The Roman History (Books XX–XXV)

Book XX

20.1

A.D. 360.

These were the events which took place in Illyricum and in the East. But the next year, that of Constantius's tenth and Julian's third consulship, the affairs of Britain became troubled, in consequence of the incursions of the savage nations of Picts and Scots, who breaking the peace to which they had agreed, were plundering the districts on their borders, and keeping in constant alarm the provinces exhausted by former disasters, Cæsar, who was wintering at Paris, having his mind divided by various cares, feared to go to the aid of his subjects across the channel (as we have related Constans to have done), lest he should leave the Gauls without a governor, while the Allemanni were still full of fierce and warlike inclinations.

Therefore, to tranquillize these districts by reason or by force, it was decided to send Lupicinus, who was at that time commander of the forces; a man of talent in war, and especially skilful in all that related to camps, but very haughty, and smelling, as one may say, of the tragic buskin, while parts of his conduct made it a question which predominated—his avarice or his cruelty.

Accordingly, an auxiliary force of light-armed troops, Heruli and Batavi, with two legions from Mœsia, were in the very depth of winter put under the command of this general, with which he marched to Boulogne, and having procured some vessels and embarked his soldiers on them, he sailed with a fair wind, and reached Richborough on the opposite coast, from which place he proceeded to London, that he might there deliberate on the aspect of affairs, and take immediate measures for his campaign.

20.2

In the mean time, after the fall of Amida, and after Ursicinus had returned as commander of the infantry to the emperor's camp (for we have already mentioned that he had been appointed to succeed Barbatio), he was at once attacked by slanderers, who at first tried to whisper his character away, but presently openly brought forward false charges against him.

And the emperor, listening to them, since he commonly formed his opinions on vain conjecture, and was always ready to yield his judgment to crafty persons, appointed Arbetio and Florentius, the chief steward, as judges to inquire how it was that the town was destroyed. They rejected the plain and easily proved causes of the disaster, fearing that Eusebius, at that time high chamberlain, would be offended if they admitted proofs which showed undeniably that what had happened was owing to the obstinate inactivity of Sabinianus; and so distorting the truth, they examined only some points of no consequence, and having no bearing on the transaction.

Ursicinus felt the iniquity of this proceeding; and said, "Although the emperor despises me, still the importance of this affair is such that it cannot be judged of and punished by any decision lower than that of the emperor. Nevertheless, let him know what I venture to prophesy, that while he is concerning himself about this disaster at Amida, of which he has received a faithful account; and while he gives himself up to the influence of the eunuchs, he will not in the ensuing spring,¹ even if he himself should come with the entire strength of his army, be able to prevent the dismemberment of Mesopotamia." This speech having been related to the emperor with many additions, and a malignant interpretation, Constantius became enraged beyond measure; and without allowing the affair to be discussed, or those things to be explained to him of which he was ignorant, he believed all the calumnies against Ursicinus, and deposing him from his office, ordered him into retirement; promoting Agilo, by a vast leap, to take

his place, he having been before only a tribune of a native troop of Scutarii.

20.3

At the same time one day the sky in the east was perceived to be covered with a thick darkness, and from daybreak to noon the stars were visible throughout; and, as an addition to these terrors, while the light of heaven was thus withdrawn, and the world almost buried in clouds, men, from the length of the eclipse, began to believe that the sun had wholly disappeared. Presently, however, it was seen again like a new moon, then like a half-moon, and at last it was restored entire.

A thing which on other occasions did not happen so visibly except when after several unequal revolutions, the moon returns to exactly the same point at fixed intervals; that is to say, when the moon is found in the same sign of the zodiac, exactly opposite to the rays of the sun, and stops there a few minutes, which in geometry are called parts of parts.

And although the changes and motions of both sun and moon, as the inquiries into intelligible causes have remarked, perpetually return to the same conjunction at the end of each lunar month, still the sun is not always eclipsed on these occasions, but only when the moon, as by a kind of balance, is in the exact centre between the sun and our sight.

In short, the sun is eclipsed, and his brilliancy removed from our sight, when he and the moon, which of all the constellations of heaven is the lowest, proceeding with equal pace in their orbits, are placed in conjunction in spite of the height which separates them (as Ptolemy learnedly explains it), and afterwards return to the dimensions which are called ascending or descending points of the ecliptic conjunctions: or, as the Greeks call them, defective conjunctions. And if these great lights find themselves in the neighbourhood of these points or knots, the eclipse is small.

But if they are exactly in the knots which form the points of intersection between the ascending and descending path of the moon, then the sky will be covered with denser darkness, and the whole atmosphere becomes so thick that we cannot see what is close to us.

Again, the sun is conceived to appear double when a cloud is raised higher than usual, which from its proximity to the eternal fires, shines in such a manner that it forms the brightness of a second orb as from a purer mirror.

