmitted?

79e

Meno: Yes, Socrates; and we were quite right in doing so.

Socrates: But then, my friend, do not suppose that we can explain to any one the nature of virtue as a whole through some unexplained portion of virtue, or anything at all in that fashion; we should only have to ask over again the old question, What is virtue? Am I not right?

Meno: I believe that you are.

Socrates: Then begin again, and answer me, What, according to you and your friend Gorgias, is the definition of virtue?

80a

Meno: O Socrates, I used to be told, before I knew you, that you were always doubting yourself and making others doubt; and now you are casting your spells over me, and I am simply getting bewitched and enchanted, and am at my wits' end. And if I may venture to make a jest upon you, you seem to me both in your appearance and in your power over others to be very like the flat torpedo fish, who torpifies those who come near him and touch him, as you have now torpified me, I think. For my soul and my tongue are really torpid, and I do not know how to answer you; and though I have been delivered of an infinite variety of speeches about virtue before now, and to many persons — and very good ones they were, as I thought — at this moment I cannot even say what virtue is. And I think that you are very wise in not voyaging and going away from home, for if you did in other places as you do in Athens, you would be cast into prison as a magician.

Socrates: You are a rogue, Meno, and had all but caught me.

80b

Meno: What do you mean, Socrates?

Socrates: I can tell why you made a simile about me.

80c

Meno: Why?

Socrates: In order that I might make another simile about you. For I know that all pretty young gentlemen like to have pretty similes made about them — as well they may — but I shall not return the compliment. As to my being a torpedo, if the torpedo is torpid as well as the cause of torpidity in others, then indeed I am a torpedo, but not otherwise; for I perplex others, not because I am clear, but because I am utterly perplexed myself. And now I know not what virtue is, and you seem to be in the same case, although you did once perhaps know before you touched me. However, I have no objection to join with you in the enquiry.

Meno: And how will you enquire, Socrates, into that which you do not know? What will you put forth as the subject of enquiry? And if you find what you want, how will you ever know that this is the thing which you did not know?

80d

Socrates: I know, Meno, what you mean; but just see what a tiresome dispute you are introducing. You argue that a man cannot enquire either about that which he knows, or about that which he does not know; for if he knows, he has no need to enquire; and if not, he cannot; for he does not know the very subject about which he is to enquire (Compare Aristot. Post. Anal.).

80e

Meno: Well, Socrates, and is not the argument sound?

Socrates: I think not.

Meno: Why not?

Socrates: I will tell you why: I have heard from certain wise men and women who spoke of things divine that —

Meno: What did they say?

Socrates: They spoke of a glorious truth, as I conceive.

81a

Meno: What was it? and who were they?

81b

Socrates: Some of them were priests and priestesses, who had studied how they might be able to give a reason of their profession: there have been poets also, who spoke of these things by inspiration, like Pindar, and many others who were inspired. And they say — mark, now, and see whether their words are true — they say that the soul of man is immortal, and at one time has an end, which is termed dying, and at another time is born again, but is never destroyed. And the moral is, that a man ought to live always in perfect holiness. ‘For in the ninth year Persephone sends the souls of those from whom she has received the penalty of ancient crime back again from beneath into the light of the sun above, and these are they who become noble kings and mighty men and great in wisdom and are called saintly heroes in after ages.’ The soul, then, as being immortal, and having been born again many times, and having seen all things that exist, whether in this world or in the world below, has knowledge of them all; and it is no wonder that she should be able to call to remembrance all that she ever knew about virtue, and about everything; for as all nature is akin, and the soul has learned all things; there is no difficulty in her eliciting or as men say learning, out of a single recollection all the rest, if a man is strenuous and does not faint; for all enquiry and all learning is but recollection. And therefore we ought not to listen to this sophistical argument about the impossibility of enquiry: for it will make us idle; and is sweet only to the sluggard; but the other saying will make us active and

inquisitive. In that confiding, I will gladly enquire with you into the nature of virtue.

81c

Meno: Yes, Socrates; but what do you mean by saying that we do not learn, and that what we call learning is only a process of recollection? Can you teach me how this is?

Socrates: I told you, Meno, just now that you were a rogue, and now you ask whether I can teach you, when I am saying that there is no teaching, but only recollection; and thus you imagine that you will involve me in a contradiction.

82a

Meno: Indeed, Socrates, I protest that I had no such intention. I only asked the question from habit; but if you can prove to me that what you say is true, I wish that you would.

Socrates: It will be no easy matter, but I will try to please you to the utmost of my power. Suppose that you call one of your numerous attendants, that I may demonstrate on him.

Meno: Certainly. Come hither, boy.

Socrates: He is Greek, and speaks Greek, does he not?

82b

Meno: Yes, indeed; he was born in the house.

Socrates: Attend now to the questions which I ask him, and observe whether he learns of me or only remembers.

Meno: I will.

Socrates: Tell me, boy, do you know that a figure like this is a square?

Boy: I do.

Socrates: And you know that a square figure has these four lines equal?

Boy: Certainly.

82c

Socrates: And these lines which I have drawn through the middle of the square are also equal?

Boy: Yes.

Socrates: A square may be of any size?

Boy: Certainly.

Socrates: And if one side of the figure be of two feet, and the other side be of two feet, how much will the whole be? Let me explain: if in one direction the space was of two feet, and in the other direction of one foot, the whole would be of two feet taken once?

Boy: Yes.

Socrates: But since this side is also of two feet, there are twice two feet?

Boy: There are.

Socrates: Then the square is of twice two feet?

Boy: Yes.

Socrates: And how many are twice two feet? count and tell me.

Boy: Four, Socrates.

82e

Socrates: And might there not be another square twice as large as this, and having like this the lines equal?

Boy: Yes.

Socrates: And of how many feet will that be?

Boy: Of eight feet.

Socrates: And now try and tell me the length of the line which forms the side of that double square: this is two feet — what will

that be?

Boy: Clearly, Socrates, it will be double.

Socrates: Do you observe, Meno, that I am not teaching the boy anything, but only asking him questions; and now he fancies that he knows how long a line is necessary in order to produce a figure of eight square feet; does he not?

83a

Meno: Yes.

Socrates: And does he really know?

Meno: Certainly not.

Socrates: He only guesses that because the square is double, the line is double.

Meno: True.

Socrates: Observe him while he recalls the steps in regular order. (To the Boy:) Tell me, boy, do you assert that a double space comes from a double line? Remember that I am not speaking of an oblong, but of a figure equal every way, and twice the size of this — that is to say of eight feet; and I want to know whether you still say that a double square comes from double line?

Boy: Yes.

Socrates: But does not this line become doubled if we add another such line here?

Boy: Certainly.

Socrates: And four such lines will make a space containing eight feet?

Boy: Yes.

Socrates: Let us describe such a figure: Would you not say that this is the figure of eight feet?

Boy: Yes.

Socrates: And are there not these four divisions in the figure, each of which is equal to the figure of four feet?

Boy: True.

83c

Socrates: And is not that four times four?

Boy: Certainly.

Socrates: And four times is not double?

Boy: No, indeed.

Socrates: But how much?

Boy: Four times as much.

Socrates: Therefore the double line, boy, has given a space, not twice, but four times as much.

Boy: True.

Socrates: Four times four are sixteen — are they not?

83d

Boy: Yes.

Socrates: What line would give you a space of eight feet, as this gives one of sixteen feet; — do you see?

Boy: Yes.

Socrates: And the space of four feet is made from this half line?

Boy: Yes.

Socrates: Good; and is not a space of eight feet twice the size of this, and half the size of the other?

Boy: Certainly.

Socrates: Such a space, then, will be made out of a line greater than this one, and less than that one?

83e

Boy: Yes; I think so.

Socrates: Very good; I like to hear you say what you think. And now tell me, is not this a line of two feet and that of four?

Boy: Yes.

Socrates: Then the line which forms the side of eight feet ought to be more than this line of two feet, and less than the other of four feet?

Boy: It ought.

Socrates: Try and see if you can tell me how much it will be.

Boy: Three feet.

Socrates: Then if we add a half to this line of two, that will be the line of three. Here are two and there is one; and on the other side, here are two also and there is one: and that makes the figure of which you speak?

84a

Boy: Yes.

Socrates: But if there are three feet this way and three feet that way, the whole space will be three times three feet?

Boy: That is evident.

Socrates: And how much are three times three feet?

Boy: Nine.

Socrates: And how much is the double of four?

Boy: Eight.

Socrates: Then the figure of eight is not made out of a line of three?

Boy: No.

Socrates: But from what line? — tell me exactly; and if you would rather not reckon, try and show me the line.

84b

Boy: Indeed, Socrates, I do not know.

Socrates: Do you see, Meno, what advances he has made in his power of recollection? He did not know at first, and he does not know now, what is the side of a figure of eight feet: but then he thought that he knew, and answered confidently as if he knew, and had no difficulty; now he has a difficulty, and neither knows nor fancies that he knows.

84c

Meno: True.

Socrates: Is he not better off in knowing his ignorance?

Meno: I think that he is.

Socrates: If we have made him doubt, and given him the ‘torpedo’s shock,’ have we done him any harm?

Meno: I think not.

Socrates: We have certainly, as would seem, assisted him in some degree to the discovery of the truth; and now he will wish to remedy his ignorance, but then he would have been ready to tell all the world again and again that the double space should have a double side.

84d

Meno: True.

Socrates: But do you suppose that he would ever have enquired into or learned what he fancied that he knew, though he was really ignorant of it, until he had fallen into perplexity under the idea that he did not know, and had desired to know?

Meno: I think not, Socrates.

Socrates: Then he was the better for the torpedo's touch?

Meno: I think so.

84e

Socrates: Mark now the farther development. I shall only ask him, and not teach him, and he shall share the enquiry with me: and do you watch and see if you find me telling or explaining anything to him, instead of eliciting his opinion. Tell me, boy, is not this a square of four feet which I have drawn?

Boy: Yes.

Socrates: And now I add another square equal to the former one?

Boy: Yes.

Socrates: And a third, which is equal to either of them?

Boy: Yes.

85a

Socrates: Suppose that we fill up the vacant corner?

Boy: Very good.

Socrates: Here, then, there are four equal spaces?

Boy: Yes.

Socrates: And how many times larger is this space than this other?

Boy: Four times.

Socrates: But it ought to have been twice only, as you will remember.

Boy: True.

Socrates: And does not this line, reaching from corner to corner, bisect each of these spaces?

Boy: Yes.

Socrates: And are there not here four equal lines which contain this space?

85b

Boy: There are.

Socrates: Look and see how much this space is.

Boy: I do not understand.

Socrates: Has not each interior line cut off half of the four spaces?

Boy: Yes.

Socrates: And how many spaces are there in this section?

85c

Boy: Four.

Socrates: And how many in this?

Boy: Two.

Socrates: And four is how many times two?

Boy: Twice.

Socrates: And this space is of how many feet?

Boy: Of eight feet.

Socrates: And from what line do you get this figure?

Boy: From this.

Socrates: That is, from the line which extends from corner to corner of the figure of four feet?

85d

Boy: Yes.

Socrates: And that is the line which the learned call the diagonal. And if this is the proper name, then you, Meno's slave, are prepared to affirm that the double space is the square of the

diagonal?

Boy: Certainly, Socrates.

Socrates: What do you say of him, Meno? Were not all these answers given out of his own head?

Meno: Yes, they were all his own.

Socrates: And yet, as we were just now saying, he did not know?

Meno: True.

Socrates: But still he had in him those notions of his — had he not?

Meno: Yes.

Socrates: Then he who does not know may still have true notions of that which he does not know?

85e

Meno: He has.

Socrates: And at present these notions have just been stirred up in him, as in a dream; but if he were frequently asked the same questions, in different forms, he would know as well as any one at last?

Meno: I dare say.

Socrates: Without any one teaching him he will recover his knowledge for himself, if he is only asked questions?

Meno: Yes.

Socrates: And this spontaneous recovery of knowledge in him is recollection?

Meno: True.

Socrates: And this knowledge which he now has must he not either have acquired or always possessed?

86a

Meno: Yes.

Socrates: But if he always possessed this knowledge he would always have known; or if he has acquired the knowledge he could not have acquired it in this life, unless he has been taught geometry; for he may be made to do the same with all geometry and every other branch of knowledge. Now, has any one ever taught him all this? You must know about him, if, as you say, he was born and bred in your house.

Meno: And I am certain that no one ever did teach him.

86b

Socrates: And yet he has the knowledge?

Meno: The fact, Socrates, is undeniable.

Socrates: But if he did not acquire the knowledge in this life, then he must have had and learned it at some other time?

Meno: Clearly he must.

Socrates: Which must have been the time when he was not a man?

Meno: Yes.

Socrates: And if there have been always true thoughts in him, both at the time when he was and was not a man, which only need to be awakened into knowledge by putting questions to him, his soul must have always possessed this knowledge, for he always either was or was not a man?

Meno: Obviously.

Socrates: And if the truth of all things always existed in the soul, then the soul is immortal. Wherefore be of good cheer, and try to recollect what you do not know, or rather what you do not remember.

Meno: I feel, somehow, that I like what you are saying.

Socrates: And I, Meno, like what I am saying. Some things I have said of which I am not altogether confident. But that we shall be better and braver and less helpless if we think that we ought to enquire, than we should have been if we indulged in the idle fancy that there was no knowing and no use in seeking to know what we do not know; — that is a theme upon which I am ready to fight, in word and deed, to the utmost of my power.

86d

Meno: There again, Socrates, your words seem to me excellent.

Socrates: Then, as we are agreed that a man should enquire about that which he does not know, shall you and I make an effort to enquire together into the nature of virtue?

Meno: By all means, Socrates. And yet I would much rather return to my original question, Whether in seeking to acquire virtue we should regard it as a thing to be taught, or as a gift of nature, or as coming to men in some other way?

87a

Socrates: Had I the command of you as well as of myself, Meno, I would not have enquired whether virtue is given by instruction or not, until we had first ascertained ‘what it is.’ But as you think only of controlling me who am your slave, and never of controlling yourself, — such being your notion of freedom, I must yield to you, for you are irresistible. And therefore I have now to enquire into the qualities of a thing of which I do not as yet know the nature. At any rate, will you condescend a little, and allow the question ‘Whether virtue is given by instruction, or in any other way,’ to be argued upon hypothesis? As the geometrician, when he is asked whether a certain triangle is capable being inscribed in a certain circle (Or, whether a certain area is capable of being inscribed as a triangle in a certain circle.), will reply: ‘I cannot tell you as yet; but I will offer a hypothesis which may assist us in forming a conclusion: If the figure be such that when you have produced a given side

of it (Or, when you apply it to the given line, i.e. the diameter of the circle (autou).), the given area of the triangle falls short by an area corresponding to the part produced (Or, similar to the area so applied.), then one consequence follows, and if this is impossible then some other; and therefore I wish to assume a hypothesis before I tell you whether this triangle is capable of being inscribed in the circle': — that is a geometrical hypothesis. And we too, as we know not the nature and qualities of virtue, must ask, whether virtue is or is not taught, under a hypothesis: as thus, if virtue is of such a class of mental goods, will it be taught or not? Let the first hypothesis be that virtue is or is not knowledge, — in that case will it be taught or not? or, as we were just now saying, 'remembered'? For there is no use in disputing about the name. But is virtue taught or not? or rather, does not every one see that knowledge alone is taught?

Meno: I agree.

Socrates: Then if virtue is knowledge, virtue will be taught?

Meno: Certainly.

Socrates: Then now we have made a quick end of this question: if virtue is of such a nature, it will be taught; and if not, not?

Meno: Certainly.

87d

Socrates: The next question is, whether virtue is knowledge or of another species?

Meno: Yes, that appears to be the question which comes next in order.

Socrates: Do we not say that virtue is a good? — This is a hypothesis which is not set aside.

Meno: Certainly.

Socrates: Now, if there be any sort of good which is distinct from knowledge, virtue may be that good; but if knowledge embraces all good, then we shall be right in thinking that virtue is knowledge?

Meno: True.

Socrates: And virtue makes us good?

Meno: Yes.

Socrates: And if we are good, then we are profitable; for all good things are profitable?

Meno: Yes.

Socrates: Then virtue is profitable?

Meno: That is the only inference.

Socrates: Then now let us see what are the things which severally profit us. Health and strength, and beauty and wealth — these, and the like of these, we call profitable?

Meno: True.

88b

Socrates: And yet these things may also sometimes do us harm: would you not think so?

Meno: Yes.

Socrates: And what is the guiding principle which makes them profitable or the reverse? Are they not profitable when they are rightly used, and hurtful when they are not rightly used?

Meno: Certainly.

Socrates: Next, let us consider the goods of the soul: they are temperance, justice, courage, quickness of apprehension, memory, magnanimity, and the like?

Meno: Surely.

Socrates: And such of these as are not knowledge, but of another sort, are sometimes profitable and sometimes hurtful; as, for example, courage wanting prudence, which is only a sort of confidence? When a man has no sense he is harmed by courage, but when he has sense he is profited?

Meno: True.

Socrates: And the same may be said of temperance and quickness of apprehension; whatever things are learned or done with sense are profitable, but when done without sense they are hurtful?

Meno: Very true.

Socrates: And in general, all that the soul attempts or endures, when under the guidance of wisdom, ends in happiness; but when she is under the guidance of folly, in the opposite?

Meno: That appears to be true.

Socrates: If then virtue is a quality of the soul, and is admitted to be profitable, it must be wisdom or prudence, since none of the things of the soul are either profitable or hurtful in themselves, but they are all made profitable or hurtful by the addition of wisdom or of folly; and therefore if virtue is profitable, virtue must be a sort of wisdom or prudence?

Meno: I quite agree.

Socrates: And the other goods, such as wealth and the like, of which we were just now saying that they are sometimes good and sometimes evil, do not they also become profitable or hurtful, accordingly as the soul guides and uses them rightly or wrongly; just as the things of the soul herself are benefited when under the guidance of wisdom and harmed by folly?

Meno: True.

Socrates: And the wise soul guides them rightly, and the foolish soul wrongly.

Meno: Yes.

89b

Socrates: And is not this universally true of human nature? All other things hang upon the soul, and the things of the soul herself hang upon wisdom, if they are to be good; and so wisdom is inferred to be that which profits — and virtue, as we say, is profitable?

Meno: Certainly.

Socrates: And thus we arrive at the conclusion that virtue is either wholly or partly wisdom?

Meno: I think that what you are saying, Socrates, is very true.

Socrates: But if this is true, then the good are not by nature good?

Meno: I think not.

Socrates: If they had been, there would assuredly have been discerners of characters among us who would have known our future great men; and on their showing we should have adopted them, and when we had got them, we should have kept them in the citadel out of the way of harm, and set a stamp upon them far rather than upon a piece of gold, in order that no one might tamper with them; and when they grew up they would have been useful to the state?

Meno: Yes, Socrates, that would have been the right way.

89d

Socrates: But if the good are not by nature good, are they made good by instruction?

Meno: There appears to be no other alternative, Socrates. On the supposition that virtue is knowledge, there can be no doubt

that virtue is taught.

Socrates: Yes, indeed; but what if the supposition is erroneous?

Meno: I certainly thought just now that we were right.

Socrates: Yes, Meno; but a principle which has any soundness should stand firm not only just now, but always.

89e

Meno: Well; and why are you so slow of heart to believe that knowledge is virtue?

Socrates: I will try and tell you why, Meno. I do not retract the assertion that if virtue is knowledge it may be taught; but I fear that I have some reason in doubting whether virtue is knowledge: for consider now and say whether virtue, and not only virtue but anything that is taught, must not have teachers and disciples?

Meno: Surely.

Socrates: And conversely, may not the art of which neither teachers nor disciples exist be assumed to be incapable of being taught?

Meno: True; but do you think that there are no teachers of virtue?

Socrates: I have certainly often enquired whether there were any, and taken great pains to find them, and have never succeeded; and many have assisted me in the search, and they were the persons whom I thought the most likely to know. Here at the moment when he is wanted we fortunately have sitting by us Anytus, the very person of whom we should make enquiry; to him then let us repair. In the first place, he is the son of a wealthy and wise father, Anthemion, who acquired his wealth, not by accident or gift, like Ismenias the Theban (who has recently made himself as rich as Polycrates), but by his own skill and industry, and who is a well-conditioned, modest man,

not insolent, or overbearing, or annoying; moreover, this son of his has received a good education, as the Athenian people certainly appear to think, for they choose him to fill the highest offices. And these are the sort of men from whom you are likely to learn whether there are any teachers of virtue, and who they are. Please, Anytus, to help me and your friend Meno in answering our question, Who are the teachers? Consider the matter thus: If we wanted Meno to be a good physician, to whom should we send him? Should we not send him to the physicians?

Anytus: Certainly.

Socrates: Or if we wanted him to be a good cobbler, should we not send him to the cobblers?

Anytus: Yes.

Socrates: And so forth?

Anytus: Yes.

90e

Socrates: Let me trouble you with one more question. When we say that we should be right in sending him to the physicians if we wanted him to be a physician, do we mean that we should be right in sending him to those who profess the art, rather than to those who do not, and to those who demand payment for teaching the art, and profess to teach it to any one who will come and learn? And if these were our reasons, should we not be right in sending him?

Anytus: Yes.

Socrates: And might not the same be said of flute-playing, and of the other arts? Would a man who wanted to make another a flute-player refuse to send him to those who profess to teach the art for money, and be plaguing other persons to give him instruction, who are not professed teachers and who never had

a single disciple in that branch of knowledge which he wishes him to acquire — would not such conduct be the height of folly?

91a

Anytus: Yes, by Zeus, and of ignorance too.

Socrates: Very good. And now you are in a position to advise with me about my friend Meno. He has been telling me, Anytus, that he desires to attain that kind of wisdom and virtue by which men order the state or the house, and honour their parents, and know when to receive and when to send away citizens and strangers, as a good man should. Now, to whom should he go in order that he may learn this virtue? Does not the previous argument imply clearly that we should send him to those who profess and avouch that they are the common teachers of all Hellas, and are ready to impart instruction to any one who likes, at a fixed price?

91c

Anytus: Whom do you mean, Socrates?

Socrates: You surely know, do you not, Anytus, that these are the people whom mankind call Sophists?

Anytus: By Heracles, Socrates, forbear! I only hope that no friend or kinsman or acquaintance of mine, whether citizen or stranger, will ever be so mad as to allow himself to be corrupted by them; for they are a manifest pest and corrupting influence to those who have to do with them.

Socrates: What, Anytus? Of all the people who profess that they know how to do men good, do you mean to say that these are the only ones who not only do them no good, but positively corrupt those who are entrusted to them, and in return for this disservice have the face to demand money? Indeed, I cannot believe you; for I know of a single man, Protagoras, who made more out of his craft than the illustrious Pheidias, who created such noble works, or any ten other statuary. How could that

be? A mender of old shoes, or patcher up of clothes, who made the shoes or clothes worse than he received them, could not have remained thirty days undetected, and would very soon have starved; whereas during more than forty years, Protagoras was corrupting all Hellas, and sending his disciples from him worse than he received them, and he was never found out. For, if I am not mistaken, he was about seventy years old at his death, forty of which were spent in the practice of his profession; and during all that time he had a good reputation, which to this day he retains: and not only Protagoras, but many others are well spoken of; some who lived before him, and others who are still living. Now, when you say that they deceived and corrupted the youth, are they to be supposed to have corrupted them consciously or unconsciously? Can those who were deemed by many to be the wisest men of Hellas have been out of their minds?

92a

Anytus: Out of their minds! No, Socrates; the young men who gave their money to them were out of their minds, and their relations and guardians who entrusted their youth to the care of these men were still more out of their minds, and most of all, the cities who allowed them to come in, and did not drive them out, citizen and stranger alike.

Socrates: Has any of the Sophists wronged you, Anytus? What makes you so angry with them?

Anytus: No, indeed, neither I nor any of my belongings has ever had, nor would I suffer them to have, anything to do with them.

92c

Socrates: Then you are entirely unacquainted with them?

Anytus: And I have no wish to be acquainted.

Socrates: Then, my dear friend, how can you know whether a thing is good or bad of which you are wholly ignorant?

Anytus: Quite well; I am sure that I know what manner of men these are, whether I am acquainted with them or not.

Socrates: You must be a diviner, Anytus, for I really cannot make out, judging from your own words, how, if you are not acquainted with them, you know about them. But I am not enquiring of you who are the teachers who will corrupt Meno (let them be, if you please, the Sophists); I only ask you to tell him who there is in this great city who will teach him how to become eminent in the virtues which I was just now describing. He is the friend of your family, and you will oblige him.

Anytus: Why do you not tell him yourself?

92e

Socrates: I have told him whom I supposed to be the teachers of these things; but I learn from you that I am utterly at fault, and I dare say that you are right. And now I wish that you, on your part, would tell me to whom among the Athenians he should go. Whom would you name?

Anytus: Why single out individuals? Any Athenian gentleman, taken at random, if he will mind him, will do far more good to him than the Sophists.

Socrates: And did those gentlemen grow of themselves; and without having been taught by any one, were they nevertheless able to teach others that which they had never learned themselves?

93a

Anytus: I imagine that they learned of the previous generation of gentlemen. Have there not been many good men in this city?

Socrates: Yes, certainly, Anytus; and many good statesmen also there always have been and there are still, in the city of Athens. But the question is whether they were also good teachers of their own virtue; — not whether there are, or have been, good men in this part of the world, but whether virtue can be taught,

is the question which we have been discussing. Now, do we mean to say that the good men of our own and of other times knew how to impart to others that virtue which they had themselves; or is virtue a thing incapable of being communicated or imparted by one man to another? That is the question which I and Meno have been arguing. Look at the matter in your own way: Would you not admit that Themistocles was a good man?

93c

Anytus: Certainly; no man better.

Socrates: And must not he then have been a good teacher, if any man ever was a good teacher, of his own virtue?

93d

Anytus: Yes certainly, — if he wanted to be so.

Socrates: But would he not have wanted? He would, at any rate, have desired to make his own son a good man and a gentleman; he could not have been jealous of him, or have intentionally abstained from imparting to him his own virtue. Did you never hear that he made his son Cleophantus a famous horseman; and had him taught to stand upright on horseback and hurl a javelin, and to do many other marvellous things; and in anything which could be learned from a master he was well trained? Have you not heard from our elders of him?

Anytus: I have.

Socrates: Then no one could say that his son showed any want of capacity?

93e

Anytus: Very likely not.

Socrates: But did any one, old or young, ever say in your hearing that Cleophantus, son of Themistocles, was a wise or good man, as his father was?

Anytus: I have certainly never heard any one say so.

Socrates: And if virtue could have been taught, would his father Themistocles have sought to train him in these minor accomplishments, and allowed him who, as you must remember, was his own son, to be no better than his neighbours in those qualities in which he himself excelled?

94a

Anytus: Indeed, indeed, I think not.

Socrates: Here was a teacher of virtue whom you admit to be among the best men of the past. Let us take another, — Aristides, the son of Lysimachus: would you not acknowledge that he was a good man?

94b

Anytus: To be sure I should.

Socrates: And did not he train his son Lysimachus better than any other Athenian in all that could be done for him by the help of masters? But what has been the result? Is he a bit better than any other mortal? He is an acquaintance of yours, and you see what he is like. There is Pericles, again, magnificent in his wisdom; and he, as you are aware, had two sons, Paralus and Xanthippus.

94c

Anytus: I know.

Socrates: And you know, also, that he taught them to be unrivalled horsemen, and had them trained in music and gymnastics and all sorts of arts — in these respects they were on a level with the best — and had he no wish to make good men of them? Nay, he must have wished it. But virtue, as I suspect, could not be taught. And that you may not suppose the incompetent teachers to be only the meaner sort of Athenians and few in number, remember again that Thucydides had two sons, Melesias and Stephanus, whom, besides giving them a

good education in other things, he trained in wrestling, and they were the best wrestlers in Athens: one of them he committed to the care of Xanthias, and the other of Eudorus, who had the reputation of being the most celebrated wrestlers of that day. Do you remember them?

Anytus: I have heard of them.

Socrates: Now, can there be a doubt that Thucydides, whose children were taught things for which he had to spend money, would have taught them to be good men, which would have cost him nothing, if virtue could have been taught? Will you reply that he was a mean man, and had not many friends among the Athenians and allies? Nay, but he was of a great family, and a man of influence at Athens and in all Hellas, and, if virtue could have been taught, he would have found out some Athenian or foreigner who would have made good men of his sons, if he could not himself spare the time from cares of state. Once more, I suspect, friend Anytus, that virtue is not a thing which can be taught?

95a

Anytus: Socrates, I think that you are too ready to speak evil of men: and, if you will take my advice, I would recommend you to be careful. Perhaps there is no city in which it is not easier to do men harm than to do them good, and this is certainly the case at Athens, as I believe that you know.

Socrates: O Meno, think that Anytus is in a rage. And he may well be in a rage, for he thinks, in the first place, that I am defaming these gentlemen; and in the second place, he is of opinion that he is one of them himself. But some day he will know what is the meaning of defamation, and if he ever does, he will forgive me. Meanwhile I will return to you, Meno; for I suppose that there are gentlemen in your region too?

Meno: Certainly there are.

Socrates: And are they willing to teach the young? and do they profess to be teachers? and do they agree that virtue is taught?

95c

Meno: No indeed, Socrates, they are anything but agreed; you may hear them saying at one time that virtue can be taught, and then again the reverse.

Socrates: Can we call those teachers who do not acknowledge the possibility of their own vocation?

Meno: I think not, Socrates.

Socrates: And what do you think of these Sophists, who are the only professors? Do they seem to you to be teachers of virtue?

Meno: I often wonder, Socrates, that Gorgias is never heard promising to teach virtue: and when he hears others promising he only laughs at them; but he thinks that men should be taught to speak.

95d

Socrates: Then do you not think that the Sophists are teachers?

Meno: I cannot tell you, Socrates; like the rest of the world, I am in doubt, and sometimes I think that they are teachers and sometimes not.

Socrates: And are you aware that not you only and other politicians have doubts whether virtue can be taught or not, but that Theognis the poet says the very same thing?

Meno: Where does he say so?

Socrates: In these elegiac verses (Theog.): ^{95e} ‘Eat and drink and sit with the mighty, and make yourself agreeable to them; for from the good you will learn what is good, but if you mix with the bad you will lose the intelligence which you already have.’

95e

Do you observe that here he seems to imply that virtue can be taught?

Meno: Clearly.

Socrates: But in some other verses he shifts about and says (Theog.): 'If understanding could be created and put into a man, then they' (who were able to perform this feat) 'would have obtained great rewards.'

96b

And again: — 'Never would a bad son have sprung from a good sire, for he would have heard the voice of instruction; but not by teaching will you ever make a bad man into a good one.'

And this, as you may remark, is a contradiction of the other.

Meno: Clearly.

Socrates: And is there anything else of which the professors are affirmed not only not to be teachers of others, but to be ignorant themselves, and bad at the knowledge of that which they are professing to teach? or is there anything about which even the acknowledged 'gentlemen' are sometimes saying that 'this thing can be taught,' and sometimes the opposite? Can you say that they are teachers in any true sense whose ideas are in such confusion?

96c

Meno: I should say, certainly not.

Socrates: But if neither the Sophists nor the gentlemen are teachers, clearly there can be no other teachers?

Meno: No.

Socrates: And if there are no teachers, neither are there disciples?

Meno: Agreed.

Socrates: And we have admitted that a thing cannot be taught of which there are neither teachers nor disciples?

Meno: We have.

96d

Socrates: And there are no teachers of virtue to be found anywhere?

Meno: There are not.

Socrates: And if there are no teachers, neither are there scholars?

Meno: That, I think, is true.

Socrates: Then virtue cannot be taught?

Meno: Not if we are right in our view. But I cannot believe, Socrates, that there are no good men: And if there are, how did they come into existence?

Socrates: I am afraid, Meno, that you and I are not good for much, and that Gorgias has been as poor an educator of you as Prodicus has been of me. Certainly we shall have to look to ourselves, and try to find some one who will help in some way or other to improve us. This I say, because I observe that in the previous discussion none of us remarked that right and good action is possible to man under other guidance than that of knowledge (episteme); — and indeed if this be denied, there is no seeing how there can be any good men at all.

Meno: How do you mean, Socrates?

97b

Socrates: I mean that good men are necessarily useful or profitable. Were we not right in admitting this? It must be so.

Meno: Yes.

Socrates: And in supposing that they will be useful only if they are true guides to us of action — there we were also right?

Meno: Yes.

Socrates: But when we said that a man cannot be a good guide unless he have knowledge (phrhoneisis), this we were wrong.

Meno: What do you mean by the word 'right'?

97c

Socrates: I will explain. If a man knew the way to Larisa, or anywhere else, and went to the place and led others thither, would he not be a right and good guide?

Meno: Certainly.

Socrates: And a person who had a right opinion about the way, but had never been and did not know, might be a good guide also, might he not?

Meno: Certainly.

Socrates: And while he has true opinion about that which the other knows, he will be just as good a guide if he thinks the truth, as he who knows the truth?

Meno: Exactly.

Socrates: Then true opinion is as good a guide to correct action as knowledge; and that was the point which we omitted in our speculation about the nature of virtue, when we said that knowledge only is the guide of right action; whereas there is also right opinion.

Meno: True.

97d

Socrates: Then right opinion is not less useful than knowledge?

Meno: The difference, Socrates, is only that he who has knowledge will always be right; but he who has right opinion will sometimes be right, and sometimes not.

Socrates: What do you mean? Can he be wrong who has right opinion, so long as he has right opinion?

Meno: I admit the cogency of your argument, and therefore, Socrates, I wonder that knowledge should be preferred to right opinion — or why they should ever differ.

Socrates: And shall I explain this wonder to you?

Meno: Do tell me.

Socrates: You would not wonder if you had ever observed the images of Daedalus (Compare Euthyphro); but perhaps you have not got them in your country?

97e

Meno: What have they to do with the question?

Socrates: Because they require to be fastened in order to keep them, and if they are not fastened they will play truant and run away.

Meno: Well, what of that?

Socrates: I mean to say that they are not very valuable possessions if they are at liberty, for they will walk off like runaway slaves; but when fastened, they are of great value, for they are really beautiful works of art. Now this is an illustration of the nature of true opinions: while they abide with us they are beautiful and fruitful, but they run away out of the human soul, and do not remain long, and therefore they are not of much value until they are fastened by the tie of the cause; and this fastening of them, friend Meno, is recollection, as you and I have agreed to call it. But when they are bound, in the first place, they have the nature of knowledge; and, in the second place, they are abiding. And this is why knowledge is more honourable and excellent than true opinion, because fastened by a chain.

98b

Meno: What you are saying, Socrates, seems to be very like the truth.

Socrates: I too speak rather in ignorance; I only conjecture. And yet that knowledge differs from true opinion is no matter of conjecture with me. There are not many things which I profess to know, but this is most certainly one of them.

Meno: Yes, Socrates; and you are quite right in saying so.

98c

Socrates: And am I not also right in saying that true opinion leading the way perfects action quite as well as knowledge?

Meno: There again, Socrates, I think you are right.

98d

Socrates: Then right opinion is not a whit inferior to knowledge, or less useful in action; nor is the man who has right opinion inferior to him who has knowledge?

Meno: True.

Socrates: And surely the good man has been acknowledged by us to be useful?

Meno: Yes.

Socrates: Seeing then that men become good and useful to states, not only because they have knowledge, but because they have right opinion, and that neither knowledge nor right opinion is given to man by nature or acquired by him — (do you imagine either of them to be given by nature?

Meno: Not I.)

Socrates: Then if they are not given by nature, neither are the good by nature good?

98e

Meno: Certainly not.

Socrates: And nature being excluded, then came the question whether virtue is acquired by teaching?

Meno: Yes.

Socrates: If virtue was wisdom (or knowledge), then, as we thought, it was taught?

Meno: Yes.

Socrates: And if it was taught it was wisdom?

Meno: Certainly.

Socrates: And if there were teachers, it might be taught; and if there were no teachers, not?

99a

Meno: True.

Socrates: But surely we acknowledged that there were no teachers of virtue?

Meno: Yes.

Socrates: Then we acknowledged that it was not taught, and was not wisdom?

Meno: Certainly.

Socrates: And yet we admitted that it was a good?

Meno: Yes.

Socrates: And the right guide is useful and good?

Meno: Certainly.

99b

Socrates: And the only right guides are knowledge and true opinion — these are the guides of man; for things which happen by chance are not under the guidance of man: but the guides of man are true opinion and knowledge.

99c

Meno: I think so too.

Socrates: But if virtue is not taught, neither is virtue knowledge.

Meno: Clearly not.

Socrates: Then of two good and useful things, one, which is knowledge, has been set aside, and cannot be supposed to be our guide in political life.

Meno: I think not.

Socrates: And therefore not by any wisdom, and not because they were wise, did Themistocles and those others of whom Anytus spoke govern states. This was the reason why they were unable to make others like themselves — because their virtue was not grounded on knowledge.

Meno: That is probably true, Socrates.

^{99d}

Socrates: But if not by knowledge, the only alternative which remains is that statesmen must have guided states by right opinion, which is in politics what divination is in religion; for diviners and also prophets say many things truly, but they know not what they say.

Meno: So I believe.

Socrates: And may we not, Meno, truly call those men ‘divine’ who, having no understanding, yet succeed in many a grand deed and word?

Meno: Certainly.

Socrates: Then we shall also be right in calling divine those whom we were just now speaking of as diviners and prophets, including the whole tribe of poets. Yes, and statesmen above all may be said to be divine and illumined, being inspired and possessed of God, in which condition they say many grand

things, not knowing what they say.

Meno: Yes.

Socrates: And the women too, Meno, call good men divine — do they not? and the Spartans, when they praise a good man, say ‘that he is a divine man.’

100a

Meno: And I think, Socrates, that they are right; although very likely our friend Anytus may take offence at the word.

Socrates: I do not care; as for Anytus, there will be another opportunity of talking with him. To sum up our enquiry — the result seems to be, if we are at all right in our view, that virtue is neither natural nor acquired, but an instinct given by God to the virtuous. Nor is the instinct accompanied by reason, unless there may be supposed to be among statesmen some one who is capable of educating statesmen. And if there be such an one, he may be said to be among the living what Homer says that Tiresias was among the dead, ‘he alone has understanding; but the rest are flitting shades’; and he and his virtue in like manner will be a reality among shadows.

100c

Meno: That is excellent, Socrates.

Socrates: Then, Meno, the conclusion is that virtue comes to the virtuous by the gift of God. But we shall never know the certain truth until, before asking how virtue is given, we enquire into the actual nature of virtue. I fear that I must go away, but do you, now that you are persuaded yourself, persuade our friend Anytus. And do not let him be so exasperated; if you can conciliate him, you will have done good service to the Athenian people.

scene: no setting

313a

Socrates: Tell me, what is law?

Companion: To what kind of law does your question refer?

Socrates: What! Is there any difference between law and law, in this particular point of being law? For just consider what is the actual question I am putting to you. It is as though I had asked, what is gold: if you had asked me in the same manner, to what kind of gold I refer, I think your question would have been incorrect. For I presume there is no difference between gold and gold, [313b] or between stone and stone, in point of being gold or stone; and so neither does law differ at all from law, I suppose, but they are all the same thing. For each of them is law alike, not one more so, and another less. That is the particular point of my question — what is law as a whole? So if you are ready, tell me.

313b

Companion: Well, what else should law be, Socrates, but things loyally accepted?

313c

Socrates: And so speech, you think, is the things that are spoken, or sight the things seen, or hearing the things heard? Or is speech [313c] something distinct from the things spoken, sight something distinct from the things seen, and hearing something distinct from the things heard; and so law is something distinct from things loyally accepted? Is this so, or what is your view?

Companion: I find it now to be something distinct.

Socrates: Then law is not things loyally accepted.

Companion: I think not.

313d

Socrates: Now what can law be? Let us consider it in this way. Suppose someone had asked us about what was stated just now: [314a] Since you say it is by sight that things seen are seen, what is this sight whereby they are seen? Our answer to him would have been: That sensation which shows objects by means of the eyes. And if he had asked us again: Well then, since it is by hearing that things heard are heard, what is hearing? Our answer to him would have been: That sensation which shows us sounds by means of the ears. In the same way then, suppose he should also ask us: Since it is by law that loyally accepted things are so accepted, what is this law whereby they are so accepted? [314b] Is it some sensation or showing, as when things learnt are learnt by knowledge showing them, or some discovery, as when things discovered are discovered — for instance, the causes of health and sickness by medicine, or the designs of the gods, as the prophets say, by prophecy; for art is surely our discovery of things, is it not?

Companion: Certainly.

Socrates: Then what thing especially of this sort shall we surmise law to be?

Companion: Our resolutions and decrees, I imagine: for how else can one describe law? [314c] So that apparently the whole thing, law, as you put it in your question, is a city's resolution.

Socrates: State opinion, it seems, is what you call law.

Companion: I do.

Socrates: And perhaps you are right: but I fancy we shall get a better knowledge in this way. You call some men wise?

Companion: I do.

314d

Socrates: And the wise are wise by wisdom?

Companion: Yes.

Socrates: And again, the just are just by justice?

Companion: Certainly.

Socrates: And so the law-abiding are law-abiding by law? [314d]

Companion: Yes.

Socrates: And the lawless are lawless by lawlessness?

Companion: Yes.

Socrates: And the law-abiding are just?

Companion: Yes.

Socrates: And the lawless are unjust?

Companion: Unjust.

Socrates: And justice and law are most noble?

Companion: That is so.

Socrates: And injustice and lawlessness most base?

Companion: Yes.

314e

Socrates: And the former preserve cities and everything else, while the latter destroy and overturn them?

Companion: Yes.

Socrates: Hence we must regard law as something noble, and seek after it as a good.

Companion: Undeniably.

Socrates: And we said that law is a city's resolution? [314e]

Companion: So we did.

Socrates: Well now, are not some resolutions good, and others evil?

Companion: Yes, to be sure.

Socrates: And, you know, law was not evil.

Companion: No, indeed.

Socrates: So it is not right to reply, in that simple fashion, that law is a city's resolution.

315a

Companion: I agree that it is not.

Socrates: An evil resolution, you see, cannot properly be a law.

Companion: No, to be sure.

Socrates: But still, I am quite clear myself that law is some sort of opinion; and since it is not evil opinion, is it not manifest by this time that it is good opinion, granting that law is opinion?

Companion: Yes.

Socrates: But what is good opinion? Is it not true opinion?

Companion: Yes. [315a]

Socrates: And true opinion is discovery of reality?

Companion: Yes, it is.

Socrates: So law tends to be discovery of reality.

315b

Companion: Then how is it, Socrates, if law is discovery of reality, that we do not use always the same laws on the same matters, if we have thus got realities discovered?

Socrates: Law tends none the less to be discovery of reality: but men, who do not use [315b] always the same laws, as we observe, are not always able to discover what the law is intent on — reality. For come now, let us see if from this point onward

we can get it clear whether we use always the same laws or different ones at different times, and whether we all use the same, or some of us use some, and others others.

315c

Companion: Why, that, Socrates, is no difficult matter to determine — that the same men do not use always the same laws, and also that different men use different ones. With us, for instance, human sacrifice is not legal, but unholy, [315c] whereas the Carthaginians perform it as a thing they account holy and legal, and that too when some of them sacrifice even their own sons to Cronos, as I daresay you yourself have heard. And not merely is it foreign peoples who use different laws from ours, but our neighbors in Lycaea and the descendants of Athamas — you know their sacrifices, Greeks though they be. And as to ourselves too, you know, of course, from what you have heard yourself, the kind of laws we formerly used in regard to our dead, when we slaughtered sacred victims before [315d] the funeral procession, and engaged urn-women to collect the bones from the ashes. Then again, a yet earlier generation used to bury the dead where they were, in the house: but we do none of these things. One might give thousands of other instances; for there is ample means of proving that neither we copy ourselves nor mankind each other always in laws and customs.

315d

Socrates: And it is no wonder, my excellent friend, if what you say is correct, and I have overlooked it. But if you continue to express your views after your own fashion in lengthy speeches, [315e] and I speak likewise, we shall never come to any agreement, in my opinion: but if we study the matter jointly, we may perhaps concur. Well now, if you like, hold a joint inquiry with me by asking me questions; or if you prefer, by answering them.

Companion: Why, I am willing, Socrates, to answer anything you like.

Socrates: Come then, do you consider just things to be unjust and unjust things just, or just things to be just and unjust things unjust?

Companion: I consider just things to be just, and unjust things unjust. [316a]

Socrates: And are they so considered among all men elsewhere as they are here?

Companion: Yes.

Socrates: And among the Persians also?

Companion: Among the Persians also.

Socrates: Always, I presume?

Companion: Always.

316a

Socrates: Are things that weigh more considered heavier here, and things that weigh less lighter, or the contrary?

Companion: No, those that weigh more are considered heavier, and those that weigh less lighter.

Socrates: And is it so in Carthage also, and in Lycaea?

Companion: Yes.

Socrates: Noble things, it would seem, are everywhere considered noble, [316b] and base things base; not base things noble or noble things base.

Companion: That is so.

Socrates: And thus, as a universal rule, realities, and not unrealities, are accepted as real, both among us and among all other men.

316b

Companion: I agree.

Socrates: Then whoever fails to attain reality, fails to attain accepted law.

Companion: In your present way of putting it, Socrates, the same things appear to be accepted as lawful both by us and by the rest of the world, always: [316c] but when I reflect that we are continually changing our laws in all sorts of ways, I cannot bring myself to assent.

316c

Socrates: Perhaps it is because you do not reflect that when we change our pieces at draughts they are the same pieces. But look at it, as I do, in this way. Have you in your time come across a treatise on healing the sick?

Companion: I have.

Socrates: Then do you know to what art such a treatise belongs?

Companion: I do: medicine.

Socrates: And you give the name of doctors to those who have knowledge of these matters?

Companion: Yes. [316d]

Socrates: Then do those who have knowledge accept the same views on the same things, or do they accept different views?

Companion: The same, in my opinion.

Socrates: Do Greeks only accept the same views as Greeks on what they know, or do foreigners also agree on these matters, both among themselves and with Greeks?

Companion: It is quite inevitable, I should say, that those who know should agree in accepting the same views, whether Greeks or foreigners.

Socrates: Well answered. And do they so always?

Companion: Yes, it is so always.

Socrates: And do doctors on their part, in their treatises on health, [316e] write what they accept as real?

Companion: Yes.

Socrates: Then these treatises of the doctors are medical, and medical laws.

Companion: Medical, to be sure.

Socrates: And are agricultural treatises likewise agricultural laws?

Companion: Yes.

Socrates: And whose are the treatises and accepted rules about garden-work?

316e

Companion: Gardeners'.

Socrates: So these are our gardening laws.

Companion: Yes.

Socrates: Of people who know how to control gardens?

Companion: Certainly.

Socrates: And it is the gardeners who know.

Companion: Yes.

Socrates: And whose are the treatises and accepted rules about the confection of tasty dishes?

Companion: Cooks'.

Socrates: Then there are laws of cookery?

Companion: Of cookery.

Socrates: Of people who know, it would seem, how to control the confection of tasty dishes? [317a]

Companion: Yes.

Socrates: And it is the cooks, they say, who know?

Companion: Yes, it is they who know.

Socrates: Very well; and now, whose are the treatises and accepted rules about the government of a state? Of the people who know how to control states, are they not?

Companion: I agree.

Socrates: And is it anyone else than statesmen and royal persons who know?

Companion: It is they, to be sure.

Socrates: Then what people call “laws” are treatises of state, — [317b] writings of kings and good men.

Companion: That is true.

317b

Socrates: And must it not be that those who know will not write differently at different times on the same matters?

Companion: They will not.

Socrates: Nor will they ever change one set of accepted rules for another in respect of the same matters.

Companion: No, indeed.

Socrates: So if we see some persons anywhere doing this, shall we say that those who do so have knowledge, or have none?

Companion: That they have no knowledge.

Socrates: And again, whatever is right, we shall say is lawful for each person, whether in medicine or in cookery or in gardening?

Companion: Yes. [317c]

Socrates: And whatever is not right we shall decline to call lawful?

Companion: We shall decline.

Socrates: Then it becomes unlawful.

Companion: It must.

Socrates: And again, in writings about what is just and unjust, and generally about the government of a state and the proper way of governing it, that which is right is the king's law, but not so that which is not right, though it seems to be law to those who do not know; for it is unlawful.

Companion: Yes. [317d]

Socrates: Then we rightly admitted that law is discovery of reality.

317d

Companion: So it appears.

Socrates: Now let us observe this further point about it. Who has knowledge of distributing seed over land?

Companion: A farmer.

Socrates: And does he distribute the suitable seed to each sort of land?

Companion: Yes.

Socrates: Then the farmer is a good apportioner of it, and his laws and distributions are right in this matter?

Companion: Yes.

Socrates: And who is a good apportioner of notes struck for a tune, skilled in distributing suitable notes, and who is it whose laws are right here? [317e]

Companion: The flute-player and the harp-player.

317e

Socrates: Then he who is the best lawyer in these matters is the best flute-player.

Companion: Yes.

Socrates: And who is most skilled in distributing food to human bodies? Is it not he who assigns suitable food?

Companion: Yes.

Socrates: Then his distributions and laws are best, and whoever is the best lawyer in this matter is also the best apportioner.

318a

Companion: Certainly.

Socrates: Who is he?

Companion: A trainer. [318a]

Socrates: He is the best man to pasture the human herd of the body?

Companion: Yes.

Socrates: And who is the best man to pasture a flock of sheep? What is his name?

Companion: A shepherd.

Socrates: Then the shepherd's laws are best for sheep.

Companion: Yes.

Socrates: And the herdsman's for oxen.

Companion: Yes.

318b

Socrates: And whose laws are best for the souls of men? The king's, are they not? Say if you agree.

Companion: I do. [318b]

Socrates: Then you are quite right. Now can you tell me who, in former times, has proved himself a good lawgiver in regard to the laws of flute-playing? Perhaps you cannot think of him: would you like me to remind you?

Companion: Do by all means.

Socrates: Then is it Marsyas, by tradition, and his beloved Olympus, the Phrygian?

318c

Companion: That is true.

Socrates: And their flute-tunes also are most divine, and alone stir and make manifest those who are in need of the gods; and to this day they only remain, as being divine. [318c]

Companion: That is so.

Socrates: And who by tradition has shown himself a good lawgiver among the ancient kings, so that to this day his ordinances remain, as being divine?

Companion: I cannot think.

318d

Socrates: Do you not know which of the Greeks use the most ancient laws?

Companion: Do you mean the Spartans, and Lycurgus the lawgiver?

Socrates: Why, that is a matter, I daresay, of less than three hundred years ago, or but a little more. But whence is it that [318d] the best of those ordinances come? Do you know?

Companion: From Crete, so they say.

Socrates: Then the people there use the most ancient laws in Greece?

Companion: Yes.

Socrates: Then do you know who were their good kings? Minos and Rhadamanthus, the sons of Zeus and Europa; those laws were theirs.

318e

Companion: Rhadamanthus, they do say, Socrates, was a just man; but Minos was a savage sort of person, harsh and unjust.

Socrates: Your tale, my excellent friend, is a fiction of Attic tragedy. [318e]

Companion: What! Is not this the tradition about Minos?

Socrates: Not in Homer and Hesiod; and yet they are more to be believed than all the tragedians together, from whom you heard your tale.

319a

Companion: Well, and what, pray, is their tale about Minos?

Socrates: I will tell you, in order that you may not share the impiety of the multitude: for there cannot conceivably be anything more impious or more to be guarded against than being mistaken in word and deed with regard to the gods, and after them, with regard to divine men; you must take very great precaution, whenever you are about to [319a] blame or praise a man, so as not to speak incorrectly. For this reason you must learn to distinguish honest and dishonest men: for God feels resentment when one blames a man who is like himself, or praises a man who is the opposite; and the former is the good man. For you must not suppose that while stocks and stones and birds and snakes are sacred, men are not; nay, the good man is the most sacred of all these things, and the wicked man is the most defiled.

319b

So if I now proceed to relate how Minos is eulogized by Homer [319b] and Hesiod, my purpose is to prevent you, a

man sprung from a man, from making a mistake in regard to a hero who was the son of Zeus. For Homer, in telling of Crete that there were in it many men and “ninety cities,” says: “And amongst them is the mighty city of Cnossos, where Minos was king, having colloquy with mighty Zeus in the ninth year. “Hom. Od. 19.179 [319c] Now here in Homer we have a eulogy of Minos, briefly expressed, such as the poet never composed for a single one of the heroes. For that Zeus is a sophist, and that sophistry is a highly honorable art, he makes plain in many other places, and particularly here. For he says that Minos consorted and discoursed with Zeus in the ninth year, and went regularly to be educated by Zeus as though he were a sophist. And the fact that Homer assigned this privilege of having been educated by Zeus to no one among the heroes but Minos makes this a marvellous piece of praise. [319d] And in the Ghost-raising in the Odyssey he has described Minos as judging with a golden scepter in his hand, but not Rhadamanthus: Rhadamanthus he has neither described here as judging nor anywhere as consorting with Zeus; wherefore I say that Minos above all persons has been eulogized by Homer. For to have been the son of Zeus, and to have been the only one who was educated by Zeus, is praise unsurpassable.

319e

For the meaning of the verse— “he was king having colloquy with mighty Zeus in the ninth year” —
 “Hom. Od. 19.179 [319e] is that Minos was a disciple of Zeus. For colloquies are discourses, and he who has colloquy is a disciple by means of discourse. So every ninth year Minos repaired to the cave of Zeus, to learn some things, and to show his knowledge of others that he had learnt from Zeus in the preceding nine years. Some there are who suppose that he who has colloquy is a cup-companion and fellow-jester of Zeus: but one may take the following as a proof that [320a]

they who suppose so are babblers. For of all the many nations of men, both Greek and foreign, the only people who refrain from drinking-bouts and the jesting that occurs where there is wine, are the Cretans, and after them the Spartans, who learnt it from the Cretans. In Crete it is one of their laws which Minos ordained that they are not to drink with each other to intoxication. And yet it is evident that the things he thought honorable were what he ordained as lawful for his people as well. For surely Minos did not, like an inferior person, [320b] think one thing and do another, different from what he thought: no, this intercourse, as I say, was held by means of discussion for education in virtue. Wherefore he ordained for his people these very laws, which have made Crete happy through the length of time, and Sparta happy also, since she began to use them; for they are divine.

320c

Rhadamanthus was a good man indeed, for he had been educated by Minos; he had, however, been educated, [320c] not in the whole of the kingly art, but in one subsidiary to the kingly, enough for presiding in law courts; so that he was spoken of as a good judge. For Minos used him as guardian of the law in the city, and Talos as the same for the rest of Crete. For Talos thrice a year made a round of the villages, guarding the laws in them, by holding their laws inscribed on brazen tablets, which gave him his name of “brazen.” And what Hesiod also has said [320d] of Minos is akin to this. For after mentioning him by name he remarks— “Who was most kingly of mortal kings, and lorded it over more neighboring folk than any, holding the scepter of Zeus: therewith it was that he ruled the cities as king.

“Hes. Fr. 144 And by the scepter of Zeus he means nothing else than the education that he had of Zeus, whereby he directed Crete.

Companion: Then how has it ever come about, Socrates, that this report is spread abroad of Minos, as an uneducated [320e] and harsh-tempered person?

Socrates: Because of something that will make both you, if you are wise, my excellent friend, and everybody else who cares to have a good reputation, beware of ever quarreling with any man of a poetic turn. For poets have great influence over opinion, according as they create it in the minds of men by either commending or vilifying. And this was the mistake that Minos made, in waging war on this city of ours, which besides all its various culture has poets of every kind, and especially those who write tragedy. [321a] Now tragedy is a thing of ancient standing here; it did not begin, as people suppose, from Thespis or from Phrynicus, but if you will reflect, you will find it is a very ancient invention of our city. Tragedy is the most popularly delightful and soul-enthraling branch of poetry: in it, accordingly, we get Minos on the rack of verse,, and thus avenge ourselves for that tribute which he compelled us to pay This, then, was the mistake that Minos made — his quarrel with us — and hence it is that, as you said in your question, he has fallen more and more into evil repute. For that he was a good [321b] and law-abiding person, as we stated in what went before — a good apportioner — is most convincingly shown by the fact the his laws are unshaken, since they were made by one who discovered aright the truth of reality in regard to the management of a state.

321b

Companion: In my opinion, Socrates, your statement is a probable one.

Socrates: Then if what I say is true, do you consider that the Cretan people of Minos and Rhadamanthus use the most ancient laws?

Companion: I do.

Socrates: So these have shown themselves the best lawgivers among men of ancient times — [321c] apportioners and shepherds of men; just as Homer called the good general a “shepherd of the folk.”

321c

Companion: Quite so, indeed.

Socrates: Come then, in good friendship’s name: if someone should ask us what it is that the good lawgiver and apportioner for the body distributes to it when he makes it better, we should say, if we were to make a correct and brief answer, that it was food and labor; the former to strengthen, and the latter to exercise and brace it.

Companion: And we should be right. [321d]

Socrates: And if he then proceeded to ask us — And what might that be which the good lawgiver and apportioner distributes to the soul to make it better? — what would be our answer if we would avoid being ashamed of ourselves and our years?

321d

Companion: This time I am unable to say.

Socrates: But indeed it is shameful for the soul of either of us to be found ignorant of those things within it on which its good and abject states depend, while it has studied those that pertain to the body and rest.

Parmenides

ΠΑΡΜΕΝΙΔΗΣ

Plato

narrator: CEPHALUS of Clazomenae

persons in the dialogue:

ADIMANTUS *Athenian, son of Ariston, Plato's brother*

ZENO *of Elea, student of Parmenides*

SOCRATES *of Alopece, son of Sophroniscus*

PARMENIDES *of Elea, philosopher and teacher*

ARISTOTELES *Athenian of Thorae, son of Timocrates*

scene: outside the city walls of Athens at the house of Pythodorus, during the Great Panathenaea

126a

We had come from our home at Clazomenae to Athens, and met Adeimantus and Glaucon in the Agora. Welcome, Cephalus, said Adeimantus, taking me by the hand; is there anything which we can do for you in Athens?

Yes; that is why I am here; I wish to ask a favour of you.

What may that be? he said.

126b

I want you to tell me the name of your half brother, which I have forgotten; he was a mere child when I last came hither from Clazomenae, but that was a long time ago; his father's name, if I remember rightly, was Pyrilampes?

Yes, he said, and the name of our brother, Antiphon; but why do you ask?

126c

Let me introduce some countrymen of mine, I said; they are lovers of philosophy, and have heard that Antiphon was intimate with a certain Pythodorus, a friend of Zeno, and remembers a conversation which took place between Socrates, Zeno, and Parmenides many years ago, Pythodorus having often recited it to him.

Quite true.

And could we hear it? I asked.

Nothing easier, he replied; when he was a youth he made a careful study of the piece; at present his thoughts run in another direction; like his grandfather Antiphon he is devoted to horses. But, if that is what you want, let us go and look for him; he dwells at Melita, which is quite near, and he has only just left us to go home.

127b

Accordingly we went to look for him; he was at home, and in the act of giving a bridle to a smith to be fitted. When he had done with the smith, his brothers told him the purpose of our visit; and he saluted me as an acquaintance whom he remembered from my former visit, and we asked him to repeat the dialogue. At first he was not very willing, and complained of the trouble, but at length he consented. He told us that Pythodorus had described to him the appearance of Parmenides and Zeno; they came to Athens, as he said, at the great Panathenaea; the former was, at the time of his visit, about 65 years old, very white with age, but well favoured. Zeno was nearly 40 years of age, tall and fair to look upon; in the days of his youth he was reported to have been beloved by Parmenides. He said that they lodged with Pythodorus in the Ceramicus, outside the wall, whither Socrates, then a very young man, came to see them, and many others with him; they wanted to hear the writings of Zeno, which had been brought to Athens for the first time on the occasion of their visit. These Zeno himself read to them in the absence of Parmenides, and had very nearly finished when Pythodorus entered, and with him Parmenides and Aristoteles who was afterwards one of the Thirty, and heard the little that remained of the dialogue. Pythodorus had heard Zeno repeat them before.

When the recitation was completed, Socrates requested that the first thesis of the first argument might be read over again, and

this having been done, he said: What is your meaning, Zeno? Do you maintain that if being is many, it must be both like and unlike, and that this is impossible, for neither can the like be unlike, nor the unlike like — is that your position?

127e

Just so, said Zeno.

And if the unlike cannot be like, or the like unlike, then according to you, being could not be many; for this would involve an impossibility. In all that you say have you any other purpose except to disprove the being of the many? and is not each division of your treatise intended to furnish a separate proof of this, there being in all as many proofs of the not-being of the many as you have composed arguments? Is that your meaning, or have I misunderstood you?

128a

No, said Zeno; you have correctly understood my general purpose.

I see, Parmenides, said Socrates, that Zeno would like to be not only one with you in friendship but your second self in his writings too; he puts what you say in another way, and would fain make believe that he is telling us something which is new. For you, in your poems, say The All is one, and of this you adduce excellent proofs; and he on the other hand says There is no many; and on behalf of this he offers overwhelming evidence. You affirm unity, he denies plurality. And so you deceive the world into believing that you are saying different things when really you are saying much the same. This is a strain of art beyond the reach of most of us.

128b

Yes, Socrates, said Zeno. But although you are as keen as a Spartan hound in pursuing the track, you do not fully apprehend the true motive of the composition, which is not really such an artificial work as you imagine; for what you speak

of was an accident; there was no pretence of a great purpose; nor any serious intention of deceiving the world. The truth is, that these writings of mine were meant to protect the arguments of Parmenides against those who make fun of him and seek to show the many ridiculous and contradictory results which they suppose to follow from the affirmation of the one. My answer is addressed to the partisans of the many, whose attack I return with interest by retorting upon them that their hypothesis of the being of many, if carried out, appears to be still more ridiculous than the hypothesis of the being of one. Zeal for my master led me to write the book in the days of my youth, but some one stole the copy; and therefore I had no choice whether it should be published or not; the motive, however, of writing, was not the ambition of an elder man, but the pugnacity of a young one. This you do not seem to see, Socrates; though in other respects, as I was saying, your notion is a very just one.

129b

I understand, said Socrates, and quite accept your account. But tell me, Zeno, do you not further think that there is an idea of likeness in itself, and another idea of unlikeness, which is the opposite of likeness, and that in these two, you and I and all other things to which we apply the term many, participate — things which participate in likeness become in that degree and manner like; and so far as they participate in unlikeness become in that degree unlike, or both like and unlike in the degree in which they participate in both? And may not all things partake of both opposites, and be both like and unlike, by reason of this participation? — Where is the wonder? Now if a person could prove the absolute like to become unlike, or the absolute unlike to become like, that, in my opinion, would indeed be a wonder; but there is nothing extraordinary, Zeno, in showing that the things which only partake of likeness and unlikeness experience both. Nor, again, if a person were to show that all is one by

partaking of one, and at the same time many by partaking of many, would that be very astonishing. But if he were to show me that the absolute one was many, or the absolute many one, I should be truly amazed. And so of all the rest: I should be surprised to hear that the natures or ideas themselves had these opposite qualities; but not if a person wanted to prove of me that I was many and also one. When he wanted to show that I was many he would say that I have a right and a left side, and a front and a back, and an upper and a lower half, for I cannot deny that I partake of multitude; when, on the other hand, he wants to prove that I am one, he will say, that we who are here assembled are seven, and that I am one and partake of the one. In both instances he proves his case. So again, if a person shows that such things as wood, stones, and the like, being many are also one, we admit that he shows the coexistence of the one and many, but he does not show that the many are one or the one many; he is uttering not a paradox but a truism. If however, as I just now suggested, some one were to abstract simple notions of like, unlike, one, many, rest, motion, and similar ideas, and then to show that these admit of admixture and separation in themselves, I should be very much astonished. This part of the argument appears to be treated by you, Zeno, in a very spirited manner; but, as I was saying, I should be far more amazed if any one found in the ideas themselves which are apprehended by reason, the same puzzle and entanglement which you have shown to exist in visible objects.

130b

While Socrates was speaking, Pythodorus thought that Parmenides and Zeno were not altogether pleased at the successive steps of the argument; but still they gave the closest attention, and often looked at one another, and smiled as if in admiration of him. When he had finished, Parmenides expressed their feelings in the following words: — Socrates, he said, I admire the bent of your mind towards philosophy; tell me

now, was this your own distinction between ideas in themselves and the things which partake of them? and do you think that there is an idea of likeness apart from the likeness which we possess, and of the one and many, and of the other things which Zeno mentioned?

I think that there are such ideas, said Socrates.

Parmenides proceeded: And would you also make absolute ideas of the just and the beautiful and the good, and of all that class?

Yes, he said, I should.

130c

And would you make an idea of man apart from us and from all other human creatures, or of fire and water?

I am often undecided, Parmenides, as to whether I ought to include them or not.

130d

And would you feel equally undecided, Socrates, about things of which the mention may provoke a smile? — I mean such things as hair, mud, dirt, or anything else which is vile and paltry; would you suppose that each of these has an idea distinct from the actual objects with which we come into contact, or not?

Certainly not, said Socrates; visible things like these are such as they appear to us, and I am afraid that there would be an absurdity in assuming any idea of them, although I sometimes get disturbed, and begin to think that there is nothing without an idea; but then again, when I have taken up this position, I run away, because I am afraid that I may fall into a bottomless pit of nonsense, and perish; and so I return to the ideas of which I was just now speaking, and occupy myself with them.

Yes, Socrates, said Parmenides; that is because you are still young; the time will come, if I am not mistaken, when philosophy will have a firmer grasp of you, and then you will

not despise even the meanest things; at your age, you are too much disposed to regard the opinions of men. But I should like to know whether you mean that there are certain ideas of which all other things partake, and from which they derive their names; that similars, for example, become similar, because they partake of similarity; and great things become great, because they partake of greatness; and that just and beautiful things become just and beautiful, because they partake of justice and beauty?

Yes, certainly, said Socrates that is my meaning.

131b

Then each individual partakes either of the whole of the idea or else of a part of the idea? Can there be any other mode of participation?

There cannot be, he said.

Then do you think that the whole idea is one, and yet, being one, is in each one of the many?

Why not, Parmenides? said Socrates.

Because one and the same thing will exist as a whole at the same time in many separate individuals, and will therefore be in a state of separation from itself.

Nay, but the idea may be like the day which is one and the same in many places at once, and yet continuous with itself; in this way each idea may be one and the same in all at the same time.

131c

I like your way, Socrates, of making one in many places at once. You mean to say, that if I were to spread out a sail and cover a number of men, there would be one whole including many — is not that your meaning?

I think so.

131d

And would you say that the whole sail includes each man, or a part of it only, and different parts different men?

The latter.

Then, Socrates, the ideas themselves will be divisible, and things which participate in them will have a part of them only and not the whole idea existing in each of them?

That seems to follow.

Then would you like to say, Socrates, that the one idea is really divisible and yet remains one?

131e

Certainly not, he said.

Suppose that you divide absolute greatness, and that of the many great things, each one is great in virtue of a portion of greatness less than absolute greatness — is that conceivable?

No.

Or will each equal thing, if possessing some small portion of equality less than absolute equality, be equal to some other thing by virtue of that portion only?

Impossible.

Or suppose one of us to have a portion of smallness; this is but a part of the small, and therefore the absolutely small is greater; if the absolutely small be greater, that to which the part of the small is added will be smaller and not greater than before.

132a

How absurd!

Then in what way, Socrates, will all things participate in the ideas, if they are unable to participate in them either as parts or wholes?

Indeed, he said, you have asked a question which is not easily answered.

Well, said Parmenides, and what do you say of another question?

What question?

132b

I imagine that the way in which you are led to assume one idea of each kind is as follows: — You see a number of great objects, and when you look at them there seems to you to be one and the same idea (or nature) in them all; hence you conceive of greatness as one.

Very true, said Socrates.

And if you go on and allow your mind in like manner to embrace in one view the idea of greatness and of great things which are not the idea, and to compare them, will not another greatness arise, which will appear to be the source of all these?

It would seem so.

Then another idea of greatness now comes into view over and above absolute greatness, and the individuals which partake of it; and then another, over and above all these, by virtue of which they will all be great, and so each idea instead of being one will be infinitely multiplied.

But may not the ideas, asked Socrates, be thoughts only, and have no proper existence except in our minds, Parmenides? For in that case each idea may still be one, and not experience this infinite multiplication.

And can there be individual thoughts which are thoughts of nothing?

Impossible, he said.

132d

The thought must be of something?

Yes.

Of something which is or which is not?

Of something which is.

Must it not be of a single something, which the thought recognizes as attaching to all, being a single form or nature?

Yes.

132e

And will not the something which is apprehended as one and the same in all, be an idea?

From that, again, there is no escape.

Then, said Parmenides, if you say that everything else participates in the ideas, must you not say either that everything is made up of thoughts, and that all things think; or that they are thoughts but have no thought?

133a

The latter view, Parmenides, is no more rational than the previous one. In my opinion, the ideas are, as it were, patterns fixed in nature, and other things are like them, and resemblances of them — what is meant by the participation of other things in the ideas, is really assimilation to them.

But if, said he, the individual is like the idea, must not the idea also be like the individual, in so far as the individual is a resemblance of the idea? That which is like, cannot be conceived of as other than the like of like.

Impossible.

And when two things are alike, must they not partake of the same idea?

They must.

133b

And will not that of which the two partake, and which makes them alike, be the idea itself?

Certainly.

Then the idea cannot be like the individual, or the individual like the idea; for if they are alike, some further idea of likeness will always be coming to light, and if that be like anything else, another; and new ideas will be always arising, if the idea resembles that which partakes of it?

Quite true.

The theory, then, that other things participate in the ideas by resemblance, has to be given up, and some other mode of participation devised?

It would seem so.

Do you see then, Socrates, how great is the difficulty of affirming the ideas to be absolute?

Yes, indeed.

133c

And, further, let me say that as yet you only understand a small part of the difficulty which is involved if you make of each thing a single idea, parting it off from other things.

What difficulty? he said.

There are many, but the greatest of all is this: — If an opponent argues that these ideas, being such as we say they ought to be, must remain unknown, no one can prove to him that he is wrong, unless he who denies their existence be a man of great ability and knowledge, and is willing to follow a long and laborious demonstration; he will remain unconvinced, and still insist that they cannot be known.

What do you mean, Parmenides? said Socrates.

In the first place, I think, Socrates, that you, or any one who maintains the existence of absolute essences, will admit that they cannot exist in us.

No, said Socrates; for then they would be no longer absolute.

True, he said; and therefore when ideas are what they are in relation to one another, their essence is determined by a relation among themselves, and has nothing to do with the resemblances, or whatever they are to be termed, which are in our sphere, and from which we receive this or that name when we partake of them. And the things which are within our sphere and have the same names with them, are likewise only relative to one another, and not to the ideas which have the same names with them, but belong to themselves and not to them.

134a

What do you mean? said Socrates.

I may illustrate my meaning in this way, said Parmenides: — A master has a slave; now there is nothing absolute in the relation between them, which is simply a relation of one man to another. But there is also an idea of mastership in the abstract, which is relative to the idea of slavery in the abstract. These natures have nothing to do with us, nor we with them; they are concerned with themselves only, and we with ourselves. Do you see my meaning?

Yes, said Socrates, I quite see your meaning.

And will not knowledge — I mean absolute knowledge — answer to absolute truth?

Certainly.

And each kind of absolute knowledge will answer to each kind of absolute being?

Yes.

134c

But the knowledge which we have, will answer to the truth which we have; and again, each kind of knowledge which we have, will be a knowledge of each kind of being which we have?

Certainly.

But the ideas themselves, as you admit, we have not, and cannot have?

No, we cannot.

And the absolute natures or kinds are known severally by the absolute idea of knowledge?

Yes.

And we have not got the idea of knowledge?

No.

Then none of the ideas are known to us, because we have no share in absolute knowledge?

I suppose not.

134d

Then the nature of the beautiful in itself, and of the good in itself, and all other ideas which we suppose to exist absolutely, are unknown to us?

It would seem so.

I think that there is a stranger consequence still.

What is it?

Would you, or would you not say, that absolute knowledge, if there is such a thing, must be a far more exact knowledge than our knowledge; and the same of beauty and of the rest?

134e

Yes.

And if there be such a thing as participation in absolute knowledge, no one is more likely than God to have this most exact knowledge?

Certainly.

But then, will God, having absolute knowledge, have a knowledge of human things?

Why not?

Because, Socrates, said Parmenides, we have admitted that the ideas are not valid in relation to human things; nor human things in relation to them; the relations of either are limited to their respective spheres.

Yes, that has been admitted.

135a

And if God has this perfect authority, and perfect knowledge, his authority cannot rule us, nor his knowledge know us, or any human thing; just as our authority does not extend to the gods, nor our knowledge know anything which is divine, so by parity of reason they, being gods, are not our masters, neither do they know the things of men.

Yet, surely, said Socrates, to deprive God of knowledge is monstrous.

These, Socrates, said Parmenides, are a few, and only a few of the difficulties in which we are involved if ideas really are and we determine each one of them to be an absolute unity. He who hears what may be said against them will deny the very existence of them — and even if they do exist, he will say that they must of necessity be unknown to man; and he will seem to have reason on his side, and as we were remarking just now, will be very difficult to convince; a man must be gifted with very considerable ability before he can learn that everything has a class and an absolute essence; and still more remarkable will he

be who discovers all these things for himself, and having thoroughly investigated them is able to teach them to others.

I agree with you, Parmenides, said Socrates; and what you say is very much to my mind.

And yet, Socrates, said Parmenides, if a man, fixing his attention on these and the like difficulties, does away with ideas of things and will not admit that every individual thing has its own determinate idea which is always one and the same, he will have nothing on which his mind can rest; and so he will utterly destroy the power of reasoning, as you seem to me to have particularly noted.

Very true, he said.

But, then, what is to become of philosophy? Whither shall we turn, if the ideas are unknown?

I certainly do not see my way at present.

Yes, said Parmenides; and I think that this arises, Socrates, out of your attempting to define the beautiful, the just, the good, and the ideas generally, without sufficient previous training. I noticed your deficiency, when I heard you talking here with your friend Aristoteles, the day before yesterday. The impulse that carries you towards philosophy is assuredly noble and divine; but there is an art which is called by the vulgar idle talking, and which is often imagined to be useless; in that you must train and exercise yourself, now that you are young, or truth will elude your grasp.

135e

And what is the nature of this exercise, Parmenides, which you would recommend?

That which you heard Zeno practising; at the same time, I give you credit for saying to him that you did not care to examine the perplexity in reference to visible things, or to consider the

question that way; but only in reference to objects of thought, and to what may be called ideas.

136a

Why, yes, he said, there appears to me to be no difficulty in showing by this method that visible things are like and unlike and may experience anything.

Quite true, said Parmenides; but I think that you should go a step further, and consider not only the consequences which flow from a given hypothesis, but also the consequences which flow from denying the hypothesis; and that will be still better training for you.

What do you mean? he said.

136c

I mean, for example, that in the case of this very hypothesis of Zeno's about the many, you should inquire not only what will be the consequences to the many in relation to themselves and to the one, and to the one in relation to itself and the many, on the hypothesis of the being of the many, but also what will be the consequences to the one and the many in their relation to themselves and to each other, on the opposite hypothesis. Or, again, if likeness is or is not, what will be the consequences in either of these cases to the subjects of the hypothesis, and to other things, in relation both to themselves and to one another, and so of unlikeness; and the same holds good of motion and rest, of generation and destruction, and even of being and not-being. In a word, when you suppose anything to be or not to be, or to be in any way affected, you must look at the consequences in relation to the thing itself, and to any other things which you choose, — to each of them singly, to more than one, and to all; and so of other things, you must look at them in relation to themselves and to anything else which you suppose either to be or not to be, if you would train yourself perfectly and see the real truth.

136e

That, Parmenides, is a tremendous business of which you speak, and I do not quite understand you; will you take some hypothesis and go through the steps? — then I shall apprehend you better.

That, Socrates, is a serious task to impose on a man of my years.

Then will you, Zeno? said Socrates.

137a

Zeno answered with a smile: — Let us make our petition to Parmenides himself, who is quite right in saying that you are hardly aware of the extent of the task which you are imposing on him; and if there were more of us I should not ask him, for these are not subjects which any one, especially at his age, can well speak of before a large audience; most people are not aware that this roundabout progress through all things is the only way in which the mind can attain truth and wisdom. And therefore, Parmenides, I join in the request of Socrates, that I may hear the process again which I have not heard for a long time.

When Zeno had thus spoken, Pythodorus, according to Antiphon's report of him, said, that he himself and Aristoteles and the whole company entreated Parmenides to give an example of the process. I cannot refuse, said Parmenides; and yet I feel rather like Ibycus, who, when in his old age, against his will, he fell in love, compared himself to an old racehorse, who was about to run in a chariot race, shaking with fear at the course he knew so well — this was his simile of himself. And I also experience a trembling when I remember through what an ocean of words I have to wade at my time of life. But I must indulge you, as Zeno says that I ought, and we are alone. Where shall I begin? And what shall be our first hypothesis, if I am to attempt this laborious pastime? Shall I begin with myself, and take my own hypothesis the one? and consider the consequences which follow on the supposition either of the

being or of the not-being of one?

By all means, said Zeno.

And who will answer me? he said. Shall I propose the youngest? He will not make difficulties and will be the most likely to say what he thinks; and his answers will give me time to breathe.

I am the one whom you mean, Parmenides, said Aristoteles; for I am the youngest and at your service. Ask, and I will answer.

Parmenides proceeded: 1.a. If one is, he said, the one cannot be many?

Impossible.

Then the one cannot have parts, and cannot be a whole?

Why not?

Because every part is part of a whole; is it not?

Yes.

137e

And what is a whole? would not that of which no part is wanting be a whole?

Certainly.

Then, in either case, the one would be made up of parts; both as being a whole, and also as having parts?

To be sure.

And in either case, the one would be many, and not one?

True.

But, surely, it ought to be one and not many?

It ought.

Then, if the one is to remain one, it will not be a whole, and will not have parts?

No.

But if it has no parts, it will have neither beginning, middle, nor end; for these would of course be parts of it.

Right.

138a

But then, again, a beginning and an end are the limits of everything?

Certainly.

Then the one, having neither beginning nor end, is unlimited?

Yes, unlimited.

And therefore formless; for it cannot partake either of round or straight.

But why?

Why, because the round is that of which all the extreme points are equidistant from the centre?

Yes.

138b

And the straight is that of which the centre intercepts the view of the extremes?

True.

Then the one would have parts and would be many, if it partook either of a straight or of a circular form?

Assuredly.

But having no parts, it will be neither straight nor round?

Right.

And, being of such a nature, it cannot be in any place, for it cannot be either in another or in itself.

How so?

Because if it were in another, it would be encircled by that in which it was, and would touch it at many places and with many parts; but that which is one and indivisible, and does not partake of a circular nature, cannot be touched all round in many places.

Certainly not.

But if, on the other hand, one were in itself, it would also be contained by nothing else but itself; that is to say, if it were really in itself; for nothing can be in anything which does not contain it.

Impossible.

But then, that which contains must be other than that which is contained? for the same whole cannot do and suffer both at once; and if so, one will be no longer one, but two?

138d

True.

Then one cannot be anywhere, either in itself or in another?

No.

Further consider, whether that which is of such a nature can have either rest or motion.

Why not?

Why, because the one, if it were moved, would be either moved in place or changed in nature; for these are the only kinds of motion.

Yes.

And the one, when it changes and ceases to be itself, cannot be any longer one.

It cannot.

It cannot therefore experience the sort of motion which is change of nature?

Clearly not.

Then can the motion of the one be in place?

Perhaps.

But if the one moved in place, must it not either move round and round in the same place, or from one place to another?

It must.

138e

And that which moves in a circle must rest upon a centre; and that which goes round upon a centre must have parts which are different from the centre; but that which has no centre and no parts cannot possibly be carried round upon a centre?

Impossible.

But perhaps the motion of the one consists in change of place?

Perhaps so, if it moves at all.

And have we not already shown that it cannot be in anything?

Yes.

Then its coming into being in anything is still more impossible; is it not?

I do not see why.

139a

Why, because anything which comes into being in anything, can neither as yet be in that other thing while still coming into being, nor be altogether out of it, if already coming into being in it.

Certainly not.

And therefore whatever comes into being in another must have parts, and then one part may be in, and another part out of that other; but that which has no parts can never be at one and the same time neither wholly within nor wholly without anything.

True.

And is there not a still greater impossibility in that which has no parts, and is not a whole, coming into being anywhere, since it cannot come into being either as a part or as a whole?

139c

Clearly.

Then it does not change place by revolving in the same spot, nor by going somewhere and coming into being in something; nor again, by change in itself?

Very true.

Then in respect of any kind of motion the one is immoveable?

Immoveable.

But neither can the one be in anything, as we affirm?

Yes, we said so.

Then it is never in the same?

Why not?

Because if it were in the same it would be in something.

Certainly.

And we said that it could not be in itself, and could not be in other?

True.

Then one is never in the same place?

It would seem not.

But that which is never in the same place is never quiet or at rest?

Never.

One then, as would seem, is neither at rest nor in motion?

It certainly appears so.

139d

Neither will it be the same with itself or other; nor again, other than itself or other.

How is that?

If other than itself it would be other than one, and would not be one.

True.

And if the same with other, it would be that other, and not itself; so that upon this supposition too, it would not have the nature of one, but would be other than one?

It would.

Then it will not be the same with other, or other than itself?

It will not.

Neither will it be other than other, while it remains one; for not one, but only other, can be other than other, and nothing else.

True.

Then not by virtue of being one will it be other?

139e

Certainly not.

But if not by virtue of being one, not by virtue of itself; and if not by virtue of itself, not itself, and itself not being other at all, will not be other than anything?

Right.

Neither will one be the same with itself.

How not?

Surely the nature of the one is not the nature of the same.

Why not?

It is not when anything becomes the same with anything that it becomes one.

What of that?

Anything which becomes the same with the many, necessarily becomes many and not one.

True.

But, if there were no difference between the one and the same, when a thing became the same, it would always become one; and when it became one, the same?

Certainly.

140a

And, therefore, if one be the same with itself, it is not one with itself, and will therefore be one and also not one.

Surely that is impossible.

And therefore the one can neither be other than other, nor the same with itself.

Impossible.

And thus the one can neither be the same, nor other, either in relation to itself or other?

140b

No.

Neither will the one be like anything or unlike itself or other.

Why not?

Because likeness is sameness of affections.

Yes.

And sameness has been shown to be of a nature distinct from oneness?

That has been shown.

But if the one had any other affection than that of being one, it would be affected in such a way as to be more than one; which is impossible.

True.

Then the one can never be so affected as to be the same either with another or with itself?

Clearly not.

140c

Then it cannot be like another, or like itself?

No.

Nor can it be affected so as to be other, for then it would be affected in such a way as to be more than one.

It would.

That which is affected otherwise than itself or another, will be unlike itself or another, for sameness of affections is likeness.

True.

But the one, as appears, never being affected otherwise, is never unlike itself or other?

Never.

Then the one will never be either like or unlike itself or other?

Plainly not.

Again, being of this nature, it can neither be equal nor unequal either to itself or to other.

140d

How is that?

Why, because the one if equal must be of the same measures as that to which it is equal.

True.

And if greater or less than things which are commensurable with it, the one will have more measures than that which is less, and fewer than that which is greater?

Yes.

And so of things which are not commensurate with it, the one will have greater measures than that which is less and smaller than that which is greater.

Certainly.

140e

But how can that which does not partake of sameness, have either the same measures or have anything else the same?

Impossible.

And not having the same measures, the one cannot be equal either with itself or with another?

It appears so.

But again, whether it have fewer or more measures, it will have as many parts as it has measures; and thus again the one will be no longer one but will have as many parts as measures.

Right.

141a

And if it were of one measure, it would be equal to that measure; yet it has been shown to be incapable of equality.

It has.

Then it will neither partake of one measure, nor of many, nor of few, nor of the same at all, nor be equal to itself or another; nor be greater or less than itself, or other?

Certainly.

Well, and do we suppose that one can be older, or younger than anything, or of the same age with it?

Why not?

141b

Why, because that which is of the same age with itself or other, must partake of equality or likeness of time; and we said that the one did not partake either of equality or of likeness?

We did say so.

And we also said, that it did not partake of inequality or unlikeness.

Very true.

How then can one, being of this nature, be either older or younger than anything, or have the same age with it?

In no way.

Then one cannot be older or younger, or of the same age, either with itself or with another?

Clearly not.

Then the one, being of this nature, cannot be in time at all; for must not that which is in time, be always growing older than itself?

141c

Certainly.

And that which is older, must always be older than something which is younger?

True.

Then, that which becomes older than itself, also becomes at the same time younger than itself, if it is to have something to become older than.

What do you mean?

I mean this: — A thing does not need to become different from another thing which is already different; it IS different, and if its different has become, it has become different; if its different will be, it will be different; but of that which is becoming different, there cannot have been, or be about to be, or yet be, a different — the only different possible is one which is becoming.

That is inevitable.

But, surely, the elder is a difference relative to the younger, and to nothing else.

True.

Then that which becomes older than itself must also, at the same time, become younger than itself?

Yes.

But again, it is true that it cannot become for a longer or for a shorter time than itself, but it must become, and be, and have become, and be about to be, for the same time with itself?

141e

That again is inevitable.

Then things which are in time, and partake of time, must in every case, I suppose, be of the same age with themselves; and must also become at once older and younger than themselves?

Yes.

But the one did not partake of those affections?

Not at all.

Then it does not partake of time, and is not in any time?

So the argument shows.

Well, but do not the expressions 'was,' and 'has become,' and 'was becoming,' signify a participation of past time?

142a

Certainly.

And do not 'will be,' 'will become,' 'will have become,' signify a participation of future time?

Yes.

And 'is,' or 'becomes,' signifies a participation of present time?

Certainly.

And if the one is absolutely without participation in time, it never had become, or was becoming, or was at any time, or is now become or is becoming, or is, or will become, or will have become, or will be, hereafter.

Most true.

But are there any modes of partaking of being other than these?

There are none.

Then the one cannot possibly partake of being?

That is the inference.

142b

Then the one is not at all?

Clearly not.

Then the one does not exist in such way as to be one; for if it were and partook of being, it would already be; but if the

argument is to be trusted, the one neither is nor is one?

True.

But that which is not admits of no attribute or relation?

Of course not.

Then there is no name, nor expression, nor perception, nor opinion, nor knowledge of it?

Clearly not.

Then it is neither named, nor expressed, nor opined, nor known, nor does anything that is perceive it.

So we must infer.

But can all this be true about the one?

I think not.

1.b. Suppose, now, that we return once more to the original hypothesis; let us see whether, on a further review, any new aspect of the question appears.

I shall be very happy to do so.

We say that we have to work out together all the consequences, whatever they may be, which follow, if the one is?

Yes.

Then we will begin at the beginning: — If one is, can one be, and not partake of being?

Impossible.

Then the one will have being, but its being will not be the same with the one; for if the same, it would not be the being of the one; nor would the one have participated in being, for the proposition that one is would have been identical with the proposition that one is one; but our hypothesis is not if one is

one, what will follow, but if one is: — am I not right?

Quite right.

We mean to say, that being has not the same significance as one?

Of course.

142e

And when we put them together shortly, and say ‘One is,’ that is equivalent to saying, ‘partakes of being’?

Quite true.

Once more then let us ask, if one is what will follow. Does not this hypothesis necessarily imply that one is of such a nature as to have parts?

143a

How so?

In this way: — If being is predicated of the one, if the one is, and one of being, if being is one; and if being and one are not the same; and since the one, which we have assumed, is, must not the whole, if it is one, itself be, and have for its parts, one and being?

Certainly.

And is each of these parts — one and being — to be simply called a part, or must the word ‘part’ be relative to the word ‘whole’?

The latter.

Then that which is one is both a whole and has a part?

Certainly.

143b

Again, of the parts of the one, if it is — I mean being and one — does either fail to imply the other? is the one wanting to being, or being to the one?

Impossible.

Thus, each of the parts also has in turn both one and being, and is at the least made up of two parts; and the same principle goes on for ever, and every part whatever has always these two parts; for being always involves one, and one being; so that one is always disappearing, and becoming two.

Certainly.

And so the one, if it is, must be infinite in multiplicity?

Clearly.

Let us take another direction.

What direction?

We say that the one partakes of being and therefore it is?

Yes.

And in this way, the one, if it has being, has turned out to be many?

143c

True.

But now, let us abstract the one which, as we say, partakes of being, and try to imagine it apart from that of which, as we say, it partakes — will this abstract one be one only or many?

One, I think.

Let us see: — Must not the being of one be other than one? for the one is not being, but, considered as one, only partook of being?

Certainly.

If being and the one be two different things, it is not because the one is one that it is other than being; nor because being is being that it is other than the one; but they differ from one another in

virtue of otherness and difference.

143d

Certainly.

So that the other is not the same — either with the one or with being?

Certainly not.

And therefore whether we take being and the other, or being and the one, or the one and the other, in every such case we take two things, which may be rightly called both.

How so.

143e

In this way — you may speak of being?

Yes.

And also of one?

Yes.

Then now we have spoken of either of them?

Yes.

Well, and when I speak of being and one, I speak of them both?

Certainly.

And if I speak of being and the other, or of the one and the other, — in any such case do I not speak of both?

Yes.

And must not that which is correctly called both, be also two?

Undoubtedly.

And of two things how can either by any possibility not be one?

It cannot.

Then, if the individuals of the pair are together two, they must be severally one?

Clearly.

And if each of them is one, then by the addition of any one to any pair, the whole becomes three?

Yes.

144a

And three are odd, and two are even?

Of course.

And if there are two there must also be twice, and if there are three there must be thrice; that is, if twice one makes two, and thrice one three?

Certainly.

There are two, and twice, and therefore there must be twice two; and there are three, and there is thrice, and therefore there must be thrice three?

Of course.

If there are three and twice, there is twice three; and if there are two and thrice, there is thrice two?

Undoubtedly.

Here, then, we have even taken even times, and odd taken odd times, and even taken odd times, and odd taken even times.

144b

True.

And if this is so, does any number remain which has no necessity to be?

None whatever.

Then if one is, number must also be?

It must.

144c

But if there is number, there must also be many, and infinite multiplicity of being; for number is infinite in multiplicity, and partakes also of being; am I not right?

Certainly.

And if all number participates in being, every part of number will also participate?

Yes.

Then being is distributed over the whole multitude of things, and nothing that is, however small or however great, is devoid of it? And, indeed, the very supposition of this is absurd, for how can that which is, be devoid of being?

In no way.

And it is divided into the greatest and into the smallest, and into being of all sizes, and is broken up more than all things; the divisions of it have no limit.

144d

True.

Then it has the greatest number of parts?

Yes, the greatest number.

Is there any of these which is a part of being, and yet no part?

Impossible.

But if it is at all and so long as it is, it must be one, and cannot be none?

Certainly.

Then the one attaches to every single part of being, and does not fail in any part, whether great or small, or whatever may be

the size of it?

144c

True.

But reflect: — Can one, in its entirety, be in many places at the same time?

No; I see the impossibility of that.

And if not in its entirety, then it is divided; for it cannot be present with all the parts of being, unless divided.

True.

And that which has parts will be as many as the parts are?

Certainly.

Then we were wrong in saying just now, that being was distributed into the greatest number of parts. For it is not distributed into parts more than the one, into parts equal to the one; the one is never wanting to being, or being to the one, but being two they are co-equal and co-extensive.

145a

Certainly that is true.

The one itself, then, having been broken up into parts by being, is many and infinite?

True.

Then not only the one which has being is many, but the one itself distributed by being, must also be many?

Certainly.

Further, inasmuch as the parts are parts of a whole, the one, as a whole, will be limited; for are not the parts contained by the whole?

Certainly.

And that which contains, is a limit?

Of course.

Then the one if it has being is one and many, whole and parts, having limits and yet unlimited in number?

Clearly.

And because having limits, also having extremes?

Certainly.

And if a whole, having beginning and middle and end. For can anything be a whole without these three? And if any one of them is wanting to anything, will that any longer be a whole?

No.

Then the one, as appears, will have beginning, middle, and end.

It will.

But, again, the middle will be equidistant from the extremes; or it would not be in the middle?

Yes.

145c

Then the one will partake of figure, either rectilinear or round, or a union of the two?

True.

And if this is the case, it will be both in itself and in another too.

How?

Every part is in the whole, and none is outside the whole.

True.

And all the parts are contained by the whole?

Yes.

And the one is all its parts, and neither more nor less than all?

No.

And the one is the whole?

Of course.

145d

But if all the parts are in the whole, and the one is all of them and the whole, and they are all contained by the whole, the one will be contained by the one; and thus the one will be in itself.

That is true.

But then, again, the whole is not in the parts — neither in all the parts, nor in some one of them. For if it is in all, it must be in one; for if there were any one in which it was not, it could not be in all the parts; for the part in which it is wanting is one of all, and if the whole is not in this, how can it be in them all?

145e

It cannot.

Nor can the whole be in some of the parts; for if the whole were in some of the parts, the greater would be in the less, which is impossible.

Yes, impossible.

But if the whole is neither in one, nor in more than one, nor in all of the parts, it must be in something else, or cease to be anywhere at all?

Certainly.

If it were nowhere, it would be nothing; but being a whole, and not being in itself, it must be in another.

146a

Very true.

The one then, regarded as a whole, is in another, but regarded as being all its parts, is in itself; and therefore the one must be itself in itself and also in another.

Certainly.

The one then, being of this nature, is of necessity both at rest and in motion?

How?

The one is at rest since it is in itself, for being in one, and not passing out of this, it is in the same, which is itself.

True.

And that which is ever in the same, must be ever at rest?

Certainly.

146b

Well, and must not that, on the contrary, which is ever in other, never be in the same; and if never in the same, never at rest, and if not at rest, in motion?

True.

Then the one being always itself in itself and other, must always be both at rest and in motion?

Clearly.

And must be the same with itself, and other than itself; and also the same with the others, and other than the others; this follows from its previous affections.

How so?

Everything in relation to every other thing, is either the same or other; or if neither the same nor other, then in the relation of a part to a whole, or of a whole to a part.

146c

Clearly.

And is the one a part of itself?

Certainly not.

Since it is not a part in relation to itself it cannot be related to itself as whole to part?

It cannot.

But is the one other than one?

No.

146d

And therefore not other than itself?

Certainly not.

If then it be neither other, nor a whole, nor a part in relation to itself, must it not be the same with itself?

Certainly.

But then, again, a thing which is in another place from 'itself,' if this 'itself' remains in the same place with itself, must be other than 'itself,' for it will be in another place?

True.

Then the one has been shown to be at once in itself and in another?

Yes.

Thus, then, as appears, the one will be other than itself?

True.

Well, then, if anything be other than anything, will it not be other than that which is other?

Certainly.

146e

And will not all things that are not one, be other than the one, and the one other than the not-one?

Of course.

Then the one will be other than the others?

True.

But, consider: — Are not the absolute same, and the absolute other, opposites to one another?

Of course.

Then will the same ever be in the other, or the other in the same?

They will not.

If then the other is never in the same, there is nothing in which the other is during any space of time; for during that space of time, however small, the other would be in the same. Is not that true?

Yes.

And since the other is never in the same, it can never be in anything that is.

True.

147a

Then the other will never be either in the not-one, or in the one?

Certainly not.

Then not by reason of otherness is the one other than the not-one, or the not-one other than the one.

No.

Nor by reason of themselves will they be other than one another, if not partaking of the other.

How can they be?

But if they are not other, either by reason of themselves or of the other, will they not altogether escape being other than one another?

They will.

Again, the not-one cannot partake of the one; otherwise it would not have been not-one, but would have been in some way one.

True.

147b

Nor can the not-one be number; for having number, it would not have been not-one at all.

It would not.

Again, is the not-one part of the one; or rather, would it not in that case partake of the one?

It would.

If then, in every point of view, the one and the not-one are distinct, then neither is the one part or whole of the not-one, nor is the not-one part or whole of the one?

No.

But we said that things which are neither parts nor wholes of one another, nor other than one another, will be the same with one another: — so we said?

147c

Yes.

Then shall we say that the one, being in this relation to the not-one, is the same with it?

Let us say so.

Then it is the same with itself and the others, and also other than itself and the others.

That appears to be the inference.

And it will also be like and unlike itself and the others?

Perhaps.

Since the one was shown to be other than the others, the others will also be other than the one.

Yes.

And the one is other than the others in the same degree that the others are other than it, and neither more nor less?

True.

And if neither more nor less, then in a like degree?

Yes.

In virtue of the affection by which the one is other than others and others in like manner other than it, the one will be affected like the others and the others like the one.

147d

How do you mean?

I may take as an illustration the case of names: You give a name to a thing?

Yes.

And you may say the name once or oftener?

Yes.

And when you say it once, you mention that of which it is the name? and when more than once, is it something else which you mention? or must it always be the same thing of which you speak, whether you utter the name once or more than once?

Of course it is the same.

And is not 'other' a name given to a thing?

147e

Certainly.

Whenever, then, you use the word 'other,' whether once or oftener, you name that of which it is the name, and to no other do you give the name?

True.

Then when we say that the others are other than the one, and the one other than the others, in repeating the word 'other' we speak of that nature to which the name is applied, and of no other?

Quite true.

148a

Then the one which is other than others, and the other which is other than the one, in that the word 'other' is applied to both, will be in the same condition; and that which is in the same condition is like?

Yes.

Then in virtue of the affection by which the one is other than the others, every thing will be like every thing, for every thing is other than every thing.

True.

Again, the like is opposed to the unlike?

Yes.

And the other to the same?

148b

True again.

And the one was also shown to be the same with the others?

Yes.

And to be the same with the others is the opposite of being other than the others?

Certainly.

And in that it was other it was shown to be like?

Yes.

But in that it was the same it will be unlike by virtue of the opposite affection to that which made it like; and this was the affection of otherness.

Yes.

The same then will make it unlike; otherwise it will not be the opposite of the other.

True.

148c

Then the one will be both like and unlike the others; like in so far as it is other, and unlike in so far as it is the same.

Yes, that argument may be used.

And there is another argument.

What?

In so far as it is affected in the same way it is not affected otherwise, and not being affected otherwise is not unlike, and not being unlike, is like; but in so far as it is affected by other it is otherwise, and being otherwise affected is unlike.

True.

Then because the one is the same with the others and other than the others, on either of these two grounds, or on both of them, it will be both like and unlike the others?

Certainly.

148d

And in the same way as being other than itself and the same with itself, on either of these two grounds and on both of them, it will be like and unlike itself?

Of course.

Again, how far can the one touch or not touch itself and others? — consider.

I am considering.

The one was shown to be in itself which was a whole?

True.

And also in other things?

Yes.

In so far as it is in other things it would touch other things, but in so far as it is in itself it would be debarred from touching them, and would touch itself only.

Clearly.

148e

Then the inference is that it would touch both?

It would.

But what do you say to a new point of view? Must not that which is to touch another be next to that which it is to touch, and occupy the place nearest to that in which what it touches is situated?

True.

Then the one, if it is to touch itself, ought to be situated next to itself, and occupy the place next to that in which itself is?

It ought.

And that would require that the one should be two, and be in two places at once, and this, while it is one, will never happen.

No.

Then the one cannot touch itself any more than it can be two?

It cannot.

149a

Neither can it touch others.

Why not?

The reason is, that whatever is to touch another must be in separation from, and next to, that which it is to touch, and no third thing can be between them.

True.

Two things, then, at the least are necessary to make contact possible?

They are.

And if to the two a third be added in due order, the number of terms will be three, and the contacts two?

Yes.

149b

And every additional term makes one additional contact, whence it follows that the contacts are one less in number than the terms; the first two terms exceeded the number of contacts by one, and the whole number of terms exceeds the whole number of contacts by one in like manner; and for every one which is afterwards added to the number of terms, one contact is added to the contacts.

True.

Whatever is the whole number of things, the contacts will be always one less.

True.

But if there be only one, and not two, there will be no contact?

How can there be?

And do we not say that the others being other than the one are not one and have no part in the one?

True.

Then they have no number, if they have no one in them?

Of course not.

Then the others are neither one nor two, nor are they called by the name of any number?

No.

One, then, alone is one, and two do not exist?

Clearly not.

And if there are not two, there is no contact?

There is not.

Then neither does the one touch the others, nor the others the one, if there is no contact?

^{149d}

Certainly not.

For all which reasons the one touches and does not touch itself and the others?

True.

Further — is the one equal and unequal to itself and others?

How do you mean?

If the one were greater or less than the others, or the others greater or less than the one, they would not be greater or less

than each other in virtue of their being the one and the others; but, if in addition to their being what they are they had equality, they would be equal to one another, or if the one had smallness and the others greatness, or the one had greatness and the others smallness — whichever kind had greatness would be greater, and whichever had smallness would be smaller?

149e

Certainly.

Then there are two such ideas as greatness and smallness; for if they were not they could not be opposed to each other and be present in that which is.

How could they?

If, then, smallness is present in the one it will be present either in the whole or in a part of the whole?

Certainly.

Suppose the first; it will be either co-equal and co-extensive with the whole one, or will contain the one?

Clearly.

If it be co-extensive with the one it will be co-equal with the one, or if containing the one it will be greater than the one?

Of course.

But can smallness be equal to anything or greater than anything, and have the functions of greatness and equality and not its own functions?

Impossible.

150b

Then smallness cannot be in the whole of one, but, if at all, in a part only?

Yes.

And surely not in all of a part, for then the difficulty of the whole will recur; it will be equal to or greater than any part in which it is.

Certainly.

Then smallness will not be in anything, whether in a whole or in a part; nor will there be anything small but actual smallness.

True.

Neither will greatness be in the one, for if greatness be in anything there will be something greater other and besides greatness itself, namely, that in which greatness is; and this too when the small itself is not there, which the one, if it is great, must exceed; this, however, is impossible, seeing that smallness is wholly absent.

True.

But absolute greatness is only greater than absolute smallness, and smallness is only smaller than absolute greatness.

Very true.

Then other things not greater or less than the one, if they have neither greatness nor smallness; nor have greatness or smallness any power of exceeding or being exceeded in relation to the one, but only in relation to one another; nor will the one be greater or less than them or others, if it has neither greatness nor smallness.

Clearly not.

Then if the one is neither greater nor less than the others, it cannot either exceed or be exceeded by them?

Certainly not.

And that which neither exceeds nor is exceeded, must be on an equality; and being on an equality, must be equal.

Of course.

And this will be true also of the relation of the one to itself; having neither greatness nor smallness in itself, it will neither exceed nor be exceeded by itself, but will be on an equality with and equal to itself.

150e

Certainly.

Then the one will be equal both to itself and the others?

Clearly so.

And yet the one, being itself in itself, will also surround and be without itself; and, as containing itself, will be greater than itself; and, as contained in itself, will be less; and will thus be greater and less than itself.

It will.

Now there cannot possibly be anything which is not included in the one and the others?

151a

Of course not.

But, surely, that which is must always be somewhere?

Yes.

But that which is in anything will be less, and that in which it is will be greater; in no other way can one thing be in another.

True.

And since there is nothing other or besides the one and the others, and they must be in something, must they not be in one another, the one in the others and the others in the one, if they are to be anywhere?

That is clear.

151b

But inasmuch as the one is in the others, the others will be greater than the one, because they contain the one, which will be less than the others, because it is contained in them; and inasmuch as the others are in the one, the one on the same principle will be greater than the others, and the others less than the one.

True.

The one, then, will be equal to and greater and less than itself and the others?

Clearly.

And if it be greater and less and equal, it will be of equal and more and less measures or divisions than itself and the others, and if of measures, also of parts?

Of course.

151c

And if of equal and more and less measures or divisions, it will be in number more or less than itself and the others, and likewise equal in number to itself and to the others?

How is that?

It will be of more measures than those things which it exceeds, and of as many parts as measures; and so with that to which it is equal, and that than which it is less.

True.

And being greater and less than itself, and equal to itself, it will be of equal measures with itself and of more and fewer measures than itself; and if of measures then also of parts?

It will.

151d

And being of equal parts with itself, it will be numerically equal to itself; and being of more parts, more, and being of less, less than itself?

Certainly.

And the same will hold of its relation to other things; inasmuch as it is greater than them, it will be more in number than them; and inasmuch as it is smaller, it will be less in number; and inasmuch as it is equal in size to other things, it will be equal to them in number.

Certainly.

Once more, then, as would appear, the one will be in number both equal to and more and less than both itself and all other things.

It will.

151e

Does the one also partake of time? And is it and does it become older and younger than itself and others, and again, neither younger nor older than itself and others, by virtue of participation in time?

152a

How do you mean?

If one is, being must be predicated of it?

Yes.

But to be (einaí) is only participation of being in present time, and to have been is the participation of being at a past time, and to be about to be is the participation of being at a future time?

Very true.

Then the one, since it partakes of being, partakes of time?

Certainly.

And is not time always moving forward?

Yes.

Then the one is always becoming older than itself, since it moves forward in time?

152b

Certainly.

And do you remember that the older becomes older than that which becomes younger?

I remember.

Then since the one becomes older than itself, it becomes younger at the same time?

Certainly.

Thus, then, the one becomes older as well as younger than itself?

Yes.

And it is older (is it not?) when in becoming, it gets to the point of time between 'was' and 'will be,' which is 'now': for surely in going from the past to the future, it cannot skip the present?

152c

No.

And when it arrives at the present it stops from becoming older, and no longer becomes, but is older, for if it went on it would never be reached by the present, for it is the nature of that which goes on, to touch both the present and the future, letting go the present and seizing the future, while in process of becoming between them.

True.

But that which is becoming cannot skip the present; when it reaches the present it ceases to become, and is then whatever it

may happen to be becoming.

152d

Clearly.

And so the one, when in becoming older it reaches the present, ceases to become, and is then older.

Certainly.

And it is older than that than which it was becoming older, and it was becoming older than itself.

Yes.

And that which is older is older than that which is younger?

True.

Then the one is younger than itself, when in becoming older it reaches the present?

Certainly.

But the present is always present with the one during all its being; for whenever it is it is always now.

Certainly.

Then the one always both is and becomes older and younger than itself?

Truly.

152e

And is it or does it become a longer time than itself or an equal time with itself?

An equal time.

But if it becomes or is for an equal time with itself, it is of the same age with itself?

Of course.

And that which is of the same age, is neither older nor younger?

No.

The one, then, becoming and being the same time with itself, neither is nor becomes older or younger than itself?

I should say not.

And what are its relations to other things? Is it or does it become older or younger than they?

I cannot tell you.

You can at least tell me that others than the one are more than the one — other would have been one, but the others have multitude, and are more than one?

153a

They will have multitude.

And a multitude implies a number larger than one?

Of course.

And shall we say that the lesser or the greater is the first to come or to have come into existence?

The lesser.

Then the least is the first? And that is the one?

Yes.

Then the one of all things that have number is the first to come into being; but all other things have also number, being plural and not singular.

They have.

And since it came into being first it must be supposed to have come into being prior to the others, and the others later; and the things which came into being later, are younger than that which preceded them? And so the other things will be younger

than the one, and the one older than other things?

True.

What would you say of another question? Can the one have come into being contrary to its own nature, or is that impossible?

Impossible.

153c

And yet, surely, the one was shown to have parts; and if parts, then a beginning, middle and end?

Yes.

And a beginning, both of the one itself and of all other things, comes into being first of all; and after the beginning, the others follow, until you reach the end?

Certainly.

And all these others we shall affirm to be parts of the whole and of the one, which, as soon as the end is reached, has become whole and one?

Yes; that is what we shall say.

153d

But the end comes last, and the one is of such a nature as to come into being with the last; and, since the one cannot come into being except in accordance with its own nature, its nature will require that it should come into being after the others, simultaneously with the end.

Clearly.

Then the one is younger than the others and the others older than the one.

That also is clear in my judgment.

Well, and must not a beginning or any other part of the one or of anything, if it be a part and not parts, being a part, be also of necessity one?

Certainly.

153e

And will not the one come into being together with each part — together with the first part when that comes into being, and together with the second part and with all the rest, and will not be wanting to any part, which is added to any other part until it has reached the last and become one whole; it will be wanting neither to the middle, nor to the first, nor to the last, nor to any of them, while the process of becoming is going on?

True.

154a

Then the one is of the same age with all the others, so that if the one itself does not contradict its own nature, it will be neither prior nor posterior to the others, but simultaneous; and according to this argument the one will be neither older nor younger than the others, nor the others than the one, but according to the previous argument the one will be older and younger than the others and the others than the one.

Certainly.

After this manner then the one is and has become. But as to its becoming older and younger than the others, and the others than the one, and neither older nor younger, what shall we say? Shall we say as of being so also of becoming, or otherwise?

I cannot answer.

154b

But I can venture to say, that even if one thing were older or younger than another, it could not become older or younger in a greater degree than it was at first; for equals added to unequals, whether to periods of time or to anything else, leave

the difference between them the same as at first.

Of course.

Then that which is, cannot become older or younger than that which is, since the difference of age is always the same; the one is and has become older and the other younger; but they are no longer becoming so.

True.

And the one which is does not therefore become either older or younger than the others which are.

No.

But consider whether they may not become older and younger in another way.

In what way?

154c

Just as the one was proven to be older than the others and the others than the one.

And what of that?

If the one is older than the others, has come into being a longer time than the others.

Yes.

But consider again; if we add equal time to a greater and a less time, will the greater differ from the less time by an equal or by a smaller portion than before?

By a smaller portion.

154d

Then the difference between the age of the one and the age of the others will not be afterwards so great as at first, but if an equal time be added to both of them they will differ less and less in age?

Yes.

And that which differs in age from some other less than formerly, from being older will become younger in relation to that other than which it was older?

Yes, younger.

And if the one becomes younger the others aforesaid will become older than they were before, in relation to the one.

154e

Certainly.

155a

Then that which had become younger becomes older relatively to that which previously had become and was older; it never really is older, but is always becoming, for the one is always growing on the side of youth and the other on the side of age. And in like manner the older is always in process of becoming younger than the younger; for as they are always going in opposite directions they become in ways the opposite to one another, the younger older than the older, and the older younger than the younger. They cannot, however, have become; for if they had already become they would be and not merely become. But that is impossible; for they are always becoming both older and younger than one another: the one becomes younger than the others because it was seen to be older and prior, and the others become older than the one because they came into being later; and in the same way the others are in the same relation to the one, because they were seen to be older, and prior to the one.

That is clear.

155b

Inasmuch then, one thing does not become older or younger than another, in that they always differ from each other by an equal number, the one cannot become older or younger than

the others, nor the others than the one; but inasmuch as that which came into being earlier and that which came into being later must continually differ from each other by a different portion — in this point of view the others must become older and younger than the one, and the one than the others.

155c

Certainly.

For all these reasons, then, the one is and becomes older and younger than itself and the others, and neither is nor becomes older or younger than itself or the others.

Certainly.

But since the one partakes of time, and partakes of becoming older and younger, must it not also partake of the past, the present, and the future?

Of course it must.

Then the one was and is and will be, and was becoming and is becoming and will become?

Certainly.

155d

And there is and was and will be something which is in relation to it and belongs to it?

True.

And since we have at this moment opinion and knowledge and perception of the one, there is opinion and knowledge and perception of it?

Quite right.

Then there is name and expression for it, and it is named and expressed, and everything of this kind which appertains to other things appertains to the one.

Certainly, that is true.

155e

Yet once more and for the third time, let us consider: If the one is both one and many, as we have described, and is neither one nor many, and participates in time, must it not, in as far as it is one, at times partake of being, and in as far as it is not one, at times not partake of being?

Certainly.

But can it partake of being when not partaking of being, or not partake of being when partaking of being?

Impossible.

Then the one partakes and does not partake of being at different times, for that is the only way in which it can partake and not partake of the same.

True.

156a

And is there not also a time at which it assumes being and relinquishes being — for how can it have and not have the same thing unless it receives and also gives it up at some time?

Impossible.

And the assuming of being is what you would call becoming?

I should.

And the relinquishing of being you would call destruction?

I should.

The one then, as would appear, becomes and is destroyed by taking and giving up being.

Certainly.

And being one and many and in process of becoming and being destroyed, when it becomes one it ceases to be many, and when many, it ceases to be one?

Certainly.

156b

And as it becomes one and many, must it not inevitably experience separation and aggregation?

Inevitably.

And whenever it becomes like and unlike it must be assimilated and dissimilated?

Yes.

And when it becomes greater or less or equal it must grow or diminish or be equalized?

True.

And when being in motion it rests, and when being at rest it changes to motion, it can surely be in no time at all?

How can it?

156c

But that a thing which is previously at rest should be afterwards in motion, or previously in motion and afterwards at rest, without experiencing change, is impossible.

Impossible.

And surely there cannot be a time in which a thing can be at once neither in motion nor at rest?

There cannot.

But neither can it change without changing.

True.

When then does it change; for it cannot change either when at rest, or when in motion, or when in time?

It cannot.

156d

And does this strange thing in which it is at the time of changing really exist?

What thing?

156e

The moment. For the moment seems to imply a something out of which change takes place into either of two states; for the change is not from the state of rest as such, nor from the state of motion as such; but there is this curious nature which we call the moment lying between rest and motion, not being in any time; and into this and out of this what is in motion changes into rest, and what is at rest into motion.

So it appears.

And the one then, since it is at rest and also in motion, will change to either, for only in this way can it be in both. And in changing it changes in a moment, and when it is changing it will be in no time, and will not then be either in motion or at rest.

157a

It will not.

And it will be in the same case in relation to the other changes, when it passes from being into cessation of being, or from not-being into becoming — then it passes between certain states of motion and rest, and neither is nor is not, nor becomes nor is destroyed.

Very true.

157b

And on the same principle, in the passage from one to many and from many to one, the one is neither one nor many, neither

separated nor aggregated; and in the passage from like to unlike, and from unlike to like, it is neither like nor unlike, neither in a state of assimilation nor of dissimilation; and in the passage from small to great and equal and back again, it will be neither small nor great, nor equal, nor in a state of increase, or diminution, or equalization.

True.

All these, then, are the affections of the one, if the one has being.

Of course.

1.aa. But if one is, what will happen to the others — is not that also to be considered?

Yes.

Let us show then, if one is, what will be the affections of the others than the one.

Let us do so.

Inasmuch as there are things other than the one, the others are not the one; for if they were they could not be other than the one.

157c

Very true.

Nor are the others altogether without the one, but in a certain way they participate in the one.

In what way?

Because the others are other than the one inasmuch as they have parts; for if they had no parts they would be simply one.

Right.

And parts, as we affirm, have relation to a whole?

So we say.

And a whole must necessarily be one made up of many; and the parts will be parts of the one, for each of the parts is not a part of many, but of a whole.

How do you mean?

157d

If anything were a part of many, being itself one of them, it will surely be a part of itself, which is impossible, and it will be a part of each one of the other parts, if of all; for if not a part of some one, it will be a part of all the others but this one, and thus will not be a part of each one; and if not a part of each, one it will not be a part of any one of the many; and not being a part of any one, it cannot be a part or anything else of all those things of none of which it is anything.

Clearly not.

157e

Then the part is not a part of the many, nor of all, but is of a certain single form, which we call a whole, being one perfect unity framed out of all — of this the part will be a part.

Certainly.

If, then, the others have parts, they will participate in the whole and in the one.

True.

Then the others than the one must be one perfect whole, having parts.

Certainly.

158a

And the same argument holds of each part, for the part must participate in the one; for if each of the parts is a part, this means, I suppose, that it is one separate from the rest and

self-related; otherwise it is not each.

True.

But when we speak of the part participating in the one, it must clearly be other than one; for if not, it would not merely have participated, but would have been one; whereas only the itself can be one.

Very true.

Both the whole and the part must participate in the one; for the whole will be one whole, of which the parts will be parts; and each part will be one part of the whole which is the whole of the part.

True.

158b

And will not the things which participate in the one, be other than it?

Of course.

And the things which are other than the one will be many; for if the things which are other than the one were neither one nor more than one, they would be nothing.

True.

But, seeing that the things which participate in the one as a part, and in the one as a whole, are more than one, must not those very things which participate in the one be infinite in number?

158c

How so?

Let us look at the matter thus: — Is it not a fact that in partaking of the one they are not one, and do not partake of the one at the very time when they are partaking of it?

Clearly.

They do so then as multitudes in which the one is not present?

Very true.

And if we were to abstract from them in idea the very smallest fraction, must not that least fraction, if it does not partake of the one, be a multitude and not one?

It must.

And if we continue to look at the other side of their nature, regarded simply, and in itself, will not they, as far as we see them, be unlimited in number?

Certainly.

158d

And yet, when each several part becomes a part, then the parts have a limit in relation to the whole and to each other, and the whole in relation to the parts.

Just so.

The result to the others than the one is that the union of themselves and the one appears to create a new element in them which gives to them limitation in relation to one another; whereas in their own nature they have no limit.

That is clear.

Then the others than the one, both as whole and parts, are infinite, and also partake of limit.

Certainly.

Then they are both like and unlike one another and themselves.

158e

How is that?

Inasmuch as they are unlimited in their own nature, they are all affected in the same way.

True.

And inasmuch as they all partake of limit, they are all affected in the same way.

Of course.

But inasmuch as their state is both limited and unlimited, they are affected in opposite ways.

159a

Yes.

And opposites are the most unlike of things.

Certainly.

Considered, then, in regard to either one of their affections, they will be like themselves and one another; considered in reference to both of them together, most opposed and most unlike.

That appears to be true.

Then the others are both like and unlike themselves and one another?

True.

And they are the same and also different from one another, and in motion and at rest, and experience every sort of opposite affection, as may be proved without difficulty of them, since they have been shown to have experienced the affections aforesaid?

159b

True.

1.bb. Suppose, now, that we leave the further discussion of these matters as evident, and consider again upon the

hypothesis that the one is, whether opposite of all this is or is not equally true of the others.

By all means.

Then let us begin again, and ask, If one is, what must be the affections of the others?

Let us ask that question.

Must not the one be distinct from the others, and the others from the one?

Why so?

159c

Why, because there is nothing else beside them which is distinct from both of them; for the expression 'one and the others' includes all things.

Yes, all things.

Then we cannot suppose that there is anything different from them in which both the one and the others might exist?

There is nothing.

Then the one and the others are never in the same?

True.

Then they are separated from each other?

Yes.

And we surely cannot say that what is truly one has parts?

Impossible.

Then the one will not be in the others as a whole, nor as part, if it be separated from the others, and has no parts?

Impossible.

Then there is no way in which the others can partake of the one, if they do not partake either in whole or in part?

It would seem not.

Then there is no way in which the others are one, or have in themselves any unity?

There is not.

Nor are the others many; for if they were many, each part of them would be a part of the whole; but now the others, not partaking in any way of the one, are neither one nor many, nor whole, nor part.

True.

Then the others neither are nor contain two or three, if entirely deprived of the one?

159e

True.

Then the others are neither like nor unlike the one, nor is likeness and unlikeness in them; for if they were like and unlike, or had in them likeness and unlikeness, they would have two natures in them opposite to one another.

That is clear.

But for that which partakes of nothing to partake of two things was held by us to be impossible?

Impossible.

Then the others are neither like nor unlike nor both, for if they were like or unlike they would partake of one of those two natures, which would be one thing, and if they were both they would partake of opposites which would be two things, and this has been shown to be impossible.

True.

160a

Therefore they are neither the same, nor other, nor in motion, nor at rest, nor in a state of becoming, nor of being destroyed, nor greater, nor less, nor equal, nor have they experienced anything else of the sort; for, if they are capable of experiencing any such affection, they will participate in one and two and three, and odd and even, and in these, as has been proved, they do not participate, seeing that they are altogether and in every way devoid of the one.

Very true.

160b

Therefore if one is, the one is all things, and also nothing, both in relation to itself and to other things.

Certainly.

2.a. Well, and ought we not to consider next what will be the consequence if the one is not?

Yes; we ought.

What is the meaning of the hypothesis — If the one is not; is there any difference between this and the hypothesis — If the not one is not?

There is a difference, certainly.

Is there a difference only, or rather are not the two expressions — if the one is not, and if the not one is not, entirely opposed?

160c

They are entirely opposed.

And suppose a person to say: — If greatness is not, if smallness is not, or anything of that sort, does he not mean, whenever he uses such an expression, that ‘what is not’ is other than other things?

To be sure.

And so when he says 'If one is not' he clearly means, that what 'is not' is other than all others; we know what he means — do we not?

Yes, we do.

When he says 'one,' he says something which is known; and secondly something which is other than all other things; it makes no difference whether he predicate of one being or not-being, for that which is said 'not to be' is known to be something all the same, and is distinguished from other things.

160d

Certainly.

Then I will begin again, and ask: If one is not, what are the consequences? In the first place, as would appear, there is a knowledge of it, or the very meaning of the words, 'if one is not,' would not be known.

True.

160e

Secondly, the others differ from it, or it could not be described as different from the others?

Certainly.

Difference, then, belongs to it as well as knowledge; for in speaking of the one as different from the others, we do not speak of a difference in the others, but in the one.

Clearly so.

Moreover, the one that is not is something and partakes of relation to 'that,' and 'this,' and 'these,' and the like, and is an attribute of 'this'; for the one, or the others than the one, could not have been spoken of, nor could any attribute or relative of the one that is not have been or been spoken of, nor could it have been said to be anything, if it did not partake of 'some,' or

of the other relations just now mentioned.

161a

True.

Being, then, cannot be ascribed to the one, since it is not; but the one that is not may or rather must participate in many things, if it and nothing else is not; if, however, neither the one nor the one that is not is supposed not to be, and we are speaking of something of a different nature, we can predicate nothing of it. But supposing that the one that is not and nothing else is not, then it must participate in the predicate 'that,' and in many others.

161b

Certainly.

And it will have unlikeness in relation to the others, for the others being different from the one will be of a different kind.

Certainly.

And are not things of a different kind also other in kind?

Of course.

And are not things other in kind unlike?

They are unlike.

And if they are unlike the one, that which they are unlike will clearly be unlike them?

Clearly so.

Then the one will have unlikeness in respect of which the others are unlike it?

That would seem to be true.

And if unlikeness to other things is attributed to it, it must have likeness to itself.

161c

How so?

If the one have unlikeness to one, something else must be meant; nor will the hypothesis relate to one; but it will relate to something other than one?

Quite so.

But that cannot be.

No.

Then the one must have likeness to itself?

It must.

Again, it is not equal to the others; for if it were equal, then it would at once be and be like them in virtue of the equality; but if one has no being, then it can neither be nor be like?

It cannot.

But since it is not equal to the others, neither can the others be equal to it?

161d

Certainly not.

And things that are not equal are unequal?

True.

And they are unequal to an unequal?

Of course.

Then the one partakes of inequality, and in respect of this the others are unequal to it?

Very true.

And inequality implies greatness and smallness?

Yes.

Then the one, if of such a nature, has greatness and smallness?

That appears to be true.

And greatness and smallness always stand apart?

True.

161e

Then there is always something between them?

There is.

And can you think of anything else which is between them other than equality?

No, it is equality which lies between them.

Then that which has greatness and smallness also has equality, which lies between them?

That is clear.

Then the one, which is not, partakes, as would appear, of greatness and smallness and equality?

Clearly.

Further, it must surely in a sort partake of being?

How so?

It must be so, for if not, then we should not speak the truth in saying that the one is not. But if we speak the truth, clearly we must say what is. Am I not right?

Yes.

162a

And since we affirm that we speak truly, we must also affirm that we say what is?

Certainly.

Then, as would appear, the one, when it is not, is; for if it were not to be when it is not, but (Or, 'to remit something of existence in relation to not-being.') were to relinquish something of being, so as to become not-being, it would at once be.

Quite true.

Then the one which is not, if it is to maintain itself, must have the being of not-being as the bond of not-being, just as being must have as a bond the not-being of not-being in order to perfect its own being; for the truest assertion of the being of being and of the not-being of not-being is when being partakes of the being of being, and not of the being of not-being — that is, the perfection of being; and when not-being does not partake of the not-being of not-being but of the being of not-being — that is the perfection of not-being.

Most true.

Since then what is partakes of not-being, and what is not of being, must not the one also partake of being in order not to be?

Certainly.

Then the one, if it is not, clearly has being?

^{162c}

Clearly.

And has not-being also, if it is not?

Of course.

But can anything which is in a certain state not be in that state without changing?

Impossible.

Then everything which is and is not in a certain state, implies change?

Certainly.

And change is motion — we may say that?

Yes, motion.

And the one has been proved both to be and not to be?

Yes.

And therefore is and is not in the same state?

Yes.

Thus the one that is not has been shown to have motion also, because it changes from being to not-being?

162d

That appears to be true.

But surely if it is nowhere among what is, as is the fact, since it is not, it cannot change from one place to another?

Impossible.

Then it cannot move by changing place?

No.

Nor can it turn on the same spot, for it nowhere touches the same, for the same is, and that which is not cannot be reckoned among things that are?

It cannot.

Then the one, if it is not, cannot turn in that in which it is not?

No.

162e

Neither can the one, whether it is or is not, be altered into other than itself, for if it altered and became different from itself, then we could not be still speaking of the one, but of something else?

True.

But if the one neither suffers alteration, nor turns round in the same place, nor changes place, can it still be capable of motion?

Impossible.

163a

Now that which is unmoved must surely be at rest, and that which is at rest must stand still?

Certainly.

Then the one that is not, stands still, and is also in motion?

That seems to be true.

But if it be in motion it must necessarily undergo alteration, for anything which is moved, in so far as it is moved, is no longer in the same state, but in another?

Yes.

Then the one, being moved, is altered?

Yes.

And, further, if not moved in any way, it will not be altered in any way?

No.

Then, in so far as the one that is not is moved, it is altered, but in so far as it is not moved, it is not altered?

163b

Right.

Then the one that is not is altered and is not altered?

That is clear.

And must not that which is altered become other than it previously was, and lose its former state and be destroyed; but that which is not altered can neither come into being nor be

destroyed?

Very true.

And the one that is not, being altered, becomes and is destroyed; and not being altered, neither becomes nor is destroyed; and so the one that is not becomes and is destroyed, and neither becomes nor is destroyed?

163c

True.

2.b. And now, let us go back once more to the beginning, and see whether these or some other consequences will follow.

Let us do as you say.

If one is not, we ask what will happen in respect of one? That is the question.

Yes.

Do not the words 'is not' signify absence of being in that to which we apply them?

Just so.

And when we say that a thing is not, do we mean that it is not in one way but is in another? or do we mean, absolutely, that what is not has in no sort or way or kind participation of being?

163d

Quite absolutely.

Then, that which is not cannot be, or in any way participate in being?

It cannot.

And did we not mean by becoming, and being destroyed, the assumption of being and the loss of being?

Nothing else.

And can that which has no participation in being, either assume or lose being?

Impossible.

The one then, since it in no way is, cannot have or lose or assume being in any way?

True.

Then the one that is not, since it in no way partakes of being, neither perishes nor becomes?

163e

No.

Then it is not altered at all; for if it were it would become and be destroyed?

True.

But if it be not altered it cannot be moved?

Certainly not.

Nor can we say that it stands, if it is nowhere; for that which stands must always be in one and the same spot?

Of course.

Then we must say that the one which is not never stands still and never moves?

Neither.

Nor is there any existing thing which can be attributed to it; for if there had been, it would partake of being?

164a

That is clear.

And therefore neither smallness, nor greatness, nor equality, can be attributed to it?

No.

Nor yet likeness nor difference, either in relation to itself or to others?

Clearly not.

Well, and if nothing should be attributed to it, can other things be attributed to it?

Certainly not.

And therefore other things can neither be like or unlike, the same, or different in relation to it?

They cannot.

164b

Nor can what is not, be anything, or be this thing, or be related to or the attribute of this or that or other, or be past, present, or future. Nor can knowledge, or opinion, or perception, or expression, or name, or any other thing that is, have any concern with it?

No.

Then the one that is not has no condition of any kind?

Such appears to be the conclusion.

2.aa. Yet once more; if one is not, what becomes of the others? Let us determine that.

Yes; let us determine that.

The others must surely be; for if they, like the one, were not, we could not be now speaking of them.

True.

But to speak of the others implies difference — the terms 'other' and 'different' are synonymous?

True.

Other means other than other, and different, different from the different?

Yes.

Then, if there are to be others, there is something than which they will be other?

Certainly.

And what can that be? — for if the one is not, they will not be other than the one.

They will not.

Then they will be other than each other; for the only remaining alternative is that they are other than nothing.

True.

164d

And they are each other than one another, as being plural and not singular; for if one is not, they cannot be singular, but every particle of them is infinite in number; and even if a person takes that which appears to be the smallest fraction, this, which seemed one, in a moment evanesces into many, as in a dream, and from being the smallest becomes very great, in comparison with the fractions into which it is split up?

Very true.

And in such particles the others will be other than one another, if others are, and the one is not?

Exactly.

And will there not be many particles, each appearing to be one, but not being one, if one is not?

True.

164e

And it would seem that number can be predicated of them if each of them appears to be one, though it is really many?

It can.

And there will seem to be odd and even among them, which will also have no reality, if one is not?

Yes.

165a

And there will appear to be a least among them; and even this will seem large and manifold in comparison with the many small fractions which are contained in it?

Certainly.

And each particle will be imagined to be equal to the many and little; for it could not have appeared to pass from the greater to the less without having appeared to arrive at the middle; and thus would arise the appearance of equality.

Yes.

And having neither beginning, middle, nor end, each separate particle yet appears to have a limit in relation to itself and other.

165b

How so?

Because, when a person conceives of any one of these as such, prior to the beginning another beginning appears, and there is another end, remaining after the end, and in the middle truer middles within but smaller, because no unity can be conceived of any of them, since the one is not.

Very true.

And so all being, whatever we think of, must be broken up into fractions, for a particle will have to be conceived of without unity?

Certainly.

165c

And such being when seen indistinctly and at a distance, appears to be one; but when seen near and with keen intellect, every single thing appears to be infinite, since it is deprived of the one, which is not?

Nothing more certain.

Then each of the others must appear to be infinite and finite, and one and many, if others than the one exist and not the one.

They must.

Then will they not appear to be like and unlike?

In what way?

Just as in a picture things appear to be all one to a person standing at a distance, and to be in the same state and alike?

True.

But when you approach them, they appear to be many and different; and because of the appearance of the difference, different in kind from, and unlike, themselves?

165d

True.

And so must the particles appear to be like and unlike themselves and each other.

Certainly.

165e

And must they not be the same and yet different from one another, and in contact with themselves, although they are separated, and having every sort of motion, and every sort of rest, and becoming and being destroyed, and in neither state, and the like, all which things may be easily enumerated, if the

one is not and the many are?

Most true.

2.bb. Once more, let us go back to the beginning, and ask if the one is not, and the others of the one are, what will follow.

Let us ask that question.

In the first place, the others will not be one?

Impossible.

Nor will they be many; for if they were many one would be contained in them. But if no one of them is one, all of them are nought, and therefore they will not be many.

True.

If there be no one in the others, the others are neither many nor one.

They are not.

Nor do they appear either as one or many.

Why not?

Because the others have no sort or manner or way of communion with any sort of not-being, nor can anything which is not, be connected with any of the others; for that which is not has no parts.

True.

Nor is there an opinion or any appearance of not-being in connexion with the others, nor is not-being ever in any way attributed to the others.

No.

166b

Then if one is not, there is no conception of any of the others either as one or many; for you cannot conceive the many

without the one.

You cannot.

Then if one is not, the others neither are, nor can be conceived to be either one or many?

It would seem not.

Nor as like or unlike?

No.

Nor as the same or different, nor in contact or separation, nor in any of those states which we enumerated as appearing to be; — the others neither are nor appear to be any of these, if one is not?

True.

166c

Then may we not sum up the argument in a word and say truly: If one is not, then nothing is?

Certainly.

Let thus much be said; and further let us affirm what seems to be the truth, that, whether one is or is not, one and the others in relation to themselves and one another, all of them, in every way, are and are not, and appear to be and appear not to be.

Most true.

57a

Place of the narration: Phlius.

Echecrates: Were you yourself, Phaedo, in the prison with Socrates on the day when he drank the poison?

Phaedo: Yes, Echecrates, I was.

Echecrates: I should so like to hear about his death. What did he say in his last hours? We were informed that he died by taking poison, but no one knew anything more; for no Phliasian ever goes to Athens now, and it is a long time since any stranger from Athens has found his way hither; so that we had no clear account.

57b

Phaedo: Did you not hear of the proceedings at the trial?

58a

Echecrates: Yes; some one told us about the trial, and we could not understand why, having been condemned, he should have been put to death, not at the time, but long afterwards. What was the reason of this?

Phaedo: An accident, Echecrates: the stern of the ship which the Athenians send to Delos happened to have been crowned on the day before he was tried.

Echecrates: What is this ship?

Phaedo: It is the ship in which, according to Athenian tradition, Theseus went to Crete when he took with him the fourteen youths, and was the saviour of them and of himself. And they were said to have vowed to Apollo at the time, that if they were saved they would send a yearly mission to Delos. Now this custom still continues, and the whole period of the voyage to and from Delos, beginning when the priest of Apollo crowns the stern of the ship, is a holy season, during which the city is not allowed to be polluted by public executions; and when the vessel is detained by contrary winds, the time spent in going and returning is very considerable. As I was saying, the ship was crowned on the day before the trial, and this was the reason why Socrates lay in prison and was not put to death until long after he was condemned.

58c

Echecrates: What was the manner of his death, Phaedo? What was said or done? And which of his friends were with him? Or did the authorities forbid them to be present — so that he had no friends near him when he died?

Phaedo: No; there were several of them with him.

Echecrates: If you have nothing to do, I wish that you would tell me what passed, as exactly as you can.

58d

Phaedo: I have nothing at all to do, and will try to gratify your wish. To be reminded of Socrates is always the greatest delight to me, whether I speak myself or hear another speak of him.

Echecrates: You will have listeners who are of the same mind with you, and I hope that you will be as exact as you can.

Phaedo: I had a singular feeling at being in his company. For I could hardly believe that I was present at the death of a friend, and therefore I did not pity him, Echecrates; he died so fearlessly, and his words and bearing were so noble and gracious, that to me he appeared blessed. I thought that in going to the other world he could not be without a divine call, and that he would be happy, if any man ever was, when he arrived there, and therefore I did not pity him as might have seemed natural at such an hour. But I had not the pleasure which I usually feel in philosophical discourse (for philosophy was the theme of which we spoke). I was pleased, but in the pleasure there was also a strange admixture of pain; for I reflected that he was soon to die, and this double feeling was shared by us all; we were laughing and weeping by turns, especially the excitable Apollodorus — you know the sort of man?

Echecrates: Yes.

Phaedo: He was quite beside himself; and I and all of us were greatly moved.

59b

Echecrates: Who were present?

Phaedo: Of native Athenians there were, besides Apollodorus, Critobulus and his father Crito, Hermogenes, Epigenes, Aeschines, Antisthenes; likewise Ctesippus of the deme of Paeania, Menexenus, and some others; Plato, if I am not mistaken, was ill.

Echecrates: Were there any strangers?

59c

Phaedo: Yes, there were; Simmias the Theban, and Cebes, and Phaedondes; Euclid and Terpison, who came from Megara.

59d

Echecrates: And was Aristippus there, and Cleombrotus?

Phaedo: No, they were said to be in Aegina.

Echecrates: Any one else?

Phaedo: I think that these were nearly all.

Echecrates: Well, and what did you talk about?

60a

Phaedo: I will begin at the beginning, and endeavour to repeat the entire conversation. On the previous days we had been in the habit of assembling early in the morning at the court in which the trial took place, and which is not far from the prison. There we used to wait talking with one another until the opening of the doors (for they were not opened very early); then we went in and generally passed the day with Socrates. On the last morning we assembled sooner than usual, having heard on the day before when we quitted the prison in the evening that the sacred ship had come from Delos, and so we arranged to meet very early at the accustomed place. On our arrival the jailer who answered the door, instead of admitting us, came out and told us to stay until he called us. 'For the Eleven,' he said, 'are now with Socrates; they are taking off his chains, and giving orders that he is to die to-day.' He soon returned and said that we might come in. On entering we found Socrates just released from chains, and Xanthippe, whom you know, sitting by him, and holding his child in her arms. When she saw us she uttered a cry and said, as women will: 'O Socrates, this is the last time that either you will converse with your friends, or they with you.' Socrates turned to Crito and said: 'Crito, let some one take her home.' Some of Crito's people accordingly led her away, crying out and beating herself. And when she was gone, Socrates, sitting up on the couch, bent and rubbed his leg, saying, as he was rubbing: How singular is the thing called pleasure, and how curiously related to pain, which might be thought to be the opposite of it; for they are never present to a man at the same instant, and yet he who pursues either is

generally compelled to take the other; their bodies are two, but they are joined by a single head. And I cannot help thinking that if Aesop had remembered them, he would have made a fable about God trying to reconcile their strife, and how, when he could not, he fastened their heads together; and this is the reason why when one comes the other follows, as I know by my own experience now, when after the pain in my leg which was caused by the chain pleasure appears to succeed.

60c

Upon this Cebes said: I am glad, Socrates, that you have mentioned the name of Aesop. For it reminds me of a question which has been asked by many, and was asked of me only the day before yesterday by Evenus the poet — he will be sure to ask it again, and therefore if you would like me to have an answer ready for him, you may as well tell me what I should say to him: — he wanted to know why you, who never before wrote a line of poetry, now that you are in prison are turning Aesop's fables into verse, and also composing that hymn in honour of Apollo.

60d

Tell him, Cebes, he replied, what is the truth — that I had no idea of rivalling him or his poems; to do so, as I knew, would be no easy task. But I wanted to see whether I could purge away a scruple which I felt about the meaning of certain dreams. In the course of my life I have often had intimations in dreams 'that I should compose music.' The same dream came to me sometimes in one form, and sometimes in another, but always saying the same or nearly the same words: 'Cultivate and make music,' said the dream. And hitherto I had imagined that this was only intended to exhort and encourage me in the study of philosophy, which has been the pursuit of my life, and is the noblest and best of music. The dream was bidding me do what I was already doing, in the same way that the competitor in a race is bidden by the spectators to run when he is already running. But I was not certain of this, for the dream might have

meant music in the popular sense of the word, and being under sentence of death, and the festival giving me a respite, I thought that it would be safer for me to satisfy the scruple, and, in obedience to the dream, to compose a few verses before I departed. And first I made a hymn in honour of the god of the festival, and then considering that a poet, if he is really to be a poet, should not only put together words, but should invent stories, and that I have no invention, I took some fables of Aesop, which I had ready at hand and which I knew — they were the first I came upon — and turned them into verse. Tell this to Evenus, Cebes, and bid him be of good cheer; say that I would have him come after me if he be a wise man, and not tarry; and that to-day I am likely to be going, for the Athenians say that I must.

61c

Simmias said: What a message for such a man! having been a frequent companion of his I should say that, as far as I know him, he will never take your advice unless he is obliged.

Why, said Socrates, — is not Evenus a philosopher?

I think that he is, said Simmias.

Then he, or any man who has the spirit of philosophy, will be willing to die, but he will not take his own life, for that is held to be unlawful.

61d

Here he changed his position, and put his legs off the couch on to the ground, and during the rest of the conversation he remained sitting.

Why do you say, enquired Cebes, that a man ought not to take his own life, but that the philosopher will be ready to follow the dying?

Socrates replied: And have you, Cebes and Simmias, who are the disciples of Philolaus, never heard him speak of this?

61e

Yes, but his language was obscure, Socrates.

My words, too, are only an echo; but there is no reason why I should not repeat what I have heard: and indeed, as I am going to another place, it is very meet for me to be thinking and talking of the nature of the pilgrimage which I am about to make. What can I do better in the interval between this and the setting of the sun?

62a

Then tell me, Socrates, why is suicide held to be unlawful? as I have certainly heard Philolaus, about whom you were just now asking, affirm when he was staying with us at Thebes: and there are others who say the same, although I have never understood what was meant by any of them.

Do not lose heart, replied Socrates, and the day may come when you will understand. I suppose that you wonder why, when other things which are evil may be good at certain times and to certain persons, death is to be the only exception, and why, when a man is better dead, he is not permitted to be his own benefactor, but must wait for the hand of another.

62b

Very true, said Cebes, laughing gently and speaking in his native Boeotian.

I admit the appearance of inconsistency in what I am saying; but there may not be any real inconsistency after all. There is a doctrine whispered in secret that man is a prisoner who has no right to open the door and run away; this is a great mystery which I do not quite understand. Yet I too believe that the gods are our guardians, and that we are a possession of theirs. Do you not agree?

62c

Yes, I quite agree, said Cebes.

And if one of your own possessions, an ox or an ass, for example, took the liberty of putting himself out of the way when you had given no intimation of your wish that he should die, would you not be angry with him, and would you not punish him if you could?

62d

Certainly, replied Cebes.

Then, if we look at the matter thus, there may be reason in saying that a man should wait, and not take his own life until God summons him, as he is now summoning me.

Yes, Socrates, said Cebes, there seems to be truth in what you say. And yet how can you reconcile this seemingly true belief that God is our guardian and we his possessions, with the willingness to die which we were just now attributing to the philosopher? That the wisest of men should be willing to leave a service in which they are ruled by the gods who are the best of rulers, is not reasonable; for surely no wise man thinks that when set at liberty he can take better care of himself than the gods take of him. A fool may perhaps think so — he may argue that he had better run away from his master, not considering that his duty is to remain to the end, and not to run away from the good, and that there would be no sense in his running away. The wise man will want to be ever with him who is better than himself. Now this, Socrates, is the reverse of what was just now said; for upon this view the wise man should sorrow and the fool rejoice at passing out of life.

63a

The earnestness of Cebes seemed to please Socrates. Here, said he, turning to us, is a man who is always inquiring, and is not so easily convinced by the first thing which he hears.

63b

And certainly, added Simmias, the objection which he is now making does appear to me to have some force. For what can be

the meaning of a truly wise man wanting to fly away and lightly leave a master who is better than himself? And I rather imagine that Cebes is referring to you; he thinks that you are too ready to leave us, and too ready to leave the gods whom you acknowledge to be our good masters.

Yes, replied Socrates; there is reason in what you say. And so you think that I ought to answer your indictment as if I were in a court?

We should like you to do so, said Simmias.

63c

Then I must try to make a more successful defence before you than I did when before the judges. For I am quite ready to admit, Simmias and Cebes, that I ought to be grieved at death, if I were not persuaded in the first place that I am going to other gods who are wise and good (of which I am as certain as I can be of any such matters), and secondly (though I am not so sure of this last) to men departed, better than those whom I leave behind; and therefore I do not grieve as I might have done, for I have good hope that there is yet something remaining for the dead, and as has been said of old, some far better thing for the good than for the evil.

63d

But do you mean to take away your thoughts with you, Socrates? said Simmias. Will you not impart them to us? — for they are a benefit in which we too are entitled to share. Moreover, if you succeed in convincing us, that will be an answer to the charge against yourself.

I will do my best, replied Socrates. But you must first let me hear what Crito wants; he has long been wishing to say something to me.

Only this, Socrates, replied Crito: — the attendant who is to give you the poison has been telling me, and he wants me to tell you,

that you are not to talk much, talking, he says, increases heat, and this is apt to interfere with the action of the poison; persons who excite themselves are sometimes obliged to take a second or even a third dose.

Then, said Socrates, let him mind his business and be prepared to give the poison twice or even thrice if necessary; that is all.

63e

I knew quite well what you would say, replied Crito; but I was obliged to satisfy him.

Never mind him, he said.

And now, O my judges, I desire to prove to you that the real philosopher has reason to be of good cheer when he is about to die, and that after death he may hope to obtain the greatest good in the other world. And how this may be, Simmias and Cebes, I will endeavour to explain. For I deem that the true votary of philosophy is likely to be misunderstood by other men; they do not perceive that he is always pursuing death and dying; and if this be so, and he has had the desire of death all his life long, why when his time comes should he repine at that which he has been always pursuing and desiring?

64a

Simmias said laughingly: Though not in a laughing humour, you have made me laugh, Socrates; for I cannot help thinking that the many when they hear your words will say how truly you have described philosophers, and our people at home will likewise say that the life which philosophers desire is in reality death, and that they have found them out to be deserving of the death which they desire.

64b

And they are right, Simmias, in thinking so, with the exception of the words 'they have found them out'; for they have not found out either what is the nature of that death which the true

philosopher deserves, or how he deserves or desires death. But enough of them: — let us discuss the matter among ourselves: Do we believe that there is such a thing as death?

To be sure, replied Simmias.

Is it not the separation of soul and body? And to be dead is the completion of this; when the soul exists in herself, and is released from the body and the body is released from the soul, what is this but death?

64c

Just so, he replied.

There is another question, which will probably throw light on our present inquiry if you and I can agree about it: — Ought the philosopher to care about the pleasures — if they are to be called pleasures — of eating and drinking?

Certainly not, answered Simmias.

And what about the pleasures of love — should he care for them?

By no means.

And will he think much of the other ways of indulging the body, for example, the acquisition of costly raiment, or sandals, or other adornments of the body? Instead of caring about them, does he not rather despise anything more than nature needs? What do you say?

I should say that the true philosopher would despise them.

Would you not say that he is entirely concerned with the soul and not with the body? He would like, as far as he can, to get away from the body and to turn to the soul.

65a

Quite true.

In matters of this sort philosophers, above all other men, may be observed in every sort of way to dis sever the soul from the communion of the body.

Very true.

Whereas, Simmias, the rest of the world are of opinion that to him who has no sense of pleasure and no part in bodily pleasure, life is not worth having; and that he who is indifferent about them is as good as dead.

That is also true.

65b

What again shall we say of the actual acquirement of knowledge? — is the body, if invited to share in the enquiry, a hinderer or a helper? I mean to say, have sight and hearing any truth in them? Are they not, as the poets are always telling us, inaccurate witnesses? and yet, if even they are inaccurate and indistinct, what is to be said of the other senses? — for you will allow that they are the best of them?

Certainly, he replied.

65c

Then when does the soul attain truth? — for in attempting to consider anything in company with the body she is obviously deceived.

True.

Then must not true existence be revealed to her in thought, if at all?

Yes.

And thought is best when the mind is gathered into herself and none of these things trouble her — neither sounds nor sights nor pain nor any pleasure, — when she takes leave of the body, and has as little as possible to do with it, when she has no bodily

sense or desire, but is aspiring after true being?

Certainly.

And in this the philosopher dishonours the body; his soul runs away from his body and desires to be alone and by herself?

65d

That is true.

Well, but there is another thing, Simmias: Is there or is there not an absolute justice?

Assuredly there is.

And an absolute beauty and absolute good?

Of course.

But did you ever behold any of them with your eyes?

Certainly not.

Or did you ever reach them with any other bodily sense? — and I speak not of these alone, but of absolute greatness, and health, and strength, and of the essence or true nature of everything. Has the reality of them ever been perceived by you through the bodily organs? or rather, is not the nearest approach to the knowledge of their several natures made by him who so orders his intellectual vision as to have the most exact conception of the essence of each thing which he considers?

Certainly.

65e

And he attains to the purest knowledge of them who goes to each with the mind alone, not introducing or intruding in the act of thought sight or any other sense together with reason, but with the very light of the mind in her own clearness searches into the very truth of each; he who has got rid, as far as he can, of eyes and ears and, so to speak, of the whole body, these being in his opinion distracting elements which when

they infect the soul hinder her from acquiring truth and knowledge — who, if not he, is likely to attain the knowledge of true being?

What you say has a wonderful truth in it, Socrates, replied Simmias.

66a

And when real philosophers consider all these things, will they not be led to make a reflection which they will express in words something like the following? ‘Have we not found,’ they will say, ‘a path of thought which seems to bring us and our argument to the conclusion, that while we are in the body, and while the soul is infected with the evils of the body, our desire will not be satisfied? and our desire is of the truth. For the body is a source of endless trouble to us by reason of the mere requirement of food; and is liable also to diseases which overtake and impede us in the search after true being; it fills us full of loves, and lusts, and fears, and fancies of all kinds, and endless foolery, and in fact, as men say, takes away from us the power of thinking at all. Whence come wars, and fightings, and factions? whence but from the body and the lusts of the body? wars are occasioned by the love of money, and money has to be acquired for the sake and in the service of the body; and by reason of all these impediments we have no time to give to philosophy; and, last and worst of all, even if we are at leisure and betake ourselves to some speculation, the body is always breaking in upon us, causing turmoil and confusion in our enquiries, and so amazing us that we are prevented from seeing the truth. It has been proved to us by experience that if we would have pure knowledge of anything we must be quit of the body — the soul in herself must behold things in themselves: and then we shall attain the wisdom which we desire, and of which we say that we are lovers, not while we live, but after death; for if while in company with the body, the soul cannot

have pure knowledge, one of two things follows — either knowledge is not to be attained at all, or, if at all, after death. For then, and not till then, the soul will be parted from the body and exist in herself alone. In this present life, I reckon that we make the nearest approach to knowledge when we have the least possible intercourse or communion with the body, and are not surfeited with the bodily nature, but keep ourselves pure until the hour when God himself is pleased to release us. And thus having got rid of the foolishness of the body we shall be pure and hold converse with the pure, and know of ourselves the clear light everywhere, which is no other than the light of truth.’ For the impure are not permitted to approach the pure. These are the sort of words, Simmias, which the true lovers of knowledge cannot help saying to one another, and thinking. You would agree; would you not?

66e

Undoubtedly, Socrates.

67b

But, O my friend, if this is true, there is great reason to hope that, going whither I go, when I have come to the end of my journey, I shall attain that which has been the pursuit of my life. And therefore I go on my way rejoicing, and not I only, but every other man who believes that his mind has been made ready and that he is in a manner purified.

Certainly, replied Simmias.

67c

And what is purification but the separation of the soul from the body, as I was saying before; the habit of the soul gathering and collecting herself into herself from all sides out of the body; the dwelling in her own place alone, as in another life, so also in this, as far as she can; — the release of the soul from the chains of the body?

Very true, he said.

And this separation and release of the soul from the body is termed death?

To be sure, he said.

And the true philosophers, and they only, are ever seeking to release the soul. Is not the separation and release of the soul from the body their especial study?

That is true.

And, as I was saying at first, there would be a ridiculous contradiction in men studying to live as nearly as they can in a state of death, and yet repining when it comes upon them.

67e

Clearly.

And the true philosophers, Simmias, are always occupied in the practice of dying, wherefore also to them least of all men is death terrible. Look at the matter thus: — if they have been in every way the enemies of the body, and are wanting to be alone with the soul, when this desire of theirs is granted, how inconsistent would they be if they trembled and repined, instead of rejoicing at their departure to that place where, when they arrive, they hope to gain that which in life they desired — and this was wisdom — and at the same time to be rid of the company of their enemy. Many a man has been willing to go to the world below animated by the hope of seeing there an earthly love, or wife, or son, and conversing with them. And will he who is a true lover of wisdom, and is strongly persuaded in like manner that only in the world below he can worthily enjoy her, still repine at death? Will he not depart with joy? Surely he will, O my friend, if he be a true philosopher. For he will have a firm conviction that there and there only, he can find wisdom in her purity. And if this be true, he would be very absurd, as I was saying, if he were afraid of death.

He would, indeed, replied Simmias.

And when you see a man who is repining at the approach of death, is not his reluctance a sufficient proof that he is not a lover of wisdom, but a lover of the body, and probably at the same time a lover of either money or power, or both?

68b

Quite so, he replied.

And is not courage, Simmias, a quality which is specially characteristic of the philosopher?

Certainly.

There is temperance again, which even by the vulgar is supposed to consist in the control and regulation of the passions, and in the sense of superiority to them — is not temperance a virtue belonging to those only who despise the body, and who pass their lives in philosophy?

Most assuredly.

For the courage and temperance of other men, if you will consider them, are really a contradiction.

How so?

68d

Well, he said, you are aware that death is regarded by men in general as a great evil.

Very true, he said.

And do not courageous men face death because they are afraid of yet greater evils?

That is quite true.

Then all but the philosophers are courageous only from fear, and because they are afraid; and yet that a man should be courageous from fear, and because he is a coward, is surely a

strange thing.

Very true.

68e

And are not the temperate exactly in the same case? They are temperate because they are intemperate — which might seem to be a contradiction, but is nevertheless the sort of thing which happens with this foolish temperance. For there are pleasures which they are afraid of losing; and in their desire to keep them, they abstain from some pleasures, because they are overcome by others; and although to be conquered by pleasure is called by men intemperance, to them the conquest of pleasure consists in being conquered by pleasure. And that is what I mean by saying that, in a sense, they are made temperate through intemperance.

Such appears to be the case.

69a

Yet the exchange of one fear or pleasure or pain for another fear or pleasure or pain, and of the greater for the less, as if they were coins, is not the exchange of virtue. O my blessed Simmias, is there not one true coin for which all things ought to be exchanged? — and that is wisdom; and only in exchange for this, and in company with this, is anything truly bought or sold, whether courage or temperance or justice. And is not all true virtue the companion of wisdom, no matter what fears or pleasures or other similar goods or evils may or may not attend her? But the virtue which is made up of these goods, when they are severed from wisdom and exchanged with one another, is a shadow of virtue only, nor is there any freedom or health or truth in her; but in the true exchange there is a purging away of all these things, and temperance, and justice, and courage, and wisdom herself are the purgation of them. The founders of the mysteries would appear to have had a real meaning, and were not talking nonsense when they intimated in a figure long ago

that he who passes unsanctified and uninitiated into the world below will lie in a slough, but that he who arrives there after initiation and purification will dwell with the gods. For ‘many,’ as they say in the mysteries, ‘are the thyrsus-bearers, but few are the mystics,’ — meaning, as I interpret the words, ‘the true philosophers.’ In the number of whom, during my whole life, I have been seeking, according to my ability, to find a place; — whether I have sought in a right way or not, and whether I have succeeded or not, I shall truly know in a little while, if God will, when I myself arrive in the other world — such is my belief. And therefore I maintain that I am right, Simmias and Cebes, in not grieving or repining at parting from you and my masters in this world, for I believe that I shall equally find good masters and friends in another world. But most men do not believe this saying; if then I succeed in convincing you by my defence better than I did the Athenian judges, it will be well.

69e

Cebes answered: I agree, Socrates, in the greater part of what you say. But in what concerns the soul, men are apt to be incredulous; they fear that when she has left the body her place may be nowhere, and that on the very day of death she may perish and come to an end — immediately on her release from the body, issuing forth dispersed like smoke or air and in her flight vanishing away into nothingness. If she could only be collected into herself after she has obtained release from the evils of which you are speaking, there would be good reason to hope, Socrates, that what you say is true. But surely it requires a great deal of argument and many proofs to show that when the man is dead his soul yet exists, and has any force or intelligence.

70b

True, Cebes, said Socrates; and shall I suggest that we converse a little of the probabilities of these things?

I am sure, said Cebes, that I should greatly like to know your opinion about them.

70c

I reckon, said Socrates, that no one who heard me now, not even if he were one of my old enemies, the Comic poets, could accuse me of idle talking about matters in which I have no concern: — If you please, then, we will proceed with the inquiry.

Suppose we consider the question whether the souls of men after death are or are not in the world below. There comes into my mind an ancient doctrine which affirms that they go from hence into the other world, and returning hither, are born again from the dead. Now if it be true that the living come from the dead, then our souls must exist in the other world, for if not, how could they have been born again? And this would be conclusive, if there were any real evidence that the living are only born from the dead; but if this is not so, then other arguments will have to be adduced.

Very true, replied Cebes.

70e

Then let us consider the whole question, not in relation to man only, but in relation to animals generally, and to plants, and to everything of which there is generation, and the proof will be easier. Are not all things which have opposites generated out of their opposites? I mean such things as good and evil, just and unjust — and there are innumerable other opposites which are generated out of opposites. And I want to show that in all opposites there is of necessity a similar alternation; I mean to say, for example, that anything which becomes greater must become greater after being less.

True.

71a

And that which becomes less must have been once greater and then have become less.

Yes.

And the weaker is generated from the stronger, and the swifter from the slower.

Very true.

And the worse is from the better, and the more just is from the more unjust.

Of course.

And is this true of all opposites? and are we convinced that all of them are generated out of opposites?

Yes.

71b

And in this universal opposition of all things, are there not also two intermediate processes which are ever going on, from one to the other opposite, and back again; where there is a greater and a less there is also an intermediate process of increase and diminution, and that which grows is said to wax, and that which decays to wane?

Yes, he said.

And there are many other processes, such as division and composition, cooling and heating, which equally involve a passage into and out of one another. And this necessarily holds of all opposites, even though not always expressed in words — they are really generated out of one another, and there is a passing or process from one to the other of them?

71c

Very true, he replied.

Well, and is there not an opposite of life, as sleep is the opposite of waking?

True, he said.

And what is it?

71d

Death, he answered.

And these, if they are opposites, are generated the one from the other, and have there their two intermediate processes also?

Of course.

Now, said Socrates, I will analyze one of the two pairs of opposites which I have mentioned to you, and also its intermediate processes, and you shall analyze the other to me. One of them I term sleep, the other waking. The state of sleep is opposed to the state of waking, and out of sleeping waking is generated, and out of waking, sleeping; and the process of generation is in the one case falling asleep, and in the other waking up. Do you agree?

71e

I entirely agree.

Then, suppose that you analyze life and death to me in the same manner. Is not death opposed to life?

Yes.

And they are generated one from the other?

Yes.

What is generated from the living?

The dead.

And what from the dead?

I can only say in answer — the living.

Then the living, whether things or persons, Cebes, are generated from the dead?

That is clear, he replied.

Then the inference is that our souls exist in the world below?

That is true.

72a

And one of the two processes or generations is visible — for surely the act of dying is visible?

Surely, he said.

What then is to be the result? Shall we exclude the opposite process? And shall we suppose nature to walk on one leg only? Must we not rather assign to death some corresponding process of generation?

Certainly, he replied.

And what is that process?

Return to life.

And return to life, if there be such a thing, is the birth of the dead into the world of the living?

Quite true.

Then here is a new way by which we arrive at the conclusion that the living come from the dead, just as the dead come from the living; and this, if true, affords a most certain proof that the souls of the dead exist in some place out of which they come again.

72b

Yes, Socrates, he said; the conclusion seems to flow necessarily out of our previous admissions.

And that these admissions were not unfair, Cebes, he said, may be shown, I think, as follows: If generation were in a straight line only, and there were no compensation or circle in nature, no turn or return of elements into their opposites, then you

know that all things would at last have the same form and pass into the same state, and there would be no more generation of them.

What do you mean? he said.

A simple thing enough, which I will illustrate by the case of sleep, he replied. You know that if there were no alternation of sleeping and waking, the tale of the sleeping Endymion would in the end have no meaning, because all other things would be asleep, too, and he would not be distinguishable from the rest. Or if there were composition only, and no division of substances, then the chaos of Anaxagoras would come again. And in like manner, my dear Cebes, if all things which partook of life were to die, and after they were dead remained in the form of death, and did not come to life again, all would at last die, and nothing would be alive — what other result could there be? For if the living spring from any other things, and they too die, must not all things at last be swallowed up in death? (But compare Republic.)

72d

There is no escape, Socrates, said Cebes; and to me your argument seems to be absolutely true.

Yes, he said, Cebes, it is and must be so, in my opinion; and we have not been deluded in making these admissions; but I am confident that there truly is such a thing as living again, and that the living spring from the dead, and that the souls of the dead are in existence, and that the good souls have a better portion than the evil.

72e

Cebes added: Your favorite doctrine, Socrates, that knowledge is simply recollection, if true, also necessarily implies a previous time in which we have learned that which we now recollect. But this would be impossible unless our soul had been in some place

before existing in the form of man; here then is another proof of the soul's immortality.

73a

But tell me, Cebes, said Simmias, interposing, what arguments are urged in favour of this doctrine of recollection. I am not very sure at the moment that I remember them.

One excellent proof, said Cebes, is afforded by questions. If you put a question to a person in a right way, he will give a true answer of himself, but how could he do this unless there were knowledge and right reason already in him? And this is most clearly shown when he is taken to a diagram or to anything of that sort. (Compare Meno.)

73b

But if, said Socrates, you are still incredulous, Simmias, I would ask you whether you may not agree with me when you look at the matter in another way; — I mean, if you are still incredulous as to whether knowledge is recollection.

Incredulous, I am not, said Simmias; but I want to have this doctrine of recollection brought to my own recollection, and, from what Cebes has said, I am beginning to recollect and be convinced; but I should still like to hear what you were going to say.

73c

This is what I would say, he replied: — We should agree, if I am not mistaken, that what a man recollects he must have known at some previous time.

Very true.

And what is the nature of this knowledge or recollection? I mean to ask, Whether a person who, having seen or heard or in any way perceived anything, knows not only that, but has a conception of something else which is the subject, not of the same but of some other kind of knowledge, may not be fairly

said to recollect that of which he has the conception?

What do you mean?

I mean what I may illustrate by the following instance: — The knowledge of a lyre is not the same as the knowledge of a man?

73d

True.

And yet what is the feeling of lovers when they recognize a lyre, or a garment, or anything else which the beloved has been in the habit of using? Do not they, from knowing the lyre, form in the mind's eye an image of the youth to whom the lyre belongs? And this is recollection. In like manner any one who sees Simmias may remember Cebes; and there are endless examples of the same thing.

Endless, indeed, replied Simmias.

And recollection is most commonly a process of recovering that which has been already forgotten through time and inattention.

Very true, he said.

Well; and may you not also from seeing the picture of a horse or a lyre remember a man? and from the picture of Simmias, you may be led to remember Cebes?

True.

Or you may also be led to the recollection of Simmias himself?

Quite so.

And in all these cases, the recollection may be derived from things either like or unlike?

74a

It may be.

And when the recollection is derived from like things, then another consideration is sure to arise, which is — whether the

likeness in any degree falls short or not of that which is recollected?

Very true, he said.

And shall we proceed a step further, and affirm that there is such a thing as equality, not of one piece of wood or stone with another, but that, over and above this, there is absolute equality? Shall we say so?

Say so, yes, replied Simmias, and swear to it, with all the confidence in life.

And do we know the nature of this absolute essence?

74b

To be sure, he said.

And whence did we obtain our knowledge? Did we not see equalities of material things, such as pieces of wood and stones, and gather from them the idea of an equality which is different from them? For you will acknowledge that there is a difference. Or look at the matter in another way: — Do not the same pieces of wood or stone appear at one time equal, and at another time unequal?

That is certain.

But are real equals ever unequal? or is the idea of equality the same as of inequality?

74c

Impossible, Socrates.

Then these (so-called) equals are not the same with the idea of equality?

I should say, clearly not, Socrates.

And yet from these equals, although differing from the idea of equality, you conceived and attained that idea?

Very true, he said.

Which might be like, or might be unlike them?

Yes.

But that makes no difference; whenever from seeing one thing you conceived another, whether like or unlike, there must surely have been an act of recollection?

Very true.

74d

But what would you say of equal portions of wood and stone, or other material equals? and what is the impression produced by them? Are they equals in the same sense in which absolute equality is equal? or do they fall short of this perfect equality in a measure?

Yes, he said, in a very great measure too.

And must we not allow, that when I or any one, looking at any object, observes that the thing which he sees aims at being some other thing, but falls short of, and cannot be, that other thing, but is inferior, he who makes this observation must have had a previous knowledge of that to which the other, although similar, was inferior?

Certainly.

And has not this been our own case in the matter of equals and of absolute equality?

Precisely.

74e

Then we must have known equality previously to the time when we first saw the material equals, and reflected that all these apparent equals strive to attain absolute equality, but fall short of it?

75a

Very true.

And we recognize also that this absolute equality has only been known, and can only be known, through the medium of sight or touch, or of some other of the senses, which are all alike in this respect?

Yes, Socrates, as far as the argument is concerned, one of them is the same as the other.

From the senses then is derived the knowledge that all sensible things aim at an absolute equality of which they fall short?

75b

Yes.

Then before we began to see or hear or perceive in any way, we must have had a knowledge of absolute equality, or we could not have referred to that standard the equals which are derived from the senses? — for to that they all aspire, and of that they fall short.

No other inference can be drawn from the previous statements.

And did we not see and hear and have the use of our other senses as soon as we were born?

Certainly.

Then we must have acquired the knowledge of equality at some previous time?

75c

Yes.

That is to say, before we were born, I suppose?

True.

And if we acquired this knowledge before we were born, and were born having the use of it, then we also knew before we were born and at the instant of birth not only the equal or the

greater or the less, but all other ideas; for we are not speaking only of equality, but of beauty, goodness, justice, holiness, and of all which we stamp with the name of essence in the dialectical process, both when we ask and when we answer questions. Of all this we may certainly affirm that we acquired the knowledge before birth?

We may.

But if, after having acquired, we have not forgotten what in each case we acquired, then we must always have come into life having knowledge, and shall always continue to know as long as life lasts — for knowing is the acquiring and retaining knowledge and not forgetting. Is not forgetting, Simmias, just the losing of knowledge?

75d

Quite true, Socrates.

75e

But if the knowledge which we acquired before birth was lost by us at birth, and if afterwards by the use of the senses we recovered what we previously knew, will not the process which we call learning be a recovering of the knowledge which is natural to us, and may not this be rightly termed recollection?

Very true.

76a

So much is clear — that when we perceive something, either by the help of sight, or hearing, or some other sense, from that perception we are able to obtain a notion of some other thing like or unlike which is associated with it but has been forgotten. Whence, as I was saying, one of two alternatives follows: — either we had this knowledge at birth, and continued to know through life; or, after birth, those who are said to learn only remember, and learning is simply recollection.

Yes, that is quite true, Socrates.

And which alternative, Simmias, do you prefer? Had we the knowledge at our birth, or did we recollect the things which we knew previously to our birth?

I cannot decide at the moment.

76b

At any rate you can decide whether he who has knowledge will or will not be able to render an account of his knowledge? What do you say?

Certainly, he will.

But do you think that every man is able to give an account of these very matters about which we are speaking?

Would that they could, Socrates, but I rather fear that to-morrow, at this time, there will no longer be any one alive who is able to give an account of them such as ought to be given.

76c

Then you are not of opinion, Simmias, that all men know these things?

Certainly not.

They are in process of recollecting that which they learned before?

Certainly.

But when did our souls acquire this knowledge? — not since we were born as men?

Certainly not.

And therefore, previously?

Yes.

Then, Simmias, our souls must also have existed without bodies before they were in the form of man, and must have had

intelligence.

Unless indeed you suppose, Socrates, that these notions are given us at the very moment of birth; for this is the only time which remains.

76d

Yes, my friend, but if so, when do we lose them? for they are not in us when we are born — that is admitted. Do we lose them at the moment of receiving them, or if not at what other time?

No, Socrates, I perceive that I was unconsciously talking nonsense.

Then may we not say, Simmias, that if, as we are always repeating, there is an absolute beauty, and goodness, and an absolute essence of all things; and if to this, which is now discovered to have existed in our former state, we refer all our sensations, and with this compare them, finding these ideas to be pre-existent and our inborn possession — then our souls must have had a prior existence, but if not, there would be no force in the argument? There is the same proof that these ideas must have existed before we were born, as that our souls existed before we were born; and if not the ideas, then not the souls.

76e

Yes, Socrates; I am convinced that there is precisely the same necessity for the one as for the other; and the argument retreats successfully to the position that the existence of the soul before birth cannot be separated from the existence of the essence of which you speak. For there is nothing which to my mind is so patent as that beauty, goodness, and the other notions of which you were just now speaking, have a most real and absolute existence; and I am satisfied with the proof.

Well, but is Cebes equally satisfied? for I must convince him too.

77a

I think, said Simmias, that Cebes is satisfied: although he is the most incredulous of mortals, yet I believe that he is sufficiently convinced of the existence of the soul before birth. But that after death the soul will continue to exist is not yet proven even to my own satisfaction. I cannot get rid of the feeling of the many to which Cebes was referring — the feeling that when the man dies the soul will be dispersed, and that this may be the extinction of her. For admitting that she may have been born elsewhere, and framed out of other elements, and was in existence before entering the human body, why after having entered in and gone out again may she not herself be destroyed and come to an end?

77c

Very true, Simmias, said Cebes; about half of what was required has been proven; to wit, that our souls existed before we were born: — that the soul will exist after death as well as before birth is the other half of which the proof is still wanting, and has to be supplied; when that is given the demonstration will be complete.

But that proof, Simmias and Cebes, has been already given, said Socrates, if you put the two arguments together — I mean this and the former one, in which we admitted that everything living is born of the dead. For if the soul exists before birth, and in coming to life and being born can be born only from death and dying, must she not after death continue to exist, since she has to be born again? — Surely the proof which you desire has been already furnished. Still I suspect that you and Simmias would be glad to probe the argument further. Like children, you are haunted with a fear that when the soul leaves the body, the wind may really blow her away and scatter her; especially if a man should happen to die in a great storm and not when the sky is calm.

77e

Cebes answered with a smile: Then, Socrates, you must argue us out of our fears — and yet, strictly speaking, they are not our fears, but there is a child within us to whom death is a sort of hobgoblin; him too we must persuade not to be afraid when he is alone in the dark.

78a

Socrates said: Let the voice of the charmer be applied daily until you have charmed away the fear.

And where shall we find a good charmer of our fears, Socrates, when you are gone?

78b

Hellas, he replied, is a large place, Cebes, and has many good men, and there are barbarous races not a few: seek for him among them all, far and wide, sparing neither pains nor money; for there is no better way of spending your money. And you must seek among yourselves too; for you will not find others better able to make the search.

The search, replied Cebes, shall certainly be made. And now, if you please, let us return to the point of the argument at which we digressed.

By all means, replied Socrates; what else should I please?

Very good.

78c

Must we not, said Socrates, ask ourselves what that is which, as we imagine, is liable to be scattered, and about which we fear? and what again is that about which we have no fear? And then we may proceed further to enquire whether that which suffers dispersion is or is not of the nature of soul — our hopes and fears as to our own souls will turn upon the answers to these questions.

Very true, he said.

Now the compound or composite may be supposed to be naturally capable, as of being compounded, so also of being dissolved; but that which is uncompounded, and that only, must be, if anything is, indissoluble.

Yes; I should imagine so, said Cebes.

78d

And the uncompounded may be assumed to be the same and unchanging, whereas the compound is always changing and never the same.

I agree, he said.

Then now let us return to the previous discussion. Is that idea or essence, which in the dialectical process we define as essence or true existence — whether essence of equality, beauty, or anything else — are these essences, I say, liable at times to some degree of change? or are they each of them always what they are, having the same simple self-existent and unchanging forms, not admitting of variation at all, or in any way, or at any time?

They must be always the same, Socrates, replied Cebes.

78e

And what would you say of the many beautiful — whether men or horses or garments or any other things which are named by the same names and may be called equal or beautiful, — are they all unchanging and the same always, or quite the reverse? May they not rather be described as almost always changing and hardly ever the same, either with themselves or with one another?

The latter, replied Cebes; they are always in a state of change.

79a

And these you can touch and see and perceive with the senses, but the unchanging things you can only perceive with the mind — they are invisible and are not seen?

That is very true, he said.

Well, then, added Socrates, let us suppose that there are two sorts of existences — one seen, the other unseen.

Let us suppose them.

The seen is the changing, and the unseen is the unchanging?

That may be also supposed.

79b

And, further, is not one part of us body, another part soul?

To be sure.

And to which class is the body more alike and akin?

Clearly to the seen — no one can doubt that.

And is the soul seen or not seen?

Not by man, Socrates.

And what we mean by ‘seen’ and ‘not seen’ is that which is or is not visible to the eye of man?

Yes, to the eye of man.

And is the soul seen or not seen?

Not seen.

Unseen then?

Yes.

Then the soul is more like to the unseen, and the body to the seen?

That follows necessarily, Socrates.

79c

And were we not saying long ago that the soul when using the body as an instrument of perception, that is to say, when using the sense of sight or hearing or some other sense (for the

meaning of perceiving through the body is perceiving through the senses) — were we not saying that the soul too is then dragged by the body into the region of the changeable, and wanders and is confused; the world spins round her, and she is like a drunkard, when she touches change?

Very true.

79d

But when returning into herself she reflects, then she passes into the other world, the region of purity, and eternity, and immortality, and unchangeableness, which are her kindred, and with them she ever lives, when she is by herself and is not let or hindered; then she ceases from her erring ways, and being in communion with the unchanging is unchanging. And this state of the soul is called wisdom?

That is well and truly said, Socrates, he replied.

79e

And to which class is the soul more nearly alike and akin, as far as may be inferred from this argument, as well as from the preceding one?

I think, Socrates, that, in the opinion of every one who follows the argument, the soul will be infinitely more like the unchangeable — even the most stupid person will not deny that.

And the body is more like the changing?

Yes.

80a

Yet once more consider the matter in another light: When the soul and the body are united, then nature orders the soul to rule and govern, and the body to obey and serve. Now which of these two functions is akin to the divine? and which to the mortal? Does not the divine appear to you to be that which naturally orders and rules, and the mortal to be that which is subject and servant?

True.

And which does the soul resemble?

The soul resembles the divine, and the body the mortal — there can be no doubt of that, Socrates.

80b

Then reflect, Cebes: of all which has been said is not this the conclusion? — that the soul is in the very likeness of the divine, and immortal, and intellectual, and uniform, and indissoluble, and unchangeable; and that the body is in the very likeness of the human, and mortal, and unintellectual, and multiform, and dissoluble, and changeable. Can this, my dear Cebes, be denied?

It cannot.

But if it be true, then is not the body liable to speedy dissolution? and is not the soul almost or altogether indissoluble?

Certainly.

80c

And do you further observe, that after a man is dead, the body, or visible part of him, which is lying in the visible world, and is called a corpse, and would naturally be dissolved and decomposed and dissipated, is not dissolved or decomposed at once, but may remain for a for some time, nay even for a long time, if the constitution be sound at the time of death, and the season of the year favourable? For the body when shrunk and embalmed, as the manner is in Egypt, may remain almost entire through infinite ages; and even in decay, there are still some portions, such as the bones and ligaments, which are practically indestructible: — Do you agree?

Yes.

80d

And is it likely that the soul, which is invisible, in passing to the place of the true Hades, which like her is invisible, and pure, and noble, and on her way to the good and wise God, whither, if God will, my soul is also soon to go, — that the soul, I repeat, if this be her nature and origin, will be blown away and destroyed immediately on quitting the body, as the many say? That can never be, my dear Simmias and Cebes. The truth rather is, that the soul which is pure at departing and draws after her no bodily taint, having never voluntarily during life had connection with the body, which she is ever avoiding, herself gathered into herself; — and making such abstraction her perpetual study — which means that she has been a true disciple of philosophy; and therefore has in fact been always engaged in the practice of dying? For is not philosophy the practice of death? — *81a* Certainly — *81a* That soul, I say, herself invisible, departs to the invisible world — to the divine and immortal and rational: thither arriving, she is secure of bliss and is released from the error and folly of men, their fears and wild passions and all other human ills, and for ever dwells, as they say of the initiated, in company with the gods (compare Apol.). Is not this true, Cebes?

81b

Yes, said Cebes, beyond a doubt.

But the soul which has been polluted, and is impure at the time of her departure, and is the companion and servant of the body always, and is in love with and fascinated by the body and by the desires and pleasures of the body, until she is led to believe that the truth only exists in a bodily form, which a man may touch and see and taste, and use for the purposes of his lusts, — the soul, I mean, accustomed to hate and fear and avoid the intellectual principle, which to the bodily eye is dark and invisible, and can be attained only by philosophy; — do you suppose that such a soul will depart pure and unalloyed?

81c

Impossible, he replied.

She is held fast by the corporeal, which the continual association and constant care of the body have wrought into her nature.

Very true.

And this corporeal element, my friend, is heavy and weighty and earthy, and is that element of sight by which a soul is depressed and dragged down again into the visible world, because she is afraid of the invisible and of the world below — prowling about tombs and sepulchres, near which, as they tell us, are seen certain ghostly apparitions of souls which have not departed pure, but are cloyed with sight and therefore visible.

81d

(Compare Milton, *Comus*: — ‘But when lust, By unchaste looks, loose gestures, and foul talk, But most by lewd and lavish act of sin, Lets in defilement to the inward parts, The soul grows clotted by contagion, Imbodies, and imbrutes, till she quite lose, The divine property of her first being.

Such are those thick and gloomy shadows damp Oft seen in charnel vaults and sepulchres, 81e Linger, and sitting by a new made grave, 81e As loath to leave the body that it lov’d, 81e And linked itself by carnal sensuality 81e To a degenerate and degraded state.’)

81e

That is very likely, Socrates.

Yes, that is very likely, Cebes; and these must be the souls, not of the good, but of the evil, which are compelled to wander about such places in payment of the penalty of their former evil way of life; and they continue to wander until through the craving after the corporeal which never leaves them, they are imprisoned finally in another body. And they may be supposed

to find their prisons in the same natures which they have had in their former lives.

82a

What natures do you mean, Socrates?

82b

What I mean is that men who have followed after gluttony, and wantonness, and drunkenness, and have had no thought of avoiding them, would pass into asses and animals of that sort. What do you think?

I think such an opinion to be exceedingly probable.

And those who have chosen the portion of injustice, and tyranny, and violence, will pass into wolves, or into hawks and kites; — whither else can we suppose them to go?

Yes, said Cebes; with such natures, beyond question.

And there is no difficulty, he said, in assigning to all of them places answering to their several natures and propensities?

There is not, he said.

Some are happier than others; and the happiest both in themselves and in the place to which they go are those who have practised the civil and social virtues which are called temperance and justice, and are acquired by habit and attention without philosophy and mind. (Compare Republic.)

82d

Why are they the happiest?

Because they may be expected to pass into some gentle and social kind which is like their own, such as bees or wasps or ants, or back again into the form of man, and just and moderate men may be supposed to spring from them.

Very likely.

82e

No one who has not studied philosophy and who is not entirely pure at the time of his departure is allowed to enter the company of the Gods, but the lover of knowledge only. And this is the reason, Simmias and Cebes, why the true votaries of philosophy abstain from all fleshly lusts, and hold out against them and refuse to give themselves up to them, — not because they fear poverty or the ruin of their families, like the lovers of money, and the world in general; nor like the lovers of power and honour, because they dread the dishonour or disgrace of evil deeds.

No, Socrates, that would not become them, said Cebes.

No indeed, he replied; and therefore they who have any care of their own souls, and do not merely live moulding and fashioning the body, say farewell to all this; they will not walk in the ways of the blind: and when philosophy offers them purification and release from evil, they feel that they ought not to resist her influence, and whither she leads they turn and follow.

83b

What do you mean, Socrates?

I will tell you, he said. The lovers of knowledge are conscious that the soul was simply fastened and glued to the body — until philosophy received her, she could only view real existence through the bars of a prison, not in and through herself; she was wallowing in the mire of every sort of ignorance; and by reason of lust had become the principal accomplice in her own captivity. This was her original state; and then, as I was saying, and as the lovers of knowledge are well aware, philosophy, seeing how terrible was her confinement, of which she was to herself the cause, received and gently comforted her and sought to release her, pointing out that the eye and the ear and the other senses are full of deception, and persuading her to retire from them, and abstain from all but the necessary use of them,

and be gathered up and collected into herself, bidding her trust in herself and her own pure apprehension of pure existence, and to mistrust whatever comes to her through other channels and is subject to variation; for such things are visible and tangible, but what she sees in her own nature is intelligible and invisible. And the soul of the true philosopher thinks that she ought not to resist this deliverance, and therefore abstains from pleasures and desires and pains and fears, as far as she is able; reflecting that when a man has great joys or sorrows or fears or desires, he suffers from them, not merely the sort of evil which might be anticipated — as for example, the loss of his health or property which he has sacrificed to his lusts — but an evil greater far, which is the greatest and worst of all evils, and one of which he never thinks.

83d

What is it, Socrates? said Cebes.

83e

The evil is that when the feeling of pleasure or pain is most intense, every soul of man imagines the objects of this intense feeling to be then plainest and truest: but this is not so, they are really the things of sight.

Very true.

84a

And is not this the state in which the soul is most enthralled by the body?

How so?

Why, because each pleasure and pain is a sort of nail which nails and rivets the soul to the body, until she becomes like the body, and believes that to be true which the body affirms to be true; and from agreeing with the body and having the same delights she is obliged to have the same habits and haunts, and is not likely ever to be pure at her departure to the world below, but is

always infected by the body; and so she sinks into another body and there germinates and grows, and has therefore no part in the communion of the divine and pure and simple.

Most true, Socrates, answered Cebes.

And this, Cebes, is the reason why the true lovers of knowledge are temperate and brave; and not for the reason which the world gives.

Certainly not.

84c

Certainly not! The soul of a philosopher will reason in quite another way; she will not ask philosophy to release her in order that when released she may deliver herself up again to the thralldom of pleasures and pains, doing a work only to be undone again, weaving instead of unweaving her Penelope's web. But she will calm passion, and follow reason, and dwell in the contemplation of her, beholding the true and divine (which is not matter of opinion), and thence deriving nourishment. Thus she seeks to live while she lives, and after death she hopes to go to her own kindred and to that which is like her, and to be freed from human ills. Never fear, Simmias and Cebes, that a soul which has been thus nurtured and has had these pursuits, will at her departure from the body be scattered and blown away by the winds and be nowhere and nothing.

84d

When Socrates had done speaking, for a considerable time there was silence; he himself appeared to be meditating, as most of us were, on what had been said; only Cebes and Simmias spoke a few words to one another. And Socrates observing them asked what they thought of the argument, and whether there was anything wanting? For, said he, there are many points still open to suspicion and attack, if any one were disposed to sift the matter thoroughly. Should you be considering some other

matter I say no more, but if you are still in doubt do not hesitate to say exactly what you think, and let us have anything better which you can suggest; and if you think that I can be of any use, allow me to help you.

85a

Simmias said: I must confess, Socrates, that doubts did arise in our minds, and each of us was urging and inciting the other to put the question which we wanted to have answered and which neither of us liked to ask, fearing that our importunity might be troublesome under present at such a time.

85c

Socrates replied with a smile: O Simmias, what are you saying? I am not very likely to persuade other men that I do not regard my present situation as a misfortune, if I cannot even persuade you that I am no worse off now than at any other time in my life. Will you not allow that I have as much of the spirit of prophecy in me as the swans? For they, when they perceive that they must die, having sung all their life long, do then sing more lustily than ever, rejoicing in the thought that they are about to go away to the god whose ministers they are. But men, because they are themselves afraid of death, slanderously affirm of the swans that they sing a lament at the last, not considering that no bird sings when cold, or hungry, or in pain, not even the nightingale, nor the swallow, nor yet the hoopoe; which are said indeed to tune a lay of sorrow, although I do not believe this to be true of them any more than of the swans. But because they are sacred to Apollo, they have the gift of prophecy, and anticipate the good things of another world, wherefore they sing and rejoice in that day more than they ever did before. And I too, believing myself to be the consecrated servant of the same God, and the fellow-servant of the swans, and thinking that I have received from my master gifts of prophecy which are not inferior to theirs, would not go out of life less merrily than the swans. Never mind then, if this be your only objection, but

speak and ask anything which you like, while the eleven magistrates of Athens allow.

85e

Very good, Socrates, said Simmias; then I will tell you my difficulty, and Cebes will tell you his. I feel myself, (and I daresay that you have the same feeling), how hard or rather impossible is the attainment of any certainty about questions such as these in the present life. And yet I should deem him a coward who did not prove what is said about them to the uttermost, or whose heart failed him before he had examined them on every side. For he should persevere until he has achieved one of two things: either he should discover, or be taught the truth about them; or, if this be impossible, I would have him take the best and most irrefragable of human theories, and let this be the raft upon which he sails through life — not without risk, as I admit, if he cannot find some word of God which will more surely and safely carry him. And now, as you bid me, I will venture to question you, and then I shall not have to reproach myself hereafter with not having said at the time what I think. For when I consider the matter, either alone or with Cebes, the argument does certainly appear to me, Socrates, to be not sufficient.

Socrates answered: I dare say, my friend, that you may be right, but I should like to know in what respect the argument is insufficient.

86d

In this respect, replied Simmias: — Suppose a person to use the same argument about harmony and the lyre — might he not say that harmony is a thing invisible, incorporeal, perfect, divine, existing in the lyre which is harmonized, but that the lyre and the strings are matter and material, composite, earthy, and akin to mortality? And when some one breaks the lyre, or cuts and rends the strings, then he who takes this view would argue as

you do, and on the same analogy, that the harmony survives and has not perished — you cannot imagine, he would say, that the lyre without the strings, and the broken strings themselves which are mortal remain, and yet that the harmony, which is of heavenly and immortal nature and kindred, has perished — perished before the mortal. The harmony must still be somewhere, and the wood and strings will decay before anything can happen to that. The thought, Socrates, must have occurred to your own mind that such is our conception of the soul; and that when the body is in a manner strung and held together by the elements of hot and cold, wet and dry, then the soul is the harmony or due proportionate admixture of them. But if so, whenever the strings of the body are unduly loosened or overstrained through disease or other injury, then the soul, though most divine, like other harmonies of music or of works of art, of course perishes at once, although the material remains of the body may last for a considerable time, until they are either decayed or burnt. And if any one maintains that the soul, being the harmony of the elements of the body, is first to perish in that which is called death, how shall we answer him?

87a

Socrates looked fixedly at us as his manner was, and said with a smile: Simmias has reason on his side; and why does not some one of you who is better able than myself answer him? for there is force in his attack upon me. But perhaps, before we answer him, we had better also hear what Cebes has to say that we may gain time for reflection, and when they have both spoken, we may either assent to them, if there is truth in what they say, or if not, we will maintain our position. Please to tell me then, Cebes, he said, what was the difficulty which troubled you?

88a

Cebes said: I will tell you. My feeling is that the argument is where it was, and open to the same objections which were urged before; for I am ready to admit that the existence of the

soul before entering into the bodily form has been very ingeniously, and, if I may say so, quite sufficiently proven; but the existence of the soul after death is still, in my judgment, unproven. Now my objection is not the same as that of Simmias; for I am not disposed to deny that the soul is stronger and more lasting than the body, being of opinion that in all such respects the soul very far excels the body. Well, then, says the argument to me, why do you remain unconvinced? — When you see that the weaker continues in existence after the man is dead, will you not admit that the more lasting must also survive during the same period of time? Now I will ask you to consider whether the objection, which, like Simmias, I will express in a figure, is of any weight. The analogy which I will adduce is that of an old weaver, who dies, and after his death somebody says: — He is not dead, he must be alive; — see, there is the coat which he himself wove and wore, and which remains whole and undecayed. And then he proceeds to ask of some one who is incredulous, whether a man lasts longer, or the coat which is in use and wear; and when he is answered that a man lasts far longer, thinks that he has thus certainly demonstrated the survival of the man, who is the more lasting, because the less lasting remains. But that, Simmias, as I would beg you to remark, is a mistake; any one can see that he who talks thus is talking nonsense. For the truth is, that the weaver aforesaid, having woven and worn many such coats, outlived several of them, and was outlived by the last; but a man is not therefore proved to be slighter and weaker than a coat. Now the relation of the body to the soul may be expressed in a similar figure; and any one may very fairly say in like manner that the soul is lasting, and the body weak and shortlived in comparison. He may argue in like manner that every soul wears out many bodies, especially if a man live many years. While he is alive the body deliquesces and decays, and the soul always weaves another garment and repairs the waste. But of course,

whenever the soul perishes, she must have on her last garment, and this will survive her; and then at length, when the soul is dead, the body will show its native weakness, and quickly decompose and pass away. I would therefore rather not rely on the argument from superior strength to prove the continued existence of the soul after death. For granting even more than you affirm to be possible, and acknowledging not only that the soul existed before birth, but also that the souls of some exist, and will continue to exist after death, and will be born and die again and again, and that there is a natural strength in the soul which will hold out and be born many times — nevertheless, we may be still inclined to think that she will weary in the labours of successive births, and may at last succumb in one of her deaths and utterly perish; and this death and dissolution of the body which brings destruction to the soul may be unknown to any of us, for no one of us can have had any experience of it: and if so, then I maintain that he who is confident about death has but a foolish confidence, unless he is able to prove that the soul is altogether immortal and imperishable. But if he cannot prove the soul's immortality, he who is about to die will always have reason to fear that when the body is disunited, the soul also may utterly perish.

88c

All of us, as we afterwards remarked to one another, had an unpleasant feeling at hearing what they said. When we had been so firmly convinced before, now to have our faith shaken seemed to introduce a confusion and uncertainty, not only into the previous argument, but into any future one; either we were incapable of forming a judgment, or there were no grounds of belief.

88e

Echecrates: There I feel with you — by heaven I do, Phaedo, and when you were speaking, I was beginning to ask myself the same question: What argument can I ever trust again? For what

could be more convincing than the argument of Socrates, which has now fallen into discredit? That the soul is a harmony is a doctrine which has always had a wonderful attraction for me, and, when mentioned, came back to me at once, as my own original conviction. And now I must begin again and find another argument which will assure me that when the man is dead the soul survives. Tell me, I implore you, how did Socrates proceed? Did he appear to share the unpleasant feeling which you mention? or did he calmly meet the attack? And did he answer forcibly or feebly? Narrate what passed as exactly as you can.

Phaedo: Often, Echecrates, I have wondered at Socrates, but never more than on that occasion. That he should be able to answer was nothing, but what astonished me was, first, the gentle and pleasant and approving manner in which he received the words of the young men, and then his quick sense of the wound which had been inflicted by the argument, and the readiness with which he healed it. He might be compared to a general rallying his defeated and broken army, urging them to accompany him and return to the field of argument.

89c

Echecrates: What followed?

Phaedo: You shall hear, for I was close to him on his right hand, seated on a sort of stool, and he on a couch which was a good deal higher. He stroked my head, and pressed the hair upon my neck — he had a way of playing with my hair; and then he said: To-morrow, Phaedo, I suppose that these fair locks of yours will be severed.

Yes, Socrates, I suppose that they will, I replied.

Not so, if you will take my advice.

What shall I do with them? I said.

89d

To-day, he replied, and not to-morrow, if this argument dies and we cannot bring it to life again, you and I will both shave our locks; and if I were you, and the argument got away from me, and I could not hold my ground against Simmias and Cebes, I would myself take an oath, like the Argives, not to wear hair any more until I had renewed the conflict and defeated them.

Yes, I said, but Heracles himself is said not to be a match for two.

Summon me then, he said, and I will be your Iolaus until the sun goes down.

I summon you rather, I rejoined, not as Heracles summoning Iolaus, but as Iolaus might summon Heracles.

That will do as well, he said. But first let us take care that we avoid a danger.

Of what nature? I said.

90a

Lest we become misologists, he replied, no worse thing can happen to a man than this. For as there are misanthropists or haters of men, there are also misologists or haters of ideas, and both spring from the same cause, which is ignorance of the world. Misanthropy arises out of the too great confidence of inexperience; — you trust a man and think him altogether true and sound and faithful, and then in a little while he turns out to be false and knavish; and then another and another, and when this has happened several times to a man, especially when it happens among those whom he deems to be his own most trusted and familiar friends, and he has often quarreled with them, he at last hates all men, and believes that no one has any good in him at all. You must have observed this trait of character?

90b

I have.

90c

And is not the feeling discreditable? Is it not obvious that such an one having to deal with other men, was clearly without any experience of human nature; for experience would have taught him the true state of the case, that few are the good and few the evil, and that the great majority are in the interval between them.

What do you mean? I said.

I mean, he replied, as you might say of the very large and very small, that nothing is more uncommon than a very large or very small man; and this applies generally to all extremes, whether of great and small, or swift and slow, or fair and foul, or black and white: and whether the instances you select be men or dogs or anything else, few are the extremes, but many are in the mean between them. Did you never observe this?

Yes, I said, I have.

And do you not imagine, he said, that if there were a competition in evil, the worst would be found to be very few?

Yes, that is very likely, I said.

Yes, that is very likely, he replied; although in this respect arguments are unlike men — there I was led on by you to say more than I had intended; but the point of comparison was, that when a simple man who has no skill in dialectics believes an argument to be true which he afterwards imagines to be false, whether really false or not, and then another and another, he has no longer any faith left, and great disputers, as you know, come to think at last that they have grown to be the wisest of mankind; for they alone perceive the utter unsoundness and instability of all arguments, or indeed, of all things, which, like the currents in the Euripus, are going up and down in never-ceasing ebb and flow.

That is quite true, I said.

Yes, Phaedo, he replied, and how melancholy, if there be such a thing as truth or certainty or possibility of knowledge — that a man should have lighted upon some argument or other which at first seemed true and then turned out to be false, and instead of blaming himself and his own want of wit, because he is annoyed, should at last be too glad to transfer the blame from himself to arguments in general: and for ever afterwards should hate and revile them, and lose truth and the knowledge of realities.

Yes, indeed, I said; that is very melancholy.

91b

Let us then, in the first place, he said, be careful of allowing or of admitting into our souls the notion that there is no health or soundness in any arguments at all. Rather say that we have not yet attained to soundness in ourselves, and that we must struggle manfully and do our best to gain health of mind — you and all other men having regard to the whole of your future life, and I myself in the prospect of death. For at this moment I am sensible that I have not the temper of a philosopher; like the vulgar, I am only a partisan. Now the partisan, when he is engaged in a dispute, cares nothing about the rights of the question, but is anxious only to convince his hearers of his own assertions. And the difference between him and me at the present moment is merely this — that whereas he seeks to convince his hearers that what he says is true, I am rather seeking to convince myself; to convince my hearers is a secondary matter with me. And do but see how much I gain by the argument. For if what I say is true, then I do well to be persuaded of the truth, but if there be nothing after death, still, during the short time that remains, I shall not distress my friends with lamentations, and my ignorance will not last, but will die with me, and therefore no harm will be done. This is the

state of mind, Simmias and Cebes, in which I approach the argument. And I would ask you to be thinking of the truth and not of Socrates: agree with me, if I seem to you to be speaking the truth; or if not, withstand me might and main, that I may not deceive you as well as myself in my enthusiasm, and like the bee, leave my sting in you before I die.

And now let us proceed, he said. And first of all let me be sure that I have in my mind what you were saying. Simmias, if I remember rightly, has fears and misgivings whether the soul, although a fairer and diviner thing than the body, being as she is in the form of harmony, may not perish first. On the other hand, Cebes appeared to grant that the soul was more lasting than the body, but he said that no one could know whether the soul, after having worn out many bodies, might not perish herself and leave her last body behind her; and that this is death, which is the destruction not of the body but of the soul, for in the body the work of destruction is ever going on. Are not these, Simmias and Cebes, the points which we have to consider?

92a

They both agreed to this statement of them.

He proceeded: And did you deny the force of the whole preceding argument, or of a part only?

Of a part only, they replied.

92b

And what did you think, he said, of that part of the argument in which we said that knowledge was recollection, and hence inferred that the soul must have previously existed somewhere else before she was enclosed in the body?

Cebes said that he had been wonderfully impressed by that part of the argument, and that his conviction remained absolutely unshaken. Simmias agreed, and added that he himself could

hardly imagine the possibility of his ever thinking differently.

92c

But, rejoined Socrates, you will have to think differently, my Theban friend, if you still maintain that harmony is a compound, and that the soul is a harmony which is made out of strings set in the frame of the body; for you will surely never allow yourself to say that a harmony is prior to the elements which compose it.

Never, Socrates.

92d

But do you not see that this is what you imply when you say that the soul existed before she took the form and body of man, and was made up of elements which as yet had no existence? For harmony is not like the soul, as you suppose; but first the lyre, and the strings, and the sounds exist in a state of discord, and then harmony is made last of all, and perishes first. And how can such a notion of the soul as this agree with the other?

Not at all, replied Simmias.

And yet, he said, there surely ought to be harmony in a discourse of which harmony is the theme.

There ought, replied Simmias.

But there is no harmony, he said, in the two propositions that knowledge is recollection, and that the soul is a harmony. Which of them will you retain?

I think, he replied, that I have a much stronger faith, Socrates, in the first of the two, which has been fully demonstrated to me, than in the latter, which has not been demonstrated at all, but rests only on probable and plausible grounds; and is therefore believed by the many. I know too well that these arguments from probabilities are impostors, and unless great caution is observed in the use of them, they are apt to be deceptive — in

geometry, and in other things too. But the doctrine of knowledge and recollection has been proven to me on trustworthy grounds; and the proof was that the soul must have existed before she came into the body, because to her belongs the essence of which the very name implies existence. Having, as I am convinced, rightly accepted this conclusion, and on sufficient grounds, I must, as I suppose, cease to argue or allow others to argue that the soul is a harmony.

Let me put the matter, Simmias, he said, in another point of view: Do you imagine that a harmony or any other composition can be in a state other than that of the elements, out of which it is compounded?

93b

Certainly not.

Or do or suffer anything other than they do or suffer?

He agreed.

93c

Then a harmony does not, properly speaking, lead the parts or elements which make up the harmony, but only follows them.

He assented.

For harmony cannot possibly have any motion, or sound, or other quality which is opposed to its parts.

That would be impossible, he replied.

And does not the nature of every harmony depend upon the manner in which the elements are harmonized?

I do not understand you, he said.

I mean to say that a harmony admits of degrees, and is more of a harmony, and more completely a harmony, when more truly and fully harmonized, to any extent which is possible; and less of a harmony, and less completely a harmony, when less truly

and fully harmonized.

93d

True.

But does the soul admit of degrees? or is one soul in the very least degree more or less, or more or less completely, a soul than another?

Not in the least.

Yet surely of two souls, one is said to have intelligence and virtue, and to be good, and the other to have folly and vice, and to be an evil soul: and this is said truly?

Yes, truly.

But what will those who maintain the soul to be a harmony say of this presence of virtue and vice in the soul? — will they say that here is another harmony, and another discord, and that the virtuous soul is harmonized, and herself being a harmony has another harmony within her, and that the vicious soul is inharmonical and has no harmony within her?

I cannot tell, replied Simmias; but I suppose that something of the sort would be asserted by those who say that the soul is a harmony.

And we have already admitted that no soul is more a soul than another; which is equivalent to admitting that harmony is not more or less harmony, or more or less completely a harmony?

93e

Quite true.

And that which is not more or less a harmony is not more or less harmonized?

True.

And that which is not more or less harmonized cannot have more or less of harmony, but only an equal harmony?

Yes, an equal harmony.

Then one soul not being more or less absolutely a soul than another, is not more or less harmonized?

94a

Exactly.

And therefore has neither more nor less of discord, nor yet of harmony?

She has not.

And having neither more nor less of harmony or of discord, one soul has no more vice or virtue than another, if vice be discord and virtue harmony?