Now let us come to the moon. The moon sustains a clear and visible eclipse when, being at the full, and exactly opposite to the sun, she is distant from his orb one hundred and eighty degrees, that is, is in the seventh sign; and although this happens at every full moon, still there is not always one eclipse.

But since she is always nearest to the earth as it revolves, and the most distant from the rest of the other stars, and sometimes exposes itself to the light which strikes it, and sometimes also is partially obscured by the intervention of the shade of night, which comes over it in the form of a cone; and then she is involved in thick darkness, when the sun, being surrounded by the centre of the lowest sphere, cannot illuminate her with his rays, because the mass of the earth is in the way; for opinions agree that the moon has no light of her own.

And when she returns to the same sign of the zodiac which the sun occupies, she is obscured (as has been said), her brightness being wholly dimmed, and this is called a conjunction of the moon.

Again the moon is said to be new when she has the sun above her with a slight variation from the perpendicular, and then she appears very thin to mankind, even when leaving the sun she reaches the second sign. Then, when she has advanced further, and shines brilliantly with a sort of horned figure, she is said to be crescent shaped; but when she begins to be a long way distant from the sun, and reaches the fourth

sign, she gets a greater light, the sun's rays being turned upon her, and then she is of the shape of a semicircle.

As she goes on still further, and reaches the fifth sign, she assumes a convex shape, a sort of hump appearing from each side. And when she is exactly opposite the sun, she shines with a full light, having arrived at the seventh sign; and even while she is there, having advanced but a very little further, she begins to diminish, which we call waning; and as she gets older, she resumes the same shapes that she had while increasing. But it is established by unanimous consent that she is never seen to be eclipsed except in the middle of her course.

But when we said that the sun moves sometimes in the ether, sometimes in the lower-world, it must be understood that the starry bodies, considered in relation to the universe, neither set nor rise; but only appear to do so to our sight on earth, which is suspended by the motion of some interior spirit, and compared with the immensity of things is but a little point, which causes the stars in their eternal order to appear sometimes fixed in heaven, and at others, from the imperfection of human vision, moving from their places. Let us now return to our original subject.

20.4

Even while he was hastening to lead succours to the East, which, as the concurrent testimony of both spies and deserters assured him, was on the point of being invaded by the Persians, Constantius was greatly disturbed by the virtues of Julian, which were now becoming renowned among all nations, so highly did fame extol his great labours, achievements, and victories, in having conquered several kingdoms of the Allemanni, and recovered several towns in Gaul which had been plundered and destroyed by the barbarians, and having compelled the barbarians themselves to become subjects and tributaries of the empire.

Influenced by these considerations, and fearing lest Julian's influence

should become greater, at the instigation, as it is said, of the prefect Florentius, he sent Decentius, the tribune and secretary, to bring away at once the auxiliary troops of the Heruli and Batavi, and the Celtæ, and the legion called Petulantes,² and three hundred picked men from the other forces; enjoining him to make all speed on the plea that their presence was required with the army which it was intended to march at the beginning of spring against the Parthians.

Also, Lupicinus was directed to come as commander of these auxiliary troops with the three hundred picked men, and to lose no time, as it was not known that he had crossed over to Britain; and Sintula, at that time the superintendent of Julian's stables, was ordered to select the best men of the Scutarii and Gentiles,³ and to bring them also to join the emperor.

Julian made no remonstrance, but obeyed these orders, yielding in all respects to the will of the emperor. But on one point he could not conceal his feelings nor keep silence: but entreated that those men might be spared from this hardship who had left their homes on the other side of the Rhine, and had joined his army on condition of never being moved into any country beyond the Alps, urging that if this were known, it might be feared that other volunteers of the barbarian nations, who had often enlisted in our service on similar conditions, would be prevented from doing so in future. But he argued in vain.

For the tribune, disregarding his complaints, carried out the commands of the emperor, and having chosen out a band suited for forced marches, of pre-eminent vigour and activity, set out with them full of hope of promotion.

And as Julian, being in doubt what to do about the rest of the troops whom he was ordered to send, and revolving all kinds of plans in his mind, considered that the matter ought to be managed with great care, as there was on one side the fierceness of the barbarians, and on

the other the authority of the orders he had received (his perplexity being further increased by the absence of the commander of the cavalry), he urged the prefect, who had gone some time before to Vienne under the pretence of procuring corn, but in reality to escape from military troubles, to return to him.

For the prefect bore in mind the substance of a report which he was suspected to have sent some time before, and which recommended the withdrawing from the defence of Gaul those troops so renowned for their valour, and already objects of dread to the barbarians.

The prefect, as soon as he had received Julian's letters, informing him of what had happened, and entreating him to come speedily to him to aid the republic with his counsels, positively refused, being alarmed because the letters expressly declared that in any crisis of danger the prefect ought never to be absent from the general. And it was added that if he declined to give his aid, Julian himself would, of his own accord, renounce the emblems of authority, thinking it better to die, if so it was fated, than to have the ruin of the provinces attributed to him. But the obstinacy of the prefect prevailed, and he resolutely refused to comply with the wishes thus reasonably expressed and enforced.

But during the delay which arose from the absence of Lupicinus and of any military movement on the part of the alarmed prefect, Julian, deprived of all assistance in the way of advice, and being greatly perplexed, thought it best to hasten the departure of all his troops from the stations in which they were passing the winter, and to let them begin their march.

When this was known, some one privily threw down a bitter libel near the standard of the Petulantes legion, which, among other things, contained these words,—“We are being driven to the farthest parts of the earth like condemned criminals, and our relations will become slaves to the Allemanni after we have delivered them from that first

captivity by desperate battles.”

When this writing was taken to head-quarters and read, Julian, considering the reasonableness of the complaint, ordered that their families should go to the East with them, and allowed them the use of the public wagons for the purpose of moving them. And as it was for some time doubted which road they should take, he decided, at the suggestion of the secretary Decentius, that they should go by Paris, where he himself still was, not having moved.

And so it was done. And when they arrived in the suburbs, the prince, according to his custom, met them, praising those whom he recognized, and reminding individuals of their gallant deeds, he congratulated them with courteous words, encouraging them to go cheerfully to join the emperor, as they would reap the most worthy rewards of their exertions where power was the greatest and most extensive.

And to do them the more honour, as they were going to a great distance, he invited their chiefs to a supper, when he bade them ask whatever they desired. And they, having been treated with such liberality, departed, anxious and sorrowful on two accounts, because cruel fortune was separating them at once from so kind a ruler and from their native land. And with this sorrowful feeling they retired to their camp.

But when night came on they broke out into open discontent, and their minds being excited, as his own griefs pressed upon each individual, they had recourse to force, and took up arms, and with a great outcry thronged to the palace, and surrounding it so as to prevent any one from escaping, they saluted Julian as emperor with loud vociferations, insisting vehemently on his coming forth to them; and though they were compelled to wait till daylight, still, as they

would not depart, at last he did come forth. And when he appeared, they saluted him emperor with redoubled and unanimous cheers.

But he steadily resisted them individually and collectively, at one time showing himself indignant, at another holding out his hands and entreating and beseeching them not to sully their numerous victories with anything unbecoming, and not to let unseasonable rashness and precipitation awaken materials for discord. At last he appeased them, and having addressed them mildly, he added—

“I beseech you let your anger depart for a while: without any dissension or attempt at revolution what you wish will easily be obtained. Since you are so strongly bound by love of your country, and fear strange lands to which you are unaccustomed, return now to your homes, certain that you shall not cross the Alps, since you dislike it. And I will explain the matter to the full satisfaction of the emperor, who is a man of great wisdom, and will listen to reason.”

Nevertheless, after his speech was ended, the cries were repeated with as much vigour and unanimity as ever; and so vehement was the uproar and zeal, which did not even spare reproaches and threats, that Julian was compelled to consent. And being lifted up on the shield of an infantry soldier, and raised up in sight of all, he was saluted as Augustus with one universal acclamation, and was ordered to produce a diadem. And when he said that he had never had one, his wife’s coronet or necklace was demanded.

And when he protested that it was not fitting for him at his first accession to be adorned with female ornaments, the frontlet of a horse was sought for, so that being crowned therewith, he might have some badge, however obscure, of supreme power. But when he insisted that that also would be unbecoming, a man named Maurus, afterwards a count, the same who was defeated in the defile of the Succi, but who was then only one of the front-rank men of the Petulantes, tore a chain off his own neck, which he wore in his quality

of standard-bearer, and placed it boldly on Julian's head, who, being thus brought under extreme compulsion, and seeing that he could not escape the most imminent danger to his life if he persisted in his resistance, consented to their wishes, and promised a largesse of five pieces of gold and a pound of silver to every man.

After this Julian felt more anxiety than ever; and, keenly alive to the future consequences, neither wore his diadem or appeared in public, nor would he even transact the serious business which pressed upon his attention, but sought retirement, being full of consternation at the strangeness of the recent events. This continued till one of the decurions of the palace (which is an office of dignity) came in great haste to the standards of the Petulantes and of the Celtic legion, and in a violent manner exclaimed that it was a monstrous thing that he who had the day before been by their will declared emperor should have been privily assassinated.

When this was heard, the soldiers, as readily excited by what they did not know as by what they did, began to brandish their javelins, and draw their swords, and (as is usual at times of sudden tumult) to flock from every quarter in haste and disorder to the palace. The sentinels were alarmed at the uproar, as were the tribunes and the captain of the guard, and suspecting some treachery from the fickle soldiery, they fled, fearing sudden death to themselves.