94b

Not at all more.

Or speaking more correctly, Simmias, the soul, if she is a harmony, will never have any vice; because a harmony, being absolutely a harmony, has no part in the inharmonical.

No.

And therefore a soul which is absolutely a soul has no vice?

How can she have, if the previous argument holds?

94c

Then, if all souls are equally by their nature souls, all souls of all living creatures will be equally good?

I agree with you, Socrates, he said.

And can all this be true, think you? he said; for these are the consequences which seem to follow from the assumption that the soul is a harmony?

It cannot be true.

Once more, he said, what ruler is there of the elements of human nature other than the soul, and especially the wise soul?

Do you know of any?

Indeed, I do not.

And is the soul in agreement with the affections of the body? or is she at variance with them? For example, when the body is hot and thirsty, does not the soul incline us against drinking? and when the body is hungry, against eating? And this is only one instance out of ten thousand of the opposition of the soul to the things of the body.

94d

Very true.

But we have already acknowledged that the soul, being a harmony, can never utter a note at variance with the tensions and relaxations and vibrations and other affections of the strings out of which she is composed; she can only follow, she cannot lead them?

It must be so, he replied.

94e

And yet do we not now discover the soul to be doing the exact opposite — leading the elements of which she is believed to be composed; almost always opposing and coercing them in all sorts of ways throughout life, sometimes more violently with the pains of medicine and gymnastic; then again more gently; now threatening, now admonishing the desires, passions, fears, as if talking to a thing which is not herself, as Homer in the *Odyssey* represents Odysseus doing in the words — 95a ‘He beat his breast, and thus reproached his heart: Endure, my heart; far worse hast thou endured!’

95a

Do you think that Homer wrote this under the idea that the soul is a harmony capable of being led by the affections of the body, and not rather of a nature which should lead and master them — herself a far diviner thing than any harmony?

95b

Yes, Socrates, I quite think so.

Then, my friend, we can never be right in saying that the soul is a harmony, for we should contradict the divine Homer, and contradict ourselves.

True, he said.

Thus much, said Socrates, of Harmonia, your Theban goddess, who has graciously yielded to us; but what shall I say, Cebes, to her husband Cadmus, and how shall I make peace with him?

I think that you will discover a way of propitiating him, said Cebes; I am sure that you have put the argument with Harmonia in a manner that I could never have expected. For when Simmias was mentioning his difficulty, I quite imagined that no answer could be given to him, and therefore I was surprised at finding that his argument could not sustain the first onset of yours, and not impossibly the other, whom you call Cadmus, may share a similar fate.

95d

Nay, my good friend, said Socrates, let us not boast, lest some evil eye should put to flight the word which I am about to speak. That, however, may be left in the hands of those above, while I draw near in Homeric fashion, and try the mettle of your words. Here lies the point: — You want to have it proven to you that the soul is imperishable and immortal, and the philosopher who is confident in death appears to you to have but a vain and foolish confidence, if he believes that he will fare better in the world below than one who has led another sort of life, unless he can prove this; and you say that the demonstration of the strength and divinity of the soul, and of her existence prior to our becoming men, does not necessarily imply her immortality. Admitting the soul to be longlived, and to have known and done much in a former state, still she is not on that account

immortal; and her entrance into the human form may be a sort of disease which is the beginning of dissolution, and may at last, after the toils of life are over, end in that which is called death. And whether the soul enters into the body once only or many times, does not, as you say, make any difference in the fears of individuals. For any man, who is not devoid of sense, must fear, if he has no knowledge and can give no account of the soul's immortality. This, or something like this, I suspect to be your notion, Cebes; and I designedly recur to it in order that nothing may escape us, and that you may, if you wish, add or subtract anything.

But, said Cebes, as far as I see at present, I have nothing to add or subtract: I mean what you say that I mean.

96a

Socrates paused awhile, and seemed to be absorbed in reflection. At length he said: You are raising a tremendous question, Cebes, involving the whole nature of generation and corruption, about which, if you like, I will give you my own experience; and if anything which I say is likely to avail towards the solution of your difficulty you may make use of it.

I should very much like, said Cebes, to hear what you have to say.

96c

Then I will tell you, said Socrates. When I was young, Cebes, I had a prodigious desire to know that department of philosophy which is called the investigation of nature; to know the causes of things, and why a thing is and is created or destroyed appeared to me to be a lofty profession; and I was always agitating myself with the consideration of questions such as these: — Is the growth of animals the result of some decay which the hot and cold principle contracts, as some have said? Is the blood the element with which we think, or the air, or the fire? or perhaps nothing of the kind — but the brain may be the

originating power of the perceptions of hearing and sight and smell, and memory and opinion may come from them, and science may be based on memory and opinion when they have attained fixity. And then I went on to examine the corruption of them, and then to the things of heaven and earth, and at last I concluded myself to be utterly and absolutely incapable of these enquiries, as I will satisfactorily prove to you. For I was fascinated by them to such a degree that my eyes grew blind to things which I had seemed to myself, and also to others, to know quite well; I forgot what I had before thought self-evident truths; e.g. such a fact as that the growth of man is the result of eating and drinking; for when by the digestion of food flesh is added to flesh and bone to bone, and whenever there is an aggregation of congenial elements, the lesser bulk becomes larger and the small man great. Was not that a reasonable notion?

97a

Yes, said Cebes, I think so.

Well; but let me tell you something more. There was a time when I thought that I understood the meaning of greater and less pretty well; and when I saw a great man standing by a little one, I fancied that one was taller than the other by a head; or one horse would appear to be greater than another horse: and still more clearly did I seem to perceive that ten is two more than eight, and that two cubits are more than one, because two is the double of one.

And what is now your notion of such matters? said Cebes.

97b

I should be far enough from imagining, he replied, that I knew the cause of any of them, by heaven I should; for I cannot satisfy myself that, when one is added to one, the one to which the addition is made becomes two, or that the two units added together make two by reason of the addition. I cannot

understand how, when separated from the other, each of them was one and not two, and now, when they are brought together, the mere juxtaposition or meeting of them should be the cause of their becoming two: neither can I understand how the division of one is the way to make two; for then a different cause would produce the same effect, — as in the former instance the addition and juxtaposition of one to one was the cause of two, in this the separation and subtraction of one from the other would be the cause. Nor am I any longer satisfied that I understand the reason why one or anything else is either generated or destroyed or is at all, but I have in my mind some confused notion of a new method, and can never admit the other.

97d

Then I heard some one reading, as he said, from a book of Anaxagoras, that mind was the disposer and cause of all, and I was delighted at this notion, which appeared quite admirable, and I said to myself: If mind is the disposer, mind will dispose all for the best, and put each particular in the best place; and I argued that if any one desired to find out the cause of the generation or destruction or existence of anything, he must find out what state of being or doing or suffering was best for that thing, and therefore a man had only to consider the best for himself and others, and then he would also know the worse, since the same science comprehended both. And I rejoiced to think that I had found in Anaxagoras a teacher of the causes of existence such as I desired, and I imagined that he would tell me first whether the earth is flat or round; and whichever was true, he would proceed to explain the cause and the necessity of this being so, and then he would teach me the nature of the best and show that this was best; and if he said that the earth was in the centre, he would further explain that this position was the best, and I should be satisfied with the explanation given, and not want any other sort of cause. And I thought that I would then go

on and ask him about the sun and moon and stars, and that he would explain to me their comparative swiftness, and their returnings and various states, active and passive, and how all of them were for the best. For I could not imagine that when he spoke of mind as the disposer of them, he would give any other account of their being as they are, except that this was best; and I thought that when he had explained to me in detail the cause of each and the cause of all, he would go on to explain to me what was best for each and what was good for all. These hopes I would not have sold for a large sum of money, and I seized the books and read them as fast as I could in my eagerness to know the better and the worse.

98d

What expectations I had formed, and how grievously was I disappointed! As I proceeded, I found my philosopher altogether forsaking mind or any other principle of order, but having recourse to air, and ether, and water, and other eccentricities. I might compare him to a person who began by maintaining generally that mind is the cause of the actions of Socrates, but who, when he endeavoured to explain the causes of my several actions in detail, went on to show that I sit here because my body is made up of bones and muscles; and the bones, as he would say, are hard and have joints which divide them, and the muscles are elastic, and they cover the bones, which have also a covering or environment of flesh and skin which contains them; and as the bones are lifted at their joints by the contraction or relaxation of the muscles, I am able to bend my limbs, and this is why I am sitting here in a curved posture — that is what he would say, and he would have a similar explanation of my talking to you, which he would attribute to sound, and air, and hearing, and he would assign ten thousand other causes of the same sort, forgetting to mention the true cause, which is, that the Athenians have thought fit to condemn me, and accordingly I have thought it

better and more right to remain here and undergo my sentence; for I am inclined to think that these muscles and bones of mine would have gone off long ago to Megara or Boeotia — by the dog they would, if they had been moved only by their own idea of what was best, and if I had not chosen the better and nobler part, instead of playing truant and running away, of enduring any punishment which the state inflicts. There is surely a strange confusion of causes and conditions in all this. It may be said, indeed, that without bones and muscles and the other parts of the body I cannot execute my purposes. But to say that I do as I do because of them, and that this is the way in which mind acts, and not from the choice of the best, is a very careless and idle mode of speaking. I wonder that they cannot distinguish the cause from the condition, which the many, feeling about in the dark, are always mistaking and misnaming. And thus one man makes a vortex all round and steadies the earth by the heaven; another gives the air as a support to the earth, which is a sort of broad trough. Any power which in arranging them as they are arranges them for the best never enters into their minds; and instead of finding any superior strength in it, they rather expect to discover another Atlas of the world who is stronger and more everlasting and more containing than the good; — of the obligatory and containing power of the good they think nothing; and yet this is the principle which I would fain learn if any one would teach me. But as I have failed either to discover myself, or to learn of any one else, the nature of the best, I will exhibit to you, if you like, what I have found to be the second best mode of enquiring into the cause.

99d

I should very much like to hear, he replied.

100a

Socrates proceeded: — I thought that as I had failed in the contemplation of true existence, I ought to be careful that I did

not lose the eye of my soul; as people may injure their bodily eye by observing and gazing on the sun during an eclipse, unless they take the precaution of only looking at the image reflected in the water, or in some similar medium. So in my own case, I was afraid that my soul might be blinded altogether if I looked at things with my eyes or tried to apprehend them by the help of the senses. And I thought that I had better have recourse to the world of mind and seek there the truth of existence. I dare say that the simile is not perfect — for I am very far from admitting that he who contemplates existences through the medium of thought, sees them only ‘through a glass darkly,’ any more than he who considers them in action and operation. However, this was the method which I adopted: I first assumed some principle which I judged to be the strongest, and then I affirmed as true whatever seemed to agree with this, whether relating to the cause or to anything else; and that which disagreed I regarded as untrue. But I should like to explain my meaning more clearly, as I do not think that you as yet understand me.

100b

No indeed, replied Cebes, not very well.

100c

There is nothing new, he said, in what I am about to tell you; but only what I have been always and everywhere repeating in the previous discussion and on other occasions: I want to show you the nature of that cause which has occupied my thoughts. I shall have to go back to those familiar words which are in the mouth of every one, and first of all assume that there is an absolute beauty and goodness and greatness, and the like; grant me this, and I hope to be able to show you the nature of the cause, and to prove the immortality of the soul.

Cebes said: You may proceed at once with the proof, for I grant you this.

Well, he said, then I should like to know whether you agree with me in the next step; for I cannot help thinking, if there be anything beautiful other than absolute beauty should there be such, that it can be beautiful only in as far as it partakes of absolute beauty — and I should say the same of everything. Do you agree in this notion of the cause?

Yes, he said, I agree.

He proceeded: I know nothing and can understand nothing of any other of those wise causes which are alleged; and if a person says to me that the bloom of colour, or form, or any such thing is a source of beauty, I leave all that, which is only confusing to me, and simply and singly, and perhaps foolishly, hold and am assured in my own mind that nothing makes a thing beautiful but the presence and participation of beauty in whatever way or manner obtained; for as to the manner I am uncertain, but I stoutly contend that by beauty all beautiful things become beautiful. This appears to me to be the safest answer which I can give, either to myself or to another, and to this I cling, in the persuasion that this principle will never be overthrown, and that to myself or to any one who asks the question, I may safely reply, That by beauty beautiful things become beautiful. Do you not agree with me?

101a

I do.

And that by greatness only great things become great and greater greater, and by smallness the less become less?

True.

Then if a person were to remark that A is taller by a head than B, and B less by a head than A, you would refuse to admit his statement, and would stoutly contend that what you mean is only that the greater is greater by, and by reason of, greatness, and the less is less only by, and by reason of, smallness; and thus

you would avoid the danger of saying that the greater is greater and the less less by the measure of the head, which is the same in both, and would also avoid the monstrous absurdity of supposing that the greater man is greater by reason of the head, which is small. You would be afraid to draw such an inference, would you not?

101b

Indeed, I should, said Cebes, laughing.

In like manner you would be afraid to say that ten exceeded eight by, and by reason of, two; but would say by, and by reason of, number; or you would say that two cubits exceed one cubit not by a half, but by magnitude?—for there is the same liability to error in all these cases.

101c

Very true, he said.

101d

Again, would you not be cautious of affirming that the addition of one to one, or the division of one, is the cause of two? And you would loudly asseverate that you know of no way in which anything comes into existence except by participation in its own proper essence, and consequently, as far as you know, the only cause of two is the participation in duality — this is the way to make two, and the participation in one is the way to make one. You would say: I will let alone puzzles of division and addition — wiser heads than mine may answer them; inexperienced as I am, and ready to start, as the proverb says, at my own shadow, I cannot afford to give up the sure ground of a principle. And if any one assails you there, you would not mind him, or answer him, until you had seen whether the consequences which follow agree with one another or not, and when you are further required to give an explanation of this principle, you would go on to assume a higher principle, and a higher, until you found a resting-place in the best of the higher;

but you would not confuse the principle and the consequences in your reasoning, like the Eristics — at least if you wanted to discover real existence. Not that this confusion signifies to them, who never care or think about the matter at all, for they have the wit to be well pleased with themselves however great may be the turmoil of their ideas. But you, if you are a philosopher, will certainly do as I say.

What you say is most true, said Simmias and Cebes, both speaking at once.

102a

Echecrates: Yes, Phaedo; and I do not wonder at their assenting. Any one who has the least sense will acknowledge the wonderful clearness of Socrates' reasoning.

Phaedo: Certainly, Echecrates; and such was the feeling of the whole company at the time.

Echecrates: Yes, and equally of ourselves, who were not of the company, and are now listening to your recital. But what followed?

Phaedo: After all this had been admitted, and they had that ideas exist, and that other things participate in them and derive their names from them, Socrates, if I remember rightly, said: —

102b This is your way of speaking; and yet when you say that Simmias is greater than Socrates and less than Phaedo, do you not predicate of Simmias both greatness and smallness?

102b

Yes, I do.

But still you allow that Simmias does not really exceed Socrates, as the words may seem to imply, because he is Simmias, but by reason of the size which he has; just as Simmias does not exceed Socrates because he is Simmias, any more than because Socrates is Socrates, but because he has smallness when compared with the greatness of Simmias?

True.

And if Phaedo exceeds him in size, this is not because Phaedo is Phaedo, but because Phaedo has greatness relatively to Simmias, who is comparatively smaller?

102c

That is true.

And therefore Simmias is said to be great, and is also said to be small, because he is in a mean between them, exceeding the smallness of the one by his greatness, and allowing the greatness of the other to exceed his smallness. He added, laughing, I am speaking like a book, but I believe that what I am saying is true.

102d

Simmias assented.

I speak as I do because I want you to agree with me in thinking, not only that absolute greatness will never be great and also small, but that greatness in us or in the concrete will never admit the small or admit of being exceeded: instead of this, one of two things will happen, either the greater will fly or retire before the opposite, which is the less, or at the approach of the less has already ceased to exist; but will not, if allowing or admitting of smallness, be changed by that; even as I, having received and admitted smallness when compared with Simmias, remain just as I was, and am the same small person. And as the idea of greatness cannot condescend ever to be or become small, in like manner the smallness in us cannot be or become great; nor can any other opposite which remains the same ever be or become its own opposite, but either passes away or perishes in the change.

That, replied Cebes, is quite my notion.

103a

Hereupon one of the company, though I do not exactly remember which of them, said: In heaven's name, is not this the direct contrary of what was admitted before — that out of the greater came the less and out of the less the greater, and that opposites were simply generated from opposites; but now this principle seems to be utterly denied.

103b

Socrates inclined his head to the speaker and listened. I like your courage, he said, in reminding us of this. But you do not observe that there is a difference in the two cases. For then we were speaking of opposites in the concrete, and now of the essential opposite which, as is affirmed, neither in us nor in nature can ever be at variance with itself: then, my friend, we were speaking of things in which opposites are inherent and which are called after them, but now about the opposites which are inherent in them and which give their name to them; and these essential opposites will never, as we maintain, admit of generation into or out of one another. At the same time, turning to Cebes, he said: Are you at all disconcerted, Cebes, at our friend's objection?

103c

No, I do not feel so, said Cebes; and yet I cannot deny that I am often disturbed by objections.

Then we are agreed after all, said Socrates, that the opposite will never in any case be opposed to itself?

To that we are quite agreed, he replied.

Yet once more let me ask you to consider the question from another point of view, and see whether you agree with me: — There is a thing which you term heat, and another thing which you term cold?

103d

Certainly.

But are they the same as fire and snow?

Most assuredly not.

Heat is a thing different from fire, and cold is not the same with snow?

Yes.

And yet you will surely admit, that when snow, as was before said, is under the influence of heat, they will not remain snow and heat; but at the advance of the heat, the snow will either retire or perish?

Very true, he replied.

103e

And the fire too at the advance of the cold will either retire or perish; and when the fire is under the influence of the cold, they will not remain as before, fire and cold.

That is true, he said.

104a

And in some cases the name of the idea is not only attached to the idea in an eternal connection, but anything else which, not being the idea, exists only in the form of the idea, may also lay claim to it. I will try to make this clearer by an example: — The odd number is always called by the name of odd?

Very true.

But is this the only thing which is called odd? Are there not other things which have their own name, and yet are called odd, because, although not the same as oddness, they are never without oddness? — that is what I mean to ask — whether numbers such as the number three are not of the class of odd. And there are many other examples: would you not say, for example, that three may be called by its proper name, and also be called odd, which is not the same with three? and this may be

said not only of three but also of five, and of every alternate number — each of them without being oddness is odd, and in the same way two and four, and the other series of alternate numbers, has every number even, without being evenness. Do you agree?

Of course.

104b

Then now mark the point at which I am aiming: — not only do essential opposites exclude one another, but also concrete things, which, although not in themselves opposed, contain opposites; these, I say, likewise reject the idea which is opposed to that which is contained in them, and when it approaches them they either perish or withdraw. For example; Will not the number three endure annihilation or anything sooner than be converted into an even number, while remaining three?

Very true, said Cebes.

And yet, he said, the number two is certainly not opposed to the number three?

It is not.

Then not only do opposite ideas repel the advance of one another, but also there are other natures which repel the approach of opposites.

Very true, he said.

Suppose, he said, that we endeavour, if possible, to determine what these are.

By all means.

Are they not, Cebes, such as compel the things of which they have possession, not only to take their own form, but also the form of some opposite?

104d

What do you mean?

I mean, as I was just now saying, and as I am sure that you know, that those things which are possessed by the number three must not only be three in number, but must also be odd.

Quite true.

And on this oddness, of which the number three has the impress, the opposite idea will never intrude?

No.

And this impress was given by the odd principle?

Yes.

And to the odd is opposed the even?

True.

Then the idea of the even number will never arrive at three?

No.

Then three has no part in the even?

104e

None.

Then the triad or number three is uneven?

Very true.

105a

To return then to my distinction of natures which are not opposed, and yet do not admit opposites — as, in the instance given, three, although not opposed to the even, does not any the more admit of the even, but always brings the opposite into play on the other side; or as two does not receive the odd, or fire the cold — from these examples (and there are many more of them) perhaps you may be able to arrive at the general conclusion, that not only opposites will not receive opposites,

but also that nothing which brings the opposite will admit the opposite of that which it brings, in that to which it is brought. And here let me recapitulate — for there is no harm in repetition. The number five will not admit the nature of the even, any more than ten, which is the double of five, will admit the nature of the odd. The double has another opposite, and is not strictly opposed to the odd, but nevertheless rejects the odd altogether. Nor again will parts in the ratio 3:2, nor any fraction in which there is a half, nor again in which there is a third, admit the notion of the whole, although they are not opposed to the whole: You will agree?

105b

Yes, he said, I entirely agree and go along with you in that.

And now, he said, let us begin again; and do not you answer my question in the words in which I ask it: let me have not the old safe answer of which I spoke at first, but another equally safe, of which the truth will be inferred by you from what has been just said. I mean that if any one asks you ‘what that is, of which the inherence makes the body hot,’ you will reply not heat (this is what I call the safe and stupid answer), but fire, a far superior answer, which we are now in a condition to give. Or if any one asks you ‘why a body is diseased,’ you will not say from disease, but from fever; and instead of saying that oddness is the cause of odd numbers, you will say that the monad is the cause of them: and so of things in general, as I dare say that you will understand sufficiently without my adducing any further examples.

105c

Yes, he said, I quite understand you.

Tell me, then, what is that of which the inherence will render the body alive?

The soul, he replied.

And is this always the case?

Yes, he said, of course.

Then whatever the soul possesses, to that she comes bearing life?

Yes, certainly.

And is there any opposite to life?

There is, he said.

And what is that?

Death.

Then the soul, as has been acknowledged, will never receive the opposite of what she brings.

Impossible, replied Cebes.

And now, he said, what did we just now call that principle which repels the even?

The odd.

And that principle which repels the musical, or the just?

The unmusical, he said, and the unjust.

And what do we call the principle which does not admit of death?

The immortal, he said.

And does the soul admit of death?

No.

Then the soul is immortal?

Yes, he said.

106a

And may we say that this has been proven?

Yes, abundantly proven, Socrates, he replied.

Supposing that the odd were imperishable, must not three be imperishable?

Of course.

And if that which is cold were imperishable, when the warm principle came attacking the snow, must not the snow have retired whole and unmelted — for it could never have perished, nor could it have remained and admitted the heat?

106b

True, he said.

Again, if the uncooling or warm principle were imperishable, the fire when assailed by cold would not have perished or have been extinguished, but would have gone away unaffected?

Certainly, he said.

106c

And the same may be said of the immortal: if the immortal is also imperishable, the soul when attacked by death cannot perish; for the preceding argument shows that the soul will not admit of death, or ever be dead, any more than three or the odd number will admit of the even, or fire or the heat in the fire, of the cold. Yet a person may say: 'But although the odd will not become even at the approach of the even, why may not the odd perish and the even take the place of the odd?' Now to him who makes this objection, we cannot answer that the odd principle is imperishable; for this has not been acknowledged, but if this had been acknowledged, there would have been no difficulty in contending that at the approach of the even the odd principle and the number three took their departure; and the same argument would have held good of fire and heat and any other thing.

Very true.

And the same may be said of the immortal: if the immortal is also imperishable, then the soul will be imperishable as well as immortal; but if not, some other proof of her imperishableness will have to be given.

106d

No other proof is needed, he said; for if the immortal, being eternal, is liable to perish, then nothing is imperishable.

Yes, replied Socrates, and yet all men will agree that God, and the essential form of life, and the immortal in general, will never perish.

Yes, all men, he said — that is true; and what is more, gods, if I am not mistaken, as well as men.

Seeing then that the immortal is indestructible, must not the soul, if she is immortal, be also imperishable?

Most certainly.

106e

Then when death attacks a man, the mortal portion of him may be supposed to die, but the immortal retires at the approach of death and is preserved safe and sound?

True.

Then, Cebes, beyond question, the soul is immortal and imperishable, and our souls will truly exist in another world!

107a

I am convinced, Socrates, said Cebes, and have nothing more to object; but if my friend Simmias, or any one else, has any further objection to make, he had better speak out, and not keep silence, since I do not know to what other season he can defer the discussion, if there is anything which he wants to say or to have said.

But I have nothing more to say, replied Simmias; nor can I see any reason for doubt after what has been said. But I still feel and

cannot help feeling uncertain in my own mind, when I think of the greatness of the subject and the feebleness of man.

Yes, Simmias, replied Socrates, that is well said: and I may add that first principles, even if they appear certain, should be carefully considered; and when they are satisfactorily ascertained, then, with a sort of hesitating confidence in human reason, you may, I think, follow the course of the argument; and if that be plain and clear, there will be no need for any further enquiry.

107b

Very true.

107c

But then, O my friends, he said, if the soul is really immortal, what care should be taken of her, not only in respect of the portion of time which is called life, but of eternity! And the danger of neglecting her from this point of view does indeed appear to be awful. If death had only been the end of all, the wicked would have had a good bargain in dying, for they would have been happily quit not only of their body, but of their own evil together with their souls. But now, inasmuch as the soul is manifestly immortal, there is no release or salvation from evil except the attainment of the highest virtue and wisdom. For the soul when on her progress to the world below takes nothing with her but nurture and education; and these are said greatly to benefit or greatly to injure the departed, at the very beginning of his journey thither.

107d

For after death, as they say, the genius of each individual, to whom he belonged in life, leads him to a certain place in which the dead are gathered together, whence after judgment has been given they pass into the world below, following the guide, who is appointed to conduct them from this world to the other: and when they have there received their due and remained

their time, another guide brings them back again after many revolutions of ages. Now this way to the other world is not, as Aeschylus says in the Telephus, a single and straight path — if that were so no guide would be needed, for no one could miss it; but there are many partings of the road, and windings, as I infer from the rites and sacrifices which are offered to the gods below in places where three ways meet on earth. The wise and orderly soul follows in the straight path and is conscious of her surroundings; but the soul which desires the body, and which, as I was relating before, has long been fluttering about the lifeless frame and the world of sight, is after many struggles and many sufferings hardly and with violence carried away by her attendant genius, and when she arrives at the place where the other souls are gathered, if she be impure and have done impure deeds, whether foul murders or other crimes which are the brothers of these, and the works of brothers in crime — from that soul every one flees and turns away; no one will be her companion, no one her guide, but alone she wanders in extremity of evil until certain times are fulfilled, and when they are fulfilled, she is borne irresistibly to her own fitting habitation; as every pure and just soul which has passed through life in the company and under the guidance of the gods has also her own proper home.

108a

Now the earth has divers wonderful regions, and is indeed in nature and extent very unlike the notions of geographers, as I believe on the authority of one who shall be nameless.

108c

What do you mean, Socrates? said Simmias. I have myself heard many descriptions of the earth, but I do not know, and I should very much like to know, in which of these you put faith.

108d

And I, Simmias, replied Socrates, if I had the art of Glaucus would tell you; although I know not that the art of Glaucus

could prove the truth of my tale, which I myself should never be able to prove, and even if I could, I fear, Simmias, that my life would come to an end before the argument was completed. I may describe to you, however, the form and regions of the earth according to my conception of them.

That, said Simmias, will be enough.

108e

Well, then, he said, my conviction is, that the earth is a round body in the centre of the heavens, and therefore has no need of air or any similar force to be a support, but is kept there and hindered from falling or inclining any way by the equability of the surrounding heaven and by her own equipoise. For that which, being in equipoise, is in the centre of that which is equably diffused, will not incline any way in any degree, but will always remain in the same state and not deviate. And this is my first notion.

Which is surely a correct one, said Simmias.

109c

Also I believe that the earth is very vast, and that we who dwell in the region extending from the river Phasis to the Pillars of Heracles inhabit a small portion only about the sea, like ants or frogs about a marsh, and that there are other inhabitants of many other like places; for everywhere on the face of the earth there are hollows of various forms and sizes, into which the water and the mist and the lower air collect. But the true earth is pure and situated in the pure heaven — there are the stars also; and it is the heaven which is commonly spoken of by us as the ether, and of which our own earth is the sediment gathering in the hollows beneath. But we who live in these hollows are deceived into the notion that we are dwelling above on the surface of the earth; which is just as if a creature who was at the bottom of the sea were to fancy that he was on the surface of the water, and that the sea was the heaven through which he

saw the sun and the other stars, he having never come to the surface by reason of his feebleness and sluggishness, and having never lifted up his head and seen, nor ever heard from one who had seen, how much purer and fairer the world above is than his own. And such is exactly our case: for we are dwelling in a hollow of the earth, and fancy that we are on the surface; and the air we call the heaven, in which we imagine that the stars move. But the fact is, that owing to our feebleness and sluggishness we are prevented from reaching the surface of the air: for if any man could arrive at the exterior limit, or take the wings of a bird and come to the top, then like a fish who puts his head out of the water and sees this world, he would see a world beyond; and, if the nature of man could sustain the sight, he would acknowledge that this other world was the place of the true heaven and the true light and the true earth. For our earth, and the stones, and the entire region which surrounds us, are spoilt and corroded, as in the sea all things are corroded by the brine, neither is there any noble or perfect growth, but caverns only, and sand, and an endless slough of mud: and even the shore is not to be compared to the fairer sights of this world. And still less is this our world to be compared with the other. Of that upper earth which is under the heaven, I can tell you a charming tale, Simmias, which is well worth hearing.

109d

And we, Socrates, replied Simmias, shall be charmed to listen to you.

110d

The tale, my friend, he said, is as follows: — In the first place, the earth, when looked at from above, is in appearance streaked like one of those balls which have leather coverings in twelve pieces, and is decked with various colours, of which the colours used by painters on earth are in a manner samples. But there the whole earth is made up of them, and they are brighter far and clearer than ours; there is a purple of wonderful lustre, also

the radiance of gold, and the white which is in the earth is whiter than any chalk or snow. Of these and other colours the earth is made up, and they are more in number and fairer than the eye of man has ever seen; the very hollows (of which I was speaking) filled with air and water have a colour of their own, and are seen like light gleaming amid the diversity of the other colours, so that the whole presents a single and continuous appearance of variety in unity. And in this fair region everything that grows — trees, and flowers, and fruits — are in a like degree fairer than any here; and there are hills, having stones in them in a like degree smoother, and more transparent, and fairer in colour than our highly-valued emeralds and sardonyxes and jaspers, and other gems, which are but minute fragments of them: for there all the stones are like our precious stones, and fairer still (compare *Republic*). The reason is, that they are pure, and not, like our precious stones, infected or corroded by the corrupt briny elements which coagulate among us, and which breed foulness and disease both in earth and stones, as well as in animals and plants. They are the jewels of the upper earth, which also shines with gold and silver and the like, and they are set in the light of day and are large and abundant and in all places, making the earth a sight to gladden the beholder's eye. And there are animals and men, some in a middle region, others dwelling about the air as we dwell about the sea; others in islands which the air flows round, near the continent: and in a word, the air is used by them as the water and the sea are by us, and the ether is to them what the air is to us. Moreover, the temperament of their seasons is such that they have no disease, and live much longer than we do, and have sight and hearing and smell, and all the other senses, in far greater perfection, in the same proportion that air is purer than water or the ether than air. Also they have temples and sacred places in which the gods really dwell, and they hear their voices and receive their answers, and are conscious of them and hold

converse with them, and they see the sun, moon, and stars as they truly are, and their other blessedness is of a piece with this.

111c

Such is the nature of the whole earth, and of the things which are around the earth; and there are divers regions in the hollows on the face of the globe everywhere, some of them deeper and more extended than that which we inhabit, others deeper but with a narrower opening than ours, and some are shallower and also wider. All have numerous perforations, and there are passages broad and narrow in the interior of the earth, connecting them with one another; and there flows out of and into them, as into basins, a vast tide of water, and huge subterranean streams of perennial rivers, and springs hot and cold, and a great fire, and great rivers of fire, and streams of liquid mud, thin or thick (like the rivers of mud in Sicily, and the lava streams which follow them), and the regions about which they happen to flow are filled up with them. And there is a swinging or see-saw in the interior of the earth which moves all this up and down, and is due to the following cause: — There is a chasm which is the vastest of them all, and pierces right through the whole earth; this is that chasm which Homer describes in the words, — ‘Far off, where is the inmost depth beneath the earth;’

112a

and which he in other places, and many other poets, have called Tartarus. And the see-saw is caused by the streams flowing into and out of this chasm, and they each have the nature of the soil through which they flow. And the reason why the streams are always flowing in and out, is that the watery element has no bed or bottom, but is swinging and surging up and down, and the surrounding wind and air do the same; they follow the water up and down, hither and thither, over the earth — just as in the act of respiration the air is always in process of inhalation and exhalation; — and the wind swinging with the water in and out

produces fearful and irresistible blasts: when the waters retire with a rush into the lower parts of the earth, as they are called, they flow through the earth in those regions, and fill them up like water raised by a pump, and then when they leave those regions and rush back hither, they again fill the hollows here, and when these are filled, flow through subterranean channels and find their way to their several places, forming seas, and lakes, and rivers, and springs. Thence they again enter the earth, some of them making a long circuit into many lands, others going to a few places and not so distant; and again fall into Tartarus, some at a point a good deal lower than that at which they rose, and others not much lower, but all in some degree lower than the point from which they came. And some burst forth again on the opposite side, and some on the same side, and some wind round the earth with one or many folds like the coils of a serpent, and descend as far as they can, but always return and fall into the chasm. The rivers flowing in either direction can descend only to the centre and no further, for opposite to the rivers is a precipice.

113b

Now these rivers are many, and mighty, and diverse, and there are four principal ones, of which the greatest and outermost is that called Oceanus, which flows round the earth in a circle; and in the opposite direction flows Acheron, which passes under the earth through desert places into the Acherusian lake: this is the lake to the shores of which the souls of the many go when they are dead, and after waiting an appointed time, which is to some a longer and to some a shorter time, they are sent back to be born again as animals. The third river passes out between the two, and near the place of outlet pours into a vast region of fire, and forms a lake larger than the Mediterranean Sea, boiling with water and mud; and proceeding muddy and turbid, and winding about the earth, comes, among other places, to the extremities of the Acherusian Lake, but mingles not with the

waters of the lake, and after making many coils about the earth plunges into Tartarus at a deeper level. This is that Pyriphlegethon, as the stream is called, which throws up jets of fire in different parts of the earth. The fourth river goes out on the opposite side, and falls first of all into a wild and savage region, which is all of a dark-blue colour, like lapis lazuli; and this is that river which is called the Stygian river, and falls into and forms the Lake Styx, and after falling into the lake and receiving strange powers in the waters, passes under the earth, winding round in the opposite direction, and comes near the Acherusian lake from the opposite side to Pyriphlegethon. And the water of this river too mingles with no other, but flows round in a circle and falls into Tartarus over against Pyriphlegethon; and the name of the river, as the poets say, is Cocytus.

114a

Such is the nature of the other world; and when the dead arrive at the place to which the genius of each severally guides them, first of all, they have sentence passed upon them, as they have lived well and piously or not. And those who appear to have lived neither well nor ill, go to the river Acheron, and embarking in any vessels which they may find, are carried in them to the lake, and there they dwell and are purified of their evil deeds, and having suffered the penalty of the wrongs which they have done to others, they are absolved, and receive the rewards of their good deeds, each of them according to his deserts. But those who appear to be incurable by reason of the greatness of their crimes — who have committed many and terrible deeds of sacrilege, murders foul and violent, or the like — such are hurled into Tartarus which is their suitable destiny, and they never come out. Those again who have committed crimes, which, although great, are not irremediable — who in a moment of anger, for example, have done violence to a father or a mother, and have repented for the remainder of their lives, or,

who have taken the life of another under the like extenuating circumstances — these are plunged into Tartarus, the pains of which they are compelled to undergo for a year, but at the end of the year the wave casts them forth — mere homicides by way of Cocytus, parricides and matricides by Pyriphlegethon — and they are borne to the Acherusian lake, and there they lift up their voices and call upon the victims whom they have slain or wronged, to have pity on them, and to be kind to them, and let them come out into the lake. And if they prevail, then they come forth and cease from their troubles; but if not, they are carried back again into Tartarus and from thence into the rivers unceasingly, until they obtain mercy from those whom they have wronged: for that is the sentence inflicted upon them by their judges. Those too who have been pre-eminent for holiness of life are released from this earthly prison, and go to their pure home which is above, and dwell in the purer earth; and of these, such as have duly purified themselves with philosophy live henceforth altogether without the body, in mansions fairer still which may not be described, and of which the time would fail me to tell.

Wherefore, Simmias, seeing all these things, what ought not we to do that we may obtain virtue and wisdom in this life? Fair is the prize, and the hope great!

114d

A man of sense ought not to say, nor will I be very confident, that the description which I have given of the soul and her mansions is exactly true. But I do say that, inasmuch as the soul is shown to be immortal, he may venture to think, not improperly or unworthily, that something of the kind is true. The venture is a glorious one, and he ought to comfort himself with words like these, which is the reason why I lengthen out the tale. Wherefore, I say, let a man be of good cheer about his soul, who having cast away the pleasures and ornaments of the

body as alien to him and working harm rather than good, has sought after the pleasures of knowledge; and has arrayed the soul, not in some foreign attire, but in her own proper jewels, temperance, and justice, and courage, and nobility, and truth — in these adorned she is ready to go on her journey to the world below, when her hour comes. You, Simmias and Cebes, and all other men, will depart at some time or other. Me already, as the tragic poet would say, the voice of fate calls. Soon I must drink the poison; and I think that I had better repair to the bath first, in order that the women may not have the trouble of washing my body after I am dead.

114e

When he had done speaking, Crito said: And have you any commands for us, Socrates — anything to say about your children, or any other matter in which we can serve you?

115b

Nothing particular, Crito, he replied: only, as I have always told you, take care of yourselves; that is a service which you may be ever rendering to me and mine and to all of us, whether you promise to do so or not. But if you have no thought for yourselves, and care not to walk according to the rule which I have prescribed for you, not now for the first time, however much you may profess or promise at the moment, it will be of no avail.

We will do our best, said Crito: And in what way shall we bury you?

115d

In any way that you like; but you must get hold of me, and take care that I do not run away from you. Then he turned to us, and added with a smile: — I cannot make Crito believe that I am the same Socrates who have been talking and conducting the argument; he fancies that I am the other Socrates whom he will soon see, a dead body — and he asks, How shall he bury me? And

though I have spoken many words in the endeavour to show that when I have drunk the poison I shall leave you and go to the joys of the blessed, — these words of mine, with which I was comforting you and myself, have had, as I perceive, no effect upon Crito. And therefore I want you to be surety for me to him now, as at the trial he was surety to the judges for me: but let the promise be of another sort; for he was surety for me to the judges that I would remain, and you must be my surety to him that I shall not remain, but go away and depart; and then he will suffer less at my death, and not be grieved when he sees my body being burned or buried. I would not have him sorrow at my hard lot, or say at the burial, Thus we lay out Socrates, or, Thus we follow him to the grave or bury him; for false words are not only evil in themselves, but they infect the soul with evil. Be of good cheer, then, my dear Crito, and say that you are burying my body only, and do with that whatever is usual, and what you think best.

116a

When he had spoken these words, he arose and went into a chamber to bathe; Crito followed him and told us to wait. So we remained behind, talking and thinking of the subject of discourse, and also of the greatness of our sorrow; he was like a father of whom we were being bereaved, and we were about to pass the rest of our lives as orphans. When he had taken the bath his children were brought to him — (he had two young sons and an elder one); and the women of his family also came, and he talked to them and gave them a few directions in the presence of Crito; then he dismissed them and returned to us.

116b

Now the hour of sunset was near, for a good deal of time had passed while he was within. When he came out, he sat down with us again after his bath, but not much was said. Soon the jailer, who was the servant of the Eleven, entered and stood by him, saying: — To you, Socrates, whom I know to be the noblest

and gentlest and best of all who ever came to this place, I will not impute the angry feelings of other men, who rage and swear at me, when, in obedience to the authorities, I bid them drink the poison — indeed, I am sure that you will not be angry with me; for others, as you are aware, and not I, are to blame. And so fare you well, and try to bear lightly what must needs be — you know my errand. Then bursting into tears he turned away and went out.

116d

Socrates looked at him and said: I return your good wishes, and will do as you bid. Then turning to us, he said, How charming the man is: since I have been in prison he has always been coming to see me, and at times he would talk to me, and was as good to me as could be, and now see how generously he sorrows on my account. We must do as he says, Crito; and therefore let the cup be brought, if the poison is prepared: if not, let the attendant prepare some.

116e

Yet, said Crito, the sun is still upon the hill-tops, and I know that many a one has taken the draught late, and after the announcement has been made to him, he has eaten and drunk, and enjoyed the society of his beloved; do not hurry — there is time enough.

Socrates said: Yes, Crito, and they of whom you speak are right in so acting, for they think that they will be gainers by the delay; but I am right in not following their example, for I do not think that I should gain anything by drinking the poison a little later; I should only be ridiculous in my own eyes for sparing and saving a life which is already forfeit. Please then to do as I say, and not to refuse me.

117c

Crito made a sign to the servant, who was standing by; and he went out, and having been absent for some time, returned with

the jailer carrying the cup of poison. Socrates said: You, my good friend, who are experienced in these matters, shall give me directions how I am to proceed. The man answered: You have only to walk about until your legs are heavy, and then to lie down, and the poison will act. At the same time he handed the cup to Socrates, who in the easiest and gentlest manner, without the least fear or change of colour or feature, looking at the man with all his eyes, Echecrates, as his manner was, took the cup and said: What do you say about making a libation out of this cup to any god? May I, or not? The man answered: We only prepare, Socrates, just so much as we deem enough. I understand, he said: but I may and must ask the gods to prosper my journey from this to the other world — even so — and so be it according to my prayer. Then raising the cup to his lips, quite readily and cheerfully he drank off the poison. And hitherto most of us had been able to control our sorrow; but now when we saw him drinking, and saw too that he had finished the draught, we could no longer forbear, and in spite of myself my own tears were flowing fast; so that I covered my face and wept, not for him, but at the thought of my own calamity in having to part from such a friend. Nor was I the first; for Crito, when he found himself unable to restrain his tears, had got up, and I followed; and at that moment, Apollodorus, who had been weeping all the time, broke out in a loud and passionate cry which made cowards of us all. Socrates alone retained his calmness: What is this strange outcry? he said. I sent away the women mainly in order that they might not misbehave in this way, for I have been told that a man should die in peace. Be quiet, then, and have patience. When we heard his words we were ashamed, and refrained our tears; and he walked about until, as he said, his legs began to fail, and then he lay on his back, according to the directions, and the man who gave him the poison now and then looked at his feet and legs; and after a while he pressed his foot hard, and asked him if he could feel;

and he said, No; and then his leg, and so upwards and upwards, and showed us that he was cold and stiff. And he felt them himself, and said: When the poison reaches the heart, that will be the end. He was beginning to grow cold about the groin, when he uncovered his face, for he had covered himself up, and said — they were his last words — he said: Crito, I owe a cock to Asclepius; will you remember to pay the debt? The debt shall be paid, said Crito; is there anything else? There was no answer to this question; but in a minute or two a movement was heard, and the attendants uncovered him; his eyes were set, and Crito closed his eyes and mouth.

118a

Such was the end, Echecrates, of our friend; concerning whom I may truly say, that of all the men of his time whom I have known, he was the wisest and justest and best.

Phaedrus

persons in the dialogue:

SOCRATES of Alopecce, son of Sophroniscus

PHAEDRUS a young Athenian

scene: outside the city walls of Athens, by the Ilissus river

227a

Socrates: My dear Phaedrus, whence come you, and whither are you going?

Phaedrus: I come from Lysias the son of Cephalus, and I am going to take a walk outside the wall, for I have been sitting with him the whole morning; and our common friend Acumenus tells me that it is much more refreshing to walk in the open air than to be shut up in a cloister.

227b

Socrates: There he is right. Lysias then, I suppose, was in the town?

Phaedrus: Yes, he was staying with Epicrates, here at the house of Morychus; that house which is near the temple of Olympian Zeus.

Socrates: And how did he entertain you? Can I be wrong in supposing that Lysias gave you a feast of discourse?

Phaedrus: You shall hear, if you can spare time to accompany me.

Socrates: And should I not deem the conversation of you and Lysias ‘a thing of higher import,’ as I may say in the words of Pindar, ‘than any business’?

Phaedrus: Will you go on?

Socrates: And will you go on with the narration?

Phaedrus: My tale, Socrates, is one of your sort, for love was the theme which occupied us — love after a fashion: Lysias has been

writing about a fair youth who was being tempted, but not by a lover; and this was the point: he ingeniously proved that the non-lover should be accepted rather than the lover.

Socrates: O that is noble of him! I wish that he would say the poor man rather than the rich, and the old man rather than the young one; — then he would meet the case of me and of many a man; his words would be quite refreshing, and he would be a public benefactor. For my part, I do so long to hear his speech, that if you walk all the way to Megara, and when you have reached the wall come back, as Herodicus recommends, without going in, I will keep you company.

227d

Phaedrus: What do you mean, my good Socrates? How can you imagine that my unpractised memory can do justice to an elaborate work, which the greatest rhetorician of the age spent a long time in composing. Indeed, I cannot; I would give a great deal if I could.

228a

Socrates: I believe that I know Phaedrus about as well as I know myself, and I am very sure that the speech of Lysias was repeated to him, not once only, but again and again; — he insisted on hearing it many times over and Lysias was very willing to gratify him; at last, when nothing else would do, he got hold of the book, and looked at what he most wanted to see, — this occupied him during the whole morning; — and then when he was tired with sitting, he went out to take a walk, not until, by the dog, as I believe, he had simply learned by heart the entire discourse, unless it was unusually long, and he went to a place outside the wall that he might practise his lesson. There he saw a certain lover of discourse who had a similar weakness; — he saw and rejoiced; now thought he, ‘I shall have a partner in my revels.’ And he invited him to come and walk with him. But when the lover of discourse begged that he would

repeat the tale, he gave himself airs and said, 'No I cannot,' as if he were indisposed; although, if the hearer had refused, he would sooner or later have been compelled by him to listen whether he would or no. Therefore, Phaedrus, bid him do at once what he will soon do whether bidden or not.

Phaedrus: I see that you will not let me off until I speak in some fashion or other; verily therefore my best plan is to speak as I best can.

Socrates: A very true remark, that of yours.

228d

Phaedrus: I will do as I say; but believe me, Socrates, I did not learn the very words — O no; nevertheless I have a general notion of what he said, and will give you a summary of the points in which the lover differed from the non-lover. Let me begin at the beginning.

Socrates: Yes, my sweet one; but you must first of all show what you have in your left hand under your cloak, for that roll, as I suspect, is the actual discourse. Now, much as I love you, I would not have you suppose that I am going to have your memory exercised at my expense, if you have Lysias himself here.

Phaedrus: Enough; I see that I have no hope of practising my art upon you. But if I am to read, where would you please to sit?

Socrates: Let us turn aside and go by the Ilissus; we will sit down at some quiet spot.

Phaedrus: I am fortunate in not having my sandals, and as you never have any, I think that we may go along the brook and cool our feet in the water; this will be the easiest way, and at midday and in the summer is far from being unpleasant.

229a

Socrates: Lead on, and look out for a place in which we can sit down.

229b

Phaedrus: Do you see the tallest plane-tree in the distance?

Socrates: Yes.

Phaedrus: There are shade and gentle breezes, and grass on which we may either sit or lie down.

Socrates: Move forward.

Phaedrus: I should like to know, Socrates, whether the place is not somewhere here at which Boreas is said to have carried off Orithyia from the banks of the Ilissus?

Socrates: Such is the tradition.

Phaedrus: And is this the exact spot? The little stream is delightfully clear and bright; I can fancy that there might be maidens playing near.

Socrates: I believe that the spot is not exactly here, but about a quarter of a mile lower down, where you cross to the temple of Artemis, and there is, I think, some sort of an altar of Boreas at the place.

Phaedrus: I have never noticed it; but I beseech you to tell me, Socrates, do you believe this tale?

Socrates: The wise are doubtful, and I should not be singular if, like them, I too doubted. I might have a rational explanation that Orithyia was playing with Pharmacia, when a northern gust carried her over the neighbouring rocks; and this being the manner of her death, she was said to have been carried away by Boreas. There is a discrepancy, however, about the locality; according to another version of the story she was taken from Areopagus, and not from this place. Now I quite acknowledge that these allegories are very nice, but he is not to be envied

who has to invent them; much labour and ingenuity will be required of him; and when he has once begun, he must go on and rehabilitate Hippocentaurs and chimeras dire. Gorgons and winged steeds flow in apace, and numberless other inconceivable and portentous natures. And if he is sceptical about them, and would fain reduce them one after another to the rules of probability, this sort of crude philosophy will take up a great deal of time. Now I have no leisure for such enquiries; shall I tell you why? I must first know myself, as the Delphian inscription says; to be curious about that which is not my concern, while I am still in ignorance of my own self, would be ridiculous. And therefore I bid farewell to all this; the common opinion is enough for me. For, as I was saying, I want to know not about this, but about myself: am I a monster more complicated and swollen with passion than the serpent Typho, or a creature of a gentler and simpler sort, to whom Nature has given a diviner and lowlier destiny? But let me ask you, friend: have we not reached the plane-tree to which you were conducting us?

230c

Phaedrus: Yes, this is the tree.

230d

Socrates: By Here, a fair resting-place, full of summer sounds and scents. Here is this lofty and spreading plane-tree, and the agnus castus high and clustering, in the fullest blossom and the greatest fragrance; and the stream which flows beneath the plane-tree is deliciously cold to the feet. Judging from the ornaments and images, this must be a spot sacred to Achelous and the Nymphs. How delightful is the breeze: — so very sweet; and there is a sound in the air shrill and summerlike which makes answer to the chorus of the cicadae. But the greatest charm of all is the grass, like a pillow gently sloping to the head. My dear Phaedrus, you have been an admirable guide.

Phaedrus: What an incomprehensible being you are, Socrates: when you are in the country, as you say, you really are like some stranger who is led about by a guide. Do you ever cross the border? I rather think that you never venture even outside the gates.

231a

Socrates: Very true, my good friend; and I hope that you will excuse me when you hear the reason, which is, that I am a lover of knowledge, and the men who dwell in the city are my teachers, and not the trees or the country. Though I do indeed believe that you have found a spell with which to draw me out of the city into the country, like a hungry cow before whom a bough or a bunch of fruit is waved. For only hold up before me in like manner a book, and you may lead me all round Attica, and over the wide world. And now having arrived, I intend to lie down, and do you choose any posture in which you can read best. Begin.

231e

Phaedrus: Listen. You know how matters stand with me; and how, as I conceive, this affair may be arranged for the advantage of both of us. And I maintain that I ought not to fail in my suit, because I am not your lover: for lovers repent of the kindnesses which they have shown when their passion ceases, but to the non-lovers who are free and not under any compulsion, no time of repentance ever comes; for they confer their benefits according to the measure of their ability, in the way which is most conducive to their own interest. Then again, lovers consider how by reason of their love they have neglected their own concerns and rendered service to others: and when to these benefits conferred they add on the troubles which they have endured, they think that they have long ago made to the beloved a very ample return. But the non-lover has no such tormenting recollections; he has never neglected his affairs or quarrelled with his relations; he has no troubles to add up or

excuses to invent; and being well rid of all these evils, why should he not freely do what will gratify the beloved? If you say that the lover is more to be esteemed, because his love is thought to be greater; for he is willing to say and do what is hateful to other men, in order to please his beloved; — that, if true, is only a proof that he will prefer any future love to his present, and will injure his old love at the pleasure of the new. And how, in a matter of such infinite importance, can a man be right in trusting himself to one who is afflicted with a malady which no experienced person would attempt to cure, for the patient himself admits that he is not in his right mind, and acknowledges that he is wrong in his mind, but says that he is unable to control himself? And if he came to his right mind, would he ever imagine that the desires were good which he conceived when in his wrong mind? Once more, there are many more non-lovers than lovers; and if you choose the best of the lovers, you will not have many to choose from; but if from the non-lovers, the choice will be larger, and you will be far more likely to find among them a person who is worthy of your friendship. If public opinion be your dread, and you would avoid reproach, in all probability the lover, who is always thinking that other men are as emulous of him as he is of them, will boast to some one of his successes, and make a show of them openly in the pride of his heart; — he wants others to know that his labour has not been lost; but the non-lover is more his own master, and is desirous of solid good, and not of the opinion of mankind. Again, the lover may be generally noted or seen following the beloved (this is his regular occupation), and whenever they are observed to exchange two words they are supposed to meet about some affair of love either past or in contemplation; but when non-lovers meet, no one asks the reason why, because people know that talking to another is natural, whether friendship or mere pleasure be the motive. Once more, if you fear the fickleness of friendship, consider that

in any other case a quarrel might be a mutual calamity; but now, when you have given up what is most precious to you, you will be the greater loser, and therefore, you will have more reason in being afraid of the lover, for his vexations are many, and he is always fancying that every one is leagued against him. Wherefore also he debars his beloved from society; he will not have you intimate with the wealthy, lest they should exceed him in wealth, or with men of education, lest they should be his superiors in understanding; and he is equally afraid of anybody's influence who has any other advantage over himself. If he can persuade you to break with them, you are left without a friend in the world; or if, out of a regard to your own interest, you have more sense than to comply with his desire, you will have to quarrel with him. But those who are non-lovers, and whose success in love is the reward of their merit, will not be jealous of the companions of their beloved, and will rather hate those who refuse to be his associates, thinking that their favourite is slighted by the latter and benefited by the former; for more love than hatred may be expected to come to him out of his friendship with others. Many lovers too have loved the person of a youth before they knew his character or his belongings; so that when their passion has passed away, there is no knowing whether they will continue to be his friends; whereas, in the case of non-lovers who were always friends, the friendship is not lessened by the favours granted; but the recollection of these remains with them, and is an earnest of good things to come.

233b

Further, I say that you are likely to be improved by me, whereas the lover will spoil you. For they praise your words and actions in a wrong way; partly, because they are afraid of offending you, and also, their judgment is weakened by passion. Such are the feats which love exhibits; he makes things painful to the disappointed which give no pain to others; he compels the

successful lover to praise what ought not to give him pleasure, and therefore the beloved is to be pitied rather than envied. But if you listen to me, in the first place, I, in my intercourse with you, shall not merely regard present enjoyment, but also future advantage, being not mastered by love, but my own master; nor for small causes taking violent dislikes, but even when the cause is great, slowly laying up little wrath — unintentional offences I shall forgive, and intentional ones I shall try to prevent; and these are the marks of a friendship which will last.

233e

Do you think that a lover only can be a firm friend? reflect: — if this were true, we should set small value on sons, or fathers, or mothers; nor should we ever have loyal friends, for our love of them arises not from passion, but from other associations. Further, if we ought to shower favours on those who are the most eager suitors, — on that principle, we ought always to do good, not to the most virtuous, but to the most needy; for they are the persons who will be most relieved, and will therefore be the most grateful; and when you make a feast you should invite not your friend, but the beggar and the empty soul; for they will love you, and attend you, and come about your doors, and will be the best pleased, and the most grateful, and will invoke many a blessing on your head. Yet surely you ought not to be granting favours to those who besiege you with prayer, but to those who are best able to reward you; nor to the lover only, but to those who are worthy of love; nor to those who will enjoy the bloom of your youth, but to those who will share their possessions with you in age; nor to those who, having succeeded, will glory in their success to others, but to those who will be modest and tell no tales; nor to those who care about you for a moment only, but to those who will continue your friends through life; nor to those who, when their passion is over, will pick a quarrel with you, but rather to those who, when the charm of youth has left you, will show their own virtue. Remember what I have said;

and consider yet this further point: friends admonish the lover under the idea that his way of life is bad, but no one of his kindred ever yet censured the non-lover, or thought that he was ill-advised about his own interests.

234b

‘Perhaps you will ask me whether I propose that you should indulge every non-lover. To which I reply that not even the lover would advise you to indulge all lovers, for the indiscriminate favour is less esteemed by the rational recipient, and less easily hidden by him who would escape the censure of the world. Now love ought to be for the advantage of both parties, and for the injury of neither.

234d

‘I believe that I have said enough; but if there is anything more which you desire or which in your opinion needs to be supplied, ask and I will answer.’

Now, Socrates, what do you think? Is not the discourse excellent, more especially in the matter of the language?

Socrates: Yes, quite admirable; the effect on me was ravishing. And this I owe to you, Phaedrus, for I observed you while reading to be in an ecstasy, and thinking that you are more experienced in these matters than I am, I followed your example, and, like you, my divine darling, I became inspired with a phrenzy.

Phaedrus: Indeed, you are pleased to be merry.

Socrates: Do you mean that I am not in earnest?

234e

Phaedrus: Now don’t talk in that way, Socrates, but let me have your real opinion; I adjure you, by Zeus, the god of friendship, to tell me whether you think that any Hellene could have said more or spoken better on the same subject.

Socrates: Well, but are you and I expected to praise the sentiments of the author, or only the clearness, and roundness, and finish, and tournure of the language? As to the first I willingly submit to your better judgment, for I am not worthy to form an opinion, having only attended to the rhetorical manner; and I was doubting whether this could have been defended even by Lysias himself; I thought, though I speak under correction, that he repeated himself two or three times, either from want of words or from want of pains; and also, he appeared to me ostentatiously to exult in showing how well he could say the same thing in two or three ways.

235b

Phaedrus: Nonsense, Socrates; what you call repetition was the especial merit of the speech; for he omitted no topic of which the subject rightly allowed, and I do not think that any one could have spoken better or more exhaustively.

Socrates: There I cannot go along with you. Ancient sages, men and women, who have spoken and written of these things, would rise up in judgment against me, if out of complaisance I assented to you.

235c

Phaedrus: Who are they, and where did you hear anything better than this?

Socrates: I am sure that I must have heard; but at this moment I do not remember from whom; perhaps from Sappho the fair, or Anacreon the wise; or, possibly, from a prose writer. Why do I say so? Why, because I perceive that my bosom is full, and that I could make another speech as good as that of Lysias, and different. Now I am certain that this is not an invention of my own, who am well aware that I know nothing, and therefore I can only infer that I have been filled through the ears, like a pitcher, from the waters of another, though I have actually forgotten in my stupidity who was my informant.

235e

Phaedrus: That is grand: — but never mind where you heard the discourse or from whom; let that be a mystery not to be divulged even at my earnest desire. Only, as you say, promise to make another and better oration, equal in length and entirely new, on the same subject; and I, like the nine Archons, will promise to set up a golden image at Delphi, not only of myself, but of you, and as large as life.

Socrates: You are a dear golden ass if you suppose me to mean that Lysias has altogether missed the mark, and that I can make a speech from which all his arguments are to be excluded. The worst of authors will say something which is to the point. Who, for example, could speak on this thesis of yours without praising the discretion of the non-lover and blaming the indiscretion of the lover? These are the commonplaces of the subject which must come in (for what else is there to be said?) and must be allowed and excused; the only merit is in the arrangement of them, for there can be none in the invention; but when you leave the commonplaces, then there may be some originality.

236b

Phaedrus: I admit that there is reason in what you say, and I too will be reasonable, and will allow you to start with the premiss that the lover is more disordered in his wits than the non-lover; if in what remains you make a longer and better speech than Lysias, and use other arguments, then I say again, that a statue you shall have of beaten gold, and take your place by the colossal offerings of the Cypselids at Olympia.

Socrates: How profoundly in earnest is the lover, because to tease him I lay a finger upon his love! And so, Phaedrus, you really imagine that I am going to improve upon the ingenuity of Lysias?

236c

Phaedrus: There I have you as you had me, and you must just speak ‘as you best can.’ Do not let us exchange ‘tu quoque’ as in a farce, or compel me to say to you as you said to me, ‘I know Socrates as well as I know myself, and he was wanting to speak, but he gave himself airs.’ Rather I would have you consider that from this place we stir not until you have unbosomed yourself of the speech; for here are we all alone, and I am stronger, remember, and younger than you: — Wherefore perpend, and do not compel me to use violence.

236d

Socrates: But, my sweet Phaedrus, how ridiculous it would be of me to compete with Lysias in an extempore speech! He is a master in his art and I am an untaught man.

Phaedrus: You see how matters stand; and therefore let there be no more pretences; for, indeed, I know the word that is irresistible.

Socrates: Then don’t say it.

236e

Phaedrus: Yes, but I will; and my word shall be an oath. ‘I say, or rather swear’ — but what god will be witness of my oath?— ‘By this plane-tree I swear, that unless you repeat the discourse here in the face of this very plane-tree, I will never tell you another; never let you have word of another!’

Socrates: Villain! I am conquered; the poor lover of discourse has no more to say.

Phaedrus: Then why are you still at your tricks?

Socrates: I am not going to play tricks now that you have taken the oath, for I cannot allow myself to be starved.

Phaedrus: Proceed.

Socrates: Shall I tell you what I will do?

237a

Phaedrus: What?

Socrates: I will veil my face and gallop through the discourse as fast as I can, for if I see you I shall feel ashamed and not know what to say.

237b

Phaedrus: Only go on and you may do anything else which you please.

Socrates: Come, O ye Muses, melodious, as ye are called, whether you have received this name from the character of your strains, or because the Melians are a musical race, help, O help me in the tale which my good friend here desires me to rehearse, in order that his friend whom he always deemed wise may seem to him to be wiser than ever.

Once upon a time there was a fair boy, or, more properly speaking, a youth; he was very fair and had a great many lovers; and there was one special cunning one, who had persuaded the youth that he did not love him, but he really loved him all the same; and one day when he was paying his addresses to him, he used this very argument — that he ought to accept the non-lover rather than the lover; his words were as follows: — 237c
'All good counsel begins in the same way; a man should know what he is advising about, or his counsel will all come to nought. But people imagine that they know about the nature of things, when they don't know about them, and, not having come to an understanding at first because they think that they know, they end, as might be expected, in contradicting one another and themselves. Now you and I must not be guilty of this fundamental error which we condemn in others; but as our question is whether the lover or non-lover is to be preferred, let us first of all agree in defining the nature and power of love, and then, keeping our eyes upon the definition and to this appealing, let us further enquire whether love brings advantage or disadvantage.

237c

'Every one sees that love is a desire, and we know also that non-lovers desire the beautiful and good. Now in what way is the lover to be distinguished from the non-lover? Let us note that in every one of us there are two guiding and ruling principles which lead us whither they will; one is the natural desire of pleasure, the other is an acquired opinion which aspires after the best; and these two are sometimes in harmony and then again at war, and sometimes the one, sometimes the other conquers. When opinion by the help of reason leads us to the best, the conquering principle is called temperance; but when desire, which is devoid of reason, rules in us and drags us to pleasure, that power of misrule is called excess. Now excess has many names, and many members, and many forms, and any of these forms when very marked gives a name, neither honourable nor creditable, to the bearer of the name. The desire of eating, for example, which gets the better of the higher reason and the other desires, is called gluttony, and he who is possessed by it is called a glutton; the tyrannical desire of drink, which inclines the possessor of the desire to drink, has a name which is only too obvious, and there can be as little doubt by what name any other appetite of the same family would be called; — it will be the name of that which happens to be dominant. And now I think that you will perceive the drift of my discourse; but as every spoken word is in a manner plainer than the unspoken, I had better say further that the irrational desire which overcomes the tendency of opinion towards right, and is led away to the enjoyment of beauty, and especially of personal beauty, by the desires which are her own kindred — that supreme desire, I say, which by leading conquers and by the force of passion is reinforced, from this very force, receiving a name, is called love (*erromenos eros*).'

And now, dear Phaedrus, I shall pause for an instant to ask whether you do not think me, as I appear to myself, inspired?

238d

Phaedrus: Yes, Socrates, you seem to have a very unusual flow of words.

Socrates: Listen to me, then, in silence; for surely the place is holy; so that you must not wonder, if, as I proceed, I appear to be in a divine fury, for already I am getting into dithyrambics.

Phaedrus: Nothing can be truer.

Socrates: The responsibility rests with you. But hear what follows, and perhaps the fit may be averted; all is in their hands above. I will go on talking to my youth. Listen: — ^{238e} Thus, my friend, we have declared and defined the nature of the subject. Keeping the definition in view, let us now enquire what advantage or disadvantage is likely to ensue from the lover or the non-lover to him who accepts their advances.

239a

He who is the victim of his passions and the slave of pleasure will of course desire to make his beloved as agreeable to himself as possible. Now to him who has a mind diseased anything is agreeable which is not opposed to him, but that which is equal or superior is hateful to him, and therefore the lover will not brook any superiority or equality on the part of his beloved; he is always employed in reducing him to inferiority. And the ignorant is the inferior of the wise, the coward of the brave, the slow of speech of the speaker, the dull of the clever. These, and not these only, are the mental defects of the beloved; — defects which, when implanted by nature, are necessarily a delight to the lover, and when not implanted, he must contrive to implant them in him, if he would not be deprived of his fleeting joy. And therefore he cannot help being jealous, and will debar his beloved from the advantages of society which would make a man of him, and especially from that society which would have given him wisdom, and thereby he cannot fail to do him great harm. That is to say, in his excessive fear lest he should come to

be despised in his eyes he will be compelled to banish from him divine philosophy; and there is no greater injury which he can inflict upon him than this. He will contrive that his beloved shall be wholly ignorant, and in everything shall look to him; he is to be the delight of the lover's heart, and a curse to himself. Verily, a lover is a profitable guardian and associate for him in all that relates to his mind.

239c

Let us next see how his master, whose law of life is pleasure and not good, will keep and train the body of his servant. Will he not choose a beloved who is delicate rather than sturdy and strong? One brought up in shady bowers and not in the bright sun, a stranger to manly exercises and the sweat of toil, accustomed only to a soft and luxurious diet, instead of the hues of health having the colours of paint and ornament, and the rest of a piece? — such a life as any one can imagine and which I need not detail at length. But I may sum up all that I have to say in a word, and pass on. Such a person in war, or in any of the great crises of life, will be the anxiety of his friends and also of his lover, and certainly not the terror of his enemies; which nobody can deny.

239e

And now let us tell what advantage or disadvantage the beloved will receive from the guardianship and society of his lover in the matter of his property; this is the next point to be considered. The lover will be the first to see what, indeed, will be sufficiently evident to all men, that he desires above all things to deprive his beloved of his dearest and best and holiest possessions, father, mother, kindred, friends, of all whom he thinks may be hinderers or reprovers of their most sweet converse; he will even cast a jealous eye upon his gold and silver or other property, because these make him a less easy prey, and when caught less manageable; hence he is of necessity displeased at his possession of them and rejoices at their loss;

and he would like him to be wifeless, childless, homeless, as well; and the longer the better, for the longer he is all this, the longer he will enjoy him.

240b

There are some sort of animals, such as flatterers, who are dangerous and mischievous enough, and yet nature has mingled a temporary pleasure and grace in their composition. You may say that a courtesan is hurtful, and disapprove of such creatures and their practices, and yet for the time they are very pleasant. But the lover is not only hurtful to his love; he is also an extremely disagreeable companion. The old proverb says that 'birds of a feather flock together'; I suppose that equality of years inclines them to the same pleasures, and similarity begets friendship; yet you may have more than enough even of this; and verily constraint is always said to be grievous. Now the lover is not only unlike his beloved, but he forces himself upon him. For he is old and his love is young, and neither day nor night will he leave him if he can help; necessity and the sting of desire drive him on, and allure him with the pleasure which he receives from seeing, hearing, touching, perceiving him in every way. And therefore he is delighted to fasten upon him and to minister to him. But what pleasure or consolation can the beloved be receiving all this time? Must he not feel the extremity of disgust when he looks at an old shrivelled face and the remainder to match, which even in a description is disagreeable, and quite detestable when he is forced into daily contact with his lover; moreover he is jealously watched and guarded against everything and everybody, and has to hear misplaced and exaggerated praises of himself, and censures equally inappropriate, which are intolerable when the man is sober, and, besides being intolerable, are published all over the world in all their indelicacy and wearisomeness when he is drunk.

241a

And not only while his love continues is he mischievous and unpleasant, but when his love ceases he becomes a perfidious enemy of him on whom he showered his oaths and prayers and promises, and yet could hardly prevail upon him to tolerate the tedium of his company even from motives of interest. The hour of payment arrives, and now he is the servant of another master; instead of love and infatuation, wisdom and temperance are his bosom's lords; but the beloved has not discovered the change which has taken place in him, when he asks for a return and recalls to his recollection former sayings and doings; he believes himself to be speaking to the same person, and the other, not having the courage to confess the truth, and not knowing how to fulfil the oaths and promises which he made when under the dominion of folly, and having now grown wise and temperate, does not want to do as he did or to be as he was before. And so he runs away and is constrained to be a defaulter; the oyster-shell (In allusion to a game in which two parties fled or pursued according as an oyster-shell which was thrown into the air fell with the dark or light side uppermost.) has fallen with the other side uppermost — he changes pursuit into flight, while the other is compelled to follow him with passion and imprecation, not knowing that he ought never from the first to have accepted a demented lover instead of a sensible non-lover; and that in making such a choice he was giving himself up to a faithless, morose, envious, disagreeable being, hurtful to his estate, hurtful to his bodily health, and still more hurtful to the cultivation of his mind, than which there neither is nor ever will be anything more honoured in the eyes both of gods and men. Consider this, fair youth, and know that in the friendship of the lover there is no real kindness; he has an appetite and wants to feed upon you: 'As wolves love lambs so lovers love their loves.'

But I told you so, I am speaking in verse, and therefore I had better make an end; enough.

Phaedrus: I thought that you were only half-way and were going to make a similar speech about all the advantages of accepting the non-lover. Why do you not proceed?

241d

Socrates: Does not your simplicity observe that I have got out of dithyrambics into heroics, when only uttering a censure on the lover? And if I am to add the praises of the non-lover what will become of me? Do you not perceive that I am already overtaken by the Nymphs to whom you have mischievously exposed me? And therefore I will only add that the non-lover has all the advantages in which the lover is accused of being deficient. And now I will say no more; there has been enough of both of them. Leaving the tale to its fate, I will cross the river and make the best of my way home, lest a worse thing be inflicted upon me by you.

241e

Phaedrus: Not yet, Socrates; not until the heat of the day has passed; do you not see that the hour is almost noon? there is the midday sun standing still, as people say, in the meridian. Let us rather stay and talk over what has been said, and then return in the cool.

Socrates: Your love of discourse, Phaedrus, is superhuman, simply marvellous, and I do not believe that there is any one of your contemporaries who has either made or in one way or another has compelled others to make an equal number of speeches. I would except Simmias the Theban, but all the rest are far behind you. And now I do verily believe that you have been the cause of another.

242a

Phaedrus: That is good news. But what do you mean?

Socrates: I mean to say that as I was about to cross the stream the usual sign was given to me, — that sign which always forbids, but never bids, me to do anything which I am going to

do; and I thought that I heard a voice saying in my ear that I had been guilty of impiety, and that I must not go away until I had made an atonement. Now I am a diviner, though not a very good one, but I have enough religion for my own use, as you might say of a bad writer — his writing is good enough for him; and I am beginning to see that I was in error. O my friend, how prophetic is the human soul! At the time I had a sort of misgiving, and, like Ibycus, ‘I was troubled; I feared that I might be buying honour from men at the price of sinning against the gods.’ Now I recognize my error.

242b

Phaedrus: What error?

Socrates: That was a dreadful speech which you brought with you, and you made me utter one as bad.

Phaedrus: How so?

Socrates: It was foolish, I say, — to a certain extent, impious; can anything be more dreadful?

Phaedrus: Nothing, if the speech was really such as you describe.

Socrates: Well, and is not Eros the son of Aphrodite, and a god?

Phaedrus: So men say.

Socrates: But that was not acknowledged by Lysias in his speech, nor by you in that other speech which you by a charm drew from my lips. For if love be, as he surely is, a divinity, he cannot be evil. Yet this was the error of both the speeches. There was also a simplicity about them which was refreshing; having no truth or honesty in them, nevertheless they pretended to be something, hoping to succeed in deceiving the manikins of earth and gain celebrity among them. Wherefore I must have a purgation. And I bethink me of an ancient purgation of mythological error which was devised, not by

Homer, for he never had the wit to discover why he was blind, but by Stesichorus, who was a philosopher and knew the reason why; and therefore, when he lost his eyes, for that was the penalty which was inflicted upon him for reviling the lovely Helen, he at once purged himself. And the purgation was a recantation, which began thus, — ‘False is that word of mine — the truth is that thou didst not embark in ^{243a} ships, nor ever go to the walls of Troy;’

^{243a}

and when he had completed his poem, which is called ‘the recantation,’ immediately his sight returned to him. Now I will be wiser than either Stesichorus or Homer, in that I am going to make my recantation for reviling love before I suffer; and this I will attempt, not as before, veiled and ashamed, but with forehead bold and bare.

Phaedrus: Nothing could be more agreeable to me than to hear you say so.

^{243b}

Socrates: Only think, my good Phaedrus, what an utter want of delicacy was shown in the two discourses; I mean, in my own and in that which you recited out of the book. Would not any one who was himself of a noble and gentle nature, and who loved or ever had loved a nature like his own, when we tell of the petty causes of lovers’ jealousies, and of their exceeding animosities, and of the injuries which they do to their beloved, have imagined that our ideas of love were taken from some haunt of sailors to which good manners were unknown — he would certainly never have admitted the justice of our censure?

^{243c}

Phaedrus: I dare say not, Socrates.

Socrates: Therefore, because I blush at the thought of this person, and also because I am afraid of Love himself, I desire to wash the brine out of my ears with water from the spring; and I

would counsel Lysias not to delay, but to write another discourse, which shall prove that ‘ceteris paribus’ the lover ought to be accepted rather than the non-lover.

243d

Phaedrus: Be assured that he shall. You shall speak the praises of the lover, and Lysias shall be compelled by me to write another discourse on the same theme.

Socrates: You will be true to your nature in that, and therefore I believe you.

Phaedrus: Speak, and fear not.

Socrates: But where is the fair youth whom I was addressing before, and who ought to listen now; lest, if he hear me not, he should accept a non-lover before he knows what he is doing?

Phaedrus: He is close at hand, and always at your service.

244a

Socrates: Know then, fair youth, that the former discourse was the word of Phaedrus, the son of Vain Man, who dwells in the city of Myrrhina (Myrrhinusius). And this which I am about to utter is the recantation of Stesichorus the son of Godly Man (Euphemus), who comes from the town of Desire (Himera), and is to the following effect: ‘I told a lie when I said’ that the beloved ought to accept the non-lover when he might have the lover, because the one is sane, and the other mad. It might be so if madness were simply an evil; but there is also a madness which is a divine gift, and the source of the chiefest blessings granted to men. For prophecy is a madness, and the prophetess at Delphi and the priestesses at Dodona when out of their senses have conferred great benefits on Hellas, both in public and private life, but when in their senses few or none. And I might also tell you how the Sibyl and other inspired persons have given to many an one many an intimation of the future which has saved them from falling. But it would be tedious to speak of

what every one knows.

244b

There will be more reason in appealing to the ancient inventors of names (compare Cratylus), who would never have connected prophecy (mantike) which foretells the future and is the noblest of arts, with madness (manike), or called them both by the same name, if they had deemed madness to be a disgrace or dishonour; — they must have thought that there was an inspired madness which was a noble thing; for the two words, mantike and manike, are really the same, and the letter tau is only a modern and tasteless insertion. And this is confirmed by the name which was given by them to the rational investigation of futurity, whether made by the help of birds or of other signs — this, for as much as it is an art which supplies from the reasoning faculty mind (nous) and information (istoria) to human thought (oiesis) they originally termed oionoistike, but the word has been lately altered and made sonorous by the modern introduction of the letter Omega (oionoistike and oionistike), and in proportion as prophecy (mantike) is more perfect and august than augury, both in name and fact, in the same proportion, as the ancients testify, is madness superior to a sane mind (sophrosune) for the one is only of human, but the other of divine origin. Again, where plagues and mightiest woes have bred in certain families, owing to some ancient blood-guiltiness, there madness has entered with holy prayers and rites, and by inspired utterances found a way of deliverance for those who are in need; and he who has part in this gift, and is truly possessed and duly out of his mind, is by the use of purifications and mysteries made whole and exempt from evil, future as well as present, and has a release from the calamity which was afflicting him. The third kind is the madness of those who are possessed by the Muses; which taking hold of a delicate and virgin soul, and there inspiring frenzy, awakens lyrical and all other numbers; with these adorning the myriad actions of

ancient heroes for the instruction of posterity. But he who, having no touch of the Muses' madness in his soul, comes to the door and thinks that he will get into the temple by the help of art — he, I say, and his poetry are not admitted; the sane man disappears and is nowhere when he enters into rivalry with the madman.

245b

I might tell of many other noble deeds which have sprung from inspired madness. And therefore, let no one frighten or flutter us by saying that the temperate friend is to be chosen rather than the inspired, but let him further show that love is not sent by the gods for any good to lover or beloved; if he can do so we will allow him to carry off the palm. And we, on our part, will prove in answer to him that the madness of love is the greatest of heaven's blessings, and the proof shall be one which the wise will receive, and the witling disbelieve. But first of all, let us view the affections and actions of the soul divine and human, and try to ascertain the truth about them. The beginning of our proof is as follows: — 245c (Translated by Cic. Tus. Quaest.) The soul through all her being is immortal, for that which is ever in motion is immortal; but that which moves another and is moved by another, in ceasing to move ceases also to live. Only the self-moving, never leaving self, never ceases to move, and is the fountain and beginning of motion to all that moves besides. Now, the beginning is unbegotten, for that which is begotten has a beginning; but the beginning is begotten of nothing, for if it were begotten of something, then the begotten would not come from a beginning. But if unbegotten, it must also be indestructible; for if beginning were destroyed, there could be no beginning out of anything, nor anything out of a beginning; and all things must have a beginning. And therefore the self-moving is the beginning of motion; and this can neither be destroyed nor begotten, else the whole heavens and all creation would collapse and stand still, and never again have motion or

birth. But if the self-moving is proved to be immortal, he who affirms that self-motion is the very idea and essence of the soul will not be put to confusion. For the body which is moved from without is soulless; but that which is moved from within has a soul, for such is the nature of the soul. But if this be true, must not the soul be the self-moving, and therefore of necessity unbegotten and immortal? Enough of the soul's immortality.

246b

Of the nature of the soul, though her true form be ever a theme of large and more than mortal discourse, let me speak briefly, and in a figure. And let the figure be composite — a pair of winged horses and a charioteer. Now the winged horses and the charioteers of the gods are all of them noble and of noble descent, but those of other races are mixed; the human charioteer drives his in a pair; and one of them is noble and of noble breed, and the other is ignoble and of ignoble breed; and the driving of them of necessity gives a great deal of trouble to him. I will endeavour to explain to you in what way the mortal differs from the immortal creature. The soul in her totality has the care of inanimate being everywhere, and traverses the whole heaven in divers forms appearing — when perfect and fully winged she soars upward, and orders the whole world; whereas the imperfect soul, losing her wings and drooping in her flight at last settles on the solid ground — there, finding a home, she receives an earthly frame which appears to be self-moved, but is really moved by her power; and this composition of soul and body is called a living and mortal creature. For immortal no such union can be reasonably believed to be; although fancy, not having seen nor surely known the nature of God, may imagine an immortal creature having both a body and also a soul which are united throughout all time. Let that, however, be as God wills, and be spoken of acceptably to him. And now let us ask the reason why the soul loses her wings!

247a

The wing is the corporeal element which is most akin to the divine, and which by nature tends to soar aloft and carry that which gravitates downwards into the upper region, which is the habitation of the gods. The divine is beauty, wisdom, goodness, and the like; and by these the wing of the soul is nourished, and grows apace; but when fed upon evil and foulness and the opposite of good, wastes and falls away. Zeus, the mighty lord, holding the reins of a winged chariot, leads the way in heaven, ordering all and taking care of all; and there follows him the array of gods and demi-gods, marshalled in eleven bands; Hestia alone abides at home in the house of heaven; of the rest they who are reckoned among the princely twelve march in their appointed order. They see many blessed sights in the inner heaven, and there are many ways to and fro, along which the blessed gods are passing, every one doing his own work; he may follow who will and can, for jealousy has no place in the celestial choir. But when they go to banquet and festival, then they move up the steep to the top of the vault of heaven. The chariots of the gods in even poise, obeying the rein, glide rapidly; but the others labour, for the vicious steed goes heavily, weighing down the charioteer to the earth when his steed has not been thoroughly trained: — and this is the hour of agony and extremest conflict for the soul. For the immortals, when they are at the end of their course, go forth and stand upon the outside of heaven, and the revolution of the spheres carries them round, and they behold the things beyond. But of the heaven which is above the heavens, what earthly poet ever did or ever will sing worthily? It is such as I will describe; for I must dare to speak the truth, when truth is my theme. There abides the very being with which true knowledge is concerned; the colourless, formless, intangible essence, visible only to mind, the pilot of the soul. The divine intelligence, being nurtured upon mind and pure knowledge, and the intelligence of every

soul which is capable of receiving the food proper to it, rejoices at beholding reality, and once more gazing upon truth, is replenished and made glad, until the revolution of the worlds brings her round again to the same place. In the revolution she beholds justice, and temperance, and knowledge absolute, not in the form of generation or of relation, which men call existence, but knowledge absolute in existence absolute; and beholding the other true existences in like manner, and feasting upon them, she passes down into the interior of the heavens and returns home; and there the charioteer putting up his horses at the stall, gives them ambrosia to eat and nectar to drink.

248a

Such is the life of the gods; but of other souls, that which follows God best and is likest to him lifts the head of the charioteer into the outer world, and is carried round in the revolution, troubled indeed by the steeds, and with difficulty beholding true being; while another only rises and falls, and sees, and again fails to see by reason of the unruliness of the steeds. The rest of the souls are also longing after the upper world and they all follow, but not being strong enough they are carried round below the surface, plunging, treading on one another, each striving to be first; and there is confusion and perspiration and the extremity of effort; and many of them are lamed or have their wings broken through the ill-driving of the charioteers; and all of them after a fruitless toil, not having attained to the mysteries of true being, go away, and feed upon opinion. The reason why the souls exhibit this exceeding eagerness to behold the plain of truth is that pasturage is found there, which is suited to the highest part of the soul; and the wing on which the soul soars is nourished with this. And there is a law of Destiny, that the soul which attains any vision of truth in company with a god is preserved from harm until the next period, and if attaining always is always unharmed. But when she is unable to follow,

and fails to behold the truth, and through some ill-hap sinks beneath the double load of forgetfulness and vice, and her wings fall from her and she drops to the ground, then the law ordains that this soul shall at her first birth pass, not into any other animal, but only into man; and the soul which has seen most of truth shall come to the birth as a philosopher, or artist, or some musical and loving nature; that which has seen truth in the second degree shall be some righteous king or warrior chief; the soul which is of the third class shall be a politician, or economist, or trader; the fourth shall be a lover of gymnastic toils, or a physician; the fifth shall lead the life of a prophet or hierophant; to the sixth the character of poet or some other imitative artist will be assigned; to the seventh the life of an artisan or husbandman; to the eighth that of a sophist or demagogue; to the ninth that of a tyrant — all these are states of probation, in which he who does righteously improves, and he who does unrighteously, deteriorates his lot.

248e

Ten thousand years must elapse before the soul of each one can return to the place from whence she came, for she cannot grow her wings in less; only the soul of a philosopher, guileless and true, or the soul of a lover, who is not devoid of philosophy, may acquire wings in the third of the recurring periods of a thousand years; he is distinguished from the ordinary good man who gains wings in three thousand years: — and they who choose this life three times in succession have wings given them, and go away at the end of three thousand years. But the others (The philosopher alone is not subject to judgment (krisis), for he has never lost the vision of truth.) receive judgment when they have completed their first life, and after the judgment they go, some of them to the houses of correction which are under the earth, and are punished; others to some place in heaven whither they are lightly borne by justice, and there they live in a manner worthy of the life which they led

here when in the form of men. And at the end of the first thousand years the good souls and also the evil souls both come to draw lots and choose their second life, and they may take any which they please. The soul of a man may pass into the life of a beast, or from the beast return again into the man. But the soul which has never seen the truth will not pass into the human form. For a man must have intelligence of universals, and be able to proceed from the many particulars of sense to one conception of reason; — this is the recollection of those things which our soul once saw while following God — when regardless of that which we now call being she raised her head up towards the true being. And therefore the mind of the philosopher alone has wings; and this is just, for he is always, according to the measure of his abilities, clinging in recollection to those things in which God abides, and in beholding which He is what He is. And he who employs aright these memories is ever being initiated into perfect mysteries and alone becomes truly perfect. But, as he forgets earthly interests and is rapt in the divine, the vulgar deem him mad, and rebuke him; they do not see that he is inspired.

249d

Thus far I have been speaking of the fourth and last kind of madness, which is imputed to him who, when he sees the beauty of earth, is transported with the recollection of the true beauty; he would like to fly away, but he cannot; he is like a bird fluttering and looking upward and careless of the world below; and he is therefore thought to be mad. And I have shown this of all inspirations to be the noblest and highest and the offspring of the highest to him who has or shares in it, and that he who loves the beautiful is called a lover because he partakes of it. For, as has been already said, every soul of man has in the way of nature beheld true being; this was the condition of her passing into the form of man. But all souls do not easily recall the things of the other world; they may have seen them for a

short time only, or they may have been unfortunate in their earthly lot, and, having had their hearts turned to unrighteousness through some corrupting influence, they may have lost the memory of the holy things which once they saw. Few only retain an adequate remembrance of them; and they, when they behold here any image of that other world, are rapt in amazement; but they are ignorant of what this rapture means, because they do not clearly perceive. For there is no light of justice or temperance or any of the higher ideas which are precious to souls in the earthly copies of them: they are seen through a glass dimly; and there are few who, going to the images, behold in them the realities, and these only with difficulty. There was a time when with the rest of the happy band they saw beauty shining in brightness, — we philosophers following in the train of Zeus, others in company with other gods; and then we beheld the beatific vision and were initiated into a mystery which may be truly called most blessed, celebrated by us in our state of innocence, before we had any experience of evils to come, when we were admitted to the sight of apparitions innocent and simple and calm and happy, which we beheld shining in pure light, pure ourselves and not yet enshrined in that living tomb which we carry about, now that we are imprisoned in the body, like an oyster in his shell. Let me linger over the memory of scenes which have passed away.

250e

But of beauty, I repeat again that we saw her there shining in company with the celestial forms; and coming to earth we find her here too, shining in clearness through the clearest aperture of sense. For sight is the most piercing of our bodily senses; though not by that is wisdom seen; her loveliness would have been transporting if there had been a visible image of her, and the other ideas, if they had visible counterparts, would be equally lovely. But this is the privilege of beauty, that being the loveliest she is also the most palpable to sight. Now he who is

not newly initiated or who has become corrupted, does not easily rise out of this world to the sight of true beauty in the other; he looks only at her earthly namesake, and instead of being awed at the sight of her, he is given over to pleasure, and like a brutish beast he rushes on to enjoy and beget; he consorts with wantonness, and is not afraid or ashamed of pursuing pleasure in violation of nature. But he whose initiation is recent, and who has been the spectator of many glories in the other world, is amazed when he sees any one having a godlike face or form, which is the expression of divine beauty; and at first a shudder runs through him, and again the old awe steals over him; then looking upon the face of his beloved as of a god he reverences him, and if he were not afraid of being thought a downright madman, he would sacrifice to his beloved as to the image of a god; then while he gazes on him there is a sort of reaction, and the shudder passes into an unusual heat and perspiration; for, as he receives the effluence of beauty through the eyes, the wing moistens and he warms. And as he warms, the parts out of which the wing grew, and which had been hitherto closed and rigid, and had prevented the wing from shooting forth, are melted, and as nourishment streams upon him, the lower end of the wing begins to swell and grow from the root upwards; and the growth extends under the whole soul — for once the whole was winged. During this process the whole soul is all in a state of ebullition and effervescence, — which may be compared to the irritation and uneasiness in the gums at the time of cutting teeth, — bubbles up, and has a feeling of uneasiness and tickling; but when in like manner the soul is beginning to grow wings, the beauty of the beloved meets her eye and she receives the sensible warm motion of particles which flow towards her, therefore called emotion (*imeros*), and is refreshed and warmed by them, and then she ceases from her pain with joy. But when she is parted from her beloved and her moisture fails, then the orifices of the passage out of which the

wing shoots dry up and close, and intercept the germ of the wing; which, being shut up with the emotion, throbbing as with the pulsations of an artery, pricks the aperture which is nearest, until at length the entire soul is pierced and maddened and pained, and at the recollection of beauty is again delighted. And from both of them together the soul is oppressed at the strangeness of her condition, and is in a great strait and excitement, and in her madness can neither sleep by night nor abide in her place by day. And wherever she thinks that she will behold the beautiful one, thither in her desire she runs. And when she has seen him, and bathed herself in the waters of beauty, her constraint is loosened, and she is refreshed, and has no more pangs and pains; and this is the sweetest of all pleasures at the time, and is the reason why the soul of the lover will never forsake his beautiful one, whom he esteems above all; he has forgotten mother and brethren and companions, and he thinks nothing of the neglect and loss of his property; the rules and proprieties of life, on which he formerly prided himself, he now despises, and is ready to sleep like a servant, wherever he is allowed, as near as he can to his desired one, who is the object of his worship, and the physician who can alone assuage the greatness of his pain. And this state, my dear imaginary youth to whom I am talking, is by men called love, and among the gods has a name at which you, in your simplicity, may be inclined to mock; there are two lines in the apocryphal writings of Homer in which the name occurs. One of them is rather outrageous, and not altogether metrical. They are as follows: ^{252c} ‘Mortals call him fluttering love, But the immortals call him winged one, Because the growing of wings (Or, reading pterothoiton, ‘the movement of wings.’) is a necessity to him.’

^{252c}

You may believe this, but not unless you like. At any rate the loves of lovers and their causes are such as I have described.

^{252d}

Now the lover who is taken to be the attendant of Zeus is better able to bear the winged god, and can endure a heavier burden; but the attendants and companions of Ares, when under the influence of love, if they fancy that they have been at all wronged, are ready to kill and put an end to themselves and their beloved. And he who follows in the train of any other god, while he is unspoiled and the impression lasts, honours and imitates him, as far as he is able; and after the manner of his God he behaves in his intercourse with his beloved and with the rest of the world during the first period of his earthly existence. Every one chooses his love from the ranks of beauty according to his character, and this he makes his god, and fashions and adorns as a sort of image which he is to fall down and worship. The followers of Zeus desire that their beloved should have a soul like him; and therefore they seek out some one of a philosophical and imperial nature, and when they have found him and loved him, they do all they can to confirm such a nature in him, and if they have no experience of such a disposition hitherto, they learn of any one who can teach them, and themselves follow in the same way. And they have the less difficulty in finding the nature of their own god in themselves, because they have been compelled to gaze intensely on him; their recollection clings to him, and they become possessed of him, and receive from him their character and disposition, so far as man can participate in God. The qualities of their god they attribute to the beloved, wherefore they love him all the more, and if, like the Bacchic Nymphs, they draw inspiration from Zeus, they pour out their own fountain upon him, wanting to make him as like as possible to their own god. But those who are the followers of Here seek a royal love, and when they have found him they do just the same with him; and in like manner the followers of Apollo, and of every other god walking in the ways of their god, seek a love who is to be made like him whom they serve, and when they have found him, they themselves

imitate their god, and persuade their love to do the same, and educate him into the manner and nature of the god as far as they each can; for no feelings of envy or jealousy are entertained by them towards their beloved, but they do their utmost to create in him the greatest likeness of themselves and of the god whom they honour. Thus fair and blissful to the beloved is the desire of the inspired lover, and the initiation of which I speak into the mysteries of true love, if he be captured by the lover and their purpose is effected. Now the beloved is taken captive in the following manner: — ^{253e} As I said at the beginning of this tale, I divided each soul into three — two horses and a charioteer; and one of the horses was good and the other bad: the division may remain, but I have not yet explained in what the goodness or badness of either consists, and to that I will now proceed. The right-hand horse is upright and cleanly made; he has a lofty neck and an aquiline nose; his colour is white, and his eyes dark; he is a lover of honour and modesty and temperance, and the follower of true glory; he needs no touch of the whip, but is guided by word and admonition only. The other is a crooked lumbering animal, put together anyhow; he has a short thick neck; he is flat-faced and of a dark colour, with grey eyes and blood-red complexion (Or with grey and blood-shot eyes.); the mate of insolence and pride, shag-eared and deaf, hardly yielding to whip and spur. Now when the charioteer beholds the vision of love, and has his whole soul warmed through sense, and is full of the prickings and ticklings of desire, the obedient steed, then as always under the government of shame, refrains from leaping on the beloved; but the other, heedless of the pricks and of the blows of the whip, plunges and runs away, giving all manner of trouble to his companion and the charioteer, whom he forces to approach the beloved and to remember the joys of love. They at first indignantly oppose him and will not be urged on to do terrible and unlawful deeds; but at last, when he persists in plaguing

them, they yield and agree to do as he bids them. And now they are at the spot and behold the flashing beauty of the beloved; which when the charioteer sees, his memory is carried to the true beauty, whom he beholds in company with Modesty like an image placed upon a holy pedestal. He sees her, but he is afraid and falls backwards in adoration, and by his fall is compelled to pull back the reins with such violence as to bring both the steeds on their haunches, the one willing and unresisting, the unruly one very unwilling; and when they have gone back a little, the one is overcome with shame and wonder, and his whole soul is bathed in perspiration; the other, when the pain is over which the bridle and the fall had given him, having with difficulty taken breath, is full of wrath and reproaches, which he heaps upon the charioteer and his fellow-steed, for want of courage and manhood, declaring that they have been false to their agreement and guilty of desertion. Again they refuse, and again he urges them on, and will scarce yield to their prayer that he would wait until another time. When the appointed hour comes, they make as if they had forgotten, and he reminds them, fighting and neighing and dragging them on, until at length he on the same thoughts intent, forces them to draw near again. And when they are near he stoops his head and puts up his tail, and takes the bit in his teeth and pulls shamelessly. Then the charioteer is worse off than ever; he falls back like a racer at the barrier, and with a still more violent wrench drags the bit out of the teeth of the wild steed and covers his abusive tongue and jaws with blood, and forces his legs and haunches to the ground and punishes him sorely. And when this has happened several times and the villain has ceased from his wanton way, he is tamed and humbled, and follows the will of the charioteer, and when he sees the beautiful one he is ready to die of fear. And from that time forward the soul of the lover follows the beloved in modesty and holy fear.

And so the beloved who, like a god, has received every true and loyal service from his lover, not in pretence but in reality, being also himself of a nature friendly to his admirer, if in former days he has blushed to own his passion and turned away his lover, because his youthful companions or others slanderously told him that he would be disgraced, now as years advance, at the appointed age and time, is led to receive him into communion. For fate which has ordained that there shall be no friendship among the evil has also ordained that there shall ever be friendship among the good. And the beloved when he has received him into communion and intimacy, is quite amazed at the good-will of the lover; he recognises that the inspired friend is worth all other friends or kinsmen; they have nothing of friendship in them worthy to be compared with his. And when this feeling continues and he is nearer to him and embraces him, in gymnastic exercises and at other times of meeting, then the fountain of that stream, which Zeus when he was in love with Ganymede named Desire, overflows upon the lover, and some enters into his soul, and some when he is filled flows out again; and as a breeze or an echo rebounds from the smooth rocks and returns whence it came, so does the stream of beauty, passing through the eyes which are the windows of the soul, come back to the beautiful one; there arriving and quickening the passages of the wings, watering them and inclining them to grow, and filling the soul of the beloved also with love. And thus he loves, but he knows not what; he does not understand and cannot explain his own state; he appears to have caught the infection of blindness from another; the lover is his mirror in whom he is beholding himself, but he is not aware of this. When he is with the lover, both cease from their pain, but when he is away then he longs as he is longed for, and has love's image, love for love (Anteros) lodging in his breast, which he calls and believes to be not love but friendship only, and his desire is as the desire of the other, but weaker; he wants to see him, touch

him, kiss him, embrace him, and probably not long afterwards his desire is accomplished. When they meet, the wanton steed of the lover has a word to say to the charioteer; he would like to have a little pleasure in return for many pains, but the wanton steed of the beloved says not a word, for he is bursting with passion which he understands not; — he throws his arms round the lover and embraces him as his dearest friend; and, when they are side by side, he is not in a state in which he can refuse the lover anything, if he ask him; although his fellow-steed and the charioteer oppose him with the arguments of shame and reason. After this their happiness depends upon their self-control; if the better elements of the mind which lead to order and philosophy prevail, then they pass their life here in happiness and harmony — masters of themselves and orderly — enslaving the vicious and emancipating the virtuous elements of the soul; and when the end comes, they are light and winged for flight, having conquered in one of the three heavenly or truly Olympian victories; nor can human discipline or divine inspiration confer any greater blessing on man than this. If, on the other hand, they leave philosophy and lead the lower life of ambition, then probably, after wine or in some other careless hour, the two wanton animals take the two souls when off their guard and bring them together, and they accomplish that desire of their hearts which to the many is bliss; and this having once enjoyed they continue to enjoy, yet rarely because they have not the approval of the whole soul. They too are dear, but not so dear to one another as the others, either at the time of their love or afterwards. They consider that they have given and taken from each other the most sacred pledges, and they may not break them and fall into enmity. At last they pass out of the body, unwinged, but eager to soar, and thus obtain no mean reward of love and madness. For those who have once begun the heavenward pilgrimage may not go down again to darkness and the journey beneath the earth, but they live in light always;

happy companions in their pilgrimage, and when the time comes at which they receive their wings they have the same plumage because of their love.

257a

Thus great are the heavenly blessings which the friendship of a lover will confer upon you, my youth. Whereas the attachment of the non-lover, which is alloyed with a worldly prudence and has worldly and niggardly ways of doling out benefits, will breed in your soul those vulgar qualities which the populace applaud, will send you bowling round the earth during a period of nine thousand years, and leave you a fool in the world below.

And thus, dear Eros, I have made and paid my recantation, as well and as fairly as I could; more especially in the matter of the poetical figures which I was compelled to use, because Phaedrus would have them. And now forgive the past and accept the present, and be gracious and merciful to me, and do not in thine anger deprive me of sight, or take from me the art of love which thou hast given me, but grant that I may be yet more esteemed in the eyes of the fair. And if Phaedrus or I myself said anything rude in our first speeches, blame Lysias, who is the father of the brat, and let us have no more of his progeny; bid him study philosophy, like his brother Polemarchus; and then his lover Phaedrus will no longer halt between two opinions, but will dedicate himself wholly to love and to philosophical discourses.

257d

Phaedrus: I join in the prayer, Socrates, and say with you, if this be for my good, may your words come to pass. But why did you make your second oration so much finer than the first? I wonder why. And I begin to be afraid that I shall lose conceit of Lysias, and that he will appear tame in comparison, even if he be willing to put another as fine and as long as yours into the field, which I doubt. For quite lately one of your politicians was abusing him on this very account; and called him a ‘speech

writer' again and again. So that a feeling of pride may probably induce him to give up writing speeches.

Socrates: What a very amusing notion! But I think, my young man, that you are much mistaken in your friend if you imagine that he is frightened at a little noise; and, possibly, you think that his assailant was in earnest?

257e

Phaedrus: I thought, Socrates, that he was. And you are aware that the greatest and most influential statesmen are ashamed of writing speeches and leaving them in a written form, lest they should be called Sophists by posterity.

Socrates: You seem to be unconscious, Phaedrus, that the 'sweet elbow' (A proverb, like 'the grapes are sour,' applied to pleasures which cannot be had, meaning sweet things which, like the elbow, are out of the reach of the mouth. The promised pleasure turns out to be a long and tedious affair.) of the proverb is really the long arm of the Nile. And you appear to be equally unaware of the fact that this sweet elbow of theirs is also a long arm. For there is nothing of which our great politicians are so fond as of writing speeches and bequeathing them to posterity. And they add their admirers' names at the top of the writing, out of gratitude to them.

Phaedrus: What do you mean? I do not understand.

Socrates: Why, do you not know that when a politician writes, he begins with the names of his approvers?

Phaedrus: How so?

Socrates: Why, he begins in this manner: 'Be it enacted by the senate, the people, or both, on the motion of a certain person,' who is our author; and so putting on a serious face, he proceeds to display his own wisdom to his admirers in what is often a long and tedious composition. Now what is that sort of thing

but a regular piece of authorship?

Phaedrus: True.

Socrates: And if the law is finally approved, then the author leaves the theatre in high delight; but if the law is rejected and he is done out of his speech-making, and not thought good enough to write, then he and his party are in mourning.

258d

Phaedrus: Very true.

Socrates: So far are they from despising, or rather so highly do they value the practice of writing.

Phaedrus: No doubt.

Socrates: And when the king or orator has the power, as Lycurgus or Solon or Darius had, of attaining an immortality or authorship in a state, is he not thought by posterity, when they see his compositions, and does he not think himself, while he is yet alive, to be a god?

Phaedrus: Very true.

Socrates: Then do you think that any one of this class, however ill-disposed, would reproach Lysias with being an author?

Phaedrus: Not upon your view; for according to you he would be casting a slur upon his own favourite pursuit.

258e

Socrates: Any one may see that there is no disgrace in the mere fact of writing.

Phaedrus: Certainly not.

Socrates: The disgrace begins when a man writes not well, but badly.

Phaedrus: Clearly.

Socrates: And what is well and what is badly — need we ask Lysias, or any other poet or orator, who ever wrote or will write either a political or any other work, in metre or out of metre, poet or prose writer, to teach us this?

Phaedrus: Need we? For what should a man live if not for the pleasures of discourse? Surely not for the sake of bodily pleasures, which almost always have previous pain as a condition of them, and therefore are rightly called slavish.

259b

Socrates: There is time enough. And I believe that the grasshoppers chirruping after their manner in the heat of the sun over our heads are talking to one another and looking down at us. What would they say if they saw that we, like the many, are not conversing, but slumbering at mid-day, lulled by their voices, too indolent to think? Would they not have a right to laugh at us? They might imagine that we were slaves, who, coming to rest at a place of resort of theirs, like sheep lie asleep at noon around the well. But if they see us discoursing, and like Odysseus sailing past them, deaf to their siren voices, they may perhaps, out of respect, give us of the gifts which they receive from the gods that they may impart them to men.

Phaedrus: What gifts do you mean? I never heard of any.

Socrates: A lover of music like yourself ought surely to have heard the story of the grasshoppers, who are said to have been human beings in an age before the Muses. And when the Muses came and song appeared they were ravished with delight; and singing always, never thought of eating and drinking, until at last in their forgetfulness they died. And now they live again in the grasshoppers; and this is the return which the Muses make to them — they neither hunger, nor thirst, but from the hour of their birth are always singing, and never eating or drinking; and when they die they go and inform the Muses in heaven who honours them on earth. They win the love of Terpsichore for

the dancers by their report of them; of Erato for the lovers, and of the other Muses for those who do them honour, according to the several ways of honouring them; — of Calliope the eldest Muse and of Urania who is next to her, for the philosophers, of whose music the grasshoppers make report to them; for these are the Muses who are chiefly concerned with heaven and thought, divine as well as human, and they have the sweetest utterance. For many reasons, then, we ought always to talk and not to sleep at mid-day.

Phaedrus: Let us talk.

260a

Socrates: Shall we discuss the rules of writing and speech as we were proposing?

Phaedrus: Very good.

Socrates: In good speaking should not the mind of the speaker know the truth of the matter about which he is going to speak?

Phaedrus: And yet, Socrates, I have heard that he who would be an orator has nothing to do with true justice, but only with that which is likely to be approved by the many who sit in judgment; nor with the truly good or honourable, but only with opinion about them, and that from opinion comes persuasion, and not from the truth.

260b

Socrates: The words of the wise are not to be set aside; for there is probably something in them; and therefore the meaning of this saying is not hastily to be dismissed.

Phaedrus: Very true.

Socrates: Let us put the matter thus: — Suppose that I persuaded you to buy a horse and go to the wars. Neither of us knew what a horse was like, but I knew that you believed a horse to be of tame animals the one which has the longest ears.

Phaedrus: That would be ridiculous.

Socrates: There is something more ridiculous coming: — Suppose, further, that in sober earnest I, having persuaded you of this, went and composed a speech in honour of an ass, whom I entitled a horse beginning: ‘A noble animal and a most useful possession, especially in war, and you may get on his back and fight, and he will carry baggage or anything.’

Phaedrus: How ridiculous!

Socrates: Ridiculous! Yes; but is not even a ridiculous friend better than a cunning enemy?

Phaedrus: Certainly.

Socrates: And when the orator instead of putting an ass in the place of a horse, puts good for evil, being himself as ignorant of their true nature as the city on which he imposes is ignorant; and having studied the notions of the multitude, falsely persuades them not about ‘the shadow of an ass,’ which he confounds with a horse, but about good which he confounds with evil, — what will be the harvest which rhetoric will be likely to gather after the sowing of that seed?

Phaedrus: The reverse of good.

Socrates: But perhaps rhetoric has been getting too roughly handled by us, and she might answer: What amazing nonsense you are talking! As if I forced any man to learn to speak in ignorance of the truth! Whatever my advice may be worth, I should have told him to arrive at the truth first, and then come to me. At the same time I boldly assert that mere knowledge of the truth will not give you the art of persuasion.

Phaedrus: There is reason in the lady’s defence of herself.

Socrates: Quite true; if only the other arguments which remain to be brought up bear her witness that she is an art at all. But I

seem to hear them arraying themselves on the opposite side, declaring that she speaks falsely, and that rhetoric is a mere routine and trick, not an art. Lo! a Spartan appears, and says that there never is nor ever will be a real art of speaking which is divorced from the truth.

261a

Phaedrus: And what are these arguments, Socrates? Bring them out that we may examine them.

Socrates: Come out, fair children, and convince Phaedrus, who is the father of similar beauties, that he will never be able to speak about anything as he ought to speak unless he have a knowledge of philosophy. And let Phaedrus answer you.

261b

Phaedrus: Put the question.

Socrates: Is not rhetoric, taken generally, a universal art of enchanting the mind by arguments; which is practised not only in courts and public assemblies, but in private houses also, having to do with all matters, great as well as small, good and bad alike, and is in all equally right, and equally to be esteemed — that is what you have heard?

261c

Phaedrus: Nay, not exactly that; I should say rather that I have heard the art confined to speaking and writing in lawsuits, and to speaking in public assemblies — not extended farther.

Socrates: Then I suppose that you have only heard of the rhetoric of Nestor and Odysseus, which they composed in their leisure hours when at Troy, and never of the rhetoric of Palamedes?

Phaedrus: No more than of Nestor and Odysseus, unless Gorgias is your Nestor, and Thrasymachus or Theodorus your Odysseus.

261d

Socrates: Perhaps that is my meaning. But let us leave them. And do you tell me, instead, what are plaintiff and defendant doing in a law court — are they not contending?

Phaedrus: Exactly so.

Socrates: About the just and unjust — that is the matter in dispute?

Phaedrus: Yes.

Socrates: And a professor of the art will make the same thing appear to the same persons to be at one time just, at another time, if he is so inclined, to be unjust?

Phaedrus: Exactly.

Socrates: And when he speaks in the assembly, he will make the same things seem good to the city at one time, and at another time the reverse of good?

Phaedrus: That is true.

261e

Socrates: Have we not heard of the Eleatic Palamedes (Zeno), who has an art of speaking by which he makes the same things appear to his hearers like and unlike, one and many, at rest and in motion?

Phaedrus: Very true.

Socrates: The art of disputation, then, is not confined to the courts and the assembly, but is one and the same in every use of language; this is the art, if there be such an art, which is able to find a likeness of everything to which a likeness can be found, and draws into the light of day the likenesses and disguises which are used by others?

Phaedrus: How do you mean?

Socrates: Let me put the matter thus: When will there be more chance of deception — when the difference is large or small?

Phaedrus: When the difference is small.

Socrates: And you will be less likely to be discovered in passing by degrees into the other extreme than when you go all at once?

Phaedrus: Of course.

Socrates: He, then, who would deceive others, and not be deceived, must exactly know the real likenesses and differences of things?

Phaedrus: He must.

262c

Socrates: And if he is ignorant of the true nature of any subject, how can he detect the greater or less degree of likeness in other things to that of which by the hypothesis he is ignorant?

Phaedrus: He cannot.

Socrates: And when men are deceived and their notions are at variance with realities, it is clear that the error slips in through resemblances?

Phaedrus: Yes, that is the way.

262d

Socrates: Then he who would be a master of the art must understand the real nature of everything; or he will never know either how to make the gradual departure from truth into the opposite of truth which is effected by the help of resemblances, or how to avoid it?

Phaedrus: He will not.

Socrates: He then, who being ignorant of the truth aims at appearances, will only attain an art of rhetoric which is ridiculous and is not an art at all?

Phaedrus: That may be expected.

Socrates: Shall I propose that we look for examples of art and want of art, according to our notion of them, in the speech of Lysias which you have in your hand, and in my own speech?

262e

Phaedrus: Nothing could be better; and indeed I think that our previous argument has been too abstract and wanting in illustrations.

Socrates: Yes; and the two speeches happen to afford a very good example of the way in which the speaker who knows the truth may, without any serious purpose, steal away the hearts of his hearers. This piece of good-fortune I attribute to the local deities; and, perhaps, the prophets of the Muses who are singing over our heads may have imparted their inspiration to me. For I do not imagine that I have any rhetorical art of my own.

Phaedrus: Granted; if you will only please to get on.

Socrates: Suppose that you read me the first words of Lysias' speech.

Phaedrus: 'You know how matters stand with me, and how, as I conceive, they might be arranged for our common interest; and I maintain that I ought not to fail in my suit, because I am not your lover. For lovers repent—'

263c

Socrates: Enough: — Now, shall I point out the rhetorical error of those words?

Phaedrus: Yes.

Socrates: Every one is aware that about some things we are agreed, whereas about other things we differ.

Phaedrus: I think that I understand you; but will you explain yourself?

Socrates: When any one speaks of iron and silver, is not the same thing present in the minds of all?

Phaedrus: Certainly.

Socrates: But when any one speaks of justice and goodness we part company and are at odds with one another and with ourselves?

Phaedrus: Precisely.

Socrates: Then in some things we agree, but not in others?

Phaedrus: That is true.

Socrates: In which are we more likely to be deceived, and in which has rhetoric the greater power?

Phaedrus: Clearly, in the uncertain class.

263d

Socrates: Then the rhetorician ought to make a regular division, and acquire a distinct notion of both classes, as well of that in which the many err, as of that in which they do not err?

Phaedrus: He who made such a distinction would have an excellent principle.

Socrates: Yes; and in the next place he must have a keen eye for the observation of particulars in speaking, and not make a mistake about the class to which they are to be referred.

Phaedrus: Certainly.

Socrates: Now to which class does love belong — to the debatable or to the undisputed class?

Phaedrus: To the debatable, clearly; for if not, do you think that love would have allowed you to say as you did, that he is an evil both to the lover and the beloved, and also the greatest possible good?

263e

Socrates: Capital. But will you tell me whether I defined love at the beginning of my speech? for, having been in an ecstasy, I cannot well remember.

Phaedrus: Yes, indeed; that you did, and no mistake.

264a

Socrates: Then I perceive that the Nymphs of Achelous and Pan the son of Hermes, who inspired me, were far better rhetoricians than Lysias the son of Cephalus. Alas! how inferior to them he is! But perhaps I am mistaken; and Lysias at the commencement of his lover's speech did insist on our supposing love to be something or other which he fancied him to be, and according to this model he fashioned and framed the remainder of his discourse. Suppose we read his beginning over again:

Phaedrus: If you please; but you will not find what you want.

Socrates: Read, that I may have his exact words.

264b

Phaedrus: 'You know how matters stand with me, and how, as I conceive, they might be arranged for our common interest; and I maintain I ought not to fail in my suit because I am not your lover, for lovers repent of the kindnesses which they have shown, when their love is over.'

Socrates: Here he appears to have done just the reverse of what he ought; for he has begun at the end, and is swimming on his back through the flood to the place of starting. His address to the fair youth begins where the lover would have ended. Am I not right, sweet Phaedrus?

Phaedrus: Yes, indeed, Socrates; he does begin at the end.

264c

Socrates: Then as to the other topics — are they not thrown down anyhow? Is there any principle in them? Why should the next topic follow next in order, or any other topic? I cannot help fancying in my ignorance that he wrote off boldly just

what came into his head, but I dare say that you would recognize a rhetorical necessity in the succession of the several parts of the composition?

264d

Phaedrus: You have too good an opinion of me if you think that I have any such insight into his principles of composition.

Socrates: At any rate, you will allow that every discourse ought to be a living creature, having a body of its own and a head and feet; there should be a middle, beginning, and end, adapted to one another and to the whole?

264e

Phaedrus: Certainly.

Socrates: Can this be said of the discourse of Lysias? See whether you can find any more connexion in his words than in the epitaph which is said by some to have been inscribed on the grave of Midas the Phrygian.

Phaedrus: What is there remarkable in the epitaph?

Socrates: It is as follows: — ‘I am a maiden of bronze and lie on the tomb of Midas; So long as water flows and tall trees grow, So long here on this spot by his sad tomb abiding, I shall declare to passers-by that Midas sleeps below.’

Now in this rhyme whether a line comes first or comes last, as you will perceive, makes no difference.

265a

Phaedrus: You are making fun of that oration of ours.

Socrates: Well, I will say no more about your friend’s speech lest I should give offence to you; although I think that it might furnish many other examples of what a man ought rather to avoid. But I will proceed to the other speech, which, as I think, is also suggestive to students of rhetoric.

265b

Phaedrus: In what way?

Socrates: The two speeches, as you may remember, were unlike; the one argued that the lover and the other that the non-lover ought to be accepted.

Phaedrus: And right manfully.

Socrates: You should rather say ‘madly;’ and madness was the argument of them, for, as I said, ‘love is a madness.’

Phaedrus: Yes.

Socrates: And of madness there were two kinds; one produced by human infirmity, the other was a divine release of the soul from the yoke of custom and convention.

Phaedrus: True.

265d

Socrates: The divine madness was subdivided into four kinds, prophetic, initiatory, poetic, erotic, having four gods presiding over them; the first was the inspiration of Apollo, the second that of Dionysus, the third that of the Muses, the fourth that of Aphrodite and Eros. In the description of the last kind of madness, which was also said to be the best, we spoke of the affection of love in a figure, into which we introduced a tolerably credible and possibly true though partly erring myth, which was also a hymn in honour of Love, who is your lord and also mine, Phaedrus, and the guardian of fair children, and to him we sung the hymn in measured and solemn strain.

Phaedrus: I know that I had great pleasure in listening to you.

Socrates: Let us take this instance and note how the transition was made from blame to praise.

Phaedrus: What do you mean?

265e

Socrates: I mean to say that the composition was mostly playful. Yet in these chance fancies of the hour were involved two principles of which we should be too glad to have a clearer description if art could give us one.

Phaedrus: What are they?

Socrates: First, the comprehension of scattered particulars in one idea; as in our definition of love, which whether true or false certainly gave clearness and consistency to the discourse, the speaker should define his several notions and so make his meaning clear.

Phaedrus: What is the other principle, Socrates?

266b

Socrates: The second principle is that of division into species according to the natural formation, where the joint is, not breaking any part as a bad carver might. Just as our two discourses, alike assumed, first of all, a single form of unreason; and then, as the body which from being one becomes double and may be divided into a left side and right side, each having parts right and left of the same name — after this manner the speaker proceeded to divide the parts of the left side and did not desist until he found in them an evil or left-handed love which he justly reviled; and the other discourse leading us to the madness which lay on the right side, found another love, also having the same name, but divine, which the speaker held up before us and applauded and affirmed to be the author of the greatest benefits.

Phaedrus: Most true.

266c

Socrates: I am myself a great lover of these processes of division and generalization; they help me to speak and to think. And if I find any man who is able to see ‘a One and Many’ in nature, him I follow, and ‘walk in his footsteps as if he were a

god.’ And those who have this art, I have hitherto been in the habit of calling dialecticians; but God knows whether the name is right or not. And I should like to know what name you would give to your or to Lysias’ disciples, and whether this may not be that famous art of rhetoric which Thrasyarchus and others teach and practise? Skilful speakers they are, and impart their skill to any who is willing to make kings of them and to bring gifts to them.

266d

Phaedrus: Yes, they are royal men; but their art is not the same with the art of those whom you call, and rightly, in my opinion, dialecticians: — Still we are in the dark about rhetoric.

Socrates: What do you mean? The remains of it, if there be anything remaining which can be brought under rules of art, must be a fine thing; and, at any rate, is not to be despised by you and me. But how much is left?

266e

Phaedrus: There is a great deal surely to be found in books of rhetoric?

Socrates: Yes; thank you for reminding me: — There is the exordium, showing how the speech should begin, if I remember rightly; that is what you mean — the niceties of the art?

Phaedrus: Yes.

Socrates: Then follows the statement of facts, and upon that witnesses; thirdly, proofs; fourthly, probabilities are to come; the great Byzantine word-maker also speaks, if I am not mistaken, of confirmation and further confirmation.

Phaedrus: You mean the excellent Theodorus.

267a

Socrates: Yes; and he tells how refutation or further refutation is to be managed, whether in accusation or defence. I ought also to mention the illustrious Parian, Evenus, who first invented

insinuations and indirect praises; and also indirect censures, which according to some he put into verse to help the memory. But shall I 'to dumb forgetfulness consign' Tisias and Gorgias, who are not ignorant that probability is superior to truth, and who by force of argument make the little appear great and the great little, disguise the new in old fashions and the old in new fashions, and have discovered forms for everything, either short or going on to infinity. I remember Prodicus laughing when I told him of this; he said that he had himself discovered the true rule of art, which was to be neither long nor short, but of a convenient length.

267c

Phaedrus: Well done, Prodicus!

Socrates: Then there is Hippias the Elean stranger, who probably agrees with him.

Phaedrus: Yes.

Socrates: And there is also Polus, who has treasures of diplasiology, and gnomology, and eikonology, and who teaches in them the names of which Licymnius made him a present; they were to give a polish.

Phaedrus: Had not Protagoras something of the same sort?

Socrates: Yes, rules of correct diction and many other fine precepts; for the 'sorrows of a poor old man,' or any other pathetic case, no one is better than the Chalcedonian giant; he can put a whole company of people into a passion and out of one again by his mighty magic, and is first-rate at inventing or disposing of any sort of calumny on any grounds or none. All of them agree in asserting that a speech should end in a recapitulation, though they do not all agree to use the same word.

268a

Phaedrus: You mean that there should be a summing up of the arguments in order to remind the hearers of them.

Socrates: I have now said all that I have to say of the art of rhetoric: have you anything to add?

Phaedrus: Not much; nothing very important.

Socrates: Leave the unimportant and let us bring the really important question into the light of day, which is: What power has this art of rhetoric, and when?

268b

Phaedrus: A very great power in public meetings.

Socrates: It has. But I should like to know whether you have the same feeling as I have about the rhetoricians? To me there seem to be a great many holes in their web.

Phaedrus: Give an example.

Socrates: I will. Suppose a person to come to your friend Eryximachus, or to his father Acumenus, and to say to him: 'I know how to apply drugs which shall have either a heating or a cooling effect, and I can give a vomit and also a purge, and all that sort of thing; and knowing all this, as I do, I claim to be a physician and to make physicians by imparting this knowledge to others,' — what do you suppose that they would say?

268c

Phaedrus: They would be sure to ask him whether he knew 'to whom' he would give his medicines, and 'when,' and 'how much.'

Socrates: And suppose that he were to reply: 'No; I know nothing of all that; I expect the patient who consults me to be able to do these things for himself?'

Phaedrus: They would say in reply that he is a madman or a pedant who fancies that he is a physician because he has read

something in a book, or has stumbled on a prescription or two, although he has no real understanding of the art of medicine.

268d

Socrates: And suppose a person were to come to Sophocles or Euripides and say that he knows how to make a very long speech about a small matter, and a short speech about a great matter, and also a sorrowful speech, or a terrible, or threatening speech, or any other kind of speech, and in teaching this fancies that he is teaching the art of tragedy — ?

Phaedrus: They too would surely laugh at him if he fancies that tragedy is anything but the arranging of these elements in a manner which will be suitable to one another and to the whole.

Socrates: But I do not suppose that they would be rude or abusive to him: Would they not treat him as a musician a man who thinks that he is a harmonist because he knows how to pitch the highest and lowest note; happening to meet such an one he would not say to him savagely, ‘Fool, you are mad!’ But like a musician, in a gentle and harmonious tone of voice, he would answer: ‘My good friend, he who would be a harmonist must certainly know this, and yet he may understand nothing of harmony if he has not got beyond your stage of knowledge, for you only know the preliminaries of harmony and not harmony itself.’

269a

Phaedrus: Very true.

Socrates: And will not Sophocles say to the display of the would-be tragedian, that this is not tragedy but the preliminaries of tragedy? and will not Acumenus say the same of medicine to the would-be physician?

Phaedrus: Quite true.

Socrates: And if Adrastus the mellifluous or Pericles heard of these wonderful arts, brachylogies and eikonologies and all the

hard names which we have been endeavouring to draw into the light of day, what would they say? Instead of losing temper and applying uncomplimentary epithets, as you and I have been doing, to the authors of such an imaginary art, their superior wisdom would rather censure us, as well as them. 'Have a little patience, Phaedrus and Socrates, they would say; you should not be in such a passion with those who from some want of dialectical skill are unable to define the nature of rhetoric, and consequently suppose that they have found the art in the preliminary conditions of it, and when these have been taught by them to others, fancy that the whole art of rhetoric has been taught by them; but as to using the several instruments of the art effectively, or making the composition a whole, — an application of it such as this is they regard as an easy thing which their disciples may make for themselves.'

269c

Phaedrus: I quite admit, Socrates, that the art of rhetoric which these men teach and of which they write is such as you describe — there I agree with you. But I still want to know where and how the true art of rhetoric and persuasion is to be acquired.

269d

Socrates: The perfection which is required of the finished orator is, or rather must be, like the perfection of anything else; partly given by nature, but may also be assisted by art. If you have the natural power and add to it knowledge and practice, you will be a distinguished speaker; if you fall short in either of these, you will be to that extent defective. But the art, as far as there is an art, of rhetoric does not lie in the direction of Lysias or Thrasymachus.

270a

Phaedrus: In what direction then?

Socrates: I conceive Pericles to have been the most accomplished of rhetoricians.

Phaedrus: What of that?

Socrates: All the great arts require discussion and high speculation about the truths of nature; hence come loftiness of thought and completeness of execution. And this, as I conceive, was the quality which, in addition to his natural gifts, Pericles acquired from his intercourse with Anaxagoras whom he happened to know. He was thus imbued with the higher philosophy, and attained the knowledge of Mind and the negative of Mind, which were favourite themes of Anaxagoras, and applied what suited his purpose to the art of speaking.

Phaedrus: Explain.

Socrates: Rhetoric is like medicine.

Phaedrus: How so?

Socrates: Why, because medicine has to define the nature of the body and rhetoric of the soul — if we would proceed, not empirically but scientifically, in the one case to impart health and strength by giving medicine and food, in the other to implant the conviction or virtue which you desire, by the right application of words and training.

270c

Phaedrus: There, Socrates, I suspect that you are right.

Socrates: And do you think that you can know the nature of the soul intelligently without knowing the nature of the whole?

Phaedrus: Hippocrates the Asclepiad says that the nature even of the body can only be understood as a whole. (Compare Charmides.)

Socrates: Yes, friend, and he was right: — still, we ought not to be content with the name of Hippocrates, but to examine and see whether his argument agrees with his conception of nature.

Phaedrus: I agree.

Socrates: Then consider what truth as well as Hippocrates says about this or about any other nature. Ought we not to consider first whether that which we wish to learn and to teach is a simple or multiform thing, and if simple, then to enquire what power it has of acting or being acted upon in relation to other things, and if multiform, then to number the forms; and see first in the case of one of them, and then in the case of all of them, what is that power of acting or being acted upon which makes each and all of them to be what they are?

270e

Phaedrus: You may very likely be right, Socrates.

Socrates: The method which proceeds without analysis is like the groping of a blind man. Yet, surely, he who is an artist ought not to admit of a comparison with the blind, or deaf. The rhetorician, who teaches his pupil to speak scientifically, will particularly set forth the nature of that being to which he addresses his speeches; and this, I conceive, to be the soul.

271a

Phaedrus: Certainly.

Socrates: His whole effort is directed to the soul; for in that he seeks to produce conviction.

Phaedrus: Yes.

Socrates: Then clearly, Thrasymachus or any one else who teaches rhetoric in earnest will give an exact description of the nature of the soul; which will enable us to see whether she be single and same, or, like the body, multiform. That is what we should call showing the nature of the soul.

271b

Phaedrus: Exactly.

Socrates: He will explain, secondly, the mode in which she acts or is acted upon.

Phaedrus: True.

Socrates: Thirdly, having classified men and speeches, and their kinds and affections, and adapted them to one another, he will tell the reasons of his arrangement, and show why one soul is persuaded by a particular form of argument, and another not.

271c

Phaedrus: You have hit upon a very good way.

Socrates: Yes, that is the true and only way in which any subject can be set forth or treated by rules of art, whether in speaking or writing. But the writers of the present day, at whose feet you have sat, craftily conceal the nature of the soul which they know quite well. Nor, until they adopt our method of reading and writing, can we admit that they write by rules of art?

Phaedrus: What is our method?

Socrates: I cannot give you the exact details; but I should like to tell you generally, as far as is in my power, how a man ought to proceed according to rules of art.

Phaedrus: Let me hear.

271e

Socrates: Oratory is the art of enchanting the soul, and therefore he who would be an orator has to learn the differences of human souls — they are so many and of such a nature, and from them come the differences between man and man. Having proceeded thus far in his analysis, he will next divide speeches into their different classes:— ‘Such and such persons,’ he will say, are affected by this or that kind of speech in this or that way,’ and he will tell you why. The pupil must have a good theoretical notion of them first, and then he must have experience of them in actual life, and be able to follow them with all his senses about him, or he will never get beyond the precepts of his masters. But when he understands what

persons are persuaded by what arguments, and sees the person about whom he was speaking in the abstract actually before him, and knows that it is he, and can say to himself, 'This is the man or this is the character who ought to have a certain argument applied to him in order to convince him of a certain opinion;' — he who knows all this, and knows also when he should speak and when he should refrain, and when he should use pithy sayings, pathetic appeals, sensational effects, and all the other modes of speech which he has learned; — when, I say, he knows the times and seasons of all these things, then, and not till then, he is a perfect master of his art; but if he fail in any of these points, whether in speaking or teaching or writing them, and yet declares that he speaks by rules of art, he who says 'I don't believe you' has the better of him. Well, the teacher will say, is this, Phaedrus and Socrates, your account of the so-called art of rhetoric, or am I to look for another?

Phaedrus: He must take this, Socrates, for there is no possibility of another, and yet the creation of such an art is not easy.

272c

Socrates: Very true; and therefore let us consider this matter in every light, and see whether we cannot find a shorter and easier road; there is no use in taking a long rough roundabout way if there be a shorter and easier one. And I wish that you would try and remember whether you have heard from Lysias or any one else anything which might be of service to us.

Phaedrus: If trying would avail, then I might; but at the moment I can think of nothing.

Socrates: Suppose I tell you something which somebody who knows told me.

Phaedrus: Certainly.

Socrates: May not 'the wolf,' as the proverb says, 'claim a hearing'?

Phaedrus: Do you say what can be said for him.

272d

Socrates: He will argue that there is no use in putting a solemn face on these matters, or in going round and round, until you arrive at first principles; for, as I said at first, when the question is of justice and good, or is a question in which men are concerned who are just and good, either by nature or habit, he who would be a skilful rhetorician has no need of truth — for that in courts of law men literally care nothing about truth, but only about conviction: and this is based on probability, to which he who would be a skilful orator should therefore give his whole attention. And they say also that there are cases in which the actual facts, if they are improbable, ought to be withheld, and only the probabilities should be told either in accusation or defence, and that always in speaking, the orator should keep probability in view, and say good-bye to the truth. And the observance of this principle throughout a speech furnishes the whole art.

273a

Phaedrus: That is what the professors of rhetoric do actually say, Socrates. I have not forgotten that we have quite briefly touched upon this matter already; with them the point is all-important.

Socrates: I dare say that you are familiar with Tisias. Does he not define probability to be that which the many think?

Phaedrus: Certainly, he does.

273b

Socrates: I believe that he has a clever and ingenious case of this sort: — He supposes a feeble and valiant man to have assaulted a strong and cowardly one, and to have robbed him of his coat or of something or other; he is brought into court, and then Tisias says that both parties should tell lies: the coward should say that he was assaulted by more men than one; the

other should prove that they were alone, and should argue thus: 'How could a weak man like me have assaulted a strong man like him?' The complainant will not like to confess his own cowardice, and will therefore invent some other lie which his adversary will thus gain an opportunity of refuting. And there are other devices of the same kind which have a place in the system. Am I not right, Phaedrus?

Phaedrus: Certainly.

Socrates: Bless me, what a wonderfully mysterious art is this which Tisias or some other gentleman, in whatever name or country he rejoices, has discovered. Shall we say a word to him or not?

273c

Phaedrus: What shall we say to him?

273d

Socrates: Let us tell him that, before he appeared, you and I were saying that the probability of which he speaks was engendered in the minds of the many by the likeness of the truth, and we had just been affirming that he who knew the truth would always know best how to discover the resemblances of the truth. If he has anything else to say about the art of speaking we should like to hear him; but if not, we are satisfied with our own view, that unless a man estimates the various characters of his hearers and is able to divide all things into classes and to comprehend them under single ideas, he will never be a skilful rhetorician even within the limits of human power. And this skill he will not attain without a great deal of trouble, which a good man ought to undergo, not for the sake of speaking and acting before men, but in order that he may be able to say what is acceptable to God and always to act acceptably to Him as far as in him lies; for there is a saying of wiser men than ourselves, that a man of sense should not try to please his fellow-servants (at least this should not be his first

object) but his good and noble masters; and therefore if the way is long and circuitous, marvel not at this, for, where the end is great, there we may take the longer road, but not for lesser ends such as yours. Truly, the argument may say, Tisias, that if you do not mind going so far, rhetoric has a fair beginning here.

Phaedrus: I think, Socrates, that this is admirable, if only practicable.

Socrates: But even to fail in an honourable object is honourable.

Phaedrus: True.

274a

Socrates: Enough appears to have been said by us of a true and false art of speaking.

Phaedrus: Certainly.

Socrates: But there is something yet to be said of propriety and impropriety of writing.

Phaedrus: Yes.

Socrates: Do you know how you can speak or act about rhetoric in a manner which will be acceptable to God?

Phaedrus: No, indeed. Do you?

274b

Socrates: I have heard a tradition of the ancients, whether true or not they only know; although if we had found the truth ourselves, do you think that we should care much about the opinions of men?

Phaedrus: Your question needs no answer; but I wish that you would tell me what you say that you have heard.

274c

Socrates: At the Egyptian city of Naucratis, there was a famous old god, whose name was Theuth; the bird which is called the

Ibis is sacred to him, and he was the inventor of many arts, such as arithmetic and calculation and geometry and astronomy and draughts and dice, but his great discovery was the use of letters. Now in those days the god Thamus was the king of the whole country of Egypt; and he dwelt in that great city of Upper Egypt which the Hellenes call Egyptian Thebes, and the god himself is called by them Ammon. To him came Theuth and showed his inventions, desiring that the other Egyptians might be allowed to have the benefit of them; he enumerated them, and Thamus enquired about their several uses, and praised some of them and censured others, as he approved or disapproved of them. It would take a long time to repeat all that Thamus said to Theuth in praise or blame of the various arts. But when they came to letters, This, said Theuth, will make the Egyptians wiser and give them better memories; it is a specific both for the memory and for the wit. Thamus replied: O most ingenious Theuth, the parent or inventor of an art is not always the best judge of the utility or inutility of his own inventions to the users of them. And in this instance, you who are the father of letters, from a paternal love of your own children have been led to attribute to them a quality which they cannot have; for this discovery of yours will create forgetfulness in the learners' souls, because they will not use their memories; they will trust to the external written characters and not remember of themselves. The specific which you have discovered is an aid not to memory, but to reminiscence, and you give your disciples not truth, but only the semblance of truth; they will be hearers of many things and will have learned nothing; they will appear to be omniscient and will generally know nothing; they will be tiresome company, having the show of wisdom without the reality.

Phaedrus: Yes, Socrates, you can easily invent tales of Egypt, or of any other country.

275b

Socrates: There was a tradition in the temple of Dodona that oaks first gave prophetic utterances. The men of old, unlike in their simplicity to young philosophy, deemed that if they heard the truth even from 'oak or rock,' it was enough for them; whereas you seem to consider not whether a thing is or is not true, but who the speaker is and from what country the tale comes.

Phaedrus: I acknowledge the justice of your rebuke; and I think that the Theban is right in his view about letters.

275c

Socrates: He would be a very simple person, and quite a stranger to the oracles of Thamus or Ammon, who should leave in writing or receive in writing any art under the idea that the written word would be intelligible or certain; or who deemed that writing was at all better than knowledge and recollection of the same matters?

Phaedrus: That is most true.

275d

Socrates: I cannot help feeling, Phaedrus, that writing is unfortunately like painting; for the creations of the painter have the attitude of life, and yet if you ask them a question they preserve a solemn silence. And the same may be said of speeches. You would imagine that they had intelligence, but if you want to know anything and put a question to one of them, the speaker always gives one unvarying answer. And when they have been once written down they are tumbled about anywhere among those who may or may not understand them, and know not to whom they should reply, to whom not: and, if they are maltreated or abused, they have no parent to protect them; and they cannot protect or defend themselves.

Phaedrus: That again is most true.

Socrates: Is there not another kind of word or speech far better than this, and having far greater power — a son of the same family, but lawfully begotten?

Phaedrus: Whom do you mean, and what is his origin?

Socrates: I mean an intelligent word graven in the soul of the learner, which can defend itself, and knows when to speak and when to be silent.

276a

Phaedrus: You mean the living word of knowledge which has a soul, and of which the written word is properly no more than an image?

Socrates: Yes, of course that is what I mean. And now may I be allowed to ask you a question: Would a husbandman, who is a man of sense, take the seeds, which he values and which he wishes to bear fruit, and in sober seriousness plant them during the heat of summer, in some garden of Adonis, that he may rejoice when he sees them in eight days appearing in beauty? at least he would do so, if at all, only for the sake of amusement and pastime. But when he is in earnest he sows in fitting soil, and practises husbandry, and is satisfied if in eight months the seeds which he has sown arrive at perfection?

276b

Phaedrus: Yes, Socrates, that will be his way when he is in earnest; he will do the other, as you say, only in play.

Socrates: And can we suppose that he who knows the just and good and honourable has less understanding, than the husbandman, about his own seeds?

Phaedrus: Certainly not.

276c

Socrates: Then he will not seriously incline to 'write' his thoughts 'in water' with pen and ink, sowing words which can neither speak for themselves nor teach the truth adequately to

others?

Phaedrus: No, that is not likely.

Socrates: No, that is not likely — in the garden of letters he will sow and plant, but only for the sake of recreation and amusement; he will write them down as memorials to be treasured against the forgetfulness of old age, by himself, or by any other old man who is treading the same path. He will rejoice in beholding their tender growth; and while others are refreshing their souls with banqueting and the like, this will be the pastime in which his days are spent.

276d

Phaedrus: A pastime, Socrates, as noble as the other is ignoble, the pastime of a man who can be amused by serious talk, and can discourse merrily about justice and the like.

276e

Socrates: True, Phaedrus. But nobler far is the serious pursuit of the dialectician, who, finding a congenial soul, by the help of science sows and plants therein words which are able to help themselves and him who planted them, and are not unfruitful, but have in them a seed which others brought up in different soils render immortal, making the possessors of it happy to the utmost extent of human happiness.

Phaedrus: Far nobler, certainly.

Socrates: And now, Phaedrus, having agreed upon the premises we may decide about the conclusion.

Phaedrus: About what conclusion?

Socrates: About Lysias, whom we censured, and his art of writing, and his discourses, and the rhetorical skill or want of skill which was shown in them — these are the questions which we sought to determine, and they brought us to this point. And I think that we are now pretty well informed about the nature of

art and its opposite.

277a

Phaedrus: Yes, I think with you; but I wish that you would repeat what was said.

277b

Socrates: Until a man knows the truth of the several particulars of which he is writing or speaking, and is able to define them as they are, and having defined them again to divide them until they can be no longer divided, and until in like manner he is able to discern the nature of the soul, and discover the different modes of discourse which are adapted to different natures, and to arrange and dispose them in such a way that the simple form of speech may be addressed to the simpler nature, and the complex and composite to the more complex nature — until he has accomplished all this, he will be unable to handle arguments according to rules of art, as far as their nature allows them to be subjected to art, either for the purpose of teaching or persuading; — such is the view which is implied in the whole preceding argument.

Phaedrus: Yes, that was our view, certainly.

Socrates: Secondly, as to the censure which was passed on the speaking or writing of discourses, and how they might be rightly or wrongly censured — did not our previous argument show — ?

Phaedrus: Show what?

Socrates: That whether Lysias or any other writer that ever was or will be, whether private man or statesman, proposes laws and so becomes the author of a political treatise, fancying that there is any great certainty and clearness in his performance, the fact of his so writing is only a disgrace to him, whatever men may say. For not to know the nature of justice and injustice, and good and evil, and not to be able to distinguish the

dream from the reality, cannot in truth be otherwise than disgraceful to him, even though he have the applause of the whole world.

277d

Phaedrus: Certainly.

277e

Socrates: But he who thinks that in the written word there is necessarily much which is not serious, and that neither poetry nor prose, spoken or written, is of any great value, if, like the compositions of the rhapsodes, they are only recited in order to be believed, and not with any view to criticism or instruction; and who thinks that even the best of writings are but a reminiscence of what we know, and that only in principles of justice and goodness and nobility taught and communicated orally for the sake of instruction and graven in the soul, which is the true way of writing, is there clearness and perfection and seriousness, and that such principles are a man's own and his legitimate offspring; — being, in the first place, the word which he finds in his own bosom; secondly, the brethren and descendants and relations of his idea which have been duly implanted by him in the souls of others; — and who cares for them and no others — this is the right sort of man; and you and I, Phaedrus, would pray that we may become like him.

Phaedrus: That is most assuredly my desire and prayer.

278b

Socrates: And now the play is played out; and of rhetoric enough. Go and tell Lysias that to the fountain and school of the Nymphs we went down, and were bidden by them to convey a message to him and to other composers of speeches — to Homer and other writers of poems, whether set to music or not; and to Solon and others who have composed writings in the form of political discourses which they would term laws — to all of them we are to say that if their compositions are based on knowledge

of the truth, and they can defend or prove them, when they are put to the test, by spoken arguments, which leave their writings poor in comparison of them, then they are to be called, not only poets, orators, legislators, but are worthy of a higher name, befitting the serious pursuit of their life.

Phaedrus: What name would you assign to them?

278d

Socrates: Wise, I may not call them; for that is a great name which belongs to God alone, — lovers of wisdom or philosophers is their modest and befitting title.

Phaedrus: Very suitable.

Socrates: And he who cannot rise above his own compilations and compositions, which he has been long patching and piecing, adding some and taking away some, may be justly called poet or speech-maker or law-maker.

278e

Phaedrus: Certainly.

Socrates: Now go and tell this to your companion.

Phaedrus: But there is also a friend of yours who ought not to be forgotten.

Socrates: Who is he?

Phaedrus: Isocrates the fair: — What message will you send to him, and how shall we describe him?

Socrates: Isocrates is still young, Phaedrus; but I am willing to hazard a prophecy concerning him.

Phaedrus: What would you prophesy?

279a

Socrates: I think that he has a genius which soars above the orations of Lysias, and that his character is cast in a finer mould. My impression of him is that he will marvellously improve as he

grows older, and that all former rhetoricians will be as children in comparison of him. And I believe that he will not be satisfied with rhetoric, but that there is in him a divine inspiration which will lead him to things higher still. For he has an element of philosophy in his nature. This is the message of the gods dwelling in this place, and which I will myself deliver to Isocrates, who is my delight; and do you give the other to Lysias, who is yours.

Phaedrus: I will; and now as the heat is abated let us depart.

279b

Socrates: Should we not offer up a prayer first of all to the local deities?

Phaedrus: By all means.

Socrates: Beloved Pan, and all ye other gods who haunt this place, give me beauty in the inward soul; and may the outward and inward man be at one. May I reckon the wise to be the wealthy, and may I have such a quantity of gold as a temperate man and he only can bear and carry. — Anything more? The prayer, I think, is enough for me.

279c

Phaedrus: Ask the same for me, for friends should have all things in common.

Socrates: Let us go.

Philebus

ΦΙΛΗΒΟΣ

Plato

translated by Benjamin Jowett

persons in the dialogue:

SOCRATES of Alopecce, son of Sophroniscus

PROTARCHUS son of Callias, a very rich Athenian

PHILEBUS nothing is known

scene: no indication

11a

Socrates: Observe, Protarchus, the nature of the position which you are now going to take from Philebus, and what the other position is which I maintain, and which, if you do not approve of it, is to be controverted by you. Shall you and I sum up the two sides?

11b

Protarchus: By all means.

Socrates: Philebus was saying that enjoyment and pleasure and delight, and the class of feelings akin to them, are a good to every living being, whereas I contend, that not these, but wisdom and intelligence and memory, and their kindred, right opinion and true reasoning, are better and more desirable than pleasure for all who are able to partake of them, and that to all such who are or ever will be they are the most advantageous of all things. Have I not given, Philebus, a fair statement of the two sides of the argument?

11c

Philebus: Nothing could be fairer, Socrates.

Socrates: And do you, Protarchus, accept the position which is assigned to you?

Protarchus: I cannot do otherwise, since our excellent Philebus has left the field.

11d

Socrates: Surely the truth about these matters ought, by all means, to be ascertained.

Protarchus: Certainly.

Socrates: Shall we further agree —

Protarchus: To what?

Socrates: That you and I must now try to indicate some state and disposition of the soul, which has the property of making all men happy.

Protarchus: Yes, by all means.

Socrates: And you say that pleasure, and I say that wisdom, is such a state?

Protarchus: True.

Socrates: And what if there be a third state, which is better than either? Then both of us are vanquished — are we not? But if this life, which really has the power of making men happy, turn out to be more akin to pleasure than to wisdom, the life of pleasure may still have the advantage over the life of wisdom.

12a

Protarchus: True.

Socrates: Or suppose that the better life is more nearly allied to wisdom, then wisdom conquers, and pleasure is defeated; — do you agree?

Protarchus: Certainly.

Socrates: And what do you say, Philebus?

Philebus: I say, and shall always say, that pleasure is easily the conqueror; but you must decide for yourself, Protarchus.

12b

Protarchus: You, Philebus, have handed over the argument to me, and have no longer a voice in the matter?

Philebus: True enough. Nevertheless I would clear myself and deliver my soul of you; and I call the goddess herself to witness

that I now do so.

12c

Protarchus: You may appeal to us; we too will be the witnesses of your words. And now, Socrates, whether Philebus is pleased or displeased, we will proceed with the argument.

Socrates: Then let us begin with the goddess herself, of whom Philebus says that she is called Aphrodite, but that her real name is Pleasure.

Protarchus: Very good.

Socrates: The awe which I always feel, Protarchus, about the names of the gods is more than human — it exceeds all other fears. And now I would not sin against Aphrodite by naming her amiss; let her be called what she pleases. But Pleasure I know to be manifold, and with her, as I was just now saying, we must begin, and consider what her nature is. She has one name, and therefore you would imagine that she is one; and yet surely she takes the most varied and even unlike forms. For do we not say that the intemperate has pleasure, and that the temperate has pleasure in his very temperance, — that the fool is pleased when he is full of foolish fancies and hopes, and that the wise man has pleasure in his wisdom? and how foolish would any one be who affirmed that all these opposite pleasures are severally alike!

12d

Protarchus: Why, Socrates, they are opposed in so far as they spring from opposite sources, but they are not in themselves opposite. For must not pleasure be of all things most absolutely like pleasure, — that is, like itself?

12e

Socrates: Yes, my good friend, just as colour is like colour; — in so far as colours are colours, there is no difference between them; and yet we all know that black is not only unlike, but even absolutely opposed to white: or again, as figure is like figure, for

all figures are comprehended under one class; and yet particular figures may be absolutely opposed to one another, and there is an infinite diversity of them. And we might find similar examples in many other things; therefore do not rely upon this argument, which would go to prove the unity of the most extreme opposites. And I suspect that we shall find a similar opposition among pleasures.

13a

Protarchus: Very likely; but how will this invalidate the argument?

Socrates: Why, I shall reply, that dissimilar as they are, you apply to them a new predicate, for you say that all pleasant things are good; now although no one can argue that pleasure is not pleasure, he may argue, as we are doing, that pleasures are oftener bad than good; but you call them all good, and at the same time are compelled, if you are pressed, to acknowledge that they are unlike. And so you must tell us what is the identical quality existing alike in good and bad pleasures, which makes you designate all of them as good.

13b

Protarchus: What do you mean, Socrates? Do you think that any one who asserts pleasure to be the good, will tolerate the notion that some pleasures are good and others bad?

13c

Socrates: And yet you will acknowledge that they are different from one another, and sometimes opposed?

Protarchus: Not in so far as they are pleasures.

Socrates: That is a return to the old position, Protarchus, and so we are to say (are we?) that there is no difference in pleasures, but that they are all alike; and the examples which have just been cited do not pierce our dull minds, but we go on arguing all the same, like the weakest and most inexperienced reasoners?

(Probably corrupt.)

13d

Protarchus: What do you mean?

Socrates: Why, I mean to say, that in self-defence I may, if I like, follow your example, and assert boldly that the two things most unlike are most absolutely alike; and the result will be that you and I will prove ourselves to be very tyros in the art of disputing; and the argument will be blown away and lost. Suppose that we put back, and return to the old position; then perhaps we may come to an understanding with one another.

13e

Protarchus: How do you mean?

Socrates: Shall I, Protarchus, have my own question asked of me by you?

Protarchus: What question?

Socrates: Ask me whether wisdom and science and mind, and those other qualities which I, when asked by you at first what is the nature of the good, affirmed to be good, are not in the same case with the pleasures of which you spoke.

Protarchus: What do you mean?

14a

Socrates: The sciences are a numerous class, and will be found to present great differences. But even admitting that, like the pleasures, they are opposite as well as different, should I be worthy of the name of dialectician if, in order to avoid this difficulty, I were to say (as you are saying of pleasure) that there is no difference between one science and another; — would not the argument founder and disappear like an idle tale, although we might ourselves escape drowning by clinging to a fallacy?

14b

Protarchus: May none of this befall us, except the deliverance! Yet I like the even-handed justice which is applied to both our arguments. Let us assume, then, that there are many and diverse pleasures, and many and different sciences.

14c

Socrates: And let us have no concealment, Protarchus, of the differences between my good and yours; but let us bring them to the light in the hope that, in the process of testing them, they may show whether pleasure is to be called the good, or wisdom, or some third quality; for surely we are not now simply contending in order that my view or that yours may prevail, but I presume that we ought both of us to be fighting for the truth.

Protarchus: Certainly we ought.

Socrates: Then let us have a more definite understanding and establish the principle on which the argument rests.

14d

Protarchus: What principle?

Socrates: A principle about which all men are always in a difficulty, and some men sometimes against their will.

Protarchus: Speak plainer.

Socrates: The principle which has just turned up, which is a marvel of nature; for that one should be many or many one, are wonderful propositions; and he who affirms either is very open to attack.

Protarchus: Do you mean, when a person says that I, Protarchus, am by nature one and also many, dividing the single 'me' into many 'me's,' and even opposing them as great and small, light and heavy, and in ten thousand other ways?

14e

Socrates: Those, Protarchus, are the common and acknowledged paradoxes about the one and many, which I may

say that everybody has by this time agreed to dismiss as childish and obvious and detrimental to the true course of thought; and no more favour is shown to that other puzzle, in which a person proves the members and parts of anything to be divided, and then confessing that they are all one, says laughingly in disproof of his own words: Why, here is a miracle, the one is many and infinite, and the many are only one.

15a

Protarchus: But what, Socrates, are those other marvels connected with this subject which, as you imply, have not yet become common and acknowledged?

15b

Socrates: When, my boy, the one does not belong to the class of things that are born and perish, as in the instances which we were giving, for in those cases, and when unity is of this concrete nature, there is, as I was saying, a universal consent that no refutation is needed; but when the assertion is made that man is one, or ox is one, or beauty one, or the good one, then the interest which attaches to these and similar unities and the attempt which is made to divide them gives birth to a controversy.

Protarchus: Of what nature?

15c

Socrates: In the first place, as to whether these unities have a real existence; and then how each individual unity, being always the same, and incapable either of generation or of destruction, but retaining a permanent individuality, can be conceived either as dispersed and multiplied in the infinity of the world of generation, or as still entire and yet divided from itself, which latter would seem to be the greatest impossibility of all, for how can one and the same thing be at the same time in one and in many things? These, Protarchus, are the real difficulties, and this is the one and many to which they relate;

they are the source of great perplexity if ill decided, and the right determination of them is very helpful.

15d

Protarchus: Then, Socrates, let us begin by clearing up these questions.

Socrates: That is what I should wish.

Protarchus: And I am sure that all my other friends will be glad to hear them discussed; Philebus, fortunately for us, is not disposed to move, and we had better not stir him up with questions.

Socrates: Good; and where shall we begin this great and multifarious battle, in which such various points are at issue? Shall we begin thus?

Protarchus: How?

Socrates: We say that the one and many become identified by thought, and that now, as in time past, they run about together, in and out of every word which is uttered, and that this union of them will never cease, and is not now beginning, but is, as I believe, an everlasting quality of thought itself, which never grows old. Any young man, when he first tastes these subtleties, is delighted, and fancies that he has found a treasure of wisdom; in the first enthusiasm of his joy he leaves no stone, or rather no thought unturned, now rolling up the many into the one, and kneading them together, now unfolding and dividing them; he puzzles himself first and above all, and then he proceeds to puzzle his neighbours, whether they are older or younger, or of his own age — that makes no difference; neither father nor mother does he spare; no human being who has ears is safe from him, hardly even his dog, and a barbarian would have no chance of escaping him, if an interpreter could only be found.

16c

Protarchus: Considering, Socrates, how many we are, and that all of us are young men, is there not a danger that we and Philebus may all set upon you, if you abuse us? We understand what you mean; but is there no charm by which we may dispel all this confusion, no more excellent way of arriving at the truth? If there is, we hope that you will guide us into that way, and we will do our best to follow, for the enquiry in which we are engaged, Socrates, is not unimportant.

Socrates: The reverse of unimportant, my boys, as Philebus calls you, and there neither is nor ever will be a better than my own favourite way, which has nevertheless already often deserted me and left me helpless in the hour of need.

Protarchus: Tell us what that is.

Socrates: One which may be easily pointed out, but is by no means easy of application; it is the parent of all the discoveries in the arts.

Protarchus: Tell us what it is.

Socrates: A gift of heaven, which, as I conceive, the gods tossed among men by the hands of a new Prometheus, and therewith a blaze of light; and the ancients, who were our betters and nearer the gods than we are, handed down the tradition, that whatever things are said to be are composed of one and many, and have the finite and infinite implanted in them: seeing, then, that such is the order of the world, we too ought in every enquiry to begin by laying down one idea of that which is the subject of enquiry; this unity we shall find in everything. Having found it, we may next proceed to look for two, if there be two, or, if not, then for three or some other number, subdividing each of these units, until at last the unity with which we began is seen not only to be one and many and infinite, but also a definite number; the infinite must not be suffered to approach the many until the entire number of the species intermediate

between unity and infinity has been discovered, — then, and not till then, we may rest from division, and without further troubling ourselves about the endless individuals may allow them to drop into infinity. This, as I was saying, is the way of considering and learning and teaching one another, which the gods have handed down to us. But the wise men of our time are either too quick or too slow in conceiving plurality in unity. Having no method, they make their one and many anyhow, and from unity pass at once to infinity; the intermediate steps never occur to them. And this, I repeat, is what makes the difference between the mere art of disputation and true dialectic.

17b

Protarchus: I think that I partly understand you Socrates, but I should like to have a clearer notion of what you are saying.

17c

Socrates: I may illustrate my meaning by the letters of the alphabet, Protarchus, which you were made to learn as a child.

Protarchus: How do they afford an illustration?

Socrates: The sound which passes through the lips whether of an individual or of all men is one and yet infinite.

Protarchus: Very true.

Socrates: And yet not by knowing either that sound is one or that sound is infinite are we perfect in the art of speech, but the knowledge of the number and nature of sounds is what makes a man a grammarian.

Protarchus: Very true.

Socrates: And the knowledge which makes a man a musician is of the same kind.

Protarchus: How so?

Socrates: Sound is one in music as well as in grammar?

Protarchus: Certainly.

Socrates: And there is a higher note and a lower note, and a note of equal pitch: — may we affirm so much?

Protarchus: Yes.

Socrates: But you would not be a real musician if this was all that you knew; though if you did not know this you would know almost nothing of music.

Protarchus: Nothing.

Socrates: But when you have learned what sounds are high and what low, and the number and nature of the intervals and their limits or proportions, and the systems compounded out of them, which our fathers discovered, and have handed down to us who are their descendants under the name of harmonies; and the affections corresponding to them in the movements of the human body, which when measured by numbers ought, as they say, to be called rhythms and measures; and they tell us that the same principle should be applied to every one and many; — when, I say, you have learned all this, then, my dear friend, you are perfect; and you may be said to understand any other subject, when you have a similar grasp of it. But the infinity of kinds and the infinity of individuals which there is in each of them, when not classified, creates in every one of us a state of infinite ignorance; and he who never looks for number in anything, will not himself be looked for in the number of famous men.

18a

Protarchus: I think that what Socrates is now saying is excellent, Philebus.

Philebus: I think so too, but how do his words bear upon us and upon the argument?

Socrates: Philebus is right in asking that question of us, Protarchus.

Protarchus: Indeed he is, and you must answer him.

18b

Socrates: I will; but you must let me make one little remark first about these matters; I was saying, that he who begins with any individual unity, should proceed from that, not to infinity, but to a definite number, and now I say conversely, that he who has to begin with infinity should not jump to unity, but he should look about for some number representing a certain quantity, and thus out of all end in one. And now let us return for an illustration of our principle to the case of letters.

Protarchus: What do you mean?

Socrates: Some god or divine man, who in the Egyptian legend is said to have been Theuth, observing that the human voice was infinite, first distinguished in this infinity a certain number of vowels, and then other letters which had sound, but were not pure vowels (i.e., the semivowels); these too exist in a definite number; and lastly, he distinguished a third class of letters which we now call mutes, without voice and without sound, and divided these, and likewise the two other classes of vowels and semivowels, into the individual sounds, and told the number of them, and gave to each and all of them the name of letters; and observing that none of us could learn any one of them and not learn them all, and in consideration of this common bond which in a manner united them, he assigned to them all a single art, and this he called the art of grammar or letters.

18e

Philebus: The illustration, Protarchus, has assisted me in understanding the original statement, but I still feel the defect of which I just now complained.

Socrates: Are you going to ask, Philebus, what this has to do with the argument?

Philebus: Yes, that is a question which Protarchus and I have been long asking.

Socrates: Assuredly you have already arrived at the answer to the question which, as you say, you have been so long asking?

Philebus: How so?

19a

Socrates: Did we not begin by enquiring into the comparative eligibility of pleasure and wisdom?

Philebus: Certainly.

Socrates: And we maintain that they are each of them one?

Philebus: True.

Socrates: And the precise question to which the previous discussion desires an answer is, how they are one and also many (i.e., how they have one genus and many species), and are not at once infinite, and what number of species is to be assigned to either of them before they pass into infinity (i.e. into the infinite number of individuals).

19b

Protarchus: That is a very serious question, Philebus, to which Socrates has ingeniously brought us round, and please to consider which of us shall answer him; there may be something ridiculous in my being unable to answer, and therefore imposing the task upon you, when I have undertaken the whole charge of the argument, but if neither of us were able to answer, the result methinks would be still more ridiculous. Let us consider, then, what we are to do: — Socrates, if I understood him rightly, is asking whether there are not kinds of pleasure, and what is the number and nature of them, and the same of wisdom.

19c

Socrates: Most true, O son of Callias; and the previous argument showed that if we are not able to tell the kinds of everything that has unity, likeness, sameness, or their opposites, none of us will be of the smallest use in any enquiry.

Protarchus: That seems to be very near the truth, Socrates. Happy would the wise man be if he knew all things, and the next best thing for him is that he should know himself. Why do I say so at this moment? I will tell you. You, Socrates, have granted us this opportunity of conversing with you, and are ready to assist us in determining what is the best of human goods. For when Philebus said that pleasure and delight and enjoyment and the like were the chief good, you answered — No, not those, but another class of goods; and we are constantly reminding ourselves of what you said, and very properly, in order that we may not forget to examine and compare the two. And these goods, which in your opinion are to be designated as superior to pleasure, and are the true objects of pursuit, are mind and knowledge and understanding and art, and the like. There was a dispute about which were the best, and we playfully threatened that you should not be allowed to go home until the question was settled; and you agreed, and placed yourself at our disposal. And now, as children say, what has been fairly given cannot be taken back; cease then to fight against us in this way.

20a

Socrates: In what way?

20b

Philebus: Do not perplex us, and keep asking questions of us to which we have not as yet any sufficient answer to give; let us not imagine that a general puzzling of us all is to be the end of our discussion, but if we are unable to answer, do you answer, as you have promised. Consider, then, whether you will divide pleasure and knowledge according to their kinds; or you may let the matter drop, if you are able and willing to find some other

mode of clearing up our controversy.

Socrates: If you say that, I have nothing to apprehend, for the words ‘if you are willing’ dispel all my fear; and, moreover, a god seems to have recalled something to my mind.

Philebus: What is that?

20c

Socrates: I remember to have heard long ago certain discussions about pleasure and wisdom, whether awake or in a dream I cannot tell; they were to the effect that neither the one nor the other of them was the good, but some third thing, which was different from them, and better than either. If this be clearly established, then pleasure will lose the victory, for the good will cease to be identified with her: — Am I not right?

Protarchus: Yes.

Socrates: And there will cease to be any need of distinguishing the kinds of pleasures, as I am inclined to think, but this will appear more clearly as we proceed.

20d

Protarchus: Capital, Socrates; pray go on as you propose.

Socrates: But, let us first agree on some little points.

Protarchus: What are they?

Socrates: Is the good perfect or imperfect?

Protarchus: The most perfect, Socrates, of all things.

Socrates: And is the good sufficient?

Protarchus: Yes, certainly, and in a degree surpassing all other things.

Socrates: And no one can deny that all percipient beings desire and hunt after good, and are eager to catch and have the good about them, and care not for the attainment of anything which

is not accompanied by good.

20e

Protarchus: That is undeniable.

Socrates: Now let us part off the life of pleasure from the life of wisdom, and pass them in review.

Protarchus: How do you mean?

Socrates: Let there be no wisdom in the life of pleasure, nor any pleasure in the life of wisdom, for if either of them is the chief good, it cannot be supposed to want anything, but if either is shown to want anything, then it cannot really be the chief good.

21a

Protarchus: Impossible.

Socrates: And will you help us to test these two lives?

Protarchus: Certainly.

Socrates: Then answer.

Protarchus: Ask.

Socrates: Would you choose, Protarchus, to live all your life long in the enjoyment of the greatest pleasures?

Protarchus: Certainly I should.

21b

Socrates: Would you consider that there was still anything wanting to you if you had perfect pleasure?

Protarchus: Certainly not.

Socrates: Reflect; would you not want wisdom and intelligence and forethought, and similar qualities? would you not at any rate want sight?

Protarchus: Why should I? Having pleasure I should have all things.

Socrates: Living thus, you would always throughout your life enjoy the greatest pleasures?

21c

Protarchus: I should.

Socrates: But if you had neither mind, nor memory, nor knowledge, nor true opinion, you would in the first place be utterly ignorant of whether you were pleased or not, because you would be entirely devoid of intelligence.

Protarchus: Certainly.

Socrates: And similarly, if you had no memory you would not recollect that you had ever been pleased, nor would the slightest recollection of the pleasure which you feel at any moment remain with you; and if you had no true opinion you would not think that you were pleased when you were; and if you had no power of calculation you would not be able to calculate on future pleasure, and your life would be the life, not of a man, but of an oyster or ‘pulmo marinus.’ Could this be otherwise?

21d

Protarchus: No.

Socrates: But is such a life eligible?

Protarchus: I cannot answer you, Socrates; the argument has taken away from me the power of speech.

Socrates: We must keep up our spirits; — let us now take the life of mind and examine it in turn.

Protarchus: And what is this life of mind?

21e

Socrates: I want to know whether any one of us would consent to live, having wisdom and mind and knowledge and memory of all things, but having no sense of pleasure or pain, and wholly unaffected by these and the like feelings?

22a

Protarchus: Neither life, Socrates, appears eligible to me, nor is likely, as I should imagine, to be chosen by any one else.

Socrates: What would you say, Protarchus, to both of these in one, or to one that was made out of the union of the two?

Protarchus: Out of the union, that is, of pleasure with mind and wisdom?

22b

Socrates: Yes, that is the life which I mean.

Protarchus: There can be no difference of opinion; not some but all would surely choose this third rather than either of the other two, and in addition to them.

Socrates: But do you see the consequence?

Protarchus: To be sure I do. The consequence is, that two out of the three lives which have been proposed are neither sufficient nor eligible for man or for animal.

22c

Socrates: Then now there can be no doubt that neither of them has the good, for the one which had would certainly have been sufficient and perfect and eligible for every living creature or thing that was able to live such a life; and if any of us had chosen any other, he would have chosen contrary to the nature of the truly eligible, and not of his own free will, but either through ignorance or from some unhappy necessity.

Protarchus: Certainly that seems to be true.

Socrates: And now have I not sufficiently shown that Philebus' goddess is not to be regarded as identical with the good?

Philebus: Neither is your 'mind' the good, Socrates, for that will be open to the same objections.

Socrates: Perhaps, Philebus, you may be right in saying so of my ‘mind’; but of the true, which is also the divine mind, far otherwise. However, I will not at present claim the first place for mind as against the mixed life; but we must come to some understanding about the second place. For you might affirm pleasure and I mind to be the cause of the mixed life; and in that case although neither of them would be the good, one of them might be imagined to be the cause of the good. And I might proceed further to argue in opposition to Philebus, that the element which makes this mixed life eligible and good, is more akin and more similar to mind than to pleasure. And if this is true, pleasure cannot be truly said to share either in the first or second place, and does not, if I may trust my own mind, attain even to the third.

23a

Protarchus: Truly, Socrates, pleasure appears to me to have had a fall; in fighting for the palm, she has been smitten by the argument, and is laid low. I must say that mind would have fallen too, and may therefore be thought to show discretion in not putting forward a similar claim. And if pleasure were deprived not only of the first but of the second place, she would be terribly damaged in the eyes of her admirers, for not even to them would she still appear as fair as before.

23b

Socrates: Well, but had we not better leave her now, and not pain her by applying the crucial test, and finally detecting her?

Protarchus: Nonsense, Socrates.

Socrates: Why? because I said that we had better not pain pleasure, which is an impossibility?

Protarchus: Yes, and more than that, because you do not seem to be aware that none of us will let you go home until you have finished the argument.

23c

Socrates: Heavens! Protarchus, that will be a tedious business, and just at present not at all an easy one. For in going to war in the cause of mind, who is aspiring to the second prize, I ought to have weapons of another make from those which I used before; some, however, of the old ones may do again. And must I then finish the argument?

Protarchus: Of course you must.

Socrates: Let us be very careful in laying the foundation.

Protarchus: What do you mean?

23d

Socrates: Let us divide all existing things into two, or rather, if you do not object, into three classes.

Protarchus: Upon what principle would you make the division?

Socrates: Let us take some of our newly-found notions.

Protarchus: Which of them?

Socrates: Were we not saying that God revealed a finite element of existence, and also an infinite?

Protarchus: Certainly.

Socrates: Let us assume these two principles, and also a third, which is compounded out of them; but I fear that I am ridiculously clumsy at these processes of division and enumeration.

Protarchus: What do you mean, my good friend?

Socrates: I say that a fourth class is still wanted.

23e

Protarchus: What will that be?

Socrates: Find the cause of the third or compound, and add this as a fourth class to the three others.

Protarchus: And would you like to have a fifth class or cause of resolution as well as a cause of composition?

Socrates: Not, I think, at present; but if I want a fifth at some future time you shall allow me to have it.

24a

Protarchus: Certainly.

Socrates: Let us begin with the first three; and as we find two out of the three greatly divided and dispersed, let us endeavour to reunite them, and see how in each of them there is a one and many.

Protarchus: If you would explain to me a little more about them, perhaps I might be able to follow you.

Socrates: Well, the two classes are the same which I mentioned before, one the finite, and the other the infinite; I will first show that the infinite is in a certain sense many, and the finite may be hereafter discussed.

Protarchus: I agree.

24b

Socrates: And now consider well; for the question to which I invite your attention is difficult and controverted. When you speak of hotter and colder, can you conceive any limit in those qualities? Does not the more and less, which dwells in their very nature, prevent their having any end? for if they had an end, the more and less would themselves have an end.

Protarchus: That is most true.

24c

Socrates: Ever, as we say, into the hotter and the colder there enters a more and a less.

Protarchus: Yes.

Socrates: Then, says the argument, there is never any end of them, and being endless they must also be infinite.

Protarchus: Yes, Socrates, that is exceedingly true.

Socrates: Yes, my dear Protarchus, and your answer reminds me that such an expression as ‘exceedingly,’ which you have just uttered, and also the term ‘gently,’ have the same significance as more or less; for whenever they occur they do not allow of the existence of quantity — they are always introducing degrees into actions, instituting a comparison of a more or a less excessive or a more or a less gentle, and at each creation of more or less, quantity disappears. For, as I was just now saying, if quantity and measure did not disappear, but were allowed to intrude in the sphere of more and less and the other comparatives, these last would be driven out of their own domain. When definite quantity is once admitted, there can be no longer a ‘hotter’ or a ‘colder’ (for these are always progressing, and are never in one stay); but definite quantity is at rest, and has ceased to progress. Which proves that comparatives, such as the hotter and the colder, are to be ranked in the class of the infinite.

24e

Protarchus: Your remark certainly has the look of truth, Socrates; but these subjects, as you were saying, are difficult to follow at first. I think however, that if I could hear the argument repeated by you once or twice, there would be a substantial agreement between us.

Socrates: Yes, and I will try to meet your wish; but, as I would rather not waste time in the enumeration of endless particulars, let me know whether I may not assume as a note of the infinite —

Protarchus: What?

25a

Socrates: I want to know whether such things as appear to us to admit of more or less, or are denoted by the words ‘exceedingly,’ ‘gently,’ ‘extremely,’ and the like, may not be referred to the class of the infinite, which is their unity, for, as was asserted in the previous argument, all things that were divided and dispersed should be brought together, and have the mark or seal of some one nature, if possible, set upon them — do you remember?

25b

Protarchus: Yes.

Socrates: And all things which do not admit of more or less, but admit their opposites, that is to say, first of all, equality, and the equal, or again, the double, or any other ratio of number and measure — all these may, I think, be rightly reckoned by us in the class of the limited or finite; what do you say?

25c

Protarchus: Excellent, Socrates.

Socrates: And now what nature shall we ascribe to the third or compound kind?

Protarchus: You, I think, will have to tell me that.

Socrates: Rather God will tell you, if there be any God who will listen to my prayers.

Protarchus: Offer up a prayer, then, and think.

25d

Socrates: I am thinking, Protarchus, and I believe that some God has befriended us.

Protarchus: What do you mean, and what proof have you to offer of what you are saying?

Socrates: I will tell you, and do you listen to my words.

Protarchus: Proceed.

Socrates: Were we not speaking just now of hotter and colder?

Protarchus: True.

Socrates: Add to them drier, wetter, more, less, swifter, slower, greater, smaller, and all that in the preceding argument we placed under the unity of more and less.

Protarchus: In the class of the infinite, you mean?

Socrates: Yes; and now mingle this with the other.

25e

Protarchus: What is the other.

Socrates: The class of the finite which we ought to have brought together as we did the infinite; but, perhaps, it will come to the same thing if we do so now; — when the two are combined, a third will appear.

26a

Protarchus: What do you mean by the class of the finite?

Socrates: The class of the equal and the double, and any class which puts an end to difference and opposition, and by introducing number creates harmony and proportion among the different elements.

Protarchus: I understand; you seem to me to mean that the various opposites, when you mingle with them the class of the finite, takes certain forms.

Socrates: Yes, that is my meaning.

26b

Protarchus: Proceed.

Socrates: Does not the right participation in the finite give health — in disease, for instance?

Protarchus: Certainly.

Socrates: And whereas the high and low, the swift and the slow are infinite or unlimited, does not the addition of the principles aforesaid introduce a limit, and perfect the whole frame of music?

Protarchus: Yes, certainly.

Socrates: Or, again, when cold and heat prevail, does not the introduction of them take away excess and indefiniteness, and infuse moderation and harmony?

Protarchus: Certainly.

Socrates: And from a like admixture of the finite and infinite come the seasons, and all the delights of life?

26c

Protarchus: Most true.

Socrates: I omit ten thousand other things, such as beauty and health and strength, and the many beauties and high perfections of the soul: O my beautiful Philebus, the goddess, methinks, seeing the universal wantonness and wickedness of all things, and that there was in them no limit to pleasures and self-indulgence, devised the limit of law and order, whereby, as you say, Philebus, she torments, or as I maintain, delivers the soul. — What think you, Protarchus?

Protarchus: Her ways are much to my mind, Socrates.

26d

Socrates: You will observe that I have spoken of three classes?

Protarchus: Yes, I think that I understand you: you mean to say that the infinite is one class, and that the finite is a second class of existences; but what you would make the third I am not so certain.

26e

Socrates: That is because the amazing variety of the third class is too much for you, my dear friend; but there was not this

difficulty with the infinite, which also comprehended many classes, for all of them were sealed with the note of more and less, and therefore appeared one.

Protarchus: True.

Socrates: And the finite or limit had not many divisions, and we readily acknowledged it to be by nature one?

Protarchus: Yes.

Socrates: Yes, indeed; and when I speak of the third class, understand me to mean any offspring of these, being a birth into true being, effected by the measure which the limit introduces.

27a

Protarchus: I understand.

Socrates: Still there was, as we said, a fourth class to be investigated, and you must assist in the investigation; for does not everything which comes into being, of necessity come into being through a cause?

Protarchus: Yes, certainly; for how can there be anything which has no cause?

Socrates: And is not the agent the same as the cause in all except name; the agent and the cause may be rightly called one?

27b

Protarchus: Very true.

Socrates: And the same may be said of the patient, or effect; we shall find that they too differ, as I was saying, only in name — shall we not?

Protarchus: We shall.

Socrates: The agent or cause always naturally leads, and the patient or effect naturally follows it?

Protarchus: Certainly.

Socrates: Then the cause and what is subordinate to it in generation are not the same, but different?

Protarchus: True.

27c

Socrates: Did not the things which were generated, and the things out of which they were generated, furnish all the three classes?

Protarchus: Yes.

Socrates: And the creator or cause of them has been satisfactorily proven to be distinct from them, — and may therefore be called a fourth principle?

Protarchus: So let us call it.

Socrates: Quite right; but now, having distinguished the four, I think that we had better refresh our memories by recapitulating each of them in order.

Protarchus: By all means.

27d

Socrates: Then the first I will call the infinite or unlimited, and the second the finite or limited; then follows the third, an essence compound and generated; and I do not think that I shall be far wrong in speaking of the cause of mixture and generation as the fourth.

Protarchus: Certainly not.

Socrates: And now what is the next question, and how came we hither? Were we not enquiring whether the second place belonged to pleasure or wisdom?

Protarchus: We were.

27e

Socrates: And now, having determined these points, shall we not be better able to decide about the first and second place, which was the original subject of dispute?

Protarchus: I dare say.

Socrates: We said, if you remember, that the mixed life of pleasure and wisdom was the conqueror — did we not?

Protarchus: True.

Socrates: And we see what is the place and nature of this life and to what class it is to be assigned?

Protarchus: Beyond a doubt.

28a

Socrates: This is evidently comprehended in the third or mixed class; which is not composed of any two particular ingredients, but of all the elements of infinity, bound down by the finite, and may therefore be truly said to comprehend the conqueror life.

Protarchus: Most true.

Socrates: And what shall we say, Philebus, of your life which is all sweetness; and in which of the aforesaid classes is that to be placed? Perhaps you will allow me to ask you a question before you answer?

28b

Philebus: Let me hear.

Socrates: Have pleasure and pain a limit, or do they belong to the class which admits of more and less?

Philebus: They belong to the class which admits of more, Socrates; for pleasure would not be perfectly good if she were not infinite in quantity and degree.

28c

Socrates: Nor would pain, Philebus, be perfectly evil. And therefore the infinite cannot be that element which imparts to

pleasure some degree of good. But now — admitting, if you like, that pleasure is of the nature of the infinite — in which of the aforesaid classes, O Protarchus and Philebus, can we without irreverence place wisdom and knowledge and mind? And let us be careful, for I think that the danger will be very serious if we err on this point.

Philebus: You magnify, Socrates, the importance of your favourite god.

Socrates: And you, my friend, are also magnifying your favourite goddess; but still I must beg you to answer the question.

Protarchus: Socrates is quite right, Philebus, and we must submit to him.

28d

Philebus: And did not you, Protarchus, propose to answer in my place?

Protarchus: Certainly I did; but I am now in a great strait, and I must entreat you, Socrates, to be our spokesman, and then we shall not say anything wrong or disrespectful of your favourite.

Socrates: I must obey you, Protarchus; nor is the task which you impose a difficult one; but did I really, as Philebus implies, disconcert you with my playful solemnity, when I asked the question to what class mind and knowledge belong?

28e

Protarchus: You did, indeed, Socrates.

Socrates: Yet the answer is easy, since all philosophers assert with one voice that mind is the king of heaven and earth — in reality they are magnifying themselves. And perhaps they are right. But still I should like to consider the class of mind, if you do not object, a little more fully.

29a

Philebus: Take your own course, Socrates, and never mind length; we shall not tire of you.

Socrates: Very good; let us begin then, Protarchus, by asking a question.

Protarchus: What question?

Socrates: Whether all this which they call the universe is left to the guidance of unreason and chance medley, or, on the contrary, as our fathers have declared, ordered and governed by a marvellous intelligence and wisdom.

29b

Protarchus: Wide asunder are the two assertions, illustrious Socrates, for that which you were just now saying to me appears to be blasphemy; but the other assertion, that mind orders all things, is worthy of the aspect of the world, and of the sun, and of the moon, and of the stars and of the whole circle of the heavens; and never will I say or think otherwise.

Socrates: Shall we then agree with them of old time in maintaining this doctrine, — not merely reasserting the notions of others, without risk to ourselves, — but shall we share in the danger, and take our part of the reproach which will await us, when an ingenious individual declares that all is disorder?

29c

Protarchus: That would certainly be my wish.

Socrates: Then now please to consider the next stage of the argument.

Protarchus: Let me hear.

Socrates: We see that the elements which enter into the nature of the bodies of all animals, fire, water, air, and, as the storm-tossed sailor cries, 'land' (i.e., earth), reappear in the constitution of the world.

29d

Protarchus: The proverb may be applied to us; for truly the storm gathers over us, and we are at our wit's end.

Socrates: There is something to be remarked about each of these elements.

Protarchus: What is it?

Socrates: Only a small fraction of any one of them exists in us, and that of a mean sort, and not in any way pure, or having any power worthy of its nature. One instance will prove this of all of them; there is fire within us, and in the universe.

29e

Protarchus: True.

Socrates: And is not our fire small and weak and mean? But the fire in the universe is wonderful in quantity and beauty, and in every power that fire has.

Protarchus: Most true.

Socrates: And is the fire in the universe nourished and generated and ruled by the fire in us, or is the fire in you and me, and in other animals, dependent on the universal fire?

30a

Protarchus: That is a question which does not deserve an answer.

Socrates: Right; and you would say the same, if I am not mistaken, of the earth which is in animals and the earth which is in the universe, and you would give a similar reply about all the other elements?

Protarchus: Why, how could any man who gave any other be deemed in his senses?

Socrates: I do not think that he could — but now go on to the next step. When we saw those elements of which we have been speaking gathered up in one, did we not call them a body?

Protarchus: We did.

Socrates: And the same may be said of the cosmos, which for the same reason may be considered to be a body, because made up of the same elements.

Protarchus: Very true.

Socrates: But is our body nourished wholly by this body, or is this body nourished by our body, thence deriving and having the qualities of which we were just now speaking?

Protarchus: That again, Socrates, is a question which does not deserve to be asked.

30c

Socrates: Well, tell me, is this question worth asking?

Protarchus: What question?

Socrates: May our body be said to have a soul?

Protarchus: Clearly.

Socrates: And whence comes that soul, my dear Protarchus, unless the body of the universe, which contains elements like those in our bodies but in every way fairer, had also a soul? Can there be another source?

Protarchus: Clearly, Socrates, that is the only source.

30d

Socrates: Why, yes, Protarchus; for surely we cannot imagine that of the four classes, the finite, the infinite, the composition of the two, and the cause, the fourth, which enters into all things, giving to our bodies souls, and the art of self-management, and of healing disease, and operating in other ways to heal and organize, having too all the attributes of wisdom; — we cannot, I say, imagine that whereas the self-same elements exist, both in the entire heaven and in great provinces of the heaven, only fairer and purer, this last should not also in

that higher sphere have designed the noblest and fairest things?

Protarchus: Such a supposition is quite unreasonable.

30e

Socrates: Then if this be denied, should we not be wise in adopting the other view and maintaining that there is in the universe a mighty infinite and an adequate limit, of which we have often spoken, as well as a presiding cause of no mean power, which orders and arranges years and seasons and months, and may be justly called wisdom and mind?

31a

Protarchus: Most justly.

Socrates: And wisdom and mind cannot exist without soul?

Protarchus: Certainly not.

Socrates: And in the divine nature of Zeus would you not say that there is the soul and mind of a king, because there is in him the power of the cause? And other gods have other attributes, by which they are pleased to be called.

31b

Protarchus: Very true.

Socrates: Do not then suppose that these words are rashly spoken by us, O Protarchus, for they are in harmony with the testimony of those who said of old time that mind rules the universe.

Protarchus: True.

Socrates: And they furnish an answer to my enquiry; for they imply that mind is the parent of that class of the four which we called the cause of all; and I think that you now have my answer.

Protarchus: I have indeed, and yet I did not observe that you had answered.

31c

Socrates: A jest is sometimes refreshing, Protarchus, when it interrupts earnest.

Protarchus: Very true.

Socrates: I think, friend, that we have now pretty clearly set forth the class to which mind belongs and what is the power of mind.

Protarchus: True.

Socrates: And the class to which pleasure belongs has also been long ago discovered?

Protarchus: Yes.

Socrates: And let us remember, too, of both of them, (1) that mind was akin to the cause and of this family; and (2) that pleasure is infinite and belongs to the class which neither has, nor ever will have in itself, a beginning, middle, or end of its own.

31d

Protarchus: I shall be sure to remember.

Socrates: We must next examine what is their place and under what conditions they are generated. And we will begin with pleasure, since her class was first examined; and yet pleasure cannot be rightly tested apart from pain.

31e

Protarchus: If this is the road, let us take it.

Socrates: I wonder whether you would agree with me about the origin of pleasure and pain.

Protarchus: What do you mean?

Socrates: I mean to say that their natural seat is in the mixed class.

Protarchus: And would you tell me again, sweet Socrates, which of the aforesaid classes is the mixed one?

32a

Socrates: I will, my fine fellow, to the best of my ability.

Protarchus: Very good.

Socrates: Let us then understand the mixed class to be that which we placed third in the list of four.

Protarchus: That which followed the infinite and the finite; and in which you ranked health, and, if I am not mistaken, harmony.

Socrates: Capital; and now will you please to give me your best attention?

Protarchus: Proceed; I am attending.

Socrates: I say that when the harmony in animals is dissolved, there is also a dissolution of nature and a generation of pain.

Protarchus: That is very probable.

Socrates: And the restoration of harmony and return to nature is the source of pleasure, if I may be allowed to speak in the fewest and shortest words about matters of the greatest moment.

32b

Protarchus: I believe that you are right, Socrates; but will you try to be a little plainer?

32c

Socrates: Do not obvious and every-day phenomena furnish the simplest illustration?

Protarchus: What phenomena do you mean?

Socrates: Hunger, for example, is a dissolution and a pain.

Protarchus: True.

Socrates: Whereas eating is a replenishment and a pleasure?

Protarchus: Yes.

Socrates: Thirst again is a destruction and a pain, but the effect of moisture replenishing the dry place is a pleasure: once more, the unnatural separation and dissolution caused by heat is painful, and the natural restoration and refrigeration is pleasant.

Protarchus: Very true.

Socrates: And the unnatural freezing of the moisture in an animal is pain, and the natural process of resolution and return of the elements to their original state is pleasure. And would not the general proposition seem to you to hold, that the destroying of the natural union of the finite and infinite, which, as I was observing before, make up the class of living beings, is pain, and that the process of return of all things to their own nature is pleasure?

32d

Protarchus: Granted; what you say has a general truth.

32e

Socrates: Here then is one kind of pleasures and pains originating severally in the two processes which we have described?

Protarchus: Good.

Socrates: Let us next assume that in the soul herself there is an antecedent hope of pleasure which is sweet and refreshing, and an expectation of pain, fearful and anxious.

Protarchus: Yes; this is another class of pleasures and pains, which is of the soul only, apart from the body, and is produced by expectation.

33a

Socrates: Right; for in the analysis of these, pure, as I suppose them to be, the pleasures being unalloyed with pain and the pains with pleasure, methinks that we shall see clearly whether the whole class of pleasure is to be desired, or whether this quality of entire desirableness is not rather to be attributed to another of the classes which have been mentioned; and whether pleasure and pain, like heat and cold, and other things of the same kind, are not sometimes to be desired and sometimes not to be desired, as being not in themselves good, but only sometimes and in some instances admitting of the nature of good.

33b

Protarchus: You say most truly that this is the track which the investigation should pursue.

Socrates: Well, then, assuming that pain ensues on the dissolution, and pleasure on the restoration of the harmony, let us now ask what will be the condition of animated beings who are neither in process of restoration nor of dissolution. And mind what you say: I ask whether any animal who is in that condition can possibly have any feeling of pleasure or pain, great or small?

Protarchus: Certainly not.

33c

Socrates: Then here we have a third state, over and above that of pleasure and of pain?

Protarchus: Very true.

Socrates: And do not forget that there is such a state; it will make a great difference in our judgment of pleasure, whether we remember this or not. And I should like to say a few words about it.

Protarchus: What have you to say?

33d

Socrates: Why, you know that if a man chooses the life of wisdom, there is no reason why he should not live in this neutral state.

Protarchus: You mean that he may live neither rejoicing nor sorrowing?

Socrates: Yes; and if I remember rightly, when the lives were compared, no degree of pleasure, whether great or small, was thought to be necessary to him who chose the life of thought and wisdom.

Protarchus: Yes, certainly, we said so.

Socrates: Then he will live without pleasure; and who knows whether this may not be the most divine of all lives?

33e

Protarchus: If so, the gods, at any rate, cannot be supposed to have either joy or sorrow.

Socrates: Certainly not — there would be a great impropriety in the assumption of either alternative. But whether the gods are or are not indifferent to pleasure is a point which may be considered hereafter if in any way relevant to the argument, and whatever is the conclusion we will place it to the account of mind in her contest for the second place, should she have to resign the first.

Protarchus: Just so.

Socrates: The other class of pleasures, which as we were saying is purely mental, is entirely derived from memory.

34a

Protarchus: What do you mean?

Socrates: I must first of all analyze memory, or rather perception which is prior to memory, if the subject of our discussion is ever to be properly cleared up.

Protarchus: How will you proceed?

Socrates: Let us imagine affections of the body which are extinguished before they reach the soul, and leave her unaffected; and again, other affections which vibrate through both soul and body, and impart a shock to both and to each of them.

34b

Protarchus: Granted.

Socrates: And the soul may be truly said to be oblivious of the first but not of the second?

Protarchus: Quite true.

Socrates: When I say oblivious, do not suppose that I mean forgetfulness in a literal sense; for forgetfulness is the exit of memory, which in this case has not yet entered; and to speak of the loss of that which is not yet in existence, and never has been, is a contradiction; do you see?

Protarchus: Yes.

Socrates: Then just be so good as to change the terms.

Protarchus: How shall I change them?

34c

Socrates: Instead of the oblivion of the soul, when you are describing the state in which she is unaffected by the shocks of the body, say unconsciousness.

Protarchus: I see.

Socrates: And the union or communion of soul and body in one feeling and motion would be properly called consciousness?

Protarchus: Most true.

Socrates: Then now we know the meaning of the word?

Protarchus: Yes.

Socrates: And memory may, I think, be rightly described as the preservation of consciousness?

Protarchus: Right.

Socrates: But do we not distinguish memory from recollection?

34d

Protarchus: I think so.

Socrates: And do we not mean by recollection the power which the soul has of recovering, when by herself, some feeling which she experienced when in company with the body?

Protarchus: Certainly.

34e

Socrates: And when she recovers of herself the lost recollection of some consciousness or knowledge, the recovery is termed recollection and reminiscence?

Protarchus: Very true.

Socrates: There is a reason why I say all this.

Protarchus: What is it?

Socrates: I want to attain the plainest possible notion of pleasure and desire, as they exist in the mind only, apart from the body; and the previous analysis helps to show the nature of both.

Protarchus: Then now, Socrates, let us proceed to the next point.

35a

Socrates: There are certainly many things to be considered in discussing the generation and whole complexion of pleasure. At the outset we must determine the nature and seat of desire.

Protarchus: Ay; let us enquire into that, for we shall lose nothing.

Socrates: Nay, Protarchus, we shall surely lose the puzzle if we find the answer.

Protarchus: A fair retort; but let us proceed.

Socrates: Did we not place hunger, thirst, and the like, in the class of desires?

Protarchus: Certainly.

Socrates: And yet they are very different; what common nature have we in view when we call them by a single name?

35b

Protarchus: By heavens, Socrates, that is a question which is not easily answered; but it must be answered.

Socrates: Then let us go back to our examples.

Protarchus: Where shall we begin?

Socrates: Do we mean anything when we say ‘a man thirsts’?

Protarchus: Yes.

Socrates: We mean to say that he ‘is empty’?

Protarchus: Of course.

Socrates: And is not thirst desire?

Protarchus: Yes, of drink.

Socrates: Would you say of drink, or of replenishment with drink?

35c

Protarchus: I should say, of replenishment with drink.

Socrates: Then he who is empty desires, as would appear, the opposite of what he experiences; for he is empty and desires to be full?

Protarchus: Clearly so.

Socrates: But how can a man who is empty for the first time, attain either by perception or memory to any apprehension of replenishment, of which he has no present or past experience?

Protarchus: Impossible.

Socrates: And yet he who desires, surely desires something?

Protarchus: Of course.

35d

Socrates: He does not desire that which he experiences, for he experiences thirst, and thirst is emptiness; but he desires replenishment?

Protarchus: True.

Socrates: Then there must be something in the thirsty man which in some way apprehends replenishment?

Protarchus: There must.

Socrates: And that cannot be the body, for the body is supposed to be emptied?

Protarchus: Yes.

Socrates: The only remaining alternative is that the soul apprehends the replenishment by the help of memory; as is obvious, for what other way can there be?

35e

Protarchus: I cannot imagine any other.

Socrates: But do you see the consequence?

Protarchus: What is it?

Socrates: That there is no such thing as desire of the body.

Protarchus: Why so?

Socrates: Why, because the argument shows that the endeavour of every animal is to the reverse of his bodily state.

Protarchus: Yes.

Socrates: And the impulse which leads him to the opposite of what he is experiencing proves that he has a memory of the opposite state.

Protarchus: True.

36a

Socrates: And the argument, having proved that memory attracts us towards the objects of desire, proves also that the impulses and the desires and the moving principle in every living being have their origin in the soul.

Protarchus: Most true.

Socrates: The argument will not allow that our body either hungers or thirsts or has any similar experience.

Protarchus: Quite right.

Socrates: Let me make a further observation; the argument appears to me to imply that there is a kind of life which consists in these affections.

Protarchus: Of what affections, and of what kind of life, are you speaking?

36b

Socrates: I am speaking of being emptied and replenished, and of all that relates to the preservation and destruction of living beings, as well as of the pain which is felt in one of these states and of the pleasure which succeeds to it.

Protarchus: True.

Socrates: And what would you say of the intermediate state?

Protarchus: What do you mean by 'intermediate'?

Socrates: I mean when a person is in actual suffering and yet remembers past pleasures which, if they would only return,

would relieve him; but as yet he has them not. May we not say of him, that he is in an intermediate state?

36c

Protarchus: Certainly.

Socrates: Would you say that he was wholly pained or wholly pleased?

Protarchus: Nay, I should say that he has two pains; in his body there is the actual experience of pain, and in his soul longing and expectation.

Socrates: What do you mean, Protarchus, by the two pains? May not a man who is empty have at one time a sure hope of being filled, and at other times be quite in despair?

36d

Protarchus: Very true.

Socrates: And has he not the pleasure of memory when he is hoping to be filled, and yet in that he is empty is he not at the same time in pain?

Protarchus: Certainly.

Socrates: Then man and the other animals have at the same time both pleasure and pain?

Protarchus: I suppose so.

36e

Socrates: But when a man is empty and has no hope of being filled, there will be the double experience of pain. You observed this and inferred that the double experience was the single case possible.

Protarchus: Quite true, Socrates.

Socrates: Shall the enquiry into these states of feeling be made the occasion of raising a question?

Protarchus: What question?

Socrates: Whether we ought to say that the pleasures and pains of which we are speaking are true or false? or some true and some false?

Protarchus: But how, Socrates, can there be false pleasures and pains?

Socrates: And how, Protarchus, can there be true and false fears, or true and false expectations, or true and false opinions?

37a

Protarchus: I grant that opinions may be true or false, but not pleasures.

Socrates: What do you mean? I am afraid that we are raising a very serious enquiry.

Protarchus: There I agree.

Socrates: And yet, my boy, for you are one of Philebus' boys, the point to be considered, is, whether the enquiry is relevant to the argument.

Protarchus: Surely.

Socrates: No tedious and irrelevant discussion can be allowed; what is said should be pertinent.

37b

Protarchus: Right.

Socrates: I am always wondering at the question which has now been raised.

Protarchus: How so?

Socrates: Do you deny that some pleasures are false, and others true?

Protarchus: To be sure I do.

Socrates: Would you say that no one ever seemed to rejoice and yet did not rejoice, or seemed to feel pain and yet did not feel pain, sleeping or waking, mad or lunatic?

37c

Protarchus: So we have always held, Socrates.

Socrates: But were you right? Shall we enquire into the truth of your opinion?

Protarchus: I think that we should.

Socrates: Let us then put into more precise terms the question which has arisen about pleasure and opinion. Is there such a thing as opinion?

Protarchus: Yes.

Socrates: And such a thing as pleasure?

Protarchus: Yes.

Socrates: And an opinion must be of something?

Protarchus: True.

Socrates: And a man must be pleased by something?

37d

Protarchus: Quite correct.

Socrates: And whether the opinion be right or wrong, makes no difference; it will still be an opinion?

Protarchus: Certainly.

Socrates: And he who is pleased, whether he is rightly pleased or not, will always have a real feeling of pleasure?

Protarchus: Yes; that is also quite true.

Socrates: Then, how can opinion be both true and false, and pleasure true only, although pleasure and opinion are both equally real?

37e

Protarchus: Yes; that is the question.

Socrates: You mean that opinion admits of truth and falsehood, and hence becomes not merely opinion, but opinion of a certain quality; and this is what you think should be examined?

Protarchus: Yes.

Socrates: And further, even if we admit the existence of qualities in other objects, may not pleasure and pain be simple and devoid of quality?

Protarchus: Clearly.

Socrates: But there is no difficulty in seeing that pleasure and pain as well as opinion have qualities, for they are great or small, and have various degrees of intensity; as was indeed said long ago by us.

38a

Protarchus: Quite true.

Socrates: And if badness attaches to any of them, Protarchus, then we should speak of a bad opinion or of a bad pleasure?

Protarchus: Quite true, Socrates.

Socrates: And if rightness attaches to any of them, should we not speak of a right opinion or right pleasure; and in like manner of the reverse of rightness?

Protarchus: Certainly.

38b

Socrates: And if the thing opined be erroneous, might we not say that the opinion, being erroneous, is not right or rightly opined?

Protarchus: Certainly.

Socrates: And if we see a pleasure or pain which errs in respect of its object, shall we call that right or good, or by any honourable name?

Protarchus: Not if the pleasure is mistaken; how could we?

Socrates: And surely pleasure often appears to accompany an opinion which is not true, but false?

38c

Protarchus: Certainly it does; and in that case, Socrates, as we were saying, the opinion is false, but no one could call the actual pleasure false.

Socrates: How eagerly, Protarchus, do you rush to the defence of pleasure!

Protarchus: Nay, Socrates, I only repeat what I hear.

Socrates: And is there no difference, my friend, between that pleasure which is associated with right opinion and knowledge, and that which is often found in all of us associated with falsehood and ignorance?

38d

Protarchus: There must be a very great difference, between them.

Socrates: Then, now let us proceed to contemplate this difference.

Protarchus: Lead, and I will follow.

Socrates: Well, then, my view is —

Protarchus: What is it?

Socrates: We agree — do we not? — that there is such a thing as false, and also such a thing as true opinion?

Protarchus: Yes.

Socrates: And pleasure and pain, as I was just now saying, are often consequent upon these — upon true and false opinion, I mean.

Protarchus: Very true.

38e

Socrates: And do not opinion and the endeavour to form an opinion always spring from memory and perception?

Protarchus: Certainly.

Socrates: Might we imagine the process to be something of this nature?

Protarchus: Of what nature?

Socrates: An object may be often seen at a distance not very clearly, and the seer may want to determine what it is which he sees.

39a

Protarchus: Very likely.

Socrates: Soon he begins to interrogate himself.

Protarchus: In what manner?

Socrates: He asks himself— ‘What is that which appears to be standing by the rock under the tree?’ This is the question which he may be supposed to put to himself when he sees such an appearance.

Protarchus: True.

39b

Socrates: To which he may guess the right answer, saying as if in a whisper to himself— ‘It is a man.’

Protarchus: Very good.

Socrates: Or again, he may be misled, and then he will say— ‘No, it is a figure made by the shepherds.’

Protarchus: Yes.

Socrates: And if he has a companion, he repeats his thought to him in articulate sounds, and what was before an opinion, has now become a proposition.

Protarchus: Certainly.

Socrates: But if he be walking alone when these thoughts occur to him, he may not unfrequently keep them in his mind for a considerable time.

39c

Protarchus: Very true.

Socrates: Well, now, I wonder whether you would agree in my explanation of this phenomenon.

Protarchus: What is your explanation?

Socrates: I think that the soul at such times is like a book.

Protarchus: How so?

39d

Socrates: Memory and perception meet, and they and their attendant feelings seem to almost to write down words in the soul, and when the inscribing feeling writes truly, then true opinion and true propositions which are the expressions of opinion come into our souls — but when the scribe within us writes falsely, the result is false.

Protarchus: I quite assent and agree to your statement.

Socrates: I must bespeak your favour also for another artist, who is busy at the same time in the chambers of the soul.

Protarchus: Who is he?

39e

Socrates: The painter, who, after the scribe has done his work, draws images in the soul of the things which he has described.

Protarchus: But when and how does he do this?

Socrates: When a man, besides receiving from sight or some other sense certain opinions or statements, sees in his mind the images of the subjects of them; — is not this a very common mental phenomenon?

40a

Protarchus: Certainly.

Socrates: And the images answering to true opinions and words are true, and to false opinions and words false; are they not?

Protarchus: They are.

Socrates: If we are right so far, there arises a further question.

Protarchus: What is it?

Socrates: Whether we experience the feeling of which I am speaking only in relation to the present and the past, or in relation to the future also?

Protarchus: I should say in relation to all times alike.

40b

Socrates: Have not purely mental pleasures and pains been described already as in some cases anticipations of the bodily ones; from which we may infer that anticipatory pleasures and pains have to do with the future?

Protarchus: Most true.

Socrates: And do all those writings and paintings which, as we were saying a little while ago, are produced in us, relate to the past and present only, and not to the future?

40c

Protarchus: To the future, very much.

Socrates: When you say, 'Very much,' you mean to imply that all these representations are hopes about the future, and that

mankind are filled with hopes in every stage of existence?

Protarchus: Exactly.

Socrates: Answer me another question.

Protarchus: What question?

Socrates: A just and pious and good man is the friend of the gods; is he not?

Protarchus: Certainly he is.

Socrates: And the unjust and utterly bad man is the reverse?

Protarchus: True.

40d

Socrates: And all men, as we were saying just now, are always filled with hopes?

Protarchus: Certainly.

Socrates: And these hopes, as they are termed, are propositions which exist in the minds of each of us?

Protarchus: Yes.

Socrates: And the fancies of hope are also pictured in us; a man may often have a vision of a heap of gold, and pleasures ensuing, and in the picture there may be a likeness of himself mightily rejoicing over his good fortune.

Protarchus: True.

40e

Socrates: And may we not say that the good, being friends of the gods, have generally true pictures presented to them, and the bad false pictures?

Protarchus: Certainly.

Socrates: The bad, too, have pleasures painted in their fancy as well as the good; but I presume that they are false pleasures.

Protarchus: They are.

Socrates: The bad then commonly delight in false pleasures, and the good in true pleasures?

41a

Protarchus: Doubtless.

Socrates: Then upon this view there are false pleasures in the souls of men which are a ludicrous imitation of the true, and there are pains of a similar character?

Protarchus: There are.

Socrates: And did we not allow that a man who had an opinion at all had a real opinion, but often about things which had no existence either in the past, present, or future?

Protarchus: Quite true.

Socrates: And this was the source of false opinion and opining; am I not right?

Protarchus: Yes.

41b

Socrates: And must we not attribute to pleasure and pain a similar real but illusory character?

Protarchus: How do you mean?

Socrates: I mean to say that a man must be admitted to have real pleasure who is pleased with anything or anyhow; and he may be pleased about things which neither have nor have ever had any real existence, and, more often than not, are never likely to exist.

41c

Protarchus: Yes, Socrates, that again is undeniable.