When all before them seemed tranquil, the soldiers stood quietly awhile; and on being asked what was the cause of their sudden and precipitate movement, they at first hesitated, and then avowing their alarm for the safety of the emperor, declared they would not retire till they had been admitted into the council-chamber, and had seen him safe in his imperial robes.

20.5

When the news of these events reached the troops, whom we have spoken of as having already marched under the command of Sintula,

they returned with him quietly to Paris. And an order having been issued that the next morning they should all assemble in the open space in front of the camp, Julian advanced among them, and ascended a tribunal more splendid than usual, surrounded with the eagles, standards, and banners, and guarded by a strong band of armed soldiers.

And after a moment's quiet, while he looked down from his height on the countenances of those before him, and saw them all full of joy and alacrity, he kindled their loyalty with a few simple words, as with a trumpet.

“The difficulty of my situation, O brave and faithful champions of myself and of the republic, who have often with me exposed your lives for the welfare of the provinces, requires that, since you have now by your resolute decision raised me, your Cæsar, to the highest of all dignities, I should briefly set before you the state of affairs, in order that safe and prudent remedies for their new condition may be devised.

“While little more than a youth, as you well know, I was for form's sake invested with the purple, and by the decision of the emperor was intrusted to your protection. Since that time I have never forgotten my resolution of a virtuous life: I have been seen with you as the partner of all your labours, when, in consequence of the diminution of the confidence felt in us by the barbarians, terrible disasters fell upon the empire, our cities being stormed, and countless thousands of men being slain, and even the little that was left to us being in a very tottering condition. I think it superfluous to recapitulate how often, in the depth of winter, beneath a frozen sky, at a season when there is usually a cessation from war both by land and sea, we have defeated with heavy loss the Allemanni, previously unconquered.

“One circumstance may neither be passed over nor suppressed. On that glorious day which we saw at Strasburg, which brought perpetual

liberty to Gaul, we together, I throwing myself among the thickly falling darts, and you being invincible by your vigour and experience, repelled the enemy who poured upon us like a torrent; slaying them as we did with the sword, or driving them to be drowned in the river, with very little loss of our own men, whose funerals we celebrated with glorious panegyrics rather than with mourning.

“It is my belief that after such mighty achievements posterity will not be silent respecting your services to the republic, in every country, if you now, in case of any danger or misfortune, vigorously support with your valour and resolution me whom you have raised to the lofty dignity of emperor.

“But to maintain things in their due order, so as to preserve to brave men their well-merited rewards and prevent underhand ambition from forestalling your honours, I make this rule in the honourable presence of your counsel. That no civil or military officer shall be promoted from any other consideration than that of his own merits; and he shall be disgraced who solicits promotion for any one on any other ground.”

The lower class of soldiers, who had long been deprived of rank or reward, were encouraged by this speech to entertain better hopes, and now rising up with a great noise, and beating their shields with their spears, they with unanimous shouts showed their approbation of his language and purpose.

And that no opportunity, however brief, might be afforded to disturb so wise an arrangement, the Petulantes and Celtic legion immediately besought him, on behalf of their commissaries, to give them the government of any provinces he pleased, and when he refused them, they retired without being either offended or out of humour.

But the very night before the day on which he was thus proclaimed emperor, Julian had mentioned to his most intimate friends that during his slumbers some one had appeared to him in a dream, in the

form and habit of the genius of the empire, who uttered these words in a tone of reproach: “For some time, Julian, have I been secretly watching the door of thy palace, wishing to increase thy dignity, and I have often retired as one rejected; but if I am not now admitted, when the opinion of the many is unanimous, I shall retire discouraged and sorrowful. But lay this up in the depth of thy heart, that I will dwell with thee no longer.”

20.6

While these transactions were proceeding in Gaul, to the great anxiety of many, the fierce king of Persia (the advice of Antoninus being now seconded by the arrival of Craugasius), burning with eagerness to obtain Mesopotamia, while Constantius with his army was at a distance, crossed the Tigris in due form with a vast army, and laid siege to Singara with a thoroughly equipped force, sufficient for the siege of a town which, in the opinion of the chief commanders of those regions, was abundantly fortified and supplied.

The garrison, as soon as they saw the enemy, while still at a distance, at once closed their gates, and with great spirit thronged to the towers and battlements, collecting on them stones and warlike engines. And then, having made all their preparations, they stood prepared to repel the advancing host if they should venture to approach the walls.

Therefore the king, when he arrived and found that, though they would admit some of his nobles near enough to confer with them, he could not, by any conciliatory language, bend the garrison to his wishes, he gave one entire day to rest, and then, at daybreak, on a signal made by the raising of a scarlet flag, the whole city was surrounded by men carrying ladders, while others began to raise engines; all being protected by fences and penthouses while seeking a way to assail the foundation of the walls.

Against these attempts the citizens, standing on the lofty battlements, drove back with stones and every kind of missile the assailants who were seeking with great ferocity to find an entrance.

For many days the struggle continued without any decided result, many being wounded and killed on both sides. At last, the struggle growing fiercer, one day on the approach of evening a very heavy battering-ram was brought forward among other engines, which battered a round tower with repeated blows, at a point where we mentioned that the city had been laid open in a former siege.

The citizens at once repaired to this point, and a violent conflict arose in this small space; torches and firebrands were brought from all quarters to consume this formidable engine, while arrows and bullets were showered down without cessation on the assailants. But the keenness of the ram prevailed over every means of defence, digging through the mortar of the recently cemented stones, which was still moist and unsettled.

And while the contest was thus proceeding with fire and sword, the tower fell, and a path was opened into the city, the place being stripped of its defenders, whom the magnitude of the danger had scattered. The Persian bands raised a wild shout, and without hindrance filled every quarter of the city. A very few of the inhabitants were slain, and all the rest, by command of Sapor, were taken alive and transported to the most distant regions of Persia.

There had been assigned for the protection of this city two legions, the first Flavian and the first Parthian, and a great body of native troops, as well as a division of auxiliary cavalry which had been shut up in it through the suddenness of the attack made upon it. All of these, as I have said, were taken prisoners, without receiving any assistance from our armies.

For the greater part of our army was in tents taking care of Nisibis, which was at a considerable distance. But even if it had not been so, no one even in ancient times could easily bring aid to Singara when in danger, since the whole country around laboured under a scarcity of water. And although a former generation had placed this fort very

advisedly, to check sudden movements of hostility, yet it was a great burden to the state, having been several times taken, and always involving the loss of its garrison.

20.7

After Singara had fallen, Sapor prudently avoided Nisibis, recollecting the losses which he had several times sustained before it, and turned to the right by a circuitous path, hoping either to subdue by force or to win by bribes the garrison of Bezabde, which its founders also called Phœnice, and to make himself master of that town, which is an exceedingly strong fortress, placed on a hill of moderate height, and close to the banks of the Tigris, having a double wall, as many places have which from their situation are thought to be especially exposed. For its defence three legions had been assigned; the second Flavian, the second Armenian, and the second Parthian, with a large body of archers of the Zabdiceni, a tribe subject to us, in whose territory this town was situated.

At the beginning of the siege, the king, with an escort of glittering cuirassiers, himself taller than any of them, rode entirely round the camp, coming up boldly to the very edge of the fosse, where he was at once a mark for the unerring bullets of the balistæ, and arrows; but he was so completely covered with thick scale-armour that he retired unhurt.

Then laying aside his anger, he sent some heralds with all due solemnity, courteously inviting the besieged to consult the safety of their lives, and seeing the desperateness of their situation, to put an end to the siege by a timely surrender; to open their gates and come forth, presenting themselves as suppliants before the conqueror of nations.

When these messengers approached the walls, the garrison spared them because they had with them some men of noble birth, who had been made prisoners at Singara, and were well known to the citizens;

and out of pity to them no one shot an arrow, though they would give no reply to the proposal of peace.

Then a truce being made for a day and night, before dawn on the second day the entire force of the Persians attacked the palisade with ferocious threats and cries, coming up boldly to the walls, where a fierce contest ensued, the citizens resisting with great vigour.

So that many of the Parthians⁴ were wounded, because some of them carrying ladders, and others wicker screens, advanced as it were blindfold, and were not spared by our men. For the clouds of arrows flew thickly, piercing the enemy packed in close order. At last, after sunset the two sides separated, having suffered about equal loss: and the next day before dawn the combat was renewed with greater vehemence than before, the trumpets cheering the men on both sides, and again a terrible slaughter of each took place, both armies struggling with the most determined obstinacy.

But on the following day both armies by common consent rested from their terrible exertions, the defenders of the walls and the Persians being equally dismayed. When a Christian priest made sign by gestures that he desired to go forth, and having received a promise that he should be allowed to return in safety, he advanced to the king's tent.

When he was permitted to speak, he, with gentle language, urged the Persians to depart to their own country, affirming that after the losses each side had sustained they had reason perhaps to fear even greater disasters in future. But these and other similar arguments were uttered to no purpose. The fierce madness of the king robbing them of their effect, as Sapor swore positively that he would never retire till he had destroyed our camp.

Nevertheless a groundless suspicion was whispered against the bishop, wholly false in my opinion, though supported by the

assertions of many, that he had secretly informed Sapor what part of the wall to attack, as being internally slight and weak. Though the suspicion derived some corroboration from the fact that afterwards the engines of the enemy were carefully and with great exultation directed against the places which were weakest, or most decayed, as if those who worked them were acquainted with what parts were most easily penetrable.