Socrates: And may not the same be said about fear and anger and the like; are they not often false?

Protarchus: Quite so.

Socrates: And can opinions be good or bad except in as far as they are true or false?

Protarchus: In no other way.

Socrates: Nor can pleasures be conceived to be bad except in so far as they are false.

Protarchus: Nay, Socrates, that is the very opposite of truth; for no one would call pleasures and pains bad because they are false, but by reason of some other great corruption to which they are liable.

41d

Socrates: Well, of pleasures which are corrupt and caused by corruption we will hereafter speak, if we care to continue the enquiry; for the present I would rather show by another argument that there are many false pleasures existing or coming into existence in us, because this may assist our final decision.

Protarchus: Very true; that is to say, if there are such pleasures.

41e

Socrates: I think that there are, Protarchus; but this is an opinion which should be well assured, and not rest upon a mere assertion.

Protarchus: Very good.

Socrates: Then now, like wrestlers, let us approach and grasp this new argument.

Protarchus: Proceed.

42a

Socrates: We were maintaining a little while since, that when desires, as they are termed, exist in us, then the body has

separate feelings apart from the soul — do you remember?

Protarchus: Yes, I remember that you said so.

Socrates: And the soul was supposed to desire the opposite of the bodily state, while the body was the source of any pleasure or pain which was experienced.

Protarchus: True.

Socrates: Then now you may infer what happens in such cases.

Protarchus: What am I to infer?

Socrates: That in such cases pleasures and pains come simultaneously; and there is a juxtaposition of the opposite sensations which correspond to them, as has been already shown.

42b

Protarchus: Clearly.

Socrates: And there is another point to which we have agreed.

Protarchus: What is it?

Socrates: That pleasure and pain both admit of more and less, and that they are of the class of infinites.

Protarchus: Certainly, we said so.

Socrates: But how can we rightly judge of them?

Protarchus: How can we?

Socrates: Is it our intention to judge of their comparative importance and intensity, measuring pleasure against pain, and pain against pain, and pleasure against pleasure?

Protarchus: Yes, such is our intention, and we shall judge of them accordingly.

42c

Socrates: Well, take the case of sight. Does not the nearness or distance of magnitudes obscure their true proportions, and make us opine falsely; and do we not find the same illusion happening in the case of pleasures and pains?

Protarchus: Yes, Socrates, and in a degree far greater.

Socrates: Then what we are now saying is the opposite of what we were saying before.

Protarchus: What was that?

Socrates: Then the opinions were true and false, and infected the pleasures and pains with their own falsity.

42d

Protarchus: Very true.

Socrates: But now it is the pleasures which are said to be true and false because they are seen at various distances, and subjected to comparison; the pleasures appear to be greater and more vehement when placed side by side with the pains, and the pains when placed side by side with the pleasures.

42e

Protarchus: Certainly, and for the reason which you mention.

Socrates: And suppose you part off from pleasures and pains the element which makes them appear to be greater or less than they really are: you will acknowledge that this element is illusory, and you will never say that the corresponding excess or defect of pleasure or pain is real or true.

Protarchus: Certainly not.

43a

Socrates: Next let us see whether in another direction we may not find pleasures and pains existing and appearing in living beings, which are still more false than these.

Protarchus: What are they, and how shall we find them?

Socrates: If I am not mistaken, I have often repeated that pains and aches and suffering and uneasiness of all sorts arise out of a corruption of nature caused by concretions, and dissolutions, and repletions, and evacuations, and also by growth and decay?

43b

Protarchus: Yes, that has been often said.

Socrates: And we have also agreed that the restoration of the natural state is pleasure?

Protarchus: Right.

Socrates: But now let us suppose an interval of time at which the body experiences none of these changes.

Protarchus: When can that be, Socrates?

Socrates: Your question, Protarchus, does not help the argument.

Protarchus: Why not, Socrates?

Socrates: Because it does not prevent me from repeating mine.

Protarchus: And what was that?

43c

Socrates: Why, Protarchus, admitting that there is no such interval, I may ask what would be the necessary consequence if there were?

Protarchus: You mean, what would happen if the body were not changed either for good or bad?

Socrates: Yes.

Protarchus: Why then, Socrates, I should suppose that there would be neither pleasure nor pain.

Socrates: Very good; but still, if I am not mistaken, you do assert that we must always be experiencing one of them; that is what the wise tell us; for, say they, all things are ever flowing up

and down.

43d

Protarchus: Yes, and their words are of no mean authority.

Socrates: Of course, for they are no mean authorities themselves; and I should like to avoid the brunt of their argument. Shall I tell you how I mean to escape from them? And you shall be the partner of my flight.

Protarchus: How?

Socrates: To them we will say: ‘Good; but are we, or living things in general, always conscious of what happens to us — for example, of our growth, or the like? Are we not, on the contrary, almost wholly unconscious of this and similar phenomena?’ You must answer for them.

43e

Protarchus: The latter alternative is the true one.

Socrates: Then we were not right in saying, just now, that motions going up and down cause pleasures and pains?

Protarchus: True.

Socrates: A better and more unexceptionable way of speaking will be —

Protarchus: What?

Socrates: If we say that the great changes produce pleasures and pains, but that the moderate and lesser ones do neither.

Protarchus: That, Socrates, is the more correct mode of speaking.

44a

Socrates: But if this be true, the life to which I was just now referring again appears.

Protarchus: What life?

Socrates: The life which we affirmed to be devoid either of pain or of joy.

Protarchus: Very true.

Socrates: We may assume then that there are three lives, one pleasant, one painful, and the third which is neither; what say you?

Protarchus: I should say as you do that there are three of them.

Socrates: But if so, the negation of pain will not be the same with pleasure.

Protarchus: Certainly not.

44b

Socrates: Then when you hear a person saying, that always to live without pain is the pleasantest of all things, what would you understand him to mean by that statement?

Protarchus: I think that by pleasure he must mean the negative of pain.

Socrates: Let us take any three things; or suppose that we embellish a little and call the first gold, the second silver, and there shall be a third which is neither.

Protarchus: Very good.

Socrates: Now, can that which is neither be either gold or silver?

Protarchus: Impossible.

44c

Socrates: No more can that neutral or middle life be rightly or reasonably spoken or thought of as pleasant or painful.

Protarchus: Certainly not.

Socrates: And yet, my friend, there are, as we know, persons who say and think so.

Protarchus: Certainly.

Socrates: And do they think that they have pleasure when they are free from pain?

Protarchus: They say so.

Socrates: And they must think or they would not say that they have pleasure.

Protarchus: I suppose not.

Socrates: And yet if pleasure and the negation of pain are of distinct natures, they are wrong.

Protarchus: But they are undoubtedly of distinct natures.

Socrates: Then shall we take the view that they are three, as we were just now saying, or that they are two only — the one being a state of pain, which is an evil, and the other a cessation of pain, which is of itself a good, and is called pleasant?

44d

Protarchus: But why, Socrates, do we ask the question at all? I do not see the reason.

Socrates: You, Protarchus, have clearly never heard of certain enemies of our friend Philebus.

Protarchus: And who may they be?

Socrates: Certain persons who are reputed to be masters in natural philosophy, who deny the very existence of pleasure.

Protarchus: Indeed!

Socrates: They say that what the school of Philebus calls pleasures are all of them only avoidances of pain.

44e

Protarchus: And would you, Socrates, have us agree with them?

45a

Socrates: Why, no, I would rather use them as a sort of diviners, who divine the truth, not by rules of art, but by an instinctive repugnance and extreme detestation which a noble nature has of the power of pleasure, in which they think that there is nothing sound, and her seductive influence is declared by them to be witchcraft, and not pleasure. This is the use which you may make of them. And when you have considered the various grounds of their dislike, you shall hear from me what I deem to be true pleasures. Having thus examined the nature of pleasure from both points of view, we will bring her up for judgment.

Protarchus: Well said.

45b

Socrates: Then let us enter into an alliance with these philosophers and follow in the track of their dislike. I imagine that they would say something of this sort; they would begin at the beginning, and ask whether, if we wanted to know the nature of any quality, such as hardness, we should be more likely to discover it by looking at the hardest things, rather than at the least hard? You, Protarchus, shall answer these severe gentlemen as you answer me.

Protarchus: By all means, and I reply to them, that you should look at the greatest instances.

45c

Socrates: Then if we want to see the true nature of pleasures as a class, we should not look at the most diluted pleasures, but at the most extreme and most vehement?

Protarchus: In that every one will agree.

Socrates: And the obvious instances of the greatest pleasures, as we have often said, are the pleasures of the body?

Protarchus: Certainly.

Socrates: And are they felt by us to be or become greater, when we are sick or when we are in health? And here we must be careful in our answer, or we shall come to grief.

45d

Protarchus: How will that be?

Socrates: Why, because we might be tempted to answer, ‘When we are in health.’

Protarchus: Yes, that is the natural answer.

Socrates: Well, but are not those pleasures the greatest of which mankind have the greatest desires?

Protarchus: True.

Socrates: And do not people who are in a fever, or any similar illness, feel cold or thirst or other bodily affections more intensely? Am I not right in saying that they have a deeper want and greater pleasure in the satisfaction of their want?

Protarchus: That is obvious as soon as it is said.

45e

Socrates: Well, then, shall we not be right in saying, that if a person would wish to see the greatest pleasures he ought to go and look, not at health, but at disease? And here you must distinguish: — do not imagine that I mean to ask whether those who are very ill have more pleasures than those who are well, but understand that I am speaking of the magnitude of pleasure; I want to know where pleasures are found to be most intense. For, as I say, we have to discover what is pleasure, and what they mean by pleasure who deny her very existence.

46a

Protarchus: I think I follow you.

Socrates: You will soon have a better opportunity of showing whether you do or not, Protarchus. Answer now, and tell me whether you see, I will not say more, but more intense and

excessive pleasures in wantonness than in temperance? Reflect before you speak.

46b

Protarchus: I understand you, and see that there is a great difference between them; the temperate are restrained by the wise man's aphorism of 'Never too much,' which is their rule, but excess of pleasure possessing the minds of fools and wantons becomes madness and makes them shout with delight.

Socrates: Very good, and if this be true, then the greatest pleasures and pains will clearly be found in some vicious state of soul and body, and not in a virtuous state.

46c

Protarchus: Certainly.

Socrates: And ought we not to select some of these for examination, and see what makes them the greatest?

Protarchus: To be sure we ought.

Socrates: Take the case of the pleasures which arise out of certain disorders.

Protarchus: What disorders?

Socrates: The pleasures of unseemly disorders, which our severe friends utterly detest.

Protarchus: What pleasures?

Socrates: Such, for example, as the relief of itching and other ailments by scratching, which is the only remedy required. For what in Heaven's name is the feeling to be called which is thus produced in us? — Pleasure or pain?

Protarchus: A villainous mixture of some kind, Socrates, I should say.

46d

Socrates: I did not introduce the argument, O Protarchus, with any personal reference to Philebus, but because, without the consideration of these and similar pleasures, we shall not be able to determine the point at issue.

Protarchus: Then we had better proceed to analyze this family of pleasures.

Socrates: You mean the pleasures which are mingled with pain?

Protarchus: Exactly.

Socrates: There are some mixtures which are of the body, and only in the body, and others which are of the soul, and only in the soul; while there are other mixtures of pleasures with pains, common both to soul and body, which in their composite state are called sometimes pleasures and sometimes pains.

Protarchus: How is that?

47a

Socrates: Whenever, in the restoration or in the derangement of nature, a man experiences two opposite feelings; for example, when he is cold and is growing warm, or again, when he is hot and is becoming cool, and he wants to have the one and be rid of the other; — the sweet has a bitter, as the common saying is, and both together fasten upon him and create irritation and in time drive him to distraction.

Protarchus: That description is very true to nature.

47b

Socrates: And in these sorts of mixtures the pleasures and pains are sometimes equal, and sometimes one or other of them predominates?

Protarchus: True.

Socrates: Of cases in which the pain exceeds the pleasure, an example is afforded by itching, of which we were just now speaking, and by the tingling which we feel when the boiling and fiery element is within, and the rubbing and motion only relieves the surface, and does not reach the parts affected; then if you put them to the fire, and as a last resort apply cold to them, you may often produce the most intense pleasure or pain in the inner parts, which contrasts and mingles with the pain or pleasure, as the case may be, of the outer parts; and this is due to the forcible separation of what is united, or to the union of what is separated, and to the juxtaposition of pleasure and pain.

47c

Protarchus: Quite so.

Socrates: Sometimes the element of pleasure prevails in a man, and the slight undercurrent of pain makes him tingle, and causes a gentle irritation; or again, the excessive infusion of pleasure creates an excitement in him, — he even leaps for joy, he assumes all sorts of attitudes, he changes all manner of colours, he gasps for breath, and is quite amazed, and utters the most irrational exclamations.

47d

Protarchus: Yes, indeed.

47e

Socrates: He will say of himself, and others will say of him, that he is dying with these delights; and the more dissipated and good-for-nothing he is, the more vehemently he pursues them in every way; of all pleasures he declares them to be the greatest; and he reckons him who lives in the most constant enjoyment of them to be the happiest of mankind.

Protarchus: That, Socrates, is a very true description of the opinions of the majority about pleasures.

48a

Socrates: Yes, Protarchus, quite true of the mixed pleasures, which arise out of the communion of external and internal sensations in the body; there are also cases in which the mind contributes an opposite element to the body, whether of pleasure or pain, and the two unite and form one mixture. Concerning these I have already remarked, that when a man is empty he desires to be full, and has pleasure in hope and pain in vacuity. But now I must further add what I omitted before, that in all these and similar emotions in which body and mind are opposed (and they are innumerable), pleasure and pain coalesce in one.

48b

Protarchus: I believe that to be quite true.

Socrates: There still remains one other sort of admixture of pleasures and pains.

Protarchus: What is that?

Socrates: The union which, as we were saying, the mind often experiences of purely mental feelings.

48c

Protarchus: What do you mean?

Socrates: Why, do we not speak of anger, fear, desire, sorrow, love, emulation, envy, and the like, as pains which belong to the soul only?

Protarchus: Yes.

Socrates: And shall we not find them also full of the most wonderful pleasures? need I remind you of the anger ‘Which stirs even a wise man to violence, And is sweeter than honey and the honeycomb?’

48d

And you remember how pleasures mingle with pains in lamentation and bereavement?

Protarchus: Yes, there is a natural connexion between them.

Socrates: And you remember also how at the sight of tragedies the spectators smile through their tears?

Protarchus: Certainly I do.

Socrates: And are you aware that even at a comedy the soul experiences a mixed feeling of pain and pleasure?

Protarchus: I do not quite understand you.

48e

Socrates: I admit, Protarchus, that there is some difficulty in recognizing this mixture of feelings at a comedy.

Protarchus: There is, I think.

Socrates: And the greater the obscurity of the case the more desirable is the examination of it, because the difficulty in detecting other cases of mixed pleasures and pains will be less.

Protarchus: Proceed.

Socrates: I have just mentioned envy; would you not call that a pain of the soul?

Protarchus: Yes.

Socrates: And yet the envious man finds something in the misfortunes of his neighbours at which he is pleased?

49a

Protarchus: Certainly.

Socrates: And ignorance, and what is termed clownishness, are surely an evil?

Protarchus: To be sure.

Socrates: From these considerations learn to know the nature of the ridiculous.

Protarchus: Explain.

Socrates: The ridiculous is in short the specific name which is used to describe the vicious form of a certain habit; and of vice in general it is that kind which is most at variance with the inscription at Delphi.

Protarchus: You mean, Socrates, ‘Know thyself.’

Socrates: I do; and the opposite would be, ‘Know not thyself.’

Protarchus: Certainly.

Socrates: And now, O Protarchus, try to divide this into three.

49b

Protarchus: Indeed I am afraid that I cannot.

Socrates: Do you mean to say that I must make the division for you?

Protarchus: Yes, and what is more, I beg that you will.

Socrates: Are there not three ways in which ignorance of self may be shown?

Protarchus: What are they?

Socrates: In the first place, about money; the ignorant may fancy himself richer than he is.

Protarchus: Yes, that is a very common error.

Socrates: And still more often he will fancy that he is taller or fairer than he is, or that he has some other advantage of person which he really has not.

49c

Protarchus: Of course.

Socrates: And yet surely by far the greatest number err about the goods of the mind; they imagine themselves to be much better men than they are.

49d

Protarchus: Yes, that is by far the commonest delusion.

Socrates: And of all the virtues, is not wisdom the one which the mass of mankind are always claiming, and which most arouses in them a spirit of contention and lying conceit of wisdom?

Protarchus: Certainly.

Socrates: And may not all this be truly called an evil condition?

Protarchus: Very evil.

Socrates: But we must pursue the division a step further, Protarchus, if we would see in envy of the childish sort a singular mixture of pleasure and pain.

Protarchus: How can we make the further division which you suggest?

Socrates: All who are silly enough to entertain this lying conceit of themselves may of course be divided, like the rest of mankind, into two classes — one having power and might; and the other the reverse.

49e

Protarchus: Certainly.

50a

Socrates: Let this, then, be the principle of division; those of them who are weak and unable to revenge themselves, when they are laughed at, may be truly called ridiculous, but those who can defend themselves may be more truly described as strong and formidable; for ignorance in the powerful is hateful and horrible, because hurtful to others both in reality and in fiction, but powerless ignorance may be reckoned, and in truth is, ridiculous.

50b

Protarchus: That is very true, but I do not as yet see where is the admixture of pleasures and pains.

Socrates: Well, then, let us examine the nature of envy.

Protarchus: Proceed.

Socrates: Is not envy an unrighteous pleasure, and also an unrighteous pain?

Protarchus: Most true.

Socrates: There is nothing envious or wrong in rejoicing at the misfortunes of enemies?

Protarchus: Certainly not.

50c

Socrates: But to feel joy instead of sorrow at the sight of our friends' misfortunes — is not that wrong?

Protarchus: Undoubtedly.

Socrates: Did we not say that ignorance was always an evil?

Protarchus: True.

Socrates: And the three kinds of vain conceit in our friends which we enumerated — the vain conceit of beauty, of wisdom, and of wealth, are ridiculous if they are weak, and detestable when they are powerful: May we not say, as I was saying before, that our friends who are in this state of mind, when harmless to others, are simply ridiculous?

Protarchus: They are ridiculous.

Socrates: And do we not acknowledge this ignorance of theirs to be a misfortune?

Protarchus: Certainly.

Socrates: And do we feel pain or pleasure in laughing at it?

Protarchus: Clearly we feel pleasure.

Socrates: And was not envy the source of this pleasure which we feel at the misfortunes of friends?

Protarchus: Certainly.

Socrates: Then the argument shows that when we laugh at the folly of our friends, pleasure, in mingling with envy, mingles with pain, for envy has been acknowledged by us to be mental pain, and laughter is pleasant; and so we envy and laugh at the same instant.

Protarchus: True.

50e

Socrates: And the argument implies that there are combinations of pleasure and pain in lamentations, and in tragedy and comedy, not only on the stage, but on the greater stage of human life; and so in endless other cases.

51a

Protarchus: I do not see how any one can deny what you say, Socrates, however eager he may be to assert the opposite opinion.

Socrates: I mentioned anger, desire, sorrow, fear, love, emulation, envy, and similar emotions, as examples in which we should find a mixture of the two elements so often named; did I not?

Protarchus: Yes.

Socrates: We may observe that our conclusions hitherto have had reference only to sorrow and envy and anger.

Protarchus: I see.

Socrates: Then many other cases still remain?

51b

Protarchus: Certainly.

51c

Socrates: And why do you suppose me to have pointed out to you the admixture which takes place in comedy? Why but to convince you that there was no difficulty in showing the mixed nature of fear and love and similar affections; and I thought that

when I had given you the illustration, you would have let me off, and have acknowledged as a general truth that the body without the soul, and the soul without the body, as well as the two united, are susceptible of all sorts of admixtures of pleasures and pains; and so further discussion would have been unnecessary. And now I want to know whether I may depart; or will you keep me here until midnight? I fancy that I may obtain my release without many words; — if I promise that to-morrow I will give you an account of all these cases. But at present I would rather sail in another direction, and go to other matters which remain to be settled, before the judgment can be given which Philebus demands.

Protarchus: Very good, Socrates; in what remains take your own course.

Socrates: Then after the mixed pleasures the unmixed should have their turn; this is the natural and necessary order.

51d

Protarchus: Excellent.

Socrates: These, in turn, then, I will now endeavour to indicate; for with the maintainers of the opinion that all pleasures are a cessation of pain, I do not agree, but, as I was saying, I use them as witnesses, that there are pleasures which seem only and are not, and there are others again which have great power and appear in many forms, yet are intermingled with pains, and are partly alleviations of agony and distress, both of body and mind.

51e

Protarchus: Then what pleasures, Socrates, should we be right in conceiving to be true?

52a

Socrates: True pleasures are those which are given by beauty of colour and form, and most of those which arise from smells; those of sound, again, and in general those of which the want is

painless and unconscious, and of which the fruition is palpable to sense and pleasant and unalloyed with pain.

Protarchus: Once more, Socrates, I must ask what you mean.

52b

Socrates: My meaning is certainly not obvious, and I will endeavour to be plainer. I do not mean by beauty of form such beauty as that of animals or pictures, which the many would suppose to be my meaning; but, says the argument, understand me to mean straight lines and circles, and the plane or solid figures which are formed out of them by turning-lathes and rulers and measurers of angles; for these I affirm to be not only relatively beautiful, like other things, but they are eternally and absolutely beautiful, and they have peculiar pleasures, quite unlike the pleasures of scratching. And there are colours which are of the same character, and have similar pleasures; now do you understand my meaning?

52c

Protarchus: I am trying to understand, Socrates, and I hope that you will try to make your meaning clearer.

Socrates: When sounds are smooth and clear, and have a single pure tone, then I mean to say that they are not relatively but absolutely beautiful, and have natural pleasures associated with them.

Protarchus: Yes, there are such pleasures.

Socrates: The pleasures of smell are of a less ethereal sort, but they have no necessary admixture of pain; and all pleasures, however and wherever experienced, which are unattended by pains, I assign to an analogous class. Here then are two kinds of pleasures.

52d

Protarchus: I understand.

Socrates: To these may be added the pleasures of knowledge, if no hunger of knowledge and no pain caused by such hunger precede them.

Protarchus: And this is the case.

52e

Socrates: Well, but if a man who is full of knowledge loses his knowledge, are there not pains of forgetting?

Protarchus: Not necessarily, but there may be times of reflection, when he feels grief at the loss of his knowledge.

Socrates: Yes, my friend, but at present we are enumerating only the natural perceptions, and have nothing to do with reflection.

Protarchus: In that case you are right in saying that the loss of knowledge is not attended with pain.

53a

Socrates: These pleasures of knowledge, then, are unmixed with pain; and they are not the pleasures of the many but of a very few.

Protarchus: Quite true.

53b

Socrates: And now, having fairly separated the pure pleasures and those which may be rightly termed impure, let us further add to our description of them, that the pleasures which are in excess have no measure, but that those which are not in excess have measure; the great, the excessive, whether more or less frequent, we shall be right in referring to the class of the infinite, and of the more and less, which pours through body and soul alike; and the others we shall refer to the class which has measure.

Protarchus: Quite right, Socrates.

Socrates: Still there is something more to be considered about pleasures.

Protarchus: What is it?

Socrates: When you speak of purity and clearness, or of excess, abundance, greatness and sufficiency, in what relation do these terms stand to truth?

Protarchus: Why do you ask, Socrates?

53c

Socrates: Because, Protarchus, I should wish to test pleasure and knowledge in every possible way, in order that if there be a pure and impure element in either of them, I may present the pure element for judgment, and then they will be more easily judged of by you and by me and by all of us.

Protarchus: Most true.

53d

Socrates: Let us investigate all the pure kinds; first selecting for consideration a single instance.

Protarchus: What instance shall we select?

Socrates: Suppose that we first of all take whiteness.

Protarchus: Very good.

Socrates: How can there be purity in whiteness, and what purity? Is that purest which is greatest or most in quantity, or that which is most unadulterated and freest from any admixture of other colours?

Protarchus: Clearly that which is most unadulterated.

53e

Socrates: True, Protarchus; and so the purest white, and not the greatest or largest in quantity, is to be deemed truest and most beautiful?

Protarchus: Right.

Socrates: And we shall be quite right in saying that a little pure white is whiter and fairer and truer than a great deal that is mixed.

Protarchus: Perfectly right.

Socrates: There is no need of adducing many similar examples in illustration of the argument about pleasure; one such is sufficient to prove to us that a small pleasure or a small amount of pleasure, if pure or unalloyed with pain, is always pleasanter and truer and fairer than a great pleasure or a great amount of pleasure of another kind.

54a

Protarchus: Assuredly; and the instance you have given is quite sufficient.

Socrates: But what do you say of another question: — have we not heard that pleasure is always a generation, and has no true being? Do not certain ingenious philosophers teach this doctrine, and ought not we to be grateful to them?

Protarchus: What do they mean?

Socrates: I will explain to you, my dear Protarchus, what they mean, by putting a question.

54b

Protarchus: Ask, and I will answer.

Socrates: I assume that there are two natures, one self-existent, and the other ever in want of something.

Protarchus: What manner of natures are they?

Socrates: The one majestic ever, the other inferior.

Protarchus: You speak riddles.

Socrates: You have seen loves good and fair, and also brave lovers of them.

Protarchus: I should think so.

54c

Socrates: Search the universe for two terms which are like these two and are present everywhere.

Protarchus: Yet a third time I must say, Be a little plainer, Socrates.

Socrates: There is no difficulty, Protarchus; the argument is only in play, and insinuates that some things are for the sake of something else (relatives), and that other things are the ends to which the former class subserve (absolutes).

Protarchus: Your many repetitions make me slow to understand.

Socrates: As the argument proceeds, my boy, I dare say that the meaning will become clearer.

Protarchus: Very likely.

Socrates: Here are two new principles.

Protarchus: What are they?

Socrates: One is the generation of all things, and the other is essence.

54d

Protarchus: I readily accept from you both generation and essence.

Socrates: Very right; and would you say that generation is for the sake of essence, or essence for the sake of generation?

Protarchus: You want to know whether that which is called essence is, properly speaking, for the sake of generation?

Socrates: Yes.

Protarchus: By the gods, I wish that you would repeat your question.

54e

Socrates: I mean, O my Protarchus, to ask whether you would tell me that ship-building is for the sake of ships, or ships for the sake of ship-building? and in all similar cases I should ask the same question.

Protarchus: Why do you not answer yourself, Socrates?

Socrates: I have no objection, but you must take your part.

Protarchus: Certainly.

Socrates: My answer is, that all things instrumental, remedial, material, are given to us with a view to generation, and that each generation is relative to, or for the sake of, some being or essence, and that the whole of generation is relative to the whole of essence.

55a

Protarchus: Assuredly.

Socrates: Then pleasure, being a generation, must surely be for the sake of some essence?

Protarchus: True.

Socrates: And that for the sake of which something else is done must be placed in the class of good, and that which is done for the sake of something else, in some other class, my good friend.

Protarchus: Most certainly.

Socrates: Then pleasure, being a generation, will be rightly placed in some other class than that of good?

Protarchus: Quite right.

55b

Socrates: Then, as I said at first, we ought to be very grateful to him who first pointed out that pleasure was a generation only, and had no true being at all; for he is clearly one who laughs at the notion of pleasure being a good.

Protarchus: Assuredly.

Socrates: And he would surely laugh also at those who make generation their highest end.

Protarchus: Of whom are you speaking, and what do they mean?

Socrates: I am speaking of those who when they are cured of hunger or thirst or any other defect by some process of generation are delighted at the process as if it were pleasure; and they say that they would not wish to live without these and other feelings of a like kind which might be mentioned.

55c

Protarchus: That is certainly what they appear to think.

Socrates: And is not destruction universally admitted to be the opposite of generation?

Protarchus: Certainly.

Socrates: Then he who chooses thus, would choose generation and destruction rather than that third sort of life, in which, as we were saying, was neither pleasure nor pain, but only the purest possible thought.

55d

Protarchus: He who would make us believe pleasure to be a good is involved in great absurdities, Socrates.

Socrates: Great, indeed; and there is yet another of them.

Protarchus: What is it?

55e

Socrates: Is there not an absurdity in arguing that there is nothing good or noble in the body, or in anything else, but that good is in the soul only, and that the only good of the soul is pleasure; and that courage or temperance or understanding, or any other good of the soul, is not really a good? — and is there not yet a further absurdity in our being compelled to say that he who has a feeling of pain and not of pleasure is bad at the time when he is suffering pain, even though he be the best of men; and again, that he who has a feeling of pleasure, in so far as he is pleased at the time when he is pleased, in that degree excels in virtue?

56a

Protarchus: Nothing, Socrates, can be more irrational than all this.

Socrates: And now, having subjected pleasure to every sort of test, let us not appear to be too sparing of mind and knowledge: let us ring their metal bravely, and see if there be unsoundness in any part, until we have found out what in them is of the purest nature; and then the truest elements both of pleasure and knowledge may be brought up for judgment.

56b

Protarchus: Right.

Socrates: Knowledge has two parts, — the one productive, and the other educational?

Protarchus: True.

Socrates: And in the productive or handicraft arts, is not one part more akin to knowledge, and the other less; and may not the one part be regarded as the pure, and the other as the impure?

Protarchus: Certainly.

Socrates: Let us separate the superior or dominant elements in each of them.

Protarchus: What are they, and how do you separate them?

56c

Socrates: I mean to say, that if arithmetic, mensuration, and weighing be taken away from any art, that which remains will not be much.

Protarchus: Not much, certainly.

Socrates: The rest will be only conjecture, and the better use of the senses which is given by experience and practice, in addition to a certain power of guessing, which is commonly called art, and is perfected by attention and pains.

Protarchus: Nothing more, assuredly.

56d

Socrates: Music, for instance, is full of this empiricism; for sounds are harmonized, not by measure, but by skilful conjecture; the music of the flute is always trying to guess the pitch of each vibrating note, and is therefore mixed up with much that is doubtful and has little which is certain.

Protarchus: Most true.

Socrates: And the same will be found to hold good of medicine and husbandry and piloting and generalship.

Protarchus: Very true.

Socrates: The art of the builder, on the other hand, which uses a number of measures and instruments, attains by their help to a greater degree of accuracy than the other arts.

Protarchus: How is that?

Socrates: In ship-building and house-building, and in other branches of the art of carpentering, the builder has his rule, lathe, compass, line, and a most ingenious machine for

straightening wood.

56e

Protarchus: Very true, Socrates.

Socrates: Then now let us divide the arts of which we were speaking into two kinds, — the arts which, like music, are less exact in their results, and those which, like carpentering, are more exact.

Protarchus: Let us make that division.

57a

Socrates: Of the latter class, the most exact of all are those which we just now spoke of as primary.

Protarchus: I see that you mean arithmetic, and the kindred arts of weighing and measuring.

Socrates: Certainly, Protarchus; but are not these also distinguishable into two kinds?

Protarchus: What are the two kinds?

Socrates: In the first place, arithmetic is of two kinds, one of which is popular, and the other philosophical.

Protarchus: How would you distinguish them?

57b

Socrates: There is a wide difference between them, Protarchus; some arithmeticians reckon unequal units; as for example, two armies, two oxen, two very large things or two very small things. The party who are opposed to them insist that every unit in ten thousand must be the same as every other unit.

Protarchus: Undoubtedly there is, as you say, a great difference among the votaries of the science; and there may be reasonably supposed to be two sorts of arithmetic.

Socrates: And when we compare the art of mensuration which is used in building with philosophical geometry, or the art of

computation which is used in trading with exact calculation, shall we say of either of the pairs that it is one or two?

57c

Protarchus: On the analogy of what has preceded, I should be of opinion that they were severally two.

Socrates: Right; but do you understand why I have discussed the subject?

Protarchus: I think so, but I should like to be told by you.

Socrates: The argument has all along been seeking a parallel to pleasure, and true to that original design, has gone on to ask whether one sort of knowledge is purer than another, as one pleasure is purer than another.

Protarchus: Clearly; that was the intention.

57d

Socrates: And has not the argument in what has preceded, already shown that the arts have different provinces, and vary in their degrees of certainty?

Protarchus: Very true.

57e

Socrates: And just now did not the argument first designate a particular art by a common term, thus making us believe in the unity of that art; and then again, as if speaking of two different things, proceed to enquire whether the art as pursued by philosophers, or as pursued by non-philosophers, has more of certainty and purity?

Protarchus: That is the very question which the argument is asking.

Socrates: And how, Protarchus, shall we answer the enquiry?

58a

Protarchus: O Socrates, we have reached a point at which the difference of clearness in different kinds of knowledge is

enormous.

Socrates: Then the answer will be the easier.

Protarchus: Certainly; and let us say in reply, that those arts into which arithmetic and mensuration enter, far surpass all others; and that of these the arts or sciences which are animated by the pure philosophic impulse are infinitely superior in accuracy and truth.

Socrates: Then this is your judgment; and this is the answer which, upon your authority, we will give to all masters of the art of misinterpretation?

Protarchus: What answer?

58b

Socrates: That there are two arts of arithmetic, and two of mensuration; and also several other arts which in like manner have this double nature, and yet only one name.

Protarchus: Let us boldly return this answer to the masters of whom you speak, Socrates, and hope for good luck.

58c

Socrates: We have explained what we term the most exact arts or sciences.

Protarchus: Very good.

Socrates: And yet, Protarchus, dialectic will refuse to acknowledge us, if we do not award to her the first place.

Protarchus: And pray, what is dialectic?

Socrates: Clearly the science which has to do with all that knowledge of which we are now speaking; for I am sure that all men who have a grain of intelligence will admit that the knowledge which has to do with being and reality, and sameness and unchangeableness, is by far the truest of all. But how would you decide this question, Protarchus?

Protarchus: I have often heard Gorgias maintain, Socrates, that the art of persuasion far surpassed every other; this, as he says, is by far the best of them all, for to it all things submit, not by compulsion, but of their own free will. Now, I should not like to quarrel either with you or with him.

Socrates: You mean to say that you would like to desert, if you were not ashamed?

Protarchus: As you please.

Socrates: May I not have led you into a misapprehension?

Protarchus: How?

58e

Socrates: Dear Protarchus, I never asked which was the greatest or best or usefulest of arts or sciences, but which had clearness and accuracy, and the greatest amount of truth, however humble and little useful an art. And as for Gorgias, if you do not deny that his art has the advantage in usefulness to mankind, he will not quarrel with you for saying that the study of which I am speaking is superior in this particular of essential truth; as in the comparison of white colours, a little whiteness, if that little be only pure, was said to be superior in truth to a great mass which is impure. And now let us give our best attention and consider well, not the comparative use or reputation of the sciences, but the power or faculty, if there be such, which the soul has of loving the truth, and of doing all things for the sake of it; let us search into the pure element of mind and intelligence, and then we shall be able to say whether the science of which I have been speaking is most likely to possess the faculty, or whether there be some other which has higher claims.

59b

Protarchus: Well, I have been considering, and I can hardly think that any other science or art has a firmer grasp of the

truth than this.

59c

Socrates: Do you say so because you observe that the arts in general and those engaged in them make use of opinion, and are resolutely engaged in the investigation of matters of opinion? Even he who supposes himself to be occupied with nature is really occupied with the things of this world, how created, how acting or acted upon. Is not this the sort of enquiry in which his life is spent?

Protarchus: True.

Socrates: He is labouring, not after eternal being, but about things which are becoming, or which will or have become.

Protarchus: Very true.

59d

Socrates: And can we say that any of these things which neither are nor have been nor will be unchangeable, when judged by the strict rule of truth ever become certain?

Protarchus: Impossible.

Socrates: How can anything fixed be concerned with that which has no fixedness?

Protarchus: How indeed?

Socrates: Then mind and science when employed about such changing things do not attain the highest truth?

Protarchus: I should imagine not.

Socrates: And now let us bid farewell, a long farewell, to you or me or Philebus or Gorgias, and urge on behalf of the argument a single point.

59e

Protarchus: What point?

Socrates: Let us say that the stable and pure and true and unalloyed has to do with the things which are eternal and unchangeable and unmixed, or if not, at any rate what is most akin to them has; and that all other things are to be placed in a second or inferior class.

60a

Protarchus: Very true.

Socrates: And of the names expressing cognition, ought not the fairest to be given to the fairest things?

Protarchus: That is natural.

Socrates: And are not mind and wisdom the names which are to be honoured most?

Protarchus: Yes.

Socrates: And these names may be said to have their truest and most exact application when the mind is engaged in the contemplation of true being?

Protarchus: Certainly.

Socrates: And these were the names which I adduced of the rivals of pleasure?

Protarchus: Very true, Socrates.

Socrates: In the next place, as to the mixture, here are the ingredients, pleasure and wisdom, and we may be compared to artists who have their materials ready to their hands.

Protarchus: Yes.

60b

Socrates: And now we must begin to mix them?

Protarchus: By all means.

Socrates: But had we not better have a preliminary word and refresh our memories?

Protarchus: Of what?

60c

Socrates: Of that which I have already mentioned. Well says the proverb, that we ought to repeat twice and even thrice that which is good.

Protarchus: Certainly.

Socrates: Well then, by Zeus, let us proceed, and I will make what I believe to be a fair summary of the argument.

Protarchus: Let me hear.

Socrates: Philebus says that pleasure is the true end of all living beings, at which all ought to aim, and moreover that it is the chief good of all, and that the two names ‘good’ and ‘pleasant’ are correctly given to one thing and one nature; Socrates, on the other hand, begins by denying this, and further says, that in nature as in name they are two, and that wisdom partakes more than pleasure of the good. Is not and was not this what we were saying, Protarchus?

60d

Protarchus: Certainly.

Socrates: And is there not and was there not a further point which was conceded between us?

Protarchus: What was it?

Socrates: That the good differs from all other things.

Protarchus: In what respect?

Socrates: In that the being who possesses good always everywhere and in all things has the most perfect sufficiency, and is never in need of anything else.

Protarchus: Exactly.

Socrates: And did we not endeavour to make an imaginary separation of wisdom and pleasure, assigning to each a distinct life, so that pleasure was wholly excluded from wisdom, and wisdom in like manner had no part whatever in pleasure?

60e

Protarchus: We did.

Socrates: And did we think that either of them alone would be sufficient?

61a

Protarchus: Certainly not.

61b

Socrates: And if we erred in any point, then let any one who will, take up the enquiry again and set us right; and assuming memory and wisdom and knowledge and true opinion to belong to the same class, let him consider whether he would desire to possess or acquire, — I will not say pleasure, however abundant or intense, if he has no real perception that he is pleased, nor any consciousness of what he feels, nor any recollection, however momentary, of the feeling, — but would he desire to have anything at all, if these faculties were wanting to him? And about wisdom I ask the same question; can you conceive that any one would choose to have all wisdom absolutely devoid of pleasure, rather than with a certain degree of pleasure, or all pleasure devoid of wisdom, rather than with a certain degree of wisdom?

61c

Protarchus: Certainly not, Socrates; but why repeat such questions any more?

Socrates: Then the perfect and universally eligible and entirely good cannot possibly be either of them?

Protarchus: Impossible.

Socrates: Then now we must ascertain the nature of the good more or less accurately, in order, as we were saying, that the second place may be duly assigned.

Protarchus: Right.

Socrates: Have we not found a road which leads towards the good?

Protarchus: What road?

61d

Socrates: Supposing that a man had to be found, and you could discover in what house he lived, would not that be a great step towards the discovery of the man himself?

Protarchus: Certainly.

Socrates: And now reason intimates to us, as at our first beginning, that we should seek the good, not in the unmixed life but in the mixed.

Protarchus: True.

Socrates: There is greater hope of finding that which we are seeking in the life which is well mixed than in that which is not?

Protarchus: Far greater.

Socrates: Then now let us mingle, Protarchus, at the same time offering up a prayer to Dionysus or Hephaestus, or whoever is the god who presides over the ceremony of mingling.

Protarchus: By all means.

61e

Socrates: Are not we the cup-bearers? and here are two fountains which are flowing at our side: one, which is pleasure, may be likened to a fountain of honey; the other, wisdom, a sober draught in which no wine mingles, is of water unpleasant but healthful; out of these we must seek to make the fairest of all possible mixtures.

62a

Protarchus: Certainly.

Socrates: Tell me first; — should we be most likely to succeed if we mingled every sort of pleasure with every sort of wisdom?

Protarchus: Perhaps we might.

Socrates: But I should be afraid of the risk, and I think that I can show a safer plan.

Protarchus: What is it?

Socrates: One pleasure was supposed by us to be truer than another, and one art to be more exact than another.

Protarchus: Certainly.

62b

Socrates: There was also supposed to be a difference in sciences; some of them regarding only the transient and perishing, and others the permanent and imperishable and everlasting and immutable; and when judged by the standard of truth, the latter, as we thought, were truer than the former.

Protarchus: Very good and right.

62c

Socrates: If, then, we were to begin by mingling the sections of each class which have the most of truth, will not the union suffice to give us the loveliest of lives, or shall we still want some elements of another kind?

Protarchus: I think that we ought to do what you suggest.

Socrates: Let us suppose a man who understands justice, and has reason as well as understanding about the true nature of this and of all other things.

Protarchus: We will suppose such a man.

62d

Socrates: Will he have enough of knowledge if he is acquainted only with the divine circle and sphere, and knows nothing of our human spheres and circles, but uses only divine circles and measures in the building of a house?

Protarchus: The knowledge which is only superhuman, Socrates, is ridiculous in man.

Socrates: What do you mean? Do you mean that you are to throw into the cup and mingle the impure and uncertain art which uses the false measure and the false circle?

Protarchus: Yes, we must, if any of us is ever to find his way home.

Socrates: And am I to include music, which, as I was saying just now, is full of guesswork and imitation, and is wanting in purity?

62e

Protarchus: Yes, I think that you must, if human life is to be a life at all.

Socrates: Well, then, suppose that I give way, and, like a doorkeeper who is pushed and overborne by the mob, I open the door wide, and let knowledge of every sort stream in, and the pure mingle with the impure?

Protarchus: I do not know, Socrates, that any great harm would come of having them all, if only you have the first sort.

63a

Socrates: Well, then, shall I let them all flow into what Homer poetically terms ‘a meeting of the waters’?

Protarchus: By all means.

Socrates: There — I have let them in, and now I must return to the fountain of pleasure. For we were not permitted to begin by mingling in a single stream the true portions of both according

to our original intention; but the love of all knowledge constrained us to let all the sciences flow in together before the pleasures.

Protarchus: Quite true.

63b

Socrates: And now the time has come for us to consider about the pleasures also, whether we shall in like manner let them go all at once, or at first only the true ones.

Protarchus: It will be by far the safer course to let flow the true ones first.

Socrates: Let them flow, then; and now, if there are any necessary pleasures, as there were arts and sciences necessary, must we not mingle them?

63c

Protarchus: Yes; the necessary pleasures should certainly be allowed to mingle.

Socrates: The knowledge of the arts has been admitted to be innocent and useful always; and if we say of pleasures in like manner that all of them are good and innocent for all of us at all times, we must let them all mingle?

Protarchus: What shall we say about them, and what course shall we take?

Socrates: Do not ask me, Protarchus; but ask the daughters of pleasure and wisdom to answer for themselves.

Protarchus: How?

Socrates: Tell us, O beloved — shall we call you pleasures or by some other name? — would you rather live with or without wisdom? I am of opinion that they would certainly answer as follows:

63d

Protarchus: How?

Socrates: They would answer, as we said before, that for any single class to be left by itself pure and isolated is not good, nor altogether possible; and that if we are to make comparisons of one class with another and choose, there is no better companion than knowledge of things in general, and likewise the perfect knowledge, if that may be, of ourselves in every respect.

Protarchus: And our answer will be: — In that ye have spoken well.

Socrates: Very true. And now let us go back and interrogate wisdom and mind: Would you like to have any pleasures in the mixture? And they will reply:— ‘What pleasures do you mean?’

Protarchus: Likely enough.

64a

Socrates: And we shall take up our parable and say: Do you wish to have the greatest and most vehement pleasures for your companions in addition to the true ones? ‘Why, Socrates,’ they will say, ‘how can we? seeing that they are the source of ten thousand hindrances to us; they trouble the souls of men, which are our habitation, with their madness; they prevent us from coming to the birth, and are commonly the ruin of the children which are born to us, causing them to be forgotten and unheeded; but the true and pure pleasures, of which you spoke, know to be of our family, and also those pleasures which accompany health and temperance, and which every Virtue, like a goddess, has in her train to follow her about wherever she goes, — mingle these and not the others; there would be great want of sense in any one who desires to see a fair and perfect mixture, and to find in it what is the highest good in man and in the universe, and to divine what is the true form of good — there would be great want of sense in his allowing the

pleasures, which are always in the company of folly and vice, to mingle with mind in the cup.' — Is not this a very rational and suitable reply, which mind has made, both on her own behalf, as well as on the behalf of memory and true opinion?

64c

Protarchus: Most certainly.

Socrates: And still there must be something more added, which is a necessary ingredient in every mixture.

Protarchus: What is that?

Socrates: Unless truth enter into the composition, nothing can truly be created or subsist.

Protarchus: Impossible.

Socrates: Quite impossible; and now you and Philebus must tell me whether anything is still wanting in the mixture, for to my way of thinking the argument is now completed, and may be compared to an incorporeal law, which is going to hold fair rule over a living body.

64d

Protarchus: I agree with you, Socrates.

Socrates: And may we not say with reason that we are now at the vestibule of the habitation of the good?

Protarchus: I think that we are.

Socrates: What, then, is there in the mixture which is most precious, and which is the principal cause why such a state is universally beloved by all? When we have discovered it, we will proceed to ask whether this omnipresent nature is more akin to pleasure or to mind.

Protarchus: Quite right; in that way we shall be better able to judge.

64e

Socrates: And there is no difficulty in seeing the cause which renders any mixture either of the highest value or of none at all.

Protarchus: What do you mean?

Socrates: Every man knows it.

Protarchus: What?

65a

Socrates: He knows that any want of measure and symmetry in any mixture whatever must always of necessity be fatal, both to the elements and to the mixture, which is then not a mixture, but only a confused medley which brings confusion on the possessor of it.

Protarchus: Most true.

Socrates: And now the power of the good has retired into the region of the beautiful; for measure and symmetry are beauty and virtue all the world over.

Protarchus: True.

Socrates: Also we said that truth was to form an element in the mixture.

Protarchus: Certainly.

65b

Socrates: Then, if we are not able to hunt the good with one idea only, with three we may catch our prey; Beauty, Symmetry, Truth are the three, and these taken together we may regard as the single cause of the mixture, and the mixture as being good by reason of the infusion of them.

Protarchus: Quite right.

65c

Socrates: And now, Protarchus, any man could decide well enough whether pleasure or wisdom is more akin to the highest good, and more honourable among gods and men.

Protarchus: Clearly, and yet perhaps the argument had better be pursued to the end.

Socrates: We must take each of them separately in their relation to pleasure and mind, and pronounce upon them; for we ought to see to which of the two they are severally most akin.

Protarchus: You are speaking of beauty, truth, and measure?

Socrates: Yes, Protarchus, take truth first, and, after passing in review mind, truth, pleasure, pause awhile and make answer to yourself — as to whether pleasure or mind is more akin to truth.

65d

Protarchus: There is no need to pause, for the difference between them is palpable; pleasure is the veriest impostor in the world; and it is said that in the pleasures of love, which appear to be the greatest, perjury is excused by the gods; for pleasures, like children, have not the least particle of reason in them; whereas mind is either the same as truth, or the most like truth, and the truest.

65e

Socrates: Shall we next consider measure, in like manner, and ask whether pleasure has more of this than wisdom, or wisdom than pleasure?

Protarchus: Here is another question which may be easily answered; for I imagine that nothing can ever be more immoderate than the transports of pleasure, or more in conformity with measure than mind and knowledge.

Socrates: Very good; but there still remains the third test: Has mind a greater share of beauty than pleasure, and is mind or pleasure the fairer of the two?

Protarchus: No one, Socrates, either awake or dreaming, ever saw or imagined mind or wisdom to be in aught unseemly, at

any time, past, present, or future.

Socrates: Right.

Protarchus: But when we see some one indulging in pleasures, perhaps in the greatest of pleasures, the ridiculous or disgraceful nature of the action makes us ashamed; and so we put them out of sight, and consign them to darkness, under the idea that they ought not to meet the eye of day.

66a

Socrates: Then, Protarchus, you will proclaim everywhere, by word of mouth to this company, and by messengers bearing the tidings far and wide, that pleasure is not the first of possessions, nor yet the second, but that in measure, and the mean, and the suitable, and the like, the eternal nature has been found.

66b

Protarchus: Yes, that seems to be the result of what has been now said.

Socrates: In the second class is contained the symmetrical and beautiful and perfect or sufficient, and all which are of that family.

Protarchus: True.

Socrates: And if you reckon in the third class mind and wisdom, you will not be far wrong, if I divine aright.

Protarchus: I dare say.

66c

Socrates: And would you not put in the fourth class the goods which we were affirming to appertain specially to the soul — sciences and arts and true opinions as we called them? These come after the third class, and form the fourth, as they are certainly more akin to good than pleasure is.

Protarchus: Surely.

Socrates: The fifth class are the pleasures which were defined by us as painless, being the pure pleasures of the soul herself, as we termed them, which accompany, some the sciences, and some the senses.

Protarchus: Perhaps.

66d

Socrates: And now, as Orpheus says, 'With the sixth generation cease the glory of my song.'

Here, at the sixth award, let us make an end; all that remains is to set the crown on our discourse.

Protarchus: True.

Socrates: Then let us sum up and reassert what has been said, thus offering the third libation to the saviour Zeus.

Protarchus: How?

Socrates: Philebus affirmed that pleasure was always and absolutely the good.

66e

Protarchus: I understand; this third libation, Socrates, of which you spoke, meant a recapitulation.

Socrates: Yes, but listen to the sequel; convinced of what I have just been saying, and feeling indignant at the doctrine, which is maintained, not by Philebus only, but by thousands of others, I affirmed that mind was far better and far more excellent, as an element of human life, than pleasure.

Protarchus: True.

Socrates: But, suspecting that there were other things which were also better, I went on to say that if there was anything better than either, then I would claim the second place for mind over pleasure, and pleasure would lose the second place as well as the first.

67a

Protarchus: You did.

Socrates: Nothing could be more satisfactorily shown than the unsatisfactory nature of both of them.

Protarchus: Very true.

Socrates: The claims both of pleasure and mind to be the absolute good have been entirely disproven in this argument, because they are both wanting in self-sufficiency and also in adequacy and perfection.

Protarchus: Most true.

Socrates: But, though they must both resign in favour of another, mind is ten thousand times nearer and more akin to the nature of the conqueror than pleasure.

Protarchus: Certainly.

Socrates: And, according to the judgment which has now been given, pleasure will rank fifth.

67b

Protarchus: True.

Socrates: But not first; no, not even if all the oxen and horses and animals in the world by their pursuit of enjoyment proclaim her to be so; — although the many trusting in them, as diviners trust in birds, determine that pleasures make up the good of life, and deem the lusts of animals to be better witnesses than the inspirations of divine philosophy.

Protarchus: And now, Socrates, we tell you that the truth of what you have been saying is approved by the judgment of all of us.

Socrates: And will you let me go?

Protarchus: There is a little which yet remains, and I will remind you of it, for I am sure that you will not be the first to go

away from an argument.

Protagoras

ΠΡΟΤΑΓΟΡΑΣ

Plato

translated by Benjamin Jowett

narrator: SOCRATES of Alopecce, son of Sophroniscus

persons in the dialogue:

COMPANION *unidentified*

HIPPOCRATES *Athenian*

CALLIAS *a student of Protagoras, Hippias, Prodicus*

PROTAGORAS *a renowned sophist from Abdera*

HIPPIAS *a polymath, sophist, diplomat from Elis*

PRODICUS *a teacher of semantics, rhetoric from Ceos*

CRITIAS *a leader of oligarchy of the Thirty, Athenian*

ALCIBIADES *a famous and notorious general and politician*

scene: Socrates' room / courtyard outside / the street / the house of Callias

309a

Companion: Where do you come from, Socrates? And yet I need hardly ask the question, for I know that you have been in chase of the fair Alcibiades. I saw him the day before yesterday; and he had got a beard like a man, — and he is a man, as I may tell you in your ear. But I thought that he was still very charming.

309b

Socrates: What of his beard? Are you not of Homer's opinion, who says 'Youth is most charming when the beard first appears'?

And that is now the charm of Alcibiades.

Companion: Well, and how do matters proceed? Have you been visiting him, and was he gracious to you?

Socrates: Yes, I thought that he was very gracious; and especially to-day, for I have just come from him, and he has been helping me in an argument. But shall I tell you a strange thing? I paid no attention to him, and several times I quite forgot that he was present.

309c

Companion: What is the meaning of this? Has anything happened between you and him? For surely you cannot have discovered a fairer love than he is; certainly not in this city of Athens.

Socrates: Yes, much fairer.

Companion: What do you mean — a citizen or a foreigner?

Socrates: A foreigner.

Companion: Of what country?

Socrates: Of Abdera.

Companion: And is this stranger really in your opinion a fairer love than the son of Cleinias?

309d

Socrates: And is not the wiser always the fairer, sweet friend?

Companion: But have you really met, Socrates, with some wise one?

Socrates: Say rather, with the wisest of all living men, if you are willing to accord that title to Protagoras.

310a

Companion: What! Is Protagoras in Athens?

Socrates: Yes; he has been here two days.

Companion: And do you just come from an interview with him?

Socrates: Yes; and I have heard and said many things.

Companion: Then, if you have no engagement, suppose that you sit down and tell me what passed, and my attendant here shall give up his place to you.

310b

Socrates: To be sure; and I shall be grateful to you for listening.

Companion: Thank you, too, for telling us.

Socrates: That is thank you twice over. Listen then: — Last night, or rather very early this morning, Hippocrates, the son of Apollodorus and the brother of Phason, gave a tremendous thump with his staff at my door; some one opened to him, and he came rushing in and bawled out: Socrates, are you awake or asleep?

I knew his voice, and said: Hippocrates, is that you? and do you bring any news?

Good news, he said; nothing but good.

310c

Delightful, I said; but what is the news? and why have you come hither at this unearthly hour?

He drew nearer to me and said: Protagoras is come.

Yes, I replied; he came two days ago: have you only just heard of his arrival?

Yes, by the gods, he said; but not until yesterday evening.

310d

At the same time he felt for the truckle-bed, and sat down at my feet, and then he said: Yesterday quite late in the evening, on my return from Oenoe whither I had gone in pursuit of my runaway slave Satyrus, as I meant to have told you, if some other matter had not come in the way; — on my return, when we had done supper and were about to retire to rest, my brother said to me: Protagoras is come. I was going to you at once, and then I thought that the night was far spent. But the moment sleep left me after my fatigue, I got up and came hither direct.

I, who knew the very courageous madness of the man, said: What is the matter? Has Protagoras robbed you of anything?

310e

He replied, laughing: Yes, indeed he has, Socrates, of the wisdom which he keeps from me.

But, surely, I said, if you give him money, and make friends with him, he will make you as wise as he is himself.

Would to heaven, he replied, that this were the case! He might take all that I have, and all that my friends have, if he pleased. But that is why I have come to you now, in order that you may speak to him on my behalf; for I am young, and also I have never seen nor heard him; (when he visited Athens before I was but a child;) and all men praise him, Socrates; he is reputed to be the most accomplished of speakers. There is no reason why we should not go to him at once, and then we shall find him at home. He lodges, as I hear, with Callias the son of Hipponicus: let us start.

311b

I replied: Not yet, my good friend; the hour is too early. But let us rise and take a turn in the court and wait about there until day-break; when the day breaks, then we will go. For Protagoras is generally at home, and we shall be sure to find him; never fear.

311c

Upon this we got up and walked about in the court, and I thought that I would make trial of the strength of his resolution. So I examined him and put questions to him. Tell me, Hippocrates, I said, as you are going to Protagoras, and will be paying your money to him, what is he to whom you are going? and what will he make of you? If, for example, you had thought of going to Hippocrates of Cos, the Asclepiad, and were about to give him your money, and some one had said to you: You are paying money to your namesake Hippocrates, O Hippocrates; tell me, what is he that you give him money? how would you have answered?

I should say, he replied, that I gave money to him as a physician. And what will he make of you?

A physician, he said.

And if you were resolved to go to Polycleitus the Argive, or Pheidias the Athenian, and were intending to give them money, and some one had asked you: What are Polycleitus and Pheidias? and why do you give them this money? — how would you have answered?

311d

I should have answered, that they were statuaries.

And what will they make of you?

A statuary, of course.

Well now, I said, you and I are going to Protagoras, and we are ready to pay him money on your behalf. If our own means are sufficient, and we can gain him with these, we shall be only too glad; but if not, then we are to spend the money of your friends as well. Now suppose, that while we are thus enthusiastically pursuing our object some one were to say to us: Tell me, Socrates, and you Hippocrates, what is Protagoras, and why are you going to pay him money, — how should we answer? I know that Pheidias is a sculptor, and that Homer is a poet; but what appellation is given to Protagoras? how is he designated?

312a

They call him a Sophist, Socrates, he replied.

Then we are going to pay our money to him in the character of a Sophist?

Certainly.

But suppose a person were to ask this further question: And how about yourself? What will Protagoras make of you, if you go to see him?

He answered, with a blush upon his face (for the day was just beginning to dawn, so that I could see him): Unless this differs

in some way from the former instances, I suppose that he will make a Sophist of me.

312b

By the gods, I said, and are you not ashamed at having to appear before the Hellenes in the character of a Sophist?

Indeed, Socrates, to confess the truth, I am.

But you should not assume, Hippocrates, that the instruction of Protagoras is of this nature: may you not learn of him in the same way that you learned the arts of the grammarian, or musician, or trainer, not with the view of making any of them a profession, but only as a part of education, and because a private gentleman and freeman ought to know them?

312c

Just so, he said; and that, in my opinion, is a far truer account of the teaching of Protagoras.

I said: I wonder whether you know what you are doing?

And what am I doing?

You are going to commit your soul to the care of a man whom you call a Sophist. And yet I hardly think that you know what a Sophist is; and if not, then you do not even know to whom you are committing your soul and whether the thing to which you commit yourself be good or evil.

312d

I certainly think that I do know, he replied.

Then tell me, what do you imagine that he is?

I take him to be one who knows wise things, he replied, as his name implies.

And might you not, I said, affirm this of the painter and of the carpenter also: Do not they, too, know wise things? But suppose a person were to ask us: In what are the painters wise? We

should answer: In what relates to the making of likenesses, and similarly of other things. And if he were further to ask: What is the wisdom of the Sophist, and what is the manufacture over which he presides? — how should we answer him?

312e

How should we answer him, Socrates? What other answer could there be but that he presides over the art which makes men eloquent?

Yes, I replied, that is very likely true, but not enough; for in the answer a further question is involved: Of what does the Sophist make a man talk eloquently? The player on the lyre may be supposed to make a man talk eloquently about that which he makes him understand, that is about playing the lyre. Is not that true?

Yes.

Then about what does the Sophist make him eloquent? Must not he make him eloquent in that which he understands?

Yes, that may be assumed.

313a

And what is that which the Sophist knows and makes his disciple know?

Indeed, he said, I cannot tell.

313b

Then I proceeded to say: Well, but are you aware of the danger which you are incurring? If you were going to commit your body to some one, who might do good or harm to it, would you not carefully consider and ask the opinion of your friends and kindred, and deliberate many days as to whether you should give him the care of your body? But when the soul is in question, which you hold to be of far more value than the body, and upon the good or evil of which depends the well-being of your all, — about this you never consulted either with your

father or with your brother or with any one of us who are your companions. But no sooner does this foreigner appear, than you instantly commit your soul to his keeping. In the evening, as you say, you hear of him, and in the morning you go to him, never deliberating or taking the opinion of any one as to whether you ought to intrust yourself to him or not; — you have quite made up your mind that you will at all hazards be a pupil of Protagoras, and are prepared to expend all the property of yourself and of your friends in carrying out at any price this determination, although, as you admit, you do not know him, and have never spoken with him: and you call him a Sophist, but are manifestly ignorant of what a Sophist is; and yet you are going to commit yourself to his keeping.

313c

When he heard me say this, he replied: No other inference, Socrates, can be drawn from your words.

313d

I proceeded: Is not a Sophist, Hippocrates, one who deals wholesale or retail in the food of the soul? To me that appears to be his nature.

And what, Socrates, is the food of the soul?

314a

Surely, I said, knowledge is the food of the soul; and we must take care, my friend, that the Sophist does not deceive us when he praises what he sells, like the dealers wholesale or retail who sell the food of the body; for they praise indiscriminately all their goods, without knowing what are really beneficial or hurtful: neither do their customers know, with the exception of any trainer or physician who may happen to buy of them. In like manner those who carry about the wares of knowledge, and make the round of the cities, and sell or retail them to any customer who is in want of them, praise them all alike; though I should not wonder, O my friend, if many of them were really

ignorant of their effect upon the soul; and their customers equally ignorant, unless he who buys of them happens to be a physician of the soul. If, therefore, you have understanding of what is good and evil, you may safely buy knowledge of Protagoras or of any one; but if not, then, O my friend, pause, and do not hazard your dearest interests at a game of chance. For there is far greater peril in buying knowledge than in buying meat and drink: the one you purchase of the wholesale or retail dealer, and carry them away in other vessels, and before you receive them into the body as food, you may deposit them at home and call in any experienced friend who knows what is good to be eaten or drunken, and what not, and how much, and when; and then the danger of purchasing them is not so great. But you cannot buy the wares of knowledge and carry them away in another vessel; when you have paid for them you must receive them into the soul and go your way, either greatly harmed or greatly benefited; and therefore we should deliberate and take counsel with our elders; for we are still young — too young to determine such a matter. And now let us go, as we were intending, and hear Protagoras; and when we have heard what he has to say, we may take counsel of others; for not only is Protagoras at the house of Callias, but there is Hippias of Elis, and, if I am not mistaken, Prodicus of Ceos, and several other wise men.

314d

To this we agreed, and proceeded on our way until we reached the vestibule of the house; and there we stopped in order to conclude a discussion which had arisen between us as we were going along; and we stood talking in the vestibule until we had finished and come to an understanding. And I think that the door-keeper, who was a eunuch, and who was probably annoyed at the great inroad of the Sophists, must have heard us talking. At any rate, when we knocked at the door, and he opened and saw us, he grumbled: They are Sophists — he is not at home; and

instantly gave the door a hearty bang with both his hands. Again we knocked, and he answered without opening: Did you not hear me say that he is not at home, fellows? But, my friend, I said, you need not be alarmed; for we are not Sophists, and we are not come to see Callias, but we want to see Protagoras; and I must request you to announce us. At last, after a good deal of difficulty, the man was persuaded to open the door.

315a

When we entered, we found Protagoras taking a walk in the cloister; and next to him, on one side, were walking Callias, the son of Hipponicus, and Paralus, the son of Pericles, who, by the mother's side, is his half-brother, and Charmides, the son of Glaucon. On the other side of him were Xanthippus, the other son of Pericles, Philippides, the son of Philomelus; also Antimoerus of Mende, who of all the disciples of Protagoras is the most famous, and intends to make sophistry his profession. A train of listeners followed him; the greater part of them appeared to be foreigners, whom Protagoras had brought with him out of the various cities visited by him in his journeys, he, like Orpheus, attracting them his voice, and they following (Compare Rep.). I should mention also that there were some Athenians in the company. Nothing delighted me more than the precision of their movements: they never got into his way at all; but when he and those who were with him turned back, then the band of listeners parted regularly on either side; he was always in front, and they wheeled round and took their places behind him in perfect order.

315c

After him, as Homer says (Od.), 'I lifted up my eyes and saw' Hippias the Elean sitting in the opposite cloister on a chair of state, and around him were seated on benches Eryximachus, the son of Acumenus, and Phaedrus the Myrrhinusian, and Andron the son of Androtion, and there were strangers whom he had brought with him from his native city of Elis, and some others:

they were putting to Hippias certain physical and astronomical questions, and he, ex cathedra, was determining their several questions to them, and discoursing of them.

315d

Also, 'my eyes beheld Tantalus (Od.);' for Prodicus the Cean was at Athens: he had been lodged in a room which, in the days of Hipponicus, was a storehouse; but, as the house was full, Callias had cleared this out and made the room into a guest-chamber. Now Prodicus was still in bed, wrapped up in sheepskins and bedclothes, of which there seemed to be a great heap; and there was sitting by him on the couches near, Pausanias of the deme of Cerameis, and with Pausanias was a youth quite young, who is certainly remarkable for his good looks, and, if I am not mistaken, is also of a fair and gentle nature. I thought that I heard him called Agathon, and my suspicion is that he is the beloved of Pausanias. There was this youth, and also there were the two Adeimantuses, one the son of Cepis, and the other of Leucolophides, and some others. I was very anxious to hear what Prodicus was saying, for he seems to me to be an all-wise and inspired man; but I was not able to get into the inner circle, and his fine deep voice made an echo in the room which rendered his words inaudible.

316b

No sooner had we entered than there followed us Alcibiades the beautiful, as you say, and I believe you; and also Critias the son of Callaeschrus.

On entering we stopped a little, in order to look about us, and then walked up to Protagoras, and I said: Protagoras, my friend Hippocrates and I have come to see you.

316c

Do you wish, he said, to speak with me alone, or in the presence of the company?

Whichever you please, I said; you shall determine when you have heard the purpose of our visit.

And what is your purpose? he said.

316d

I must explain, I said, that my friend Hippocrates is a native Athenian; he is the son of Apollodorus, and of a great and prosperous house, and he is himself in natural ability quite a match for anybody of his own age. I believe that he aspires to political eminence; and this he thinks that conversation with you is most likely to procure for him. And now you can determine whether you would wish to speak to him of your teaching alone or in the presence of the company.

316e

Thank you, Socrates, for your consideration of me. For certainly a stranger finding his way into great cities, and persuading the flower of the youth in them to leave company of their kinsmen or any other acquaintances, old or young, and live with him, under the idea that they will be improved by his conversation, ought to be very cautious; great jealousies are aroused by his proceedings, and he is the subject of many enmities and conspiracies. Now the art of the Sophist is, as I believe, of great antiquity; but in ancient times those who practised it, fearing this odium, veiled and disguised themselves under various names, some under that of poets, as Homer, Hesiod, and Simonides, some, of hierophants and prophets, as Orpheus and Musaeus, and some, as I observe, even under the name of gymnastic-masters, like Iccus of Tarentum, or the more recently celebrated Herodicus, now of Selymbria and formerly of Megara, who is a first-rate Sophist. Your own Agathocles pretended to be a musician, but was really an eminent Sophist; also Pythocleides the Cean; and there were many others; and all of them, as I was saying, adopted these arts as veils or disguises because they were afraid of the odium which they would incur.

But that is not my way, for I do not believe that they effected their purpose, which was to deceive the government, who were not blinded by them; and as to the people, they have no understanding, and only repeat what their rulers are pleased to tell them. Now to run away, and to be caught in running away, is the very height of folly, and also greatly increases the exasperation of mankind; for they regard him who runs away as a rogue, in addition to any other objections which they have to him; and therefore I take an entirely opposite course, and acknowledge myself to be a Sophist and instructor of mankind; such an open acknowledgement appears to me to be a better sort of caution than concealment. Nor do I neglect other precautions, and therefore I hope, as I may say, by the favour of heaven that no harm will come of the acknowledgment that I am a Sophist. And I have been now many years in the profession — for all my years when added up are many: there is no one here present of whom I might not be the father. Wherefore I should much prefer conversing with you, if you want to speak with me, in the presence of the company.

317e

As I suspected that he would like to have a little display and glorification in the presence of Prodicus and Hippias, and would gladly show us to them in the light of his admirers, I said: But why should we not summon Prodicus and Hippias and their friends to hear us?

Very good, he said.

Suppose, said Callias, that we hold a council in which you may sit and discuss. — This was agreed upon, and great delight was felt at the prospect of hearing wise men talk; we ourselves took the chairs and benches, and arranged them by Hippias, where the other benches had been already placed. Meanwhile Callias and Alcibiades got Prodicus out of bed and brought in him and his companions.

318a

When we were all seated, Protagoras said: Now that the company are assembled, Socrates, tell me about the young man of whom you were just now speaking.

I replied: I will begin again at the same point, Protagoras, and tell you once more the purport of my visit: this is my friend Hippocrates, who is desirous of making your acquaintance; he would like to know what will happen to him if he associates with you. I have no more to say.

318b

Protagoras answered: Young man, if you associate with me, on the very first day you will return home a better man than you came, and better on the second day than on the first, and better every day than you were on the day before.

318c

When I heard this, I said: Protagoras, I do not at all wonder at hearing you say this; even at your age, and with all your wisdom, if any one were to teach you what you did not know before, you would become better no doubt: but please to answer in a different way — I will explain how by an example. Let me suppose that Hippocrates, instead of desiring your acquaintance, wished to become acquainted with the young man Zeuxippus of Heraclea, who has lately been in Athens, and he had come to him as he has come to you, and had heard him say, as he has heard you say, that every day he would grow and become better if he associated with him: and then suppose that he were to ask him, ‘In what shall I become better, and in what shall I grow?’ — Zeuxippus would answer, ‘In painting.’ And suppose that he went to Orthagoras the Theban, and heard him say the same thing, and asked him, ‘In what shall I become better day by day?’ he would reply, ‘In flute-playing.’ Now I want you to make the same sort of answer to this young man and to me, who am asking questions on his account. When you say that on the first day on which he associates with you he will

return home a better man, and on every day will grow in like manner, — in what, Protagoras, will he be better? and about what?

318e

When Protagoras heard me say this, he replied: You ask questions fairly, and I like to answer a question which is fairly put. If Hippocrates comes to me he will not experience the sort of drudgery with which other Sophists are in the habit of insulting their pupils; who, when they have just escaped from the arts, are taken and driven back into them by these teachers, and made to learn calculation, and astronomy, and geometry, and music (he gave a look at Hippias as he said this); but if he comes to me, he will learn that which he comes to learn. And this is prudence in affairs private as well as public; he will learn to order his own house in the best manner, and he will be able to speak and act for the best in the affairs of the state.

319a

Do I understand you, I said; and is your meaning that you teach the art of politics, and that you promise to make men good citizens?

319b

That, Socrates, is exactly the profession which I make.

319d

Then, I said, you do indeed possess a noble art, if there is no mistake about this; for I will freely confess to you, Protagoras, that I have a doubt whether this art is capable of being taught, and yet I know not how to disbelieve your assertion. And I ought to tell you why I am of opinion that this art cannot be taught or communicated by man to man. I say that the Athenians are an understanding people, and indeed they are esteemed to be such by the other Hellenes. Now I observe that when we are met together in the assembly, and the matter in hand relates to building, the builders are summoned as advisers; when the question is one of ship-building, then the

ship-wrights; and the like of other arts which they think capable of being taught and learned. And if some person offers to give them advice who is not supposed by them to have any skill in the art, even though he be good-looking, and rich, and noble, they will not listen to him, but laugh and hoot at him, until either he is clamoured down and retires of himself; or if he persist, he is dragged away or put out by the constables at the command of the prytanes. This is their way of behaving about professors of the arts. But when the question is an affair of state, then everybody is free to have a say — carpenter, tinker, cobbler, sailor, passenger; rich and poor, high and low — any one who likes gets up, and no one reproaches him, as in the former case, with not having learned, and having no teacher, and yet giving advice; evidently because they are under the impression that this sort of knowledge cannot be taught. And not only is this true of the state, but of individuals; the best and wisest of our citizens are unable to impart their political wisdom to others: as for example, Pericles, the father of these young men, who gave them excellent instruction in all that could be learned from masters, in his own department of politics neither taught them, nor gave them teachers; but they were allowed to wander at their own free will in a sort of hope that they would light upon virtue of their own accord. Or take another example: there was Cleinias the younger brother of our friend Alcibiades, of whom this very same Pericles was the guardian; and he being in fact under the apprehension that Cleinias would be corrupted by Alcibiades, took him away, and placed him in the house of Aripbron to be educated; but before six months had elapsed, Aripbron sent him back, not knowing what to do with him. And I could mention numberless other instances of persons who were good themselves, and never yet made any one else good, whether friend or stranger. Now I, Protagoras, having these examples before me, am inclined to think that virtue cannot be taught. But then again, when I listen

to your words, I waver; and am disposed to think that there must be something in what you say, because I know that you have great experience, and learning, and invention. And I wish that you would, if possible, show me a little more clearly that virtue can be taught. Will you be so good?

320c

That I will, Socrates, and gladly. But what would you like? Shall I, as an elder, speak to you as younger men in an apologue or myth, or shall I argue out the question?

To this several of the company answered that he should choose for himself.

Well, then, he said, I think that the myth will be more interesting.

321b

Once upon a time there were gods only, and no mortal creatures. But when the time came that these also should be created, the gods fashioned them out of earth and fire and various mixtures of both elements in the interior of the earth; and when they were about to bring them into the light of day, they ordered Prometheus and Epimetheus to equip them, and to distribute to them severally their proper qualities. Epimetheus said to Prometheus: 'Let me distribute, and do you inspect.' This was agreed, and Epimetheus made the distribution. There were some to whom he gave strength without swiftness, while he equipped the weaker with swiftness; some he armed, and others he left unarmed; and devised for the latter some other means of preservation, making some large, and having their size as a protection, and others small, whose nature was to fly in the air or burrow in the ground; this was to be their way of escape. Thus did he compensate them with the view of preventing any race from becoming extinct. And when he had provided against their destruction by one another, he contrived also a means of protecting them against the seasons of heaven; clothing them

with close hair and thick skins sufficient to defend them against the winter cold and able to resist the summer heat, so that they might have a natural bed of their own when they wanted to rest; also he furnished them with hoofs and hair and hard and callous skins under their feet. Then he gave them varieties of food, — herb of the soil to some, to others fruits of trees, and to others roots, and to some again he gave other animals as food. And some he made to have few young ones, while those who were their prey were very prolific; and in this manner the race was preserved. Thus did Epimetheus, who, not being very wise, forgot that he had distributed among the brute animals all the qualities which he had to give, — and when he came to man, who was still unprovided, he was terribly perplexed. Now while he was in this perplexity, Prometheus came to inspect the distribution, and he found that the other animals were suitably furnished, but that man alone was naked and shoeless, and had neither bed nor arms of defence. The appointed hour was approaching when man in his turn was to go forth into the light of day; and Prometheus, not knowing how he could devise his salvation, stole the mechanical arts of Hephaestus and Athene, and fire with them (they could neither have been acquired nor used without fire), and gave them to man. Thus man had the wisdom necessary to the support of life, but political wisdom he had not; for that was in the keeping of Zeus, and the power of Prometheus did not extend to entering into the citadel of heaven, where Zeus dwelt, who moreover had terrible sentinels; but he did enter by stealth into the common workshop of Athene and Hephaestus, in which they used to practise their favourite arts, and carried off Hephaestus' art of working by fire, and also the art of Athene, and gave them to man. And in this way man was supplied with the means of life. But Prometheus is said to have been afterwards prosecuted for theft, owing to the blunder of Epimetheus.

Now man, having a share of the divine attributes, was at first the only one of the animals who had any gods, because he alone was of their kindred; and he would raise altars and images of them. He was not long in inventing articulate speech and names; and he also constructed houses and clothes and shoes and beds, and drew sustenance from the earth. Thus provided, mankind at first lived dispersed, and there were no cities. But the consequence was that they were destroyed by the wild beasts, for they were utterly weak in comparison of them, and their art was only sufficient to provide them with the means of life, and did not enable them to carry on war against the animals: food they had, but not as yet the art of government, of which the art of war is a part. After a while the desire of self-preservation gathered them into cities; but when they were gathered together, having no art of government, they evil intreated one another, and were again in process of dispersion and destruction. Zeus feared that the entire race would be exterminated, and so he sent Hermes to them, bearing reverence and justice to be the ordering principles of cities and the bonds of friendship and conciliation. Hermes asked Zeus how he should impart justice and reverence among men: — Should he distribute them as the arts are distributed; that is to say, to a favoured few only, one skilled individual having enough of medicine or of any other art for many unskilled ones? ‘Shall this be the manner in which I am to distribute justice and reverence among men, or shall I give them to all?’ ‘To all,’ said Zeus; ‘I should like them all to have a share; for cities cannot exist, if a few only share in the virtues, as in the arts. And further, make a law by my order, that he who has no part in reverence and justice shall be put to death, for he is a plague of the state.’

322e

And this is the reason, Socrates, why the Athenians and mankind in general, when the question relates to carpentering

or any other mechanical art, allow but a few to share in their deliberations; and when any one else interferes, then, as you say, they object, if he be not of the favoured few; which, as I reply, is very natural. But when they meet to deliberate about political virtue, which proceeds only by way of justice and wisdom, they are patient enough of any man who speaks of them, as is also natural, because they think that every man ought to share in this sort of virtue, and that states could not exist if this were otherwise. I have explained to you, Socrates, the reason of this phenomenon.

323b

And that you may not suppose yourself to be deceived in thinking that all men regard every man as having a share of justice or honesty and of every other political virtue, let me give you a further proof, which is this. In other cases, as you are aware, if a man says that he is a good flute-player, or skilful in any other art in which he has no skill, people either laugh at him or are angry with him, and his relations think that he is mad and go and admonish him; but when honesty is in question, or some other political virtue, even if they know that he is dishonest, yet, if the man comes publicly forward and tells the truth about his dishonesty, then, what in the other case was held by them to be good sense, they now deem to be madness. They say that all men ought to profess honesty whether they are honest or not, and that a man is out of his mind who says anything else. Their notion is, that a man must have some degree of honesty; and that if he has none at all he ought not to be in the world.

323e

I have been showing that they are right in admitting every man as a counsellor about this sort of virtue, as they are of opinion that every man is a partaker of it. And I will now endeavour to show further that they do not conceive this virtue to be given by nature, or to grow spontaneously, but to be a thing which

may be taught; and which comes to a man by taking pains. No one would instruct, no one would rebuke, or be angry with those whose calamities they suppose to be due to nature or chance; they do not try to punish or to prevent them from being what they are; they do but pity them. Who is so foolish as to chastise or instruct the ugly, or the diminutive, or the feeble? And for this reason. Because he knows that good and evil of this kind is the work of nature and of chance; whereas if a man is wanting in those good qualities which are attained by study and exercise and teaching, and has only the contrary evil qualities, other men are angry with him, and punish and reprove him — of these evil qualities one is impiety, another injustice, and they may be described generally as the very opposite of political virtue. In such cases any man will be angry with another, and reprimand him, — clearly because he thinks that by study and learning, the virtue in which the other is deficient may be acquired. If you will think, Socrates, of the nature of punishment, you will see at once that in the opinion of mankind virtue may be acquired; no one punishes the evil-doer under the notion, or for the reason, that he has done wrong, — only the unreasonable fury of a beast acts in that manner. But he who desires to inflict rational punishment does not retaliate for a past wrong which cannot be undone; he has regard to the future, and is desirous that the man who is punished, and he who sees him punished, may be deterred from doing wrong again. He punishes for the sake of prevention, thereby clearly implying that virtue is capable of being taught. This is the notion of all who retaliate upon others either privately or publicly. And the Athenians, too, your own citizens, like other men, punish and take vengeance on all whom they regard as evil doers; and hence, we may infer them to be of the number of those who think that virtue may be acquired and taught. Thus far, Socrates, I have shown you clearly enough, if I am not mistaken, that your countrymen are right in admitting the

tinker and the cobbler to advise about politics, and also that they deem virtue to be capable of being taught and acquired.

324e

There yet remains one difficulty which has been raised by you about the sons of good men. What is the reason why good men teach their sons the knowledge which is gained from teachers, and make them wise in that, but do nothing towards improving them in the virtues which distinguish themselves? And here, Socrates, I will leave the apologue and resume the argument. Please to consider: Is there or is there not some one quality of which all the citizens must be partakers, if there is to be a city at all? In the answer to this question is contained the only solution of your difficulty; there is no other. For if there be any such quality, and this quality or unity is not the art of the carpenter, or the smith, or the potter, but justice and temperance and holiness and, in a word, manly virtue — if this is the quality of which all men must be partakers, and which is the very condition of their learning or doing anything else, and if he who is wanting in this, whether he be a child only or a grown-up man or woman, must be taught and punished, until by punishment he becomes better, and he who rebels against instruction and punishment is either exiled or condemned to death under the idea that he is incurable — if what I am saying be true, good men have their sons taught other things and not this, do consider how extraordinary their conduct would appear to be. For we have shown that they think virtue capable of being taught and cultivated both in private and public; and, notwithstanding, they have their sons taught lesser matters, ignorance of which does not involve the punishment of death: but greater things, of which the ignorance may cause death and exile to those who have no training or knowledge of them — aye, and confiscation as well as death, and, in a word, may be the ruin of families — those things, I say, they are supposed not to teach them, — not to take the utmost care that they should

learn. How improbable is this, Socrates!

325d

Education and admonition commence in the first years of childhood, and last to the very end of life. Mother and nurse and father and tutor are vying with one another about the improvement of the child as soon as ever he is able to understand what is being said to him: he cannot say or do anything without their setting forth to him that this is just and that is unjust; this is honourable, that is dishonourable; this is holy, that is unholy; do this and abstain from that. And if he obeys, well and good; if not, he is straightened by threats and blows, like a piece of bent or warped wood. At a later stage they send him to teachers, and enjoin them to see to his manners even more than to his reading and music; and the teachers do as they are desired. And when the boy has learned his letters and is beginning to understand what is written, as before he understood only what was spoken, they put into his hands the works of great poets, which he reads sitting on a bench at school; in these are contained many admonitions, and many tales, and praises, and encomia of ancient famous men, which he is required to learn by heart, in order that he may imitate or emulate them and desire to become like them. Then, again, the teachers of the lyre take similar care that their young disciple is temperate and gets into no mischief; and when they have taught him the use of the lyre, they introduce him to the poems of other excellent poets, who are the lyric poets; and these they set to music, and make their harmonies and rhythms quite familiar to the children's souls, in order that they may learn to be more gentle, and harmonious, and rhythmical, and so more fitted for speech and action; for the life of man in every part has need of harmony and rhythm. Then they send them to the master of gymnastic, in order that their bodies may better minister to the virtuous mind, and that they may not be compelled through bodily weakness to play the coward in war

or on any other occasion. This is what is done by those who have the means, and those who have the means are the rich; their children begin to go to school soonest and leave off latest. When they have done with masters, the state again compels them to learn the laws, and live after the pattern which they furnish, and not after their own fancies; and just as in learning to write, the writing-master first draws lines with a style for the use of the young beginner, and gives him the tablet and makes him follow the lines, so the city draws the laws, which were the invention of good lawgivers living in the olden time; these are given to the young man, in order to guide him in his conduct whether he is commanding or obeying; and he who transgresses them is to be corrected, or, in other words, called to account, which is a term used not only in your country, but also in many others, seeing that justice calls men to account. Now when there is all this care about virtue private and public, why, Socrates, do you still wonder and doubt whether virtue can be taught? Cease to wonder, for the opposite would be far more surprising.

327c

But why then do the sons of good fathers often turn out ill? There is nothing very wonderful in this; for, as I have been saying, the existence of a state implies that virtue is not any man's private possession. If so — and nothing can be truer — then I will further ask you to imagine, as an illustration, some other pursuit or branch of knowledge which may be assumed equally to be the condition of the existence of a state. Suppose that there could be no state unless we were all flute-players, as far as each had the capacity, and everybody was freely teaching everybody the art, both in private and public, and reproving the bad player as freely and openly as every man now teaches justice and the laws, not concealing them as he would conceal the other arts, but imparting them — for all of us have a mutual interest in the justice and virtue of one another, and this is the

reason why every one is so ready to teach justice and the laws; — suppose, I say, that there were the same readiness and liberality among us in teaching one another flute-playing, do you imagine, Socrates, that the sons of good flute-players would be more likely to be good than the sons of bad ones? I think not. Would not their sons grow up to be distinguished or undistinguished according to their own natural capacities as flute-players, and the son of a good player would often turn out to be a bad one, and the son of a bad player to be a good one, all flute-players would be good enough in comparison of those who were ignorant and unacquainted with the art of flute-playing? In like manner I would have you consider that he who appears to you to be the worst of those who have been brought up in laws and humanities, would appear to be a just man and a master of justice if he were to be compared with men who had no education, or courts of justice, or laws, or any restraints upon them which compelled them to practise virtue — with the savages, for example, whom the poet Pherecrates exhibited on the stage at the last year's Lenaean festival. If you were living among men such as the man-haters in his Chorus, you would be only too glad to meet with Eurybates and Phrynondas, and you would sorrowfully long to revisit the rascality of this part of the world. You, Socrates, are discontented, and why? Because all men are teachers of virtue, each one according to his ability; and you say Where are the teachers? You might as well ask, Who teaches Greek? For of that too there will not be any teachers found. Or you might ask, Who is to teach the sons of our artisans this same art which they have learned of their fathers? He and his fellow-workmen have taught them to the best of their ability, — but who will carry them further in their arts? And you would certainly have a difficulty, Socrates, in finding a teacher of them; but there would be no difficulty in finding a teacher of those who are wholly ignorant. And this is true of virtue or of anything else; if a man is better able than we

are to promote virtue ever so little, we must be content with the result. A teacher of this sort I believe myself to be, and above all other men to have the knowledge which makes a man noble and good; and I give my pupils their money's-worth, and even more, as they themselves confess. And therefore I have introduced the following mode of payment: — When a man has been my pupil, if he likes he pays my price, but there is no compulsion; and if he does not like, he has only to go into a temple and take an oath of the value of the instructions, and he pays no more than he declares to be their value.

328d

Such is my Apologue, Socrates, and such is the argument by which I endeavour to show that virtue may be taught, and that this is the opinion of the Athenians. And I have also attempted to show that you are not to wonder at good fathers having bad sons, or at good sons having bad fathers, of which the sons of Polycleitus afford an example, who are the companions of our friends here, Paralus and Xanthippus, but are nothing in comparison with their father; and this is true of the sons of many other artists. As yet I ought not to say the same of Paralus and Xanthippus themselves, for they are young and there is still hope of them.

328e

Protagoras ended, and in my ear 'So charming left his voice, that I the while Thought him still speaking; still stood fixed to hear (Borrowed by Milton, "Paradise Lost").'

329b

At length, when the truth dawned upon me, that he had really finished, not without difficulty I began to collect myself, and looking at Hippocrates, I said to him: O son of Apollodorus, how deeply grateful I am to you for having brought me hither; I would not have missed the speech of Protagoras for a great deal. For I used to imagine that no human care could make men good; but I know better now. Yet I have still one very small difficulty

which I am sure that Protagoras will easily explain, as he has already explained so much. If a man were to go and consult Pericles or any of our great speakers about these matters, he might perhaps hear as fine a discourse; but then when one has a question to ask of any of them, like books, they can neither answer nor ask; and if any one challenges the least particular of their speech, they go ringing on in a long harangue, like brazen pots, which when they are struck continue to sound unless some one puts his hand upon them; whereas our friend Protagoras can not only make a good speech, as he has already shown, but when he is asked a question he can answer briefly; and when he asks he will wait and hear the answer; and this is a very rare gift. Now I, Protagoras, want to ask of you a little question, which if you will only answer, I shall be quite satisfied. You were saying that virtue can be taught; — that I will take upon your authority, and there is no one to whom I am more ready to trust. But I marvel at one thing about which I should like to have my mind set at rest. You were speaking of Zeus sending justice and reverence to men; and several times while you were speaking, justice, and temperance, and holiness, and all these qualities, were described by you as if together they made up virtue. Now I want you to tell me truly whether virtue is one whole, of which justice and temperance and holiness are parts; or whether all these are only the names of one and the same thing: that is the doubt which still lingers in my mind.

329c

There is no difficulty, Socrates, in answering that the qualities of which you are speaking are the parts of virtue which is one.

329d

And are they parts, I said, in the same sense in which mouth, nose, and eyes, and ears, are the parts of a face; or are they like the parts of gold, which differ from the whole and from one another only in being larger or smaller?

329e

I should say that they differed, Socrates, in the first way; they are related to one another as the parts of a face are related to the whole face.

And do men have some one part and some another part of virtue? Or if a man has one part, must he also have all the others?

By no means, he said; for many a man is brave and not just, or just and not wise.

You would not deny, then, that courage and wisdom are also parts of virtue?

330a

Most undoubtedly they are, he answered; and wisdom is the noblest of the parts.

And they are all different from one another? I said.

Yes.

330b

And has each of them a distinct function like the parts of the face; — the eye, for example, is not like the ear, and has not the same functions; and the other parts are none of them like one another, either in their functions, or in any other way? I want to know whether the comparison holds concerning the parts of virtue. Do they also differ from one another in themselves and in their functions? For that is clearly what the simile would imply.

Yes, Socrates, you are right in supposing that they differ.

Then, I said, no other part of virtue is like knowledge, or like justice, or like courage, or like temperance, or like holiness?

No, he answered.

330c

Well then, I said, suppose that you and I enquire into their natures. And first, you would agree with me that justice is of the nature of a thing, would you not? That is my opinion: would it not be yours also?

Mine also, he said.

And suppose that some one were to ask us, saying, 'O Protagoras, and you, Socrates, what about this thing which you were calling justice, is it just or unjust?' — and I were to answer, just: would you vote with me or against me?

With you, he said.

330d

Thereupon I should answer to him who asked me, that justice is of the nature of the just: would not you?

Yes, he said.

And suppose that he went on to say: 'Well now, is there also such a thing as holiness?' — we should answer, 'Yes,' if I am not mistaken?

Yes, he said.

Which you would also acknowledge to be a thing — should we not say so?

He assented.

330e

'And is this a sort of thing which is of the nature of the holy, or of the nature of the unholy?' I should be angry at his putting such a question, and should say, 'Peace, man; nothing can be holy if holiness is not holy.' What would you say? Would you not answer in the same way?

Certainly, he said.

331a

And then after this suppose that he came and asked us, 'What were you saying just now? Perhaps I may not have heard you rightly, but you seemed to me to be saying that the parts of virtue were not the same as one another.' I should reply, 'You certainly heard that said, but not, as you imagine, by me; for I only asked the question; Protagoras gave the answer.' And suppose that he turned to you and said, 'Is this true, Protagoras? and do you maintain that one part of virtue is unlike another, and is this your position?' — how would you answer him?

I could not help acknowledging the truth of what he said, Socrates.

331b

Well then, Protagoras, we will assume this; and now supposing that he proceeded to say further, 'Then holiness is not of the nature of justice, nor justice of the nature of holiness, but of the nature of unholiness; and holiness is of the nature of the not just, and therefore of the unjust, and the unjust is the unholy': how shall we answer him? I should certainly answer him on my own behalf that justice is holy, and that holiness is just; and I would say in like manner on your behalf also, if you would allow me, that justice is either the same with holiness, or very nearly the same; and above all I would assert that justice is like holiness and holiness is like justice; and I wish that you would tell me whether I may be permitted to give this answer on your behalf, and whether you would agree with me.

331c

He replied, I cannot simply agree, Socrates, to the proposition that justice is holy and that holiness is just, for there appears to me to be a difference between them. But what matter? if you please I please; and let us assume, if you will I, that justice is holy, and that holiness is just.

331d

Pardon me, I replied; I do not want this 'if you wish' or 'if you will' sort of conclusion to be proven, but I want you and me to be proven: I mean to say that the conclusion will be best proven if there be no 'if.'

331e

Well, he said, I admit that justice bears a resemblance to holiness, for there is always some point of view in which everything is like every other thing; white is in a certain way like black, and hard is like soft, and the most extreme opposites have some qualities in common; even the parts of the face which, as we were saying before, are distinct and have different functions, are still in a certain point of view similar, and one of them is like another of them. And you may prove that they are like one another on the same principle that all things are like one another; and yet things which are like in some particular ought not to be called alike, nor things which are unlike in some particular, however slight, unlike.

And do you think, I said in a tone of surprise, that justice and holiness have but a small degree of likeness?

332a

Certainly not; any more than I agree with what I understand to be your view.

Well, I said, as you appear to have a difficulty about this, let us take another of the examples which you mentioned instead. Do you admit the existence of folly?

I do.

And is not wisdom the very opposite of folly?

That is true, he said.

And when men act rightly and advantageously they seem to you to be temperate?

Yes, he said.

And temperance makes them temperate?

Certainly.

332b

And they who do not act rightly act foolishly, and in acting thus are not temperate?

I agree, he said.

Then to act foolishly is the opposite of acting temperately?

He assented.

And foolish actions are done by folly, and temperate actions by temperance?

He agreed.

And that is done strongly which is done by strength, and that which is weakly done, by weakness?

He assented.

And that which is done with swiftness is done swiftly, and that which is done with slowness, slowly?

He assented again.

332c

And that which is done in the same manner, is done by the same; and that which is done in an opposite manner by the opposite?

He agreed.

Once more, I said, is there anything beautiful?

Yes.

To which the only opposite is the ugly?

There is no other.

And is there anything good?

There is.

To which the only opposite is the evil?

There is no other.

And there is the acute in sound?

True.

To which the only opposite is the grave?

There is no other, he said, but that.

Then every opposite has one opposite only and no more?

He assented.

Then now, I said, let us recapitulate our admissions. First of all we admitted that everything has one opposite and not more than one?

We did so.

And we admitted also that what was done in opposite ways was done by opposites?

332d

Yes.

And that which was done foolishly, as we further admitted, was done in the opposite way to that which was done temperately?

Yes.

And that which was done temperately was done by temperance, and that which was done foolishly by folly?

He agreed.

And that which is done in opposite ways is done by opposites?

332e

Yes.

And one thing is done by temperance, and quite another thing by folly?

Yes.

And in opposite ways?

Certainly.

And therefore by opposites: — then folly is the opposite of temperance?

Clearly.

And do you remember that folly has already been acknowledged by us to be the opposite of wisdom?

He assented.

And we said that everything has only one opposite?

Yes.

333a

Then, Protagoras, which of the two assertions shall we renounce? One says that everything has but one opposite; the other that wisdom is distinct from temperance, and that both of them are parts of virtue; and that they are not only distinct, but dissimilar, both in themselves and in their functions, like the parts of a face. Which of these two assertions shall we renounce? For both of them together are certainly not in harmony; they do not accord or agree: for how can they be said to agree if everything is assumed to have only one opposite and not more than one, and yet folly, which is one, has clearly the two opposites — wisdom and temperance? Is not that true, Protagoras? What else would you say?

He assented, but with great reluctance.

333b

Then temperance and wisdom are the same, as before justice and holiness appeared to us to be nearly the same. And now,

Protagoras, I said, we must finish the enquiry, and not faint. Do you think that an unjust man can be temperate in his injustice?

I should be ashamed, Socrates, he said, to acknowledge this, which nevertheless many may be found to assert.

And shall I argue with them or with you? I replied.

333c

I would rather, he said, that you should argue with the many first, if you will.

Whichever you please, if you will only answer me and say whether you are of their opinion or not. My object is to test the validity of the argument; and yet the result may be that I who ask and you who answer may both be put on our trial.

Protagoras at first made a show of refusing, as he said that the argument was not encouraging; at length, he consented to answer.

Now then, I said, begin at the beginning and answer me. You think that some men are temperate, and yet unjust?

Yes, he said; let that be admitted.

And temperance is good sense?

Yes.

And good sense is good counsel in doing injustice?

333d

Granted.

If they succeed, I said, or if they do not succeed?

If they succeed.

And you would admit the existence of goods?

Yes.

And is the good that which is expedient for man?

Yes, indeed, he said: and there are some things which may be inexpedient, and yet I call them good.

I thought that Protagoras was getting ruffled and excited; he seemed to be setting himself in an attitude of war. Seeing this, I minded my business, and gently said: — When you say, Protagoras, that things inexpedient are good, do you mean inexpedient for man only, or inexpedient altogether? and do you call the latter good?

334b

Certainly not the last, he replied; for I know of many things — meats, drinks, medicines, and ten thousand other things, which are inexpedient for man, and some which are expedient; and some which are neither expedient nor inexpedient for man, but only for horses; and some for oxen only, and some for dogs; and some for no animals, but only for trees; and some for the roots of trees and not for their branches, as for example, manure, which is a good thing when laid about the roots of a tree, but utterly destructive if thrown upon the shoots and young branches; or I may instance olive oil, which is mischievous to all plants, and generally most injurious to the hair of every animal with the exception of man, but beneficial to human hair and to the human body generally; and even in this application (so various and changeable is the nature of the benefit), that which is the greatest good to the outward parts of a man, is a very great evil to his inward parts: and for this reason physicians always forbid their patients the use of oil in their food, except in very small quantities, just enough to extinguish the disagreeable sensation of smell in meats and sauces.

334c

When he had given this answer, the company cheered him. And I said: Protagoras, I have a wretched memory, and when any one makes a long speech to me I never remember what he is talking about. As then, if I had been deaf, and you were going to

converse with me, you would have had to raise your voice; so now, having such a bad memory, I will ask you to cut your answers shorter, if you would take me with you.

334d

What do you mean? he said: how am I to shorten my answers? shall I make them too short?

Certainly not, I said.

But short enough?

Yes, I said.

Shall I answer what appears to me to be short enough, or what appears to you to be short enough?

I have heard, I said, that you can speak and teach others to speak about the same things at such length that words never seemed to fail, or with such brevity that no one could use fewer of them. Please therefore, if you talk with me, to adopt the latter or more compendious method.

335a

Socrates, he replied, many a battle of words have I fought, and if I had followed the method of disputation which my adversaries desired, as you want me to do, I should have been no better than another, and the name of Protagoras would have been nowhere.

335b

I saw that he was not satisfied with his previous answers, and that he would not play the part of answerer any more if he could help; and I considered that there was no call upon me to continue the conversation; so I said: Protagoras, I do not wish to force the conversation upon you if you had rather not, but when you are willing to argue with me in such a way that I can follow you, then I will argue with you. Now you, as is said of you by others and as you say of yourself, are able to have discussions in shorter forms of speech as well as in longer, for you are a master of wisdom; but I cannot manage these long speeches: I

only wish that I could. You, on the other hand, who are capable of either, ought to speak shorter as I beg you, and then we might converse. But I see that you are disinclined, and as I have an engagement which will prevent my staying to hear you at greater length (for I have to be in another place), I will depart; although I should have liked to have heard you.

335c

Thus I spoke, and was rising from my seat, when Callias seized me by the right hand, and in his left hand caught hold of this old cloak of mine. He said: We cannot let you go, Socrates, for if you leave us there will be an end of our discussions: I must therefore beg you to remain, as there is nothing in the world that I should like better than to hear you and Protagoras discourse. Do not deny the company this pleasure.

335d

Now I had got up, and was in the act of departure. Son of Hipponicus, I replied, I have always admired, and do now heartily applaud and love your philosophical spirit, and I would gladly comply with your request, if I could. But the truth is that I cannot. And what you ask is as great an impossibility to me, as if you bade me run a race with Crison of Himera, when in his prime, or with some one of the long or day course runners. To such a request I should reply that I would fain ask the same of my own legs; but they refuse to comply. And therefore if you want to see Crison and me in the same stadium, you must bid him slacken his speed to mine, for I cannot run quickly, and he can run slowly. And in like manner if you want to hear me and Protagoras discoursing, you must ask him to shorten his answers, and keep to the point, as he did at first; if not, how can there be any discussion? For discussion is one thing, and making an oration is quite another, in my humble opinion.

335e

But you see, Socrates, said Callias, that Protagoras may fairly claim to speak in his own way, just as you claim to speak in

yours.

336b

Here Alcibiades interposed, and said: That, Callias, is not a true statement of the case. For our friend Socrates admits that he cannot make a speech — in this he yields the palm to Protagoras; but I should be greatly surprised if he yielded to any living man in the power of holding and apprehending an argument. Now if Protagoras will make a similar admission, and confess that he is inferior to Socrates in argumentative skill, that is enough for Socrates; but if he claims a superiority in argument as well, let him ask and answer — not, when a question is asked, slipping away from the point, and instead of answering, making a speech at such length that most of his hearers forget the question at issue (not that Socrates is likely to forget — I will be bound for that, although he may pretend in fun that he has a bad memory). And Socrates appears to me to be more in the right than Protagoras; that is my view, and every man ought to say what he thinks.

336c

When Alcibiades had done speaking, some one — Critias, I believe — went on to say: O Prodicus and Hippias, Callias appears to me to be a partisan of Protagoras; and this led Alcibiades, who loves opposition, to take the other side. But we should not be partisans either of Socrates or of Protagoras; let us rather unite in entreating both of them not to break up the discussion.

337b

Prodicus added: That, Critias, seems to me to be well said, for those who are present at such discussions ought to be impartial hearers of both the speakers; remembering, however, that impartiality is not the same as equality, for both sides should be impartially heard, and yet an equal meed should not be assigned to both of them; but to the wiser a higher meed should be given, and a lower to the less wise. And I as well as Critias would beg

you, Protagoras and Socrates, to grant our request, which is, that you will argue with one another and not wrangle; for friends argue with friends out of good-will, but only adversaries and enemies wrangle. And then our meeting will be delightful; for in this way you, who are the speakers, will be most likely to win esteem, and not praise only, among us who are your audience; for esteem is a sincere conviction of the hearers' souls, but praise is often an insincere expression of men uttering falsehoods contrary to their conviction. And thus we who are the hearers will be gratified and not pleased; for gratification is of the mind when receiving wisdom and knowledge, but pleasure is of the body when eating or experiencing some other bodily delight. Thus spoke Prodicus, and many of the company applauded his words.

337d

Hippias the sage spoke next. He said: All of you who are here present I reckon to be kinsmen and friends and fellow-citizens, by nature and not by law; for by nature like is akin to like, whereas law is the tyrant of mankind, and often compels us to do many things which are against nature. How great would be the disgrace then, if we, who know the nature of things, and are the wisest of the Hellenes, and as such are met together in this city, which is the metropolis of wisdom, and in the greatest and most glorious house of this city, should have nothing to show worthy of this height of dignity, but should only quarrel with one another like the meanest of mankind! I do pray and advise you, Protagoras, and you, Socrates, to agree upon a compromise. Let us be your peacemakers. And do not you, Socrates, aim at this precise and extreme brevity in discourse, if Protagoras objects, but loosen and let go the reins of speech, that your words may be grander and more becoming to you. Neither do you, Protagoras, go forth on the gale with every sail set out of sight of land into an ocean of words, but let there be a mean observed by both of you. Do as I say. And let me also

persuade you to choose an arbiter or overseer or president; he will keep watch over your words and will prescribe their proper length.

338c

This proposal was received by the company with universal approval; Callias said that he would not let me off, and they begged me to choose an arbiter. But I said that to choose an umpire of discourse would be unseemly; for if the person chosen was inferior, then the inferior or worse ought not to preside over the better; or if he was equal, neither would that be well; for he who is our equal will do as we do, and what will be the use of choosing him? And if you say, 'Let us have a better then,' — to that I answer that you cannot have any one who is wiser than Protagoras. And if you choose another who is not really better, and whom you only say is better, to put another over him as though he were an inferior person would be an unworthy reflection on him; not that, as far as I am concerned, any reflection is of much consequence to me. Let me tell you then what I will do in order that the conversation and discussion may go on as you desire. If Protagoras is not disposed to answer, let him ask and I will answer; and I will endeavour to show at the same time how, as I maintain, he ought to answer: and when I have answered as many questions as he likes to ask, let him in like manner answer me; and if he seems to be not very ready at answering the precise question asked of him, you and I will unite in entreating him, as you entreated me, not to spoil the discussion. And this will require no special arbiter — all of you shall be arbiters.

338d

This was generally approved, and Protagoras, though very much against his will, was obliged to agree that he would ask questions; and when he had put a sufficient number of them, that he would answer in his turn those which he was asked in short replies. He began to put his questions as follows: — I am of

opinion, Socrates, he said, that skill in poetry is the principal part of education; and this I conceive to be the power of knowing what compositions of the poets are correct, and what are not, and how they are to be distinguished, and of explaining when asked the reason of the difference. And I propose to transfer the question which you and I have been discussing to the domain of poetry; we will speak as before of virtue, but in reference to a passage of a poet. Now Simonides says to Scopas the son of Creon the Thessalian: ^{339a} ‘Hardly on the one hand can a man become truly good, built four-square in hands and feet and mind, a work without a flaw.’

^{339a}

Do you know the poem? or shall I repeat the whole?

There is no need, I said; for I am perfectly well acquainted with the ode, — I have made a careful study of it.

Very well, he said. And do you think that the ode is a good composition, and true?

Yes, I said, both good and true.

But if there is a contradiction, can the composition be good or true?

No, not in that case, I replied.

And is there not a contradiction? he asked. Reflect.

Well, my friend, I have reflected.

^{339b}

And does not the poet proceed to say, ‘I do not agree with the word of Pittacus, albeit the utterance of a wise man: Hardly can a man be good’? Now you will observe that this is said by the same poet.

I know it.

And do you think, he said, that the two sayings are consistent?

Yes, I said, I think so (at the same time I could not help fearing that there might be something in what he said). And you think otherwise?

339c

Why, he said, how can he be consistent in both? First of all, premising as his own thought, 'Hardly can a man become truly good'; and then a little further on in the poem, forgetting, and blaming Pittacus and refusing to agree with him, when he says, 'Hardly can a man be good,' which is the very same thing. And yet when he blames him who says the same with himself, he blames himself; so that he must be wrong either in his first or his second assertion.

339d

Many of the audience cheered and applauded this. And I felt at first giddy and faint, as if I had received a blow from the hand of an expert boxer, when I heard his words and the sound of the cheering; and to confess the truth, I wanted to get time to think what the meaning of the poet really was. So I turned to Prodicus and called him. Prodicus, I said, Simonides is a countryman of yours, and you ought to come to his aid. I must appeal to you, like the river Scamander in Homer, who, when beleaguered by Achilles, summons the Simois to aid him, saying: 'Brother dear, let us both together stay the force of the hero (Il.).'

339e

And I summon you, for I am afraid that Protagoras will make an end of Simonides. Now is the time to rehabilitate Simonides, by the application of your philosophy of synonyms, which enables you to distinguish 'will' and 'wish,' and make other charming distinctions like those which you drew just now. And I should like to know whether you would agree with me; for I am of opinion that there is no contradiction in the words of Simonides. And first of all I wish that you would say whether, in your opinion, Prodicus, 'being' is the same as 'becoming.'

Not the same, certainly, replied Prodicus.

Did not Simonides first set forth, as his own view, that ‘Hardly can a man become truly good’?

340b

Quite right, said Prodicus.

And then he blames Pittacus, not, as Protagoras imagines, for repeating that which he says himself, but for saying something different from himself. Pittacus does not say as Simonides says, that hardly can a man become good, but hardly can a man be good: and our friend Prodicus would maintain that being, Protagoras, is not the same as becoming; and if they are not the same, then Simonides is not inconsistent with himself. I dare say that Prodicus and many others would say, as Hesiod says, ‘On the one hand, hardly can a man become good, For the gods have made virtue the reward of toil, 340c But on the other hand, when you have climbed the height, 340c Then, to retain virtue, however difficult the acquisition, is easy

340c

— (Works and Days).’

340d

Prodicus heard and approved; but Protagoras said: Your correction, Socrates, involves a greater error than is contained in the sentence which you are correcting.

Alas! I said, Protagoras; then I am a sorry physician, and do but aggravate a disorder which I am seeking to cure.

Such is the fact, he said.

How so? I asked.

The poet, he replied, could never have made such a mistake as to say that virtue, which in the opinion of all men is the hardest of all things, can be easily retained.

340e

Well, I said, and how fortunate are we in having Prodicus among us, at the right moment; for he has a wisdom, Protagoras, which, as I imagine, is more than human and of very ancient date, and may be as old as Simonides or even older. Learned as you are in many things, you appear to know nothing of this; but I know, for I am a disciple of his. And now, if I am not mistaken, you do not understand the word 'hard' (chalepon) in the sense which Simonides intended; and I must correct you, as Prodicus corrects me when I use the word 'awful' (deinon) as a term of praise. If I say that Protagoras or any one else is an 'awfully' wise man, he asks me if I am not ashamed of calling that which is good 'awful'; and then he explains to me that the term 'awful' is always taken in a bad sense, and that no one speaks of being 'awfully' healthy or wealthy, or of 'awful' peace, but of 'awful' disease, 'awful' war, 'awful' poverty, meaning by the term 'awful,' evil. And I think that Simonides and his countrymen the Cean, when they spoke of 'hard' meant 'evil,' or something which you do not understand. Let us ask Prodicus, for he ought to be able to answer questions about the dialect of Simonides. What did he mean, Prodicus, by the term 'hard'?

341a

Evil, said Prodicus.

And therefore, I said, Prodicus, he blames Pittacus for saying, 'Hard is the good,' just as if that were equivalent to saying, Evil is the good.

341c

Yes, he said, that was certainly his meaning; and he is twitting Pittacus with ignorance of the use of terms, which in a Lesbian, who has been accustomed to speak a barbarous language, is natural.

Do you hear, Protagoras, I asked, what our friend Prodicus is saying? And have you an answer for him?

You are entirely mistaken, Prodicus, said Protagoras; and I know very well that Simonides in using the word 'hard' meant what all of us mean, not evil, but that which is not easy — that which takes a great deal of trouble: of this I am positive.

341d

I said: I also incline to believe, Protagoras, that this was the meaning of Simonides, of which our friend Prodicus was very well aware, but he thought that he would make fun, and try if you could maintain your thesis; for that Simonides could never have meant the other is clearly proved by the context, in which he says that God only has this gift. Now he cannot surely mean to say that to be good is evil, when he afterwards proceeds to say that God only has this gift, and that this is the attribute of him and of no other. For if this be his meaning, Prodicus would impute to Simonides a character of recklessness which is very unlike his countrymen. And I should like to tell you, I said, what I imagine to be the real meaning of Simonides in this poem, if you will test what, in your way of speaking, would be called my skill in poetry; or if you would rather, I will be the listener.

341e

To this proposal Protagoras replied: As you please; — and Hippias, Prodicus, and the others told me by all means to do as I proposed.

342c

Then now, I said, I will endeavour to explain to you my opinion about this poem of Simonides. There is a very ancient philosophy which is more cultivated in Crete and Lacedaemon than in any other part of Hellas, and there are more philosophers in those countries than anywhere else in the world. This, however, is a secret which the Lacedaemonians deny; and they pretend to be ignorant, just because they do not wish to have it thought that they rule the world by wisdom, like the Sophists of whom Protagoras was speaking, and not by valour of arms; considering that if the reason of their

superiority were disclosed, all men would be practising their wisdom. And this secret of theirs has never been discovered by the imitators of Lacedaemonian fashions in other cities, who go about with their ears bruised in imitation of them, and have the caestus bound on their arms, and are always in training, and wear short cloaks; for they imagine that these are the practices which have enabled the Lacedaemonians to conquer the other Hellenes. Now when the Lacedaemonians want to unbend and hold free conversation with their wise men, and are no longer satisfied with mere secret intercourse, they drive out all these laconizers, and any other foreigners who may happen to be in their country, and they hold a philosophical seance unknown to strangers; and they themselves forbid their young men to go out into other cities — in this they are like the Cretans — in order that they may not unlearn the lessons which they have taught them. And in Lacedaemon and Crete not only men but also women have a pride in their high cultivation. And hereby you may know that I am right in attributing to the Lacedaemonians this excellence in philosophy and speculation: If a man converses with the most ordinary Lacedaemonian, he will find him seldom good for much in general conversation, but at any point in the discourse he will be darting out some notable saying, terse and full of meaning, with unerring aim; and the person with whom he is talking seems to be like a child in his hands. And many of our own age and of former ages have noted that the true Lacedaemonian type of character has the love of philosophy even stronger than the love of gymnastics; they are conscious that only a perfectly educated man is capable of uttering such expressions. Such were Thales of Miletus, and Pittacus of Mitylene, and Bias of Priene, and our own Solon, and Cleobulus the Lindian, and Myson the Chenian; and seventh in the catalogue of wise men was the Lacedaemonian Chilo. All these were lovers and emulators and disciples of the culture of the Lacedaemonians, and any one may perceive that their

wisdom was of this character; consisting of short memorable sentences, which they severally uttered. And they met together and dedicated in the temple of Apollo at Delphi, as the first-fruits of their wisdom, the far-famed inscriptions, which are in all men's mouths— 'Know thyself,' and 'Nothing too much.'

342e

Why do I say all this? I am explaining that this Lacedaemonian brevity was the style of primitive philosophy. Now there was a saying of Pittacus which was privately circulated and received the approbation of the wise, 'Hard is it to be good.' And Simonides, who was ambitious of the fame of wisdom, was aware that if he could overthrow this saying, then, as if he had won a victory over some famous athlete, he would carry off the palm among his contemporaries. And if I am not mistaken, he composed the entire poem with the secret intention of damaging Pittacus and his saying.

343d

Let us all unite in examining his words, and see whether I am speaking the truth. Simonides must have been a lunatic, if, in the very first words of the poem, wanting to say only that to become good is hard, he inserted (Greek) 'on the one hand' ('on the one hand to become good is hard'); there would be no reason for the introduction of (Greek), unless you suppose him to speak with a hostile reference to the words of Pittacus. Pittacus is saying 'Hard is it to be good,' and he, in refutation of this thesis, rejoins that the truly hard thing, Pittacus, is to become good, not joining 'truly' with 'good,' but with 'hard.' Not, that the hard thing is to be truly good, as though there were some truly good men, and there were others who were good but not truly good (this would be a very simple observation, and quite unworthy of Simonides); but you must suppose him to make a trajection of the word 'truly' (Greek), construing the saying of Pittacus thus (and let us imagine

Pittacus to be speaking and Simonides answering him): ‘O my friends,’ says Pittacus, ‘hard is it to be good,’ and Simonides answers, ‘In that, Pittacus, you are mistaken; the difficulty is not to be good, but on the one hand, to become good, four-square in hands and feet and mind, without a flaw — that is hard truly.’ This way of reading the passage accounts for the insertion of (Greek) ‘on the one hand,’ and for the position at the end of the clause of the word ‘truly,’ and all that follows shows this to be the meaning. A great deal might be said in praise of the details of the poem, which is a charming piece of workmanship, and very finished, but such minutiae would be tedious. I should like, however, to point out the general intention of the poem, which is certainly designed in every part to be a refutation of the saying of Pittacus. For he speaks in what follows a little further on as if he meant to argue that although there is a difficulty in becoming good, yet this is possible for a time, and only for a time. But having become good, to remain in a good state and be good, as you, Pittacus, affirm, is not possible, and is not granted to man; God only has this blessing; ‘but man cannot help being bad when the force of circumstances overpowers him.’ Now whom does the force of circumstance overpower in the command of a vessel? — not the private individual, for he is always overpowered; and as one who is already prostrate cannot be overthrown, and only he who is standing upright but not he who is prostrate can be laid prostrate, so the force of circumstances can only overpower him who, at some time or other, has resources, and not him who is at all times helpless. The descent of a great storm may make the pilot helpless, or the severity of the season the husbandman or the physician; for the good may become bad, as another poet witnesses: — ^{344d} ‘The good are sometimes good and sometimes bad.’

^{344d}

But the bad does not become bad; he is always bad. So that when the force of circumstances overpowers the man of resources

and skill and virtue, then he cannot help being bad. And you, Pittacus, are saying, 'Hard is it to be good.' Now there is a difficulty in becoming good; and yet this is possible: but to be good is an impossibility — ^{344e} 'For he who does well is the good man, and he who does ill is the bad.'

^{345a}

But what sort of doing is good in letters? and what sort of doing makes a man good in letters? Clearly the knowing of them. And what sort of well-doing makes a man a good physician? Clearly the knowledge of the art of healing the sick. 'But he who does ill is the bad.' Now who becomes a bad physician? Clearly he who is in the first place a physician, and in the second place a good physician; for he may become a bad one also: but none of us unskilled individuals can by any amount of doing ill become physicians, any more than we can become carpenters or anything of that sort; and he who by doing ill cannot become a physician at all, clearly cannot become a bad physician. In like manner the good may become deteriorated by time, or toil, or disease, or other accident (the only real doing ill is to be deprived of knowledge), but the bad man will never become bad, for he is always bad; and if he were to become bad, he must previously have been good. Thus the words of the poem tend to show that on the one hand a man cannot be continuously good, but that he may become good and may also become bad; and again that ^{345c} 'They are the best for the longest time whom the gods love.'

^{345c}

All this relates to Pittacus, as is further proved by the sequel. For he adds: — 'Therefore I will not throw away my span of life to no purpose in searching after the impossible, hoping in vain to find a perfectly faultless man among those who partake of the fruit of the broad-bosomed earth: if I find him, I will send you word.'

(this is the vehement way in which he pursues his attack upon Pittacus throughout the whole poem): 'But him who does no evil, voluntarily I praise and love; — not even the gods war against necessity.'

345e

All this has a similar drift, for Simonides was not so ignorant as to say that he praised those who did no evil voluntarily, as though there were some who did evil voluntarily. For no wise man, as I believe, will allow that any human being errs voluntarily, or voluntarily does evil and dishonourable actions; but they are very well aware that all who do evil and dishonourable things do them against their will. And Simonides never says that he praises him who does no evil voluntarily; the word 'voluntarily' applies to himself. For he was under the impression that a good man might often compel himself to love and praise another, and to be the friend and approver of another; and that there might be an involuntary love, such as a man might feel to an unnatural father or mother, or country, or the like. Now bad men, when their parents or country have any defects, look on them with malignant joy, and find fault with them and expose and denounce them to others, under the idea that the rest of mankind will be less likely to take themselves to task and accuse them of neglect; and they blame their defects far more than they deserve, in order that the odium which is necessarily incurred by them may be increased: but the good man dissembles his feelings, and constrains himself to praise them; and if they have wronged him and he is angry, he pacifies his anger and is reconciled, and compels himself to love and praise his own flesh and blood. And Simonides, as is probable, considered that he himself had often had to praise and magnify a tyrant or the like, much against his will, and he also wishes to imply to Pittacus that he does not censure him because he is censorious.

‘For I am satisfied’ he says, ‘when a man is neither bad nor very stupid; and when he knows justice (which is the health of states), and is of sound mind, I will find no fault with him, for I am not given to finding fault, and there are innumerable fools’

346c

(implying that if he delighted in censure he might have abundant opportunity of finding fault).

‘All things are good with which evil is unmingled.’

346d

In these latter words he does not mean to say that all things are good which have no evil in them, as you might say ‘All things are white which have no black in them,’ for that would be ridiculous; but he means to say that he accepts and finds no fault with the moderate or intermediate state.

(‘I do not hope’ he says, ‘to find a perfectly blameless man among those who partake of the fruits of the broad-bosomed earth (if I find him, I will send you word); in this sense I praise no man. But he who is moderately good, and does no evil, is good enough for me, who love and approve every one’)

(and here observe that he uses a Lesbian word, *epainemi* (approve), because he is addressing Pittacus, ‘Who love and APPROVE every one VOLUNTARILY, who does no evil.’

and that the stop should be put after ‘voluntarily’); ‘but there are some whom I involuntarily praise and love. And you, Pittacus, I would never have blamed, if you had spoken what was moderately good and true; but I do blame you because, putting on the appearance of truth, you are speaking falsely about the highest matters.’ — And this, I said, Prodicus and Protagoras, I take to be the meaning of Simonides in this poem.

347b

Hippias said: I think, Socrates, that you have given a very good explanation of the poem; but I have also an excellent

interpretation of my own which I will propound to you, if you will allow me.

Nay, Hippias, said Alcibiades; not now, but at some other time. At present we must abide by the compact which was made between Socrates and Protagoras, to the effect that as long as Protagoras is willing to ask, Socrates should answer; or that if he would rather answer, then that Socrates should ask.

347c

I said: I wish Protagoras either to ask or answer as he is inclined; but I would rather have done with poems and odes, if he does not object, and come back to the question about which I was asking you at first, Protagoras, and by your help make an end of that. The talk about the poets seems to me like a commonplace entertainment to which a vulgar company have recourse; who, because they are not able to converse or amuse one another, while they are drinking, with the sound of their own voices and conversation, by reason of their stupidity, raise the price of flute-girls in the market, hiring for a great sum the voice of a flute instead of their own breath, to be the medium of intercourse among them: but where the company are real gentlemen and men of education, you will see no flute-girls, nor dancing-girls, nor harp-girls; and they have no nonsense or games, but are contented with one another's conversation, of which their own voices are the medium, and which they carry on by turns and in an orderly manner, even though they are very liberal in their potations. And a company like this of ours, and men such as we profess to be, do not require the help of another's voice, or of the poets whom you cannot interrogate about the meaning of what they are saying; people who cite them declaring, some that the poet has one meaning, and others that he has another, and the point which is in dispute can never be decided. This sort of entertainment they decline, and prefer to talk with one another, and put one another to the

proof in conversation. And these are the models which I desire that you and I should imitate. Leaving the poets, and keeping to ourselves, let us try the mettle of one another and make proof of the truth in conversation. If you have a mind to ask, I am ready to answer; or if you would rather, do you answer, and give me the opportunity of resuming and completing our unfinished argument.

348b

I made these and some similar observations; but Protagoras would not distinctly say which he would do. Thereupon Alcibiades turned to Callias, and said: — Do you think, Callias, that Protagoras is fair in refusing to say whether he will or will not answer? for I certainly think that he is unfair; he ought either to proceed with the argument, or distinctly refuse to proceed, that we may know his intention; and then Socrates will be able to discourse with some one else, and the rest of the company will be free to talk with one another.

348c

I think that Protagoras was really made ashamed by these words of Alcibiades, and when the prayers of Callias and the company were superadded, he was at last induced to argue, and said that I might ask and he would answer.

So I said: Do not imagine, Protagoras, that I have any other interest in asking questions of you but that of clearing up my own difficulties. For I think that Homer was very right in saying that 348d ‘When two go together, one sees before the other (il.),’

348d

for all men who have a companion are readier in deed, word, or thought; but if a man ‘Sees a thing when he is alone,’

349a

he goes about straightway seeking until he finds some one to whom he may show his discoveries, and who may confirm him in them. And I would rather hold discourse with you than with

any one, because I think that no man has a better understanding of most things which a good man may be expected to understand, and in particular of virtue. For who is there, but you? — who not only claim to be a good man and a gentleman, for many are this, and yet have not the power of making others good — whereas you are not only good yourself, but also the cause of goodness in others. Moreover such confidence have you in yourself, that although other Sophists conceal their profession, you proclaim in the face of Hellas that you are a Sophist or teacher of virtue and education, and are the first who demanded pay in return. How then can I do otherwise than invite you to the examination of these subjects, and ask questions and consult with you? I must, indeed. And I should like once more to have my memory refreshed by you about the questions which I was asking you at first, and also to have your help in considering them. If I am not mistaken the question was this: Are wisdom and temperance and courage and justice and holiness five names of the same thing? or has each of the names a separate underlying essence and corresponding thing having a peculiar function, no one of them being like any other of them? And you replied that the five names were not the names of the same thing, but that each of them had a separate object, and that all these objects were parts of virtue, not in the same way that the parts of gold are like each other and the whole of which they are parts, but as the parts of the face are unlike the whole of which they are parts and one another, and have each of them a distinct function. I should like to know whether this is still your opinion; or if not, I will ask you to define your meaning, and I shall not take you to task if you now make a different statement. For I dare say that you may have said what you did only in order to make trial of me.

349d

I answer, Socrates, he said, that all these qualities are parts of virtue, and that four out of the five are to some extent similar,

and that the fifth of them, which is courage, is very different from the other four, as I prove in this way: You may observe that many men are utterly unrighteous, unholy, intemperate, ignorant, who are nevertheless remarkable for their courage.

349e

Stop, I said; I should like to think about that. When you speak of brave men, do you mean the confident, or another sort of nature?

Yes, he said; I mean the impetuous, ready to go at that which others are afraid to approach.

In the next place, you would affirm virtue to be a good thing, of which good thing you assert yourself to be a teacher.

350a

Yes, he said; I should say the best of all things, if I am in my right mind.

And is it partly good and partly bad, I said, or wholly good?

Wholly good, and in the highest degree.

Tell me then; who are they who have confidence when diving into a well?

I should say, the divers.

And the reason of this is that they have knowledge?

Yes, that is the reason.

350b

And who have confidence when fighting on horseback — the skilled horseman or the unskilled?

The skilled.

And who when fighting with light shields — the peltasts or the nonpeltasts?

The peltasts. And that is true of all other things, he said, if that is your point: those who have knowledge are more confident than those who have no knowledge, and they are more confident after they have learned than before.

And have you not seen persons utterly ignorant, I said, of these things, and yet confident about them?

Yes, he said, I have seen such persons far too confident.

And are not these confident persons also courageous?

350c

In that case, he replied, courage would be a base thing, for the men of whom we are speaking are surely madmen.

Then who are the courageous? Are they not the confident?

Yes, he said; to that statement I adhere.

350d

And those, I said, who are thus confident without knowledge are really not courageous, but mad; and in that case the wisest are also the most confident, and being the most confident are also the bravest, and upon that view again wisdom will be courage.

Nay, Socrates, he replied, you are mistaken in your remembrance of what was said by me. When you asked me, I certainly did say that the courageous are the confident; but I was never asked whether the confident are the courageous; if you had asked me, I should have answered 'Not all of them': and what I did answer you have not proved to be false, although you proceeded to show that those who have knowledge are more courageous than they were before they had knowledge, and more courageous than others who have no knowledge, and were then led on to think that courage is the same as wisdom. But in this way of arguing you might come to imagine that strength is wisdom. You might begin by asking whether the strong are able, and I should say 'Yes'; and then whether those

who know how to wrestle are not more able to wrestle than those who do not know how to wrestle, and more able after than before they had learned, and I should assent. And when I had admitted this, you might use my admissions in such a way as to prove that upon my view wisdom is strength; whereas in that case I should not have admitted, any more than in the other, that the able are strong, although I have admitted that the strong are able. For there is a difference between ability and strength; the former is given by knowledge as well as by madness or rage, but strength comes from nature and a healthy state of the body. And in like manner I say of confidence and courage, that they are not the same; and I argue that the courageous are confident, but not all the confident courageous. For confidence may be given to men by art, and also, like ability, by madness and rage; but courage comes to them from nature and the healthy state of the soul.

351b

I said: You would admit, Protagoras, that some men live well and others ill?

He assented.

And do you think that a man lives well who lives in pain and grief?

351c

He does not.

But if he lives pleasantly to the end of his life, will he not in that case have lived well?

He will.

Then to live pleasantly is a good, and to live unpleasantly an evil?

Yes, he said, if the pleasure be good and honourable.

And do you, Protagoras, like the rest of the world, call some pleasant things evil and some painful things good? — for I am rather disposed to say that things are good in as far as they are pleasant, if they have no consequences of another sort, and in as far as they are painful they are bad.

351d

I do not know, Socrates, he said, whether I can venture to assert in that unqualified manner that the pleasant is the good and the painful the evil. Having regard not only to my present answer, but also to the whole of my life, I shall be safer, if I am not mistaken, in saying that there are some pleasant things which are not good, and that there are some painful things which are good, and some which are not good, and that there are some which are neither good nor evil.

351e

And you would call pleasant, I said, the things which participate in pleasure or create pleasure?

Certainly, he said.

Then my meaning is, that in as far as they are pleasant they are good; and my question would imply that pleasure is a good in itself.

According to your favourite mode of speech, Socrates, 'Let us reflect about this,' he said; and if the reflection is to the point, and the result proves that pleasure and good are really the same, then we will agree; but if not, then we will argue.

352a

And would you wish to begin the enquiry? I said; or shall I begin?

You ought to take the lead, he said; for you are the author of the discussion.

352c

May I employ an illustration? I said. Suppose some one who is enquiring into the health or some other bodily quality of another: — he looks at his face and at the tips of his fingers, and then he says, Uncover your chest and back to me that I may have a better view: — that is the sort of thing which I desire in this speculation. Having seen what your opinion is about good and pleasure, I am minded to say to you: Uncover your mind to me, Protagoras, and reveal your opinion about knowledge, that I may know whether you agree with the rest of the world. Now the rest of the world are of opinion that knowledge is a principle not of strength, or of rule, or of command: their notion is that a man may have knowledge, and yet that the knowledge which is in him may be overmastered by anger, or pleasure, or pain, or love, or perhaps by fear, — just as if knowledge were a slave, and might be dragged about anyhow. Now is that your view? or do you think that knowledge is a noble and commanding thing, which cannot be overcome, and will not allow a man, if he only knows the difference of good and evil, to do anything which is contrary to knowledge, but that wisdom will have strength to help him?

352d

I agree with you, Socrates, said Protagoras; and not only so, but I, above all other men, am bound to say that wisdom and knowledge are the highest of human things.

352e

Good, I said, and true. But are you aware that the majority of the world are of another mind; and that men are commonly supposed to know the things which are best, and not to do them when they might? And most persons whom I have asked the reason of this have said that when men act contrary to knowledge they are overcome by pain, or pleasure, or some of those affections which I was just now mentioning.

Yes, Socrates, he replied; and that is not the only point about which mankind are in error.

353a

Suppose, then, that you and I endeavour to instruct and inform them what is the nature of this affection which they call ‘being overcome by pleasure,’ and which they affirm to be the reason why they do not always do what is best. When we say to them: Friends, you are mistaken, and are saying what is not true, they would probably reply: Socrates and Protagoras, if this affection of the soul is not to be called ‘being overcome by pleasure,’ pray, what is it, and by what name would you describe it?

But why, Socrates, should we trouble ourselves about the opinion of the many, who just say anything that happens to occur to them?

353b

I believe, I said, that they may be of use in helping us to discover how courage is related to the other parts of virtue. If you are disposed to abide by our agreement, that I should show the way in which, as I think, our recent difficulty is most likely to be cleared up, do you follow; but if not, never mind.

You are quite right, he said; and I would have you proceed as you have begun.

353c

Well then, I said, let me suppose that they repeat their question, What account do you give of that which, in our way of speaking, is termed being overcome by pleasure? I should answer thus: Listen, and Protagoras and I will endeavour to show you. When men are overcome by eating and drinking and other sensual desires which are pleasant, and they, knowing them to be evil, nevertheless indulge in them, would you not say that they were overcome by pleasure? They will not deny this. And suppose that you and I were to go on and ask them again: ‘In what way do you say that they are evil, — in that they are pleasant and

give pleasure at the moment, or because they cause disease and poverty and other like evils in the future? Would they still be evil, if they had no attendant evil consequences, simply because they give the consciousness of pleasure of whatever nature? — Would they not answer that they are not evil on account of the pleasure which is immediately given by them, but on account of the after consequences — diseases and the like?

353d

I believe, said Protagoras, that the world in general would answer as you do.

353e

And in causing diseases do they not cause pain? and in causing poverty do they not cause pain; — they would agree to that also, if I am not mistaken?

Protagoras assented.

354a

Then I should say to them, in my name and yours: Do you think them evil for any other reason, except because they end in pain and rob us of other pleasures: — there again they would agree?

We both of us thought that they would.

And then I should take the question from the opposite point of view, and say: ‘Friends, when you speak of goods being painful, do you not mean remedial goods, such as gymnastic exercises, and military service, and the physician’s use of burning, cutting, drugging, and starving? Are these the things which are good but painful?’ — they would assent to me?

354b

He agreed.

‘And do you call them good because they occasion the greatest immediate suffering and pain; or because, afterwards, they bring health and improvement of the bodily condition and the salvation of states and power over others and wealth?’ — they

would agree to the latter alternative, if I am not mistaken?

354c

He assented.

‘Are these things good for any other reason except that they end in pleasure, and get rid of and avert pain? Are you looking to any other standard but pleasure and pain when you call them good?’ — they would acknowledge that they were not?

I think so, said Protagoras.

354d

‘And do you not pursue after pleasure as a good, and avoid pain as an evil?’

He assented.

‘Then you think that pain is an evil and pleasure is a good: and even pleasure you deem an evil, when it robs you of greater pleasures than it gives, or causes pains greater than the pleasure. If, however, you call pleasure an evil in relation to some other end or standard, you will be able to show us that standard. But you have none to show.’

354e

I do not think that they have, said Protagoras.

‘And have you not a similar way of speaking about pain? You call pain a good when it takes away greater pains than those which it has, or gives pleasures greater than the pains: then if you have some standard other than pleasure and pain to which you refer when you call actual pain a good, you can show what that is. But you cannot.’

True, said Protagoras.

355c

Suppose again, I said, that the world says to me: ‘Why do you spend many words and speak in many ways on this subject?’ Excuse me, friends, I should reply; but in the first place there is

a difficulty in explaining the meaning of the expression 'overcome by pleasure'; and the whole argument turns upon this. And even now, if you see any possible way in which evil can be explained as other than pain, or good as other than pleasure, you may still retract. Are you satisfied, then, at having a life of pleasure which is without pain? If you are, and if you are unable to show any good or evil which does not end in pleasure and pain, hear the consequences: — If what you say is true, then the argument is absurd which affirms that a man often does evil knowingly, when he might abstain, because he is seduced and overpowered by pleasure; or again, when you say that a man knowingly refuses to do what is good because he is overcome at the moment by pleasure. And that this is ridiculous will be evident if only we give up the use of various names, such as pleasant and painful, and good and evil. As there are two things, let us call them by two names — first, good and evil, and then pleasant and painful. Assuming this, let us go on to say that a man does evil knowing that he does evil. But some one will ask, Why? Because he is overcome, is the first answer. And by what is he overcome? the enquirer will proceed to ask. And we shall not be able to reply 'By pleasure,' for the name of pleasure has been exchanged for that of good. In our answer, then, we shall only say that he is overcome. 'By what?' he will reiterate. By the good, we shall have to reply; indeed we shall. Nay, but our questioner will rejoin with a laugh, if he be one of the swaggering sort, 'That is too ridiculous, that a man should do what he knows to be evil when he ought not, because he is overcome by good. Is that, he will ask, because the good was worthy or not worthy of conquering the evil?' And in answer to that we shall clearly reply, Because it was not worthy; for if it had been worthy, then he who, as we say, was overcome by pleasure, would not have been wrong. 'But how,' he will reply, 'can the good be unworthy of the evil, or the evil of the good'? Is not the real explanation that they are out of proportion to one

another, either as greater and smaller, or more and fewer? This we cannot deny. And when you speak of being overcome—‘what do you mean,’ he will say, ‘but that you choose the greater evil in exchange for the lesser good?’ Admitted. And now substitute the names of pleasure and pain for good and evil, and say, not as before, that a man does what is evil knowingly, but that he does what is painful knowingly, and because he is overcome by pleasure, which is unworthy to overcome. What measure is there of the relations of pleasure to pain other than excess and defect, which means that they become greater and smaller, and more and fewer, and differ in degree? For if any one says: ‘Yes, Socrates, but immediate pleasure differs widely from future pleasure and pain’ — To that I should reply: And do they differ in anything but in pleasure and pain? There can be no other measure of them. And do you, like a skilful weigher, put into the balance the pleasures and the pains, and their nearness and distance, and weigh them, and then say which outweighs the other. If you weigh pleasures against pleasures, you of course take the more and greater; or if you weigh pains against pains, you take the fewer and the less; or if pleasures against pains, then you choose that course of action in which the painful is exceeded by the pleasant, whether the distant by the near or the near by the distant; and you avoid that course of action in which the pleasant is exceeded by the painful. Would you not admit, my friends, that this is true? I am confident that they cannot deny this.

356a

He agreed with me.

356d

Well then, I shall say, if you agree so far, be so good as to answer me a question: Do not the same magnitudes appear larger to your sight when near, and smaller when at a distance? They will acknowledge that. And the same holds of thickness and number; also sounds, which are in themselves equal, are greater when

near, and lesser when at a distance. They will grant that also. Now suppose happiness to consist in doing or choosing the greater, and in not doing or in avoiding the less, what would be the saving principle of human life? Would not the art of measuring be the saving principle; or would the power of appearance? Is not the latter that deceiving art which makes us wander up and down and take the things at one time of which we repent at another, both in our actions and in our choice of things great and small? But the art of measurement would do away with the effect of appearances, and, showing the truth, would fain teach the soul at last to find rest in the truth, and would thus save our life. Would not mankind generally acknowledge that the art which accomplishes this result is the art of measurement?

Yes, he said, the art of measurement.

357a

Suppose, again, the salvation of human life to depend on the choice of odd and even, and on the knowledge of when a man ought to choose the greater or less, either in reference to themselves or to each other, and whether near or at a distance; what would be the saving principle of our lives? Would not knowledge? — a knowledge of measuring, when the question is one of excess and defect, and a knowledge of number, when the question is of odd and even? The world will assent, will they not?

Protagoras himself thought that they would.

357b

Well then, my friends, I say to them; seeing that the salvation of human life has been found to consist in the right choice of pleasures and pains, — in the choice of the more and the fewer, and the greater and the less, and the nearer and remoter, must not this measuring be a consideration of their excess and defect and equality in relation to each other?

This is undeniably true.

357c

And this, as possessing measure, must undeniably also be an art and science?

They will agree, he said.

357e

The nature of that art or science will be a matter of future consideration; but the existence of such a science furnishes a demonstrative answer to the question which you asked of me and Protagoras. At the time when you asked the question, if you remember, both of us were agreeing that there was nothing mightier than knowledge, and that knowledge, in whatever existing, must have the advantage over pleasure and all other things; and then you said that pleasure often got the advantage even over a man who has knowledge; and we refused to allow this, and you rejoined: O Protagoras and Socrates, what is the meaning of being overcome by pleasure if not this? — tell us what you call such a state: — if we had immediately and at the time answered ‘Ignorance,’ you would have laughed at us. But now, in laughing at us, you will be laughing at yourselves: for you also admitted that men err in their choice of pleasures and pains; that is, in their choice of good and evil, from defect of knowledge; and you admitted further, that they err, not only from defect of knowledge in general, but of that particular knowledge which is called measuring. And you are also aware that the erring act which is done without knowledge is done in ignorance. This, therefore, is the meaning of being overcome by pleasure; — ignorance, and that the greatest. And our friends Protagoras and Prodicus and Hippias declare that they are the physicians of ignorance; but you, who are under the mistaken impression that ignorance is not the cause, and that the art of which I am speaking cannot be taught, neither go yourselves, nor send your children, to the Sophists, who are the teachers of

these things — you take care of your money and give them none; and the result is, that you are the worse off both in public and private life: — Let us suppose this to be our answer to the world in general: And now I should like to ask you, Hippias, and you, Prodicus, as well as Protagoras (for the argument is to be yours as well as ours), whether you think that I am speaking the truth or not?

358b

They all thought that what I said was entirely true.

Then you agree, I said, that the pleasant is the good, and the painful evil. And here I would beg my friend Prodicus not to introduce his distinction of names, whether he is disposed to say pleasurable, delightful, joyful. However, by whatever name he prefers to call them, I will ask you, most excellent Prodicus, to answer in my sense of the words.

358c

Prodicus laughed and assented, as did the others.

Then, my friends, what do you say to this? Are not all actions honourable and useful, of which the tendency is to make life painless and pleasant? The honourable work is also useful and good?

This was admitted.

358d

Then, I said, if the pleasant is the good, nobody does anything under the idea or conviction that some other thing would be better and is also attainable, when he might do the better. And this inferiority of a man to himself is merely ignorance, as the superiority of a man to himself is wisdom.

They all assented.

And is not ignorance the having a false opinion and being deceived about important matters?

To this also they unanimously assented.

Then, I said, no man voluntarily pursues evil, or that which he thinks to be evil. To prefer evil to good is not in human nature; and when a man is compelled to choose one of two evils, no one will choose the greater when he may have the less.

358e

All of us agreed to every word of this.

Well, I said, there is a certain thing called fear or terror; and here, Prodicus, I should particularly like to know whether you would agree with me in defining this fear or terror as expectation of evil.

Protagoras and Hippias agreed, but Prodicus said that this was fear and not terror.

359a

Never mind, Prodicus, I said; but let me ask whether, if our former assertions are true, a man will pursue that which he fears when he is not compelled? Would not this be in flat contradiction to the admission which has been already made, that he thinks the things which he fears to be evil; and no one will pursue or voluntarily accept that which he thinks to be evil?

That also was universally admitted.

359c

Then, I said, these, Hippias and Prodicus, are our premisses; and I would beg Protagoras to explain to us how he can be right in what he said at first. I do not mean in what he said quite at first, for his first statement, as you may remember, was that whereas there were five parts of virtue none of them was like any other of them; each of them had a separate function. To this, however, I am not referring, but to the assertion which he afterwards made that of the five virtues four were nearly akin to each other, but that the fifth, which was courage, differed greatly

from the others. And of this he gave me the following proof. He said: You will find, Socrates, that some of the most impious, and unrighteous, and intemperate, and ignorant of men are among the most courageous; which proves that courage is very different from the other parts of virtue. I was surprised at his saying this at the time, and I am still more surprised now that I have discussed the matter with you. So I asked him whether by the brave he meant the confident. Yes, he replied, and the impetuous or goers. (You may remember, Protagoras, that this was your answer.)

359d

He assented.

Well then, I said, tell us against what are the courageous ready to go — against the same dangers as the cowards?

No, he answered.

Then against something different?

Yes, he said.

Then do cowards go where there is safety, and the courageous where there is danger?

Yes, Socrates, so men say.

Very true, I said. But I want to know against what do you say that the courageous are ready to go — against dangers, believing them to be dangers, or not against dangers?

359e

No, said he; the former case has been proved by you in the previous argument to be impossible.

That, again, I replied, is quite true. And if this has been rightly proven, then no one goes to meet what he thinks to be dangers, since the want of self-control, which makes men rush into dangers, has been shown to be ignorance.

He assented.

And yet the courageous man and the coward alike go to meet that about which they are confident; so that, in this point of view, the cowardly and the courageous go to meet the same things.

360a

And yet, Socrates, said Protagoras, that to which the coward goes is the opposite of that to which the courageous goes; the one, for example, is ready to go to battle, and the other is not ready.

And is going to battle honourable or disgraceful? I said.

Honourable, he replied.

And if honourable, then already admitted by us to be good; for all honourable actions we have admitted to be good.

That is true; and to that opinion I shall always adhere.

True, I said. But which of the two are they who, as you say, are unwilling to go to war, which is a good and honourable thing?

360b

The cowards, he replied.

And what is good and honourable, I said, is also pleasant?

It has certainly been acknowledged to be so, he replied.

And do the cowards knowingly refuse to go to the nobler, and pleasanter, and better?

The admission of that, he replied, would belie our former admissions.

But does not the courageous man also go to meet the better, and pleasanter, and nobler?

That must be admitted.

360c

And the courageous man has no base fear or base confidence?

True, he replied.

And if not base, then honourable?

He admitted this.

And if honourable, then good?

Yes.

But the fear and confidence of the coward or foolhardy or madman, on the contrary, are base?

He assented.

And these base fears and confidences originate in ignorance and uninstructedness?

True, he said.

Then as to the motive from which the cowards act, do you call it cowardice or courage?

I should say cowardice, he replied.

360d

And have they not been shown to be cowards through their ignorance of dangers?

Assuredly, he said.

And because of that ignorance they are cowards?

He assented.

And the reason why they are cowards is admitted by you to be cowardice?

He again assented.

Then the ignorance of what is and is not dangerous is cowardice?

He nodded assent.

But surely courage, I said, is opposed to cowardice?

Yes.

Then the wisdom which knows what are and are not dangers is opposed to the ignorance of them?

To that again he nodded assent.

And the ignorance of them is cowardice?

To that he very reluctantly nodded assent.

360e

And the knowledge of that which is and is not dangerous is courage, and is opposed to the ignorance of these things?

At this point he would no longer nod assent, but was silent.

And why, I said, do you neither assent nor dissent, Protagoras?

Finish the argument by yourself, he said.

361a

I only want to ask one more question, I said. I want to know whether you still think that there are men who are most ignorant and yet most courageous?

You seem to have a great ambition to make me answer, Socrates, and therefore I will gratify you, and say, that this appears to me to be impossible consistently with the argument.

361b

My only object, I said, in continuing the discussion, has been the desire to ascertain the nature and relations of virtue; for if this were clear, I am very sure that the other controversy which has been carried on at great length by both of us — you affirming and I denying that virtue can be taught — would also become clear. The result of our discussion appears to me to be singular. For if the argument had a human voice, that voice would be

heard laughing at us and saying: 'Protagoras and Socrates, you are strange beings; there are you, Socrates, who were saying that virtue cannot be taught, contradicting yourself now by your attempt to prove that all things are knowledge, including justice, and temperance, and courage, — which tends to show that virtue can certainly be taught; for if virtue were other than knowledge, as Protagoras attempted to prove, then clearly virtue cannot be taught; but if virtue is entirely knowledge, as you are seeking to show, then I cannot but suppose that virtue is capable of being taught. Protagoras, on the other hand, who started by saying that it might be taught, is now eager to prove it to be anything rather than knowledge; and if this is true, it must be quite incapable of being taught.' Now I, Protagoras, perceiving this terrible confusion of our ideas, have a great desire that they should be cleared up. And I should like to carry on the discussion until we ascertain what virtue is, whether capable of being taught or not, lest haply Epimetheus should trip us up and deceive us in the argument, as he forgot us in the story; I prefer your Prometheus to your Epimetheus, for of him I make use, whenever I am busy about these questions, in Promethean care of my own life. And if you have no objection, as I said at first, I should like to have your help in the enquiry.

361e

Protagoras replied: Socrates, I am not of a base nature, and I am the last man in the world to be envious. I cannot but applaud your energy and your conduct of an argument. As I have often said, I admire you above all men whom I know, and far above all men of your age; and I believe that you will become very eminent in philosophy. Let us come back to the subject at some future time; at present we had better turn to something else.

362a

By all means, I said, if that is your wish; for I too ought long since to have kept the engagement of which I spoke before, and only tarried because I could not refuse the request of the noble

Callias. So the conversation ended, and we went our way.

narrator: SOCRATES of Alopecce, son of Sophroniscus

persons in the dialogue:

GLAUCON *Plato's brother*

POLEMARCHUS *son of Cephalus*

UNNAMED SLAVE *from Polemarchus' household*

ADIMANTUS *Plato's brother*

THRASYMACHUS *a rhetorician and diplomat from Chalcedon*

CLITOPHON *an oligarchic political leader*

CEPHALUS *from Sicily, a successful shield manufacturer in the Piraeus*

scene: on the road to Athens during the Bendis festival / at the house of Polemarchus in the Piraeus

BOOK I

327a

Socrates - Glaucon *327b* I went down yesterday to the Piraeus with Glaucon the son of Ariston, that I might offer up my prayers to the goddess; and also because I wanted to see in what manner they would celebrate the festival, which was a new thing. I was delighted with the procession of the inhabitants; but that of the Thracians was equally, if not more, beautiful. When we had finished our prayers and viewed the spectacle, we turned in the direction of the city; and at that instant Polemarchus the son of Cephalus chanced to catch sight of us from a distance as we were starting on our way home, and told his servant to run and bid us wait for him. The servant took hold of me by the cloak behind, and said: Polemarchus desires you to wait.

327c

I turned round, and asked him where his master was.

There he is, said the youth, coming after you, if you will only wait.

Certainly we will, said Glaucon; and in a few minutes Polemarchus appeared, and with him Adeimantus, Glaucon's brother, Niceratus the son of Nicias, and several others who had been at the procession.

328a

Socrates - Polemarchus - Glaucon - Adeimantus Polemarchus said to me: I perceive, Socrates, that you and our companion are already on your way to the city.

You are not far wrong, I said.

But do you see, he rejoined, how many we are?

Of course.

And are you stronger than all these? for if not, you will have to remain where you are.

May there not be the alternative, I said, that we may persuade you to let us go?

But can you persuade us, if we refuse to listen to you? he said.

Certainly not, replied Glaucon.

328b

Then we are not going to listen; of that you may be assured.

Adeimantus added: Has no one told you of the torch-race on horseback in honour of the goddess which will take place in the evening?

With horses! I replied: That is a novelty. Will horsemen carry torches and pass them one to another during the race?

328c

Yes, said Polemarchus, and not only so, but a festival will be celebrated at night, which you certainly ought to see. Let us rise soon after supper and see this festival; there will be a gathering of young men, and we will have a good talk. Stay then, and do not be perverse.

Glaucou said: I suppose, since you insist, that we must.

Very good, I replied.

Glaucou - Cephalus - Socrates ^{328d} Accordingly we went with Polemarchus to his house; and there we found his brothers Lysias and Euthydemus, and with them Thrasymachus the Chalcedonian, Charmantides the Paeonian, and Cleitophon the son of Aristonymus. There too was Cephalus the father of Polemarchus, whom I had not seen for a long time, and I thought him very much aged. He was seated on a cushioned chair, and had a garland on his head, for he had been sacrificing in the court; and there were some other chairs in the room arranged in a semicircle, upon which we sat down by him. He saluted me eagerly, and then he said: — ^{328e} You don't come to see me, Socrates, as often as you ought: If I were still able to go and see you I would not ask you to come to me. But at my age I can hardly get to the city, and therefore you should come oftener to the Piraeus. For let me tell you, that the more the pleasures of the body fade away, the greater to me is the pleasure and charm of conversation. Do not then deny my request, but make our house your resort and keep company with these young men; we are old friends, and you will be quite at home with us.

^{329a}

I replied: There is nothing which for my part I like better, Cephalus, than conversing with aged men; for I regard them as travellers who have gone a journey which I too may have to go, and of whom I ought to enquire, whether the way is smooth and easy, or rugged and difficult. And this is a question which I should like to ask of you who have arrived at that time which the poets call the 'threshold of old age' — Is life harder towards the end, or what report do you give of it?

^{329d}

I will tell you, Socrates, he said, what my own feeling is. Men of my age flock together; we are birds of a feather, as the old proverb says; and at our meetings the tale of my acquaintance commonly is — I cannot eat, I cannot drink; the pleasures of youth and love are fled away: there was a good time once, but now that is gone, and life is no longer life. Some complain of the slights which are put upon them by relations, and they will tell you sadly of how many evils their old age is the cause. But to me, Socrates, these complainers seem to blame that which is not really in fault. For if old age were the cause, I too being old, and every other old man, would have felt as they do. But this is not my own experience, nor that of others whom I have known. How well I remember the aged poet Sophocles, when in answer to the question, How does love suit with age, Sophocles, — are you still the man you were? Peace, he replied; most gladly have I escaped the thing of which you speak; I feel as if I had escaped from a mad and furious master. His words have often occurred to my mind since, and they seem as good to me now as at the time when he uttered them. For certainly old age has a great sense of calm and freedom; when the passions relax their hold, then, as Sophocles says, we are freed from the grasp not of one mad master only, but of many. The truth is, Socrates, that these regrets, and also the complaints about relations, are to be attributed to the same cause, which is not old age, but men's characters and tempers; for he who is of a calm and happy nature will hardly feel the pressure of age, but to him who is of an opposite disposition youth and age are equally a burden.

330a

I listened in admiration, and wanting to draw him out, that he might go on — Yes, Cephalus, I said: but I rather suspect that people in general are not convinced by you when you speak thus; they think that old age sits lightly upon you, not because of your happy disposition, but because you are rich, and wealth is well known to be a great comforter.

330b

You are right, he replied; they are not convinced: and there is something in what they say; not, however, so much as they imagine. I might answer them as Themistocles answered the Seriphian who was abusing him and saying that he was famous, not for his own merits but because he was an Athenian: 'If you had been a native of my country or I of yours, neither of us would have been famous.' And to those who are not rich and are impatient of old age, the same reply may be made; for to the good poor man old age cannot be a light burden, nor can a bad rich man ever have peace with himself.

330c

May I ask, Cephalus, whether your fortune was for the most part inherited or acquired by you?

Acquired! Socrates; do you want to know how much I acquired? In the art of making money I have been midway between my father and grandfather: for my grandfather, whose name I bear, doubled and trebled the value of his patrimony, that which he inherited being much what I possess now; but my father Lysanias reduced the property below what it is at present: and I shall be satisfied if I leave to these my sons not less but a little more than I received.

330d

That was why I asked you the question, I replied, because I see that you are indifferent about money, which is a characteristic rather of those who have inherited their fortunes than of those who have acquired them; the makers of fortunes have a second love of money as a creation of their own, resembling the affection of authors for their own poems, or of parents for their children, besides that natural love of it for the sake of use and profit which is common to them and all men. And hence they are very bad company, for they can talk about nothing but the praises of wealth. That is true, he said.

330e

Yes, that is very true, but may I ask another question? What do you consider to be the greatest blessing which you have reaped from your wealth?

One, he said, of which I could not expect easily to convince others. For let me tell you, Socrates, that when a man thinks himself to be near death, fears and cares enter into his mind which he never had before; the tales of a world below and the punishment which is exacted there of deeds done here were once a laughing matter to him, but now he is tormented with the thought that they may be true: either from the weakness of age, or because he is now drawing nearer to that other place, he has a clearer view of these things; suspicions and alarms crowd thickly upon him, and he begins to reflect and consider what wrongs he has done to others. And when he finds that the sum of his transgressions is great he will many a time like a child start up in his sleep for fear, and he is filled with dark forebodings. But to him who is conscious of no sin, sweet hope, as Pindar charmingly says, is the kind nurse of his age: ^{331a} Hope, he says, cherishes the soul of him who lives in justice and holiness and is the nurse of his age and the companion of his journey; — hope which is mightiest to sway the restless soul of man.

^{331b}

How admirable are his words! And the great blessing of riches, I do not say to every man, but to a good man, is, that he has had no occasion to deceive or to defraud others, either intentionally or unintentionally; and when he departs to the world below he is not in any apprehension about offerings due to the gods or debts which he owes to men. Now to this peace of mind the possession of wealth greatly contributes; and therefore I say, that, setting one thing against another, of the many advantages which wealth has to give, to a man of sense this is in my opinion the greatest.

331c

Well said, Cephalus, I replied; but as concerning justice, what is it? — to speak the truth and to pay your debts — no more than this? And even to this are there not exceptions? Suppose that a friend when in his right mind has deposited arms with me and he asks for them when he is not in his right mind, ought I to give them back to him? No one would say that I ought or that I should be right in doing so, any more than they would say that I ought always to speak the truth to one who is in his condition.

331d

You are quite right, he replied.

But then, I said, speaking the truth and paying your debts is not a correct definition of justice.

Cephalus - Socrates - Polemarchus Quite correct, Socrates, if Simonides is to be believed, said
Polemarchus interposing.

I fear, said Cephalus, that I must go now, for I have to look after the sacrifices, and I hand over the argument to Polemarchus and the company.

Is not Polemarchus your heir? I said.

331e

To be sure, he answered, and went away laughing to the sacrifices.

Socrates - Polemarchus Tell me then, O thou heir of the argument, what did Simonides say, and according to you truly say, about justice?

He said that the repayment of a debt is just, and in saying so he appears to me to be right.

332a

I should be sorry to doubt the word of such a wise and inspired man, but his meaning, though probably clear to you, is the

reverse of clear to me. For he certainly does not mean, as we were now saying that I ought to return a return a deposit of arms or of anything else to one who asks for it when he is not in his right senses; and yet a deposit cannot be denied to be a debt.

332b

True.

Then when the person who asks me is not in his right mind I am by no means to make the return?

Certainly not.

332c

When Simonides said that the repayment of a debt was justice, he did not mean to include that case?

Certainly not; for he thinks that a friend ought always to do good to a friend and never evil.

You mean that the return of a deposit of gold which is to the injury of the receiver, if the two parties are friends, is not the repayment of a debt, — that is what you would imagine him to say?

Yes.

And are enemies also to receive what we owe to them?

To be sure, he said, they are to receive what we owe them, and an enemy, as I take it, owes to an enemy that which is due or proper to him — that is to say, evil.

332d

Simonides, then, after the manner of poets, would seem to have spoken darkly of the nature of justice; for he really meant to say that justice is the giving to each man what is proper to him, and this he termed a debt.

That must have been his meaning, he said.

By heaven! I replied; and if we asked him what due or proper thing is given by medicine, and to whom, what answer do you think that he would make to us?

332e

He would surely reply that medicine gives drugs and meat and drink to human bodies.

And what due or proper thing is given by cookery, and to what? Seasoning to food.

And what is that which justice gives, and to whom?

If, Socrates, we are to be guided at all by the analogy of the preceding instances, then justice is the art which gives good to friends and evil to enemies.

That is his meaning then?

I think so.

And who is best able to do good to his friends and evil to his enemies in time of sickness?

The physician.

333a

Or when they are on a voyage, amid the perils of the sea?

The pilot.

And in what sort of actions or with a view to what result is the just man most able to do harm to his enemy and good to his friends?

In going to war against the one and in making alliances with the other.

But when a man is well, my dear Polemarchus, there is no need of a physician?

No.

And he who is not on a voyage has no need of a pilot?

333b

No.

Then in time of peace justice will be of no use?

I am very far from thinking so.

You think that justice may be of use in peace as well as in war?

Yes.

Like husbandry for the acquisition of corn?

Yes.

Or like shoemaking for the acquisition of shoes, — that is what you mean?

Yes.

And what similar use or power of acquisition has justice in time of peace?

In contracts, Socrates, justice is of use.

And by contracts you mean partnerships?

Exactly.

But is the just man or the skilful player a more useful and better partner at a game of draughts?

333c

The skilful player.

And in the laying of bricks and stones is the just man a more useful or better partner than the builder?

Quite the reverse.

Then in what sort of partnership is the just man a better partner than the harp-player, as in playing the harp the harp-player is certainly a better partner than the just man?

In a money partnership.

Yes, Polemarchus, but surely not in the use of money; for you do not want a just man to be your counsellor the purchase or sale of a horse; a man who is knowing about horses would be better for that, would he not?

333d

Certainly.

And when you want to buy a ship, the shipwright or the pilot would be better?

True.

Then what is that joint use of silver or gold in which the just man is to be preferred?

When you want a deposit to be kept safely.

You mean when money is not wanted, but allowed to lie?

Precisely.

That is to say, justice is useful when money is useless?

That is the inference.

333e

And when you want to keep a pruning-hook safe, then justice is useful to the individual and to the state; but when you want to use it, then the art of the vine-dresser?

Clearly.

And when you want to keep a shield or a lyre, and not to use them, you would say that justice is useful; but when you want to use them, then the art of the soldier or of the musician?

Certainly.

And so of all the other things; — justice is useful when they are useless, and useless when they are useful?

That is the inference.

334a

Then justice is not good for much. But let us consider this further point: Is not he who can best strike a blow in a boxing match or in any kind of fighting best able to ward off a blow?

Certainly.

And he who is most skilful in preventing or escaping from a disease is best able to create one?

True.

334b

And he is the best guard of a camp who is best able to steal a march upon the enemy?

Certainly.

Then he who is a good keeper of anything is also a good thief?

That, I suppose, is to be inferred.

Then if the just man is good at keeping money, he is good at stealing it.

That is implied in the argument.

Then after all the just man has turned out to be a thief. And this is a lesson which I suspect you must have learnt out of Homer; for he, speaking of Autolycus, the maternal grandfather of Odysseus, who is a favourite of his, affirms that 334c He was excellent above all men in theft and perjury.

334c

And so, you and Homer and Simonides are agreed that justice is an art of theft; to be practised however 'for the good of friends and for the harm of enemies,' — that was what you were saying?

No, certainly not that, though I do not now know what I did say; but I still stand by the latter words.

Well, there is another question: By friends and enemies do we mean those who are so really, or only in seeming?

Surely, he said, a man may be expected to love those whom he thinks good, and to hate those whom he thinks evil.

334d

Yes, but do not persons often err about good and evil: many who are not good seem to be so, and conversely?

That is true.

Then to them the good will be enemies and the evil will be their friends? True.

And in that case they will be right in doing good to the evil and evil to the good?

Clearly.

But the good are just and would not do an injustice?

True.

Then according to your argument it is just to injure those who do no wrong?

334e

Nay, Socrates; the doctrine is immoral.

Then I suppose that we ought to do good to the just and harm to the unjust?

I like that better.

But see the consequence: — Many a man who is ignorant of human nature has friends who are bad friends, and in that case he ought to do harm to them; and he has good enemies whom he ought to benefit; but, if so, we shall be saying the very opposite of that which we affirmed to be the meaning of Simonides.

Very true, he said: and I think that we had better correct an error into which we seem to have fallen in the use of the words 'friend' and 'enemy.'

335a

What was the error, Polemarchus? I asked.

We assumed that he is a friend who seems to be or who is thought good.

And how is the error to be corrected?

We should rather say that he is a friend who is, as well as seems, good; and that he who seems only, and is not good, only seems to be and is not a friend; and of an enemy the same may be said.

You would argue that the good are our friends and the bad our enemies?

Yes.

335b

And instead of saying simply as we did at first, that it is just to do good to our friends and harm to our enemies, we should further say: It is just to do good to our friends when they are good and harm to our enemies when they are evil?

Yes, that appears to me to be the truth.

But ought the just to injure any one at all?

Undoubtedly he ought to injure those who are both wicked and his enemies.

When horses are injured, are they improved or deteriorated?

The latter.

Deteriorated, that is to say, in the good qualities of horses, not of dogs?

Yes, of horses.

And dogs are deteriorated in the good qualities of dogs, and not of horses?

Of course.

335c

And will not men who are injured be deteriorated in that which is the proper virtue of man?

Certainly.

And that human virtue is justice?

To be sure.

Then men who are injured are of necessity made unjust?

That is the result.

But can the musician by his art make men unmusical?

Certainly not.

Or the horseman by his art make them bad horsemen?

Impossible.

And can the just by justice make men unjust, or speaking general can the good by virtue make them bad?

Assuredly not.

335d

Any more than heat can produce cold?

It cannot.

Or drought moisture?

Clearly not.

Nor can the good harm any one?

Impossible.

And the just is the good?

Certainly.

Then to injure a friend or any one else is not the act of a just man, but of the opposite, who is the unjust?

I think that what you say is quite true, Socrates.

335e

Then if a man says that justice consists in the repayment of debts, and that good is the debt which a man owes to his friends, and evil the debt which he owes to his enemies, — to say this is not wise; for it is not true, if, as has been clearly shown, the injuring of another can be in no case just.

I agree with you, said Polemarchus.

Then you and I are prepared to take up arms against any one who attributes such a saying to Simonides or Bias or Pittacus, or any other wise man or seer?

I am quite ready to do battle at your side, he said.

Shall I tell you whose I believe the saying to be?

Whose?

336a

I believe that Periander or Perdiccas or Xerxes or Ismenias the Theban, or some other rich and mighty man, who had a great opinion of his own power, was the first to say that justice is 'doing good to your friends and harm to your enemies.'

Most true, he said.

Yes, I said; but if this definition of justice also breaks down, what other can be offered?

336b

Several times in the course of the discussion Thrasy-machus had made an attempt to get the argument into his own hands, and had been put down by the rest of the company, who wanted to hear the end. But when Polemarchus and I had done speaking

and there was a pause, he could no longer hold his peace; and, gathering himself up, he came at us like a wild beast, seeking to devour us. We were quite panic-stricken at the sight of him.

Socrates - Polemarchus - Thrasymachus ^{336c} He roared out to the whole company: What folly. Socrates, has taken possession of you all? And why, sillybillies, do you knock under to one another? I say that if you want really to know what justice is, you should not only ask but answer, and you should not seek honour to yourself from the refutation of an opponent, but have your own answer; for there is many a one who can ask and cannot answer. And now I will not have you say that justice is duty or advantage or profit or gain or interest, for this sort of nonsense will not do for me; I must have clearness and accuracy.

^{336d}

I was panic-stricken at his words, and could not look at him without trembling. Indeed I believe that if I had not fixed my eye upon him, I should have been struck dumb: but when I saw his fury rising, I looked at him first, and was therefore able to reply to him.

^{336e}

Thrasymachus, I said, with a quiver, don't be hard upon us. Polemarchus and I may have been guilty of a little mistake in the argument, but I can assure you that the error was not intentional. If we were seeking for a piece of gold, you would not imagine that we were 'knocking under to one another,' and so losing our chance of finding it. And why, when we are seeking for justice, a thing more precious than many pieces of gold, do you say that we are weakly yielding to one another and not doing our utmost to get at the truth? Nay, my good friend, we are most willing and anxious to do so, but the fact is that we cannot. And if so, you people who know all things should pity us and not be angry with us.

337a

How characteristic of Socrates! he replied, with a bitter laugh; — that's your ironical style! Did I not foresee — have I not already told you, that whatever he was asked he would refuse to answer, and try irony or any other shuffle, in order that he might avoid answering?

337b

You are a philosopher, Thrasymachus, I replied, and well know that if you ask a person what numbers make up twelve, taking care to prohibit him whom you ask from answering twice six, or three times four, or six times two, or four times three, 'for this sort of nonsense will not do for me,' — then obviously, that is your way of putting the question, no one can answer you. But suppose that he were to retort, 'Thrasymachus, what do you mean? If one of these numbers which you interdict be the true answer to the question, am I falsely to say some other number which is not the right one? — is that your meaning?' — How would you answer him?

337c

Just as if the two cases were at all alike! he said.

Why should they not be? I replied; and even if they are not, but only appear to be so to the person who is asked, ought he not to say what he thinks, whether you and I forbid him or not?

I presume then that you are going to make one of the interdicted answers?

337d

I dare say that I may, notwithstanding the danger, if upon reflection I approve of any of them.

But what if I give you an answer about justice other and better, he said, than any of these? What do you deserve to have done to you?

Done to me! — as becomes the ignorant, I must learn from the wise — that is what I deserve to have done to me.

What, and no payment! a pleasant notion!

I will pay when I have the money, I replied.

Socrates - Thrasymachus - Glaucon ^{337e} But you have, Socrates, said Glaucon: and you, Thrasymachus, need be under no anxiety about money, for we will all make a contribution for Socrates.

^{337e}

Yes, he replied, and then Socrates will do as he always does — refuse to answer himself, but take and pull to pieces the answer of some one else.

^{338a}

Why, my good friend, I said, how can any one answer who knows, and says that he knows, just nothing; and who, even if he has some faint notions of his own, is told by a man of authority not to utter them? The natural thing is, that the speaker should be some one like yourself who professes to know and can tell what he knows. Will you then kindly answer, for the edification of the company and of myself?

Glaucon and the rest of the company joined in my request and Thrasymachus, as any one might see, was in reality eager to speak; for he thought that he had an excellent answer, and would distinguish himself. But at first he to insist on my answering; at length he consented to begin. Behold, he said, the wisdom of Socrates; he refuses to teach himself, and goes about learning of others, to whom he never even says thank you.

^{338b}

That I learn of others, I replied, is quite true; but that I am ungrateful I wholly deny. Money I have none, and therefore I pay in praise, which is all I have: and how ready I am to praise any one who appears to me to speak well you will very soon find out when you answer; for I expect that you will answer well.

Listen, then, he said; I proclaim that justice is nothing else than the interest of the stronger. And now why do you not me? But of course you won't.

338c

Let me first understand you, I replied. Justice, as you say, is the interest of the stronger. What, Thrasymachus, is the meaning of this? You cannot mean to say that because Polydamas, the pancratiast, is stronger than we are, and finds the eating of beef conducive to his bodily strength, that to eat beef is therefore equally for our good who are weaker than he is, and right and just for us?

That's abominable of you, Socrates; you take the words in the sense which is most damaging to the argument.

338d

Not at all, my good sir, I said; I am trying to understand them; and I wish that you would be a little clearer.

Well, he said, have you never heard that forms of government differ; there are tyrannies, and there are democracies, and there are aristocracies?

Yes, I know.

And the government is the ruling power in each state?

Certainly.

338e

And the different forms of government make laws democratical, aristocratical, tyrannical, with a view to their several interests; and these laws, which are made by them for their own interests, are the justice which they deliver to their subjects, and him who transgresses them they punish as a breaker of the law, and unjust. And that is what I mean when I say that in all states there is the same principle of justice, which is the interest of the government; and as the government must be supposed to have power, the only reasonable conclusion is, that everywhere there

is one principle of justice, which is the interest of the stronger.

339a

Now I understand you, I said; and whether you are right or not I will try to discover. But let me remark, that in defining justice you have yourself used the word 'interest' which you forbade me to use. It is true, however, that in your definition the words 'of the stronger' are added.

339b

A small addition, you must allow, he said.

Great or small, never mind about that: we must first enquire whether what you are saying is the truth. Now we are both agreed that justice is interest of some sort, but you go on to say 'of the stronger'; about this addition I am not so sure, and must therefore consider further.

Proceed.

339c

I will; and first tell me, Do you admit that it is just or subjects to obey their rulers?

I do.

But are the rulers of states absolutely infallible, or are they sometimes liable to err?

To be sure, he replied, they are liable to err.

Then in making their laws they may sometimes make them rightly, and sometimes not?

True.

When they make them rightly, they make them agreeably to their interest; when they are mistaken, contrary to their interest; you admit that?

Yes.

And the laws which they make must be obeyed by their subjects,
— and that is what you call justice?

339d

Doubtless.

Then justice, according to your argument, is not only obedience
to the interest of the stronger but the reverse?

What is that you are saying? he asked.

I am only repeating what you are saying, I believe. But let us
consider: Have we not admitted that the rulers may be mistaken
about their own interest in what they command, and also that
to obey them is justice? Has not that been admitted?

Yes.

339e

Then you must also have acknowledged justice not to be for the
interest of the stronger, when the rulers unintentionally
command things to be done which are to their own injury. For
if, as you say, justice is the obedience which the subject renders
to their commands, in that case, O wisest of men, is there any
escape from the conclusion that the weaker are commanded to
do, not what is for the interest, but what is for the injury of the
stronger?

Nothing can be clearer, Socrates, said Polemarchus.

340a

Socrates - Cleitophon - Polemarchus - Thrasymachus Yes, said
Cleitophon, interposing, if you are allowed to be his witness.

But there is no need of any witness, said Polemarchus, for
Thrasymachus himself acknowledges that rulers may
sometimes command what is not for their own interest, and
that for subjects to obey them is justice.

Yes, Polemarchus, — Thrasymachus said that for subjects to do
what was commanded by their rulers is just.

Yes, Cleitophon, but he also said that justice is the interest of the stronger, and, while admitting both these propositions, he further acknowledged that the stronger may command the weaker who are his subjects to do what is not for his own interest; whence follows that justice is the injury quite as much as the interest of the stronger.

340b

But, said Cleitophon, he meant by the interest of the stronger what the stronger thought to be his interest, — this was what the weaker had to do; and this was affirmed by him to be justice.

Those were not his words, rejoined Polemarchus.

Socrates - Thrasyarchus Never mind, I replied, if he now says that they are, let us accept his statement. Tell me, Thrasyarchus, I said, did you mean by justice what the stronger thought to be his interest, whether really so or not?

340c

Certainly not, he said. Do you suppose that I call him who is mistaken the stronger at the time when he is mistaken?

Yes, I said, my impression was that you did so, when you admitted that the ruler was not infallible but might be sometimes mistaken.

340d

You argue like an informer, Socrates. Do you mean, for example, that he who is mistaken about the sick is a physician in that he is mistaken? or that he who errs in arithmetic or grammar is an arithmetician or grammarian at the time when he is making the mistake, in respect of the mistake? True, we say that the physician or arithmetician or grammarian has made a mistake, but this is only a way of speaking; for the fact is that neither the grammarian nor any other person of skill ever makes a mistake in so far as he is what his name implies; they none of them err unless their skill fails them, and then they cease to be skilled

artists. No artist or sage or ruler errs at the time when he is what his name implies; though he is commonly said to err, and I adopted the common mode of speaking. But to be perfectly accurate, since you are such a lover of accuracy, we should say that the ruler, in so far as he is the ruler, is unerring, and, being unerring, always commands that which is for his own interest; and the subject is required to execute his commands; and therefore, as I said at first and now repeat, justice is the interest of the stronger.

340e

Indeed, Thrasymachus, and do I really appear to you to argue like an informer?

341a

Certainly, he replied.

And you suppose that I ask these questions with any design of injuring you in the argument?

Nay, he replied, 'suppose' is not the word — I know it; but you will be found out, and by sheer force of argument you will never prevail.

341b

I shall not make the attempt, my dear man; but to avoid any misunderstanding occurring between us in future, let me ask, in what sense do you speak of a ruler or stronger whose interest, as you were saying, he being the superior, it is just that the inferior should execute — is he a ruler in the popular or in the strict sense of the term?

In the strictest of all senses, he said. And now cheat and play the informer if you can; I ask no quarter at your hands. But you never will be able, never.

341c

And do you imagine, I said, that I am such a madman as to try and cheat, Thrasymachus? I might as well shave a lion.

Why, he said, you made the attempt a minute ago, and you failed.

Enough, I said, of these civilities. It will be better that I should ask you a question: Is the physician, taken in that strict sense of which you are speaking, a healer of the sick or a maker of money? And remember that I am now speaking of the true physician.

A healer of the sick, he replied.

And the pilot — that is to say, the true pilot — is he a captain of sailors or a mere sailor?

341d

A captain of sailors.

The circumstance that he sails in the ship is not to be taken into account; neither is he to be called a sailor; the name pilot by which he is distinguished has nothing to do with sailing, but is significant of his skill and of his authority over the sailors.

Very true, he said.

Now, I said, every art has an interest?

Certainly.

For which the art has to consider and provide?

Yes, that is the aim of art.

And the interest of any art is the perfection of it — this and nothing else?

What do you mean?

341e

I mean what I may illustrate negatively by the example of the body. Suppose you were to ask me whether the body is self-sufficing or has wants, I should reply: Certainly the body has wants; for the body may be ill and require to be cured, and

has therefore interests to which the art of medicine ministers; and this is the origin and intention of medicine, as you will acknowledge. Am I not right?

Quite right, he replied.

342a

But is the art of medicine or any other art faulty or deficient in any quality in the same way that the eye may be deficient in sight or the ear fail of hearing, and therefore requires another art to provide for the interests of seeing and hearing — has art in itself, I say, any similar liability to fault or defect, and does every art require another supplementary art to provide for its interests, and that another and another without end? Or have the arts to look only after their own interests? Or have they no need either of themselves or of another? — having no faults or defects, they have no need to correct them, either by the exercise of their own art or of any other; they have only to consider the interest of their subject-matter. For every art remains pure and faultless while remaining true — that is to say, while perfect and unimpaired. Take the words in your precise sense, and tell me whether I am not right.”

342b

Yes, clearly.

Then medicine does not consider the interest of medicine, but the interest of the body?

True, he said.

342c

Nor does the art of horsemanship consider the interests of the art of horsemanship, but the interests of the horse; neither do any other arts care for themselves, for they have no needs; they care only for that which is the subject of their art?

True, he said.

But surely, Thrasymachus, the arts are the superiors and rulers of their own subjects?

To this he assented with a good deal of reluctance.

Then, I said, no science or art considers or enjoins the interest of the stronger or superior, but only the interest of the subject and weaker?

He made an attempt to contest this proposition also, but finally acquiesced.

342d

Then, I continued, no physician, in so far as he is a physician, considers his own good in what he prescribes, but the good of his patient; for the true physician is also a ruler having the human body as a subject, and is not a mere money-maker; that has been admitted?

Yes.

And the pilot likewise, in the strict sense of the term, is a ruler of sailors and not a mere sailor?

That has been admitted.

And such a pilot and ruler will provide and prescribe for the interest of the sailor who is under him, and not for his own or the ruler's interest?

He gave a reluctant 'Yes.'

342e

Then, I said, Thrasymachus, there is no one in any rule who, in so far as he is a ruler, considers or enjoins what is for his own interest, but always what is for the interest of his subject or suitable to his art; to that he looks, and that alone he considers in everything which he says and does.

343a

When we had got to this point in the argument, and every one saw that the definition of justice had been completely upset, Thrasymachus, instead of replying to me, said: Tell me, Socrates, have you got a nurse?

Why do you ask such a question, I said, when you ought rather to be answering?

Because she leaves you to snivel, and never wipes your nose: she has not even taught you to know the shepherd from the sheep.

What makes you say that? I replied.

343e

Because you fancy that the shepherd or neatherd fattens or tends the sheep or oxen with a view to their own good and not to the good of himself or his master; and you further imagine that the rulers of states, if they are true rulers, never think of their subjects as sheep, and that they are not studying their own advantage day and night. Oh, no; and so entirely astray are you in your ideas about the just and unjust as not even to know that justice and the just are in reality another's good; that is to say, the interest of the ruler and stronger, and the loss of the subject and servant; and injustice the opposite; for the unjust is lord over the truly simple and just: he is the stronger, and his subjects do what is for his interest, and minister to his happiness, which is very far from being their own. Consider further, most foolish Socrates, that the just is always a loser in comparison with the unjust. First of all, in private contracts: wherever the unjust is the partner of the just you will find that, when the partnership is dissolved, the unjust man has always more and the just less. Secondly, in their dealings with the State: when there is an income tax, the just man will pay more and the unjust less on the same amount of income; and when there is anything to be received the one gains nothing and the other much. Observe also what happens when they take an office; there is the just man neglecting his affairs and perhaps

suffering other losses, and getting nothing out of the public, because he is just; moreover he is hated by his friends and acquaintance for refusing to serve them in unlawful ways. But all this is reversed in the case of the unjust man. I am speaking, as before, of injustice on a large scale in which the advantage of the unjust is more apparent; and my meaning will be most clearly seen if we turn to that highest form of injustice in which the criminal is the happiest of men, and the sufferers or those who refuse to do injustice are the most miserable — that is to say tyranny, which by fraud and force takes away the property of others, not little by little but wholesale; comprehending in one, things sacred as well as profane, private and public; for which acts of wrong, if he were detected perpetrating any one of them singly, he would be punished and incur great disgrace — they who do such wrong in particular cases are called robbers of temples, and man-stealers and burglars and swindlers and thieves. But when a man besides taking away the money of the citizens has made slaves of them, then, instead of these names of reproach, he is termed happy and blessed, not only by the citizens but by all who hear of his having achieved the consummation of injustice. For mankind censure injustice, fearing that they may be the victims of it and not because they shrink from committing it. And thus, as I have shown, Socrates, injustice, when on a sufficient scale, has more strength and freedom and mastery than justice; and, as I said at first, justice is the interest of the stronger, whereas injustice is a man's own profit and interest.

344d

Thrasymachus, when he had thus spoken, having, like a bathman, deluged our ears with his words, had a mind to go away. But the company would not let him; they insisted that he should remain and defend his position; and I myself added my own humble request that he would not leave us. Thrasymachus, I said to him, excellent man, how suggestive are your remarks!

And are you going to run away before you have fairly taught or learned whether they are true or not? Is the attempt to determine the way of man's life so small a matter in your eyes — to determine how life may be passed by each one of us to the greatest advantage?

And do I differ from you, he said, as to the importance of the enquiry?

344e

You appear rather, I replied, to have no care or thought about us, Thrasymachus — whether we live better or worse from not knowing what you say you know, is to you a matter of indifference. Prithee, friend, do not keep your knowledge to yourself; we are a large party; and any benefit which you confer upon us will be amply rewarded. For my own part I openly declare that I am not convinced, and that I do not believe injustice to be more gainful than justice, even if uncontrolled and allowed to have free play. For, granting that there may be an unjust man who is able to commit injustice either by fraud or force, still this does not convince me of the superior advantage of injustice, and there may be others who are in the same predicament with myself. Perhaps we may be wrong; if so, you in your wisdom should convince us that we are mistaken in preferring justice to injustice.

345a

And how am I to convince you, he said, if you are not already convinced by what I have just said; what more can I do for you? Would you have me put the proof bodily into your souls?

345c

Heaven forbid! I said; I would only ask you to be consistent; or, if you change, change openly and let there be no deception. For I must remark, Thrasymachus, if you will recall what was previously said, that although you began by defining the true physician in an exact sense, you did not observe a like exactness

when speaking of the shepherd; you thought that the shepherd as a shepherd tends the sheep not with a view to their own good, but like a mere diner or banqueter with a view to the pleasures of the table; or, again, as a trader for sale in the market, and not as a shepherd. Yet surely the art of the shepherd is concerned only with the good of his subjects; he has only to provide the best for them, since the perfection of the art is already ensured whenever all the requirements of it are satisfied. And that was what I was saying just now about the ruler. I conceived that the art of the ruler, considered as ruler, whether in a state or in private life, could only regard the good of his flock or subjects; whereas you seem to think that the rulers in states, that is to say, the true rulers, like being in authority.

345d

Think! Nay, I am sure of it.

Then why in the case of lesser offices do men never take them willingly without payment, unless under the idea that they govern for the advantage not of themselves but of others? Let me ask you a question: Are not the several arts different, by reason of their each having a separate function? And, my dear illustrious friend, do say what you think, that we may make a little progress.

Yes, that is the difference, he replied.

345e

And each art gives us a particular good and not merely a general one — medicine, for example, gives us health; navigation, safety at sea, and so on?

Yes, he said.

And the art of payment has the special function of giving pay: but we do not confuse this with other arts, any more than the art of the pilot is to be confused with the art of medicine,

because the health of the pilot may be improved by a sea voyage. You would not be inclined to say, would you, that navigation is the art of medicine, at least if we are to adopt your exact use of language?

346a

Certainly not.

Or because a man is in good health when he receives pay you would not say that the art of payment is medicine?

I should say not.

Nor would you say that medicine is the art of receiving pay because a man takes fees when he is engaged in healing?

Certainly not.

And we have admitted, I said, that the good of each art is specially confined to the art?

Yes.

346b

Then, if there be any good which all artists have in common, that is to be attributed to something of which they all have the common use?

True, he replied.

And when the artist is benefited by receiving pay the advantage is gained by an additional use of the art of pay, which is not the art professed by him?

He gave a reluctant assent to this.

346d

Then the pay is not derived by the several artists from their respective arts. But the truth is, that while the art of medicine gives health, and the art of the builder builds a house, another art attends them which is the art of pay. The various arts may be doing their own business and benefiting that over which

they preside, but would the artist receive any benefit from his art unless he were paid as well?

I suppose not.

But does he therefore confer no benefit when he works for nothing?

Certainly, he confers a benefit.

346e

Then now, Thrasmachus, there is no longer any doubt that neither arts nor governments provide for their own interests; but, as we were before saying, they rule and provide for the interests of their subjects who are the weaker and not the stronger — to their good they attend and not to the good of the superior.

And this is the reason, my dear Thrasmachus, why, as I was just now saying, no one is willing to govern; because no one likes to take in hand the reformation of evils which are not his concern without remuneration. For, in the execution of his work, and in giving his orders to another, the true artist does not regard his own interest, but always that of his subjects; and therefore in order that rulers may be willing to rule, they must be paid in one of three modes of payment: money, or honour, or a penalty for refusing.

347a

Socrates - Glaucon What do you mean, Socrates? said Glaucon. The first two modes of payment are intelligible enough, but what the penalty is I do not understand, or how a penalty can be a payment.

347b

You mean that you do not understand the nature of this payment which to the best men is the great inducement to rule? Of course you know that ambition and avarice are held to be, as indeed they are, a disgrace?

Very true.

347c

And for this reason, I said, money and honour have no attraction for them; good men do not wish to be openly demanding payment for governing and so to get the name of hirelings, nor by secretly helping themselves out of the public revenues to get the name of thieves. And not being ambitious they do not care about honour. Wherefore necessity must be laid upon them, and they must be induced to serve from the fear of punishment. And this, as I imagine, is the reason why the forwardness to take office, instead of waiting to be compelled, has been deemed dishonourable. Now the worst part of the punishment is that he who refuses to rule is liable to be ruled by one who is worse than himself. And the fear of this, as I conceive, induces the good to take office, not because they would, but because they cannot help — not under the idea that they are going to have any benefit or enjoyment themselves, but as a necessity, and because they are not able to commit the task of ruling to any one who is better than themselves, or indeed as good. For there is reason to think that if a city were composed entirely of good men, then to avoid office would be as much an object of contention as to obtain office is at present; then we should have plain proof that the true ruler is not meant by nature to regard his own interest, but that of his subjects; and every one who knew this would choose rather to receive a benefit from another than to have the trouble of conferring one. So far am I from agreeing with Thrasymachus that justice is the interest of the stronger. This latter question need not be further discussed at present; but when Thrasymachus says that the life of the unjust is more advantageous than that of the just, his new statement appears to me to be of a far more serious character. Which of us has spoken truly? And which sort of life, Glaucon, do you prefer?

348a

I for my part deem the life of the just to be the more advantageous, he answered.

Did you hear all the advantages of the unjust which Thrasymachus was rehearsing?

Yes, I heard him, he replied, but he has not convinced me.

Then shall we try to find some way of convincing him, if we can, that he is saying what is not true?

Most certainly, he replied.

If, I said, he makes a set speech and we make another recounting all the advantages of being just, and he answers and we rejoin, there must be a numbering and measuring of the goods which are claimed on either side, and in the end we shall want judges to decide; but if we proceed in our enquiry as we lately did, by making admissions to one another, we shall unite the offices of judge and advocate in our own persons.

348b

Very good, he said.

And which method do I understand you to prefer? I said.

That which you propose.

Well, then, Thrasymachus, I said, suppose you begin at the beginning and answer me. You say that perfect injustice is more gainful than perfect justice?

Socrates - Glaucon - Thrasymachus Yes, that is what I say, and I have given you my reasons.

348c

And what is your view about them? Would you call one of them virtue and the other vice?

Certainly.

I suppose that you would call justice virtue and injustice vice?

What a charming notion! So likely too, seeing that I affirm injustice to be profitable and justice not.

What else then would you say?

The opposite, he replied.

And would you call justice vice?

No, I would rather say sublime simplicity.

Then would you call injustice malignity?

No; I would rather say discretion.

And do the unjust appear to you to be wise and good?

348d

Yes, he said; at any rate those of them who are able to be perfectly unjust, and who have the power of subduing states and nations; but perhaps you imagine me to be talking of cutpurses.

Even this profession if undetected has advantages, though they are not to be compared with those of which I was just now speaking.

348e

I do not think that I misapprehend your meaning, Thrasymachus, I replied; but still I cannot hear without amazement that you class injustice with wisdom and virtue, and justice with the opposite.

Certainly I do so class them.

Now, I said, you are on more substantial and almost unanswerable ground; for if the injustice which you were maintaining to be profitable had been admitted by you as by others to be vice and deformity, an answer might have been given to you on received principles; but now I perceive that you will call injustice honourable and strong, and to the unjust you will attribute all the qualities which were attributed by us

before to the just, seeing that you do not hesitate to rank injustice with wisdom and virtue.

349a

You have guessed most infallibly, he replied.

349b

Then I certainly ought not to shrink from going through with the argument so long as I have reason to think that you, Thrasymachus, are speaking your real mind; for I do believe that you are now in earnest and are not amusing yourself at our expense.

I may be in earnest or not, but what is that to you? — to refute the argument is your business.

Very true, I said; that is what I have to do: But will you be so good as answer yet one more question? Does the just man try to gain any advantage over the just?

Far otherwise; if he did would not be the simple, amusing creature which he is.

And would he try to go beyond just action?

349c

He would not.

And how would he regard the attempt to gain an advantage over the unjust; would that be considered by him as just or unjust?

He would think it just, and would try to gain the advantage; but he would not be able.

Whether he would or would not be able, I said, is not to the point. My question is only whether the just man, while refusing to have more than another just man, would wish and claim to have more than the unjust?

Yes, he would.

349d

And what of the unjust — does he claim to have more than the just man and to do more than is just.

Of course, he said, for he claims to have more than all men.

And the unjust man will strive and struggle to obtain more than the unjust man or action, in order that he may have more than all?

True.

We may put the matter thus, I said — the just does not desire more than his like but more than his unlike, whereas the unjust desires more than both his like and his unlike?

Nothing, he said, can be better than that statement.

And the unjust is good and wise, and the just is neither?

Good again, he said.

And is not the unjust like the wise and good and the just unlike them?

349e

Of course, he said, he who is of a certain nature, is like those who are of a certain nature; he who is not, not.

Each of them, I said, is such as his like is?

Certainly, he replied.

Very good, Thrasymachus, I said; and now to take the case of the arts: you would admit that one man is a musician and another not a musician?

Yes.

And which is wise and which is foolish?

Clearly the musician is wise, and he who is not a musician is foolish.

And he is good in as far as he is wise, and bad in as far as he is foolish?

Yes.

350a

And you would say the same sort of thing of the physician?

Yes.

And do you think, my excellent friend, that a musician when he adjusts the lyre would desire or claim to exceed or go beyond a musician in the tightening and loosening the strings?

I do not think that he would.

But he would claim to exceed the non-musician?

Of course.

And what would you say of the physician? In prescribing meats and drinks would he wish to go beyond another physician or beyond the practice of medicine?

He would not.

But he would wish to go beyond the non-physician?

Yes.

350b

And about knowledge and ignorance in general; see whether you think that any man who has knowledge ever would wish to have the choice of saying or doing more than another man who has knowledge. Would he not rather say or do the same as his like in the same case?

That, I suppose, can hardly be denied.

And what of the ignorant? would he not desire to have more than either the knowing or the ignorant?

I dare say.

And the knowing is wise?

Yes.

And the wise is good?

True.

Then the wise and good will not desire to gain more than his like, but more than his unlike and opposite?

350c

I suppose so.

Whereas the bad and ignorant will desire to gain more than both?

Yes.

But did we not say, Thrasymachus, that the unjust goes beyond both his like and unlike? Were not these your words? They were.

They were.

And you also said that the lust will not go beyond his like but his unlike?

Yes.

Then the just is like the wise and good, and the unjust like the evil and ignorant?

That is the inference.

And each of them is such as his like is?

That was admitted.

350d

Then the just has turned out to be wise and good and the unjust evil and ignorant.

Thrasymachus made all these admissions, not fluently, as I repeat them, but with extreme reluctance; it was a hot

summer's day, and the perspiration poured from him in torrents; and then I saw what I had never seen before, Thrasymachus blushing. As we were now agreed that justice was virtue and wisdom, and injustice vice and ignorance, I proceeded to another point: ^{350e} Well, I said, Thrasymachus, that matter is now settled; but were we not also saying that injustice had strength; do you remember?

^{350e}

Yes, I remember, he said, but do not suppose that I approve of what you are saying or have no answer; if however I were to answer, you would be quite certain to accuse me of haranguing; therefore either permit me to have my say out, or if you would rather ask, do so, and I will answer 'Very good,' as they say to story-telling old women, and will nod 'Yes' and 'No.'

Certainly not, I said, if contrary to your real opinion.

^{351a}

Yes, he said, I will, to please you, since you will not let me speak.

What else would you have?

Nothing in the world, I said; and if you are so disposed I will ask and you shall answer.

Proceed.

^{351b}

Then I will repeat the question which I asked before, in order that our examination of the relative nature of justice and injustice may be carried on regularly. A statement was made that injustice is stronger and more powerful than justice, but now justice, having been identified with wisdom and virtue, is easily shown to be stronger than injustice, if injustice is ignorance; this can no longer be questioned by any one. But I want to view the matter, Thrasymachus, in a different way: You would not deny that a state may be unjust and may be unjustly

attempting to enslave other states, or may have already enslaved them, and may be holding many of them in subjection?

True, he replied; and I will add the best and perfectly unjust state will be most likely to do so.

351c

I know, I said, that such was your position; but what I would further consider is, whether this power which is possessed by the superior state can exist or be exercised without justice.

If you are right in your view, and justice is wisdom, then only with justice; but if I am right, then without justice.

I am delighted, Thrasymachus, to see you not only nodding assent and dissent, but making answers which are quite excellent.

That is out of civility to you, he replied.

You are very kind, I said; and would you have the goodness also to inform me, whether you think that a state, or an army, or a band of robbers and thieves, or any other gang of evil-doers could act at all if they injured one another?

351d

No indeed, he said, they could not.

But if they abstained from injuring one another, then they might act together better?

Yes.

And this is because injustice creates divisions and hatreds and fighting, and justice imparts harmony and friendship; is not that true, Thrasymachus?

I agree, he said, because I do not wish to quarrel with you.

351e

How good of you, I said; but I should like to know also whether injustice, having this tendency to arouse hatred, wherever existing, among slaves or among freemen, will not make them hate one another and set them at variance and render them incapable of common action?

Certainly.

And even if injustice be found in two only, will they not quarrel and fight, and become enemies to one another and to the just.

352a

They will.

And suppose injustice abiding in a single person, would your wisdom say that she loses or that she retains her natural power?

Let us assume that she retains her power.

352b

Yet is not the power which injustice exercises of such a nature that wherever she takes up her abode, whether in a city, in an army, in a family, or in any other body, that body is, to begin with, rendered incapable of united action by reason of sedition and distraction; and does it not become its own enemy and at variance with all that opposes it, and with the just? Is not this the case?

Yes, certainly.

And is not injustice equally fatal when existing in a single person; in the first place rendering him incapable of action because he is not at unity with himself, and in the second place making him an enemy to himself and the just? Is not that true, Thrasymachus?

Yes.

352c

And O my friend, I said, surely the gods are just?

Granted that they are.

But if so, the unjust will be the enemy of the gods, and the just will be their friend?

Feast away in triumph, and take your fill of the argument; I will not oppose you, lest I should displease the company.

352d

Well then, proceed with your answers, and let me have the remainder of my repast. For we have already shown that the just are clearly wiser and better and abler than the unjust, and that the unjust are incapable of common action; nay ing at more, that to speak as we did of men who are evil acting at any time vigorously together, is not strictly true, for if they had been perfectly evil, they would have laid hands upon one another; but it is evident that there must have been some remnant of justice in them, which enabled them to combine; if there had not been they would have injured one another as well as their victims; they were but half — villains in their enterprises; for had they been whole villains, and utterly unjust, they would have been utterly incapable of action. That, as I believe, is the truth of the matter, and not what you said at first. But whether the just have a better and happier life than the unjust is a further question which we also proposed to consider. I think that they have, and for the reasons which to have given; but still I should like to examine further, for no light matter is at stake, nothing less than the rule of human life.

Proceed.

I will proceed by asking a question: Would you not say that a horse has some end?

352e

I should.

And the end or use of a horse or of anything would be that which could not be accomplished, or not so well accomplished,

by any other thing?

I do not understand, he said.

Let me explain: Can you see, except with the eye?

Certainly not.

Or hear, except with the ear?

No.

These then may be truly said to be the ends of these organs?

They may.

But you can cut off a vine-branch with a dagger or with a chisel, and in many other ways?

Of course.

And yet not so well as with a pruning-hook made for the purpose?

353a

True.

May we not say that this is the end of a pruning-hook?

We may.

Then now I think you will have no difficulty in understanding my meaning when I asked the question whether the end of anything would be that which could not be accomplished, or not so well accomplished, by any other thing?

353b

I understand your meaning, he said, and assent.

And that to which an end is appointed has also an excellence? Need I ask again whether the eye has an end?

It has.

And has not the eye an excellence?

Yes.

And the ear has an end and an excellence also?

True.

And the same is true of all other things; they have each of them an end and a special excellence?

That is so.

353c

Well, and can the eyes fulfil their end if they are wanting in their own proper excellence and have a defect instead?

How can they, he said, if they are blind and cannot see?

You mean to say, if they have lost their proper excellence, which is sight; but I have not arrived at that point yet. I would rather ask the question more generally, and only enquire whether the things which fulfil their ends fulfil them by their own proper excellence, and fall of fulfilling them by their own defect?

Certainly, he replied.

I might say the same of the ears; when deprived of their own proper excellence they cannot fulfil their end?

353d

True.

And the same observation will apply to all other things?

I agree.

Well; and has not the soul an end which nothing else can fulfil? for example, to superintend and command and deliberate and the like. Are not these functions proper to the soul, and can they rightly be assigned to any other?

To no other.

And is not life to be reckoned among the ends of the soul?

Assuredly, he said.

And has not the soul an excellence also?

Yes.

And can she or can she not fulfil her own ends when deprived of that excellence?

353e

She cannot.

Then an evil soul must necessarily be an evil ruler and superintendent, and the good soul a good ruler?

Yes, necessarily.

And we have admitted that justice is the excellence of the soul, and injustice the defect of the soul?

That has been admitted.

Then the just soul and the just man will live well, and the unjust man will live ill?

That is what your argument proves.

And he who lives well is blessed and happy, and he who lives ill the reverse of happy?

354a

Certainly.

Then the just is happy, and the unjust miserable?

So be it.

But happiness and not misery is profitable.

Of course.

Then, my blessed Thrasymachus, injustice can never be more profitable than justice.

Let this, Socrates, he said, be your entertainment at the Bendidea.

354b

For which I am indebted to you, I said, now that you have grown gentle towards me and have left off scolding. Nevertheless, I have not been well entertained; but that was my own fault and not yours. As an epicure snatches a taste of every dish which is successively brought to table, he not having allowed himself time to enjoy the one before, so have I gone from one subject to another without having discovered what I sought at first, the nature of justice. I left that enquiry and turned away to consider whether justice is virtue and wisdom or evil and folly; and when there arose a further question about the comparative advantages of justice and injustice, I could not refrain from passing on to that. And the result of the whole discussion has been that I know nothing at all. For I know not what justice is, and therefore I am not likely to know whether it is or is not a virtue, nor can I say whether the just man is happy or unhappy.

BOOK II

357a

Socrates - Glaucon With these words I was thinking that I had made an end of the discussion; but the end, in truth, proved to be only a beginning. For Glaucon, who is always the most pugnacious of men, was dissatisfied at Thrasymachus' retirement; he wanted to have the battle out. So he said to me: Socrates, do you wish really to persuade us, or only to seem to have persuaded us, that to be just is always better than to be unjust?

357b

I should wish really to persuade you, I replied, if I could.

Then you certainly have not succeeded. Let me ask you now: — How would you arrange goods — are there not some which we

welcome for their own sakes, and independently of their consequences, as, for example, harmless pleasures and enjoyments, which delight us at the time, although nothing follows from them?

357c

I agree in thinking that there is such a class, I replied.

Is there not also a second class of goods, such as knowledge, sight, health, which are desirable not only in themselves, but also for their results?

Certainly, I said.

And would you not recognize a third class, such as gymnastic, and the care of the sick, and the physician's art; also the various ways of money-making — these do us good but we regard them as disagreeable; and no one would choose them for their own sakes, but only for the sake of some reward or result which flows from them?

357d

There is, I said, this third class also. But why do you ask?

358a

Because I want to know in which of the three classes you would place justice?

In the highest class, I replied, — among those goods which he who would be happy desires both for their own sake and for the sake of their results.

Then the many are of another mind; they think that justice is to be reckoned in the troublesome class, among goods which are to be pursued for the sake of rewards and of reputation, but in themselves are disagreeable and rather to be avoided.