And although the narrowness of the causeway made the approach to the walls hard, and though the battering-rams when equipped were brought forward with great difficulty, from fear of the stones and arrows hurled upon the assailants by the besieged, still neither the balistæ nor the scorpions rested a moment, the first shooting javelins, and the latter hurling showers of stones, and baskets on fire, smeared with pitch and tar; and as these were perpetually rolled down, the engines halted as if rooted to the ground, and fiery darts and firebrands well-aimed set them on fire.

Still while this was going on, and numbers were falling on both sides, the besiegers were the more eager to destroy a town, strong both by its natural situation and its powerful defences, before the arrival of winter, thinking it impossible to appease the fury of their king if they should fail. Therefore neither abundant bloodshed nor the sight of numbers of their comrades pierced with deadly wounds could deter the rest from similar audacity.

But for a long time, fighting with absolute desperation, they exposed themselves to imminent danger; while those who worked the battering-rams were prevented from advancing by the vast weight of millstones, and all kinds of fiery missiles hurled against them.

One battering-ram was higher than the rest, and was covered with bull's hides wetted, and being therefore safer from any accident of fire, or from lighted javelins, it led the way in the attacks on the wall

with mighty blows, and with its terrible point it dug into the joints of the stones till it overthrew the tower. The tower fell with a mighty crash, and those in it were thrown down with a sudden jerk, and breaking their limbs, or being buried beneath the ruins, perished by various and unexpected kinds of death; then, a safer entrance having been thus found, the multitude of the enemy poured in with their arms.

While the war-cry of the Persians sounded in the trembling ears of the defeated garrison, a fierce battle within the narrower bounds raged within the walls, while bands of our men and of the enemy fought hand to hand, being jammed together, with swords drawn on both sides, and no quarter given.

At last the besieged, after making head with mighty exertion against the destruction which long seemed doubtful, were overwhelmed with the weight of the countless host which pressed upon them. And the swords of the furious foe cut down all they could find; children were torn from their mother's bosom, and the mothers were slain, no one regarding what he did. Among these mournful scenes the Persians, devoted to plunder, loaded with every kind of booty, and driving before them a vast multitude of prisoners, returned in triumph to their tents.

But the king, elated with insolence and triumph, having long been desirous to obtain possession of Phœnice, as a most important fortress, did not retire till he had repaired in the strongest manner that portion of the walls which had been shaken, and till he had stocked it with ample magazines of provisions, and placed in it a garrison of men noble by birth and eminent for their skill in war.

For he feared (what indeed happened) that the Romans, being indignant at the loss of this their grand camp, would exert themselves with all their might to recover it.

Then, being full of exultation, and cherishing greater hopes than ever of gaining whatever he desired, after taking a few forts of small importance, he prepared to attack Victa, a very ancient fortress, believed to have been founded by Alexander, the Macedonian, situated on the most distant border of Mesopotamia, and surrounded with winding walls full of projecting angles, and so well furnished at all points as to be almost unassailable.

And when he had tried every expedient against it, at one time trying to bribe the garrison with promises, at another to terrify them with threats of torture, and employing all kinds of engines such as are used in sieges, after sustaining more injury than he inflicted, he at last retired from his unsuccessful enterprise.

20.8

These were the events of this year between the Tigris and the Euphrates. And when frequent intelligence of them had reached Constantius, who was in continual dread of Parthian expeditions, and was passing the winter at Constantinople, he devoted greater care than ever to strengthening his frontiers with every kind of warlike equipment. He collected veterans, and enlisted recruits, and increased the legions with reinforcements of vigorous youths, who had already repeatedly signalized their valour in the battles of the eastern campaigns: and beside these he collected auxiliary forces from among the Scythians by urgent requests and promises of pay, in order to set out from Thrace in the spring, and at once march to the disturbed provinces.

During the same time Julian, who was wintering at Paris, alarmed at the prospect of the ultimate issue of the events in that district, became full of anxiety, feeling sure, after deep consideration, that Constantius would never give his consent to what had been done in his case, since he had always disdained him as a person of no importance.

Therefore, after much reflection on the somewhat disturbed beginning which the present novel state of affairs showed, he determined to send envoys to him to relate all that had taken place; and he gave them letters setting forth fully what had been done, and what ought to be done next, supporting his recommendations by proofs.

Although in reality he believed that the emperor was already informed of all, from the report of Decentius, who had returned to him some time before; and of the chamberlains who had recently gone back from Gaul, after having brought him some formal orders. And although he was not in reality vexed at his promotion, still he avoided all arrogant language in his letters, that he might not appear to have suddenly shaken off his authority. Now the following was the purport of his letters.

“I have at all times been of the same mind, and have adhered to my original intentions, not less by my conduct than by my promises, as far as lay in my power, as has been abundantly plain from repeated actions of mine.

“And up to this time, since you created me Cæsar, and exposed me to the din of war, contented with the power you conferred on me, as a faithful officer I have sent you continued intelligence of all your affairs proceeding according to your wishes; never speaking of my own dangers; though it can easily be proved, that, while the Germans have been routed in every direction, I have always been the first in all toils and the last to allow myself any rest.

“But allow me to say, that if any violent change has taken place, as you think, the soldier who has been passing his life in many terrible wars without reward, has only completed what he has long had under consideration, being indignant and impatient at being only under a chief of the second class, as knowing that from a Cæsar no adequate

reward for his continued exertions and frequent victories could possibly be procured.

“And while angry at the feeling that he could neither expect promotion nor annual pay, he had this sudden aggravation to his discontent, that he, a man used to cold climates, was ordered to march to the most remote districts of the East, to be separated from his wife and children, and to be dragged away in want and nakedness. This made him fiercer than usual; and so the troops one night collected and laid siege to the palace, saluting with loud and incessant outcries Julian as emperor.

“I shuddered at their boldness, I confess, and withdrew myself. And retiring while I could, I sought safety in concealment and disguise—and as they would not desist, armed, so to say, with the shield of my own free heart, I came out before them all, thinking that the tumult might be appeased by authority, or by conciliatory language.

“They became wonderfully excited, and proceeded to such lengths that, when I endeavoured to overcome their pertinacity with my entreaties, they came close up to me, threatening me with instant death. At last I was overcome, and arguing with myself that if I were murdered by them some one else would willingly accept the dignity of emperor, I consented, hoping thus to pacify their armed violence.

“This is the plain account of what has been done; and I entreat you to listen to it with mildness. Do not believe that anything else is the truth; and do not listen to malignant men who deal in mischievous whispers, always eager to seek their own gain by causing ill will between princes. Banish flattery, which is the nurse of vice, and listen to the voice of that most excellent of all virtues, justice. And receive with good faith the equitable condition which I propose, considering in your mind that such things are for the interest of the Roman state,

and of us also who are united by affection of blood, and by an equality of superior fortune.

“And pardon me. These reasonable requests of mine I am not so anxious to see carried out, as to see them approved by you as expedient and proper; and I shall with eagerness follow all your instructions.

“What requires to be done I will briefly explain. I will provide you some Spanish draught horses, and some youths to mingle with the Gentiles and Scutarii of the Letian tribe, a race of barbarians on the side of the Rhine; or else of those people which have come over to our side. And I promise till the end of my life to do all I can to assist you, not only with gratitude, but with eagerness.

“Your clemency will appoint us prefects for our prætorium of known equity and virtue: the appointment of the ordinary judges, and the promotion of the military officers it is fair should be left to me; as also the selection of my guard. For it would be unreasonable, when it is possible to be guarded against, that those persons should be placed about an emperor of whose manners and inclinations he is ignorant.

“These things I can further assure you of positively. The Gauls will neither of their own accord, nor by any amount of compulsion, be brought to send recruits to foreign and distant countries, since they have been long harassed by protracted annoyances and heavy disasters, lest the youth of the nation should be destroyed, and the whole people, while recollecting their past sufferings, should abandon themselves to despair for the future.

“Nor is it fit to seek from hence assistance against the Parthians, when even now the attempts of the barbarians against this land are not brought to an end, and while, if you will suffer me to tell the truth, these provinces are still exposed to continual dangers on being deprived of all foreign or adequate assistance.

“In speaking thus, I do think I have written to you in a manner suited to the interests of the state, both in my demands and my entreaties. For I well know, not to speak in a lofty tone, though such might not misbecome an emperor, what wretched states of affairs, even when utterly desperate and given up, have been before now retrieved and re-established by the agreement of princes, each yielding reciprocally to one another. While it is also plain from the example of our ancestors, that rulers who acknowledge and act upon such principles do somehow ever find the means of living prosperously and happily, and leave behind them to the latest posterity an enviable fame.”

To these letters he added others of a more secret purport, to be given privily to Constantius, in which he blamed and reproached him; though their exact tenor was not fit to be known, nor if known, fit to be divulged to the public.

For the office of delivering these letters, men of great dignity were chosen; namely, Pentadius, the master of the ceremonies, and Eutherius, at that time the principal chamberlain; who were charged, after they had delivered the letters, to relate what they had seen, without suppressing anything; and to take their own measures boldly on all future emergencies which might arise.

In the mean time the flight of Florentius, the prefect, aggravated the envy with which these circumstances were regarded. For he, as if he foresaw the commotion likely to arise, as might be gathered from general conversation, from the act of sending for the troops, had departed for Vienne (being also desirous to get out of the way of Julian, whom he had often slandered), pretending to be compelled to this journey for the sake of providing supplies for the army.

Afterwards, when he had heard of Julian's being raised to the dignity of emperor, being greatly alarmed, and giving up almost all hope of saving his life, he availed himself of his distance from Julian to escape

from the evils which he suspected; and leaving behind him all his family, he proceeded by slow journeys to Constantius; and to prove his own innocence he brought forward many charges of rebellion against Julian.