358b

I know, I said, that this is their manner of thinking, and that this was the thesis which Thrasymachus was maintaining just now,

when he censured justice and praised injustice. But I am too stupid to be convinced by him.

358d

I wish, he said, that you would hear me as well as him, and then I shall see whether you and I agree. For Thrasymachus seems to me, like a snake, to have been charmed by your voice sooner than he ought to have been; but to my mind the nature of justice and injustice have not yet been made clear. Setting aside their rewards and results, I want to know what they are in themselves, and how they inwardly work in the soul. If you, please, then, I will revive the argument of Thrasymachus. And first I will speak of the nature and origin of justice according to the common view of them. Secondly, I will show that all men who practise justice do so against their will, of necessity, but not as a good. And thirdly, I will argue that there is reason in this view, for the life of the unjust is after all better far than the life of the just — if what they say is true, Socrates, since I myself am not of their opinion. But still I acknowledge that I am perplexed when I hear the voices of Thrasymachus and myriads of others dinning in my ears; and, on the other hand, I have never yet heard the superiority of justice to injustice maintained by any one in a satisfactory way. I want to hear justice praised in respect of itself; then I shall be satisfied, and you are the person from whom I think that I am most likely to hear this; and therefore I will praise the unjust life to the utmost of my power, and my manner of speaking will indicate the manner in which I desire to hear you too praising justice and censuring injustice. Will you say whether you approve of my proposal?

359a

Indeed I do; nor can I imagine any theme about which a man of sense would oftener wish to converse.

I am delighted, he replied, to hear you say so, and shall begin by speaking, as I proposed, of the nature and origin of justice.

GLAUCON ^{359b} They say that to do injustice is, by nature, good; to suffer injustice, evil; but that the evil is greater than the good. And so when men have both done and suffered injustice and have had experience of both, not being able to avoid the one and obtain the other, they think that they had better agree among themselves to have neither; hence there arise laws and mutual covenants; and that which is ordained by law is termed by them lawful and just. This they affirm to be the origin and nature of justice; — it is a mean or compromise, between the best of all, which is to do injustice and not be punished, and the worst of all, which is to suffer injustice without the power of retaliation; and justice, being at a middle point between the two, is tolerated not as a good, but as the lesser evil, and honoured by reason of the inability of men to do injustice. For no man who is worthy to be called a man would ever submit to such an agreement if he were able to resist; he would be mad if he did. Such is the received account, Socrates, of the nature and origin of justice.

^{360b}

Now that those who practise justice do so involuntarily and because they have not the power to be unjust will best appear if we imagine something of this kind: having given both to the just and the unjust power to do what they will, let us watch and see whither desire will lead them; then we shall discover in the very act the just and unjust man to be proceeding along the same road, following their interest, which all natures deem to be their good, and are only diverted into the path of justice by the force of law. The liberty which we are supposing may be most completely given to them in the form of such a power as is said to have been possessed by Gyges the ancestor of Croesus the Lydian. According to the tradition, Gyges was a shepherd in the

service of the king of Lydia; there was a great storm, and an earthquake made an opening in the earth at the place where he was feeding his flock. Amazed at the sight, he descended into the opening, where, among other marvels, he beheld a hollow brazen horse, having doors, at which he stooping and looking in saw a dead body of stature, as appeared to him, more than human, and having nothing on but a gold ring; this he took from the finger of the dead and reascended. Now the shepherds met together, according to custom, that they might send their monthly report about the flocks to the king; into their assembly he came having the ring on his finger, and as he was sitting among them he chanced to turn the collet of the ring inside his hand, when instantly he became invisible to the rest of the company and they began to speak of him as if he were no longer present. He was astonished at this, and again touching the ring he turned the collet outwards and reappeared; he made several trials of the ring, and always with the same result-when he turned the collet inwards he became invisible, when outwards he reappeared. Whereupon he contrived to be chosen one of the messengers who were sent to the court; where as soon as he arrived he seduced the queen, and with her help conspired against the king and slew him, and took the kingdom. Suppose now that there were two such magic rings, and the just put on one of them and the unjust the other; no man can be imagined to be of such an iron nature that he would stand fast in justice. No man would keep his hands off what was not his own when he could safely take what he liked out of the market, or go into houses and lie with any one at his pleasure, or kill or release from prison whom he would, and in all respects be like a God among men. Then the actions of the just would be as the actions of the unjust; they would both come at last to the same point. And this we may truly affirm to be a great proof that a man is just, not willingly or because he thinks that justice is any good to him individually, but of necessity, for wherever any one

thinks that he can safely be unjust, there he is unjust. For all men believe in their hearts that injustice is far more profitable to the individual than justice, and he who argues as I have been supposing, will say that they are right. If you could imagine any one obtaining this power of becoming invisible, and never doing any wrong or touching what was another's, he would be thought by the lookers-on to be a most wretched idiot, although they would praise him to one another's faces, and keep up appearances with one another from a fear that they too might suffer injustice. Enough of this.

361b

Now, if we are to form a real judgment of the life of the just and unjust, we must isolate them; there is no other way; and how is the isolation to be effected? I answer: Let the unjust man be entirely unjust, and the just man entirely just; nothing is to be taken away from either of them, and both are to be perfectly furnished for the work of their respective lives. First, let the unjust be like other distinguished masters of craft; like the skilful pilot or physician, who knows intuitively his own powers and keeps within their limits, and who, if he fails at any point, is able to recover himself. So let the unjust make his unjust attempts in the right way, and lie hidden if he means to be great in his injustice (he who is found out is nobody): for the highest reach of injustice is: to be deemed just when you are not. Therefore I say that in the perfectly unjust man we must assume the most perfect injustice; there is to be no deduction, but we must allow him, while doing the most unjust acts, to have acquired the greatest reputation for justice. If he have taken a false step he must be able to recover himself; he must be one who can speak with effect, if any of his deeds come to light, and who can force his way where force is required his courage and strength, and command of money and friends. And at his side let us place the just man in his nobleness and simplicity, wishing, as Aeschylus says, to be and not to seem good. There

must be no seeming, for if he seem to be just he will be honoured and rewarded, and then we shall not know whether he is just for the sake of justice or for the sake of honours and rewards; therefore, let him be clothed in justice only, and have no other covering; and he must be imagined in a state of life the opposite of the former. Let him be the best of men, and let him be thought the worst; then he will have been put to the proof; and we shall see whether he will be affected by the fear of infamy and its consequences. And let him continue thus to the hour of death; being just and seeming to be unjust. When both have reached the uttermost extreme, the one of justice and the other of injustice, let judgment be given which of them is the happier of the two.

361e

Socrates - Glaucon Heavens! my dear Glaucon, I said, how energetically you polish them up for the decision, first one and then the other, as if they were two statues.

362a

I do my best, he said. And now that we know what they are like there is no difficulty in tracing out the sort of life which awaits either of them. This I will proceed to describe; but as you may think the description a little too coarse, I ask you to suppose, Socrates, that the words which follow are not mine. — Let me put them into the mouths of the eulogists of injustice: They will tell you that the just man who is thought unjust will be scourged, racked, bound — will have his eyes burnt out; and, at last, after suffering every kind of evil, he will be impaled: Then he will understand that he ought to seem only, and not to be, just; the words of Aeschylus may be more truly spoken of the unjust than of the just. For the unjust is pursuing a reality; he does not live with a view to appearances — he wants to be really unjust and not to seem only: — 362b His mind has a soil deep and fertile,
Out of which spring his prudent counsels.

362c

In the first place, he is thought just, and therefore bears rule in the city; he can marry whom he will, and give in marriage to whom he will; also he can trade and deal where he likes, and always to his own advantage, because he has no misgivings about injustice and at every contest, whether in public or private, he gets the better of his antagonists, and gains at their expense, and is rich, and out of his gains he can benefit his friends, and harm his enemies; moreover, he can offer sacrifices, and dedicate gifts to the gods abundantly and magnificently, and can honour the gods or any man whom he wants to honour in a far better style than the just, and therefore he is likely to be dearer than they are to the gods. And thus, Socrates, gods and men are said to unite in making the life of the unjust better than the life of the just.

362d

Adeimantus - Socrates I was going to say something in answer to Glaucon, when Adeimantus, his brother, interposed: Socrates, he said, you do not suppose that there is nothing more to be urged?

Why, what else is there? I answered.

362e

The strongest point of all has not been even mentioned, he replied.

Well, then, according to the proverb, 'Let brother help brother' — if he fails in any part do you assist him; although I must confess that Glaucon has already said quite enough to lay me in the dust, and take from me the power of helping justice.

ADEIMANTUS ^{363a} Nonsense, he replied. But let me add something more: There is another side to Glaucon's argument about the praise and censure of justice and injustice, which is equally required in order to bring out what I believe to be his meaning. Parents and tutors are always telling their sons and

their wards that they are to be just; but why? not for the sake of justice, but for the sake of character and reputation; in the hope of obtaining for him who is reputed just some of those offices, marriages, and the like which Glaucon has enumerated among the advantages accruing to the unjust from the reputation of justice. More, however, is made of appearances by this class of persons than by the others; for they throw in the good opinion of the gods, and will tell you of a shower of benefits which the heavens, as they say, rain upon the pious; and this accords with the testimony of the noble Hesiod and Homer, the first of whom says, that the gods make the oaks of the just — ^{363b} To hear acorns at their summit, and bees I the middle;

And the sheep the bowed down bowed the with the their fleeces.

^{363c}

and many other blessings of a like kind are provided for them. And Homer has a very similar strain; for he speaks of one whose fame is — As the fame of some blameless king who, like a god,

Maintains justice to whom the black earth brings forth
Wheat and barley, whose trees are bowed with fruit,
And his sheep never fail to bear, and the sea gives him fish.

^{363e}

Still grander are the gifts of heaven which Musaeus and his son vouchsafe to the just; they take them down into the world below, where they have the saints lying on couches at a feast, everlastingly drunk, crowned with garlands; their idea seems to be that an immortality of drunkenness is the highest meed of virtue. Some extend their rewards yet further; the posterity, as they say, of the faithful and just shall survive to the third and fourth generation. This is the style in which they praise justice. But about the wicked there is another strain; they bury them in a slough in Hades, and make them carry water in a sieve; also

while they are yet living they bring them to infamy, and inflict upon them the punishments which Glaucon described as the portion of the just who are reputed to be unjust; nothing else does their invention supply. Such is their manner of praising the one and censuring the other.

364c

Once more, Socrates, I will ask you to consider another way of speaking about justice and injustice, which is not confined to the poets, but is found in prose writers. The universal voice of mankind is always declaring that justice and virtue are honourable, but grievous and toilsome; and that the pleasures of vice and injustice are easy of attainment, and are only censured by law and opinion. They say also that honesty is for the most part less profitable than dishonesty; and they are quite ready to call wicked men happy, and to honour them both in public and private when they are rich or in any other way influential, while they despise and overlook those who may be weak and poor, even though acknowledging them to be better than the others. But most extraordinary of all is their mode of speaking about virtue and the gods: they say that the gods apportion calamity and misery to many good men, and good and happiness to the wicked. And mendicant prophets go to rich men's doors and persuade them that they have a power committed to them by the gods of making an atonement for a man's own or his ancestor's sins by sacrifices or charms, with rejoicings and feasts; and they promise to harm an enemy, whether just or unjust, at a small cost; with magic arts and incantations binding heaven, as they say, to execute their will. And the poets are the authorities to whom they appeal, now smoothing the path of vice with the words of Hesiod; — 364d Vice may be had in abundance without trouble; the way is smooth and her dwelling-place is near. But before virtue the gods have set toil, 364d and a tedious and uphill road: then citing Homer as a witness that the gods may be influenced by men; for he also

says: ^{364d} The gods, too, may he turned from their purpose; and men pray to them and avert their wrath by sacrifices and soothing entreaties, and by libations and the odour of fat, when they have sinned and transgressed.

^{364e}

And they produce a host of books written by Musaeus and Orpheus, who were children of the Moon and the Muses — that is what they say — according to which they perform their ritual, and persuade not only individuals, but whole cities, that expiations and atonements for sin may be made by sacrifices and amusements which fill a vacant hour, and are equally at the service of the living and the dead; the latter sort they call mysteries, and they redeem us from the pains of hell, but if we neglect them no one knows what awaits us.

^{365a}

He proceeded: And now when the young hear all this said about virtue and vice, and the way in which gods and men regard them, how are their minds likely to be affected, my dear Socrates, — those of them, I mean, who are quickwitted, and, like bees on the wing, light on every flower, and from all that they hear are prone to draw conclusions as to what manner of persons they should be and in what way they should walk if they would make the best of life? Probably the youth will say to himself in the words of Pindar — ^{365b} Can I by justice or by crooked ways of deceit ascend a loftier tower which may be a fortress to me all my days?

^{365d}

For what men say is that, if I am really just and am not also thought just profit there is none, but the pain and loss on the other hand are unmistakable. But if, though unjust, I acquire the reputation of justice, a heavenly life is promised to me. Since then, as philosophers prove, appearance tyrannizes over truth and is lord of happiness, to appearance I must devote myself. I will describe around me a picture and shadow of virtue to be the

vestibule and exterior of my house; behind I will trail the subtle and crafty fox, as Archilochus, greatest of sages, recommends. But I hear some one exclaiming that the concealment of wickedness is often difficult; to which I answer, Nothing great is easy. Nevertheless, the argument indicates this, if we would be happy, to be the path along which we should proceed. With a view to concealment we will establish secret brotherhoods and political clubs. And there are professors of rhetoric who teach the art of persuading courts and assemblies; and so, partly by persuasion and partly by force, I shall make unlawful gains and not be punished. Still I hear a voice saying that the gods cannot be deceived, neither can they be compelled. But what if there are no gods? or, suppose them to have no care of human things — why in either case should we mind about concealment? And even if there are gods, and they do care about us, yet we know of them only from tradition and the genealogies of the poets; and these are the very persons who say that they may be influenced and turned by ‘sacrifices and soothing entreaties and by offerings.’ Let us be consistent then, and believe both or neither. If the poets speak truly, why then we had better be unjust, and offer of the fruits of injustice; for if we are just, although we may escape the vengeance of heaven, we shall lose the gains of injustice; but, if we are unjust, we shall keep the gains, and by our sinning and praying, and praying and sinning, the gods will be propitiated, and we shall not be punished. ‘But there is a world below in which either we or our posterity will suffer for our unjust deeds.’ Yes, my friend, will be the reflection, but there are mysteries and atoning deities, and these have great power. That is what mighty cities declare; and the children of the gods, who were their poets and prophets, bear a like testimony.

366c

On what principle, then, shall we any longer choose justice rather than the worst injustice? when, if we only unite the

latter with a deceitful regard to appearances, we shall fare to our mind both with gods and men, in life and after death, as the most numerous and the highest authorities tell us. Knowing all this, Socrates, how can a man who has any superiority of mind or person or rank or wealth, be willing to honour justice; or indeed to refrain from laughing when he hears justice praised? And even if there should be some one who is able to disprove the truth of my words, and who is satisfied that justice is best, still he is not angry with the unjust, but is very ready to forgive them, because he also knows that men are not just of their own free will; unless, peradventure, there be some one whom the divinity within him may have inspired with a hatred of injustice, or who has attained knowledge of the truth — but no other man. He only blames injustice who, owing to cowardice or age or some weakness, has not the power of being unjust. And this is proved by the fact that when he obtains the power, he immediately becomes unjust as far as he can be.

367c

The cause of all this, Socrates, was indicated by us at the beginning of the argument, when my brother and I told you how astonished we were to find that of all the professing panegyrists of justice — beginning with the ancient heroes of whom any memorial has been preserved to us, and ending with the men of our own time — no one has ever blamed injustice or praised justice except with a view to the glories, honours, and benefits which flow from them. No one has ever adequately described either in verse or prose the true essential nature of either of them abiding in the soul, and invisible to any human or divine eye; or shown that of all the things of a man's soul which he has within him, justice is the greatest good, and injustice the greatest evil. Had this been the universal strain, had you sought to persuade us of this from our youth upwards, we should not have been on the watch to keep one another from doing wrong, but every one would have been his own

watchman, because afraid, if he did wrong, of harbouring in himself the greatest of evils. I dare say that Thrasymachus and others would seriously hold the language which I have been merely repeating, and words even stronger than these about justice and injustice, grossly, as I conceive, perverting their true nature. But I speak in this vehement manner, as I must frankly confess to you, because I want to hear from you the opposite side; and I would ask you to show not only the superiority which justice has over injustice, but what effect they have on the possessor of them which makes the one to be a good and the other an evil to him. And please, as Glaucon requested of you, to exclude reputations; for unless you take away from each of them his true reputation and add on the false, we shall say that you do not praise justice, but the appearance of it; we shall think that you are only exhorting us to keep injustice dark, and that you really agree with Thrasymachus in thinking that justice is another's good and the interest of the stronger, and that injustice is a man's own profit and interest, though injurious to the weaker. Now as you have admitted that justice is one of that highest class of goods which are desired indeed for their results, but in a far greater degree for their own sakes — like sight or hearing or knowledge or health, or any other real and natural and not merely conventional good — I would ask you in your praise of justice to regard one point only: I mean the essential good and evil which justice and injustice work in the possessors of them. Let others praise justice and censure injustice, magnifying the rewards and honours of the one and abusing the other; that is a manner of arguing which, coming from them, I am ready to tolerate, but from you who have spent your whole life in the consideration of this question, unless I hear the contrary from your own lips, I expect something better. And therefore, I say, not only prove to us that justice is better than injustice, but show what they either of them do to the possessor of them, which makes the one to be a good and

the other an evil, whether seen or unseen by gods and men.

368a

Socrates - Adeimantus 368b I had always admired the genius of Glaucon and Adeimantus, but on hearing these words I was quite delighted, and said: Sons of an illustrious father, that was not a bad beginning of the Elegiac verses which the admirer of Glaucon made in honour of you after you had distinguished yourselves at the battle of Megara: — 368b ‘Sons of Ariston,’ he sang, ‘divine offspring of an illustrious hero.’

368c

The epithet is very appropriate, for there is something truly divine in being able to argue as you have done for the superiority of injustice, and remaining unconvinced by your own arguments. And I do believe that you are not convinced — this I infer from your general character, for had I judged only from your speeches I should have mistrusted you. But now, the greater my confidence in you, the greater is my difficulty in knowing what to say. For I am in a strait between two; on the one hand I feel that I am unequal to the task; and my inability is brought home to me by the fact that you were not satisfied with the answer which I made to Thrasymachus, proving, as I thought, the superiority which justice has over injustice. And yet I cannot refuse to help, while breath and speech remain to me; I am afraid that there would be an impiety in being present when justice is evil spoken of and not lifting up a hand in her defence. And therefore I had best give such help as I can.

368d

Glaucon and the rest entreated me by all means not to let the question drop, but to proceed in the investigation. They wanted to arrive at the truth, first, about the nature of justice and injustice, and secondly, about their relative advantages. I told them, what I really thought, that the enquiry would be of a serious nature, and would require very good eyes. Seeing then, I said, that we are no great wits, I think that we had better adopt

a method which I may illustrate thus; suppose that a short-sighted person had been asked by some one to read small letters from a distance; and it occurred to some one else that they might be found in another place which was larger and in which the letters were larger — if they were the same and he could read the larger letters first, and then proceed to the lesser — this would have been thought a rare piece of good fortune.

369a

Very true, said Adeimantus; but how does the illustration apply to our enquiry?

I will tell you, I replied; justice, which is the subject of our enquiry, is, as you know, sometimes spoken of as the virtue of an individual, and sometimes as the virtue of a State.

True, he replied.

And is not a State larger than an individual?

It is.

369b

Then in the larger the quantity of justice is likely to be larger and more easily discernible. I propose therefore that we enquire into the nature of justice and injustice, first as they appear in the State, and secondly in the individual, proceeding from the greater to the lesser and comparing them.

That, he said, is an excellent proposal.

And if we imagine the State in process of creation, we shall see the justice and injustice of the State in process of creation also.

I dare say.

369c

When the State is completed there may be a hope that the object of our search will be more easily discovered.

Yes, far more easily.

But ought we to attempt to construct one? I said; for to do so, as I am inclined to think, will be a very serious task. Reflect therefore.

I have reflected, said Adeimantus, and am anxious that you should proceed.

A State, I said, arises, as I conceive, out of the needs of mankind; no one is self-sufficing, but all of us have many wants. Can any other origin of a State be imagined?

There can I be no other.

369d

Then, as we have many wants, and many persons are needed to supply them, one takes a helper for one purpose and another for another; and when these partners and helpers are gathered together in one habitation the body of inhabitants is termed a State.

True, he said.

And they exchange with one another, and one gives, and another receives, under the idea that the exchange will be for their good.

Very true.

Then, I said, let us begin and create in idea a State; and yet the true creator is necessity, who is the mother of our invention.

Of course, he replied.

369e

Now the first and greatest of necessities is food, which is the condition of life and existence.

Certainly.

The second is a dwelling, and the third clothing and the like.

True.

And now let us see how our city will be able to supply this great demand: We may suppose that one man is a husbandman, another a builder, some one else a weaver — shall we add to them a shoemaker, or perhaps some other purveyor to our bodily wants?

Quite right.

The barest notion of a State must include four or five men.

Clearly.

370a

And how will they proceed? Will each bring the result of his labours into a common stock? — the individual husbandman, for example, producing for four, and labouring four times as long and as much as he need in the provision of food with which he supplies others as well as himself; or will he have nothing to do with others and not be at the trouble of producing for them, but provide for himself alone a fourth of the food in a fourth of the time, and in the remaining three-fourths of his time be employed in making a house or a coat or a pair of shoes, having no partnership with others, but supplying himself all his own wants?

370b

Adeimantus thought that he should aim at producing food only and not at producing everything.

Probably, I replied, that would be the better way; and when I hear you say this, I am myself reminded that we are not all alike; there are diversities of natures among us which are adapted to different occupations.

Very true.

And will you have a work better done when the workman has many occupations, or when he has only one?

370c

When he has only one.

Further, there can be no doubt that a work is spoilt when not done at the right time?

No doubt.

For business is not disposed to wait until the doer of the business is at leisure; but the doer must follow up what he is doing, and make the business his first object.

He must.

And if so, we must infer that all things are produced more plentifully and easily and of a better quality when one man does one thing which is natural to him and does it at the right time, and leaves other things.

370d

Undoubtedly.

Then more than four citizens will be required; for the husbandman will not make his own plough or mattock, or other implements of agriculture, if they are to be good for anything. Neither will the builder make his tools — and he too needs many; and in like manner the weaver and shoemaker.

True.

Then carpenters, and smiths, and many other artisans, will be sharers in our little State, which is already beginning to grow?

370e

True.

Yet even if we add neatherds, shepherds, and other herdsmen, in order that our husbandmen may have oxen to plough with, and builders as well as husbandmen may have draught cattle, and curriers and weavers fleeces and hides, — still our State will not be very large.

That is true; yet neither will it be a very small State which contains all these.

Then, again, there is the situation of the city — to find a place where nothing need be imported is well-nigh impossible.

Impossible.

Then there must be another class of citizens who will bring the required supply from another city?

There must.

371a

But if the trader goes empty-handed, having nothing which they require who would supply his need, he will come back empty-handed.

371b

That is certain.

And therefore what they produce at home must be not only enough for themselves, but such both in quantity and quality as to accommodate those from whom their wants are supplied.

Very true.

Then more husbandmen and more artisans will be required?

They will.

Not to mention the importers and exporters, who are called merchants?

Yes.

Then we shall want merchants?

We shall.

371c

And if merchandise is to be carried over the sea, skilful sailors will also be needed, and in considerable numbers?

Yes, in considerable numbers.

Then, again, within the city, how will they exchange their productions?

To secure such an exchange was, as you will remember, one of our principal objects when we formed them into a society and constituted a State.

Clearly they will buy and sell.

Then they will need a market-place, and a money-token for purposes of exchange.

371d

Certainly.

Suppose now that a husbandman, or an artisan, brings some production to market, and he comes at a time when there is no one to exchange with him, — is he to leave his calling and sit idle in the market-place?

Not at all; he will find people there who, seeing the want, undertake the office of salesmen. In well-ordered States they are commonly those who are the weakest in bodily strength, and therefore of little use for any other purpose; their duty is to be in the market, and to give money in exchange for goods to those who desire to sell and to take money from those who desire to buy.

371e

This want, then, creates a class of retail-traders in our State. Is not 'retailer' the term which is applied to those who sit in the market-place engaged in buying and selling, while those who wander from one city to another are called merchants?

Yes, he said.

372a

And there is another class of servants, who are intellectually hardly on the level of companionship; still they have plenty of bodily strength for labour, which accordingly they sell, and are called, if I do not mistake, hirelings, hire being the name which is given to the price of their labour.

True.

Then hirelings will help to make up our population?

Yes.

And now, Adeimantus, is our State matured and perfected?

I think so.

Where, then, is justice, and where is injustice, and in what part of the State did they spring up?

372b

Probably in the dealings of these citizens with one another. cannot imagine that they are more likely to be found anywhere else.

I dare say that you are right in your suggestion, I said; we had better think the matter out, and not shrink from the enquiry.

372d

Let us then consider, first of all, what will be their way of life, now that we have thus established them. Will they not produce corn, and wine, and clothes, and shoes, and build houses for themselves? And when they are housed, they will work, in summer, commonly, stripped and barefoot, but in winter substantially clothed and shod. They will feed on barley-meal and flour of wheat, baking and kneading them, making noble cakes and loaves; these they will serve up on a mat of reeds or on clean leaves, themselves reclining the while upon beds strewn with yew or myrtle. And they and their children will feast, drinking of the wine which they have made, wearing garlands on their heads, and hymning the praises of the gods, in

happy converse with one another. And they will take care that their families do not exceed their means; having an eye to poverty or war.

Socrates - Glaucon But, said Glaucon, interposing, you have not given them a relish to their meal.

372e

True, I replied, I had forgotten; of course they must have a relish-salt, and olives, and cheese, and they will boil roots and herbs such as country people prepare; for a dessert we shall give them figs, and peas, and beans; and they will roast myrtle-berries and acorns at the fire, drinking in moderation. And with such a diet they may be expected to live in peace and health to a good old age, and bequeath a similar life to their children after them.

Yes, Socrates, he said, and if you were providing for a city of pigs, how else would you feed the beasts?

But what would you have, Glaucon? I replied.

Why, he said, you should give them the ordinary conveniences of life. People who are to be comfortable are accustomed to lie on sofas, and dine off tables, and they should have sauces and sweets in the modern style.

373a

Yes, I said, now I understand: the question which you would have me consider is, not only how a State, but how a luxurious State is created; and possibly there is no harm in this, for in such a State we shall be more likely to see how justice and injustice originate. In my opinion the true and healthy constitution of the State is the one which I have described. But if you wish also to see a State at fever heat, I have no objection. For I suspect that many will not be satisfied with the simpler way of way They will be for adding sofas, and tables, and other furniture; also dainties, and perfumes, and incense, and

courtesans, and cakes, all these not of one sort only, but in every variety; we must go beyond the necessities of which I was at first speaking, such as houses, and clothes, and shoes: the arts of the painter and the embroiderer will have to be set in motion, and gold and ivory and all sorts of materials must be procured.

True, he said.

373c

Then we must enlarge our borders; for the original healthy State is no longer sufficient. Now will the city have to fill and swell with a multitude of callings which are not required by any natural want; such as the whole tribe of hunters and actors, of whom one large class have to do with forms and colours; another will be the votaries of music — poets and their attendant train of rhapsodists, players, dancers, contractors; also makers of divers kinds of articles, including women's dresses. And we shall want more servants. Will not tutors be also in request, and nurses wet and dry, tirewomen and barbers, as well as confectioners and cooks; and swineherds, too, who were not needed and therefore had no place in the former edition of our State, but are needed now? They must not be forgotten: and there will be animals of many other kinds, if people eat them.

Certainly.

And living in this way we shall have much greater need of physicians than before?

373d

Much greater.

373e

And the country which was enough to support the original inhabitants will be too small now, and not enough?

Quite true.

Then a slice of our neighbours' land will be wanted by us for pasture and tillage, and they will want a slice of ours, if, like ourselves, they exceed the limit of necessity, and give themselves up to the unlimited accumulation of wealth?

374a

That, Socrates, will be inevitable.

And so we shall go to war, Glaucon. Shall we not?

Most certainly, he replied.

Then without determining as yet whether war does good or harm, thus much we may affirm, that now we have discovered war to be derived from causes which are also the causes of almost all the evils in States, private as well as public.

374b

Undoubtedly.

And our State must once more enlarge; and this time the will be nothing short of a whole army, which will have to go out and fight with the invaders for all that we have, as well as for the things and persons whom we were describing above.

Why? he said; are they not capable of defending themselves?

No, I said; not if we were right in the principle which was acknowledged by all of us when we were framing the State: the principle, as you will remember, was that one man cannot practise many arts with success.

374c

Very true, he said.

But is not war an art?

Certainly.

And an art requiring as much attention as shoemaking?

Quite true.

374d

And the shoemaker was not allowed by us to be husbandman, or a weaver, a builder — in order that we might have our shoes well made; but to him and to every other worker was assigned one work for which he was by nature fitted, and at that he was to continue working all his life long and at no other; he was not to let opportunities slip, and then he would become a good workman. Now nothing can be more important than that the work of a soldier should be well done. But is war an art so easily acquired that a man may be a warrior who is also a husbandman, or shoemaker, or other artisan; although no one in the world would be a good dice or draught player who merely took up the game as a recreation, and had not from his earliest years devoted himself to this and nothing else?

374e

No tools will make a man a skilled workman, or master of defence, nor be of any use to him who has not learned how to handle them, and has never bestowed any attention upon them. How then will he who takes up a shield or other implement of war become a good fighter all in a day, whether with heavy-armed or any other kind of troops?

Yes, he said, the tools which would teach men their own use would be beyond price.

And the higher the duties of the guardian, I said, the more time, and skill, and art, and application will be needed by him?

No doubt, he replied.

Will he not also require natural aptitude for his calling?

375a

Certainly.

Then it will be our duty to select, if we can, natures which are fitted for the task of guarding the city?

It will.

And the selection will be no easy matter, I said; but we must be brave and do our best.

We must.

Is not the noble youth very like a well-bred dog in respect of guarding and watching?

What do you mean?

375b

I mean that both of them ought to be quick to see, and swift to overtake the enemy when they see him; and strong too if, when they have caught him, they have to fight with him.

All these qualities, he replied, will certainly be required by them.

Well, and your guardian must be brave if he is to fight well?

Certainly.

And is he likely to be brave who has no spirit, whether horse or dog or any other animal? Have you never observed how invincible and unconquerable is spirit and how the presence of it makes the soul of any creature to be absolutely fearless and indomitable?

375c

I have.

Then now we have a clear notion of the bodily qualities which are required in the guardian.

True.

And also of the mental ones; his soul is to be full of spirit?

Yes.

But are not these spirited natures apt to be savage with one another, and with everybody else?

A difficulty by no means easy to overcome, he replied.

Whereas, I said, they ought to be dangerous to their enemies, and gentle to their friends; if not, they will destroy themselves without waiting for their enemies to destroy them.

375d

True, he said.

What is to be done then? I said; how shall we find a gentle nature which has also a great spirit, for the one is the contradiction of the other?

True.

He will not be a good guardian who is wanting in either of these two qualities; and yet the combination of them appears to be impossible; and hence we must infer that to be a good guardian is impossible.

I am afraid that what you say is true, he replied.

375e

Here feeling perplexed I began to think over what had preceded. My friend, I said, no wonder that we are in a perplexity; for we have lost sight of the image which we had before us.

What do you mean? he said.

I mean to say that there do exist natures gifted with those opposite qualities.

And where do you find them?

Many animals, I replied, furnish examples of them; our friend the dog is a very good one: you know that well-bred dogs are perfectly gentle to their familiars and acquaintances, and the reverse to strangers.

376a

Yes, I know.

Then there is nothing impossible or out of the order of nature in our finding a guardian who has a similar combination of qualities?

Certainly not.

Would not he who is fitted to be a guardian, besides the spirited nature, need to have the qualities of a philosopher?

I do not apprehend your meaning.

The trait of which I am speaking, I replied, may be also seen in the dog, and is remarkable in the animal.

What trait?

Why, a dog, whenever he sees a stranger, is angry; when an acquaintance, he welcomes him, although the one has never done him any harm, nor the other any good. Did this never strike you as curious?

376b

The matter never struck me before; but I quite recognise the truth of your remark.

And surely this instinct of the dog is very charming; — your dog is a true philosopher.

Why?

Why, because he distinguishes the face of a friend and of an enemy only by the criterion of knowing and not knowing. And must not an animal be a lover of learning who determines what he likes and dislikes by the test of knowledge and ignorance?

Most assuredly.

376c

And is not the love of learning the love of wisdom, which is philosophy?

They are the same, he replied.

And may we not say confidently of man also, that he who is likely to be gentle to his friends and acquaintances, must by nature be a lover of wisdom and knowledge?

That we may safely affirm.

Then he who is to be a really good and noble guardian of the State will require to unite in himself philosophy and spirit and swiftness and strength?

376d

Undoubtedly.

Then we have found the desired natures; and now that we have found them, how are they to be reared and educated? Is not this enquiry which may be expected to throw light on the greater enquiry which is our final end — How do justice and injustice grow up in States? for we do not want either to omit what is to the point or to draw out the argument to an inconvenient length.

Socrates - Adeimantus Adeimantus thought that the enquiry would be of great service to us.

Then, I said, my dear friend, the task must not be given up, even if somewhat long.

Certainly not.

376e

Come then, and let us pass a leisure hour in story-telling, and our story shall be the education of our heroes.

By all means.

And what shall be their education? Can we find a better than the traditional sort? — and this has two divisions, gymnastic for the body, and music for the soul.

True.

Shall we begin education with music, and go on to gymnastic afterwards?

By all means.

And when you speak of music, do you include literature or not?

I do.

And literature may be either true or false?

Yes.

And the young should be trained in both kinds, and we begin with the false?

377a

I do not understand your meaning, he said.

You know, I said, that we begin by telling children stories which, though not wholly destitute of truth, are in the main fictitious; and these stories are told them when they are not of an age to learn gymnastics.

Very true.

That was my meaning when I said that we must teach music before gymnastics.

Quite right, he said.

377b

You know also that the beginning is the most important part of any work, especially in the case of a young and tender thing; for that is the time at which the character is being formed and the desired impression is more readily taken.

Quite true.

And shall we just carelessly allow children to hear any casual tales which may be devised by casual persons, and to receive into their minds ideas for the most part the very opposite of those which we should wish them to have when they are grown

up?

377c

We cannot.

Then the first thing will be to establish a censorship of the writers of fiction, and let the censors receive any tale of fiction which is good, and reject the bad; and we will desire mothers and nurses to tell their children the authorised ones only. Let them fashion the mind with such tales, even more fondly than they mould the body with their hands; but most of those which are now in use must be discarded.

Of what tales are you speaking? he said.

You may find a model of the lesser in the greater, I said; for they are necessarily of the same type, and there is the same spirit in both of them.

377d

Very likely, he replied; but I do not as yet know what you would term the greater.

Those, I said, which are narrated by Homer and Hesiod, and the rest of the poets, who have ever been the great story-tellers of mankind.

But which stories do you mean, he said; and what fault do you find with them?

A fault which is most serious, I said; the fault of telling a lie, and, what is more, a bad lie.

But when is this fault committed?

Whenever an erroneous representation is made of the nature of gods and heroes, — as when a painter paints a portrait not having the shadow of a likeness to the original.

377e

Yes, he said, that sort of thing is certainly very blamable; but what are the stories which you mean?

First of all, I said, there was that greatest of all lies, in high places, which the poet told about Uranus, and which was a bad lie too, — I mean what Hesiod says that Uranus did, and how Cronus retaliated on him. The doings of Cronus, and the sufferings which in turn his son inflicted upon him, even if they were true, ought certainly not to be lightly told to young and thoughtless persons; if possible, they had better be buried in silence. But if there is an absolute necessity for their mention, a chosen few might hear them in a mystery, and they should sacrifice not a common [Eleusinian] pig, but some huge and unprocurable victim; and then the number of the hearers will be very few indeed.

378a

Why, yes, said he, those stories are extremely objectionable.

Yes, Adeimantus, they are stories not to be repeated in our State; the young man should not be told that in committing the worst of crimes he is far from doing anything outrageous; and that even if he chastises his father when does wrong, in whatever manner, he will only be following the example of the first and greatest among the gods.

378b

I entirely agree with you, he said; in my opinion those stories are quite unfit to be repeated.

378d

Neither, if we mean our future guardians to regard the habit of quarrelling among themselves as of all things the basest, should any word be said to them of the wars in heaven, and of the plots and fightings of the gods against one another, for they are not true. No, we shall never mention the battles of the giants, or let them be embroidered on garments; and we shall be silent about the innumerable other quarrels of gods and heroes with their

friends and relatives. If they would only believe us we would tell them that quarrelling is unholy, and that never up to this time has there been any, quarrel between citizens; this is what old men and old women should begin by telling children; and when they grow up, the poets also should be told to compose for them in a similar spirit. But the narrative of Hephaestus binding Here his mother, or how on another occasion Zeus sent him flying for taking her part when she was being beaten, and all the battles of the gods in Homer — these tales must not be admitted into our State, whether they are supposed to have an allegorical meaning or not. For a young person cannot judge what is allegorical and what is literal; anything that he receives into his mind at that age is likely to become indelible and unalterable; and therefore it is most important that the tales which the young first hear should be models of virtuous thoughts.

379a

There you are right, he replied; but if any one asks where are such models to be found and of what tales are you speaking — how shall we answer him?

I said to him, You and I, Adeimantus, at this moment are not poets, but founders of a State: now the founders of a State ought to know the general forms in which poets should cast their tales, and the limits which must be observed by them, but to make the tales is not their business.

Very true, he said; but what are these forms of theology which you mean?

379b

Something of this kind, I replied: — God is always to be represented as he truly is, whatever be the sort of poetry, epic, lyric or tragic, in which the representation is given.

Right.

And is he not truly good? and must he not be represented as such?

Certainly.

And no good thing is hurtful?

No, indeed.

And that which is not hurtful hurts not?

Certainly not.

And that which hurts not does no evil?

No.

And can that which does no evil be a cause of evil?

Impossible.

And the good is advantageous?

Yes.

And therefore the cause of well-being?

Yes.

It follows therefore that the good is not the cause of all things, but of the good only?

379c

Assuredly.

Then God, if he be good, is not the author of all things, as the many assert, but he is the cause of a few things only, and not of most things that occur to men. For few are the goods of human life, and many are the evils, and the good is to be attributed to God alone; of the evils the causes are to be sought elsewhere, and not in him.

That appears to me to be most true, he said.

379d

Then we must not listen to Homer or to any other poet who is guilty of the folly of saying that two casks Lie at the threshold of Zeus, full of lots, one of good,

the other of evil lots, ^{379e} and that he to whom Zeus gives a mixture of the two ^{379e} Sometimes meets with evil fortune, at other times with good; ^{379e} but that he to whom is given the cup of unmingled ill, ^{379e} Him wild hunger drives o'er the beauteous earth.

^{379e}

And again Zeus, who is the dispenser of good and evil to us.

^{380a}

And if any one asserts that the violation of oaths and treaties, which was really the work of Pandarus, was brought about by Athene and Zeus, or that the strife and contention of the gods was instigated by Themis and Zeus, he shall not have our approval; neither will we allow our young men to hear the words of Aeschylus, that God plants guilt among men when he desires utterly to destroy a house.

^{380b}

And if a poet writes of the sufferings of Niobe — the subject of the tragedy in which these iambic verses occur — or of the house of Pelops, or of the Trojan war or on any similar theme, either we must not permit him to say that these are the works of God, or if they are of God, he must devise some explanation of them such as we are seeking; he must say that God did what was just and right, and they were the better for being punished; but that those who are punished are miserable, and that God is the author of their misery — the poet is not to be permitted to say; though he may say that the wicked are miserable because they require to be punished, and are benefited by receiving punishment from God; but that God being good is the author of evil to any one is to be strenuously denied, and not to be said or sung or heard in verse or prose by any one whether old or young in any well-ordered commonwealth. Such a fiction is

suicidal, ruinous, impious.

I agree with you, he replied, and am ready to give my assent to the law.

380c

Let this then be one of our rules and principles concerning the gods, to which our poets and reciters will be expected to conform — that God is not the author of all things, but of good only.

That will do, he said.

And what do you think of a second principle? Shall I ask you whether God is a magician, and of a nature to appear insidiously now in one shape, and now in another — sometimes himself changing and passing into many forms, sometimes deceiving us with the semblance of such transformations; or is he one and the same immutably fixed in his own proper image?

I cannot answer you, he said, without more thought.

Well, I said; but if we suppose a change in anything, that change must be effected either by the thing itself, or by some other thing?

380d

Most certainly.

And things which are at their best are also least liable to be altered or discomposed; for example, when healthiest and strongest, the human frame is least liable to be affected by meats and drinks, and the plant which is in the fullest vigour also suffers least from winds or the heat of the sun or any similar causes.

Of course.

And will not the bravest and wisest soul be least confused or deranged by any external influence?

380e

True.

381a

And the same principle, as I should suppose, applies to all composite things — furniture, houses, garments; when good and well made, they are least altered by time and circumstances.

Very true.

Then everything which is good, whether made by art or nature, or both, is least liable to suffer change from without?

381b

True.

But surely God and the things of God are in every way perfect?

Of course they are.

Then he can hardly be compelled by external influence to take many shapes?

He cannot.

But may he not change and transform himself?

Clearly, he said, that must be the case if he is changed at all.

And will he then change himself for the better and fairer, or for the worse and more unsightly?

If he change at all he can only change for the worse, for we cannot suppose him to be deficient either in virtue or beauty.

Very true, Adeimantus; but then, would any one, whether God or man, desire to make himself worse?

Impossible.

381c

Then it is impossible that God should ever be willing to change; being, as is supposed, the fairest and best that is conceivable, every god remains absolutely and for ever in his own form.

That necessarily follows, he said, in my judgment.

Then, I said, my dear friend, let none of the poets tell us that The gods, taking the disguise of strangers from other lands, walk up and down cities in all sorts of forms; ^{381d} and let no one slander Proteus and Thetis, neither let any one, either in tragedy or in any other kind of poetry, introduce Here disguised in the likeness of a priestess asking an alms ^{381d} For the life-giving daughters of Inachus the river of Argos;

^{381e}

— let us have no more lies of that sort. Neither must we have mothers under the influence of the poets scaring their children with a bad version of these myths — telling how certain gods, as they say, ‘Go about by night in the likeness of so many strangers and in divers forms’; but let them take heed lest they make cowards of their children, and at the same time speak blasphemy against the gods.

Heaven forbid, he said.

But although the gods are themselves unchangeable, still by witchcraft and deception they may make us think that they appear in various forms?

Perhaps, he replied.

Well, but can you imagine that God will be willing to lie, whether in word or deed, or to put forth a phantom of himself?

^{382a}

I cannot say, he replied.

Do you not know, I said, that the true lie, if such an expression may be allowed, is hated of gods and men?

What do you mean? he said.

I mean that no one is willingly deceived in that which is the truest and highest part of himself, or about the truest and

highest matters; there, above all, he is most afraid of a lie having possession of him.

Still, he said, I do not comprehend you.

382b

The reason is, I replied, that you attribute some profound meaning to my words; but I am only saying that deception, or being deceived or uninformed about the highest realities in the highest part of themselves, which is the soul, and in that part of them to have and to hold the lie, is what mankind least like; — that, I say, is what they utterly detest.

There is nothing more hateful to them.

And, as I was just now remarking, this ignorance in the soul of him who is deceived may be called the true lie; for the lie in words is only a kind of imitation and shadowy image of a previous affection of the soul, not pure unadulterated falsehood. Am I not right?

Perfectly right.

The true lie is hated not only by the gods, but also by men?

Yes.

382c

Whereas the lie in words is in certain cases useful and not hateful; in dealing with enemies — that would be an instance; or again, when those whom we call our friends in a fit of madness or illusion are going to do some harm, then it is useful and is a sort of medicine or preventive; also in the tales of mythology, of which we were just now speaking — because we do not know the truth about ancient times, we make falsehood as much like truth as we can, and so turn it to account.

Very true, he said.

382d

But can any of these reasons apply to God? Can we suppose that he is ignorant of antiquity, and therefore has recourse to invention?

That would be ridiculous, he said.

Then the lying poet has no place in our idea of God?

I should say not.

Or perhaps he may tell a lie because he is afraid of enemies?

That is inconceivable.

But he may have friends who are senseless or mad?

But no mad or senseless person can be a friend of God.

Then no motive can be imagined why God should lie?

None whatever.

Then the superhuman and divine is absolutely incapable of falsehood?

Yes.

Then is God perfectly simple and true both in word and deed; he changes not; he deceives not, either by sign or word, by dream or waking vision.

382e

Your thoughts, he said, are the reflection of my own.

You agree with me then, I said, that this is the second type or form in which we should write and speak about divine things. The gods are not magicians who transform themselves, neither do they deceive mankind in any way.

I grant that.

Then, although we are admirers of Homer, we do not admire the lying dream which Zeus sends to Agamemnon; neither will we praise the verses of Aeschylus in which Thetis says that Apollo

at her nuptials ^{383b} Was celebrating in song her fair progeny whose days were to be long, and to know no sickness. And when he had spoken of my lot as in all things blessed of heaven he raised a note of triumph and cheered my soul. And I thought that the word of Phoebus being divine and full of prophecy, would not fail. And now he himself who uttered the strain, he who was present at the banquet, and who said this — he it is who has slain my son.

^{383c}

These are the kind of sentiments about the gods which will arouse our anger; and he who utters them shall be refused a chorus; neither shall we allow teachers to make use of them in the instruction of the young, meaning, as we do, that our guardians, as far as men can be, should be true worshippers of the gods and like them.

I entirely agree, he said, in these principles, and promise to make them my laws.

BOOK III

^{386a}

Socrates - Adeimantus Such then, I said, are our principles of theology — some tales are to be told, and others are not to be told to our disciples from their youth upwards, if we mean them to honour the gods and their parents, and to value friendship with one another.

Yes; and I think that our principles are right, he said.

But if they are to be courageous, must they not learn other lessons besides these, and lessons of such a kind as will take away the fear of death? Can any man be courageous who has the fear of death in him?

^{386b}

Certainly not, he said.

And can he be fearless of death, or will he choose death in battle rather than defeat and slavery, who believes the world below to be real and terrible?

Impossible.

Then we must assume a control over the narrators of this class of tales as well as over the others, and beg them not simply to but rather to commend the world below, intimating to them that their descriptions are untrue, and will do harm to our future warriors.

386c

That will be our duty, he said.

Then, I said, we shall have to obliterate many obnoxious passages, beginning with the verses, I would rather he a serf on the land of a poor and portionless man than rule over all the dead who have come to nought.

We must also expunge the verse, which tells us how Pluto feared, 386d Lest the mansions grim and squalid which the gods abhor should be seen both of mortals and immortals.

386d

And again: O heavens! verily in the house of Hades there is soul and ghostly form but no mind at all!

Again of Tiresias: — [To him even after death did Persephone grant mind,] that he alone should be wise; but the other souls are flitting shades.

Again: — The soul flying from the limbs had gone to Hades, lamenting her fate, leaving manhood and youth.

Again: — And the soul, with shrilling cry, passed like smoke beneath the earth.

387a

And, — As bats in hollow of mystic cavern, whenever any of the has dropped out of the string and falls from the rock, fly

shrilling and cling to one another, so did they with shrilling cry hold together as they moved.

387b

And we must beg Homer and the other poets not to be angry if we strike out these and similar passages, not because they are unpoetical, or unattractive to the popular ear, but because the greater the poetical charm of them, the less are they meet for the ears of boys and men who are meant to be free, and who should fear slavery more than death.

Undoubtedly.

Also we shall have to reject all the terrible and appalling names describe the world below — Cocytus and Styx, ghosts under the earth, and sapless shades, and any similar words of which the very mention causes a shudder to pass through the inmost soul of him who hears them. I do not say that these horrible stories may not have a use of some kind; but there is a danger that the nerves of our guardians may be rendered too excitable and effeminate by them.

387c

There is a real danger, he said.

Then we must have no more of them.

True.

Another and a nobler strain must be composed and sung by us.

Clearly.

And shall we proceed to get rid of the weepings and wailings of famous men?

They will go with the rest.

But shall we be right in getting rid of them? Reflect: our principle is that the good man will not consider death terrible to any other good man who is his comrade.

Yes; that is our principle.

387d

And therefore he will not sorrow for his departed friend as though he had suffered anything terrible?

He will not.

Such an one, as we further maintain, is sufficient for himself and his own happiness, and therefore is least in need of other men.

True, he said.

And for this reason the loss of a son or brother, or the deprivation of fortune, is to him of all men least terrible.

Assuredly.

And therefore he will be least likely to lament, and will bear with the greatest equanimity any misfortune of this sort which may befall him.

387e

Yes, he will feel such a misfortune far less than another.

Then we shall be right in getting rid of the lamentations of famous men, and making them over to women (and not even to women who are good for anything), or to men of a baser sort, that those who are being educated by us to be the defenders of their country may scorn to do the like.

That will be very right.

388a

Then we will once more entreat Homer and the other poets not to depict Achilles, who is the son of a goddess, first lying on his side, then on his back, and then on his face; then starting up and sailing in a frenzy along the shores of the barren sea; now taking the sooty ashes in both his hands and pouring them over his head, or weeping and wailing in the various modes which

Homer has delineated. Nor should he describe Priam the kinsman of the gods as praying and beseeching, Rolling in the dirt, calling each man loudly by his name.

388b

Still more earnestly will we beg of him at all events not to introduce the gods lamenting and saying, ^{388c} Alas! my misery! Alas! that I bore the harvest to my sorrow.

388c

But if he must introduce the gods, at any rate let him not dare so completely to misrepresent the greatest of the gods, as to make him say — ^{388d} O heavens! with my eyes verily I behold a dear friend of mine chased round and round the city, and my heart is sorrowful.

388d

Or again: — Woe is me that I am fated to have Sarpedon, dearest of men to me, subdued at the hands of Patroclus the son of Menoetius.

For if, my sweet Adeimantus, our youth seriously listen to such unworthy representations of the gods, instead of laughing at them as they ought, hardly will any of them deem that he himself, being but a man, can be dishonoured by similar actions; neither will he rebuke any inclination which may arise in his mind to say and do the like. And instead of having any shame or self-control, he will be always whining and lamenting on slight occasions.

388e

Yes, he said, that is most true.

Yes, I replied; but that surely is what ought not to be, as the argument has just proved to us; and by that proof we must abide until it is disproved by a better.

It ought not to be.

389a

Neither ought our guardians to be given to laughter. For a fit of laughter which has been indulged to excess almost always produces a violent reaction.

So I believe.

Then persons of worth, even if only mortal men, must not be represented as overcome by laughter, and still less must such a representation of the gods be allowed.

Still less of the gods, as you say, he replied.

Then we shall not suffer such an expression to be used about the gods as that of Homer when he describes how ^{389b} inextinguishable laughter arose among the blessed gods, when they saw Hephaestus bustling about the mansion.

^{389b}

On your views, we must not admit them.

On my views, if you like to father them on me; that we must not admit them is certain.

Again, truth should be highly valued; if, as we were saying, a lie is useless to the gods, and useful only as a medicine to men, then the use of such medicines should be restricted to physicians; private individuals have no business with them.

^{389c}

Clearly not, he said.

Then if any one at all is to have the privilege of lying, the rulers of the State should be the persons; and they, in their dealings either with enemies or with their own citizens, may be allowed to lie for the public good. But nobody else should meddle with anything of the kind; and although the rulers have this privilege, for a private man to lie to them in return is to be deemed a more heinous fault than for the patient or the pupil of a gymnasium not to speak the truth about his own bodily

illnesses to the physician or to the trainer, or for a sailor not to tell the captain what is happening about the ship and the rest of the crew, and how things are going with himself or his fellow sailors.

389d

Most true, he said.

If, then, the ruler catches anybody beside himself lying in the State, Any of the craftsmen, whether he priest or physician or carpenter.

he will punish him for introducing a practice which is equally subversive and destructive of ship or State.

Most certainly, he said, if our idea of the State is ever carried out.

In the next place our youth must be temperate?

389e

Certainly.

Are not the chief elements of temperance, speaking generally, obedience to commanders and self-control in sensual pleasures?

True.

Then we shall approve such language as that of Diomedes in Homer, Friend, sit still and obey my word, and the verses which follow, The Greeks marched breathing prowess, ...in silent awe of their leaders, and other sentiments of the same kind.

We shall.

What of this line, O heavy with wine, who hast the eyes of a dog and the heart of a stag, 390a and of the words which follow? Would you say that these, or any similar impertinences which private individuals are supposed to address to their rulers, whether in verse or prose, are well or ill spoken?

390a

They are ill spoken.

They may very possibly afford some amusement, but they do not conduce to temperance. And therefore they are likely to do harm to our young men — you would agree with me there?

Yes.

And then, again, to make the wisest of men say that nothing in his opinion is more glorious than When the tables are full of bread and meat, and the cup-bearer carries round wine which he draws from the bowl and pours into the cups, 390b is it fit or conducive to temperance for a young man to hear such words? Or the verse 390b The saddest of fates is to die and meet destiny from hunger?

390b

What would you say again to the tale of Zeus, who, while other gods and men were asleep and he the only person awake, lay devising plans, but forgot them all in a moment through his lust, and was so completely overcome at the sight of Here that he would not even go into the hut, but wanted to lie with her on the ground, declaring that he had never been in such a state of rapture before, even when they first met one another 390c Without the knowledge of their parents; 390c or that other tale of how Hephaestus, because of similar goings on, cast a chain around Ares and Aphrodite?

390d

Indeed, he said, I am strongly of opinion that they ought not to hear that sort of thing.

But any deeds of endurance which are done or told by famous men, these they ought to see and hear; as, for example, what is said in the verses, 390e He smote his breast, and thus reproached his heart,

Endure, my heart; far worse hast thou endured!

390e

Certainly, he said.

In the next place, we must not let them be receivers of gifts or lovers of money.

Certainly not.

Neither must we sing to them of Gifts persuading gods, and persuading reverend kings.

391a

Neither is Phoenix, the tutor of Achilles, to be approved or deemed to have given his pupil good counsel when he told him that he should take the gifts of the Greeks and assist them; but that without a gift he should not lay aside his anger. Neither will we believe or acknowledge Achilles himself to have been such a lover of money that he took Agamemnon's or that when he had received payment he restored the dead body of Hector, but that without payment he was unwilling to do so.

Undoubtedly, he said, these are not sentiments which can be approved.

391b

Loving Homer as I do, I hardly like to say that in attributing these feelings to Achilles, or in believing that they are truly to him, he is guilty of downright impiety. As little can I believe the narrative of his insolence to Apollo, where he says, Thou hast wronged me, O far-darter, most abominable of deities.

Verily I would he even with thee, if I had only the power, ^{391c} or his insubordination to the river-god, on whose divinity he is ready to lay hands; or his offering to the dead Patroclus of his own hair, which had been previously dedicated to the other river-god Spercheius, and that he actually performed this vow; or that he dragged Hector round the tomb of Patroclus, and slaughtered the captives at the pyre; of all this I cannot believe that he was guilty, any more than I can allow

our citizens to believe that he, the wise Cheiron's pupil, the son of a goddess and of Peleus who was the gentlest of men and third in descent from Zeus, was so disordered in his wits as to be at one time the slave of two seemingly inconsistent passions, meanness, not untainted by avarice, combined with overweening contempt of gods and men.

391d

You are quite right, he replied.

391e

And let us equally refuse to believe, or allow to be repeated, the tale of Theseus son of Poseidon, or of Peirithous son of Zeus, going forth as they did to perpetrate a horrid rape; or of any other hero or son of a god daring to do such impious and dreadful things as they falsely ascribe to them in our day: and let us further compel the poets to declare either that these acts were not done by them, or that they were not the sons of gods; — both in the same breath they shall not be permitted to affirm. We will not have them trying to persuade our youth that the gods are the authors of evil, and that heroes are no better than men-sentiments which, as we were saying, are neither pious nor true, for we have already proved that evil cannot come from the gods.

392a

Assuredly not.

And further they are likely to have a bad effect on those who hear them; for everybody will begin to excuse his own vices when he is convinced that similar wickednesses are always being perpetrated by — The kindred of the gods, the relatives of Zeus, whose ancestral altar, the altar of Zeus, is aloft in air on the peak of Ida, and who have the blood of deities yet flowing in their veins.

And therefore let us put an end to such tales, lest they engender laxity of morals among the young.

392b

By all means, he replied.

But now that we are determining what classes of subjects are or are not to be spoken of, let us see whether any have been omitted by us. The manner in which gods and demigods and heroes and the world below should be treated has been already laid down.

Very true.

And what shall we say about men? That is clearly the remaining portion of our subject.

Clearly so.

But we are not in a condition to answer this question at present, my friend.

Why not?

392c

Because, if I am not mistaken, we shall have to say that about men poets and story-tellers are guilty of making the gravest misstatements when they tell us that wicked men are often happy, and the good miserable; and that injustice is profitable when undetected, but that justice is a man's own loss and another's gain — these things we shall forbid them to utter, and command them to sing and say the opposite.

To be sure we shall, he replied.

392d

But if you admit that I am right in this, then I shall maintain that you have implied the principle for which we have been all along contending.

I grant the truth of your inference.

That such things are or are not to be said about men is a question which we cannot determine until we have discovered

what justice is, and how naturally advantageous to the possessor, whether he seems to be just or not.

Most true, he said.

Enough of the subjects of poetry: let us now speak of the style; and when this has been considered, both matter and manner will have been completely treated.

392e

I do not understand what you mean, said Adeimantus.

Then I must make you understand; and perhaps I may be more intelligible if I put the matter in this way. You are aware, I suppose, that all mythology and poetry is a narration of events, either past, present, or to come?

Certainly, he replied.

And narration may be either simple narration, or imitation, or a union of the two?

That again, he said, I do not quite understand.

393b

I fear that I must be a ridiculous teacher when I have so much difficulty in making myself apprehended. Like a bad speaker, therefore, I will not take the whole of the subject, but will break a piece off in illustration of my meaning. You know the first lines of the Iliad, in which the poet says that Chryses prayed Agamemnon to release his daughter, and that Agamemnon flew into a passion with him; whereupon Chryses, failing of his object, invoked the anger of the God against the Achaeans. Now as far as these lines, And he prayed all the Greeks, but especially the two sons of Atreus, the chiefs of the people, the poet is speaking in his own person; he never leads us to suppose that he is any one else. But in what follows he takes the person of Chryses, and then he does all that he can to make us believe that the speaker is not Homer, but the aged priest himself. And in

this double form he has cast the entire narrative of the events which occurred at Troy and in Ithaca and throughout the Odyssey.

393c

Yes.

And a narrative it remains both in the speeches which the poet recites from time to time and in the intermediate passages?

Quite true.

But when the poet speaks in the person of another, may we not say that he assimilates his style to that of the person who, as he informs you, is going to speak?

Certainly.

393d

And this assimilation of himself to another, either by the use of voice or gesture, is the imitation of the person whose character he assumes?

Of course.

Then in this case the narrative of the poet may be said to proceed by way of imitation?

Very true.

394a

Or, if the poet everywhere appears and never conceals himself, then again the imitation is dropped, and his poetry becomes simple narration. However, in order that I may make my meaning quite clear, and that you may no more say, 'I don't understand,' I will show how the change might be effected. If Homer had said, 'The priest came, having his daughter's ransom in his hands, supplicating the Achaeans, and above all the kings;' and then if, instead of speaking in the person of Chryses, he had continued in his own person, the words would have been, not imitation, but simple narration. The passage would

have run as follows (I am no poet, and therefore I drop the metre), ‘The priest came and prayed the gods on behalf of the Greeks that they might capture Troy and return safely home, but begged that they would give him back his daughter, and take the ransom which he brought, and respect the God. Thus he spoke, and the other Greeks revered the priest and assented. But Agamemnon was wroth, and bade him depart and not come again, lest the staff and chaplets of the God should be of no avail to him — the daughter of Chryses should not be released, he said — she should grow old with him in Argos. And then he told him to go away and not to provoke him, if he intended to get home unscathed. And the old man went away in fear and silence, and, when he had left the camp, he called upon Apollo by his many names, reminding him of everything which he had done pleasing to him, whether in building his temples, or in offering sacrifice, and praying that his good deeds might be returned to him, and that the Achaeans might expiate his tears by the arrows of the god,’ — and so on. In this way the whole becomes simple narrative.

394c

I understand, he said.

Or you may suppose the opposite case — that the intermediate passages are omitted, and the dialogue only left.

That also, he said, I understand; you mean, for example, as in tragedy.

You have conceived my meaning perfectly; and if I mistake not, what you failed to apprehend before is now made clear to you, that poetry and mythology are, in some cases, wholly imitative — instances of this are supplied by tragedy and comedy; there is likewise the opposite style, in which the my poet is the only speaker — of this the dithyramb affords the best example; and the combination of both is found in epic, and in several other styles of poetry. Do I take you with me?

394d

Yes, he said; I see now what you meant.

I will ask you to remember also what I began by saying, that we had done with the subject and might proceed to the style.

Yes, I remember.

In saying this, I intended to imply that we must come to an understanding about the mimetic art, — whether the poets, in narrating their stories, are to be allowed by us to imitate, and if so, whether in whole or in part, and if the latter, in what parts; or should all imitation be prohibited?

You mean, I suspect, to ask whether tragedy and comedy shall be admitted into our State?

394e

Yes, I said; but there may be more than this in question: I really do not know as yet, but whither the argument may blow, thither we go.

And go we will, he said.

Then, Adeimantus, let me ask you whether our guardians ought to be imitators; or rather, has not this question been decided by the rule already laid down that one man can only do one thing well, and not many; and that if he attempt many, he will altogether fall of gaining much reputation in any?

Certainly.

395a

And this is equally true of imitation; no one man can imitate many things as well as he would imitate a single one?

He cannot.

Then the same person will hardly be able to play a serious part in life, and at the same time to be an imitator and imitate many other parts as well; for even when two species of imitation are

nearly allied, the same persons cannot succeed in both, as, for example, the writers of tragedy and comedy — did you not just now call them imitations?

Yes, I did; and you are right in thinking that the same persons cannot succeed in both.

Any more than they can be rhapsodists and actors at once?

395b

True.

Neither are comic and tragic actors the same; yet all these things are but imitations.

They are so.

And human nature, Adeimantus, appears to have been coined into yet smaller pieces, and to be as incapable of imitating many things well, as of performing well the actions of which the imitations are copies.

Quite true, he replied.

395c

If then we adhere to our original notion and bear in mind that our guardians, setting aside every other business, are to dedicate themselves wholly to the maintenance of freedom in the State, making this their craft, and engaging in no work which does not bear on this end, they ought not to practise or imitate anything else; if they imitate at all, they should imitate from youth upward only those characters which are suitable to their profession — the courageous, temperate, holy, free, and the like; but they should not depict or be skilful at imitating any kind of illiberality or baseness, lest from imitation they should come to be what they imitate. Did you never observe how imitations, beginning in early youth and continuing far into life, at length grow into habits and become a second nature, affecting body, voice, and mind?

395d

Yes, certainly, he said.

395e

Then, I said, we will not allow those for whom we profess a care and of whom we say that they ought to be good men, to imitate a woman, whether young or old, quarrelling with her husband, or striving and vaunting against the gods in conceit of her happiness, or when she is in affliction, or sorrow, or weeping; and certainly not one who is in sickness, love, or labour.

Very right, he said.

Neither must they represent slaves, male or female, performing the offices of slaves?

396a

They must not.

And surely not bad men, whether cowards or any others, who do the reverse of what we have just been prescribing, who scold or mock or revile one another in drink or out of in drink or, or who in any other manner sin against themselves and their neighbours in word or deed, as the manner of such is. Neither should they be trained to imitate the action or speech of men or women who are mad or bad; for madness, like vice, is to be known but not to be practised or imitated.

Very true, he replied.

396b

Neither may they imitate smiths or other artificers, or oarsmen, or boatswains, or the like?

How can they, he said, when they are not allowed to apply their minds to the callings of any of these?

Nor may they imitate the neighing of horses, the bellowing of bulls, the murmur of rivers and roll of the ocean, thunder, and all that sort of thing?

396c

Nay, he said, if madness be forbidden, neither may they copy the behaviour of madmen.

You mean, I said, if I understand you aright, that there is one sort of narrative style which may be employed by a truly good man when he has anything to say, and that another sort will be used by a man of an opposite character and education.

And which are these two sorts? he asked.

396d

Suppose, I answered, that a just and good man in the course of a narration comes on some saying or action of another good man, — I should imagine that he will like to personate him, and will not be ashamed of this sort of imitation: he will be most ready to play the part of the good man when he is acting firmly and wisely; in a less degree when he is overtaken by illness or love or drink, or has met with any other disaster. But when he comes to a character which is unworthy of him, he will not make a study of that; he will disdain such a person, and will assume his likeness, if at all, for a moment only when he is performing some good action; at other times he will be ashamed to play a part which he has never practised, nor will he like to fashion and frame himself after the baser models; he feels the employment of such an art, unless in jest, to be beneath him, and his mind revolts at it.

396e

So I should expect, he replied.

Then he will adopt a mode of narration such as we have illustrated out of Homer, that is to say, his style will be both imitative and narrative; but there will be very little of the former, and a great deal of the latter. Do you agree?

Certainly, he said; that is the model which such a speaker must necessarily take.

397b

But there is another sort of character who will narrate anything, and, the worse lie is, the more unscrupulous he will be; nothing will be too bad for him: and he will be ready to imitate anything, not as a joke, but in right good earnest, and before a large company. As I was just now saying, he will attempt to represent the roll of thunder, the noise of wind and hall, or the creaking of wheels, and pulleys, and the various sounds of flutes; pipes, trumpets, and all sorts of instruments: he will bark like a dog, bleat like a sheep, or crow like a cock; his entire art will consist in imitation of voice and gesture, and there will be very little narration.

397c

That, he said, will be his mode of speaking.

These, then, are the two kinds of style?

Yes.

And you would agree with me in saying that one of them is simple and has but slight changes; and if the harmony and rhythm are also chosen for their simplicity, the result is that the speaker, if he speaks correctly, is always pretty much the same in style, and he will keep within the limits of a single harmony (for the changes are not great), and in like manner he will make use of nearly the same rhythm?

That is quite true, he said.

397d

Whereas the other requires all sorts of harmonies and all sorts of rhythms, if the music and the style are to correspond, because the style has all sorts of changes.

That is also perfectly true, he replied.

And do not the two styles, or the mixture of the two, comprehend all poetry, and every form of expression in words? No one can say anything except in one or other of them or in

both together.

They include all, he said.

And shall we receive into our State all the three styles, or one only of the two unmixed styles? or would you include the mixed?

I should prefer only to admit the pure imitator of virtue.

397e

Yes, I said, Adeimantus, but the mixed style is also very charming; and indeed the pantomimic, which is the opposite of the one chosen by you, is the most popular style with children and their attendants, and with the world in general.

I do not deny it.

But I suppose you would argue that such a style is unsuitable to our State, in which human nature is not twofold or manifold, for one man plays one part only?

Yes; quite unsuitable.

And this is the reason why in our State, and in our State only, we shall find a shoemaker to be a shoemaker and not a pilot also, and a husbandman to be a husbandman and not a dicast also, and a soldier a soldier and not a trader also, and the same throughout?

398a

True, he said.

And therefore when any one of these pantomimic gentlemen, who are so clever that they can imitate anything, comes to us, and makes a proposal to exhibit himself and his poetry, we will fall down and worship him as a sweet and holy and wonderful being; but we must also inform him that in our State such as he are not permitted to exist; the law will not allow them. And so when we have anointed him with myrrh, and set a garland of

wool upon his head, we shall send him away to another city. For we mean to employ for our souls' health the rougher and severer poet or story-teller, who will imitate the style of the virtuous only, and will follow those models which we prescribed at first when we began the education of our soldiers.

398b

We certainly will, he said, if we have the power.

Then now, my friend, I said, that part of music or literary education which relates to the story or myth may be considered to be finished; for the matter and manner have both been discussed.

398c

I think so too, he said.

Next in order will follow melody and song.

That is obvious.

Every one can see already what we ought to say about them, if we are to be consistent with ourselves.

Socrates - Glaucon I fear, said Glaucon, laughing, that the words 'every one' hardly includes me, for I cannot at the moment say what they should be; though I may guess.

At any rate you can tell that a song or ode has three parts — the words, the melody, and the rhythm; that degree of knowledge I may presuppose?

398d

Yes, he said; so much as that you may.

And as for the words, there surely be no difference words between words which are and which are not set to music; both will conform to the same laws, and these have been already determined by us?

Yes.

And the melody and rhythm will depend upon the words?

Certainly.

We were saying, when we spoke of the subject-matter, that we had no need of lamentations and strains of sorrow?

True.

And which are the harmonies expressive of sorrow? You are musical, and can tell me.

398e

The harmonies which you mean are the mixed or tenor Lydian, and the full-toned or bass Lydian, and such like.

These then, I said, must be banished; even to women who have a character to maintain they are of no use, and much less to men. Certainly.

In the next place, drunkenness and softness and indolence are utterly unbecoming the character of our guardians.

Utterly unbecoming.

And which are the soft or drinking harmonies?

The Ionian, he replied, and the Lydian; they are termed 'relaxed.'

399a

Well, and are these of any military use?

Quite the reverse, he replied; and if so the Dorian and the Phrygian are the only ones which you have left.

399b

I answered: Of the harmonies I know nothing, but I want to have one warlike, to sound the note or accent which a brave man utters in the hour of danger and stern resolve, or when his cause is failing, and he is going to wounds or death or is overtaken by some other evil, and at every such crisis meets the

blows of fortune with firm step and a determination to endure; and another to be used by him in times of peace and freedom of action, when there is no pressure of necessity, and he is seeking to persuade God by prayer, or man by instruction and admonition, or on the other hand, when he is expressing his willingness to yield to persuasion or entreaty or admonition, and which represents him when by prudent conduct he has attained his end, not carried away by his success, but acting moderately and wisely under the circumstances, and acquiescing in the event. These two harmonies I ask you to leave; the strain of necessity and the strain of freedom, the strain of the unfortunate and the strain of the fortunate, the strain of courage, and the strain of temperance; these, I say, leave.

399c

And these, he replied, are the Dorian and Phrygian harmonies of which I was just now speaking.

399d

Then, I said, if these and these only are to be used in our songs and melodies, we shall not want multiplicity of notes or a panharmonic scale?

I suppose not.

399e

Then we shall not maintain the artificers of lyres with three corners and complex scales, or the makers of any other many-stringed curiously-harmonised instruments?

Certainly not.

But what do you say to flute-makers and flute-players? Would you admit them into our State when you reflect that in this composite use of harmony the flute is worse than all the stringed instruments put together; even the panharmonic music is only an imitation of the flute?

Clearly not.

There remain then only the lyre and the harp for use in the city, and the shepherds may have a pipe in the country.

That is surely the conclusion to be drawn from the argument.

400a

The preferring of Apollo and his instruments to Marsyas and his instruments is not at all strange, I said.

Not at all, he replied.

And so, by the dog of Egypt, we have been unconsciously purging the State, which not long ago we termed luxurious.

And we have done wisely, he replied.

Then let us now finish the purgation, I said. Next in order to harmonies, rhythms will naturally follow, and they should be subject to the same rules, for we ought not to seek out complex systems of metre, or metres of every kind, but rather to discover what rhythms are the expressions of a courageous and harmonious life; and when we have found them, we shall adapt the foot and the melody to words having a like spirit, not the words to the foot and melody. To say what these rhythms are will be your duty — you must teach me them, as you have already taught me the harmonies.

400b

But, indeed, he replied, I cannot tell you. I only know that there are some three principles of rhythm out of which metrical systems are framed, just as in sounds there are four notes out of which all the harmonies are composed; that is an observation which I have made. But of what sort of lives they are severally the imitations I am unable to say.

400c

Then, I said, we must take Damon into our counsels; and he will tell us what rhythms are expressive of meanness, or insolence, or fury, or other unworthiness, and what are to be reserved for the expression of opposite feelings. And I think that I have an indistinct recollection of his mentioning a complex Cretic rhythm; also a dactylic or heroic, and he arranged them in some manner which I do not quite understand, making the rhythms equal in the rise and fall of the foot, long and short alternating; and, unless I am mistaken, he spoke of an iambic as well as of a trochaic rhythm, and assigned to them short and long quantities. Also in some cases he appeared to praise or censure the movement of the foot quite as much as the rhythm; or perhaps a combination of the two; for I am not certain what he meant. These matters, however, as I was saying, had better be referred to Damon himself, for the analysis of the subject would be difficult, you know.

400d

Rather so, I should say.

400e

But there is no difficulty in seeing that grace or the absence of grace is an effect of good or bad rhythm.

None at all.

And also that good and bad rhythm naturally assimilate to a good and bad style; and that harmony and discord in like manner follow style; for our principle is that rhythm and harmony are regulated by the words, and not the words by them.

401a

Just so, he said, they should follow the words.

And will not the words and the character of the style depend on the temper of the soul?

Yes.

And everything else on the style?

Yes.

Then beauty of style and harmony and grace and good rhythm depend on simplicity, — I mean the true simplicity of a rightly and nobly ordered mind and character, not that other simplicity which is only an euphemism for folly?

Very true, he replied.

And if our youth are to do their work in life, must they not make these graces and harmonies their perpetual aim?

401b

They must.

And surely the art of the painter and every other creative and constructive art are full of them, — weaving, embroidery, architecture, and every kind of manufacture; also nature, animal and vegetable, — in all of them there is grace or the absence of grace. And ugliness and discord and inharmonious motion are nearly allied to ill words and ill nature, as grace and harmony are the twin sisters of goodness and virtue and bear their likeness.

That is quite true, he said.

401d

But shall our superintendence go no further, and are the poets only to be required by us to express the image of the good in their works, on pain, if they do anything else, of expulsion from our State? Or is the same control to be extended to other artists, and are they also to be prohibited from exhibiting the opposite forms of vice and intemperance and meanness and indecency in sculpture and building and the other creative arts; and is he who cannot conform to this rule of ours to be prevented from practising his art in our State, lest the taste of our citizens be corrupted by him? We would not have our guardians grow up

amid images of moral deformity, as in some noxious pasture, and there browse and feed upon many a baneful herb and flower day by day, little by little, until they silently gather a festering mass of corruption in their own soul. Let our artists rather be those who are gifted to discern the true nature of the beautiful and graceful; then will our youth dwell in a land of health, amid fair sights and sounds, and receive the good in everything; and beauty, the effluence of fair works, shall flow into the eye and ear, like a health-giving breeze from a purer region, and insensibly draw the soul from earliest years into likeness and sympathy with the beauty of reason.

402a

There can be no nobler training than that, he replied.

And therefore, I said, Glaucon, musical training is a more potent instrument than any other, because rhythm and harmony find their way into the inward places of the soul, on which they mightily fasten, imparting grace, and making the soul of him who is rightly educated graceful, or of him who is ill-educated ungraceful; and also because he who has received this true education of the inner being will most shrewdly perceive omissions or faults in art and nature, and with a true taste, while he praises and rejoices over and receives into his soul the good, and becomes noble and good, he will justly blame and hate the bad, now in the days of his youth, even before he is able to know the reason why; and when reason comes he will recognise and salute the friend with whom his education has made him long familiar.

402c

Yes, he said, I quite agree with you in thinking that our youth should be trained in music and on the grounds which you mention.

Just as in learning to read, I said, we were satisfied when we knew the letters of the alphabet, which are very few, in all their

recurring sizes and combinations; not slighting them as unimportant whether they occupy a space large or small, but everywhere eager to make them out; and not thinking ourselves perfect in the art of reading until we recognise them wherever they are found: True — Or, as we recognise the reflection of letters in the water, or in a mirror, only when we know the letters themselves; the same art and study giving us the knowledge of both: ^{402d} Exactly — ^{402d} Even so, as I maintain, neither we nor our guardians, whom we have to educate, can ever become musical until we and they know the essential forms, in all their combinations, and can recognise them and their images wherever they are found, not slighting them either in small things or great, but believing them all to be within the sphere of one art and study.

^{402d}

Most assuredly.

And when a beautiful soul harmonises with a beautiful form, and the two are cast in one mould, that will be the fairest of sights to him who has an eye to see it?

The fairest indeed.

^{402e}

And the fairest is also the loveliest?

That may be assumed.

And the man who has the spirit of harmony will be most in love with the loveliest; but he will not love him who is of an inharmonious soul?

That is true, he replied, if the deficiency be in his soul; but if there be any merely bodily defect in another he will be patient of it, and will love all the same.

^{403a}

I perceive, I said, that you have or have had experiences of this sort, and I agree. But let me ask you another question: Has

excess of pleasure any affinity to temperance?

How can that be? he replied; pleasure deprives a man of the use of his faculties quite as much as pain.

Or any affinity to virtue in general?

None whatever.

Any affinity to wantonness and intemperance?

Yes, the greatest.

And is there any greater or keener pleasure than that of sensual love?

No, nor a madder.

Whereas true love is a love of beauty and order — temperate and harmonious?

Quite true, he said.

Then no intemperance or madness should be allowed to approach true love?

403b

Certainly not.

Then mad or intemperate pleasure must never be allowed to come near the lover and his beloved; neither of them can have any part in it if their love is of the right sort?

No, indeed, Socrates, it must never come near them.

403c

Then I suppose that in the city which we are founding you would make a law to the effect that a friend should use no other familiarity to his love than a father would use to his son, and then only for a noble purpose, and he must first have the other's consent; and this rule is to limit him in all his intercourse, and he is never to be seen going further, or, if he exceeds, he is to be deemed guilty of coarseness and bad taste.

403d

I quite agree, he said.

Thus much of music, which makes a fair ending; for what should be the end of music if not the love of beauty?

I agree, he said.

After music comes gymnastic, in which our youth are next to be trained.

Certainly.

403e

Gymnastic as well as music should begin in early years; the training in it should be careful and should continue through life. Now my belief is, — and this is a matter upon which I should like to have your opinion in confirmation of my own, but my own belief is, — not that the good body by any bodily excellence improves the soul, but, on the contrary, that the good soul, by her own excellence, improves the body as far as this may be possible. What do you say?

Yes, I agree.

Then, to the mind when adequately trained, we shall be right in handing over the more particular care of the body; and in order to avoid prolixity we will now only give the general outlines of the subject.

Very good.

That they must abstain from intoxication has been already remarked by us; for of all persons a guardian should be the last to get drunk and not know where in the world he is.

404a

Yes, he said; that a guardian should require another guardian to take care of him is ridiculous indeed.

But next, what shall we say of their food; for the men are in training for the great contest of all — are they not?

Yes, he said.

And will the habit of body of our ordinary athletes be suited to them?

404b

Why not?

I am afraid, I said, that a habit of body such as they have is but a sleepy sort of thing, and rather perilous to health. Do you not observe that these athletes sleep away their lives, and are liable to most dangerous illnesses if they depart, in ever so slight a degree, from their customary regimen?

Yes, I do.

Then, I said, a finer sort of training will be required for our warrior athletes, who are to be like wakeful dogs, and to see and hear with the utmost keenness; amid the many changes of water and also of food, of summer heat and winter cold, which they will have to endure when on a campaign, they must not be liable to break down in health.

404c

That is my view.

The really excellent gymnastic is twin sister of that simple music which we were just now describing.

How so?

Why, I conceive that there is a gymnastic which, like our music, is simple and good; and especially the military gymnastic.

What do you mean?

My meaning may be learned from Homer; he, you know, feeds his heroes at their feasts, when they are campaigning, on soldiers' fare; they have no fish, although they are on the shores

of the Hellespont, and they are not allowed boiled meats but only roast, which is the food most convenient for soldiers, requiring only that they should light a fire, and not involving the trouble of carrying about pots and pans.

404d

True.

404e

And I can hardly be mistaken in saying that sweet sauces are nowhere mentioned in Homer. In proscribing them, however, he is not singular; all professional athletes are well aware that a man who is to be in good condition should take nothing of the kind.

Yes, he said; and knowing this, they are quite right in not taking them.

Then you would not approve of Syracusan dinners, and the refinements of
Sicilian cookery?

I think not.

Nor, if a man is to be in condition, would you allow him to
have a
Corinthian girl as his fair friend?

Certainly not.

405a

Neither would you approve of the delicacies, as they are
thought, of
Athenian confectionery?

Certainly not.

All such feeding and living may be rightly compared by us to melody and song composed in the panharmonic style, and in all the rhythms. Exactly.

405b

There complexity engendered license, and here disease; whereas simplicity in music was the parent of temperance in the soul; and simplicity in gymnastic of health in the body.

Most true, he said.

But when intemperance and disease multiply in a State, halls of justice and medicine are always being opened; and the arts of the doctor and the lawyer give themselves airs, finding how keen is the interest which not only the slaves but the freemen of a city take about them.

Of course.

405c

And yet what greater proof can there be of a bad and disgraceful state of education than this, that not only artisans and the meaner sort of people need the skill of first-rate physicians and judges, but also those who would profess to have had a liberal education? Is it not disgraceful, and a great sign of want of good-breeding, that a man should have to go abroad for his law and physic because he has none of his own at home, and must therefore surrender himself into the hands of other men whom he makes lords and judges over him?

Of all things, he said, the most disgraceful.

405d

Would you say ‘most,’ I replied, when you consider that there is a further stage of the evil in which a man is not only a life-long litigant, passing all his days in the courts, either as plaintiff or defendant, but is actually led by his bad taste to pride himself on his litigiousness; he imagines that he is a master in dishonesty; able to take every crooked turn, and wriggle into and out of every hole, bending like a withy and getting out of the way of justice: and all for what? — in order to gain small points not worth mentioning, he not knowing that so to order his life as to be able to do without a napping judge is a far higher

and nobler sort of thing. Is not that still more disgraceful?

405e

Yes, he said, that is still more disgraceful.

Well, I said, and to require the help of medicine, not when a wound has to be cured, or on occasion of an epidemic, but just because, by indolence and a habit of life such as we have been describing, men fill themselves with waters and winds, as if their bodies were a marsh, compelling the ingenious sons of Asclepius to find more names for diseases, such as flatulence and catarrh; is not this, too, a disgrace?

406a

Yes, he said, they do certainly give very strange and newfangled names to diseases.

406b

Yes, I said, and I do not believe that there were any such diseases in the days of Asclepius; and this I infer from the circumstance that the hero Eurypylus, after he has been wounded in Homer, drinks a posset of Pramnian wine well besprinkled with barley-meal and grated cheese, which are certainly inflammatory, and yet the sons of Asclepius who were at the Trojan war do not blame the damsel who gives him the drink, or rebuke Patroclus, who is treating his case.

Well, he said, that was surely an extraordinary drink to be given to a person in his condition.

406c

Not so extraordinary, I replied, if you bear in mind that in former days, as is commonly said, before the time of Herodicus, the guild of Asclepius did not practise our present system of medicine, which may be said to educate diseases. But Herodicus, being a trainer, and himself of a sickly constitution, by a combination of training and doctoring found out a way of torturing first and chiefly himself, and secondly the rest of the world.

How was that? he said.

406d

By the invention of lingering death; for he had a mortal disease which he perpetually tended, and as recovery was out of the question, he passed his entire life as a valetudinarian; he could do nothing but attend upon himself, and he was in constant torment whenever he departed in anything from his usual regimen, and so dying hard, by the help of science he struggled on to old age.

A rare reward of his skill!

406e

Yes, I said; a reward which a man might fairly expect who never understood that, if Asclepius did not instruct his descendants in valetudinarian arts, the omission arose, not from ignorance or inexperience of such a branch of medicine, but because he knew that in all well-ordered states every individual has an occupation to which he must attend, and has therefore no leisure to spend in continually being ill. This we remark in the case of the artisan, but, ludicrously enough, do not apply the same rule to people of the richer sort.

407a

How do you mean? he said.

407b

I mean this: When a carpenter is ill he asks the physician for a rough and ready cure; an emetic or a purge or a cautery or the knife, — these are his remedies. And if some one prescribes for him a course of dietetics, and tells him that he must swathe and swaddle his head, and all that sort of thing, he replies at once that he has no time to be ill, and that he sees no good in a life which is spent in nursing his disease to the neglect of his customary employment; and therefore bidding good-bye to this sort of physician, he resumes his ordinary habits, and either gets well and lives and does his business, or, if his constitution

falls, he dies and has no more trouble.

Yes, he said, and a man in his condition of life ought to use the art of medicine thus far only.

Has he not, I said, an occupation; and what profit would there be in his life if he were deprived of his occupation?

Quite true, he said.

407c

But with the rich man this is otherwise; of him we do not say that he has any specially appointed work which he must perform, if he would live.

He is generally supposed to have nothing to do.

Then you never heard of the saying of Phocylides, that as soon as a man has a livelihood he should practise virtue?

Nay, he said, I think that he had better begin somewhat sooner.

407d

Let us not have a dispute with him about this, I said; but rather ask ourselves: Is the practice of virtue obligatory on the rich man, or can he live without it? And if obligatory on him, then let us raise a further question, whether this dieting of disorders which is an impediment to the application of the mind to carpentering and the mechanical arts, does not equally stand in the way of the sentiment of Phocylides?

407e

Of that, he replied, there can be no doubt; such excessive care of the body, when carried beyond the rules of gymnastic, is most inimical to the practice of virtue.

Yes, indeed, I replied, and equally incompatible with the management of a house, an army, or an office of state; and, what is most important of all, irreconcilable with any kind of study or thought or self-reflection — there is a constant suspicion that headache and giddiness are to be ascribed to philosophy, and

hence all practising or making trial of virtue in the higher sense is absolutely stopped; for a man is always fancying that he is being made ill, and is in constant anxiety about the state of his body.

408a

Yes, likely enough.

And therefore our politic Asclepius may be supposed to have exhibited the power of his art only to persons who, being generally of healthy constitution and habits of life, had a definite ailment; such as these he cured by purges and operations, and bade them live as usual, herein consulting the interests of the State; but bodies which disease had penetrated through and through he would not have attempted to cure by gradual processes of evacuation and infusion: he did not want to lengthen out good-for-nothing lives, or to have weak fathers begetting weaker sons; — if a man was not able to live in the ordinary way he had no business to cure him; for such a cure would have been of no use either to himself, or to the State.

408b

Then, he said, you regard Asclepius as a statesman.

Clearly; and his character is further illustrated by his sons. Note that they were heroes in the days of old and practised the medicines of which I am speaking at the siege of Troy: You will remember how, when Pandarus wounded Menelaus, they sucked the blood out of the wound, and sprinkled soothing remedies, ^{408c} but they never prescribed what the patient was afterwards to eat or drink in the case of Menelaus, any more than in the case of Eurypylus; the remedies, as they conceived, were enough to heal any man who before he was wounded was healthy and regular in habits; and even though he did happen to drink a posset of Pramnian wine, he might get well all the same. But they would have nothing to do with unhealthy and intemperate subjects, whose lives were of no use either to

themselves or others; the art of medicine was not designed for their good, and though they were as rich as Midas, the sons of Asclepius would have declined to attend them.

408d

They were very acute persons, those sons of Asclepius.

Naturally so, I replied. Nevertheless, the tragedians and Pindar disobeying our behests, although they acknowledge that Asclepius was the son of Apollo, say also that he was bribed into healing a rich man who was at the point of death, and for this reason he was struck by lightning. But we, in accordance with the principle already affirmed by us, will not believe them when they tell us both; — if he was the son of a god, we maintain that he was not avaricious; or, if he was avaricious he was not the son of a god.

408e

All that, Socrates, is excellent; but I should like to put a question to you: Ought there not to be good physicians in a State, and are not the best those who have treated the greatest number of constitutions good and bad? and are not the best judges in like manner those who are acquainted with all sorts of moral natures?

409a

Yes, I said, I too would have good judges and good physicians. But do you know whom I think good?

Will you tell me?

I will, if I can. Let me however note that in the same question you join two things which are not the same.

How so? he asked.

409b

Why, I said, you join physicians and judges. Now the most skilful physicians are those who, from their youth upwards, have combined with the knowledge of their art the greatest

experience of disease; they had better not be robust in health, and should have had all manner of diseases in their own persons. For the body, as I conceive, is not the instrument with which they cure the body; in that case we could not allow them ever to be or to have been sickly; but they cure the body with the mind, and the mind which has become and is sick can cure nothing.

That is very true, he said.

409c

But with the judge it is otherwise; since he governs mind by mind; he ought not therefore to have been trained among vicious minds, and to have associated with them from youth upwards, and to have gone through the whole calendar of crime, only in order that he may quickly infer the crimes of others as he might their bodily diseases from his own self-consciousness; the honourable mind which is to form a healthy judgment should have had no experience or contamination of evil habits when young. And this is the reason why in youth good men often appear to be simple, and are easily practised upon by the dishonest, because they have no examples of what evil is in their own souls.

409d

Yes, he said, they are far too apt to be deceived.

409e

Therefore, I said, the judge should not be young; he should have learned to know evil, not from his own soul, but from late and long observation of the nature of evil in others: knowledge should be his guide, not personal experience.

Yes, he said, that is the ideal of a judge.

410a

Yes, I replied, and he will be a good man (which is my answer to your question); for he is good who has a good soul. But the cunning and suspicious nature of which we spoke, — he who has

committed many crimes, and fancies himself to be a master in wickedness, when he is amongst his fellows, is wonderful in the precautions which he takes, because he judges of them by himself: but when he gets into the company of men of virtue, who have the experience of age, he appears to be a fool again, owing to his unseasonable suspicions; he cannot recognise an honest man, because he has no pattern of honesty in himself; at the same time, as the bad are more numerous than the good, and he meets with them oftener, he thinks himself, and is by others thought to be, rather wise than foolish.

Most true, he said.

410b

Then the good and wise judge whom we are seeking is not this man, but the other; for vice cannot know virtue too, but a virtuous nature, educated by time, will acquire a knowledge both of virtue and vice: the virtuous, and not the vicious, man has wisdom — in my opinion.

And in mine also.

This is the sort of medicine, and this is the sort of law, which you sanction in your State. They will minister to better natures, giving health both of soul and of body; but those who are diseased in their bodies they will leave to die, and the corrupt and incurable souls they will put an end to themselves.

410c

That is clearly the best thing both for the patients and for the State.

And thus our youth, having been educated only in that simple music which, as we said, inspires temperance, will be reluctant to go to law.

Clearly.

And the musician, who, keeping to the same track, is content to practise the simple gymnastic, will have nothing to do with medicine unless in some extreme case.

410d

That I quite believe.

The very exercises and tolls which he undergoes are intended to stimulate the spirited element of his nature, and not to increase his strength; he will not, like common athletes, use exercise and regimen to develop his muscles.

Very right, he said.

Neither are the two arts of music and gymnastic really designed, as is often supposed, the one for the training of the soul, the other for the training of the body.

What then is the real object of them?

I believe, I said, that the teachers of both have in view chiefly the improvement of the soul.

How can that be? he asked.

410e

Did you never observe, I said, the effect on the mind itself of exclusive devotion to gymnastic, or the opposite effect of an exclusive devotion to music?

In what way shown? he said.

The one producing a temper of hardness and ferocity, the other of softness and effeminacy, I replied.

Yes, he said, I am quite aware that the mere athlete becomes too much of a savage, and that the mere musician is melted and softened beyond what is good for him.

411a

Yet surely, I said, this ferocity only comes from spirit, which, if rightly educated, would give courage, but, if too much

intensified, is liable to become hard and brutal.

That I quite think.

On the other hand the philosopher will have the quality of gentleness. And this also, when too much indulged, will turn to softness, but, if educated rightly, will be gentle and moderate.

True.

And in our opinion the guardians ought to have both these qualities?

Assuredly.

And both should be in harmony?

Beyond question.

And the harmonious soul is both temperate and courageous?

Yes.

And the inharmonious is cowardly and boorish?

411b

Very true.

And, when a man allows music to play upon him and to pour into his soul through the funnel of his ears those sweet and soft and melancholy airs of which we were just now speaking, and his whole life is passed in warbling and the delights of song; in the first stage of the process the passion or spirit which is in him is tempered like iron, and made useful, instead of brittle and useless. But, if he carries on the softening and soothing process, in the next stage he begins to melt and waste, until he has wasted away his spirit and cut out the sinews of his soul; and he becomes a feeble warrior.

411c

Very true.

If the element of spirit is naturally weak in him the change is speedily accomplished, but if he have a good deal, then the power of music weakening the spirit renders him excitable; — on the least provocation he flames up at once, and is speedily extinguished; instead of having spirit he grows irritable and passionate and is quite impracticable.

Exactly.

411d

And so in gymnastics, if a man takes violent exercise and is a great feeder, and the reverse of a great student of music and philosophy, at first the high condition of his body fills him with pride and spirit, and he becomes twice the man that he was.

411e

Certainly.

And what happens? if he do nothing else, and holds no converse with the Muses, does not even that intelligence which there may be in him, having no taste of any sort of learning or enquiry or thought or culture, grow feeble and dull and blind, his mind never waking up or receiving nourishment, and his senses not being purged of their mists?

True, he said.

412a

And he ends by becoming a hater of philosophy, uncivilized, never using the weapon of persuasion, — he is like a wild beast, all violence and fierceness, and knows no other way of dealing; and he lives in all ignorance and evil conditions, and has no sense of propriety and grace.

That is quite true, he said.

412b

And as there are two principles of human nature, one the spirited and the other the philosophical, some God, as I should say, has given mankind two arts answering to them (and only

indirectly to the soul and body), in order that these two principles (like the strings of an instrument) may be relaxed or drawn tighter until they are duly harmonised.

That appears to be the intention.

And he who mingles music with gymnastic in the fairest proportions, and best attempers them to the soul, may be rightly called the true musician and harmonist in a far higher sense than the tuner of the strings.

You are quite right, Socrates.

412c

And such a presiding genius will be always required in our State if the government is to last.

Yes, he will be absolutely necessary.

Such, then, are our principles of nurture and education: Where would be the use of going into further details about the dances of our citizens, or about their hunting and coursing, their gymnastic and equestrian contests? For these all follow the general principle, and having found that, we shall have no difficulty in discovering them.

I dare say that there will be no difficulty.

Very good, I said; then what is the next question? Must we not ask who are to be rulers and who subjects?

412d

Certainly.

There can be no doubt that the elder must rule the younger.

Clearly.

And that the best of these must rule.

That is also clear.

Now, are not the best husbandmen those who are most devoted to husbandry?

Yes.

And as we are to have the best of guardians for our city, must they not be those who have most the character of guardians?

Yes.

412e

And to this end they ought to be wise and efficient, and to have a special care of the State?

True.

And a man will be most likely to care about that which he loves?

To be sure.

And he will be most likely to love that which he regards as having the same interests with himself, and that of which the good or evil fortune is supposed by him at any time most to affect his own?

Very true, he replied.

413a

Then there must be a selection. Let us note among the guardians those who in their whole life show the greatest eagerness to do what is for the good of their country, and the greatest repugnance to do what is against her interests.

Those are the right men.

And they will have to be watched at every age, in order that we may see whether they preserve their resolution, and never, under the influence either of force or enchantment, forget or cast off their sense of duty to the State.

How cast off? he said.

I will explain to you, I replied. A resolution may go out of a man's mind either with his will or against his will; with his will when he gets rid of a falsehood and learns better, against his will whenever he is deprived of a truth.

413b

I understand, he said, the willing loss of a resolution; the meaning of the unwilling I have yet to learn.

Why, I said, do you not see that men are unwillingly deprived of good, and willingly of evil? Is not to have lost the truth an evil, and to possess the truth a good? and you would agree that to conceive things as they are is to possess the truth?

Yes, he replied; I agree with you in thinking that mankind are deprived of truth against their will.

413c

And is not this involuntary deprivation caused either by theft, or force, or enchantment?

Still, he replied, I do not understand you.

I fear that I must have been talking darkly, like the tragedians. I only mean that some men are changed by persuasion and that others forget; argument steals away the hearts of one class, and time of the other; and this I call theft. Now you understand me?

Yes.

Those again who are forced are those whom the violence of some pain or grief compels to change their opinion.

I understand, he said, and you are quite right.

And you would also acknowledge that the enchanted are those who change their minds either under the softer influence of pleasure, or the sterner influence of fear?

Yes, he said; everything that deceives may be said to enchant.

413d

Therefore, as I was just now saying, we must enquire who are the best guardians of their own conviction that what they think the interest of the State is to be the rule of their lives. We must watch them from their youth upwards, and make them perform actions in which they are most likely to forget or to be deceived, and he who remembers and is not deceived is to be selected, and he who falls in the trial is to be rejected. That will be the way?

Yes.

413e

And there should also be toils and pains and conflicts prescribed for them, in which they will be made to give further proof of the same qualities.

Very right, he replied.

414a

And then, I said, we must try them with enchantments that is the third sort of test — and see what will be their behaviour: like those who take colts amid noise and tumult to see if they are of a timid nature, so must we take our youth amid terrors of some kind, and again pass them into pleasures, and prove them more thoroughly than gold is proved in the furnace, that we may discover whether they are armed against all enchantments, and of a noble bearing always, good guardians of themselves and of the music which they have learned, and retaining under all circumstances a rhythmical and harmonious nature, such as will be most serviceable to the individual and to the State. And he who at every age, as boy and youth and in mature life, has come out of the trial victorious and pure, shall be appointed a ruler and guardian of the State; he shall be honoured in life and death, and shall receive sepulture and other memorials of honour, the greatest that we have to give. But him who fails, we must reject. I am inclined to think that this is the sort of way in which our rulers and guardians should be chosen and

appointed. I speak generally, and not with any pretension to exactness.

414c

And, speaking generally, I agree with you, he said.

And perhaps the word ‘guardian’ in the fullest sense ought to be applied to this higher class only who preserve us against foreign enemies and maintain peace among our citizens at home, that the one may not have the will, or the others the power, to harm us. The young men whom we before called guardians may be more properly designated auxiliaries and supporters of the principles of the rulers.

I agree with you, he said.

How then may we devise one of those needful falsehoods of which we lately spoke — just one royal lie which may deceive the rulers, if that be possible, and at any rate the rest of the city?

414d

What sort of lie? he said.

Nothing new, I replied; only an old Phoenician tale of what has often occurred before now in other places, (as the poets say, and have made the world believe,) though not in our time, and I do not know whether such an event could ever happen again, or could now even be made probable, if it did.

How your words seem to hesitate on your lips!

You will not wonder, I replied, at my hesitation when you have heard.

Speak, he said, and fear not.

415a

Well then, I will speak, although I really know not how to look you in the face, or in what words to utter the audacious fiction, which I propose to communicate gradually, first to the rulers,

then to the soldiers, and lastly to the people. They are to be told that their youth was a dream, and the education and training which they received from us, an appearance only; in reality during all that time they were being formed and fed in the womb of the earth, where they themselves and their arms and appurtenances were manufactured; when they were completed, the earth, their mother, sent them up; and so, their country being their mother and also their nurse, they are bound to advise for her good, and to defend her against attacks, and her citizens they are to regard as children of the earth and their own brothers.

415b

You had good reason, he said, to be ashamed of the lie which you were going to tell.

415c

True, I replied, but there is more coming; I have only told you half. Citizens, we shall say to them in our tale, you are brothers, yet God has framed you differently. Some of you have the power of command, and in the composition of these he has mingled gold, wherefore also they have the greatest honour; others he has made of silver, to be auxiliaries; others again who are to be husbandmen and craftsmen he has composed of brass and iron; and the species will generally be preserved in the children. But as all are of the same original stock, a golden parent will sometimes have a silver son, or a silver parent a golden son. And God proclaims as a first principle to the rulers, and above all else, that there is nothing which should so anxiously guard, or of which they are to be such good guardians, as of the purity of the race. They should observe what elements mingle in their offspring; for if the son of a golden or silver parent has an admixture of brass and iron, then nature orders a transposition of ranks, and the eye of the ruler must not be pitiful towards the child because he has to descend in the scale and become a husbandman or artisan, just as there may be sons of artisans

who having an admixture of gold or silver in them are raised to honour, and become guardians or auxiliaries. For an oracle says that when a man of brass or iron guards the State, it will be destroyed. Such is the tale; is there any possibility of making our citizens believe in it?

415e

Not in the present generation, he replied; there is no way of accomplishing this; but their sons may be made to believe in the tale, and their sons' sons, and posterity after them.

416a

I see the difficulty, I replied; yet the fostering of such a belief will make them care more for the city and for one another. Enough, however, of the fiction, which may now fly abroad upon the wings of rumour, while we arm our earth-born heroes, and lead them forth under the command of their rulers. Let them look round and select a spot whence they can best suppress insurrection, if any prove refractory within, and also defend themselves against enemies, who like wolves may come down on the fold from without; there let them encamp, and when they have encamped, let them sacrifice to the proper Gods and prepare their dwellings.

Just so, he said.

And their dwellings must be such as will shield them against the cold of winter and the heat of summer.

I suppose that you mean houses, he replied.

Yes, I said; but they must be the houses of soldiers, and not of shop-keepers.

416b

What is the difference? he said.

That I will endeavour to explain, I replied. To keep watchdogs, who, from want of discipline or hunger, or some evil habit, or evil habit or other, would turn upon the sheep and worry them,

and behave not like dogs but wolves, would be a foul and monstrous thing in a shepherd?

Truly monstrous, he said.

And therefore every care must be taken that our auxiliaries, being stronger than our citizens, may not grow to be too much for them and become savage tyrants instead of friends and allies?

Yes, great care should be taken.

And would not a really good education furnish the best safeguard?

But they are well-educated already, he replied.

416c

I cannot be so confident, my dear Glaucon, I said; I am much certain that they ought to be, and that true education, whatever that may be, will have the greatest tendency to civilize and humanize them in their relations to one another, and to those who are under their protection.

Very true, he replied.

416d

And not only their education, but their habitations, and all that belongs to them, should be such as will neither impair their virtue as guardians, nor tempt them to prey upon the other citizens. Any man of sense must acknowledge that.

He must.

416e

Then let us consider what will be their way of life, if they are to realize our idea of them. In the first place, none of them should have any property of his own beyond what is absolutely necessary; neither should they have a private house or store closed against any one who has a mind to enter; their provisions should be only such as are required by trained warriors, who

are men of temperance and courage; they should agree to receive from the citizens a fixed rate of pay, enough to meet the expenses of the year and no more; and they will go and live together like soldiers in a camp. Gold and silver we will tell them that they have from God; the diviner metal is within them, and they have therefore no need of the dross which is current among men, and ought not to pollute the divine by any such earthly admixture; for that commoner metal has been the source of many unholy deeds, but their own is undefiled. And they alone of all the citizens may not touch or handle silver or gold, or be under the same roof with them, or wear them, or drink from them. And this will be their salvation, and they will be the saviours of the State. But should they ever acquire homes or lands or moneys of their own, they will become housekeepers and husbandmen instead of guardians, enemies and tyrants instead of allies of the other citizens; hating and being hated, plotting and being plotted against, they will pass their whole life in much greater terror of internal than of external enemies, and the hour of ruin, both to themselves and to the rest of the State, will be at hand. For all which reasons may we not say that thus shall our State be ordered, and that these shall be the regulations appointed by us for guardians concerning their houses and all other matters? other ^{417b} Yes, said Glaucon.

BOOK IV

^{419a}

Adeimantus - Socrates Here Adeimantus interposed a question: How would you answer, Socrates, said he, if a person were to say that you are making these people miserable, and that they are the cause of their own unhappiness; the city in fact belongs to them, but they are none the better for it; whereas other men acquire lands, and build large and handsome houses, and have everything handsome about them, offering sacrifices to the gods on their own account, and practising hospitality;

moreover, as you were saying just now, they have gold and silver, and all that is usual among the favourites of fortune; but our poor citizens are no better than mercenaries who are quartered in the city and are always mounting guard?

420a

Yes, I said; and you may add that they are only fed, and not paid in addition to their food, like other men; and therefore they cannot, if they would, take a journey of pleasure; they have no money to spend on a mistress or any other luxurious fancy, which, as the world goes, is thought to be happiness; and many other accusations of the same nature might be added.

420b

But, said he, let us suppose all this to be included in the charge.

You mean to ask, I said, what will be our answer?

Yes.

421a

If we proceed along the old path, my belief, I said, is that we shall find the answer. And our answer will be that, even as they are, our guardians may very likely be the happiest of men; but that our aim in founding the State was not the disproportionate happiness of any one class, but the greatest happiness of the whole; we thought that in a State which is ordered with a view to the good of the whole we should be most likely to find Justice, and in the ill-ordered State injustice: and, having found them, we might then decide which of the two is the happier. At present, I take it, we are fashioning the happy State, not piecemeal, or with a view of making a few happy citizens, but as a whole; and by-and-by we will proceed to view the opposite kind of State. Suppose that we were painting a statue, and some one came up to us and said, Why do you not put the most beautiful colours on the most beautiful parts of the body — the eyes ought to be purple, but you have made them black — to him we might fairly answer, Sir, you would not surely have us

beautify the eyes to such a degree that they are no longer eyes; consider rather whether, by giving this and the other features their due proportion, we make the whole beautiful. And so I say to you, do not compel us to assign to the guardians a sort of happiness which will make them anything but guardians; for we too can clothe our husbandmen in royal apparel, and set crowns of gold on their heads, and bid them till the ground as much as they like, and no more. Our potters also might be allowed to repose on couches, and feast by the fireside, passing round the winecup, while their wheel is conveniently at hand, and working at pottery only as much as they like; in this way we might make every class happy-and then, as you imagine, the whole State would be happy. But do not put this idea into our heads; for, if we listen to you, the husbandman will be no longer a husbandman, the potter will cease to be a potter, and no one will have the character of any distinct class in the State. Now this is not of much consequence where the corruption of society, and pretension to be what you are not, is confined to cobblers; but when the guardians of the laws and of the government are only seemingly and not real guardians, then see how they turn the State upside down; and on the other hand they alone have the power of giving order and happiness to the State. We mean our guardians to be true saviours and not the destroyers of the State, whereas our opponent is thinking of peasants at a festival, who are enjoying a life of revelry, not of citizens who are doing their duty to the State. But, if so, we mean different things, and he is speaking of something which is not a State. And therefore we must consider whether in appointing our guardians we would look to their greatest happiness individually, or whether this principle of happiness does not rather reside in the State as a whole. But the latter be the truth, then the guardians and auxillaries, and all others equally with them, must be compelled or induced to do their own work in the best way. And thus the whole State will grow

up in a noble order, and the several classes will receive the proportion of happiness which nature assigns to them.

421c

I think that you are quite right.

I wonder whether you will agree with another remark which occurs to me.

What may that be?

There seem to be two causes of the deterioration of the arts.

What are they?

Wealth, I said, and poverty.

How do they act?

The process is as follows: When a potter becomes rich, will he, think you, any longer take the same pains with his art?

Certainly not.

He will grow more and more indolent and careless?

421d

Very true.

And the result will be that he becomes a worse potter?

Yes; he greatly deteriorates.

But, on the other hand, if he has no money, and cannot provide himself tools or instruments, he will not work equally well himself, nor will he teach his sons or apprentices to work equally well.

Certainly not.

Then, under the influence either of poverty or of wealth, workmen and their work are equally liable to degenerate?

That is evident.

421e

Here, then, is a discovery of new evils, I said, against which the guardians will have to watch, or they will creep into the city unobserved.

What evils?

422a

Wealth, I said, and poverty; the one is the parent of luxury and indolence, and the other of meanness and viciousness, and both of discontent.

422b

That is very true, he replied; but still I should like to know, Socrates, how our city will be able to go to war, especially against an enemy who is rich and powerful, if deprived of the sinews of war.

There would certainly be a difficulty, I replied, in going to war with one such enemy; but there is no difficulty where there are two of them.

How so? he asked.

In the first place, I said, if we have to fight, our side will be trained warriors fighting against an army of rich men.

That is true, he said.

422c

And do you not suppose, Adeimantus, that a single boxer who was perfect in his art would easily be a match for two stout and well-to-do gentlemen who were not boxers?

Hardly, if they came upon him at once.

422d

What, not, I said, if he were able to run away and then turn and strike at the one who first came up? And supposing he were to do this several times under the heat of a scorching sun, might he not, being an expert, overturn more than one stout

personage?

Certainly, he said, there would be nothing wonderful in that.

And yet rich men probably have a greater superiority in the science and practice of boxing than they have in military qualities.

Likely enough.

Then we may assume that our athletes will be able to fight with two or three times their own number?

I agree with you, for I think you right.

423a

And suppose that, before engaging, our citizens send an embassy to one of the two cities, telling them what is the truth: Silver and gold we neither have nor are permitted to have, but you may; do you therefore come and help us in war, of and take the spoils of the other city: Who, on hearing these words, would choose to fight against lean wiry dogs, rather than, with the dogs on their side, against fat and tender sheep?

That is not likely; and yet there might be a danger to the poor State if the wealth of many States were to be gathered into one.

But how simple of you to use the term State at all of any but our own!

Why so?

423b

You ought to speak of other States in the plural number; not one of them is a city, but many cities, as they say in the game. For indeed any city, however small, is in fact divided into two, one the city of the poor, the other of the rich; these are at war with one another; and in either there are many smaller divisions, and you would be altogether beside the mark if you treated them all as a single State. But if you deal with them as

many, and give the wealth or power or persons of the one to the others, you will always have a great many friends and not many enemies. And your State, while the wise order which has now been prescribed continues to prevail in her, will be the greatest of States, I do not mean to say in reputation or appearance, but in deed and truth, though she number not more than a thousand defenders. A single State which is her equal you will hardly find, either among Hellenes or barbarians, though many that appear to be as great and many times greater.

423c

That is most true, he said.

And what, I said, will be the best limit for our rulers to fix when they are considering the size of the State and the amount of territory which they are to include, and beyond which they will not go?

423d

What limit would you propose?

I would allow the State to increase so far as is consistent with unity; that, I think, is the proper limit.

Very good, he said.

Here then, I said, is another order which will have to be conveyed to our guardians: Let our city be accounted neither large nor small, but one and self-sufficing.

And surely, said he, this is not a very severe order which we impose upon them.

423e

And the other, said I, of which we were speaking before is lighter still, I mean the duty of degrading the offspring of the guardians when inferior, and of elevating into the rank of guardians the offspring of the lower classes, when naturally superior. The intention was, that, in the case of the citizens generally, each individual should be put to the use for which

nature which nature intended him, one to one work, and then every man would do his own business, and be one and not many; and so the whole city would be one and not many.

Yes, he said; that is not so difficult.

424a

The regulations which we are prescribing, my good Adeimantus, are not, as might be supposed, a number of great principles, but trifles all, if care be taken, as the saying is, of the one great thing, — a thing, however, which I would rather call, not great, but sufficient for our purpose.

What may that be? he asked.

424b

Education, I said, and nurture: If our citizens are well educated, and grow into sensible men, they will easily see their way through all these, as well as other matters which I omit; such, for example, as marriage, the possession of women and the procreation of children, which will all follow the general principle that friends have all things in common, as the proverb says.

That will be the best way of settling them.

Also, I said, the State, if once started well, moves with accumulating force like a wheel. For good nurture and education implant good constitutions, and these good constitutions taking root in a good education improve more and more, and this improvement affects the breed in man as in other animals.

424c

Very possibly, he said.

Then to sum up: This is the point to which, above all, the attention of our rulers should be directed, — that music and gymnastic be preserved in their original form, and no innovation made. They must do their utmost to maintain them

intact. And when any one says that mankind most regard The newest song which the singers have, ^{424d} they will be afraid that he may be praising, not new songs, but a new kind of song; and this ought not to be praised, or conceived to be the meaning of the poet; for any musical innovation is full of danger to the whole State, and ought to be prohibited. So Damon tells me, and I can quite believe him;-he says that when modes of music change, of the State always change with them.

^{424d}

Yes, said Adeimantus; and you may add my suffrage to Damon's and your own.

Then, I said, our guardians must lay the foundations of their fortress in music?

^{424e}

Yes, he said; the lawlessness of which you speak too easily steals in.

Yes, I replied, in the form of amusement; and at first sight it appears harmless.

^{425a}

Why, yes, he said, and there is no harm; were it not that little by little this spirit of licence, finding a home, imperceptibly penetrates into manners and customs; whence, issuing with greater force, it invades contracts between man and man, and from contracts goes on to laws and constitutions, in utter recklessness, ending at last, Socrates, by an overthrow of all rights, private as well as public.

Is that true? I said.

That is my belief, he replied.

^{425b}

Then, as I was saying, our youth should be trained from the first in a stricter system, for if amusements become lawless, and the youths themselves become lawless, they can never grow up into

well-conducted and virtuous citizens.

Very true, he said.

425c

And when they have made a good beginning in play, and by the help of music have gained the habit of good order, then this habit of order, in a manner how unlike the lawless play of the others! will accompany them in all their actions and be a principle of growth to them, and if there be any fallen places a principle in the State will raise them up again.

Very true, he said.

Thus educated, they will invent for themselves any lesser rules which their predecessors have altogether neglected.

What do you mean?

425d

I mean such things as these: — when the young are to be silent before their elders; how they are to show respect to them by standing and making them sit; what honour is due to parents; what garments or shoes are to be worn; the mode of dressing the hair; deportment and manners in general. You would agree with me?

Yes.

But there is, I think, small wisdom in legislating about such matters, — I doubt if it is ever done; nor are any precise written enactments about them likely to be lasting.

Impossible.

425e

It would seem, Adeimantus, that the direction in which education starts a man, will determine his future life. Does not like always attract like?

To be sure.

Until some one rare and grand result is reached which may be good, and may be the reverse of good?

That is not to be denied.

And for this reason, I said, I shall not attempt to legislate further about them.

Naturally enough, he replied.

426a

Well, and about the business of the agora, dealings and the ordinary dealings between man and man, or again about agreements with the commencement with artisans; about insult and injury, of the commencement of actions, and the appointment of juries, what would you say? there may also arise questions about any impositions and extractions of market and harbour dues which may be required, and in general about the regulations of markets, police, harbours, and the like. But, oh heavens! shall we condescend to legislate on any of these particulars?

I think, he said, that there is no need to impose laws about them on good men; what regulations are necessary they will find out soon enough for themselves.

426b

Yes, I said, my friend, if God will only preserve to them the laws which we have given them.

And without divine help, said Adeimantus, they will go on for ever making and mending their laws and their lives in the hope of attaining perfection.

426c

You would compare them, I said, to those invalids who, having no self-restraint, will not leave off their habits of intemperance?

Exactly.

Yes, I said; and what a delightful life they lead! they are always doctoring and increasing and complicating their disorders, and always fancying that they will be cured by any nostrum which anybody advises them to try.

Such cases are very common, he said, with invalids of this sort.

Yes, I replied; and the charming thing is that they deem him their worst enemy who tells them the truth, which is simply that, unless they give up eating and drinking and wenching and idling, neither drug nor cautery nor spell nor amulet nor any other remedy will avail.

426d

Charming! he replied. I see nothing charming in going into a passion with a man who tells you what is right.

These gentlemen, I said, do not seem to be in your good graces.

Assuredly not.

Nor would you praise the behaviour of States which act like the men whom I was just now describing. For are there not ill-ordered States in which the citizens are forbidden under pain of death to alter the constitution; and yet he who most sweetly courts those who live under this regime and indulges them and fawns upon them and is skilful in anticipating and gratifying their humours is held to be a great and good statesman — do not these States resemble the persons whom I was describing?

426e

Yes, he said; the States are as bad as the men; and I am very far from praising them.

But do you not admire, I said, the coolness and dexterity of these ready ministers of political corruption?

Yes, he said, I do; but not of all of them, for there are some whom the applause of the multitude has deluded into the belief that they are really statesmen, and these are not much to be

admired.

427a

What do you mean? I said; you should have more feeling for them. When a man cannot measure, and a great many others who cannot measure declare that he is four cubits high, can he help believing what they say?

Nay, he said, certainly not in that case.

427b

Well, then, do not be angry with them; for are they not as good as a play, trying their hand at paltry reforms such as I was describing; they are always fancying that by legislation they will make an end of frauds in contracts, and the other rascalities which I was mentioning, not knowing that they are in reality cutting off the heads of a hydra?

Yes, he said; that is just what they are doing.

I conceive, I said, that the true legislator will not trouble himself with this class of enactments whether concerning laws or the constitution either in an ill-ordered or in a well-ordered State; for in the former they are quite useless, and in the latter there will be no difficulty in devising them; and many of them will naturally flow out of our previous regulations.

427c

What, then, he said, is still remaining to us of the work of legislation?

Nothing to us, I replied; but to Apollo, the God of Delphi, there remains the ordering of the greatest and noblest and chiefest things of all.

Which are they? he said.

427d

The institution of temples and sacrifices, and the entire service of gods, demigods, and heroes; also the ordering of the

repositories of the dead, and the rites which have to be observed by him who would propitiate the inhabitants of the world below. These are matters of which we are ignorant ourselves, and as founders of a city we should be unwise in trusting them to any interpreter but our ancestral deity. He is the god who sits in the center, on the navel of the earth, and he is the interpreter of religion to all mankind.

427e

You are right, and we will do as you propose.

428a

But where, amid all this, is justice? son of Ariston, tell me where. Now that our city has been made habitable, light a candle and search, and get your brother and Polemarchus and the rest of our friends to help, and let us see where in it we can discover justice and where injustice, and in what they differ from one another, and which of them the man who would be happy should have for his portion, whether seen or unseen by gods and men.

Socrates - Glaucon Nonsense, said Glaucon: did you not promise to search yourself, saying that for you not to help justice in her need would be an impiety?

I do not deny that I said so, and as you remind me, I will be as good as my word; but you must join.

We will, he replied.

Well, then, I hope to make the discovery in this way: I mean to begin with the assumption that our State, if rightly ordered, is perfect.

428b

That is most certain.

And being perfect, is therefore wise and valiant and temperate and just.

That is likewise clear.

And whichever of these qualities we find in the State, the one which is not found will be the residue?

Very good.

If there were four things, and we were searching for one of them, wherever it might be, the one sought for might be known to us from the first, and there would be no further trouble; or we might know the other three first, and then the fourth would clearly be the one left.

Very true, he said.

428c

And is not a similar method to be pursued about the virtues, which are also four in number?

Clearly.

First among the virtues found in the State, wisdom comes into view, and in this I detect a certain peculiarity.

What is that?

The State which we have been describing is said to be wise as being good in counsel?

Very true.

428d

And good counsel is clearly a kind of knowledge, for not by ignorance, but by knowledge, do men counsel well?

Clearly.

And the kinds of knowledge in a State are many and diverse?

Of course.

There is the knowledge of the carpenter; but is that the sort of knowledge which gives a city the title of wise and good in

counsel?

Certainly not; that would only give a city the reputation of skill in carpentering.

Then a city is not to be called wise because possessing a knowledge which counsels for the best about wooden implements?

Certainly not.

Nor by reason of a knowledge which advises about brazen pots, I said, nor as possessing any other similar knowledge?

Not by reason of any of them, he said.

428e

Nor yet by reason of a knowledge which cultivates the earth; that would give the city the name of agricultural?

Yes.

Well, I said, and is there any knowledge in our recently founded State among any of the citizens which advises, not about any particular thing in the State, but about the whole, and considers how a State can best deal with itself and with other States?

There certainly is.

And what is knowledge, and among whom is it found? I asked.

It is the knowledge of the guardians, he replied, and found among those whom we were just now describing as perfect guardians.

And what is the name which the city derives from the possession of this sort of knowledge?

429a

The name of good in counsel and truly wise.

And will there be in our city more of these true guardians or more smiths?

The smiths, he replied, will be far more numerous.

Will not the guardians be the smallest of all the classes who receive a name from the profession of some kind of knowledge?

Much the smallest.

And so by reason of the smallest part or class, and of the knowledge which resides in this presiding and ruling part of itself, the whole State, being thus constituted according to nature, will be wise; and this, which has the only knowledge worthy to be called wisdom, has been ordained by nature to be of all classes the least.

Most true.

429b

Thus, then, I said, the nature and place in the State of one of the four virtues has somehow or other been discovered.

And, in my humble opinion, very satisfactorily discovered, he replied.

Again, I said, there is no difficulty in seeing the nature of courage; and in what part that quality resides which gives the name of courageous to the State.

How do you mean?

429c

Why, I said, every one who calls any State courageous or cowardly, will be thinking of the part which fights and goes out to war on the State's behalf.

No one, he replied, would ever think of any other.

Certainly not.

The rest of the citizens may be courageous or may be cowardly but their courage or cowardice will not, as I conceive, have the effect of making the city either the one or the other.

429d

The city will be courageous in virtue of a portion of herself which preserves under all circumstances that opinion about the nature of things to be feared and not to be feared in which our legislator educated them; and this is what you term courage.

I should like to hear what you are saying once more, for I do not think that I perfectly understand you.

I mean that courage is a kind of salvation.

429e

Salvation of what?

Of the opinion respecting things to be feared, what they are and of what nature, which the law implants through education; and I mean by the words ‘under all circumstances’ to intimate that in pleasure or in pain, or under the influence of desire or fear, a man preserves, and does not lose this opinion. Shall I give you an illustration?

430a

If you please.

You know, I said, that dyers, when they want to dye wool for making the true sea-purple, begin by selecting their white colour first; this they prepare and dress with much care and pains, in order that the white ground may take the purple hue in full perfection. The dyeing then proceeds; and whatever is dyed in this manner becomes a fast colour, and no washing either with lyes or without them can take away the bloom. But, when the ground has not been duly prepared, you will have noticed how poor is the look either of purple or of any other colour.

430b

Yes, he said; I know that they have a washed-out and ridiculous appearance.

Then now, I said, you will understand what our object was in selecting our soldiers, and educating them in music and

gymnastic; we were contriving influences which would prepare them to take the dye of the laws in perfection, and the colour of their opinion about dangers and of every other opinion was to be indelibly fixed by their nurture and training, not to be washed away by such potent lyes as pleasure — mightier agent far in washing the soul than any soda or lye; or by sorrow, fear, and desire, the mightiest of all other solvents. And this sort of universal saving power of true opinion in conformity with law about real and false dangers I call and maintain to be courage, unless you disagree.

430d

But I agree, he replied; for I suppose that you mean to exclude mere uninstructed courage, such as that of a wild beast or of a slave — this, in your opinion, is not the courage which the law ordains, and ought to have another name.

Most certainly.

Then I may infer courage to be such as you describe?

Why, yes, said I, you may, and if you add the words ‘of a citizen,’ you will not be far wrong; — hereafter, if you like, we will carry the examination further, but at present we are we seeking not for courage but justice; and for the purpose of our enquiry we have said enough.

430e

You are right, he replied.

Two virtues remain to be discovered in the State—first temperance, and then justice which is the end of our search.

Very true.

Now, can we find justice without troubling ourselves about temperance?

I do not know how that can be accomplished, he said, nor do I desire that justice should be brought to light and temperance

lost sight of; and therefore I wish that you would do me the favour of considering temperance first.

431a

Certainly, I replied, I should not be justified in refusing your request.

Then consider, he said.

431b

Yes, I replied; I will; and as far as I can at present see, the virtue of temperance has more of the nature of harmony and symphony than the preceding.

How so? he asked.

Temperance, I replied, is the ordering or controlling of certain pleasures and desires; this is curiously enough implied in the saying of ‘a man being his own master’ and other traces of the same notion may be found in language.

No doubt, he said.

There is something ridiculous in the expression ‘master of himself’; for the master is also the servant and the servant the master; and in all these modes of speaking the same person is denoted.

Certainly.

431c

The meaning is, I believe, that in the human soul there is a better and also a worse principle; and when the better has the worse under control, then a man is said to be master of himself; and this is a term of praise; but when, owing to evil education or association, the better principle, which is also the smaller, is overwhelmed by the greater mass of the worse — in this case he is blamed and is called the slave of self and unprincipled.

Yes, there is reason in that.

431d

And now, I said, look at our newly created State, and there you will find one of these two conditions realised; for the State, as you will acknowledge, may be justly called master of itself, if the words 'temperance' and 'self-mastery' truly express the rule of the better part over the worse.

Yes, he said, I see that what you say is true.

Let me further note that the manifold and complex pleasures and desires and pains are generally found in children and women and servants, and in the freemen so called who are of the lowest and more numerous class.

Certainly, he said.

Whereas the simple and moderate desires which follow reason, and are under the guidance of mind and true opinion, are to be found only in a few, and those the best born and best educated.

431e

Very true. These two, as you may perceive, have a place in our State; and the meaner desires of the are held down by the virtuous desires and wisdom of the few.

That I perceive, he said.

Then if there be any city which may be described as master of its own pleasures and desires, and master of itself, ours may claim such a designation?

Certainly, he replied.

It may also be called temperate, and for the same reasons?

Yes.

432a

And if there be any State in which rulers and subjects will be agreed as to the question who are to rule, that again will be our State?

Undoubtedly.

And the citizens being thus agreed among themselves, in which class will temperance be found — in the rulers or in the subjects?

In both, as I should imagine, he replied.

Do you observe that we were not far wrong in our guess that temperance was a sort of harmony?

Why so?

432b

Why, because temperance is unlike courage and wisdom, each of which resides in a part only, the one making the State wise and the other valiant; not so temperance, which extends to the whole, and runs through all the notes of the scale, and produces a harmony of the weaker and the stronger and the middle class, whether you suppose them to be stronger or weaker in wisdom or power or numbers or wealth, or anything else. Most truly then may we deem temperance to be the agreement of the naturally superior and inferior, as to the right to rule of either, both in states and individuals.

432c

I entirely agree with you.

And so, I said, we may consider three out of the four virtues to have been discovered in our State. The last of those qualities which make a state virtuous must be justice, if we only knew what that was.

The inference is obvious.

432d

The time then has arrived, Glaucon, when, like huntsmen, we should surround the cover, and look sharp that justice does not steal away, and pass out of sight and escape us; for beyond a doubt she is somewhere in this country: watch therefore and strive to catch a sight of her, and if you see her first, let me know.

Would that I could! but you should regard me rather as a follower who has just eyes enough to, see what you show him — that is about as much as I am good for.

432e

Offer up a prayer with me and follow.

I will, but you must show me the way.

Here is no path, I said, and the wood is dark and perplexing; still we must push on.

Let us push on.

Here I saw something; Halloo! I said, I begin to perceive a track, and I believe that the quarry will not escape.

Good news, he said.

Truly, I said, we are stupid fellows.

Why so?

Why, my good sir, at the beginning of our enquiry, ages ago, there was justice tumbling out at our feet, and we never saw her; nothing could be more ridiculous. Like people who go about looking for what they have in their hands — that was the way with us — we looked not at what we were seeking, but at what was far off in the distance; and therefore, I suppose, we missed her.

433a

What do you mean?

I mean to say that in reality for a long time past we have been talking of justice, and have failed to recognise her.

I grow impatient at the length of your exordium.

433b

Well then, tell me, I said, whether I am right or not: You remember the original principle which we were always laying

down at the foundation of the State, that one man should practise one thing only, the thing to which his nature was best adapted; — now justice is this principle or a part of it.

Yes, we often said that one man should do one thing only.

433c

Further, we affirmed that justice was doing one's own business, and not being a busybody; we said so again and again, and many others have said the same to us.

Yes, we said so.

Then to do one's own business in a certain way may be assumed to be justice. Can you tell me whence I derive this inference?

I cannot, but I should like to be told.

433d

Because I think that this is the only virtue which remains in the State when the other virtues of temperance and courage and wisdom are abstracted; and, that this is the ultimate cause and condition of the existence of all of them, and while remaining in them is also their preservative; and we were saying that if the three were discovered by us, justice would be the fourth or remaining one.

That follows of necessity.

433e

If we are asked to determine which of these four qualities by its presence contributes most to the excellence of the State, whether the agreement of rulers and subjects, or the preservation in the soldiers of the opinion which the law ordains about the true nature of dangers, or wisdom and watchfulness in the rulers, or whether this other which I am mentioning, and which is found in children and women, slave and freeman, artisan, ruler, subject, — the quality, I mean, of every one doing his own work, and not being a busybody, would claim the palm — the question is not so easily answered.

434a

Certainly, he replied, there would be a difficulty in saying which.

Then the power of each individual in the State to do his own work appears to compete with the other political virtues, wisdom, temperance, courage.

Yes, he said.

And the virtue which enters into this competition is justice?

Exactly.

Let us look at the question from another point of view: Are not the rulers in a State those to whom you would entrust the office of determining suits at law?

434b

Certainly.

And are suits decided on any other ground but that a man may neither take what is another's, nor be deprived of what is his own?

Yes; that is their principle.

Which is a just principle?

Yes.

Then on this view also justice will be admitted to be the having and doing what is a man's own, and belongs to him?

434c

Very true.

Think, now, and say whether you agree with me or not. Suppose a carpenter to be doing the business of a cobbler, or a cobbler of a carpenter; and suppose them to exchange their implements or their duties, or the same person to be doing the work of both, or whatever be the change; do you think that any great harm

would result to the State?

Not much.

434d

But when the cobbler or any other man whom nature designed to be a trader, having his heart lifted up by wealth or strength or the number of his followers, or any like advantage, attempts to force his way into the class of warriors, or a warrior into that of legislators and guardians, for which he is unfitted, and either to take the implements or the duties of the other; or when one man is trader, legislator, and warrior all in one, then I think you will agree with me in saying that this interchange and this meddling of one with another is the ruin of the State.

Most true.

434e

Seeing then, I said, that there are three distinct classes, any meddling of one with another, or the change of one into another, is the greatest harm to the State, and may be most justly termed evil-doing?

Precisely.

And the greatest degree of evil-doing to one's own city would be termed by you injustice?

Certainly.

This then is injustice; and on the other hand when the trader, the auxiliary, and the guardian each do their own business, that is justice, and will make the city just.

I agree with you.

435a

We will not, I said, be over-positive as yet; but if, on trial, this conception of justice be verified in the individual as well as in the State, there will be no longer any room for doubt; if it be not verified, we must have a fresh enquiry. First let us complete the

old investigation, which we began, as you remember, under the impression that, if we could previously examine justice on the larger scale, there would be less difficulty in discerning her in the individual. That larger example appeared to be the State, and accordingly we constructed as good a one as we could, knowing well that in the good State justice would be found. Let the discovery which we made be now applied to the individual — if they agree, we shall be satisfied; or, if there be a difference in the individual, we will come back to the State and have another trial of the theory. The friction of the two when rubbed together may possibly strike a light in which justice will shine forth, and the vision which is then revealed we will fix in our souls.

435b

That will be in regular course; let us do as you say.

I proceeded to ask: When two things, a greater and less, are called by the same name, are they like or unlike in so far as they are called the same?

435c

Like, he replied.

The just man then, if we regard the idea of justice only, will be like the just State?

He will.

And a State was thought by us to be just when the three classes in the State severally did their own business; and also thought to be temperate and valiant and wise by reason of certain other affections and qualities of these same classes?

True, he said.

435d

And so of the individual; we may assume that he has the same three principles in his own soul which are found in the State; and he may be rightly described in the same terms, because he

is affected in the same manner?

Certainly, he said.

Once more then, O my friend, we have alighted upon an easy question — whether the soul has these three principles or not?

An easy question! Nay, rather, Socrates, the proverb holds that hard is the good.

435e

Very true, I said; and I do not think that the method which we are employing is at all adequate to the accurate solution of this question; the true method is another and a longer one. Still we may arrive at a solution not below the level of the previous enquiry.

May we not be satisfied with that? he said; — under the circumstances, I am quite content.

I too, I replied, shall be extremely well satisfied.

Then faint not in pursuing the speculation, he said.

436b

Must we not acknowledge, I said, that in each of us there are the same principles and habits which there are in the State; and that from the individual they pass into the State? — how else can they come there? Take the quality of passion or spirit; — it would be ridiculous to imagine that this quality, when found in States, is not derived from the individuals who are supposed to possess it, e.g. the Thracians, Scythians, and in general the northern nations; and the same may be said of the love of knowledge, which is the special characteristic of our part of the world, or of the love of money, which may, with equal truth, be attributed to the Phoenicians and Egyptians.

Exactly so, he said.

There is no difficulty in understanding this.

436c

None whatever.

But the question is not quite so easy when we proceed to ask whether these principles are three or one; whether, that is to say, we learn with one part of our nature, are angry with another, and with a third part desire the satisfaction of our natural appetites; or whether the whole soul comes into play in each sort of action — to determine that is the difficulty.

Yes, he said; there lies the difficulty.

Then let us now try and determine whether they are the same or different.

How can we? he asked.

436d

I replied as follows: The same thing clearly cannot act or be acted upon in the same part or in relation to the same thing at the same time, in contrary ways; and therefore whenever this contradiction occurs in things apparently the same, we know that they are really not the same, but different.

Good.

For example, I said, can the same thing be at rest and in motion at the same time in the same part?

Impossible.

436e

Still, I said, let us have a more precise statement of terms, lest we should hereafter fall out by the way. Imagine the case of a man who is standing and also moving his hands and his head, and suppose a person to say that one and the same person is in motion and at rest at the same moment — to such a mode of speech we should object, and should rather say that one part of him is in motion while another is at rest.

Very true.

437a

And suppose the objector to refine still further, and to draw the nice distinction that not only parts of tops, but whole tops, when they spin round with their pegs fixed on the spot, are at rest and in motion at the same time (and he may say the same of anything which revolves in the same spot), his objection would not be admitted by us, because in such cases things are not at rest and in motion in the same parts of themselves; we should rather say that they have both an axis and a circumference, and that the axis stands still, for there is no deviation from the perpendicular; and that the circumference goes round. But if, while revolving, the axis inclines either to the right or left, forwards or backwards, then in no point of view can they be at rest.

That is the correct mode of describing them, he replied.

437b

Then none of these objections will confuse us, or incline us to believe that the same thing at the same time, in the same part or in relation to the same thing, can act or be acted upon in contrary ways.

Certainly not, according to my way of thinking.

437c

Yet, I said, that we may not be compelled to examine all such objections, and prove at length that they are untrue, let us assume their absurdity, and go forward on the understanding that hereafter, if this assumption turn out to be untrue, all the consequences which follow shall be withdrawn.

Yes, he said, that will be the best way.

Well, I said, would you not allow that assent and dissent, desire and aversion, attraction and repulsion, are all of them opposites, whether they are regarded as active or passive (for that makes no difference in the fact of their opposition)?

437d

Yes, he said, they are opposites.

Well, I said, and hunger and thirst, and the desires in general, and again willing and wishing, — all these you would refer to the classes already mentioned. You would say — would you not? — that the soul of him who desires is seeking after the object of his desires; or that he is drawing to himself the thing which he wishes to possess: or again, when a person wants anything to be given him, his mind, longing for the realisation of his desires, intimates his wish to have it by a nod of assent, as if he had been asked a question?

Very true.

437e

And what would you say of unwillingness and dislike and the absence of desire; should not these be referred to the opposite class of repulsion and rejection?

Certainly.

Admitting this to be true of desire generally, let us suppose a particular class of desires, and out of these we will select hunger and thirst, as they are termed, which are the most obvious of them?

Let us take that class, he said.

The object of one is food, and of the other drink?

Yes.

438a

And here comes the point: is not thirst the desire which the soul has of drink, and of drink only; not of drink qualified by anything else; for example, warm or cold, or much or little, or, in a word, drink of any particular sort: but if the thirst be accompanied by heat, then the desire is of cold drink; or, if accompanied by cold, then of warm drink; or, if the thirst be

excessive, then the drink which is desired will be excessive; or, if not great, the quantity of drink will also be small: but thirst pure and simple will desire drink pure and simple, which is the natural satisfaction of thirst, as food is of hunger?

438b

Yes, he said; the simple desire is, as you say, in every case of the simple object, and the qualified desire of the qualified object.

But here a confusion may arise; and I should wish to guard against an opponent starting up and saying that no man desires drink only, but good drink, or food only, but good food; for good is the universal object of desire, and thirst being a desire, will necessarily be thirst after good drink; and the same is true of every other desire.

438c

Yes, he replied, the opponent might have something to say.

Nevertheless I should still maintain, that of relatives some have a quality attached to either term of the relation; others are simple and have their correlatives simple.

I do not know what you mean.

Well, you know of course that the greater is relative to the less?

Certainly.

And the much greater to the much less?

Yes.

And the sometime greater to the sometime less, and the greater that is to be to the less that is to be?

Certainly, he said.

438d

And so of more and less, and of other correlative terms, such as the double and the half, or again, the heavier and the lighter, the swifter and the slower; and of hot and cold, and of any other

relatives; — is not this true of all of them?

Yes.

438e

And does not the same principle hold in the sciences? The object of science is knowledge (assuming that to be the true definition), but the object of a particular science is a particular kind of knowledge; I mean, for example, that the science of house-building is a kind of knowledge which is defined and distinguished from other kinds and is therefore termed architecture.

Certainly.

Because it has a particular quality which no other has?

Yes.

And it has this particular quality because it has an object of a particular kind; and this is true of the other arts and sciences?

Yes.

Now, then, if I have made myself clear, you will understand my original meaning in what I said about relatives. My meaning was, that if one term of a relation is taken alone, the other is taken alone; if one term is qualified, the other is also qualified. I do not mean to say that relatives may not be disparate, or that the science of health is healthy, or of disease necessarily diseased, or that the sciences of good and evil are therefore good and evil; but only that, when the term science is no longer used absolutely, but has a qualified object which in this case is the nature of health and disease, it becomes defined, and is hence called not merely science, but the science of medicine.

439a

I quite understand, and I think as you do.

Would you not say that thirst is one of these essentially relative terms, having clearly a relation — Yes, thirst is relative to drink.

And a certain kind of thirst is relative to a certain kind of drink; but thirst taken alone is neither of much nor little, nor of good nor bad, nor of any particular kind of drink, but of drink only?

439b

Certainly.

Then the soul of the thirsty one, in so far as he is thirsty, desires only drink; for this he yearns and tries to obtain it?

That is plain.

And if you suppose something which pulls a thirsty soul away from drink, that must be different from the thirsty principle which draws him like a beast to drink; for, as we were saying, the same thing cannot at the same time with the same part of itself act in contrary ways about the same.

439c

Impossible.

No more than you can say that the hands of the archer push and pull the bow at the same time, but what you say is that one hand pushes and the other pulls.

Exactly so, he replied.

And might a man be thirsty, and yet unwilling to drink?

Yes, he said, it constantly happens.

And in such a case what is one to say? Would you not say that there was something in the soul bidding a man to drink, and something else forbidding him, which is other and stronger than the principle which bids him?

I should say so.

439d

And the forbidding principle is derived from reason, and that which bids and attracts proceeds from passion and disease?

Clearly.

439e

Then we may fairly assume that they are two, and that they differ from one another; the one with which man reasons, we may call the rational principle of the soul, the other, with which he loves and hungers and thirsts and feels the flutterings of any other desire, may be termed the irrational or appetitive, the ally of sundry pleasures and satisfactions?

Yes, he said, we may fairly assume them to be different.

Then let us finally determine that there are two principles existing in the soul. And what of passion, or spirit? Is it a third, or akin to one of the preceding?

440a

I should be inclined to say — akin to desire.

Well, I said, there is a story which I remember to have heard, and in which I put faith. The story is, that Leontius, the son of Aglaion, coming up one day from the Piraeus, under the north wall on the outside, observed some dead bodies lying on the ground at the place of execution. He felt a desire to see them, and also a dread and abhorrence of them; for a time he struggled and covered his eyes, but at length the desire got the better of him; and forcing them open, he ran up to the dead bodies, saying, Look, ye wretches, take your fill of the fair sight.

440b

I have heard the story myself, he said.

The moral of the tale is, that anger at times goes to war with desire, as though they were two distinct things.

Yes; that is the meaning, he said.

440c

And are there not many other cases in which we observe that when a man's desires violently prevail over his reason, he reviles himself, and is angry at the violence within him, and that in this struggle, which is like the struggle of factions in a State, his spirit is on the side of his reason; — but for the passionate or spirited element to take part with the desires when reason that she should not be opposed, is a sort of thing which thing which I believe that you never observed occurring in yourself, nor, as I should imagine, in any one else?

Certainly not.

440d

Suppose that a man thinks he has done a wrong to another, the nobler he is the less able is he to feel indignant at any suffering, such as hunger, or cold, or any other pain which the injured person may inflict upon him — these he deems to be just, and, as I say, his anger refuses to be excited by them.

True, he said.

But when he thinks that he is the sufferer of the wrong, then he boils and chafes, and is on the side of what he believes to be justice; and because he suffers hunger or cold or other pain he is only the more determined to persevere and conquer. His noble spirit will not be quelled until he either slays or is slain; or until he hears the voice of the shepherd, that is, reason, bidding his dog bark no more.

440e

The illustration is perfect, he replied; and in our State, as we were saying, the auxiliaries were to be dogs, and to hear the voice of the rulers, who are their shepherds.

441a

I perceive, I said, that you quite understand me; there is, however, a further point which I wish you to consider.

What point?

You remember that passion or spirit appeared at first sight to be a kind of desire, but now we should say quite the contrary; for in the conflict of the soul spirit is arrayed on the side of the rational principle.

Most assuredly.

441b

But a further question arises: Is passion different from reason also, or only a kind of reason; in which latter case, instead of three principles in the soul, there will only be two, the rational and the concupiscent; or rather, as the State was composed of three classes, traders, auxiliaries, counsellors, so may there not be in the individual soul a third element which is passion or spirit, and when not corrupted by bad education is the natural auxiliary of reason Yes, he said, there must be a third.

Yes, I replied, if passion, which has already been shown to be different from desire, turn out also to be different from reason.

But that is easily proved: — We may observe even in young children that they are full of spirit almost as soon as they are born, whereas some of them never seem to attain to the use of reason, and most of them late enough.

441c

Excellent, I said, and you may see passion equally in brute animals, which is a further proof of the truth of what you are saying. And we may once more appeal to the words of Homer, which have been already quoted by us, He smote his breast, and thus rebuked his soul, for in this verse Homer has clearly supposed the power which reasons about the better and worse to be different from the unreasoning anger which is rebuked by it.

Very true, he said.

441d

And so, after much tossing, we have reached land, and are fairly agreed that the same principles which exist in the State exist also in the individual, and that they are three in number.

Exactly.

Must we not then infer that the individual is wise in the same way, and in virtue of the same quality which makes the State wise?

Certainly.

Also that the same quality which constitutes courage in the State constitutes courage in the individual, and that both the State and the individual bear the same relation to all the other virtues?

441e

Assuredly.

And the individual will be acknowledged by us to be just in the same way in which the State is just?

That follows, of course.

We cannot but remember that the justice of the State consisted in each of the three classes doing the work of its own class?

We are not very likely to have forgotten, he said.

We must recollect that the individual in whom the several qualities of his nature do their own work will be just, and will do his own work?

Yes, he said, we must remember that too.

And ought not the rational principle, which is wise, and has the care of the whole soul, to rule, and the passionate or spirited principle to be the subject and ally?

442a

Certainly.

And, as we were saying, the united influence of music and gymnastic will bring them into accord, nerving and sustaining the reason with noble words and lessons, and moderating and soothing and civilizing the wildness of passion by harmony and rhythm?

Quite true, he said.

442b

And these two, thus nurtured and educated, and having learned truly to know their own functions, will rule over the concupiscent, which in each of us is the largest part of the soul and by nature most insatiable of gain; over this they will keep guard, lest, waxing great and strong with the fulness of bodily pleasures, as they are termed, the concupiscent soul, no longer confined to her own sphere, should attempt to enslave and rule those who are not her natural-born subjects, and overturn the whole life of man?

442c

Very true, he said.

Both together will they not be the best defenders of the whole soul and the whole body against attacks from without; the one counselling, and the other fighting under his leader, and courageously executing his commands and counsels?

True.

And he is to be deemed courageous whose spirit retains in pleasure and in pain the commands of reason about what he ought or ought not to fear?

442d

Right, he replied.

And him we call wise who has in him that little part which rules, and which proclaims these commands; that part too being supposed to have a knowledge of what is for the interest of each of the three parts and of the whole?

Assuredly.

And would you not say that he is temperate who has these same elements in friendly harmony, in whom the one ruling principle of reason, and the two subject ones of spirit and desire are equally agreed that reason ought to rule, and do not rebel?

442e

Certainly, he said, that is the true account of temperance whether in the State or individual.

And surely, I said, we have explained again and again how and by virtue of what quality a man will be just.

That is very certain.

443a

And is justice dimmer in the individual, and is her form different, or is she the same which we found her to be in the State?

There is no difference in my opinion, he said.

Because, if any doubt is still lingering in our minds, a few commonplace instances will satisfy us of the truth of what I am saying.

What sort of instances do you mean?

If the case is put to us, must we not admit that the just State, or the man who is trained in the principles of such a State, will be less likely than the unjust to make away with a deposit of gold or silver? Would any one deny this?

No one, he replied.

Will the just man or citizen ever be guilty of sacrilege or theft, or treachery either to his friends or to his country?

443b

Never.

Neither will he ever break faith where there have been oaths or agreements?

Impossible.

No one will be less likely to commit adultery, or to dishonour his father and mother, or to fall in his religious duties?

No one.

And the reason is that each part of him is doing its own business, whether in ruling or being ruled?

443c

Exactly so.

Are you satisfied then that the quality which makes such men and such states is justice, or do you hope to discover some other?

Not I, indeed.

443d

Then our dream has been realised; and the suspicion which we entertained at the beginning of our work of construction, that some divine power must have conducted us to a primary form of justice, has now been verified?

Yes, certainly.

443e

And the division of labour which required the carpenter and the shoemaker and the rest of the citizens to be doing each his own business, and not another's, was a shadow of justice, and for that reason it was of use?

Clearly.

But in reality justice was such as we were describing, being concerned however, not with the outward man, but with the inward, which is the true self and concernment of man: for the just man does not permit the several elements within him to

interfere with one another, or any of them to do the work of others, — he sets in order his own inner life, and is his own master and his own law, and at peace with himself; and when he has bound together the three principles within him, which may be compared to the higher, lower, and middle notes of the scale, and the intermediate intervals — when he has bound all these together, and is no longer many, but has become one entirely temperate and perfectly adjusted nature, then he proceeds to act, if he has to act, whether in a matter of property, or in the treatment of the body, or in some affair of politics or private business; always thinking and calling that which preserves and co-operates with this harmonious condition, just and good action, and the knowledge which presides over it, wisdom, and that which at any time impairs this condition, he will call unjust action, and the opinion which presides over it ignorance.

444a

You have said the exact truth, Socrates.

Very good; and if we were to affirm that we had discovered the just man and the just State, and the nature of justice in each of them, we should not be telling a falsehood?

444b

Most certainly not.

May we say so, then?

Let us say so.

And now, I said, injustice has to be considered.

Clearly.

Must not injustice be a strife which arises among the three principles — a meddlesomeness, and interference, and rising up of a part of the soul against the whole, an assertion of unlawful authority, which is made by a rebellious subject against a true prince, of whom he is the natural vassal, — what is all this

confusion and delusion but injustice, and intemperance and cowardice and ignorance, and every form of vice?

444c

Exactly so.

And if the nature of justice and injustice be known, then the meaning of acting unjustly and being unjust, or, again, of acting justly, will also be perfectly clear?

What do you mean? he said.

Why, I said, they are like disease and health; being in the soul just what disease and health are in the body.

How so? he said.

Why, I said, that which is healthy causes health, and that which is unhealthy causes disease.

Yes.

And just actions cause justice, and unjust actions cause injustice?

444d

That is certain.

And the creation of health is the institution of a natural order and government of one by another in the parts of the body; and the creation of disease is the production of a state of things at variance with this natural order?

True.

444e

And is not the creation of justice the institution of a natural order and government of one by another in the parts of the soul, and the creation of injustice the production of a state of things at variance with the natural order?

Exactly so, he said.

Then virtue is the health and beauty and well-being of the soul, and vice the disease and weakness and deformity of the same?

True.

And do not good practices lead to virtue, and evil practices to vice?

Assuredly.

445a

Still our old question of the comparative advantage of justice and injustice has not been answered: Which is the more profitable, to be just and act justly and practise virtue, whether seen or unseen of gods and men, or to be unjust and act unjustly, if only unpunished and unreformed?

In my judgment, Socrates, the question has now become ridiculous. We know that, when the bodily constitution is gone, life is no longer endurable, though pampered with all kinds of meats and drinks, and having all wealth and all power; and shall we be told that when the very essence of the vital principle is undermined and corrupted, life is still worth having to a man, if only he be allowed to do whatever he likes with the single exception that he is not to acquire justice and virtue, or to escape from injustice and vice; assuming them both to be such as we have described?

445b

Yes, I said, the question is, as you say, ridiculous. Still, as we are near the spot at which we may see the truth in the clearest manner with our own eyes, let us not faint by the way.

Certainly not, he replied.

445c

Come up hither, I said, and behold the various forms of vice, those of them, I mean, which are worth looking at.

I am following you, he replied: proceed.

I said, The argument seems to have reached a height from which, as from some tower of speculation, a man may look down and see that virtue is one, but that the forms of vice are innumerable; there being four special ones which are deserving of note.

What do you mean? he said.

I mean, I replied, that there appear to be as many forms of the soul as there are distinct forms of the State.

How many?

445d

There are five of the State, and five of the soul, I said.

What are they?

The first, I said, is that which we have been describing, and which may be said to have two names, monarchy and aristocracy, accordingly as rule is exercised by one distinguished man or by many.

True, he replied.

445e

But I regard the two names as describing one form only; for whether the government is in the hands of one or many, if the governors have been trained in the manner which we have supposed, the fundamental laws of the State will be maintained.

That is true, he replied.

BOOK V

449a

Socrates - Glaucon - Adeimantus Such is the good and true City or State, and the good and man is of the same pattern; and if this is right every other is wrong; and the evil is one which affects not only the ordering of the State, but also the

regulation of the individual soul, and is exhibited in four forms.

What are they? he said.

449b

I was proceeding to tell the order in which the four evil forms appeared to me to succeed one another, when Pole marchus, who was sitting a little way off, just beyond Adeimantus, began to whisper to him: stretching forth his hand, he took hold of the upper part of his coat by the shoulder, and drew him towards him, leaning forward himself so as to be quite close and saying something in his ear, of which I only caught the words, ‘Shall we let him off, or what shall we do?’

449c

Certainly not, said Adeimantus, raising his voice.

Who is it, I said, whom you are refusing to let off?

You, he said.

I repeated, Why am I especially not to be let off?

Why, he said, we think that you are lazy, and mean to cheat us out of a whole chapter which is a very important part of the story; and you fancy that we shall not notice your airy way of proceeding; as if it were self-evident to everybody, that in the matter of women and children ‘friends have all things in common.’

449d

And was I not right, Adeimantus?

Yes, he said; but what is right in this particular case, like everything else, requires to be explained; for community may be of many kinds. Please, therefore, to say what sort of community you mean. We have been long expecting that you would tell us something about the family life of your citizens — how they will bring children into the world, and rear them when they have arrived, and, in general, what is the nature of

this community of women and children—for we are of opinion that the right or wrong management of such matters will have a great and paramount influence on the State for good or for evil. And now, since the question is still undetermined, and you are taking in hand another State, we have resolved, as you heard, not to let you go until you give an account of all this.

450a

To that resolution, said Glaucon, you may regard me as saying Agreed.

Socrates - Adeimantus - Glaucon - Thrasymachus And without more ado, said Thrasymachus, you may consider us all to be equally agreed.

450b

I said, You know not what you are doing in thus assailing me: What an argument are you raising about the State! Just as I thought that I had finished, and was only too glad that I had laid this question to sleep, and was reflecting how fortunate I was in your acceptance of what I then said, you ask me to begin again at the very foundation, ignorant of what a hornet's nest of words you are stirring. Now I foresaw this gathering trouble, and avoided it.

450c

For what purpose do you conceive that we have come here,
said

Thrasymachus, — to look for gold, or to hear discourse?

Yes, but discourse should have a limit.

Yes, Socrates, said Glaucon, and the whole of life is the only limit which wise men assign to the hearing of such discourses. But never mind about us; take heart yourself and answer the question in your own way: What sort of community of women and children is this which is to prevail among our guardians? and how shall we manage the period between birth and

education, which seems to require the greatest care? Tell us how these things will be.

450d

Yes, my simple friend, but the answer is the reverse of easy; many more doubts arise about this than about our previous conclusions. For the practicability of what is said may be doubted; and looked at in another point of view, whether the scheme, if ever so practicable, would be for the best, is also doubtful. Hence I feel a reluctance to approach the subject, lest our aspiration, my dear friend, should turn out to be a dream only.

450e

Fear not, he replied, for your audience will not be hard upon you; they are not sceptical or hostile.

I said: My good friend, I suppose that you mean to encourage me by these words.

Yes, he said.

Then let me tell you that you are doing just the reverse; the encouragement which you offer would have been all very well had I myself believed that I knew what I was talking about: to declare the truth about matters of high interest which a man honours and loves among wise men who love him need occasion no fear or faltering in his mind; but to carry on an argument when you are yourself only a hesitating enquirer, which is my condition, is a dangerous and slippery thing; and the danger is not that I shall be laughed at (of which the fear would be childish), but that I shall miss the truth where I have most need to be sure of my footing, and drag my friends after me in my fall. And I pray Nemesis not to visit upon me the words which I am going to utter. For I do indeed believe that to be an involuntary homicide is a less crime than to be a deceiver about beauty or goodness or justice in the matter of laws. And that is a

risk which I would rather run among enemies than among friends, and therefore you do well to encourage me.

451b

Glaucon laughed and said: Well then, Socrates, in case you and your argument do us any serious injury you shall be acquitted beforehand of the and shall not be held to be a deceiver; take courage then and speak.

Well, I said, the law says that when a man is acquitted he is free from guilt, and what holds at law may hold in argument.

Then why should you mind?

Well, I replied, I suppose that I must retrace my steps and say what I perhaps ought to have said before in the proper place. The part of the men has been played out, and now properly enough comes the turn of the women. Of them I will proceed to speak, and the more readily since I am invited by you.

451d

For men born and educated like our citizens, the only way, in my opinion, of arriving at a right conclusion about the possession and use of women and children is to follow the path on which we originally started, when we said that the men were to be the guardians and watchdogs of the herd.

True.

Let us further suppose the birth and education of our women to be subject to similar or nearly similar regulations; then we shall see whether the result accords with our design.

What do you mean?

451e

What I mean may be put into the form of a question, I said: Are dogs divided into hes and shes, or do they both share equally in hunting and in keeping watch and in the other duties of dogs? or do we entrust to the males the entire and exclusive care of

the flocks, while we leave the females at home, under the idea that the bearing and suckling their puppies is labour enough for them?

452a

No, he said, they share alike; the only difference between them is that the males are stronger and the females weaker.

But can you use different animals for the same purpose, unless they are bred and fed in the same way?

You cannot.

Then, if women are to have the same duties as men, they must have the same nurture and education?

Yes.

452b

The education which was assigned to the men was music and gymnastic.

Yes.

Then women must be taught music and gymnastic and also the art of war, which they must practise like the men?

That is the inference, I suppose.

I should rather expect, I said, that several of our proposals, if they are carried out, being unusual, may appear ridiculous.

No doubt of it.

452c

Yes, and the most ridiculous thing of all will be the sight of women naked in the palaestra, exercising with the men, especially when they are no longer young; they certainly will not be a vision of beauty, any more than the enthusiastic old men who in spite of wrinkles and ugliness continue to frequent the gymnasia.

Yes, indeed, he said: according to present notions the proposal would be thought ridiculous.

But then, I said, as we have determined to speak our minds, we must not fear the jests of the wits which will be directed against this sort of innovation; how they will talk of women's attainments both in music and gymnastic, and above all about their wearing armour and riding upon horseback!

452d

Very true, he replied.

Yet having begun we must go forward to the rough places of the law; at the same time begging of these gentlemen for once in their life to be serious. Not long ago, as we shall remind them, the Hellenes were of the opinion, which is still generally received among the barbarians, that the sight of a naked man was ridiculous and improper; and when first the Cretans and then the Lacedaemonians introduced the custom, the wits of that day might equally have ridiculed the innovation.

452e

No doubt.

But when experience showed that to let all things be uncovered was far better than to cover them up, and the ludicrous effect to the outward eye vanished before the better principle which reason asserted, then the man was perceived to be a fool who directs the shafts of his ridicule at any other sight but that of folly and vice, or seriously inclines to weigh the beautiful by any other standard but that of the good.

453a

Very true, he replied.

453b

First, then, whether the question is to be put in jest or in earnest, let us come to an understanding about the nature of woman: Is she capable of sharing either wholly or partially in

the actions of men, or not at all? And is the art of war one of those arts in which she can or can not share? That will be the best way of commencing the enquiry, and will probably lead to the fairest conclusion.

That will be much the best way.

Shall we take the other side first and begin by arguing against ourselves; in this manner the adversary's position will not be undefended.

Why not? he said.

453c

Then let us put a speech into the mouths of our opponents. They will say: 'Socrates and Glaucon, no adversary need convict you, for you yourselves, at the first foundation of the State, admitted the principle that everybody was to do the one work suited to his own nature.' And certainly, if I am not mistaken, such an admission was made by us. 'And do not the natures of men and women differ very much indeed?' And we shall reply: Of course they do. Then we shall be asked, 'Whether the tasks assigned to men and to women should not be different, and such as are agreeable to their different natures?' Certainly they should. 'But if so, have you not fallen into a serious inconsistency in saying that men and women, whose natures are so entirely different, ought to perform the same actions?' — What defence will you make for us, my good Sir, against any one who offers these objections?

453d

That is not an easy question to answer when asked suddenly; and I shall and I do beg of you to draw out the case on our side.

These are the objections, Glaucon, and there are many others of a like kind, which I foresaw long ago; they made me afraid and reluctant to take in hand any law about the possession and nurture of women and children.

By Zeus, he said, the problem to be solved is anything but easy.

453e

Why yes, I said, but the fact is that when a man is out of his depth, whether he has fallen into a little swimming bath or into mid-ocean, he has to swim all the same.

Very true.

And must not we swim and try to reach the shore: we will hope that
Arion's dolphin or some other miraculous help may save us?

I suppose so, he said.

454a

Well then, let us see if any way of escape can be found. We acknowledged — did we not? that different natures ought to have different pursuits, and that men's and women's natures are different. And now what are we saying? — that different natures ought to have the same pursuits, — this is the inconsistency which is charged upon us.

Precisely.

Verily, Glaucon, I said, glorious is the power of the art of contradiction!

Why do you say so?

Because I think that many a man falls into the practice against his will. When he thinks that he is reasoning he is really disputing, just because he cannot define and divide, and so know that of which he is speaking; and he will pursue a merely verbal opposition in the spirit of contention and not of fair discussion.

454b

Yes, he replied, such is very often the case; but what has that to do with us and our argument?

A great deal; for there is certainly a danger of our getting unintentionally into a verbal opposition.

In what way?

454c

Why, we valiantly and pugnaciously insist upon the verbal truth, that different natures ought to have different pursuits, but we never considered at all what was the meaning of sameness or difference of nature, or why we distinguished them when we assigned different pursuits to different natures and the same to the same natures.

454d

Why, no, he said, that was never considered by us.

I said: Suppose that by way of illustration we were to ask the question whether there is not an opposition in nature between bald men and hairy men; and if this is admitted by us, then, if bald men are cobblers, we should forbid the hairy men to be cobblers, and conversely?

That would be a jest, he said.

Yes, I said, a jest; and why? because we never meant when we constructed the State, that the opposition of natures should extend to every difference, but only to those differences which affected the pursuit in which the individual is engaged; we should have argued, for example, that a physician and one who is in mind a physician may be said to have the same nature.

454e

True.

Whereas the physician and the carpenter have different natures?

Certainly.

455a

And if, I said, the male and female sex appear to differ in their fitness for any art or pursuit, we should say that such pursuit or art ought to be assigned to one or the other of them; but if the difference consists only in women bearing and men begetting children, this does not amount to a proof that a woman differs from a man in respect of the sort of education she should receive; and we shall therefore continue to maintain that our guardians and their wives ought to have the same pursuits.

Very true, he said.

Next, we shall ask our opponent how, in reference to any of the pursuits or arts of civic life, the nature of a woman differs from that of a man?

455b

That will be quite fair.

And perhaps he, like yourself, will reply that to give a sufficient answer on the instant is not easy; but after a little reflection there is no difficulty.

Yes, perhaps.

Suppose then that we invite him to accompany us in the argument, and then we may hope to show him that there is nothing peculiar in the constitution of women which would affect them in the administration of the State.

By all means.

455c

Let us say to him: Come now, and we will ask you a question: — when you spoke of a nature gifted or not gifted in any respect, did you mean to say that one man will acquire a thing easily, another with difficulty; a little learning will lead the one to discover a great deal; whereas the other, after much study and application, no sooner learns than he forgets; or again, did you mean, that the one has a body which is a good servant to his

mind, while the body of the other is a hindrance to him?-would not these be the sort of differences which distinguish the man gifted by nature from the one who is ungifted?

455d

No one will deny that.

455e

And can you mention any pursuit of mankind in which the male sex has not all these gifts and qualities in a higher degree than the female? Need I waste time in speaking of the art of weaving, and the management of pancakes and preserves, in which womankind does really appear to be great, and in which for her to be beaten by a man is of all things the most absurd?

You are quite right, he replied, in maintaining the general inferiority of the female sex: although many women are in many things superior to many men, yet on the whole what you say is true.

456a

And if so, my friend, I said, there is no special faculty of administration in a state which a woman has because she is a woman, or which a man has by virtue of his sex, but the gifts of nature are alike diffused in both; all the pursuits of men are the pursuits of women also, but in all of them a woman is inferior to a man.

Very true.

Then are we to impose all our enactments on men and none of them on women?

That will never do.

One woman has a gift of healing, another not; one is a musician, and another has no music in her nature?

Very true.

456b

And one woman has a turn for gymnastic and military exercises, and another is unwarlike and hates gymnastics?

Certainly.

And one woman is a philosopher, and another is an enemy of philosophy; one has spirit, and another is without spirit?

That is also true.

Then one woman will have the temper of a guardian, and another not. Was not the selection of the male guardians determined by differences of this sort?

456c

Yes.

Men and women alike possess the qualities which make a guardian; they differ only in their comparative strength or weakness.

Obviously.

And those women who have such qualities are to be selected as the companions and colleagues of men who have similar qualities and whom they resemble in capacity and in character?

Very true.

456d

And ought not the same natures to have the same pursuits?

They ought.

Then, as we were saying before, there is nothing unnatural in assigning music and gymnastic to the wives of the guardians — to that point we come round again.

Certainly not.

The law which we then enacted was agreeable to nature, and therefore not an impossibility or mere aspiration; and the contrary practice, which prevails at present, is in reality a

violation of nature.

That appears to be true.

We had to consider, first, whether our proposals were possible, and secondly whether they were the most beneficial?

Yes.

And the possibility has been acknowledged?

Yes.

The very great benefit has next to be established?

Quite so.

456e

You will admit that the same education which makes a man a good guardian will make a woman a good guardian; for their original nature is the same?

Yes.

I should like to ask you a question.

What is it?

Would you say that all men are equal in excellence, or is one man better than another?

The latter.

And in the commonwealth which we were founding do you conceive the guardians who have been brought up on our model system to be more perfect men, or the cobblers whose education has been cobbling?

What a ridiculous question!

You have answered me, I replied: Well, and may we not further say that our guardians are the best of our citizens?

By far the best.

457a

And will not their wives be the best women?

Yes, by far the best.

And can there be anything better for the interests of the State than that the men and women of a State should be as good as possible?

There can be nothing better.

And this is what the arts of music and gymnastic, when present in such manner as we have described, will accomplish?

Certainly.

Then we have made an enactment not only possible but in the highest degree beneficial to the State?

True.

457b

Then let the wives of our guardians strip, for their virtue will be their robe, and let them share in the toils of war and the defence of their country; only in the distribution of labours the lighter are to be assigned to the women, who are the weaker natures, but in other respects their duties are to be the same. And as for the man who laughs at naked women exercising their bodies from the best of motives, in his laughter he is plucking
457c A fruit of unripe wisdom, 457c and he himself is ignorant of what he is laughing at, or what he is about; — for that is, and ever will be, the best of sayings, That the useful is the noble and the hurtful is the base.

457c

Very true.

Here, then, is one difficulty in our law about women, which we may say that we have now escaped; the wave has not swallowed us up alive for enacting that the guardians of either sex should have all their pursuits in common; to the utility and also to the

possibility of this arrangement the consistency of the argument with itself bears witness.

457d

Yes, that was a mighty wave which you have escaped.

Yes, I said, but a greater is coming; you will of this when you see the next.

Go on; let me see.

The law, I said, which is the sequel of this and of all that has preceded, is to the following effect,— ‘that the wives of our guardians are to be common, and their children are to be common, and no parent is to know his own child, nor any child his parent.’

Yes, he said, that is a much greater wave than the other; and the possibility as well as the utility of such a law are far more questionable.

457e

I do not think, I said, that there can be any dispute about the very great utility of having wives and children in common; the possibility is quite another matter, and will be very much disputed.

I think that a good many doubts may be raised about both.

458a

You imply that the two questions must be combined, I replied. Now I meant that you should admit the utility; and in this way, as I thought; I should escape from one of them, and then there would remain only the possibility.

But that little attempt is detected, and therefore you will please to give a defence of both.

458b

Well, I said, I submit to my fate. Yet grant me a little favour: let me feast my mind with the dream as day dreamers are in the

habit of feasting themselves when they are walking alone; for before they have discovered any means of effecting their wishes — that is a matter which never troubles them — they would rather not tire themselves by thinking about possibilities; but assuming that what they desire is already granted to them, they proceed with their plan, and delight in detailing what they mean to do when their wish has come true — that is a way which they have of not doing much good to a capacity which was never good for much. Now I myself am beginning to lose heart, and I should like, with your permission, to pass over the question of possibility at present. Assuming therefore the possibility of the proposal, I shall now proceed to enquire how the rulers will carry out these arrangements, and I shall demonstrate that our plan, if executed, will be of the greatest benefit to the State and to the guardians. First of all, then, if you have no objection, I will endeavour with your help to consider the advantages of the measure; and hereafter the question of possibility.

458c

I have no objection; proceed.

458d

First, I think that if our rulers and their auxiliaries are to be worthy of the name which they bear, there must be willingness to obey in the one and the power of command in the other; the guardians must themselves obey the laws, and they must also imitate the spirit of them in any details which are entrusted to their care.

That is right, he said.

You, I said, who are their legislator, having selected the men, will now select the women and give them to them; — they must be as far as possible of like natures with them; and they must live in common houses and meet at common meals, None of them will have anything specially his or her own; they will be

together, and will be brought up together, and will associate at gymnastic exercises. And so they will be drawn by a necessity of their natures to have intercourse with each other — necessity is not too strong a word, I think?

458e

Yes, he said; — necessity, not geometrical, but another sort of necessity which lovers know, and which is far more convincing and constraining to the mass of mankind.

459a

True, I said; and this, Glaucon, like all the rest, must proceed after an orderly fashion; in a city of the blessed, licentiousness is an unholy thing which the rulers will forbid.

Yes, he said, and it ought not to be permitted.

Then clearly the next thing will be to make matrimony sacred in the highest degree, and what is most beneficial will be deemed sacred?

Exactly.

459b

And how can marriages be made most beneficial? — that is a question which I put to you, because I see in your house dogs for hunting, and of the nobler sort of birds not a few. Now, I beseech you, do tell me, have you ever attended to their pairing and breeding?

In what particulars?

Why, in the first place, although they are all of a good sort, are not some better than others?

True.

And do you breed from them all indifferently, or do you take care to breed from the best only?

From the best.

459c

And do you take the oldest or the youngest, or only those of ripe age?

I choose only those of ripe age.

And if care was not taken in the breeding, your dogs and birds would greatly deteriorate?

Certainly.

And the same of horses and animals in general?

Undoubtedly.

Good heavens! my dear friend, I said, what consummate skill will our rulers need if the same principle holds of the human species!

Certainly, the same principle holds; but why does this involve any particular skill?

459d

Because, I said, our rulers will often have to practise upon the body corporate with medicines. Now you know that when patients do not require medicines, but have only to be put under a regimen, the inferior sort of practitioner is deemed to be good enough; but when medicine has to be given, then the doctor should be more of a man.

That is quite true, he said; but to what are you alluding?

I mean, I replied, that our rulers will find a considerable dose of falsehood and deceit necessary for the good of their subjects: we were saying that the use of all these things regarded as medicines might be of advantage.

459e

And we were very right.

And this lawful use of them seems likely to be often needed in the regulations of marriages and births.

How so?

460a

Why, I said, the principle has been already laid down that the best of either sex should be united with the best as often, and the inferior with the inferior, as seldom as possible; and that they should rear the offspring of the one sort of union, but not of the other, if the flock is to be maintained in first-rate condition. Now these goings on must be a secret which the rulers only know, or there will be a further danger of our herd, as the guardians may be termed, breaking out into rebellion.

Very true.

Had we not better appoint certain festivals at which we will bring together the brides and bridegrooms, and sacrifices will be offered and suitable hymeneal songs composed by our poets: the number of weddings is a matter which must be left to the discretion of the rulers, whose aim will be to preserve the average of population? There are many other things which they will have to consider, such as the effects of wars and diseases and any similar agencies, in order as far as this is possible to prevent the State from becoming either too large or too small.

460b

Certainly, he replied.

We shall have to invent some ingenious kind of lots which the less worthy may draw on each occasion of our bringing them together, and then they will accuse their own ill-luck and not the rulers.

460c

To be sure, he said.

And I think that our braver and better youth, besides their other honours and rewards, might have greater facilities of intercourse with women given them; their bravery will be a reason, and such fathers ought to have as many sons as possible.

True.

And the proper officers, whether male or female or both, for offices are to be held by women as well as by men — ^{460d} Yes — ^{460d} The proper officers will take the offspring of the good parents to the pen or fold, and there they will deposit them with certain nurses who dwell in a separate quarter; but the offspring of the inferior, or of the better when they chance to be deformed, will be put away in some mysterious, unknown place, as they should be.

^{460d}

Yes, he said, that must be done if the breed of the guardians is to be kept pure.

They will provide for their nurture, and will bring the mothers to the fold when they are full of milk, taking the greatest possible care that no mother recognizes her own child; and other wet-nurses may be engaged if more are required. Care will also be taken that the process of suckling shall not be protracted too long; and the mothers will have no getting up at night or other trouble, but will hand over all this sort of thing to the nurses and attendants.

^{460e}

You suppose the wives of our guardians to have a fine easy time of it when they are having children.

Why, said I, and so they ought. Let us, however, proceed with our scheme. We were saying that the parents should be in the prime of life?

^{461a}

Very true.

And what is the prime of life? May it not be defined as a period of about twenty years in a woman's life, and thirty in a man's?

Which years do you mean to include?

A woman, I said, at twenty years of age may begin to bear children to the State, and continue to bear them until forty; a man may begin at five-and-twenty, when he has passed the point at which the pulse of life beats quickest, and continue to beget children until he be fifty-five.

461b

Certainly, he said, both in men and women those years are the prime of physical as well as of intellectual vigour.

461c

Any one above or below the prescribed ages who takes part in the public hymeneals shall be said to have done an unholy and unrighteous thing; the child of which he is the father, if it steals into life, will have been conceived under auspices very unlike the sacrifices and prayers, which at each hymeneal priestesses and priest and the whole city will offer, that the new generation may be better and more useful than their good and useful parents, whereas his child will be the offspring of darkness and strange lust.

Very true, he replied.

And the same law will apply to any one of those within the prescribed age who forms a connection with any woman in the prime of life without the sanction of the rulers; for we shall say that he is raising up a bastard to the State, uncertified and unconsecrated.

461d

Very true, he replied.

This applies, however, only to those who are within the specified age: after that we allow them to range at will, except that a man may not marry his daughter or his daughter's daughter, or his mother or his mother's mother; and women, on the other hand, are prohibited from marrying their sons or fathers, or son's son or father's father, and so on in either

direction. And we grant all this, accompanying the permission with strict orders to prevent any embryo which may come into being from seeing the light; and if any force a way to the birth, the parents must understand that the offspring of such an union cannot be maintained, and arrange accordingly.

461e

That also, he said, is a reasonable proposition. But how will they know who are fathers and daughters, and so on?

462a

They will never know. The way will be this: — dating from the day of the hymeneal, the bridegroom who was then married will call all the male children who are born in the seventh and tenth month afterwards his sons, and the female children his daughters, and they will call him father, and he will call their children his grandchildren, and they will call the elder generation grandfathers and grandmothers. All who were begotten at the time when their fathers and mothers came together will be called their brothers and sisters, and these, as I was saying, will be forbidden to inter-marry. This, however, is not to be understood as an absolute prohibition of the marriage of brothers and sisters; if the lot favours them, and they receive the sanction of the Pythian oracle, the law will allow them.

462b

Quite right, he replied.

Such is the scheme, Glaucon, according to which the guardians of our State are to have their wives and families in common. And now you would have the argument show that this community is consistent with the rest of our polity, and also that nothing can be better — would you not?

Yes, certainly.

Shall we try to find a common basis by asking of ourselves what ought to be the chief aim of the legislator in making laws and in

the organization of a State, — what is the greatest I good, and what is the greatest evil, and then consider whether our previous description has the stamp of the good or of the evil?

462c

By all means.

Can there be any greater evil than discord and distraction and plurality where unity ought to reign? or any greater good than the bond of unity?

There cannot.

And there is unity where there is community of pleasures and pains — where all the citizens are glad or grieved on the same occasions of joy and sorrow?

No doubt.

462d

Yes; and where there is no common but only private feeling a State is disorganized — when you have one half of the world triumphing and the other plunged in grief at the same events happening to the city or the citizens?

Certainly.

Such differences commonly originate in a disagreement about the use of the terms ‘mine’ and ‘not mine,’ ‘his’ and ‘not his.’

Exactly so.

And is not that the best-ordered State in which the greatest number of persons apply the terms ‘mine’ and ‘not mine’ in the same way to the same thing?

462e

Quite true.

Or that again which most nearly approaches to the condition of the individual — as in the body, when but a finger of one of us is hurt, the whole frame, drawn towards the soul as a center and

forming one kingdom under the ruling power therein, feels the hurt and sympathizes all together with the part affected, and we say that the man has a pain in his finger; and the same expression is used about any other part of the body, which has a sensation of pain at suffering or of pleasure at the alleviation of suffering.

463a

Very true, he replied; and I agree with you that in the best-ordered State there is the nearest approach to this common feeling which you describe.

463b

Then when any one of the citizens experiences any good or evil, the whole State will make his case their own, and will either rejoice or sorrow with him?

Yes, he said, that is what will happen in a well-ordered State.

It will now be time, I said, for us to return to our State and see whether this or some other form is most in accordance with these fundamental principles.

Very good.

Our State like every other has rulers and subjects?

True.

All of whom will call one another citizens?

Of course.

463c

But is there not another name which people give to their rulers in other States?

Generally they call them masters, but in democratic States they simply call them rulers.

And in our State what other name besides that of citizens do the people give the rulers?

They are called saviours and helpers, he replied.

And what do the rulers call the people?

Their maintainers and foster-fathers.

And what do they call them in other States?

Slaves.

And what do the rulers call one another in other States?

Fellow-rulers.

And what in ours?

Fellow-guardians.

463d

Did you ever know an example in any other State of a ruler who would speak of one of his colleagues as his friend and of another as not being his friend?

Yes, very often.

And the friend he regards and describes as one in whom he has an interest, and the other as a stranger in whom he has no interest?

Exactly.

But would any of your guardians think or speak of any other guardian as a stranger?

Certainly he would not; for every one whom they meet will be regarded by them either as a brother or sister, or father or mother, or son or daughter, or as the child or parent of those who are thus connected with him.

463e

Capital, I said; but let me ask you once more: Shall they be a family in name only; or shall they in all their actions be true to the name? For example, in the use of the word 'father,' would

the care of a father be implied and the filial reverence and duty and obedience to him which the law commands; and is the violator of these duties to be regarded as an impious and unrighteous person who is not likely to receive much good either at the hands of God or of man? Are these to be or not to be the strains which the children will hear repeated in their ears by all the citizens about those who are intimated to them to be their parents and the rest of their kinsfolk?

464a

These, he said, and none other; for what can be more ridiculous than for them to utter the names of family ties with the lips only and not to act in the spirit of them?

464b

Then in our city the language of harmony and concord will be more often heard than in any other. As I was describing before, when any one is well or ill, the universal word will be with me 'it is well' or 'it is ill.'

Most true.

464c

And agreeably to this mode of thinking and speaking, were we not saying that they will have their pleasures and pains in common?

Yes, and so they will.

And they will have a common interest in the same thing which they will alike call 'my own,' and having this common interest they will have a common feeling of pleasure and pain?

Yes, far more so than in other States.

And the reason of this, over and above the general constitution of the State, will be that the guardians will have a community of women and children?

464d

That will be the chief reason.

And this unity of feeling we admitted to be the greatest good, as was implied in our own comparison of a well-ordered State to the relation of the body and the members, when affected by pleasure or pain?

That we acknowledged, and very rightly.

Then the community of wives and children among our citizens is clearly the source of the greatest good to the State?

Certainly.

And this agrees with the other principle which we were affirming, — that the guardians were not to have houses or lands or any other property; their pay was to be their food, which they were to receive from the other citizens, and they were to have no private expenses; for we intended them to preserve their true character of guardians.

464e

Right, he replied.

Both the community of property and the community of families, as I am saying, tend to make them more truly guardians; they will not tear the city in pieces by differing about 'mine' and 'not mine;' each man dragging any acquisition which he has made into a separate house of his own, where he has a separate wife and children and private pleasures and pains; but all will be affected as far as may be by the same pleasures and pains because they are all of one opinion about what is near and dear to them, and therefore they all tend towards a common end.

465a

Certainly, he replied.

And as they have nothing but their persons which they can call their own, suits and complaints will have no existence among

them; they will be delivered from all those quarrels of which money or children or relations are the occasion.

Of course they will.

465b

Neither will trials for assault or insult ever be likely to occur among them. For that equals should defend themselves against equals we shall maintain to be honourable and right; we shall make the protection of the person a matter of necessity.

That is good, he said.

Yes; and there is a further good in the law; viz. that if a man has a quarrel with another he will satisfy his resentment then and there, and not proceed to more dangerous lengths.

Certainly.

To the elder shall be assigned the duty of ruling and chastising the younger.

Clearly.

465c

Nor can there be a doubt that the younger will not strike or do any other violence to an elder, unless the magistrates command him; nor will he slight him in any way. For there are two guardians, shame and fear, mighty to prevent him: shame, which makes men refrain from laying hands on those who are to them in the relation of parents; fear, that the injured one will be succoured by the others who are his brothers, sons, one with fathers.

That is true, he replied.

465d

Then in every way the laws will help the citizens to keep the peace with one another?

Yes, there will be no want of peace.

And as the guardians will never quarrel among themselves there will be no danger of the rest of the city being divided either against them or against one another.

None whatever.

I hardly like even to mention the little meannesses of which they will be rid, for they are beneath notice: such, for example, as the flattery of the rich by the poor, and all the pains and pangs which men experience in bringing up a family, and in finding money to buy necessities for their household, borrowing and then repudiating, getting how they can, and giving the money into the hands of women and slaves to keep — the many evils of so many kinds which people suffer in this way are mean enough and obvious enough, and not worth speaking of.

465e

Yes, he said, a man has no need of eyes in order to perceive that.

And from all these evils they will be delivered, and their life will be blessed as the life of Olympic victors and yet more blessed.

How so?

466a

The Olympic victor, I said, is deemed happy in receiving a part only of the blessedness which is secured to our citizens, who have won a more glorious victory and have a more complete maintenance at the public cost. For the victory which they have won is the salvation of the whole State; and the crown with which they and their children are crowned is the fulness of all that life needs; they receive rewards from the hands of their country while living, and after death have an honourable burial.

466b

Yes, he said, and glorious rewards they are.

Do you remember, I said, how in the course of the previous discussion some one who shall be nameless accused us of

making our guardians unhappy — they had nothing and might have possessed all things-to whom we replied that, if an occasion offered, we might perhaps hereafter consider this question, but that, as at present advised, we would make our guardians truly guardians, and that we were fashioning the State with a view to the greatest happiness, not of any particular class, but of the whole?

466c

Yes, I remember.

And what do you say, now that the life of our protectors is made out to be far better and nobler than that of Olympic victors — is the life of shoemakers, or any other artisans, or of husbandmen, to be compared with it?

Certainly not.

466d

At the same time I ought here to repeat what I have said elsewhere, that if any of our guardians shall try to be happy in such a manner that he will cease to be a guardian, and is not content with this safe and harmonious life, which, in our judgment, is of all lives the best, but infatuated by some youthful conceit of happiness which gets up into his head shall seek to appropriate the whole State to himself, then he will have to learn how wisely Hesiod spoke, when he said, ‘half is more than the whole.’

If he were to consult me, I should say to him: Stay where you are, when you have the offer of such a life.

You agree then, I said, that men and women are to have a common way of life such as we have described — common education, common children; and they are to watch over the citizens in common whether abiding in the city or going out to war; they are to keep watch together, and to hunt together like dogs; and always and in all things, as far as they are able,

women are to share with the men? And in so doing they will do what is best, and will not violate, but preserve the natural relation of the sexes.

466e

I agree with you, he replied.

The enquiry, I said, has yet to be made, whether such a community be found possible — as among other animals, so also among men — and if possible, in what way possible?

467a

You have anticipated the question which I was about to suggest.

There is no difficulty, I said, in seeing how war will be carried on by them.

How?

Why, of course they will go on expeditions together; and will take with them any of their children who are strong enough, that, after the manner of the artisan's child, they may look on at the work which they will have to do when they are grown up; and besides looking on they will have to help and be of use in war, and to wait upon their fathers and mothers. Did you never observe in the arts how the potters' boys look on and help, long before they touch the wheel?

467b

Yes, I have.

And shall potters be more careful in educating their children and in giving them the opportunity of seeing and practising their duties than our guardians will be?

The idea is ridiculous, he said.

There is also the effect on the parents, with whom, as with other animals, the presence of their young ones will be the greatest incentive to valour.

467c

That is quite true, Socrates; and yet if they are defeated, which may often happen in war, how great the danger is! the children will be lost as well as their parents, and the State will never recover.

467d

True, I said; but would you never allow them to run any risk?

I am far from saying that.

Well, but if they are ever to run a risk should they not do so on some occasion when, if they escape disaster, they will be the better for it?

Clearly.

Whether the future soldiers do or do not see war in the days of their youth is a very important matter, for the sake of which some risk may fairly be incurred.

467e

Yes, very important.

This then must be our first step, — to make our children spectators of war; but we must also contrive that they shall be secured against danger; then all will be well.

True.

Their parents may be supposed not to be blind to the risks of war, but to know, as far as human foresight can, what expeditions are safe and what dangerous?

468a

That may be assumed.

And they will take them on the safe expeditions and be cautious about the dangerous ones?

True.

And they will place them under the command of experienced veterans who will be their leaders and teachers?

Very properly.

Still, the dangers of war cannot be always foreseen; there is a good deal of chance about them?

True.

Then against such chances the children must be at once furnished with wings, in order that in the hour of need they may fly away and escape.

What do you mean? he said.

468b

I mean that we must mount them on horses in their earliest youth, and when they have learnt to ride, take them on horseback to see war: the horses must be spirited and warlike, but the most tractable and yet the swiftest that can be had. In this way they will get an excellent view of what is hereafter to be their own business; and if there is danger they have only to follow their elder leaders and escape.

I believe that you are right, he said.

Next, as to war; what are to be the relations of your soldiers to one another and to their enemies? I should be inclined to propose that the soldier who leaves his rank or throws away his arms, or is guilty of any other act of cowardice, should be degraded into the rank of a husbandman or artisan. What do you think?

468c

By all means, I should say.

And he who allows himself to be taken prisoner may as well be made a present of to his enemies; he is their lawful prey, and let them do what they like with him.

Certainly.

But the hero who has distinguished himself, what shall be done to him?
In the first place, he shall receive honour in the army from his youthful comrades; every one of them in succession shall crown him.
What do you say?

I approve.

468d

And what do you say to his receiving the right hand of fellowship?

To that too, I agree.

But you will hardly agree to my next proposal.

What is your proposal?

That he should kiss and be kissed by them.

Most certainly, and I should be disposed to go further, and say: Let no one whom he has a mind to kiss refuse to be kissed by him while the expedition lasts. So that if there be a lover in the army, whether his love be youth or maiden, he may be more eager to win the prize of valour.

468e

Capital, I said. That the brave man is to have more wives than others has been already determined: and he is to have first choices in such matters more than others, in order that he may have as many children as possible?

469a

Agreed.

Again, there is another manner in which, according to Homer, brave youths should be honoured; for he tells how Ajax, after he

had distinguished himself in battle, was rewarded with long chins, which seems to be a compliment appropriate to a hero in the flower of his age, being not only a tribute of honour but also a very strengthening thing.

Most true, he said.

Then in this, I said, Homer shall be our teacher; and we too, at sacrifices and on the like occasions, will honour the brave according to the measure of their valour, whether men or women, with hymns and those other distinctions which we were mentioning; also with ^{469c} seats of precedence, and meats and full cups; ^{469c} and in honouring them, we shall be at the same time training them.

^{469c}

That, he replied, is excellent.

Yes, I said; and when a man dies gloriously in war shall we not say, in the first place, that he is of the golden race?

To be sure.

Nay, have we not the authority of Hesiod for affirming that when they are dead They are holy angels upon the earth, authors of good,
averters of evil, the guardians of speech-gifted men?

Yes; and we accept his authority.

^{469d}

We must learn of the god how we are to order the sepulture of divine and heroic personages, and what is to be their special distinction and we must do as he bids?

By all means.

And in ages to come we will reverence them and kneel before their sepulchres as at the graves of heroes. And not only they but any who are deemed pre-eminently good, whether they die

from age, or in any other way, shall be admitted to the same honours.

That is very right, he said.

Next, how shall our soldiers treat their enemies? What about this?

In what respect do you mean?

469e

First of all, in regard to slavery? Do you think it right that Hellenes should enslave Hellenic States, or allow others to enslave them, if they can help? Should not their custom be to spare them, considering the danger which there is that the whole race may one day fall under the yoke of the barbarians?

To spare them is infinitely better.

Then no Hellene should be owned by them as a slave; that is a rule which they will observe and advise the other Hellenes to observe.

470a

Certainly, he said; they will in this way be united against the barbarians and will keep their hands off one another.

Next as to the slain; ought the conquerors, I said, to take anything but their armour? Does not the practice of despoiling an enemy afford an excuse for not facing the battle? Cowards skulk about the dead, pretending that they are fulfilling a duty, and many an army before now has been lost from this love of plunder.

Very true.

470b

And is there not illiberality and avarice in robbing a corpse, and also a degree of meanness and womanishness in making an enemy of the dead body when the real enemy has flown away and left only his fighting gear behind him, — is not this rather

like a dog who cannot get at his assailant, quarrelling with the stones which strike him instead?

Very like a dog, he said.

Then we must abstain from spoiling the dead or hindering their burial?

Yes, he replied, we most certainly must.

470c

Neither shall we offer up arms at the temples of the gods, least of all the arms of Hellenes, if we care to maintain good feeling with other Hellenes; and, indeed, we have reason to fear that the offering of spoils taken from kinsmen may be a pollution unless commanded by the god himself?

Very true.

Again, as to the devastation of Hellenic territory or the burning of houses, what is to be the practice?

May I have the pleasure, he said, of hearing your opinion?

470d

Both should be forbidden, in my judgment; I would take the annual produce and no more. Shall I tell you why?

Pray do.

Why, you see, there is a difference in the names 'discord' and 'war,' and I imagine that there is also a difference in their natures; the one is expressive of what is internal and domestic, the other of what is external and foreign; and the first of the two is termed discord, and only the second, war.

470e

That is a very proper distinction, he replied.

And may I not observe with equal propriety that the Hellenic race is all united together by ties of blood and friendship, and alien and strange to the barbarians?

Very good, he said.

And therefore when Hellenes fight with barbarians and barbarians with Hellenes, they will be described by us as being at war when they fight, and by nature enemies, and this kind of antagonism should be called war; but when Hellenes fight with one another we shall say that Hellas is then in a state of disorder and discord, they being by nature friends and such enmity is to be called discord.

I agree.

471a

Consider then, I said, when that which we have acknowledged to be discord occurs, and a city is divided, if both parties destroy the lands and burn the houses of one another, how wicked does the strife appear! No true lover of his country would bring himself to tear in pieces his own nurse and mother: There might be reason in the conqueror depriving the conquered of their harvest, but still they would have the idea of peace in their hearts and would not mean to go on fighting for ever.

471b

Yes, he said, that is a better temper than the other.

And will not the city, which you are founding, be an Hellenic city?

It ought to be, he replied.

Then will not the citizens be good and civilized?

Yes, very civilized.

And will they not be lovers of Hellas, and think of Hellas as their own land, and share in the common temples?

Most certainly.

And any difference which arises among them will be regarded by them as discord only — a quarrel among friends, which is not

to be called a war?

Certainly not.

Then they will quarrel as those who intend some day to be reconciled?

Certainly.

471c

They will use friendly correction, but will not enslave or destroy their opponents; they will be correctors, not enemies?

Just so.

And as they are Hellenes themselves they will not devastate Hellas, nor will they burn houses, not even suppose that the whole population of a city — men, women, and children — are equally their enemies, for they know that the guilt of war is always confined to a few persons and that the many are their friends. And for all these reasons they will be unwilling to waste their lands and raze their houses; their enmity to them will only last until the many innocent sufferers have compelled the guilty few to give satisfaction?

471d

I agree, he said, that our citizens should thus deal with their Hellenic enemies; and with barbarians as the Hellenes now deal with one another.

Then let us enact this law also for our guardians: that they are neither to devastate the lands of Hellenes nor to burn their houses.

Agreed; and we may agree also in thinking that these, all our previous enactments, are very good.

472a

But still I must say, Socrates, that if you are allowed to go on in this way you will entirely forget the other question which at the commencement of this discussion you thrust aside: — Is such an

order of things possible, and how, if at all? For I am quite ready to acknowledge that the plan which you propose, if only feasible, would do all sorts of good to the State. I will add, what you have omitted, that your citizens will be the bravest of warriors, and will never leave their ranks, for they will all know one another, and each will call the other father, brother, son; and if you suppose the women to join their armies, whether in the same rank or in the rear, either as a terror to the enemy, or as auxiliaries in case of need, I know that they will then be absolutely invincible; and there are many domestic advantages which might also be mentioned and which I also fully acknowledge: but, as I admit all these advantages and as many more as you please, if only this State of yours were to come into existence, we need say no more about them; assuming then the existence of the State, let us now turn to the question of possibility and ways and means — the rest may be left.

472c

If I loiter for a moment, you instantly make a raid upon me, I said, and have no mercy; I have hardly escaped the first and second waves, and you seem not to be aware that you are now bringing upon me the third, which is the greatest and heaviest. When you have seen and heard the third wave, I think you be more considerate and will acknowledge that some fear and hesitation was natural respecting a proposal so extraordinary as that which I have now to state and investigate.

472d

The more appeals of this sort which you make, he said, the more determined are we that you shall tell us how such a State is possible: speak out and at once.

Let me begin by reminding you that we found our way hither in the search after justice and injustice.

True, he replied; but what of that?

I was only going to ask whether, if we have discovered them, we are to require that the just man should in nothing fail of absolute justice; or may we be satisfied with an approximation, and the attainment in him of a higher degree of justice than is to be found in other men?

The approximation will be enough.

472e

We are enquiring into the nature of absolute justice and into the character of the perfectly just, and into injustice and the perfectly unjust, that we might have an ideal. We were to look at these in order that we might judge of our own happiness and unhappiness according to the standard which they exhibited and the degree in which we resembled them, but not with any view of showing that they could exist in fact.

True, he said.

473a

Would a painter be any the worse because, after having delineated with consummate art an ideal of a perfectly beautiful man, he was unable to show that any such man could ever have existed?

He would be none the worse.

Well, and were we not creating an ideal of a perfect State?

To be sure.

And is our theory a worse theory because we are unable to prove the possibility of a city being ordered in the manner described?

Surely not, he replied.

473b

That is the truth, I said. But if, at your request, I am to try and show how and under what conditions the possibility is highest, I must ask you, having this in view, to repeat your former

admissions.

What admissions?

I want to know whether ideals are ever fully realised in language? Does not the word express more than the fact, and must not the actual, whatever a man may think, always, in the nature of things, fall short of the truth? What do you say?

I agree.

473d

Then you must not insist on my proving that the actual State will in every respect coincide with the ideal: if we are only able to discover how a city may be governed nearly as we proposed, you will admit that we have discovered the possibility which you demand; and will be contented. I am sure that I should be contented — will not you?

Yes, I will.

Let me next endeavour to show what is that fault in States which is the cause of their present maladministration, and what is the least change which will enable a State to pass into the truer form; and let the change, if possible, be of one thing only, or if not, of two; at any rate, let the changes be as few and slight as possible.

Certainly, he replied.

I think, I said, that there might be a reform of the State if only one change were made, which is not a slight or easy though still a possible one.

473e

What is it? he said.

Now then, I said, I go to meet that which I liken to the greatest of the waves; yet shall the word be spoken, even though the wave break and drown me in laughter and dishonour; and do

you mark my words.

Proceed.

474a

I said: Until philosophers are kings, or the kings and princes of this world have the spirit and power of philosophy, and political greatness and wisdom meet in one, and those commoner natures who pursue either to the exclusion of the other are compelled to stand aside, cities will never have rest from their evils, — nor the human race, as I believe, — and then only will this our State have a possibility of life and behold the light of day. Such was the thought, my dear Glaucon, which I would fain have uttered if it had not seemed too extravagant; for to be convinced that in no other State can there be happiness private or public is indeed a hard thing.

Socrates, what do you mean? I would have you consider that the word which you have uttered is one at which numerous persons, and very respectable persons too, in a figure pulling off their coats all in a moment, and seizing any weapon that comes to hand, will run at you might and main, before you know where you are, intending to do heaven knows what; and if you don't prepare an answer, and put yourself in motion, you will be prepared by their fine wits,' and no mistake.

474b

You got me into the scrape, I said.

And I was quite right; however, I will do all I can to get you out of it; but I can only give you good-will and good advice, and, perhaps, I may be able to fit answers to your questions better than another — that is all. And now, having such an auxiliary, you must do your best to show the unbelievers that you are right.

474c

I ought to try, I said, since you offer me such invaluable assistance. And I think that, if there is to be a chance of our escaping, we must explain to them whom we mean when we say that philosophers are to rule in the State; then we shall be able to defend ourselves: There will be discovered to be some natures who ought to study philosophy and to be leaders in the State; and others who are not born to be philosophers, and are meant to be followers rather than leaders.

474d

Then now for a definition, he said.

Follow me, I said, and I hope that I may in some way or other be able to give you a satisfactory explanation.

Proceed.

I dare say that you remember, and therefore I need not remind you, that a lover, if lie is worthy of the name, ought to show his love, not to some one part of that which he loves, but to the whole.

I really do not understand, and therefore beg of you to assist my memory.

474e

Another person, I said, might fairly reply as you do; but a man of pleasure like yourself ought to know that all who are in the flower of youth do somehow or other raise a pang or emotion in a lover's breast, and are thought by him to be worthy of his affectionate regards. Is not this a way which you have with the fair: one has a snub nose, and you praise his charming face; the hook-nose of another has, you say, a royal look; while he who is neither snub nor hooked has the grace of regularity: the dark visage is manly, the fair are children of the gods; and as to the sweet 'honey pale,' as they are called, what is the very name but the invention of a lover who talks in diminutives, and is not adverse to paleness if appearing on the cheek of youth? In a

word, there is no excuse which you will not make, and nothing which you will not say, in order not to lose a single flower that blooms in the spring-time of youth.

475b

If you make me an authority in matters of love, for the sake of the argument, I assent.

And what do you say of lovers of wine? Do you not see them doing the same? They are glad of any pretext of drinking any wine.

Very good.

475c

And the same is true of ambitious men; if they cannot command an army, they are willing to command a file; and if they cannot be honoured by really great and important persons, they are glad to be honoured by lesser and meaner people, but honour of some kind they must have.

Exactly.

Once more let me ask: Does he who desires any class of goods, desire the whole class or a part only?

The whole.

475d

And may we not say of the philosopher that he is a lover, not of a part of wisdom only, but of the whole?

Yes, of the whole.

And he who dislikes learnings, especially in youth, when he has no power of judging what is good and what is not, such an one we maintain not to be a philosopher or a lover of knowledge, just as he who refuses his food is not hungry, and may be said to have a bad appetite and not a good one?

Very true, he said.

Whereas he who has a taste for every sort of knowledge and who is curious to learn and is never satisfied, may be justly termed a philosopher? Am I not right?

475e

Glaucón said: If curiosity makes a philosopher, you will find many a strange being will have a title to the name. All the lovers of sights have a delight in learning, and must therefore be included. Musical amateurs, too, are a folk strangely out of place among philosophers, for they are the last persons in the world who would come to anything like a philosophical discussion, if they could help, while they run about at the Dionysiac festivals as if they had let out their ears to hear every chorus; whether the performance is in town or country — that makes no difference — they are there. Now are we to maintain that all these and any who have similar tastes, as well as the professors of quite minor arts, are philosophers?

476a

Certainly not, I replied; they are only an imitation.

He said: Who then are the true philosophers?

Those, I said, who are lovers of the vision of truth.

That is also good, he said; but I should like to know what you mean?

476b

To another, I replied, I might have a difficulty in explaining; but I am sure that you will admit a proposition which I am about to make.

What is the proposition?

That since beauty is the opposite of ugliness, they are two?

Certainly.

And inasmuch as they are two, each of them is one?

True again.

And of just and unjust, good and evil, and of every other class, the same remark holds: taken singly, each of them one; but from the various combinations of them with actions and things and with one another, they are seen in all sorts of lights and appear many? Very true.

476c

And this is the distinction which I draw between the sight-loving, art-loving, practical class and those of whom I am speaking, and who are alone worthy of the name of philosophers.

How do you distinguish them? he said.

The lovers of sounds and sights, I replied, are, as I conceive, fond of fine tones and colours and forms and all the artificial products that are made out of them, but their mind is incapable of seeing or loving absolute beauty.

True, he replied.

Few are they who are able to attain to the sight of this.

476d

Very true.

And he who, having a sense of beautiful things has no sense of absolute beauty, or who, if another lead him to a knowledge of that beauty is unable to follow — of such an one I ask, Is he awake or in a dream only? Reflect: is not the dreamer, sleeping or waking, one who likens dissimilar things, who puts the copy in the place of the real object?

I should certainly say that such an one was dreaming.

476e

But take the case of the other, who recognises the existence of absolute beauty and is able to distinguish the idea from the objects which participate in the idea, neither putting the objects

in the place of the idea nor the idea in the place of the objects — is he a dreamer, or is he awake?

He is wide awake.

And may we not say that the mind of the one who knows has knowledge, and that the mind of the other, who opines only, has opinion Certainly.

But suppose that the latter should quarrel with us and dispute our statement, can we administer any soothing cordial or advice to him, without revealing to him that there is sad disorder in his wits?

We must certainly offer him some good advice, he replied.

477a

Come, then, and let us think of something to say to him. Shall we begin by assuring him that he is welcome to any knowledge which he may have, and that we are rejoiced at his having it? But we should like to ask him a question: Does he who has knowledge know something or nothing? (You must answer for him.)

I answer that he knows something.

Something that is or is not?

Something that is; for how can that which is not ever be known?

And are we assured, after looking at the matter from many points of view, that absolute being is or may be absolutely known, but that the utterly non-existent is utterly unknown?

Nothing can be more certain.

477b

Good.: But if there be anything which is of such a nature as to be and not to be, that will have a place intermediate between pure being and the absolute negation of being?

Yes, between them.

477c

And, as knowledge corresponded to being and ignorance of necessity to not-being, for that intermediate between being and not-being there has to be discovered a corresponding intermediate between ignorance and knowledge, if there be such?

Certainly.

Do we admit the existence of opinion?

Undoubtedly.

As being the same with knowledge, or another faculty?

Another faculty.

Then opinion and knowledge have to do with different kinds of matter corresponding to this difference of faculties?

Yes.

477d

And knowledge is relative to being and knows being. But before I proceed further I will make a division.

What division?

I will begin by placing faculties in a class by themselves: they are powers in us, and in all other things, by which we do as we do. Sight and hearing, for example, I should call faculties. Have I clearly explained the class which I mean?

Yes, I quite understand.

Then let me tell you my view about them. I do not see them, and therefore the distinctions of fire, colour, and the like, which enable me to discern the differences of some things, do not apply to them. In speaking of a faculty I think only of its sphere and its result; and that which has the same sphere and the same result I call the same faculty, but that which has another sphere and another result I call different. Would that be your way of

speaking?

477e

Yes.

And will you be so very good as to answer one more question? Would you say that knowledge is a faculty, or in what class would you place it?

Certainly knowledge is a faculty, and the mightiest of all faculties.

And is opinion also a faculty?

Certainly, he said; for opinion is that with which we are able to form an opinion.

And yet you were acknowledging a little while ago that knowledge is not the same as opinion?

478a

Why, yes, he said: how can any reasonable being ever identify that which is infallible with that which errs?

An excellent answer, proving, I said, that we are quite conscious of a distinction between them.

Yes.

Then knowledge and opinion having distinct powers have also distinct spheres or subject-matters?

That is certain.

Being is the sphere or subject-matter of knowledge, and knowledge is to know the nature of being?

Yes.

And opinion is to have an opinion?

Yes.

478b

And do we know what we opine? or is the subject-matter of opinion the same as the subject-matter of knowledge?

Nay, he replied, that has been already disproven; if difference in faculty implies difference in the sphere or subject matter, and if, as we were saying, opinion and knowledge are distinct faculties, then the sphere of knowledge and of opinion cannot be the same.

Then if being is the subject-matter of knowledge, something else must be the subject-matter of opinion?

Yes, something else.

Well then, is not-being the subject-matter of opinion? or, rather, how can there be an opinion at all about not-being? Reflect: when a man has an opinion, has he not an opinion about something? Can he have an opinion which is an opinion about nothing?

478c

Impossible.

He who has an opinion has an opinion about some one thing?

Yes.

And not-being is not one thing but, properly speaking, nothing?

True.

Of not-being, ignorance was assumed to be the necessary correlative; of being, knowledge?

True, he said.

Then opinion is not concerned either with being or with not-being?

Not with either.

And can therefore neither be ignorance nor knowledge?

478d

That seems to be true.

But is opinion to be sought without and beyond either of them, in a greater clearness than knowledge, or in a greater darkness than ignorance?

In neither.

Then I suppose that opinion appears to you to be darker than knowledge, but lighter than ignorance?

Both; and in no small degree.

And also to be within and between them?

478e

Yes.

Then you would infer that opinion is intermediate?

No question.

But were we not saying before, that if anything appeared to be of a sort which is and is not at the same time, that sort of thing would appear also to lie in the interval between pure being and absolute not-being; and that the corresponding faculty is neither knowledge nor ignorance, but will be found in the interval between them?

True.

479a

And in that interval there has now been discovered something which we call opinion?

There has.

Then what remains to be discovered is the object which partakes equally of the nature of being and not-being, and cannot rightly be termed either, pure and simple; this unknown term, when discovered, we may truly call the subject of opinion,

and assign each to its proper faculty, the extremes to the faculties of the extremes and the mean to the faculty of the mean.

True.

This being premised, I would ask the gentleman who is of opinion that there is no absolute or unchangeable idea of beauty — in whose opinion the beautiful is the manifold — he, I say, your lover of beautiful sights, who cannot bear to be told that the beautiful is one, and the just is one, or that anything is one — to him I would appeal, saying, Will you be so very kind, sir, as to tell us whether, of all these beautiful things, there is one which will not be found ugly; or of the just, which will not be found unjust; or of the holy, which will not also be unholy?

479b

No, he replied; the beautiful will in some point of view be found ugly; and the same is true of the rest.

And may not the many which are doubles be also halves? — doubles, that is, of one thing, and halves of another?

Quite true.

And things great and small, heavy and light, as they are termed, will not be denoted by these any more than by the opposite names?

479c

True; both these and the opposite names will always attach to all of them.

And can any one of those many things which are called by particular names be said to be this rather than not to be this?

He replied: They are like the punning riddles which are asked at feasts or the children's puzzle about the eunuch aiming at the bat, with what he hit him, as they say in the puzzle, and upon what the bat was sitting. The individual objects of which I am

speaking are also a riddle, and have a double sense: nor can you fix them in your mind, either as being or not-being, or both, or neither.

479d

Then what will you do with them? I said. Can they have a better place than between being and not-being? For they are clearly not in greater darkness or negation than not-being, or more full of light and existence than being.

That is quite true, he said.

Thus then we seem to have discovered that the many ideas which the multitude entertain about the beautiful and about all other things are tossing about in some region which is halfway between pure being and pure not-being?

We have.

479e

Yes; and we had before agreed that anything of this kind which we might find was to be described as matter of opinion, and not as matter of knowledge; being the intermediate flux which is caught and detained by the intermediate faculty.

Quite true.

Then those who see the many beautiful, and who yet neither see absolute beauty, nor can follow any guide who points the way thither; who see the many just, and not absolute justice, and the like, — such persons may be said to have opinion but not knowledge?

That is certain.

480a

But those who see the absolute and eternal and immutable may be said to know, and not to have opinion only?

Neither can that be denied.

The one loves and embraces the subjects of knowledge, the other those of opinion? The latter are the same, as I dare say will remember, who listened to sweet sounds and gazed upon fair colours, but would not tolerate the existence of absolute beauty.

Yes, I remember.

Shall we then be guilty of any impropriety in calling them lovers of opinion rather than lovers of wisdom, and will they be very angry with us for thus describing them?

I shall tell them not to be angry; no man should be angry at what is true.

But those who love the truth in each thing are to be called lovers of wisdom and not lovers of opinion.

Assuredly.

BOOK VI

484a

Socrates - Glaucon And thus, Glaucon, after the argument has gone a weary way, the true and the false philosophers have at length appeared in view.

I do not think, he said, that the way could have been shortened.

484b

I suppose not, I said; and yet I believe that we might have had a better view of both of them if the discussion could have been confined to this one subject and if there were not many other questions awaiting us, which he who desires to see in what respect the life of the just differs from that of the unjust must consider.

And what is the next question? he asked.

Surely, I said, the one which follows next in order. Inasmuch as philosophers only are able to grasp the eternal and unchangeable, and those who wander in the region of the many and variable are not philosophers, I must ask you which of the two classes should be the rulers of our State?

And how can we rightly answer that question?

484c

Whichever of the two are best able to guard the laws and institutions of our State — let them be our guardians.

Very good.

Neither, I said, can there be any question that the guardian who is to keep anything should have eyes rather than no eyes?

There can be no question of that.

484d

And are not those who are verily and indeed wanting in the knowledge of the true being of each thing, and who have in their souls no clear pattern, and are unable as with a painter's eye to look at the absolute truth and to that original to repair, and having perfect vision of the other world to order the laws about beauty, goodness, justice in this, if not already ordered, and to guard and preserve the order of them — are not such persons, I ask, simply blind?

Truly, he replied, they are much in that condition.

And shall they be our guardians when there are others who, besides being their equals in experience and falling short of them in no particular of virtue, also know the very truth of each thing?

There can be no reason, he said, for rejecting those who have this greatest of all great qualities; they must always have the first place unless they fail in some other respect.

485a

Suppose then, I said, that we determine how far they can unite this and the other excellences.

By all means.

In the first place, as we began by observing, the nature of the philosopher has to be ascertained. We must come to an understanding about him, and, when we have done so, then, if I am not mistaken, we shall also acknowledge that such an union of qualities is possible, and that those in whom they are united, and those only, should be rulers in the State.

485b

What do you mean?

Let us suppose that philosophical minds always love knowledge of a sort which shows them the eternal nature not varying from generation and corruption.

Agreed.

And further, I said, let us agree that they are lovers of all true being; there is no part whether greater or less, or more or less honourable, which they are willing to renounce; as we said before of the lover and the man of ambition.

485c

True.

And if they are to be what we were describing, is there not another quality which they should also possess?

What quality?

Truthfulness: they will never intentionally receive into their mind falsehood, which is their detestation, and they will love the truth.

Yes, that may be safely affirmed of them.

‘May be,’ my friend, I replied, is not the word; say rather ‘must be affirmed:’ for he whose nature is amorous of anything cannot

help loving all that belongs or is akin to the object of his affections.

Right, he said.

And is there anything more akin to wisdom than truth?

How can there be?

Can the same nature be a lover of wisdom and a lover of falsehood?

Never.

The true lover of learning then must from his earliest youth, as far as in him lies, desire all truth?

485d

Assuredly.

But then again, as we know by experience, he whose desires are strong in one direction will have them weaker in others; they will be like a stream which has been drawn off into another channel.

True.

He whose desires are drawn towards knowledge in every form will be absorbed in the pleasures of the soul, and will hardly feel bodily pleasure — I mean, if he be a true philosopher and not a sham one.

That is most certain.

485e

Such an one is sure to be temperate and the reverse of covetous; for the motives which make another man desirous of having and spending, have no place in his character.

Very true.

Another criterion of the philosophical nature has also to be considered.

What is that?

There should be no secret corner of illiberality; nothing can more antagonistic than meanness to a soul which is ever longing after the whole of things both divine and human.

Most true, he replied.

486a

Then how can he who has magnificence of mind and is the spectator of all time and all existence, think much of human life?

He cannot.

Or can such an one account death fearful?

No indeed.

Then the cowardly and mean nature has no part in true philosophy?

Certainly not.

Or again: can he who is harmoniously constituted, who is not covetous or mean, or a boaster, or a coward-can he, I say, ever be unjust or hard in his dealings?

486b

Impossible.

Then you will soon observe whether a man is just and gentle, or rude and unsociable; these are the signs which distinguish even in youth the philosophical nature from the unphilosophical.

True.

There is another point which should be remarked.

What point?

486c

Whether he has or has not a pleasure in learning; for no one will love that which gives him pain, and in which after much toil he

makes little progress.

Certainly not.

And again, if he is forgetful and retains nothing of what he learns, will he not be an empty vessel?

That is certain.

Labouring in vain, he must end in hating himself and his fruitless occupation? Yes.

Then a soul which forgets cannot be ranked among genuine philosophic natures; we must insist that the philosopher should have a good memory?

Certainly.

And once more, the inharmonious and unseemly nature can only tend to disproportion?

486d

Undoubtedly.

And do you consider truth to be akin to proportion or to disproportion?

To proportion.

Then, besides other qualities, we must try to find a naturally well-proportioned and gracious mind, which will move spontaneously towards the true being of everything.

Certainly.

Well, and do not all these qualities, which we have been enumerating, go together, and are they not, in a manner, necessary to a soul, which is to have a full and perfect participation of being?

They are absolutely necessary, he replied.

486e

And must not that be a blameless study which he only can pursue who has the gift of a good memory, and is quick to learn, — noble, gracious, the friend of truth, justice, courage, temperance, who are his kindred?

487a

The god of jealousy himself, he said, could find no fault with such a study.

And to men like him, I said, when perfected by years and education, and to these only you will entrust the State.

Socrates - Adeimantus 487b Here Adeimantus interposed and said: To these statements, Socrates, no one can offer a reply; but when you talk in this way, a strange feeling passes over the minds of your hearers: They fancy that they are led astray a little at each step in the argument, owing to their own want of skill in asking and answering questions; these littles accumulate, and at the end of the discussion they are found to have sustained a mighty overthrow and all their former notions appear to be turned upside down. And as unskilful players of draughts are at last shut up by their more skilful adversaries and have no piece to move, so they too find themselves shut up at last; for they have nothing to say in this new game of which words are the counters; and yet all the time they are in the right. The observation is suggested to me by what is now occurring. For any one of us might say, that although in words he is not able to meet you at each step of the argument, he sees as a fact that the votaries of philosophy, when they carry on the study, not only in youth as a part of education, but as the pursuit of their maturer years, most of them become strange monsters, not to say utter rogues, and that those who may be considered the best of them are made useless to the world by the very study which you extol.

487d

Well, and do you think that those who say so are wrong?

I cannot tell, he replied; but I should like to know what is your opinion.

Hear my answer; I am of opinion that they are quite right.

Then how can you be justified in saying that cities will not cease from evil until philosophers rule in them, when philosophers are acknowledged by us to be of no use to them?

You ask a question, I said, to which a reply can only be given in a parable.

Yes, Socrates; and that is a way of speaking to which you are not at all accustomed, I suppose.

488a

I perceive, I said, that you are vastly amused at having plunged me into such a hopeless discussion; but now hear the parable, and then you will be still more amused at the meagreness of my imagination: for the manner in which the best men are treated in their own States is so grievous that no single thing on earth is comparable to it; and therefore, if I am to plead their cause, I must have recourse to fiction, and put together a figure made up of many things, like the fabulous unions of goats and stags which are found in pictures. Imagine then a fleet or a ship in which there is a captain who is taller and stronger than any of the crew, but he is a little deaf and has a similar infirmity in sight, and his knowledge of navigation is not much better. The sailors are quarrelling with one another about the steering — every one is of opinion that he has a right to steer, though he has never learned the art of navigation and cannot tell who taught him or when he learned, and will further assert that it cannot be taught, and they are ready to cut in pieces any one who says the contrary. They throng about the captain, begging and praying him to commit the helm to them; and if at any time they do not prevail, but others are preferred to them, they kill the others or throw them overboard, and having first chained

up the noble captain's senses with drink or some narcotic drug, they mutiny and take possession of the ship and make free with the stores; thus, eating and drinking, they proceed on their voyage in such a manner as might be expected of them. Him who is their partisan and cleverly aids them in their plot for getting the ship out of the captain's hands into their own whether by force or persuasion, they compliment with the name of sailor, pilot, able seaman, and abuse the other sort of man, whom they call a good-for-nothing; but that the true pilot must pay attention to the year and seasons and sky and stars and winds, and whatever else belongs to his art, if he intends to be really qualified for the command of a ship, and that he must and will be the steerer, whether other people like or not-the possibility of this union of authority with the steerer's art has never seriously entered into their thoughts or been made part of their calling. Now in vessels which are in a state of mutiny and by sailors who are mutineers, how will the true pilot be regarded? Will he not be called by them a prater, a star-gazer, a good-for-nothing?

488e

Of course, said Adeimantus.

Then you will hardly need, I said, to hear the interpretation of the figure, which describes the true philosopher in his relation to the State; for you understand already.

489a

Certainly.

Then suppose you now take this parable to the gentleman who is surprised at finding that philosophers have no honour in their cities; explain it to him and try to convince him that their having honour would be far more extraordinary.

489b

I will.

Say to him, that, in deeming the best votaries of philosophy to be useless to the rest of the world, he is right; but also tell him to attribute their uselessness to the fault of those who will not use them, and not to themselves. The pilot should not humbly beg the sailors to be commanded by him — that is not the order of nature; neither are ‘the wise to go to the doors of the rich’ — the ingenious author of this saying told a lie — but the truth is, that, when a man is ill, whether he be rich or poor, to the physician he must go, and he who wants to be governed, to him who is able to govern. The ruler who is good for anything ought not to beg his subjects to be ruled by him; although the present governors of mankind are of a different stamp; they may be justly compared to the mutinous sailors, and the true helmsmen to those who are called by them good-for-nothings and star-gazers.

489c

Precisely so, he said.

489d

For these reasons, and among men like these, philosophy, the noblest pursuit of all, is not likely to be much esteemed by those of the opposite faction; not that the greatest and most lasting injury is done to her by her opponents, but by her own professing followers, the same of whom you suppose the accuser to say, that the greater number of them are arrant rogues, and the best are useless; in which opinion I agreed.

Yes.

And the reason why the good are useless has now been explained?

True.

Then shall we proceed to show that the corruption of the majority is also unavoidable, and that this is not to be laid to the charge of philosophy any more than the other?

By all means.

489c

And let us ask and answer in turn, first going back to the description of the gentle and noble nature. Truth, as you will remember, was his leader, whom he followed always and in all things; failing in this, he was an impostor, and had no part or lot in true philosophy.

490a

Yes, that was said.

Well, and is not this one quality, to mention no others, greatly at variance with present notions of him?

Certainly, he said.

490b

And have we not a right to say in his defence, that the true lover of knowledge is always striving after being — that is his nature; he will not rest in the multiplicity of individuals which is an appearance only, but will go on — the keen edge will not be blunted, nor the force of his desire abate until he have attained the knowledge of the true nature of every essence by a sympathetic and kindred power in the soul, and by that power drawing near and mingling and becoming incorporate with very being, having begotten mind and truth, he will have knowledge and will live and grow truly, and then, and not till then, will he cease from his travail.

Nothing, he said, can be more just than such a description of him.

And will the love of a lie be any part of a philosopher's nature? Will he not utterly hate a lie?

He will.

And when truth is the captain, we cannot suspect any evil of the band which he leads?

490c

Impossible.

Justice and health of mind will be of the company, and temperance will follow after?

490d

True, he replied.

Neither is there any reason why I should again set in array the philosopher's virtues, as you will doubtless remember that courage, magnificence, apprehension, memory, were his natural gifts. And you objected that, although no one could deny what I then said, still, if you leave words and look at facts, the persons who are thus described are some of them manifestly useless, and the greater number utterly depraved; we were then led to enquire into the grounds of these accusations, and have now arrived at the point of asking why are the majority bad, which question of necessity brought us back to the examination and definition of the true philosopher.

Exactly.

490e

And we have next to consider the corruptions of the philosophic nature, why so many are spoiled and so few escape spoiling — I am speaking of those who were said to be useless but not wicked — and, when we have done with them, we will speak of the imitators of philosophy, what manner of men are they who aspire after a profession which is above them and of which they are unworthy, and then, by their manifold inconsistencies, bring upon philosophy, and upon all philosophers, that universal reprobation of which we speak.

What are these corruptions? he said.

I will see if I can explain them to you. Every one will admit that a nature having in perfection all the qualities which we required in a philosopher, is a rare plant which is seldom seen

among men.

Rare indeed.

491a

And what numberless and powerful causes tend to destroy these rare natures!

What causes?

In the first place there are their own virtues, their courage, temperance, and the rest of them, every one of which praise worthy qualities (and this is a most singular circumstance) destroys and distracts from philosophy the soul which is the possessor of them.

That is very singular, he replied.

491b

Then there are all the ordinary goods of life — beauty, wealth, strength, rank, and great connections in the State — you understand the sort of things — these also have a corrupting and distracting effect.

I understand; but I should like to know more precisely what you mean about them.

491c

Grasp the truth as a whole, I said, and in the right way; you will then have no difficulty in apprehending the preceding remarks, and they will no longer appear strange to you.

And how am I to do so? he asked.

Why, I said, we know that all germs or seeds, whether vegetable or animal, when they fail to meet with proper nutriment or climate or soil, in proportion to their vigour, are all the more sensitive to the want of a suitable environment, for evil is a greater enemy to what is good than what is not.

491d

Very true.

There is reason in supposing that the finest natures, when under alien conditions, receive more injury than the inferior, because the contrast is greater.

Certainly.

And may we not say, Adeimantus, that the most gifted minds, when they are ill-educated, become pre-eminently bad? Do not great crimes and the spirit of pure evil spring out of a fulness of nature ruined by education rather than from any inferiority, whereas weak natures are scarcely capable of any very great good or very great evil?

491e

There I think that you are right.

And our philosopher follows the same analogy—he is like a plant which, having proper nurture, must necessarily grow and mature into all virtue, but, if sown and planted in an alien soil, becomes the most noxious of all weeds, unless he be preserved by some divine power. Do you really think, as people so often say, that our youth are corrupted by Sophists, or that private teachers of the art corrupt them in any degree worth speaking of? Are not the public who say these things the greatest of all Sophists? And do they not educate to perfection young and old, men and women alike, and fashion them after their own hearts?

492b

When is this accomplished? he said.

492c

When they meet together, and the world sits down at an assembly, or in a court of law, or a theatre, or a camp, or in any other popular resort, and there is a great uproar, and they praise some things which are being said or done, and blame other things, equally exaggerating both, shouting and clapping their hands, and the echo of the rocks and the place in which they are assembled redoubles the sound of the praise or blame

— at such a time will not a young man's heart, as they say, leap within him? Will any private training enable him to stand firm against the overwhelming flood of popular opinion? or will he be carried away by the stream? Will he not have the notions of good and evil which the public in general have — he will do as they do, and as they are, such will he be?

Yes, Socrates; necessity will compel him.

And yet, I said, there is a still greater necessity, which has not been mentioned.

What is that?

492d

The gentle force of attainder or confiscation or death which, as you are aware, these new Sophists and educators who are the public, apply when their words are powerless.

Indeed they do; and in right good earnest.

Now what opinion of any other Sophist, or of any private person, can be expected to overcome in such an unequal contest?

None, he replied.

492e

No, indeed, I said, even to make the attempt is a great piece of folly; there neither is, nor has been, nor is ever likely to be, any different type of character which has had no other training in virtue but that which is supplied by public opinion — I speak, my friend, of human virtue only; what is more than human, as the proverb says, is not included: for I would not have you ignorant that, in the present evil state of governments, whatever is saved and comes to good is saved by the power of God, as we may truly say.

I quite assent, he replied.

Then let me crave your assent also to a further observation.

What are you going to say?

493b

Why, that all those mercenary individuals, whom the many call Sophists and whom they deem to be their adversaries, do, in fact, teach nothing but the opinion of the many, that is to say, the opinions of their assemblies; and this is their wisdom. I might compare them to a man who should study the tempers and desires of a mighty strong beast who is fed by him—he would learn how to approach and handle him, also at what times and from what causes he is dangerous or the reverse, and what is the meaning of his several cries, and by what sounds, when another utters them, he is soothed or infuriated; and you may suppose further, that when, by continually attending upon him, he has become perfect in all this, he calls his knowledge wisdom, and makes of it a system or art, which he proceeds to teach, although he has no real notion of what he means by the principles or passions of which he is speaking, but calls this honourable and that dishonourable, or good or evil, or just or unjust, all in accordance with the tastes and tempers of the great brute. Good he pronounces to be that in which the beast delights and evil to be that which he dislikes; and he can give no other account of them except that the just and noble are the necessary, having never himself seen, and having no power of explaining to others the nature of either, or the difference between them, which is immense. By heaven, would not such an one be a rare educator?

493c

Indeed, he would.

493d

And in what way does he who thinks that wisdom is the discernment of the tempers and tastes of the motley multitude, whether in painting or music, or, finally, in politics, differ from

him whom I have been describing? For when a man consorts with the many, and exhibits to them his poem or other work of art or the service which he has done the State, making them his judges when he is not obliged, the so-called necessity of Diomede will oblige him to produce whatever they praise. And yet the reasons are utterly ludicrous which they give in confirmation of their own notions about the honourable and good. Did you ever hear any of them which were not?

No, nor am I likely to hear.

493e

You recognise the truth of what I have been saying? Then let me ask you to consider further whether the world will ever be induced to believe in the existence of absolute beauty rather than of the many beautiful, or of the absolute in each kind rather than of the many in each kind?

Certainly not.

Then the world cannot possibly be a philosopher?

Impossible.

And therefore philosophers must inevitably fall under the censure of the world?

They must.

And of individuals who consort with the mob and seek to please them?

That is evident.

494a

Then, do you see any way in which the philosopher can be preserved in his calling to the end? and remember what we were saying of him, that he was to have quickness and memory and courage and magnificence — these were admitted by us to be the true philosopher's gifts.

Yes.

Will not such an one from his early childhood be in all things first among all, especially if his bodily endowments are like his mental ones?

Certainly, he said.

And his friends and fellow-citizens will want to use him as he gets older for their own purposes?

494b

No question.

Falling at his feet, they will make requests to him and do him honour and flatter him, because they want to get into their hands now, the power which he will one day possess.

That often happens, he said.

494c

And what will a man such as he be likely to do under such circumstances, especially if he be a citizen of a great city, rich and noble, and a tall proper youth? Will he not be full of boundless aspirations, and fancy himself able to manage the affairs of Hellenes and of barbarians, and having got such notions into his head will he not dilate and elevate himself in the fulness of vain pomp and senseless pride?

To be sure he will.

494d

Now, when he is in this state of mind, if some one gently comes to him and tells him that he is a fool and must get understanding, which can only be got by slaving for it, do you think that, under such adverse circumstances, he will be easily induced to listen?

Far otherwise.

494e

And even if there be some one who through inherent goodness or natural reasonableness has had his eyes opened a little and is humbled and taken captive by philosophy, how will his friends behave when they think that they are likely to lose the advantage which they were hoping to reap from his companionship? Will they not do and say anything to prevent him from yielding to his better nature and to render his teacher powerless, using to this end private intrigues as well as public prosecutions?

There can be no doubt of it.

495a

And how can one who is thus circumstanced ever become a philosopher?

Impossible.

Then were we not right in saying that even the very qualities which make a man a philosopher may, if he be ill-educated, divert him from philosophy, no less than riches and their accompaniments and the other so-called goods of life?

We were quite right.

495b

Thus, my excellent friend, is brought about all that ruin and failure which I have been describing of the natures best adapted to the best of all pursuits; they are natures which we maintain to be rare at any time; this being the class out of which come the men who are the authors of the greatest evil to States and individuals; and also of the greatest good when the tide carries them in that direction; but a small man never was the doer of any great thing either to individuals or to States.

That is most true, he said.

495c

And so philosophy is left desolate, with her marriage rite incomplete: for her own have fallen away and forsaken her, and

while they are leading a false and unbecoming life, other unworthy persons, seeing that she has no kinsmen to be her protectors, enter in and dishonour her; and fasten upon her the reproaches which, as you say, her reprovers utter, who affirm of her votaries that some are good for nothing, and that the greater number deserve the severest punishment.

495d

That is certainly what people say.

Yes; and what else would you expect, I said, when you think of the puny creatures who, seeing this land open to them — a land well stocked with fair names and showy titles — like prisoners running out of prison into a sanctuary, take a leap out of their trades into philosophy; those who do so being probably the cleverest hands at their own miserable crafts? For, although philosophy be in this evil case, still there remains a dignity about her which is not to be found in the arts. And many are thus attracted by her whose natures are imperfect and whose souls are maimed and disfigured by their meannesses, as their bodies are by their trades and crafts. Is not this unavoidable?

495e

Yes.

Are they not exactly like a bald little tinker who has just got out of durance and come into a fortune; he takes a bath and puts on a new coat, and is decked out as a bridegroom going to marry his master's daughter, who is left poor and desolate?

A most exact parallel.

496a

What will be the issue of such marriages? Will they not be vile and bastard?

There can be no question of it.

And when persons who are unworthy of education approach philosophy and make an alliance with her who is a rank above

them what sort of ideas and opinions are likely to be generated? Will they not be sophisms captivating to the ear, having nothing in them genuine, or worthy of or akin to true wisdom?

No doubt, he said.

496c

Then, Adeimantus, I said, the worthy disciples of philosophy will be but a small remnant: perchance some noble and well-educated person, detained by exile in her service, who in the absence of corrupting influences remains devoted to her; or some lofty soul born in a mean city, the politics of which he contemns and neglects; and there may be a gifted few who leave the arts, which they justly despise, and come to her; — or peradventure there are some who are restrained by our friend Theages' bridle; for everything in the life of Theages conspired to divert him from philosophy; but ill-health kept him away from politics. My own case of the internal sign is hardly worth mentioning, for rarely, if ever, has such a monitor been given to any other man. Those who belong to this small class have tasted how sweet and blessed a possession philosophy is, and have also seen enough of the madness of the multitude; and they know that no politician is honest, nor is there any champion of justice at whose side they may fight and be saved. Such an one may be compared to a man who has fallen among wild beasts — he will not join in the wickedness of his fellows, but neither is he able singly to resist all their fierce natures, and therefore seeing that he would be of no use to the State or to his friends, and reflecting that he would have to throw away his life without doing any good either to himself or others, he holds his peace, and goes his own way. He is like one who, in the storm of dust and sleet which the driving wind hurries along, retires under the shelter of a wall; and seeing the rest of mankind full of wickedness, he is content, if only he can live his own life and be pure from evil or unrighteousness, and depart in peace and

good-will, with bright hopes.

496d

Yes, he said, and he will have done a great work before he departs.

496e

A great work — yes; but not the greatest, unless he find a State suitable to him; for in a State which is suitable to him, he will have a larger growth and be the saviour of his country, as well as of himself.

The causes why philosophy is in such an evil name have now been sufficiently explained: the injustice of the charges against her has been shown—is there anything more which you wish to say?

497a

Nothing more on that subject, he replied; but I should like to know which of the governments now existing is in your opinion the one adapted to her.

Not any of them, I said; and that is precisely the accusation which I bring against them — not one of them is worthy of the philosophic nature, and hence that nature is warped and estranged; — as the exotic seed which is sown in a foreign land becomes denaturalized, and is wont to be overpowered and to lose itself in the new soil, even so this growth of philosophy, instead of persisting, degenerates and receives another character. But if philosophy ever finds in the State that perfection which she herself is, then will be seen that she is in truth divine, and that all other things, whether natures of men or institutions, are but human; — and now, I know that you are going to ask, what that State is.

497c

No, he said; there you are wrong, for I was going to ask another question — whether it is the State of which we are the founders and inventors, or some other?

497d

Yes, I replied, ours in most respects; but you may remember my saying before, that some living authority would always be required in the State having the same idea of the constitution which guided you when as legislator you were laying down the laws.

That was said, he replied.

Yes, but not in a satisfactory manner; you frightened us by interposing objections, which certainly showed that the discussion would be long and difficult; and what still remains is the reverse of easy.

What is there remaining?

497e

The question how the study of philosophy may be so ordered as not to be the ruin of the State: All great attempts are attended with risk; 'hard is the good,' as men say.

Still, he said, let the point be cleared up, and the enquiry will then be complete.

498a

I shall not be hindered, I said, by any want of will, but, if at all, by a want of power: my zeal you may see for yourselves; and please to remark in what I am about to say how boldly and unhesitatingly I declare that States should pursue philosophy, not as they do now, but in a different spirit.

In what manner?

At present, I said, the students of philosophy are quite young; beginning when they are hardly past childhood, they devote only the time saved from moneymaking and housekeeping to such pursuits; and even those of them who are reputed to have most of the philosophic spirit, when they come within sight of the great difficulty of the subject, I mean dialectic, take themselves off. In after life when invited by some one else, they

may, perhaps, go and hear a lecture, and about this they make much ado, for philosophy is not considered by them to be their proper business: at last, when they grow old, in most cases they are extinguished more truly than Heracleitus' sun, inasmuch as they never light up again.

498b

But what ought to be their course?

498c

Just the opposite. In childhood and youth their study, and what philosophy they learn, should be suited to their tender years: during this period while they are growing up towards manhood, the chief and special care should be given to their bodies that they may have them to use in the service of philosophy; as life advances and the intellect begins to mature, let them increase the gymnastics of the soul; but when the strength of our citizens fails and is past civil and military duties, then let them range at will and engage in no serious labour, as we intend them to live happily here, and to crown this life with a similar happiness in another.

498d

How truly in earnest you are, Socrates! he said; I am sure of that; and yet most of your hearers, if I am not mistaken, are likely to be still more earnest in their opposition to you, and will never be convinced; Thrasymachus least of all.

Do not make a quarrel, I said, between Thrasymachus and me, who have recently become friends, although, indeed, we were never enemies; for I shall go on striving to the utmost until I either convert him and other men, or do something which may profit them against the day when they live again, and hold the like discourse in another state of existence.

498e

You are speaking of a time which is not very near.

Rather, I replied, of a time which is as nothing in comparison with eternity. Nevertheless, I do not wonder that the many refuse to believe; for they have never seen that of which we are now speaking realised; they have seen only a conventional imitation of philosophy, consisting of words artificially brought together, not like these of ours having a natural unity. But a human being who in word and work is perfectly moulded, as far as he can be, into the proportion and likeness of virtue — such a man ruling in a city which bears the same image, they have never yet seen, neither one nor many of them — do you think that they ever did?

499a

No indeed.

No, my friend, and they have seldom, if ever, heard free and noble sentiments; such as men utter when they are earnestly and by every means in their power seeking after truth for the sake of knowledge, while they look coldly on the subtleties of controversy, of which the end is opinion and strife, whether they meet with them in the courts of law or in society.

They are strangers, he said, to the words of which you speak.

499b

And this was what we foresaw, and this was the reason why truth forced us to admit, not without fear and hesitation, that neither cities nor States nor individuals will ever attain perfection until the small class of philosophers whom we termed useless but not corrupt are providentially compelled, whether they will or not, to take care of the State, and until a like necessity be laid on the State to obey them; or until kings, or if not kings, the sons of kings or princes, are divinely inspired with a true love of true philosophy. That either or both of these alternatives are impossible, I see no reason to affirm: if they were so, we might indeed be justly ridiculed as dreamers and visionaries. Am I not right?

Quite right.

499c

If then, in the countless ages of the past, or at the present hour in some foreign clime which is far away and beyond our ken, the perfected philosopher is or has been or hereafter shall be compelled by a superior power to have the charge of the State, we are ready to assert to the death, that this our constitution has been, and is — yea, and will be whenever the Muse of Philosophy is queen. There is no impossibility in all this; that there is a difficulty, we acknowledge ourselves.

My opinion agrees with yours, he said.

But do you mean to say that this is not the opinion of the multitude?

499d

I should imagine not, he replied.

O my friend, I said, do not attack the multitude: they will change their minds, if, not in an aggressive spirit, but gently and with the view of soothing them and removing their dislike of over-education, you show them your philosophers as they really are and describe as you were just now doing their character and profession, and then mankind will see that he of whom you are speaking is not such as they supposed — if they view him in this new light, they will surely change their notion of him, and answer in another strain. Who can be at enmity with one who loves them, who that is himself gentle and free from envy will be jealous of one in whom there is no jealousy? Nay, let me answer for you, that in a few this harsh temper may be found but not in the majority of mankind.

500a

I quite agree with you, he said.

500b

And do you not also think, as I do, that the harsh feeling which the many entertain towards philosophy originates in the pretenders, who rush in uninvited, and are always abusing them, and finding fault with them, who make persons instead of things the theme of their conversation? and nothing can be more unbecoming in philosophers than this.

It is most unbecoming.

500c

For he, Adeimantus, whose mind is fixed upon true being, has surely no time to look down upon the affairs of earth, or to be filled with malice and envy, contending against men; his eye is ever directed towards things fixed and immutable, which he sees neither injuring nor injured by one another, but all in order moving according to reason; these he imitates, and to these he will, as far as he can, conform himself. Can a man help imitating that with which he holds reverential converse?

Impossible.

And the philosopher holding converse with the divine order, becomes orderly and divine, as far as the nature of man allows; but like every one else, he will suffer from detraction.

500d

Of course.

And if a necessity be laid upon him of fashioning, not only himself, but human nature generally, whether in States or individuals, into that which he beholds elsewhere, will he, think you, be an unskilful artificer of justice, temperance, and every civil virtue?

500e

Anything but unskilful.

And if the world perceives that what we are saying about him is the truth, will they be angry with philosophy? Will they disbelieve us, when we tell them that no State can be happy

which is not designed by artists who imitate the heavenly pattern?

They will not be angry if they understand, he said. But how will they draw out the plan of which you are speaking?

501b

They will begin by taking the State and the manners of men, from which, as from a tablet, they will rub out the picture, and leave a clean surface. This is no easy task. But whether easy or not, herein will lie the difference between them and every other legislator, — they will have nothing to do either with individual or State, and will inscribe no laws, until they have either found, or themselves made, a clean surface.

They will be very right, he said.

Having effected this, they will proceed to trace an outline of the constitution?

501c

No doubt.

And when they are filling in the work, as I conceive, they will often turn their eyes upwards and downwards: I mean that they will first look at absolute justice and beauty and temperance, and again at the human copy; and will mingle and temper the various elements of life into the image of a man; and thus they will conceive according to that other image, which, when existing among men, Homer calls the form and likeness of God.

Very true, he said.

501d

And one feature they will erase, and another they will put in, they have made the ways of men, as far as possible, agreeable to the ways of God?

Indeed, he said, in no way could they make a fairer picture.

501e

And now, I said, are we beginning to persuade those whom you described as rushing at us with might and main, that the painter of constitutions is such an one as we are praising; at whom they were so very indignant because to his hands we committed the State; and are they growing a little calmer at what they have just heard?

Much calmer, if there is any sense in them.

Why, where can they still find any ground for objection? Will they doubt that the philosopher is a lover of truth and being?

They would not be so unreasonable.

Or that his nature, being such as we have delineated, is akin to the highest good?

Neither can they doubt this.

But again, will they tell us that such a nature, placed under favourable circumstances, will not be perfectly good and wise if any ever was? Or will they prefer those whom we have rejected?

502a

Surely not.

Then will they still be angry at our saying, that, until philosophers bear rule, States and individuals will have no rest from evil, nor will this our imaginary State ever be realised?

I think that they will be less angry.

Shall we assume that they are not only less angry but quite gentle, and that they have been converted and for very shame, if for no other reason, cannot refuse to come to terms?

502b

By all means, he said.

Then let us suppose that the reconciliation has been effected. Will any one deny the other point, that there may be sons of kings or princes who are by nature philosophers?

Surely no man, he said.

And when they have come into being will any one say that they must of necessity be destroyed; that they can hardly be saved is not denied even by us; but that in the whole course of ages no single one of them can escape — who will venture to affirm this?

502c

Who indeed!

But, said I, one is enough; let there be one man who has a city obedient to his will, and he might bring into existence the ideal polity about which the world is so incredulous.

Yes, one is enough.

The ruler may impose the laws and institutions which we have been describing, and the citizens may possibly be willing to obey them?

Certainly.

And that others should approve of what we approve, is no miracle or impossibility?

502d

I think not.

But we have sufficiently shown, in what has preceded, that all this, if only possible, is assuredly for the best.

We have.

And now we say not only that our laws, if they could be enacted, would be for the best, but also that the enactment of them, though difficult, is not impossible.

502e

Very good.

And so with pain and toil we have reached the end of one subject, but more remains to be discussed; — how and by what

studies and pursuits will the saviours of the constitution be created, and at what ages are they to apply themselves to their several studies?

Certainly.

I omitted the troublesome business of the possession of women, and the procreation of children, and the appointment of the rulers, because I knew that the perfect State would be eyed with jealousy and was difficult of attainment; but that piece of cleverness was not of much service to me, for I had to discuss them all the same. The women and children are now disposed of, but the other question of the rulers must be investigated from the very beginning. We were saying, as you will remember, that they were to be lovers of their country, tried by the test of pleasures and pains, and neither in hardships, nor in dangers, nor at any other critical moment were to lose their patriotism — he was to be rejected who failed, but he who always came forth pure, like gold tried in the refiner's fire, was to be made a ruler, and to receive honours and rewards in life and after death. This was the sort of thing which was being said, and then the argument turned aside and veiled her face; not liking to stir the question which has now arisen.

503b

I perfectly remember, he said.

Yes, my friend, I said, and I then shrank from hazarding the bold word; but now let me dare to say — that the perfect guardian must be a philosopher.

Yes, he said, let that be affirmed.

503c

And do not suppose that there will be many of them; for the gifts which were deemed by us to be essential rarely grow together; they are mostly found in shreds and patches.

What do you mean? he said.

503d

You are aware, I replied, that quick intelligence, memory, sagacity, cleverness, and similar qualities, do not often grow together, and that persons who possess them and are at the same time high-spirited and magnanimous are not so constituted by nature as to live orderly and in a peaceful and settled manner; they are driven any way by their impulses, and all solid principle goes out of them.

Very true, he said.

On the other hand, those steadfast natures which can better be depended upon, which in a battle are impregnable to fear and immovable, are equally immovable when there is anything to be learned; they are always in a torpid state, and are apt to yawn and go to sleep over any intellectual toil.

Quite true.

503e

And yet we were saying that both qualities were necessary in those to whom the higher education is to be imparted, and who are to share in any office or command.

Certainly, he said.

And will they be a class which is rarely found?

Yes, indeed.

504a

Then the aspirant must not only be tested in those labours and dangers and pleasures which we mentioned before, but there is another kind of probation which we did not mention — he must be exercised also in many kinds of knowledge, to see whether the soul will be able to endure the highest of all, will faint under them, as in any other studies and exercises.

Yes, he said, you are quite right in testing him. But what do you mean by the highest of all knowledge?

You may remember, I said, that we divided the soul into three parts; and distinguished the several natures of justice, temperance, courage, and wisdom?

504b

Indeed, he said, if I had forgotten, I should not deserve to hear more.

And do you remember the word of caution which preceded the discussion of them?

To what do you refer?

We were saying, if I am not mistaken, that he who wanted to see them in their perfect beauty must take a longer and more circuitous way, at the end of which they would appear; but that we could add on a popular exposition of them on a level with the discussion which had preceded. And you replied that such an exposition would be enough for you, and so the enquiry was continued in what to me seemed to be a very inaccurate manner; whether you were satisfied or not, it is for you to say.

504c

Yes, he said, I thought and the others thought that you gave us a fair measure of truth.

But, my friend, I said, a measure of such things Which in any degree falls short of the whole truth is not fair measure; for nothing imperfect is the measure of anything, although persons are too apt to be contented and think that they need search no further.

504d

Not an uncommon case when people are indolent.

Yes, I said; and there cannot be any worse fault in a guardian of the

State and of the laws.

True.

The guardian then, I said, must be required to take the longer circuit, and toll at learning as well as at gymnastics, or he will never reach the highest knowledge of all which, as we were just now saying, is his proper calling.

What, he said, is there a knowledge still higher than this — higher than justice and the other virtues?

Yes, I said, there is. And of the virtues too we must behold not the outline merely, as at present — nothing short of the most finished picture should satisfy us. When little things are elaborated with an infinity of pains, in order that they may appear in their full beauty and utmost clearness, how ridiculous that we should not think the highest truths worthy of attaining the highest accuracy!

504e

A right noble thought; but do you suppose that we shall refrain from asking you what is this highest knowledge?

Nay, I said, ask if you will; but I am certain that you have heard the answer many times, and now you either do not understand me or, as I rather think, you are disposed to be troublesome; for you have of been told that the idea of good is the highest knowledge, and that all other things become useful and advantageous only by their use of this. You can hardly be ignorant that of this I was about to speak, concerning which, as you have often heard me say, we know so little; and, without which, any other knowledge or possession of any kind will profit us nothing. Do you think that the possession of all other things is of any value if we do not possess the good? or the knowledge of all other things if we have no knowledge of beauty and goodness?

505b

Assuredly not.

You are further aware that most people affirm pleasure to be the good, but the finer sort of wits say it is knowledge Yes.

And you are aware too that the latter cannot explain what they mean by knowledge, but are obliged after all to say knowledge of the good?

How ridiculous!

Yes, I said, that they should begin by reproaching us with our ignorance of the good, and then presume our knowledge of it — for the good they define to be knowledge of the good, just as if we understood them when they use the term ‘good’ — this is of course ridiculous.

505c

Most true, he said.

And those who make pleasure their good are in equal perplexity; for they are compelled to admit that there are bad pleasures as well as good.

Certainly.

And therefore to acknowledge that bad and good are the same?

True.

505d

There can be no doubt about the numerous difficulties in which this question is involved.

There can be none.

Further, do we not see that many are willing to do or to have or to seem to be what is just and honourable without the reality; but no one is satisfied with the appearance of good — the reality is what they seek; in the case of the good, appearance is despised by every one.

505e

Very true, he said.

Of this then, which every soul of man pursues and makes the end of all his actions, having a presentiment that there is such an end, and yet hesitating because neither knowing the nature nor having the same assurance of this as of other things, and therefore losing whatever good there is in other things, — of a principle such and so great as this ought the best men in our State, to whom everything is entrusted, to be in the darkness of ignorance?

506a

Certainly not, he said.

I am sure, I said, that he who does not know now the beautiful and the just are likewise good will be but a sorry guardian of them; and I suspect that no one who is ignorant of the good will have a true knowledge of them.

That, he said, is a shrewd suspicion of yours.

506b

And if we only have a guardian who has this knowledge our State will be perfectly ordered?

Of course, he replied; but I wish that you would tell me whether you conceive this supreme principle of the good to be knowledge or pleasure, or different from either.

Aye, I said, I knew all along that a fastidious gentleman like you would not be contented with the thoughts of other people about these matters.

True, Socrates; but I must say that one who like you has passed a lifetime in the study of philosophy should not be always repeating the opinions of others, and never telling his own.

506c

Well, but has any one a right to say positively what he does not know?

Not, he said, with the assurance of positive certainty; he has no right to do that: but he may say what he thinks, as a matter of opinion.

And do you not know, I said, that all mere opinions are bad, and the best of them blind? You would not deny that those who have any true notion without intelligence are only like blind men who feel their way along the road?

506d

Very true.

And do you wish to behold what is blind and crooked and base, when others will tell you of brightness and beauty?

Glaucou - Socrates Still, I must implore you, Socrates, said Glaucou, not to turn away just as you are reaching the goal; if you will only give such an explanation of the good as you have already given of justice and temperance and the other virtues, we shall be satisfied.

Yes, my friend, and I shall be at least equally satisfied, but I cannot help fearing that I shall fall, and that my indiscreet zeal will bring ridicule upon me. No, sweet sirs, let us not at present ask what is the actual nature of the good, for to reach what is now in my thoughts would be an effort too great for me. But of the child of the good who is likest him, I would fain speak, if I could be sure that you wished to hear — otherwise, not.

506e

By all means, he said, tell us about the child, and you shall remain in our debt for the account of the parent.

507a

I do indeed wish, I replied, that I could pay, and you receive, the account of the parent, and not, as now, of the offspring only; take, however, this latter by way of interest, and at the same time have a care that i do not render a false account, although I have no intention of deceiving you.

507b

Yes, we will take all the care that we can; proceed.

Yes, I said, but I must first come to an understanding with you, and remind you of what I have mentioned in the course of this discussion, and at many other times.

What?

The old story, that there is a many beautiful and a many good, and so of other things which we describe and define; to all of them 'many' is applied.

True, he said.

And there is an absolute beauty and an absolute good, and of other things to which the term 'many' is applied there is an absolute; for they may be brought under a single idea, which is called the essence of each.

Very true.

The many, as we say, are seen but not known, and the ideas are known but not seen.

507c

Exactly.

And what is the organ with which we see the visible things?

The sight, he said.

And with the hearing, I said, we hear, and with the other senses perceive the other objects of sense?

True.

But have you remarked that sight is by far the most costly and complex piece of workmanship which the artificer of the senses ever contrived?

No, I never have, he said.

Then reflect; has the ear or voice need of any third or additional nature in order that the one may be able to hear and the other to be heard?

Nothing of the sort.

507d

No, indeed, I replied; and the same is true of most, if not all, the other senses — you would not say that any of them requires such an addition?

Certainly not.

But you see that without the addition of some other nature there is no seeing or being seen?

How do you mean?

Sight being, as I conceive, in the eyes, and he who has eyes wanting to see; colour being also present in them, still unless there be a third nature specially adapted to the purpose, the owner of the eyes will see nothing and the colours will be invisible.

Of what nature are you speaking?

Of that which you term light, I replied.

True, he said.

507e

Noble, then, is the bond which links together sight and visibility, and great beyond other bonds by no small difference of nature; for light is their bond, and light is no ignoble thing?

Nay, he said, the reverse of ignoble.

508a

And which, I said, of the gods in heaven would you say was the lord of this element? Whose is that light which makes the eye to see perfectly and the visible to appear?

You mean the sun, as you and all mankind say.

May not the relation of sight to this deity be described as follows?

How?

Neither sight nor the eye in which sight resides is the sun?

No.

Yet of all the organs of sense the eye is the most like the sun?

By far the most like.

508b

And the power which the eye possesses is a sort of effluence which is dispensed from the sun?

Exactly.

Then the sun is not sight, but the author of sight who is recognised by sight.

True, he said.

508c

And this is he whom I call the child of the good, whom the good begat in his own likeness, to be in the visible world, in relation to sight and the things of sight, what the good is in the intellectual world in relation to mind and the things of mind.

Will you be a little more explicit? he said.

Why, you know, I said, that the eyes, when a person directs them towards objects on which the light of day is no longer shining, but the moon and stars only, see dimly, and are nearly blind; they seem to have no clearness of vision in them?

Very true.

But when they are directed towards objects on which the sun shines, they see clearly and there is sight in them?

508d

Certainly.

And the soul is like the eye: when resting upon that on which truth and being shine, the soul perceives and understands and is radiant with intelligence; but when turned towards the twilight of becoming and perishing, then she has opinion only, and goes blinking about, and is first of one opinion and then of another, and seems to have no intelligence?

Just so.

508e

Now, that which imparts truth to the known and the power of knowing to the knower is what I would have you term the idea of good, and this you will deem to be the cause of science, and of truth in so far as the latter becomes the subject of knowledge; beautiful too, as are both truth and knowledge, you will be right in esteeming this other nature as more beautiful than either; and, as in the previous instance, light and sight may be truly said to be like the sun, and yet not to be the sun, so in this other sphere, science and truth may be deemed to be like the good, but not the good; the good has a place of honour yet higher.

509a

What a wonder of beauty that must be, he said, which is the author of science and truth, and yet surpasses them in beauty; for you surely cannot mean to say that pleasure is the good?

God forbid, I replied; but may I ask you to consider the image in another point of view?

In what point of view?

You would say, would you not, that the sun is only the author of visibility in all visible things, but of generation and nourishment and growth, though he himself is not generation?

509b

Certainly.

In like manner the good may be said to be not only the author of knowledge to all things known, but of their being and essence, and yet the good is not essence, but far exceeds essence in dignity and power.

Glaucon said, with a ludicrous earnestness: By the light of heaven, how amazing!

Yes, I said, and the exaggeration may be set down to you; for you made me utter my fancies.

509c

And pray continue to utter them; at any rate let us hear if there is anything more to be said about the similitude of the sun.

Yes, I said, there is a great deal more.

Then omit nothing, however slight.

I will do my best, I said; but I should think that a great deal will have to be omitted.

You have to imagine, then, that there are two ruling powers, and that one of them is set over the intellectual world, the other over the visible. I do not say heaven, lest you should fancy that I am playing upon the name ('ourhanoz, orhatoz'). May I suppose that you have this distinction of the visible and intelligible fixed in your mind?

509d

I have.

509e

Now take a line which has been cut into two unequal parts, and divide each of them again in the same proportion, and suppose the two main divisions to answer, one to the visible and the other to the intelligible, and then compare the subdivisions in respect of their clearness and want of clearness, and you will find that the first section in the sphere of the visible consists of images. And by images I mean, in the first place, shadows, and

in the second place, reflections in water and in solid, smooth and polished bodies and the like: Do you understand?

Yes, I understand.

Imagine, now, the other section, of which this is only the resemblance, to include the animals which we see, and everything that grows or is made.

510a

Very good.

Would you not admit that both the sections of this division have different degrees of truth, and that the copy is to the original as the sphere of opinion is to the sphere of knowledge?

Most undoubtedly.

Next proceed to consider the manner in which the sphere of the intellectual is to be divided.

In what manner?

510b

Thus: — There are two subdivisions, in the lower of which the soul uses the figures given by the former division as images; the enquiry can only be hypothetical, and instead of going upwards to a principle descends to the other end; in the higher of the two, the soul passes out of hypotheses, and goes up to a principle which is above hypotheses, making no use of images as in the former case, but proceeding only in and through the ideas themselves.

I do not quite understand your meaning, he said.

510c

Then I will try again; you will understand me better when I have made some preliminary remarks. You are aware that students of geometry, arithmetic, and the kindred sciences assume the odd and the even and the figures and three kinds of angles and the like in their several branches of science; these are their

hypotheses, which they and everybody are supposed to know, and therefore they do not deign to give any account of them either to themselves or others; but they begin with them, and go on until they arrive at last, and in a consistent manner, at their conclusion?

Yes, he said, I know.

510d

And do you not know also that although they make use of the visible forms and reason about them, they are thinking not of these, but of the ideals which they resemble; not of the figures which they draw, but of the absolute square and the absolute diameter, and so on — the forms which they draw or make, and which have shadows and reflections in water of their own, are converted by them into images, but they are really seeking to behold the things themselves, which can only be seen with the eye of the mind?

That is true.

510e

And of this kind I spoke as the intelligible, although in the search after it the soul is compelled to use hypotheses; not ascending to a first principle, because she is unable to rise above the region of hypothesis, but employing the objects of which the shadows below are resemblances in their turn as images, they having in relation to the shadows and reflections of them a greater distinctness, and therefore a higher value.

511a

I understand, he said, that you are speaking of the province of geometry and the sister arts.

511b

And when I speak of the other division of the intelligible, you will understand me to speak of that other sort of knowledge which reason herself attains by the power of dialectic, using the hypotheses not as first principles, but only as hypotheses — that

is to say, as steps and points of departure into a world which is above hypotheses, in order that she may soar beyond them to the first principle of the whole; and clinging to this and then to that which depends on this, by successive steps she descends again without the aid of any sensible object, from ideas, through ideas, and in ideas she ends.

511c

I understand you, he replied; not perfectly, for you seem to me to be describing a task which is really tremendous; but, at any rate, I understand you to say that knowledge and being, which the science of dialectic contemplates, are clearer than the notions of the arts, as they are termed, which proceed from hypotheses only: these are also contemplated by the understanding, and not by the senses: yet, because they start from hypotheses and do not ascend to a principle, those who contemplate them appear to you not to exercise the higher reason upon them, although when a first principle is added to them they are cognizable by the higher reason. And the habit which is concerned with geometry and the cognate sciences I suppose that you would term understanding and not reason, as being intermediate between opinion and reason.

511e

You have quite conceived my meaning, I said; and now, corresponding to these four divisions, let there be four faculties in the soul-reason answering to the highest, understanding to the second, faith (or conviction) to the third, and perception of shadows to the last-and let there be a scale of them, and let us suppose that the several faculties have clearness in the same degree that their objects have truth.

I understand, he replied, and give my assent, and accept your arrangement.

BOOK VII

514a

Socrates - Glaucon ^{514b} And now, I said, let me show in a figure how far our nature is enlightened or unenlightened: — Behold! human beings living in a underground den, which has a mouth open towards the light and reaching all along the den; here they have been from their childhood, and have their legs and necks chained so that they cannot move, and can only see before them, being prevented by the chains from turning round their heads. Above and behind them a fire is blazing at a distance, and between the fire and the prisoners there is a raised way; and you will see, if you look, a low wall built along the way, like the screen which marionette players have in front of them, over which they show the puppets.

514b

I see.

514c

And do you see, I said, men passing along the wall carrying all sorts of vessels, and statues and figures of animals made of wood and stone and various materials, which appear over the wall? Some of them are talking, others silent.

515a

You have shown me a strange image, and they are strange prisoners.

Like ourselves, I replied; and they see only their own shadows, or the shadows of one another, which the fire throws on the opposite wall of the cave?

True, he said; how could they see anything but the shadows if they were never allowed to move their heads?

515b

And of the objects which are being carried in like manner they would only see the shadows?

Yes, he said.

And if they were able to converse with one another, would they not suppose that they were naming what was actually before them?

Very true.

And suppose further that the prison had an echo which came from the other side, would they not be sure to fancy when one of the passers-by spoke that the voice which they heard came from the passing shadow?

No question, he replied.

515c

To them, I said, the truth would be literally nothing but the shadows of the images.

That is certain.

515d

And now look again, and see what will naturally follow it' the prisoners are released and disabused of their error. At first, when any of them is liberated and compelled suddenly to stand up and turn his neck round and walk and look towards the light, he will suffer sharp pains; the glare will distress him, and he will be unable to see the realities of which in his former state he had seen the shadows; and then conceive some one saying to him, that what he saw before was an illusion, but that now, when he is approaching nearer to being and his eye is turned towards more real existence, he has a clearer vision, what will be his reply? And you may further imagine that his instructor is pointing to the objects as they pass and requiring him to name them, — will he not be perplexed? Will he not fancy that the shadows which he formerly saw are truer than the objects which are now shown to him?

515e

Far truer.

And if he is compelled to look straight at the light, will he not have a pain in his eyes which will make him turn away to take and take in the objects of vision which he can see, and which he will conceive to be in reality clearer than the things which are now being shown to him?

516a

True, he now And suppose once more, that he is reluctantly dragged up a steep and rugged ascent, and held fast until he's forced into the presence of the sun himself, is he not likely to be pained and irritated? When he approaches the light his eyes will be dazzled, and he will not be able to see anything at all of what are now called realities.

Not all in a moment, he said.

He will require to grow accustomed to the sight of the upper world. And first he will see the shadows best, next the reflections of men and other objects in the water, and then the objects themselves; then he will gaze upon the light of the moon and the stars and the spangled heaven; and he will see the sky and the stars by night better than the sun or the light of the sun by day?

516b

Certainly.

Last of he will be able to see the sun, and not mere reflections of him in the water, but he will see him in his own proper place, and not in another; and he will contemplate him as he is.

Certainly.

He will then proceed to argue that this is he who gives the season and the years, and is the guardian of all that is in the visible world, and in a certain way the cause of all things which he and his fellows have been accustomed to behold?

516c

Clearly, he said, he would first see the sun and then reason about him.

And when he remembered his old habitation, and the wisdom of the den and his fellow-prisoners, do you not suppose that he would felicitate himself on the change, and pity them?

516d

Certainly, he would.

And if they were in the habit of conferring honours among themselves on those who were quickest to observe the passing shadows and to remark which of them went before, and which followed after, and which were together; and who were therefore best able to draw conclusions as to the future, do you think that he would care for such honours and glories, or envy the possessors of them? Would he not say with Homer, Better to be the poor servant of a poor master, and to endure anything, rather than think as they do and live after their manner?

516e

Yes, he said, I think that he would rather suffer anything than entertain these false notions and live in this miserable manner.

Imagine once more, I said, such an one coming suddenly out of the sun to be replaced in his old situation; would he not be certain to have his eyes full of darkness?

To be sure, he said.

517a

And if there were a contest, and he had to compete in measuring the shadows with the prisoners who had never moved out of the den, while his sight was still weak, and before his eyes had become steady (and the time which would be needed to acquire this new habit of sight might be very considerable) would he not be ridiculous? Men would say of him that up he went and down he came without his eyes; and that it was better not even to think of ascending; and if any one tried

to loose another and lead him up to the light, let them only catch the offender, and they would put him to death.

517b

No question, he said.

517c

This entire allegory, I said, you may now append, dear Glaucon, to the previous argument; the prison-house is the world of sight, the light of the fire is the sun, and you will not misapprehend me if you interpret the journey upwards to be the ascent of the soul into the intellectual world according to my poor belief, which, at your desire, I have expressed whether rightly or wrongly God knows. But, whether true or false, my opinion is that in the world of knowledge the idea of good appears last of all, and is seen only with an effort; and, when seen, is also inferred to be the universal author of all things beautiful and right, parent of light and of the lord of light in this visible world, and the immediate source of reason and truth in the intellectual; and that this is the power upon which he who would act rationally, either in public or private life must have his eye fixed.

517d

I agree, he said, as far as I am able to understand you.

Moreover, I said, you must not wonder that those who attain to this beatific vision are unwilling to descend to human affairs; for their souls are ever hastening into the upper world where they desire to dwell; which desire of theirs is very natural, if our allegory may be trusted.

Yes, very natural.

And is there anything surprising in one who passes from divine contemplations to the evil state of man, misbehaving himself in a ridiculous manner; if, while his eyes are blinking and before he has become accustomed to the surrounding darkness, he is

compelled to fight in courts of law, or in other places, about the images or the shadows of images of justice, and is endeavouring to meet the conceptions of those who have never yet seen absolute justice?

518a

Anything but surprising, he replied.

518b

Any one who has common sense will remember that the bewilderments of the eyes are of two kinds, and arise from two causes, either from coming out of the light or from going into the light, which is true of the mind's eye, quite as much as of the bodily eye; and he who remembers this when he sees any one whose vision is perplexed and weak, will not be too ready to laugh; he will first ask whether that soul of man has come out of the brighter light, and is unable to see because unaccustomed to the dark, or having turned from darkness to the day is dazzled by excess of light. And he will count the one happy in his condition and state of being, and he will pity the other; or, if he have a mind to laugh at the soul which comes from below into the light, there will be more reason in this than in the laugh which greets him who returns from above out of the light into the den.

518c

That, he said, is a very just distinction.

But then, if I am right, certain professors of education must be wrong when they say that they can put a knowledge into the soul which was not there before, like sight into blind eyes.

They undoubtedly say this, he replied.

518d

Whereas, our argument shows that the power and capacity of learning exists in the soul already; and that just as the eye was unable to turn from darkness to light without the whole body, so too the instrument of knowledge can only by the movement

of the whole soul be turned from the world of becoming into that of being, and learn by degrees to endure the sight of being, and of the brightest and best of being, or in other words, of the good.

518e

Very true.

And must there not be some art which will effect conversion in the easiest and quickest manner; not implanting the faculty of sight, for that exists already, but has been turned in the wrong direction, and is looking away from the truth?

519a

Yes, he said, such an art may be presumed.

And whereas the other so-called virtues of the soul seem to be akin to bodily qualities, for even when they are not originally innate they can be implanted later by habit and exercise, the of wisdom more than anything else contains a divine element which always remains, and by this conversion is rendered useful and profitable; or, on the other hand, hurtful and useless. Did you never observe the narrow intelligence flashing from the keen eye of a clever rogue — how eager he is, how clearly his paltry soul sees the way to his end; he is the reverse of blind, but his keen eyesight is forced into the service of evil, and he is mischievous in proportion to his cleverness.

Very true, he said.

519b

But what if there had been a circumcision of such natures in the days of their youth; and they had been severed from those sensual pleasures, such as eating and drinking, which, like leaden weights, were attached to them at their birth, and which drag them down and turn the vision of their souls upon the things that are below — if, I say, they had been released from these impediments and turned in the opposite direction, the

very same faculty in them would have seen the truth as keenly as they see what their eyes are turned to now.

519c

Very likely.

Yes, I said; and there is another thing which is likely, or rather a necessary inference from what has preceded, that neither the uneducated and uninformed of the truth, nor yet those who never make an end of their education, will be able ministers of State; not the former, because they have no single aim of duty which is the rule of all their actions, private as well as public; nor the latter, because they will not act at all except upon compulsion, fancying that they are already dwelling apart in the islands of the blest.

519d

Very true, he replied.

Then, I said, the business of us who are the founders of the State will be to compel the best minds to attain that knowledge which we have already shown to be the greatest of all—they must continue to ascend until they arrive at the good; but when they have ascended and seen enough we must not allow them to do as they do now.

What do you mean?

I mean that they remain in the upper world: but this must not be allowed; they must be made to descend again among the prisoners in the den, and partake of their labours and honours, whether they are worth having or not.

519e

But is not this unjust? he said; ought we to give them a worse life, when they might have a better?

You have again forgotten, my friend, I said, the intention of the legislator, who did not aim at making any one class in the State happy above the rest; the happiness was to be in the whole

State, and he held the citizens together by persuasion and necessity, making them benefactors of the State, and therefore benefactors of one another; to this end he created them, not to please themselves, but to be his instruments in binding up the State.

520a

True, he said, I had forgotten.

520c

Observe, Glaucon, that there will be no injustice in compelling our philosophers to have a care and providence of others; we shall explain to them that in other States, men of their class are not obliged to share in the toils of politics: and this is reasonable, for they grow up at their own sweet will, and the government would rather not have them. Being self-taught, they cannot be expected to show any gratitude for a culture which they have never received. But we have brought you into the world to be rulers of the hive, kings of yourselves and of the other citizens, and have educated you far better and more perfectly than they have been educated, and you are better able to share in the double duty. Wherefore each of you, when his turn comes, must go down to the general underground abode, and get the habit of seeing in the dark. When you have acquired the habit, you will see ten thousand times better than the inhabitants of the den, and you will know what the several images are, and what they represent, because you have seen the beautiful and just and good in their truth. And thus our State which is also yours will be a reality, and not a dream only, and will be administered in a spirit unlike that of other States, in which men fight with one another about shadows only and are distracted in the struggle for power, which in their eyes is a great good. Whereas the truth is that the State in which the rulers are most reluctant to govern is always the best and most quietly governed, and the State in which they are most eager, the worst.

520d

Quite true, he replied.

And will our pupils, when they hear this, refuse to take their turn at the toils of State, when they are allowed to spend the greater part of their time with one another in the heavenly light?

520e

Impossible, he answered; for they are just men, and the commands which we impose upon them are just; there can be no doubt that every one of them will take office as a stern necessity, and not after the fashion of our present rulers of State.

521a

Yes, my friend, I said; and there lies the point. You must contrive for your future rulers another and a better life than that of a ruler, and then you may have a well-ordered State; for only in the State which offers this, will they rule who are truly rich, not in silver and gold, but in virtue and wisdom, which are the true blessings of life. Whereas if they go to the administration of public affairs, poor and hungering after the' own private advantage, thinking that hence they are to snatch the chief good, order there can never be; for they will be fighting about office, and the civil and domestic broils which thus arise will be the ruin of the rulers themselves and of the whole State.

521b

Most true, he replied.

And the only life which looks down upon the life of political ambition is that of true philosophy. Do you know of any other?

Indeed, I do not, he said.

And those who govern ought not to be lovers of the task? For, if they are, there will be rival lovers, and they will fight.

521c

No question.

Who then are those whom we shall compel to be guardians? Surely they will be the men who are wisest about affairs of State, and by whom the State is best administered, and who at the same time have other honours and another and a better life than that of politics?

They are the men, and I will choose them, he replied.

And now shall we consider in what way such guardians will be produced, and how they are to be brought from darkness to light, — as some are said to have ascended from the world below to the gods?

521d

By all means, he replied.

521e

The process, I said, is not the turning over of an oyster-shell, but the turning round of a soul passing from a day which is little better than night to the true day of being, that is, the ascent from below, which we affirm to be true philosophy?

Quite so.

And should we not enquire what sort of knowledge has the power of effecting such a change?

Certainly.

What sort of knowledge is there which would draw the soul from becoming to being? And another consideration has just occurred to me: You will remember that our young men are to be warrior athletes Yes, that was said.

Then this new kind of knowledge must have an additional quality?

What quality?

Usefulness in war.

Yes, if possible.

There were two parts in our former scheme of education, were there not?

522a

Just so.

There was gymnastic which presided over the growth and decay of the body, and may therefore be regarded as having to do with generation and corruption?

True.

Then that is not the knowledge which we are seeking to discover? No.

But what do you say of music, which also entered to a certain extent into our former scheme?

522b

Music, he said, as you will remember, was the counterpart of gymnastic, and trained the guardians by the influences of habit, by harmony making them harmonious, by rhythm rhythmical, but not giving them science; and the words, whether fabulous or possibly true, had kindred elements of rhythm and harmony in them. But in music there was nothing which tended to that good which you are now seeking.

You are most accurate, I said, in your recollection; in music there certainly was nothing of the kind. But what branch of knowledge is there, my dear Glaucon, which is of the desired nature; since all the useful arts were reckoned mean by us?

522c

Undoubtedly; and yet if music and gymnastic are excluded, and the arts are also excluded, what remains?

Well, I said, there may be nothing left of our special subjects; and then we shall have to take something which is not special, but of universal application.

What may that be?

522d

A something which all arts and sciences and intelligences use in common, and which every one first has to learn among the elements of education.

What is that?

The little matter of distinguishing one, two, and three — in a word, number and calculation: — do not all arts and sciences necessarily partake of them?

Yes.

Then the art of war partakes of them?

To the sure.

522e

Then Palamedes, whenever he appears in tragedy, proves Agamemnon ridiculously unfit to be a general. Did you never remark how he declares that he had invented number, and had numbered the ships and set in array the ranks of the army at Troy; which implies that they had never been numbered before, and Agamemnon must be supposed literally to have been incapable of counting his own feet — how could he if he was ignorant of number? And if that is true, what sort of general must he have been?

523a

I should say a very strange one, if this was as you say.

Can we deny that a warrior should have a knowledge of arithmetic?

Certainly he should, if he is to have the smallest understanding of military tactics, or indeed, I should rather say, if he is to be a man at all.

I should like to know whether you have the same notion which I have of this study?

What is your notion?

523b

It appears to me to be a study of the kind which we are seeking, and which leads naturally to reflection, but never to have been rightly used; for the true use of it is simply to draw the soul towards being.

Will you explain your meaning? he said.

I will try, I said; and I wish you would share the enquiry with me, and say 'yes' or 'no' when I attempt to distinguish in my own mind what branches of knowledge have this attracting power, in order that we may have clearer proof that arithmetic is, as I suspect, one of them.

523c

Explain, he said.

I mean to say that objects of sense are of two kinds; some of them do not invite thought because the sense is an adequate judge of them; while in the case of other objects sense is so untrustworthy that further enquiry is imperatively demanded.

You are clearly referring, he said, to the manner in which the senses are imposed upon by distance, and by painting in light and shade.

No, I said, that is not at all my meaning.

Then what is your meaning?

523d

When speaking of uninviting objects, I mean those which do not pass from one sensation to the opposite; inviting objects are those which do; in this latter case the sense coming upon the object, whether at a distance or near, gives no more vivid idea of anything in particular than of its opposite. An illustration will make my meaning clearer: — here are three fingers — a little finger, a second finger, and a middle finger.

Very good.

You may suppose that they are seen quite close: And here comes the point.

What is it?

523e

Each of them equally appears a finger, whether seen in the middle or at the extremity, whether white or black, or thick or thin — it makes no difference; a finger is a finger all the same. In these cases a man is not compelled to ask of thought the question, what is a finger? for the sight never intimates to the mind that a finger is other than a finger.

True.

524a

And therefore, I said, as we might expect, there is nothing here which invites or excites intelligence.

There is not, he said.

But is this equally true of the greatness and smallness of the fingers? Can sight adequately perceive them? and is no difference made by the circumstance that one of the fingers is in the middle and another at the extremity? And in like manner does the touch adequately perceive the qualities of thickness or thinness, or softness or hardness? And so of the other senses; do they give perfect intimations of such matters? Is not their mode of operation on this wise — the sense which is concerned with

the quality of hardness is necessarily concerned also with the quality of softness, and only intimates to the soul that the same thing is felt to be both hard and soft?

524b

You are quite right, he said.

And must not the soul be perplexed at this intimation which the sense gives of a hard which is also soft? What, again, is the meaning of light and heavy, if that which is light is also heavy, and that which is heavy, light?

Yes, he said, these intimations which the soul receives are very curious and require to be explained.

Yes, I said, and in these perplexities the soul naturally summons to her aid calculation and intelligence, that she may see whether the several objects announced to her are one or two.

524c

True.

And if they turn out to be two, is not each of them one and different?

Certainly.

And if each is one, and both are two, she will conceive the two as in a state of division, for if there were undivided they could only be conceived of as one?

True.

524d

The eye certainly did see both small and great, but only in a confused manner; they were not distinguished.

Yes.

Whereas the thinking mind, intending to light up the chaos, was compelled to reverse the process, and look at small and great as separate and not confused.

Very true.

Was not this the beginning of the enquiry ‘What is great?’ and ‘What is small?’

Exactly so.

And thus arose the distinction of the visible and the intelligible.

Most true.

524e

This was what I meant when I spoke of impressions which invited the intellect, or the reverse — those which are simultaneous with opposite impressions, invite thought; those which are not simultaneous do not.

I understand, he said, and agree with you.

And to which class do unity and number belong?

I do not know, he replied.

Think a little and you will see that what has preceded will supply the answer; for if simple unity could be adequately perceived by the sight or by any other sense, then, as we were saying in the case of the finger, there would be nothing to attract towards being; but when there is some contradiction always present, and one is the reverse of one and involves the conception of plurality, then thought begins to be aroused within us, and the soul perplexed and wanting to arrive at a decision asks ‘What is absolute unity?’ This is the way in which the study of the one has a power of drawing and converting the mind to the contemplation of true being.

525a

And surely, he said, this occurs notably in the case of one; for we see the same thing to be both one and infinite in multitude?

Yes, I said; and this being true of one must be equally true of all number?

Certainly.

And all arithmetic and calculation have to do with number?

Yes.

And they appear to lead the mind towards truth?

525b

Yes, in a very remarkable manner.

525c

Then this is knowledge of the kind for which we are seeking, having a double use, military and philosophical; for the man of war must learn the art of number or he will not know how to array his troops, and the philosopher also, because he has to rise out of the sea of change and lay hold of true being, and therefore he must be an arithmetician.

That is true.

And our guardian is both warrior and philosopher?

Certainly.

525d

Then this is a kind of knowledge which legislation may fitly prescribe; and we must endeavour to persuade those who are prescribe to be the principal men of our State to go and learn arithmetic, not as amateurs, but they must carry on the study until they see the nature of numbers with the mind only; nor again, like merchants or retail-traders, with a view to buying or selling, but for the sake of their military use, and of the soul herself; and because this will be the easiest way for her to pass from becoming to truth and being.

That is excellent, he said.

Yes, I said, and now having spoken of it, I must add how charming the science is! and in how many ways it conduces to our desired end, if pursued in the spirit of a philosopher, and

not of a shopkeeper!

How do you mean?

525e

I mean, as I was saying, that arithmetic has a very great and elevating effect, compelling the soul to reason about abstract number, and rebelling against the introduction of visible or tangible objects into the argument. You know how steadily the masters of the art repel and ridicule any one who attempts to divide absolute unity when he is calculating, and if you divide, they multiply, taking care that one shall continue one and not become lost in fractions.

526a

That is very true.

Now, suppose a person were to say to them: O my friends, what are these wonderful numbers about which you are reasoning, in which, as you say, there is a unity such as you demand, and each unit is equal, invariable, indivisible, — what would they answer?

526b

They would answer, as I should conceive, that they were speaking of those numbers which can only be realised in thought.

Then you see that this knowledge may be truly called necessary, necessitating as it clearly does the use of the pure intelligence in the attainment of pure truth?

Yes; that is a marked characteristic of it.

And have you further observed, that those who have a natural talent for calculation are generally quick at every other kind of knowledge; and even the dull if they have had an arithmetical training, although they may derive no other advantage from it, always become much quicker than they would otherwise have been.

526c

Very true, he said.

And indeed, you will not easily find a more difficult study, and not many as difficult.

You will not.

And, for all these reasons, arithmetic is a kind of knowledge in which the best natures should be trained, and which must not be given up.

I agree.

526d

Let this then be made one of our subjects of education. And next, shall we enquire whether the kindred science also concerns us?

You mean geometry?

Exactly so.

Clearly, he said, we are concerned with that part of geometry which relates to war; for in pitching a camp, or taking up a position, or closing or extending the lines of an army, or any other military manoeuvre, whether in actual battle or on a march, it will make all the difference whether a general is or is not a geometrician.

526e

Yes, I said, but for that purpose a very little of either geometry or calculation will be enough; the question relates rather to the greater and more advanced part of geometry — whether that tends in any degree to make more easy the vision of the idea of good; and thither, as I was saying, all things tend which compel the soul to turn her gaze towards that place, where is the full perfection of being, which she ought, by all means, to behold.

True, he said.

527a

Then if geometry compels us to view being, it concerns us; if becoming only, it does not concern us?

Yes, that is what we assert.

Yet anybody who has the least acquaintance with geometry will not deny that such a conception of the science is in flat contradiction to the ordinary language of geometers.

How so?

They have in view practice only, and are always speaking? in a narrow and ridiculous manner, of squaring and extending and applying and the like — they confuse the necessities of geometry with those of daily life; whereas knowledge is the real object of the whole science.

Certainly, he said.

527b

Then must not a further admission be made?

What admission?

That the knowledge at which geometry aims is knowledge of the eternal, and not of aught perishing and transient.

That, he replied, may be readily allowed, and is true.

Then, my noble friend, geometry will draw the soul towards truth, and create the spirit of philosophy, and raise up that which is now unhappily allowed to fall down.

Nothing will be more likely to have such an effect.

527c

Then nothing should be more sternly laid down than that the inhabitants of your fair city should by all means learn geometry. Moreover the science has indirect effects, which are not small.

Of what kind? he said.

There are the military advantages of which you spoke, I said; and in all departments of knowledge, as experience proves, any one who has studied geometry is infinitely quicker of apprehension than one who has not.

Yes indeed, he said, there is an infinite difference between them.

527d

Then shall we propose this as a second branch of knowledge which our youth will study?

Let us do so, he replied.

And suppose we make astronomy the third — what do you say?

I am strongly inclined to it, he said; the observation of the seasons and of months and years is as essential to the general as it is to the farmer or sailor.

527e

I am amused, I said, at your fear of the world, which makes you guard against the appearance of insisting upon useless studies; and I quite admit the difficulty of believing that in every man there is an eye of the soul which, when by other pursuits lost and dimmed, is by these purified and re-illuminated; and is more precious far than ten thousand bodily eyes, for by it alone is truth seen. Now there are two classes of persons: one class of those who will agree with you and will take your words as a revelation; another class to whom they will be utterly unmeaning, and who will naturally deem them to be idle tales, for they see no sort of profit which is to be obtained from them. And therefore you had better decide at once with which of the two you are proposing to argue. You will very likely say with neither, and that your chief aim in carrying on the argument is your own improvement; at the same time you do not grudge to others any benefit which they may receive.

528a

I think that I should prefer to carry on the argument mainly on my own behalf.

528b

Then take a step backward, for we have gone wrong in the order of the sciences.

What was the mistake? he said.

After plane geometry, I said, we proceeded at once to solids in revolution, instead of taking solids in themselves; whereas after the second dimension the third, which is concerned with cubes and dimensions of depth, ought to have followed.

That is true, Socrates; but so little seems to be known as yet about these subjects.

528c

Why, yes, I said, and for two reasons: — in the first place, no government patronises them; this leads to a want of energy in the pursuit of them, and they are difficult; in the second place, students cannot learn them unless they have a director. But then a director can hardly be found, and even if he could, as matters now stand, the students, who are very conceited, would not attend to him. That, however, would be otherwise if the whole State became the director of these studies and gave honour to them; then disciples would want to come, and there would be continuous and earnest search, and discoveries would be made; since even now, disregarded as they are by the world, and maimed of their fair proportions, and although none of their votaries can tell the use of them, still these studies force their way by their natural charm, and very likely, if they had the help of the State, they would some day emerge into light.

528d

Yes, he said, there is a remarkable charm in them. But I do not clearly understand the change in the order. First you began with a geometry of plane surfaces?

Yes, I said.

And you placed astronomy next, and then you made a step backward?

Yes, and I have delayed you by my hurry; the ludicrous state of solid geometry, which, in natural order, should have followed, made me pass over this branch and go on to astronomy, or motion of solids.

528e

True, he said.

Then assuming that the science now omitted would come into existence if encouraged by the State, let us go on to astronomy, which will be fourth.

529a

The right order, he replied. And now, Socrates, as you rebuked the vulgar manner in which I praised astronomy before, my praise shall be given in your own spirit. For every one, as I think, must see that astronomy compels the soul to look upwards and leads us from this world to another.

Every one but myself, I said; to every one else this may be clear, but not to me.

And what then would you say?

I should rather say that those who elevate astronomy into philosophy appear to me to make us look downwards and not upwards.

529b

What do you mean? he asked.

You, I replied, have in your mind a truly sublime conception of our knowledge of the things above. And I dare say that if a person were to throw his head back and study the fretted ceiling, you would still think that his mind was the percipient, and not his eyes. And you are very likely right, and I may be a

simpleton: but, in my opinion, that knowledge only which is of being and of the unseen can make the soul look upwards, and whether a man gapes at the heavens or blinks on the ground, seeking to learn some particular of sense, I would deny that he can learn, for nothing of that sort is matter of science; his soul is looking downwards, not upwards, whether his way to knowledge is by water or by land, whether he floats, or only lies on his back.

529c

I acknowledge, he said, the justice of your rebuke. Still, I should like to ascertain how astronomy can be learned in any manner more conducive to that knowledge of which we are speaking?

I will tell you, I said: The starry heaven which we behold is wrought upon a visible ground, and therefore, although the fairest and most perfect of visible things, must necessarily be deemed inferior far to the true motions of absolute swiftness and absolute slowness, which are relative to each other, and carry with them that which is contained in them, in the true number and in every true figure. Now, these are to be apprehended by reason and intelligence, but not by sight.

True, he replied.

529e

The spangled heavens should be used as a pattern and with a view to that higher knowledge; their beauty is like the beauty of figures or pictures excellently wrought by the hand of Daedalus, or some other great artist, which we may chance to behold; any geometrician who saw them would appreciate the exquisiteness of their workmanship, but he would never dream of thinking that in them he could find the true equal or the true double, or the truth of any other proportion.

No, he replied, such an idea would be ridiculous.

530a

And will not a true astronomer have the same feeling when he looks at the movements of the stars? Will he not think that heaven and the things in heaven are framed by the Creator of them in the most perfect manner? But he will never imagine that the proportions of night and day, or of both to the month, or of the month to the year, or of the stars to these and to one another, and any other things that are material and visible can also be eternal and subject to no deviation — that would be absurd; and it is equally absurd to take so much pains in investigating their exact truth.

I quite agree, though I never thought of this before.

Then, I said, in astronomy, as in geometry, we should employ problems, and let the heavens alone if we would approach the subject in the right way and so make the natural gift of reason to be of any real use.

530b

That, he said, is a work infinitely beyond our present astronomers.

Yes, I said; and there are many other things which must also have a similar extension given to them, if our legislation is to be of any value. But can you tell me of any other suitable study?

No, he said, not without thinking.

Motion, I said, has many forms, and not one only; two of them are obvious enough even to wits no better than ours; and there are others, as I imagine, which may be left to wiser persons.

530c

But where are the two?

There is a second, I said, which is the counterpart of the one already named.

And what may that be?

530d

The second, I said, would seem relatively to the ears to be what the first is to the eyes; for I conceive that as the eyes are designed to look up at the stars, so are the ears to hear harmonious motions; and these are sister sciences — as the Pythagoreans say, and we, Glaucon, agree with them?

Yes, he replied.

530e

But this, I said, is a laborious study, and therefore we had better go and learn of them; and they will tell us whether there are any other applications of these sciences. At the same time, we must not lose sight of our own higher object.

What is that?

There is a perfection which all knowledge ought to reach, and which our pupils ought also to attain, and not to fall short of, as I was saying that they did in astronomy. For in the science of harmony, as you probably know, the same thing happens. The teachers of harmony compare the sounds and consonances which are heard only, and their labour, like that of the astronomers, is in vain.

531a

Yes, by heaven! he said; and 'tis as good as a play to hear them talking about their condensed notes, as they call them; they put their ears close alongside of the strings like persons catching a sound from their neighbour's wall — one set of them declaring that they distinguish an intermediate note and have found the least interval which should be the unit of measurement; the others insisting that the two sounds have passed into the same — either party setting their ears before their understanding.

531b

You mean, I said, those gentlemen who tease and torture the strings and rack them on the pegs of the instrument: might carry on the metaphor and speak after their manner of the

blows which the plectrum gives, and make accusations against the strings, both of backwardness and forwardness to sound; but this would be tedious, and therefore I will only say that these are not the men, and that I am referring to the Pythagoreans, of whom I was just now proposing to enquire about harmony. For they too are in error, like the astronomers; they investigate the numbers of the harmonies which are heard, but they never attain to problems—that is to say, they never reach the natural harmonies of number, or reflect why some numbers are harmonious and others not.

531c

That, he said, is a thing of more than mortal knowledge.

531d

A thing, I replied, which I would rather call useful; that is, if sought after with a view to the beautiful and good; but if pursued in any other spirit, useless. Very true, he said.

Now, when all these studies reach the point of inter-communion and connection with one another, and come to be considered in their mutual affinities, then, I think, but not till then, will the pursuit of them have a value for our objects; otherwise there is no profit in them.

I suspect so; but you are speaking, Socrates, of a vast work.

531e

What do you mean? I said; the prelude or what? Do you not know that all this is but the prelude to the actual strain which we have to learn? For you surely would not regard the skilled mathematician as a dialectician?

Assuredly not, he said; I have hardly ever known a mathematician who was capable of reasoning.

532a

But do you imagine that men who are unable to give and take a reason will have the knowledge which we require of them?

Neither can this be supposed.

And so, Glaucon, I said, we have at last arrived at the hymn of dialectic. This is that strain which is of the intellect only, but which the faculty of sight will nevertheless be found to imitate; for sight, as you may remember, was imagined by us after a while to behold the real animals and stars, and last of all the sun himself. And so with dialectic; when a person starts on the discovery of the absolute by the light of reason only, and without any assistance of sense, and perseveres until by pure intelligence he arrives at the perception of the absolute good, he at last finds himself at the end of the intellectual world, as in the case of sight at the end of the visible.

532c

Exactly, he said.

Then this is the progress which you call dialectic?

True.

But the release of the prisoners from chains, and their translation from the shadows to the images and to the light, and the ascent from the underground den to the sun, while in his presence they are vainly trying to look on animals and plants and the light of the sun, but are able to perceive even with their weak eyes the images in the water (which are divine), and are the shadows of true existence (not shadows of images cast by a light of fire, which compared with the sun is only an image) — this power of elevating the highest principle in the soul to the contemplation of that which is best in existence, with which we may compare the raising of that faculty which is the very light of the body to the sight of that which is brightest in the material and visible world — this power is given, as I was saying, by all that study and pursuit of the arts which has been described.

532d

I agree in what you are saying, he replied, which may be hard to believe, yet, from another point of view, is harder still to deny. This, however, is not a theme to be treated of in passing only, but will have to be discussed again and again. And so, whether our conclusion be true or false, let us assume all this, and proceed at once from the prelude or preamble to the chief strain, and describe that in like manner. Say, then, what is the nature and what are the divisions of dialectic, and what are the paths which lead thither; for these paths will also lead to our final rest?

532e

Dear Glaucon, I said, you will not be able to follow me here, though I would do my best, and you should behold not an image only but the absolute truth, according to my notion. Whether what I told you would or would not have been a reality I cannot venture to say; but you would have seen something like reality; of that I am confident.

Doubtless, he replied.

But I must also remind you, that the power of dialectic alone can reveal this, and only to one who is a disciple of the previous sciences.

533a

Of that assertion you may be as confident as of the last.

533b

And assuredly no one will argue that there is any other method of comprehending by any regular process all true existence or of ascertaining what each thing is in its own nature; for the arts in general are concerned with the desires or opinions of men, or are cultivated with a view to production and construction, or for the preservation of such productions and constructions; and as to the mathematical sciences which, as we were saying, have some apprehension of true being — geometry and the like — they only dream about being, but never can they behold the

waking reality so long as they leave the hypotheses which they use unexamined, and are unable to give an account of them. For when a man knows not his own first principle, and when the conclusion and intermediate steps are also constructed out of he knows not what, how can he imagine that such a fabric of convention can ever become science?

533c

Impossible, he said.

Then dialectic, and dialectic alone, goes directly to the first principle and is the only science which does away with hypotheses in order to make her ground secure; the eye of the soul, which is literally buried in an outlandish slough, is by her gentle aid lifted upwards; and she uses as handmaids and helpers in the work of conversion, the sciences which we have been discussing. Custom terms them sciences, but they ought to have some other name, implying greater clearness than opinion and less clearness than science: and this, in our previous sketch, was called understanding. But why should we dispute about names when we have realities of such importance to consider?

534a

Why indeed, he said, when any name will do which expresses the thought of the mind with clearness?

At any rate, we are satisfied, as before, to have four divisions; two for intellect and two for opinion, and to call the first division science, the second understanding, the third belief, and the fourth perception of shadows, opinion being concerned with becoming, and intellect with being; and so to make a proportion: — As being is to becoming, so is pure intellect to opinion.

And as intellect is to opinion, so is science to belief, and understanding to the perception of shadows.

534b

But let us defer the further correlation and subdivision of the subjects of opinion and of intellect, for it will be a long enquiry, many times longer than this has been.

As far as I understand, he said, I agree.

534c

And do you also agree, I said, in describing the dialectician as one who attains a conception of the essence of each thing? And he who does not possess and is therefore unable to impart this conception, in whatever degree he fails, may in that degree also be said to fail in intelligence? Will you admit so much?

Yes, he said; how can I deny it?

And you would say the same of the conception of the good?

534d

Until the person is able to abstract and define rationally the idea of good, and unless he can run the gauntlet of all objections, and is ready to disprove them, not by appeals to opinion, but to absolute truth, never faltering at any step of the argument — unless he can do all this, you would say that he knows neither the idea of good nor any other good; he apprehends only a shadow, if anything at all, which is given by opinion and not by science; — dreaming and slumbering in this life, before he is well awake here, he arrives at the world below, and has his final quietus.

In all that I should most certainly agree with you.

And surely you would not have the children of your ideal State, whom you are nurturing and educating — if the ideal ever becomes a reality — you would not allow the future rulers to be like posts, having no reason in them, and yet to be set in authority over the highest matters?

535a

Certainly not.

Then you will make a law that they shall have such an education as will enable them to attain the greatest skill in asking and answering questions?

Yes, he said, you and I together will make it.

Dialectic, then, as you will agree, is the coping-stone of the sciences, and is set over them; no other science can be placed higher — the nature of knowledge can no further go?

I agree, he said.

But to whom we are to assign these studies, and in what way they are to be assigned, are questions which remain to be considered?

535b

Yes, clearly.

You remember, I said, how the rulers were chosen before?

Certainly, he said.

The same natures must still be chosen, and the preference again given to the surest and the bravest, and, if possible, to the fairest; and, having noble and generous tempers, they should also have the natural gifts which will facilitate their education.

And what are these?

535c

Such gifts as keenness and ready powers of acquisition; for the mind more often faints from the severity of study than from the severity of gymnastics: the toil is more entirely the mind's own, and is not shared with the body.

Very true, he replied.

Further, he of whom we are in search should have a good memory, and be an unwearied solid man who is a lover of labour in any line; or he will never be able to endure the great amount of bodily exercise and to go through all the intellectual

discipline and study which we require of him.

535d

Certainly, he said; he must have natural gifts.

The mistake at present is, that those who study philosophy have no vocation, and this, as I was before saying, is the reason why she has fallen into disrepute: her true sons should take her by the hand and not bastards.

What do you mean?

In the first place, her votary should not have a lame or halting industry — I mean, that he should not be half industrious and half idle: as, for example, when a man is a lover of gymnastic and hunting, and all other bodily exercises, but a hater rather than a lover of the labour of learning or listening or enquiring. Or the occupation to which he devotes himself may be of an opposite kind, and he may have the other sort of lameness.

535e

Certainly, he said.

And as to truth, I said, is not a soul equally to be deemed halt and lame which hates voluntary falsehood and is extremely indignant at herself and others when they tell lies, but is patient of involuntary falsehood, and does not mind wallowing like a swinish beast in the mire of ignorance, and has no shame at being detected?

536a

To be sure.

And, again, in respect of temperance, courage, magnificence, and every other virtue, should we not carefully distinguish between the true son and the bastard? for where there is no discernment of such qualities States and individuals unconsciously err and the State makes a ruler, and the individual a friend, of one who, being defective in some part of virtue, is in a figure lame or a bastard.

536b

That is very true, he said.

All these things, then, will have to be carefully considered by us; and if only those whom we introduce to this vast system of education and training are sound in body and mind, justice herself will have nothing to say against us, and we shall be the saviours of the constitution and of the State; but, if our pupils are men of another stamp, the reverse will happen, and we shall pour a still greater flood of ridicule on philosophy than she has to endure at present.

536c

That would not be creditable.

Certainly not, I said; and yet perhaps, in thus turning jest into earnest I am equally ridiculous.

In what respect?

I had forgotten, I said, that we were not serious, and spoke with too much excitement. For when I saw philosophy so undeservedly trampled under foot of men I could not help feeling a sort of indignation at the authors of her disgrace: and my anger made me too vehement.

536d

Indeed! I was listening, and did not think so.

But I, who am the speaker, felt that I was. And now let me remind you that, although in our former selection we chose old men, we must not do so in this. Solon was under a delusion when he said that a man when he grows old may learn many things — for he can no more learn much than he can run much; youth is the time for any extraordinary toil.

536e

Of course.

And, therefore, calculation and geometry and all the other elements of instruction, which are a preparation for dialectic, should be presented to the mind in childhood; not, however, under any notion of forcing our system of education.

Why not?

Because a freeman ought not to be a slave in the acquisition of knowledge of any kind. Bodily exercise, when compulsory, does no harm to the body; but knowledge which is acquired under compulsion obtains no hold on the mind.

537a

Very true.

Then, my good friend, I said, do not use compulsion, but let early education be a sort of amusement; you will then be better able to find out the natural bent.

That is a very rational notion, he said.

Do you remember that the children, too, were to be taken to see the battle on horseback; and that if there were no danger they were to be brought close up and, like young hounds, have a taste of blood given them?

Yes, I remember.

The same practice may be followed, I said, in all these things — labours, lessons, dangers — and he who is most at home in all of them ought to be enrolled in a select number.

537b

At what age?

At the age when the necessary gymnastics are over: the period whether of two or three years which passes in this sort of training is useless for any other purpose; for sleep and exercise are unpropitious to learning; and the trial of who is first in gymnastic exercises is one of the most important tests to which

our youth are subjected.

537c

Certainly, he replied.

After that time those who are selected from the class of twenty years old will be promoted to higher honour, and the sciences which they learned without any order in their early education will now be brought together, and they will be able to see the natural relationship of them to one another and to true being.

Yes, he said, that is the only kind of knowledge which takes lasting root.

537d

Yes, I said; and the capacity for such knowledge is the great criterion of dialectical talent: the comprehensive mind is always the dialectical.

I agree with you, he said.

These, I said, are the points which you must consider; and those who have most of this comprehension, and who are more steadfast in their learning, and in their military and other appointed duties, when they have arrived at the age of thirty have to be chosen by you out of the select class, and elevated to higher honour; and you will have to prove them by the help of dialectic, in order to learn which of them is able to give up the use of sight and the other senses, and in company with truth to attain absolute being: And here, my friend, great caution is required.

537e

Why great caution?

Do you not remark, I said, how great is the evil which dialectic has introduced?

What evil? he said.

The students of the art are filled with lawlessness.

538a

Quite true, he said.

Do you think that there is anything so very unnatural or inexcusable in their case? or will you make allowance for them?

In what way make allowance?

I want you, I said, by way of parallel, to imagine a supposititious son who is brought up in great wealth; he is one of a great and numerous family, and has many flatterers. When he grows up to manhood, he learns that his alleged are not his real parents; but who the real are he is unable to discover. Can you guess how he will be likely to behave towards his flatterers and his supposed parents, first of all during the period when he is ignorant of the false relation, and then again when he knows? Or shall I guess for you?

538b

If you please.

538c

Then I should say, that while he is ignorant of the truth he will be likely to honour his father and his mother and his supposed relations more than the flatterers; he will be less inclined to neglect them when in need, or to do or say anything against them; and he will be less willing to disobey them in any important matter.

He will.

But when he has made the discovery, I should imagine that he would diminish his honour and regard for them, and would become more devoted to the flatterers; their influence over him would greatly increase; he would now live after their ways, and openly associate with them, and, unless he were of an unusually good disposition, he would trouble himself no more about his supposed parents or other relations.

Well, all that is very probable. But how is the image applicable to the disciples of philosophy?

538d

In this way: you know that there are certain principles about justice and honour, which were taught us in childhood, and under their parental authority we have been brought up, obeying and honouring them.

That is true.

There are also opposite maxims and habits of pleasure which flatter and attract the soul, but do not influence those of us who have any sense of right, and they continue to obey and honour the maxims of their fathers.

True.

Now, when a man is in this state, and the questioning spirit asks what is fair or honourable, and he answers as the legislator has taught him, and then arguments many and diverse refute his words, until he is driven into believing that nothing is honourable any more than dishonourable, or just and good any more than the reverse, and so of all the notions which he most valued, do you think that he will still honour and obey them as before?

Impossible.

538e

And when he ceases to think them honourable and natural as heretofore, and he fails to discover the true, can he be expected to pursue any life other than that which flatters his desires?

He cannot.

And from being a keeper of the law he is converted into a breaker of it?

Unquestionably.

Now all this is very natural in students of philosophy such as I have described, and also, as I was just now saying, most excusable.

539a

Yes, he said; and, I may add, pitiable.

Therefore, that your feelings may not be moved to pity about our citizens who are now thirty years of age, every care must be taken in introducing them to dialectic.

Certainly.

539b

There is a danger lest they should taste the dear delight too early; for youngsters, as you may have observed, when they first get the taste in their mouths, argue for amusement, and are always contradicting and refuting others in imitation of those who refute them; like puppy-dogs, they rejoice in pulling and tearing at all who come near them.

Yes, he said, there is nothing which they like better.

And when they have made many conquests and received defeats at the hands of many, they violently and speedily get into a way of not believing anything which they believed before, and hence, not only they, but philosophy and all that relates to it is apt to have a bad name with the rest of the world.

539c

Too true, he said.

But when a man begins to get older, he will no longer be guilty of such insanity; he will imitate the dialectician who is seeking for truth, and not the eristic, who is contradicting for the sake of amusement; and the greater moderation of his character will increase instead of diminishing the honour of the pursuit.

Very true, he said.

539d

And did we not make special provision for this, when we said that the disciples of philosophy were to be orderly and steadfast, not, as now, any chance aspirant or intruder?

Very true.

Suppose, I said, the study of philosophy to take the place of gymnastics and to be continued diligently and earnestly and exclusively for twice the number of years which were passed in bodily exercise — will that be enough?

539e

Would you say six or four years? he asked.

Say five years, I replied; at the end of the time they must be sent down again into the den and compelled to hold any military or other office which young men are qualified to hold: in this way they will get their experience of life, and there will be an opportunity of trying whether, when they are drawn all manner of ways by temptation, they will stand firm or flinch.

And how long is this stage of their lives to last?

540a

Fifteen years, I answered; and when they have reached fifty years of age, then let those who still survive and have distinguished themselves in every action of their lives and in every branch of knowledge come at last to their consummation; the time has now arrived at which they must raise the eye of the soul to the universal light which lightens all things, and behold the absolute good; for that is the pattern according to which they are to order the State and the lives of individuals, and the remainder of their own lives also; making philosophy their chief pursuit, but, when their turn comes, toiling also at politics and ruling for the public good, not as though they were performing some heroic action, but simply as a matter of duty; and when they have brought up in each generation others like themselves and left them in their place to be governors of the State, then

they will depart to the Islands of the Blest and dwell there; and the city will give them public memorials and sacrifices and honour them, if the Pythian oracle consent, as demi-gods, but if not, as in any case blessed and divine.

540c

You are a sculptor, Socrates, and have made statues of our governors faultless in beauty.

Yes, I said, Glaucon, and of our governesses too; for you must not suppose that what I have been saying applies to men only and not to women as far as their natures can go.

There you are right, he said, since we have made them to share in all things like the men.

540d

Well, I said, and you would agree (would you not?) that what has been said about the State and the government is not a mere dream, and although difficult not impossible, but only possible in the way which has been supposed; that is to say, when the true philosopher kings are born in a State, one or more of them, despising the honours of this present world which they deem mean and worthless, esteeming above all things right and the honour that springs from right, and regarding justice as the greatest and most necessary of all things, whose ministers they are, and whose principles will be exalted by them when they set in order their own city?

540e

How will they proceed?

541a

They will begin by sending out into the country all the inhabitants of the city who are more than ten years old, and will take possession of their children, who will be unaffected by the habits of their parents; these they will train in their own habits and laws, I mean in the laws which we have given them: and in this way the State and constitution of which we were speaking

will soonest and most easily attain happiness, and the nation which has such a constitution will gain most.

Yes, that will be the best way. And I think, Socrates, that you have very well described how, if ever, such a constitution might come into being.

541b

Enough then of the perfect State, and of the man who bears its image — there is no difficulty in seeing how we shall describe him.

There is no difficulty, he replied; and I agree with you in thinking that nothing more need be said.

BOOK VIII

543a

Socrates - Glaucon And so, Glaucon, we have arrived at the conclusion that in the perfect State wives and children are to be in common; and that all education and the pursuits of war and peace are also to be common, and the best philosophers and the bravest warriors are to be their kings?

That, replied Glaucon, has been acknowledged.

543b

Yes, I said; and we have further acknowledged that the governors, when appointed themselves, will take their soldiers and place them in houses such as we were describing, which are common to all, and contain nothing private, or individual; and about their property, you remember what we agreed?

543c

Yes, I remember that no one was to have any of the ordinary possessions of mankind; they were to be warrior athletes and guardians, receiving from the other citizens, in lieu of annual payment, only their maintenance, and they were to take care of themselves and of the whole State.

True, I said; and now that this division of our task is concluded, let us find the point at which we digressed, that we may return into the old path.

544a

There is no difficulty in returning; you implied, then as now, that you had finished the description of the State: you said that such a State was good, and that the man was good who answered to it, although, as now appears, you had more excellent things to relate both of State and man. And you said further, that if this was the true form, then the others were false; and of the false forms, you said, as I remember, that there were four principal ones, and that their defects, and the defects of the individuals corresponding to them, were worth examining. When we had seen all the individuals, and finally agreed as to who was the best and who was the worst of them, we were to consider whether the best was not also the happiest, and the worst the most miserable. I asked you what were the four forms of government of which you spoke, and then Polemarchus and Adeimantus put in their word; and you began again, and have found your way to the point at which we have now arrived.

544b

Your recollection, I said, is most exact.

Then, like a wrestler, he replied, you must put yourself again in the same position; and let me ask the same questions, and do you give me the same answer which you were about to give me then.

Yes, if I can, I will, I said.

I shall particularly wish to hear what were the four constitutions of which you were speaking.

544d

That question, I said, is easily answered: the four governments of which I spoke, so far as they have distinct names, are, first, those of Crete and Sparta, which are generally applauded; what is termed oligarchy comes next; this is not equally approved, and is a form of government which teems with evils: thirdly, democracy, which naturally follows oligarchy, although very different: and lastly comes tyranny, great and famous, which differs from them all, and is the fourth and worst disorder of a State. I do not know, do you? of any other constitution which can be said to have a distinct character. There are lordships and principalities which are bought and sold, and some other intermediate forms of government. But these are nondescripts and may be found equally among Hellenes and among barbarians.

544e

Yes, he replied, we certainly hear of many curious forms of government which exist among them.

Do you know, I said, that governments vary as the dispositions of men vary, and that there must be as many of the one as there are of the other? For we cannot suppose that States are made of 'oak and rock,' and not out of the human natures which are in them, and which in a figure turn the scale and draw other things after them?

Yes, he said, the States are as the men are; they grow out of human characters.

545a

Then if the constitutions of States are five, the dispositions of individual minds will also be five?

Certainly.

Him who answers to aristocracy, and whom we rightly call just and good, we have already described.

We have.

Then let us now proceed to describe the inferior sort of natures, being the contentious and ambitious, who answer to the Spartan polity; also the oligarchical, democratical, and tyrannical. Let us place the most just by the side of the most unjust, and when we see them we shall be able to compare the relative happiness or unhappiness of him who leads a life of pure justice or pure injustice. The enquiry will then be completed. And we shall know whether we ought to pursue injustice, as Thrasymachus advises, or in accordance with the conclusions of the argument to prefer justice.

545b

Certainly, he replied, we must do as you say.

Shall we follow our old plan, which we adopted with a view to clearness, of taking the State first and then proceeding to the individual, and begin with the government of honour? — I know of no name for such a government other than timocracy, or perhaps timarchy. We will compare with this the like character in the individual; and, after that, consider oligarchical man; and then again we will turn our attention to democracy and the democratical man; and lastly, we will go and view the city of tyranny, and once more take a look into the tyrant's soul, and try to arrive at a satisfactory decision.

545c

That way of viewing and judging of the matter will be very suitable.

First, then, I said, let us enquire how timocracy (the government of honour) arises out of aristocracy (the government of the best). Clearly, all political changes originate in divisions of the actual governing power; a government which is united, however small, cannot be moved.

545d

Very true, he said.

In what way, then, will our city be moved, and in what manner the two classes of auxiliaries and rulers disagree among themselves or with one another? Shall we, after the manner of Homer, pray the Muses to tell us 'how discord first arose'? Shall we imagine them in solemn mockery, to play and jest with us as if we were children, and to address us in a lofty tragic vein, making believe to be in earnest?

546a

How would they address us?

546d

After this manner: — A city which is thus constituted can hardly be shaken; but, seeing that everything which has a beginning has also an end, even a constitution such as yours will not last for ever, but will in time be dissolved. And this is the dissolution: — In plants that grow in the earth, as well as in animals that move on the earth's surface, fertility and sterility of soul and body occur when the circumferences of the circles of each are completed, which in short-lived existences pass over a short space, and in long-lived ones over a long space. But to the knowledge of human fecundity and sterility all the wisdom and education of your rulers will not attain; the laws which regulate them will not be discovered by an intelligence which is alloyed with sense, but will escape them, and they will bring children into the world when they ought not. Now that which is of divine birth has a period which is contained in a perfect number, but the period of human birth is comprehended in a number in which first increments by involution and evolution (or squared and cubed) obtaining three intervals and four terms of like and unlike, waxing and waning numbers, make all the terms commensurable and agreeable to one another. The base of these (3) with a third added (4) when combined with five (20) and raised to the third power furnishes two harmonies; the first a square which is a hundred times as great ($400 = 4 \times 100$), and the other a figure having one side equal to the former, but oblong,

consisting of a hundred numbers squared upon rational diameters of a square (i. e. omitting fractions), the side of which is five ($7 \times 7 = 49$ $\times$ 100 = 4900), each of them being less by one (than the perfect square which includes the fractions, sc. 50) or less by two perfect squares of irrational diameters (of a square the side of which is five = $50 + 50 = 100$); and a hundred cubes of three ($27 \times 100 = 2700 + 4900 + 400 = 8000$). Now this number represents a geometrical figure which has control over the good and evil of births. For when your guardians are ignorant of the law of births, and unite bride and bridegroom out of season, the children will not be goodly or fortunate. And though only the best of them will be appointed by their predecessors, still they will be unworthy to hold their fathers' places, and when they come into power as guardians, they will soon be found to fall in taking care of us, the Muses, first by under-valuing music; which neglect will soon extend to gymnastic; and hence the young men of your State will be less cultivated. In the succeeding generation rulers will be appointed who have lost the guardian power of testing the metal of your different races, which, like Hesiod's, are of gold and silver and brass and iron. And so iron will be mingled with silver, and brass with gold, and hence there will arise dissimilarity and inequality and irregularity, which always and in all places are causes of hatred and war. This the Muses affirm to be the stock from which discord has sprung, wherever arising; and this is their answer to us.

547b

Yes, and we may assume that they answer truly.

547c

Why, yes, I said, of course they answer truly; how can the Muses speak falsely?

And what do the Muses say next?

547e

When discord arose, then the two races were drawn different ways: the iron and brass fell to acquiring money and land and houses and gold and silver; but the gold and silver races, not wanting money but having the true riches in their own nature, inclined towards virtue and the ancient order of things. There was a battle between them, and at last they agreed to distribute their land and houses among individual owners; and they enslaved their friends and maintainers, whom they had formerly protected in the condition of freemen, and made of them subjects and servants; and they themselves were engaged in war and in keeping a watch against them.

I believe that you have rightly conceived the origin of the change.

548a

And the new government which thus arises will be of a form intermediate between oligarchy and aristocracy?

Very true.

Such will be the change, and after the change has been made, how will they proceed? Clearly, the new State, being in a mean between oligarchy and the perfect State, will partly follow one and partly the other, and will also have some peculiarities.

True, he said.

548b

In the honour given to rulers, in the abstinence of the warrior class from agriculture, handicrafts, and trade in general, in the institution of common meals, and in the attention paid to gymnastics and military training — in all these respects this State will resemble the former.

True.

548c

But in the fear of admitting philosophers to power, because they are no longer to be had simple and earnest, but are made

up of mixed elements; and in turning from them to passionate and less complex characters, who are by nature fitted for war rather than peace; and in the value set by them upon military stratagems and contrivances, and in the waging of everlasting wars — this State will be for the most part peculiar.

Yes.

548d

Yes, I said; and men of this stamp will be covetous of money, like those who live in oligarchies; they will have, a fierce secret longing after gold and silver, which they will hoard in dark places, having magazines and treasuries of their own for the deposit and concealment of them; also castles which are just nests for their eggs, and in which they will spend large sums on their wives, or on any others whom they please.

That is most true, he said.

And they are miserly because they have no means of openly acquiring the money which they prize; they will spend that which is another man's on the gratification of their desires, stealing their pleasures and running away like children from the law, their father: they have been schooled not by gentle influences but by force, for they have neglected her who is the true Muse, the companion of reason and philosophy, and have honoured gymnastic more than music.

548e

Undoubtedly, he said, the form of government which you describe is a mixture of good and evil.

549a

Why, there is a mixture, I said; but one thing, and one thing only, is predominantly seen, — the spirit of contention and ambition; and these are due to the prevalence of the passionate or spirited element.

Assuredly, he said.

549b

Such is the origin and such the character of this State, which has been described in outline only; the more perfect execution was not required, for a sketch is enough to show the type of the most perfectly just and most perfectly unjust; and to go through all the States and all the characters of men, omitting none of them, would be an interminable labour.

Very true, he replied.

Now what man answers to this form of government-how did he come into being, and what is he like?

Socrates - Adeimantus I think, said Adeimantus, that in the spirit of contention which characterises him, he is not unlike our friend Glaucon.

Perhaps, I said, he may be like him in that one point; but there are other respects in which he is very different.

In what respects?

549c

He should have more of self-assertion and be less cultivated, and yet a friend of culture; and he should be a good listener, but no speaker. Such a person is apt to be rough with slaves, unlike the educated man, who is too proud for that; and he will also be courteous to freemen, and remarkably obedient to authority; he is a lover of power and a lover of honour; claiming to be a ruler, not because he is eloquent, or on any ground of that sort, but because he is a soldier and has performed feats of arms; he is also a lover of gymnastic exercises and of the chase.

549d

Yes, that is the type of character which answers to timocracy.

Such an one will despise riches only when he is young; but as he gets older he will be more and more attracted to them, because he has a piece of the avaricious nature in him, and is not singleminded towards virtue, having lost his best guardian.

Who was that? said Adeimantus.

Philosophy, I said, tempered with music, who comes and takes her abode in a man, and is the only saviour of his virtue throughout life.

Good, he said.

Such, I said, is the timocratical youth, and he is like the timocratical State.

Exactly.

549e

His origin is as follows: — He is often the young son of a grave father, who dwells in an ill-governed city, of which he declines the honours and offices, and will not go to law, or exert himself in any way, but is ready to waive his rights in order that he may escape trouble.

And how does the son come into being?

550a

The character of the son begins to develop when he hears his mother complaining that her husband has no place in the government, of which the consequence is that she has no precedence among other women. Further, when she sees her husband not very eager about money, and instead of battling and railing in the law courts or assembly, taking whatever happens to him quietly; and when she observes that his thoughts always centre in himself, while he treats her with very considerable indifference, she is annoyed, and says to her son that his father is only half a man and far too easy-going: adding all the other complaints about her own ill-treatment which women are so fond of rehearsing.

550b

Yes, said Adeimantus, they give us plenty of them, and their complaints are so like themselves.

550c

And you know, I said, that the old servants also, who are supposed to be attached to the family, from time to time talk privately in the same strain to the son; and if they see any one who owes money to his father, or is wronging him in any way, and he falls to prosecute them, they tell the youth that when he grows up he must retaliate upon people of this sort, and be more of a man than his father. He has only to walk abroad and he hears and sees the same sort of thing: those who do their own business in the city are called simpletons, and held in no esteem, while the busy-bodies are honoured and applauded. The result is that the young man, hearing and seeing all these things — hearing too, the words of his father, and having a nearer view of his way of life, and making comparisons of him and others — is drawn opposite ways: while his father is watering and nourishing the rational principle in his soul, the others are encouraging the passionate and appetitive; and he being not originally of a bad nature, but having kept bad company, is at last brought by their joint influence to a middle point, and gives up the kingdom which is within him to the middle principle of contentiousness and passion, and becomes arrogant and ambitious.

550d

You seem to me to have described his origin perfectly.

550e

Then we have now, I said, the second form of government and the second type of character?

We have.

Next, let us look at another man who, as Aeschylus says, is set over against another State; or rather, as our plan requires, begin with the State.

By all means.

I believe that oligarchy follows next in order.

And what manner of government do you term oligarchy?

A government resting on a valuation of property, in which the rich have power and the poor man is deprived of it.

I understand, he replied.

551a

Ought I not to begin by describing how the change from timocracy to oligarchy arises?

Yes.

Well, I said, no eyes are required in order to see how the one passes into the other.

How?

The accumulation of gold in the treasury of private individuals is ruin the of timocracy; they invent illegal modes of expenditure; for what do they or their wives care about the law?

Yes, indeed.

And then one, seeing another grow rich, seeks to rival him, and thus the great mass of the citizens become lovers of money.

Likely enough.

And so they grow richer and richer, and the more they think of making a fortune the less they think of virtue; for when riches and virtue are placed together in the scales of the balance, the one always rises as the other falls.

551b

True.

And in proportion as riches and rich men are honoured in the State, virtue and the virtuous are dishonoured.

Clearly.

And what is honoured is cultivated, and that which has no honour is neglected.

That is obvious.

And so at last, instead of loving contention and glory, men become lovers of trade and money; they honour and look up to the rich man, and make a ruler of him, and dishonour the poor man.

They do so.

551d

They next proceed to make a law which fixes a sum of money as the qualification of citizenship; the sum is higher in one place and lower in another, as the oligarchy is more or less exclusive; and they allow no one whose property falls below the amount fixed to have any share in the government. These changes in the constitution they effect by force of arms, if intimidation has not already done their work.

Very true.

And this, speaking generally, is the way in which oligarchy is established.

551e

Yes, he said; but what are the characteristics of this form of government, and what are the defects of which we were speaking?

First of all, I said, consider the nature of the qualification just think what would happen if pilots were to be chosen according to their property, and a poor man were refused permission to steer, even though he were a better pilot?

You mean that they would shipwreck?

Yes; and is not this true of the government of anything?

I should imagine so.

Except a city? — or would you include a city?

552a

Nay, he said, the case of a city is the strongest of all, inasmuch as the rule of a city is the greatest and most difficult of all.

This, then, will be the first great defect of oligarchy?

Clearly.

And here is another defect which is quite as bad.

What defect?

The inevitable division: such a State is not one, but two States, the one of poor, the other of rich men; and they are living on the same spot and always conspiring against one another.

552b

That, surely, is at least as bad.

Another discreditable feature is, that, for a like reason, they are incapable of carrying on any war. Either they arm the multitude, and then they are more afraid of them than of the enemy; or, if they do not call them out in the hour of battle, they are oligarchs indeed, few to fight as they are few to rule. And at the same time their fondness for money makes them unwilling to pay taxes.

How discreditable!

552c

And, as we said before, under such a constitution the same persons have too many callings — they are husbandmen, tradesmen, warriors, all in one. Does that look well?

Anything but well.

There is another evil which is, perhaps, the greatest of all, and to which this State first begins to be liable.

What evil?

A man may sell all that he has, and another may acquire his property; yet after the sale he may dwell in the city of which he is no longer a part, being neither trader, nor artisan, nor horseman, nor hoplite, but only a poor, helpless creature.

552d

Yes, that is an evil which also first begins in this State.

The evil is certainly not prevented there; for oligarchies have both the extremes of great wealth and utter poverty.

True.

But think again: In his wealthy days, while he was spending his money, was a man of this sort a whit more good to the State for the purposes of citizenship? Or did he only seem to be a member of the ruling body, although in truth he was neither ruler nor subject, but just a spendthrift?

552e

As you say, he seemed to be a ruler, but was only a spendthrift.

May we not say that this is the drone in the house who is like the drone in the honeycomb, and that the one is the plague of the city as the other is of the hive?

Just so, Socrates.

And God has made the flying drones, Adeimantus, all without stings, whereas of the walking drones he has made some without stings but others have dreadful stings; of the stingless class are those who in their old age end as paupers; of the stingers come all the criminal class, as they are termed.

553a

Most true, he said.

Clearly then, whenever you see paupers in a State, somewhere in that neighborhood there are hidden away thieves, and cutpurses and robbers of temples, and all sorts of malefactors.

Clearly.

Well, I said, and in oligarchical States do you not find paupers?

553b

Yes, he said; nearly everybody is a pauper who is not a ruler.

And may we be so bold as to affirm that there are also many criminals to be found in them, rogues who have stings, and whom the authorities are careful to restrain by force?

Certainly, we may be so bold.

The existence of such persons is to be attributed to want of education, ill-training, and an evil constitution of the State?

True.

Such, then, is the form and such are the evils of oligarchy; and there may be many other evils.

Very likely.

553c

Then oligarchy, or the form of government in which the rulers are elected for their wealth, may now be dismissed. Let us next proceed to consider the nature and origin of the individual who answers to this State.

By all means.

Does not the timocratical man change into the oligarchical on this wise?

How?

553d

A time arrives when the representative of timocracy has a son: at first he begins by emulating his father and walking in his footsteps, but presently he sees him of a sudden foundering against the State as upon a sunken reef, and he and all that he has is lost; he may have been a general or some other high

officer who is brought to trial under a prejudice raised by informers, and either put to death, or exiled, or deprived of the privileges of a citizen, and all his property taken from him.

Nothing more likely.

And the son has seen and known all this — he is a ruined man, and his fear has taught him to knock ambition and passion head-foremost from his bosom's throne; humbled by poverty he takes to money-making and by mean and miserly savings and hard work gets a fortune together. Is not such an one likely to seat the concupiscent and covetous element on the vacant throne and to suffer it to play the great king within him, girt with tiara and chain and scimitar?

553e

Most true, he replied.

And when he has made reason and spirit sit down on the ground obediently on either side of their sovereign, and taught them to know their place, he compels the one to think only of how lesser sums may be turned into larger ones, and will not allow the other to worship and admire anything but riches and rich men, or to be ambitious of anything so much as the acquisition of wealth and the means of acquiring it.

554a

Of all changes, he said, there is none so speedy or so sure as the conversion of the ambitious youth into the avaricious one.

554b

And the avaricious, I said, is the oligarchical youth?

Yes, he said; at any rate the individual out of whom he came is like the State out of which oligarchy came.

Let us then consider whether there is any likeness between them.

Very good.

First, then, they resemble one another in the value which they set upon wealth?

Certainly.

Also in their penurious, laborious character; the individual only satisfies his necessary appetites, and confines his expenditure to them; his other desires he subdues, under the idea that they are unprofitable.

True.

554c

He is a shabby fellow, who saves something out of everything and makes a purse for himself; and this is the sort of man whom the vulgar applaud. Is he not a true image of the State which he represents?

He appears to me to be so; at any rate money is highly valued by him as well as by the State.

You see that he is not a man of cultivation, I said.

I imagine not, he said; had he been educated he would never have made a blind god director of his chorus, or given him chief honour.

554d

Excellent! I said. Yet consider: Must we not further admit that owing to this want of cultivation there will be found in him dronelike desires as of pauper and rogue, which are forcibly kept down by his general habit of life?

True.

Do you know where you will have to look if you want to discover his rogueries?

Where must I look?

554e

You should see him where he has some great opportunity of acting dishonestly, as in the guardianship of an orphan.

Aye.

It will be clear enough then that in his ordinary dealings which give him a reputation for honesty he coerces his bad passions by an enforced virtue; not making them see that they are wrong, or taming them by reason, but by necessity and fear constraining them, and because he trembles for his possessions.

555a

To be sure.

Yes, indeed, my dear friend, but you will find that the natural desires of the drone commonly exist in him all the same whenever he has to spend what is not his own.

Yes, and they will be strong in him too.

The man, then, will be at war with himself; he will be two men, and not one; but, in general, his better desires will be found to prevail over his inferior ones.

True.

555b

For these reasons such an one will be more respectable than most people; yet the true virtue of a unanimous and harmonious soul will flee far away and never come near him.

I should expect so.

And surely, the miser individually will be an ignoble competitor in a State for any prize of victory, or other object of honourable ambition; he will not spend his money in the contest for glory; so afraid is he of awakening his expensive appetites and inviting them to help and join in the struggle; in true oligarchical fashion he fights with a small part only of his resources, and the result commonly is that he loses the prize and saves his money.

555c

Very true.

Can we any longer doubt, then, that the miser and money-maker answers to the oligarchical State?

There can be no doubt.

Next comes democracy; of this the origin and nature have still to be considered by us; and then we will enquire into the ways of the democratic man, and bring him up for judgement.

That, he said, is our method.

555d

Well, I said, and how does the change from oligarchy into democracy arise? Is it not on this wise? — The good at which such a State aims is to become as rich as possible, a desire which is insatiable?

What then?

The rulers, being aware that their power rests upon their wealth, refuse to curtail by law the extravagance of the spendthrift youth because they gain by their ruin; they take interest from them and buy up their estates and thus increase their own wealth and importance?

To be sure.

There can be no doubt that the love of wealth and the spirit of moderation cannot exist together in citizens of the same State to any considerable extent; one or the other will be disregarded.

That is tolerably clear.

555e

And in oligarchical States, from the general spread of carelessness and extravagance, men of good family have often been reduced to beggary?

Yes, often.

And still they remain in the city; there they are, ready to sting and fully armed, and some of them owe money, some have forfeited their citizenship; a third class are in both predicaments; and they hate and conspire against those who have got their property, and against everybody else, and are eager for revolution.

556a

That is true.

On the other hand, the men of business, stooping as they walk, and pretending not even to see those whom they have already ruined, insert their sting — that is, their money — into some one else who is not on his guard against them, and recover the parent sum many times over multiplied into a family of children: and so they make drone and pauper to abound in the State.

556b

Yes, he said, there are plenty of them — that is certain.

The evil blazes up like a fire; and they will not extinguish it, either by restricting a man's use of his own property, or by another remedy: What other?

One which is the next best, and has the advantage of compelling the citizens to look to their characters: — Let there be a general rule that every one shall enter into voluntary contracts at his own risk, and there will be less of this scandalous money-making, and the evils of which we were speaking will be greatly lessened in the State.

556c

Yes, they will be greatly lessened.

At present the governors, induced by the motives which I have named, treat their subjects badly; while they and their adherents, especially the young men of the governing class, are habituated to lead a life of luxury and idleness both of body and

mind; they do nothing, and are incapable of resisting either pleasure or pain.

Very true.

They themselves care only for making money, and are as indifferent as the pauper to the cultivation of virtue.

556d

Yes, quite as indifferent.

556e

Such is the state of affairs which prevails among them. And often rulers and their subjects may come in one another's way, whether on a pilgrimage or a march, as fellow-soldiers or fellow-sailors; aye, and they may observe the behaviour of each other in the very moment of danger — for where danger is, there is no fear that the poor will be despised by the rich — and very likely the wiry sunburnt poor man may be placed in battle at the side of a wealthy one who has never spoilt his complexion and has plenty of superfluous flesh — when he sees such an one puffing and at his wit's end, how can he avoid drawing the conclusion that men like him are only rich because no one has the courage to despoil them? And when they meet in private will not people be saying to one another 'Our warriors are not good for much'?

557a

Yes, he said, I am quite aware that this is their way of talking.

557b

And, as in a body which is diseased the addition of a touch from without may bring on illness, and sometimes even when there is no external provocation a commotion may arise within-in the same way wherever there is weakness in the State there is also likely to be illness, of which the occasions may be very slight, the one party introducing from without their oligarchical, the other their democratical allies, and then the State falls sick, and is at war with herself; and may be at times distracted, even

when there is no external cause.

Yes, surely.

And then democracy comes into being after the poor have conquered their opponents, slaughtering some and banishing some, while to the remainder they give an equal share of freedom and power; and this is the form of government in which the magistrates are commonly elected by lot.

557c

Yes, he said, that is the nature of democracy, whether the revolution has been effected by arms, or whether fear has caused the opposite party to withdraw.

And now what is their manner of life, and what sort of a government have they? for as the government is, such will be the man.

Clearly, he said.

In the first place, are they not free; and is not the city full of freedom and frankness — a man may say and do what he likes?

'Tis said so, he replied.

And where freedom is, the individual is clearly able to order for himself his own life as he pleases?

557d

Clearly.

Then in this kind of State there will be the greatest variety of human natures?

There will.

This, then, seems likely to be the fairest of States, being an embroidered robe which is spangled with every sort of flower. And just as women and children think a variety of colours to be of all things most charming, so there are many men to whom this State, which is spangled with the manners and characters

of mankind, will appear to be the fairest of States.

557e

Yes.

Yes, my good Sir, and there will be no better in which to look for a government.

Why?

Because of the liberty which reigns there — they have a complete assortment of constitutions; and he who has a mind to establish a State, as we have been doing, must go to a democracy as he would to a bazaar at which they sell them, and pick out the one that suits him; then, when he has made his choice, he may found his State.

558a

He will be sure to have patterns enough.

And there being no necessity, I said, for you to govern in this State, even if you have the capacity, or to be governed, unless you like, or go to war when the rest go to war, or to be at peace when others are at peace, unless you are so disposed — there being no necessity also, because some law forbids you to hold office or be a dicast, that you should not hold office or be a dicast, if you have a fancy — is not this a way of life which for the moment is supremely delightful 558b For the moment, yes.

558b

And is not their humanity to the condemned in some cases quite charming? Have you not observed how, in a democracy, many persons, although they have been sentenced to death or exile, just stay where they are and walk about the world — the gentleman parades like a hero, and nobody sees or cares?

Yes, he replied, many and many a one.

558c

See too, I said, the forgiving spirit of democracy, and the ‘don’t care’ about trifles, and the disregard which she shows of all the fine principles which we solemnly laid down at the foundation of the city — as when we said that, except in the case of some rarely gifted nature, there never will be a good man who has not from his childhood been used to play amid things of beauty and make of them a joy and a study — how grandly does she trample all these fine notions of ours under her feet, never giving a thought to the pursuits which make a statesman, and promoting to honour any one who professes to be the people’s friend.

558d

Yes, she is of a noble spirit.

These and other kindred characteristics are proper to democracy, which is a charming form of government, full of variety and disorder, and dispensing a sort of equality to equals and unequals alike.

We know her well.

Consider now, I said, what manner of man the individual is, or rather consider, as in the case of the State, how he comes into being.

Very good, he said.

Is not this the way — he is the son of the miserly and oligarchical father who has trained him in his own habits?

Exactly.

558e

And, like his father, he keeps under by force the pleasures which are of the spending and not of the getting sort, being those which are called unnecessary?

Obviously.

Would you like, for the sake of clearness, to distinguish which are the necessary and which are the unnecessary pleasures?

I should.

Are not necessary pleasures those of which we cannot get rid, and of which the satisfaction is a benefit to us? And they are rightly so, because we are framed by nature to desire both what is beneficial and what is necessary, and cannot help it.

559a

True.

We are not wrong therefore in calling them necessary?

We are not.

559b

And the desires of which a man may get rid, if he takes pains from his youth upwards — of which the presence, moreover, does no good, and in some cases the reverse of good — shall we not be right in saying that all these are unnecessary?

Yes, certainly.

Suppose we select an example of either kind, in order that we may have a general notion of them?

Very good.

Will not the desire of eating, that is, of simple food and condiments, in so far as they are required for health and strength, be of the necessary class?

559c

That is what I should suppose.

The pleasure of eating is necessary in two ways; it does us good and it is essential to the continuance of life?

Yes.

But the condiments are only necessary in so far as they are good for health?

Certainly.

And the desire which goes beyond this, or more delicate food, or other luxuries, which might generally be got rid of, if controlled and trained in youth, and is hurtful to the body, and hurtful to the soul in the pursuit of wisdom and virtue, may be rightly called unnecessary?

559d

Very true.

May we not say that these desires spend, and that the others make money because they conduce to production?

Certainly.

And of the pleasures of love, and all other pleasures, the same holds good?

True.

559e

And the drone of whom we spoke was he who was surfeited in pleasures and desires of this sort, and was the slave of the unnecessary desires, whereas he who was subject to the necessary only was miserly and oligarchical?

Very true.

Again, let us see how the democratical man grows out of the oligarchical: the following, as I suspect, is commonly the process.

What is the process?

560a

When a young man who has been brought up as we were just now describing, in a vulgar and miserly way, has tasted drones' honey and has come to associate with fierce and crafty natures

who are able to provide for him all sorts of refinements and varieties of pleasure — then, as you may imagine, the change will begin of the oligarchical principle within him into the democratical?

Inevitably.

And as in the city like was helping like, and the change was effected by an alliance from without assisting one division of the citizens, so too the young man is changed by a class of desires coming from without to assist the desires within him, that which is and alike again helping that which is akin and alike?

560b

Certainly.

And if there be any ally which aids the oligarchical principle within him, whether the influence of a father or of kindred, advising or rebuking him, then there arises in his soul a faction and an opposite faction, and he goes to war with himself.

It must be so.

And there are times when the democratical principle gives way to the oligarchical, and some of his desires die, and others are banished; a spirit of reverence enters into the young man's soul and order is restored.

Yes, he said, that sometimes happens.

560c

And then, again, after the old desires have been driven out, fresh ones spring up, which are akin to them, and because he, their father, does not know how to educate them, wax fierce and numerous.

560d

Yes, he said, that is apt to be the way.

They draw him to his old associates, and holding secret intercourse with them, breed and multiply in him.

Very true.

At length they seize upon the citadel of the young man's soul, which they perceive to be void of all accomplishments and fair pursuits and true words, which make their abode in the minds of men who are dear to the gods, and are their best guardians and sentinels.

None better.

False and boastful conceits and phrases mount upwards and take their place.

They are certain to do so.

560e

And so the young man returns into the country of the lotus-eaters, and takes up his dwelling there in the face of all men; and if any help be sent by his friends to the oligarchical part of him, the aforesaid vain conceits shut the gate of the king's fastness; and they will neither allow the embassy itself to enter, private if private advisers offer the fatherly counsel of the aged will they listen to them or receive them. There is a battle and they gain the day, and then modesty, which they call silliness, is ignominiously thrust into exile by them, and temperance, which they nickname unmanliness, is trampled in the mire and cast forth; they persuade men that moderation and orderly expenditure are vulgarity and meanness, and so, by the help of a rabble of evil appetites, they drive them beyond the border.

Yes, with a will.

561a

And when they have emptied and swept clean the soul of him who is now in their power and who is being initiated by them in

great mysteries, the next thing is to bring back to their house insolence and anarchy and waste and impudence in bright array having garlands on their heads, and a great company with them, hymning their praises and calling them by sweet names; insolence they term breeding, and anarchy liberty, and waste magnificence, and impudence courage. And so the young man passes out of his original nature, which was trained in the school of necessity, into the freedom and libertinism of useless and unnecessary pleasures.

561b

Yes, he said, the change in him is visible enough.

After this he lives on, spending his money and labour and time on unnecessary pleasures quite as much as on necessary ones; but if he be fortunate, and is not too much disordered in his wits, when years have elapsed, and the heyday of passion is over — supposing that he then re-admits into the city some part of the exiled virtues, and does not wholly give himself up to their successors — in that case he balances his pleasures and lives in a sort of equilibrium, putting the government of himself into the hands of the one which comes first and wins the turn; and when he has had enough of that, then into the hands of another; he despises none of them but encourages them all equally.

561c

Very true, he said.

561d

Neither does he receive or let pass into the fortress any true word of advice; if any one says to him that some pleasures are the satisfactions of good and noble desires, and others of evil desires, and that he ought to use and honour some and chastise and master the others — whenever this is repeated to him he shakes his head and says that they are all alike, and that one is as good as another.

Yes, he said; that is the way with him.

562a

Yes, I said, he lives from day to day indulging the appetite of the hour; and sometimes he is lapped in drink and strains of the flute; then he becomes a water-drinker, and tries to get thin; then he takes a turn at gymnastics; sometimes idling and neglecting everything, then once more living the life of a philosopher; often he is busy with politics, and starts to his feet and says and does whatever comes into his head; and, if he is emulous of any one who is a warrior, off he is in that direction, or of men of business, once more in that. His life has neither law nor order; and this distracted existence he terms joy and bliss and freedom; and so he goes on.

Yes, he replied, he is all liberty and equality.

562b

Yes, I said; his life is motley and manifold and an epitome of the lives of many; — he answers to the State which we described as fair and spangled. And many a man and many a woman will take him for their pattern, and many a constitution and many an example of manners is contained in him.

Just so.

Let him then be set over against democracy; he may truly be called the democratic man.

Let that be his place, he said.

Last of all comes the most beautiful of all, man and State alike, tyranny and the tyrant; these we have now to consider.

562c

Quite true, he said.

Say then, my friend, in what manner does tyranny arise? — that it has a democratic origin is evident.

Clearly.

And does not tyranny spring from democracy in the same manner as democracy from oligarchy — I mean, after a sort?

How?

The good which oligarchy proposed to itself and the means by which it was maintained was excess of wealth — am I not right?

Yes.

562d

And the insatiable desire of wealth and the neglect of all other things for the sake of money-getting was also the ruin of oligarchy?

True.

And democracy has her own good, of which the insatiable desire brings her to dissolution?

What good?

Freedom, I replied; which, as they tell you in a democracy, is the glory of the State — and that therefore in a democracy alone will the freeman of nature deign to dwell.

Yes; the saying is in everybody's mouth.

I was going to observe, that the insatiable desire of this and the neglect of other things introduces the change in democracy, which occasions a demand for tyranny.

How so?

562e

When a democracy which is thirsting for freedom has evil cupbearers presiding over the feast, and has drunk too deeply of the strong wine of freedom, then, unless her rulers are very amenable and give a plentiful draught, she calls them to account and punishes them, and says that they are cursed oligarchs.

563a

Yes, he replied, a very common occurrence.

Yes, I said; and loyal citizens are insultingly termed by her slaves who hug their chains and men of naught; she would have subjects who are like rulers, and rulers who are like subjects: these are men after her own heart, whom she praises and honours both in private and public. Now, in such a State, can liberty have any limit?

563b

Certainly not.

By degrees the anarchy finds a way into private houses, and ends by getting among the animals and infecting them.

How do you mean?

I mean that the father grows accustomed to descend to the level of his sons and to fear them, and the son is on a level with his father, he having no respect or reverence for either of his parents; and this is his freedom, and metic is equal with the citizen and the citizen with the metic, and the stranger is quite as good as either.

563c

Yes, he said, that is the way.

And these are not the only evils, I said — there are several lesser ones: In such a state of society the master fears and flatters his scholars, and the scholars despise their masters and tutors; young and old are all alike; and the young man is on a level with the old, and is ready to compete with him in word or deed; and old men condescend to the young and are full of pleasantry and gaiety; they are loth to be thought morose and authoritative, and therefore they adopt the manners of the young.

Quite true, he said.

The last extreme of popular liberty is when the slave bought with money, whether male or female, is just as free as his or her

purchaser; nor must I forget to tell of the liberty and equality of the two sexes in relation to each other.

563d

Why not, as Aeschylus says, utter the word which rises to our lips?

That is what I am doing, I replied; and I must add that no one who does not know would believe, how much greater is the liberty which the animals who are under the dominion of man have in a democracy than in any other State: for truly, the she-dogs, as the proverb says, are as good as their she-mistresses, and the horses and asses have a way of marching along with all the rights and dignities of freemen; and they will run at anybody who comes in their way if he does not leave the road clear for them: and all things are just ready to burst with liberty.

563e

When I take a country walk, he said, I often experience what you describe. You and I have dreamed the same thing.

And above all, I said, and as the result of all, see how sensitive the citizens become; they chafe impatiently at the least touch of authority and at length, as you know, they cease to care even for the laws, written or unwritten; they will have no one over them.

Yes, he said, I know it too well.

564a

Such, my friend, I said, is the fair and glorious beginning out of which springs tyranny.

Glorious indeed, he said. But what is the next step?

The ruin of oligarchy is the ruin of democracy; the same disease magnified and intensified by liberty overmasters democracy — the truth being that the excessive increase of anything often causes a reaction in the opposite direction; and this is the case

not only in the seasons and in vegetable and animal life, but above all in forms of government.

564b

True.

The excess of liberty, whether in States or individuals, seems only to pass into excess of slavery.

Yes, the natural order.

And so tyranny naturally arises out of democracy, and the most aggravated form of tyranny and slavery out of the most extreme form of liberty?

As we might expect.

That, however, was not, as I believe, your question-you rather desired to know what is that disorder which is generated alike in oligarchy and democracy, and is the ruin of both?

564c

Just so, he replied.

Well, I said, I meant to refer to the class of idle spendthrifts, of whom the more courageous are the-leaders and the more timid the followers, the same whom we were comparing to drones, some stingless, and others having stings.

564d

A very just comparison.

These two classes are the plagues of every city in which they are generated, being what phlegm and bile are to the body. And the good physician and lawgiver of the State ought, like the wise bee-master, to keep them at a distance and prevent, if possible, their ever coming in; and if they have anyhow found a way in, then he should have them and their cells cut out as speedily as possible.

Yes, by all means, he said.

Then, in order that we may see clearly what we are doing, let us imagine democracy to be divided, as indeed it is, into three classes; for in the first place freedom creates rather more drones in the democratic than there were in the oligarchical State.

564e

That is true.

And in the democracy they are certainly more intensified.

How so?

Because in the oligarchical State they are disqualified and driven from office, and therefore they cannot train or gather strength; whereas in a democracy they are almost the entire ruling power, and while the keener sort speak and act, the rest keep buzzing about the bema and do not suffer a word to be said on the other side; hence in democracies almost everything is managed by the drones.

Very true, he said.

Then there is another class which is always being severed from the mass.

565a

What is that?

They are the orderly class, which in a nation of traders sure to be the richest.

Naturally so.

They are the most squeezable persons and yield the largest amount of honey to the drones.

Why, he said, there is little to be squeezed out of people who have little.

And this is called the wealthy class, and the drones feed upon them.

That is pretty much the case, he said.

565b

The people are a third class, consisting of those who work with their own hands; they are not politicians, and have not much to live upon. This, when assembled, is the largest and most powerful class in a democracy.

True, he said; but then the multitude is seldom willing to congregate unless they get a little honey.

And do they not share? I said. Do not their leaders deprive the rich of their estates and distribute them among the people; at the same time taking care to reserve the larger part for themselves?

565c

Why, yes, he said, to that extent the people do share.

And the persons whose property is taken from them are compelled to defend themselves before the people as they best can?

What else can they do?

And then, although they may have no desire of change, the others charge them with plotting against the people and being friends of oligarchy? True.

565d

And the end is that when they see the people, not of their own accord, but through ignorance, and because they are deceived by informers, seeking to do them wrong, then at last they are forced to become oligarchs in reality; they do not wish to be, but the sting of the drones torments them and breeds revolution in them.

That is exactly the truth.

Then come impeachments and judgments and trials of one another.

565e

True.

The people have always some champion whom they set over them and nurse into greatness.

Yes, that is their way.

This and no other is the root from which a tyrant springs; when he first appears above ground he is a protector.

Yes, that is quite clear.

How then does a protector begin to change into a tyrant? Clearly when he does what the man is said to do in the tale of the Arcadian temple of Lycaean Zeus.

566a

What tale?

The tale is that he who has tasted the entrails of a single human victim minced up with the entrails of other victims is destined to become a wolf. Did you never hear it?

Oh, yes.

And the protector of the people is like him; having a mob entirely at his disposal, he is not restrained from shedding the blood of kinsmen; by the favourite method of false accusation he brings them into court and murders them, making the life of man to disappear, and with unholy tongue and lips tasting the blood of his fellow citizen; some he kills and others he banishes, at the same time hinting at the abolition of debts and partition of lands: and after this, what will be his destiny? Must he not either perish at the hands of his enemies, or from being a man become a wolf — that is, a tyrant?

566b

Inevitably.

This, I said, is he who begins to make a party against the rich?

The same.

After a while he is driven out, but comes back, in spite of his enemies, a tyrant full grown.

That is clear.

And if they are unable to expel him, or to get him condemned to death by a public accusation, they conspire to assassinate him.

Yes, he said, that is their usual way.

566c

Then comes the famous request for a bodyguard, which is the device of all those who have got thus far in their tyrannical career— ‘Let not the people’s friend,’ as they say, ‘be lost to them.’

Exactly.

The people readily assent; all their fears are for him — they have none for themselves.

Very true.

And when a man who is wealthy and is also accused of being an enemy of the people sees this, then, my friend, as the oracle said to Croesus, By pebbly Hermus’ shore he flees and rests not and is not
ashamed to be a coward.

And quite right too, said he, for if he were, he would never be ashamed again.

566d

But if he is caught he dies.

Of course.

And he, the protector of whom we spoke, is to be seen, not ‘larding the plain’ with his bulk, but himself the overthrower of many, standing up in the chariot of State with the reins in his

hand, no longer protector, but tyrant absolute.

No doubt, he said.

And now let us consider the happiness of the man, and also of the State in which a creature like him is generated.

566e

Yes, he said, let us consider that.

At first, in the early days of his power, he is full of smiles, and he salutes every one whom he meets; — he to be called a tyrant, who is making promises in public and also in private! liberating debtors, and distributing land to the people and his followers, and wanting to be so kind and good to every one!

Of course, he said.

But when he has disposed of foreign enemies by conquest or treaty, and there is nothing to fear from them, then he is always stirring up some war or other, in order that the people may require a leader.

567a

To be sure.

Has he not also another object, which is that they may be impoverished by payment of taxes, and thus compelled to devote themselves to their daily wants and therefore less likely to conspire against him? Clearly.

And if any of them are suspected by him of having notions of freedom, and of resistance to his authority, he will have a good pretext for destroying them by placing them at the mercy of the enemy; and for all these reasons the tyrant must be always getting up a war.

He must.

567b

Now he begins to grow unpopular.

A necessary result.

Then some of those who joined in setting him up, and who are in power, speak their minds to him and to one another, and the more courageous of them cast in his teeth what is being done.

Yes, that may be expected.

And the tyrant, if he means to rule, must get rid of them; he cannot stop while he has a friend or an enemy who is good for anything.

567c

He cannot.

And therefore he must look about him and see who is valiant, who is high-minded, who is wise, who is wealthy; happy man, he is the enemy of them all, and must seek occasion against them whether he will or no, until he has made a purgation of the State.

Yes, he said, and a rare purgation.

Yes, I said, not the sort of purgation which the physicians make of the body; for they take away the worse and leave the better part, but he does the reverse.

567d

If he is to rule, I suppose that he cannot help himself.

What a blessed alternative, I said: — to be compelled to dwell only with the many bad, and to be by them hated, or not to live at all!

Yes, that is the alternative.

And the more detestable his actions are to the citizens the more satellites and the greater devotion in them will he require?

Certainly.

And who are the devoted band, and where will he procure them?

They will flock to him, he said, of their own accord, if he pays them.

567e

By the dog! I said, here are more drones, of every sort and from every land.

Yes, he said, there are.

But will he not desire to get them on the spot?

How do you mean?

He will rob the citizens of their slaves; he will then set them free and enrol them in his bodyguard.

To be sure, he said; and he will be able to trust them best of all.

What a blessed creature, I said, must this tyrant be; he has put to death the others and has these for his trusted friends.

Yes, he said; they are quite of his sort.

568a

Yes, I said, and these are the new citizens whom he has called into existence, who admire him and are his companions, while the good hate and avoid him.

Of course.

Verily, then, tragedy is a wise thing and Euripides a great tragedian.

Why so?

Why, because he is the author of the pregnant saying, Tyrants are wise by living with the wise; and he clearly meant to say that they are the wise whom the tyrant makes his companions.

Yes, he said, and he also praises tyranny as godlike; and many other things of the same kind are said by him and by the other poets.

568b

And therefore, I said, the tragic poets being wise men will forgive us and any others who live after our manner if we do not receive them into our State, because they are the eulogists of tyranny.

Yes, he said, those who have the wit will doubtless forgive us.

568c

But they will continue to go to other cities and attract mobs, and hire voices fair and loud and persuasive, and draw the cities over to tyrannies and democracies.

Very true.

Moreover, they are paid for this and receive honour — the greatest honour, as might be expected, from tyrants, and the next greatest from democracies; but the higher they ascend our constitution hill, the more their reputation fails, and seems unable from shortness of breath to proceed further.

True.

But we are wandering from the subject: Let us therefore return and enquire how the tyrant will maintain that fair and numerous and various and ever-changing army of his.

568d

If, he said, there are sacred treasures in the city, he will confiscate and spend them; and in so far as the fortunes of attainted persons may suffice, he will be able to diminish the taxes which he would otherwise have to impose upon the people.

And when these fail?

Why, clearly, he said, then he and his boon companions, whether male or female, will be maintained out of his father's estate.

568e

You mean to say that the people, from whom he has derived his being, will maintain him and his companions?

Yes, he said; they cannot help themselves.

569a

But what if the people fly into a passion, and aver that a grown-up son ought not to be supported by his father, but that the father should be supported by the son? The father did not bring him into being, or settle him in life, in order that when his son became a man he should himself be the servant of his own servants and should support him and his rabble of slaves and companions; but that his son should protect him, and that by his help he might be emancipated from the government of the rich and aristocratic, as they are termed. And so he bids him and his companions depart, just as any other father might drive out of the house a riotous son and his undesirable associates.

569b

By heaven, he said, then the parent will discover what a monster he has been fostering in his bosom; and, when he wants to drive him out, he will find that he is weak and his son strong.

Why, you do not mean to say that the tyrant will use violence? What! beat his father if he opposes him?

Yes, he will, having first disarmed him.

569c

Then he is a parricide, and a cruel guardian of an aged parent; and this is real tyranny, about which there can be no longer a mistake: as the saying is, the people who would escape the smoke which is the slavery of freemen, has fallen into the fire

which is the tyranny of slaves. Thus liberty, getting out of all order and reason, passes into the harshest and bitterest form of slavery.

True, he said.

Very well; and may we not rightly say that we have sufficiently discussed the nature of tyranny, and the manner of the transition from democracy to tyranny?

Yes, quite enough, he said.

BOOK IX

571a

Socrates - Adeimantus Last of all comes the tyrannical man; about whom we have once more to ask, how is he formed out of the democratical? and how does he live, in happiness or in misery?

Yes, he said, he is the only one remaining.

There is, however, I said, a previous question which remains unanswered.

What question?

I do not think that we have adequately determined the nature and number of the appetites, and until this is accomplished the enquiry will always be confused.

571b

Well, he said, it is not too late to supply the omission.

Very true, I said; and observe the point which I want to understand: Certain of the unnecessary pleasures and appetites I conceive to be unlawful; every one appears to have them, but in some persons they are controlled by the laws and by reason, and the better desires prevail over them-either they are wholly banished or they become few and weak; while in the case of

others they are stronger, and there are more of them.

571c

Which appetites do you mean?

571d

I mean those which are awake when the reasoning and human and ruling power is asleep; then the wild beast within us, gorged with meat or drink, starts up and having shaken off sleep, goes forth to satisfy his desires; and there is no conceivable folly or crime — not excepting incest or any other unnatural union, or parricide, or the eating of forbidden food — which at such a time, when he has parted company with all shame and sense, a man may not be ready to commit.

Most true, he said.

572a

But when a man's pulse is healthy and temperate, and when before going to sleep he has awakened his rational powers, and fed them on noble thoughts and enquiries, collecting himself in meditation; after having first indulged his appetites neither too much nor too little, but just enough to lay them to sleep, and prevent them and their enjoyments and pains from interfering with the higher principle — which he leaves in the solitude of pure abstraction, free to contemplate and aspire to the knowledge of the unknown, whether in past, present, or future: when again he has allayed the passionate element, if he has a quarrel against any one — I say, when, after pacifying the two irrational principles, he rouses up the third, which is reason, before he takes his rest, then, as you know, he attains truth most nearly, and is least likely to be the sport of fantastic and lawless visions.

I quite agree.

572b

In saying this I have been running into a digression; but the point which I desire to note is that in all of us, even in good

men, there is a lawless wild-beast nature, which peers out in sleep. Pray, consider whether I am right, and you agree with me.

Yes, I agree.

572c

And now remember the character which we attributed to the democratic man. He was supposed from his youth upwards to have been trained under a miserly parent, who encouraged the saving appetites in him, but discountenanced the unnecessary, which aim only at amusement and ornament?

True.

572d

And then he got into the company of a more refined, licentious sort of people, and taking to all their wanton ways rushed into the opposite extreme from an abhorrence of his father's meanness. At last, being a better man than his corruptors, he was drawn in both directions until he halted midway and led a life, not of vulgar and slavish passion, but of what he deemed moderate indulgence in various pleasures. After this manner the democrat was generated out of the oligarch?

Yes, he said; that was our view of him, and is so still.

And now, I said, years will have passed away, and you must conceive this man, such as he is, to have a son, who is brought up in his father's principles.

572e

I can imagine him.

Then you must further imagine the same thing to happen to the son which has already happened to the father: — he is drawn into a perfectly lawless life, which by his seducers is termed perfect liberty; and his father and friends take part with his moderate desires, and the opposite party assist the opposite ones. As soon as these dire magicians and tyrant-makers find that they are losing their hold on him, they contrive to implant

in him a master passion, to be lord over his idle and spendthrift lusts — a sort of monstrous winged drone — that is the only image which will adequately describe him.

573a

Yes, he said, that is the only adequate image of him.

573b

And when his other lusts, amid clouds of incense and perfumes and garlands and wines, and all the pleasures of a dissolute life, now let loose, come buzzing around him, nourishing to the utmost the sting of desire which they implant in his drone-like nature, then at last this lord of the soul, having Madness for the captain of his guard, breaks out into a frenzy: and if he finds in himself any good opinions or appetites in process of formation, and there is in him any sense of shame remaining, to these better principles he puts an end, and casts them forth until he has purged away temperance and brought in madness to the full.

573c

Yes, he said, that is the way in which the tyrannical man is generated.

And is not this the reason why of old love has been called a tyrant?

I should not wonder.

Further, I said, has not a drunken man also the spirit of a tyrant?

He has.

573d

And you know that a man who is deranged and not right in his mind, will fancy that he is able to rule, not only over men, but also over the gods?

That he will.

And the tyrannical man in the true sense of the word comes into being when, either under the influence of nature, or habit, or both, he becomes drunken, lustful, passionate? O my friend, is not that so?

Assuredly.

Such is the man and such is his origin. And next, how does he live?

Suppose, as people facetiously say, you were to tell me.

I imagine, I said, at the next step in his progress, that there will be feasts and carousals and revellings and courtezans, and all that sort of thing; Love is the lord of the house within him, and orders all the concerns of his soul.

573e

That is certain.

Yes; and every day and every night desires grow up many and formidable, and their demands are many.

They are indeed, he said.

His revenues, if he has any, are soon spent.

True.

Then comes debt and the cutting down of his property.

Of course.

When he has nothing left, must not his desires, crowding in the nest like young ravens, be crying aloud for food; and he, goaded on by them, and especially by love himself, who is in a manner the captain of them, is in a frenzy, and would fain discover whom he can defraud or despoil of his property, in order that he may gratify them?

574a

Yes, that is sure to be the case.

He must have money, no matter how, if he is to escape horrid pains and pangs.

He must.

574b

And as in himself there was a succession of pleasures, and the new got the better of the old and took away their rights, so he being younger will claim to have more than his father and his mother, and if he has spent his own share of the property, he will take a slice of theirs.

No doubt he will.

And if his parents will not give way, then he will try first of all to cheat and deceive them.

Very true.

And if he fails, then he will use force and plunder them.

Yes, probably.

574c

And if the old man and woman fight for their own, what then, my friend?

Will the creature feel any compunction at tyrannizing over them?

Nay, he said, I should not feel at all comfortable about his parents.

But, O heavens! Adeimantus, on account of some newfangled love of a harlot, who is anything but a necessary connection, can you believe that he would strike the mother who is his ancient friend and necessary to his very existence, and would place her under the authority of the other, when she is brought under the same roof with her; or that, under like circumstances, he would do the same to his withered old father, first and most indispensable of friends, for the sake of some newly found

blooming youth who is the reverse of indispensable?

574d

Yes, indeed, he said; I believe that he would.

Truly, then, I said, a tyrannical son is a blessing to his father and mother.

He is indeed, he replied.

575a

He first takes their property, and when that falls, and pleasures are beginning to swarm in the hive of his soul, then he breaks into a house, or steals the garments of some nightly wayfarer; next he proceeds to clear a temple. Meanwhile the old opinions which he had when a child, and which gave judgment about good and evil, are overthrown by those others which have just been emancipated, and are now the bodyguard of love and share his empire. These in his democratic days, when he was still subject to the laws and to his father, were only let loose in the dreams of sleep. But now that he is under the dominion of love, he becomes always and in waking reality what he was then very rarely and in a dream only; he will commit the foulest murder, or eat forbidden food, or be guilty of any other horrid act. Love is his tyrant, and lives lordly in him and lawlessly, and being himself a king, leads him on, as a tyrant leads a State, to the performance of any reckless deed by which he can maintain himself and the rabble of his associates, whether those whom evil communications have brought in from without, or those whom he himself has allowed to break loose within him by reason of a similar evil nature in himself. Have we not here a picture of his way of life?

575b

Yes, indeed, he said.

And if there are only a few of them in the State, the rest of the people are well disposed, they go away and become the

bodyguard or mercenary soldiers of some other tyrant who may probably want them for a war; and if there is no war, they stay at home and do many little pieces of mischief in the city.

575c

What sort of mischief?

For example, they are the thieves, burglars, cutpurses, footpads, robbers of temples, man-stealers of the community; or if they are able to speak they turn informers, and bear false witness, and take bribes.

A small catalogue of evils, even if the perpetrators of them are few in number.

575d

Yes, I said; but small and great are comparative terms, and all these things, in the misery and evil which they inflict upon a State, do not come within a thousand miles of the tyrant; when this noxious class and their followers grow numerous and become conscious of their strength, assisted by the infatuation of the people, they choose from among themselves the one who has most of the tyrant in his own soul, and him they create their tyrant.

Yes, he said, and he will be the most fit to be a tyrant.

575e

If the people yield, well and good; but if they resist him, as he began by beating his own father and mother, so now, if he has the power, he beats them, and will keep his dear old fatherland or motherland, as the Cretans say, in subjection to his young retainers whom he has introduced to be their rulers and masters. This is the end of his passions and desires.

Exactly.

576a

When such men are only private individuals and before they get power, this is their character; they associate entirely with their

own flatterers or ready tools; or if they want anything from anybody, they in their turn are equally ready to bow down before them: they profess every sort of affection for them; but when they have gained their point they know them no more.

Yes, truly.

They are always either the masters or servants and never the friends of anybody; the tyrant never tastes of true freedom or friendship.

Certainly not.

And may we not rightly call such men treacherous?

576b

No question.

Also they are utterly unjust, if we were right in our notion of justice?

Yes, he said, and we were perfectly right.

Let us then sum up in a word, I said, the character of the worst man: he is the waking reality of what we dreamed.

Most true.

And this is he who being by nature most of a tyrant bears rule, and the longer he lives the more of a tyrant he becomes.

576c

Socrates - Glaucon That is certain, said Glaucon, taking his turn to answer.

And will not he who has been shown to be the wickedest, be also the most miserable? and he who has tyrannized longest and most, most continually and truly miserable; although this may not be the opinion of men in general?

Yes, he said, inevitably.

And must not the tyrannical man be like the tyrannical, State, and the democratical man like the democratical State; and the same of the others?

576d

Certainly.

And as State is to State in virtue and happiness, so is man in relation to man?

To be sure.

Then comparing our original city, which was under a king, and the city which is under a tyrant, how do they stand as to virtue?

They are the opposite extremes, he said, for one is the very best and the other is the very worst.

576e

There can be no mistake, I said, as to which is which, and therefore I will at once enquire whether you would arrive at a similar decision about their relative happiness and misery. And here we must not allow ourselves to be panic-stricken at the apparition of the tyrant, who is only a unit and may perhaps have a few retainers about him; but let us go as we ought into every corner of the city and look all about, and then we will give our opinion.

577a

A fair invitation, he replied; and I see, as every one must, that a tyranny is the wretchedest form of government, and the rule of a king the happiest.

And in estimating the men too, may I not fairly make a like request, that I should have a judge whose mind can enter into and see through human nature? He must not be like a child who looks at the outside and is dazzled at the pompous aspect which the tyrannical nature assumes to the beholder, but let him be one who has a clear insight. May I suppose that the judgment is given in the hearing of us all by one who is able to judge, and

has dwelt in the same place with him, and been present at his dally life and known him in his family relations, where he may be seen stripped of his tragedy attire, and again in the hour of public danger — he shall tell us about the happiness and misery of the tyrant when compared with other men?

577b

That again, he said, is a very fair proposal.

Shall I assume that we ourselves are able and experienced judges and have before now met with such a person? We shall then have some one who will answer our enquiries.

By all means.

577c

Let me ask you not to forget the parallel of the individual and the State; bearing this in mind, and glancing in turn from one to the other of them, will you tell me their respective conditions?

What do you mean? he asked.

Beginning with the State, I replied, would you say that a city which is governed by a tyrant is free or enslaved?

No city, he said, can be more completely enslaved.

And yet, as you see, there are freemen as well as masters in such a State?

577d

Yes, he said, I see that there are — a few; but the people, speaking generally, and the best of them, are miserably degraded and enslaved.

Then if the man is like the State, I said, must not the same rule prevail? his soul is full of meanness and vulgarity — the best elements in him are enslaved; and there is a small ruling part, which is also the worst and maddest.

Inevitably.

And would you say that the soul of such an one is the soul of a freeman, or of a slave?

577e

He has the soul of a slave, in my opinion.

And the State which is enslaved under a tyrant is utterly incapable of acting voluntarily?

578a

Utterly incapable.

And also the soul which is under a tyrant (I am speaking of the soul taken as a whole) is least capable of doing what she desires; there is a gadfly which goads her, and she is full of trouble and remorse?

Certainly.

And is the city which is under a tyrant rich or poor?

Poor.

And the tyrannical soul must be always poor and insatiable?

True.

And must not such a State and such a man be always full of fear?

578b

Yes, indeed.

Is there any State in which you will find more of lamentation and sorrow and groaning and pain?

Certainly not.

And is there any man in whom you will find more of this sort of misery than in the tyrannical man, who is in a fury of passions and desires?

578c

Impossible.

Reflecting upon these and similar evils, you held the tyrannical State to be the most miserable of States?

And I was right, he said.

Certainly, I said. And when you see the same evils in the tyrannical man, what do you say of him?

I say that he is by far the most miserable of all men.

There, I said, I think that you are beginning to go wrong.

What do you mean?

I do not think that he has as yet reached the utmost extreme of misery.

Then who is more miserable?

One of whom I am about to speak.

Who is that?

578d

He who is of a tyrannical nature, and instead of leading a private life has been cursed with the further misfortune of being a public tyrant.

From what has been said, I gather that you are right.

Yes, I replied, but in this high argument you should be a little more certain, and should not conjecture only; for of all questions, this respecting good and evil is the greatest.

Very true, he said.

Let me then offer you an illustration, which may, I think, throw a light upon this subject.

What is your illustration?

578e

The case of rich individuals in cities who possess many slaves: from them you may form an idea of the tyrant's condition, for

they both have slaves; the only difference is that he has more slaves.

Yes, that is the difference.

You know that they live securely and have nothing to apprehend from their servants?

What should they fear?

Nothing. But do you observe the reason of this?

Yes; the reason is, that the whole city is leagued together for the protection of each individual.

Very true, I said. But imagine one of these owners, the master say of some fifty slaves, together with his family and property and slaves, carried off by a god into the wilderness, where there are no freemen to help him — will he not be in an agony of fear lest he and his wife and children should be put to death by his slaves?

Yes, he said, he will be in the utmost fear.

The time has arrived when he will be compelled to flatter divers of his slaves, and make many promises to them of freedom and other things, much against his will — he will have to cajole his own servants.

579a

Yes, he said, that will be the only way of saving himself.

And suppose the same god, who carried him away, to surround him with neighbours who will not suffer one man to be the master of another, and who, if they could catch the offender, would take his life?

His case will be still worse, if you suppose him to be everywhere surrounded and watched by enemies.

579b

And is not this the sort of prison in which the tyrant will be bound — he who being by nature such as we have described, is full of all sorts of fears and lusts? His soul is dainty and greedy, and yet alone, of all men in the city, he is never allowed to go on a journey, or to see the things which other freemen desire to see, but he lives in his hole like a woman hidden in the house, and is jealous of any other citizen who goes into foreign parts and sees anything of interest.

Very true, he said.

579c

And amid evils such as these will not he who is ill-governed in his own person — the tyrannical man, I mean — whom you just now decided to be the most miserable of all — will not he be yet more miserable when, instead of leading a private life, he is constrained by fortune to be a public tyrant? He has to be master of others when he is not master of himself: he is like a diseased or paralytic man who is compelled to pass his life, not in retirement, but fighting and combating with other men.

579d

Yes, he said, the similitude is most exact.

Is not his case utterly miserable? and does not the actual tyrant lead a worse life than he whose life you determined to be the worst?

Certainly.

579e

He who is the real tyrant, whatever men may think, is the real slave, and is obliged to practise the greatest adulation and servility, and to be the flatterer of the vilest of mankind. He has desires which he is utterly unable to satisfy, and has more wants than any one, and is truly poor, if you know how to inspect the whole soul of him: all his life long he is beset with fear and is full of convulsions, and distractions, even as the State which he

resembles: and surely the resemblance holds?

Very true, he said.

580a

Moreover, as we were saying before, he grows worse from having power: he becomes and is of necessity more jealous, more faithless, more unjust, more friendless, more impious, than he was at first; he is the purveyor and cherisher of every sort of vice, and the consequence is that he is supremely miserable, and that he makes everybody else as miserable as himself.

No man of any sense will dispute your words.

580b

Come then, I said, and as the general umpire in theatrical contests proclaims the result, do you also decide who in your opinion is first in the scale of happiness, and who second, and in what order the others follow: there are five of them in all — they are the royal, timocratical, oligarchical, democratical, tyrannical.

The decision will be easily given, he replied; they shall be choruses coming on the stage, and I must judge them in the order in which they enter, by the criterion of virtue and vice, happiness and misery.

580c

Need we hire a herald, or shall I announce, that the son of Ariston (the best) has decided that the best and justest is also the happiest, and that this is he who is the most royal man and king over himself; and that the worst and most unjust man is also the most miserable, and that this is he who being the greatest tyrant of himself is also the greatest tyrant of his State?

Make the proclamation yourself, he said.

And shall I add, ‘whether seen or unseen by gods and men’?

Let the words be added.

580d

Then this, I said, will be our first proof; and there is another, which may also have some weight.

What is that?

The second proof is derived from the nature of the soul: seeing that the individual soul, like the State, has been divided by us into three principles, the division may, I think, furnish a new demonstration.

580e

Of what nature?

It seems to me that to these three principles three pleasures correspond; also three desires and governing powers.

How do you mean? he said.

There is one principle with which, as we were saying, a man learns, another with which he is angry; the third, having many forms, has no special name, but is denoted by the general term appetitive, from the extraordinary strength and vehemence of the desires of eating and drinking and the other sensual appetites which are the main elements of it; also money-loving, because such desires are generally satisfied by the help of money.

581a

That is true, he said.

If we were to say that the loves and pleasures of this third part were concerned with gain, we should then be able to fall back on a single notion; and might truly and intelligibly describe this part of the soul as loving gain or money.

I agree with you.

Again, is not the passionate element wholly set on ruling and conquering and getting fame?

True.

Suppose we call it the contentious or ambitious — would the term be suitable?

Extremely suitable.

581b

On the other hand, every one sees that the principle of knowledge is wholly directed to the truth, and cares less than either of the others for gain or fame.

Far less.

‘Lover of wisdom,’ ‘lover of knowledge,’ are titles which we may fitly apply to that part of the soul?

Certainly.

581c

One principle prevails in the souls of one class of men, another in others, as may happen?

Yes.

Then we may begin by assuming that there are three classes of men — lovers of wisdom, lovers of honour, lovers of gain?

Exactly.

And there are three kinds of pleasure, which are their several objects?

Very true.

581d

Now, if you examine the three classes of men, and ask of them in turn which of their lives is pleasantest, each will be found praising his own and depreciating that of others: the money-maker will contrast the vanity of honour or of learning

if they bring no money with the solid advantages of gold and silver?

True, he said.

And the lover of honour — what will be his opinion? Will he not think that the pleasure of riches is vulgar, while the pleasure of learning, if it brings no distinction, is all smoke and nonsense to him?

Very true.

581e

And are we to suppose, I said, that the philosopher sets any value on other pleasures in comparison with the pleasure of knowing the truth, and in that pursuit abiding, ever learning, not so far indeed from the heaven of pleasure? Does he not call the other pleasures necessary, under the idea that if there were no necessity for them, he would rather not have them?

There can be no doubt of that, he replied.

582a

Since, then, the pleasures of each class and the life of each are in dispute, and the question is not which life is more or less honourable, or better or worse, but which is the more pleasant or painless — how shall we know who speaks truly?

I cannot myself tell, he said.

Well, but what ought to be the criterion? Is any better than experience and wisdom and reason?

There cannot be a better, he said.

Then, I said, reflect. Of the three individuals, which has the greatest experience of all the pleasures which we enumerated? Has the lover of gain, in learning the nature of essential truth, greater experience of the pleasure of knowledge than the philosopher has of the pleasure of gain?

582b

The philosopher, he replied, has greatly the advantage; for he has of necessity always known the taste of the other pleasures from his childhood upwards: but the lover of gain in all his experience has not of necessity tasted — or, I should rather say, even had he desired, could hardly have tasted — the sweetness of learning and knowing truth.

Then the lover of wisdom has a great advantage over the lover of gain, for he has a double experience?

Yes, very great.

Again, has he greater experience of the pleasures of honour, or the lover of honour of the pleasures of wisdom?

582c

Nay, he said, all three are honoured in proportion as they attain their object; for the rich man and the brave man and the wise man alike have their crowd of admirers, and as they all receive honour they all have experience of the pleasures of honour; but the delight which is to be found in the knowledge of true being is known to the philosopher only.

His experience, then, will enable him to judge better than any one?

Far better.

And he is the only one who has wisdom as well as experience?

Certainly.

Further, the very faculty which is the instrument of judgment is not possessed by the covetous or ambitious man, but only by the philosopher?

582d

What faculty?

Reason, with whom, as we were saying, the decision ought to rest.

Yes.

And reasoning is peculiarly his instrument?

Certainly.

If wealth and gain were the criterion, then the praise or blame of the lover of gain would surely be the most trustworthy?

Assuredly.

Or if honour or victory or courage, in that case the judgement of the ambitious or pugnacious would be the truest?

Clearly.

But since experience and wisdom and reason are the judges — The only inference possible, he replied, is that pleasures which are approved by the lover of wisdom and reason are the truest.

And so we arrive at the result, that the pleasure of the intelligent part of the soul is the pleasantest of the three, and that he of us in whom this is the ruling principle has the pleasantest life.

582e

Unquestionably, he said, the wise man speaks with authority when he approves of his own life.

And what does the judge affirm to be the life which is next, and the pleasure which is next?

Clearly that of the soldier and lover of honour; who is nearer to himself than the money-maker.

Last comes the lover of gain?

Very true, he said.

Twice in succession, then, has the just man overthrown the unjust in this conflict; and now comes the third trial, which is dedicated to Olympian Zeus the saviour: a sage whispers in my ear that no pleasure except that of the wise is quite true and pure — all others are a shadow only; and surely this will prove the greatest and most decisive of falls?

583a

Yes, the greatest; but will you explain yourself?

I will work out the subject and you shall answer my questions.

Proceed.

Say, then, is not pleasure opposed to pain?

True.

And there is a neutral state which is neither pleasure nor pain?

There is.

A state which is intermediate, and a sort of repose of the soul about either — that is what you mean?

Yes.

You remember what people say when they are sick?

What do they say?

That after all nothing is pleasanter than health. But then they never knew this to be the greatest of pleasures until they were ill.

583b

Yes, I know, he said.

And when persons are suffering from acute pain, you must have heard them say that there is nothing pleasanter than to get rid of their pain?

I have.

And there are many other cases of suffering in which the mere rest and cessation of pain, and not any positive enjoyment, is extolled by them as the greatest pleasure?

583d

Yes, he said; at the time they are pleased and well content to be at rest.

Again, when pleasure ceases, that sort of rest or cessation will be painful?

Doubtless, he said.

Then the intermediate state of rest will be pleasure and will also be pain?

So it would seem.

But can that which is neither become both?

I should say not.

And both pleasure and pain are motions of the soul, are they not?

Yes.

But that which is neither was just now shown to be rest and not motion, and in a mean between them?

Yes.

583e

How, then, can we be right in supposing that the absence of pain is pleasure, or that the absence of pleasure is pain?

Impossible.

This then is an appearance only and not a reality; that is to say, the rest is pleasure at the moment and in comparison of what is painful, and painful in comparison of what is pleasant; but all these representations, when tried by the test of true pleasure, are not real but a sort of imposition?

584a

That is the inference.

Look at the other class of pleasures which have no antecedent pains and you will no longer suppose, as you perhaps may at present, that pleasure is only the cessation of pain, or pain of pleasure.

What are they, he said, and where shall I find them?

There are many of them: take as an example the pleasures, of smell, which are very great and have no antecedent pains; they come in a moment, and when they depart leave no pain behind them.

Most true, he said.

584b

Let us not, then, be induced to believe that pure pleasure is the cessation of pain, or pain of pleasure.

No.

Still, the more numerous and violent pleasures which reach the soul through the body are generally of this sort — they are reliefs of pain.

That is true.

And the anticipations of future pleasures and pains are of a like nature?

Yes.

Shall I give you an illustration of them?

Let me hear.

You would allow, I said, that there is in nature an upper and lower and middle region?

I should.

584c

And if a person were to go from the lower to the middle region, would he not imagine that he is going up; and he who is standing in the middle and sees whence he has come, would imagine that he is already in the upper region, if he has never seen the true upper world?

To be sure, he said; how can he think otherwise?

But if he were taken back again he would imagine, and truly imagine, that he was descending?

No doubt.

584d

All that would arise out of his ignorance of the true upper and middle and lower regions?

Yes.

Then can you wonder that persons who are inexperienced in the truth, as they have wrong ideas about many other things, should also have wrong ideas about pleasure and pain and the intermediate state; so that when they are only being drawn towards the painful they feel pain and think the pain which they experience to be real, and in like manner, when drawn away from pain to the neutral or intermediate state, they firmly believe that they have reached the goal of satiety and pleasure; they, not knowing pleasure, err in contrasting pain with the absence of pain, which is like contrasting black with grey instead of white — can you wonder, I say, at this?

584e

No, indeed; I should be much more disposed to wonder at the opposite.

Look at the matter thus: — Hunger, thirst, and the like, are inanitions of the bodily state?

Yes.

And ignorance and folly are inanitions of the soul?

True.

And food and wisdom are the corresponding satisfactions of either?

Certainly.

And is the satisfaction derived from that which has less or from that which has more existence the truer?

Clearly, from that which has more.

585a

What classes of things have a greater share of pure existence in your judgment — those of which food and drink and condiments and all kinds of sustenance are examples, or the class which contains true opinion and knowledge and mind and all the different kinds of virtue? Put the question in this way: — Which has a more pure being — that which is concerned with the invariable, the immortal, and the true, and is of such a nature, and is found in such natures; or that which is concerned with and found in the variable and mortal, and is itself variable and mortal?

585b

Far purer, he replied, is the being of that which is concerned with the invariable.

And does the essence of the invariable partake of knowledge in the same degree as of essence?

Yes, of knowledge in the same degree.

And of truth in the same degree?

Yes.

And, conversely, that which has less of truth will also have less of essence?

Necessarily.

Then, in general, those kinds of things which are in the service of the body have less of truth and essence than those which are in the service of the soul?

585c

Far less.

And has not the body itself less of truth and essence than the soul?

Yes.

What is filled with more real existence, and actually has a more real existence, is more really filled than that which is filled with less real existence and is less real?

Of course.

585d

And if there be a pleasure in being filled with that which is according to nature, that which is more really filled with more real being will more really and truly enjoy true pleasure; whereas that which participates in less real being will be less truly and surely satisfied, and will participate in an illusory and less real pleasure?

Unquestionably.

586a

Those then who know not wisdom and virtue, and are always busy with gluttony and sensuality, go down and up again as far as the mean; and in this region they move at random throughout life, but they never pass into the true upper world; thither they neither look, nor do they ever find their way, neither are they truly filled with true being, nor do they taste of pure and abiding pleasure. Like cattle, with their eyes always looking down and their heads stooping to the earth, that is, to the dining-table, they fatten and feed and breed, and, in their

excessive love of these delights, they kick and butt at one another with horns and hoofs which are made of iron; and they kill one another by reason of their insatiable lust. For they fill themselves with that which is not substantial, and the part of themselves which they fill is also unsubstantial and incontinent.

586b

Verily, Socrates, said Glaucon, you describe the life of the many like an oracle.

Their pleasures are mixed with pains — how can they be otherwise? For they are mere shadows and pictures of the true, and are coloured by contrast, which exaggerates both light and shade, and so they implant in the minds of fools insane desires of themselves; and they are fought about as Stesichorus says that the Greeks fought about the shadow of Helen at Troy in ignorance of the truth.

586c

Something of that sort must inevitably happen.

And must not the like happen with the spirited or passionate element of the soul? Will not the passionate man who carries his passion into action, be in the like case, whether he is envious and ambitious, or violent and contentious, or angry and discontented, if he be seeking to attain honour and victory and the satisfaction of his anger without reason or sense?

586d

Yes, he said, the same will happen with the spirited element also.

586e

Then may we not confidently assert that the lovers of money and honour, when they seek their pleasures under the guidance and in the company of reason and knowledge, and pursue after and win the pleasures which wisdom shows them, will also have the truest pleasures in the highest degree which is attainable to them, inasmuch as they follow truth; and they will have the

pleasures which are natural to them, if that which is best for each one is also most natural to him?

Yes, certainly; the best is the most natural.

And when the whole soul follows the philosophical principle, and there is no division, the several parts are just, and do each of them their own business, and enjoy severally the best and truest pleasures of which they are capable?

587a

Exactly.

But when either of the two other principles prevails, it fails in attaining its own pleasure, and compels the rest to pursue after a pleasure which is a shadow only and which is not their own?

True.

587b

And the greater the interval which separates them from philosophy and reason, the more strange and illusive will be the pleasure?

Yes.

And is not that farthest from reason which is at the greatest distance from law and order?

Clearly.

And the lustful and tyrannical desires are, as we saw, at the greatest distance? Yes.

And the royal and orderly desires are nearest?

Yes.

Then the tyrant will live at the greatest distance from true or natural pleasure, and the king at the least?

Certainly.

But if so, the tyrant will live most unpleasantly, and the king most pleasantly?

Inevitably.

587c

Would you know the measure of the interval which separates them?

Will you tell me?

There appear to be three pleasures, one genuine and two spurious: now the transgression of the tyrant reaches a point beyond the spurious; he has run away from the region of law and reason, and taken up his abode with certain slave pleasures which are his satellites, and the measure of his inferiority can only be expressed in a figure.

How do you mean?

I assume, I said, that the tyrant is in the third place from the oligarch; the democrat was in the middle?

Yes.

And if there is truth in what has preceded, he will be wedded to an image of pleasure which is thrice removed as to truth from the pleasure of the oligarch?

587d

He will.

And the oligarch is third from the royal; since we count as one royal and aristocratical?

Yes, he is third.

Then the tyrant is removed from true pleasure by the space of a number which is three times three?

Manifestly.

The shadow then of tyrannical pleasure determined by the number of length will be a plane figure.

Certainly.

And if you raise the power and make the plane a solid, there is no difficulty in seeing how vast is the interval by which the tyrant is parted from the king.

587e

Yes; the arithmetician will easily do the sum.

Or if some person begins at the other end and measures the interval by which the king is parted from the tyrant in truth of pleasure, he will find him, when the multiplication is complete, living 729 times more pleasantly, and the tyrant more painfully by this same interval.

What a wonderful calculation! And how enormous is the distance which separates the just from the unjust in regard to pleasure and pain!

Yet a true calculation, I said, and a number which nearly concerns human life, if human beings are concerned with days and nights and months and years.

588a

Yes, he said, human life is certainly concerned with them.

Then if the good and just man be thus superior in pleasure to the evil and unjust, his superiority will be infinitely greater in propriety of life and in beauty and virtue?

Immeasurably greater.

588b

Well, I said, and now having arrived at this stage of the argument, we may revert to the words which brought us hither: Was not some one saying that injustice was a gain to the perfectly unjust who was reputed to be just?

Yes, that was said.

Now then, having determined the power and quality of justice and injustice, let us have a little conversation with him.

What shall we say to him?

Let us make an image of the soul, that he may have his own words presented before his eyes.

Of what sort?

An ideal image of the soul, like the composite creations of ancient mythology, such as the Chimera or Scylla or Cerberus, and there are many others in which two or more different natures are said to grow into one.

588c

There are said of have been such unions.

Then do you now model the form of a multitudinous, many-headed monster, having a ring of heads of all manner of beasts, tame and wild, which he is able to generate and metamorphose at will.

You suppose marvellous powers in the artist; but, as language is more pliable than wax or any similar substance, let there be such a model as you propose.

588d

Suppose now that you make a second form as of a lion, and a third of a man, the second smaller than the first, and the third smaller than the second.

That, he said, is an easier task; and I have made them as you say.

And now join them, and let the three grow into one.

That has been accomplished.

588e

Next fashion the outside of them into a single image, as of a man, so that he who is not able to look within, and sees only the outer hull, may believe the beast to be a single human creature. I have done so, he said.

589a

And now, to him who maintains that it is profitable for the human creature to be unjust, and unprofitable to be just, let us reply that, if he be right, it is profitable for this creature to feast the multitudinous monster and strengthen the lion and the lion-like qualities, but to starve and weaken the man, who is consequently liable to be dragged about at the mercy of either of the other two; and he is not to attempt to familiarize or harmonize them with one another — he ought rather to suffer them to fight and bite and devour one another.

Certainly, he said; that is what the approver of injustice says.

589b

To him the supporter of justice makes answer that he should ever so speak and act as to give the man within him in some way or other the most complete mastery over the entire human creature.

He should watch over the many-headed monster like a good husbandman, fostering and cultivating the gentle qualities, and preventing the wild ones from growing; he should be making the lion-heart his ally, and in common care of them all should be uniting the several parts with one another and with himself.

589c

Yes, he said, that is quite what the maintainer of justice say.

And so from every point of view, whether of pleasure, honour, or advantage, the approver of justice is right and speaks the truth, and the disapprover is wrong and false and ignorant.

Yes, from every point of view.

589d

Come, now, and let us gently reason with the unjust, who is not intentionally in error. 'Sweet Sir,' we will say to him, what think you of things esteemed noble and ignoble? Is not the noble that which subjects the beast to the man, or rather to the god in man; and the ignoble that which subjects the man to the beast? He can hardly avoid saying yes — can he now?

Not if he has any regard for my opinion.

589e

But, if he agree so far, we may ask him to answer another question: 'Then how would a man profit if he received gold and silver on the condition that he was to enslave the noblest part of him to the worst? Who can imagine that a man who sold his son or daughter into slavery for money, especially if he sold them into the hands of fierce and evil men, would be the gainer, however large might be the sum which he received? And will any one say that he is not a miserable caitiff who remorselessly sells his own divine being to that which is most godless and detestable? Eriphyle took the necklace as the price of her husband's life, but he is taking a bribe in order to compass a worse ruin.'

590a

Yes, said Glaucon, far worse — I will answer for him.

Has not the intemperate been censured of old, because in him the huge multiform monster is allowed to be too much at large?

Clearly.

And men are blamed for pride and bad temper when the lion and serpent element in them disproportionately grows and gains strength?

590b

Yes.

And luxury and softness are blamed, because they relax and weaken this same creature, and make a coward of him?

Very true.

And is not a man reproached for flattery and meanness who subordinates the spirited animal to the unruly monster, and, for the sake of money, of which he can never have enough, habituates him in the days of his youth to be trampled in the mire, and from being a lion to become a monkey?

590c

True, he said.

590d

And why are mean employments and manual arts a reproach Only because they imply a natural weakness of the higher principle; the individual is unable to control the creatures within him, but has to court them, and his great study is how to flatter them.

Such appears to be the reason.

590e

And therefore, being desirous of placing him under a rule like that of the best, we say that he ought to be the servant of the best, in whom the Divine rules; not, as Thrasymachus supposed, to the injury of the servant, but because every one had better be ruled by divine wisdom dwelling within him; or, if this be impossible, then by an external authority, in order that we may be all, as far as possible, under the same government, friends and equals.

True, he said.

591a

And this is clearly seen to be the intention of the law, which is the ally of the whole city; and is seen also in the authority which we exercise over children, and the refusal to let them be free until we have established in them a principle analogous to the constitution of a state, and by cultivation of this higher element have set up in their hearts a guardian and ruler like our own,

and when this is done they may go their ways.

Yes, he said, the purpose of the law is manifest.

591b

From what point of view, then, and on what ground can we say that a man is profited by injustice or intemperance or other baseness, which will make him a worse man, even though he acquire money or power by his wickedness?

From no point of view at all.

What shall he profit, if his injustice be undetected and unpunished? He who is undetected only gets worse, whereas he who is detected and punished has the brutal part of his nature silenced and humanized; the gentler element in him is liberated, and his whole soul is perfected and ennobled by the acquirement of justice and temperance and wisdom, more than the body ever is by receiving gifts of beauty, strength and health, in proportion as the soul is more honourable than the body.

Certainly, he said.

To this nobler purpose the man of understanding will devote the energies of his life. And in the first place, he will honour studies which impress these qualities on his soul and disregard others?

591c

Clearly, he said.

591d

In the next place, he will regulate his bodily habit and training, and so far will he be from yielding to brutal and irrational pleasures, that he will regard even health as quite a secondary matter; his first object will be not that he may be fair or strong or well, unless he is likely thereby to gain temperance, but he will always desire so to attemper the body as to preserve the harmony of the soul?

Certainly he will, if he has true music in him.

591e

And in the acquisition of wealth there is a principle of order and harmony which he will also observe; he will not allow himself to be dazzled by the foolish applause of the world, and heap up riches to his own infinite harm?

Certainly not, he said.

He will look at the city which is within him, and take heed that no disorder occur in it, such as might arise either from superfluity or from want; and upon this principle he will regulate his property and gain or spend according to his means.

Very true.

And, for the same reason, he will gladly accept and enjoy such honours as he deems likely to make him a better man; but those, whether private or public, which are likely to disorder his life, he will avoid?

592a

Then, if that is his motive, he will not be a statesman.

By the dog of Egypt, he will! in the city which is his own he certainly will, though in the land of his birth perhaps not, unless he have a divine call.

I understand; you mean that he will be a ruler in the city of which we are the founders, and which exists in idea only; for I do not believe that there is such an one anywhere on earth?

592b

In heaven, I replied, there is laid up a pattern of it, methinks, which he who desires may behold, and beholding, may set his own house in order. But whether such an one exists, or ever will exist in fact, is no matter; for he will live after the manner of that city, having nothing to do with any other.

I think so, he said.

BOOK X

595a

Socrates - Glaucon Of the many excellences which I perceive in the order of our State, there is none which upon reflection pleases me better than the rule about poetry.

595b

To what do you refer?

To the rejection of imitative poetry, which certainly ought not to be received; as I see far more clearly now that the parts of the soul have been distinguished.

What do you mean?

Speaking in confidence, for I should not like to have my words repeated to the tragedians and the rest of the imitative tribe — but I do not mind saying to you, that all poetical imitations are ruinous to the understanding of the hearers, and that the knowledge of their true nature is the only antidote to them.

595c

Explain the purport of your remark.

Well, I will tell you, although I have always from my earliest youth had an awe and love of Homer, which even now makes the words falter on my lips, for he is the great captain and teacher of the whole of that charming tragic company; but a man is not to be revered more than the truth, and therefore I will speak out.

Very good, he said.

Listen to me then, or rather, answer me.

Put your question.

Can you tell me what imitation is? for I really do not know.

A likely thing, then, that I should know.

596a

Why not? for the duller eye may often see a thing sooner than the keener.

Very true, he said; but in your presence, even if I had any faint notion, I could not muster courage to utter it. Will you enquire yourself?

Well then, shall we begin the enquiry in our usual manner: Whenever a number of individuals have a common name, we assume them to have also a corresponding idea or form. Do you understand me?

I do.

Let us take any common instance; there are beds and tables in the world — plenty of them, are there not?

Yes.

But there are only two ideas or forms of them — one the idea of a bed, the other of a table.

True.

596b

And the maker of either of them makes a bed or he makes a table for our use, in accordance with the idea — that is our way of speaking in this and similar instances — but no artificer makes the ideas themselves: how could he?

Impossible.

And there is another artist, — I should like to know what you would say of him.

596c

Who is he?

One who is the maker of all the works of all other workmen.

What an extraordinary man!

Wait a little, and there will be more reason for your saying so. For this is he who is able to make not only vessels of every kind, but plants and animals, himself and all other things — the earth and heaven, and the things which are in heaven or under the earth; he makes the gods also.

He must be a wizard and no mistake.

Oh! you are incredulous, are you? Do you mean that there is no such maker or creator, or that in one sense there might be a maker of all these things but in another not? Do you see that there is a way in which you could make them all yourself?

What way?

An easy way enough; or rather, there are many ways in which the feat might be quickly and easily accomplished, none quicker than that of turning a mirror round and round — you would soon enough make the sun and the heavens, and the earth and yourself, and other animals and plants, and all the other things of which we were just now speaking, in the mirror.

596d

Yes, he said; but they would be appearances only.

Very good, I said, you are coming to the point now. And the painter too is, as I conceive, just such another — a creator of appearances, is he not?

Of course.

But then I suppose you will say that what he creates is untrue. And yet there is a sense in which the painter also creates a bed?

Yes, he said, but not a real bed.

596e

And what of the maker of the bed? Were you not saying that he too makes, not the idea which, according to our view, is the essence of the bed, but only a particular bed?

Yes, I did.

Then if he does not make that which exists he cannot make true existence, but only some semblance of existence; and if any one were to say that the work of the maker of the bed, or of any other workman, has real existence, he could hardly be supposed to be speaking the truth.

At any rate, he replied, philosophers would say that he was not speaking the truth.

No wonder, then, that his work too is an indistinct expression of truth.

No wonder.

Suppose now that by the light of the examples just offered we enquire who this imitator is?

If you please.

Well then, here are three beds: one existing in nature, which is made by God, as I think that we may say — for no one else can be the maker?

597a

No.

There is another which is the work of the carpenter?

Yes.

And the work of the painter is a third?

Yes.

Beds, then, are of three kinds, and there are three artists who superintend them: God, the maker of the bed, and the painter?

Yes, there are three of them.

God, whether from choice or from necessity, made one bed in nature and one only; two or more such ideal beds neither ever

have been nor ever will be made by God.

Why is that?

Because even if He had made but two, a third would still appear behind them which both of them would have for their idea, and that would be the ideal bed and the two others.

597b

Very true, he said.

597c

God knew this, and He desired to be the real maker of a real bed, not a particular maker of a particular bed, and therefore He created a bed which is essentially and by nature one only.

So we believe.

Shall we, then, speak of Him as the natural author or maker of the bed?

Yes, he replied; inasmuch as by the natural process of creation He is the author of this and of all other things.

And what shall we say of the carpenter — is not he also the maker of the bed?

Yes.

But would you call the painter a creator and maker?

597d

Certainly not.

Yet if he is not the maker, what is he in relation to the bed?

I think, he said, that we may fairly designate him as the imitator of that which the others make.

Good, I said; then you call him who is third in the descent from nature an imitator?

Certainly, he said.

And the tragic poet is an imitator, and therefore, like all other imitators, he is thrice removed from the king and from the truth?

That appears to be so.

Then about the imitator we are agreed. And what about the painter? — I would like to know whether he may be thought to imitate that which originally exists in nature, or only the creations of artists?

597e

The latter.

As they are or as they appear? You have still to determine this.

What do you mean?

I mean, that you may look at a bed from different points of view, obliquely or directly or from any other point of view, and the bed will appear different, but there is no difference in reality. And the same of all things.

Yes, he said, the difference is only apparent.

598a

Now let me ask you another question: Which is the art of painting designed to be — an imitation of things as they are, or as they appear — of appearance or of reality?

Of appearance.

Then the imitator, I said, is a long way off the truth, and can do all things because he lightly touches on a small part of them, and that part an image. For example: A painter will paint a cobbler, carpenter, or any other artist, though he knows nothing of their arts; and, if he is a good artist, he may deceive children or simple persons, when he shows them his picture of a carpenter from a distance, and they will fancy that they are looking at a real carpenter.

598b

Certainly.

And whenever any one informs us that he has found a man knows all the arts, and all things else that anybody knows, and every single thing with a higher degree of accuracy than any other man — whoever tells us this, I think that we can only imagine to be a simple creature who is likely to have been deceived by some wizard or actor whom he met, and whom he thought all-knowing, because he himself was unable to analyse the nature of knowledge and ignorance and imitation.

598c

Most true.

598d

And so, when we hear persons saying that the tragedians, and Homer, who is at their head, know all the arts and all things human, virtue as well as vice, and divine things too, for that the good poet cannot compose well unless he knows his subject, and that he who has not this knowledge can never be a poet, we ought to consider whether here also there may not be a similar illusion. Perhaps they may have come across imitators and been deceived by them; they may not have remembered when they saw their works that these were but imitations thrice removed from the truth, and could easily be made without any knowledge of the truth, because they are appearances only and not realities? Or, after all, they may be in the right, and poets do really know the things about which they seem to the many to speak so well?

598e

The question, he said, should by all means be considered.

Now do you suppose that if a person were able to make the original as well as the image, he would seriously devote himself to the image-making branch? Would he allow imitation to be the ruling principle of his life, as if he had nothing higher in

him?

I should say not.

The real artist, who knew what he was imitating, would be interested in realities and not in imitations; and would desire to leave as memorials of himself works many and fair; and, instead of being the author of encomiums, he would prefer to be the theme of them.

Yes, he said, that would be to him a source of much greater honour and profit.

599b

Then, I said, we must put a question to Homer; not about medicine, or any of the arts to which his poems only incidentally refer: we are not going to ask him, or any other poet, whether he has cured patients like Asclepius, or left behind him a school of medicine such as the Asclepiads were, or whether he only talks about medicine and other arts at second hand; but we have a right to know respecting military tactics, politics, education, which are the chiefest and noblest subjects of his poems, and we may fairly ask him about them. 'Friend Homer,' then we say to him, 'if you are only in the second remove from truth in what you say of virtue, and not in the third — not an image maker or imitator — and if you are able to discern what pursuits make men better or worse in private or public life, tell us what State was ever better governed by your help? The good order of Lacedaemon is due to Lycurgus, and many other cities great and small have been similarly benefited by others; but who says that you have been a good legislator to them and have done them any good? Italy and Sicily boast of Charondas, and there is Solon who is renowned among us; but what city has anything to say about you?' Is there any city which he might name?

599d

I think not, said Glaucon; not even the Homerids themselves pretend that he was a legislator.

Well, but is there any war on record which was carried on successfully by him, or aided by his counsels, when he was alive?

There is not.

Or is there any invention of his, applicable to the arts or to human life, such as Thales the Milesian or Anacharsis the Scythian, and other ingenious men have conceived, which is attributed to him?

There is absolutely nothing of the kind.

But, if Homer never did any public service, was he privately a guide or teacher of any? Had he in his lifetime friends who loved to associate with him, and who handed down to posterity an Homeric way of life, such as was established by Pythagoras who was so greatly beloved for his wisdom, and whose followers are to this day quite celebrated for the order which was named after him?

600a

Nothing of the kind is recorded of him. For surely, Socrates, Creophylus, the companion of Homer, that child of flesh, whose name always makes us laugh, might be more justly ridiculed for his stupidity, if, as is said, Homer was greatly neglected by him and others in his own day when he was alive?

600c

Yes, I replied, that is the tradition. But can you imagine, Glaucon, that if Homer had really been able to educate and improve mankind — if he had possessed knowledge and not been a mere imitator — can you imagine, I say, that he would not have had many followers, and been honoured and loved by them? Protagoras of Abdera, and Prodicus of Ceos, and a host of others, have only to whisper to their contemporaries: ‘You will

never be able to manage either your own house or your own State until you appoint us to be your ministers of education' — and this ingenious device of theirs has such an effect in making them love them that their companions all but carry them about on their shoulders. And is it conceivable that the contemporaries of Homer, or again of Hesiod, would have allowed either of them to go about as rhapsodists, if they had really been able to make mankind virtuous? Would they not have been as unwilling to part with them as with gold, and have compelled them to stay at home with them? Or, if the master would not stay, then the disciples would have followed him about everywhere, until they had got education enough?

Yes, Socrates, that, I think, is quite true.

600d

Then must we not infer that all these poetical individuals, beginning with Homer, are only imitators; they copy images of virtue and the like, but the truth they never reach? The poet is like a painter who, as we have already observed, will make a likeness of a cobbler though he understands nothing of cobbling; and his picture is good enough for those who know no more than he does, and judge only by colours and figures.

Quite so.

600e

In like manner the poet with his words and phrases may be said to lay on the colours of the several arts, himself understanding their nature only enough to imitate them; and other people, who are as ignorant as he is, and judge only from his words, imagine that if he speaks of cobbling, or of military tactics, or of anything else, in metre and harmony and rhythm, he speaks very well — such is the sweet influence which melody and rhythm by nature have. And I think that you must have observed again and again what a poor appearance the tales of poets make when stripped of the colours which music puts

upon them, and recited in simple prose.

601a

Yes, he said.

They are like faces which were never really beautiful, but only blooming; and now the bloom of youth has passed away from them?

Exactly.

Here is another point: The imitator or maker of the image knows nothing of true existence; he knows appearances only. Am I not right?

Yes.

Then let us have a clear understanding, and not be satisfied with half an explanation.

Proceed.

Of the painter we say that he will paint reins, and he will paint a bit?

601b

Yes.

And the worker in leather and brass will make them?

Certainly.

But does the painter know the right form of the bit and reins? Nay, hardly even the workers in brass and leather who make them; only the horseman who knows how to use them — he knows their right form.

Most true.

601c

And may we not say the same of all things?

What?

That there are three arts which are concerned with all things: one which uses, another which makes, a third which imitates them?

Yes.

And the excellence or beauty or truth of every structure, animate or inanimate, and of every action of man, is relative to the use for which nature or the artist has intended them.

True.

Then the user of them must have the greatest experience of them, and he must indicate to the maker the good or bad qualities which develop themselves in use; for example, the flute-player will tell the flute-maker which of his flutes is satisfactory to the performer; he will tell him how he ought to make them, and the other will attend to his instructions?

Of course.

601d

The one knows and therefore speaks with authority about the goodness and badness of flutes, while the other, confiding in him, will do what he is told by him?

True.

The instrument is the same, but about the excellence or badness of it the maker will only attain to a correct belief; and this he will gain from him who knows, by talking to him and being compelled to hear what he has to say, whereas the user will have knowledge?

True.

But will the imitator have either? Will he know from use whether or no his drawing is correct or beautiful? Or will he have right opinion from being compelled to associate with another who knows and gives him instructions about what he

should draw?

Neither.

601e

Then he will no more have true opinion than he will have knowledge about the goodness or badness of his imitations?

I suppose not.

The imitative artist will be in a brilliant state of intelligence about his own creations?

Nay, very much the reverse.

And still he will go on imitating without knowing what makes a thing good or bad, and may be expected therefore to imitate only that which appears to be good to the ignorant multitude?

602a

Just so.

Thus far then we are pretty well agreed that the imitator has no knowledge worth mentioning of what he imitates. Imitation is only a kind of play or sport, and the tragic poets, whether they write in iambic or in Heroic verse, are imitators in the highest degree?

Very true.

And now tell me, I conjure you, has not imitation been shown by us to be concerned with that which is thrice removed from the truth?

Certainly.

602b

And what is the faculty in man to which imitation is addressed?

What do you mean?

I will explain: The body which is large when seen near, appears small when seen at a distance?

True.

And the same object appears straight when looked at out of the water, and crooked when in the water; and the concave becomes convex, owing to the illusion about colours to which the sight is liable. Thus every sort of confusion is revealed within us; and this is that weakness of the human mind on which the art of conjuring and of deceiving by light and shadow and other ingenious devices imposes, having an effect upon us like magic.

602c

True.

And the arts of measuring and numbering and weighing come to the rescue of the human understanding—there is the beauty of them — and the apparent greater or less, or more or heavier, no longer have the mastery over us, but give way before calculation and measure and weight?

602d

Most true.

And this, surely, must be the work of the calculating and rational principle in the soul To be sure.

And when this principle measures and certifies that some things are equal, or that some are greater or less than others, there occurs an apparent contradiction?

True.

But were we not saying that such a contradiction is the same faculty cannot have contrary opinions at the same time about the same thing?

Very true.

Then that part of the soul which has an opinion contrary to measure is not the same with that which has an opinion in

accordance with measure?

True.

And the better part of the soul is likely to be that which trusts to measure and calculation?

602e

Certainly.

And that which is opposed to them is one of the inferior principles of the soul?

No doubt.

This was the conclusion at which I was seeking to arrive when I said that painting or drawing, and imitation in general, when doing their own proper work, are far removed from truth, and the companions and friends and associates of a principle within us which is equally removed from reason, and that they have no true or healthy aim.

603a

Exactly.

The imitative art is an inferior who marries an inferior, and has inferior offspring.

Very true.

And is this confined to the sight only, or does it extend to the hearing also, relating in fact to what we term poetry?

Probably the same would be true of poetry.

603b

Do not rely, I said, on a probability derived from the analogy of painting; but let us examine further and see whether the faculty with which poetical imitation is concerned is good or bad.

By all means.

We may state the question thus: — Imitation imitates the actions of men, whether voluntary or involuntary, on which, as they imagine, a good or bad result has ensued, and they rejoice or sorrow accordingly. Is there anything more?

No, there is nothing else.

603c

But in all this variety of circumstances is the man at unity with himself — or rather, as in the instance of sight there was confusion and opposition in his opinions about the same things, so here also is there not strife and inconsistency in his life? Though I need hardly raise the question again, for I remember that all this has been already admitted; and the soul has been acknowledged by us to be full of these and ten thousand similar oppositions occurring at the same moment?

And we were right, he said.

Yes, I said, thus far we were right; but there was an omission which must now be supplied.

What was the omission?

603d

Were we not saying that a good man, who has the misfortune to lose his son or anything else which is most dear to him, will bear the loss with more equanimity than another?

Yes.

But will he have no sorrow, or shall we say that although he cannot help sorrowing, he will moderate his sorrow?

The latter, he said, is the truer statement.

Tell me: will he be more likely to struggle and hold out against his sorrow when he is seen by his equals, or when he is alone?

It will make a great difference whether he is seen or not.

When he is by himself he will not mind saying or doing many things which he would be ashamed of any one hearing or seeing him do?

True.

603e

There is a principle of law and reason in him which bids him resist, as well as a feeling of his misfortune which is forcing him to indulge his sorrow?

True.

But when a man is drawn in two opposite directions, to and from the same object, this, as we affirm, necessarily implies two distinct principles in him?

Certainly.

One of them is ready to follow the guidance of the law?

How do you mean?

The law would say that to be patient under suffering is best, and that we should not give way to impatience, as there is no knowing whether such things are good or evil; and nothing is gained by impatience; also, because no human thing is of serious importance, and grief stands in the way of that which at the moment is most required.

604a

What is most required? he asked.

604b

That we should take counsel about what has happened, and when the dice have been thrown order our affairs in the way which reason deems best; not, like children who have had a fall, keeping hold of the part struck and wasting time in setting up a howl, but always accustoming the soul forthwith to apply a remedy, raising up that which is sickly and fallen, banishing the cry of sorrow by the healing art.

604c

Yes, he said, that is the true way of meeting the attacks of fortune.

Yes, I said; and the higher principle is ready to follow this suggestion of reason?

Clearly.

And the other principle, which inclines us to recollection of our troubles and to lamentation, and can never have enough of them, we may call irrational, useless, and cowardly?

Indeed, we may.

And does not the latter — I mean the rebellious principle — furnish a great variety of materials for imitation? Whereas the wise and calm temperament, being always nearly equable, is not easy to imitate or to appreciate when imitated, especially at a public festival when a promiscuous crowd is assembled in a theatre. For the feeling represented is one to which they are strangers.

Certainly.

604d

Then the imitative poet who aims at being popular is not by nature made, nor is his art intended, to please or to affect the principle in the soul; but he will prefer the passionate and fitful temper, which is easily imitated?

Clearly.

604e

And now we may fairly take him and place him by the side of the painter, for he is like him in two ways: first, inasmuch as his creations have an inferior degree of truth — in this, I say, he is like him; and he is also like him in being concerned with an inferior part of the soul; and therefore we shall be right in refusing to admit him into a well-ordered State, because he

awakens and nourishes and strengthens the feelings and impairs the reason. As in a city when the evil are permitted to have authority and the good are put out of the way, so in the soul of man, as we maintain, the imitative poet implants an evil constitution, for he indulges the irrational nature which has no discernment of greater and less, but thinks the same thing at one time great and at another small—he is a manufacturer of images and is very far removed from the truth.

605a

Exactly.

605b

But we have not yet brought forward the heaviest count in our accusation: — the power which poetry has of harming even the good (and there are very few who are not harmed), is surely an awful thing?

Yes, certainly, if the effect is what you say.

Hear and judge: The best of us, as I conceive, when we listen to a passage of Homer, or one of the tragedians, in which he represents some pitiful hero who is drawling out his sorrows in a long oration, or weeping, and smiting his breast — the best of us, you know, delight in giving way to sympathy, and are in raptures at the excellence of the poet who stirs our feelings most.

Yes, of course I know.

But when any sorrow of our own happens to us, then you may observe that we pride ourselves on the opposite quality — we would fain be quiet and patient; this is the manly part, and the other which delighted us in the recitation is now deemed to be the part of a woman.

605c

Very true, he said.

Now can we be right in praising and admiring another who is doing that which any one of us would abominate and be ashamed of in his own person?

No, he said, that is certainly not reasonable.

Nay, I said, quite reasonable from one point of view.

What point of view?

605d

If you consider, I said, that when in misfortune we feel a natural hunger and desire to relieve our sorrow by weeping and lamentation, and that this feeling which is kept under control in our own calamities is satisfied and delighted by the poets;-the better nature in each of us, not having been sufficiently trained by reason or habit, allows the sympathetic element to break loose because the sorrow is another's; and the spectator fancies that there can be no disgrace to himself in praising and pitying any one who comes telling him what a good man he is, and making a fuss about his troubles; he thinks that the pleasure is a gain, and why should he be supercilious and lose this and the poem too? Few persons ever reflect, as I should imagine, that from the evil of other men something of evil is communicated to themselves. And so the feeling of sorrow which has gathered strength at the sight of the misfortunes of others is with difficulty repressed in our own.

605e

How very true!

606a

And does not the same hold also of the ridiculous? There are jests which you would be ashamed to make yourself, and yet on the comic stage, or indeed in private, when you hear them, you are greatly amused by them, and are not at all disgusted at their unseemliness; — the case of pity is repeated; — there is a principle in human nature which is disposed to raise a laugh,

and this which you once restrained by reason, because you were afraid of being thought a buffoon, is now let out again; and having stimulated the risible faculty at the theatre, you are betrayed unconsciously to yourself into playing the comic poet at home.

Quite true, he said.

And the same may be said of lust and anger and all the other affections, of desire and pain and pleasure, which are held to be inseparable from every action — in all of them poetry feeds and waters the passions instead of drying them up; she lets them rule, although they ought to be controlled, if mankind are ever to increase in happiness and virtue.

I cannot deny it.

606b

Therefore, Glaucon, I said, whenever you meet with any of the eulogists of Homer declaring that he has been the educator of Hellas, and that he is profitable for education and for the ordering of human things, and that you should take him up again and again and get to know him and regulate your whole life according to him, we may love and honour those who say these things — they are excellent people, as far as their lights extend; and we are ready to acknowledge that Homer is the greatest of poets and first of tragedy writers; but we must remain firm in our conviction that hymns to the gods and praises of famous men are the only poetry which ought to be admitted into our State. For if you go beyond this and allow the honeyed muse to enter, either in epic or lyric verse, not law and the reason of mankind, which by common consent have ever been deemed best, but pleasure and pain will be the rulers in our State.

606c

That is most true, he said.

606e

And now since we have reverted to the subject of poetry, let this our defence serve to show the reasonableness of our former judgment in sending away out of our State an art having the tendencies which we have described; for reason constrained us. But that she may impute to us any harshness or want of politeness, let us tell her that there is an ancient quarrel between philosophy and poetry; of which there are many proofs, such as the saying of ‘the yelping hound howling at her lord,’ or of one ‘mighty in the vain talk of fools,’ and ‘the mob of sages circumventing Zeus,’ and the ‘subtle thinkers who are beggars after all’; and there are innumerable other signs of ancient enmity between them. Notwithstanding this, let us assure our sweet friend and the sister arts of imitation that if she will only prove her title to exist in a well-ordered State we shall be delighted to receive her — we are very conscious of her charms; but we may not on that account betray the truth. I dare say, Glaucon, that you are as much charmed by her as I am, especially when she appears in Homer?

607a

Yes, indeed, I am greatly charmed.

607b

Shall I propose, then, that she be allowed to return from exile, but upon this condition only — that she make a defence of herself in lyrical or some other metre?

Certainly.

And we may further grant to those of her defenders who are lovers of poetry and yet not poets the permission to speak in prose on her behalf: let them show not only that she is pleasant but also useful to States and to human life, and we will listen in a kindly spirit; for if this can be proved we shall surely be the gainers — I mean, if there is a use in poetry as well as a delight?

Certainly, he said, we shall the gainers.

607e

If her defence fails, then, my dear friend, like other persons who are enamoured of something, but put a restraint upon themselves when they think their desires are opposed to their interests, so too must we after the manner of lovers give her up, though not without a struggle. We too are inspired by that love of poetry which the education of noble States has implanted in us, and therefore we would have her appear at her best and truest; but so long as she is unable to make good her defence, this argument of ours shall be a charm to us, which we will repeat to ourselves while we listen to her strains; that we may not fall away into the childish love of her which captivates the many. At all events we are well aware that poetry being such as we have described is not to be regarded seriously as attaining to the truth; and he who listens to her, fearing for the safety of the city which is within him, should be on his guard against her seductions and make our words his law.

608a

Yes, he said, I quite agree with you.

Yes, I said, my dear Glaucon, for great is the issue at stake, greater than appears, whether a man is to be good or bad. And what will any one be profited if under the influence of honour or money or power, aye, or under the excitement of poetry, he neglect justice and virtue?

608b

Yes, he said; I have been convinced by the argument, as I believe that any one else would have been.

And yet no mention has been made of the greatest prizes and rewards which await virtue.

What, are there any greater still? If there are, they must be of an inconceivable greatness.

Why, I said, what was ever great in a short time? The whole period of threescore years and ten is surely but a little thing in comparison with eternity?

608c

Say rather 'nothing,' he replied.

And should an immortal being seriously think of this little space rather than of the whole?

Of the whole, certainly. But why do you ask?

Are you not aware, I said, that the soul of man is immortal and imperishable?

He looked at me in astonishment, and said: No, by heaven: And are you really prepared to maintain this?

Yes, I said, I ought to be, and you too — there is no difficulty in proving it.

I see a great difficulty; but I should like to hear you state this argument of which you make so light.

608d

Listen then.

I am attending.

There is a thing which you call good and another which you call evil?

608e

Yes, he replied.

Would you agree with me in thinking that the corrupting and destroying element is the evil, and the saving and improving element the good?

Yes.

And you admit that every thing has a good and also an evil; as ophthalmia is the evil of the eyes and disease of the whole body;

as mildew is of corn, and rot of timber, or rust of copper and iron: in everything, or in almost everything, there is an inherent evil and disease?

Yes, he said.

And anything which is infected by any of these evils is made evil, and at last wholly dissolves and dies?

True.

609a

The vice and evil which is inherent in each is the destruction of each; and if this does not destroy them there is nothing else that will; for good certainly will not destroy them, nor again, that which is neither good nor evil.

Certainly not.

If, then, we find any nature which having this inherent corruption cannot be dissolved or destroyed, we may be certain that of such a nature there is no destruction?

That may be assumed.

Well, I said, and is there no evil which corrupts the soul?

609b

Yes, he said, there are all the evils which we were just now passing in review: unrighteousness, intemperance, cowardice, ignorance.

But does any of these dissolve or destroy her? — and here do not let us fall into the error of supposing that the unjust and foolish man, when he is detected, perishes through his own injustice, which is an evil of the soul. Take the analogy of the body: The evil of the body is a disease which wastes and reduces and annihilates the body; and all the things of which we were just now speaking come to annihilation through their own corruption attaching to them and inhering in them and so

destroying them. Is not this true?

609c

Yes.

Consider the soul in like manner. Does the injustice or other evil which exists in the soul waste and consume her? Do they by attaching to the soul and inhering in her at last bring her to death, and so separate her from the body?

Certainly not.

And yet, I said, it is unreasonable to suppose that anything can perish from without through affection of external evil which could not be destroyed from within by a corruption of its own?

It is, he replied.

609d

Consider, I said, Glaucon, that even the badness of food, whether staleness, decomposition, or any other bad quality, when confined to the actual food, is not supposed to destroy the body; although, if the badness of food communicates corruption to the body, then we should say that the body has been destroyed by a corruption of itself, which is disease, brought on by this; but that the body, being one thing, can be destroyed by the badness of food, which is another, and which does not engender any natural infection — this we shall absolutely deny?

609e

Very true.

And, on the same principle, unless some bodily evil can produce an evil of the soul, we must not suppose that the soul, which is one thing, can be dissolved by any merely external evil which belongs to another?

Yes, he said, there is reason in that.

610a

Either then, let us refute this conclusion, or, while it remains unrefuted, let us never say that fever, or any other disease, or the knife put to the throat, or even the cutting up of the whole body into the minutest pieces, can destroy the soul, until she herself is proved to become more unholy or unrighteous in consequence of these things being done to the body; but that the soul, or anything else if not destroyed by an internal evil, can be destroyed by an external one, is not to be affirmed by any man.

And surely, he replied, no one will ever prove that the souls of men become more unjust in consequence of death.

610b

But if some one who would rather not admit the immortality of the soul boldly denies this, and says that the dying do really become more evil and unrighteous, then, if the speaker is right, I suppose that injustice, like disease, must be assumed to be fatal to the unjust, and that those who take this disorder die by the natural inherent power of destruction which evil has, and which kills them sooner or later, but in quite another way from that in which, at present, the wicked receive death at the hands of others as the penalty of their deeds?

610c

Nay, he said, in that case injustice, if fatal to the unjust, will not be so very terrible to him, for he will be delivered from evil. But I rather suspect the opposite to be the truth, and that injustice which, if it have the power, will murder others, keeps the murderer alive — aye, and well awake too; so far removed is her dwelling-place from being a house of death.

610d

True, I said; if the inherent natural vice or evil of the soul is unable to kill or destroy her, hardly will that which is appointed to be the destruction of some other body, destroy a soul or anything else except that of which it was appointed to be the

destruction.

Yes, that can hardly be.

But the soul which cannot be destroyed by an evil, whether inherent or external, must exist for ever, and if existing for ever, must be immortal?

610e

Certainly.

That is the conclusion, I said; and, if a true conclusion, then the souls must always be the same, for if none be destroyed they will not diminish in number. Neither will they increase, for the increase of the immortal natures must come from something mortal, and all things would thus end in immortality.

Very true.

But this we cannot believe — reason will not allow us — any more than we can believe the soul, in her truest nature, to be full of variety and difference and dissimilarity.

611a

What do you mean? he said.

The soul, I said, being, as is now proven, immortal, must be the fairest of compositions and cannot be compounded of many elements?

Certainly not.

611b

Her immortality is demonstrated by the previous argument, and there are many other proofs; but to see her as she really is, not as we now behold her, marred by communion with the body and other miseries, you must contemplate her with the eye of reason, in her original purity; and then her beauty will be revealed, and justice and injustice and all the things which we have described will be manifested more clearly. Thus far, we have spoken the truth concerning her as she appears at present,

but we must remember also that we have seen her only in a condition which may be compared to that of the sea-god Glaucus, whose original image can hardly be discerned because his natural members are broken off and crushed and damaged by the waves in all sorts of ways, and incrustations have grown over them of seaweed and shells and stones, so that he is more like some monster than he is to his own natural form. And the soul which we behold is in a similar condition, disfigured by ten thousand ills. But not there, Glaucon, not there must we look.

611c

Where then?

At her love of wisdom. Let us see whom she affects, and what society and converse she seeks in virtue of her near kindred with the immortal and eternal and divine; also how different she would become if wholly following this superior principle, and borne by a divine impulse out of the ocean in which she now is, and disengaged from the stones and shells and things of earth and rock which in wild variety spring up around her because she feeds upon earth, and is overgrown by the good things of this life as they are termed: then you would see her as she is, and know whether she has one shape only or many, or what her nature is. Of her affections and of the forms which she takes in this present life I think that we have now said enough.

611d

True, he replied.

611e

And thus, I said, we have fulfilled the conditions of the argument; we have not introduced the rewards and glories of justice, which, as you were saying, are to be found in Homer and Hesiod; but justice in her own nature has been shown to be best for the soul in her own nature. Let a man do what is just, whether he have the ring of Gyges or not, and even if in addition to the ring of Gyges he put on the helmet of Hades.

Very true.

And now, Glaucon, there will be no harm in further enumerating how many and how great are the rewards which justice and the other virtues procure to the soul from gods and men, both in life and after death.

Certainly not, he said.

Will you repay me, then, what you borrowed in the argument?

What did I borrow?

612a

The assumption that the just man should appear unjust and the unjust just: for you were of opinion that even if the true state of the case could not possibly escape the eyes of gods and men, still this admission ought to be made for the sake of the argument, in order that pure justice might be weighed against pure injustice. Do you remember?

I should be much to blame if I had forgotten.

612b

Then, as the cause is decided, I demand on behalf of justice that the estimation in which she is held by gods and men and which we acknowledge to be her due should now be restored to her by us; since she has been shown to confer reality, and not to deceive those who truly possess her, let what has been taken from her be given back, that so she may win that palm of appearance which is hers also, and which she gives to her own.

The demand, he said, is just.

612c

In the first place, I said — and this is the first thing which you will have to give back — the nature both of the just and unjust is truly known to the gods.

Granted.

And if they are both known to them, one must be the friend and the other the enemy of the gods, as we admitted from the beginning?

True.

612d

And the friend of the gods may be supposed to receive from them all things at their best, excepting only such evil as is the necessary consequence of former sins?

612e

Certainly.

Then this must be our notion of the just man, that even when he is in poverty or sickness, or any other seeming misfortune, all things will in the end work together for good to him in life and death: for the gods have a care of any one whose desire is to become just and to be like God, as far as man can attain the divine likeness, by the pursuit of virtue?

Yes, he said; if he is like God he will surely not be neglected by him.

And of the unjust may not the opposite be supposed?

Certainly.

Such, then, are the palms of victory which the gods give the just?

That is my conviction.

613a

And what do they receive of men? Look at things as they really are, and you will see that the clever unjust are in the case of runners, who run well from the starting-place to the goal but not back again from the goal: they go off at a great pace, but in the end only look foolish, slinking away with their ears dragging on their shoulders, and without a crown; but the true runner comes to the finish and receives the prize and is

crowned. And this is the way with the just; he who endures to the end of every action and occasion of his entire life has a good report and carries off the prize which men have to bestow.

613b

True.

613c

And now you must allow me to repeat of the just the blessings which you were attributing to the fortunate unjust. I shall say of them, what you were saying of the others, that as they grow older, they become rulers in their own city if they care to be; they marry whom they like and give in marriage to whom they will; all that you said of the others I now say of these. And, on the other hand, of the unjust I say that the greater number, even though they escape in their youth, are found out at last and look foolish at the end of their course, and when they come to be old and miserable are flouted alike by stranger and citizen; they are beaten and then come those things unfit for ears polite, as you truly term them; they will be racked and have their eyes burned out, as you were saying. And you may suppose that I have repeated the remainder of your tale of horrors. But will you let me assume, without reciting them, that these things are true?

Certainly, he said, what you say is true.

613d

These, then, are the prizes and rewards and gifts which are bestowed upon the just by gods and men in this present life, in addition to the other good things which justice of herself provides.

Yes, he said; and they are fair and lasting.

And yet, I said, all these are as nothing, either in number or greatness in comparison with those other recompenses which await both just and unjust after death. And you ought to hear

them, and then both just and unjust will have received from us a full payment of the debt which the argument owes to them.

Speak, he said; there are few things which I would more gladly hear.

SOCRATES ^{614d} Well, I said, I will tell you a tale; not one of the tales which Odysseus tells to the hero Alcinous, yet this too is a tale of a hero, Er the son of Armenius, a Pamphylian by birth. He was slain in battle, and ten days afterwards, when the bodies of the dead were taken up already in a state of corruption, his body was found unaffected by decay, and carried away home to be buried. And on the twelfth day, as he was lying on the funeral pile, he returned to life and told them what he had seen in the other world. He said that when his soul left the body he went on a journey with a great company, and that they came to a mysterious place at which there were two openings in the earth; they were near together, and over against them were two other openings in the heaven above. In the intermediate space there were judges seated, who commanded the just, after they had given judgment on them and had bound their sentences in front of them, to ascend by the heavenly way on the right hand; and in like manner the unjust were bidden by them to descend by the lower way on the left hand; these also bore the symbols of their deeds, but fastened on their backs. He drew near, and they told him that he was to be the messenger who would carry the report of the other world to men, and they bade him hear and see all that was to be heard and seen in that place. Then he beheld and saw on one side the souls departing at either opening of heaven and earth when sentence had been given on them; and at the two other openings other souls, some ascending out of the earth dusty and worn with travel, some descending out of heaven clean and bright. And arriving ever and anon they seemed to have come from a long journey, and they went forth with gladness into the meadow, where they

encamped as at a festival; and those who knew one another embraced and conversed, the souls which came from earth curiously enquiring about the things above, and the souls which came from heaven about the things beneath. And they told one another of what had happened by the way, those from below weeping and sorrowing at the remembrance of the things which they had endured and seen in their journey beneath the earth (now the journey lasted a thousand years), while those from above were describing heavenly delights and visions of inconceivable beauty. The Story, Glaucon, would take too long to tell; but the sum was this: — He said that for every wrong which they had done to any one they suffered tenfold; or once in a hundred years — such being reckoned to be the length of man's life, and the penalty being thus paid ten times in a thousand years. If, for example, there were any who had been the cause of many deaths, or had betrayed or enslaved cities or armies, or been guilty of any other evil behaviour, for each and all of their offences they received punishment ten times over, and the rewards of beneficence and justice and holiness were in the same proportion. I need hardly repeat what he said concerning young children dying almost as soon as they were born. Of piety and impiety to gods and parents, and of murderers, there were retributions other and greater far which he described. He mentioned that he was present when one of the spirits asked another, 'Where is Ardiaeus the Great?' (Now this Ardiaeus lived a thousand years before the time of Er: he had been the tyrant of some city of Pamphylia, and had murdered his aged father and his elder brother, and was said to have committed many other abominable crimes.) The answer of the other spirit was: 'He comes not hither and will never come. And this,' said he, 'was one of the dreadful sights which we ourselves witnessed. We were at the mouth of the cavern, and, having completed all our experiences, were about to reascend, when of a sudden Ardiaeus appeared and several others, most of

whom were tyrants; and there were also besides the tyrants private individuals who had been great criminals: they were just, as they fancied, about to return into the upper world, but the mouth, instead of admitting them, gave a roar, whenever any of these incurable sinners or some one who had not been sufficiently punished tried to ascend; and then wild men of fiery aspect, who were standing by and heard the sound, seized and carried them off; and Ardiaeus and others they bound head and foot and hand, and threw them down and flayed them with scourges, and dragged them along the road at the side, carding them on thorns like wool, and declaring to the passers-by what were their crimes, and that they were being taken away to be cast into hell.' And of all the many terrors which they had endured, he said that there was none like the terror which each of them felt at that moment, lest they should hear the voice; and when there was silence, one by one they ascended with exceeding joy. These, said Er, were the penalties and retributions, and there were blessings as great.

616e

Now when the spirits which were in the meadow had tarried seven days, on the eighth they were obliged to proceed on their journey, and, on the fourth day after, he said that they came to a place where they could see from above a line of light, straight as a column, extending right through the whole heaven and through the earth, in colour resembling the rainbow, only brighter and purer; another day's journey brought them to the place, and there, in the midst of the light, they saw the ends of the chains of heaven let down from above: for this light is the belt of heaven, and holds together the circle of the universe, like the under-girders of a trireme. From these ends is extended the spindle of Necessity, on which all the revolutions turn. The shaft and hook of this spindle are made of steel, and the whorl is made partly of steel and also partly of other materials. Now the whorl is in form like the whorl used on earth; and the

description of it implied that there is one large hollow whorl which is quite scooped out, and into this is fitted another lesser one, and another, and another, and four others, making eight in all, like vessels which fit into one another; the whorls show their edges on the upper side, and on their lower side all together form one continuous whorl. This is pierced by the spindle, which is driven home through the centre of the eighth. The first and outermost whorl has the rim broadest, and the seven inner whorls are narrower, in the following proportions — the sixth is next to the first in size, the fourth next to the sixth; then comes the eighth; the seventh is fifth, the fifth is sixth, the third is seventh, last and eighth comes the second. The largest (of fixed stars) is spangled, and the seventh (or sun) is brightest; the eighth (or moon) coloured by the reflected light of the seventh; the second and fifth (Saturn and Mercury) are in colour like one another, and yellower than the preceding; the third (Venus) has the whitest light; the fourth (Mars) is reddish; the sixth (Jupiter) is in whiteness second. Now the whole spindle has the same motion; but, as the whole revolves in one direction, the seven inner circles move slowly in the other, and of these the swiftest is the eighth; next in swiftness are the seventh, sixth, and fifth, which move together; third in swiftness appeared to move according to the law of this reversed motion the fourth; the third appeared fourth and the second fifth. The spindle turns on the knees of Necessity; and on the upper surface of each circle is a siren, who goes round with them, hymning a single tone or note. The eight together form one harmony; and round about, at equal intervals, there is another band, three in number, each sitting upon her throne: these are the Fates, daughters of Necessity, who are clothed in white robes and have chaplets upon their heads, Lachesis and Clotho and Atropos, who accompany with their voices the harmony of the sirens — Lachesis singing of the past, Clotho of the present, Atropos of the future; Clotho from time to time

assisting with a touch of her right hand the revolution of the outer circle of the whorl or spindle, and Atropos with her left hand touching and guiding the inner ones, and Lachesis laying hold of either in turn, first with one hand and then with the other.

617e

When Er and the spirits arrived, their duty was to go at once to Lachesis; but first of all there came a prophet who arranged them in order; then he took from the knees of Lachesis lots and samples of lives, and having mounted a high pulpit, spoke as follows: 'Hear the word of Lachesis, the daughter of Necessity. Mortal souls, behold a new cycle of life and mortality. Your genius will not be allotted to you, but you choose your genius; and let him who draws the first lot have the first choice, and the life which he chooses shall be his destiny. Virtue is free, and as a man honours or dishonours her he will have more or less of her; the responsibility is with the chooser — God is justified.' When the Interpreter had thus spoken he scattered lots indifferently among them all, and each of them took up the lot which fell near him, all but Er himself (he was not allowed), and each as he took his lot perceived the number which he had obtained. Then the Interpreter placed on the ground before them the samples of lives; and there were many more lives than the souls present, and they were of all sorts. There were lives of every animal and of man in every condition. And there were tyrannies among them, some lasting out the tyrant's life, others which broke off in the middle and came to an end in poverty and exile and beggary; and there were lives of famous men, some who were famous for their form and beauty as well as for their strength and success in games, or, again, for their birth and the qualities of their ancestors; and some who were the reverse of famous for the opposite qualities. And of women likewise; there was not, however, any definite character them, because the soul, when choosing a new life, must of necessity become different. But

there was every other quality, and the all mingled with one another, and also with elements of wealth and poverty, and disease and health; and there were mean states also. And here, my dear Glaucon, is the supreme peril of our human state; and therefore the utmost care should be taken. Let each one of us leave every other kind of knowledge and seek and follow one thing only, if peradventure he may be able to learn and may find some one who will make him able to learn and discern between good and evil, and so to choose always and everywhere the better life as he has opportunity. He should consider the bearing of all these things which have been mentioned severally and collectively upon virtue; he should know what the effect of beauty is when combined with poverty or wealth in a particular soul, and what are the good and evil consequences of noble and humble birth, of private and public station, of strength and weakness, of cleverness and dullness, and of all the soul, and the operation of them when conjoined; he will then look at the nature of the soul, and from the consideration of all these qualities he will be able to determine which is the better and which is the worse; and so he will choose, giving the name of evil to the life which will make his soul more unjust, and good to the life which will make his soul more just; all else he will disregard. For we have seen and know that this is the best choice both in life and after death. A man must take with him into the world below an adamant faith in truth and right, that there too he may be undazzled by the desire of wealth or the other allurements of evil, lest, coming upon tyrannies and similar villainies, he do irremediable wrongs to others and suffer yet worse himself; but let him know how to choose the mean and avoid the extremes on either side, as far as possible, not only in this life but in all that which is to come. For this is the way of happiness.

619e

And according to the report of the messenger from the other world this was what the prophet said at the time: 'Even for the last comer, if he chooses wisely and will live diligently, there is appointed a happy and not undesirable existence. Let not him who chooses first be careless, and let not the last despair.' And when he had spoken, he who had the first choice came forward and in a moment chose the greatest tyranny; his mind having been darkened by folly and sensuality, he had not thought out the whole matter before he chose, and did not at first sight perceive that he was fated, among other evils, to devour his own children. But when he had time to reflect, and saw what was in the lot, he began to beat his breast and lament over his choice, forgetting the proclamation of the prophet; for, instead of throwing the blame of his misfortune on himself, he accused chance and the gods, and everything rather than himself. Now he was one of those who came from heaven, and in a former life had dwelt in a well-ordered State, but his virtue was a matter of habit only, and he had no philosophy. And it was true of others who were similarly overtaken, that the greater number of them came from heaven and therefore they had never been schooled by trial, whereas the pilgrims who came from earth, having themselves suffered and seen others suffer, were not in a hurry to choose. And owing to this inexperience of theirs, and also because the lot was a chance, many of the souls exchanged a good destiny for an evil or an evil for a good. For if a man had always on his arrival in this world dedicated himself from the first to sound philosophy, and had been moderately fortunate in the number of the lot, he might, as the messenger reported, be happy here, and also his journey to another life and return to this, instead of being rough and underground, would be smooth and heavenly. Most curious, he said, was the spectacle — sad and laughable and strange; for the choice of the souls was in most cases based on their experience of a previous life. There he saw the soul which had once been Orpheus choosing the life of a

swan out of enmity to the race of women, hating to be born of a woman because they had been his murderers; he beheld also the soul of Thamyras choosing the life of a nightingale; birds, on the other hand, like the swan and other musicians, wanting to be men. The soul which obtained the twentieth lot chose the life of a lion, and this was the soul of Ajax the son of Telamon, who would not be a man, remembering the injustice which was done him the judgment about the arms. The next was Agamemnon, who took the life of an eagle, because, like Ajax, he hated human nature by reason of his sufferings. About the middle came the lot of Atalanta; she, seeing the great fame of an athlete, was unable to resist the temptation: and after her there followed the soul of Epeus the son of Panopeus passing into the nature of a woman cunning in the arts; and far away among the last who chose, the soul of the jester Thersites was putting on the form of a monkey. There came also the soul of Odysseus having yet to make a choice, and his lot happened to be the last of them all. Now the recollection of former tolls had disenchanted him of ambition, and he went about for a considerable time in search of the life of a private man who had no cares; he had some difficulty in finding this, which was lying about and had been neglected by everybody else; and when he saw it, he said that he would have done the had his lot been first instead of last, and that he was delighted to have it. And not only did men pass into animals, but I must also mention that there were animals tame and wild who changed into one another and into corresponding human natures — the good into the gentle and the evil into the savage, in all sorts of combinations.

621a

All the souls had now chosen their lives, and they went in the order of their choice to Lachesis, who sent with them the genius whom they had severally chosen, to be the guardian of their lives and the fulfiller of the choice: this genius led the souls first to Clotho, and drew them within the revolution of the spindle

impelled by her hand, thus ratifying the destiny of each; and then, when they were fastened to this, carried them to Atropos, who spun the threads and made them irreversible, whence without turning round they passed beneath the throne of Necessity; and when they had all passed, they marched on in a scorching heat to the plain of Forgetfulness, which was a barren waste destitute of trees and verdure; and then towards evening they encamped by the river of Unmindfulness, whose water no vessel can hold; of this they were all obliged to drink a certain quantity, and those who were not saved by wisdom drank more than was necessary; and each one as he drank forgot all things. Now after they had gone to rest, about the middle of the night there was a thunderstorm and earthquake, and then in an instant they were driven upwards in all manner of ways to their birth, like stars shooting. He himself was hindered from drinking the water. But in what manner or by what means he returned to the body he could not say; only, in the morning, awaking suddenly, he found himself lying on the pyre.

621c

And thus, Glaucon, the tale has been saved and has not perished, and will save us if we are obedient to the word spoken; and we shall pass safely over the river of Forgetfulness and our soul will not be defiled. Wherefore my counsel is that we hold fast ever to the heavenly way and follow after justice and virtue always, considering that the soul is immortal and able to endure every sort of good and every sort of evil. Thus shall we live dear to one another and to the gods, both while remaining here and when, like conquerors in the games who go round to gather gifts, we receive our reward. And it shall be well with us both in this life and in the pilgrimage of a thousand years which we have been describing.

Sophist

persons in the dialogue:

THEODORUS a mathematician from Cyrene

THEAETETUS a young mathematician of Athens

SOCRATES of Alopecce, son of Sophroniscus

STRANGER from Elea, follower of Parmenides and Zeno

scene: continuation of the Theaetetus, the day after that conversation

216a

Theodorus, Theaetetus, Socrates. An Eleatic Stranger, whom Theodorus and Theaetetus bring with them. The younger Socrates, who is a silent auditor.

Theodorus: Here we are, Socrates, true to our agreement of yesterday; and we bring with us a stranger from Elea, who is a disciple of Parmenides and Zeno, and a true philosopher.

Socrates: Is he not rather a god, Theodorus, who comes to us in the disguise of a stranger? For Homer says that all the gods, and especially the god of strangers, are companions of the meek and just, and visit the good and evil among men. And may not your companion be one of those higher powers, a cross-examining deity, who has come to spy out our weakness in argument, and to cross-examine us?

216b

Theodorus: Nay, Socrates, he is not one of the disputatious sort — he is too good for that. And, in my opinion, he is not a god at all; but divine he certainly is, for this is a title which I should give to all philosophers.

216c

Socrates: Capital, my friend! and I may add that they are almost as hard to be discerned as the gods. For the true philosophers, and such as are not merely made up for the occasion, appear in various forms unrecognized by the ignorance of men, and they 'hover about cities,' as Homer declares, looking from above upon human life; and some think nothing of them, and others

can never think enough; and sometimes they appear as statesmen, and sometimes as sophists; and then, again, to many they seem to be no better than madmen. I should like to ask our Eleatic friend, if he would tell us, what is thought about them in Italy, and to whom the terms are applied.

Theodorus: What terms?

Socrates: Sophist, statesman, philosopher.

Theodorus: What is your difficulty about them, and what made you ask?

Socrates: I want to know whether by his countrymen they are regarded as one or two; or do they, as the names are three, distinguish also three kinds, and assign one to each name?

Theodorus: I dare say that the Stranger will not object to discuss the question. What do you say, Stranger?

217b

Stranger: I am far from objecting, Theodorus, nor have I any difficulty in replying that by us they are regarded as three. But to define precisely the nature of each of them is by no means a slight or easy task.

Theodorus: You have happened to light, Socrates, almost on the very question which we were asking our friend before we came hither, and he excused himself to us, as he does now to you; although he admitted that the matter had been fully discussed, and that he remembered the answer.

217c

Socrates: Then do not, Stranger, deny us the first favour which we ask of you: I am sure that you will not, and therefore I shall only beg of you to say whether you like and are accustomed to make a long oration on a subject which you want to explain to another, or to proceed by the method of question and answer. I remember hearing a very noble discussion in which Parmenides

employed the latter of the two methods, when I was a young man, and he was far advanced in years. (Compare Parm.)

Stranger: I prefer to talk with another when he responds pleasantly, and is light in hand; if not, I would rather have my own say.

Socrates: Any one of the present company will respond kindly to you, and you can choose whom you like of them; I should recommend you to take a young person — Theaetetus, for example — unless you have a preference for some one else.

217d

Stranger: I feel ashamed, Socrates, being a new-comer into your society, instead of talking a little and hearing others talk, to be spinning out a long soliloquy or address, as if I wanted to show off. For the true answer will certainly be a very long one, a great deal longer than might be expected from such a short and simple question. At the same time, I fear that I may seem rude and ungracious if I refuse your courteous request, especially after what you have said. For I certainly cannot object to your proposal, that Theaetetus should respond, having already conversed with him myself, and being recommended by you to take him.

Theaetetus: But are you sure, Stranger, that this will be quite so acceptable to the rest of the company as Socrates imagines?

Stranger: You hear them applauding, Theaetetus; after that, there is nothing more to be said. Well then, I am to argue with you, and if you tire of the argument, you may complain of your friends and not of me.

Theaetetus: I do not think that I shall tire, and if I do, I shall get my friend here, young Socrates, the namesake of the elder Socrates, to help; he is about my own age, and my partner at the gymnasium, and is constantly accustomed to work with me.

218a

Stranger: Very good; you can decide about that for yourself as we proceed. Meanwhile you and I will begin together and enquire into the nature of the Sophist, first of the three: I should like you to make out what he is and bring him to light in a discussion; for at present we are only agreed about the name, but of the thing to which we both apply the name possibly you have one notion and I another; whereas we ought always to come to an understanding about the thing itself in terms of a definition, and not merely about the name minus the definition. Now the tribe of Sophists which we are investigating is not easily caught or defined; and the world has long ago agreed, that if great subjects are to be adequately treated, they must be studied in the lesser and easier instances of them before we proceed to the greatest of all. And as I know that the tribe of Sophists is troublesome and hard to be caught, I should recommend that we practise beforehand the method which is to be applied to him on some simple and smaller thing, unless you can suggest a better way.

Theaetetus: Indeed I cannot.

Stranger: Then suppose that we work out some lesser example which will be a pattern of the greater?

218d

Theaetetus: Good.

218e

Stranger: What is there which is well known and not great, and is yet as susceptible of definition as any larger thing? Shall I say an angler? He is familiar to all of us, and not a very interesting or important person.

Theaetetus: He is not.

Stranger: Yet I suspect that he will furnish us with the sort of definition and line of enquiry which we want.

Theaetetus: Very good.

219a

Stranger: Let us begin by asking whether he is a man having art or not having art, but some other power.

Theaetetus: He is clearly a man of art.

Stranger: And of arts there are two kinds?

Theaetetus: What are they?

Stranger: There is agriculture, and the tending of mortal creatures, and the art of constructing or moulding vessels, and there is the art of imitation — all these may be appropriately called by a single name.

219b

Theaetetus: What do you mean? And what is the name?

Stranger: He who brings into existence something that did not exist before is said to be a producer, and that which is brought into existence is said to be produced.

Theaetetus: True.

Stranger: And all the arts which were just now mentioned are characterized by this power of producing?

Theaetetus: They are.

Stranger: Then let us sum them up under the name of productive or creative art.

Theaetetus: Very good.

Stranger: Next follows the whole class of learning and cognition; then comes trade, fighting, hunting. And since none of these produces anything, but is only engaged in conquering by word or deed, or in preventing others from conquering, things which exist and have been already produced — in each and all of these branches there appears to be an art which may be called acquisitive.

Theaetetus: Yes, that is the proper name.

Stranger: Seeing, then, that all arts are either acquisitive or creative, in which class shall we place the art of the angler?

219d

Theaetetus: Clearly in the acquisitive class.

Stranger: And the acquisitive may be subdivided into two parts: there is exchange, which is voluntary and is effected by gifts, hire, purchase; and the other part of acquisitive, which takes by force of word or deed, may be termed conquest?

Theaetetus: That is implied in what has been said.

Stranger: And may not conquest be again subdivided?

Theaetetus: How?

Stranger: Open force may be called fighting, and secret force may have the general name of hunting?

Theaetetus: Yes.

219e

Stranger: And there is no reason why the art of hunting should not be further divided.

Theaetetus: How would you make the division?

Stranger: Into the hunting of living and of lifeless prey.

Theaetetus: Yes, if both kinds exist.

220a

Stranger: Of course they exist; but the hunting after lifeless things having no special name, except some sorts of diving, and other small matters, may be omitted; the hunting after living things may be called animal hunting.

Theaetetus: Yes.

Stranger: And animal hunting may be truly said to have two divisions, land-animal hunting, which has many kinds and

names, and water-animal hunting, or the hunting after animals who swim?

Theaetetus: True.

Stranger: And of swimming animals, one class lives on the wing and the other in the water?

Theaetetus: Certainly.

Stranger: Fowling is the general term under which the hunting of all birds is included.

220b

Theaetetus: True.

Stranger: The hunting of animals who live in the water has the general name of fishing.

Theaetetus: Yes.

Stranger: And this sort of hunting may be further divided also into two principal kinds?

Theaetetus: What are they?

Stranger: There is one kind which takes them in nets, another which takes them by a blow.

Theaetetus: What do you mean, and how do you distinguish them?

220c

Stranger: As to the first kind — all that surrounds and encloses anything to prevent egress, may be rightly called an enclosure.

Theaetetus: Very true.

Stranger: For which reason twig baskets, casting-nets, nooses, creels, and the like may all be termed ‘enclosures’?

Theaetetus: True.

Stranger: And therefore this first kind of capture may be called by us capture with enclosures, or something of that sort?

Theaetetus: Yes.

220d

Stranger: The other kind, which is practised by a blow with hooks and three-pronged spears, when summed up under one name, may be called striking, unless you, Theaetetus, can find some better name?

Theaetetus: Never mind the name — what you suggest will do very well.

Stranger: There is one mode of striking, which is done at night, and by the light of a fire, and is by the hunters themselves called firing, or spearing by firelight.

Theaetetus: True.

Stranger: And the fishing by day is called by the general name of barbing, because the spears, too, are barbed at the point.

Theaetetus: Yes, that is the term.

220e

Stranger: Of this barb-fishing, that which strikes the fish who is below from above is called spearing, because this is the way in which the three-pronged spears are mostly used.

Theaetetus: Yes, it is often called so.

Stranger: Then now there is only one kind remaining.

221a

Theaetetus: What is that?

Stranger: When a hook is used, and the fish is not struck in any chance part of his body, as he is with the spear, but only about the head and mouth, and is then drawn out from below upwards with reeds and rods: — What is the right name of that mode of fishing, Theaetetus?

Theaetetus: I suspect that we have now discovered the object of our search.

221b

Stranger: Then now you and I have come to an understanding not only about the name of the angler's art, but about the definition of the thing itself. One half of all art was acquisitive — half of the acquisitive art was conquest or taking by force, half of this was hunting, and half of hunting was hunting animals, half of this was hunting water animals — of this again, the under half was fishing, half of fishing was striking; a part of striking was fishing with a barb, and one half of this again, being the kind which strikes with a hook and draws the fish from below upwards, is the art which we have been seeking, and which from the nature of the operation is denoted angling or drawing up (aspalieutike, anaspasthai).

221c

Theaetetus: The result has been quite satisfactorily brought out.

Stranger: And now, following this pattern, let us endeavour to find out what a Sophist is.

Theaetetus: By all means.

Stranger: The first question about the angler was, whether he was a skilled artist or unskilled?

Theaetetus: True.

221d

Stranger: And shall we call our new friend unskilled, or a thorough master of his craft?

Theaetetus: Certainly not unskilled, for his name, as, indeed, you imply, must surely express his nature.

Stranger: Then he must be supposed to have some art.

Theaetetus: What art?

Stranger: By heaven, they are cousins! it never occurred to us.

Theaetetus: Who are cousins?

Stranger: The angler and the Sophist.

Theaetetus: In what way are they related?

Stranger: They both appear to me to be hunters.

Theaetetus: How the Sophist? Of the other we have spoken.

221e

Stranger: You remember our division of hunting, into hunting after swimming animals and land animals?

Theaetetus: Yes.

Stranger: And you remember that we subdivided the swimming and left the land animals, saying that there were many kinds of them?

Theaetetus: Certainly.

Stranger: Thus far, then, the Sophist and the angler, starting from the art of acquiring, take the same road?

Theaetetus: So it would appear.

Stranger: Their paths diverge when they reach the art of animal hunting; the one going to the sea-shore, and to the rivers and to the lakes, and angling for the animals which are in them.

Theaetetus: Very true.

Stranger: While the other goes to land and water of another sort — rivers of wealth and broad meadow-lands of generous youth; and he also is intending to take the animals which are in them.

Theaetetus: What do you mean?

Stranger: Of hunting on land there are two principal divisions.

222c

Theaetetus: What are they?

Stranger: One is the hunting of tame, and the other of wild animals.

Theaetetus: But are tame animals ever hunted?

Stranger: Yes, if you include man under tame animals. But if you like you may say that there are no tame animals, or that, if there are, man is not among them; or you may say that man is a tame animal but is not hunted — you shall decide which of these alternatives you prefer.

Theaetetus: I should say, Stranger, that man is a tame animal, and I admit that he is hunted.

Stranger: Then let us divide the hunting of tame animals into two parts.

Theaetetus: How shall we make the division?

Stranger: Let us define piracy, man-stealing, tyranny, the whole military art, by one name, as hunting with violence.

222d

Theaetetus: Very good.

Stranger: But the art of the lawyer, of the popular orator, and the art of conversation may be called in one word the art of persuasion.

Theaetetus: True.

Stranger: And of persuasion, there may be said to be two kinds?

Theaetetus: What are they?

Stranger: One is private, and the other public.

Theaetetus: Yes; each of them forms a class.

Stranger: And of private hunting, one sort receives hire, and the other brings gifts.

Theaetetus: I do not understand you.

Stranger: You seem never to have observed the manner in which lovers hunt.

222e

Theaetetus: To what do you refer?

Stranger: I mean that they lavish gifts on those whom they hunt in addition to other inducements.

Theaetetus: Most true.

Stranger: Let us admit this, then, to be the amatory art.

Theaetetus: Certainly.

Stranger: But that sort of hireling whose conversation is pleasing and who baits his hook only with pleasure and exacts nothing but his maintenance in return, we should all, if I am not mistaken, describe as possessing flattery or an art of making things pleasant.

223a

Theaetetus: Certainly.

Stranger: And that sort, which professes to form acquaintances only for the sake of virtue, and demands a reward in the shape of money, may be fairly called by another name?

Theaetetus: To be sure.

Stranger: And what is the name? Will you tell me?

223b

Theaetetus: It is obvious enough; for I believe that we have discovered the Sophist: which is, as I conceive, the proper name for the class described.

Stranger: Then now, Theaetetus, his art may be traced as a branch of the appropriative, acquisitive family — which hunts animals, — living — land — tame animals; which hunts man, — privately — for hire, — taking money in exchange — having the semblance of education; and this is termed Sophistry, and is a hunt after young men of wealth and rank — such is the conclusion.

Theaetetus: Just so.

223c

Stranger: Let us take another branch of his genealogy; for he is a professor of a great and many-sided art; and if we look back at what has preceded we see that he presents another aspect, besides that of which we are speaking.

Theaetetus: In what respect?

Stranger: There were two sorts of acquisitive art; the one concerned with hunting, the other with exchange.

Theaetetus: There were.

Stranger: And of the art of exchange there are two divisions, the one of giving, and the other of selling.

Theaetetus: Let us assume that.

Stranger: Next, we will suppose the art of selling to be divided into two parts.

Theaetetus: How?

Stranger: There is one part which is distinguished as the sale of a man's own productions; another, which is the exchange of the works of others.

Theaetetus: Certainly.

223e

Stranger: And is not that part of exchange which takes place in the city, being about half of the whole, termed retailing?

Theaetetus: Yes.

Stranger: And that which exchanges the goods of one city for those of another by selling and buying is the exchange of the merchant?

Theaetetus: To be sure.

224a

Stranger: And you are aware that this exchange of the merchant is of two kinds: it is partly concerned with food for the use of the body, and partly with the food of the soul which is bartered and received in exchange for money.

Theaetetus: What do you mean?

Stranger: You want to know what is the meaning of food for the soul; the other kind you surely understand.

Theaetetus: Yes.

224b

Stranger: Take music in general and painting and marionette playing and many other things, which are purchased in one city, and carried away and sold in another — wares of the soul which are hawked about either for the sake of instruction or amusement; — may not he who takes them about and sells them be quite as truly called a merchant as he who sells meats and drinks?

Theaetetus: To be sure he may.

Stranger: And would you not call by the same name him who buys up knowledge and goes about from city to city exchanging his wares for money?

Theaetetus: Certainly I should.

224c

Stranger: Of this merchandise of the soul, may not one part be fairly termed the art of display? And there is another part which

is certainly not less ridiculous, but being a trade in learning must be called by some name germane to the matter?

Theaetetus: Certainly.

Stranger: The latter should have two names, — one descriptive of the sale of the knowledge of virtue, and the other of the sale of other kinds of knowledge.

Theaetetus: Of course.

224d

Stranger: The name of art-seller corresponds well enough to the latter; but you must try and tell me the name of the other.

Theaetetus: He must be the Sophist, whom we are seeking; no other name can possibly be right.

Stranger: No other; and so this trader in virtue again turns out to be our friend the Sophist, whose art may now be traced from the art of acquisition through exchange, trade, merchandise, to a merchandise of the soul which is concerned with speech and the knowledge of virtue.

224e

Theaetetus: Quite true.

Stranger: And there may be a third reappearance of him; — for he may have settled down in a city, and may fabricate as well as buy these same wares, intending to live by selling them, and he would still be called a Sophist?

Theaetetus: Certainly.

Stranger: Then that part of the acquisitive art which exchanges, and of exchange which either sells a man's own productions or retails those of others, as the case may be, and in either way sells the knowledge of virtue, you would again term Sophistry?

225a

Theaetetus: I must, if I am to keep pace with the argument.

Stranger: Let us consider once more whether there may not be yet another aspect of sophistry.

Theaetetus: What is it?

Stranger: In the acquisitive there was a subdivision of the combative or fighting art.

Theaetetus: There was.

Stranger: Perhaps we had better divide it.

Theaetetus: What shall be the divisions?

Stranger: There shall be one division of the competitive, and another of the pugnacious.

Theaetetus: Very good.

225b

Stranger: That part of the pugnacious which is a contest of bodily strength may be properly called by some such name as violent.

Theaetetus: True.

Stranger: And when the war is one of words, it may be termed controversy?

Theaetetus: Yes.

Stranger: And controversy may be of two kinds.

Theaetetus: What are they?

Stranger: When long speeches are answered by long speeches, and there is public discussion about the just and unjust, that is forensic controversy.

Theaetetus: Yes.

225c

Stranger: And there is a private sort of controversy, which is cut up into questions and answers, and this is commonly called disputation?

Theaetetus: Yes, that is the name.

Stranger: And of disputation, that sort which is only a discussion about contracts, and is carried on at random, and without rules of art, is recognized by the reasoning faculty to be a distinct class, but has hitherto had no distinctive name, and does not deserve to receive one from us.

Theaetetus: No; for the different sorts of it are too minute and heterogeneous.

225d

Stranger: But that which proceeds by rules of art to dispute about justice and injustice in their own nature, and about things in general, we have been accustomed to call argumentation (Eristic)?

Theaetetus: Certainly.

Stranger: And of argumentation, one sort wastes money, and the other makes money.

Theaetetus: Very true.

Stranger: Suppose we try and give to each of these two classes a name.

Theaetetus: Let us do so.

Stranger: I should say that the habit which leads a man to neglect his own affairs for the pleasure of conversation, of which the style is far from being agreeable to the majority of his hearers, may be fairly termed loquacity: such is my opinion.

Theaetetus: That is the common name for it.

Stranger: But now who the other is, who makes money out of private disputation, it is your turn to say.

226a

Theaetetus: There is only one true answer: he is the wonderful Sophist, of whom we are in pursuit, and who reappears again for the fourth time.

Stranger: Yes, and with a fresh pedigree, for he is the money-making species of the Eristic, disputatious, controversial, pugnacious, combative, acquisitive family, as the argument has already proven.

Theaetetus: Certainly.

Stranger: How true was the observation that he was a many-sided animal, and not to be caught with one hand, as they say!

226b

Theaetetus: Then you must catch him with two.

Stranger: Yes, we must, if we can. And therefore let us try another track in our pursuit of him: You are aware that there are certain menial occupations which have names among servants?

Theaetetus: Yes, there are many such; which of them do you mean?

Stranger: I mean such as sifting, straining, winnowing, threshing.

Theaetetus: Certainly.

226c

Stranger: And besides these there are a great many more, such as carding, spinning, adjusting the warp and the woof; and thousands of similar expressions are used in the arts.

Theaetetus: Of what are they to be patterns, and what are we going to do with them all?

Stranger: I think that in all of these there is implied a notion of division.

Theaetetus: Yes.

Stranger: Then if, as I was saying, there is one art which includes all of them, ought not that art to have one name?

Theaetetus: And what is the name of the art?

226d

Stranger: The art of discerning or discriminating.

Theaetetus: Very good.

Stranger: Think whether you cannot divide this.

Theaetetus: I should have to think a long while.

Stranger: In all the previously named processes either like has been separated from like or the better from the worse.

Theaetetus: I see now what you mean.

Stranger: There is no name for the first kind of separation; of the second, which throws away the worse and preserves the better, I do know a name.

Theaetetus: What is it?

Stranger: Every discernment or discrimination of that kind, as I have observed, is called a purification.

Theaetetus: Yes, that is the usual expression.

Stranger: And any one may see that purification is of two kinds.

227a

Theaetetus: Perhaps so, if he were allowed time to think; but I do not see at this moment.

Stranger: There are many purifications of bodies which may with propriety be comprehended under a single name.

Theaetetus: What are they, and what is their name?

227b

Stranger: There is the purification of living bodies in their inward and in their outward parts, of which the former is duly effected by medicine and gymnastic, the latter by the not very dignified art of the bath-man; and there is the purification of inanimate substances — to this the arts of fulling and of furbishing in general attend in a number of minute particulars, having a variety of names which are thought ridiculous.

Theaetetus: Very true.

Stranger: There can be no doubt that they are thought ridiculous, Theaetetus; but then the dialectical art never considers whether the benefit to be derived from the purge is greater or less than that to be derived from the sponge, and has not more interest in the one than in the other; her endeavour is to know what is and is not kindred in all arts, with a view to the acquisition of intelligence; and having this in view, she honours them all alike, and when she makes comparisons, she counts one of them not a whit more ridiculous than another; nor does she esteem him who adduces as his example of hunting, the general's art, at all more decorous than another who cites that of the vermin-destroyer, but only as the greater pretender of the two. And as to your question concerning the name which was to comprehend all these arts of purification, whether of animate or inanimate bodies, the art of dialectic is in no wise particular about fine words, if she may be only allowed to have a general name for all other purifications, binding them up together and separating them off from the purification of the soul or intellect. For this is the purification at which she wants to arrive, and this we should understand to be her aim.

227d

Theaetetus: Yes, I understand; and I agree that there are two sorts of purification, and that one of them is concerned with the soul, and that there is another which is concerned with the body.

Stranger: Excellent; and now listen to what I am going to say, and try to divide further the first of the two.

Theaetetus: Whatever line of division you suggest, I will endeavour to assist you.

Stranger: Do we admit that virtue is distinct from vice in the soul?

Theaetetus: Certainly.

Stranger: And purification was to leave the good and to cast out whatever is bad?

Theaetetus: True.

Stranger: Then any taking away of evil from the soul may be properly called purification?

228a

Theaetetus: Yes.

Stranger: And in the soul there are two kinds of evil.

Theaetetus: What are they?

Stranger: The one may be compared to disease in the body, the other to deformity.

Theaetetus: I do not understand.

Stranger: Perhaps you have never reflected that disease and discord are the same.

Theaetetus: To this, again, I know not what I should reply.

Stranger: Do you not conceive discord to be a dissolution of kindred elements, originating in some disagreement?

228b

Theaetetus: Just that.

Stranger: And is deformity anything but the want of measure, which is always unsightly?

Theaetetus: Exactly.

228c

Stranger: And do we not see that opinion is opposed to desire, pleasure to anger, reason to pain, and that all these elements are opposed to one another in the souls of bad men?

Theaetetus: Certainly.

Stranger: And yet they must all be akin?

Theaetetus: Of course.

Stranger: Then we shall be right in calling vice a discord and disease of the soul?

Theaetetus: Most true.

228d

Stranger: And when things having motion, and aiming at an appointed mark, continually miss their aim and glance aside, shall we say that this is the effect of symmetry among them, or of the want of symmetry?

Theaetetus: Clearly of the want of symmetry.

Stranger: But surely we know that no soul is voluntarily ignorant of anything?

Theaetetus: Certainly not.

Stranger: And what is ignorance but the aberration of a mind which is bent on truth, and in which the process of understanding is perverted?

Theaetetus: True.

Stranger: Then we are to regard an unintelligent soul as deformed and devoid of symmetry?

228e

Theaetetus: Very true.

Stranger: Then there are these two kinds of evil in the soul — the one which is generally called vice, and is obviously a disease of the soul...

Theaetetus: Yes.

Stranger: And there is the other, which they call ignorance, and which, because existing only in the soul, they will not allow to be vice.

Theaetetus: I certainly admit what I at first disputed — that there are two kinds of vice in the soul, and that we ought to consider cowardice, intemperance, and injustice to be alike forms of disease in the soul, and ignorance, of which there are all sorts of varieties, to be deformity.

Stranger: And in the case of the body are there not two arts which have to do with the two bodily states?

Theaetetus: What are they?

229b

Stranger: There is gymnastic, which has to do with deformity, and medicine, which has to do with disease.

Theaetetus: True.

Stranger: And where there is insolence and injustice and cowardice, is not chastisement the art which is most required?

Theaetetus: That certainly appears to be the opinion of mankind.

Stranger: Again, of the various kinds of ignorance, may not instruction be rightly said to be the remedy?

Theaetetus: True.

Stranger: And of the art of instruction, shall we say that there is one or many kinds? At any rate there are two principal ones. Think.

229c

Theaetetus: I will.

Stranger: I believe that I can see how we shall soonest arrive at the answer to this question.

Theaetetus: How?

Stranger: If we can discover a line which divides ignorance into two halves. For a division of ignorance into two parts will certainly imply that the art of instruction is also twofold, answering to the two divisions of ignorance.

Theaetetus: Well, and do you see what you are looking for?

Stranger: I do seem to myself to see one very large and bad sort of ignorance which is quite separate, and may be weighed in the scale against all other sorts of ignorance put together.

Theaetetus: What is it?

Stranger: When a person supposes that he knows, and does not know; this appears to be the great source of all the errors of the intellect.

Theaetetus: True.

Stranger: And this, if I am not mistaken, is the kind of ignorance which specially earns the title of stupidity.

Theaetetus: True.

229e

Stranger: What name, then, shall be given to the sort of instruction which gets rid of this?

Theaetetus: The instruction which you mean, Stranger, is, I should imagine, not the teaching of handicraft arts, but what, thanks to us, has been termed education in this part the world.

Stranger: Yes, Theaetetus, and by nearly all Hellenes. But we have still to consider whether education admits of any further division.

Theaetetus: We have.

Stranger: I think that there is a point at which such a division is possible.

230a

Theaetetus: Where?

Stranger: Of education, one method appears to be rougher, and another smoother.

Theaetetus: How are we to distinguish the two?

Stranger: There is the time-honoured mode which our fathers commonly practised towards their sons, and which is still adopted by many — either of roughly reproofing their errors, or of gently advising them; which varieties may be correctly included under the general term of admonition.

230b

Theaetetus: True.

Stranger: But whereas some appear to have arrived at the conclusion that all ignorance is involuntary, and that no one who thinks himself wise is willing to learn any of those things in which he is conscious of his own cleverness, and that the admonitory sort of instruction gives much trouble and does little good —

Theaetetus: There they are quite right.

Stranger: Accordingly, they set to work to eradicate the spirit of conceit in another way.

Theaetetus: In what way?

Stranger: They cross-examine a man's words, when he thinks that he is saying something and is really saying nothing, and easily convict him of inconsistencies in his opinions; these they then collect by the dialectical process, and placing them side by side, show that they contradict one another about the same things, in relation to the same things, and in the same respect. He, seeing this, is angry with himself, and grows gentle towards others, and thus is entirely delivered from great prejudices and harsh notions, in a way which is most amusing to the hearer, and produces the most lasting good effect on the person who is the subject of the operation. For as the physician considers that the body will receive no benefit from taking food until the internal obstacles have been removed, so the purifier of the soul is conscious that his patient will receive no benefit from the application of knowledge until he is refuted, and from refutation learns modesty; he must be purged of his prejudices first and made to think that he knows only what he knows, and no more.

230e

Theaetetus: That is certainly the best and wisest state of mind.

Stranger: For all these reasons, Theaetetus, we must admit that refutation is the greatest and chiefest of purifications, and he who has not been refuted, though he be the Great King himself, is in an awful state of impurity; he is uninstructed and deformed in those things in which he who would be truly blessed ought to be fairest and purest.

Theaetetus: Very true.

Stranger: And who are the ministers of this art? I am afraid to say the Sophists.

Theaetetus: Why?

Stranger: Lest we should assign to them too high a prerogative.

Theaetetus: Yet the Sophist has a certain likeness to our minister of purification.

Stranger: Yes, the same sort of likeness which a wolf, who is the fiercest of animals, has to a dog, who is the gentlest. But he who would not be found tripping, ought to be very careful in this matter of comparisons, for they are most slippery things. Nevertheless, let us assume that the Sophists are the men. I say this provisionally, for I think that the line which divides them will be marked enough if proper care is taken.

231c

Theaetetus: Likely enough.

Stranger: Let us grant, then, that from the discerning art comes purification, and from purification let there be separated off a part which is concerned with the soul; of this mental purification instruction is a portion, and of instruction education, and of education, that refutation of vain conceit which has been discovered in the present argument; and let this be called by you and me the nobly-descended art of Sophistry.

Theaetetus: Very well; and yet, considering the number of forms in which he has presented himself, I begin to doubt how I can with any truth or confidence describe the real nature of the Sophist.

231d

Stranger: You naturally feel perplexed; and yet I think that he must be still more perplexed in his attempt to escape us, for as the proverb says, when every way is blocked, there is no escape; now, then, is the time of all others to set upon him.

Theaetetus: True.

Stranger: First let us wait a moment and recover breath, and while we are resting, we may reckon up in how many forms he

has appeared. In the first place, he was discovered to be a paid hunter after wealth and youth.

231e

Theaetetus: Yes.

Stranger: In the second place, he was a merchant in the goods of the soul.

Theaetetus: Certainly.

Stranger: In the third place, he has turned out to be a retailer of the same sort of wares.

Theaetetus: Yes; and in the fourth place, he himself manufactured the learned wares which he sold.

232a

Stranger: Quite right; I will try and remember the fifth myself. He belonged to the fighting class, and was further distinguished as a hero of debate, who professed the eristic art.

Theaetetus: True.

Stranger: The sixth point was doubtful, and yet we at last agreed that he was a purger of souls, who cleared away notions obstructive to knowledge.

Theaetetus: Very true.

232b

Stranger: Do you not see that when the professor of any art has one name and many kinds of knowledge, there must be something wrong? The multiplicity of names which is applied to him shows that the common principle to which all these branches of knowledge are tending, is not understood.

Theaetetus: I should imagine this to be the case.

232c

Stranger: At any rate we will understand him, and no indolence shall prevent us. Let us begin again, then, and re-examine some

of our statements concerning the Sophist; there was one thing which appeared to me especially characteristic of him.

Theaetetus: To what are you referring?

Stranger: We were saying of him, if I am not mistaken, that he was a disputer?

Theaetetus: We were.

Stranger: And does he not also teach others the art of disputation?

Theaetetus: Certainly he does.

Stranger: And about what does he profess that he teaches men to dispute? To begin at the beginning — Does he make them able to dispute about divine things, which are invisible to men in general?

Theaetetus: At any rate, he is said to do so.

232d

Stranger: And what do you say of the visible things in heaven and earth, and the like?

Theaetetus: Certainly he disputes, and teaches to dispute about them.

Stranger: Then, again, in private conversation, when any universal assertion is made about generation and essence, we know that such persons are tremendous argufiers, and are able to impart their own skill to others.

Theaetetus: Undoubtedly.

232e

Stranger: And do they not profess to make men able to dispute about law and about politics in general?

Theaetetus: Why, no one would have anything to say to them, if they did not make these professions.

Stranger: In all and every art, what the craftsman ought to say in answer to any question is written down in a popular form, and he who likes may learn.

233a

Theaetetus: I suppose that you are referring to the precepts of Protagoras about wrestling and the other arts?

Stranger: Yes, my friend, and about a good many other things. In a word, is not the art of disputation a power of disputing about all things?

Theaetetus: Certainly; there does not seem to be much which is left out.

Stranger: But oh! my dear youth, do you suppose this possible? for perhaps your young eyes may see things which to our duller sight do not appear.

Theaetetus: To what are you alluding? I do not think that I understand your present question.

233b

Stranger: I ask whether anybody can understand all things.

Theaetetus: Happy would mankind be if such a thing were possible!

Socrates: But how can any one who is ignorant dispute in a rational manner against him who knows?

Theaetetus: He cannot.

Stranger: Then why has the sophistical art such a mysterious power?

Theaetetus: To what do you refer?

Stranger: How do the Sophists make young men believe in their supreme and universal wisdom? For if they neither disputed nor were thought to dispute rightly, or being thought to do so were deemed no wiser for their controversial skill, then, to

quote your own observation, no one would give them money or be willing to learn their art.

Theaetetus: They certainly would not.

Stranger: But they are willing.

Theaetetus: Yes, they are.

Stranger: Yes, and the reason, as I should imagine, is that they are supposed to have knowledge of those things about which they dispute?

Theaetetus: Certainly.

Stranger: And they dispute about all things?

Theaetetus: True.

Stranger: And therefore, to their disciples, they appear to be all-wise?

233d

Theaetetus: Certainly.

Stranger: But they are not; for that was shown to be impossible.

Theaetetus: Impossible, of course.

Stranger: Then the Sophist has been shown to have a sort of conjectural or apparent knowledge only of all things, which is not the truth?

Theaetetus: Exactly; no better description of him could be given.

Stranger: Let us now take an illustration, which will still more clearly explain his nature.

233e

Theaetetus: What is it?

Stranger: I will tell you, and you shall answer me, giving your very closest attention. Suppose that a person were to profess,

not that he could speak or dispute, but that he knew how to make and do all things, by a single art.

Theaetetus: All things?

Stranger: I see that you do not understand the first word that I utter, for you do not understand the meaning of ‘all.’

234a

Theaetetus: No, I do not.

Stranger: Under all things, I include you and me, and also animals and trees.

Theaetetus: What do you mean?

Stranger: Suppose a person to say that he will make you and me, and all creatures.

Theaetetus: What would he mean by ‘making’? He cannot be a husbandman; — for you said that he is a maker of animals.

Stranger: Yes; and I say that he is also the maker of the sea, and the earth, and the heavens, and the gods, and of all other things; and, further, that he can make them in no time, and sell them for a few pence.

234b

Theaetetus: That must be a jest.

Stranger: And when a man says that he knows all things, and can teach them to another at a small cost, and in a short time, is not that a jest?

Theaetetus: Certainly.

Stranger: And is there any more artistic or graceful form of jest than imitation?

Theaetetus: Certainly not; and imitation is a very comprehensive term, which includes under one class the most diverse sorts of things.

234c

Stranger: We know, of course, that he who professes by one art to make all things is really a painter, and by the painter's art makes resemblances of real things which have the same name with them; and he can deceive the less intelligent sort of young children, to whom he shows his pictures at a distance, into the belief that he has the absolute power of making whatever he likes.

Theaetetus: Certainly.

234d

Stranger: And may there not be supposed to be an imitative art of reasoning? Is it not possible to enchant the hearts of young men by words poured through their ears, when they are still at a distance from the truth of facts, by exhibiting to them fictitious arguments, and making them think that they are true, and that the speaker is the wisest of men in all things?

Theaetetus: Yes; why should there not be another such art?

Stranger: But as time goes on, and their hearers advance in years, and come into closer contact with realities, and have learnt by sad experience to see and feel the truth of things, are not the greater part of them compelled to change many opinions which they formerly entertained, so that the great appears small to them, and the easy difficult, and all their dreamy speculations are overturned by the facts of life?

234e

Theaetetus: That is my view, as far as I can judge, although, at my age, I may be one of those who see things at a distance only.

Stranger: And the wish of all of us, who are your friends, is and always will be to bring you as near to the truth as we can without the sad reality. And now I should like you to tell me, whether the Sophist is not visibly a magician and imitator of true being; or are we still disposed to think that he may have a

true knowledge of the various matters about which he disputes?

Theaetetus: But how can he, Stranger? Is there any doubt, after what has been said, that he is to be located in one of the divisions of children's play?

235a

Stranger: Then we must place him in the class of magicians and mimics.

Theaetetus: Certainly we must.

Stranger: And now our business is not to let the animal out, for we have got him in a sort of dialectical net, and there is one thing which he decidedly will not escape.

Theaetetus: What is that?

Stranger: The inference that he is a juggler.

235b

Theaetetus: Precisely my own opinion of him.

Stranger: Then, clearly, we ought as soon as possible to divide the image-making art, and go down into the net, and, if the Sophist does not run away from us, to seize him according to orders and deliver him over to reason, who is the lord of the hunt, and proclaim the capture of him; and if he creeps into the recesses of the imitative art, and secretes himself in one of them, to divide again and follow him up until in some sub-section of imitation he is caught. For our method of tackling each and all is one which neither he nor any other creature will ever escape in triumph.

Theaetetus: Well said; and let us do as you propose.

Stranger: Well, then, pursuing the same analytic method as before, I think that I can discern two divisions of the imitative art, but I am not as yet able to see in which of them the desired form is to be found.

Theaetetus: Will you tell me first what are the two divisions of which you are speaking?

235d

Stranger: One is the art of likeness-making; — generally a likeness of anything is made by producing a copy which is executed according to the proportions of the original, similar in length and breadth and depth, each thing receiving also its appropriate colour.

Theaetetus: Is not this always the aim of imitation?

Stranger: Not always; in works either of sculpture or of painting, which are of any magnitude, there is a certain degree of deception; for artists were to give the true proportions of their fair works, the upper part, which is farther off, would appear to be out of proportion in comparison with the lower, which is nearer; and so they give up the truth in their images and make only the proportions which appear to be beautiful, disregarding the real ones.

Theaetetus: Quite true.

Stranger: And that which being other is also like, may we not fairly call a likeness or image?

236a

Theaetetus: Yes.

Stranger: And may we not, as I did just now, call that part of the imitative art which is concerned with making such images the art of likeness-making?

236b

Theaetetus: Let that be the name.

Stranger: And what shall we call those resemblances of the beautiful, which appear such owing to the unfavourable position of the spectator, whereas if a person had the power of getting a correct view of works of such magnitude, they would

appear not even like that to which they profess to be like? May we not call these ‘appearances,’ since they appear only and are not really like?

Theaetetus: Certainly.

236c

Stranger: There is a great deal of this kind of thing in painting, and in all imitation.

Theaetetus: Of course.

Stranger: And may we not fairly call the sort of art, which produces an appearance and not an image, phantastic art?

Theaetetus: Most fairly.

Stranger: These then are the two kinds of image-making — the art of making likenesses, and phantastic or the art of making appearances?

236d

Theaetetus: True.

Stranger: I was doubtful before in which of them I should place the Sophist, nor am I even now able to see clearly; verily he is a wonderful and inscrutable creature. And now in the cleverest manner he has got into an impossible place.

Theaetetus: Yes, he has.

Stranger: Do you speak advisedly, or are you carried away at the moment by the habit of assenting into giving a hasty answer?

Theaetetus: May I ask to what you are referring?

236e

Stranger: My dear friend, we are engaged in a very difficult speculation — there can be no doubt of that; for how a thing can appear and seem, and not be, or how a man can say a thing which is not true, has always been and still remains a very

perplexing question. Can any one say or think that falsehood really exists, and avoid being caught in a contradiction? Indeed, Theaetetus, the task is a difficult one.

Theaetetus: Why?

237a

Stranger: He who says that falsehood exists has the audacity to assert the being of not-being; for this is implied in the possibility of falsehood. But, my boy, in the days when I was a boy, the great Parmenides protested against this doctrine, and to the end of his life he continued to inculcate the same lesson — always repeating both in verse and out of verse: ‘Keep your mind from this way of enquiry, for never will you show that not-being is.’

Such is his testimony, which is confirmed by the very expression when sifted a little. Would you object to begin with the consideration of the words themselves?

Theaetetus: Never mind about me; I am only desirous that you should carry on the argument in the best way, and that you should take me with you.

237b

Stranger: Very good; and now say, do we venture to utter the forbidden word ‘not-being’?

Theaetetus: Certainly we do.

237c

Stranger: Let us be serious then, and consider the question neither in strife nor play: suppose that one of the hearers of Parmenides was asked, ‘To what is the term “not-being” to be applied?’ — do you know what sort of object he would single out in reply, and what answer he would make to the enquirer?

Theaetetus: That is a difficult question, and one not to be answered at all by a person like myself.

Stranger: There is at any rate no difficulty in seeing that the predicate 'not-being' is not applicable to any being.

Theaetetus: None, certainly.

Stranger: And if not to being, then not to something.

Theaetetus: Of course not.

Stranger: It is also plain, that in speaking of something we speak of being, for to speak of an abstract something naked and isolated from all being is impossible.

237d

Theaetetus: Impossible.

Stranger: You mean by assenting to imply that he who says something must say some one thing?

Theaetetus: Yes.

Stranger: Some in the singular (ti) you would say is the sign of one, some in the dual (tine) of two, some in the plural (tines) of many?

Theaetetus: Exactly.

Stranger: Then he who says 'not something' must say absolutely nothing.

Theaetetus: Most assuredly.

Stranger: And as we cannot admit that a man speaks and says nothing, he who says 'not-being' does not speak at all.

Theaetetus: The difficulty of the argument can no further go.

237e

Stranger: Not yet, my friend, is the time for such a word; for there still remains of all perplexities the first and greatest, touching the very foundation of the matter.

Theaetetus: What do you mean? Do not be afraid to speak.

Stranger: To that which is, may be attributed some other thing which is?

Theaetetus: Certainly.

Stranger: But can anything which is, be attributed to that which is not?

Theaetetus: Impossible.

Stranger: And all number is to be reckoned among things which are?

Theaetetus: Yes, surely number, if anything, has a real existence.

Stranger: Then we must not attempt to attribute to not-being number either in the singular or plural?

238a

Theaetetus: The argument implies that we should be wrong in doing so.

Stranger: But how can a man either express in words or even conceive in thought things which are not or a thing which is not without number?

Theaetetus: How indeed?

Stranger: When we speak of things which are not, are we not attributing plurality to not-being?

238b

Theaetetus: Certainly.

Stranger: But, on the other hand, when we say 'what is not,' do we not attribute unity?

Theaetetus: Manifestly.

Stranger: Nevertheless, we maintain that you may not and ought not to attribute being to not-being?

Theaetetus: Most true.

Stranger: Do you see, then, that not-being in itself can neither be spoken, uttered, or thought, but that it is unthinkable, unutterable, unspeakable, indescribable?

Theaetetus: Quite true.

Stranger: But, if so, I was wrong in telling you just now that the difficulty which was coming is the greatest of all.

Theaetetus: What! is there a greater still behind?

Stranger: Well, I am surprised, after what has been said already, that you do not see the difficulty in which he who would refute the notion of not-being is involved. For he is compelled to contradict himself as soon as he makes the attempt.

238d

Theaetetus: What do you mean? Speak more clearly.

Stranger: Do not expect clearness from me. For I, who maintain that not-being has no part either in the one or many, just now spoke and am still speaking of not-being as one; for I say 'not-being.' Do you understand?

Theaetetus: Yes.

Stranger: And a little while ago I said that not-being is unutterable, unspeakable, indescribable: do you follow?

Theaetetus: I do after a fashion.

238e

Stranger: When I introduced the word 'is,' did I not contradict what I said before?

Theaetetus: Clearly.

Stranger: And in using the singular verb, did I not speak of not-being as one?

Theaetetus: Yes.

Stranger: And when I spoke of not-being as indescribable and unspeakable and unutterable, in using each of these words in the singular, did I not refer to not-being as one?

Theaetetus: Certainly.

239a

Stranger: And yet we say that, strictly speaking, it should not be defined as one or many, and should not even be called 'it,' for the use of the word 'it' would imply a form of unity.

Theaetetus: Quite true.

Stranger: How, then, can any one put any faith in me? For now, as always, I am unequal to the refutation of not-being. And therefore, as I was saying, do not look to me for the right way of speaking about not-being; but come, let us try the experiment with you.

Theaetetus: What do you mean?

239b

Stranger: Make a noble effort, as becomes youth, and endeavour with all your might to speak of not-being in a right manner, without introducing into it either existence or unity or plurality.

Theaetetus: It would be a strange boldness in me which would attempt the task when I see you thus discomfited.

Stranger: Say no more of ourselves; but until we find some one or other who can speak of not-being without number, we must acknowledge that the Sophist is a clever rogue who will not be got out of his hole.

Theaetetus: Most true.

239c

Stranger: And if we say to him that he professes an art of making appearances, he will grapple with us and retort our argument upon ourselves; and when we call him an image-maker he will say, 'Pray what do you mean at all by an image?' — and I should like to know, Theaetetus, how we can possibly answer the younger's question?

Theaetetus: We shall doubtless tell him of the images which are reflected in water or in mirrors; also of sculptures, pictures, and other duplicates.

239d

Stranger: I see, Theaetetus, that you have never made the acquaintance of the Sophist.

Theaetetus: Why do you think so?

Stranger: He will make believe to have his eyes shut, or to have none.

Theaetetus: What do you mean?

Stranger: When you tell him of something existing in a mirror, or in sculpture, and address him as though he had eyes, he will laugh you to scorn, and will pretend that he knows nothing of mirrors and streams, or of sight at all; he will say that he is asking about an idea.

239e

Theaetetus: What can he mean?

Stranger: The common notion pervading all these objects, which you speak of as many, and yet call by the single name of image, as though it were the unity under which they were all included. How will you maintain your ground against him?

Theaetetus: How, Stranger, can I describe an image except as something fashioned in the likeness of the true?

Stranger: And do you mean this something to be some other true thing, or what do you mean?

Theaetetus: Certainly not another true thing, but only a resemblance.

Stranger: And you mean by true that which really is?

Theaetetus: Yes.

Stranger: And the not true is that which is the opposite of the true?

Theaetetus: Exactly.

Stranger: A resemblance, then, is not really real, if, as you say, not true?

Theaetetus: Nay, but it is in a certain sense.

240b

Stranger: You mean to say, not in a true sense?

Theaetetus: Yes; it is in reality only an image.

Stranger: Then what we call an image is in reality really unreal.

Theaetetus: In what a strange complication of being and not-being we are involved!

Stranger: Strange! I should think so. See how, by his reciprocation of opposites, the many-headed Sophist has compelled us, quite against our will, to admit the existence of not-being.

Theaetetus: Yes, indeed, I see.

240c

Stranger: The difficulty is how to define his art without falling into a contradiction.

Theaetetus: How do you mean? And where does the danger lie?

Stranger: When we say that he deceives us with an illusion, and that his art is illusory, do we mean that our soul is led by his art to think falsely, or what do we mean?

Theaetetus: There is nothing else to be said.

240d

Stranger: Again, false opinion is that form of opinion which thinks the opposite of the truth: — You would assent?

Theaetetus: Certainly.

Stranger: You mean to say that false opinion thinks what is not?

Theaetetus: Of course.

Stranger: Does false opinion think that things which are not are not, or that in a certain sense they are?

Theaetetus: Things that are not must be imagined to exist in a certain sense, if any degree of falsehood is to be possible.

Stranger: And does not false opinion also think that things which most certainly exist do not exist at all?

Theaetetus: Yes.

240e

Stranger: And here, again, is falsehood?

Theaetetus: Falsehood — yes.

Stranger: And in like manner, a false proposition will be deemed to be one which asserts the non-existence of things which are, and the existence of things which are not.

241a

Theaetetus: There is no other way in which a false proposition can arise.

Stranger: There is not; but the Sophist will deny these statements. And indeed how can any rational man assent to

them, when the very expressions which we have just used were before acknowledged by us to be unutterable, unspeakable, indescribable, unthinkable? Do you see his point, Theaetetus?

241b

Theaetetus: Of course he will say that we are contradicting ourselves when we hazard the assertion, that falsehood exists in opinion and in words; for in maintaining this, we are compelled over and over again to assert being of not-being, which we admitted just now to be an utter impossibility.

Stranger: How well you remember! And now it is high time to hold a consultation as to what we ought to do about the Sophist; for if we persist in looking for him in the class of false workers and magicians, you see that the handles for objection and the difficulties which will arise are very numerous and obvious.

Theaetetus: They are indeed.

Stranger: We have gone through but a very small portion of them, and they are really infinite.

Theaetetus: If that is the case, we cannot possibly catch the Sophist.

Stranger: Shall we then be so faint-hearted as to give him up?

Theaetetus: Certainly not, I should say, if we can get the slightest hold upon him.

241c

Stranger: Will you then forgive me, and, as your words imply, not be altogether displeased if I flinch a little from the grasp of such a sturdy argument?

Theaetetus: To be sure I will.

Stranger: I have a yet more urgent request to make.

Theaetetus: Which is — ?

Stranger: That you will promise not to regard me as a parricide.

Theaetetus: And why?

241d

Stranger: Because, in self-defence, I must test the philosophy of my father Parmenides, and try to prove by main force that in a certain sense not-being is, and that being, on the other hand, is not.

Theaetetus: Some attempt of the kind is clearly needed.

Stranger: Yes, a blind man, as they say, might see that, and, unless these questions are decided in one way or another, no one when he speaks of false words, or false opinion, or idols, or images, or imitations, or appearances, or about the arts which are concerned with them; can avoid falling into ridiculous contradictions.

241e

Theaetetus: Most true.

Stranger: And therefore I must venture to lay hands on my father's argument; for if I am to be over-scrupulous, I shall have to give the matter up.

Theaetetus: Nothing in the world should ever induce us to do so.

Stranger: I have a third little request which I wish to make.

Theaetetus: What is it?

242a

Stranger: You heard me say what I have always felt and still feel — that I have no heart for this argument?

Theaetetus: I did.

Stranger: I tremble at the thought of what I have said, and expect that you will deem me mad, when you hear of my sudden changes and shiftings; let me therefore observe, that I am examining the question entirely out of regard for you.

Theaetetus: There is no reason for you to fear that I shall impute any impropriety to you, if you attempt this refutation and proof; take heart, therefore, and proceed.

Stranger: And where shall I begin the perilous enterprise? I think that the road which I must take is —

Theaetetus: Which? — Let me hear.

Stranger: I think that we had better, first of all, consider the points which at present are regarded as self-evident, lest we may have fallen into some confusion, and be too ready to assent to one another, fancying that we are quite clear about them.

242c

Theaetetus: Say more distinctly what you mean.

Stranger: I think that Parmenides, and all ever yet undertook to determine the number and nature of existences, talked to us in rather a light and easy strain.

Theaetetus: How?

242d

Stranger: As if we had been children, to whom they repeated each his own mythus or story; — one said that there were three principles, and that at one time there was war between certain of them; and then again there was peace, and they were married and begat children, and brought them up; and another spoke of two principles, — a moist and a dry, or a hot and a cold, and made them marry and cohabit. The Eleatics, however, in our part of the world, say that all things are many in name, but in nature one; this is their mythus, which goes back to Xenophanes, and is even older. Then there are Ionian, and in more recent times Sicilian muses, who have arrived at the conclusion that to unite the two principles is safer, and to say that being is one and many, and that these are held together by enmity and friendship, ever parting, ever meeting, as the severer Muses assert, while the gentler ones do not insist on the

perpetual strife and peace, but admit a relaxation and alternation of them; peace and unity sometimes prevailing under the sway of Aphrodite, and then again plurality and war, by reason of a principle of strife. Whether any of them spoke the truth in all this is hard to determine; besides, antiquity and famous men should have reverence, and not be liable to accusations so serious. Yet one thing may be said of them without offence —

Theaetetus: What thing?

Stranger: That they went on their several ways disdaining to notice people like ourselves; they did not care whether they took us with them, or left us behind them.

Theaetetus: How do you mean?

Stranger: I mean to say, that when they talk of one, two, or more elements, which are or have become or are becoming, or again of heat mingling with cold, assuming in some other part of their works separations and mixtures, — tell me, Theaetetus, do you understand what they mean by these expressions? When I was a younger man, I used to fancy that I understood quite well what was meant by the term ‘not-being,’ which is our present subject of dispute; and now you see in what a fix we are about it.

243a

Theaetetus: I see.

Stranger: And very likely we have been getting into the same perplexity about ‘being,’ and yet may fancy that when anybody utters the word, we understand him quite easily, although we do not know about not-being. But we may be; equally ignorant of both.

Theaetetus: I dare say.

Stranger: And the same may be said of all the terms just mentioned.

Theaetetus: True.

Stranger: The consideration of most of them may be deferred; but we had better now discuss the chief captain and leader of them.

Theaetetus: Of what are you speaking? You clearly think that we must first investigate what people mean by the word 'being.'

Stranger: You follow close at my heels, Theaetetus. For the right method, I conceive, will be to call into our presence the dualistic philosophers and to interrogate them. 'Come,' we will say, 'Ye, who affirm that hot and cold or any other two principles are the universe, what is this term which you apply to both of them, and what do you mean when you say that both and each of them "are"? How are we to understand the word "are"? Upon your view, are we to suppose that there is a third principle over and above the other two, — three in all, and not two? For clearly you cannot say that one of the two principles is being, and yet attribute being equally to both of them; for, if you did, whichever of the two is identified with being, will comprehend the other; and so they will be one and not two.'

Theaetetus: Very true.

Stranger: But perhaps you mean to give the name of 'being' to both of them together?

Theaetetus: Quite likely.

Stranger: 'Then, friends,' we shall reply to them, 'the answer is plainly that the two will still be resolved into one.'

Theaetetus: Most true.

Stranger: 'Since, then, we are in a difficulty, please to tell us what you mean, when you speak of being; for there can be no

doubt that you always from the first understood your own meaning, whereas we once thought that we understood you, but now we are in a great strait. Please to begin by explaining this matter to us, and let us no longer fancy that we understand you, when we entirely misunderstand you.' There will be no impropriety in our demanding an answer to this question, either of the dualists or of the pluralists?

Theaetetus: Certainly not.

Stranger: And what about the assertors of the oneness of the all — must we not endeavour to ascertain from them what they mean by 'being'?

Theaetetus: By all means.

Stranger: Then let them answer this question: One, you say, alone is? 'Yes,' they will reply.

Theaetetus: True.

Stranger: And there is something which you call 'being'?

Theaetetus: 'Yes.'

Stranger: And is being the same as one, and do you apply two names to the same thing?

Theaetetus: What will be their answer, Stranger?

Stranger: It is clear, Theaetetus, that he who asserts the unity of being will find a difficulty in answering this or any other question.

244c

Theaetetus: Why so?

Stranger: To admit of two names, and to affirm that there is nothing but unity, is surely ridiculous?

Theaetetus: Certainly.

Stranger: And equally irrational to admit that a name is anything?

Theaetetus: How so?

Stranger: To distinguish the name from the thing, implies duality.

244d

Theaetetus: Yes.

Stranger: And yet he who identifies the name with the thing will be compelled to say that it is the name of nothing, or if he says that it is the name of something, even then the name will only be the name of a name, and of nothing else.

Theaetetus: True.

Stranger: And the one will turn out to be only one of one, and being absolute unity, will represent a mere name.

Theaetetus: Certainly.

Stranger: And would they say that the whole is other than the one that is, or the same with it?

Theaetetus: To be sure they would, and they actually say so.

Stranger: If being is a whole, as Parmenides sings, — ‘Every way like unto the fullness of a well-rounded sphere, Evenly balanced from the centre on every side, And must needs be neither greater nor less in any way, Neither on this side nor on that—’

244e

then being has a centre and extremes, and, having these, must also have parts.

Theaetetus: True.

Stranger: Yet that which has parts may have the attribute of unity in all the parts, and in this way being all and a whole, may be one?

Theaetetus: Certainly.

Stranger: But that of which this is the condition cannot be absolute unity?

Theaetetus: Why not?

Stranger: Because, according to right reason, that which is truly one must be affirmed to be absolutely indivisible.

245a

Theaetetus: Certainly.

Stranger: But this indivisible, if made up of many parts, will contradict reason.

Theaetetus: I understand.

Stranger: Shall we say that being is one and a whole, because it has the attribute of unity? Or shall we say that being is not a whole at all?

Theaetetus: That is a hard alternative to offer.

Stranger: Most true; for being, having in a certain sense the attribute of one, is yet proved not to be the same as one, and the all is therefore more than one.

245b

Theaetetus: Yes.

Stranger: And yet if being be not a whole, through having the attribute of unity, and there be such a thing as an absolute whole, being lacks something of its own nature?

Theaetetus: Certainly.

Stranger: Upon this view, again, being, having a defect of being, will become not-being?

Theaetetus: True.

Stranger: And, again, the all becomes more than one, for being and the whole will each have their separate nature.

Theaetetus: Yes.

245c

Stranger: But if the whole does not exist at all, all the previous difficulties remain the same, and there will be the further difficulty, that besides having no being, being can never have come into being.

Theaetetus: Why so?

Stranger: Because that which comes into being always comes into being as a whole, so that he who does not give whole a place among beings, cannot speak either of essence or generation as existing.

245d

Theaetetus: Yes, that certainly appears to be true.

Stranger: Again; how can that which is not a whole have any quantity? For that which is of a certain quantity must necessarily be the whole of that quantity.

Theaetetus: Exactly.

Stranger: And there will be innumerable other points, each of them causing infinite trouble to him who says that being is either one or two.

Theaetetus: The difficulties which are dawning upon us prove this; for one objection connects with another, and they are always involving what has preceded in a greater and worse perplexity.

245e

Stranger: We are far from having exhausted the more exact thinkers who treat of being and not-being. But let us be content to leave them, and proceed to view those who speak less precisely; and we shall find as the result of all, that the nature of

being is quite as difficult to comprehend as that of not-being.

Theaetetus: Then now we will go to the others.

246a

Stranger: There appears to be a sort of war of Giants and Gods going on amongst them; they are fighting with one another about the nature of essence.

Theaetetus: How is that?

Stranger: Some of them are dragging down all things from heaven and from the unseen to earth, and they literally grasp in their hands rocks and oaks; of these they lay hold, and obstinately maintain, that the things only which can be touched or handled have being or essence, because they define being and body as one, and if any one else says that what is not a body exists they altogether despise him, and will hear of nothing but body.

246b

Theaetetus: I have often met with such men, and terrible fellows they are.

Stranger: And that is the reason why their opponents cautiously defend themselves from above, out of an unseen world, mightily contending that true essence consists of certain intelligible and incorporeal ideas; the bodies of the materialists, which by them are maintained to be the very truth, they break up into little bits by their arguments, and affirm them to be, not essence, but generation and motion. Between the two armies, Theaetetus, there is always an endless conflict raging concerning these matters.

246c

Theaetetus: True.

Stranger: Let us ask each party in turn, to give an account of that which they call essence.

Theaetetus: How shall we get it out of them?

Stranger: With those who make being to consist in ideas, there will be less difficulty, for they are civil people enough; but there will be very great difficulty, or rather an absolute impossibility, in getting an opinion out of those who drag everything down to matter. Shall I tell you what we must do?

Theaetetus: What?

246d

Stranger: Let us, if we can, really improve them; but if this is not possible, let us imagine them to be better than they are, and more willing to answer in accordance with the rules of argument, and then their opinion will be more worth having; for that which better men acknowledge has more weight than that which is acknowledged by inferior men. Moreover we are no respecters of persons, but seekers after truth.

Theaetetus: Very good.

Stranger: Then now, on the supposition that they are improved, let us ask them to state their views, and do you interpret them.

Theaetetus: Agreed.

Stranger: Let them say whether they would admit that there is such a thing as a mortal animal.

Theaetetus: Of course they would.

Stranger: And do they not acknowledge this to be a body having a soul?

Theaetetus: Certainly they do.

Stranger: Meaning to say that the soul is something which exists?

Theaetetus: True.

Stranger: And do they not say that one soul is just, and another unjust, and that one soul is wise, and another foolish?

247a

Theaetetus: Certainly.

Stranger: And that the just and wise soul becomes just and wise by the possession of justice and wisdom, and the opposite under opposite circumstances?

Theaetetus: Yes, they do.

Stranger: But surely that which may be present or may be absent will be admitted by them to exist?

Theaetetus: Certainly.

Stranger: And, allowing that justice, wisdom, the other virtues, and their opposites exist, as well as a soul in which they inhere, do they affirm any of them to be visible and tangible, or are they all invisible?

247b

Theaetetus: They would say that hardly any of them are visible.

Stranger: And would they say that they are corporeal?

Theaetetus: They would distinguish: the soul would be said by them to have a body; but as to the other qualities of justice, wisdom, and the like, about which you asked, they would not venture either to deny their existence, or to maintain that they were all corporeal.

Stranger: Verily, Theaetetus, I perceive a great improvement in them; the real aborigines, children of the dragon's teeth, would have been deterred by no shame at all, but would have obstinately asserted that nothing is which they are not able to squeeze in their hands.

247c

Theaetetus: That is pretty much their notion.

247d

Stranger: Let us push the question; for if they will admit that any, even the smallest particle of being, is incorporeal, it is enough; they must then say what that nature is which is common to both the corporeal and incorporeal, and which they have in their mind's eye when they say of both of them that they 'are.' Perhaps they may be in a difficulty; and if this is the case, there is a possibility that they may accept a notion of ours respecting the nature of being, having nothing of their own to offer.

Theaetetus: What is the notion? Tell me, and we shall soon see.

Stranger: My notion would be, that anything which possesses any sort of power to affect another, or to be affected by another, if only for a single moment, however trifling the cause and however slight the effect, has real existence; and I hold that the definition of being is simply power.

247e

Theaetetus: They accept your suggestion, having nothing better of their own to offer.

Stranger: Very good; perhaps we, as well as they, may one day change our minds; but, for the present, this may be regarded as the understanding which is established with them.

Theaetetus: Agreed.

Stranger: Let us now go to the friends of ideas; of their opinions, too, you shall be the interpreter.

248a

Theaetetus: I will.

Stranger: To them we say — You would distinguish essence from generation?

Theaetetus: 'Yes,' they reply.

Stranger: And you would allow that we participate in generation with the body, and through perception, but we participate with the soul through thought in true essence; and essence you would affirm to be always the same and immutable, whereas generation or becoming varies?

Theaetetus: Yes; that is what we should affirm.

Stranger: Well, fair sirs, we say to them, what is this participation, which you assert of both? Do you agree with our recent definition?

Theaetetus: What definition?

Stranger: We said that being was an active or passive energy, arising out of a certain power which proceeds from elements meeting with one another. Perhaps your ears, Theaetetus, may fail to catch their answer, which I recognize because I have been accustomed to hear it.

Theaetetus: And what is their answer?

Stranger: They deny the truth of what we were just now saying to the aborigines about existence.

Theaetetus: What was that?

248c

Stranger: Any power of doing or suffering in a degree however slight was held by us to be a sufficient definition of being?

Theaetetus: True.

Stranger: They deny this, and say that the power of doing or suffering is confined to becoming, and that neither power is applicable to being.

Theaetetus: And is there not some truth in what they say?

Stranger: Yes; but our reply will be, that we want to ascertain from them more distinctly, whether they further admit that the

soul knows, and that being or essence is known.

Theaetetus: There can be no doubt that they say so.

248d

Stranger: And is knowing and being known doing or suffering, or both, or is the one doing and the other suffering, or has neither any share in either?

Theaetetus: Clearly, neither has any share in either; for if they say anything else, they will contradict themselves.

Stranger: I understand; but they will allow that if to know is active, then, of course, to be known is passive. And on this view being, in so far as it is known, is acted upon by knowledge, and is therefore in motion; for that which is in a state of rest cannot be acted upon, as we affirm.

248e

Theaetetus: True.

Stranger: And, O heavens, can we ever be made to believe that motion and life and soul and mind are not present with perfect being? Can we imagine that being is devoid of life and mind, and exists in awful unmeaningness an everlasting fixture?

Theaetetus: That would be a dreadful thing to admit, Stranger.

Stranger: But shall we say that has mind and not life?

Theaetetus: How is that possible?

Stranger: Or shall we say that both inhere in perfect being, but that it has no soul which contains them?

Theaetetus: And in what other way can it contain them?

Stranger: Or that being has mind and life and soul, but although endowed with soul remains absolutely unmoved?

Theaetetus: All three suppositions appear to me to be irrational.

Stranger: Under being, then, we must include motion, and that which is moved.

249b

Theaetetus: Certainly.

Stranger: Then, Theaetetus, our inference is, that if there is no motion, neither is there any mind anywhere, or about anything or belonging to any one.

Theaetetus: Quite true.

Stranger: And yet this equally follows, if we grant that all things are in motion — upon this view too mind has no existence.

Theaetetus: How so?

249c

Stranger: Do you think that sameness of condition and mode and subject could ever exist without a principle of rest?

Theaetetus: Certainly not.

Stranger: Can you see how without them mind could exist, or come into existence anywhere?

Theaetetus: No.

Stranger: And surely contend we must in every possible way against him who would annihilate knowledge and reason and mind, and yet ventures to speak confidently about anything.

Theaetetus: Yes, with all our might.

249d

Stranger: Then the philosopher, who has the truest reverence for these qualities, cannot possibly accept the notion of those who say that the whole is at rest, either as unity or in many forms: and he will be utterly deaf to those who assert universal motion. As children say entreatingly ‘Give us both,’ so he will include both the moveable and immoveable in his definition of

being and all.

Theaetetus: Most true.

Stranger: And now, do we seem to have gained a fair notion of being?

Theaetetus: Yes truly.

Stranger: Alas, Theaetetus, methinks that we are now only beginning to see the real difficulty of the enquiry into the nature of it.

Theaetetus: What do you mean?

249e

Stranger: O my friend, do you not see that nothing can exceed our ignorance, and yet we fancy that we are saying something good?

Theaetetus: I certainly thought that we were; and I do not at all understand how we never found out our desperate case.

Stranger: Reflect: after having made these admissions, may we not be justly asked the same questions which we ourselves were asking of those who said that all was hot and cold?

Theaetetus: What were they? Will you recall them to my mind?

250a

Stranger: To be sure I will, and I will remind you of them, by putting the same questions to you which I did to them, and then we shall get on.

Theaetetus: True.

Stranger: Would you not say that rest and motion are in the most entire opposition to one another?

Theaetetus: Of course.

Stranger: And yet you would say that both and either of them equally are?

Theaetetus: I should.

Stranger: And when you admit that both or either of them are, do you mean to say that both or either of them are in motion?

Theaetetus: Certainly not.

Stranger: Or do you wish to imply that they are both at rest, when you say that they are?

250b

Theaetetus: Of course not.

Stranger: Then you conceive of being as some third and distinct nature, under which rest and motion are alike included; and, observing that they both participate in being, you declare that they are.

Theaetetus: Truly we seem to have an intimation that being is some third thing, when we say that rest and motion are.

Stranger: Then being is not the combination of rest and motion, but something different from them.

Theaetetus: So it would appear.

Stranger: Being, then, according to its own nature, is neither in motion nor at rest.

250c

Theaetetus: That is very much the truth.

Stranger: Where, then, is a man to look for help who would have any clear or fixed notion of being in his mind?

Theaetetus: Where, indeed?

Stranger: I scarcely think that he can look anywhere; for that which is not in motion must be at rest, and again, that which is not at rest must be in motion; but being is placed outside of both these classes. Is this possible?

Theaetetus: Utterly impossible.

Stranger: Here, then, is another thing which we ought to bear in mind.

250d

Theaetetus: What?

Stranger: When we were asked to what we were to assign the appellation of not-being, we were in the greatest difficulty: — do you remember?

Theaetetus: To be sure.

Stranger: And are we not now in as great a difficulty about being?

Theaetetus: I should say, Stranger, that we are in one which is, if possible, even greater.

Stranger: Then let us acknowledge the difficulty; and as being and not-being are involved in the same perplexity, there is hope that when the one appears more or less distinctly, the other will equally appear; and if we are able to see neither, there may still be a chance of steering our way in between them, without any great discredit.

Theaetetus: Very good.

Stranger: Let us enquire, then, how we come to predicate many names of the same thing.

Theaetetus: Give an example.

Stranger: I mean that we speak of man, for example, under many names — that we attribute to him colours and forms and magnitudes and virtues and vices, in all of which instances and in ten thousand others we not only speak of him as a man, but also as good, and having numberless other attributes, and in the same way anything else which we originally supposed to be one is described by us as many, and under many names.

Theaetetus: That is true.

Stranger: And thus we provide a rich feast for tyros, whether young or old; for there is nothing easier than to argue that the one cannot be many, or the many one; and great is their delight in denying that a man is good; for man, they insist, is man and good is good. I dare say that you have met with persons who take an interest in such matters — they are often elderly men, whose meagre sense is thrown into amazement by these discoveries of theirs, which they believe to be the height of wisdom.

Theaetetus: Certainly, I have.

Stranger: Then, not to exclude any one who has ever speculated at all upon the nature of being, let us put our questions to them as well as to our former friends.

Theaetetus: What questions?

Stranger: Shall we refuse to attribute being to motion and rest, or anything to anything, and assume that they do not mingle, and are incapable of participating in one another? Or shall we gather all into one class of things communicable with one another? Or are some things communicable and others not? — Which of these alternatives, Theaetetus, will they prefer?

Theaetetus: I have nothing to answer on their behalf. Suppose that you take all these hypotheses in turn, and see what are the consequences which follow from each of them.

Stranger: Very good, and first let us assume them to say that nothing is capable of participating in anything else in any respect; in that case rest and motion cannot participate in being at all.

Theaetetus: They cannot.

Stranger: But would either of them be if not participating in being?

Theaetetus: No.

Stranger: Then by this admission everything is instantly overturned, as well the doctrine of universal motion as of universal rest, and also the doctrine of those who distribute being into immutable and everlasting kinds; for all these add on a notion of being, some affirming that things 'are' truly in motion, and others that they 'are' truly at rest.

Theaetetus: Just so.

Stranger: Again, those who would at one time compound, and at another resolve all things, whether making them into one and out of one creating infinity, or dividing them into finite elements, and forming compounds out of these; whether they suppose the processes of creation to be successive or continuous, would be talking nonsense in all this if there were no admixture.

Theaetetus: True.

251e

Stranger: Most ridiculous of all will the men themselves be who want to carry out the argument and yet forbid us to call anything, because participating in some affection from another, by the name of that other.

Theaetetus: Why so?

252a

Stranger: Why, because they are compelled to use the words 'to be,' 'apart,' 'from others,' 'in itself,' and ten thousand more, which they cannot give up, but must make the connecting links of discourse; and therefore they do not require to be refuted by others, but their enemy, as the saying is, inhabits the same house with them; they are always carrying about with them an adversary, like the wonderful ventriloquist, Eurycles, who out of their own bellies audibly contradicts them.

Theaetetus: Precisely so; a very true and exact illustration.

Stranger: And now, if we suppose that all things have the power of communion with one another — what will follow?

252b

Theaetetus: Even I can solve that riddle.

Stranger: How?

Theaetetus: Why, because motion itself would be at rest, and rest again in motion, if they could be attributed to one another.

Stranger: But this is utterly impossible.

Theaetetus: Of course.

Stranger: Then only the third hypothesis remains.

Theaetetus: True.

Stranger: For, surely, either all things have communion with all; or nothing with any other thing; or some things communicate with some things and others not.

Theaetetus: Certainly.

Stranger: And two out of these three suppositions have been found to be impossible.

Theaetetus: Yes.

252d

Stranger: Every one then, who desires to answer truly, will adopt the third and remaining hypothesis of the communion of some with some.

Theaetetus: Quite true.

Stranger: This communion of some with some may be illustrated by the case of letters; for some letters do not fit each other, while others do.

Theaetetus: Of course.

Stranger: And the vowels, especially, are a sort of bond which pervades all the other letters, so that without a vowel one consonant cannot be joined to another.

Theaetetus: True.

252e

Stranger: But does every one know what letters will unite with what? Or is art required in order to do so?

Theaetetus: Art is required.

Stranger: What art?

Theaetetus: The art of grammar.

Stranger: And is not this also true of sounds high and low? — Is not he who has the art to know what sounds mingle, a musician, and he who is ignorant, not a musician?

253a

Theaetetus: Yes.

Stranger: And we shall find this to be generally true of art or the absence of art.

Theaetetus: Of course.

Stranger: And as classes are admitted by us in like manner to be some of them capable and others incapable of intermixture, must not he who would rightly show what kinds will unite and what will not, proceed by the help of science in the path of argument? And will he not ask if the connecting links are universal, and so capable of intermixture with all things; and again, in divisions, whether there are not other universal classes, which make them possible?

253b

Theaetetus: To be sure he will require science, and, if I am not mistaken, the very greatest of all sciences.

Stranger: How are we to call it? By Zeus, have we not lighted unwittingly upon our free and noble science, and in looking for the Sophist have we not entertained the philosopher unawares?

Theaetetus: What do you mean?

Stranger: Should we not say that the division according to classes, which neither makes the same other, nor makes other the same, is the business of the dialectical science?

Theaetetus: That is what we should say.

Stranger: Then, surely, he who can divide rightly is able to see clearly one form pervading a scattered multitude, and many different forms contained under one higher form; and again, one form knit together into a single whole and pervading many such wholes, and many forms, existing only in separation and isolation. This is the knowledge of classes which determines where they can have communion with one another and where not.

253d

Theaetetus: Quite true.

Stranger: And the art of dialectic would be attributed by you only to the philosopher pure and true?

Theaetetus: Who but he can be worthy?

Stranger: In this region we shall always discover the philosopher, if we look for him; like the Sophist, he is not easily discovered, but for a different reason.

Theaetetus: For what reason?

Stranger: Because the Sophist runs away into the darkness of not-being, in which he has learned by habit to feel about, and cannot be discovered because of the darkness of the place. Is not that true?

Theaetetus: It seems to be so.

Stranger: And the philosopher, always holding converse through reason with the idea of being, is also dark from excess of light; for the souls of the many have no eye which can endure the vision of the divine.

Theaetetus: Yes; that seems to be quite as true as the other.

Stranger: Well, the philosopher may hereafter be more fully considered by us, if we are disposed; but the Sophist must clearly not be allowed to escape until we have had a good look at him.

253e

Theaetetus: Very good.

254a

Stranger: Since, then, we are agreed that some classes have a communion with one another, and others not, and some have communion with a few and others with many, and that there is no reason why some should not have universal communion with all, let us now pursue the enquiry, as the argument suggests, not in relation to all ideas, lest the multitude of them should confuse us, but let us select a few of those which are reckoned to be the principal ones, and consider their several natures and their capacity of communion with one another, in order that if we are not able to apprehend with perfect clearness the notions of being and not-being, we may at least not fall short in the consideration of them, so far as they come within the scope of the present enquiry, if peradventure we may be allowed to assert the reality of not-being, and yet escape unscathed.

Theaetetus: We must do so.

Stranger: The most important of all the genera are those which we were just now mentioning — being and rest and motion.

254b

Theaetetus: Yes, by far.

Stranger: And two of these are, as we affirm, incapable of communion with one another.

Theaetetus: Quite incapable.

254c

Stranger: Whereas being surely has communion with both of them, for both of them are?

Theaetetus: Of course.

Stranger: That makes up three of them.

Theaetetus: To be sure.

Stranger: And each of them is other than the remaining two, but the same with itself.

Theaetetus: True.

Stranger: But then, what is the meaning of these two words, 'same' and 'other'? Are they two new kinds other than the three, and yet always of necessity intermingling with them, and are we to have five kinds instead of three; or when we speak of the same and other, are we unconsciously speaking of one of the three first kinds?

Theaetetus: Very likely we are.

Stranger: But, surely, motion and rest are neither the other nor the same.

Theaetetus: How is that?

Stranger: Whatever we attribute to motion and rest in common, cannot be either of them.

Theaetetus: Why not?

254d

Stranger: Because motion would be at rest and rest in motion, for either of them, being predicated of both, will compel the other to change into the opposite of its own nature, because

partaking of its opposite.

Theaetetus: Quite true.

Stranger: Yet they surely both partake of the same and of the other?

Theaetetus: Yes.

Stranger: Then we must not assert that motion, any more than rest, is either the same or the other.

Theaetetus: No; we must not.

255a

Stranger: But are we to conceive that being and the same are identical?

Theaetetus: Possibly.

Stranger: But if they are identical, then again in saying that motion and rest have being, we should also be saying that they are the same.

Theaetetus: Which surely cannot be.

Stranger: Then being and the same cannot be one.

Theaetetus: Scarcely.

Stranger: Then we may suppose the same to be a fourth class, which is now to be added to the three others.

Theaetetus: Quite true.

Stranger: And shall we call the other a fifth class? Or should we consider being and other to be two names of the same class?

255b

Theaetetus: Very likely.

Stranger: But you would agree, if I am not mistaken, that existences are relative as well as absolute?

Theaetetus: Certainly.

Stranger: And the other is always relative to other?

Theaetetus: True.

Stranger: But this would not be the case unless being and the other entirely differed; for, if the other, like being, were absolute as well as relative, then there would have been a kind of other which was not other than other. And now we find that what is other must of necessity be what it is in relation to some other.

255c

Theaetetus: That is the true state of the case.

Stranger: Then we must admit the other as the fifth of our selected classes.

Theaetetus: Yes.

Stranger: And the fifth class pervades all classes, for they all differ from one another, not by reason of their own nature, but because they partake of the idea of the other.

Theaetetus: Quite true.

Stranger: Then let us now put the case with reference to each of the five.

Theaetetus: How?

Stranger: First there is motion, which we affirm to be absolutely 'other' than rest: what else can we say?

Theaetetus: It is so.

Stranger: And therefore is not rest.

Theaetetus: Certainly not.

255d

Stranger: And yet is, because partaking of being.

Theaetetus: True.

Stranger: Again, motion is other than the same?

Theaetetus: Just so.

Stranger: And is therefore not the same.

Theaetetus: It is not.

Stranger: Yet, surely, motion is the same, because all things partake of the same.

Theaetetus: Very true.

255e

Stranger: Then we must admit, and not object to say, that motion is the same and is not the same, for we do not apply the terms 'same' and 'not the same,' in the same sense; but we call it the 'same,' in relation to itself, because partaking of the same; and not the same, because having communion with the other, it is thereby severed from the same, and has become not that but other, and is therefore rightly spoken of as 'not the same.'

Theaetetus: To be sure.

Stranger: And if absolute motion in any point of view partook of rest, there would be no absurdity in calling motion stationary.

Theaetetus: Quite right, — that is, on the supposition that some classes mingle with one another, and others not.

256a

Stranger: That such a communion of kinds is according to nature, we had already proved before we arrived at this part of our discussion.

Theaetetus: Certainly.

Stranger: Let us proceed, then. May we not say that motion is other than the other, having been also proved by us to be other than the same and other than rest?

Theaetetus: That is certain.

Stranger: Then, according to this view, motion is other and also not other?

Theaetetus: True.

Stranger: What is the next step? Shall we say that motion is other than the three and not other than the fourth, — for we agreed that there are five classes about and in the sphere of which we proposed to make enquiry?

Theaetetus: Surely we cannot admit that the number is less than it appeared to be just now.

Stranger: Then we may without fear contend that motion is other than being?

Theaetetus: Without the least fear.

Stranger: The plain result is that motion, since it partakes of being, really is and also is not?

Theaetetus: Nothing can be plainer.

Stranger: Then not-being necessarily exists in the case of motion and of every class; for the nature of the other entering into them all, makes each of them other than being, and so non-existent; and therefore of all of them, in like manner, we may truly say that they are not; and again, inasmuch as they partake of being, that they are and are existent.

Theaetetus: So we may assume.

Stranger: Every class, then, has plurality of being and infinity of not-being.

Theaetetus: So we must infer.

Stranger: And being itself may be said to be other than the other kinds.

Theaetetus: Certainly.

Stranger: Then we may infer that being is not, in respect of as many other things as there are; for not-being these it is itself one, and is not the other things, which are infinite in number.

256d

Theaetetus: That is not far from the truth.

Stranger: And we must not quarrel with this result, since it is of the nature of classes to have communion with one another; and if any one denies our present statement [viz., that being is not, etc.], let him first argue with our former conclusion [i.e., respecting the communion of ideas], and then he may proceed to argue with what follows.

256e

Theaetetus: Nothing can be fairer.

Stranger: Let me ask you to consider a further question.

Theaetetus: What question?

Stranger: When we speak of not-being, we speak, I suppose, not of something opposed to being, but only different.

Theaetetus: What do you mean?

Stranger: When we speak of something as not great, does the expression seem to you to imply what is little any more than what is equal?

257a

Theaetetus: Certainly not.

Stranger: The negative particles, *ou* and *me*, when prefixed to words, do not imply opposition, but only difference from the words, or more correctly from the things represented by the words, which follow them.

Theaetetus: Quite true.

Stranger: There is another point to be considered, if you do not object.

Theaetetus: What is it?

Stranger: The nature of the other appears to me to be divided into fractions like knowledge.

Theaetetus: How so?

Stranger: Knowledge, like the other, is one; and yet the various parts of knowledge have each of them their own particular name, and hence there are many arts and kinds of knowledge.

Theaetetus: Quite true.

Stranger: And is not the case the same with the parts of the other, which is also one?

Theaetetus: Very likely; but will you tell me how?

Stranger: There is some part of the other which is opposed to the beautiful?

Theaetetus: There is.

Stranger: Shall we say that this has or has not a name?

257c

Theaetetus: It has; for whatever we call not-beautiful is other than the beautiful, not than something else.

Stranger: And now tell me another thing.

Theaetetus: What?

Stranger: Is the not-beautiful anything but this — an existence parted off from a certain kind of existence, and again from another point of view opposed to an existing something?

Theaetetus: True.

Stranger: Then the not-beautiful turns out to be the opposition of being to being?

Theaetetus: Very true.

Stranger: But upon this view, is the beautiful a more real and the not-beautiful a less real existence?

Theaetetus: Not at all.

Stranger: And the not-great may be said to exist, equally with the great?

Theaetetus: Yes.

257d

Stranger: And, in the same way, the just must be placed in the same category with the not-just — the one cannot be said to have any more existence than the other.

Theaetetus: True.

Stranger: The same may be said of other things; seeing that the nature of the other has a real existence, the parts of this nature must equally be supposed to exist.

Theaetetus: Of course.

257e

Stranger: Then, as would appear, the opposition of a part of the other, and of a part of being, to one another, is, if I may venture to say so, as truly essence as being itself, and implies not the opposite of being, but only what is other than being.

Theaetetus: Beyond question.

Stranger: What then shall we call it?

Theaetetus: Clearly, not-being; and this is the very nature for which the Sophist compelled us to search.

Stranger: And has not this, as you were saying, as real an existence as any other class? May I not say with confidence that not-being has an assured existence, and a nature of its own? Just as the great was found to be great and the beautiful beautiful,

and the not-great not-great, and the not-beautiful not-beautiful, in the same manner not-being has been found to be and is not-being, and is to be reckoned one among the many classes of being. Do you, Theaetetus, still feel any doubt of this?

Theaetetus: None whatever.

Stranger: Do you observe that our scepticism has carried us beyond the range of Parmenides' prohibition?

Theaetetus: In what?

258b

Stranger: We have advanced to a further point, and shown him more than he forbade us to investigate.

Theaetetus: How is that?

Stranger: Why, because he says — 'Not-being never is, and do thou keep thy thoughts from this way of enquiry.'

Theaetetus: Yes, he says so.

Stranger: Whereas, we have not only proved that things which are not are, but we have shown what form of being not-being is; for we have shown that the nature of the other is, and is distributed over all things in their relations to one another, and whatever part of the other is contrasted with being, this is precisely what we have ventured to call not-being.

258c

Theaetetus: And surely, Stranger, we were quite right.

Stranger: Let not any one say, then, that while affirming the opposition of not-being to being, we still assert the being of not-being; for as to whether there is an opposite of being, to that enquiry we have long said good-bye — it may or may not be, and may or may not be capable of definition. But as touching our present account of not-being, let a man either convince us of error, or, so long as he cannot, he too must say, as we are

saying, that there is a communion of classes, and that being, and difference or other, traverse all things and mutually interpenetrate, so that the other partakes of being, and by reason of this participation is, and yet is not that of which it partakes, but other, and being other than being, it is clearly a necessity that not-being should be. And again, being, through partaking of the other, becomes a class other than the remaining classes, and being other than all of them, is not each one of them, and is not all the rest, so that undoubtedly there are thousands upon thousands of cases in which being is not, and all other things, whether regarded individually or collectively, in many respects are, and in many respects are not.

Theaetetus: True.

Stranger: And he who is sceptical of this contradiction, must think how he can find something better to say; or if he sees a puzzle, and his pleasure is to drag words this way and that, the argument will prove to him, that he is not making a worthy use of his faculties; for there is no charm in such puzzles, and there is no difficulty in detecting them; but we can tell him of something else the pursuit of which is noble and also difficult.

Theaetetus: What is it?

Stranger: A thing of which I have already spoken; — letting alone these puzzles as involving no difficulty, he should be able to follow and criticize in detail every argument, and when a man says that the same is in a manner other, or that other is the same, to understand and refute him from his own point of view, and in the same respect in which he asserts either of these affections. But to show that somehow and in some sense the same is other, or the other same, or the great small, or the like unlike; and to delight in always bringing forward such contradictions, is no real refutation, but is clearly the new-born babe of some one who is only beginning to approach the

problem of being.

Theaetetus: To be sure.

Stranger: For certainly, my friend, the attempt to separate all existences from one another is a barbarism and utterly unworthy of an educated or philosophical mind.

Theaetetus: Why so?

Stranger: The attempt at universal separation is the final annihilation of all reasoning; for only by the union of conceptions with one another do we attain to discourse of reason.

Theaetetus: True.

Stranger: And, observe that we were only just in time in making a resistance to such separatists, and compelling them to admit that one thing mingles with another.

259d

Theaetetus: Why so?

Stranger: Why, that we might be able to assert discourse to be a kind of being; for if we could not, the worst of all consequences would follow; we should have no philosophy. Moreover, the necessity for determining the nature of discourse presses upon us at this moment; if utterly deprived of it, we could no more hold discourse; and deprived of it we should be if we admitted that there was no admixture of natures at all.

Theaetetus: Very true. But I do not understand why at this moment we must determine the nature of discourse.

Stranger: Perhaps you will see more clearly by the help of the following explanation.

Theaetetus: What explanation?

Stranger: Not-being has been acknowledged by us to be one among many classes diffused over all being.

Theaetetus: True.

Stranger: And thence arises the question, whether not-being mingles with opinion and language.

Theaetetus: How so?

Stranger: If not-being has no part in the proposition, then all things must be true; but if not-being has a part, then false opinion and false speech are possible, for to think or to say what is not — is falsehood, which thus arises in the region of thought and in speech.

Theaetetus: That is quite true.

Stranger: And where there is falsehood surely there must be deceit.

Theaetetus: Yes.

Stranger: And if there is deceit, then all things must be full of idols and images and fancies.

Theaetetus: To be sure.

Stranger: Into that region the Sophist, as we said, made his escape, and, when he had got there, denied the very possibility of falsehood; no one, he argued, either conceived or uttered falsehood, inasmuch as not-being did not in any way partake of being.

Theaetetus: True.

Stranger: And now, not-being has been shown to partake of being, and therefore he will not continue fighting in this direction, but he will probably say that some ideas partake of not-being, and some not, and that language and opinion are of the non-partaking class; and he will still fight to the death

against the existence of the image-making and phantastic art, in which we have placed him, because, as he will say, opinion and language do not partake of not-being, and unless this participation exists, there can be no such thing as falsehood. And, with the view of meeting this evasion, we must begin by enquiring into the nature of language, opinion, and imagination, in order that when we find them we may find also that they have communion with not-being, and, having made out the connexion of them, may thus prove that falsehood exists; and therein we will imprison the Sophist, if he deserves it, or, if not, we will let him go again and look for him in another class.

Theaetetus: Certainly, Stranger, there appears to be truth in what was said about the Sophist at first, that he was of a class not easily caught, for he seems to have abundance of defences, which he throws up, and which must every one of them be stormed before we can reach the man himself. And even now, we have with difficulty got through his first defence, which is the not-being of not-being, and lo! here is another; for we have still to show that falsehood exists in the sphere of language and opinion, and there will be another and another line of defence without end.

261a

Stranger: Any one, Theaetetus, who is able to advance even a little ought to be of good cheer, for what would he who is dispirited at a little progress do, if he were making none at all, or even undergoing a repulse? Such a faint heart, as the proverb says, will never take a city: but now that we have succeeded thus far, the citadel is ours, and what remains is easier.

Theaetetus: Very true.

Stranger: Then, as I was saying, let us first of all obtain a conception of language and opinion, in order that we may have clearer grounds for determining, whether not-being has any

concern with them, or whether they are both always true, and neither of them ever false.

Theaetetus: True.

Stranger: Then, now, let us speak of names, as before we were speaking of ideas and letters; for that is the direction in which the answer may be expected.

Theaetetus: And what is the question at issue about names?

Stranger: The question at issue is whether all names may be connected with one another, or none, or only some of them.

Theaetetus: Clearly the last is true.

Stranger: I understand you to say that words which have a meaning when in sequence may be connected, but that words which have no meaning when in sequence cannot be connected?

261c

Theaetetus: What are you saying?

Stranger: What I thought that you intended when you gave your assent; for there are two sorts of intimation of being which are given by the voice.

Theaetetus: What are they?

Stranger: One of them is called nouns, and the other verbs.

Theaetetus: Describe them.

Stranger: That which denotes action we call a verb.

Theaetetus: True.

Stranger: And the other, which is an articulate mark set on those who do the actions, we call a noun.

Theaetetus: Quite true.

Stranger: A succession of nouns only is not a sentence, any more than of verbs without nouns.

Theaetetus: I do not understand you.

Stranger: I see that when you gave your assent you had something else in your mind. But what I intended to say was, that a mere succession of nouns or of verbs is not discourse.

261e

Theaetetus: What do you mean?

Stranger: I mean that words like ‘walks,’ ‘runs,’ ‘sleeps,’ or any other words which denote action, however many of them you string together, do not make discourse.

Theaetetus: How can they?

Stranger: Or, again, when you say ‘lion,’ ‘stag,’ ‘horse,’ or any other words which denote agents — neither in this way of stringing words together do you attain to discourse; for there is no expression of action or inaction, or of the existence of existence or non-existence indicated by the sounds, until verbs are mingled with nouns; then the words fit, and the smallest combination of them forms language, and is the simplest and least form of discourse.

Theaetetus: Again I ask, What do you mean?

Stranger: When any one says ‘A man learns,’ should you not call this the simplest and least of sentences?

Theaetetus: Yes.

Stranger: Yes, for he now arrives at the point of giving an intimation about something which is, or is becoming, or has become, or will be. And he not only names, but he does something, by connecting verbs with nouns; and therefore we say that he discourses, and to this connexion of words we give the name of discourse.

Theaetetus: True.

Stranger: And as there are some things which fit one another, and other things which do not fit, so there are some vocal signs which do, and others which do not, combine and form discourse.

Theaetetus: Quite true.

Stranger: There is another small matter.

Theaetetus: What is it?

Stranger: A sentence must and cannot help having a subject.

Theaetetus: True.

Stranger: And must be of a certain quality.

Theaetetus: Certainly.

262d

Stranger: And now let us mind what we are about.

Theaetetus: We must do so.

Stranger: I will repeat a sentence to you in which a thing and an action are combined, by the help of a noun and a verb; and you shall tell me of whom the sentence speaks.

Theaetetus: I will, to the best of my power.

Stranger: ‘Theaetetus sits’ — not a very long sentence.

Theaetetus: Not very.

Stranger: Of whom does the sentence speak, and who is the subject? that is what you have to tell.

Theaetetus: Of me; I am the subject.

Stranger: Or this sentence, again —

262e

Theaetetus: What sentence?

Stranger: 'Theaetetus, with whom I am now speaking, is flying.'

Theaetetus: That also is a sentence which will be admitted by every one to speak of me, and to apply to me.

Stranger: We agreed that every sentence must necessarily have a certain quality.

Theaetetus: Yes.

Stranger: And what is the quality of each of these two sentences?

Theaetetus: The one, as I imagine, is false, and the other true.

263a

Stranger: The true says what is true about you?

Theaetetus: Yes.

Stranger: And the false says what is other than true?

Theaetetus: Yes.

Stranger: And therefore speaks of things which are not as if they were?

Theaetetus: True.

Stranger: And say that things are real of you which are not; for, as we were saying, in regard to each thing or person, there is much that is and much that is not.

Theaetetus: Quite true.

Stranger: The second of the two sentences which related to you was first of all an example of the shortest form consistent with our definition.

Theaetetus: Yes, this was implied in recent admission.

Stranger: And, in the second place, it related to a subject?

Theaetetus: Yes.

Stranger: Who must be you, and can be nobody else?

Theaetetus: Unquestionably.

263c

Stranger: And it would be no sentence at all if there were no subject, for, as we proved, a sentence which has no subject is impossible.

Theaetetus: Quite true.

Stranger: When other, then, is asserted of you as the same, and not-being as being, such a combination of nouns and verbs is really and truly false discourse.

Theaetetus: Most true.

Stranger: And therefore thought, opinion, and imagination are now proved to exist in our minds both as true and false.

Theaetetus: How so?

263d

Stranger: You will know better if you first gain a knowledge of what they are, and in what they severally differ from one another.

Theaetetus: Give me the knowledge which you would wish me to gain.

Stranger: Are not thought and speech the same, with this exception, that what is called thought is the unuttered conversation of the soul with herself?

Theaetetus: Quite true.

Stranger: But the stream of thought which flows through the lips and is audible is called speech?

263e

Theaetetus: True.

Stranger: And we know that there exists in speech...

Theaetetus: What exists?

Stranger: Affirmation.

Theaetetus: Yes, we know it.

Stranger: When the affirmation or denial takes Place in silence and in the mind only, have you any other name by which to call it but opinion?

Theaetetus: There can be no other name.

264a

Stranger: And when opinion is presented, not simply, but in some form of sense, would you not call it imagination?

Theaetetus: Certainly.

Stranger: And seeing that language is true and false, and that thought is the conversation of the soul with herself, and opinion is the end of thinking, and imagination or phantasy is the union of sense and opinion, the inference is that some of them, since they are akin to language, should have an element of falsehood as well as of truth?

Theaetetus: Certainly.

264b

Stranger: Do you perceive, then, that false opinion and speech have been discovered sooner than we expected? — For just now we seemed to be undertaking a task which would never be accomplished.

Theaetetus: I perceive.

Stranger: Then let us not be discouraged about the future; but now having made this discovery, let us go back to our previous classification.

264c

Theaetetus: What classification?

Stranger: We divided image-making into two sorts; the one likeness-making, the other imaginative or phantastic.

Theaetetus: True.

Stranger: And we said that we were uncertain in which we should place the Sophist.

Theaetetus: We did say so.

Stranger: And our heads began to go round more and more when it was asserted that there is no such thing as an image or idol or appearance, because in no manner or time or place can there ever be such a thing as falsehood.

264d

Theaetetus: True.

Stranger: And now, since there has been shown to be false speech and false opinion, there may be imitations of real existences, and out of this condition of the mind an art of deception may arise.

Theaetetus: Quite possible.

Stranger: And we have already admitted, in what preceded, that the Sophist was lurking in one of the divisions of the likeness-making art?

Theaetetus: Yes.

Stranger: Let us, then, renew the attempt, and in dividing any class, always take the part to the right, holding fast to that which holds the Sophist, until we have stripped him of all his common properties, and reached his difference or peculiar. Then we may exhibit him in his true nature, first to ourselves and then to kindred dialectical spirits.

Theaetetus: Very good.

Stranger: You may remember that all art was originally divided by us into creative and acquisitive.

Theaetetus: Yes.

Stranger: And the Sophist was flitting before us in the acquisitive class, in the subdivisions of hunting, contests, merchandize, and the like.

Theaetetus: Very true.

Stranger: But now that the imitative art has enclosed him, it is clear that we must begin by dividing the art of creation; for imitation is a kind of creation — of images, however, as we affirm, and not of real things.

Theaetetus: Quite true.

Stranger: In the first place, there are two kinds of creation.

265b

Theaetetus: What are they?

Stranger: One of them is human and the other divine.

Theaetetus: I do not follow.

Stranger: Every power, as you may remember our saying originally, which causes things to exist, not previously existing, was defined by us as creative.

Theaetetus: I remember.

Stranger: Looking, now, at the world and all the animals and plants, at things which grow upon the earth from seeds and roots, as well as at inanimate substances which are formed within the earth, fusile or non-fusile, shall we say that they come into existence — not having existed previously — by the creation of God, or shall we agree with vulgar opinion about them?

265c

Theaetetus: What is it?

Stranger: The opinion that nature brings them into being from some spontaneous and unintelligent cause. Or shall we say that they are created by a divine reason and a knowledge which comes from God?

Theaetetus: I dare say that, owing to my youth, I may often waver in my view, but now when I look at you and see that you incline to refer them to God, I defer to your authority.

265d

Stranger: Nobly said, Theaetetus, and if I thought that you were one of those who would hereafter change your mind, I would have gently argued with you, and forced you to assent; but as I perceive that you will come of yourself and without any argument of mine, to that belief which, as you say, attracts you, I will not forestall the work of time. Let me suppose, then, that things which are said to be made by nature are the work of divine art, and that things which are made by man out of these are works of human art. And so there are two kinds of making and production, the one human and the other divine.

Theaetetus: True.

Stranger: Then, now, subdivide each of the two sections which we have already.

Theaetetus: How do you mean?

Stranger: I mean to say that you should make a vertical division of production or invention, as you have already made a lateral one.

Theaetetus: I have done so.

Stranger: Then, now, there are in all four parts or segments — two of them have reference to us and are human, and two of them have reference to the gods and are divine.

Theaetetus: True.

Stranger: And, again, in the division which was supposed to be made in the other way, one part in each subdivision is the making of the things themselves, but the two remaining parts may be called the making of likenesses; and so the productive art is again divided into two parts.

266a

Theaetetus: Tell me the divisions once more.

Stranger: I suppose that we, and the other animals, and the elements out of which things are made — fire, water, and the like — are known by us to be each and all the creation and work of God.

Theaetetus: True.

Stranger: And there are images of them, which are not them, but which correspond to them; and these are also the creation of a wonderful skill.

266b

Theaetetus: What are they?

Stranger: The appearances which spring up of themselves in sleep or by day, such as a shadow when darkness arises in a fire, or the reflection which is produced when the light in bright and smooth objects meets on their surface with an external light, and creates a perception the opposite of our ordinary sight.

Theaetetus: Yes; and the images as well as the creation are equally the work of a divine hand.

Stranger: And what shall we say of human art? Do we not make one house by the art of building, and another by the art of drawing, which is a sort of dream created by man for those who are awake?

Theaetetus: Quite true.

266c

Stranger: And other products of human creation are also twofold and go in pairs; there is the thing, with which the art of making the thing is concerned, and the image, with which imitation is concerned.

Theaetetus: Now I begin to understand, and am ready to acknowledge that there are two kinds of production, and each of them twofold; in the lateral division there is both a divine and a human production; in the vertical there are realities and a creation of a kind of similitudes.

Stranger: And let us not forget that of the imitative class the one part was to have been likeness-making, and the other phantastic, if it could be shown that falsehood is a reality and belongs to the class of real being.

266d

Theaetetus: Yes.

Stranger: And this appeared to be the case; and therefore now, without hesitation, we shall number the different kinds as two.

Theaetetus: True.

Stranger: Then, now, let us again divide the phantastic art.

Theaetetus: Where shall we make the division?

Stranger: There is one kind which is produced by an instrument, and another in which the creator of the appearance is himself the instrument.

Theaetetus: What do you mean?

266e

Stranger: When any one makes himself appear like another in his figure or his voice, imitation is the name for this part of the phantastic art.

Theaetetus: Yes.

Stranger: Let this, then, be named the art of mimicry, and this the province assigned to it; as for the other division, we are weary and will give that up, leaving to some one else the duty of making the class and giving it a suitable name.

Theaetetus: Let us do as you say — assign a sphere to the one and leave the other.

267a

Stranger: There is a further distinction, Theaetetus, which is worthy of our consideration, and for a reason which I will tell you.

Theaetetus: Let me hear.

Stranger: There are some who imitate, knowing what they imitate, and some who do not know. And what line of distinction can there possibly be greater than that which divides ignorance from knowledge?

Theaetetus: There can be no greater.

Stranger: Was not the sort of imitation of which we spoke just now the imitation of those who know? For he who would imitate you would surely know you and your figure?

267b

Theaetetus: Naturally.

Stranger: And what would you say of the figure or form of justice or of virtue in general? Are we not well aware that many, having no knowledge of either, but only a sort of opinion, do their best to show that this opinion is really entertained by them, by expressing it, as far as they can, in word and deed?

Theaetetus: Yes, that is very common.

Stranger: And do they always fail in their attempt to be thought just, when they are not? Or is not the very opposite true?

Theaetetus: The very opposite.

267c

Stranger: Such a one, then, should be described as an imitator — to be distinguished from the other, as he who is ignorant is distinguished from him who knows?

Theaetetus: True.

Stranger: Can we find a suitable name for each of them? This is clearly not an easy task; for among the ancients there was some confusion of ideas, which prevented them from attempting to divide genera into species; wherefore there is no great abundance of names. Yet, for the sake of distinctness, I will make bold to call the imitation which coexists with opinion, the imitation of appearance — that which coexists with science, a scientific or learned imitation.

Theaetetus: Granted.

Stranger: The former is our present concern, for the Sophist was classed with imitators indeed, but not among those who have knowledge.

Theaetetus: Very true.

267d

Stranger: Let us, then, examine our imitator of appearance, and see whether he is sound, like a piece of iron, or whether there is still some crack in him.

Theaetetus: Let us examine him.

Stranger: Indeed there is a very considerable crack; for if you look, you find that one of the two classes of imitators is a simple creature, who thinks that he knows that which he only fancies; the other sort has knocked about among arguments, until he suspects and fears that he is ignorant of that which to the many he pretends to know.

Theaetetus: There are certainly the two kinds which you describe.

Stranger: Shall we regard one as the simple imitator — the other as the dissembling or ironical imitator?

267e

Theaetetus: Very good.

Stranger: And shall we further speak of this latter class as having one or two divisions?

Theaetetus: Answer yourself.

Stranger: Upon consideration, then, there appear to me to be two; there is the dissembler, who harangues a multitude in public in a long speech, and the dissembler, who in private and in short speeches compels the person who is conversing with him to contradict himself.

Theaetetus: What you say is most true.

Stranger: And who is the maker of the longer speeches? Is he the statesman or the popular orator?

268a

Theaetetus: The latter.

Stranger: And what shall we call the other? Is he the philosopher or the Sophist?

Theaetetus: The philosopher he cannot be, for upon our view he is ignorant; but since he is an imitator of the wise he will have a name which is formed by an adaptation of the word sophos. What shall we name him? I am pretty sure that I cannot be mistaken in terming him the true and very Sophist.

Stranger: Shall we bind up his name as we did before, making a chain from one end of his genealogy to the other?

268b

Theaetetus: By all means.

Stranger: He, then, who traces the pedigree of his art as follows — who, belonging to the conscious or dissembling section of the art of causing self-contradiction, is an imitator of appearance, and is separated from the class of phantastic which is a branch of image-making into that further division of creation, the juggling of words, a creation human, and not divine — any one who affirms the real Sophist to be of this blood and lineage will say the very truth.

268d

Theaetetus: Undoubtedly.

Statesman

persons in the dialogue:

SOCRATES of Alopecce, son of Sophroniscus

THEODORUS of Cyrene, geometer

STRANGER from Elis in Italy

YOUNG SOCRATES of Athens

scene: in the Athenian gymnasium where the Theaetetus was set

257a

Socrates: I owe you many thanks, indeed, Theodorus, for the acquaintance both of Theaetetus and of the Stranger.

Theodorus: And in a little while, Socrates, you will owe me three times as many, when they have completed for you the delineation of the Statesman and of the Philosopher, as well as of the Sophist.

Socrates: Sophist, statesman, philosopher! O my dear Theodorus, do my ears truly witness that this is the estimate formed of them by the great calculator and geometrician?

Theodorus: What do you mean, Socrates?

Socrates: I mean that you rate them all at the same value, whereas they are really separated by an interval, which no geometrical ratio can express.

Theodorus: By Ammon, the god of Cyrene, Socrates, that is a very fair hit; and shows that you have not forgotten your geometry. I will retaliate on you at some other time, but I must now ask the Stranger, who will not, I hope, tire of his goodness to us, to proceed either with the Statesman or with the Philosopher, whichever he prefers.

257c

Stranger: That is my duty, Theodorus; having begun I must go on, and not leave the work unfinished. But what shall be done with Theaetetus?

Theodorus: In what respect?

Stranger: Shall we relieve him, and take his companion, the Young Socrates, instead of him? What do you advise?

257d

Theodorus: Yes, give the other a turn, as you propose. The young always do better when they have intervals of rest.

Socrates: I think, Stranger, that both of them may be said to be in some way related to me; for the one, as you affirm, has the cut of my ugly face (compare Theaet.), the other is called by my name. And we should always be on the look-out to recognize a kinsman by the style of his conversation. I myself was discoursing with Theaetetus yesterday, and I have just been listening to his answers; my namesake I have not yet examined, but I must. Another time will do for me; to-day let him answer you.

258a

Stranger: Very good. Young Socrates, do you hear what the elder Socrates is proposing?

Young Socrates: I do.

Stranger: And do you agree to his proposal?

Young Socrates: Certainly.

Stranger: As you do not object, still less can I. After the Sophist, then, I think that the Statesman naturally follows next in the order of enquiry. And please to say, whether he, too, should be ranked among those who have science.

258b

Young Socrates: Yes.

Stranger: Then the sciences must be divided as before?

Young Socrates: I dare say.

Stranger: But yet the division will not be the same?

Young Socrates: How then?

Stranger: They will be divided at some other point.

Young Socrates: Yes.

Stranger: Where shall we discover the path of the Statesman? We must find and separate off, and set our seal upon this, and we will set the mark of another class upon all diverging paths. Thus the soul will conceive of all kinds of knowledge under two classes.

Young Socrates: To find the path is your business, Stranger, and not mine.

Stranger: Yes, Socrates, but the discovery, when once made, must be yours as well as mine.

258c

Young Socrates: Very good.

Stranger: Well, and are not arithmetic and certain other kindred arts, merely abstract knowledge, wholly separated from action?

Young Socrates: True.

Stranger: But in the art of carpentering and all other handicrafts, the knowledge of the workman is merged in his work; he not only knows, but he also makes things which previously did not exist.

Young Socrates: Certainly.

Stranger: Then let us divide sciences in general into those which are practical and those which are purely intellectual.

Young Socrates: Let us assume these two divisions of science, which is one whole.

Stranger: And are 'statesman,' 'king,' 'master,' or 'householder,' one and the same; or is there a science or art answering to each

of these names? Or rather, allow me to put the matter in another way.

Young Socrates: Let me hear.

Stranger: If any one who is in a private station has the skill to advise one of the public physicians, must not he also be called a physician?

Young Socrates: Yes.

259a

Stranger: And if any one who is in a private station is able to advise the ruler of a country, may not he be said to have the knowledge which the ruler himself ought to have?

Young Socrates: True.

Stranger: But surely the science of a true king is royal science?

259b

Young Socrates: Yes.

Stranger: And will not he who possesses this knowledge, whether he happens to be a ruler or a private man, when regarded only in reference to his art, be truly called ‘royal’?

Young Socrates: He certainly ought to be.

Stranger: And the householder and master are the same?

Young Socrates: Of course.

Stranger: Again, a large household may be compared to a small state: — will they differ at all, as far as government is concerned?

Young Socrates: They will not.

259c

Stranger: Then, returning to the point which we were just now discussing, do we not clearly see that there is one science of all of them; and this science may be called either royal or political

or economical; we will not quarrel with any one about the name.

Young Socrates: Certainly not.

Stranger: This too, is evident, that the king cannot do much with his hands, or with his whole body, towards the maintenance of his empire, compared with what he does by the intelligence and strength of his mind.

Young Socrates: Clearly not.

259d

Stranger: Then, shall we say that the king has a greater affinity to knowledge than to manual arts and to practical life in general?

Young Socrates: Certainly he has.

Stranger: Then we may put all together as one and the same — statesmanship and the statesman — the kingly science and the king.

Young Socrates: Clearly.

Stranger: And now we shall only be proceeding in due order if we go on to divide the sphere of knowledge?

Young Socrates: Very good.

Stranger: Think whether you can find any joint or parting in knowledge.

259e

Young Socrates: Tell me of what sort.

Stranger: Such as this: You may remember that we made an art of calculation?

Young Socrates: Yes.

Stranger: Which was, unmistakeably, one of the arts of knowledge?

Young Socrates: Certainly.

Stranger: And to this art of calculation which discerns the differences of numbers shall we assign any other function except to pass judgment on their differences?

Young Socrates: How could we?

260a

Stranger: You know that the master-builder does not work himself, but is the ruler of workmen?

Young Socrates: Yes.

Stranger: He contributes knowledge, not manual labour?

Young Socrates: True.

Stranger: And may therefore be justly said to share in theoretical science?

Young Socrates: Quite true.

260b

Stranger: But he ought not, like the calculator, to regard his functions as at an end when he has formed a judgment; — he must assign to the individual workmen their appropriate task until they have completed the work.

Young Socrates: True.

Stranger: Are not all such sciences, no less than arithmetic and the like, subjects of pure knowledge; and is not the difference between the two classes, that the one sort has the power of judging only, and the other of ruling as well?

Young Socrates: That is evident.

Stranger: May we not very properly say, that of all knowledge, there are two divisions — one which rules, and the other which judges?

Young Socrates: I should think so.

260c

Stranger: And when men have anything to do in common, that they should be of one mind is surely a desirable thing?

Young Socrates: Very true.

Stranger: Then while we are at unity among ourselves, we need not mind about the fancies of others?

Young Socrates: Certainly not.

Stranger: And now, in which of these divisions shall we place the king? — Is he a judge and a kind of spectator? Or shall we assign to him the art of command — for he is a ruler?

Young Socrates: The latter, clearly.

260d

Stranger: Then we must see whether there is any mark of division in the art of command too. I am inclined to think that there is a distinction similar to that of manufacturer and retail dealer, which parts off the king from the herald.

Young Socrates: How is this?

Stranger: Why, does not the retailer receive and sell over again the productions of others, which have been sold before?

Young Socrates: Certainly he does.

Stranger: And is not the herald under command, and does he not receive orders, and in his turn give them to others?

Young Socrates: Very true.

Stranger: Then shall we mingle the kingly art in the same class with the art of the herald, the interpreter, the boatswain, the prophet, and the numerous kindred arts which exercise command; or, as in the preceding comparison we spoke of manufacturers, or sellers for themselves, and of retailers, — seeing, too, that the class of supreme rulers, or rulers for themselves, is almost nameless — shall we make a word

following the same analogy, and refer kings to a supreme or ruling-for-self science, leaving the rest to receive a name from some one else? For we are seeking the ruler; and our enquiry is not concerned with him who is not a ruler.

Young Socrates: Very good.

Stranger: Thus a very fair distinction has been attained between the man who gives his own commands, and him who gives another's. And now let us see if the supreme power allows of any further division.

Young Socrates: By all means.

Stranger: I think that it does; and please to assist me in making the division.

261b

Young Socrates: At what point?

Stranger: May not all rulers be supposed to command for the sake of producing something?

Young Socrates: Certainly.

Stranger: Nor is there any difficulty in dividing the things produced into two classes.

261c

Young Socrates: How would you divide them?

Stranger: Of the whole class, some have life and some are without life.

Young Socrates: True.

Stranger: And by the help of this distinction we may make, if we please, a subdivision of the section of knowledge which commands.

Young Socrates: At what point?

Stranger: One part may be set over the production of lifeless, the other of living objects; and in this way the whole will be divided.

Young Socrates: Certainly.

Stranger: That division, then, is complete; and now we may leave one half, and take up the other; which may also be divided into two.

Young Socrates: Which of the two halves do you mean?

Stranger: Of course that which exercises command about animals. For, surely, the royal science is not like that of a master-workman, a science presiding over lifeless objects; — the king has a nobler function, which is the management and control of living beings.

Young Socrates: True.

Stranger: And the breeding and tending of living beings may be observed to be sometimes a tending of the individual; in other cases, a common care of creatures in flocks?

261e

Young Socrates: True.

Stranger: But the statesman is not a tender of individuals — not like the driver or groom of a single ox or horse; he is rather to be compared with the keeper of a drove of horses or oxen.

Young Socrates: Yes, I see, thanks to you.

Stranger: Shall we call this art of tending many animals together, the art of managing a herd, or the art of collective management?

Young Socrates: No matter; — whichever suggests itself to us in the course of conversation.

Stranger: Very good, Socrates; and, if you continue to be not too particular about names, you will be all the richer in wisdom when you are an old man. And now, as you say, leaving the discussion of the name, — can you see a way in which a person, by showing the art of herding to be of two kinds, may cause that which is now sought amongst twice the number of things, to be then sought amongst half that number?

262b

Young Socrates: I will try; — there appears to me to be one management of men and another of beasts.

Stranger: You have certainly divided them in a most straightforward and manly style; but you have fallen into an error which hereafter I think that we had better avoid.

Young Socrates: What is the error?

Stranger: I think that we had better not cut off a single small portion which is not a species, from many larger portions; the part should be a species. To separate off at once the subject of investigation, is a most excellent plan, if only the separation be rightly made; and you were under the impression that you were right, because you saw that you would come to man; and this led you to hasten the steps. But you should not chip off too small a piece, my friend; the safer way is to cut through the middle; which is also the more likely way of finding classes. Attention to this principle makes all the difference in a process of enquiry.

Young Socrates: What do you mean, Stranger?

Stranger: I will endeavour to speak more plainly out of love to your good parts, Socrates; and, although I cannot at present entirely explain myself, I will try, as we proceed, to make my meaning a little clearer.

Young Socrates: What was the error of which, as you say, we were guilty in our recent division?

Stranger: The error was just as if some one who wanted to divide the human race, were to divide them after the fashion which prevails in this part of the world; here they cut off the Hellenes as one species, and all the other species of mankind, which are innumerable, and have no ties or common language, they include under the single name of 'barbarians,' and because they have one name they are supposed to be of one species also. Or suppose that in dividing numbers you were to cut off ten thousand from all the rest, and make of it one species, comprehending the rest under another separate name, you might say that here too was a single class, because you had given it a single name. Whereas you would make a much better and more equal and logical classification of numbers, if you divided them into odd and even; or of the human species, if you divided them into male and female; and only separated off Lydians or Phrygians, or any other tribe, and arrayed them against the rest of the world, when you could no longer make a division into parts which were also classes.

Young Socrates: Very true; but I wish that this distinction between a part and a class could still be made somewhat plainer.

Stranger: O Socrates, best of men, you are imposing upon me a very difficult task. We have already digressed further from our original intention than we ought, and you would have us wander still further away. But we must now return to our subject; and hereafter, when there is a leisure hour, we will follow up the other track; at the same time, I wish you to guard against imagining that you ever heard me declare —

Young Socrates: What?

Stranger: That a class and a part are distinct.

Young Socrates: What did I hear, then?

Stranger: That a class is necessarily a part, but there is no similar necessity that a part should be a class; that is the view which I should always wish you to attribute to me, Socrates.

Young Socrates: So be it.

Stranger: There is another thing which I should like to know.

Young Socrates: What is it?

263c

Stranger: The point at which we digressed; for, if I am not mistaken, the exact place was at the question, Where you would divide the management of herds. To this you appeared rather too ready to answer that there were two species of animals; man being one, and all brutes making up the other.

263d

Young Socrates: True.

Stranger: I thought that in taking away a part, you imagined that the remainder formed a class, because you were able to call them by the common name of brutes.

Young Socrates: That again is true.

Stranger: Suppose now, O most courageous of dialecticians, that some wise and understanding creature, such as a crane is reputed to be, were, in imitation of you, to make a similar division, and set up cranes against all other animals to their own special glorification, at the same time jumbling together all the others, including man, under the appellation of brutes, — here would be the sort of error which we must try to avoid.

Young Socrates: How can we be safe?

Stranger: If we do not divide the whole class of animals, we shall be less likely to fall into that error.

Young Socrates: We had better not take the whole?

Stranger: Yes, there lay the source of error in our former division.

264a

Young Socrates: How?

Stranger: You remember how that part of the art of knowledge which was concerned with command, had to do with the rearing of living creatures, — I mean, with animals in herds?

Young Socrates: Yes.

Stranger: In that case, there was already implied a division of all animals into tame and wild; those whose nature can be tamed are called tame, and those which cannot be tamed are called wild.

264b

Young Socrates: True.

Stranger: And the political science of which we are in search, is and ever was concerned with tame animals, and is also confined to gregarious animals.

Young Socrates: Yes.

Stranger: But then we ought not to divide, as we did, taking the whole class at once. Neither let us be in too great haste to arrive quickly at the political science; for this mistake has already brought upon us the misfortune of which the proverb speaks.

Young Socrates: What misfortune?

264c

Stranger: The misfortune of too much haste, which is too little speed.

Young Socrates: And all the better, Stranger; — we got what we deserved.

Stranger: Very well: Let us then begin again, and endeavour to divide the collective rearing of animals; for probably the

completion of the argument will best show what you are so anxious to know. Tell me, then —

Young Socrates: What?

264d

Stranger: Have you ever heard, as you very likely may — for I do not suppose that you ever actually visited them — of the preserves of fishes in the Nile, and in the ponds of the Great King; or you may have seen similar preserves in wells at home?

Young Socrates: Yes, to be sure, I have seen them, and I have often heard the others described.

Stranger: And you may have heard also, and may have been assured by report, although you have not travelled in those regions, of nurseries of geese and cranes in the plains of Thessaly?

Young Socrates: Certainly.

Stranger: I asked you, because here is a new division of the management of herds, into the management of land and of water herds.

Young Socrates: There is.

Stranger: And do you agree that we ought to divide the collective rearing of herds into two corresponding parts, the one the rearing of water, and the other the rearing of land herds?

Young Socrates: Yes.

265a

Stranger: There is surely no need to ask which of these two contains the royal art, for it is evident to everybody.

Young Socrates: Certainly.

Stranger: Any one can divide the herds which feed on dry land?

Young Socrates: How would you divide them?

Stranger: I should distinguish between those which fly and those which walk.

Young Socrates: Most true.

Stranger: And where shall we look for the political animal? Might not an idiot, so to speak, know that he is a pedestrian?

Young Socrates: Certainly.

265b

Stranger: The art of managing the walking animal has to be further divided, just as you might halve an even number.

Young Socrates: Clearly.

Stranger: Let me note that here appear in view two ways to that part or class which the argument aims at reaching, — the one a speedier way, which cuts off a small portion and leaves a large; the other agrees better with the principle which we were laying down, that as far as we can we should divide in the middle; but it is longer. We can take either of them, whichever we please.

Young Socrates: Cannot we have both ways?

265c

Stranger: Together? What a thing to ask! but, if you take them in turn, you clearly may.

Young Socrates: Then I should like to have them in turn.

Stranger: There will be no difficulty, as we are near the end; if we had been at the beginning, or in the middle, I should have demurred to your request; but now, in accordance with your desire, let us begin with the longer way; while we are fresh, we shall get on better. And now attend to the division.

Young Socrates: Let me hear.

265d

Stranger: The tame walking herding animals are distributed by nature into two classes.

Young Socrates: Upon what principle?

Stranger: The one grows horns; and the other is without horns.

Young Socrates: Clearly.

Stranger: Suppose that you divide the science which manages pedestrian animals into two corresponding parts, and define them; for if you try to invent names for them, you will find the intricacy too great.

265e

Young Socrates: How must I speak of them, then?

Stranger: In this way: let the science of managing pedestrian animals be divided into two parts, and one part assigned to the horned herd, and the other to the herd that has no horns.

Young Socrates: All that you say has been abundantly proved, and may therefore be assumed.

Stranger: The king is clearly the shepherd of a polled herd, who have no horns.

266a

Young Socrates: That is evident.

Stranger: Shall we break up this hornless herd into sections, and endeavour to assign to him what is his?

Young Socrates: By all means.

Stranger: Shall we distinguish them by their having or not having cloven feet, or by their mixing or not mixing the breed? You know what I mean.

Young Socrates: What?

Stranger: I mean that horses and asses naturally breed from one another.

Young Socrates: Yes.

266b

Stranger: But the remainder of the hornless herd of tame animals will not mix the breed.

Young Socrates: Very true.

Stranger: And of which has the Statesman charge, — of the mixed or of the unmixed race?

Young Socrates: Clearly of the unmixed.

Stranger: I suppose that we must divide this again as before.

Young Socrates: We must.

266c

Stranger: Every tame and herding animal has now been split up, with the exception of two species; for I hardly think that dogs should be reckoned among gregarious animals.

Young Socrates: Certainly not; but how shall we divide the two remaining species?

Stranger: There is a measure of difference which may be appropriately employed by you and Theaetetus, who are students of geometry.

Young Socrates: What is that?

Stranger: The diameter; and, again, the diameter of a diameter. (Compare Meno.)

266d

Young Socrates: What do you mean?

Stranger: How does man walk, but as a diameter whose power is two feet?

Young Socrates: Just so.

Stranger: And the power of the remaining kind, being the power of twice two feet, may be said to be the diameter of our

diameter.

Young Socrates: Certainly; and now I think that I pretty nearly understand you.

Stranger: In these divisions, Socrates, I descry what would make another famous jest.

Young Socrates: What is it?

266e

Stranger: Human beings have come out in the same class with the freest and airiest of creation, and have been running a race with them.

Young Socrates: I remark that very singular coincidence.

267a

Stranger: And would you not expect the slowest to arrive last?

Young Socrates: Indeed I should.

Stranger: And there is a still more ridiculous consequence, that the king is found running about with the herd and in close competition with the bird-catcher, who of all mankind is most of an adept at the airy life. (Plato is here introducing a new subdivision, i.e. that of bipeds into men and birds. Others however refer the passage to the division into quadrupeds and bipeds, making pigs compete with human beings and the pig-driver with the king. According to this explanation we must translate the words above, 'freest and airiest of creation,' 'worthiest and laziest of creation.')

Young Socrates: Certainly.

Stranger: Then here, Socrates, is still clearer evidence of the truth of what was said in the enquiry about the Sophist? (Compare Sophist.)

Young Socrates: What?

Stranger: That the dialectical method is no respecter of persons, and does not set the great above the small, but always arrives in her own way at the truest result.

Young Socrates: Clearly.

Stranger: And now, I will not wait for you to ask, but will of my own accord take you by the shorter road to the definition of a king.

Young Socrates: By all means.

Stranger: I say that we should have begun at first by dividing land animals into biped and quadruped; and since the winged herd, and that alone, comes out in the same class with man, we should divide bipeds into those which have feathers and those which have not, and when they have been divided, and the art of the management of mankind is brought to light, the time will have come to produce our Statesman and ruler, and set him like a charioteer in his place, and hand over to him the reins of state, for that too is a vocation which belongs to him.

Young Socrates: Very good; you have paid me the debt, — I mean, that you have completed the argument, and I suppose that you added the digression by way of interest. (Compare Republic.)

Stranger: Then now, let us go back to the beginning, and join the links, which together make the definition of the name of the Statesman's art.

Young Socrates: By all means.

268a

Stranger: The science of pure knowledge had, as we said originally, a part which was the science of rule or command, and from this was derived another part, which was called command-for-self, on the analogy of selling-for-self; an important section of this was the management of living

animals, and this again was further limited to the management of them in herds; and again in herds of pedestrian animals. The chief division of the latter was the art of managing pedestrian animals which are without horns; this again has a part which can only be comprehended under one term by joining together three names — shepherding pure-bred animals. The only further subdivision is the art of man-herding, — this has to do with bipeds, and is what we were seeking after, and have now found, being at once the royal and political.

Young Socrates: To be sure.

Stranger: And do you think, Socrates, that we really have done as you say?

Young Socrates: What?

268b

Stranger: Do you think, I mean, that we have really fulfilled our intention? — There has been a sort of discussion, and yet the investigation seems to me not to be perfectly worked out: this is where the enquiry fails.

Young Socrates: I do not understand.

Stranger: I will try to make the thought, which is at this moment present in my mind, clearer to us both.

Young Socrates: Let me hear.

Stranger: There were many arts of shepherding, and one of them was the political, which had the charge of one particular herd?

Young Socrates: Yes.

Stranger: And this the argument defined to be the art of rearing, not horses or other brutes, but the art of rearing man collectively?

268c

Young Socrates: True.

Stranger: Note, however, a difference which distinguishes the king from all other shepherds.

Young Socrates: To what do you refer?

Stranger: I want to ask, whether any one of the other herdsmen has a rival who professes and claims to share with him in the management of the herd?

Young Socrates: What do you mean?

Stranger: I mean to say that merchants, husbandmen, providers of food, and also training-masters and physicians, will all contend with the herdsmen of humanity, whom we call Statesmen, declaring that they themselves have the care of rearing or managing mankind, and that they rear not only the common herd, but also the rulers themselves.

Young Socrates: Are they not right in saying so?

268e

Stranger: Very likely they may be, and we will consider their claim. But we are certain of this, — that no one will raise a similar claim as against the herdsman, who is allowed on all hands to be the sole and only feeder and physician of his herd; he is also their match-maker and accoucheur; no one else knows that department of science. And he is their merry-maker and musician, as far as their nature is susceptible of such influences, and no one can console and soothe his own herd better than he can, either with the natural tones of his voice or with instruments. And the same may be said of tenders of animals in general.

Young Socrates: Very true.

Stranger: But if this is as you say, can our argument about the king be true and unimpeachable? Were we right in selecting him out of ten thousand other claimants to be the shepherd and

rearer of the human flock?

269a

Young Socrates: Surely not.

Stranger: Had we not reason just to now to apprehend, that although we may have described a sort of royal form, we have not as yet accurately worked out the true image of the Statesman? and that we cannot reveal him as he truly is in his own nature, until we have disengaged and separated him from those who hang about him and claim to share in his prerogatives?

Young Socrates: Very true.

Stranger: And that, Socrates, is what we must do, if we do not mean to bring disgrace upon the argument at its close.

Young Socrates: We must certainly avoid that.

Stranger: Then let us make a new beginning, and travel by a different road.

Young Socrates: What road?

Stranger: I think that we may have a little amusement; there is a famous tale, of which a good portion may with advantage be interwoven, and then we may resume our series of divisions, and proceed in the old path until we arrive at the desired summit. Shall we do as I say?

Young Socrates: By all means.

269c

Stranger: Listen, then, to a tale which a child would love to hear; and you are not too old for childish amusement.

Young Socrates: Let me hear.

Stranger: There did really happen, and will again happen, like many other events of which ancient tradition has preserved the record, the portent which is traditionally said to have occurred

in the quarrel of Atreus and Thyestes. You have heard, no doubt, and remember what they say happened at that time?

Young Socrates: I suppose you to mean the token of the birth of the golden lamb.

269d

Stranger: No, not that; but another part of the story, which tells how the sun and the stars once rose in the west, and set in the east, and that the god reversed their motion, and gave them that which they now have as a testimony to the right of Atreus.

Young Socrates: Yes; there is that legend also.

Stranger: Again, we have been often told of the reign of Cronos.

Young Socrates: Yes, very often.

Stranger: Did you ever hear that the men of former times were earth-born, and not begotten of one another?

Young Socrates: Yes, that is another old tradition.

Stranger: All these stories, and ten thousand others which are still more wonderful, have a common origin; many of them have been lost in the lapse of ages, or are repeated only in a disconnected form; but the origin of them is what no one has told, and may as well be told now; for the tale is suited to throw light on the nature of the king.

Young Socrates: Very good; and I hope that you will give the whole story, and leave out nothing.

Stranger: Listen, then. There is a time when God himself guides and helps to roll the world in its course; and there is a time, on the completion of a certain cycle, when he lets go, and the world being a living creature, and having originally received intelligence from its author and creator, turns about and by an inherent necessity revolves in the opposite direction.

Young Socrates: Why is that?

Stranger: Why, because only the most divine things of all remain ever unchanged and the same, and body is not included in this class. Heaven and the universe, as we have termed them, although they have been endowed by the Creator with many glories, partake of a bodily nature, and therefore cannot be entirely free from perturbation. But their motion is, as far as possible, single and in the same place, and of the same kind; and is therefore only subject to a reversal, which is the least alteration possible. For the lord of all moving things is alone able to move of himself; and to think that he moves them at one time in one direction and at another time in another is blasphemy. Hence we must not say that the world is either self-moved always, or all made to go round by God in two opposite courses; or that two Gods, having opposite purposes, make it move round. But as I have already said (and this is the only remaining alternative) the world is guided at one time by an external power which is divine and receives fresh life and immortality from the renewing hand of the Creator, and again, when let go, moves spontaneously, being set free at such a time as to have, during infinite cycles of years, a reverse movement: this is due to its perfect balance, to its vast size, and to the fact that it turns on the smallest pivot.

270e

Young Socrates: Your account of the world seems to be very reasonable indeed.

Stranger: Let us now reflect and try to gather from what has been said the nature of the phenomenon which we affirmed to be the cause of all these wonders. It is this.

Young Socrates: What?

Stranger: The reversal which takes place from time to time of the motion of the universe.

Young Socrates: How is that the cause?

Stranger: Of all changes of the heavenly motions, we may consider this to be the greatest and most complete.

Young Socrates: I should imagine so.

Stranger: And it may be supposed to result in the greatest changes to the human beings who are the inhabitants of the world at the time.

Young Socrates: Such changes would naturally occur.

271a

Stranger: And animals, as we know, survive with difficulty great and serious changes of many different kinds when they come upon them at once.

Young Socrates: Very true.

Stranger: Hence there necessarily occurs a great destruction of them, which extends also to the life of man; few survivors of the race are left, and those who remain become the subjects of several novel and remarkable phenomena, and of one in particular, which takes place at the time when the transition is made to the cycle opposite to that in which we are now living.

Young Socrates: What is it?

Stranger: The life of all animals first came to a standstill, and the mortal nature ceased to be or look older, and was then reversed and grew young and delicate; the white locks of the aged darkened again, and the cheeks the bearded man became smooth, and recovered their former bloom; the bodies of youths in their prime grew softer and smaller, continually by day and night returning and becoming assimilated to the nature of a newly-born child in mind as well as body; in the succeeding stage they wasted away and wholly disappeared. And the bodies of those who died by violence at that time quickly passed through the like changes, and in a few days were no more seen.

271c

Young Socrates: Then how, Stranger, were the animals created in those days; and in what way were they begotten of one another?

271d

Stranger: It is evident, Socrates, that there was no such thing in the then order of nature as the procreation of animals from one another; the earth-born race, of which we hear in story, was the one which existed in those days — they rose again from the ground; and of this tradition, which is now-a-days often unduly discredited, our ancestors, who were nearest in point of time to the end of the last period and came into being at the beginning of this, are to us the heralds. And mark how consistent the sequel of the tale is; after the return of age to youth, follows the return of the dead, who are lying in the earth, to life; simultaneously with the reversal of the world the wheel of their generation has been turned back, and they are put together and rise and live in the opposite order, unless God has carried any of them away to some other lot. According to this tradition they of necessity sprang from the earth and have the name of earth-born, and so the above legend clings to them.

271e

Young Socrates: Certainly that is quite consistent with what has preceded; but tell me, was the life which you said existed in the reign of Cronos in that cycle of the world, or in this? For the change in the course of the stars and the sun must have occurred in both.

272c

Stranger: I see that you enter into my meaning; — no, that blessed and spontaneous life does not belong to the present cycle of the world, but to the previous one, in which God superintended the whole revolution of the universe; and the several parts the universe were distributed under the rule of certain inferior deities, as is the way in some places still. There were demigods, who were the shepherds of the various species

and herds of animals, and each one was in all respects sufficient for those of whom he was the shepherd; neither was there any violence, or devouring of one another, or war or quarrel among them; and I might tell of ten thousand other blessings, which belonged to that dispensation. The reason why the life of man was, as tradition says, spontaneous, is as follows: In those days God himself was their shepherd, and ruled over them, just as man, who is by comparison a divine being, still rules over the lower animals. Under him there were no forms of government or separate possession of women and children; for all men rose again from the earth, having no memory of the past. And although they had nothing of this sort, the earth gave them fruits in abundance, which grew on trees and shrubs unbidden, and were not planted by the hand of man. And they dwelt naked, and mostly in the open air, for the temperature of their seasons was mild; and they had no beds, but lay on soft couches of grass, which grew plentifully out of the earth. Such was the life of man in the days of Cronos, Socrates; the character of our present life, which is said to be under Zeus, you know from your own experience. Can you, and will you, determine which of them you deem the happier?

Young Socrates: Impossible.

272d

Stranger: Then shall I determine for you as well as I can?

Young Socrates: By all means.

273e

Stranger: Suppose that the nurslings of Cronos, having this boundless leisure, and the power of holding intercourse, not only with men, but with the brute creation, had used all these advantages with a view to philosophy, conversing with the brutes as well as with one another, and learning of every nature which was gifted with any special power, and was able to contribute some special experience to the store of wisdom,

there would be no difficulty in deciding that they would be a thousand times happier than the men of our own day. Or, again, if they had merely eaten and drunk until they were full, and told stories to one another and to the animals — such stories as are now attributed to them — in this case also, as I should imagine, the answer would be easy. But until some satisfactory witness can be found of the love of that age for knowledge and discussion, we had better let the matter drop, and give the reason why we have unearthed this tale, and then we shall be able to get on. In the fulness of time, when the change was to take place, and the earth-born race had all perished, and every soul had completed its proper cycle of births and been sown in the earth her appointed number of times, the pilot of the universe let the helm go, and retired to his place of view; and then Fate and innate desire reversed the motion of the world. Then also all the inferior deities who share the rule of the supreme power, being informed of what was happening, let go the parts of the world which were under their control. And the world turning round with a sudden shock, being impelled in an opposite direction from beginning to end, was shaken by a mighty earthquake, which wrought a new destruction of all manner of animals. Afterwards, when sufficient time had elapsed, the tumult and confusion and earthquake ceased, and the universal creature, once more at peace, attained to a calm, and settled down into his own orderly and accustomed course, having the charge and rule of himself and of all the creatures which are contained in him, and executing, as far as he remembered them, the instructions of his Father and Creator, more precisely at first, but afterwards with less exactness. The reason of the falling off was the admixture of matter in him; this was inherent in the primal nature, which was full of disorder, until attaining to the present order. From God, the constructor, the world received all that is good in him, but from a previous state came elements of evil and unrighteousness, which, thence

derived, first of all passed into the world, and were then transmitted to the animals. While the world was aided by the pilot in nurturing the animals, the evil was small, and great the good which he produced, but after the separation, when the world was let go, at first all proceeded well enough; but, as time went on, there was more and more forgetting, and the old discord again held sway and burst forth in full glory; and at last small was the good, and great was the admixture of evil, and there was a danger of universal ruin to the world, and to the things contained in him. Wherefore God, the orderer of all, in his tender care, seeing that the world was in great straits, and fearing that all might be dissolved in the storm and disappear in infinite chaos, again seated himself at the helm; and bringing back the elements which had fallen into dissolution and disorder to the motion which had prevailed under his dispensation, he set them in order and restored them, and made the world imperishable and immortal. And this is the whole tale, of which the first part will suffice to illustrate the nature of the king. For when the world turned towards the present cycle of generation, the age of man again stood still, and a change opposite to the previous one was the result. The small creatures which had almost disappeared grew in and stature, and the newly-born children of the earth became grey and died and sank into the earth again. All things changed, imitating and following the condition of the universe, and of necessity agreeing with that in their mode of conception and generation and nurture; for no animal was any longer allowed to come into being in the earth through the agency of other creative beings, but as the world was ordained to be the lord of his own progress, in like manner the parts were ordained to grow and generate and give nourishment, as far as they could, of themselves, impelled by a similar movement. And so we have arrived at the real end of this discourse; for although there might be much to tell of the lower animals, and of the condition

out of which they changed and of the causes of the change, about men there is not much, and that little is more to the purpose. Deprived of the care of God, who had possessed and tended them, they were left helpless and defenceless, and were torn in pieces by the beasts, who were naturally fierce and had now grown wild. And in the first ages they were still without skill or resource; the food which once grew spontaneously had failed, and as yet they knew not how to procure it, because they had never felt the pressure of necessity. For all these reasons they were in a great strait; wherefore also the gifts spoken of in the old tradition were imparted to man by the gods, together with so much teaching and education as was indispensable; fire was given to them by Prometheus, the arts by Hephaestus and his fellow-worker, Athene, seeds and plants by others. From these is derived all that has helped to frame human life; since the care of the Gods, as I was saying, had now failed men, and they had to order their course of life for themselves, and were their own masters, just like the universal creature whom they imitate and follow, ever changing, as he changes, and ever living and growing, at one time in one manner, and at another time in another. Enough of the story, which may be of use in showing us how greatly we erred in the delineation of the king and the statesman in our previous discourse.

Young Socrates: What was this great error of which you speak?

Stranger: There were two; the first a lesser one, the other was an error on a much larger and grander scale.

Young Socrates: What do you mean?

Stranger: I mean to say that when we were asked about a king and statesman of the present cycle and generation, we told of a shepherd of a human flock who belonged to the other cycle, and of one who was a god when he ought to have been a man; and this a great error. Again, we declared him to be the ruler of the

entire State, without explaining how: this was not the whole truth, nor very intelligible; but still it was true, and therefore the second error was not so great as the first.

Young Socrates: Very good.

Stranger: Before we can expect to have a perfect description of the statesman we must define the nature of his office.

275d

Young Socrates: Certainly.

Stranger: And the myth was introduced in order to show, not only that all others are rivals of the true shepherd who is the object of our search, but in order that we might have a clearer view of him who is alone worthy to receive this appellation, because he alone of shepherds and herdsmen, according to the image which we have employed, has the care of human beings.

Young Socrates: Very true.

275e

Stranger: And I cannot help thinking, Socrates, that the form of the divine shepherd is even higher than that of a king; whereas the statesmen who are now on earth seem to be much more like their subjects in character, and much more nearly to partake of their breeding and education.

Young Socrates: Certainly.

Stranger: Still they must be investigated all the same, to see whether, like the divine shepherd, they are above their subjects or on a level with them.

Young Socrates: Of course.

Stranger: To resume: — Do you remember that we spoke of a command-for-self exercised over animals, not singly but collectively, which we called the art of rearing a herd?

Young Socrates: Yes, I remember.

Stranger: There, somewhere, lay our error; for we never included or mentioned the Statesman; and we did not observe that he had no place in our nomenclature.

Young Socrates: How was that?

Stranger: All other herdsmen 'rear' their herds, but this is not a suitable term to apply to the Statesman; we should use a name which is common to them all.

276b

Young Socrates: True, if there be such a name.

Stranger: Why, is not 'care' of herds applicable to all? For this implies no feeding, or any special duty; if we say either 'tending' the herds, or 'managing' the herds, or 'having the care' of them, the same word will include all, and then we may wrap up the Statesman with the rest, as the argument seems to require.

276c

Young Socrates: Quite right; but how shall we take the next step in the division?

Stranger: As before we divided the art of 'rearing' herds accordingly as they were land or water herds, winged and wingless, mixing or not mixing the breed, horned and hornless, so we may divide by these same differences the 'tending' of herds, comprehending in our definition the kingship of to-day and the rule of Cronos.

Young Socrates: That is clear; but I still ask, what is to follow.

276d

Stranger: If the word had been 'managing' herds, instead of feeding or rearing them, no one would have argued that there was no care of men in the case of the politician, although it was justly contended, that there was no human art of feeding them which was worthy of the name, or at least, if there were, many a man had a prior and greater right to share in such an art than any king.

Young Socrates: True.

Stranger: But no other art or science will have a prior or better right than the royal science to care for human society and to rule over men in general.

276e

Young Socrates: Quite true.

Stranger: In the next place, Socrates, we must surely notice that a great error was committed at the end of our analysis.

Young Socrates: What was it?

Stranger: Why, supposing we were ever so sure that there is such an art as the art of rearing or feeding bipeds, there was no reason why we should call this the royal or political art, as though there were no more to be said.

Young Socrates: Certainly not.

Stranger: Our first duty, as we were saying, was to remodel the name, so as to have the notion of care rather than of feeding, and then to divide, for there may be still considerable divisions.

277a

Young Socrates: How can they be made?

Stranger: First, by separating the divine shepherd from the human guardian or manager.

Young Socrates: True.

Stranger: And the art of management which is assigned to man would again have to be subdivided.

Young Socrates: On what principle?

Stranger: On the principle of voluntary and compulsory.

Young Socrates: Why?

Stranger: Because, if I am not mistaken, there has been an error here; for our simplicity led us to rank king and tyrant together, whereas they are utterly distinct, like their modes of government.

Young Socrates: True.

Stranger: Then, now, as I said, let us make the correction and divide human care into two parts, on the principle of voluntary and compulsory.

Young Socrates: Certainly.

Stranger: And if we call the management of violent rulers tyranny, and the voluntary management of herds of voluntary bipeds politics, may we not further assert that he who has this latter art of management is the true king and statesman?

Young Socrates: I think, Stranger, that we have now completed the account of the Statesman.

Stranger: Would that we had, Socrates, but I have to satisfy myself as well as you; and in my judgment the figure of the king is not yet perfected; like statuaries who, in their too great haste, having overdone the several parts of their work, lose time in cutting them down, so too we, partly out of haste, partly out of a magnanimous desire to expose our former error, and also because we imagined that a king required grand illustrations, have taken up a marvellous lump of fable, and have been obliged to use more than was necessary. This made us discourse at large, and, nevertheless, the story never came to an end. And our discussion might be compared to a picture of some living being which had been fairly drawn in outline, but had not yet attained the life and clearness which is given by the blending of colours. Now to intelligent persons a living being had better be delineated by language and discourse than by any painting or work of art: to the duller sort by works of art.

Young Socrates: Very true; but what is the imperfection which still remains? I wish that you would tell me.

Stranger: The higher ideas, my dear friend, can hardly be set forth except through the medium of examples; every man seems to know all things in a dreamy sort of way, and then again to wake up and to know nothing.

278a

Young Socrates: What do you mean?

Stranger: I fear that I have been unfortunate in raising a question about our experience of knowledge.

Young Socrates: Why so?

Stranger: Why, because my 'example' requires the assistance of another example.

Young Socrates: Proceed; you need not fear that I shall tire.

Stranger: I will proceed, finding, as I do, such a ready listener in you: when children are beginning to know their letters —

Young Socrates: What are you going to say?

Stranger: That they distinguish the several letters well enough in very short and easy syllables, and are able to tell them correctly.

Young Socrates: Certainly.

Stranger: Whereas in other syllables they do not recognize them, and think and speak falsely of them.

Young Socrates: Very true.

Stranger: Will not the best and easiest way of bringing them to a knowledge of what they do not as yet know be —

Young Socrates: Be what?

Stranger: To refer them first of all to cases in which they judge correctly about the letters in question, and then to compare these with the cases in which they do not as yet know, and to show them that the letters are the same, and have the same character in both combinations, until all cases in which they are right have been placed side by side with all cases in which they are wrong. In this way they have examples, and are made to learn that each letter in every combination is always the same and not another, and is always called by the same name.

278e

Young Socrates: Certainly.

Stranger: Are not examples formed in this manner? We take a thing and compare it with another distinct instance of the same thing, of which we have a right conception, and out of the comparison there arises one true notion, which includes both of them.

Young Socrates: Exactly.

Stranger: Can we wonder, then, that the soul has the same uncertainty about the alphabet of things, and sometimes and in some cases is firmly fixed by the truth in each particular, and then, again, in other cases is altogether at sea; having somehow or other a correct notion of combinations; but when the elements are transferred into the long and difficult language (syllables) of facts, is again ignorant of them?

279a

Young Socrates: There is nothing wonderful in that.

Stranger: Could any one, my friend, who began with false opinion ever expect to arrive even at a small portion of truth and to attain wisdom?

279b

Young Socrates: Hardly.

Stranger: Then you and I will not be far wrong in trying to see the nature of example in general in a small and particular instance; afterwards from lesser things we intend to pass to the royal class, which is the highest form of the same nature, and endeavour to discover by rules of art what the management of cities is; and then the dream will become a reality to us.

Young Socrates: Very true.

279c

Stranger: Then, once more, let us resume the previous argument, and as there were innumerable rivals of the royal race who claim to have the care of states, let us part them all off, and leave him alone; and, as I was saying, a model or example of this process has first to be framed.

Young Socrates: Exactly.

279d

Stranger: What model is there which is small, and yet has any analogy with the political occupation? Suppose, Socrates, that if we have no other example at hand, we choose weaving, or, more precisely, weaving of wool — this will be quite enough, without taking the whole of weaving, to illustrate our meaning?

Young Socrates: Certainly.

Stranger: Why should we not apply to weaving the same processes of division and subdivision which we have already applied to other classes; going once more as rapidly as we can through all the steps until we come to that which is needed for our purpose?

Young Socrates: How do you mean?

Stranger: I shall reply by actually performing the process.

Young Socrates: Very good.

Stranger: All things which we make or acquire are either creative or preventive; of the preventive class are antidotes, divine and human, and also defences; and defences are either military weapons or protections; and protections are veils, and also shields against heat and cold, and shields against heat and cold are shelters and coverings; and coverings are blankets and garments; and garments are some of them in one piece, and others of them are made in several parts; and of these latter some are stitched, others are fastened and not stitched; and of the not stitched, some are made of the sinews of plants, and some of hair; and of these, again, some are cemented with water and earth, and others are fastened together by themselves. And these last defences and coverings which are fastened together by themselves are called clothes, and the art which superintends them we may call, from the nature of the operation, the art of clothing, just as before the art of the Statesman was derived from the State; and may we not say that the art of weaving, at least that largest portion of it which was concerned with the making of clothes, differs only in name from this art of clothing, in the same way that, in the previous case, the royal science differed from the political?

Young Socrates: Most true.

280c

Stranger: In the next place, let us make the reflection, that the art of weaving clothes, which an incompetent person might fancy to have been sufficiently described, has been separated off from several others which are of the same family, but not from the co-operative arts.

Young Socrates: And which are the kindred arts?

280d

Stranger: I see that I have not taken you with me. So I think that we had better go backwards, starting from the end. We just now parted off from the weaving of clothes, the making of

blankets, which differ from each other in that one is put under and the other is put around: and these are what I termed kindred arts.

Young Socrates: I understand.

Stranger: And we have subtracted the manufacture of all articles made of flax and cords, and all that we just now metaphorically termed the sinews of plants, and we have also separated off the process of felting and the putting together of materials by stitching and sewing, of which the most important part is the cobbler's art.

Young Socrates: Precisely.

Stranger: Then we separated off the currier's art, which prepared coverings in entire pieces, and the art of sheltering, and subtracted the various arts of making water-tight which are employed in building, and in general in carpentering, and in other crafts, and all such arts as furnish impediments to thieving and acts of violence, and are concerned with making the lids of boxes and the fixing of doors, being divisions of the art of joining; and we also cut off the manufacture of arms, which is a section of the great and manifold art of making defences; and we originally began by parting off the whole of the magic art which is concerned with antidotes, and have left, as would appear, the very art of which we were in search, the art of protection against winter cold, which fabricates woollen defences, and has the name of weaving.

Young Socrates: Very true.

281b

Stranger: Yes, my boy, but that is not all; for the first process to which the material is subjected is the opposite of weaving.

Young Socrates: How so?

Stranger: Weaving is a sort of uniting?

Young Socrates: Yes.

Stranger: But the first process is a separation of the clotted and matted fibres?

Young Socrates: What do you mean?

Stranger: I mean the work of the carder's art; for we cannot say that carding is weaving, or that the carder is a weaver.

281c

Young Socrates: Certainly not.

Stranger: Again, if a person were to say that the art of making the warp and the woof was the art of weaving, he would say what was paradoxical and false.

Young Socrates: To be sure.

281d

Stranger: Shall we say that the whole art of the fuller or of the mender has nothing to do with the care and treatment of clothes, or are we to regard all these as arts of weaving?

Young Socrates: Certainly not.

Stranger: And yet surely all these arts will maintain that they are concerned with the treatment and production of clothes; they will dispute the exclusive prerogative of weaving, and though assigning a larger sphere to that, will still reserve a considerable field for themselves.

Young Socrates: Very true.

Stranger: Besides these, there are the arts which make tools and instruments of weaving, and which will claim at least to be co-operative causes in every work of the weaver.

281e

Young Socrates: Most true.

Stranger: Well, then, suppose that we define weaving, or rather that part of it which has been selected by us, to be the greatest and noblest of arts which are concerned with woollen garments — shall we be right? Is not the definition, although true, wanting in clearness and completeness; for do not all those other arts require to be first cleared away?

Young Socrates: True.

Stranger: Then the next thing will be to separate them, in order that the argument may proceed in a regular manner?

282a

Young Socrates: By all means.

Stranger: Let us consider, in the first place, that there are two kinds of arts entering into everything which we do.

Young Socrates: What are they?

Stranger: The one kind is the conditional or co-operative, the other the principal cause.

Young Socrates: What do you mean?

Stranger: The arts which do not manufacture the actual thing, but which furnish the necessary tools for the manufacture, without which the several arts could not fulfil their appointed work, are co-operative; but those which make the things themselves are causal.

Young Socrates: A very reasonable distinction.

Stranger: Thus the arts which make spindles, combs, and other instruments of the production of clothes, may be called co-operative, and those which treat and fabricate the things themselves, causal.

Young Socrates: Very true.

282c

Stranger: The arts of washing and mending, and the other preparatory arts which belong to the causal class, and form a division of the great art of adornment, may be all comprehended under what we call the fuller's art.

Young Socrates: Very good.

Stranger: Carding and spinning threads and all the parts of the process which are concerned with the actual manufacture of a woollen garment form a single art, which is one of those universally acknowledged, — the art of working in wool.

Young Socrates: To be sure.

Stranger: Of working in wool, again, there are two divisions, and both these are parts of two arts at once.

Young Socrates: How is that?

Stranger: Carding and one half of the use of the comb, and the other processes of wool-working which separate the composite, may be classed together as belonging both to the art of wool-working, and also to one of the two great arts which are of universal application — the art of composition and the art of division.

Young Socrates: Yes.

Stranger: To the latter belong carding and the other processes of which I was just now speaking; the art of discernment or division in wool and yarn, which is effected in one manner with the comb and in another with the hands, is variously described under all the names which I just now mentioned.

Young Socrates: Very true.

Stranger: Again, let us take some process of wool-working which is also a portion of the art of composition, and, dismissing the elements of division which we found there, make two halves, one on the principle of composition, and the other on

the principle of division.

Young Socrates: Let that be done.

Stranger: And once more, Socrates, we must divide the part which belongs at once both to wool-working and composition, if we are ever to discover satisfactorily the aforesaid art of weaving.

Young Socrates: We must.

Stranger: Yes, certainly, and let us call one part of the art the art of twisting threads, the other the art of combining them.

Young Socrates: Do I understand you, in speaking of twisting, to be referring to manufacture of the warp?

283b

Stranger: Yes, and of the woof too; how, if not by twisting, is the woof made?

Young Socrates: There is no other way.

Stranger: Then suppose that you define the warp and the woof, for I think that the definition will be of use to you.

Young Socrates: How shall I define them?

Stranger: As thus: A piece of carded wool which is drawn out lengthwise and breadthwise is said to be pulled out.

Young Socrates: Yes.

283c

Stranger: And the wool thus prepared, when twisted by the spindle, and made into a firm thread, is called the warp, and the art which regulates these operations the art of spinning the warp.

Young Socrates: True.

283d

Stranger: And the threads which are more loosely spun, having a softness proportioned to the intertexture of the warp and to the degree of force used in dressing the cloth, — the threads which are thus spun are called the woof, and the art which is set over them may be called the art of spinning the woof.

Young Socrates: Very true.

Stranger: And, now, there can be no mistake about the nature of the part of weaving which we have undertaken to define. For when that part of the art of composition which is employed in the working of wool forms a web by the regular intertexture of warp and woof, the entire woven substance is called by us a woollen garment, and the art which presides over this is the art of weaving.

283e

Young Socrates: Very true.

Stranger: But why did we not say at once that weaving is the art of entwining warp and woof, instead of making a long and useless circuit?

Young Socrates: I thought, Stranger, that there was nothing useless in what was said.

Stranger: Very likely, but you may not always think so, my sweet friend; and in case any feeling of dissatisfaction should hereafter arise in your mind, as it very well may, let me lay down a principle which will apply to arguments in general.

Young Socrates: Proceed.

Stranger: Let us begin by considering the whole nature of excess and defect, and then we shall have a rational ground on which we may praise or blame too much length or too much shortness in discussions of this kind.

284a

Young Socrates: Let us do so.

Stranger: The points on which I think that we ought to dwell are the following: —

Young Socrates: What?

Stranger: Length and shortness, excess and defect; with all of these the art of measurement is conversant.

Young Socrates: Yes.

Stranger: And the art of measurement has to be divided into two parts, with a view to our present purpose.

Young Socrates: Where would you make the division?

Stranger: As thus: I would make two parts, one having regard to the relativity of greatness and smallness to each other; and there is another, without which the existence of production would be impossible.

Young Socrates: What do you mean?

Stranger: Do you not think that it is only natural for the greater to be called greater with reference to the less alone, and the less less with reference to the greater alone?

Young Socrates: Yes.

Stranger: Well, but is there not also something exceeding and exceeded by the principle of the mean, both in speech and action, and is not this a reality, and the chief mark of difference between good and bad men?

Young Socrates: Plainly.

Stranger: Then we must suppose that the great and small exist and are discerned in both these ways, and not, as we were saying before, only relatively to one another, but there must also be another comparison of them with the mean or ideal standard; would you like to hear the reason why?

284d

Young Socrates: Certainly.

Stranger: If we assume the greater to exist only in relation to the less, there will never be any comparison of either with the mean.

Young Socrates: True.

Stranger: And would not this doctrine be the ruin of all the arts and their creations; would not the art of the Statesman and the aforesaid art of weaving disappear? For all these arts are on the watch against excess and defect, not as unrealities, but as real evils, which occasion a difficulty in action; and the excellence or beauty of every work of art is due to this observance of measure.

Young Socrates: Certainly.

284e

Stranger: But if the science of the Statesman disappears, the search for the royal science will be impossible.

Young Socrates: Very true.

Stranger: Well, then, as in the case of the Sophist we extorted the inference that not-being had an existence, because here was the point at which the argument eluded our grasp, so in this we must endeavour to show that the greater and less are not only to be measured with one another, but also have to do with the production of the mean; for if this is not admitted, neither a statesman nor any other man of action can be an undisputed master of his science.

Young Socrates: Yes, we must certainly do again what we did then.

Stranger: But this, Socrates, is a greater work than the other, of which we only too well remember the length. I think, however, that we may fairly assume something of this sort —

Young Socrates: What?

Stranger: That we shall some day require this notion of a mean with a view to the demonstration of absolute truth; meanwhile, the argument that the very existence of the arts must be held to depend on the possibility of measuring more or less, not only with one another, but also with a view to the attainment of the mean, seems to afford a grand support and satisfactory proof of the doctrine which we are maintaining; for if there are arts, there is a standard of measure, and if there is a standard of measure, there are arts; but if either is wanting, there is neither.

285c

Young Socrates: True; and what is the next step?

Stranger: The next step clearly is to divide the art of measurement into two parts, as we have said already, and to place in the one part all the arts which measure number, length, depth, breadth, swiftness with their opposites; and to have another part in which they are measured with the mean, and the fit, and the opportune, and the due, and with all those words, in short, which denote a mean or standard removed from the extremes.

285d

Young Socrates: Here are two vast divisions, embracing two very different spheres.

285e

Stranger: There are many accomplished men, Socrates, who say, believing themselves to speak wisely, that the art of measurement is universal, and has to do with all things. And this means what we are now saying; for all things which come within the province of art do certainly in some sense partake of measure. But these persons, because they are not accustomed to distinguish classes according to real forms, jumble together two widely different things, relation to one another, and to a standard, under the idea that they are the same, and also fall

into the converse error of dividing other things not according to their real parts. Whereas the right way is, if a man has first seen the unity of things, to go on with the enquiry and not desist until he has found all the differences contained in it which form distinct classes; nor again should he be able to rest contented with the manifold diversities which are seen in a multitude of things until he has comprehended all of them that have any affinity within the bounds of one similarity and embraced them within the reality of a single kind. But we have said enough on this head, and also of excess and defect; we have only to bear in mind that two divisions of the art of measurement have been discovered which are concerned with them, and not forget what they are.

Young Socrates: We will not forget.

Stranger: And now that this discussion is completed, let us go on to consider another question, which concerns not this argument only but the conduct of such arguments in general.

286b

Young Socrates: What is this new question?

286c

Stranger: Take the case of a child who is engaged in learning his letters: when he is asked what letters make up a word, should we say that the question is intended to improve his grammatical knowledge of that particular word, or of all words?

Young Socrates: Clearly, in order that he may have a better knowledge of all words.

Stranger: And is our enquiry about the Statesman intended only to improve our knowledge of politics, or our power of reasoning generally?

Young Socrates: Clearly, as in the former example, the purpose is general.

286d

Stranger: Still less would any rational man seek to analyse the notion of weaving for its own sake. But people seem to forget that some things have sensible images, which are readily known, and can be easily pointed out when any one desires to answer an enquirer without any trouble or argument; whereas the greatest and highest truths have no outward image of themselves visible to man, which he who wishes to satisfy the soul of the enquirer can adapt to the eye of sense (compare *Phaedr.*), and therefore we ought to train ourselves to give and accept a rational account of them; for immaterial things, which are the noblest and greatest, are shown only in thought and idea, and in no other way, and all that we are now saying is said for the sake of them. Moreover, there is always less difficulty in fixing the mind on small matters than on great.

286e

Young Socrates: Very good.

Stranger: Let us call to mind the bearing of all this.

Young Socrates: What is it?

Stranger: I wanted to get rid of any impression of tediousness which we may have experienced in the discussion about weaving, and the reversal of the universe, and in the discussion concerning the Sophist and the being of not-being. I know that they were felt to be too long, and I reproached myself with this, fearing that they might be not only tedious but irrelevant; and all that I have now said is only designed to prevent the recurrence of any such disagreeables for the future.

Young Socrates: Very good. Will you proceed?

Stranger: Then I would like to observe that you and I, remembering what has been said, should praise or blame the length or shortness of discussions, not by comparing them with one another, but with what is fitting, having regard to the part of measurement, which, as we said, was to be borne in mind.

287a

Young Socrates: Very true.

Stranger: And yet, not everything is to be judged even with a view to what is fitting; for we should only want such a length as is suited to give pleasure, if at all, as a secondary matter; and reason tells us, that we should be contented to make the ease or rapidity of an enquiry, not our first, but our second object; the first and highest of all being to assert the great method of division according to species — whether the discourse be shorter or longer is not to the point. No offence should be taken at length, but the longer and shorter are to be employed indifferently, according as either of them is better calculated to sharpen the wits of the auditors. Reason would also say to him who censures the length of discourses on such occasions and cannot away with their circumlocution, that he should not be in such a hurry to have done with them, when he can only complain that they are tedious, but he should prove that if they had been shorter they would have made those who took part in them better dialecticians, and more capable of expressing the truth of things; about any other praise and blame, he need not trouble himself — he should pretend not to hear them. But we have had enough of this, as you will probably agree with me in thinking. Let us return to our Statesman, and apply to his case the aforesaid example of weaving.

Young Socrates: Very good; — let us do as you say.

Stranger: The art of the king has been separated from the similar arts of shepherds, and, indeed, from all those which have to do with herds at all. There still remain, however, of the causal and co-operative arts those which are immediately concerned with States, and which must first be distinguished from one another.

287e

Young Socrates: Very good.

Stranger: You know that these arts cannot easily be divided into two halves; the reason will be very evident as we proceed.

Young Socrates: Then we had better do so.

Stranger: We must carve them like a victim into members or limbs, since we cannot bisect them. (Compare Phaedr.) For we certainly should divide everything into as few parts as possible.

Young Socrates: What is to be done in this case?

288a

Stranger: What we did in the example of weaving — all those arts which furnish the tools were regarded by us as co-operative.

Young Socrates: Yes.

Stranger: So now, and with still more reason, all arts which make any implement in a State, whether great or small, may be regarded by us as co-operative, for without them neither State nor Statesmanship would be possible; and yet we are not inclined to say that any of them is a product of the kingly art.

Young Socrates: No, indeed.

288b

Stranger: The task of separating this class from others is not an easy one; for there is plausibility in saying that anything in the world is the instrument of doing something. But there is another class of possessions in a city, of which I have a word to say.

Young Socrates: What class do you mean?

Stranger: A class which may be described as not having this power; that is to say, not like an instrument, framed for production, but designed for the preservation of that which is produced.

Young Socrates: To what do you refer?

288c

Stranger: To the class of vessels, as they are comprehensively termed, which are constructed for the preservation of things moist and dry, of things prepared in the fire or out of the fire; this is a very large class, and has, if I am not mistaken, literally nothing to do with the royal art of which we are in search.

288d

Young Socrates: Certainly not.

Stranger: There is also a third class of possessions to be noted, different from these and very extensive, moving or resting on land or water, honourable and also dishonourable. The whole of this class has one name, because it is intended to be sat upon, being always a seat for something.

Young Socrates: What is it?

Stranger: A vehicle, which is certainly not the work of the Statesman, but of the carpenter, potter, and coppersmith.

288e

Young Socrates: I understand.

Stranger: And is there not a fourth class which is again different, and in which most of the things formerly mentioned are contained, — every kind of dress, most sorts of arms, walls and enclosures, whether of earth or stone, and ten thousand other things? all of which being made for the sake of defence, may be truly called defences, and are for the most part to be regarded as the work of the builder or of the weaver, rather than of the Statesman.

Young Socrates: Certainly.

289a

Stranger: Shall we add a fifth class, of ornamentation and drawing, and of the imitations produced by drawing and music, which are designed for amusement only, and may be fairly comprehended under one name?

Young Socrates: What is it?

Stranger: Plaything is the name.

Young Socrates: Certainly.

Stranger: That one name may be fitly predicated of all of them, for none of these things have a serious purpose — amusement is their sole aim.

Young Socrates: That again I understand.

289b

Stranger: Then there is a class which provides materials for all these, out of which and in which the arts already mentioned fabricate their works; — this manifold class, I say, which is the creation and offspring of many other arts, may I not rank sixth?

Young Socrates: What do you mean?

Stranger: I am referring to gold, silver, and other metals, and all that wood-cutting and shearing of every sort provides for the art of carpentry and plaiting; and there is the process of barking and stripping the cuticle of plants, and the currier's art, which strips off the skins of animals, and other similar arts which manufacture corks and papyri and cords, and provide for the manufacture of composite species out of simple kinds — the whole class may be termed the primitive and simple possession of man, and with this the kingly science has no concern at all.

Young Socrates: True.

Stranger: The provision of food and of all other things which mingle their particles with the particles of the human body, and minister to the body, will form a seventh class, which may be called by the general term of nourishment, unless you have any better name to offer. This, however, appertains rather to the husbandman, huntsman, trainer, doctor, cook, and is not to be assigned to the Statesman's art.

Young Socrates: Certainly not.

Stranger: These seven classes include nearly every description of property, with the exception of tame animals. Consider; — there was the original material, which ought to have been placed first; next come instruments, vessels, vehicles, defences, playthings, nourishment; small things, which may be included under one of these — as for example, coins, seals and stamps, are omitted, for they have not in them the character of any larger kind which includes them; but some of them may, with a little forcing, be placed among ornaments, and others may be made to harmonize with the class of implements. The art of herding, which has been already divided into parts, will include all property in tame animals, except slaves.

Young Socrates: Very true.

290a

Stranger: The class of slaves and ministers only remains, and I suspect that in this the real aspirants for the throne, who are the rivals of the king in the formation of the political web, will be discovered; just as spinners, carders, and the rest of them, were the rivals of the weaver. All the others, who were termed co-operators, have been got rid of among the occupations already mentioned, and separated from the royal and political science.

Young Socrates: I agree.

290b

Stranger: Let us go a little nearer, in order that we may be more certain of the complexion of this remaining class.

Young Socrates: Let us do so.

Stranger: We shall find from our present point of view that the greatest servants are in a case and condition which is the reverse of what we anticipated.

Young Socrates: Who are they?

Stranger: Those who have been purchased, and have so become possessions; these are unmistakably slaves, and certainly do not claim royal science.

Young Socrates: Certainly not.

290c

Stranger: Again, freemen who of their own accord become the servants of the other classes in a State, and who exchange and equalise the products of husbandry and the other arts, some sitting in the market-place, others going from city to city by land or sea, and giving money in exchange for money or for other productions — the money-changer, the merchant, the ship-owner, the retailer, will not put in any claim to statecraft or politics?

Young Socrates: No; unless, indeed, to the politics of commerce.

Stranger: But surely men whom we see acting as hirelings and serfs, and too happy to turn their hand to anything, will not profess to share in royal science?

Young Socrates: Certainly not.

Stranger: But what would you say of some other serviceable officials?

Young Socrates: Who are they, and what services do they perform?

Stranger: There are heralds, and scribes perfected by practice, and divers others who have great skill in various sorts of business connected with the government of states — what shall we call them?

Young Socrates: They are the officials, and servants of the rulers, as you just now called them, but not themselves rulers.

Stranger: There may be something strange in any servant pretending to be a ruler, and yet I do not think that I could have been dreaming when I imagined that the principal claimants to political science would be found somewhere in this neighbourhood.

Young Socrates: Very true.

Stranger: Well, let us draw nearer, and try the claims of some who have not yet been tested: in the first place, there are diviners, who have a portion of servile or ministerial science, and are thought to be the interpreters of the gods to men.

Young Socrates: True.

291b

Stranger: There is also the priestly class, who, as the law declares, know how to give the gods gifts from men in the form of sacrifices which are acceptable to them, and to ask on our behalf blessings in return from them. Now both these are branches of the servile or ministerial art.

Young Socrates: Yes, clearly.

291c

Stranger: And here I think that we seem to be getting on the right track; for the priest and the diviner are swollen with pride and prerogative, and they create an awful impression of themselves by the magnitude of their enterprises; in Egypt, the king himself is not allowed to reign, unless he have priestly powers, and if he should be of another class and has thrust himself in, he must get enrolled in the priesthood. In many parts of Hellas, the duty of offering the most solemn propitiatory sacrifices is assigned to the highest magistracies, and here, at Athens, the most solemn and national of the ancient sacrifices are supposed to be celebrated by him who has been chosen by lot to be the King Archon.

Young Socrates: Precisely.

Stranger: But who are these other kings and priests elected by lot who now come into view followed by their retainers and a vast throng, as the former class disappears and the scene changes?

Young Socrates: Whom can you mean?

Stranger: They are a strange crew.

Young Socrates: Why strange?

291e

Stranger: A minute ago I thought that they were animals of every tribe; for many of them are like lions and centaurs, and many more like satyrs and such weak and shifty creatures; — Protean shapes quickly changing into one another's forms and natures; and now, Socrates, I begin to see who they are.

Young Socrates: Who are they? You seem to be gazing on some strange vision.

Stranger: Yes; every one looks strange when you do not know him; and just now I myself fell into this mistake — at first sight, coming suddenly upon him, I did not recognize the politician and his troop.

Young Socrates: Who is he?

Stranger: The chief of Sophists and most accomplished of wizards, who must at any cost be separated from the true king or Statesman, if we are ever to see daylight in the present enquiry.

Young Socrates: That is a hope not lightly to be renounced.

Stranger: Never, if I can help it; and, first, let me ask you a question.

Young Socrates: What?

Stranger: Is not monarchy a recognized form of government?

292b

Young Socrates: Yes.

Stranger: And, after monarchy, next in order comes the government of the few?

Young Socrates: Of course.

Stranger: Is not the third form of government the rule of the multitude, which is called by the name of democracy?

Young Socrates: Certainly.

Stranger: And do not these three expand in a manner into five, producing out of themselves two other names?

292c

Young Socrates: What are they?

Stranger: There is a criterion of voluntary and involuntary, poverty and riches, law and the absence of law, which men now-a-days apply to them; the two first they subdivide accordingly, and ascribe to monarchy two forms and two corresponding names, royalty and tyranny.

Young Socrates: Very true.

Stranger: And the government of the few they distinguish by the names of aristocracy and oligarchy.

Young Socrates: Certainly.

292d

Stranger: Democracy alone, whether rigidly observing the laws or not, and whether the multitude rule over the men of property with their consent or against their consent, always in ordinary language has the same name.

Young Socrates: True.

Stranger: But do you suppose that any form of government which is defined by these characteristics of the one, the few, or

the many, of poverty or wealth, of voluntary or compulsory submission, of written law or the absence of law, can be a right one?

Young Socrates: Why not?

Stranger: Reflect; and follow me.

292e

Young Socrates: In what direction?

Stranger: Shall we abide by what we said at first, or shall we retract our words?

Young Socrates: To what do you refer?

Stranger: If I am not mistaken, we said that royal power was a science?

Young Socrates: Yes.

Stranger: And a science of a peculiar kind, which was selected out of the rest as having a character which is at once judicial and authoritative?

Young Socrates: Yes.

Stranger: And there was one kind of authority over lifeless things and another over living animals; and so we proceeded in the division step by step up to this point, not losing the idea of science, but unable as yet to determine the nature of the particular science?

293a

Young Socrates: True.

Stranger: Hence we are led to observe that the distinguishing principle of the State cannot be the few or many, the voluntary or involuntary, poverty or riches; but some notion of science must enter into it, if we are to be consistent with what has preceded.

Young Socrates: And we must be consistent.

Stranger: Well, then, in which of these various forms of States may the science of government, which is among the greatest of all sciences and most difficult to acquire, be supposed to reside? That we must discover, and then we shall see who are the false politicians who pretend to be politicians but are not, although they persuade many, and shall separate them from the wise king.

Young Socrates: That, as the argument has already intimated, will be our duty.

Stranger: Do you think that the multitude in a State can attain political science?

Young Socrates: Impossible.

Stranger: But, perhaps, in a city of a thousand men, there would be a hundred, or say fifty, who could?

Young Socrates: In that case political science would certainly be the easiest of all sciences; there could not be found in a city of that number as many really first-rate draught-players, if judged by the standard of the rest of Hellas, and there would certainly not be as many kings. For kings we may truly call those who possess royal science, whether they rule or not, as was shown in the previous argument.

Stranger: Thank you for reminding me; and the consequence is that any true form of government can only be supposed to be the government of one, two, or, at any rate, of a few.

Young Socrates: Certainly.

Stranger: And these, whether they rule with the will, or against the will, of their subjects, with written laws or without written laws, and whether they are poor or rich, and whatever be the nature of their rule, must be supposed, according to our present

view, to rule on some scientific principle; just as the physician, whether he cures us against our will or with our will, and whatever be his mode of treatment, — incision, burning, or the infliction of some other pain, — whether he practises out of a book or not out of a book, and whether he be rich or poor, whether he purges or reduces in some other way, or even fattens his patients, is a physician all the same, so long as he exercises authority over them according to rules of art, if he only does them good and heals and saves them. And this we lay down to be the only proper test of the art of medicine, or of any other art of command.

293e

Young Socrates: Quite true.

294a

Stranger: Then that can be the only true form of government in which the governors are really found to possess science, and are not mere pretenders, whether they rule according to law or without law, over willing or unwilling subjects, and are rich or poor themselves — none of these things can with any propriety be included in the notion of the ruler.

Young Socrates: True.

294b

Stranger: And whether with a view to the public good they purge the State by killing some, or exiling some; whether they reduce the size of the body corporate by sending out from the hive swarms of citizens, or, by introducing persons from without, increase it; while they act according to the rules of wisdom and justice, and use their power with a view to the general security and improvement, the city over which they rule, and which has these characteristics, may be described as the only true State. All other governments are not genuine or real; but only imitations of this, and some of them are better and some of them are worse; the better are said to be well

governed, but they are mere imitations like the others.

294c

Young Socrates: I agree, Stranger, in the greater part of what you say; but as to their ruling without laws — the expression has a harsh sound.

294d

Stranger: You have been too quick for me, Socrates; I was just going to ask you whether you objected to any of my statements. And now I see that we shall have to consider this notion of there being good government without laws.

Young Socrates: Certainly.

Stranger: There can be no doubt that legislation is in a manner the business of a king, and yet the best thing of all is not that the law should rule, but that a man should rule supposing him to have wisdom and royal power. Do you see why this is?

Young Socrates: Why?

294e

Stranger: Because the law does not perfectly comprehend what is noblest and most just for all and therefore cannot enforce what is best. The differences of men and actions, and the endless irregular movements of human things, do not admit of any universal and simple rule. And no art whatsoever can lay down a rule which will last for all time.

Young Socrates: Of course not.

Stranger: But the law is always striving to make one; — like an obstinate and ignorant tyrant, who will not allow anything to be done contrary to his appointment, or any question to be asked — not even in sudden changes of circumstances, when something happens to be better than what he commanded for some one.

295a

Young Socrates: Certainly; the law treats us all precisely in the manner which you describe.

Stranger: A perfectly simple principle can never be applied to a state of things which is the reverse of simple.

Young Socrates: True.

Stranger: Then if the law is not the perfection of right, why are we compelled to make laws at all? The reason of this has next to be investigated.

Young Socrates: Certainly.

295b

Stranger: Let me ask, whether you have not meetings for gymnastic contests in your city, such as there are in other cities, at which men compete in running, wrestling, and the like?

Young Socrates: Yes; they are very common among us.

Stranger: And what are the rules which are enforced on their pupils by professional trainers or by others having similar authority? Can you remember?

Young Socrates: To what do you refer?

Stranger: The training-masters do not issue minute rules for individuals, or give every individual what is exactly suited to his constitution; they think that they ought to go more roughly to work, and to prescribe generally the regimen which will benefit the majority.

295c

Young Socrates: Very true.

Stranger: And therefore they assign equal amounts of exercise to them all; they send them forth together, and let them rest together from their running, wrestling, or whatever the form of bodily exercise may be.

Young Socrates: True.

295d

Stranger: And now observe that the legislator who has to preside over the herd, and to enforce justice in their dealings with one another, will not be able, in enacting for the general good, to provide exactly what is suitable for each particular case.

Young Socrates: He cannot be expected to do so.

Stranger: He will lay down laws in a general form for the majority, roughly meeting the cases of individuals; and some of them he will deliver in writing, and others will be unwritten; and these last will be traditional customs of the country.

Young Socrates: He will be right.

Stranger: Yes, quite right; for how can he sit at every man's side all through his life, prescribing for him the exact particulars of his duty? Who, Socrates, would be equal to such a task? No one who really had the royal science, if he had been able to do this, would have imposed upon himself the restriction of a written law.

Young Socrates: So I should infer from what has now been said.

Stranger: Or rather, my good friend, from what is going to be said.

Young Socrates: And what is that?

Stranger: Let us put to ourselves the case of a physician, or trainer, who is about to go into a far country, and is expecting to be a long time away from his patients — thinking that his instructions will not be remembered unless they are written down, he will leave notes of them for the use of his pupils or patients.

Young Socrates: True.

Stranger: But what would you say, if he came back sooner than he had intended, and, owing to an unexpected change of the winds or other celestial influences, something else happened to be better for them, — would he not venture to suggest this new remedy, although not contemplated in his former prescription? Would he persist in observing the original law, neither himself giving any new commandments, nor the patient daring to do otherwise than was prescribed, under the idea that this course only was healthy and medicinal, all others noxious and heterodox? Viewed in the light of science and true art, would not all such enactments be utterly ridiculous?

Young Socrates: Utterly.

Stranger: And if he who gave laws, written or unwritten, determining what was good or bad, honourable or dishonourable, just or unjust, to the tribes of men who flock together in their several cities, and are governed in accordance with them; if, I say, the wise legislator were suddenly to come again, or another like to him, is he to be prohibited from changing them? — would not this prohibition be in reality quite as ridiculous as the other?

296c

Young Socrates: Certainly.

Stranger: Do you know a plausible saying of the common people which is in point?

Young Socrates: I do not recall what you mean at the moment.

296d

Stranger: They say that if any one knows how the ancient laws may be improved, he must first persuade his own State of the improvement, and then he may legislate, but not otherwise.

Young Socrates: And are they not right?

Stranger: I dare say. But supposing that he does use some gentle violence for their good, what is this violence to be called? Or rather, before you answer, let me ask the same question in reference to our previous instances.

Young Socrates: What do you mean?

296e

Stranger: Suppose that a skilful physician has a patient, of whatever sex or age, whom he compels against his will to do something for his good which is contrary to the written rules; what is this compulsion to be called? Would you ever dream of calling it a violation of the art, or a breach of the laws of health? Nothing could be more unjust than for the patient to whom such violence is applied, to charge the physician who practises the violence with wanting skill or aggravating his disease.

Young Socrates: Most true.

Stranger: In the political art error is not called disease, but evil, or disgrace, or injustice.

Young Socrates: Quite true.

Stranger: And when the citizen, contrary to law and custom, is compelled to do what is juster and better and nobler than he did before, the last and most absurd thing which he could say about such violence is that he has incurred disgrace or evil or injustice at the hands of those who compelled him.

Young Socrates: Very true.

Stranger: And shall we say that the violence, if exercised by a rich man, is just, and if by a poor man, unjust? May not any man, rich or poor, with or without laws, with the will of the citizens or against the will of the citizens, do what is for their interest? Is not this the true principle of government, according to which the wise and good man will order the affairs of his subjects? As the pilot, by watching continually over the

interests of the ship and of the crew, — not by laying down rules, but by making his art a law, — preserves the lives of his fellow-sailors, even so, and in the self-same way, may there not be a true form of polity created by those who are able to govern in a similar spirit, and who show a strength of art which is superior to the law? Nor can wise rulers ever err while they observing the one great rule of distributing justice to the citizens with intelligence and skill, are able to preserve them, and, as far as may be, to make them better from being worse.

297d

Young Socrates: No one can deny what has been now said.

Stranger: Neither, if you consider, can any one deny the other statement.

Young Socrates: What was it?

Stranger: We said that no great number of persons, whoever they may be, can attain political knowledge, or order a State wisely, but that the true government is to be found in a small body, or in an individual, and that other States are but imitations of this, as we said a little while ago, some for the better and some for the worse.

297e

Young Socrates: What do you mean? I cannot have understood your previous remark about imitations.

Stranger: And yet the mere suggestion which I hastily threw out is highly important, even if we leave the question where it is, and do not seek by the discussion of it to expose the error which prevails in this matter.

Young Socrates: What do you mean?

Stranger: The idea which has to be grasped by us is not easy or familiar; but we may attempt to express it thus: — Supposing the government of which I have been speaking to be the only

true model, then the others must use the written laws of this — in no other way can they be saved; they will have to do what is now generally approved, although not the best thing in the world.

298a

Young Socrates: What is this?

Stranger: No citizen should do anything contrary to the laws, and any infringement of them should be punished with death and the most extreme penalties; and this is very right and good when regarded as the second best thing, if you set aside the first, of which I was just now speaking. Shall I explain the nature of what I call the second best?

Young Socrates: By all means.

Stranger: I must again have recourse to my favourite images; through them, and them alone, can I describe kings and rulers.

Young Socrates: What images?

Stranger: The noble pilot and the wise physician, who 'is worth many another man' — in the similitude of these let us endeavour to discover some image of the king.

298b

Young Socrates: What sort of an image?

Stranger: Well, such as this: — Every man will reflect that he suffers strange things at the hands of both of them; the physician saves any whom he wishes to save, and any whom he wishes to maltreat he maltreats — cutting or burning them; and at the same time requiring them to bring him payments, which are a sort of tribute, of which little or nothing is spent upon the sick man, and the greater part is consumed by him and his domestics; and the finale is that he receives money from the relations of the sick man or from some enemy of his, and puts him out of the way. And the pilots of ships are guilty of

numberless evil deeds of the same kind; they intentionally play false and leave you ashore when the hour of sailing arrives; or they cause mishaps at sea and cast away their freight; and are guilty of other rogueries. Now suppose that we, bearing all this in mind, were to determine, after consideration, that neither of these arts shall any longer be allowed to exercise absolute control either over freemen or over slaves, but that we will summon an assembly either of all the people, or of the rich only, that anybody who likes, whatever may be his calling, or even if he have no calling, may offer an opinion either about seamanship or about diseases — whether as to the manner in which physic or surgical instruments are to be applied to the patient, or again about the vessels and the nautical implements which are required in navigation, and how to meet the dangers of winds and waves which are incidental to the voyage, how to behave when encountering pirates, and what is to be done with the old-fashioned galleys, if they have to fight with others of a similar build — and that, whatever shall be decreed by the multitude on these points, upon the advice of persons skilled or unskilled, shall be written down on triangular tablets and columns, or enacted although unwritten to be national customs; and that in all future time vessels shall be navigated and remedies administered to the patient after this fashion.

299b

Young Socrates: What a strange notion!

Stranger: Suppose further, that the pilots and physicians are appointed annually, either out of the rich, or out of the whole people, and that they are elected by lot; and that after their election they navigate vessels and heal the sick according to the written rules.

Young Socrates: Worse and worse.

Stranger: But hear what follows: — When the year of office has expired, the pilot or physician has to come before a court of

review, in which the judges are either selected from the wealthy classes or chosen by lot out of the whole people; and anybody who pleases may be their accuser, and may lay to their charge, that during the past year they have not navigated their vessels or healed their patients according to the letter of the law and the ancient customs of their ancestors; and if either of them is condemned, some of the judges must fix what he is to suffer or pay.

Young Socrates: He who is willing to take a command under such conditions, deserves to suffer any penalty.

299d

Stranger: Yet once more, we shall have to enact that if any one is detected enquiring into piloting and navigation, or into health and the true nature of medicine, or about the winds, or other conditions of the atmosphere, contrary to the written rules, and has any ingenious notions about such matters, he is not to be called a pilot or physician, but a cloudy prating sophist; — further, on the ground that he is a corrupter of the young, who would persuade them to follow the art of medicine or piloting in an unlawful manner, and to exercise an arbitrary rule over their patients or ships, any one who is qualified by law may inform against him, and indict him in some court, and then if he is found to be persuading any, whether young or old, to act contrary to the written law, he is to be punished with the utmost rigour; for no one should presume to be wiser than the laws; and as touching healing and health and piloting and navigation, the nature of them is known to all, for anybody may learn the written laws and the national customs. If such were the mode of procedure, Socrates, about these sciences and about generalship, and any branch of hunting, or about painting or imitation in general, or carpentry, or any sort of handicraft, or husbandry, or planting, or if we were to see an art of rearing horses, or tending herds, or divination, or any ministerial

service, or draught-playing, or any science conversant with number, whether simple or square or cube, or comprising motion, — I say, if all these things were done in this way according to written regulations, and not according to art, what would be the result?

300b

Young Socrates: All the arts would utterly perish, and could never be recovered, because enquiry would be unlawful. And human life, which is bad enough already, would then become utterly unendurable.

Stranger: But what, if while compelling all these operations to be regulated by written law, we were to appoint as the guardian of the laws some one elected by a show of hands, or by lot, and he caring nothing about the laws, were to act contrary to them from motives of interest or favour, and without knowledge, — would not this be a still worse evil than the former?

Young Socrates: Very true.

300c

Stranger: To go against the laws, which are based upon long experience, and the wisdom of counsellors who have graciously recommended them and persuaded the multitude to pass them, would be a far greater and more ruinous error than any adherence to written law?

Young Socrates: Certainly.

Stranger: Therefore, as there is a danger of this, the next best thing in legislating is not to allow either the individual or the multitude to break the law in any respect whatever.

Young Socrates: True.

300d

Stranger: The laws would be copies of the true particulars of action as far as they admit of being written down from the lips of those who have knowledge?

Young Socrates: Certainly they would.

Stranger: And, as we were saying, he who has knowledge and is a true Statesman, will do many things within his own sphere of action by his art without regard to the laws, when he is of opinion that something other than that which he has written down and enjoined to be observed during his absence would be better.

Young Socrates: Yes, we said so.

300e

Stranger: And any individual or any number of men, having fixed laws, in acting contrary to them with a view to something better, would only be acting, as far as they are able, like the true Statesman?

Young Socrates: Certainly.

Stranger: If they had no knowledge of what they were doing, they would imitate the truth, and they would always imitate ill; but if they had knowledge, the imitation would be the perfect truth, and an imitation no longer.

301a

Young Socrates: Quite true.

Stranger: And the principle that no great number of men are able to acquire a knowledge of any art has been already admitted by us.

Young Socrates: Yes, it has.

Stranger: Then the royal or political art, if there be such an art, will never be attained either by the wealthy or by the other mob.

Young Socrates: Impossible.

301b

Stranger: Then the nearest approach which these lower forms of government can ever make to the true government of the one scientific ruler, is to do nothing contrary to their own written laws and national customs.

Young Socrates: Very good.

Stranger: When the rich imitate the true form, such a government is called aristocracy; and when they are regardless of the laws, oligarchy.

Young Socrates: True.

Stranger: Or again, when an individual rules according to law in imitation of him who knows, we call him a king; and if he rules according to law, we give him the same name, whether he rules with opinion or with knowledge.

301c

Young Socrates: To be sure.

Stranger: And when an individual truly possessing knowledge rules, his name will surely be the same — he will be called a king; and thus the five names of governments, as they are now reckoned, become one.

Young Socrates: That is true.

301d

Stranger: And when an individual ruler governs neither by law nor by custom, but following in the steps of the true man of science pretends that he can only act for the best by violating the laws, while in reality appetite and ignorance are the motives of the imitation, may not such an one be called a tyrant?

Young Socrates: Certainly.

Stranger: And this we believe to be the origin of the tyrant and the king, of oligarchies, and aristocracies, and democracies, — because men are offended at the one monarch, and can never be

made to believe that any one can be worthy of such authority, or is able and willing in the spirit of virtue and knowledge to act justly and holily to all; they fancy that he will be a despot who will wrong and harm and slay whom he pleases of us; for if there could be such a despot as we describe, they would acknowledge that we ought to be too glad to have him, and that he alone would be the happy ruler of a true and perfect State.

301e

Young Socrates: To be sure.

302a

Stranger: But then, as the State is not like a beehive, and has no natural head who is at once recognized to be the superior both in body and in mind, mankind are obliged to meet and make laws, and endeavour to approach as nearly as they can to the true form of government.

Young Socrates: True.

Stranger: And when the foundation of politics is in the letter only and in custom, and knowledge is divorced from action, can we wonder, Socrates, at the miseries which there are, and always will be, in States? Any other art, built on such a foundation and thus conducted, would ruin all that it touched. Ought we not rather to wonder at the natural strength of the political bond? For States have endured all this, time out of mind, and yet some of them still remain and are not overthrown, though many of them, like ships at sea, founder from time to time, and perish and have perished and will hereafter perish, through the badness of their pilots and crews, who have the worst sort of ignorance of the highest truths — I mean to say, that they are wholly unacquainted with politics, of which, above all other sciences, they believe themselves to have acquired the most perfect knowledge.

Young Socrates: Very true.

Stranger: Then the question arises: — which of these untrue forms of government is the least oppressive to their subjects, though they are all oppressive; and which is the worst of them? Here is a consideration which is beside our present purpose, and yet having regard to the whole it seems to influence all our actions: we must examine it.

302d

Young Socrates: Yes, we must.

Stranger: You may say that of the three forms, the same is at once the hardest and the easiest.

Young Socrates: What do you mean?

Stranger: I am speaking of the three forms of government, which I mentioned at the beginning of this discussion — monarchy, the rule of the few, and the rule of the many.

Young Socrates: True.

Stranger: If we divide each of these we shall have six, from which the true one may be distinguished as a seventh.

Young Socrates: How would you make the division?

Stranger: Monarchy divides into royalty and tyranny; the rule of the few into aristocracy, which has an auspicious name, and oligarchy; and democracy or the rule of the many, which before was one, must now be divided.

302e

Young Socrates: On what principle of division?

Stranger: On the same principle as before, although the name is now discovered to have a twofold meaning. For the distinction of ruling with law or without law, applies to this as well as to the rest.

Young Socrates: Yes.

Stranger: The division made no difference when we were looking for the perfect State, as we showed before. But now that this has been separated off, and, as we said, the others alone are left for us, the principle of law and the absence of law will bisect them all.

Young Socrates: That would seem to follow, from what has been said.

303a

Stranger: Then monarchy, when bound by good prescriptions or laws, is the best of all the six, and when lawless is the most bitter and oppressive to the subject.

Young Socrates: True.

Stranger: The government of the few, which is intermediate between that of the one and many, is also intermediate in good and evil; but the government of the many is in every respect weak and unable to do either any great good or any great evil, when compared with the others, because the offices are too minutely subdivided and too many hold them. And this therefore is the worst of all lawful governments, and the best of all lawless ones. If they are all without the restraints of law, democracy is the form in which to live is best; if they are well ordered, then this is the last which you should choose, as royalty, the first form, is the best, with the exception of the seventh, for that excels them all, and is among States what God is among men.

303b

Young Socrates: You are quite right, and we should choose that above all.

303c

Stranger: The members of all these States, with the exception of the one which has knowledge, may be set aside as being not Statesmen but partisans, — upholders of the most monstrous

idols, and themselves idols; and, being the greatest imitators and magicians, they are also the greatest of Sophists.

Young Socrates: The name of Sophist after many windings in the argument appears to have been most justly fixed upon the politicians, as they are termed.

303d

Stranger: And so our satyric drama has been played out; and the troop of Centaurs and Satyrs, however unwilling to leave the stage, have at last been separated from the political science.

Young Socrates: So I perceive.

Stranger: There remain, however, natures still more troublesome, because they are more nearly akin to the king, and more difficult to discern; the examination of them may be compared to the process of refining gold.

303e

Young Socrates: What is your meaning?

Stranger: The workmen begin by sifting away the earth and stones and the like; there remain in a confused mass the valuable elements akin to gold, which can only be separated by fire, — copper, silver, and other precious metal; these are at last refined away by the use of tests, until the gold is left quite pure.

Young Socrates: Yes, that is the way in which these things are said to be done.

304a

Stranger: In like manner, all alien and uncongenial matter has been separated from political science, and what is precious and of a kindred nature has been left; there remain the nobler arts of the general and the judge, and the higher sort of oratory which is an ally of the royal art, and persuades men to do justice, and assists in guiding the helm of States: — How can we best clear away all these, leaving him whom we seek alone and unalloyed?

Young Socrates: That is obviously what has in some way to be attempted.

Stranger: If the attempt is all that is wanting, he shall certainly be brought to light; and I think that the illustration of music may assist in exhibiting him. Please to answer me a question.

304b

Young Socrates: What question?

Stranger: There is such a thing as learning music or handicraft arts in general?

Young Socrates: There is.

Stranger: And is there any higher art or science, having power to decide which of these arts are and are not to be learned; — what do you say?

Young Socrates: I should answer that there is.

Stranger: And do we acknowledge this science to be different from the others?

304c

Young Socrates: Yes.

Stranger: And ought the other sciences to be superior to this, or no single science to any other? Or ought this science to be the overseer and governor of all the others?

Young Socrates: The latter.

Stranger: You mean to say that the science which judges whether we ought to learn or not, must be superior to the science which is learned or which teaches?

Young Socrates: Far superior.

304d

Stranger: And the science which determines whether we ought to persuade or not, must be superior to the science which is able

to persuade?

Young Socrates: Of course.

Stranger: Very good; and to what science do we assign the power of persuading a multitude by a pleasing tale and not by teaching?

Young Socrates: That power, I think, must clearly be assigned to rhetoric.

Stranger: And to what science do we give the power of determining whether we are to employ persuasion or force towards any one, or to refrain altogether?

Young Socrates: To that science which governs the arts of speech and persuasion.

304e

Stranger: Which, if I am not mistaken, will be politics?

Young Socrates: Very good.

Stranger: Rhetoric seems to be quickly distinguished from politics, being a different species, yet ministering to it.

Young Socrates: Yes.

Stranger: But what would you think of another sort of power or science?

Young Socrates: What science?

Stranger: The science which has to do with military operations against our enemies — is that to be regarded as a science or not?

Young Socrates: How can generalship and military tactics be regarded as other than a science?

Stranger: And is the art which is able and knows how to advise when we are to go to war, or to make peace, the same as this or different?

305a

Young Socrates: If we are to be consistent, we must say different.

Stranger: And we must also suppose that this rules the other, if we are not to give up our former notion?

Young Socrates: True.

Stranger: And, considering how great and terrible the whole art of war is, can we imagine any which is superior to it but the truly royal?

Young Socrates: No other.

Stranger: The art of the general is only ministerial, and therefore not political?

305b

Young Socrates: Exactly.

Stranger: Once more let us consider the nature of the righteous judge.

Young Socrates: Very good.

Stranger: Does he do anything but decide the dealings of men with one another to be just or unjust in accordance with the standard which he receives from the king and legislator, — showing his own peculiar virtue only in this, that he is not perverted by gifts, or fears, or pity, or by any sort of favour or enmity, into deciding the suits of men with one another contrary to the appointment of the legislator?

Young Socrates: No; his office is such as you describe.

305c

Stranger: Then the inference is that the power of the judge is not royal, but only the power of a guardian of the law which ministers to the royal power?

Young Socrates: True.

Stranger: The review of all these sciences shows that none of them is political or royal. For the truly royal ought not itself to act, but to rule over those who are able to act; the king ought to know what is and what is not a fitting opportunity for taking the initiative in matters of the greatest importance, whilst others should execute his orders.

Young Socrates: True.

Stranger: And, therefore, the arts which we have described, as they have no authority over themselves or one another, but are each of them concerned with some special action of their own, have, as they ought to have, special names corresponding to their several actions.

Young Socrates: I agree.

Stranger: And the science which is over them all, and has charge of the laws, and of all matters affecting the State, and truly weaves them all into one, if we would describe under a name characteristic of their common nature, most truly we may call politics.

Young Socrates: Exactly so.

Stranger: Then, now that we have discovered the various classes in a State, shall I analyse politics after the pattern which weaving supplied?

Young Socrates: I greatly wish that you would.

Stranger: Then I must describe the nature of the royal web, and show how the various threads are woven into one piece.

306a

Young Socrates: Clearly.

Stranger: A task has to be accomplished, which, although difficult, appears to be necessary.

Young Socrates: Certainly the attempt must be made.

Stranger: To assume that one part of virtue differs in kind from another, is a position easily assailable by contentious disputants, who appeal to popular opinion.

Young Socrates: I do not understand.

Stranger: Let me put the matter in another way: I suppose that you would consider courage to be a part of virtue?

Young Socrates: Certainly I should.

306b

Stranger: And you would think temperance to be different from courage; and likewise to be a part of virtue?

Young Socrates: True.

Stranger: I shall venture to put forward a strange theory about them.

Young Socrates: What is it?

Stranger: That they are two principles which thoroughly hate one another and are antagonistic throughout a great part of nature.

Young Socrates: How singular!

306c

Stranger: Yes, very — for all the parts of virtue are commonly said to be friendly to one another.

Young Socrates: Yes.

Stranger: Then let us carefully investigate whether this is universally true, or whether there are not parts of virtue which are at war with their kindred in some respect.

Young Socrates: Tell me how we shall consider that question.

Stranger: We must extend our enquiry to all those things which we consider beautiful and at the same time place in two opposite classes.

Young Socrates: Explain; what are they?

306d

Stranger: Acuteness and quickness, whether in body or soul or in the movement of sound, and the imitations of them which painting and music supply, you must have praised yourself before now, or been present when others praised them.

Young Socrates: Certainly.

Stranger: And do you remember the terms in which they are praised?

Young Socrates: I do not.

Stranger: I wonder whether I can explain to you in words the thought which is passing in my mind.

Young Socrates: Why not?

306e

Stranger: You fancy that this is all so easy: Well, let us consider these notions with reference to the opposite classes of action under which they fall. When we praise quickness and energy and acuteness, whether of mind or body or sound, we express our praise of the quality which we admire by one word, and that one word is manliness or courage.

Young Socrates: How?

307a

Stranger: We speak of an action as energetic and brave, quick and manly, and vigorous too; and when we apply the name of which I speak as the common attribute of all these natures, we certainly praise them.

Young Socrates: True.

Stranger: And do we not often praise the quiet strain of action also?

Young Socrates: To be sure.

Stranger: And do we not then say the opposite of what we said of the other?

Young Socrates: How do you mean?

307b

Stranger: We exclaim How calm! How temperate! in admiration of the slow and quiet working of the intellect, and of steadiness and gentleness in action, of smoothness and depth of voice, and of all rhythmical movement and of music in general, when these have a proper solemnity. Of all such actions we predicate not courage, but a name indicative of order.

Young Socrates: Very true.

Stranger: But when, on the other hand, either of these is out of place, the names of either are changed into terms of censure.

307c

Young Socrates: How so?

Stranger: Too great sharpness or quickness or hardness is termed violence or madness; too great slowness or gentleness is called cowardice or sluggishness; and we may observe, that for the most part these qualities, and the temperance and manliness of the opposite characters, are arrayed as enemies on opposite sides, and do not mingle with one another in their respective actions; and if we pursue the enquiry, we shall find that men who have these different qualities of mind differ from one another.

Young Socrates: In what respect?

Stranger: In respect of all the qualities which I mentioned, and very likely of many others. According to their respective affinities to either class of actions they distribute praise and blame, — praise to the actions which are akin to their own, blame to those of the opposite party — and out of this many quarrels and occasions of quarrel arise among them.

Young Socrates: True.

Stranger: The difference between the two classes is often a trivial concern; but in a state, and when affecting really important matters, becomes of all disorders the most hateful.

Young Socrates: To what do you refer?

Stranger: To nothing short of the whole regulation of human life. For the orderly class are always ready to lead a peaceful life, quietly doing their own business; this is their manner of behaving with all men at home, and they are equally ready to find some way of keeping the peace with foreign States. And on account of this fondness of theirs for peace, which is often out of season where their influence prevails, they become by degrees unwarlike, and bring up their young men to be like themselves; they are at the mercy of their enemies; whence in a few years they and their children and the whole city often pass imperceptibly from the condition of freemen into that of slaves.

Young Socrates: What a cruel fate!

Stranger: And now think of what happens with the more courageous natures. Are they not always inciting their country to go to war, owing to their excessive love of the military life? they raise up enemies against themselves many and mighty, and either utterly ruin their native-land or enslave and subject it to its foes?

Young Socrates: That, again, is true.

Stranger: Must we not admit, then, that where these two classes exist, they always feel the greatest antipathy and antagonism towards one another?

Young Socrates: We cannot deny it.

Stranger: And returning to the enquiry with which we began, have we not found that considerable portions of virtue are at

variance with one another, and give rise to a similar opposition in the characters who are endowed with them?

Young Socrates: True.

Stranger: Let us consider a further point.

Young Socrates: What is it?

Stranger: I want to know, whether any constructive art will make any, even the most trivial thing, out of bad and good materials indifferently, if this can be helped? does not all art rather reject the bad as far as possible, and accept the good and fit materials, and from these elements, whether like or unlike, gathering them all into one, work out some nature or idea?

308c

Young Socrates: To, be sure.

308d

Stranger: Then the true and natural art of statesmanship will never allow any State to be formed by a combination of good and bad men, if this can be avoided; but will begin by testing human natures in play, and after testing them, will entrust them to proper teachers who are the ministers of her purposes — she will herself give orders, and maintain authority; just as the art of weaving continually gives orders and maintains authority over the carders and all the others who prepare the material for the work, commanding the subsidiary arts to execute the works which she deems necessary for making the web.

Young Socrates: Quite true.

Stranger: In like manner, the royal science appears to me to be the mistress of all lawful educators and instructors, and having this queenly power, will not permit them to train men in what will produce characters unsuited to the political constitution which she desires to create, but only in what will produce such

as are suitable. Those which have no share of manliness and temperance, or any other virtuous inclination, and, from the necessity of an evil nature, are violently carried away to godlessness and insolence and injustice, she gets rid of by death and exile, and punishes them with the greatest of disgraces.

Young Socrates: That is commonly said.

Stranger: But those who are wallowing in ignorance and baseness she bows under the yoke of slavery.

Young Socrates: Quite right.

309b

Stranger: The rest of the citizens, out of whom, if they have education, something noble may be made, and who are capable of being united by the statesman, the kingly art blends and weaves together; taking on the one hand those whose natures tend rather to courage, which is the stronger element and may be regarded as the warp, and on the other hand those which incline to order and gentleness, and which are represented in the figure as spun thick and soft, after the manner of the woof — these, which are naturally opposed, she seeks to bind and weave together in the following manner:

Young Socrates: In what manner?

Stranger: First of all, she takes the eternal element of the soul and binds it with a divine cord, to which it is akin, and then the animal nature, and binds that with human cords.

309c

Young Socrates: I do not understand what you mean.

Stranger: The meaning is, that the opinion about the honourable and the just and good and their opposites, which is true and confirmed by reason, is a divine principle, and when implanted in the soul, is implanted, as I maintain, in a nature of heavenly birth.

Young Socrates: Yes; what else should it be?

309d

Stranger: Only the Statesman and the good legislator, having the inspiration of the royal muse, can implant this opinion, and he, only in the rightly educated, whom we were just now describing.

Young Socrates: Likely enough.

Stranger: But him who cannot, we will not designate by any of the names which are the subject of the present enquiry.

Young Socrates: Very right.

Stranger: The courageous soul when attaining this truth becomes civilized, and rendered more capable of partaking of justice; but when not partaking, is inclined to brutality. Is not that true?

Young Socrates: Certainly.

Stranger: And again, the peaceful and orderly nature, if sharing in these opinions, becomes temperate and wise, as far as this may be in a State, but if not, deservedly obtains the ignominious name of silliness.

Young Socrates: Quite true.

Stranger: Can we say that such a connexion as this will lastingly unite the evil with one another or with the good, or that any science would seriously think of using a bond of this kind to join such materials?

Young Socrates: Impossible.

310a

Stranger: But in those who were originally of a noble nature, and who have been nurtured in noble ways, and in those only, may we not say that union is implanted by law, and that this is the medicine which art prescribes for them, and of all the bonds

which unite the dissimilar and contrary parts of virtue is not this, as I was saying, the divinest?

Young Socrates: Very true.

Stranger: Where this divine bond exists there is no difficulty in imagining, or when you have imagined, in creating the other bonds, which are human only.

Young Socrates: How is that, and what bonds do you mean?

Stranger: Rights of intermarriage, and ties which are formed between States by giving and taking children in marriage, or between individuals by private betrothals and espousals. For most persons form marriage connexions without due regard to what is best for the procreation of children.

Young Socrates: In what way?

Stranger: They seek after wealth and power, which in matrimony are objects not worthy even of a serious censure.

Young Socrates: There is no need to consider them at all.

310c

Stranger: More reason is there to consider the practice of those who make family their chief aim, and to indicate their error.

Young Socrates: Quite true.

Stranger: They act on no true principle at all; they seek their ease and receive with open arms those who are like themselves, and hate those who are unlike them, being too much influenced by feelings of dislike.

Young Socrates: How so?

310d

Stranger: The quiet orderly class seek for natures like their own, and as far as they can they marry and give in marriage exclusively in this class, and the courageous do the same; they seek natures like their own, whereas they should both do

precisely the opposite.

Young Socrates: How and why is that?

Stranger: Because courage, when untempered by the gentler nature during many generations, may at first bloom and strengthen, but at last bursts forth into downright madness.

Young Socrates: Like enough.

310e

Stranger: And then, again, the soul which is over-full of modesty and has no element of courage in many successive generations, is apt to grow too indolent, and at last to become utterly paralyzed and useless.

Young Socrates: That, again, is quite likely.

Stranger: It was of these bonds I said that there would be no difficulty in creating them, if only both classes originally held the same opinion about the honourable and good; — indeed, in this single work, the whole process of royal weaving is comprised — never to allow temperate natures to be separated from the brave, but to weave them together, like the warp and the woof, by common sentiments and honours and reputation, and by the giving of pledges to one another; and out of them forming one smooth and even web, to entrust to them the offices of State.

Young Socrates: How do you mean?

Stranger: Where one officer only is needed, you must choose a ruler who has both these qualities — when many, you must mingle some of each, for the temperate ruler is very careful and just and safe, but is wanting in thoroughness and go.

Young Socrates: Certainly, that is very true.

311b

Stranger: The character of the courageous, on the other hand, falls short of the former in justice and caution, but has the power of action in a remarkable degree, and where either of these two qualities is wanting, there cities cannot altogether prosper either in their public or private life.

Young Socrates: Certainly they cannot.

311c

Stranger: This then we declare to be the completion of the web of political action, which is created by a direct intertexture of the brave and temperate natures, whenever the royal science has drawn the two minds into communion with one another by unanimity and friendship, and having perfected the noblest and best of all the webs which political life admits, and enfolding therein all other inhabitants of cities, whether slaves or freemen, binds them in one fabric and governs and presides over them, and, in so far as to be happy is vouchsafed to a city, in no particular fails to secure their happiness.

Young Socrates: Your picture, Stranger, of the king and statesman, no less than of the Sophist, is quite perfect.

Symposium

narrator: APOLLODORUS, a constant companion of Socrates; ARISTODEMUS, a follower of Socrates (the actual eyewitness whose account Apollodorus relays) persons in the dialogue:

PHAEDRUS *a friend of Eryximachus*

PAUSANIAS *a lover of Agathon*

ERYXIMACHUS *a physician*

ARISTOPHANES *a comedian*

AGATHON *a tragedian, beloved of Pausanias*

SOCRATES *of Alopecce, son of Sophroniscus*

ALCIBIADES *a famous and notorious politician and general*

DIOTIMA *a priestess and teacher, possibly Plato's invention (appears in flashback within Socrates' speech)*

scene: the house of Agathon in Athens, celebrating the victory for his first tragedy

172b

Concerning the things about which you ask to be informed I believe that I am not ill-prepared with an answer. For the day before yesterday I was coming from my own home at Phalerum to the city, and one of my acquaintance, who had caught a sight of me from behind, calling out playfully in the distance, said: Apollodorus, O thou Phalerian (Probably a play of words on (Greek), 'bald-headed.') man, halt! So I did as I was bid; and then he said, I was looking for you, Apollodorus, only just now, that I might ask you about the speeches in praise of love, which were delivered by Socrates, Alcibiades, and others, at Agathon's supper. Phoenix, the son of Philip, told another person who told me of them; his narrative was very indistinct, but he said that you knew, and I wish that you would give me an account of them. Who, if not you, should be the reporter of the words of your friend? And first tell me, he said, were you present at this meeting?

Your informant, Glaucon, I said, must have been very indistinct indeed, if you imagine that the occasion was recent; or that I could have been of the party.

Why, yes, he replied, I thought so.

Impossible: I said. Are you ignorant that for many years Agathon has not resided at Athens; and not three have elapsed since I became acquainted with Socrates, and have made it my daily business to know all that he says and does. There was a time when I was running about the world, fancying myself to be well employed, but I was really a most wretched being, no better than you are now. I thought that I ought to do anything rather than be a philosopher.

Well, he said, jesting apart, tell me when the meeting occurred.

In our boyhood, I replied, when Agathon won the prize with his first tragedy, on the day after that on which he and his chorus offered the sacrifice of victory.

173b

Then it must have been a long while ago, he said; and who told you — did Socrates?

173c

No indeed, I replied, but the same person who told Phoenix; — he was a little fellow, who never wore any shoes, Aristodemus, of the deme of Cydathenaeum. He had been at Agathon's feast; and I think that in those days there was no one who was a more devoted admirer of Socrates. Moreover, I have asked Socrates about the truth of some parts of his narrative, and he confirmed them. Then, said Glaucon, let us have the tale over again; is not the road to Athens just made for conversation? And so we walked, and talked of the discourses on love; and therefore, as I said at first, I am not ill-prepared to comply with your request, and will have another rehearsal of them if you like. For to speak or to hear others speak of philosophy always gives me the

greatest pleasure, to say nothing of the profit. But when I hear another strain, especially that of you rich men and traders, such conversation displeases me; and I pity you who are my companions, because you think that you are doing something when in reality you are doing nothing. And I dare say that you pity me in return, whom you regard as an unhappy creature, and very probably you are right. But I certainly know of you what you only think of me — there is the difference.

173d

Companion: I see, Apollodorus, that you are just the same — always speaking evil of yourself, and of others; and I do believe that you pity all mankind, with the exception of Socrates, yourself first of all, true in this to your old name, which, however deserved, I know not how you acquired, of Apollodorus the madman; for you are always raging against yourself and everybody but Socrates.

Apollodorus: Yes, friend, and the reason why I am said to be mad, and out of my wits, is just because I have these notions of myself and you; no other evidence is required.

174a

Companion: No more of that, Apollodorus; but let me renew my request that you would repeat the conversation.

Apollodorus: Well, the tale of love was on this wise: — But perhaps I had better begin at the beginning, and endeavour to give you the exact words of Aristodemus: He said that he met Socrates fresh from the bath and sandalled; and as the sight of the sandals was unusual, he asked him whither he was going that he had been converted into such a beau: — To a banquet at Agathon's, he replied, whose invitation to his sacrifice of victory I refused yesterday, fearing a crowd, but promising that I would come to-day instead; and so I have put on my finery, because he is such a fine man. What say you to going with me unasked?

I will do as you bid me, I replied.

Follow then, he said, and let us demolish the proverb: — ‘To the feasts of inferior men the good unbidden go;’

instead of which our proverb will run: — ‘To the feasts of the good the good unbidden go;’

174c

and this alteration may be supported by the authority of Homer himself, who not only demolishes but literally outrages the proverb. For, after picturing Agamemnon as the most valiant of men, he makes Menelaus, who is but a fainthearted warrior, come unbidden (*Iliad*) to the banquet of Agamemnon, who is feasting and offering sacrifices, not the better to the worse, but the worse to the better.

174d

I rather fear, Socrates, said Aristodemus, lest this may still be my case; and that, like Menelaus in Homer, I shall be the inferior person, who ‘To the feasts of the wise unbidden goes.’

But I shall say that I was bidden of you, and then you will have to make an excuse.

‘Two going together,’

he replied, in Homeric fashion, one or other of them may invent an excuse by the way (*Iliad*).

174e

This was the style of their conversation as they went along. Socrates dropped behind in a fit of abstraction, and desired Aristodemus, who was waiting, to go on before him. When he reached the house of Agathon he found the doors wide open, and a comical thing happened. A servant coming out met him, and led him at once into the banqueting-hall in which the guests were reclining, for the banquet was about to begin. Welcome, Aristodemus, said Agathon, as soon as he appeared — you are just in time to sup with us; if you come on any other

matter put it off, and make one of us, as I was looking for you yesterday and meant to have asked you, if I could have found you. But what have you done with Socrates?

I turned round, but Socrates was nowhere to be seen; and I had to explain that he had been with me a moment before, and that I came by his invitation to the supper.

175a

You were quite right in coming, said Agathon; but where is he himself?

He was behind me just now, as I entered, he said, and I cannot think what has become of him.

Go and look for him, boy, said Agathon, and bring him in; and do you, Aristodemus, meanwhile take the place by Eryximachus.

175b

The servant then assisted him to wash, and he lay down, and presently another servant came in and reported that our friend Socrates had retired into the portico of the neighbouring house. 'There he is fixed,' said he, 'and when I call to him he will not stir.'

How strange, said Agathon; then you must call him again, and keep calling him.

Let him alone, said my informant; he has a way of stopping anywhere and losing himself without any reason. I believe that he will soon appear; do not therefore disturb him.

175d

Well, if you think so, I will leave him, said Agathon. And then, turning to the servants, he added, 'Let us have supper without waiting for him. Serve up whatever you please, for there is no one to give you orders; hitherto I have never left you to yourselves. But on this occasion imagine that you are our hosts, and that I and the company are your guests; treat us well, and then we shall commend you.' After this, supper was served, but

still no Socrates; and during the meal Agathon several times expressed a wish to send for him, but Aristodemus objected; and at last when the feast was about half over — for the fit, as usual, was not of long duration — Socrates entered. Agathon, who was reclining alone at the end of the table, begged that he would take the place next to him; that ‘I may touch you,’ he said, ‘and have the benefit of that wise thought which came into your mind in the portico, and is now in your possession; for I am certain that you would not have come away until you had found what you sought.’

175e

How I wish, said Socrates, taking his place as he was desired, that wisdom could be infused by touch, out of the fuller into the emptier man, as water runs through wool out of a fuller cup into an emptier one; if that were so, how greatly should I value the privilege of reclining at your side! For you would have filled me full with a stream of wisdom plenteous and fair; whereas my own is of a very mean and questionable sort, no better than a dream. But yours is bright and full of promise, and was manifested forth in all the splendour of youth the day before yesterday, in the presence of more than thirty thousand Hellenes.

176a

You are mocking, Socrates, said Agathon, and ere long you and I will have to determine who bears off the palm of wisdom — of this Dionysus shall be the judge; but at present you are better occupied with supper.

176b

Socrates took his place on the couch, and supped with the rest; and then libations were offered, and after a hymn had been sung to the god, and there had been the usual ceremonies, they were about to commence drinking, when Pausanias said, And now, my friends, how can we drink with least injury to ourselves? I can assure you that I feel severely the effect of

yesterday's potations, and must have time to recover; and I suspect that most of you are in the same predicament, for you were of the party yesterday. Consider then: How can the drinking be made easiest?

176c

I entirely agree, said Aristophanes, that we should, by all means, avoid hard drinking, for I was myself one of those who were yesterday drowned in drink.

I think that you are right, said Eryximachus, the son of Acumenus; but I should still like to hear one other person speak: Is Agathon able to drink hard?

I am not equal to it, said Agathon.

Then, said Eryximachus, the weak heads like myself, Aristodemus, Phaedrus, and others who never can drink, are fortunate in finding that the stronger ones are not in a drinking mood. (I do not include Socrates, who is able either to drink or to abstain, and will not mind, whichever we do.) Well, as of none of the company seem disposed to drink much, I may be forgiven for saying, as a physician, that drinking deep is a bad practice, which I never follow, if I can help, and certainly do not recommend to another, least of all to any one who still feels the effects of yesterday's carouse.

176e

I always do what you advise, and especially what you prescribe as a physician, rejoined Phaedrus the Myrrhinusian, and the rest of the company, if they are wise, will do the same.

It was agreed that drinking was not to be the order of the day, but that they were all to drink only so much as they pleased.

177a

Then, said Eryximachus, as you are all agreed that drinking is to be voluntary, and that there is to be no compulsion, I move, in the next place, that the flute-girl, who has just made her

appearance, be told to go away and play to herself, or, if she likes, to the women who are within (compare Prot.). To-day let us have conversation instead; and, if you will allow me, I will tell you what sort of conversation. This proposal having been accepted, Eryximachus proceeded as follows: — I will begin, he said, after the manner of Melanippe in Euripides, ‘Not mine the word’

which I am about to speak, but that of Phaedrus. For often he says to me in an indignant tone:— ‘What a strange thing it is, Eryximachus, that, whereas other gods have poems and hymns made in their honour, the great and glorious god, Love, has no encomiast among all the poets who are so many. There are the worthy sophists too — the excellent Prodicus for example, who have descanted in prose on the virtues of Heracles and other heroes; and, what is still more extraordinary, I have met with a philosophical work in which the utility of salt has been made the theme of an eloquent discourse; and many other like things have had a like honour bestowed upon them. And only to think that there should have been an eager interest created about them, and yet that to this day no one has ever dared worthily to hymn Love’s praises! So entirely has this great deity been neglected.’ Now in this Phaedrus seems to me to be quite right, and therefore I want to offer him a contribution; also I think that at the present moment we who are here assembled cannot do better than honour the god Love. If you agree with me, there will be no lack of conversation; for I mean to propose that each of us in turn, going from left to right, shall make a speech in honour of Love. Let him give us the best which he can; and Phaedrus, because he is sitting first on the left hand, and because he is the father of the thought, shall begin.

178a

No one will vote against you, Eryximachus, said Socrates. How can I oppose your motion, who profess to understand nothing

but matters of love; nor, I presume, will Agathon and Pausanias; and there can be no doubt of Aristophanes, whose whole concern is with Dionysus and Aphrodite; nor will any one disagree of those whom I see around me. The proposal, as I am aware, may seem rather hard upon us whose place is last; but we shall be contented if we hear some good speeches first. Let Phaedrus begin the praise of Love, and good luck to him. All the company expressed their assent, and desired him to do as Socrates bade him.

Aristodemus did not recollect all that was said, nor do I recollect all that he related to me; but I will tell you what I thought most worthy of remembrance, and what the chief speakers said.

178c

Phaedrus began by affirming that Love is a mighty god, and wonderful among gods and men, but especially wonderful in his birth. For he is the eldest of the gods, which is an honour to him; and a proof of his claim to this honour is, that of his parents there is no memorial; neither poet nor prose-writer has ever affirmed that he had any. As Hesiod says: — ‘First Chaos came, and then broad-bosomed Earth, The everlasting seat of all that is, And Love.’

In other words, after Chaos, the Earth and Love, these two, came into being. Also Parmenides sings of Generation: ‘First in the train of gods, he fashioned Love.’

178d

And Acusilaus agrees with Hesiod. Thus numerous are the witnesses who acknowledge Love to be the eldest of the gods. And not only is he the eldest, he is also the source of the greatest benefits to us. For I know not any greater blessing to a young man who is beginning life than a virtuous lover, or to the lover than a beloved youth. For the principle which ought to be the guide of men who would nobly live — that principle, I say, neither kindred, nor honour, nor wealth, nor any other motive

is able to implant so well as love. Of what am I speaking? Of the sense of honour and dishonour, without which neither states nor individuals ever do any good or great work. And I say that a lover who is detected in doing any dishonourable act, or submitting through cowardice when any dishonour is done to him by another, will be more pained at being detected by his beloved than at being seen by his father, or by his companions, or by any one else. The beloved too, when he is found in any disgraceful situation, has the same feeling about his lover. And if there were only some way of contriving that a state or an army should be made up of lovers and their loves (compare Rep.), they would be the very best governors of their own city, abstaining from all dishonour, and emulating one another in honour; and when fighting at each other's side, although a mere handful, they would overcome the world. For what lover would not choose rather to be seen by all mankind than by his beloved, either when abandoning his post or throwing away his arms? He would be ready to die a thousand deaths rather than endure this. Or who would desert his beloved or fail him in the hour of danger? The veriest coward would become an inspired hero, equal to the bravest, at such a time; Love would inspire him. That courage which, as Homer says, the god breathes into the souls of some heroes, Love of his own nature infuses into the lover.

179d

Love will make men dare to die for their beloved — love alone; and women as well as men. Of this, Alcestis, the daughter of Pelias, is a monument to all Hellas; for she was willing to lay down her life on behalf of her husband, when no one else would, although he had a father and mother; but the tenderness of her love so far exceeded theirs, that she made them seem to be strangers in blood to their own son, and in name only related to him; and so noble did this action of hers appear to the gods, as well as to men, that among the many who have done virtuously

she is one of the very few to whom, in admiration of her noble action, they have granted the privilege of returning alive to earth; such exceeding honour is paid by the gods to the devotion and virtue of love. But Orpheus, the son of Oeagrus, the harper, they sent empty away, and presented to him an apparition only of her whom he sought, but herself they would not give up, because he showed no spirit; he was only a harp-player, and did not dare like Alcestis to die for love, but was contriving how he might enter Hades alive; moreover, they afterwards caused him to suffer death at the hands of women, as the punishment of his cowardliness. Very different was the reward of the true love of Achilles towards his lover Patroclus — his lover and not his love (the notion that Patroclus was the beloved one is a foolish error into which Aeschylus has fallen, for Achilles was surely the fairer of the two, fairer also than all the other heroes; and, as Homer informs us, he was still beardless, and younger far). And greatly as the gods honour the virtue of love, still the return of love on the part of the beloved to the lover is more admired and valued and rewarded by them, for the lover is more divine; because he is inspired by God. Now Achilles was quite aware, for he had been told by his mother, that he might avoid death and return home, and live to a good old age, if he abstained from slaying Hector. Nevertheless he gave his life to revenge his friend, and dared to die, not only in his defence, but after he was dead. Wherefore the gods honoured him even above Alcestis, and sent him to the Islands of the Blest. These are my reasons for affirming that Love is the eldest and noblest and mightiest of the gods; and the chiefest author and giver of virtue in life, and of happiness after death.

182a

This, or something like this, was the speech of Phaedrus; and some other speeches followed which Aristodemus did not remember; the next which he repeated was that of Pausanias. Phaedrus, he said, the argument has not been set before us, I

think, quite in the right form; — we should not be called upon to praise Love in such an indiscriminate manner. If there were only one Love, then what you said would be well enough; but since there are more Loves than one, — should have begun by determining which of them was to be the theme of our praises. I will amend this defect; and first of all I will tell you which Love is deserving of praise, and then try to hymn the praiseworthy one in a manner worthy of him. For we all know that Love is inseparable from Aphrodite, and if there were only one Aphrodite there would be only one Love; but as there are two goddesses there must be two Loves. And am I not right in asserting that there are two goddesses? The elder one, having no mother, who is called the heavenly Aphrodite — she is the daughter of Uranus; the younger, who is the daughter of Zeus and Dione — her we call common; and the Love who is her fellow-worker is rightly named common, as the other love is called heavenly. All the gods ought to have praise given to them, but not without distinction of their natures; and therefore I must try to distinguish the characters of the two Loves. Now actions vary according to the manner of their performance. Take, for example, that which we are now doing, drinking, singing and talking — these actions are not in themselves either good or evil, but they turn out in this or that way according to the mode of performing them; and when well done they are good, and when wrongly done they are evil; and in like manner not every love, but only that which has a noble purpose, is noble and worthy of praise. The Love who is the offspring of the common Aphrodite is essentially common, and has no discrimination, being such as the meaner sort of men feel, and is apt to be of women as well as of youths, and is of the body rather than of the soul — the most foolish beings are the objects of this love which desires only to gain an end, but never thinks of accomplishing the end nobly, and therefore does good and evil quite indiscriminately. The goddess who is his mother

is far younger than the other, and she was born of the union of the male and female, and partakes of both. But the offspring of the heavenly Aphrodite is derived from a mother in whose birth the female has no part, — she is from the male only; this is that love which is of youths, and the goddess being older, there is nothing of wantonness in her. Those who are inspired by this love turn to the male, and delight in him who is the more valiant and intelligent nature; any one may recognise the pure enthusiasts in the very character of their attachments. For they love not boys, but intelligent beings whose reason is beginning to be developed, much about the time at which their beards begin to grow. And in choosing young men to be their companions, they mean to be faithful to them, and pass their whole life in company with them, not to take them in their inexperience, and deceive them, and play the fool with them, or run away from one to another of them. But the love of young boys should be forbidden by law, because their future is uncertain; they may turn out good or bad, either in body or soul, and much noble enthusiasm may be thrown away upon them; in this matter the good are a law to themselves, and the coarser sort of lovers ought to be restrained by force; as we restrain or attempt to restrain them from fixing their affections on women of free birth. These are the persons who bring a reproach on love; and some have been led to deny the lawfulness of such attachments because they see the impropriety and evil of them; for surely nothing that is decorously and lawfully done can justly be censured. Now here and in Lacedaemon the rules about love are perplexing, but in most cities they are simple and easily intelligible; in Elis and Boeotia, and in countries having no gifts of eloquence, they are very straightforward; the law is simply in favour of these connexions, and no one, whether young or old, has anything to say to their discredit; the reason being, as I suppose, that they are men of few words in those parts, and therefore the lovers do

not like the trouble of pleading their suit. In Ionia and other places, and generally in countries which are subject to the barbarians, the custom is held to be dishonourable; loves of youths share the evil repute in which philosophy and gymnastics are held, because they are inimical to tyranny; for the interests of rulers require that their subjects should be poor in spirit (compare Arist. Politics), and that there should be no strong bond of friendship or society among them, which love, above all other motives, is likely to inspire, as our Athenian tyrants learned by experience; for the love of Aristogeiton and the constancy of Harmodius had a strength which undid their power. And, therefore, the ill-repute into which these attachments have fallen is to be ascribed to the evil condition of those who make them to be ill-reputed; that is to say, to the self-seeking of the governors and the cowardice of the governed; on the other hand, the indiscriminate honour which is given to them in some countries is attributable to the laziness of those who hold this opinion of them. In our own country a far better principle prevails, but, as I was saying, the explanation of it is rather perplexing. For, observe that open loves are held to be more honourable than secret ones, and that the love of the noblest and highest, even if their persons are less beautiful than others, is especially honourable. Consider, too, how great is the encouragement which all the world gives to the lover; neither is he supposed to be doing anything dishonourable; but if he succeeds he is praised, and if he fail he is blamed. And in the pursuit of his love the custom of mankind allows him to do many strange things, which philosophy would bitterly censure if they were done from any motive of interest, or wish for office or power. He may pray, and entreat, and supplicate, and swear, and lie on a mat at the door, and endure a slavery worse than that of any slave — in any other case friends and enemies would be equally ready to prevent him, but now there is no friend who will be ashamed of him and admonish him, and no enemy will

charge him with meanness or flattery; the actions of a lover have a grace which ennobles them; and custom has decided that they are highly commendable and that there no loss of character in them; and, what is strangest of all, he only may swear and forswear himself (so men say), and the gods will forgive his transgression, for there is no such thing as a lover's oath. Such is the entire liberty which gods and men have allowed the lover, according to the custom which prevails in our part of the world. From this point of view a man fairly argues that in Athens to love and to be loved is held to be a very honourable thing. But when parents forbid their sons to talk with their lovers, and place them under a tutor's care, who is appointed to see to these things, and their companions and equals cast in their teeth anything of the sort which they may observe, and their elders refuse to silence the reprovers and do not rebuke them — any one who reflects on all this will, on the contrary, think that we hold these practices to be most disgraceful. But, as I was saying at first, the truth as I imagine is, that whether such practices are honourable or whether they are dishonourable is not a simple question; they are honourable to him who follows them honourably, dishonourable to him who follows them dishonourably. There is dishonour in yielding to the evil, or in an evil manner; but there is honour in yielding to the good, or in an honourable manner. Evil is the vulgar lover who loves the body rather than the soul, inasmuch as he is not even stable, because he loves a thing which is in itself unstable, and therefore when the bloom of youth which he was desiring is over, he takes wing and flies away, in spite of all his words and promises; whereas the love of the noble disposition is life-long, for it becomes one with the everlasting. The custom of our country would have both of them proven well and truly, and would have us yield to the one sort of lover and avoid the other, and therefore encourages some to pursue, and others to fly; testing both the lover and beloved in contests and trials, until

they show to which of the two classes they respectively belong. And this is the reason why, in the first place, a hasty attachment is held to be dishonourable, because time is the true test of this as of most other things; and secondly there is a dishonour in being overcome by the love of money, or of wealth, or of political power, whether a man is frightened into surrender by the loss of them, or, having experienced the benefits of money and political corruption, is unable to rise above the seductions of them. For none of these things are of a permanent or lasting nature; not to mention that no generous friendship ever sprang from them. There remains, then, only one way of honourable attachment which custom allows in the beloved, and this is the way of virtue; for as we admitted that any service which the lover does to him is not to be accounted flattery or a dishonour to himself, so the beloved has one way only of voluntary service which is not dishonourable, and this is virtuous service.

184d

For we have a custom, and according to our custom any one who does service to another under the idea that he will be improved by him either in wisdom, or in some other particular of virtue — such a voluntary service, I say, is not to be regarded as a dishonour, and is not open to the charge of flattery. And these two customs, one the love of youth, and the other the practice of philosophy and virtue in general, ought to meet in one, and then the beloved may honourably indulge the lover. For when the lover and beloved come together, having each of them a law, and the lover thinks that he is right in doing any service which he can to his gracious loving one; and the other that he is right in showing any kindness which he can to him who is making him wise and good; the one capable of communicating wisdom and virtue, the other seeking to acquire them with a view to education and wisdom, when the two laws of love are fulfilled and meet in one — then, and then only, may the beloved yield with honour to the lover. Nor when love is of

this disinterested sort is there any disgrace in being deceived, but in every other case there is equal disgrace in being or not being deceived. For he who is gracious to his lover under the impression that he is rich, and is disappointed of his gains because he turns out to be poor, is disgraced all the same: for he has done his best to show that he would give himself up to any one's 'uses base' for the sake of money; but this is not honourable. And on the same principle he who gives himself to a lover because he is a good man, and in the hope that he will be improved by his company, shows himself to be virtuous, even though the object of his affection turn out to be a villain, and to have no virtue; and if he is deceived he has committed a noble error. For he has proved that for his part he will do anything for anybody with a view to virtue and improvement, than which there can be nothing nobler. Thus noble in every case is the acceptance of another for the sake of virtue. This is that love which is the love of the heavenly goddess, and is heavenly, and of great price to individuals and cities, making the lover and the beloved alike eager in the work of their own improvement. But all other loves are the offspring of the other, who is the common goddess. To you, Phaedrus, I offer this my contribution in praise of love, which is as good as I could make extempore.

185e

Pausanias came to a pause — this is the balanced way in which I have been taught by the wise to speak; and Aristodemus said that the turn of Aristophanes was next, but either he had eaten too much, or from some other cause he had the hiccough, and was obliged to change turns with Eryximachus the physician, who was reclining on the couch below him. Eryximachus, he said, you ought either to stop my hiccough, or to speak in my turn until I have left off.

186a

I will do both, said Eryximachus: I will speak in your turn, and do you speak in mine; and while I am speaking let me

recommend you to hold your breath, and if after you have done so for some time the hiccough is no better, then gargle with a little water; and if it still continues, tickle your nose with something and sneeze; and if you sneeze once or twice, even the most violent hiccough is sure to go. I will do as you prescribe, said Aristophanes, and now get on.

187a

Eryximachus spoke as follows: Seeing that Pausanias made a fair beginning, and but a lame ending, I must endeavour to supply his deficiency. I think that he has rightly distinguished two kinds of love. But my art further informs me that the double love is not merely an affection of the soul of man towards the fair, or towards anything, but is to be found in the bodies of all animals and in productions of the earth, and I may say in all that is; such is the conclusion which I seem to have gathered from my own art of medicine, whence I learn how great and wonderful and universal is the deity of love, whose empire extends over all things, divine as well as human. And from medicine I will begin that I may do honour to my art. There are in the human body these two kinds of love, which are confessedly different and unlike, and being unlike, they have loves and desires which are unlike; and the desire of the healthy is one, and the desire of the diseased is another; and as Pausanias was just now saying that to indulge good men is honourable, and bad men dishonourable: — so too in the body the good and healthy elements are to be indulged, and the bad elements and the elements of disease are not to be indulged, but discouraged. And this is what the physician has to do, and in this the art of medicine consists: for medicine may be regarded generally as the knowledge of the loves and desires of the body, and how to satisfy them or not; and the best physician is he who is able to separate fair love from foul, or to convert one into the other; and he who knows how to eradicate and how to implant love, whichever is required, and can reconcile the most hostile

elements in the constitution and make them loving friends, is a skilful practitioner. Now the most hostile are the most opposite, such as hot and cold, bitter and sweet, moist and dry, and the like. And my ancestor, Asclepius, knowing how to implant friendship and accord in these elements, was the creator of our art, as our friends the poets here tell us, and I believe them; and not only medicine in every branch but the arts of gymnastic and husbandry are under his dominion. Any one who pays the least attention to the subject will also perceive that in music there is the same reconciliation of opposites; and I suppose that this must have been the meaning of Heracleitus, although his words are not accurate; for he says that The One is united by disunion, like the harmony of the bow and the lyre. Now there is an absurdity saying that harmony is discord or is composed of elements which are still in a state of discord. But what he probably meant was, that harmony is composed of differing notes of higher or lower pitch which disagreed once, but are now reconciled by the art of music; for if the higher and lower notes still disagreed, there could be no harmony, — clearly not. For harmony is a symphony, and symphony is an agreement; but an agreement of disagreements while they disagree there cannot be; you cannot harmonize that which disagrees. In like manner rhythm is compounded of elements short and long, once differing and now in accord; which accordance, as in the former instance, medicine, so in all these other cases, music implants, making love and unison to grow up among them; and thus music, too, is concerned with the principles of love in their application to harmony and rhythm. Again, in the essential nature of harmony and rhythm there is no difficulty in discerning love which has not yet become double. But when you want to use them in actual life, either in the composition of songs or in the correct performance of airs or metres composed already, which latter is called education, then the difficulty begins, and the good artist is needed. Then the old tale has to be

repeated of fair and heavenly love — the love of Urania the fair and heavenly muse, and of the duty of accepting the temperate, and those who are as yet intemperate only that they may become temperate, and of preserving their love; and again, of the vulgar Polyhymnia, who must be used with circumspection that the pleasure be enjoyed, but may not generate licentiousness; just as in my own art it is a great matter so to regulate the desires of the epicure that he may gratify his tastes without the attendant evil of disease. Whence I infer that in music, in medicine, in all other things human as well as divine, both loves ought to be noted as far as may be, for they are both present.

188d

The course of the seasons is also full of both these principles; and when, as I was saying, the elements of hot and cold, moist and dry, attain the harmonious love of one another and blend in temperance and harmony, they bring to men, animals, and plants health and plenty, and do them no harm; whereas the wanton love, getting the upper hand and affecting the seasons of the year, is very destructive and injurious, being the source of pestilence, and bringing many other kinds of diseases on animals and plants; for hoar-frost and hail and blight spring from the excesses and disorders of these elements of love, which to know in relation to the revolutions of the heavenly bodies and the seasons of the year is termed astronomy. Furthermore all sacrifices and the whole province of divination, which is the art of communion between gods and men — these, I say, are concerned only with the preservation of the good and the cure of the evil love. For all manner of impiety is likely to ensue if, instead of accepting and honouring and reverencing the harmonious love in all his actions, a man honours the other love, whether in his feelings towards gods or parents, towards the living or the dead. Wherefore the business of divination is to see to these loves and to heal them, and divination is the

peacemaker of gods and men, working by a knowledge of the religious or irreligious tendencies which exist in human loves. Such is the great and mighty, or rather omnipotent force of love in general. And the love, more especially, which is concerned with the good, and which is perfected in company with temperance and justice, whether among gods or men, has the greatest power, and is the source of all our happiness and harmony, and makes us friends with the gods who are above us, and with one another. I dare say that I too have omitted several things which might be said in praise of Love, but this was not intentional, and you, Aristophanes, may now supply the omission or take some other line of commendation; for I perceive that you are rid of the hiccough.

189c

Yes, said Aristophanes, who followed, the hiccough is gone; not, however, until I applied the sneezing; and I wonder whether the harmony of the body has a love of such noises and ticklings, for I no sooner applied the sneezing than I was cured.

Eryximachus said: Beware, friend Aristophanes, although you are going to speak, you are making fun of me; and I shall have to watch and see whether I cannot have a laugh at your expense, when you might speak in peace.

You are right, said Aristophanes, laughing. I will unsay my words; but do you please not to watch me, as I fear that in the speech which I am about to make, instead of others laughing with me, which is to the manner born of our muse and would be all the better, I shall only be laughed at by them.

Do you expect to shoot your bolt and escape, Aristophanes? Well, perhaps if you are very careful and bear in mind that you will be called to account, I may be induced to let you off.

191e

Aristophanes professed to open another vein of discourse; he had a mind to praise Love in another way, unlike that either of Pausanias or Eryximachus. Mankind, he said, judging by their neglect of him, have never, as I think, at all understood the power of Love. For if they had understood him they would surely have built noble temples and altars, and offered solemn sacrifices in his honour; but this is not done, and most certainly ought to be done: since of all the gods he is the best friend of men, the helper and the healer of the ills which are the great impediment to the happiness of the race. I will try to describe his power to you, and you shall teach the rest of the world what I am teaching you. In the first place, let me treat of the nature of man and what has happened to it; for the original human nature was not like the present, but different. The sexes were not two as they are now, but originally three in number; there was man, woman, and the union of the two, having a name corresponding to this double nature, which had once a real existence, but is now lost, and the word 'Androgynous' is only preserved as a term of reproach. In the second place, the primeval man was round, his back and sides forming a circle; and he had four hands and four feet, one head with two faces, looking opposite ways, set on a round neck and precisely alike; also four ears, two privy members, and the remainder to correspond. He could walk upright as men now do, backwards or forwards as he pleased, and he could also roll over and over at a great pace, turning on his four hands and four feet, eight in all, like tumblers going over and over with their legs in the air; this was when he wanted to run fast. Now the sexes were three, and such as I have described them; because the sun, moon, and earth are three; and the man was originally the child of the sun, the woman of the earth, and the man-woman of the moon, which is made up of sun and earth, and they were all round and moved round and round like their parents. Terrible was their might and strength, and the thoughts of their hearts were great, and

they made an attack upon the gods; of them is told the tale of Otys and Ephialtes who, as Homer says, dared to scale heaven, and would have laid hands upon the gods. Doubt reigned in the celestial councils. Should they kill them and annihilate the race with thunderbolts, as they had done the giants, then there would be an end of the sacrifices and worship which men offered to them; but, on the other hand, the gods could not suffer their insolence to be unrestrained. At last, after a good deal of reflection, Zeus discovered a way. He said: 'Methinks I have a plan which will humble their pride and improve their manners; men shall continue to exist, but I will cut them in two and then they will be diminished in strength and increased in numbers; this will have the advantage of making them more profitable to us. They shall walk upright on two legs, and if they continue insolent and will not be quiet, I will split them again and they shall hop about on a single leg.' He spoke and cut men in two, like a sorb-apple which is halved for pickling, or as you might divide an egg with a hair; and as he cut them one after another, he bade Apollo give the face and the half of the neck a turn in order that the man might contemplate the section of himself: he would thus learn a lesson of humility. Apollo was also bidden to heal their wounds and compose their forms. So he gave a turn to the face and pulled the skin from the sides all over that which in our language is called the belly, like the purses which draw in, and he made one mouth at the centre, which he fastened in a knot (the same which is called the navel); he also moulded the breast and took out most of the wrinkles, much as a shoemaker might smooth leather upon a last; he left a few, however, in the region of the belly and navel, as a memorial of the primeval state. After the division the two parts of man, each desiring his other half, came together, and throwing their arms about one another, entwined in mutual embraces, longing to grow into one, they were on the point of dying from hunger and self-neglect, because they did not like to

do anything apart; and when one of the halves died and the other survived, the survivor sought another mate, man or woman as we call them, — being the sections of entire men or women, — and clung to that. They were being destroyed, when Zeus in pity of them invented a new plan: he turned the parts of generation round to the front, for this had not been always their position, and they sowed the seed no longer as hitherto like grasshoppers in the ground, but in one another; and after the transposition the male generated in the female in order that by the mutual embraces of man and woman they might breed, and the race might continue; or if man came to man they might be satisfied, and rest, and go their ways to the business of life: so ancient is the desire of one another which is implanted in us, reuniting our original nature, making one of two, and healing the state of man. Each of us when separated, having one side only, like a flat fish, is but the indenture of a man, and he is always looking for his other half. Men who are a section of that double nature which was once called Androgynous are lovers of women; adulterers are generally of this breed, and also adulterous women who lust after men: the women who are a section of the woman do not care for men, but have female attachments; the female companions are of this sort. But they who are a section of the male follow the male, and while they are young, being slices of the original man, they hang about men and embrace them, and they are themselves the best of boys and youths, because they have the most manly nature. Some indeed assert that they are shameless, but this is not true; for they do not act thus from any want of shame, but because they are valiant and manly, and have a manly countenance, and they embrace that which is like them. And these when they grow up become our statesmen, and these only, which is a great proof of the truth of what I am saving. When they reach manhood they are lovers of youth, and are not naturally inclined to marry or beget children, — if at all, they do so only

in obedience to the law; but they are satisfied if they may be allowed to live with one another unwedded; and such a nature is prone to love and ready to return love, always embracing that which is akin to him. And when one of them meets with his other half, the actual half of himself, whether he be a lover of youth or a lover of another sort, the pair are lost in an amazement of love and friendship and intimacy, and one will not be out of the other's sight, as I may say, even for a moment: these are the people who pass their whole lives together; yet they could not explain what they desire of one another. For the intense yearning which each of them has towards the other does not appear to be the desire of lover's intercourse, but of something else which the soul of either evidently desires and cannot tell, and of which she has only a dark and doubtful presentiment. Suppose Hephaestus, with his instruments, to come to the pair who are lying side by side and to say to them, 'What do you people want of one another?' they would be unable to explain. And suppose further, that when he saw their perplexity he said: 'Do you desire to be wholly one; always day and night to be in one another's company? for if this is what you desire, I am ready to melt you into one and let you grow together, so that being two you shall become one, and while you live live a common life as if you were a single man, and after your death in the world below still be one departed soul instead of two — I ask whether this is what you lovingly desire, and whether you are satisfied to attain this?' — there is not a man of them who when he heard the proposal would deny or would not acknowledge that this meeting and melting into one another, this becoming one instead of two, was the very expression of his ancient need (compare Arist. Pol.). And the reason is that human nature was originally one and we were a whole, and the desire and pursuit of the whole is called love. There was a time, I say, when we were one, but now because of the wickedness of mankind God has dispersed us, as the Arcadians were dispersed

into villages by the Lacedaemonians (compare Arist. Pol.). And if we are not obedient to the gods, there is a danger that we shall be split up again and go about in basso-relievo, like the profile figures having only half a nose which are sculptured on monuments, and that we shall be like tallies. Wherefore let us exhort all men to piety, that we may avoid evil, and obtain the good, of which Love is to us the lord and minister; and let no one oppose him — he is the enemy of the gods who opposes him. For if we are friends of the God and at peace with him we shall find our own true loves, which rarely happens in this world at present. I am serious, and therefore I must beg Eryximachus not to make fun or to find any allusion in what I am saying to Pausanias and Agathon, who, as I suspect, are both of the manly nature, and belong to the class which I have been describing. But my words have a wider application — they include men and women everywhere; and I believe that if our loves were perfectly accomplished, and each one returning to his primeval nature had his original true love, then our race would be happy. And if this would be best of all, the best in the next degree and under present circumstances must be the nearest approach to such an union; and that will be the attainment of a congenial love. Wherefore, if we would praise him who has given to us the benefit, we must praise the god Love, who is our greatest benefactor, both leading us in this life back to our own nature, and giving us high hopes for the future, for he promises that if we are pious, he will restore us to our original state, and heal us and make us happy and blessed. This, Eryximachus, is my discourse of love, which, although different to yours, I must beg you to leave unassailed by the shafts of your ridicule, in order that each may have his turn; each, or rather either, for Agathon and Socrates are the only ones left.

194b

Indeed, I am not going to attack you, said Eryximachus, for I thought your speech charming, and did I not know that

Agathon and Socrates are masters in the art of love, I should be really afraid that they would have nothing to say, after the world of things which have been said already. But, for all that, I am not without hopes.

Socrates said: You played your part well, Eryximachus; but if you were as I am now, or rather as I shall be when Agathon has spoken, you would, indeed, be in a great strait.

194c

You want to cast a spell over me, Socrates, said Agathon, in the hope that I may be disconcerted at the expectation raised among the audience that I shall speak well.

I should be strangely forgetful, Agathon replied Socrates, of the courage and magnanimity which you showed when your own compositions were about to be exhibited, and you came upon the stage with the actors and faced the vast theatre altogether undismayed, if I thought that your nerves could be fluttered at a small party of friends.

Do you think, Socrates, said Agathon, that my head is so full of the theatre as not to know how much more formidable to a man of sense a few good judges are than many fools?

194d

Nay, replied Socrates, I should be very wrong in attributing to you, Agathon, that or any other want of refinement. And I am quite aware that if you happened to meet with any whom you thought wise, you would care for their opinion much more than for that of the many. But then we, having been a part of the foolish many in the theatre, cannot be regarded as the select wise; though I know that if you chanced to be in the presence, not of one of ourselves, but of some really wise man, you would be ashamed of disgracing yourself before him — would you not?

194e

Yes, said Agathon.

But before the many you would not be ashamed, if you thought that you were doing something disgraceful in their presence?

Here Phaedrus interrupted them, saying: not answer him, my dear Agathon; for if he can only get a partner with whom he can talk, especially a good-looking one, he will no longer care about the completion of our plan. Now I love to hear him talk; but just at present I must not forget the encomium on Love which I ought to receive from him and from every one. When you and he have paid your tribute to the god, then you may talk.

Very good, Phaedrus, said Agathon; I see no reason why I should not proceed with my speech, as I shall have many other opportunities of conversing with Socrates. Let me say first how I ought to speak, and then speak: — ^{195a} The previous speakers, instead of praising the god Love, or unfolding his nature, appear to have congratulated mankind on the benefits which he confers upon them. But I would rather praise the god first, and then speak of his gifts; this is always the right way of praising everything. May I say without impiety or offence, that of all the blessed gods he is the most blessed because he is the fairest and best? And he is the fairest: for, in the first place, he is the youngest, and of his youth he is himself the witness, fleeing out of the way of age, who is swift enough, swifter truly than most of us like: — Love hates him and will not come near him; but youth and love live and move together — like to like, as the proverb says. Many things were said by Phaedrus about Love in which I agree with him; but I cannot agree that he is older than Iapetus and Kronos: — not so; I maintain him to be the youngest of the gods, and youthful ever. The ancient doings among the gods of which Hesiod and Parmenides spoke, if the tradition of them be true, were done of Necessity and not of Love; had Love been in those days, there would have been no chaining or mutilation of the gods, or other violence, but peace and sweetness, as there is now in heaven, since the rule of Love

began. Love is young and also tender; he ought to have a poet like Homer to describe his tenderness, as Homer says of Ate, that she is a goddess and tender: — 195d ‘Her feet are tender, for she sets her steps, Not on the ground but on the heads of men.’

196b

herein is an excellent proof of her tenderness, — that she walks not upon the hard but upon the soft. Let us adduce a similar proof of the tenderness of Love; for he walks not upon the earth, nor yet upon the skulls of men, which are not so very soft, but in the hearts and souls of both gods and men, which are of all things the softest: in them he walks and dwells and makes his home. Not in every soul without exception, for where there is hardness he departs, where there is softness there he dwells; and nestling always with his feet and in all manner of ways in the softest of soft places, how can he be other than the softest of all things? Of a truth he is the tenderest as well as the youngest, and also he is of flexile form; for if he were hard and without flexure he could not enfold all things, or wind his way into and out of every soul of man undiscovered. And a proof of his flexibility and symmetry of form is his grace, which is universally admitted to be in an especial manner the attribute of Love; ungrace and love are always at war with one another. The fairness of his complexion is revealed by his habitation among the flowers; for he dwells not amid bloomless or fading beauties, whether of body or soul or aught else, but in the place of flowers and scents, there he sits and abides. Concerning the beauty of the god I have said enough; and yet there remains much more which I might say. Of his virtue I have now to speak: his greatest glory is that he can neither do nor suffer wrong to or from any god or any man; for he suffers not by force if he suffers; force comes not near him, neither when he acts does he act by force. For all men in all things serve him of their own free will, and where there is voluntary agreement, there, as the laws which are the lords of the city say, is justice. And not only is he

just but exceedingly temperate, for Temperance is the acknowledged ruler of the pleasures and desires, and no pleasure ever masters Love; he is their master and they are his servants; and if he conquers them he must be temperate indeed. As to courage, even the God of War is no match for him; he is the captive and Love is the lord, for love, the love of Aphrodite, masters him, as the tale runs; and the master is stronger than the servant. And if he conquers the bravest of all others, he must be himself the bravest. Of his courage and justice and temperance I have spoken, but I have yet to speak of his wisdom; and according to the measure of my ability I must try to do my best. In the first place he is a poet (and here, like Eryximachus, I magnify my art), and he is also the source of poesy in others, which he could not be if he were not himself a poet. And at the touch of him every one becomes a poet, even though he had no music in him before (A fragment of the *Sthenoaoea* of Euripides.); this also is a proof that Love is a good poet and accomplished in all the fine arts; for no one can give to another that which he has not himself, or teach that of which he has no knowledge. Who will deny that the creation of the animals is his doing? Are they not all the works of his wisdom, born and begotten of him? And as to the artists, do we not know that he only of them whom love inspires has the light of fame? — he whom Love touches not walks in darkness. The arts of medicine and archery and divination were discovered by Apollo, under the guidance of love and desire; so that he too is a disciple of Love. Also the melody of the Muses, the metallurgy of Hephaestus, the weaving of Athene, the empire of Zeus over gods and men, are all due to Love, who was the inventor of them. And so Love set in order the empire of the gods — the love of beauty, as is evident, for with deformity Love has no concern. In the days of old, as I began by saying, dreadful deeds were done among the gods, for they were ruled by Necessity; but now since the birth of Love, and from the Love of the

beautiful, has sprung every good in heaven and earth. Therefore, Phaedrus, I say of Love that he is the fairest and best in himself, and the cause of what is fairest and best in all other things. And there comes into my mind a line of poetry in which he is said to be the god who ^{197d} ‘Gives peace on earth and calms the stormy deep, Who stills the winds and bids the sufferer sleep.’

^{197d}

This is he who empties men of disaffection and fills them with affection, who makes them to meet together at banquets such as these: in sacrifices, feasts, dances, he is our lord — who sends courtesy and sends away discourtesy, who gives kindness ever and never gives unkindness; the friend of the good, the wonder of the wise, the amazement of the gods; desired by those who have no part in him, and precious to those who have the better part in him; parent of delicacy, luxury, desire, fondness, softness, grace; regardful of the good, regardless of the evil: in every word, work, wish, fear — saviour, pilot, comrade, helper; glory of gods and men, leader best and brightest: in whose footsteps let every man follow, sweetly singing in his honour and joining in that sweet strain with which love charms the souls of gods and men. Such is the speech, Phaedrus, half-playful, yet having a certain measure of seriousness, which, according to my ability, I dedicate to the god.

^{198b}

When Agathon had done speaking, Aristodemus said that there was a general cheer; the young man was thought to have spoken in a manner worthy of himself, and of the god. And Socrates, looking at Eryximachus, said: Tell me, son of Acumenus, was there not reason in my fears? and was I not a true prophet when I said that Agathon would make a wonderful oration, and that I should be in a strait?

The part of the prophecy which concerns Agathon, replied Eryximachus, appears to me to be true; but not the other part — that you will be in a strait.

198e

Why, my dear friend, said Socrates, must not I or any one be in a strait who has to speak after he has heard such a rich and varied discourse? I am especially struck with the beauty of the concluding words — who could listen to them without amazement? When I reflected on the immeasurable inferiority of my own powers, I was ready to run away for shame, if there had been a possibility of escape. For I was reminded of Gorgias, and at the end of his speech I fancied that Agathon was shaking at me the Gorginian or Gorgonian head of the great master of rhetoric, which was simply to turn me and my speech into stone, as Homer says (*Odyssey*), and strike me dumb. And then I perceived how foolish I had been in consenting to take my turn with you in praising love, and saying that I too was a master of the art, when I really had no conception how anything ought to be praised. For in my simplicity I imagined that the topics of praise should be true, and that this being presupposed, out of the true the speaker was to choose the best and set them forth in the best manner. And I felt quite proud, thinking that I knew the nature of true praise, and should speak well. Whereas I now see that the intention was to attribute to Love every species of greatness and glory, whether really belonging to him or not, without regard to truth or falsehood — that was no matter; for the original proposal seems to have been not that each of you should really praise Love, but only that you should appear to praise him. And so you attribute to Love every imaginable form of praise which can be gathered anywhere; and you say that ‘he is all this,’ and ‘the cause of all that,’ making him appear the fairest and best of all to those who know him not, for you cannot impose upon those who know him. And a noble and solemn hymn of praise have you rehearsed. But as I

misunderstood the nature of the praise when I said that I would take my turn, I must beg to be absolved from the promise which I made in ignorance, and which (as Euripides would say (Eurip. *Hyppolytus*)) was a promise of the lips and not of the mind. Farewell then to such a strain: for I do not praise in that way; no, indeed, I cannot. But if you like to hear the truth about love, I am ready to speak in my own manner, though I will not make myself ridiculous by entering into any rivalry with you. Say then, Phaedrus, whether you would like to have the truth about love, spoken in any words and in any order which may happen to come into my mind at the time. Will that be agreeable to you?

Aristodemus said that Phaedrus and the company bid him speak in any manner which he thought best. Then, he added, let me have your permission first to ask Agathon a few more questions, in order that I may take his admissions as the premisses of my discourse.

I grant the permission, said Phaedrus: put your questions. Socrates then proceeded as follows: — In the magnificent oration which you have just uttered, I think that you were right, my dear Agathon, in proposing to speak of the nature of Love first and afterwards of his works — that is a way of beginning which I very much approve. And as you have spoken so eloquently of his nature, may I ask you further, Whether love is the love of something or of nothing? And here I must explain myself: I do not want you to say that love is the love of a father or the love of a mother — that would be ridiculous; but to answer as you would, if I asked is a father a father of something? to which you would find no difficulty in replying, of a son or daughter: and the answer would be right.

199e

Very true, said Agathon.

And you would say the same of a mother?

He assented.

Yet let me ask you one more question in order to illustrate my meaning: Is not a brother to be regarded essentially as a brother of something?

200a

Certainly, he replied.

That is, of a brother or sister?

Yes, he said.

And now, said Socrates, I will ask about Love: — Is Love of something or of nothing?

Of something, surely, he replied.

Keep in mind what this is, and tell me what I want to know — whether Love desires that of which love is.

Yes, surely.

200b

And does he possess, or does he not possess, that which he loves and desires?

Probably not, I should say.

Nay, replied Socrates, I would have you consider whether ‘necessarily’ is not rather the word. The inference that he who desires something is in want of something, and that he who desires nothing is in want of nothing, is in my judgment, Agathon, absolutely and necessarily true. What do you think?

I agree with you, said Agathon.

Very good. Would he who is great, desire to be great, or he who is strong, desire to be strong?

200c

That would be inconsistent with our previous admissions.

True.: For he who is anything cannot want to be that which he is?

Very true.

And yet, added Socrates, if a man being strong desired to be strong, or being swift desired to be swift, or being healthy desired to be healthy, in that case he might be thought to desire something which he already has or is. I give the example in order that we may avoid misconception. For the possessors of these qualities, Agathon, must be supposed to have their respective advantages at the time, whether they choose or not; and who can desire that which he has? Therefore, when a person says, I am well and wish to be well, or I am rich and wish to be rich, and I desire simply to have what I have — to him we shall reply: ‘You, my friend, having wealth and health and strength, want to have the continuance of them; for at this moment, whether you choose or no, you have them. And when you say, I desire that which I have and nothing else, is not your meaning that you want to have what you now have in the future?’ He must agree with us — must he not?

He must, replied Agathon.

Then, said Socrates, he desires that what he has at present may be preserved to him in the future, which is equivalent to saying that he desires something which is non-existent to him, and which as yet he has not got: Very true, he said.

Then he and every one who desires, desires that which he has not already, and which is future and not present, and which he has not, and is not, and of which he is in want; — these are the sort of things which love and desire seek?

201a

Very true, he said.

Then now, said Socrates, let us recapitulate the argument. First, is not love of something, and of something too which is wanting to a man?

Yes, he replied.

Remember further what you said in your speech, or if you do not remember I will remind you: you said that the love of the beautiful set in order the empire of the gods, for that of deformed things there is no love — did you not say something of that kind?

Yes, said Agathon.

201b

Yes, my friend, and the remark was a just one. And if this is true, Love is the love of beauty and not of deformity?

He assented.

And the admission has been already made that Love is of something which a man wants and has not?

True, he said.

Then Love wants and has not beauty?

Certainly, he replied.

And would you call that beautiful which wants and does not possess beauty?

Certainly not.

Then would you still say that love is beautiful?

201c

Agathon replied: I fear that I did not understand what I was saying.

You made a very good speech, Agathon, replied Socrates; but there is yet one small question which I would fain ask: — Is not the good also the beautiful?

Yes.

Then in wanting the beautiful, love wants also the good?

I cannot refute you, Socrates, said Agathon: — Let us assume that what you say is true.

Say rather, beloved Agathon, that you cannot refute the truth; for Socrates is easily refuted.

And now, taking my leave of you, I would rehearse a tale of love which I heard from Diotima of Mantinea (compare 1 Alcibiades), a woman wise in this and in many other kinds of knowledge, who in the days of old, when the Athenians offered sacrifice before the coming of the plague, delayed the disease ten years. She was my instructress in the art of love, and I shall repeat to you what she said to me, beginning with the admissions made by Agathon, which are nearly if not quite the same which I made to the wise woman when she questioned me: I think that this will be the easiest way, and I shall take both parts myself as well as I can (compare Gorgias). As you, Agathon, suggested (*supra*), I must speak first of the being and nature of Love, and then of his works. First I said to her in nearly the same words which he used to me, that Love was a mighty god, and likewise fair; and she proved to me as I proved to him that, by my own showing, Love was neither fair nor good. ‘What do you mean, Diotima,’ I said, ‘is love then evil and foul?’ ‘Hush,’ she cried; ‘must that be foul which is not fair?’ ‘Certainly,’ I said. ‘And is that which is not wise, ignorant? do you not see that there is a mean between wisdom and ignorance?’ ‘And what may that be?’ I said. ‘Right opinion,’ she replied; ‘which, as you know, being incapable of giving a reason, is not knowledge (for how can knowledge be devoid of reason? nor again, ignorance, for neither can ignorance attain the truth), but is clearly something which is a mean between ignorance and wisdom.’ ‘Quite true,’ I replied. ‘Do not then insist,’ she said, ‘that what is

not fair is of necessity foul, or what is not good evil; or infer that because love is not fair and good he is therefore foul and evil; for he is in a mean between them.' 'Well,' I said, 'Love is surely admitted by all to be a great god.' 'By those who know or by those who do not know?' 'By all.' 'And how, Socrates,' she said with a smile, 'can Love be acknowledged to be a great god by those who say that he is not a god at all?' 'And who are they?' I said. 'You and I are two of them,' she replied. 'How can that be?' I said. 'It is quite intelligible,' she replied; 'for you yourself would acknowledge that the gods are happy and fair — of course you would — would you dare to say that any god was not?' 'Certainly not,' I replied. 'And you mean by the happy, those who are the possessors of things good or fair?' 'Yes.' 'And you admitted that Love, because he was in want, desires those good and fair things of which he is in want?' 'Yes, I did.' 'But how can he be a god who has no portion in what is either good or fair?' 'Impossible.' 'Then you see that you also deny the divinity of Love.'

203c

'What then is Love?' I asked; 'Is he mortal?' 'No.' 'What then?' 'As in the former instance, he is neither mortal nor immortal, but in a mean between the two.' 'What is he, Diotima?' 'He is a great spirit (daimon), and like all spirits he is intermediate between the divine and the mortal.' 'And what,' I said, 'is his power?' 'He interprets,' she replied, 'between gods and men, conveying and taking across to the gods the prayers and sacrifices of men, and to men the commands and replies of the gods; he is the mediator who spans the chasm which divides them, and therefore in him all is bound together, and through him the arts of the prophet and the priest, their sacrifices and mysteries and charms, and all prophecy and incantation, find their way. For God mingles not with man; but through Love all the intercourse and converse of God with man, whether awake or asleep, is carried on. The wisdom which understands this is

spiritual; all other wisdom, such as that of arts and handicrafts, is mean and vulgar. Now these spirits or intermediate powers are many and diverse, and one of them is Love.' 'And who,' I said, 'was his father, and who his mother?' 'The tale,' she said, 'will take time; nevertheless I will tell you. On the birthday of Aphrodite there was a feast of the gods, at which the god Poros or Plenty, who is the son of Metis or Discretion, was one of the guests. When the feast was over, Penia or Poverty, as the manner is on such occasions, came about the doors to beg. Now Plenty who was the worse for nectar (there was no wine in those days), went into the garden of Zeus and fell into a heavy sleep, and Poverty considering her own straitened circumstances, plotted to have a child by him, and accordingly she lay down at his side and conceived Love, who partly because he is naturally a lover of the beautiful, and because Aphrodite is herself beautiful, and also because he was born on her birthday, is her follower and attendant. And as his parentage is, so also are his fortunes. In the first place he is always poor, and anything but tender and fair, as the many imagine him; and he is rough and squalid, and has no shoes, nor a house to dwell in; on the bare earth exposed he lies under the open heaven, in the streets, or at the doors of houses, taking his rest; and like his mother he is always in distress. Like his father too, whom he also partly resembles, he is always plotting against the fair and good; he is bold, enterprising, strong, a mighty hunter, always weaving some intrigue or other, keen in the pursuit of wisdom, fertile in resources; a philosopher at all times, terrible as an enchanter, sorcerer, sophist. He is by nature neither mortal nor immortal, but alive and flourishing at one moment when he is in plenty, and dead at another moment, and again alive by reason of his father's nature. But that which is always flowing in is always flowing out, and so he is never in want and never in wealth; and, further, he is in a mean between ignorance and knowledge. The truth of the matter is this: No god is a

philosopher or seeker after wisdom, for he is wise already; nor does any man who is wise seek after wisdom. Neither do the ignorant seek after wisdom. For herein is the evil of ignorance, that he who is neither good nor wise is nevertheless satisfied with himself: he has no desire for that of which he feels no want.' 'But who then, Diotima,' I said, 'are the lovers of wisdom, if they are neither the wise nor the foolish?' 'A child may answer that question,' she replied; 'they are those who are in a mean between the two; Love is one of them. For wisdom is a most beautiful thing, and Love is of the beautiful; and therefore Love is also a philosopher or lover of wisdom, and being a lover of wisdom is in a mean between the wise and the ignorant. And of this too his birth is the cause; for his father is wealthy and wise, and his mother poor and foolish. Such, my dear Socrates, is the nature of the spirit Love. The error in your conception of him was very natural, and as I imagine from what you say, has arisen out of a confusion of love and the beloved, which made you think that love was all beautiful. For the beloved is the truly beautiful, and delicate, and perfect, and blessed; but the principle of love is of another nature, and is such as I have described.'

I said, 'O thou stranger woman, thou sayest well; but, assuming Love to be such as you say, what is the use of him to men?' 'That, Socrates,' she replied, 'I will attempt to unfold: of his nature and birth I have already spoken; and you acknowledge that love is of the beautiful. But some one will say: Of the beautiful in what, Socrates and Diotima? — or rather let me put the question more clearly, and ask: When a man loves the beautiful, what does he desire?' I answered her 'That the beautiful may be his.' 'Still,' she said, 'the answer suggests a further question: What is given by the possession of beauty?' 'To what you have asked,' I replied, 'I have no answer ready.' 'Then,' she said, 'let me put the word "good" in the place of the beautiful, and repeat the question once more: If he who loves

loves the good, what is it then that he loves?" "The possession of the good," I said. "And what does he gain who possesses the good?" "Happiness," I replied; "there is less difficulty in answering that question." "Yes," she said, "the happy are made happy by the acquisition of good things. Nor is there any need to ask why a man desires happiness; the answer is already final." "You are right," I said. "And is this wish and this desire common to all? and do all men always desire their own good, or only some men? — what say you?" "All men," I replied; "the desire is common to all." "Why, then," she rejoined, "are not all men, Socrates, said to love, but only some of them? whereas you say that all men are always loving the same things." "I myself wonder," I said, "why this is." "There is nothing to wonder at," she replied; "the reason is that one part of love is separated off and receives the name of the whole, but the other parts have other names." "Give an illustration," I said. She answered me as follows: "There is poetry, which, as you know, is complex and manifold. All creation or passage of non-being into being is poetry or making, and the processes of all art are creative; and the masters of arts are all poets or makers." "Very true." "Still," she said, "you know that they are not called poets, but have other names; only that portion of the art which is separated off from the rest, and is concerned with music and metre, is termed poetry, and they who possess poetry in this sense of the word are called poets." "Very true," I said. "And the same holds of love. For you may say generally that all desire of good and happiness is only the great and subtle power of love; but they who are drawn towards him by any other path, whether the path of money-making or gymnastics or philosophy, are not called lovers — the name of the whole is appropriated to those whose affection takes one form only — they alone are said to love, or to be lovers." "I dare say," I replied, "that you are right." "Yes," she added, "and you hear people say that lovers are seeking for their other half; but I say that they are seeking neither for the half of

themselves, nor for the whole, unless the half or the whole be also a good. And they will cut off their own hands and feet and cast them away, if they are evil; for they love not what is their own, unless perchance there be some one who calls what belongs to him the good, and what belongs to another the evil. For there is nothing which men love but the good. Is there anything?' 'Certainly, I should say, that there is nothing.' 'Then,' she said, 'the simple truth is, that men love the good.' 'Yes,' I said. 'To which must be added that they love the possession of the good?' 'Yes, that must be added.' 'And not only the possession, but the everlasting possession of the good?' 'That must be added too.' 'Then love,' she said, 'may be described generally as the love of the everlasting possession of the good?' 'That is most true.'

'Then if this be the nature of love, can you tell me further,' she said, 'what is the manner of the pursuit? what are they doing who show all this eagerness and heat which is called love? and what is the object which they have in view? Answer me.' 'Nay, Diotima,' I replied, 'if I had known, I should not have wondered at your wisdom, neither should I have come to learn from you about this very matter.' 'Well,' she said, 'I will teach you: — The object which they have in view is birth in beauty, whether of body or soul.' 'I do not understand you,' I said; 'the oracle requires an explanation.' 'I will make my meaning clearer,' she replied. 'I mean to say, that all men are bringing to the birth in their bodies and in their souls. There is a certain age at which human nature is desirous of procreation — procreation which must be in beauty and not in deformity; and this procreation is the union of man and woman, and is a divine thing; for conception and generation are an immortal principle in the mortal creature, and in the inharmonious they can never be. But the deformed is always inharmonious with the divine, and the beautiful harmonious. Beauty, then, is the destiny or goddess of parturition who presides at birth, and therefore,

when approaching beauty, the conceiving power is propitious, and diffusive, and benign, and begets and bears fruit: at the sight of ugliness she frowns and contracts and has a sense of pain, and turns away, and shrivels up, and not without a pang refrains from conception. And this is the reason why, when the hour of conception arrives, and the teeming nature is full, there is such a flutter and ecstasy about beauty whose approach is the alleviation of the pain of travail. For love, Socrates, is not, as you imagine, the love of the beautiful only.' 'What then?' 'The love of generation and of birth in beauty.' 'Yes,' I said. 'Yes, indeed,' she replied. 'But why of generation?' 'Because to the mortal creature, generation is a sort of eternity and immortality,' she replied; 'and if, as has been already admitted, love is of the everlasting possession of the good, all men will necessarily desire immortality together with good: Wherefore love is of immortality.'

207d

All this she taught me at various times when she spoke of love. And I remember her once saying to me, 'What is the cause, Socrates, of love, and the attendant desire? See you not how all animals, birds, as well as beasts, in their desire of procreation, are in agony when they take the infection of love, which begins with the desire of union; whereto is added the care of offspring, on whose behalf the weakest are ready to battle against the strongest even to the uttermost, and to die for them, and will let themselves be tormented with hunger or suffer anything in order to maintain their young. Man may be supposed to act thus from reason; but why should animals have these passionate feelings? Can you tell me why?' Again I replied that I did not know. She said to me: 'And do you expect ever to become a master in the art of love, if you do not know this?' 'But I have told you already, Diotima, that my ignorance is the reason why I come to you; for I am conscious that I want a teacher; tell me then the cause of this and of the other mysteries of love.'

‘Marvel not,’ she said, ‘if you believe that love is of the immortal, as we have several times acknowledged; for here again, and on the same principle too, the mortal nature is seeking as far as is possible to be everlasting and immortal: and this is only to be attained by generation, because generation always leaves behind a new existence in the place of the old. Nay even in the life of the same individual there is succession and not absolute unity: a man is called the same, and yet in the short interval which elapses between youth and age, and in which every animal is said to have life and identity, he is undergoing a perpetual process of loss and reparation — hair, flesh, bones, blood, and the whole body are always changing. Which is true not only of the body, but also of the soul, whose habits, tempers, opinions, desires, pleasures, pains, fears, never remain the same in any one of us, but are always coming and going; and equally true of knowledge, and what is still more surprising to us mortals, not only do the sciences in general spring up and decay, so that in respect of them we are never the same; but each of them individually experiences a like change. For what is implied in the word “recollection,” but the departure of knowledge, which is ever being forgotten, and is renewed and preserved by recollection, and appears to be the same although in reality new, according to that law of succession by which all mortal things are preserved, not absolutely the same, but by substitution, the old worn-out mortality leaving another new and similar existence behind — unlike the divine, which is always the same and not another? And in this way, Socrates, the mortal body, or mortal anything, partakes of immortality; but the immortal in another way. Marvel not then at the love which all men have of their offspring; for that universal love and interest is for the sake of immortality.’

208c

I was astonished at her words, and said: 'Is this really true, O thou wise Diotima?' And she answered with all the authority of an accomplished sophist: 'Of that, Socrates, you may be assured; — think only of the ambition of men, and you will wonder at the senselessness of their ways, unless you consider how they are stirred by the love of an immortality of fame. They are ready to run all risks greater far than they would have run for their children, and to spend money and undergo any sort of toil, and even to die, for the sake of leaving behind them a name which shall be eternal. Do you imagine that Alcestis would have died to save Admetus, or Achilles to avenge Patroclus, or your own Codrus in order to preserve the kingdom for his sons, if they had not imagined that the memory of their virtues, which still survives among us, would be immortal? Nay,' she said, 'I am persuaded that all men do all things, and the better they are the more they do them, in hope of the glorious fame of immortal virtue; for they desire the immortal.

208e

'Those who are pregnant in the body only, betake themselves to women and beget children — this is the character of their love; their offspring, as they hope, will preserve their memory and giving them the blessedness and immortality which they desire in the future. But souls which are pregnant — for there certainly are men who are more creative in their souls than in their bodies — conceive that which is proper for the soul to conceive or contain. And what are these conceptions? — wisdom and virtue in general. And such creators are poets and all artists who are deserving of the name inventor. But the greatest and fairest sort of wisdom by far is that which is concerned with the ordering of states and families, and which is called temperance and justice. And he who in youth has the seed of these implanted in him and is himself inspired, when he comes to maturity desires to beget and generate. He wanders about seeking beauty that he may beget offspring — for in deformity

he will beget nothing — and naturally embraces the beautiful rather than the deformed body; above all when he finds a fair and noble and well-nurtured soul, he embraces the two in one person, and to such an one he is full of speech about virtue and the nature and pursuits of a good man; and he tries to educate him; and at the touch of the beautiful which is ever present to his memory, even when absent, he brings forth that which he had conceived long before, and in company with him tends that which he brings forth; and they are married by a far nearer tie and have a closer friendship than those who beget mortal children, for the children who are their common offspring are fairer and more immortal. Who, when he thinks of Homer and Hesiod and other great poets, would not rather have their children than ordinary human ones? Who would not emulate them in the creation of children such as theirs, which have preserved their memory and given them everlasting glory? Or who would not have such children as Lycurgus left behind him to be the saviours, not only of Lacedaemon, but of Hellas, as one may say? There is Solon, too, who is the revered father of Athenian laws; and many others there are in many other places, both among Hellenes and barbarians, who have given to the world many noble works, and have been the parents of virtue of every kind; and many temples have been raised in their honour for the sake of children such as theirs; which were never raised in honour of any one, for the sake of his mortal children.

210a

‘These are the lesser mysteries of love, into which even you, Socrates, may enter; to the greater and more hidden ones which are the crown of these, and to which, if you pursue them in a right spirit, they will lead, I know not whether you will be able to attain. But I will do my utmost to inform you, and do you follow if you can. For he who would proceed aright in this matter should begin in youth to visit beautiful forms; and first, if he be guided by his instructor aright, to love one such form

only — out of that he should create fair thoughts; and soon he will of himself perceive that the beauty of one form is akin to the beauty of another; and then if beauty of form in general is his pursuit, how foolish would he be not to recognize that the beauty in every form is and the same! And when he perceives this he will abate his violent love of the one, which he will despise and deem a small thing, and will become a lover of all beautiful forms; in the next stage he will consider that the beauty of the mind is more honourable than the beauty of the outward form. So that if a virtuous soul have but a little comeliness, he will be content to love and tend him, and will search out and bring to the birth thoughts which may improve the young, until he is compelled to contemplate and see the beauty of institutions and laws, and to understand that the beauty of them all is of one family, and that personal beauty is a trifle; and after laws and institutions he will go on to the sciences, that he may see their beauty, being not like a servant in love with the beauty of one youth or man or institution, himself a slave mean and narrow-minded, but drawing towards and contemplating the vast sea of beauty, he will create many fair and noble thoughts and notions in boundless love of wisdom; until on that shore he grows and waxes strong, and at last the vision is revealed to him of a single science, which is the science of beauty everywhere. To this I will proceed; please to give me your very best attention: 210e ‘He who has been instructed thus far in the things of love, and who has learned to see the beautiful in due order and succession, when he comes toward the end will suddenly perceive a nature of wondrous beauty (and this, Socrates, is the final cause of all our former toils) — a nature which in the first place is everlasting, not growing and decaying, or waxing and waning; secondly, not fair in one point of view and foul in another, or at one time or in one relation or at one place fair, at another time or in another relation or at another place foul, as if fair to some and foul to

others, or in the likeness of a face or hands or any other part of the bodily frame, or in any form of speech or knowledge, or existing in any other being, as for example, in an animal, or in heaven, or in earth, or in any other place; but beauty absolute, separate, simple, and everlasting, which without diminution and without increase, or any change, is imparted to the ever-growing and perishing beauties of all other things. He who from these ascending under the influence of true love, begins to perceive that beauty, is not far from the end. And the true order of going, or being led by another, to the things of love, is to begin from the beauties of earth and mount upwards for the sake of that other beauty, using these as steps only, and from one going on to two, and from two to all fair forms, and from fair forms to fair practices, and from fair practices to fair notions, until from fair notions he arrives at the notion of absolute beauty, and at last knows what the essence of beauty is. This, my dear Socrates,' said the stranger of Mantinea, 'is that life above all others which man should live, in the contemplation of beauty absolute; a beauty which if you once beheld, you would see not to be after the measure of gold, and garments, and fair boys and youths, whose presence now entrances you; and you and many a one would be content to live seeing them only and conversing with them without meat or drink, if that were possible — you only want to look at them and to be with them. But what if man had eyes to see the true beauty — the divine beauty, I mean, pure and clear and unalloyed, not clogged with the pollutions of mortality and all the colours and vanities of human life — thither looking, and holding converse with the true beauty simple and divine? Remember how in that communion only, beholding beauty with the eye of the mind, he will be enabled to bring forth, not images of beauty, but realities (for he has hold not of an image but of a reality), and bringing forth and nourishing true virtue to become the friend of God and be immortal, if mortal man may. Would that be an ignoble

life?’

211e

Such, Phaedrus — and I speak not only to you, but to all of you — were the words of Diotima; and I am persuaded of their truth. And being persuaded of them, I try to persuade others, that in the attainment of this end human nature will not easily find a helper better than love: And therefore, also, I say that every man ought to honour him as I myself honour him, and walk in his ways, and exhort others to do the same, and praise the power and spirit of love according to the measure of my ability now and ever.

212b

The words which I have spoken, you, Phaedrus, may call an encomium of love, or anything else which you please.

212d

When Socrates had done speaking, the company applauded, and Aristophanes was beginning to say something in answer to the allusion which Socrates had made to his own speech, when suddenly there was a great knocking at the door of the house, as of revellers, and the sound of a flute-girl was heard. Agathon told the attendants to go and see who were the intruders. ‘If they are friends of ours,’ he said, ‘invite them in, but if not, say that the drinking is over.’ A little while afterwards they heard the voice of Alcibiades resounding in the court; he was in a great state of intoxication, and kept roaring and shouting ‘Where is Agathon? Lead me to Agathon,’ and at length, supported by the flute-girl and some of his attendants, he found his way to them. ‘Hail, friends,’ he said, appearing at the door crowned with a massive garland of ivy and violets, his head flowing with ribands. ‘Will you have a very drunken man as a companion of your revels? Or shall I crown Agathon, which was my intention in coming, and go away? For I was unable to come yesterday, and therefore I am here to-day, carrying on my head these ribands, that taking them from my own head, I may crown

the head of this fairest and wisest of men, as I may be allowed to call him. Will you laugh at me because I am drunk? Yet I know very well that I am speaking the truth, although you may laugh. But first tell me; if I come in shall we have the understanding of which I spoke (supra Will you have a very drunken man? etc.)? Will you drink with me or not?’

213a

The company were vociferous in begging that he would take his place among them, and Agathon specially invited him. Thereupon he was led in by the people who were with him; and as he was being led, intending to crown Agathon, he took the ribands from his own head and held them in front of his eyes; he was thus prevented from seeing Socrates, who made way for him, and Alcibiades took the vacant place between Agathon and Socrates, and in taking the place he embraced Agathon and crowned him. Take off his sandals, said Agathon, and let him make a third on the same couch.

By all means; but who makes the third partner in our revels? said Alcibiades, turning round and starting up as he caught sight of Socrates. By Heracles, he said, what is this? here is Socrates always lying in wait for me, and always, as his way is, coming out at all sorts of unsuspected places: and now, what have you to say for yourself, and why are you lying here, where I perceive that you have contrived to find a place, not by a joker or lover of jokes, like Aristophanes, but by the fairest of the company?

213c

Socrates turned to Agathon and said: I must ask you to protect me, Agathon; for the passion of this man has grown quite a serious matter to me. Since I became his admirer I have never been allowed to speak to any other fair one, or so much as to look at them. If I do, he goes wild with envy and jealousy, and not only abuses me but can hardly keep his hands off me, and at

this moment he may do me some harm. Please to see to this, and either reconcile me to him, or, if he attempts violence, protect me, as I am in bodily fear of his mad and passionate attempts.

213d

There can never be reconciliation between you and me, said Alcibiades; but for the present I will defer your chastisement. And I must beg you, Agathon, to give me back some of the ribands that I may crown the marvellous head of this universal despot — I would not have him complain of me for crowning you, and neglecting him, who in conversation is the conqueror of all mankind; and this not only once, as you were the day before yesterday, but always. Whereupon, taking some of the ribands, he crowned Socrates, and again reclined.

213e

Then he said: You seem, my friends, to be sober, which is a thing not to be endured; you must drink — for that was the agreement under which I was admitted — and I elect myself master of the feast until you are well drunk. Let us have a large goblet, Agathon, or rather, he said, addressing the attendant, bring me that wine-cooler. The wine-cooler which had caught his eye was a vessel holding more than two quarts — this he filled and emptied, and bade the attendant fill it again for Socrates. Observe, my friends, said Alcibiades, that this ingenious trick of mine will have no effect on Socrates, for he can drink any quantity of wine and not be at all nearer being drunk. Socrates drank the cup which the attendant filled for him.

Eryximachus said: What is this, Alcibiades? Are we to have neither conversation nor singing over our cups; but simply to drink as if we were thirsty?

Alcibiades replied: Hail, worthy son of a most wise and worthy sire!

The same to you, said Eryximachus; but what shall we do?

That I leave to you, said Alcibiades.

214c

'The wise physician skilled our wounds to heal (from Pope's Homer, ll.)'

shall prescribe and we will obey. What do you want?

Well, said Eryximachus, before you appeared we had passed a resolution that each one of us in turn should make a speech in praise of love, and as good a one as he could: the turn was passed round from left to right; and as all of us have spoken, and you have not spoken but have well drunken, you ought to speak, and then impose upon Socrates any task which you please, and he on his right hand neighbour, and so on.

That is good, Eryximachus, said Alcibiades; and yet the comparison of a drunken man's speech with those of sober men is hardly fair; and I should like to know, sweet friend, whether you really believe what Socrates was just now saying; for I can assure you that the very reverse is the fact, and that if I praise any one but himself in his presence, whether God or man, he will hardly keep his hands off me.

For shame, said Socrates.

214e

Hold your tongue, said Alcibiades, for by Poseidon, there is no one else whom I will praise when you are of the company.

Well then, said Eryximachus, if you like praise Socrates.

What do you think, Eryximachus? said Alcibiades: shall I attack him and inflict the punishment before you all?

What are you about? said Socrates; are you going to raise a laugh at my expense? Is that the meaning of your praise?

215a

I am going to speak the truth, if you will permit me.

I not only permit, but exhort you to speak the truth.

Then I will begin at once, said Alcibiades, and if I say anything which is not true, you may interrupt me if you will, and say 'that is a lie,' though my intention is to speak the truth. But you must not wonder if I speak any how as things come into my mind; for the fluent and orderly enumeration of all your singularities is not a task which is easy to a man in my condition.

215c

And now, my boys, I shall praise Socrates in a figure which will appear to him to be a caricature, and yet I speak, not to make fun of him, but only for the truth's sake. I say, that he is exactly like the busts of Silenus, which are set up in the statuaries' shops, holding pipes and flutes in their mouths; and they are made to open in the middle, and have images of gods inside them. I say also that he is like Marsyas the satyr. You yourself will not deny, Socrates, that your face is like that of a satyr. Aye, and there is a resemblance in other points too. For example, you are a bully, as I can prove by witnesses, if you will not confess. And are you not a flute-player? That you are, and a performer far more wonderful than Marsyas. He indeed with instruments used to charm the souls of men by the power of his breath, and the players of his music do so still: for the melodies of Olympus (compare Arist. Pol.) are derived from Marsyas who taught them, and these, whether they are played by a great master or by a miserable flute-girl, have a power which no others have; they alone possess the soul and reveal the wants of those who have need of gods and mysteries, because they are divine. But you produce the same effect with your words only, and do not require the flute: that is the difference between you and him. When we hear any other speaker, even a very good one, he produces absolutely no effect upon us, or not much, whereas the mere fragments of you and your words, even at second-hand, and however imperfectly repeated, amaze and

possess the souls of every man, woman, and child who comes within hearing of them. And if I were not afraid that you would think me hopelessly drunk, I would have sworn as well as spoken to the influence which they have always had and still have over me. For my heart leaps within me more than that of any Corybantian reveller, and my eyes rain tears when I hear them. And I observe that many others are affected in the same manner. I have heard Pericles and other great orators, and I thought that they spoke well, but I never had any similar feeling; my soul was not stirred by them, nor was I angry at the thought of my own slavish state. But this Marsyas has often brought me to such a pass, that I have felt as if I could hardly endure the life which I am leading (this, Socrates, you will admit); and I am conscious that if I did not shut my ears against him, and fly as from the voice of the siren, my fate would be like that of others, — he would transfix me, and I should grow old sitting at his feet. For he makes me confess that I ought not to live as I do, neglecting the wants of my own soul, and busying myself with the concerns of the Athenians; therefore I hold my ears and tear myself away from him. And he is the only person who ever made me ashamed, which you might think not to be in my nature, and there is no one else who does the same. For I know that I cannot answer him or say that I ought not to do as he bids, but when I leave his presence the love of popularity gets the better of me. And therefore I run away and fly from him, and when I see him I am ashamed of what I have confessed to him. Many a time have I wished that he were dead, and yet I know that I should be much more sorry than glad, if he were to die: so that I am at my wit's end.

217c

And this is what I and many others have suffered from the flute-playing of this satyr. Yet hear me once more while I show you how exact the image is, and how marvellous his power. For let me tell you; none of you know him; but I will reveal him to

you; having begun, I must go on. See you how fond he is of the fair? He is always with them and is always being smitten by them, and then again he knows nothing and is ignorant of all things — such is the appearance which he puts on. Is he not like a Silenus in this? To be sure he is: his outer mask is the carved head of the Silenus; but, O my companions in drink, when he is opened, what temperance there is residing within! Know you that beauty and wealth and honour, at which the many wonder, are of no account with him, and are utterly despised by him: he regards not at all the persons who are gifted with them; mankind are nothing to him; all his life is spent in mocking and flouting at them. But when I opened him, and looked within at his serious purpose, I saw in him divine and golden images of such fascinating beauty that I was ready to do in a moment whatever Socrates commanded: they may have escaped the observation of others, but I saw them. Now I fancied that he was seriously enamoured of my beauty, and I thought that I should therefore have a grand opportunity of hearing him tell what he knew, for I had a wonderful opinion of the attractions of my youth. In the prosecution of this design, when I next went to him, I sent away the attendant who usually accompanied me (I will confess the whole truth, and beg you to listen; and if I speak falsely, do you, Socrates, expose the falsehood). Well, he and I were alone together, and I thought that when there was nobody with us, I should hear him speak the language which lovers use to their loves when they are by themselves, and I was delighted. Nothing of the sort; he conversed as usual, and spent the day with me and then went away. Afterwards I challenged him to the palaestra; and he wrestled and closed with me several times when there was no one present; I fancied that I might succeed in this manner. Not a bit; I made no way with him. Lastly, as I had failed hitherto, I thought that I must take stronger measures and attack him boldly, and, as I had begun, not give him up, but see how matters stood between him and me. So I

invited him to sup with me, just as if he were a fair youth, and I a designing lover. He was not easily persuaded to come; he did, however, after a while accept the invitation, and when he came the first time, he wanted to go away at once as soon as supper was over, and I had not the face to detain him. The second time, still in pursuance of my design, after we had supped, I went on conversing far into the night, and when he wanted to go away, I pretended that the hour was late and that he had much better remain. So he lay down on the couch next to me, the same on which he had supped, and there was no one but ourselves sleeping in the apartment. All this may be told without shame to any one. But what follows I could hardly tell you if I were sober. Yet as the proverb says, 'In vino veritas,' whether with boys, or without them (In allusion to two proverbs.); and therefore I must speak. Nor, again, should I be justified in concealing the lofty actions of Socrates when I come to praise him. Moreover I have felt the serpent's sting; and he who has suffered, as they say, is willing to tell his fellow-sufferers only, as they alone will be likely to understand him, and will not be extreme in judging of the sayings or doings which have been wrung from his agony. For I have been bitten by a more than viper's tooth; I have known in my soul, or in my heart, or in some other part, that worst of pangs, more violent in ingenuous youth than any serpent's tooth, the pang of philosophy, which will make a man say or do anything. And you whom I see around me, Phaedrus and Agathon and Eryximachus and Pausanias and Aristodemus and Aristophanes, all of you, and I need not say Socrates himself, have had experience of the same madness and passion in your longing after wisdom. Therefore listen and excuse my doings then and my sayings now. But let the attendants and other profane and unmannered persons close up the doors of their ears.

When the lamp was put out and the servants had gone away, I thought that I must be plain with him and have no more

ambiguity. So I gave him a shake, and I said: 'Socrates, are you asleep?' 'No,' he said. 'Do you know what I am meditating?' 'What are you meditating?' he said. 'I think,' I replied, 'that of all the lovers whom I have ever had you are the only one who is worthy of me, and you appear to be too modest to speak. Now I feel that I should be a fool to refuse you this or any other favour, and therefore I come to lay at your feet all that I have and all that my friends have, in the hope that you will assist me in the way of virtue, which I desire above all things, and in which I believe that you can help me better than any one else. And I should certainly have more reason to be ashamed of what wise men would say if I were to refuse a favour to such as you, than of what the world, who are mostly fools, would say of me if I granted it.' To these words he replied in the ironical manner which is so characteristic of him:— 'Alcibiades, my friend, you have indeed an elevated aim if what you say is true, and if there really is in me any power by which you may become better; truly you must see in me some rare beauty of a kind infinitely higher than any which I see in you. And therefore, if you mean to share with me and to exchange beauty for beauty, you will have greatly the advantage of me; you will gain true beauty in return for appearance — like Diomedes, gold in exchange for brass. But look again, sweet friend, and see whether you are not deceived in me. The mind begins to grow critical when the bodily eye fails, and it will be a long time before you get old.' Hearing this, I said: 'I have told you my purpose, which is quite serious, and do you consider what you think best for you and me.' 'That is good,' he said; 'at some other time then we will consider and act as seems best about this and about other matters.' Whereupon, I fancied that he was smitten, and that the words which I had uttered like arrows had wounded him, and so without waiting to hear more I got up, and throwing my coat about him crept under his threadbare cloak, as the time of year was winter, and there I lay during the whole night having

this wonderful monster in my arms. This again, Socrates, will not be denied by you. And yet, notwithstanding all, he was so superior to my solicitations, so contemptuous and derisive and disdainful of my beauty — which really, as I fancied, had some attractions — hear, O judges; for judges you shall be of the haughty virtue of Socrates — nothing more happened, but in the morning when I awoke (let all the gods and goddesses be my witnesses) I arose as from the couch of a father or an elder brother.

219e

What do you suppose must have been my feelings, after this rejection, at the thought of my own dishonour? And yet I could not help wondering at his natural temperance and self-restraint and manliness. I never imagined that I could have met with a man such as he is in wisdom and endurance. And therefore I could not be angry with him or renounce his company, any more than I could hope to win him. For I well knew that if Ajax could not be wounded by steel, much less he by money; and my only chance of captivating him by my personal attractions had failed. So I was at my wit's end; no one was ever more hopelessly enslaved by another. All this happened before he and I went on the expedition to Potidaea; there we messed together, and I had the opportunity of observing his extraordinary power of sustaining fatigue. His endurance was simply marvellous when, being cut off from our supplies, we were compelled to go without food — on such occasions, which often happen in time of war, he was superior not only to me but to everybody; there was no one to be compared to him. Yet at a festival he was the only person who had any real powers of enjoyment; though not willing to drink, he could if compelled beat us all at that, — wonderful to relate! no human being had ever seen Socrates drunk; and his powers, if I am not mistaken, will be tested before long. His fortitude in enduring cold was also surprising. There was a severe frost, for the winter in that region is really

tremendous, and everybody else either remained indoors, or if they went out had on an amazing quantity of clothes, and were well shod, and had their feet swathed in felt and fleeces: in the midst of this, Socrates with his bare feet on the ice and in his ordinary dress marched better than the other soldiers who had shoes, and they looked daggers at him because he seemed to despise them.

I have told you one tale, and now I must tell you another, which is worth hearing, 'Of the doings and sufferings of the enduring man'

221a

while he was on the expedition. One morning he was thinking about something which he could not resolve; he would not give it up, but continued thinking from early dawn until noon — there he stood fixed in thought; and at noon attention was drawn to him, and the rumour ran through the wondering crowd that Socrates had been standing and thinking about something ever since the break of day. At last, in the evening after supper, some Ionians out of curiosity (I should explain that this was not in winter but in summer), brought out their mats and slept in the open air that they might watch him and see whether he would stand all night. There he stood until the following morning; and with the return of light he offered up a prayer to the sun, and went his way (compare *supra*). I will also tell, if you please — and indeed I am bound to tell — of his courage in battle; for who but he saved my life? Now this was the engagement in which I received the prize of valour: for I was wounded and he would not leave me, but he rescued me and my arms; and he ought to have received the prize of valour which the generals wanted to confer on me partly on account of my rank, and I told them so, (this, again, Socrates will not impeach or deny), but he was more eager than the generals that I and not he should have the prize. There was another occasion on which

his behaviour was very remarkable — in the flight of the army after the battle of Delium, where he served among the heavy-armed, — I had a better opportunity of seeing him than at Potidaea, for I was myself on horseback, and therefore comparatively out of danger. He and Laches were retreating, for the troops were in flight, and I met them and told them not to be discouraged, and promised to remain with them; and there you might see him, Aristophanes, as you describe (Aristoph. Clouds), just as he is in the streets of Athens, stalking like a pelican, and rolling his eyes, calmly contemplating enemies as well as friends, and making very intelligible to anybody, even from a distance, that whoever attacked him would be likely to meet with a stout resistance; and in this way he and his companion escaped — for this is the sort of man who is never touched in war; those only are pursued who are running away headlong. I particularly observed how superior he was to Laches in presence of mind. Many are the marvels which I might narrate in praise of Socrates; most of his ways might perhaps be paralleled in another man, but his absolute unlikeness to any human being that is or ever has been is perfectly astonishing. You may imagine Brasidas and others to have been like Achilles; or you may imagine Nestor and Antenor to have been like Pericles; and the same may be said of other famous men, but of this strange being you will never be able to find any likeness, however remote, either among men who now are or who ever have been — other than that which I have already suggested of Silenus and the satyrs; and they represent in a figure not only himself, but his words. For, although I forgot to mention this to you before, his words are like the images of Silenus which open; they are ridiculous when you first hear them; he clothes himself in language that is like the skin of the wanton satyr — for his talk is of pack-asses and smiths and cobblers and curriers, and he is always repeating the same things in the same words (compare Gorg.), so that any ignorant or inexperienced person

might feel disposed to laugh at him; but he who opens the bust and sees what is within will find that they are the only words which have a meaning in them, and also the most divine, abounding in fair images of virtue, and of the widest comprehension, or rather extending to the whole duty of a good and honourable man.

222c

This, friends, is my praise of Socrates. I have added my blame of him for his ill-treatment of me; and he has ill-treated not only me, but Charmides the son of Glaucon, and Euthydemus the son of Diocles, and many others in the same way — beginning as their lover he has ended by making them pay their addresses to him. Wherefore I say to you, Agathon, ‘Be not deceived by him; learn from me and take warning, and do not be a fool and learn by experience, as the proverb says.’

When Alcibiades had finished, there was a laugh at his outspokenness; for he seemed to be still in love with Socrates. You are sober, Alcibiades, said Socrates, or you would never have gone so far about to hide the purpose of your satyr’s praises, for all this long story is only an ingenious circumlocution, of which the point comes in by the way at the end; you want to get up a quarrel between me and Agathon, and your notion is that I ought to love you and nobody else, and that you and you only ought to love Agathon. But the plot of this Satyric or Silenic drama has been detected, and you must not allow him, Agathon, to set us at variance.

I believe you are right, said Agathon, and I am disposed to think that his intention in placing himself between you and me was only to divide us; but he shall gain nothing by that move; for I will go and lie on the couch next to you.

Yes, yes, replied Socrates, by all means come here and lie on the couch below me.

222e

Alas, said Alcibiades, how I am fooled by this man; he is determined to get the better of me at every turn. I do beseech you, allow Agathon to lie between us.

Certainly not, said Socrates, as you praised me, and I in turn ought to praise my neighbour on the right, he will be out of order in praising me again when he ought rather to be praised by me, and I must entreat you to consent to this, and not be jealous, for I have a great desire to praise the youth.

Hurrah! cried Agathon, I will rise instantly, that I may be praised by Socrates.

The usual way, said Alcibiades; where Socrates is, no one else has any chance with the fair; and now how readily has he invented a specious reason for attracting Agathon to himself.

223b

Agathon arose in order that he might take his place on the couch by Socrates, when suddenly a band of revellers entered, and spoiled the order of the banquet. Some one who was going out having left the door open, they had found their way in, and made themselves at home; great confusion ensued, and every one was compelled to drink large quantities of wine. Aristodemus said that Eryximachus, Phaedrus, and others went away — he himself fell asleep, and as the nights were long took a good rest: he was awakened towards daybreak by a crowing of cocks, and when he awoke, the others were either asleep, or had gone away; there remained only Socrates, Aristophanes, and Agathon, who were drinking out of a large goblet which they passed round, and Socrates was discoursing to them. Aristodemus was only half awake, and he did not hear the beginning of the discourse; the chief thing which he remembered was Socrates compelling the other two to acknowledge that the genius of comedy was the same with that of tragedy, and that the true artist in tragedy was an artist in comedy also. To this they were constrained to assent, being

drowsy, and not quite following the argument. And first of all Aristophanes dropped off, then, when the day was already dawning, Agathon. Socrates, having laid them to sleep, rose to depart; Aristodemus, as his manner was, following him. At the Lyceum he took a bath, and passed the day as usual. In the evening he retired to rest at his own home.

Theaetetus

ΘΕΑΙΤΗΤΟΣ

Plato

persons in the dialogue:

EUCLIDES founder of Megarian school

TERPSION of Megara, friend of Euclides

MALE SLAVE of Euclides, oral reader

THEODORUS of Cyrene, geometer

THEAETETUS of Sounion, mathematician, geometer

SOCRATES of Alopecce, son of Sophroniscus

scene: at the house of Euclides in Megara / in a gymnasium in Athens

142a

Euclid and Terpsion meet in front of Euclid's house in Megara; they enter the house, and the dialogue is read to them by a servant.

Euclid: Have you only just arrived from the country, Terpsion?

Terpsion: No, I came some time ago: and I have been in the Agora looking for you, and wondering that I could not find you.

Euclid: But I was not in the city.

Terpsion: Where then?

Euclid: As I was going down to the harbour, I met Theaetetus — he was being carried up to Athens from the army at Corinth.

Terpsion: Was he alive or dead?

142b

Euclid: He was scarcely alive, for he has been badly wounded; but he was suffering even more from the sickness which has broken out in the army.

Terpsion: The dysentery, you mean?

Euclid: Yes.

Terpsion: Alas! what a loss he will be!

Euclid: Yes, Terpsion, he is a noble fellow; only to-day I heard some people highly praising his behaviour in this very battle.

142c

Terpsion: No wonder; I should rather be surprised at hearing anything else of him. But why did he go on, instead of stopping at Megara?

Euclid: He wanted to get home: although I entreated and advised him to remain, he would not listen to me; so I set him on his way, and turned back, and then I remembered what Socrates had said of him, and thought how remarkably this, like all his predictions, had been fulfilled. I believe that he had seen him a little before his own death, when Theaetetus was a youth, and he had a memorable conversation with him, which he repeated to me when I came to Athens; he was full of admiration of his genius, and said that he would most certainly be a great man, if he lived.

143a

Terpsion: The prophecy has certainly been fulfilled; but what was the conversation? can you tell me?

Euclid: No, indeed, not offhand; but I took notes of it as soon as I got home; these I filled up from memory, writing them out at leisure; and whenever I went to Athens, I asked Socrates about any point which I had forgotten, and on my return I made corrections; thus I have nearly the whole conversation written down.

Terpsion: I remember — you told me; and I have always been intending to ask you to show me the writing, but have put off doing so; and now, why should we not read it through? — having just come from the country, I should greatly like to rest.

143b

Euclid: I too shall be very glad of a rest, for I went with Theaetetus as far as Erineum. Let us go in, then, and, while we

are reposing, the servant shall read to us.

Terpsion: Very good.

Euclid: Here is the roll, Terpsion; I may observe that I have introduced Socrates, not as narrating to me, but as actually conversing with the persons whom he mentioned — these were, Theodorus the geometrician (of Cyrene), and Theaetetus. I have omitted, for the sake of convenience, the interlocutory words ‘I said,’ ‘I remarked,’ which he used when he spoke of himself, and again, ‘he agreed,’ or ‘disagreed,’ in the answer, lest the repetition of them should be troublesome.

143c

Terpsion: Quite right, Euclid.

Euclid: And now, boy, you may take the roll and read.

143d

Euclid’s servant reads.

Socrates: If I cared enough about the Cyrenians, Theodorus, I would ask you whether there are any rising geometricians or philosophers in that part of the world. But I am more interested in our own Athenian youth, and I would rather know who among them are likely to do well. I observe them as far as I can myself, and I enquire of any one whom they follow, and I see that a great many of them follow you, in which they are quite right, considering your eminence in geometry and in other ways. Tell me then, if you have met with any one who is good for anything.

143e

Theodorus: Yes, Socrates, I have become acquainted with one very remarkable Athenian youth, whom I commend to you as well worthy of your attention. If he had been a beauty I should have been afraid to praise him, lest you should suppose that I was in love with him; but he is no beauty, and you must not be offended if I say that he is very like you; for he has a snub nose

and projecting eyes, although these features are less marked in him than in you. Seeing, then, that he has no personal attractions, I may freely say, that in all my acquaintance, which is very large, I never knew any one who was his equal in natural gifts: for he has a quickness of apprehension which is almost unrivalled, and he is exceedingly gentle, and also the most courageous of men; there is a union of qualities in him such as I have never seen in any other, and should scarcely have thought possible; for those who, like him, have quick and ready and retentive wits, have generally also quick tempers; they are ships without ballast, and go darting about, and are mad rather than courageous; and the steadier sort, when they have to face study, prove stupid and cannot remember. Whereas he moves surely and smoothly and successfully in the path of knowledge and enquiry; and he is full of gentleness, flowing on silently like a river of oil; at his age, it is wonderful.

Socrates: That is good news; whose son is he?

144b

Theodorus: The name of his father I have forgotten, but the youth himself is the middle one of those who are approaching us; he and his companions have been anointing themselves in the outer court, and now they seem to have finished, and are coming towards us. Look and see whether you know him.

144c

Socrates: I know the youth, but I do not know his name; he is the son of Euphronius the Sunian, who was himself an eminent man, and such another as his son is, according to your account of him; I believe that he left a considerable fortune.

Theodorus: Theaetetus, Socrates, is his name; but I rather think that the property disappeared in the hands of trustees; notwithstanding which he is wonderfully liberal.

Socrates: He must be a fine fellow; tell him to come and sit by me.

Theodorus: I will. Come hither, Theaetetus, and sit by Socrates.

144d

Socrates: By all means, Theaetetus, in order that I may see the reflection of myself in your face, for Theodorus says that we are alike; and yet if each of us held in his hands a lyre, and he said that they were tuned alike, should we at once take his word, or should we ask whether he who said so was or was not a musician?

Theaetetus: We should ask.

Socrates: And if we found that he was, we should take his word; and if not, not?

144e

Theaetetus: True.

Socrates: And if this supposed likeness of our faces is a matter of any interest to us, we should enquire whether he who says that we are alike is a painter or not?

Theaetetus: Certainly we should.

Socrates: And is Theodorus a painter?

145a

Theaetetus: I never heard that he was.

Socrates: Is he a geometrician?

Theaetetus: Of course he is, Socrates.

Socrates: And is he an astronomer and calculator and musician, and in general an educated man?

Theaetetus: I think so.

Socrates: If, then, he remarks on a similarity in our persons, either by way of praise or blame, there is no particular reason

why we should attend to him.

Theaetetus: I should say not.

Socrates: But if he praises the virtue or wisdom which are the mental endowments of either of us, then he who hears the praises will naturally desire to examine him who is praised: and he again should be willing to exhibit himself.

145b

Theaetetus: Very true, Socrates.

Socrates: Then now is the time, my dear Theaetetus, for me to examine, and for you to exhibit; since although Theodorus has praised many a citizen and stranger in my hearing, never did I hear him praise any one as he has been praising you.

145c

Theaetetus: I am glad to hear it, Socrates; but what if he was only in jest?

Socrates: Nay, Theodorus is not given to jesting; and I cannot allow you to retract your consent on any such pretence as that. If you do, he will have to swear to his words; and we are perfectly sure that no one will be found to impugn him. Do not be shy then, but stand to your word.

Theaetetus: I suppose I must, if you wish it.

145d

Socrates: In the first place, I should like to ask what you learn of Theodorus: something of geometry, perhaps?

Theaetetus: Yes.

Socrates: And astronomy and harmony and calculation?

Theaetetus: I do my best.

Socrates: Yes, my boy, and so do I; and my desire is to learn of him, or of anybody who seems to understand these things. And I get on pretty well in general; but there is a little difficulty which

I want you and the company to aid me in investigating. Will you answer me a question: 'Is not learning growing wiser about that which you learn?'

145e

Theaetetus: Of course.

Socrates: And by wisdom the wise are wise?

Theaetetus: Yes.

Socrates: And is that different in any way from knowledge?

146a

Theaetetus: What?

Socrates: Wisdom; are not men wise in that which they know?

Theaetetus: Certainly they are.

Socrates: Then wisdom and knowledge are the same?

Theaetetus: Yes.

Socrates: Herein lies the difficulty which I can never solve to my satisfaction — What is knowledge? Can we answer that question? What say you? which of us will speak first? whoever misses shall sit down, as at a game of ball, and shall be donkey, as the boys say; he who lasts out his competitors in the game without missing, shall be our king, and shall have the right of putting to us any questions which he pleases...Why is there no reply? I hope, Theodorus, that I am not betrayed into rudeness by my love of conversation? I only want to make us talk and be friendly and sociable.

146b

Theodorus: The reverse of rudeness, Socrates: but I would rather that you would ask one of the young fellows; for the truth is, that I am unused to your game of question and answer, and I am too old to learn; the young will be more suitable, and they will improve more than I shall, for youth is always able to

improve. And so having made a beginning with Theaetetus, I would advise you to go on with him and not let him off.

146c

Socrates: Do you hear, Theaetetus, what Theodorus says? The philosopher, whom you would not like to disobey, and whose word ought to be a command to a young man, bids me interrogate you. Take courage, then, and nobly say what you think that knowledge is.

Theaetetus: Well, Socrates, I will answer as you and he bid me; and if I make a mistake, you will doubtless correct me.

Socrates: We will, if we can.

146d

Theaetetus: Then, I think that the sciences which I learn from Theodorus — geometry, and those which you just now mentioned — are knowledge; and I would include the art of the cobbler and other craftsmen; these, each and all of, them, are knowledge.

Socrates: Too much, Theaetetus, too much; the nobility and liberality of your nature make you give many and diverse things, when I am asking for one simple thing.

Theaetetus: What do you mean, Socrates?

Socrates: Perhaps nothing. I will endeavour, however, to explain what I believe to be my meaning: When you speak of cobbling, you mean the art or science of making shoes?

146e

Theaetetus: Just so.

Socrates: And when you speak of carpentering, you mean the art of making wooden implements?

Theaetetus: I do.

Socrates: In both cases you define the subject matter of each of the two arts?

Theaetetus: True.

Socrates: But that, Theaetetus, was not the point of my question: we wanted to know not the subjects, nor yet the number of the arts or sciences, for we were not going to count them, but we wanted to know the nature of knowledge in the abstract. Am I not right?

Theaetetus: Perfectly right.

147a

Socrates: Let me offer an illustration: Suppose that a person were to ask about some very trivial and obvious thing — for example, What is clay? and we were to reply, that there is a clay of potters, there is a clay of oven-makers, there is a clay of brick-makers; would not the answer be ridiculous?

147b

Theaetetus: Truly.

Socrates: In the first place, there would be an absurdity in assuming that he who asked the question would understand from our answer the nature of ‘clay,’ merely because we added ‘of the image-makers,’ or of any other workers. How can a man understand the name of anything, when he does not know the nature of it?

Theaetetus: He cannot.

147c

Socrates: Then he who does not know what science or knowledge is, has no knowledge of the art or science of making shoes?

Theaetetus: None.

Socrates: Nor of any other science?

Theaetetus: No.

Socrates: And when a man is asked what science or knowledge is, to give in answer the name of some art or science is ridiculous; for the question is, 'What is knowledge?' and he replies, 'A knowledge of this or that.'

Theaetetus: True.

147d

Socrates: Moreover, he might answer shortly and simply, but he makes an enormous circuit. For example, when asked about the clay, he might have said simply, that clay is moistened earth — what sort of clay is not to the point.

Theaetetus: Yes, Socrates, there is no difficulty as you put the question. You mean, if I am not mistaken, something like what occurred to me and to my friend here, your namesake Socrates, in a recent discussion.

Socrates: What was that, Theaetetus?

147e

Theaetetus: Theodorus was writing out for us something about roots, such as the roots of three or five, showing that they are incommensurable by the unit: he selected other examples up to seventeen — there he stopped. Now as there are innumerable roots, the notion occurred to us of attempting to include them all under one name or class.

Socrates: And did you find such a class?

Theaetetus: I think that we did; but I should like to have your opinion.

Socrates: Let me hear.

Theaetetus: We divided all numbers into two classes: those which are made up of equal factors multiplying into one another, which we compared to square figures and called

square or equilateral numbers; — that was one class.

148a

Socrates: Very good.

Theaetetus: The intermediate numbers, such as three and five, and every other number which is made up of unequal factors, either of a greater multiplied by a less, or of a less multiplied by a greater, and when regarded as a figure, is contained in unequal sides; — all these we compared to oblong figures, and called them oblong numbers.

148b

Socrates: Capital; and what followed?

Theaetetus: The lines, or sides, which have for their squares the equilateral plane numbers, were called by us lengths or magnitudes; and the lines which are the roots of (or whose squares are equal to) the oblong numbers, were called powers or roots; the reason of this latter name being, that they are commensurable with the former [i.e., with the so-called lengths or magnitudes] not in linear measurement, but in the value of the superficial content of their squares; and the same about solids.

148c

Socrates: Excellent, my boys; I think that you fully justify the praises of Theodorus, and that he will not be found guilty of false witness.

Theaetetus: But I am unable, Socrates, to give you a similar answer about knowledge, which is what you appear to want; and therefore Theodorus is a deceiver after all.

148d

Socrates: Well, but if some one were to praise you for running, and to say that he never met your equal among boys, and afterwards you were beaten in a race by a grown-up man, who was a great runner — would the praise be any the less true?

Theaetetus: Certainly not.

Socrates: And is the discovery of the nature of knowledge so small a matter, as just now said? Is it not one which would task the powers of men perfect in every way?

148e

Theaetetus: By heaven, they should be the top of all perfection!

Socrates: Well, then, be of good cheer; do not say that Theodorus was mistaken about you, but do your best to ascertain the true nature of knowledge, as well as of other things.

Theaetetus: I am eager enough, Socrates, if that would bring to light the truth.

149a

Socrates: Come, you made a good beginning just now; let your own answer about roots be your model, and as you comprehended them all in one class, try and bring the many sorts of knowledge under one definition.

Theaetetus: I can assure you, Socrates, that I have tried very often, when the report of questions asked by you was brought to me; but I can neither persuade myself that I have a satisfactory answer to give, nor hear of any one who answers as you would have him; and I cannot shake off a feeling of anxiety.

Socrates: These are the pangs of labour, my dear Theaetetus; you have something within you which you are bringing to the birth.

149b

Theaetetus: I do not know, Socrates; I only say what I feel.

Socrates: And have you never heard, simpleton, that I am the son of a midwife, brave and burly, whose name was Phaenarete?

Theaetetus: Yes, I have.

Socrates: And that I myself practise midwifery?

Theaetetus: No, never.

Socrates: Let me tell you that I do though, my friend: but you must not reveal the secret, as the world in general have not found me out; and therefore they only say of me, that I am the strangest of mortals and drive men to their wits' end. Did you ever hear that too?

Theaetetus: Yes.

Socrates: Shall I tell you the reason?

Theaetetus: By all means.

Socrates: Bear in mind the whole business of the midwives, and then you will see my meaning better: — No woman, as you are probably aware, who is still able to conceive and bear, attends other women, but only those who are past bearing.

149c

Theaetetus: Yes, I know.

Socrates: The reason of this is said to be that Artemis — the goddess of childbirth — is not a mother, and she honours those who are like herself; but she could not allow the barren to be midwives, because human nature cannot know the mystery of an art without experience; and therefore she assigned this office to those who are too old to bear.

149d

Theaetetus: I dare say.

Socrates: And I dare say too, or rather I am absolutely certain, that the midwives know better than others who is pregnant and who is not?

Theaetetus: Very true.

Socrates: And by the use of potions and incantations they are able to arouse the pangs and to soothe them at will; they can

make those bear who have a difficulty in bearing, and if they think fit they can smother the embryo in the womb.

Theaetetus: They can.

149e

Socrates: Did you ever remark that they are also most cunning matchmakers, and have a thorough knowledge of what unions are likely to produce a brave brood?

Theaetetus: No, never.

Socrates: Then let me tell you that this is their greatest pride, more than cutting the umbilical cord. And if you reflect, you will see that the same art which cultivates and gathers in the fruits of the earth, will be most likely to know in what soils the several plants or seeds should be deposited.

Theaetetus: Yes, the same art.

Socrates: And do you suppose that with women the case is otherwise?

150a

Theaetetus: I should think not.

Socrates: Certainly not; but midwives are respectable women who have a character to lose, and they avoid this department of their profession, because they are afraid of being called procuresses, which is a name given to those who join together man and woman in an unlawful and unscientific way; and yet the true midwife is also the true and only matchmaker.

150b

Theaetetus: Clearly.

Socrates: Such are the midwives, whose task is a very important one, but not so important as mine; for women do not bring into the world at one time real children, and at another time counterfeits which are with difficulty distinguished from them; if they did, then the discernment of the true and false

birth would be the crowning achievement of the art of midwifery — you would think so?

Theaetetus: Indeed I should.

Socrates: Well, my art of midwifery is in most respects like theirs; but differs, in that I attend men and not women; and look after their souls when they are in labour, and not after their bodies: and the triumph of my art is in thoroughly examining whether the thought which the mind of the young man brings forth is a false idol or a noble and true birth. And like the midwives, I am barren, and the reproach which is often made against me, that I ask questions of others and have not the wit to answer them myself, is very just — the reason is, that the god compels me to be a midwife, but does not allow me to bring forth. And therefore I am not myself at all wise, nor have I anything to show which is the invention or birth of my own soul, but those who converse with me profit. Some of them appear dull enough at first, but afterwards, as our acquaintance ripens, if the god is gracious to them, they all make astonishing progress; and this in the opinion of others as well as in their own. It is quite dear that they never learned anything from me; the many fine discoveries to which they cling are of their own making. But to me and the god they owe their delivery. And the proof of my words is, that many of them in their ignorance, either in their self-conceit despising me, or falling under the influence of others, have gone away too soon; and have not only lost the children of whom I had previously delivered them by an ill bringing up, but have stifled whatever else they had in them by evil communications, being fonder of lies and shams than of the truth; and they have at last ended by seeing themselves, as others see them, to be great fools. Aristides, the son of Lysimachus, is one of them, and there are many others. The truants often return to me, and beg that I would consort with them again — they are ready to go to me on their knees — and

then, if my familiar allows, which is not always the case, I receive them, and they begin to grow again. Dire are the pangs which my art is able to arouse and to allay in those who consort with me, just like the pangs of women in childbirth; night and day they are full of perplexity and travail which is even worse than that of the women. So much for them. And there are others, Theaetetus, who come to me apparently having nothing in them; and as I know that they have no need of my art, I coax them into marrying some one, and by the grace of God I can generally tell who is likely to do them good. Many of them I have given away to Prodicus, and many to other inspired sages. I tell you this long story, friend Theaetetus, because I suspect, as indeed you seem to think yourself, that you are in labour — great with some conception. Come then to me, who am a midwife's son and myself a midwife, and do your best to answer the questions which I will ask you. And if I abstract and expose your first-born, because I discover upon inspection that the conception which you have formed is a vain shadow, do not quarrel with me on that account, as the manner of women is when their first children are taken from them. For I have actually known some who were ready to bite me when I deprived them of a darling folly; they did not perceive that I acted from goodwill, not knowing that no god is the enemy of man — that was not within the range of their ideas; neither am I their enemy in all this, but it would be wrong for me to admit falsehood, or to stifle the truth. Once more, then, Theaetetus, I repeat my old question, 'What is knowledge?' — and do not say that you cannot tell; but quit yourself like a man, and by the help of God you will be able to tell.

151e

Theaetetus: At any rate, Socrates, after such an exhortation I should be ashamed of not trying to do my best. Now he who knows perceives what he knows, and, as far as I can see at present, knowledge is perception.

Socrates: Bravely said, boy; that is the way in which you should express your opinion. And now, let us examine together this conception of yours, and see whether it is a true birth or a mere wind-egg; — You say that knowledge is perception?

Theaetetus: Yes.

152a

Socrates: Well, you have delivered yourself of a very important doctrine about knowledge; it is indeed the opinion of Protagoras, who has another way of expressing it. Man, he says, is the measure of all things, of the existence of things that are, and of the non-existence of things that are not: — You have read him?

Theaetetus: O yes, again and again.

Socrates: Does he not say that things are to you such as they appear to you, and to me such as they appear to me, and that you and I are men?

Theaetetus: Yes, he says so.

152b

Socrates: A wise man is not likely to talk nonsense. Let us try to understand him: the same wind is blowing, and yet one of us may be cold and the other not, or one may be slightly and the other very cold?

Theaetetus: Quite true.

Socrates: Now is the wind, regarded not in relation to us but absolutely, cold or not; or are we to say, with Protagoras, that the wind is cold to him who is cold, and not to him who is not?

Theaetetus: I suppose the last.

Socrates: Then it must appear so to each of them?

Theaetetus: Yes.

152c

Socrates: And ‘appears to him’ means the same as ‘he perceives.’

Theaetetus: True.

Socrates: Then appearing and perceiving coincide in the case of hot and cold, and in similar instances; for things appear, or may be supposed to be, to each one such as he perceives them?

Theaetetus: Yes.

152d

Socrates: Then perception is always of existence, and being the same as knowledge is unerring?

Theaetetus: Clearly.

Socrates: In the name of the Graces, what an almighty wise man Protagoras must have been! He spoke these things in a parable to the common herd, like you and me, but told the truth, ‘his Truth,’ (In allusion to a book of Protagoras’ which bore this title.) in secret to his own disciples.

Theaetetus: What do you mean, Socrates?

Socrates: I am about to speak of a high argument, in which all things are said to be relative; you cannot rightly call anything by any name, such as great or small, heavy or light, for the great will be small and the heavy light — there is no single thing or quality, but out of motion and change and admixture all things are becoming relatively to one another, which ‘becoming’ is by us incorrectly called being, but is really becoming, for nothing ever is, but all things are becoming. Summon all philosophers — Protagoras, Heracleitus, Empedocles, and the rest of them, one after another, and with the exception of Parmenides they will agree with you in this. Summon the great masters of either kind of poetry — Epicharmus, the prince of Comedy, and Homer of Tragedy; when the latter sings of *153a* ‘Ocean whence sprang the gods, and mother Tethys,’

153a

does he not mean that all things are the offspring, of flux and motion?

Theaetetus: I think so.

Socrates: And who could take up arms against such a great army having Homer for its general, and not appear ridiculous? (Compare Cratylus.)

Theaetetus: Who indeed, Socrates?

153b

Socrates: Yes, Theaetetus; and there are plenty of other proofs which will show that motion is the source of what is called being and becoming, and inactivity of not-being and destruction; for fire and warmth, which are supposed to be the parent and guardian of all other things, are born of movement and of friction, which is a kind of motion; — is not this the origin of fire?

Theaetetus: It is.

Socrates: And the race of animals is generated in the same way?

Theaetetus: Certainly.

Socrates: And is not the bodily habit spoiled by rest and idleness, but preserved for a long time by motion and exercise?

Theaetetus: True.

153c

Socrates: And what of the mental habit? Is not the soul informed, and improved, and preserved by study and attention, which are motions; but when at rest, which in the soul only means want of attention and study, is uninformed, and speedily forgets whatever she has learned?

Theaetetus: True.

Socrates: Then motion is a good, and rest an evil, to the soul as well as to the body?

Theaetetus: Clearly.

Socrates: I may add, that breathless calm, stillness and the like waste and impair, while wind and storm preserve; and the palmary argument of all, which I strongly urge, is the golden chain in Homer, by which he means the sun, thereby indicating that so long as the sun and the heavens go round in their orbits, all things human and divine are and are preserved, but if they were chained up and their motions ceased, then all things would be destroyed, and, as the saying is, turned upside down.

153d

Theaetetus: I believe, Socrates, that you have truly explained his meaning.

153e

Socrates: Then now apply his doctrine to perception, my good friend, and first of all to vision; that which you call white colour is not in your eyes, and is not a distinct thing which exists out of them. And you must not assign any place to it: for if it had position it would be, and be at rest, and there would be no process of becoming.

Theaetetus: Then what is colour?

154a

Socrates: Let us carry the principle which has just been affirmed, that nothing is self-existent, and then we shall see that white, black, and every other colour, arises out of the eye meeting the appropriate motion, and that what we call a colour is in each case neither the active nor the passive element, but something which passes between them, and is peculiar to each percipient; are you quite certain that the several colours appear to a dog or to any animal whatever as they appear to you?

Theaetetus: Far from it.

Socrates: Or that anything appears the same to you as to another man? Are you so profoundly convinced of this? Rather would it not be true that it never appears exactly the same to you, because you are never exactly the same?

Theaetetus: The latter.

Socrates: And if that with which I compare myself in size, or which I apprehend by touch, were great or white or hot, it could not become different by mere contact with another unless it actually changed; nor again, if the comparing or apprehending subject were great or white or hot, could this, when unchanged from within, become changed by any approximation or affection of any other thing. The fact is that in our ordinary way of speaking we allow ourselves to be driven into most ridiculous and wonderful contradictions, as Protagoras and all who take his line of argument would remark.

154b

Theaetetus: How? and of what sort do you mean?

154c

Socrates: A little instance will sufficiently explain my meaning: Here are six dice, which are more by a half when compared with four, and fewer by a half than twelve — they are more and also fewer. How can you or any one maintain the contrary?

Theaetetus: Very true.

Socrates: Well, then, suppose that Protagoras or some one asks whether anything can become greater or more if not by increasing, how would you answer him, Theaetetus?

Theaetetus: I should say ‘No,’ Socrates, if I were to speak my mind in reference to this last question, and if I were not afraid of contradicting my former answer.

154d

Socrates: Capital! excellent! spoken like an oracle, my boy! And if you reply ‘Yes,’ there will be a case for Euripides; for our

tongue will be unconvinced, but not our mind. (In allusion to the well-known line of Euripides, Hippol.: e gloss omomoch e de thren anomotos.)

Theaetetus: Very true.

Socrates: The thoroughbred Sophists, who know all that can be known about the mind, and argue only out of the superfluity of their wits, would have had a regular sparring-match over this, and would have knocked their arguments together finely. But you and I, who have no professional aims, only desire to see what is the mutual relation of these principles, — whether they are consistent with each or not.

154e

Theaetetus: Yes, that would be my desire.

Socrates: And mine too. But since this is our feeling, and there is plenty of time, why should we not calmly and patiently review our own thoughts, and thoroughly examine and see what these appearances in us really are? If I am not mistaken, they will be described by us as follows: — first, that nothing can become greater or less, either in number or magnitude, while remaining equal to itself — you would agree?

155a

Theaetetus: Yes.

Socrates: Secondly, that without addition or subtraction there is no increase or diminution of anything, but only equality.

155b

Theaetetus: Quite true.

Socrates: Thirdly, that what was not before cannot be afterwards, without becoming and having become.

Theaetetus: Yes, truly.

Socrates: These three axioms, if I am not mistaken, are fighting with one another in our minds in the case of the dice, or, again,

in such a case as this — if I were to say that I, who am of a certain height and taller than you, may within a year, without gaining or losing in height, be not so tall — not that I should have lost, but that you would have increased. In such a case, I am afterwards what I once was not, and yet I have not become; for I could not have become without becoming, neither could I have become less without losing somewhat of my height; and I could give you ten thousand examples of similar contradictions, if we admit them at all. I believe that you follow me, Theaetetus; for I suspect that you have thought of these questions before now.

155c

Theaetetus: Yes, Socrates, and I am amazed when I think of them; by the Gods I am! and I want to know what on earth they mean; and there are times when my head quite swims with the contemplation of them.

155d

Socrates: I see, my dear Theaetetus, that Theodorus had a true insight into your nature when he said that you were a philosopher, for wonder is the feeling of a philosopher, and philosophy begins in wonder. He was not a bad genealogist who said that Iris (the messenger of heaven) is the child of Thaumas (wonder). But do you begin to see what is the explanation of this perplexity on the hypothesis which we attribute to Protagoras?

Theaetetus: Not as yet.

Socrates: Then you will be obliged to me if I help you to unearth the hidden 'truth' of a famous man or school.

155e

Theaetetus: To be sure, I shall be very much obliged.

Socrates: Take a look round, then, and see that none of the uninitiated are listening. Now by the uninitiated I mean the people who believe in nothing but what they can grasp in their

hands, and who will not allow that action or generation or anything invisible can have real existence.

156a

Theaetetus: Yes, indeed, Socrates, they are very hard and impenetrable mortals.

Socrates: Yes, my boy, outer barbarians. Far more ingenious are the brethren whose mysteries I am about to reveal to you. Their first principle is, that all is motion, and upon this all the affections of which we were just now speaking are supposed to depend: there is nothing but motion, which has two forms, one active and the other passive, both in endless number; and out of the union and friction of them there is generated a progeny endless in number, having two forms, sense and the object of sense, which are ever breaking forth and coming to the birth at the same moment. The senses are variously named hearing, seeing, smelling; there is the sense of heat, cold, pleasure, pain, desire, fear, and many more which have names, as well as innumerable others which are without them; each has its kindred object, — each variety of colour has a corresponding variety of sight, and so with sound and hearing, and with the rest of the senses and the objects akin to them. Do you see, Theaetetus, the bearings of this tale on the preceding argument?

Theaetetus: Indeed I do not.

156c

Socrates: Then attend, and I will try to finish the story. The purport is that all these things are in motion, as I was saying, and that this motion is of two kinds, a slower and a quicker; and the slower elements have their motions in the same place and with reference to things near them, and so they beget; but what is begotten is swifter, for it is carried to fro, and moves from place to place. Apply this to sense: — When the eye and the appropriate object meet together and give birth to whiteness

and the sensation connatural with it, which could not have been given by either of them going elsewhere, then, while the sight is flowing from the eye, whiteness proceeds from the object which combines in producing the colour; and so the eye is fulfilled with sight, and really sees, and becomes, not sight, but a seeing eye; and the object which combined to form the colour is fulfilled with whiteness, and becomes not whiteness but a white thing, whether wood or stone or whatever the object may be which happens to be coloured white. And this is true of all sensible objects, hard, warm, and the like, which are similarly to be regarded, as I was saying before, not as having any absolute existence, but as being all of them of whatever kind generated by motion in their intercourse with one another; for of the agent and patient, as existing in separation, no trustworthy conception, as they say, can be formed, for the agent has no existence until united with the patient, and the patient has no existence until united with the agent; and that which by uniting with something becomes an agent, by meeting with some other thing is converted into a patient. And from all these considerations, as I said at first, there arises a general reflection, that there is no one self-existent thing, but everything is becoming and in relation; and being must be altogether abolished, although from habit and ignorance we are compelled even in this discussion to retain the use of the term. But great philosophers tell us that we are not to allow either the word 'something,' or 'belonging to something,' or 'to me,' or 'this,' or 'that,' or any other detaining name to be used, in the language of nature all things are being created and destroyed, coming into being and passing into new forms; nor can any name fix or detain them; he who attempts to fix them is easily refuted. And this should be the way of speaking, not only of particulars but of aggregates; such aggregates as are expressed in the word 'man,' or 'stone,' or any name of an animal or of a class. O Theaetetus, are not these speculations sweet as honey? And do you not like

the taste of them in the mouth?

Theaetetus: I do not know what to say, Socrates; for, indeed, I cannot make out whether you are giving your own opinion or only wanting to draw me out.

157c

Socrates: You forget, my friend, that I neither know, nor profess to know, anything of these matters; you are the person who is in labour, I am the barren midwife; and this is why I soothe you, and offer you one good thing after another, that you may taste them. And I hope that I may at last help to bring your own opinion into the light of day: when this has been accomplished, then we will determine whether what you have brought forth is only a wind-egg or a real and genuine birth. Therefore, keep up your spirits, and answer like a man what you think.

Theaetetus: Ask me.

Socrates: Then once more: Is it your opinion that nothing is but what becomes? — the good and the noble, as well as all the other things which we were just now mentioning?

157d

Theaetetus: When I hear you discoursing in this style, I think that there is a great deal in what you say, and I am very ready to assent.

157e

Socrates: Let us not leave the argument unfinished, then; for there still remains to be considered an objection which may be raised about dreams and diseases, in particular about madness, and the various illusions of hearing and sight, or of other senses. For you know that in all these cases the *esse-percipi* theory appears to be unmistakably refuted, since in dreams and illusions we certainly have false perceptions; and far from saying that everything is which appears, we should rather say

that nothing is which appears.

Theaetetus: Very true, Socrates.

Socrates: But then, my boy, how can any one contend that knowledge is perception, or that to every man what appears is?

158a

Theaetetus: I am afraid to say, Socrates, that I have nothing to answer, because you rebuked me just now for making this excuse; but I certainly cannot undertake to argue that madmen or dreamers think truly, when they imagine, some of them that they are gods, and others that they can fly, and are flying in their sleep.

Socrates: Do you see another question which can be raised about these phenomena, notably about dreaming and waking?

Theaetetus: What question?

Socrates: A question which I think that you must often have heard persons ask: — How can you determine whether at this moment we are sleeping, and all our thoughts are a dream; or whether we are awake, and talking to one another in the waking state?

158b

Theaetetus: Indeed, Socrates, I do not know how to prove the one any more than the other, for in both cases the facts precisely correspond; — and there is no difficulty in supposing that during all this discussion we have been talking to one another in a dream; and when in a dream we seem to be narrating dreams, the resemblance of the two states is quite astonishing.

158c

Socrates: You see, then, that a doubt about the reality of sense is easily raised, since there may even be a doubt whether we are awake or in a dream. And as our time is equally divided between sleeping and waking, in either sphere of existence the soul

contends that the thoughts which are present to our minds at the time are true; and during one half of our lives we affirm the truth of the one, and, during the other half, of the other; and are equally confident of both.

Theaetetus: Most true.

Socrates: And may not the same be said of madness and other disorders? the difference is only that the times are not equal.

Theaetetus: Certainly.

Socrates: And is truth or falsehood to be determined by duration of time?

Theaetetus: That would be in many ways ridiculous.

158d

Socrates: But can you certainly determine by any other means which of these opinions is true?

Theaetetus: I do not think that I can.

158e

Socrates: Listen, then, to a statement of the other side of the argument, which is made by the champions of appearance. They would say, as I imagine — Can that which is wholly other than something, have the same quality as that from which it differs? and observe, Theaetetus, that the word ‘other’ means not ‘partially,’ but ‘wholly other.’

Theaetetus: Certainly, putting the question as you do, that which is wholly other cannot either potentially or in any other way be the same.

Socrates: And must therefore be admitted to be unlike?

Theaetetus: True.

Socrates: If, then, anything happens to become like or unlike itself or another, when it becomes like we call it the same — when unlike, other?

159a

Theaetetus: Certainly.

Socrates: Were we not saying that there are agents many and infinite, and patients many and infinite?

Theaetetus: Yes.

Socrates: And also that different combinations will produce results which are not the same, but different?

Theaetetus: Certainly.

Socrates: Let us take you and me, or anything as an example: — There is Socrates in health, and Socrates sick — Are they like or unlike?

Theaetetus: You mean to compare Socrates in health as a whole, and Socrates in sickness as a whole?

Socrates: Exactly; that is my meaning.

Theaetetus: I answer, they are unlike.

Socrates: And if unlike, they are other?

Theaetetus: Certainly.

159b

Socrates: And would you not say the same of Socrates sleeping and waking, or in any of the states which we were mentioning?

Theaetetus: I should.

Socrates: All agents have a different patient in Socrates, accordingly as he is well or ill.

Theaetetus: Of course.

Socrates: And I who am the patient, and that which is the agent, will produce something different in each of the two cases?

Theaetetus: Certainly.

Socrates: The wine which I drink when I am in health, appears sweet and pleasant to me?

Theaetetus: True.

159c

Socrates: For, as has been already acknowledged, the patient and agent meet together and produce sweetness and a perception of sweetness, which are in simultaneous motion, and the perception which comes from the patient makes the tongue percipient, and the quality of sweetness which arises out of and is moving about the wine, makes the wine both to be and to appear sweet to the healthy tongue.

Theaetetus: Certainly; that has been already acknowledged.

Socrates: But when I am sick, the wine really acts upon another and a different person?

Theaetetus: Yes.

Socrates: The combination of the draught of wine, and the Socrates who is sick, produces quite another result; which is the sensation of bitterness in the tongue, and the motion and creation of bitterness in and about the wine, which becomes not bitterness but something bitter; as I myself become not perception but percipient?

159d

Theaetetus: True.

Socrates: There is no other object of which I shall ever have the same perception, for another object would give another perception, and would make the percipient other and different; nor can that object which affects me, meeting another subject, produce the same, or become similar, for that too would produce another result from another subject, and become different.

Theaetetus: True.

Socrates: Neither can I by myself, have this sensation, nor the object by itself, this quality.

159e

Theaetetus: Certainly not.

Socrates: When I perceive I must become percipient of something — there can be no such thing as perceiving and perceiving nothing; the object, whether it become sweet, bitter, or of any other quality, must have relation to a percipient; nothing can become sweet which is sweet to no one.

Theaetetus: Certainly not.

160a

Socrates: Then the inference is, that we (the agent and patient) are or become in relation to one another; there is a law which binds us one to the other, but not to any other existence, nor each of us to himself; and therefore we can only be bound to one another; so that whether a person says that a thing is or becomes, he must say that it is or becomes to or of or in relation to something else; but he must not say or allow any one else to say that anything is or becomes absolutely: — such is our conclusion.

160b

Theaetetus: Very true, Socrates.

Socrates: Then, if that which acts upon me has relation to me and to no other, I and no other am the percipient of it?

Theaetetus: Of course.

Socrates: Then my perception is true to me, being inseparable from my own being; and, as Protagoras says, to myself I am judge of what is and what is not to me.

Theaetetus: I suppose so.

Socrates: How then, if I never err, and if my mind never trips in the conception of being or becoming, can I fail of knowing that

which I perceive?

Theaetetus: You cannot.

160c

Socrates: Then you were quite right in affirming that knowledge is only perception; and the meaning turns out to be the same, whether with Homer and Heracleitus, and all that company, you say that all is motion and flux, or with the great sage Protagoras, that man is the measure of all things; or with Theaetetus, that, given these premises, perception is knowledge. Am I not right, Theaetetus, and is not this your new-born child, of which I have delivered you? What say you?

160d

Theaetetus: I cannot but agree, Socrates.

Socrates: Then this is the child, however he may turn out, which you and I have with difficulty brought into the world. And now that he is born, we must run round the hearth with him, and see whether he is worth rearing, or is only a wind-egg and a sham. Is he to be reared in any case, and not exposed? or will you bear to see him rejected, and not get into a passion if I take away your first-born?

Theodorus: Theaetetus will not be angry, for he is very good-natured. But tell me, Socrates, in heaven's name, is this, after all, not the truth?

160e

Socrates: You, Theodorus, are a lover of theories, and now you innocently fancy that I am a bag full of them, and can easily pull one out which will overthrow its predecessor. But you do not see that in reality none of these theories come from me; they all come from him who talks with me. I only know just enough to extract them from the wisdom of another, and to receive them in a spirit of fairness. And now I shall say nothing myself, but shall endeavour to elicit something from our young friend.

Theodorus: Do as you say, Socrates; you are quite right.

Socrates: Shall I tell you, Theodorus, what amazes me in your acquaintance Protagoras?

161a

Theodorus: What is it?

161b

Socrates: I am charmed with his doctrine, that what appears is to each one, but I wonder that he did not begin his book on Truth with a declaration that a pig or a dog-faced baboon, or some other yet stranger monster which has sensation, is the measure of all things; then he might have shown a magnificent contempt for our opinion of him by informing us at the outset that while we were reverencing him like a God for his wisdom he was no better than a tadpole, not to speak of his fellow-men — would not this have produced an overpowering effect? For if truth is only sensation, and no man can discern another's feelings better than he, or has any superior right to determine whether his opinion is true or false, but each, as we have several times repeated, is to himself the sole judge, and everything that he judges is true and right, why, my friend, should Protagoras be preferred to the place of wisdom and instruction, and deserve to be well paid, and we poor ignoramuses have to go to him, if each one is the measure of his own wisdom? Must he not be talking 'ad captandum' in all this? I say nothing of the ridiculous predicament in which my own midwifery and the whole art of dialectic is placed; for the attempt to supervise or refute the notions or opinions of others would be a tedious and enormous piece of folly, if to each man his own are right; and this must be the case if Protagoras' Truth is the real truth, and the philosopher is not merely amusing himself by giving oracles out of the shrine of his book.

Theodorus: He was a friend of mine, Socrates, as you were saying, and therefore I cannot have him refuted by my lips, nor

can I oppose you when I agree with you; please, then, to take Theaetetus again; he seemed to answer very nicely.

Socrates: If you were to go into a Lacedaemonian palestra, Theodorus, would you have a right to look on at the naked wrestlers, some of them making a poor figure, if you did not strip and give them an opportunity of judging of your own person?

Theodorus: Why not, Socrates, if they would allow me, as I think you will, in consideration of my age and stiffness; let some more supple youth try a fall with you, and do not drag me into the gymnasium.

Socrates: Your will is my will, Theodorus, as the proverbial philosophers say, and therefore I will return to the sage Theaetetus: Tell me, Theaetetus, in reference to what I was saying, are you not lost in wonder, like myself, when you find that all of a sudden you are raised to the level of the wisest of men, or indeed of the gods? — for you would assume the measure of Protagoras to apply to the gods as well as men?

162a

Theaetetus: Certainly I should, and I confess to you that I am lost in wonder. At first hearing, I was quite satisfied with the doctrine, that whatever appears is to each one, but now the face of things has changed.

162b

Socrates: Why, my dear boy, you are young, and therefore your ear is quickly caught and your mind influenced by popular arguments. Protagoras, or some one speaking on his behalf, will doubtless say in reply, — Good people, young and old, you meet and harangue, and bring in the gods, whose existence or non-existence I banish from writing and speech, or you talk about the reason of man being degraded to the level of the brutes, which is a telling argument with the multitude, but not

one word of proof or demonstration do you offer. All is probability with you, and yet surely you and Theodorus had better reflect whether you are disposed to admit of probability and figures of speech in matters of such importance. He or any other mathematician who argued from probabilities and likelihoods in geometry, would not be worth an ace.

162c

Theaetetus: But neither you nor we, Socrates, would be satisfied with such arguments.

Socrates: Then you and Theodorus mean to say that we must look at the matter in some other way?

162d

Theaetetus: Yes, in quite another way.

Socrates: And the way will be to ask whether perception is or is not the same as knowledge; for this was the real point of our argument, and with a view to this we raised (did we not?) those many strange questions.

Theaetetus: Certainly.

Socrates: Shall we say that we know every thing which we see and hear? for example, shall we say that not having learned, we do not hear the language of foreigners when they speak to us? or shall we say that we not only hear, but know what they are saying? Or again, if we see letters which we do not understand, shall we say that we do not see them? or shall we aver that, seeing them, we must know them?

Theaetetus: We shall say, Socrates, that we know what we actually see and hear of them — that is to say, we see and know the figure and colour of the letters, and we hear and know the elevation or depression of the sound of them; but we do not perceive by sight and hearing, or know, that which grammarians and interpreters teach about them.

163a

Socrates: Capital, Theaetetus; and about this there shall be no dispute, because I want you to grow; but there is another difficulty coming, which you will also have to repulse.

Theaetetus: What is it?

163b

Socrates: Some one will say, Can a man who has ever known anything, and still has and preserves a memory of that which he knows, not know that which he remembers at the time when he remembers? I have, I fear, a tedious way of putting a simple question, which is only, whether a man who has learned, and remembers, can fail to know?

Theaetetus: Impossible, Socrates; the supposition is monstrous.

Socrates: Am I talking nonsense, then? Think: is not seeing perceiving, and is not sight perception?

Theaetetus: True.

Socrates: And if our recent definition holds, every man knows that which he has seen?

Theaetetus: Yes.

Socrates: And you would admit that there is such a thing as memory?

Theaetetus: Yes.

Socrates: And is memory of something or of nothing?

Theaetetus: Of something, surely.

Socrates: Of things learned and perceived, that is?

Theaetetus: Certainly.

163c

Socrates: Often a man remembers that which he has seen?

Theaetetus: True.

Socrates: And if he closed his eyes, would he forget?

Theaetetus: Who, Socrates, would dare to say so?

163d

Socrates: But we must say so, if the previous argument is to be maintained.

Theaetetus: What do you mean? I am not quite sure that I understand you, though I have a strong suspicion that you are right.

Socrates: As thus: he who sees knows, as we say, that which he sees; for perception and sight and knowledge are admitted to be the same.

Theaetetus: Certainly.

Socrates: But he who saw, and has knowledge of that which he saw, remembers, when he closes his eyes, that which he no longer sees.

Theaetetus: True.

Socrates: And seeing is knowing, and therefore not-seeing is not-knowing?

Theaetetus: Very true.

163e

Socrates: Then the inference is, that a man may have attained the knowledge of something, which he may remember and yet not know, because he does not see; and this has been affirmed by us to be a monstrous supposition.

Theaetetus: Most true.

Socrates: Thus, then, the assertion that knowledge and perception are one, involves a manifest impossibility?

Theaetetus: Yes.

Socrates: Then they must be distinguished?

Theaetetus: I suppose that they must.

Socrates: Once more we shall have to begin, and ask ‘What is knowledge?’ and yet, Theaetetus, what are we going to do?

Theaetetus: About what?

164a

Socrates: Like a good-for-nothing cock, without having won the victory, we walk away from the argument and crow.

Theaetetus: How do you mean?

Socrates: After the manner of disputers (Lys.; Phaedo; Republic), we were satisfied with mere verbal consistency, and were well pleased if in this way we could gain an advantage. Although professing not to be mere Eristics, but philosophers, I suspect that we have unconsciously fallen into the error of that ingenious class of persons.

Theaetetus: I do not as yet understand you.

164b

Socrates: Then I will try to explain myself: just now we asked the question, whether a man who had learned and remembered could fail to know, and we showed that a person who had seen might remember when he had his eyes shut and could not see, and then he would at the same time remember and not know. But this was an impossibility. And so the Protagorean fable came to nought, and yours also, who maintained that knowledge is the same as perception.

Theaetetus: True.

164c

Socrates: And yet, my friend, I rather suspect that the result would have been different if Protagoras, who was the father of the first of the two brats, had been alive; he would have had a great deal to say on their behalf. But he is dead, and we insult over his orphan child; and even the guardians whom he left, and

of whom our friend Theodorus is one, are unwilling to give any help, and therefore I suppose that I must take up his cause myself, and see justice done?

164d

Theodorus: Not I, Socrates, but rather Callias, the son of Hipponicus, is guardian of his orphans. I was too soon diverted from the abstractions of dialectic to geometry. Nevertheless, I shall be grateful to you if you assist him.

Socrates: Very good, Theodorus; you shall see how I will come to the rescue. If a person does not attend to the meaning of terms as they are commonly used in argument, he may be involved even in greater paradoxes than these. Shall I explain this matter to you or to Theaetetus?

Theodorus: To both of us, and let the younger answer; he will incur less disgrace if he is discomfited.

164e

Socrates: Then now let me ask the awful question, which is this: — Can a man know and also not know that which he knows?

Theodorus: How shall we answer, Theaetetus?

Theaetetus: He cannot, I should say.

Socrates: He can, if you maintain that seeing is knowing. When you are imprisoned in a well, as the saying is, and the self-assured adversary closes one of your eyes with his hand, and asks whether you can see his cloak with the eye which he has closed, how will you answer the inevitable man?

165a

Theaetetus: I should answer, ‘Not with that eye but with the other.’

Socrates: Then you see and do not see the same thing at the same time.

Theaetetus: Yes, in a certain sense.

Socrates: None of that, he will reply; I do not ask or bid you answer in what sense you know, but only whether you know that which you do not know. You have been proved to see that which you do not see; and you have already admitted that seeing is knowing, and that not-seeing is not-knowing: I leave you to draw the inference.

165b

Theaetetus: Yes; the inference is the contradictory of my assertion.

Socrates: Yes, my marvel, and there might have been yet worse things in store for you, if an opponent had gone on to ask whether you can have a sharp and also a dull knowledge, and whether you can know near, but not at a distance, or know the same thing with more or less intensity, and so on without end. Such questions might have been put to you by a light-armed mercenary, who argued for pay. He would have lain in wait for you, and when you took up the position, that sense is knowledge, he would have made an assault upon hearing, smelling, and the other senses; — he would have shown you no mercy; and while you were lost in envy and admiration of his wisdom, he would have got you into his net, out of which you would not have escaped until you had come to an understanding about the sum to be paid for your release. Well, you ask, and how will Protagoras reinforce his position? Shall I answer for him?

165c

Theaetetus: By all means.

166a

Socrates: He will repeat all those things which we have been urging on his behalf, and then he will close with us in disdain, and say: — The worthy Socrates asked a little boy, whether the same man could remember and not know the same thing, and the boy said No, because he was frightened, and could not see

what was coming, and then Socrates made fun of poor me. The truth is, O slatternly Socrates, that when you ask questions about any assertion of mine, and the person asked is found tripping, if he has answered as I should have answered, then I am refuted, but if he answers something else, then he is refuted and not I. For do you really suppose that any one would admit the memory which a man has of an impression which has passed away to be the same with that which he experienced at the time? Assuredly not. Or would he hesitate to acknowledge that the same man may know and not know the same thing? Or, if he is afraid of making this admission, would he ever grant that one who has become unlike is the same as before he became unlike? Or would he admit that a man is one at all, and not rather many and infinite as the changes which take place in him? I speak by the card in order to avoid entanglements of words. But, O my good sir, he will say, come to the argument in a more generous spirit; and either show, if you can, that our sensations are not relative and individual, or, if you admit them to be so, prove that this does not involve the consequence that the appearance becomes, or, if you will have the word, is, to the individual only. As to your talk about pigs and baboons, you are yourself behaving like a pig, and you teach your hearers to make sport of my writings in the same ignorant manner; but this is not to your credit. For I declare that the truth is as I have written, and that each of us is a measure of existence and of non-existence. Yet one man may be a thousand times better than another in proportion as different things are and appear to him. And I am far from saying that wisdom and the wise man have no existence; but I say that the wise man is he who makes the evils which appear and are to a man, into goods which are and appear to him. And I would beg you not to press my words in the letter, but to take the meaning of them as I will explain them. Remember what has been already said, — that to the sick man his food appears to be and is bitter, and to the man in

health the opposite of bitter. Now I cannot conceive that one of these men can be or ought to be made wiser than the other: nor can you assert that the sick man because he has one impression is foolish, and the healthy man because he has another is wise; but the one state requires to be changed into the other, the worse into the better. As in education, a change of state has to be effected, and the sophist accomplishes by words the change which the physician works by the aid of drugs. Not that any one ever made another think truly, who previously thought falsely. For no one can think what is not, or, think anything different from that which he feels; and this is always true. But as the inferior habit of mind has thoughts of kindred nature, so I conceive that a good mind causes men to have good thoughts; and these which the inexperienced call true, I maintain to be only better, and not truer than others. And, O my dear Socrates, I do not call wise men tadpoles: far from it; I say that they are the physicians of the human body, and the husbandmen of plants — for the husbandmen also take away the evil and disordered sensations of plants, and infuse into them good and healthy sensations — aye and true ones; and the wise and good rhetoricians make the good instead of the evil to seem just to states; for whatever appears to a state to be just and fair, so long as it is regarded as such, is just and fair to it; but the teacher of wisdom causes the good to take the place of the evil, both in appearance and in reality. And in like manner the Sophist who is able to train his pupils in this spirit is a wise man, and deserves to be well paid by them. And so one man is wiser than another; and no one thinks falsely, and you, whether you will or not, must endure to be a measure. On these foundations the argument stands firm, which you, Socrates, may, if you please, overthrow by an opposite argument, or if you like you may put questions to me — a method to which no intelligent person will object, quite the reverse. But I must beg you to put fair questions: for there is great inconsistency in saying that you

have a zeal for virtue, and then always behaving unfairly in argument. The unfairness of which I complain is that you do not distinguish between mere disputation and dialectic: the disputer may trip up his opponent as often as he likes, and make fun; but the dialectician will be in earnest, and only correct his adversary when necessary, telling him the errors into which he has fallen through his own fault, or that of the company which he has previously kept. If you do so, your adversary will lay the blame of his own confusion and perplexity on himself, and not on you. He will follow and love you, and will hate himself, and escape from himself into philosophy, in order that he may become different from what he was. But the other mode of arguing, which is practised by the many, will have just the opposite effect upon him; and as he grows older, instead of turning philosopher, he will come to hate philosophy. I would recommend you, therefore, as I said before, not to encourage yourself in this polemical and controversial temper, but to find out, in a friendly and congenial spirit, what we really mean when we say that all things are in motion, and that to every individual and state what appears, is. In this manner you will consider whether knowledge and sensation are the same or different, but you will not argue, as you were just now doing, from the customary use of names and words, which the vulgar pervert in all sorts of ways, causing infinite perplexity to one another. Such, Theodorus, is the very slight help which I am able to offer to your old friend; had he been living, he would have helped himself in a far more gloriose style.

Theodorus: You are jesting, Socrates; indeed, your defence of him has been most valorous.

Socrates: Thank you, friend; and I hope that you observed Protagoras bidding us be serious, as the text, 'Man is the measure of all things,' was a solemn one; and he reproached us with making a boy the medium of discourse, and said that the

boy's timidity was made to tell against his argument; he also declared that we made a joke of him.

Theodorus: How could I fail to observe all that, Socrates?

Socrates: Well, and shall we do as he says?

Theodorus: By all means.

Socrates: But if his wishes are to be regarded, you and I must take up the argument, and in all seriousness, and ask and answer one another, for you see that the rest of us are nothing but boys. In no other way can we escape the imputation, that in our fresh analysis of his thesis we are making fun with boys.

Theodorus: Well, but is not Theaetetus better able to follow a philosophical enquiry than a great many men who have long beards?

Socrates: Yes, Theodorus, but not better than you; and therefore please not to imagine that I am to defend by every means in my power your departed friend; and that you are to defend nothing and nobody. At any rate, my good man, do not sheer off until we know whether you are a true measure of diagrams, or whether all men are equally measures and sufficient for themselves in astronomy and geometry, and the other branches of knowledge in which you are supposed to excel them.

168c

Theodorus: He who is sitting by you, Socrates, will not easily avoid being drawn into an argument; and when I said just now that you would excuse me, and not, like the Lacedaemonians, compel me to strip and fight, I was talking nonsense — I should rather compare you to Scirrhon, who threw travellers from the rocks; for the Lacedaemonian rule is 'strip or depart,' but you seem to go about your work more after the fashion of Antaeus: you will not allow any one who approaches you to depart until

you have stripped him, and he has been compelled to try a fall with you in argument.

168d

Socrates: There, Theodorus, you have hit off precisely the nature of my complaint; but I am even more pugnacious than the giants of old, for I have met with no end of heroes; many a Heracles, many a Theseus, mighty in words, has broken my head; nevertheless I am always at this rough exercise, which inspires me like a passion. Please, then, to try a fall with me, whereby you will do yourself good as well as me.

168e

Theodorus: I consent; lead me whither you will, for I know that you are like destiny; no man can escape from any argument which you may weave for him. But I am not disposed to go further than you suggest.

Socrates: Once will be enough; and now take particular care that we do not again unwittingly expose ourselves to the reproach of talking childishly.

Theodorus: I will do my best to avoid that error.

Socrates: In the first place, let us return to our old objection, and see whether we were right in blaming and taking offence at Protagoras on the ground that he assumed all to be equal and sufficient in wisdom; although he admitted that there was a better and worse, and that in respect of this, some who as he said were the wise excelled others.

169a

Theodorus: Very true.

Socrates: Had Protagoras been living and answered for himself, instead of our answering for him, there would have been no need of our reviewing or reinforcing the argument. But as he is not here, and some one may accuse us of speaking without authority on his behalf, had we not better come to a clearer

agreement about his meaning, for a great deal may be at stake?

Theodorus: True.

169b

Socrates: Then let us obtain, not through any third person, but from his own statement and in the fewest words possible, the basis of agreement.

Theodorus: In what way?

Socrates: In this way: — His words are, ‘What seems to a man, is to him.’

Theodorus: Yes, so he says.

169c

Socrates: And are not we, Protagoras, uttering the opinion of man, or rather of all mankind, when we say that every one thinks himself wiser than other men in some things, and their inferior in others? In the hour of danger, when they are in perils of war, or of the sea, or of sickness, do they not look up to their commanders as if they were gods, and expect salvation from them, only because they excel them in knowledge? Is not the world full of men in their several employments, who are looking for teachers and rulers of themselves and of the animals? and there are plenty who think that they are able to teach and able to rule. Now, in all this is implied that ignorance and wisdom exist among them, at least in their own opinion.

169d

Theodorus: Certainly.

Socrates: And wisdom is assumed by them to be true thought, and ignorance to be false opinion.

Theodorus: Exactly.

Socrates: How then, Protagoras, would you have us treat the argument? Shall we say that the opinions of men are always true, or sometimes true and sometimes false? In either case, the

result is the same, and their opinions are not always true, but sometimes true and sometimes false. For tell me, Theodorus, do you suppose that you yourself, or any other follower of Protagoras, would contend that no one deems another ignorant or mistaken in his opinion?

Theodorus: The thing is incredible, Socrates.

169e

Socrates: And yet that absurdity is necessarily involved in the thesis which declares man to be the measure of all things.

Theodorus: How so?

170a

Socrates: Why, suppose that you determine in your own mind something to be true, and declare your opinion to me; let us assume, as he argues, that this is true to you. Now, if so, you must either say that the rest of us are not the judges of this opinion or judgment of yours, or that we judge you always to have a true opinion? But are there not thousands upon thousands who, whenever you form a judgment, take up arms against you and are of an opposite judgment and opinion, deeming that you judge falsely?

Theodorus: Yes, indeed, Socrates, thousands and tens of thousands, as Homer says, who give me a world of trouble.

Socrates: Well, but are we to assert that what you think is true to you and false to the ten thousand others?

Theodorus: No other inference seems to be possible.

170b

Socrates: And how about Protagoras himself? If neither he nor the multitude thought, as indeed they do not think, that man is the measure of all things, must it not follow that the truth of which Protagoras wrote would be true to no one? But if you suppose that he himself thought this, and that the multitude does not agree with him, you must begin by allowing that in

whatever proportion the many are more than one, in that proportion his truth is more untrue than true.

170c

Theodorus: That would follow if the truth is supposed to vary with individual opinion.

Socrates: And the best of the joke is, that he acknowledges the truth of their opinion who believe his own opinion to be false; for he admits that the opinions of all men are true.

Theodorus: Certainly.

170d

Socrates: And does he not allow that his own opinion is false, if he admits that the opinion of those who think him false is true?

Theodorus: Of course.

Socrates: Whereas the other side do not admit that they speak falsely?

Theodorus: They do not.

Socrates: And he, as may be inferred from his writings, agrees that this opinion is also true.

Theodorus: Clearly.

Socrates: Then all mankind, beginning with Protagoras, will contend, or rather, I should say that he will allow, when he concedes that his adversary has a true opinion — Protagoras, I say, will himself allow that neither a dog nor any ordinary man is the measure of anything which he has not learned — am I not right?

170e

Theodorus: Yes.

Socrates: And the truth of Protagoras being doubted by all, will be true neither to himself to any one else?

Theodorus: I think, Socrates, that we are running my old friend too hard.

Socrates: But I do not know that we are going beyond the truth. Doubtless, as he is older, he may be expected to be wiser than we are. And if he could only just get his head out of the world below, he would have overthrown both of us again and again, me for talking nonsense and you for assenting to me, and have been off and underground in a trice. But as he is not within call, we must make the best use of our own faculties, such as they are, and speak out what appears to us to be true. And one thing which no one will deny is, that there are great differences in the understandings of men.

171a

Theodorus: In that opinion I quite agree.

171b

Socrates: And is there not most likely to be firm ground in the distinction which we were indicating on behalf of Protagoras, viz. that most things, and all immediate sensations, such as hot, dry, sweet, are only such as they appear; if however difference of opinion is to be allowed at all, surely we must allow it in respect of health or disease? for every woman, child, or living creature has not such a knowledge of what conduces to health as to enable them to cure themselves.

171c

Theodorus: I quite agree.

Socrates: Or again, in politics, while affirming that just and unjust, honourable and disgraceful, holy and unholy, are in reality to each state such as the state thinks and makes lawful, and that in determining these matters no individual or state is wiser than another, still the followers of Protagoras will not deny that in determining what is or is not expedient for the community one state is wiser and one counsellor better than another — they will scarcely venture to maintain, that what a

city enacts in the belief that it is expedient will always be really expedient. But in the other case, I mean when they speak of justice and injustice, piety and impiety, they are confident that in nature these have no existence or essence of their own — the truth is that which is agreed on at the time of the agreement, and as long as the agreement lasts; and this is the philosophy of many who do not altogether go along with Protagoras. Here arises a new question, Theodorus, which threatens to be more serious than the last.

Theodorus: Well, Socrates, we have plenty of leisure.

171d

Socrates: That is true, and your remark recalls to my mind an observation which I have often made, that those who have passed their days in the pursuit of philosophy are ridiculously at fault when they have to appear and speak in court. How natural is this!

Theodorus: What do you mean?

Socrates: I mean to say, that those who have been trained in philosophy and liberal pursuits are as unlike those who from their youth upwards have been knocking about in the courts and such places, as a freeman is in breeding unlike a slave.

Theodorus: In what is the difference seen?

171e

Socrates: In the leisure spoken of by you, which a freeman can always command: he has his talk out in peace, and, like ourselves, he wanders at will from one subject to another, and from a second to a third, — if the fancy takes him, he begins again, as we are doing now, caring not whether his words are many or few; his only aim is to attain the truth. But the lawyer is always in a hurry; there is the water of the clepsydra driving him on, and not allowing him to expatiate at will: and there is his adversary standing over him, enforcing his rights; the

indictment, which in their phraseology is termed the affidavit, is recited at the time: and from this he must not deviate. He is a servant, and is continually disputing about a fellow-servant before his master, who is seated, and has the cause in his hands; the trial is never about some indifferent matter, but always concerns himself; and often the race is for his life. The consequence has been, that he has become keen and shrewd; he has learned how to flatter his master in word and indulge him in deed; but his soul is small and unrighteous. His condition, which has been that of a slave from his youth upwards, has deprived him of growth and uprightness and independence; dangers and fears, which were too much for his truth and honesty, came upon him in early years, when the tenderness of youth was unequal to them, and he has been driven into crooked ways; from the first he has practised deception and retaliation, and has become stunted and warped. And so he has passed out of youth into manhood, having no soundness in him; and is now, as he thinks, a master in wisdom. Such is the lawyer, Theodorus. Will you have the companion picture of the philosopher, who is of our brotherhood; or shall we return to the argument? Do not let us abuse the freedom of digression which we claim.

172d

Theodorus: Nay, Socrates, not until we have finished what we are about; for you truly said that we belong to a brotherhood which is free, and are not the servants of the argument; but the argument is our servant, and must wait our leisure. Who is our judge? Or where is the spectator having any right to censure or control us, as he might the poets?

Socrates: Then, as this is your wish, I will describe the leaders; for there is no use in talking about the inferior sort. In the first place, the lords of philosophy have never, from their youth upwards, known their way to the Agora, or the dicastery, or the

council, or any other political assembly; they neither see nor hear the laws or decrees, as they are called, of the state written or recited; the eagerness of political societies in the attainment of offices — clubs, and banquets, and revels, and singing-maidens, — do not enter even into their dreams. Whether any event has turned out well or ill in the city, what disgrace may have descended to any one from his ancestors, male or female, are matters of which the philosopher no more knows than he can tell, as they say, how many pints are contained in the ocean. Neither is he conscious of his ignorance. For he does not hold aloof in order that he may gain a reputation; but the truth is, that the outer form of him only is in the city: his mind, disdaining the littlenesses and nothingnesses of human things, is ‘flying all abroad’ as Pindar says, measuring earth and heaven and the things which are under and on the earth and above the heaven, interrogating the whole nature of each and all in their entirety, but not condescending to anything which is within reach.

Theodorus: What do you mean, Socrates?

173c

Socrates: I will illustrate my meaning, Theodorus, by the jest which the clever witty Thracian handmaid is said to have made about Thales, when he fell into a well as he was looking up at the stars. She said, that he was so eager to know what was going on in heaven, that he could not see what was before his feet. This is a jest which is equally applicable to all philosophers. For the philosopher is wholly unacquainted with his next-door neighbour; he is ignorant, not only of what he is doing, but he hardly knows whether he is a man or an animal; he is searching into the essence of man, and busy in enquiring what belongs to such a nature to do or suffer different from any other; — I think that you understand me, Theodorus?

Theodorus: I do, and what you say is true.

174a

Socrates: And thus, my friend, on every occasion, private as well as public, as I said at first, when he appears in a law-court, or in any place in which he has to speak of things which are at his feet and before his eyes, he is the jest, not only of Thracian handmaids but of the general herd, tumbling into wells and every sort of disaster through his inexperience. His awkwardness is fearful, and gives the impression of imbecility. When he is reviled, he has nothing personal to say in answer to the civilities of his adversaries, for he knows no scandals of any one, and they do not interest him; and therefore he is laughed at for his sheepishness; and when others are being praised and glorified, in the simplicity of his heart he cannot help going into fits of laughter, so that he seems to be a downright idiot. When he hears a tyrant or king eulogized, he fancies that he is listening to the praises of some keeper of cattle — a swineherd, or shepherd, or perhaps a cowherd, who is congratulated on the quantity of milk which he squeezes from them; and he remarks that the creature whom they tend, and out of whom they squeeze the wealth, is of a less tractable and more insidious nature. Then, again, he observes that the great man is of necessity as ill-mannered and uneducated as any shepherd — for he has no leisure, and he is surrounded by a wall, which is his mountain-pen. Hearing of enormous landed proprietors of ten thousand acres and more, our philosopher deems this to be a trifle, because he has been accustomed to think of the whole earth; and when they sing the praises of family, and say that some one is a gentleman because he can show seven generations of wealthy ancestors, he thinks that their sentiments only betray a dull and narrow vision in those who utter them, and who are not educated enough to look at the whole, nor to consider that every man has had thousands and ten thousands of progenitors, and among them have been rich and poor, kings and slaves, Hellenes and barbarians,

innumerable. And when people pride themselves on having a pedigree of twenty-five ancestors, which goes back to Heracles, the son of Amphitryon, he cannot understand their poverty of ideas. Why are they unable to calculate that Amphitryon had a twenty-fifth ancestor, who might have been anybody, and was such as fortune made him, and he had a fiftieth, and so on? He amuses himself with the notion that they cannot count, and thinks that a little arithmetic would have got rid of their senseless vanity. Now, in all these cases our philosopher is derided by the vulgar, partly because he is thought to despise them, and also because he is ignorant of what is before him, and always at a loss.

174c

Theodorus: That is very true, Socrates.

Socrates: But, O my friend, when he draws the other into upper air, and gets him out of his pleas and rejoinders into the contemplation of justice and injustice in their own nature and in their difference from one another and from all other things; or from the commonplaces about the happiness of a king or of a rich man to the consideration of government, and of human happiness and misery in general — what they are, and how a man is to attain the one and avoid the other — when that narrow, keen, little legal mind is called to account about all this, he gives the philosopher his revenge; for dazzled by the height at which he is hanging, whence he looks down into space, which is a strange experience to him, he being dismayed, and lost, and stammering broken words, is laughed at, not by Thracian handmaidens or any other uneducated persons, for they have no eye for the situation, but by every man who has not been brought up a slave. Such are the two characters, Theodorus: the one of the freeman, who has been trained in liberty and leisure, whom you call the philosopher, — him we cannot blame because he appears simple and of no account when he has to

perform some menial task, such as packing up bed-clothes, or flavouring a sauce or fawning speech; the other character is that of the man who is able to do all this kind of service smartly and neatly, but knows not how to wear his cloak like a gentleman; still less with the music of discourse can he hymn the true life aright which is lived by immortals or men blessed of heaven.

Theodorus: If you could only persuade everybody, Socrates, as you do me, of the truth of your words, there would be more peace and fewer evils among men.

175b

Socrates: Evils, Theodorus, can never pass away; for there must always remain something which is antagonistic to good. Having no place among the gods in heaven, of necessity they hover around the mortal nature, and this earthly sphere. Wherefore we ought to fly away from earth to heaven as quickly as we can; and to fly away is to become like God, as far as this is possible; and to become like him, is to become holy, just, and wise. But, O my friend, you cannot easily convince mankind that they should pursue virtue or avoid vice, not merely in order that a man may seem to be good, which is the reason given by the world, and in my judgment is only a repetition of an old wives' fable. Whereas, the truth is that God is never in any way unrighteous — he is perfect righteousness; and he of us who is the most righteous is most like him. Herein is seen the true cleverness of a man, and also his nothingness and want of manhood. For to know this is true wisdom and virtue, and ignorance of this is manifest folly and vice. All other kinds of wisdom or cleverness, which seem only, such as the wisdom of politicians, or the wisdom of the arts, are coarse and vulgar. The unrighteous man, or the sayer and doer of unholy things, had far better not be encouraged in the illusion that his roguery is clever; for men glory in their shame — they fancy that they hear

others saying of them, 'These are not mere good-for-nothing persons, mere burdens of the earth, but such as men should be who mean to dwell safely in a state.' Let us tell them that they are all the more truly what they do not think they are because they do not know it; for they do not know the penalty of injustice, which above all things they ought to know — not stripes and death, as they suppose, which evil-doers often escape, but a penalty which cannot be escaped.

Theodorus: What is that?

176a

Socrates: There are two patterns eternally set before them; the one blessed and divine, the other godless and wretched: but they do not see them, or perceive that in their utter folly and infatuation they are growing like the one and unlike the other, by reason of their evil deeds; and the penalty is, that they lead a life answering to the pattern which they are growing like. And if we tell them, that unless they depart from their cunning, the place of innocence will not receive them after death; and that here on earth, they will live ever in the likeness of their own evil selves, and with evil friends — when they hear this they in their superior cunning will seem to be listening to the talk of idiots.

Theodorus: Very true, Socrates.

Socrates: Too true, my friend, as I well know; there is, however, one peculiarity in their case: when they begin to reason in private about their dislike of philosophy, if they have the courage to hear the argument out, and do not run away, they grow at last strangely discontented with themselves; their rhetoric fades away, and they become helpless as children. These however are digressions from which we must now desist, or they will overflow, and drown the original argument; to which, if you please, we will now return.

Theodorus: For my part, Socrates, I would rather have the digressions, for at my age I find them easier to follow; but if you wish, let us go back to the argument.

Socrates: Had we not reached the point at which the partisans of the perpetual flux, who say that things are as they seem to each one, were confidently maintaining that the ordinances which the state commanded and thought just, were just to the state which imposed them, while they were in force; this was especially asserted of justice; but as to the good, no one had any longer the hardihood to contend of any ordinances which the state thought and enacted to be good that these, while they were in force, were really good; — he who said so would be playing with the name ‘good,’ and would not touch the real question — it would be a mockery, would it not?

Theodorus: Certainly it would.

Socrates: He ought not to speak of the name, but of the thing which is contemplated under the name.

176e

Theodorus: Right.

Socrates: Whatever be the term used, the good or expedient is the aim of legislation, and as far as she has an opinion, the state imposes all laws with a view to the greatest expediency; can legislation have any other aim?

Theodorus: Certainly not.

Socrates: But is the aim attained always? do not mistakes often happen?

Theodorus: Yes, I think that there are mistakes.

Socrates: The possibility of error will be more distinctly recognised, if we put the question in reference to the whole class under which the good or expedient falls. That whole class has to do with the future, and laws are passed under the idea

that they will be useful in after-time; which, in other words, is the future.

177a

Theodorus: Very true.

177b

Socrates: Suppose now, that we ask Protagoras, or one of his disciples, a question: — O, Protagoras, we will say to him, Man is, as you declare, the measure of all things — white, heavy, light: of all such things he is the judge; for he has the criterion of them in himself, and when he thinks that things are such as he experiences them to be, he thinks what is and is true to himself. Is it not so?

Theodorus: Yes.

177c

Socrates: And do you extend your doctrine, Protagoras (as we shall further say), to the future as well as to the present; and has he the criterion not only of what in his opinion is but of what will be, and do things always happen to him as he expected? For example, take the case of heat: — When an ordinary man thinks that he is going to have a fever, and that this kind of heat is coming on, and another person, who is a physician, thinks the contrary, whose opinion is likely to prove right? Or are they both right? — he will have a heat and fever in his own judgment, and not have a fever in the physician's judgment?

Theodorus: How ludicrous!

Socrates: And the vinegrower, if I am not mistaken, is a better judge of the sweetness or dryness of the vintage which is not yet gathered than the harp-player?

Theodorus: Certainly.

Socrates: And in musical composition the musician will know better than the training master what the training master himself will hereafter think harmonious or the reverse?

Theodorus: Of course.

177e

Socrates: And the cook will be a better judge than the guest, who is not a cook, of the pleasure to be derived from the dinner which is in preparation; for of present or past pleasure we are not as yet arguing; but can we say that every one will be to himself the best judge of the pleasure which will seem to be and will be to him in the future? — nay, would not you, Protagoras, better guess which arguments in a court would convince any one of us than the ordinary man?

Theodorus: Certainly, Socrates, he used to profess in the strongest manner that he was the superior of all men in this respect.

178a

Socrates: To be sure, friend: who would have paid a large sum for the privilege of talking to him, if he had really persuaded his visitors that neither a prophet nor any other man was better able to judge what will be and seem to be in the future than every one could for himself?

Theodorus: Who indeed?

Socrates: And legislation and expediency are all concerned with the future; and every one will admit that states, in passing laws, must often fail of their highest interests?

178b

Theodorus: Quite true.

Socrates: Then we may fairly argue against your master, that he must admit one man to be wiser than another, and that the wiser is a measure: but I, who know nothing, am not at all obliged to accept the honour which the advocate of Protagoras was just now forcing upon me, whether I would or not, of being a measure of anything.

Theodorus: That is the best refutation of him, Socrates; although he is also caught when he ascribes truth to the opinions of others, who give the lie direct to his own opinion.

178c

Socrates: There are many ways, Theodorus, in which the doctrine that every opinion of every man is true may be refuted; but there is more difficulty in proving that states of feeling, which are present to a man, and out of which arise sensations and opinions in accordance with them, are also untrue. And very likely I have been talking nonsense about them; for they may be unassailable, and those who say that there is clear evidence of them, and that they are matters of knowledge, may probably be right; in which case our friend Theaetetus was not so far from the mark when he identified perception and knowledge. And therefore let us draw nearer, as the advocate of Protagoras desires; and give the truth of the universal flux a ring: is the theory sound or not? at any rate, no small war is raging about it, and there are combination not a few.

178d

Theodorus: No small, war, indeed, for in Ionia the sect makes rapid strides; the disciples of Heracleitus are most energetic upholders of the doctrine.

Socrates: Then we are the more bound, my dear Theodorus, to examine the question from the foundation as it is set forth by themselves.

179a

Theodorus: Certainly we are. About these speculations of Heracleitus, which, as you say, are as old as Homer, or even older still, the Ephesians themselves, who profess to know them, are downright mad, and you cannot talk with them on the subject. For, in accordance with their text-books, they are always in motion; but as for dwelling upon an argument or a question, and quietly asking and answering in turn, they can no

more do so than they can fly; or rather, the determination of these fellows not to have a particle of rest in them is more than the utmost powers of negation can express. If you ask any of them a question, he will produce, as from a quiver, sayings brief and dark, and shoot them at you; and if you inquire the reason of what he has said, you will be hit by some other new-fangled word, and will make no way with any of them, nor they with one another; their great care is, not to allow of any settled principle either in their arguments or in their minds, conceiving, as I imagine, that any such principle would be stationary; for they are at war with the stationary, and do what they can to drive it out everywhere.

179c

Socrates: I suppose, Theodorus, that you have only seen them when they were fighting, and have never stayed with them in time of peace, for they are no friends of yours; and their peace doctrines are only communicated by them at leisure, as I imagine, to those disciples of theirs whom they want to make like themselves.

Theodorus: Disciples! my good sir, they have none; men of their sort are not one another's disciples, but they grow up at their own sweet will, and get their inspiration anywhere, each of them saying of his neighbour that he knows nothing. From these men, then, as I was going to remark, you will never get a reason, whether with their will or without their will; we must take the question out of their hands, and make the analysis ourselves, as if we were doing geometrical problem.

179d

Socrates: Quite right too; but as touching the aforesaid problem, have we not heard from the ancients, who concealed their wisdom from the many in poetical figures, that Oceanus and Tethys, the origin of all things, are streams, and that nothing is at rest? And now the moderns, in their superior

wisdom, have declared the same openly, that the cobbler too may hear and learn of them, and no longer foolishly imagine that some things are at rest and others in motion — having learned that all is motion, he will duly honour his teachers. I had almost forgotten the opposite doctrine, Theodorus, ^{179e} ‘Alone Being remains unmoved, which is the name for the all.’

^{179e}

This is the language of Parmenides, Melissus, and their followers, who stoutly maintain that all being is one and self-contained, and has no place in which to move. What shall we do, friend, with all these people; for, advancing step by step, we have imperceptibly got between the combatants, and, unless we can protect our retreat, we shall pay the penalty of our rashness — like the players in the palaestra who are caught upon the line, and are dragged different ways by the two parties. Therefore I think that we had better begin by considering those whom we first accosted, ‘the river-gods,’ and, if we find any truth in them, we will help them to pull us over, and try to get away from the others. But if the partisans of ‘the whole’ appear to speak more truly, we will fly off from the party which would move the immovable, to them. And if I find that neither of them have anything reasonable to say, we shall be in a ridiculous position, having so great a conceit of our own poor opinion and rejecting that of ancient and famous men. O Theodorus, do you think that there is any use in proceeding when the danger is so great?

^{180b}

Theodorus: Nay, Socrates, not to examine thoroughly what the two parties have to say would be quite intolerable.

Socrates: Then examine we must, since you, who were so reluctant to begin, are so eager to proceed. The nature of motion appears to be the question with which we begin. What do they mean when they say that all things are in motion? Is

there only one kind of motion, or, as I rather incline to think, two? I should like to have your opinion upon this point in addition to my own, that I may err, if I must err, in your company; tell me, then, when a thing changes from one place to another, or goes round in the same place, is not that what is called motion?

180c

Theodorus: Yes.

Socrates: Here then we have one kind of motion. But when a thing, remaining on the same spot, grows old, or becomes black from being white, or hard from being soft, or undergoes any other change, may not this be properly called motion of another kind?

Theodorus: I think so.

Socrates: Say rather that it must be so. Of motion then there are these two kinds, 'change,' and 'motion in place.'

Theodorus: You are right.

Socrates: And now, having made this distinction, let us address ourselves to those who say that all is motion, and ask them whether all things according to them have the two kinds of motion, and are changed as well as move in place, or is one thing moved in both ways, and another in one only?

Theodorus: Indeed, I do not know what to answer; but I think they would say that all things are moved in both ways.

Socrates: Yes, comrade; for, if not, they would have to say that the same things are in motion and at rest, and there would be no more truth in saying that all things are in motion, than that all things are at rest.

Theodorus: To be sure.

Socrates: And if they are to be in motion, and nothing is to be devoid of motion, all things must always have every sort of motion?

Theodorus: Most true.

181b

Socrates: Consider a further point: did we not understand them to explain the generation of heat, whiteness, or anything else, in some such manner as the following: — were they not saying that each of them is moving between the agent and the patient, together with a perception, and that the patient ceases to be a perceiving power and becomes a percipient, and the agent a quale instead of a quality? I suspect that quality may appear a strange and uncouth term to you, and that you do not understand the abstract expression. Then I will take concrete instances: I mean to say that the producing power or agent becomes neither heat nor whiteness but hot and white, and the like of other things. For I must repeat what I said before, that neither the agent nor patient have any absolute existence, but when they come together and generate sensations and their objects, the one becomes a thing of a certain quality, and the other a percipient. You remember?

Theodorus: Of course.

181c

Socrates: We may leave the details of their theory unexamined, but we must not forget to ask them the only question with which we are concerned: Are all things in motion and flux?

Theodorus: Yes, they will reply.

181d

Socrates: And they are moved in both those ways which we distinguished, that is to say, they move in place and are also changed?

Theodorus: Of course, if the motion is to be perfect.

Socrates: If they only moved in place and were not changed, we should be able to say what is the nature of the things which are in motion and flux?

Theodorus: Exactly.

181e

Socrates: But now, since not even white continues to flow white, and whiteness itself is a flux or change which is passing into another colour, and is never to be caught standing still, can the name of any colour be rightly used at all?

Theodorus: How is that possible, Socrates, either in the case of this or of any other quality — if while we are using the word the object is escaping in the flux?

182a

Socrates: And what would you say of perceptions, such as sight and hearing, or any other kind of perception? Is there any stopping in the act of seeing and hearing?

Theodorus: Certainly not, if all things are in motion.

Socrates: Then we must not speak of seeing any more than of not-seeing, nor of any other perception more than of any non-perception, if all things partake of every kind of motion?

Theodorus: Certainly not.

Socrates: Yet perception is knowledge: so at least Theaetetus and I were saying.

Theodorus: Very true.

Socrates: Then when we were asked what is knowledge, we no more answered what is knowledge than what is not knowledge?

Theodorus: I suppose not.

Socrates: Here, then, is a fine result: we corrected our first answer in our eagerness to prove that nothing is at rest. But if nothing is at rest, every answer upon whatever subject is

equally right: you may say that a thing is or is not thus; or, if you prefer, 'becomes' thus; and if we say 'becomes,' we shall not then hamper them with words expressive of rest.

Theodorus: Quite true.

182c

Socrates: Yes, Theodorus, except in saying 'thus' and 'not thus.' But you ought not to use the word 'thus,' for there is no motion in 'thus' or in 'not thus.' The maintainers of the doctrine have as yet no words in which to express themselves, and must get a new language. I know of no word that will suit them, except perhaps 'no how,' which is perfectly indefinite.

Theodorus: Yes, that is a manner of speaking in which they will be quite at home.

Socrates: And so, Theodorus, we have got rid of your friend without assenting to his doctrine, that every man is the measure of all things — a wise man only is a measure; neither can we allow that knowledge is perception, certainly not on the hypothesis of a perpetual flux, unless perchance our friend Theaetetus is able to convince us that it is.

182d

Theodorus: Very good, Socrates; and now that the argument about the doctrine of Protagoras has been completed, I am absolved from answering; for this was the agreement.

Theaetetus: Not, Theodorus, until you and Socrates have discussed the doctrine of those who say that all things are at rest, as you were proposing.

182e

Theodorus: You, Theaetetus, who are a young rogue, must not instigate your elders to a breach of faith, but should prepare to answer Socrates in the remainder of the argument.

Theaetetus: Yes, if he wishes; but I would rather have heard about the doctrine of rest.

Theodorus: Invite Socrates to an argument — invite horsemen to the open plain; do but ask him, and he will answer.

Socrates: Nevertheless, Theodorus, I am afraid that I shall not be able to comply with the request of Theaetetus.

Theodorus: Not comply! for what reason?

183a

Socrates: My reason is that I have a kind of reverence; not so much for Melissus and the others, who say that ‘All is one and at rest,’ as for the great leader himself, Parmenides, venerable and awful, as in Homeric language he may be called; — him I should be ashamed to approach in a spirit unworthy of him. I met him when he was an old man, and I was a mere youth, and he appeared to me to have a glorious depth of mind. And I am afraid that we may not understand his words, and may be still further from understanding his meaning; above all I fear that the nature of knowledge, which is the main subject of our discussion, may be thrust out of sight by the unbidden guests who will come pouring in upon our feast of discourse, if we let them in — besides, the question which is now stirring is of immense extent, and will be treated unfairly if only considered by the way; or if treated adequately and at length, will put into the shade the other question of knowledge. Neither the one nor the other can be allowed; but I must try by my art of midwifery to deliver Theaetetus of his conceptions about knowledge.

183b

Theaetetus: Very well; do so if you will.

Socrates: Then now, Theaetetus, take another view of the subject: you answered that knowledge is perception?

Theaetetus: I did.

Socrates: And if any one were to ask you: With what does a man see black and white colours? and with what does he hear high and low sounds? — you would say, if I am not mistaken, ‘With

the eyes and with the ears.'

183c

Theaetetus: I should.

183d

Socrates: The free use of words and phrases, rather than minute precision, is generally characteristic of a liberal education, and the opposite is pedantic; but sometimes precision is necessary, and I believe that the answer which you have just given is open to the charge of incorrectness; for which is more correct, to say that we see or hear with the eyes and with the ears, or through the eyes and through the ears.

Theaetetus: I should say 'through,' Socrates, rather than 'with.'

Socrates: Yes, my boy, for no one can suppose that in each of us, as in a sort of Trojan horse, there are perched a number of unconnected senses, which do not all meet in some one nature, the mind, or whatever we please to call it, of which they are the instruments, and with which through them we perceive objects of sense.

183e

Theaetetus: I agree with you in that opinion.

Socrates: The reason why I am thus precise is, because I want to know whether, when we perceive black and white through the eyes, and again, other qualities through other organs, we do not perceive them with one and the same part of ourselves, and, if you were asked, you might refer all such perceptions to the body. Perhaps, however, I had better allow you to answer for yourself and not interfere. Tell me, then, are not the organs through which you perceive warm and hard and light and sweet, organs of the body?

Theaetetus: Of the body, certainly.

Socrates: And you would admit that what you perceive through one faculty you cannot perceive through another; the objects of

hearing, for example, cannot be perceived through sight, or the objects of sight through hearing?

Theaetetus: Of course not.

Socrates: If you have any thought about both of them, this common perception cannot come to you, either through the one or the other organ?

184b

Theaetetus: It cannot.

Socrates: How about sounds and colours: in the first place you would admit that they both exist?

Theaetetus: Yes.

Socrates: And that either of them is different from the other, and the same with itself?

Theaetetus: Certainly.

Socrates: And that both are two and each of them one?

Theaetetus: Yes.

Socrates: You can further observe whether they are like or unlike one another?

184c

Theaetetus: I dare say.

Socrates: But through what do you perceive all this about them? for neither through hearing nor yet through seeing can you apprehend that which they have in common. Let me give you an illustration of the point at issue: — If there were any meaning in asking whether sounds and colours are saline or not, you would be able to tell me what faculty would consider the question. It would not be sight or hearing, but some other.

Theaetetus: Certainly; the faculty of taste.

184d

Socrates: Very good; and now tell me what is the power which discerns, not only in sensible objects, but in all things, universal notions, such as those which are called being and not-being, and those others about which we were just asking — what organs will you assign for the perception of these notions?

Theaetetus: You are thinking of being and not being, likeness and unlikeness, sameness and difference, and also of unity and other numbers which are applied to objects of sense; and you mean to ask, through what bodily organ the soul perceives odd and even numbers and other arithmetical conceptions.

Socrates: You follow me excellently, Theaetetus; that is precisely what I am asking.

Theaetetus: Indeed, Socrates, I cannot answer; my only notion is, that these, unlike objects of sense, have no separate organ, but that the mind, by a power of her own, contemplates the universals in all things.

184e

Socrates: You are a beauty, Theaetetus, and not ugly, as Theodorus was saying; for he who utters the beautiful is himself beautiful and good. And besides being beautiful, you have done me a kindness in releasing me from a very long discussion, if you are clear that the soul views some things by herself and others through the bodily organs. For that was my own opinion, and I wanted you to agree with me.

185a

Theaetetus: I am quite clear.

Socrates: And to which class would you refer being or essence; for this, of all our notions, is the most universal?

Theaetetus: I should say, to that class which the soul aspires to know of herself.

Socrates: And would you say this also of like and unlike, same and other?

Theaetetus: Yes.

185b

Socrates: And would you say the same of the noble and base, and of good and evil?

Theaetetus: These I conceive to be notions which are essentially relative, and which the soul also perceives by comparing in herself things past and present with the future.

Socrates: And does she not perceive the hardness of that which is hard by the touch, and the softness of that which is soft equally by the touch?

Theaetetus: Yes.

Socrates: But their essence and what they are, and their opposition to one another, and the essential nature of this opposition, the soul herself endeavours to decide for us by the review and comparison of them?

185c

Theaetetus: Certainly.

Socrates: The simple sensations which reach the soul through the body are given at birth to men and animals by nature, but their reflections on the being and use of them are slowly and hardly gained, if they are ever gained, by education and long experience.

Theaetetus: Assuredly.

Socrates: And can a man attain truth who fails of attaining being?

Theaetetus: Impossible.

Socrates: And can he who misses the truth of anything, have a knowledge of that thing?

Theaetetus: He cannot.

Socrates: Then knowledge does not consist in impressions of sense, but in reasoning about them; in that only, and not in the mere impression, truth and being can be attained?

185d

Theaetetus: Clearly.

Socrates: And would you call the two processes by the same name, when there is so great a difference between them?

Theaetetus: That would certainly not be right.

Socrates: And what name would you give to seeing, hearing, smelling, being cold and being hot?

185e

Theaetetus: I should call all of them perceiving — what other name could be given to them?

Socrates: Perception would be the collective name of them?

Theaetetus: Certainly.

Socrates: Which, as we say, has no part in the attainment of truth any more than of being?

Theaetetus: Certainly not.

Socrates: And therefore not in science or knowledge?

Theaetetus: No.

Socrates: Then perception, Theaetetus, can never be the same as knowledge or science?

Theaetetus: Clearly not, Socrates; and knowledge has now been most distinctly proved to be different from perception.

186a

Socrates: But the original aim of our discussion was to find out rather what knowledge is than what it is not; at the same time we have made some progress, for we no longer seek for

knowledge in perception at all, but in that other process, however called, in which the mind is alone and engaged with being.

Theaetetus: You mean, Socrates, if I am not mistaken, what is called thinking or opining.

186b

Socrates: You conceive truly. And now, my friend, please to begin again at this point; and having wiped out of your memory all that has preceded, see if you have arrived at any clearer view, and once more say what is knowledge.

Theaetetus: I cannot say, Socrates, that all opinion is knowledge, because there may be a false opinion; but I will venture to assert, that knowledge is true opinion: let this then be my reply; and if this is hereafter disproved, I must try to find another.

186c

Socrates: That is the way in which you ought to answer, Theaetetus, and not in your former hesitating strain, for if we are bold we shall gain one of two advantages; either we shall find what we seek, or we shall be less likely to think that we know what we do not know — in either case we shall be richly rewarded. And now, what are you saying? — Are there two sorts of opinion, one true and the other false; and do you define knowledge to be the true?

186d

Theaetetus: Yes, according to my present view.

Socrates: Is it still worth our while to resume the discussion touching opinion?

Theaetetus: To what are you alluding?

Socrates: There is a point which often troubles me, and is a great perplexity to me, both in regard to myself and others. I cannot make out the nature or origin of the mental experience

to which I refer.

186e

Theaetetus: Pray what is it?

Socrates: How there can be false opinion — that difficulty still troubles the eye of my mind; and I am uncertain whether I shall leave the question, or begin over again in a new way.

Theaetetus: Begin again, Socrates, — at least if you think that there is the slightest necessity for doing so. Were not you and Theodorus just now remarking very truly, that in discussions of this kind we may take our own time?

187a

Socrates: You are quite right, and perhaps there will be no harm in retracing our steps and beginning again. Better a little which is well done, than a great deal imperfectly.

Theaetetus: Certainly.

Socrates: Well, and what is the difficulty? Do we not speak of false opinion, and say that one man holds a false and another a true opinion, as though there were some natural distinction between them?

187b

Theaetetus: We certainly say so.

Socrates: All things and everything are either known or not known. I leave out of view the intermediate conceptions of learning and forgetting, because they have nothing to do with our present question.

Theaetetus: There can be no doubt, Socrates, if you exclude these, that there is no other alternative but knowing or not knowing a thing.

Socrates: That point being now determined, must we not say that he who has an opinion, must have an opinion about something which he knows or does not know?

Theaetetus: He must.

Socrates: He who knows, cannot but know; and he who does not know, cannot know?

Theaetetus: Of course.

Socrates: What shall we say then? When a man has a false opinion does he think that which he knows to be some other thing which he knows, and knowing both, is he at the same time ignorant of both?

Theaetetus: That, Socrates, is impossible.

187c

Socrates: But perhaps he thinks of something which he does not know as some other thing which he does not know; for example, he knows neither Theaetetus nor Socrates, and yet he fancies that Theaetetus is Socrates, or Socrates Theaetetus?

187d

Theaetetus: How can he?

Socrates: But surely he cannot suppose what he knows to be what he does not know, or what he does not know to be what he knows?

Theaetetus: That would be monstrous.

Socrates: Where, then, is false opinion? For if all things are either known or unknown, there can be no opinion which is not comprehended under this alternative, and so false opinion is excluded.

Theaetetus: Most true.

Socrates: Suppose that we remove the question out of the sphere of knowing or not knowing, into that of being and not-being.

Theaetetus: What do you mean?

Socrates: May we not suspect the simple truth to be that he who thinks about anything, that which is not, will necessarily think what is false, whatever in other respects may be the state of his mind?

187e

Theaetetus: That, again, is not unlikely, Socrates.

Socrates: Then suppose some one to say to us, Theaetetus: — Is it possible for any man to think that which is not, either as a self-existent substance or as a predicate of something else? And suppose that we answer, ‘Yes, he can, when he thinks what is not true.’ — That will be our answer?

Theaetetus: Yes.

Socrates: But is there any parallel to this?

Theaetetus: What do you mean?

188a

Socrates: Can a man see something and yet see nothing?

Theaetetus: Impossible.

Socrates: But if he sees any one thing, he sees something that exists. Do you suppose that what is one is ever to be found among non-existing things?

Theaetetus: I do not.

Socrates: He then who sees some one thing, sees something which is?

Theaetetus: Clearly.

188b

Socrates: And he who hears anything, hears some one thing, and hears that which is?

Theaetetus: Yes.

Socrates: And he who touches anything, touches something which is one and therefore is?

Theaetetus: That again is true.

Socrates: And does not he who thinks, think some one thing?

Theaetetus: Certainly.

Socrates: And does not he who thinks some one thing, think something which is?

Theaetetus: I agree.

Socrates: Then he who thinks of that which is not, thinks of nothing?

Theaetetus: Clearly.

Socrates: And he who thinks of nothing, does not think at all?

188c

Theaetetus: Obviously.

Socrates: Then no one can think that which is not, either as a self-existent substance or as a predicate of something else?

Theaetetus: Clearly not.

Socrates: Then to think falsely is different from thinking that which is not?

Theaetetus: It would seem so.

Socrates: Then false opinion has no existence in us, either in the sphere of being or of knowledge?

Theaetetus: Certainly not.

Socrates: But may not the following be the description of what we express by this name?

Theaetetus: What?

188d

Socrates: May we not suppose that false opinion or thought is a sort of heterodoxy; a person may make an exchange in his mind, and say that one real object is another real object. For thus he always thinks that which is, but he puts one thing in place of another; and missing the aim of his thoughts, he may be truly said to have false opinion.

Theaetetus: Now you appear to me to have spoken the exact truth: when a man puts the base in the place of the noble, or the noble in the place of the base, then he has truly false opinion.

Socrates: I see, Theaetetus, that your fear has disappeared, and that you are beginning to despise me.

Theaetetus: What makes you say so?

188e

Socrates: You think, if I am not mistaken, that your 'truly false' is safe from censure, and that I shall never ask whether there can be a swift which is slow, or a heavy which is light, or any other self-contradictory thing, which works, not according to its own nature, but according to that of its opposite. But I will not insist upon this, for I do not wish needlessly to discourage you. And so you are satisfied that false opinion is heterodoxy, or the thought of something else?

189a

Theaetetus: I am.

Socrates: It is possible then upon your view for the mind to conceive of one thing as another?

Theaetetus: True.

Socrates: But must not the mind, or thinking power, which misplaces them, have a conception either of both objects or of one of them?

Theaetetus: Certainly.

Socrates: Either together or in succession?

Theaetetus: Very good.

Socrates: And do you mean by conceiving, the same which I mean?

189b

Theaetetus: What is that?

Socrates: I mean the conversation which the soul holds with herself in considering of anything. I speak of what I scarcely understand; but the soul when thinking appears to me to be just talking — asking questions of herself and answering them, affirming and denying. And when she has arrived at a decision, either gradually or by a sudden impulse, and has at last agreed, and does not doubt, this is called her opinion. I say, then, that to form an opinion is to speak, and opinion is a word spoken, — I mean, to oneself and in silence, not aloud or to another: What think you?

189c

Theaetetus: I agree.

Socrates: Then when any one thinks of one thing as another, he is saying to himself that one thing is another?

Theaetetus: Yes.

Socrates: But do you ever remember saying to yourself that the noble is certainly base, or the unjust just; or, best of all — have you ever attempted to convince yourself that one thing is another? Nay, not even in sleep, did you ever venture to say to yourself that odd is even, or anything of the kind?

189d

Theaetetus: Never.

Socrates: And do you suppose that any other man, either in his senses or out of them, ever seriously tried to persuade himself that an ox is a horse, or that two are one?

Theaetetus: Certainly not.

Socrates: But if thinking is talking to oneself, no one speaking and thinking of two objects, and apprehending them both in his soul, will say and think that the one is the other of them, and I must add, that even you, lover of dispute as you are, had better let the word 'other' alone (i.e. not insist that 'one' and 'other' are the same (Both words in Greek are called *eteron*: compare Parmen.; Euthyd.)). I mean to say, that no one thinks the noble to be base, or anything of the kind.

189e

Theaetetus: I will give up the word 'other,' Socrates; and I agree to what you say.

Socrates: If a man has both of them in his thoughts, he cannot think that the one of them is the other?

Theaetetus: True.

Socrates: Neither, if he has one of them only in his mind and not the other, can he think that one is the other?

Theaetetus: True; for we should have to suppose that he apprehends that which is not in his thoughts at all.

Socrates: Then no one who has either both or only one of the two objects in his mind can think that the one is the other. And therefore, he who maintains that false opinion is heterodoxy is talking nonsense; for neither in this, any more than in the previous way, can false opinion exist in us.

Theaetetus: No.

190a

Socrates: But if, Theaetetus, this is not admitted, we shall be driven into many absurdities.

Theaetetus: What are they?

190b

Socrates: I will not tell you until I have endeavoured to consider the matter from every point of view. For I should be ashamed of us if we were driven in our perplexity to admit the absurd consequences of which I speak. But if we find the solution, and get away from them, we may regard them only as the difficulties of others, and the ridicule will not attach to us. On the other hand, if we utterly fail, I suppose that we must be humble, and allow the argument to trample us under foot, as the sea-sick passenger is trampled upon by the sailor, and to do anything to us. Listen, then, while I tell you how I hope to find a way out of our difficulty.

190c

Theaetetus: Let me hear.

Socrates: I think that we were wrong in denying that a man could think what he knew to be what he did not know; and that there is a way in which such a deception is possible.

190d

Theaetetus: You mean to say, as I suspected at the time, that I may know Socrates, and at a distance see some one who is unknown to me, and whom I mistake for him — then the deception will occur?

Socrates: But has not that position been relinquished by us, because involving the absurdity that we should know and not know the things which we know?

Theaetetus: True.

Socrates: Let us make the assertion in another form, which may or may not have a favourable issue; but as we are in a great strait, every argument should be turned over and tested. Tell me, then, whether I am right in saying that you may learn a thing which at one time you did not know?

Theaetetus: Certainly you may.

Socrates: And another and another?

190e

Theaetetus: Yes.

Socrates: I would have you imagine, then, that there exists in the mind of man a block of wax, which is of different sizes in different men; harder, moister, and having more or less of purity in one than another, and in some of an intermediate quality.

Theaetetus: I see.

Socrates: Let us say that this tablet is a gift of Memory, the mother of the Muses; and that when we wish to remember anything which we have seen, or heard, or thought in our own minds, we hold the wax to the perceptions and thoughts, and in that material receive the impression of them as from the seal of a ring; and that we remember and know what is imprinted as long as the image lasts; but when the image is effaced, or cannot be taken, then we forget and do not know.

191a

Theaetetus: Very good.

Socrates: Now, when a person has this knowledge, and is considering something which he sees or hears, may not false opinion arise in the following manner?

Theaetetus: In what manner?

191b

Socrates: When he thinks what he knows, sometimes to be what he knows, and sometimes to be what he does not know. We were wrong before in denying the possibility of this.

Theaetetus: And how would you amend the former statement?

191d

Socrates: I should begin by making a list of the impossible cases which must be excluded. (1) No one can think one thing to be

another when he does not perceive either of them, but has the memorial or seal of both of them in his mind; nor can any mistaking of one thing for another occur, when he only knows one, and does not know, and has no impression of the other; nor can he think that one thing which he does not know is another thing which he does not know, or that what he does not know is what he knows; nor (2) that one thing which he perceives is another thing which he perceives, or that something which he perceives is something which he does not perceive; or that something which he does not perceive is something else which he does not perceive; or that something which he does not perceive is something which he perceives; nor again (3) can he think that something which he knows and perceives, and of which he has the impression coinciding with sense, is something else which he knows and perceives, and of which he has the impression coinciding with sense; — this last case, if possible, is still more inconceivable than the others; nor (4) can he think that something which he knows and perceives, and of which he has the memorial coinciding with sense, is something else which he knows; nor so long as these agree, can he think that a thing which he knows and perceives is another thing which he perceives; or that a thing which he does not know and does not perceive, is the same as another thing which he does not know and does not perceive; — nor again, can he suppose that a thing which he does not know and does not perceive is the same as another thing which he does not know; or that a thing which he does not know and does not perceive is another thing which he does not perceive: — All these utterly and absolutely exclude the possibility of false opinion. The only cases, if any, which remain, are the following.

192a

Theaetetus: What are they? If you tell me, I may perhaps understand you better; but at present I am unable to follow you.

Socrates: A person may think that some things which he knows, or which he perceives and does not know, are some other things which he knows and perceives; or that some things which he knows and perceives, are other things which he knows and perceives.

Theaetetus: I understand you less than ever now.

Socrates: Hear me once more, then: — I, knowing Theodorus, and remembering in my own mind what sort of person he is, and also what sort of person Theaetetus is, at one time see them, and at another time do not see them, and sometimes I touch them, and at another time not, or at one time I may hear them or perceive them in some other way, and at another time not perceive them, but still I remember them, and know them in my own mind.

Theaetetus: Very true.

Socrates: Then, first of all, I want you to understand that a man may or may not perceive sensibly that which he knows.

Theaetetus: True.

Socrates: And that which he does not know will sometimes not be perceived by him and sometimes will be perceived and only perceived?

Theaetetus: That is also true.

Socrates: See whether you can follow me better now: Socrates can recognize Theodorus and Theaetetus, but he sees neither of them, nor does he perceive them in any other way; he cannot then by any possibility imagine in his own mind that Theaetetus is Theodorus. Am I not right?

192c

Theaetetus: You are quite right.

Socrates: Then that was the first case of which I spoke.

Theaetetus: Yes.

Socrates: The second case was, that I, knowing one of you and not knowing the other, and perceiving neither, can never think him whom I know to be him whom I do not know.

Theaetetus: True.

192d

Socrates: In the third case, not knowing and not perceiving either of you, I cannot think that one of you whom I do not know is the other whom I do not know. I need not again go over the catalogue of excluded cases, in which I cannot form a false opinion about you and Theodorus, either when I know both or when I am in ignorance of both, or when I know one and not the other. And the same of perceiving: do you understand me?

Theaetetus: I do.

192e

Socrates: The only possibility of erroneous opinion is, when knowing you and Theodorus, and having on the waxen block the impression of both of you given as by a seal, but seeing you imperfectly and at a distance, I try to assign the right impression of memory to the right visual impression, and to fit this into its own print: if I succeed, recognition will take place; but if I fail and transpose them, putting the foot into the wrong shoe — that is to say, putting the vision of either of you on to the wrong impression, or if my mind, like the sight in a mirror, which is transferred from right to left, err by reason of some similar affection, then ‘heterodoxy’ and false opinion ensues.

193a

Theaetetus: Yes, Socrates, you have described the nature of opinion with wonderful exactness.

Socrates: Or again, when I know both of you, and perceive as well as know one of you, but not the other, and my knowledge of him does not accord with perception — that was the case put

by me just now which you did not understand.

Theaetetus: No, I did not.

Socrates: I meant to say, that when a person knows and perceives one of you, his knowledge coincides with his perception, he will never think him to be some other person, whom he knows and perceives, and the knowledge of whom coincides with his perception — for that also was a case supposed.

193b

Theaetetus: True.

Socrates: But there was an omission of the further case, in which, as we now say, false opinion may arise, when knowing both, and seeing, or having some other sensible perception of both, I fail in holding the seal over against the corresponding sensation; like a bad archer, I miss and fall wide of the mark — and this is called falsehood.

Theaetetus: Yes; it is rightly so called.

193d

Socrates: When, therefore, perception is present to one of the seals or impressions but not to the other, and the mind fits the seal of the absent perception on the one which is present, in any case of this sort the mind is deceived; in a word, if our view is sound, there can be no error or deception about things which a man does not know and has never perceived, but only in things which are known and perceived; in these alone opinion turns and twists about, and becomes alternately true and false; — true when the seals and impressions of sense meet straight and opposite — false when they go awry and crooked.

193e

Theaetetus: And is not that, Socrates, nobly said?

Socrates: Nobly! yes; but wait a little and hear the explanation, and then you will say so with more reason; for to think truly is

noble and to be deceived is base.

Theaetetus: Undoubtedly.

Socrates: And the origin of truth and error is as follows: — When the wax in the soul of any one is deep and abundant, and smooth and perfectly tempered, then the impressions which pass through the senses and sink into the heart of the soul, as Homer says in a parable, meaning to indicate the likeness of the soul to wax (Kerh Kerhos); these, I say, being pure and clear, and having a sufficient depth of wax, are also lasting, and minds, such as these, easily learn and easily retain, and are not liable to confusion, but have true thoughts, for they have plenty of room, and having clear impressions of things, as we term them, quickly distribute them into their proper places on the block. And such men are called wise. Do you agree?

194a

Theaetetus: Entirely.

194c

Socrates: But when the heart of any one is shaggy — a quality which the all-wise poet commends, or muddy and of impure wax, or very soft, or very hard, then there is a corresponding defect in the mind — the soft are good at learning, but apt to forget; and the hard are the reverse; the shaggy and rugged and gritty, or those who have an admixture of earth or dung in their composition, have the impressions indistinct, as also the hard, for there is no depth in them; and the soft too are indistinct, for their impressions are easily confused and effaced. Yet greater is the indistinctness when they are all jostled together in a little soul, which has no room. These are the natures which have false opinion; for when they see or hear or think of anything, they are slow in assigning the right objects to the right impressions — in their stupidity they confuse them, and are apt to see and hear and think amiss — and such men are said to be deceived in their knowledge of objects, and ignorant.

Theaetetus: No man, Socrates, can say anything truer than that.

Socrates: Then now we may admit the existence of false opinion in us?

Theaetetus: Certainly.

Socrates: And of true opinion also?

Theaetetus: Yes.

Socrates: We have at length satisfactorily proven beyond a doubt there are these two sorts of opinion?

Theaetetus: Undoubtedly.

194e

Socrates: Alas, Theaetetus, what a tiresome creature is a man who is fond of talking!

Theaetetus: What makes you say so?

Socrates: Because I am disheartened at my own stupidity and tiresome garrulity; for what other term will describe the habit of a man who is always arguing on all sides of a question; whose dulness cannot be convinced, and who will never leave off?

Theaetetus: But what puts you out of heart?

Socrates: I am not only out of heart, but in positive despair; for I do not know what to answer if any one were to ask me: — O Socrates, have you indeed discovered that false opinion arises neither in the comparison of perceptions with one another nor yet in thought, but in union of thought and perception? Yes, I shall say, with the complacency of one who thinks that he has made a noble discovery.

Theaetetus: I see no reason why we should be ashamed of our demonstration, Socrates.

Socrates: He will say: You mean to argue that the man whom we only think of and do not see, cannot be confused with the horse which we do not see or touch, but only think of and do not perceive? That I believe to be my meaning, I shall reply.

195a

Theaetetus: Quite right.

195b

Socrates: Well, then, he will say, according to that argument, the number eleven, which is only thought, can never be mistaken for twelve, which is only thought: How would you answer him?

Theaetetus: I should say that a mistake may very likely arise between the eleven or twelve which are seen or handled, but that no similar mistake can arise between the eleven and twelve which are in the mind.

195c

Socrates: Well, but do you think that no one ever put before his own mind five and seven, — I do not mean five or seven men or horses, but five or seven in the abstract, which, as we say, are recorded on the waxen block, and in which false opinion is held to be impossible; did no man ever ask himself how many these numbers make when added together, and answer that they are eleven, while another thinks that they are twelve, or would all agree in thinking and saying that they are twelve?

Theaetetus: Certainly not; many would think that they are eleven, and in the higher numbers the chance of error is greater still; for I assume you to be speaking of numbers in general.

195d

Socrates: Exactly; and I want you to consider whether this does not imply that the twelve in the waxen block are supposed to be eleven?

Theaetetus: Yes, that seems to be the case.

Socrates: Then do we not come back to the old difficulty? For he who makes such a mistake does think one thing which he knows to be another thing which he knows; but this, as we said, was impossible, and afforded an irresistible proof of the non-existence of false opinion, because otherwise the same person would inevitably know and not know the same thing at the same time.

195e

Theaetetus: Most true.

Socrates: Then false opinion cannot be explained as a confusion of thought and sense, for in that case we could not have been mistaken about pure conceptions of thought; and thus we are obliged to say, either that false opinion does not exist, or that a man may not know that which he knows; — which alternative do you prefer?

Theaetetus: It is hard to determine, Socrates.

Socrates: And yet the argument will scarcely admit of both. But, as we are at our wits' end, suppose that we do a shameless thing?

Theaetetus: What is it?

Socrates: Let us attempt to explain the verb 'to know.'

Theaetetus: And why should that be shameless?

196a

Socrates: You seem not to be aware that the whole of our discussion from the very beginning has been a search after knowledge, of which we are assumed not to know the nature.

Theaetetus: Nay, but I am well aware.

196b

Socrates: And is it not shameless when we do not know what knowledge is, to be explaining the verb 'to know'? The truth is, Theaetetus, that we have long been infected with logical

impurity. Thousands of times have we repeated the words ‘we know,’ and ‘do not know,’ and ‘we have or have not science or knowledge,’ as if we could understand what we are saying to one another, so long as we remain ignorant about knowledge; and at this moment we are using the words ‘we understand,’ ‘we are ignorant,’ as though we could still employ them when deprived of knowledge or science.

196c

Theaetetus: But if you avoid these expressions, Socrates, how will you ever argue at all?

Socrates: I could not, being the man I am. The case would be different if I were a true hero of dialectic: and O that such an one were present! for he would have told us to avoid the use of these terms; at the same time he would not have spared in you and me the faults which I have noted. But, seeing that we are no great wits, shall I venture to say what knowing is? for I think that the attempt may be worth making.

196d

Theaetetus: Then by all means venture, and no one shall find fault with you for using the forbidden terms.

Socrates: You have heard the common explanation of the verb ‘to know’?

Theaetetus: I think so, but I do not remember it at the moment.

Socrates: They explain the word ‘to know’ as meaning ‘to have knowledge.’

Theaetetus: True.

Socrates: I should like to make a slight change, and say ‘to possess’ knowledge.

Theaetetus: How do the two expressions differ?

Socrates: Perhaps there may be no difference; but still I should like you to hear my view, that you may help me to test it.

Theaetetus: I will, if I can.

Socrates: I should distinguish ‘having’ from ‘possessing’: for example, a man may buy and keep under his control a garment which he does not wear; and then we should say, not that he has, but that he possesses the garment.

Theaetetus: It would be the correct expression.

197a

Socrates: Well, may not a man ‘possess’ and yet not ‘have’ knowledge in the sense of which I am speaking? As you may suppose a man to have caught wild birds — doves or any other birds — and to be keeping them in an aviary which he has constructed at home; we might say of him in one sense, that he always has them because he possesses them, might we not?

Theaetetus: Yes.

Socrates: And yet, in another sense, he has none of them; but they are in his power, and he has got them under his hand in an enclosure of his own, and can take and have them whenever he likes; — he can catch any which he likes, and let the bird go again, and he may do so as often as he pleases.

197b

Theaetetus: True.

Socrates: Once more, then, as in what preceded we made a sort of waxen figment in the mind, so let us now suppose that in the mind of each man there is an aviary of all sorts of birds — some flocking together apart from the rest, others in small groups, others solitary, flying anywhere and everywhere.

Theaetetus: Let us imagine such an aviary — and what is to follow?

Socrates: We may suppose that the birds are kinds of knowledge, and that when we were children, this receptacle was empty; whenever a man has gotten and detained in the enclosure a kind of knowledge, he may be said to have learned or discovered the thing which is the subject of the knowledge: and this is to know.

Theaetetus: Granted.

197c

Socrates: And further, when any one wishes to catch any of these knowledges or sciences, and having taken, to hold it, and again to let them go, how will he express himself? — will he describe the ‘catching’ of them and the original ‘possession’ in the same words? I will make my meaning clearer by an example: — You admit that there is an art of arithmetic?

Theaetetus: To be sure.

197d

Socrates: Conceive this under the form of a hunt after the science of odd and even in general.

Theaetetus: I follow.

Socrates: Having the use of the art, the arithmetician, if I am not mistaken, has the conceptions of number under his hand, and can transmit them to another.

Theaetetus: Yes.

Socrates: And when transmitting them he may be said to teach them, and when receiving to learn them, and when receiving to learn them, and when having them in possession in the aforesaid aviary he may be said to know them.

197e

Theaetetus: Exactly.

Socrates: Attend to what follows: must not the perfect arithmetician know all numbers, for he has the science of all

numbers in his mind?

Theaetetus: True.

Socrates: And he can reckon abstract numbers in his head, or things about him which are numerable?

Theaetetus: Of course he can.

Socrates: And to reckon is simply to consider how much such and such a number amounts to?

Theaetetus: Very true.

Socrates: And so he appears to be searching into something which he knows, as if he did not know it, for we have already admitted that he knows all numbers; — you have heard these perplexing questions raised?

198a

Theaetetus: I have.

198b

Socrates: May we not pursue the image of the doves, and say that the chase after knowledge is of two kinds? one kind is prior to possession and for the sake of possession, and the other for the sake of taking and holding in the hands that which is possessed already. And thus, when a man has learned and known something long ago, he may resume and get hold of the knowledge which he has long possessed, but has not at hand in his mind.

Theaetetus: True.

Socrates: That was my reason for asking how we ought to speak when an arithmetician sets about numbering, or a grammarian about reading? Shall we say, that although he knows, he comes back to himself to learn what he already knows?

198c

Theaetetus: It would be too absurd, Socrates.

Socrates: Shall we say then that he is going to read or number what he does not know, although we have admitted that he knows all letters and all numbers?

Theaetetus: That, again, would be an absurdity.

198d

Socrates: Then shall we say that about names we care nothing? — any one may twist and turn the words ‘knowing’ and ‘learning’ in any way which he likes, but since we have determined that the possession of knowledge is not the having or using it, we do assert that a man cannot not possess that which he possesses; and, therefore, in no case can a man not know that which he knows, but he may get a false opinion about it; for he may have the knowledge, not of this particular thing, but of some other; — when the various numbers and forms of knowledge are flying about in the aviary, and wishing to capture a certain sort of knowledge out of the general store, he takes the wrong one by mistake, that is to say, when he thought eleven to be twelve, he got hold of the ring-dove which he had in his mind, when he wanted the pigeon.

198e

Theaetetus: A very rational explanation.

199a

Socrates: But when he catches the one which he wants, then he is not deceived, and has an opinion of what is, and thus false and true opinion may exist, and the difficulties which were previously raised disappear. I dare say that you agree with me, do you not?

Theaetetus: Yes.

Socrates: And so we are rid of the difficulty of a man’s not knowing what he knows, for we are not driven to the inference that he does not possess what he possesses, whether he be or be not deceived. And yet I fear that a greater difficulty is looking in

at the window.

Theaetetus: What is it?

Socrates: How can the exchange of one knowledge for another ever become false opinion?

Theaetetus: What do you mean?

Socrates: In the first place, how can a man who has the knowledge of anything be ignorant of that which he knows, not by reason of ignorance, but by reason of his own knowledge? And, again, is it not an extreme absurdity that he should suppose another thing to be this, and this to be another thing; — that, having knowledge present with him in his mind, he should still know nothing and be ignorant of all things? — you might as well argue that ignorance may make a man know, and blindness make him see, as that knowledge can make him ignorant.

199b

Theaetetus: Perhaps, Socrates, we may have been wrong in making only forms of knowledge our birds: whereas there ought to have been forms of ignorance as well, flying about together in the mind, and then he who sought to take one of them might sometimes catch a form of knowledge, and sometimes a form of ignorance; and thus he would have a false opinion from ignorance, but a true one from knowledge, about the same thing.

199c

Socrates: I cannot help praising you, Theaetetus, and yet I must beg you to reconsider your words. Let us grant what you say — then, according to you, he who takes ignorance will have a false opinion — am I right?

199d

Theaetetus: Yes.

Socrates: He will certainly not think that he has a false opinion?

Theaetetus: Of course not.

Socrates: He will think that his opinion is true, and he will fancy that he knows the things about which he has been deceived?

Theaetetus: Certainly.

Socrates: Then he will think that he has captured knowledge and not ignorance?

Theaetetus: Clearly.

Socrates: And thus, after going a long way round, we are once more face to face with our original difficulty. The hero of dialectic will retort upon us:— ‘O my excellent friends, he will say, laughing, if a man knows the form of ignorance and the form of knowledge, can he think that one of them which he knows is the other which he knows? or, if he knows neither of them, can he think that the one which he knows not is another which he knows not? or, if he knows one and not the other, can he think the one which he knows to be the one which he does not know? or the one which he does not know to be the one which he knows? or will you tell me that there are other forms of knowledge which distinguish the right and wrong birds, and which the owner keeps in some other aviaries or graven on waxen blocks according to your foolish images, and which he may be said to know while he possesses them, even though he have them not at hand in his mind? And thus, in a perpetual circle, you will be compelled to go round and round, and you will make no progress.’ What are we to say in reply, Theaetetus?

200a

Theaetetus: Indeed, Socrates, I do not know what we are to say.

Socrates: Are not his reproaches just, and does not the argument truly show that we are wrong in seeking for false opinion until we know what knowledge is; that must be first

ascertained; then, the nature of false opinion?

Theaetetus: I cannot but agree with you, Socrates, so far as we have yet gone.

Socrates: Then, once more, what shall we say that knowledge is? — for we are not going to lose heart as yet.

Theaetetus: Certainly, I shall not lose heart, if you do not.

Socrates: What definition will be most consistent with our former views?

Theaetetus: I cannot think of any but our old one, Socrates.

Socrates: What was it?

Theaetetus: Knowledge was said by us to be true opinion; and true opinion is surely unerring, and the results which follow from it are all noble and good.

Socrates: He who led the way into the river, Theaetetus, said ‘The experiment will show;’ and perhaps if we go forward in the search, we may stumble upon the thing which we are looking for; but if we stay where we are, nothing will come to light.

Theaetetus: Very true; let us go forward and try.

200c

Socrates: The trail soon comes to an end, for a whole profession is against us.

Theaetetus: How is that, and what profession do you mean?

200d

Socrates: The profession of the great wise ones who are called orators and lawyers; for these persuade men by their art and make them think whatever they like, but they do not teach them. Do you imagine that there are any teachers in the world so clever as to be able to convince others of the truth about acts of robbery or violence, of which they were not eye-witnesses, while a little water is flowing in the clepsydra?

Theaetetus: Certainly not, they can only persuade them.

Socrates: And would you not say that persuading them is making them have an opinion?

200e

Theaetetus: To be sure.

Socrates: When, therefore, judges are justly persuaded about matters which you can know only by seeing them, and not in any other way, and when thus judging of them from report they attain a true opinion about them, they judge without knowledge, and yet are rightly persuaded, if they have judged well.

Theaetetus: Certainly.

201a

Socrates: And yet, O my friend, if true opinion in law courts and knowledge are the same, the perfect judge could not have judged rightly without knowledge; and therefore I must infer that they are not the same.

Theaetetus: That is a distinction, Socrates, which I have heard made by some one else, but I had forgotten it. He said that true opinion, combined with reason, was knowledge, but that the opinion which had no reason was out of the sphere of knowledge; and that things of which there is no rational account are not knowable — such was the singular expression which he used — and that things which have a reason or explanation are knowable.

Socrates: Excellent; but then, how did he distinguish between things which are and are not ‘knowable’? I wish that you would repeat to me what he said, and then I shall know whether you and I have heard the same tale.

201b

Theaetetus: I do not know whether I can recall it; but if another person would tell me, I think that I could follow him.

201c

Socrates: Let me give you, then, a dream in return for a dream: — Methought that I too had a dream, and I heard in my dream that the primeval letters or elements out of which you and I and all other things are compounded, have no reason or explanation; you can only name them, but no predicate can be either affirmed or denied of them, for in the one case existence, in the other non-existence is already implied, neither of which must be added, if you mean to speak of this or that thing by itself alone. It should not be called itself, or that, or each, or alone, or this, or the like; for these go about everywhere and are applied to all things, but are distinct from them; whereas, if the first elements could be described, and had a definition of their own, they would be spoken of apart from all else. But none of these primeval elements can be defined; they can only be named, for they have nothing but a name, and the things which are compounded of them, as they are complex, are expressed by a combination of names, for the combination of names is the essence of a definition. Thus, then, the elements or letters are only objects of perception, and cannot be defined or known; but the syllables or combinations of them are known and expressed, and are apprehended by true opinion. When, therefore, any one forms the true opinion of anything without rational explanation, you may say that his mind is truly exercised, but has no knowledge; for he who cannot give and receive a reason for a thing, has no knowledge of that thing; but when he adds rational explanation, then, he is perfected in knowledge and may be all that I have been denying of him. Was that the form in which the dream appeared to you?

201e

Theaetetus: Precisely.

Socrates: And you allow and maintain that true opinion, combined with definition or rational explanation, is knowledge?

Theaetetus: Exactly.

Socrates: Then may we assume, Theaetetus, that to-day, and in this casual manner, we have found a truth which in former times many wise men have grown old and have not found?

Theaetetus: At any rate, Socrates, I am satisfied with the present statement.

Socrates: Which is probably correct — for how can there be knowledge apart from definition and true opinion? And yet there is one point in what has been said which does not quite satisfy me.

Theaetetus: What was it?

Socrates: What might seem to be the most ingenious notion of all: — That the elements or letters are unknown, but the combination or syllables known.

Theaetetus: And was that wrong?

Socrates: We shall soon know; for we have as hostages the instances which the author of the argument himself used.

Theaetetus: What hostages?

Socrates: The letters, which are the elements; and the syllables, which are the combinations; — he reasoned, did he not, from the letters of the alphabet?

Theaetetus: Yes; he did.

202c

Socrates: Let us take them and put them to the test, or rather, test ourselves: — What was the way in which we learned letters? and, first of all, are we right in saying that syllables have a definition, but that letters have no definition?

Theaetetus: I think so.

202d

Socrates: I think so too; for, suppose that some one asks you to spell the first syllable of my name: — Theaetetus, he says, what is SO?

Theaetetus: I should reply S and O.

Socrates: That is the definition which you would give of the syllable?

Theaetetus: I should.

Socrates: I wish that you would give me a similar definition of the S.

202e

Theaetetus: But how can any one, Socrates, tell the elements of an element? I can only reply, that S is a consonant, a mere noise, as of the tongue hissing; B, and most other letters, again, are neither vowel-sounds nor noises. Thus letters may be most truly said to be undefined; for even the most distinct of them, which are the seven vowels, have a sound only, but no definition at all.

Socrates: Then, I suppose, my friend, that we have been so far right in our idea about knowledge?

Theaetetus: Yes; I think that we have.

Socrates: Well, but have we been right in maintaining that the syllables can be known, but not the letters?

203a

Theaetetus: I think so.

Socrates: And do we mean by a syllable two letters, or if there are more, all of them, or a single idea which arises out of the combination of them?

Theaetetus: I should say that we mean all the letters.

203b

Socrates: Take the case of the two letters S and O, which form the first syllable of my own name; must not he who knows the syllable, know both of them?

Theaetetus: Certainly.

Socrates: He knows, that is, the S and O?

Theaetetus: Yes.

Socrates: But can he be ignorant of either singly and yet know both together?

Theaetetus: Such a supposition, Socrates, is monstrous and unmeaning.

Socrates: But if he cannot know both without knowing each, then if he is ever to know the syllable, he must know the letters first; and thus the fine theory has again taken wings and departed.

Theaetetus: Yes, with wonderful celerity.

203c

Socrates: Yes, we did not keep watch properly. Perhaps we ought to have maintained that a syllable is not the letters, but rather one single idea framed out of them, having a separate form distinct from them.

Theaetetus: Very true; and a more likely notion than the other.

Socrates: Take care; let us not be cowards and betray a great and imposing theory.

Theaetetus: No, indeed.

203d

Socrates: Let us assume then, as we now say, that the syllable is a simple form arising out of the several combinations of harmonious elements — of letters or of any other elements.

Theaetetus: Very good.

Socrates: And it must have no parts.

Theaetetus: Why?

Socrates: Because that which has parts must be a whole of all the parts. Or would you say that a whole, although formed out of the parts, is a single notion different from all the parts?

203e

Theaetetus: I should.

Socrates: And would you say that all and the whole are the same, or different?

Theaetetus: I am not certain; but, as you like me to answer at once, I shall hazard the reply, that they are different.

Socrates: I approve of your readiness, Theaetetus, but I must take time to think whether I equally approve of your answer.

Theaetetus: Yes; the answer is the point.

204a

Socrates: According to this new view, the whole is supposed to differ from all?

Theaetetus: Yes.

Socrates: Well, but is there any difference between all (in the plural) and the all (in the singular)? Take the case of number: — When we say one, two, three, four, five, six; or when we say twice three, or three times two, or four and two, or three and two and one, are we speaking of the same or of different numbers?

Theaetetus: Of the same.

Socrates: That is of six?

204b

Theaetetus: Yes.

Socrates: And in each form of expression we spoke of all the six?

Theaetetus: True.

Socrates: Again, in speaking of all (in the plural) is there not one thing which we express?

Theaetetus: Of course there is.

Socrates: And that is six?

Theaetetus: Yes.

Socrates: Then in predicating the word 'all' of things measured by number, we predicate at the same time a singular and a plural?

Theaetetus: Clearly we do.

Socrates: Again, the number of the acre and the acre are the same; are they not?

Theaetetus: Yes.

Socrates: And the number of the stadium in like manner is the stadium?

Theaetetus: Yes.

Socrates: And the army is the number of the army; and in all similar cases, the entire number of anything is the entire thing?

204c

Theaetetus: True.

Socrates: And the number of each is the parts of each?

Theaetetus: Exactly.

Socrates: Then as many things as have parts are made up of parts?

Theaetetus: Clearly.

Socrates: But all the parts are admitted to be the all, if the entire number is the all?

Theaetetus: True.

204d

Socrates: Then the whole is not made up of parts, for it would be the all, if consisting of all the parts?

Theaetetus: That is the inference.

Socrates: But is a part a part of anything but the whole?

Theaetetus: Yes, of the all.

Socrates: You make a valiant defence, Theaetetus. And yet is not the all that of which nothing is wanting?

Theaetetus: Certainly.

204e

Socrates: And is not a whole likewise that from which nothing is absent? but that from which anything is absent is neither a whole nor all; — if wanting in anything, both equally lose their entirety of nature.

Theaetetus: I now think that there is no difference between a whole and all.

Socrates: But were we not saying that when a thing has parts, all the parts will be a whole and all?

Theaetetus: Certainly.

Socrates: Then, as I was saying before, must not the alternative be that either the syllable is not the letters, and then the letters are not parts of the syllable, or that the syllable will be the same with the letters, and will therefore be equally known with them?

205a

Theaetetus: You are right.

Socrates: And, in order to avoid this, we suppose it to be different from them?

Theaetetus: Yes.

Socrates: But if letters are not parts of syllables, can you tell me of any other parts of syllables, which are not letters?

Theaetetus: No, indeed, Socrates; for if I admit the existence of parts in a syllable, it would be ridiculous in me to give up letters and seek for other parts.

Socrates: Quite true, Theaetetus, and therefore, according to our present view, a syllable must surely be some indivisible form?

205b

Theaetetus: True.

Socrates: But do you remember, my friend, that only a little while ago we admitted and approved the statement, that of the first elements out of which all other things are compounded there could be no definition, because each of them when taken by itself is uncompounded; nor can one rightly attribute to them the words 'being' or 'this,' because they are alien and inappropriate words, and for this reason the letters or elements were indefinable and unknown?

Theaetetus: I remember.

205c

Socrates: And is not this also the reason why they are simple and indivisible? I can see no other.

Theaetetus: No other reason can be given.

Socrates: Then is not the syllable in the same case as the elements or letters, if it has no parts and is one form?

Theaetetus: To be sure.

Socrates: If, then, a syllable is a whole, and has many parts or letters, the letters as well as the syllable must be intelligible and expressible, since all the parts are acknowledged to be the same as the whole?

205d

Theaetetus: True.

Socrates: But if it be one and indivisible, then the syllables and the letters are alike undefined and unknown, and for the same reason?

Theaetetus: I cannot deny that.

Socrates: We cannot, therefore, agree in the opinion of him who says that the syllable can be known and expressed, but not the letters.

Theaetetus: Certainly not; if we may trust the argument.

Socrates: Well, but will you not be equally inclined to disagree with him, when you remember your own experience in learning to read?

205e

Theaetetus: What experience?

Socrates: Why, that in learning you were kept trying to distinguish the separate letters both by the eye and by the ear, in order that, when you heard them spoken or saw them written, you might not be confused by their position.

Theaetetus: Very true.

206a

Socrates: And is the education of the harp-player complete unless he can tell what string answers to a particular note; the notes, as every one would allow, are the elements or letters of music?

Theaetetus: Exactly.

Socrates: Then, if we argue from the letters and syllables which we know to other simples and compounds, we shall say that the letters or simple elements as a class are much more certainly known than the syllables, and much more indispensable to a perfect knowledge of any subject; and if some one says that the syllable is known and the letter unknown, we shall consider that either intentionally or unintentionally he is talking nonsense?

206b

Theaetetus: Exactly.

Socrates: And there might be given other proofs of this belief, if I am not mistaken. But do not let us in looking for them lose sight of the question before us, which is the meaning of the statement, that right opinion with rational definition or explanation is the most perfect form of knowledge.

Theaetetus: We must not.

Socrates: Well, and what is the meaning of the term ‘explanation’? I think that we have a choice of three meanings.

206c

Theaetetus: What are they?

Socrates: In the first place, the meaning may be, manifesting one’s thought by the voice with verbs and nouns, imaging an opinion in the stream which flows from the lips, as in a mirror or water. Does not explanation appear to be of this nature?

Theaetetus: Certainly; he who so manifests his thought, is said to explain himself.

206d

Socrates: And every one who is not born deaf or dumb is able sooner or later to manifest what he thinks of anything; and if so, all those who have a right opinion about anything will also have right explanation; nor will right opinion be anywhere found to exist apart from knowledge.

Theaetetus: True.

Socrates: Let us not, therefore, hastily charge him who gave this account of knowledge with uttering an unmeaning word; for perhaps he only intended to say, that when a person was asked what was the nature of anything, he should be able to answer his questioner by giving the elements of the thing.

Theaetetus: As for example, Socrates...?

206e

Socrates: As, for example, when Hesiod says that a waggon is made up of a hundred planks. Now, neither you nor I could describe all of them individually; but if any one asked what is a waggon, we should be content to answer, that a waggon consists of wheels, axle, body, rims, yoke.

Theaetetus: Certainly.

207a

Socrates: And our opponent will probably laugh at us, just as he would if we professed to be grammarians and to give a grammatical account of the name of Theaetetus, and yet could only tell the syllables and not the letters of your name — that would be true opinion, and not knowledge; for knowledge, as has been already remarked, is not attained until, combined with true opinion, there is an enumeration of the elements out of which anything is composed.

Theaetetus: Yes.

Socrates: In the same general way, we might also have true opinion about a waggon; but he who can describe its essence by an enumeration of the hundred planks, adds rational explanation to true opinion, and instead of opinion has art and knowledge of the nature of a waggon, in that he attains to the whole through the elements.

Theaetetus: And do you not agree in that view, Socrates?

207b

Socrates: If you do, my friend; but I want to know first, whether you admit the resolution of all things into their elements to be a rational explanation of them, and the consideration of them in syllables or larger combinations of them to be irrational — is this your view?

Theaetetus: Precisely.

207c

Socrates: Well, and do you conceive that a man has knowledge of any element who at one time affirms and at another time denies that element of something, or thinks that the same thing is composed of different elements at different times?

Theaetetus: Assuredly not.

Socrates: And do you not remember that in your case and in that of others this often occurred in the process of learning to read?

207d

Theaetetus: You mean that I mistook the letters and misspelt the syllables?

Socrates: Yes.

Theaetetus: To be sure; I perfectly remember, and I am very far from supposing that they who are in this condition have knowledge.

Socrates: When a person at the time of learning writes the name of Theaetetus, and thinks that he ought to write and does write Th and e; but, again, meaning to write the name of Theodorus, thinks that he ought to write and does write T and e — can we suppose that he knows the first syllables of your two names?

Theaetetus: We have already admitted that such a one has not yet attained knowledge.

207e

Socrates: And in like manner he may enumerate without knowing them the second and third and fourth syllables of your name?

Theaetetus: He may.

Socrates: And in that case, when he knows the order of the letters and can write them out correctly, he has right opinion?

Theaetetus: Clearly.

Socrates: But although we admit that he has right opinion, he will still be without knowledge?

Theaetetus: Yes.

208a

Socrates: And yet he will have explanation, as well as right opinion, for he knew the order of the letters when he wrote; and this we admit to be explanation.

Theaetetus: True.

Socrates: Then, my friend, there is such a thing as right opinion united with definition or explanation, which does not as yet attain to the exactness of knowledge.

Theaetetus: It would seem so.

208b

Socrates: And what we fancied to be a perfect definition of knowledge is a dream only. But perhaps we had better not say so as yet, for were there not three explanations of knowledge, one of which must, as we said, be adopted by him who maintains knowledge to be true opinion combined with rational explanation? And very likely there may be found some one who will not prefer this but the third.

Theaetetus: You are quite right; there is still one remaining. The first was the image or expression of the mind in speech; the

second, which has just been mentioned, is a way of reaching the whole by an enumeration of the elements. But what is the third definition?

Socrates: There is, further, the popular notion of telling the mark or sign of difference which distinguishes the thing in question from all others.

208c

Theaetetus: Can you give me any example of such a definition?

Socrates: As, for example, in the case of the sun, I think that you would be contented with the statement that the sun is the brightest of the heavenly bodies which revolve about the earth.

Theaetetus: Certainly.

208d

Socrates: Understand why: — the reason is, as I was just now saying, that if you get at the difference and distinguishing characteristic of each thing, then, as many persons affirm, you will get at the definition or explanation of it; but while you lay hold only of the common and not of the characteristic notion, you will only have the definition of those things to which this common quality belongs.

Theaetetus: I understand you, and your account of definition is in my judgment correct.

Socrates: But he, who having right opinion about anything, can find out the difference which distinguishes it from other things will know that of which before he had only an opinion.

208e

Theaetetus: Yes; that is what we are maintaining.

Socrates: Nevertheless, Theaetetus, on a nearer view, I find myself quite disappointed; the picture, which at a distance was not so bad, has now become altogether unintelligible.

Theaetetus: What do you mean?

Socrates: I will endeavour to explain: I will suppose myself to have true opinion of you, and if to this I add your definition, then I have knowledge, but if not, opinion only.

Theaetetus: Yes.

Socrates: The definition was assumed to be the interpretation of your difference.

209a

Theaetetus: True.

Socrates: But when I had only opinion, I had no conception of your distinguishing characteristics.

Theaetetus: I suppose not.

Socrates: Then I must have conceived of some general or common nature which no more belonged to you than to another.

Theaetetus: True.

Socrates: Tell me, now — How in that case could I have formed a judgment of you any more than of any one else? Suppose that I imagine Theaetetus to be a man who has nose, eyes, and mouth, and every other member complete; how would that enable me to distinguish Theaetetus from Theodorus, or from some outer barbarian?

209b

Theaetetus: How could it?

Socrates: Or if I had further conceived of you, not only as having nose and eyes, but as having a snub nose and prominent eyes, should I have any more notion of you than of myself and others who resemble me?

Theaetetus: Certainly not.

Socrates: Surely I can have no conception of Theaetetus until your snub-nosedness has left an impression on my mind

different from the snub-nosedness of all others whom I have ever seen, and until your other peculiarities have a like distinctness; and so when I meet you to-morrow the right opinion will be re-called?

209c

Theaetetus: Most true.

Socrates: Then right opinion implies the perception of differences?

Theaetetus: Clearly.

Socrates: What, then, shall we say of adding reason or explanation to right opinion? If the meaning is, that we should form an opinion of the way in which something differs from another thing, the proposal is ridiculous.

Theaetetus: How so?

209d

Socrates: We are supposed to acquire a right opinion of the differences which distinguish one thing from another when we have already a right opinion of them, and so we go round and round: — the revolution of the scytal, or pestle, or any other rotatory machine, in the same circles, is as nothing compared with such a requirement; and we may be truly described as the blind directing the blind; for to add those things which we already have, in order that we may learn what we already think, is like a soul utterly benighted.

Theaetetus: Tell me; what were you going to say just now, when you asked the question?

209e

Socrates: If, my boy, the argument, in speaking of adding the definition, had used the word to 'know,' and not merely 'have an opinion' of the difference, this which is the most promising of all the definitions of knowledge would have come to a pretty end, for to know is surely to acquire knowledge.

Theaetetus: True.

Socrates: And so, when the question is asked, What is knowledge? this fair argument will answer 'Right opinion with knowledge,' — knowledge, that is, of difference, for this, as the said argument maintains, is adding the definition.

210a

Theaetetus: That seems to be true.

Socrates: But how utterly foolish, when we are asking what is knowledge, that the reply should only be, right opinion with knowledge of difference or of anything! And so, Theaetetus, knowledge is neither sensation nor true opinion, nor yet definition and explanation accompanying and added to true opinion?

Theaetetus: I suppose not.

210b

Socrates: And are you still in labour and travail, my dear friend, or have you brought all that you have to say about knowledge to the birth?

Theaetetus: I am sure, Socrates, that you have elicited from me a good deal more than ever was in me.

Socrates: And does not my art show that you have brought forth wind, and that the offspring of your brain are not worth bringing up?

210c

Theaetetus: Very true.

Socrates: But if, Theaetetus, you should ever conceive afresh, you will be all the better for the present investigation, and if not, you will be soberer and humbler and gentler to other men, and will be too modest to fancy that you know what you do not know. These are the limits of my art; I can no further go, nor do I know aught of the things which great and famous men know

or have known in this or former ages. The office of a midwife I, like my mother, have received from God; she delivered women, I deliver men; but they must be young and noble and fair.

And now I have to go to the porch of the King Archon, where I am to meet Meletus and his indictment. To-morrow morning, Theodorus, I shall hope to see you again at this place.

Timaeus

narrator: TIMAEUS from Locri Epizephyrii, South Italy

persons in the dialogue:

CRITIAS of Athens

SOCRATES of Alopecce, son of Sophroniscus

HERMOCRATES of Syracuse

scene: house of Critias during the Panathenaea

17a

Socrates: One, two, three; but where, my dear Timaeus, is the fourth of those who were yesterday my guests and are to be my entertainers to-day?

Timaeus: He has been taken ill, Socrates; for he would not willingly have been absent from this gathering.

17b

Socrates: Then, if he is not coming, you and the two others must supply his place.

Timaeus: Certainly, and we will do all that we can; having been handsomely entertained by you yesterday, those of us who remain should be only too glad to return your hospitality.

Socrates: Do you remember what were the points of which I required you to speak?

Timaeus: We remember some of them, and you will be here to remind us of anything which we have forgotten: or rather, if we are not troubling you, will you briefly recapitulate the whole, and then the particulars will be more firmly fixed in our memories?

17c

Socrates: To be sure I will: the chief theme of my yesterday's discourse was the State — how constituted and of what citizens composed it would seem likely to be most perfect.

Timaeus: Yes, Socrates; and what you said of it was very much to our mind.

17d

Socrates: Did we not begin by separating the husbandmen and the artisans from the class of defenders of the State?

Timaeus: Yes.

Socrates: And when we had given to each one that single employment and particular art which was suited to his nature, we spoke of those who were intended to be our warriors, and said that they were to be guardians of the city against attacks from within as well as from without, and to have no other employment; they were to be merciful in judging their subjects, of whom they were by nature friends, but fierce to their enemies, when they came across them in battle.

18a

Timaeus: Exactly.

18b

Socrates: We said, if I am not mistaken, that the guardians should be gifted with a temperament in a high degree both passionate and philosophical; and that then they would be as they ought to be, gentle to their friends and fierce with their enemies.

Timaeus: Certainly.

Socrates: And what did we say of their education? Were they not to be trained in gymnastic, and music, and all other sorts of knowledge which were proper for them?

Timaeus: Very true.

18c

Socrates: And being thus trained they were not to consider gold or silver or anything else to be their own private property; they were to be like hired troops, receiving pay for keeping guard

from those who were protected by them — the pay was to be no more than would suffice for men of simple life; and they were to spend in common, and to live together in the continual practice of virtue, which was to be their sole pursuit.

Timaeus: That was also said.

Socrates: Neither did we forget the women; of whom we declared, that their natures should be assimilated and brought into harmony with those of the men, and that common pursuits should be assigned to them both in time of war and in their ordinary life.

Timaeus: That, again, was as you say.

18d

Socrates: And what about the procreation of children? Or rather was not the proposal too singular to be forgotten? for all wives and children were to be in common, to the intent that no one should ever know his own child, but they were to imagine that they were all one family; those who were within a suitable limit of age were to be brothers and sisters, those who were of an elder generation parents and grandparents, and those of a younger, children and grandchildren.

Timaeus: Yes, and the proposal is easy to remember, as you say.

Socrates: And do you also remember how, with a view of securing as far as we could the best breed, we said that the chief magistrates, male and female, should contrive secretly, by the use of certain lots, so to arrange the nuptial meeting, that the bad of either sex and the good of either sex might pair with their like; and there was to be no quarrelling on this account, for they would imagine that the union was a mere accident, and was to be attributed to the lot?

18e

Timaeus: I remember.

19a

Socrates: And you remember how we said that the children of the good parents were to be educated, and the children of the bad secretly dispersed among the inferior citizens; and while they were all growing up the rulers were to be on the look-out, and to bring up from below in their turn those who were worthy, and those among themselves who were unworthy were to take the places of those who came up?

Timaeus: True.

Socrates: Then have I now given you all the heads of our yesterday's discussion? Or is there anything more, my dear Timaeus, which has been omitted?

Timaeus: Nothing, Socrates; it was just as you have said.

20a

Socrates: I should like, before proceeding further, to tell you how I feel about the State which we have described. I might compare myself to a person who, on beholding beautiful animals either created by the painter's art, or, better still, alive but at rest, is seized with a desire of seeing them in motion or engaged in some struggle or conflict to which their forms appear suited; this is my feeling about the State which we have been describing. There are conflicts which all cities undergo, and I should like to hear some one tell of our own city carrying on a struggle against her neighbours, and how she went out to war in a becoming manner, and when at war showed by the greatness of her actions and the magnanimity of her words in dealing with other cities a result worthy of her training and education. Now I, Critias and Hermocrates, am conscious that I myself should never be able to celebrate the city and her citizens in a befitting manner, and I am not surprised at my own incapacity; to me the wonder is rather that the poets present as well as past are no better — not that I mean to depreciate them; but every one can see that they are a tribe of imitators, and will imitate best and most easily the life in which they have been

brought up; while that which is beyond the range of a man's education he finds hard to carry out in action, and still harder adequately to represent in language. I am aware that the Sophists have plenty of brave words and fair conceits, but I am afraid that being only wanderers from one city to another, and having never had habitations of their own, they may fail in their conception of philosophers and statesmen, and may not know what they do and say in time of war, when they are fighting or holding parley with their enemies. And thus people of your class are the only ones remaining who are fitted by nature and education to take part at once both in politics and philosophy. Here is Timaeus, of Locris in Italy, a city which has admirable laws, and who is himself in wealth and rank the equal of any of his fellow-citizens; he has held the most important and honourable offices in his own state, and, as I believe, has scaled the heights of all philosophy; and here is Critias, whom every Athenian knows to be no novice in the matters of which we are speaking; and as to Hermocrates, I am assured by many witnesses that his genius and education qualify him to take part in any speculation of the kind. And therefore yesterday when I saw that you wanted me to describe the formation of the State, I readily assented, being very well aware, that, if you only would, none were better qualified to carry the discussion further, and that when you had engaged our city in a suitable war, you of all men living could best exhibit her playing a fitting part. When I had completed my task, I in return imposed this other task upon you. You conferred together and agreed to entertain me to-day, as I had entertained you, with a feast of discourse. Here am I in festive array, and no man can be more ready for the promised banquet.

20d

Hermocrates: And we too, Socrates, as Timaeus says, will not be wanting in enthusiasm; and there is no excuse for not complying with your request. As soon as we arrived yesterday

at the guest-chamber of Critias, with whom we are staying, or rather on our way thither, we talked the matter over, and he told us an ancient tradition, which I wish, Critias, that you would repeat to Socrates, so that he may help us to judge whether it will satisfy his requirements or not.

Critias: I will, if Timaeus, who is our other partner, approves.

Timaeus: I quite approve.

20e

Critias: Then listen, Socrates, to a tale which, though strange, is certainly true, having been attested by Solon, who was the wisest of the seven sages. He was a relative and a dear friend of my great-grandfather, Dropides, as he himself says in many passages of his poems; and he told the story to Critias, my grandfather, who remembered and repeated it to us. There were of old, he said, great and marvellous actions of the Athenian city, which have passed into oblivion through lapse of time and the destruction of mankind, and one in particular, greater than all the rest. This we will now rehearse. It will be a fitting monument of our gratitude to you, and a hymn of praise true and worthy of the goddess, on this her day of festival.

21a

Socrates: Very good. And what is this ancient famous action of the Athenians, which Critias declared, on the authority of Solon, to be not a mere legend, but an actual fact?

21c

Critias: I will tell an old-world story which I heard from an aged man; for Critias, at the time of telling it, was, as he said, nearly ninety years of age, and I was about ten. Now the day was that day of the Apaturia which is called the Registration of Youth, at which, according to custom, our parents gave prizes for recitations, and the poems of several poets were recited by us boys, and many of us sang the poems of Solon, which at that time had not gone out of fashion. One of our tribe, either

because he thought so or to please Critias, said that in his judgment Solon was not only the wisest of men, but also the noblest of poets. The old man, as I very well remember, brightened up at hearing this and said, smiling: Yes, Amynander, if Solon had only, like other poets, made poetry the business of his life, and had completed the tale which he brought with him from Egypt, and had not been compelled, by reason of the factions and troubles which he found stirring in his own country when he came home, to attend to other matters, in my opinion he would have been as famous as Homer or Hesiod, or any poet.

21e

And what was the tale about, Critias? said Amynander.

About the greatest action which the Athenians ever did, and which ought to have been the most famous, but, through the lapse of time and the destruction of the actors, it has not come down to us.

Tell us, said the other, the whole story, and how and from whom Solon heard this veritable tradition.

23b

He replied: — In the Egyptian Delta, at the head of which the river Nile divides, there is a certain district which is called the district of Sais, and the great city of the district is also called Sais, and is the city from which King Amasis came. The citizens have a deity for their foundress; she is called in the Egyptian tongue Neith, and is asserted by them to be the same whom the Hellenes call Athene; they are great lovers of the Athenians, and say that they are in some way related to them. To this city came Solon, and was received there with great honour; he asked the priests who were most skilful in such matters, about antiquity, and made the discovery that neither he nor any other Hellene knew anything worth mentioning about the times of old. On one occasion, wishing to draw them on to speak of antiquity, he

began to tell about the most ancient things in our part of the world — about Phoroneus, who is called ‘the first man,’ and about Niobe; and after the Deluge, of the survival of Deucalion and Pyrrha; and he traced the genealogy of their descendants, and reckoning up the dates, tried to compute how many years ago the events of which he was speaking happened. Thereupon one of the priests, who was of a very great age, said: O Solon, Solon, you Hellenes are never anything but children, and there is not an old man among you. Solon in return asked him what he meant. I mean to say, he replied, that in mind you are all young; there is no old opinion handed down among you by ancient tradition, nor any science which is hoary with age. And I will tell you why. There have been, and will be again, many destructions of mankind arising out of many causes; the greatest have been brought about by the agencies of fire and water, and other lesser ones by innumerable other causes. There is a story, which even you have preserved, that once upon a time Paethon, the son of Helios, having yoked the steeds in his father’s chariot, because he was not able to drive them in the path of his father, burnt up all that was upon the earth, and was himself destroyed by a thunderbolt. Now this has the form of a myth, but really signifies a declination of the bodies moving in the heavens around the earth, and a great conflagration of things upon the earth, which recurs after long intervals; at such times those who live upon the mountains and in dry and lofty places are more liable to destruction than those who dwell by rivers or on the seashore. And from this calamity the Nile, who is our never-failing saviour, delivers and preserves us. When, on the other hand, the gods purge the earth with a deluge of water, the survivors in your country are herdsmen and shepherds who dwell on the mountains, but those who, like you, live in cities are carried by the rivers into the sea. Whereas in this land, neither then nor at any other time, does the water come down from above on the fields, having always a tendency to come up

from below; for which reason the traditions preserved here are the most ancient. The fact is, that wherever the extremity of winter frost or of summer sun does not prevent, mankind exist, sometimes in greater, sometimes in lesser numbers. And whatever happened either in your country or in ours, or in any other region of which we are informed — if there were any actions noble or great or in any other way remarkable, they have all been written down by us of old, and are preserved in our temples. Whereas just when you and other nations are beginning to be provided with letters and the other requisites of civilized life, after the usual interval, the stream from heaven, like a pestilence, comes pouring down, and leaves only those of you who are destitute of letters and education; and so you have to begin all over again like children, and know nothing of what happened in ancient times, either among us or among yourselves. As for those genealogies of yours which you just now recounted to us, Solon, they are no better than the tales of children. In the first place you remember a single deluge only, but there were many previous ones; in the next place, you do not know that there formerly dwelt in your land the fairest and noblest race of men which ever lived, and that you and your whole city are descended from a small seed or remnant of them which survived. And this was unknown to you, because, for many generations, the survivors of that destruction died, leaving no written word. For there was a time, Solon, before the great deluge of all, when the city which now is Athens was first in war and in every way the best governed of all cities, is said to have performed the noblest deeds and to have had the fairest constitution of any of which tradition tells, under the face of heaven. Solon marvelled at his words, and earnestly requested the priests to inform him exactly and in order about these former citizens. You are welcome to hear about them, Solon, said the priest, both for your own sake and for that of your city, and above all, for the sake of the goddess who is the common

patron and parent and educator of both our cities. She founded your city a thousand years before ours (Observe that Plato gives the same date (9000 years ago) for the foundation of Athens and for the repulse of the invasion from Atlantis (Crit.)), receiving from the Earth and Hephaestus the seed of your race, and afterwards she founded ours, of which the constitution is recorded in our sacred registers to be 8000 years old. As touching your citizens of 9000 years ago, I will briefly inform you of their laws and of their most famous action; the exact particulars of the whole we will hereafter go through at our leisure in the sacred registers themselves. If you compare these very laws with ours you will find that many of ours are the counterpart of yours as they were in the olden time. In the first place, there is the caste of priests, which is separated from all the others; next, there are the artificers, who ply their several crafts by themselves and do not intermix; and also there is the class of shepherds and of hunters, as well as that of husbandmen; and you will observe, too, that the warriors in Egypt are distinct from all the other classes, and are commanded by the law to devote themselves solely to military pursuits; moreover, the weapons which they carry are shields and spears, a style of equipment which the goddess taught of Asiatics first to us, as in your part of the world first to you. Then as to wisdom, do you observe how our law from the very first made a study of the whole order of things, extending even to prophecy and medicine which gives health, out of these divine elements deriving what was needful for human life, and adding every sort of knowledge which was akin to them. All this order and arrangement the goddess first imparted to you when establishing your city; and she chose the spot of earth in which you were born, because she saw that the happy temperament of the seasons in that land would produce the wisest of men. Wherefore the goddess, who was a lover both of war and of wisdom, selected and first of all settled that spot which was the

most likely to produce men likest herself. And there you dwelt, having such laws as these and still better ones, and excelled all mankind in all virtue, as became the children and disciples of the gods.

25c

Many great and wonderful deeds are recorded of your state in our histories. But one of them exceeds all the rest in greatness and valour. For these histories tell of a mighty power which unprovoked made an expedition against the whole of Europe and Asia, and to which your city put an end. This power came forth out of the Atlantic Ocean, for in those days the Atlantic was navigable; and there was an island situated in front of the straits which are by you called the Pillars of Heracles; the island was larger than Libya and Asia put together, and was the way to other islands, and from these you might pass to the whole of the opposite continent which surrounded the true ocean; for this sea which is within the Straits of Heracles is only a harbour, having a narrow entrance, but that other is a real sea, and the surrounding land may be most truly called a boundless continent. Now in this island of Atlantis there was a great and wonderful empire which had rule over the whole island and several others, and over parts of the continent, and, furthermore, the men of Atlantis had subjected the parts of Libya within the columns of Heracles as far as Egypt, and of Europe as far as Tyrrhenia. This vast power, gathered into one, endeavoured to subdue at a blow our country and yours and the whole of the region within the straits; and then, Solon, your country shone forth, in the excellence of her virtue and strength, among all mankind. She was pre-eminent in courage and military skill, and was the leader of the Hellenes. And when the rest fell off from her, being compelled to stand alone, after having undergone the very extremity of danger, she defeated and triumphed over the invaders, and preserved from slavery those who were not yet subjugated, and generously liberated all

the rest of us who dwell within the pillars. But afterwards there occurred violent earthquakes and floods; and in a single day and night of misfortune all your warlike men in a body sank into the earth, and the island of Atlantis in like manner disappeared in the depths of the sea. For which reason the sea in those parts is impassable and impenetrable, because there is a shoal of mud in the way; and this was caused by the subsidence of the island.

25d

I have told you briefly, Socrates, what the aged Critias heard from Solon and related to us. And when you were speaking yesterday about your city and citizens, the tale which I have just been repeating to you came into my mind, and I remarked with astonishment how, by some mysterious coincidence, you agreed in almost every particular with the narrative of Solon; but I did not like to speak at the moment. For a long time had elapsed, and I had forgotten too much; I thought that I must first of all run over the narrative in my own mind, and then I would speak. And so I readily assented to your request yesterday, considering that in all such cases the chief difficulty is to find a tale suitable to our purpose, and that with such a tale we should be fairly well provided.

26e

And therefore, as Hermocrates has told you, on my way home yesterday I at once communicated the tale to my companions as I remembered it; and after I left them, during the night by thinking I recovered nearly the whole of it. Truly, as is often said, the lessons of our childhood make a wonderful impression on our memories; for I am not sure that I could remember all the discourse of yesterday, but I should be much surprised if I forgot any of these things which I have heard very long ago. I listened at the time with childlike interest to the old man's narrative; he was very ready to teach me, and I asked him again and again to repeat his words, so that like an indelible picture they were branded into my mind. As soon as the day broke, I

rehearsed them as he spoke them to my companions, that they, as well as myself, might have something to say. And now, Socrates, to make an end of my preface, I am ready to tell you the whole tale. I will give you not only the general heads, but the particulars, as they were told to me. The city and citizens, which you yesterday described to us in fiction, we will now transfer to the world of reality. It shall be the ancient city of Athens, and we will suppose that the citizens whom you imagined, were our veritable ancestors, of whom the priest spoke; they will perfectly harmonize, and there will be no inconsistency in saying that the citizens of your republic are these ancient Athenians. Let us divide the subject among us, and all endeavour according to our ability gracefully to execute the task which you have imposed upon us. Consider then, Socrates, if this narrative is suited to the purpose, or whether we should seek for some other instead.

27b

Socrates: And what other, Critias, can we find that will be better than this, which is natural and suitable to the festival of the goddess, and has the very great advantage of being a fact and not a fiction? How or where shall we find another if we abandon this? We cannot, and therefore you must tell the tale, and good luck to you; and I in return for my yesterday's discourse will now rest and be a listener.

27c

Critias: Let me proceed to explain to you, Socrates, the order in which we have arranged our entertainment. Our intention is, that Timaeus, who is the most of an astronomer amongst us, and has made the nature of the universe his special study, should speak first, beginning with the generation of the world and going down to the creation of man; next, I am to receive the men whom he has created, and of whom some will have profited by the excellent education which you have given them; and then, in accordance with the tale of Solon, and equally with

his law, we will bring them into court and make them citizens, as if they were those very Athenians whom the sacred Egyptian record has recovered from oblivion, and thenceforward we will speak of them as Athenians and fellow-citizens.

27d

Socrates: I see that I shall receive in my turn a perfect and splendid feast of reason. And now, Timaeus, you, I suppose, should speak next, after duly calling upon the Gods.

Timaeus: All men, Socrates, who have any degree of right feeling, at the beginning of every enterprise, whether small or great, always call upon God. And we, too, who are going to discourse of the nature of the universe, how created or how existing without creation, if we be not altogether out of our wits, must invoke the aid of Gods and Goddesses and pray that our words may be acceptable to them and consistent with themselves. Let this, then, be our invocation of the Gods, to which I add an exhortation of myself to speak in such manner as will be most intelligible to you, and will most accord with my own intent.

29b

First then, in my judgment, we must make a distinction and ask, What is that which always is and has no becoming; and what is that which is always becoming and never is? That which is apprehended by intelligence and reason is always in the same state; but that which is conceived by opinion with the help of sensation and without reason, is always in a process of becoming and perishing and never really is. Now everything that becomes or is created must of necessity be created by some cause, for without a cause nothing can be created. The work of the creator, whenever he looks to the unchangeable and fashions the form and nature of his work after an unchangeable pattern, must necessarily be made fair and perfect; but when he looks to the created only, and uses a created pattern, it is not

fair or perfect. Was the heaven then or the world, whether called by this or by any other more appropriate name — assuming the name, I am asking a question which has to be asked at the beginning of an enquiry about anything — was the world, I say, always in existence and without beginning? or created, and had it a beginning? Created, I reply, being visible and tangible and having a body, and therefore sensible; and all sensible things are apprehended by opinion and sense and are in a process of creation and created. Now that which is created must, as we affirm, of necessity be created by a cause. But the father and maker of all this universe is past finding out; and even if we found him, to tell of him to all men would be impossible. And there is still a question to be asked about him: Which of the patterns had the artificer in view when he made the world — the pattern of the unchangeable, or of that which is created? If the world be indeed fair and the artificer good, it is manifest that he must have looked to that which is eternal; but if what cannot be said without blasphemy is true, then to the created pattern. Every one will see that he must have looked to the eternal; for the world is the fairest of creations and he is the best of causes. And having been created in this way, the world has been framed in the likeness of that which is apprehended by reason and mind and is unchangeable, and must therefore of necessity, if this is admitted, be a copy of something. Now it is all-important that the beginning of everything should be according to nature. And in speaking of the copy and the original we may assume that words are akin to the matter which they describe; when they relate to the lasting and permanent and intelligible, they ought to be lasting and unalterable, and, as far as their nature allows, irrefutable and immovable — nothing less. But when they express only the copy or likeness and not the eternal things themselves, they need only be likely and analogous to the real words. As being is to becoming, so is truth to belief. If then, Socrates, amid the many

opinions about the gods and the generation of the universe, we are not able to give notions which are altogether and in every respect exact and consistent with one another, do not be surprised. Enough, if we adduce probabilities as likely as any others; for we must remember that I who am the speaker, and you who are the judges, are only mortal men, and we ought to accept the tale which is probable and enquire no further.

29e

Socrates: Excellent, Timaeus; and we will do precisely as you bid us. The prelude is charming, and is already accepted by us — may we beg of you to proceed to the strain?

Timaeus: Let me tell you then why the creator made this world of generation. He was good, and the good can never have any jealousy of anything. And being free from jealousy, he desired that all things should be as like himself as they could be. This is in the truest sense the origin of creation and of the world, as we shall do well in believing on the testimony of wise men: God desired that all things should be good and nothing bad, so far as this was attainable. Wherefore also finding the whole visible sphere not at rest, but moving in an irregular and disorderly fashion, out of disorder he brought order, considering that this was in every way better than the other. Now the deeds of the best could never be or have been other than the fairest; and the creator, reflecting on the things which are by nature visible, found that no unintelligent creature taken as a whole was fairer than the intelligent taken as a whole; and that intelligence could not be present in anything which was devoid of soul. For which reason, when he was framing the universe, he put intelligence in soul, and soul in body, that he might be the creator of a work which was by nature fairest and best. Wherefore, using the language of probability, we may say that the world became a living creature truly endowed with soul and intelligence by the providence of God.

31a

This being supposed, let us proceed to the next stage: In the likeness of what animal did the Creator make the world? It would be an unworthy thing to liken it to any nature which exists as a part only; for nothing can be beautiful which is like any imperfect thing; but let us suppose the world to be the very image of that whole of which all other animals both individually and in their tribes are portions. For the original of the universe contains in itself all intelligible beings, just as this world comprehends us and all other visible creatures. For the Deity, intending to make this world like the fairest and most perfect of intelligible beings, framed one visible animal comprehending within itself all other animals of a kindred nature. Are we right in saying that there is one world, or that they are many and infinite? There must be one only, if the created copy is to accord with the original. For that which includes all other intelligible creatures cannot have a second or companion; in that case there would be need of another living being which would include both, and of which they would be parts, and the likeness would be more truly said to resemble not them, but that other which included them. In order then that the world might be solitary, like the perfect animal, the creator made not two worlds or an infinite number of them; but there is and ever will be one only-begotten and created heaven.

32b

Now that which is created is of necessity corporeal, and also visible and tangible. And nothing is visible where there is no fire, or tangible which has no solidity, and nothing is solid without earth. Wherefore also God in the beginning of creation made the body of the universe to consist of fire and earth. But two things cannot be rightly put together without a third; there must be some bond of union between them. And the fairest bond is that which makes the most complete fusion of itself and the things which it combines; and proportion is best adapted to

effect such a union. For whenever in any three numbers, whether cube or square, there is a mean, which is to the last term what the first term is to it; and again, when the mean is to the first term as the last term is to the mean — then the mean becoming first and last, and the first and last both becoming means, they will all of them of necessity come to be the same, and having become the same with one another will be all one. If the universal frame had been created a surface only and having no depth, a single mean would have sufficed to bind together itself and the other terms; but now, as the world must be solid, and solid bodies are always compacted not by one mean but by two, God placed water and air in the mean between fire and earth, and made them to have the same proportion so far as was possible (as fire is to air so is air to water, and as air is to water so is water to earth); and thus he bound and put together a visible and tangible heaven. And for these reasons, and out of such elements which are in number four, the body of the world was created, and it was harmonized by proportion, and therefore has the spirit of friendship; and having been reconciled to itself, it was indissoluble by the hand of any other than the framer.

33c

Now the creation took up the whole of each of the four elements; for the Creator compounded the world out of all the fire and all the water and all the air and all the earth, leaving no part of any of them nor any power of them outside. His intention was, in the first place, that the animal should be as far as possible a perfect whole and of perfect parts: secondly, that it should be one, leaving no remnants out of which another such world might be created: and also that it should be free from old age and unaffected by disease. Considering that if heat and cold and other powerful forces which unite bodies surround and attack them from without when they are unprepared, they decompose them, and by bringing diseases and old age upon

them, make them waste away — for this cause and on these grounds he made the world one whole, having every part entire, and being therefore perfect and not liable to old age and disease. And he gave to the world the figure which was suitable and also natural. Now to the animal which was to comprehend all animals, that figure was suitable which comprehends within itself all other figures. Wherefore he made the world in the form of a globe, round as from a lathe, having its extremes in every direction equidistant from the centre, the most perfect and the most like itself of all figures; for he considered that the like is infinitely fairer than the unlike. This he finished off, making the surface smooth all round for many reasons; in the first place, because the living being had no need of eyes when there was nothing remaining outside him to be seen; nor of ears when there was nothing to be heard; and there was no surrounding atmosphere to be breathed; nor would there have been any use of organs by the help of which he might receive his food or get rid of what he had already digested, since there was nothing which went from him or came into him: for there was nothing beside him. Of design he was created thus, his own waste providing his own food, and all that he did or suffered taking place in and by himself. For the Creator conceived that a being which was self-sufficient would be far more excellent than one which lacked anything; and, as he had no need to take anything or defend himself against any one, the Creator did not think it necessary to bestow upon him hands: nor had he any need of feet, nor of the whole apparatus of walking; but the movement suited to his spherical form was assigned to him, being of all the seven that which is most appropriate to mind and intelligence; and he was made to move in the same manner and on the same spot, within his own limits revolving in a circle. All the other six motions were taken away from him, and he was made not to partake of their deviations. And as this circular movement required no feet, the universe was created without legs and

without feet.

34c

Such was the whole plan of the eternal God about the god that was to be, to whom for this reason he gave a body, smooth and even, having a surface in every direction equidistant from the centre, a body entire and perfect, and formed out of perfect bodies. And in the centre he put the soul, which he diffused throughout the body, making it also to be the exterior environment of it; and he made the universe a circle moving in a circle, one and solitary, yet by reason of its excellence able to converse with itself, and needing no other friendship or acquaintance. Having these purposes in view he created the world a blessed god.

35b

Now God did not make the soul after the body, although we are speaking of them in this order; for having brought them together he would never have allowed that the elder should be ruled by the younger; but this is a random manner of speaking which we have, because somehow we ourselves too are very much under the dominion of chance. Whereas he made the soul in origin and excellence prior to and older than the body, to be the ruler and mistress, of whom the body was to be the subject. And he made her out of the following elements and on this wise: Out of the indivisible and unchangeable, and also out of that which is divisible and has to do with material bodies, he compounded a third and intermediate kind of essence, partaking of the nature of the same and of the other, and this compound he placed accordingly in a mean between the indivisible, and the divisible and material. He took the three elements of the same, the other, and the essence, and mingled them into one form, compressing by force the reluctant and unsociable nature of the other into the same. When he had mingled them with the essence and out of three made one, he again divided this whole into as many portions as was fitting,

each portion being a compound of the same, the other, and the essence. And he proceeded to divide after this manner: — First of all, he took away one part of the whole (1), and then he separated a second part which was double the first (2), and then he took away a third part which was half as much again as the second and three times as much as the first (3), and then he took a fourth part which was twice as much as the second (4), and a fifth part which was three times the third (9), and a sixth part which was eight times the first (8), and a seventh part which was twenty-seven times the first (27). After this he filled up the double intervals (i.e. between 1, 2, 4, 8) and the triple (i.e. between 1, 3, 9, 27) cutting off yet other portions from the mixture and placing them in the intervals, so that in each interval there were two kinds of means, the one exceeding and exceeded by equal parts of its extremes (as for example 1, $4/3$, 2, in which the mean $4/3$ is one-third of 1 more than 1, and one-third of 2 less than 2), the other being that kind of mean which exceeds and is exceeded by an equal number (e.g.

36c

- over 1, $4/3$, $3/2$, - over 2, $8/3$, 3, - over 4, $16/3$, 6, - over 8: and - over 1, $3/2$, 2, - over 3, $9/2$, 6, - over 9, $27/2$, 18, - over 27.

36d

Where there were intervals of $3/2$ and of $4/3$ and of $9/8$, made by the connecting terms in the former intervals, he filled up all the intervals of $4/3$ with the interval of $9/8$, leaving a fraction over; and the interval which this fraction expressed was in the ratio of 256 to 243 (e.g.

$243:256::81/64:4/3::243/128:2::81/32:8/3::243/64:4::81/16:16/3::242/32:8$.

37a

And thus the whole mixture out of which he cut these portions was all exhausted by him. This entire compound he divided lengthways into two parts, which he joined to one another at

the centre like the letter X, and bent them into a circular form, connecting them with themselves and each other at the point opposite to their original meeting-point; and, comprehending them in a uniform revolution upon the same axis, he made the one the outer and the other the inner circle. Now the motion of the outer circle he called the motion of the same, and the motion of the inner circle the motion of the other or diverse. The motion of the same he carried round by the side (i.e. of the rectangular figure supposed to be inscribed in the circle of the Same) to the right, and the motion of the diverse diagonally (i.e. across the rectangular figure from corner to corner) to the left. And he gave dominion to the motion of the same and like, for that he left single and undivided; but the inner motion he divided in six places and made seven unequal circles having their intervals in ratios of two and three, three of each, and bade the orbits proceed in a direction opposite to one another; and three (Sun, Mercury, Venus) he made to move with equal swiftness, and the remaining four (Moon, Saturn, Mars, Jupiter) to move with unequal swiftness to the three and to one another, but in due proportion.

37c

Now when the Creator had framed the soul according to his will, he formed within her the corporeal universe, and brought the two together, and united them centre to centre. The soul, interfused everywhere from the centre to the circumference of heaven, of which also she is the external envelopment, herself turning in herself, began a divine beginning of never-ceasing and rational life enduring throughout all time. The body of heaven is visible, but the soul is invisible, and partakes of reason and harmony, and being made by the best of intellectual and everlasting natures, is the best of things created. And because she is composed of the same and of the other and of the essence, these three, and is divided and united in due proportion, and in her revolutions returns upon herself, the soul, when touching

anything which has essence, whether dispersed in parts or undivided, is stirred through all her powers, to declare the sameness or difference of that thing and some other; and to what individuals are related, and by what affected, and in what way and how and when, both in the world of generation and in the world of immutable being. And when reason, which works with equal truth, whether she be in the circle of the diverse or of the same — in voiceless silence holding her onward course in the sphere of the self-moved — when reason, I say, is hovering around the sensible world and when the circle of the diverse also moving truly imparts the intimations of sense to the whole soul, then arise opinions and beliefs sure and certain. But when reason is concerned with the rational, and the circle of the same moving smoothly declares it, then intelligence and knowledge are necessarily perfected. And if any one affirms that in which these two are found to be other than the soul, he will say the very opposite of the truth.

38c

When the father and creator saw the creature which he had made moving and living, the created image of the eternal gods, he rejoiced, and in his joy determined to make the copy still more like the original; and as this was eternal, he sought to make the universe eternal, so far as might be. Now the nature of the ideal being was everlasting, but to bestow this attribute in its fulness upon a creature was impossible. Wherefore he resolved to have a moving image of eternity, and when he set in order the heaven, he made this image eternal but moving according to number, while eternity itself rests in unity; and this image we call time. For there were no days and nights and months and years before the heaven was created, but when he constructed the heaven he created them also. They are all parts of time, and the past and future are created species of time, which we unconsciously but wrongly transfer to the eternal essence; for we say that he 'was,' he 'is,' he 'will be,' but the

truth is that 'is' alone is properly attributed to him, and that 'was' and 'will be' are only to be spoken of becoming in time, for they are motions, but that which is immovably the same cannot become older or younger by time, nor ever did or has become, or hereafter will be, older or younger, nor is subject at all to any of those states which affect moving and sensible things and of which generation is the cause. These are the forms of time, which imitates eternity and revolves according to a law of number. Moreover, when we say that what has become IS become and what becomes IS becoming, and that what will become IS about to become and that the non-existent IS non-existent — all these are inaccurate modes of expression (compare Parmen.). But perhaps this whole subject will be more suitably discussed on some other occasion.

39b

Time, then, and the heaven came into being at the same instant in order that, having been created together, if ever there was to be a dissolution of them, they might be dissolved together. It was framed after the pattern of the eternal nature, that it might resemble this as far as was possible; for the pattern exists from eternity, and the created heaven has been, and is, and will be, in all time. Such was the mind and thought of God in the creation of time. The sun and moon and five other stars, which are called the planets, were created by him in order to distinguish and preserve the numbers of time; and when he had made their several bodies, he placed them in the orbits in which the circle of the other was revolving, — in seven orbits seven stars. First, there was the moon in the orbit nearest the earth, and next the sun, in the second orbit above the earth; then came the morning star and the star sacred to Hermes, moving in orbits which have an equal swiftness with the sun, but in an opposite direction; and this is the reason why the sun and Hermes and Lucifer overtake and are overtaken by each other. To enumerate the places which he assigned to the other stars, and to give all the

reasons why he assigned them, although a secondary matter, would give more trouble than the primary. These things at some future time, when we are at leisure, may have the consideration which they deserve, but not at present.

39e

Now, when all the stars which were necessary to the creation of time had attained a motion suitable to them, and had become living creatures having bodies fastened by vital chains, and learnt their appointed task, moving in the motion of the diverse, which is diagonal, and passes through and is governed by the motion of the same, they revolved, some in a larger and some in a lesser orbit — those which had the lesser orbit revolving faster, and those which had the larger more slowly. Now by reason of the motion of the same, those which revolved fastest appeared to be overtaken by those which moved slower although they really overtook them; for the motion of the same made them all turn in a spiral, and, because some went one way and some another, that which receded most slowly from the sphere of the same, which was the swiftest, appeared to follow it most nearly. That there might be some visible measure of their relative swiftness and slowness as they proceeded in their eight courses, God lighted a fire, which we now call the sun, in the second from the earth of these orbits, that it might give light to the whole of heaven, and that the animals, as many as nature intended, might participate in number, learning arithmetic from the revolution of the same and the like. Thus then, and for this reason the night and the day were created, being the period of the one most intelligent revolution. And the month is accomplished when the moon has completed her orbit and overtaken the sun, and the year when the sun has completed his own orbit. Mankind, with hardly an exception, have not remarked the periods of the other stars, and they have no name for them, and do not measure them against one another by the help of number, and hence they can scarcely be

said to know that their wanderings, being infinite in number and admirable for their variety, make up time. And yet there is no difficulty in seeing that the perfect number of time fulfils the perfect year when all the eight revolutions, having their relative degrees of swiftness, are accomplished together and attain their completion at the same time, measured by the rotation of the same and equally moving. After this manner, and for these reasons, came into being such of the stars as in their heavenly progress received reversals of motion, to the end that the created heaven might imitate the eternal nature, and be as like as possible to the perfect and intelligible animal.

40d

Thus far and until the birth of time the created universe was made in the likeness of the original, but inasmuch as all animals were not yet comprehended therein, it was still unlike. What remained, the creator then proceeded to fashion after the nature of the pattern. Now as in the ideal animal the mind perceives ideas or species of a certain nature and number, he thought that this created animal ought to have species of a like nature and number. There are four such; one of them is the heavenly race of the gods; another, the race of birds whose way is in the air; the third, the watery species; and the fourth, the pedestrian and land creatures. Of the heavenly and divine, he created the greater part out of fire, that they might be the brightest of all things and fairest to behold, and he fashioned them after the likeness of the universe in the figure of a circle, and made them follow the intelligent motion of the supreme, distributing them over the whole circumference of heaven, which was to be a true cosmos or glorious world spangled with them all over. And he gave to each of them two movements: the first, a movement on the same spot after the same manner, whereby they ever continue to think consistently the same thoughts about the same things; the second, a forward movement, in which they are controlled by the revolution of

the same and the like; but by the other five motions they were unaffected, in order that each of them might attain the highest perfection. And for this reason the fixed stars were created, to be divine and eternal animals, ever-abiding and revolving after the same manner and on the same spot; and the other stars which reverse their motion and are subject to deviations of this kind, were created in the manner already described. The earth, which is our nurse, clinging (or 'circling') around the pole which is extended through the universe, he framed to be the guardian and artificer of night and day, first and eldest of gods that are in the interior of heaven. Vain would be the attempt to tell all the figures of them circling as in dance, and their juxtapositions, and the return of them in their revolutions upon themselves, and their approximations, and to say which of these deities in their conjunctions meet, and which of them are in opposition, and in what order they get behind and before one another, and when they are severally eclipsed to our sight and again reappear, sending terrors and intimations of the future to those who cannot calculate their movements — to attempt to tell of all this without a visible representation of the heavenly system would be labour in vain. Enough on this head; and now let what we have said about the nature of the created and visible gods have an end.

41d

To know or tell the origin of the other divinities is beyond us, and we must accept the traditions of the men of old time who affirm themselves to be the offspring of the gods — that is what they say — and they must surely have known their own ancestors. How can we doubt the word of the children of the gods? Although they give no probable or certain proofs, still, as they declare that they are speaking of what took place in their own family, we must conform to custom and believe them. In this manner, then, according to them, the genealogy of these gods is to be received and set forth.

Oceanus and Tethys were the children of Earth and Heaven, and from these sprang Phorcys and Cronos and Rhea, and all that generation; and from Cronos and Rhea sprang Zeus and Here, and all those who are said to be their brethren, and others who were the children of these.

Now, when all of them, both those who visibly appear in their revolutions as well as those other gods who are of a more retiring nature, had come into being, the creator of the universe addressed them in these words: 'Gods, children of gods, who are my works, and of whom I am the artificer and father, my creations are indissoluble, if so I will. All that is bound may be undone, but only an evil being would wish to undo that which is harmonious and happy. Wherefore, since ye are but creatures, ye are not altogether immortal and indissoluble, but ye shall certainly not be dissolved, nor be liable to the fate of death, having in my will a greater and mightier bond than those with which ye were bound at the time of your birth. And now listen to my instructions: — Three tribes of mortal beings remain to be created — without them the universe will be incomplete, for it will not contain every kind of animal which it ought to contain, if it is to be perfect. On the other hand, if they were created by me and received life at my hands, they would be on an equality with the gods. In order then that they may be mortal, and that this universe may be truly universal, do ye, according to your natures, betake yourselves to the formation of animals, imitating the power which was shown by me in creating you. The part of them worthy of the name immortal, which is called divine and is the guiding principle of those who are willing to follow justice and you — of that divine part I will myself sow the seed, and having made a beginning, I will hand the work over to you. And do ye then interweave the mortal with the immortal, and make and beget living creatures, and give them food, and make them to grow, and receive them again in death.'

42e

Thus he spake, and once more into the cup in which he had previously mingled the soul of the universe he poured the remains of the elements, and mingled them in much the same manner; they were not, however, pure as before, but diluted to the second and third degree. And having made it he divided the whole mixture into souls equal in number to the stars, and assigned each soul to a star; and having there placed them as in a chariot, he showed them the nature of the universe, and declared to them the laws of destiny, according to which their first birth would be one and the same for all, — no one should suffer a disadvantage at his hands; they were to be sown in the instruments of time severally adapted to them, and to come forth the most religious of animals; and as human nature was of two kinds, the superior race would hereafter be called man. Now, when they should be implanted in bodies by necessity, and be always gaining or losing some part of their bodily substance, then in the first place it would be necessary that they should all have in them one and the same faculty of sensation, arising out of irresistible impressions; in the second place, they must have love, in which pleasure and pain mingle; also fear and anger, and the feelings which are akin or opposite to them; if they conquered these they would live righteously, and if they were conquered by them, unrighteously. He who lived well during his appointed time was to return and dwell in his native star, and there he would have a blessed and congenial existence. But if he failed in attaining this, at the second birth he would pass into a woman, and if, when in that state of being, he did not desist from evil, he would continually be changed into some brute who resembled him in the evil nature which he had acquired, and would not cease from his toils and transformations until he followed the revolution of the same and the like within him, and overcame by the help of reason the turbulent and irrational mob of later accretions, made up of fire and air and water and

earth, and returned to the form of his first and better state. Having given all these laws to his creatures, that he might be guiltless of future evil in any of them, the creator sowed some of them in the earth, and some in the moon, and some in the other instruments of time; and when he had sown them he committed to the younger gods the fashioning of their mortal bodies, and desired them to furnish what was still lacking to the human soul, and having made all the suitable additions, to rule over them, and to pilot the mortal animal in the best and wisest manner which they could, and avert from him all but self-inflicted evils.

43e

When the creator had made all these ordinances he remained in his own accustomed nature, and his children heard and were obedient to their father's word, and receiving from him the immortal principle of a mortal creature, in imitation of their own creator they borrowed portions of fire, and earth, and water, and air from the world, which were hereafter to be restored — these they took and welded them together, not with the indissoluble chains by which they were themselves bound, but with little pegs too small to be visible, making up out of all the four elements each separate body, and fastening the courses of the immortal soul in a body which was in a state of perpetual influx and efflux. Now these courses, detained as in a vast river, neither overcame nor were overcome; but were hurrying and hurried to and fro, so that the whole animal was moved and progressed, irregularly however and irrationally and anyhow, in all the six directions of motion, wandering backwards and forwards, and right and left, and up and down, and in all the six directions. For great as was the advancing and retiring flood which provided nourishment, the affections produced by external contact caused still greater tumult — when the body of any one met and came into collision with some external fire, or with the solid earth or the gliding waters, or was caught in the

tempest borne on the air, and the motions produced by any of these impulses were carried through the body to the soul. All such motions have consequently received the general name of 'sensations,' which they still retain. And they did in fact at that time create a very great and mighty movement; uniting with the ever-flowing stream in stirring up and violently shaking the courses of the soul, they completely stopped the revolution of the same by their opposing current, and hindered it from predominating and advancing; and they so disturbed the nature of the other or diverse, that the three double intervals (i.e. between 1, 2, 4, 8), and the three triple intervals (i.e. between 1, 3, 9, 27), together with the mean terms and connecting links which are expressed by the ratios of 3:2, and 4:3, and of 9:8 — these, although they cannot be wholly undone except by him who united them, were twisted by them in all sorts of ways, and the circles were broken and disordered in every possible manner, so that when they moved they were tumbling to pieces, and moved irrationally, at one time in a reverse direction, and then again obliquely, and then upside down, as you might imagine a person who is upside down and has his head leaning upon the ground and his feet up against something in the air; and when he is in such a position, both he and the spectator fancy that the right of either is his left, and the left right. If, when powerfully experiencing these and similar effects, the revolutions of the soul come in contact with some external thing, either of the class of the same or of the other, they speak of the same or of the other in a manner the very opposite of the truth; and they become false and foolish, and there is no course or revolution in them which has a guiding or directing power; and if again any sensations enter in violently from without and drag after them the whole vessel of the soul, then the courses of the soul, though they seem to conquer, are really conquered.

And by reason of all these affections, the soul, when encased in a mortal body, now, as in the beginning, is at first without intelligence; but when the flood of growth and nutriment abates, and the courses of the soul, calming down, go their own way and become steadier as time goes on, then the several circles return to their natural form, and their revolutions are corrected, and they call the same and the other by their right names, and make the possessor of them to become a rational being. And if these combine in him with any true nurture or education, he attains the fulness and health of the perfect man, and escapes the worst disease of all; but if he neglects education he walks lame to the end of his life, and returns imperfect and good for nothing to the world below. This, however, is a later stage; at present we must treat more exactly the subject before us, which involves a preliminary enquiry into the generation of the body and its members, and as to how the soul was created — for what reason and by what providence of the gods; and holding fast to probability, we must pursue our way.

45c

First, then, the gods, imitating the spherical shape of the universe, enclosed the two divine courses in a spherical body, that, namely, which we now term the head, being the most divine part of us and the lord of all that is in us: to this the gods, when they put together the body, gave all the other members to be servants, considering that it partook of every sort of motion. In order then that it might not tumble about among the high and deep places of the earth, but might be able to get over the one and out of the other, they provided the body to be its vehicle and means of locomotion; which consequently had length and was furnished with four limbs extended and flexible; these God contrived to be instruments of locomotion with which it might take hold and find support, and so be able to pass through all places, carrying on high the dwelling-place of the most sacred and divine part of us. Such was the origin of legs

and hands, which for this reason were attached to every man; and the gods, deeming the front part of man to be more honourable and more fit to command than the hinder part, made us to move mostly in a forward direction. Wherefore man must needs have his front part unlike and distinguished from the rest of his body.

46c

And so in the vessel of the head, they first of all put a face in which they inserted organs to minister in all things to the providence of the soul, and they appointed this part, which has authority, to be by nature the part which is in front. And of the organs they first contrived the eyes to give light, and the principle according to which they were inserted was as follows: So much of fire as would not burn, but gave a gentle light, they formed into a substance akin to the light of every-day life; and the pure fire which is within us and related thereto they made to flow through the eyes in a stream smooth and dense, compressing the whole eye, and especially the centre part, so that it kept out everything of a coarser nature, and allowed to pass only this pure element. When the light of day surrounds the stream of vision, then like falls upon like, and they coalesce, and one body is formed by natural affinity in the line of vision, wherever the light that falls from within meets with an external object. And the whole stream of vision, being similarly affected in virtue of similarity, diffuses the motions of what it touches or what touches it over the whole body, until they reach the soul, causing that perception which we call sight. But when night comes on and the external and kindred fire departs, then the stream of vision is cut off; for going forth to an unlike element it is changed and extinguished, being no longer of one nature with the surrounding atmosphere which is now deprived of fire: and so the eye no longer sees, and we feel disposed to sleep. For when the eyelids, which the gods invented for the preservation of sight, are closed, they keep in the internal fire; and the power

of the fire diffuses and equalizes the inward motions; when they are equalized, there is rest, and when the rest is profound, sleep comes over us scarce disturbed by dreams; but where the greater motions still remain, of whatever nature and in whatever locality, they engender corresponding visions in dreams, which are remembered by us when we are awake and in the external world. And now there is no longer any difficulty in understanding the creation of images in mirrors and all smooth and bright surfaces. For from the communion of the internal and external fires, and again from the union of them and their numerous transformations when they meet in the mirror, all these appearances of necessity arise, when the fire from the face coalesces with the fire from the eye on the bright and smooth surface. And right appears left and left right, because the visual rays come into contact with the rays emitted by the object in a manner contrary to the usual mode of meeting; but the right appears right, and the left left, when the position of one of the two concurring lights is reversed; and this happens when the mirror is concave and its smooth surface repels the right stream of vision to the left side, and the left to the right (He is speaking of two kinds of mirrors, first the plane, secondly the concave; and the latter is supposed to be placed, first horizontally, and then vertically.). Or if the mirror be turned vertically, then the concavity makes the countenance appear to be all upside down, and the lower rays are driven upwards and the upper downwards.

47e

All these are to be reckoned among the second and co-operative causes which God, carrying into execution the idea of the best as far as possible, uses as his ministers. They are thought by most men not to be the second, but the prime causes of all things, because they freeze and heat, and contract and dilate, and the like. But they are not so, for they are incapable of reason or intellect; the only being which can properly have

mind is the invisible soul, whereas fire and water, and earth and air, are all of them visible bodies. The lover of intellect and knowledge ought to explore causes of intelligent nature first of all, and, secondly, of those things which, being moved by others, are compelled to move others. And this is what we too must do. Both kinds of causes should be acknowledged by us, but a distinction should be made between those which are endowed with mind and are the workers of things fair and good, and those which are deprived of intelligence and always produce chance effects without order or design. Of the second or co-operative causes of sight, which help to give to the eyes the power which they now possess, enough has been said. I will therefore now proceed to speak of the higher use and purpose for which God has given them to us. The sight in my opinion is the source of the greatest benefit to us, for had we never seen the stars, and the sun, and the heaven, none of the words which we have spoken about the universe would ever have been uttered. But now the sight of day and night, and the months and the revolutions of the years, have created number, and have given us a conception of time, and the power of enquiring about the nature of the universe; and from this source we have derived philosophy, than which no greater good ever was or will be given by the gods to mortal man. This is the greatest boon of sight: and of the lesser benefits why should I speak? even the ordinary man if he were deprived of them would bewail his loss, but in vain. Thus much let me say however: God invented and gave us sight to the end that we might behold the courses of intelligence in the heaven, and apply them to the courses of our own intelligence which are akin to them, the unperturbed to the perturbed; and that we, learning them and partaking of the natural truth of reason, might imitate the absolutely unerring courses of God and regulate our own vagaries. The same may be affirmed of speech and hearing: they have been given by the gods to the same end and for a like

reason. For this is the principal end of speech, whereto it most contributes. Moreover, so much of music as is adapted to the sound of the voice and to the sense of hearing is granted to us for the sake of harmony; and harmony, which has motions akin to the revolutions of our souls, is not regarded by the intelligent votary of the Muses as given by them with a view to irrational pleasure, which is deemed to be the purpose of it in our day, but as meant to correct any discord which may have arisen in the courses of the soul, and to be our ally in bringing her into harmony and agreement with herself; and rhythm too was given by them for the same reason, on account of the irregular and graceless ways which prevail among mankind generally, and to help us against them.

49a

Thus far in what we have been saying, with small exception, the works of intelligence have been set forth; and now we must place by the side of them in our discourse the things which come into being through necessity — for the creation is mixed, being made up of necessity and mind. Mind, the ruling power, persuaded necessity to bring the greater part of created things to perfection, and thus and after this manner in the beginning, when the influence of reason got the better of necessity, the universe was created. But if a person will truly tell of the way in which the work was accomplished, he must include the other influence of the variable cause as well. Wherefore, we must return again and find another suitable beginning, as about the former matters, so also about these. To which end we must consider the nature of fire, and water, and air, and earth, such as they were prior to the creation of the heaven, and what was happening to them in this previous state; for no one has as yet explained the manner of their generation, but we speak of fire and the rest of them, whatever they mean, as though men knew their natures, and we maintain them to be the first principles and letters or elements of the whole, when they cannot

reasonably be compared by a man of any sense even to syllables or first compounds. And let me say thus much: I will not now speak of the first principle or principles of all things, or by whatever name they are to be called, for this reason — because it is difficult to set forth my opinion according to the method of discussion which we are at present employing. Do not imagine, any more than I can bring myself to imagine, that I should be right in undertaking so great and difficult a task. Remembering what I said at first about probability, I will do my best to give as probable an explanation as any other — or rather, more probable; and I will first go back to the beginning and try to speak of each thing and of all. Once more, then, at the commencement of my discourse, I call upon God, and beg him to be our saviour out of a strange and unwonted enquiry, and to bring us to the haven of probability. So now let us begin again.

49d

This new beginning of our discussion of the universe requires a fuller division than the former; for then we made two classes, now a third must be revealed. The two sufficed for the former discussion: one, which we assumed, was a pattern intelligible and always the same; and the second was only the imitation of the pattern, generated and visible. There is also a third kind which we did not distinguish at the time, conceiving that the two would be enough. But now the argument seems to require that we should set forth in words another kind, which is difficult of explanation and dimly seen. What nature are we to attribute to this new kind of being? We reply, that it is the receptacle, and in a manner the nurse, of all generation. I have spoken the truth; but I must express myself in clearer language, and this will be an arduous task for many reasons, and in particular because I must first raise questions concerning fire and the other elements, and determine what each of them is; for to say, with any probability or certitude, which of them should be called water rather than fire, and which should be called any

of them rather than all or some one of them, is a difficult matter. How, then, shall we settle this point, and what questions about the elements may be fairly raised?

50c

In the first place, we see that what we just now called water, by condensation, I suppose, becomes stone and earth; and this same element, when melted and dispersed, passes into vapour and air. Air, again, when inflamed, becomes fire; and again fire, when condensed and extinguished, passes once more into the form of air; and once more, air, when collected and condensed, produces cloud and mist; and from these, when still more compressed, comes flowing water, and from water comes earth and stones once more; and thus generation appears to be transmitted from one to the other in a circle. Thus, then, as the several elements never present themselves in the same form, how can any one have the assurance to assert positively that any of them, whatever it may be, is one thing rather than another? No one can. But much the safest plan is to speak of them as follows: — Anything which we see to be continually changing, as, for example, fire, we must not call ‘this’ or ‘that,’ but rather say that it is ‘of such a nature’; nor let us speak of water as ‘this’; but always as ‘such’; nor must we imply that there is any stability in any of those things which we indicate by the use of the words ‘this’ and ‘that,’ supposing ourselves to signify something thereby; for they are too volatile to be detained in any such expressions as ‘this,’ or ‘that,’ or ‘relative to this,’ or any other mode of speaking which represents them as permanent. We ought not to apply ‘this’ to any of them, but rather the word ‘such’; which expresses the similar principle circulating in each and all of them; for example, that should be called ‘fire’ which is of such a nature always, and so of everything that has generation. That in which the elements severally grow up, and appear, and decay, is alone to be called by the name ‘this’ or ‘that’; but that which is of a certain nature,

hot or white, or anything which admits of opposite qualities, and all things that are compounded of them, ought not to be so denominated. Let me make another attempt to explain my meaning more clearly. Suppose a person to make all kinds of figures of gold and to be always transmuting one form into all the rest; — somebody points to one of them and asks what it is. By far the safest and truest answer is, That is gold; and not to call the triangle or any other figures which are formed in the gold ‘these,’ as though they had existence, since they are in process of change while he is making the assertion; but if the questioner be willing to take the safe and indefinite expression, ‘such,’ we should be satisfied. And the same argument applies to the universal nature which receives all bodies — that must be always called the same; for, while receiving all things, she never departs at all from her own nature, and never in any way, or at any time, assumes a form like that of any of the things which enter into her; she is the natural recipient of all impressions, and is stirred and informed by them, and appears different from time to time by reason of them. But the forms which enter into and go out of her are the likenesses of real existences modelled after their patterns in a wonderful and inexplicable manner, which we will hereafter investigate. For the present we have only to conceive of three natures: first, that which is in process of generation; secondly, that in which the generation takes place; and thirdly, that of which the thing generated is a resemblance. And we may liken the receiving principle to a mother, and the source or spring to a father, and the intermediate nature to a child; and may remark further, that if the model is to take every variety of form, then the matter in which the model is fashioned will not be duly prepared, unless it is formless, and free from the impress of any of those shapes which it is hereafter to receive from without. For if the matter were like any of the supervening forms, then whenever any opposite or entirely different nature was stamped upon its

surface, it would take the impression badly, because it would intrude its own shape. Wherefore, that which is to receive all forms should have no form; as in making perfumes they first contrive that the liquid substance which is to receive the scent shall be as inodorous as possible; or as those who wish to impress figures on soft substances do not allow any previous impression to remain, but begin by making the surface as even and smooth as possible. In the same way that which is to receive perpetually and through its whole extent the resemblances of all eternal beings ought to be devoid of any particular form. Wherefore, the mother and receptacle of all created and visible and in any way sensible things, is not to be termed earth, or air, or fire, or water, or any of their compounds or any of the elements from which these are derived, but is an invisible and formless being which receives all things and in some mysterious way partakes of the intelligible, and is most incomprehensible. In saying this we shall not be far wrong; as far, however, as we can attain to a knowledge of her from the previous considerations, we may truly say that fire is that part of her nature which from time to time is inflamed, and water that which is moistened, and that the mother substance becomes earth and air, in so far as she receives the impressions of them.

52a

Let us consider this question more precisely. Is there any self-existent fire? and do all those things which we call self-existent exist? or are only those things which we see, or in some way perceive through the bodily organs, truly existent, and nothing whatever besides them? And is all that which we call an intelligible essence nothing at all, and only a name? Here is a question which we must not leave unexamined or undetermined, nor must we affirm too confidently that there can be no decision; neither must we interpolate in our present long discourse a digression equally long, but if it is possible to set forth a great principle in a few words, that is just what we

want.

52d

Thus I state my view: — If mind and true opinion are two distinct classes, then I say that there certainly are these self-existent ideas unperceived by sense, and apprehended only by the mind; if, however, as some say, true opinion differs in no respect from mind, then everything that we perceive through the body is to be regarded as most real and certain. But we must affirm them to be distinct, for they have a distinct origin and are of a different nature; the one is implanted in us by instruction, the other by persuasion; the one is always accompanied by true reason, the other is without reason; the one cannot be overcome by persuasion, but the other can; and lastly, every man may be said to share in true opinion, but mind is the attribute of the gods and of very few men. Wherefore also we must acknowledge that there is one kind of being which is always the same, uncreated and indestructible, never receiving anything into itself from without, nor itself going out to any other, but invisible and imperceptible by any sense, and of which the contemplation is granted to intelligence only. And there is another nature of the same name with it, and like to it, perceived by sense, created, always in motion, becoming in place and again vanishing out of place, which is apprehended by opinion and sense. And there is a third nature, which is space, and is eternal, and admits not of destruction and provides a home for all created things, and is apprehended without the help of sense, by a kind of spurious reason, and is hardly real; which we behold as in a dream, say of all existence that it must of necessity be in some place and occupy a space, but that what is neither in heaven nor in earth has no existence. Of these and other things of the same kind, relating to the true and waking reality of nature, we have only this dreamlike sense, and we are unable to cast off sleep and determine the truth about them. For an image, since the reality, after which it is modelled,

does not belong to it, and it exists ever as the fleeting shadow of some other, must be inferred to be in another (i.e. in space), grasping existence in some way or other, or it could not be at all. But true and exact reason, vindicating the nature of true being, maintains that while two things (i.e. the image and space) are different they cannot exist one of them in the other and so be one and also two at the same time.

53c

Thus have I concisely given the result of my thoughts; and my verdict is that being and space and generation, these three, existed in their three ways before the heaven; and that the nurse of generation, moistened by water and inflamed by fire, and receiving the forms of earth and air, and experiencing all the affections which accompany these, presented a strange variety of appearances; and being full of powers which were neither similar nor equally balanced, was never in any part in a state of equipoise, but swaying unevenly hither and thither, was shaken by them, and by its motion again shook them; and the elements when moved were separated and carried continually, some one way, some another; as, when grain is shaken and winnowed by fans and other instruments used in the threshing of corn, the close and heavy particles are borne away and settle in one direction, and the loose and light particles in another. In this manner, the four kinds or elements were then shaken by the receiving vessel, which, moving like a winnowing machine, scattered far away from one another the elements most unlike, and forced the most similar elements into close contact. Wherefore also the various elements had different places before they were arranged so as to form the universe. At first, they were all without reason and measure. But when the world began to get into order, fire and water and earth and air had only certain faint traces of themselves, and were altogether such as everything might be expected to be in the absence of God; this, I say, was their nature at that time, and God fashioned

them by form and number. Let it be consistently maintained by us in all that we say that God made them as far as possible the fairest and best, out of things which were not fair and good. And now I will endeavour to show you the disposition and generation of them by an unaccustomed argument, which I am compelled to use; but I believe that you will be able to follow me, for your education has made you familiar with the methods of science.

54d

In the first place, then, as is evident to all, fire and earth and water and air are bodies. And every sort of body possesses solidity, and every solid must necessarily be contained in planes; and every plane rectilinear figure is composed of triangles; and all triangles are originally of two kinds, both of which are made up of one right and two acute angles; one of them has at either end of the base the half of a divided right angle, having equal sides, while in the other the right angle is divided into unequal parts, having unequal sides. These, then, proceeding by a combination of probability with demonstration, we assume to be the original elements of fire and the other bodies; but the principles which are prior to these God only knows, and he of men who is the friend of God. And next we have to determine what are the four most beautiful bodies which are unlike one another, and of which some are capable of resolution into one another; for having discovered thus much, we shall know the true origin of earth and fire and of the proportionate and intermediate elements. And then we shall not be willing to allow that there are any distinct kinds of visible bodies fairer than these. Wherefore we must endeavour to construct the four forms of bodies which excel in beauty, and then we shall be able to say that we have sufficiently apprehended their nature. Now of the two triangles, the isosceles has one form only; the scalene or unequal-sided has an infinite number. Of the infinite forms we must select the most

beautiful, if we are to proceed in due order, and any one who can point out a more beautiful form than ours for the construction of these bodies, shall carry off the palm, not as an enemy, but as a friend. Now, the one which we maintain to be the most beautiful of all the many triangles (and we need not speak of the others) is that of which the double forms a third triangle which is equilateral; the reason of this would be long to tell; he who disproves what we are saying, and shows that we are mistaken, may claim a friendly victory. Then let us choose two triangles, out of which fire and the other elements have been constructed, one isosceles, the other having the square of the longer side equal to three times the square of the lesser side.

55d

Now is the time to explain what was before obscurely said: there was an error in imagining that all the four elements might be generated by and into one another; this, I say, was an erroneous supposition, for there are generated from the triangles which we have selected four kinds — three from the one which has the sides unequal; the fourth alone is framed out of the isosceles triangle. Hence they cannot all be resolved into one another, a great number of small bodies being combined into a few large ones, or the converse. But three of them can be thus resolved and compounded, for they all spring from one, and when the greater bodies are broken up, many small bodies will spring up out of them and take their own proper figures; or, again, when many small bodies are dissolved into their triangles, if they become one, they will form one large mass of another kind. So much for their passage into one another. I have now to speak of their several kinds, and show out of what combinations of numbers each of them was formed. The first will be the simplest and smallest construction, and its element is that triangle which has its hypotenuse twice the lesser side. When two such triangles are joined at the diagonal, and this is repeated three times, and the triangles rest their diagonals and shorter sides on

the same point as a centre, a single equilateral triangle is formed out of six triangles; and four equilateral triangles, if put together, make out of every three plane angles one solid angle, being that which is nearest to the most obtuse of plane angles; and out of the combination of these four angles arises the first solid form which distributes into equal and similar parts the whole circle in which it is inscribed. The second species of solid is formed out of the same triangles, which unite as eight equilateral triangles and form one solid angle out of four plane angles, and out of six such angles the second body is completed. And the third body is made up of 120 triangular elements, forming twelve solid angles, each of them included in five plane equilateral triangles, having altogether twenty bases, each of which is an equilateral triangle. The one element (that is, the triangle which has its hypotenuse twice the lesser side) having generated these figures, generated no more; but the isosceles triangle produced the fourth elementary figure, which is compounded of four such triangles, joining their right angles in a centre, and forming one equilateral quadrangle. Six of these united form eight solid angles, each of which is made by the combination of three plane right angles; the figure of the body thus composed is a cube, having six plane quadrangular equilateral bases. There was yet a fifth combination which God used in the delineation of the universe.

56b

Now, he who, duly reflecting on all this, enquires whether the worlds are to be regarded as indefinite or definite in number, will be of opinion that the notion of their indefiniteness is characteristic of a sadly indefinite and ignorant mind. He, however, who raises the question whether they are to be truly regarded as one or five, takes up a more reasonable position. Arguing from probabilities, I am of opinion that they are one; another, regarding the question from another point of view, will be of another mind. But, leaving this enquiry, let us proceed

to distribute the elementary forms, which have now been created in idea, among the four elements.

57a

To earth, then, let us assign the cubical form; for earth is the most immoveable of the four and the most plastic of all bodies, and that which has the most stable bases must of necessity be of such a nature. Now, of the triangles which we assumed at first, that which has two equal sides is by nature more firmly based than that which has unequal sides; and of the compound figures which are formed out of either, the plane equilateral quadrangle has necessarily a more stable basis than the equilateral triangle, both in the whole and in the parts. Wherefore, in assigning this figure to earth, we adhere to probability; and to water we assign that one of the remaining forms which is the least moveable; and the most moveable of them to fire; and to air that which is intermediate. Also we assign the smallest body to fire, and the greatest to water, and the intermediate in size to air; and, again, the acutest body to fire, and the next in acuteness to air, and the third to water. Of all these elements, that which has the fewest bases must necessarily be the most moveable, for it must be the acutest and most penetrating in every way, and also the lightest as being composed of the smallest number of similar particles: and the second body has similar properties in a second degree, and the third body in the third degree. Let it be agreed, then, both according to strict reason and according to probability, that the pyramid is the solid which is the original element and seed of fire; and let us assign the element which was next in the order of generation to air, and the third to water. We must imagine all these to be so small that no single particle of any of the four kinds is seen by us on account of their smallness: but when many of them are collected together their aggregates are seen. And the ratios of their numbers, motions, and other properties, everywhere God, as far as necessity allowed or gave consent,

has exactly perfected, and harmonized in due proportion.

57d

From all that we have just been saying about the elements or kinds, the most probable conclusion is as follows: — earth, when meeting with fire and dissolved by its sharpness, whether the dissolution take place in the fire itself or perhaps in some mass of air or water, is borne hither and thither, until its parts, meeting together and mutually harmonising, again become earth; for they can never take any other form. But water, when divided by fire or by air, on re-forming, may become one part fire and two parts air; and a single volume of air divided becomes two of fire. Again, when a small body of fire is contained in a larger body of air or water or earth, and both are moving, and the fire struggling is overcome and broken up, then two volumes of fire form one volume of air; and when air is overcome and cut up into small pieces, two and a half parts of air are condensed into one part of water. Let us consider the matter in another way. When one of the other elements is fastened upon by fire, and is cut by the sharpness of its angles and sides, it coalesces with the fire, and then ceases to be cut by them any longer. For no element which is one and the same with itself can be changed by or change another of the same kind and in the same state. But so long as in the process of transition the weaker is fighting against the stronger, the dissolution continues. Again, when a few small particles, enclosed in many larger ones, are in process of decomposition and extinction, they only cease from their tendency to extinction when they consent to pass into the conquering nature, and fire becomes air and air water. But if bodies of another kind go and attack them (i.e. the small particles), the latter continue to be dissolved until, being completely forced back and dispersed, they make their escape to their own kindred, or else, being overcome and assimilated to the conquering power, they remain where they are and dwell with

their victors, and from being many become one. And owing to these affections, all things are changing their place, for by the motion of the receiving vessel the bulk of each class is distributed into its proper place; but those things which become unlike themselves and like other things, are hurried by the shaking into the place of the things to which they grow like.

57e

Now all unmixed and primary bodies are produced by such causes as these. As to the subordinate species which are included in the greater kinds, they are to be attributed to the varieties in the structure of the two original triangles. For either structure did not originally produce the triangle of one size only, but some larger and some smaller, and there are as many sizes as there are species of the four elements. Hence when they are mingled with themselves and with one another there is an endless variety of them, which those who would arrive at the probable truth of nature ought duly to consider.

58c

Unless a person comes to an understanding about the nature and conditions of rest and motion, he will meet with many difficulties in the discussion which follows. Something has been said of this matter already, and something more remains to be said, which is, that motion never exists in what is uniform. For to conceive that anything can be moved without a mover is hard or indeed impossible, and equally impossible to conceive that there can be a mover unless there be something which can be moved — motion cannot exist where either of these are wanting, and for these to be uniform is impossible; wherefore we must assign rest to uniformity and motion to the want of uniformity. Now inequality is the cause of the nature which is wanting in uniformity; and of this we have already described the origin. But there still remains the further point — why things when divided after their kinds do not cease to pass through one another and to change their place — which we will

now proceed to explain. In the revolution of the universe are comprehended all the four elements, and this being circular and having a tendency to come together, compresses everything and will not allow any place to be left void. Wherefore, also, fire above all things penetrates everywhere, and air next, as being next in rarity of the elements; and the two other elements in like manner penetrate according to their degrees of rarity. For those things which are composed of the largest particles have the largest void left in their compositions, and those which are composed of the smallest particles have the least. And the contraction caused by the compression thrusts the smaller particles into the interstices of the larger. And thus, when the small parts are placed side by side with the larger, and the lesser divide the greater and the greater unite the lesser, all the elements are borne up and down and hither and thither towards their own places; for the change in the size of each changes its position in space. And these causes generate an inequality which is always maintained, and is continually creating a perpetual motion of the elements in all time.

59c

In the next place we have to consider that there are divers kinds of fire. There are, for example, first, flame; and secondly, those emanations of flame which do not burn but only give light to the eyes; thirdly, the remains of fire, which are seen in red-hot embers after the flame has been extinguished. There are similar differences in the air; of which the brightest part is called the aether, and the most turbid sort mist and darkness; and there are various other nameless kinds which arise from the inequality of the triangles. Water, again, admits in the first place of a division into two kinds; the one liquid and the other fusile. The liquid kind is composed of the small and unequal particles of water; and moves itself and is moved by other bodies owing to the want of uniformity and the shape of its particles; whereas the fusile kind, being formed of large and

uniform particles, is more stable than the other, and is heavy and compact by reason of its uniformity. But when fire gets in and dissolves the particles and destroys the uniformity, it has greater mobility, and becoming fluid is thrust forth by the neighbouring air and spreads upon the earth; and this dissolution of the solid masses is called melting, and their spreading out upon the earth flowing. Again, when the fire goes out of the fusile substance, it does not pass into a vacuum, but into the neighbouring air; and the air which is displaced forces together the liquid and still moveable mass into the place which was occupied by the fire, and unites it with itself. Thus compressed the mass resumes its equability, and is again at unity with itself, because the fire which was the author of the inequality has retreated; and this departure of the fire is called cooling, and the coming together which follows upon it is termed congealment. Of all the kinds termed fusile, that which is the densest and is formed out of the finest and most uniform parts is that most precious possession called gold, which is hardened by filtration through rock; this is unique in kind, and has both a glittering and a yellow colour. A shoot of gold, which is so dense as to be very hard, and takes a black colour, is termed adamant. There is also another kind which has parts nearly like gold, and of which there are several species; it is denser than gold, and it contains a small and fine portion of earth, and is therefore harder, yet also lighter because of the great interstices which it has within itself; and this substance, which is one of the bright and denser kinds of water, when solidified is called copper. There is an alloy of earth mingled with it, which, when the two parts grow old and are disunited, shows itself separately and is called rust. The remaining phenomena of the same kind there will be no difficulty in reasoning out by the method of probabilities. A man may sometimes set aside meditations about eternal things, and for recreation turn to consider the truths of generation which are

probable only; he will thus gain a pleasure not to be repented of, and secure for himself while he lives a wise and moderate pastime. Let us grant ourselves this indulgence, and go through the probabilities relating to the same subjects which follow next in order.

60b

Water which is mingled with fire, so much as is fine and liquid (being so called by reason of its motion and the way in which it rolls along the ground), and soft, because its bases give way and are less stable than those of earth, when separated from fire and air and isolated, becomes more uniform, and by their retirement is compressed into itself; and if the condensation be very great, the water above the earth becomes hail, but on the earth, ice; and that which is congealed in a less degree and is only half solid, when above the earth is called snow, and when upon the earth, and condensed from dew, hoar-frost. Then, again, there are the numerous kinds of water which have been mingled with one another, and are distilled through plants which grow in the earth; and this whole class is called by the name of juices or saps. The unequal admixture of these fluids creates a variety of species; most of them are nameless, but four which are of a fiery nature are clearly distinguished and have names. First, there is wine, which warms the soul as well as the body: secondly, there is the oily nature, which is smooth and divides the visual ray, and for this reason is bright and shining and of a glistening appearance, including pitch, the juice of the castor berry, oil itself, and other things of a like kind: thirdly, there is the class of substances which expand the contracted parts of the mouth, until they return to their natural state, and by reason of this property create sweetness; — these are included under the general name of honey: and, lastly, there is a frothy nature, which differs from all juices, having a burning quality which dissolves the flesh; it is called opos (a vegetable acid).

61c

As to the kinds of earth, that which is filtered through water passes into stone in the following manner: — The water which mixes with the earth and is broken up in the process changes into air, and taking this form mounts into its own place. But as there is no surrounding vacuum it thrusts away the neighbouring air, and this being rendered heavy, and, when it is displaced, having been poured around the mass of earth, forcibly compresses it and drives it into the vacant space whence the new air had come up; and the earth when compressed by the air into an indissoluble union with water becomes rock. The fairer sort is that which is made up of equal and similar parts and is transparent; that which has the opposite qualities is inferior. But when all the watery part is suddenly drawn out by fire, a more brittle substance is formed, to which we give the name of pottery. Sometimes also moisture may remain, and the earth which has been fused by fire becomes, when cool, a certain stone of a black colour. A like separation of the water which had been copiously mingled with them may occur in two substances composed of finer particles of earth and of a briny nature; out of either of them a half-solid-body is then formed, soluble in water — the one, soda, which is used for purging away oil and earth, the other, salt, which harmonizes so well in combinations pleasing to the palate, and is, as the law testifies, a substance dear to the gods. The compounds of earth and water are not soluble by water, but by fire only, and for this reason: — Neither fire nor air melt masses of earth; for their particles, being smaller than the interstices in its structure, have plenty of room to move without forcing their way, and so they leave the earth unmelted and undissolved; but particles of water, which are larger, force a passage, and dissolve and melt the earth. Wherefore earth when not consolidated by force is dissolved by water only; when consolidated, by nothing but fire; for this is the only body which

can find an entrance. The cohesion of water again, when very strong, is dissolved by fire only — when weaker, then either by air or fire — the former entering the interstices, and the latter penetrating even the triangles. But nothing can dissolve air, when strongly condensed, which does not reach the elements or triangles; or if not strongly condensed, then only fire can dissolve it. As to bodies composed of earth and water, while the water occupies the vacant interstices of the earth in them which are compressed by force, the particles of water which approach them from without, finding no entrance, flow around the entire mass and leave it undissolved; but the particles of fire, entering into the interstices of the water, do to the water what water does to earth and fire to air (The text seems to be corrupt.), and are the sole causes of the compound body of earth and water liquefying and becoming fluid. Now these bodies are of two kinds; some of them, such as glass and the fusible sort of stones, have less water than they have earth; on the other hand, substances of the nature of wax and incense have more of water entering into their composition.

62c

I have thus shown the various classes of bodies as they are diversified by their forms and combinations and changes into one another, and now I must endeavour to set forth their affections and the causes of them. In the first place, the bodies which I have been describing are necessarily objects of sense. But we have not yet considered the origin of flesh, or what belongs to flesh, or of that part of the soul which is mortal. And these things cannot be adequately explained without also explaining the affections which are concerned with sensation, nor the latter without the former: and yet to explain them together is hardly possible; for which reason we must assume first one or the other and afterwards examine the nature of our hypothesis. In order, then, that the affections may follow regularly after the elements, let us presuppose the existence of

body and soul.

63b

First, let us enquire what we mean by saying that fire is hot; and about this we may reason from the dividing or cutting power which it exercises on our bodies. We all of us feel that fire is sharp; and we may further consider the fineness of the sides, and the sharpness of the angles, and the smallness of the particles, and the swiftness of the motion — all this makes the action of fire violent and sharp, so that it cuts whatever it meets. And we must not forget that the original figure of fire (i.e. the pyramid), more than any other form, has a dividing power which cuts our bodies into small pieces (*Kepmatizei*), and thus naturally produces that affection which we call heat; and hence the origin of the name (*thepmos*, *Kepma*). Now, the opposite of this is sufficiently manifest; nevertheless we will not fail to describe it. For the larger particles of moisture which surround the body, entering in and driving out the lesser, but not being able to take their places, compress the moist principle in us; and this from being unequal and disturbed, is forced by them into a state of rest, which is due to equability and compression. But things which are contracted contrary to nature are by nature at war, and force themselves apart; and to this war and convulsion the name of shivering and trembling is given; and the whole affection and the cause of the affection are both termed cold. That is called hard to which our flesh yields, and soft which yields to our flesh; and things are also termed hard and soft relatively to one another. That which yields has a small base; but that which rests on quadrangular bases is firmly posed and belongs to the class which offers the greatest resistance; so too does that which is the most compact and therefore most repellent. The nature of the light and the heavy will be best understood when examined in connexion with our notions of above and below; for it is quite a mistake to suppose that the universe is parted into two regions, separate from and

opposite to each other, the one a lower to which all things tend which have any bulk, and an upper to which things only ascend against their will. For as the universe is in the form of a sphere, all the extremities, being equidistant from the centre, are equally extremities, and the centre, which is equidistant from them, is equally to be regarded as the opposite of them all. Such being the nature of the world, when a person says that any of these points is above or below, may he not be justly charged with using an improper expression? For the centre of the world cannot be rightly called either above or below, but is the centre and nothing else; and the circumference is not the centre, and has in no one part of itself a different relation to the centre from what it has in any of the opposite parts. Indeed, when it is in every direction similar, how can one rightly give to it names which imply opposition? For if there were any solid body in equipoise at the centre of the universe, there would be nothing to draw it to this extreme rather than to that, for they are all perfectly similar; and if a person were to go round the world in a circle, he would often, when standing at the antipodes of his former position, speak of the same point as above and below; for, as I was saying just now, to speak of the whole which is in the form of a globe as having one part above and another below is not like a sensible man. The reason why these names are used, and the circumstances under which they are ordinarily applied by us to the division of the heavens, may be elucidated by the following supposition: — if a person were to stand in that part of the universe which is the appointed place of fire, and where there is the great mass of fire to which fiery bodies gather — if, I say, he were to ascend thither, and, having the power to do this, were to abstract particles of fire and put them in scales and weigh them, and then, raising the balance, were to draw the fire by force towards the uncongenial element of the air, it would be very evident that he could compel the smaller mass more readily than the larger; for when two things are simultaneously

raised by one and the same power, the smaller body must necessarily yield to the superior power with less reluctance than the larger; and the larger body is called heavy and said to tend downwards, and the smaller body is called light and said to tend upwards. And we may detect ourselves who are upon the earth doing precisely the same thing. For we often separate earthy natures, and sometimes earth itself, and draw them into the uncongenial element of air by force and contrary to nature, both clinging to their kindred elements. But that which is smaller yields to the impulse given by us towards the dissimilar element more easily than the larger; and so we call the former light, and the place towards which it is impelled we call above, and the contrary state and place we call heavy and below respectively. Now the relations of these must necessarily vary, because the principal masses of the different elements hold opposite positions; for that which is light, heavy, below or above in one place will be found to be and become contrary and transverse and every way diverse in relation to that which is light, heavy, below or above in an opposite place. And about all of them this has to be considered: — that the tendency of each towards its kindred element makes the body which is moved heavy, and the place towards which the motion tends below, but things which have an opposite tendency we call by an opposite name. Such are the causes which we assign to these phenomena. As to the smooth and the rough, any one who sees them can explain the reason of them to another. For roughness is hardness mingled with irregularity, and smoothness is produced by the joint effect of uniformity and density.

65b

The most important of the affections which concern the whole body remains to be considered — that is, the cause of pleasure and pain in the perceptions of which I have been speaking, and in all other things which are perceived by sense through the parts of the body, and have both pains and pleasures attendant

on them. Let us imagine the causes of every affection, whether of sense or not, to be of the following nature, remembering that we have already distinguished between the nature which is easy and which is hard to move; for this is the direction in which we must hunt the prey which we mean to take. A body which is of a nature to be easily moved, on receiving an impression however slight, spreads abroad the motion in a circle, the parts communicating with each other, until at last, reaching the principle of mind, they announce the quality of the agent. But a body of the opposite kind, being immobile, and not extending to the surrounding region, merely receives the impression, and does not stir any of the neighbouring parts; and since the parts do not distribute the original impression to other parts, it has no effect of motion on the whole animal, and therefore produces no effect on the patient. This is true of the bones and hair and other more earthy parts of the human body; whereas what was said above relates mainly to sight and hearing, because they have in them the greatest amount of fire and air. Now we must conceive of pleasure and pain in this way. An impression produced in us contrary to nature and violent, if sudden, is painful; and, again, the sudden return to nature is pleasant; but a gentle and gradual return is imperceptible and vice versa. On the other hand the impression of sense which is most easily produced is most readily felt, but is not accompanied by pleasure or pain; such, for example, are the affections of the sight, which, as we said above, is a body naturally uniting with our body in the day-time; for cuttings and burnings and other affections which happen to the sight do not give pain, nor is there pleasure when the sight returns to its natural state; but the sensations are clearest and strongest according to the manner in which the eye is affected by the object, and itself strikes and touches it; there is no violence either in the contraction or dilation of the eye. But bodies formed of larger particles yield to the agent only with a

struggle; and then they impart their motions to the whole and cause pleasure and pain — pain when alienated from their natural conditions, and pleasure when restored to them. Things which experience gradual withdrawals and emptyings of their nature, and great and sudden replenishments, fail to perceive the emptying, but are sensible of the replenishment; and so they occasion no pain, but the greatest pleasure, to the mortal part of the soul, as is manifest in the case of perfumes. But things which are changed all of a sudden, and only gradually and with difficulty return to their own nature, have effects in every way opposite to the former, as is evident in the case of burnings and cuttings of the body.

66d

Thus have we discussed the general affections of the whole body, and the names of the agents which produce them. And now I will endeavour to speak of the affections of particular parts, and the causes and agents of them, as far as I am able. In the first place let us set forth what was omitted when we were speaking of juices, concerning the affections peculiar to the tongue. These too, like most of the other affections, appear to be caused by certain contractions and dilations, but they have besides more of roughness and smoothness than is found in other affections; for whenever earthy particles enter into the small veins which are the testing instruments of the tongue, reaching to the heart, and fall upon the moist, delicate portions of flesh — when, as they are dissolved, they contract and dry up the little veins, they are astringent if they are rougher, but if not so rough, then only harsh. Those of them which are of an abstergent nature, and purge the whole surface of the tongue, if they do it in excess, and so encroach as to consume some part of the flesh itself, like potash and soda, are all termed bitter. But the particles which are deficient in the alkaline quality, and which cleanse only moderately, are called salt, and having no bitterness or roughness, are regarded as rather agreeable than

otherwise. Bodies which share in and are made smooth by the heat of the mouth, and which are inflamed, and again in turn inflame that which heats them, and which are so light that they are carried upwards to the sensations of the head, and cut all that comes in their way, by reason of these qualities in them, are all termed pungent. But when these same particles, refined by putrefaction, enter into the narrow veins, and are duly proportioned to the particles of earth and air which are there, they set them whirling about one another, and while they are in a whirl cause them to dash against and enter into one another, and so form hollows surrounding the particles that enter — which watery vessels of air (for a film of moisture, sometimes earthy, sometimes pure, is spread around the air) are hollow spheres of water; and those of them which are pure, are transparent, and are called bubbles, while those composed of the earthy liquid, which is in a state of general agitation and effervescence, are said to boil or ferment — of all these affections the cause is termed acid. And there is the opposite affection arising from an opposite cause, when the mass of entering particles, immersed in the moisture of the mouth, is congenial to the tongue, and smooths and oils over the roughness, and relaxes the parts which are unnaturally contracted, and contracts the parts which are relaxed, and disposes them all according to their nature; — that sort of remedy of violent affections is pleasant and agreeable to every man, and has the name sweet. But enough of this.

67c

The faculty of smell does not admit of differences of kind; for all smells are of a half-formed nature, and no element is so proportioned as to have any smell. The veins about the nose are too narrow to admit earth and water, and too wide to detain fire and air; and for this reason no one ever perceives the smell of any of them; but smells always proceed from bodies that are damp, or putrefying, or liquefying, or evaporating, and are

perceptible only in the intermediate state, when water is changing into air and air into water; and all of them are either vapour or mist. That which is passing out of air into water is mist, and that which is passing from water into air is vapour; and hence all smells are thinner than water and thicker than air. The proof of this is, that when there is any obstruction to the respiration, and a man draws in his breath by force, then no smell filters through, but the air without the smell alone penetrates. Wherefore the varieties of smell have no name, and they have not many, or definite and simple kinds; but they are distinguished only as painful and pleasant, the one sort irritating and disturbing the whole cavity which is situated between the head and the navel, the other having a soothing influence, and restoring this same region to an agreeable and natural condition.

In considering the third kind of sense, hearing, we must speak of the causes in which it originates. We may in general assume sound to be a blow which passes through the ears, and is transmitted by means of the air, the brain, and the blood, to the soul, and that hearing is the vibration of this blow, which begins in the head and ends in the region of the liver. The sound which moves swiftly is acute, and the sound which moves slowly is grave, and that which is regular is equable and smooth, and the reverse is harsh. A great body of sound is loud, and a small body of sound the reverse. Respecting the harmonies of sound I must hereafter speak.

68a

There is a fourth class of sensible things, having many intricate varieties, which must now be distinguished. They are called by the general name of colours, and are a flame which emanates from every sort of body, and has particles corresponding to the sense of sight. I have spoken already, in what has preceded, of the causes which generate sight, and in this place it will be

natural and suitable to give a rational theory of colours.

68e

Of the particles coming from other bodies which fall upon the sight, some are smaller and some are larger, and some are equal to the parts of the sight itself. Those which are equal are imperceptible, and we call them transparent. The larger produce contraction, the smaller dilation, in the sight, exercising a power akin to that of hot and cold bodies on the flesh, or of astringent bodies on the tongue, or of those heating bodies which we termed pungent. White and black are similar effects of contraction and dilation in another sphere, and for this reason have a different appearance. Wherefore, we ought to term white that which dilates the visual ray, and the opposite of this is black. There is also a swifter motion of a different sort of fire which strikes and dilates the ray of sight until it reaches the eyes, forcing a way through their passages and melting them, and eliciting from them a union of fire and water which we call tears, being itself an opposite fire which comes to them from an opposite direction — the inner fire flashes forth like lightning, and the outer finds a way in and is extinguished in the moisture, and all sorts of colours are generated by the mixture. This affection is termed dazzling, and the object which produces it is called bright and flashing. There is another sort of fire which is intermediate, and which reaches and mingles with the moisture of the eye without flashing; and in this, the fire mingling with the ray of the moisture, produces a colour like blood, to which we give the name of red. A bright hue mingled with red and white gives the colour called auburn (Greek). The law of proportion, however, according to which the several colours are formed, even if a man knew he would be foolish in telling, for he could not give any necessary reason, nor indeed any tolerable or probable explanation of them. Again, red, when mingled with black and white, becomes purple, but it becomes umber (Greek) when the colours are burnt as well as mingled

and the black is more thoroughly mixed with them. Flame-colour (Greek) is produced by a union of auburn and dun (Greek), and dun by an admixture of black and white; pale yellow (Greek), by an admixture of white and auburn. White and bright meeting, and falling upon a full black, become dark blue (Greek), and when dark blue mingles with white, a light blue (Greek) colour is formed, as flame-colour with black makes leek green (Greek). There will be no difficulty in seeing how and by what mixtures the colours derived from these are made according to the rules of probability. He, however, who should attempt to verify all this by experiment, would forget the difference of the human and divine nature. For God only has the knowledge and also the power which are able to combine many things into one and again resolve the one into many. But no man either is or ever will be able to accomplish either the one or the other operation.

69a

These are the elements, thus of necessity then subsisting, which the creator of the fairest and best of created things associated with himself, when he made the self-sufficing and most perfect God, using the necessary causes as his ministers in the accomplishment of his work, but himself contriving the good in all his creations. Wherefore we may distinguish two sorts of causes, the one divine and the other necessary, and may seek for the divine in all things, as far as our nature admits, with a view to the blessed life; but the necessary kind only for the sake of the divine, considering that without them and when isolated from them, these higher things for which we look cannot be apprehended or received or in any way shared by us.

Seeing, then, that we have now prepared for our use the various classes of causes which are the material out of which the remainder of our discourse must be woven, just as wood is the material of the carpenter, let us revert in a few words to the

point at which we began, and then endeavour to add on a suitable ending to the beginning of our tale.

70c

As I said at first, when all things were in disorder God created in each thing in relation to itself, and in all things in relation to each other, all the measures and harmonies which they could possibly receive. For in those days nothing had any proportion except by accident; nor did any of the things which now have names deserve to be named at all — as, for example, fire, water, and the rest of the elements. All these the creator first set in order, and out of them he constructed the universe, which was a single animal comprehending in itself all other animals, mortal and immortal. Now of the divine, he himself was the creator, but the creation of the mortal he committed to his offspring. And they, imitating him, received from him the immortal principle of the soul; and around this they proceeded to fashion a mortal body, and made it to be the vehicle of the soul, and constructed within the body a soul of another nature which was mortal, subject to terrible and irresistible affections, — first of all, pleasure, the greatest incitement to evil; then, pain, which deters from good; also rashness and fear, two foolish counsellors, anger hard to be appeased, and hope easily led astray; — these they mingled with irrational sense and with all-daring love according to necessary laws, and so framed man. Wherefore, fearing to pollute the divine any more than was absolutely unavoidable, they gave to the mortal nature a separate habitation in another part of the body, placing the neck between them to be the isthmus and boundary, which they constructed between the head and breast, to keep them apart. And in the breast, and in what is termed the thorax, they encased the mortal soul; and as the one part of this was superior and the other inferior they divided the cavity of the thorax into two parts, as the women's and men's apartments are divided in houses, and placed the midriff to be a wall of partition between

them. That part of the inferior soul which is endowed with courage and passion and loves contention they settled nearer the head, midway between the midriff and the neck, in order that it might be under the rule of reason and might join with it in controlling and restraining the desires when they are no longer willing of their own accord to obey the word of command issuing from the citadel.

70d

The heart, the knot of the veins and the fountain of the blood which races through all the limbs, was set in the place of guard, that when the might of passion was roused by reason making proclamation of any wrong assailing them from without or being perpetrated by the desires within, quickly the whole power of feeling in the body, perceiving these commands and threats, might obey and follow through every turn and alley, and thus allow the principle of the best to have the command in all of them. But the gods, foreknowing that the palpitation of the heart in the expectation of danger and the swelling and excitement of passion was caused by fire, formed and implanted as a supporter to the heart the lung, which was, in the first place, soft and bloodless, and also had within hollows like the pores of a sponge, in order that by receiving the breath and the drink, it might give coolness and the power of respiration and alleviate the heat. Wherefore they cut the air-channels leading to the lung, and placed the lung about the heart as a soft spring, that, when passion was rife within, the heart, beating against a yielding body, might be cooled and suffer less, and might thus become more ready to join with passion in the service of reason.

71d

The part of the soul which desires meats and drinks and the other things of which it has need by reason of the bodily nature, they placed between the midriff and the boundary of the navel, contriving in all this region a sort of manger for the food of the body; and there they bound it down like a wild animal which

was chained up with man, and must be nourished if man was to exist. They appointed this lower creation his place here in order that he might be always feeding at the manger, and have his dwelling as far as might be from the council-chamber, making as little noise and disturbance as possible, and permitting the best part to advise quietly for the good of the whole. And knowing that this lower principle in man would not comprehend reason, and even if attaining to some degree of perception would never naturally care for rational notions, but that it would be led away by phantoms and visions night and day, — to be a remedy for this, God combined with it the liver, and placed it in the house of the lower nature, contriving that it should be solid and smooth, and bright and sweet, and should also have a bitter quality, in order that the power of thought, which proceeds from the mind, might be reflected as in a mirror which receives likenesses of objects and gives back images of them to the sight; and so might strike terror into the desires, when, making use of the bitter part of the liver, to which it is akin, it comes threatening and invading, and diffusing this bitter element swiftly through the whole liver produces colours like bile, and contracting every part makes it wrinkled and rough; and twisting out of its right place and contorting the lobe and closing and shutting up the vessels and gates, causes pain and loathing. And the converse happens when some gentle inspiration of the understanding pictures images of an opposite character, and allays the bile and bitterness by refusing to stir or touch the nature opposed to itself, but by making use of the natural sweetness of the liver, corrects all things and makes them to be right and smooth and free, and renders the portion of the soul which resides about the liver happy and joyful, enabling it to pass the night in peace, and to practise divination in sleep, inasmuch as it has no share in mind and reason. For the authors of our being, remembering the command of their father when he bade them create the human race as good as they

could, that they might correct our inferior parts and make them to attain a measure of truth, placed in the liver the seat of divination. And herein is a proof that God has given the art of divination not to the wisdom, but to the foolishness of man. No man, when in his wits, attains prophetic truth and inspiration; but when he receives the inspired word, either his intelligence is enthralled in sleep, or he is demented by some distemper or possession. And he who would understand what he remembers to have been said, whether in a dream or when he was awake, by the prophetic and inspired nature, or would determine by reason the meaning of the apparitions which he has seen, and what indications they afford to this man or that, of past, present or future good and evil, must first recover his wits. But, while he continues demented, he cannot judge of the visions which he sees or the words which he utters; the ancient saying is very true, that ‘only a man who has his wits can act or judge about himself and his own affairs.’ And for this reason it is customary to appoint interpreters to be judges of the true inspiration. Some persons call them prophets; they are quite unaware that they are only the expositors of dark sayings and visions, and are not to be called prophets at all, but only interpreters of prophecy.

72d

Such is the nature of the liver, which is placed as we have described in order that it may give prophetic intimations. During the life of each individual these intimations are plainer, but after his death the liver becomes blind, and delivers oracles too obscure to be intelligible. The neighbouring organ (the spleen) is situated on the left-hand side, and is constructed with a view of keeping the liver bright and pure, — like a napkin, always ready prepared and at hand to clean the mirror. And hence, when any impurities arise in the region of the liver by reason of disorders of the body, the loose nature of the spleen, which is composed of a hollow and bloodless tissue, receives

them all and clears them away, and when filled with the unclean matter, swells and festers, but, again, when the body is purged, settles down into the same place as before, and is humbled.

73b

Concerning the soul, as to which part is mortal and which divine, and how and why they are separated, and where located, if God acknowledges that we have spoken the truth, then, and then only, can we be confident; still, we may venture to assert that what has been said by us is probable, and will be rendered more probable by investigation. Let us assume thus much.

The creation of the rest of the body follows next in order, and this we may investigate in a similar manner. And it appears to be very meet that the body should be framed on the following principles: — The authors of our race were aware that we should be intemperate in eating and drinking, and take a good deal more than was necessary or proper, by reason of gluttony. In order then that disease might not quickly destroy us, and lest our mortal race should perish without fulfilling its end — intending to provide against this, the gods made what is called the lower belly, to be a receptacle for the superfluous meat and drink, and formed the convolution of the bowels, so that the food might be prevented from passing quickly through and compelling the body to require more food, thus producing insatiable gluttony, and making the whole race an enemy to philosophy and music, and rebellious against the divinest element within us.

73e

The bones and flesh, and other similar parts of us, were made as follows. The first principle of all of them was the generation of the marrow. For the bonds of life which unite the soul with the body are made fast there, and they are the root and foundation of the human race. The marrow itself is created out of other

materials: God took such of the primary triangles as were straight and smooth, and were adapted by their perfection to produce fire and water, and air and earth — these, I say, he separated from their kinds, and mingling them in due proportions with one another, made the marrow out of them to be a universal seed of the whole race of mankind; and in this seed he then planted and enclosed the souls, and in the original distribution gave to the marrow as many and various forms as the different kinds of souls were hereafter to receive. That which, like a field, was to receive the divine seed, he made round every way, and called that portion of the marrow, brain, intending that, when an animal was perfected, the vessel containing this substance should be the head; but that which was intended to contain the remaining and mortal part of the soul he distributed into figures at once round and elongated, and he called them all by the name ‘marrow’; and to these, as to anchors, fastening the bonds of the whole soul, he proceeded to fashion around them the entire framework of our body, constructing for the marrow, first of all a complete covering of bone.

75b

Bone was composed by him in the following manner. Having sifted pure and smooth earth he kneaded it and wetted it with marrow, and after that he put it into fire and then into water, and once more into fire and again into water — in this way by frequent transfers from one to the other he made it insoluble by either. Out of this he fashioned, as in a lathe, a globe made of bone, which he placed around the brain, and in this he left a narrow opening; and around the marrow of the neck and back he formed vertebrae which he placed under one another like pivots, beginning at the head and extending through the whole of the trunk. Thus wishing to preserve the entire seed, he enclosed it in a stone-like casing, inserting joints, and using in the formation of them the power of the other or diverse as an

intermediate nature, that they might have motion and flexure. Then again, considering that the bone would be too brittle and inflexible, and when heated and again cooled would soon mortify and destroy the seed within — having this in view, he contrived the sinews and the flesh, that so binding all the members together by the sinews, which admitted of being stretched and relaxed about the vertebrae, he might thus make the body capable of flexion and extension, while the flesh would serve as a protection against the summer heat and against the winter cold, and also against falls, softly and easily yielding to external bodies, like articles made of felt; and containing in itself a warm moisture which in summer exudes and makes the surface damp, would impart a natural coolness to the whole body; and again in winter by the help of this internal warmth would form a very tolerable defence against the frost which surrounds it and attacks it from without. He who modelled us, considering these things, mixed earth with fire and water and blended them; and making a ferment of acid and salt, he mingled it with them and formed soft and succulent flesh. As for the sinews, he made them of a mixture of bone and unfermented flesh, attempered so as to be in a mean, and gave them a yellow colour; wherefore the sinews have a firmer and more glutinous nature than flesh, but a softer and moister nature than the bones. With these God covered the bones and marrow, binding them together by sinews, and then enshrouded them all in an upper covering of flesh. The more living and sensitive of the bones he enclosed in the thinnest film of flesh, and those which had the least life within them in the thickest and most solid flesh. So again on the joints of the bones, where reason indicated that no more was required, he placed only a thin covering of flesh, that it might not interfere with the flexion of our bodies and make them unwieldy because difficult to move; and also that it might not, by being crowded and pressed and matted together, destroy sensation by reason

of its hardness, and impair the memory and dull the edge of intelligence. Wherefore also the thighs and the shanks and the hips, and the bones of the arms and the forearms, and other parts which have no joints, and the inner bones, which on account of the rarity of the soul in the marrow are destitute of reason — all these are abundantly provided with flesh; but such as have mind in them are in general less fleshy, except where the creator has made some part solely of flesh in order to give sensation, — as, for example, the tongue. But commonly this is not the case. For the nature which comes into being and grows up in us by a law of necessity, does not admit of the combination of solid bone and much flesh with acute perceptions. More than any other part the framework of the head would have had them, if they could have co-existed, and the human race, having a strong and fleshy and sinewy head, would have had a life twice or many times as long as it now has, and also more healthy and free from pain. But our creators, considering whether they should make a longer-lived race which was worse, or a shorter-lived race which was better, came to the conclusion that every one ought to prefer a shorter span of life, which was better, to a longer one, which was worse; and therefore they covered the head with thin bone, but not with flesh and sinews, since it had no joints; and thus the head was added, having more wisdom and sensation than the rest of the body, but also being in every man far weaker. For these reasons and after this manner God placed the sinews at the extremity of the head, in a circle round the neck, and glued them together by the principle of likeness and fastened the extremities of the jawbones to them below the face, and the other sinews he dispersed throughout the body, fastening limb to limb. The framers of us framed the mouth, as now arranged, having teeth and tongue and lips, with a view to the necessary and the good contriving the way in for necessary purposes, the way out for the best purposes; for that is necessary which enters

in and gives food to the body; but the river of speech, which flows out of a man and ministers to the intelligence, is the fairest and noblest of all streams. Still the head could neither be left a bare frame of bones, on account of the extremes of heat and cold in the different seasons, nor yet be allowed to be wholly covered, and so become dull and senseless by reason of an overgrowth of flesh. The fleshy nature was not therefore wholly dried up, but a large sort of peel was parted off and remained over, which is now called the skin. This met and grew by the help of the cerebral moisture, and became the circular envelopment of the head. And the moisture, rising up under the sutures, watered and closed in the skin upon the crown, forming a sort of knot. The diversity of the sutures was caused by the power of the courses of the soul and of the food, and the more these struggled against one another the more numerous they became, and fewer if the struggle were less violent. This skin the divine power pierced all round with fire, and out of the punctures which were thus made the moisture issued forth, and the liquid and heat which was pure came away, and a mixed part which was composed of the same material as the skin, and had a fineness equal to the punctures, was borne up by its own impulse and extended far outside the head, but being too slow to escape, was thrust back by the external air, and rolled up underneath the skin, where it took root. Thus the hair sprang up in the skin, being akin to it because it is like threads of leather, but rendered harder and closer through the pressure of the cold, by which each hair, while in process of separation from the skin, is compressed and cooled. Wherefore the creator formed the head hairy, making use of the causes which I have mentioned, and reflecting also that instead of flesh the brain needed the hair to be a light covering or guard, which would give shade in summer and shelter in winter, and at the same time would not impede our quickness of perception. From the combination of sinew, skin, and bone, in the structure of the

finger, there arises a triple compound, which, when dried up, takes the form of one hard skin partaking of all three natures, and was fabricated by these second causes, but designed by mind which is the principal cause with an eye to the future. For our creators well knew that women and other animals would some day be framed out of men, and they further knew that many animals would require the use of nails for many purposes; wherefore they fashioned in men at their first creation the rudiments of nails. For this purpose and for these reasons they caused skin, hair, and nails to grow at the extremities of the limbs.

77c

And now that all the parts and members of the mortal animal had come together, since its life of necessity consisted of fire and breath, and it therefore wasted away by dissolution and depletion, the gods contrived the following remedy: They mingled a nature akin to that of man with other forms and perceptions, and thus created another kind of animal. These are the trees and plants and seeds which have been improved by cultivation and are now domesticated among us; anciently there were only the wild kinds, which are older than the cultivated. For everything that partakes of life may be truly called a living being, and the animal of which we are now speaking partakes of the third kind of soul, which is said to be seated between the midriff and the navel, having no part in opinion or reason or mind, but only in feelings of pleasure and pain and the desires which accompany them. For this nature is always in a passive state, revolving in and about itself, repelling the motion from without and using its own, and accordingly is not endowed by nature with the power of observing or reflecting on its own concerns. Wherefore it lives and does not differ from a living being, but is fixed and rooted in the same spot, having no power of self-motion.

77e

Now after the superior powers had created all these natures to be food for us who are of the inferior nature, they cut various channels through the body as through a garden, that it might be watered as from a running stream. In the first place, they cut two hidden channels or veins down the back where the skin and the flesh join, which answered severally to the right and left side of the body. These they let down along the backbone, so as to have the marrow of generation between them, where it was most likely to flourish, and in order that the stream coming down from above might flow freely to the other parts, and equalize the irrigation. In the next place, they divided the veins about the head, and interlacing them, they sent them in opposite directions; those coming from the right side they sent to the left of the body, and those from the left they diverted towards the right, so that they and the skin might together form a bond which should fasten the head to the body, since the crown of the head was not encircled by sinews; and also in order that the sensations from both sides might be distributed over the whole body. And next, they ordered the water-courses of the body in a manner which I will describe, and which will be more easily understood if we begin by admitting that all things which have lesser parts retain the greater, but the greater cannot retain the lesser. Now of all natures fire has the smallest parts, and therefore penetrates through earth and water and air and their compounds, nor can anything hold it. And a similar principle applies to the human belly; for when meats and drinks enter it, it holds them, but it cannot hold air and fire, because the particles of which they consist are smaller than its own structure.

79a

These elements, therefore, God employed for the sake of distributing moisture from the belly into the veins, weaving together a network of fire and air like a wheel, having at the entrance two lesser wheels; further he constructed one of these

with two openings, and from the lesser weels he extended cords reaching all round to the extremities of the network. All the interior of the net he made of fire, but the lesser weels and their cavity, of air. The network he took and spread over the newly-formed animal in the following manner: — He let the lesser weels pass into the mouth; there were two of them, and one he let down by the air-pipes into the lungs, the other by the side of the air-pipes into the belly. The former he divided into two branches, both of which he made to meet at the channels of the nose, so that when the way through the mouth did not act, the streams of the mouth as well were replenished through the nose. With the other cavity (i.e. of the greater weel) he enveloped the hollow parts of the body, and at one time he made all this to flow into the lesser weels, quite gently, for they are composed of air, and at another time he caused the lesser weels to flow back again; and the net he made to find a way in and out through the pores of the body, and the rays of fire which are bound fast within followed the passage of the air either way, never at any time ceasing so long as the mortal being holds together. This process, as we affirm, the name-giver named inspiration and expiration. And all this movement, active as well as passive, takes place in order that the body, being watered and cooled, may receive nourishment and life; for when the respiration is going in and out, and the fire, which is fast bound within, follows it, and ever and anon moving to and fro, enters through the belly and reaches the meat and drink, it dissolves them, and dividing them into small portions and guiding them through the passages where it goes, pumps them as from a fountain into the channels of the veins, and makes the stream of the veins flow through the body as through a conduit.

80a

Let us once more consider the phenomena of respiration, and enquire into the causes which have made it what it is. They are

as follows: — Seeing that there is no such thing as a vacuum into which any of those things which are moved can enter, and the breath is carried from us into the external air, the next point is, as will be clear to every one, that it does not go into a vacant space, but pushes its neighbour out of its place, and that which is thrust out in turn drives out its neighbour; and in this way everything of necessity at last comes round to that place from whence the breath came forth, and enters in there, and following the breath, fills up the vacant space; and this goes on like the rotation of a wheel, because there can be no such thing as a vacuum. Wherefore also the breast and the lungs, when they emit the breath, are replenished by the air which surrounds the body and which enters in through the pores of the flesh and is driven round in a circle; and again, the air which is sent away and passes out through the body forces the breath inwards through the passage of the mouth and the nostrils. Now the origin of this movement may be supposed to be as follows. In the interior of every animal the hottest part is that which is around the blood and veins; it is in a manner an internal fountain of fire, which we compare to the network of a creel, being woven all of fire and extended through the centre of the body, while the outer parts are composed of air. Now we must admit that heat naturally proceeds outward to its own place and to its kindred element; and as there are two exits for the heat, the one out through the body, and the other through the mouth and nostrils, when it moves towards the one, it drives round the air at the other, and that which is driven round falls into the fire and becomes warm, and that which goes forth is cooled. But when the heat changes its place, and the particles at the other exit grow warmer, the hotter air inclining in that direction and carried towards its native element, fire, pushes round the air at the other; and this being affected in the same way and communicating the same impulse, a circular motion swaying to and fro is produced by the double process, which we call

inspiration and expiration.

80d

The phenomena of medical cupping-glasses and of the swallowing of drink and of the projection of bodies, whether discharged in the air or bowled along the ground, are to be investigated on a similar principle; and swift and slow sounds, which appear to be high and low, and are sometimes discordant on account of their inequality, and then again harmonical on account of the equality of the motion which they excite in us. For when the motions of the antecedent swifter sounds begin to pause and the two are equalized, the slower sounds overtake the swifter and then propel them. When they overtake them they do not intrude a new and discordant motion, but introduce the beginnings of a slower, which answers to the swifter as it dies away, thus producing a single mixed expression out of high and low, whence arises a pleasure which even the unwise feel, and which to the wise becomes a higher sort of delight, being an imitation of divine harmony in mortal motions. Moreover, as to the flowing of water, the fall of the thunderbolt, and the marvels that are observed about the attraction of amber and the Heracleian stones, — in none of these cases is there any attraction; but he who investigates rightly, will find that such wonderful phenomena are attributable to the combination of certain conditions — the non-existence of a vacuum, the fact that objects push one another round, and that they change places, passing severally into their proper positions as they are divided or combined.

Such as we have seen, is the nature and such are the causes of respiration, — the subject in which this discussion originated. For the fire cuts the food and following the breath surges up within, fire and breath rising together and filling the veins by drawing up out of the belly and pouring into them the cut portions of the food; and so the streams of food are kept flowing

through the whole body in all animals. And fresh cuttings from kindred substances, whether the fruits of the earth or herb of the field, which God planted to be our daily food, acquire all sorts of colours by their inter-mixture; but red is the most pervading of them, being created by the cutting action of fire and by the impression which it makes on a moist substance; and hence the liquid which circulates in the body has a colour such as we have described. The liquid itself we call blood, which nourishes the flesh and the whole body, whence all parts are watered and empty places filled.

81b

Now the process of repletion and evacuation is effected after the manner of the universal motion by which all kindred substances are drawn towards one another. For the external elements which surround us are always causing us to consume away, and distributing and sending off like to like; the particles of blood, too, which are divided and contained within the frame of the animal as in a sort of heaven, are compelled to imitate the motion of the universe. Each, therefore, of the divided parts within us, being carried to its kindred nature, replenishes the void. When more is taken away than flows in, then we decay, and when less, we grow and increase.

82a

The frame of the entire creature when young has the triangles of each kind new, and may be compared to the keel of a vessel which is just off the stocks; they are locked firmly together and yet the whole mass is soft and delicate, being freshly formed of marrow and nurtured on milk. Now when the triangles out of which meats and drinks are composed come in from without, and are comprehended in the body, being older and weaker than the triangles already there, the frame of the body gets the better of them and its newer triangles cut them up, and so the animal grows great, being nourished by a multitude of similar particles. But when the roots of the triangles are loosened by

having undergone many conflicts with many things in the course of time, they are no longer able to cut or assimilate the food which enters, but are themselves easily divided by the bodies which come in from without. In this way every animal is overcome and decays, and this affection is called old age. And at last, when the bonds by which the triangles of the marrow are united no longer hold, and are parted by the strain of existence, they in turn loosen the bonds of the soul, and she, obtaining a natural release, flies away with joy. For that which takes place according to nature is pleasant, but that which is contrary to nature is painful. And thus death, if caused by disease or produced by wounds, is painful and violent; but that sort of death which comes with old age and fulfils the debt of nature is the easiest of deaths, and is accompanied with pleasure rather than with pain.

83c

Now every one can see whence diseases arise. There are four natures out of which the body is compacted, earth and fire and water and air, and the unnatural excess or defect of these, or the change of any of them from its own natural place into another, or — since there are more kinds than one of fire and of the other elements — the assumption by any of these of a wrong kind, or any similar irregularity, produces disorders and diseases; for when any of them is produced or changed in a manner contrary to nature, the parts which were previously cool grow warm, and those which were dry become moist, and the light become heavy, and the heavy light; all sorts of changes occur. For, as we affirm, a thing can only remain the same with itself, whole and sound, when the same is added to it, or subtracted from it, in the same respect and in the same manner and in due proportion; and whatever comes or goes away in violation of these laws causes all manner of changes and infinite diseases and corruptions. Now there is a second class of structures which are also natural, and this affords a second

opportunity of observing diseases to him who would understand them. For whereas marrow and bone and flesh and sinews are composed of the four elements, and the blood, though after another manner, is likewise formed out of them, most diseases originate in the way which I have described; but the worst of all owe their severity to the fact that the generation of these substances proceeds in a wrong order; they are then destroyed. For the natural order is that the flesh and sinews should be made of blood, the sinews out of the fibres to which they are akin, and the flesh out of the clots which are formed when the fibres are separated. And the glutinous and rich matter which comes away from the sinews and the flesh, not only glues the flesh to the bones, but nourishes and imparts growth to the bone which surrounds the marrow; and by reason of the solidity of the bones, that which filters through consists of the purest and smoothest and oiliest sort of triangles, dropping like dew from the bones and watering the marrow. Now when each process takes place in this order, health commonly results; when in the opposite order, disease. For when the flesh becomes decomposed and sends back the wasting substance into the veins, then an over-supply of blood of diverse kinds, mingling with air in the veins, having variegated colours and bitter properties, as well as acid and saline qualities, contains all sorts of bile and serum and phlegm. For all things go the wrong way, and having become corrupted, first they taint the blood itself, and then ceasing to give nourishment to the body they are carried along the veins in all directions, no longer preserving the order of their natural courses, but at war with themselves, because they receive no good from one another, and are hostile to the abiding constitution of the body, which they corrupt and dissolve. The oldest part of the flesh which is corrupted, being hard to decompose, from long burning grows black, and from being everywhere corroded becomes bitter, and is injurious to every

part of the body which is still uncorrupted. Sometimes, when the bitter element is refined away, the black part assumes an acidity which takes the place of the bitterness; at other times the bitterness being tinged with blood has a redder colour; and this, when mixed with black, takes the hue of grass; and again, an auburn colour mingles with the bitter matter when new flesh is decomposed by the fire which surrounds the internal flame; — to all which symptoms some physician perhaps, or rather some philosopher, who had the power of seeing in many dissimilar things one nature deserving of a name, has assigned the common name of bile. But the other kinds of bile are variously distinguished by their colours. As for serum, that sort which is the watery part of blood is innocent, but that which is a secretion of black and acid bile is malignant when mingled by the power of heat with any salt substance, and is then called acid phlegm. Again, the substance which is formed by the liquefaction of new and tender flesh when air is present, if inflated and encased in liquid so as to form bubbles, which separately are invisible owing to their small size, but when collected are of a bulk which is visible, and have a white colour arising out of the generation of foam — all this decomposition of tender flesh when intermingled with air is termed by us white phlegm. And the whey or sediment of newly-formed phlegm is sweat and tears, and includes the various daily discharges by which the body is purified. Now all these become causes of disease when the blood is not replenished in a natural manner by food and drink but gains bulk from opposite sources in violation of the laws of nature. When the several parts of the flesh are separated by disease, if the foundation remains, the power of the disorder is only half as great, and there is still a prospect of an easy recovery; but when that which binds the flesh to the bones is diseased, and no longer being separated from the muscles and sinews, ceases to give nourishment to the bone and to unite flesh and bone, and from being oily and

smooth and glutinous becomes rough and salt and dry, owing to bad regimen, then all the substance thus corrupted crumbles away under the flesh and the sinews, and separates from the bone, and the fleshy parts fall away from their foundation and leave the sinews bare and full of brine, and the flesh again gets into the circulation of the blood and makes the previously-mentioned disorders still greater. And if these bodily affections be severe, still worse are the prior disorders; as when the bone itself, by reason of the density of the flesh, does not obtain sufficient air, but becomes mouldy and hot and gangrened and receives no nutriment, and the natural process is inverted, and the bone crumbling passes into the food, and the food into the flesh, and the flesh again falling into the blood makes all maladies that may occur more virulent than those already mentioned. But the worst case of all is when the marrow is diseased, either from excess or defect; and this is the cause of the very greatest and most fatal disorders, in which the whole course of the body is reversed.

84c

There is a third class of diseases which may be conceived of as arising in three ways; for they are produced sometimes by wind, and sometimes by phlegm, and sometimes by bile. When the lung, which is the dispenser of the air to the body, is obstructed by rheums and its passages are not free, some of them not acting, while through others too much air enters, then the parts which are unrefreshed by air corrode, while in other parts the excess of air forcing its way through the veins distorts them and decomposing the body is enclosed in the midst of it and occupies the midriff; thus numberless painful diseases are produced, accompanied by copious sweats. And oftentimes when the flesh is dissolved in the body, wind, generated within and unable to escape, is the source of quite as much pain as the air coming in from without; but the greatest pain is felt when the wind gets about the sinews and the veins of the shoulders,

and swells them up, and so twists back the great tendons and the sinews which are connected with them. These disorders are called tetanus and opisthotonus, by reason of the tension which accompanies them. The cure of them is difficult; relief is in most cases given by fever supervening. The white phlegm, though dangerous when detained within by reason of the air-bubbles, yet if it can communicate with the outside air, is less severe, and only discolours the body, generating leprous eruptions and similar diseases. When it is mingled with black bile and dispersed about the courses of the head, which are the divinest part of us, the attack if coming on in sleep, is not so severe; but when assailing those who are awake it is hard to be got rid of, and being an affection of a sacred part, is most justly called sacred. An acid and salt phlegm, again, is the source of all those diseases which take the form of catarrh, but they have many names because the places into which they flow are manifold.

85b

Inflammations of the body come from burnings and inflamings, and all of them originate in bile. When bile finds a means of discharge, it boils up and sends forth all sorts of tumours; but when imprisoned within, it generates many inflammatory diseases, above all when mingled with pure blood; since it then displaces the fibres which are scattered about in the blood and are designed to maintain the balance of rare and dense, in order that the blood may not be so liquefied by heat as to exude from the pores of the body, nor again become too dense and thus find a difficulty in circulating through the veins. The fibres are so constituted as to maintain this balance; and if any one brings them all together when the blood is dead and in process of cooling, then the blood which remains becomes fluid, but if they are left alone, they soon congeal by reason of the surrounding cold. The fibres having this power over the blood, bile, which is only stale blood, and which from being flesh is dissolved again into blood, at the first influx coming in little by little, hot and

liquid, is congealed by the power of the fibres; and so congealing and made to cool, it produces internal cold and shuddering. When it enters with more of a flood and overcomes the fibres by its heat, and boiling up throws them into disorder, if it have power enough to maintain its supremacy, it penetrates the marrow and burns up what may be termed the cables of the soul, and sets her free; but when there is not so much of it, and the body though wasted still holds out, the bile is itself mastered, and is either utterly banished, or is thrust through the veins into the lower or upper belly, and is driven out of the body like an exile from a state in which there has been civil war; whence arise diarrhoeas and dysenteries, and all such disorders. When the constitution is disordered by excess of fire, continuous heat and fever are the result; when excess of air is the cause, then the fever is quotidian; when of water, which is a more sluggish element than either fire or air, then the fever is a tertian; when of earth, which is the most sluggish of the four, and is only purged away in a four-fold period, the result is a quartan fever, which can with difficulty be shaken off.

87a

Such is the manner in which diseases of the body arise; the disorders of the soul, which depend upon the body, originate as follows. We must acknowledge disease of the mind to be a want of intelligence; and of this there are two kinds; to wit, madness and ignorance. In whatever state a man experiences either of them, that state may be called disease; and excessive pains and pleasures are justly to be regarded as the greatest diseases to which the soul is liable. For a man who is in great joy or in great pain, in his unreasonable eagerness to attain the one and to avoid the other, is not able to see or to hear anything rightly; but he is mad, and is at the time utterly incapable of any participation in reason. He who has the seed about the spinal marrow too plentiful and overflowing, like a tree overladen with fruit, has many throes, and also obtains many pleasures in

his desires and their offspring, and is for the most part of his life deranged, because his pleasures and pains are so very great; his soul is rendered foolish and disordered by his body; yet he is regarded not as one diseased, but as one who is voluntarily bad, which is a mistake. The truth is that the intemperance of love is a disease of the soul due chiefly to the moisture and fluidity which is produced in one of the elements by the loose consistency of the bones. And in general, all that which is termed the incontinence of pleasure and is deemed a reproach under the idea that the wicked voluntarily do wrong is not justly a matter for reproach. For no man is voluntarily bad; but the bad become bad by reason of an ill disposition of the body and bad education, things which are hateful to every man and happen to him against his will. And in the case of pain too in like manner the soul suffers much evil from the body. For where the acid and briny phlegm and other bitter and bilious humours wander about in the body, and find no exit or escape, but are pent up within and mingle their own vapours with the motions of the soul, and are blended with them, they produce all sorts of diseases, more or fewer, and in every degree of intensity; and being carried to the three places of the soul, whichever they may severally assail, they create infinite varieties of ill-temper and melancholy, of rashness and cowardice, and also of forgetfulness and stupidity. Further, when to this evil constitution of body evil forms of government are added and evil discourses are uttered in private as well as in public, and no sort of instruction is given in youth to cure these evils, then all of us who are bad become bad from two causes which are entirely beyond our control. In such cases the planters are to blame rather than the plants, the educators rather than the educated. But however that may be, we should endeavour as far as we can by education, and studies, and learning, to avoid vice and attain virtue; this, however, is part of another subject.

There is a corresponding enquiry concerning the mode of treatment by which the mind and the body are to be preserved, about which it is meet and right that I should say a word in turn; for it is more our duty to speak of the good than of the evil. Everything that is good is fair, and the fair is not without proportion, and the animal which is to be fair must have due proportion. Now we perceive lesser symmetries or proportions and reason about them, but of the highest and greatest we take no heed; for there is no proportion or disproportion more productive of health and disease, and virtue and vice, than that between soul and body. This however we do not perceive, nor do we reflect that when a weak or small frame is the vehicle of a great and mighty soul, or conversely, when a little soul is encased in a large body, then the whole animal is not fair, for it lacks the most important of all symmetries; but the due proportion of mind and body is the fairest and loveliest of all sights to him who has the seeing eye. Just as a body which has a leg too long, or which is unsymmetrical in some other respect, is an unpleasant sight, and also, when doing its share of work, is much distressed and makes convulsive efforts, and often stumbles through awkwardness, and is the cause of infinite evil to its own self — in like manner we should conceive of the double nature which we call the living being; and when in this compound there is an impassioned soul more powerful than the body, that soul, I say, convulses and fills with disorders the whole inner nature of man; and when eager in the pursuit of some sort of learning or study, causes wasting; or again, when teaching or disputing in private or in public, and strifes and controversies arise, inflames and dissolves the composite frame of man and introduces rheums; and the nature of this phenomenon is not understood by most professors of medicine, who ascribe it to the opposite of the real cause. And once more, when a body large and too strong for the soul is united to a small and weak intelligence, then inasmuch as there are two

desires natural to man, — one of food for the sake of the body, and one of wisdom for the sake of the diviner part of us — then, I say, the motions of the stronger, getting the better and increasing their own power, but making the soul dull, and stupid, and forgetful, engender ignorance, which is the greatest of diseases. There is one protection against both kinds of disproportion: — that we should not move the body without the soul or the soul without the body, and thus they will be on their guard against each other, and be healthy and well balanced. And therefore the mathematician or any one else whose thoughts are much absorbed in some intellectual pursuit, must allow his body also to have due exercise, and practise gymnastic; and he who is careful to fashion the body, should in turn impart to the soul its proper motions, and should cultivate music and all philosophy, if he would deserve to be called truly fair and truly good. And the separate parts should be treated in the same manner, in imitation of the pattern of the universe; for as the body is heated and also cooled within by the elements which enter into it, and is again dried up and moistened by external things, and experiences these and the like affections from both kinds of motions, the result is that the body if given up to motion when in a state of quiescence is overmastered and perishes; but if any one, in imitation of that which we call the foster-mother and nurse of the universe, will not allow the body ever to be inactive, but is always producing motions and agitations through its whole extent, which form the natural defence against other motions both internal and external, and by moderate exercise reduces to order according to their affinities the particles and affections which are wandering about the body, as we have already said when speaking of the universe, he will not allow enemy placed by the side of enemy to stir up wars and disorders in the body, but he will place friend by the side of friend, so as to create health. Now of all motions that is the best which is produced in a thing by itself,

for it is most akin to the motion of thought and of the universe; but that motion which is caused by others is not so good, and worst of all is that which moves the body, when at rest, in parts only and by some external agency. Wherefore of all modes of purifying and re-uniting the body the best is gymnastic; the next best is a surging motion, as in sailing or any other mode of conveyance which is not fatiguing; the third sort of motion may be of use in a case of extreme necessity, but in any other will be adopted by no man of sense: I mean the purgative treatment of physicians; for diseases unless they are very dangerous should not be irritated by medicines, since every form of disease is in a manner akin to the living being, whose complex frame has an appointed term of life. For not the whole race only, but each individual — barring inevitable accidents — comes into the world having a fixed span, and the triangles in us are originally framed with power to last for a certain time, beyond which no man can prolong his life. And this holds also of the constitution of diseases; if any one regardless of the appointed time tries to subdue them by medicine, he only aggravates and multiplies them. Wherefore we ought always to manage them by regimen, as far as a man can spare the time, and not provoke a disagreeable enemy by medicines.

89d

Enough of the composite animal, and of the body which is a part of him, and of the manner in which a man may train and be trained by himself so as to live most according to reason: and we must above and before all provide that the element which is to train him shall be the fairest and best adapted to that purpose. A minute discussion of this subject would be a serious task; but if, as before, I am to give only an outline, the subject may not unfitly be summed up as follows.

I have often remarked that there are three kinds of soul located within us, having each of them motions, and I must now repeat

in the fewest words possible, that one part, if remaining inactive and ceasing from its natural motion, must necessarily become very weak, but that which is trained and exercised, very strong. Wherefore we should take care that the movements of the different parts of the soul should be in due proportion.

90b

And we should consider that God gave the sovereign part of the human soul to be the divinity of each one, being that part which, as we say, dwells at the top of the body, and inasmuch as we are a plant not of an earthly but of a heavenly growth, raises us from earth to our kindred who are in heaven. And in this we say truly; for the divine power suspended the head and root of us from that place where the generation of the soul first began, and thus made the whole body upright. When a man is always occupied with the cravings of desire and ambition, and is eagerly striving to satisfy them, all his thoughts must be mortal, and, as far as it is possible altogether to become such, he must be mortal every whit, because he has cherished his mortal part. But he who has been earnest in the love of knowledge and of true wisdom, and has exercised his intellect more than any other part of him, must have thoughts immortal and divine, if he attain truth, and in so far as human nature is capable of sharing in immortality, he must altogether be immortal; and since he is ever cherishing the divine power, and has the divinity within him in perfect order, he will be perfectly happy. Now there is only one way of taking care of things, and this is to give to each the food and motion which are natural to it. And the motions which are naturally akin to the divine principle within us are the thoughts and revolutions of the universe. These each man should follow, and correct the courses of the head which were corrupted at our birth, and by learning the harmonies and revolutions of the universe, should assimilate the thinking being to the thought, renewing his original nature, and having assimilated them should attain to that perfect life

which the gods have set before mankind, both for the present and the future.

90e

Thus our original design of discoursing about the universe down to the creation of man is nearly completed. A brief mention may be made of the generation of other animals, so far as the subject admits of brevity; in this manner our argument will best attain a due proportion. On the subject of animals, then, the following remarks may be offered. Of the men who came into the world, those who were cowards or led unrighteous lives may with reason be supposed to have changed into the nature of women in the second generation. And this was the reason why at that time the gods created in us the desire of sexual intercourse, contriving in man one animated substance, and in woman another, which they formed respectively in the following manner. The outlet for drink by which liquids pass through the lung under the kidneys and into the bladder, which receives and then by the pressure of the air emits them, was so fashioned by them as to penetrate also into the body of the marrow, which passes from the head along the neck and through the back, and which in the preceding discourse we have named the seed. And the seed having life, and becoming endowed with respiration, produces in that part in which it respire a lively desire of emission, and thus creates in us the love of procreation. Wherefore also in men the organ of generation becoming rebellious and masterful, like an animal disobedient to reason, and maddened with the sting of lust, seeks to gain absolute sway; and the same is the case with the so-called womb or matrix of women; the animal within them is desirous of procreating children, and when remaining unfruitful long beyond its proper time, gets discontented and angry, and wandering in every direction through the body, closes up the passages of the breath, and, by obstructing respiration, drives them to extremity, causing all varieties of

disease, until at length the desire and love of the man and the woman, bringing them together and as it were plucking the fruit from the tree, sow in the womb, as in a field, animals unseen by reason of their smallness and without form; these again are separated and matured within; they are then finally brought out into the light, and thus the generation of animals is completed.

91d

Thus were created women and the female sex in general. But the race of birds was created out of innocent light-minded men, who, although their minds were directed toward heaven, imagined, in their simplicity, that the clearest demonstration of the things above was to be obtained by sight; these were remodelled and transformed into birds, and they grew feathers instead of hair. The race of wild pedestrian animals, again, came from those who had no philosophy in any of their thoughts, and never considered at all about the nature of the heavens, because they had ceased to use the courses of the head, but followed the guidance of those parts of the soul which are in the breast. In consequence of these habits of theirs they had their front-legs and their heads resting upon the earth to which they were drawn by natural affinity; and the crowns of their heads were elongated and of all sorts of shapes, into which the courses of the soul were crushed by reason of disuse. And this was the reason why they were created quadrupeds and polypods: God gave the more senseless of them the more support that they might be more attracted to the earth. And the most foolish of them, who trail their bodies entirely upon the ground and have no longer any need of feet, he made without feet to crawl upon the earth. The fourth class were the inhabitants of the water: these were made out of the most entirely senseless and ignorant of all, whom the transformers did not think any longer worthy of pure respiration, because they possessed a soul which was made impure by all sorts of transgression; and instead of the

subtle and pure medium of air, they gave them the deep and muddy sea to be their element of respiration; and hence arose the race of fishes and oysters, and other aquatic animals, which have received the most remote habitations as a punishment of their outlandish ignorance. These are the laws by which animals pass into one another, now, as ever, changing as they lose or gain wisdom and folly.

92c

We may now say that our discourse about the nature of the universe has an end. The world has received animals, mortal and immortal, and is fulfilled with them, and has become a visible animal containing the visible — the sensible God who is the image of the intellectual, the greatest, best, fairest, most perfect — the one only-begotten heaven.