And after his departure, Julian, adopting wise measures, and wishing it to be known that, even if he had him in his power, he would have spared him, allowed his relations to take with them all their property, and even granted them the use of the public conveyances to retire with safety to the East.

20.9

The envoys whom I have mentioned took equal care to discharge their orders; but while eager to pursue their journey they were unjustly detained by some of the superior magistrates on their road; and having been long and vexatiously delayed in Italy and Illyricum, they at last passed the Bosphorus, and advancing by slow journeys, they found Constantius still staying at Cæsarea in Cappadocia, a town formerly known as Mazaca, admirably situated at the foot of Mount Argæus, and of high reputation.

Being admitted to the presence, they received permission to present their letters; but when they were read the emperor became immoderately angry, and looking askance at them so as to make them fear for their lives, he ordered them to be gone without asking them any questions or permitting them to speak.

But in spite of his anger he was greatly perplexed to decide whether to move those troops whom he could trust against the Persians, or against Julian; and while he was hesitating, and long balancing between the two plans, he yielded to the useful advice of some of his counsellors, and ordered the army to march to the East.

Immediately also he dismissed the envoys, and ordered his quæstor Leonas to go with all speed with letters from him to Julian; in which

he asserted that he himself would permit no innovators, and recommended Julian, if he had any regard for his own safety or that of his relations, to lay aside his arrogance, and resume the rank of Cæsar.

And, in order to alarm him by the magnitude of his preparations, as if he really was possessed of great power, he appointed Nebridius, who was at that time Julian's quæstor, to succeed Florentius as prefect of the prætorium, and made Felix the secretary, master of the ceremonies, with several other appointments. Gumoharius, the commander of the heavy infantry, he had already appointed to succeed Lupicinus, before any of these events were known.

Accordingly Leonas reached Paris, and was there received as an honourable and discreet man; and the next day, when Julian had proceeded into the plain in front of the camp with a great multitude of soldiers and common people, which he had ordered to assemble on purpose, he mounted a tribune, in order from that high position to be more conspicuous, and desired Leonas to present his letters; and when he had opened the edict which had been sent, and began to read it, as soon as he arrived at the passage that Constantius disapproved of all that had been done, and desired Julian to be content with the power of a Cæsar, a terrible shout was raised on all sides,

"Julian emperor, as has been decreed by the authority of the province, of the army, and of the republic; which is indeed re-established, but which still dreads the renewed attacks of the barbarians."

Leonas heard this, and, after receiving letters from Julian, stating what had occurred, was dismissed in safety: the only one of the emperor's appointments which was allowed to take effect was that of Nebridius, which Julian in his letters had plainly said would be in accordance with his wishes. For he himself had some time before appointed Anatolius to be master of the ceremonies, having been formerly his private secretary; and he had also made such other appointments as seemed useful and safe.

And since, while matters were going on in this matter, Lupicinus, as being a proud and arrogant man, was an object of fear, though absent and still in Britain; and since there was a suspicion that if he heard of these occurrences while on the other side of the channel, he might cause disorders in the island, a secretary was sent to Boulogne to take care that no one should be allowed to cross; and as that was contrived, Lupicinus returned without hearing of any of these matters, and so had no opportunity of giving trouble.

20.10

But Julian, being gratified at his increase of rank, and at the confidence of the soldiers in him, not to let his good fortune cool, or to give any colour for charging him with inactivity or indolence, after he had sent his envoys to Constantius, marched to the frontier of the province of lower Germany; and having with him all the force which the business in hand demanded, he approached the town of Santon.⁵

Then crossing the Rhine, he suddenly entered the district belonging to a Frank tribe, called the Attuarii, men of a turbulent character, who at that very moment were licentiously plundering the districts of Gaul. He attacked them unexpectedly while they were apprehensive of no hostile measures, but were reposing in fancied security, relying on the ruggedness and difficulty of the roads which led into their country, and which no prince within their recollection had ever penetrated. He, however, easily surmounted all difficulties, and having put many to the sword and taken many prisoners, he granted the survivors peace at their request, thinking such a course best for their neighbours.

Then with equal celerity he repassed the river, and examining carefully the state of the garrisons on the frontier, and putting them in a proper state, he marched towards Basle; and having recovered the places which the barbarians had taken and still retained in their hands, and having carefully strengthened them, he went to Vienne, passing through Besançon, and there took up his winter quarters.

20.11

These were the events which took place in Gaul, and while they were thus conducted with prudence and good fortune, Constantius, having summoned Arsaces, king of Armenia, and having received him with great courtesy, advised and exhorted him to continue friendly and faithful to us.

For he had heard that the king of Persia had often tried by deceits and threats, and all kinds of stratagems, to induce him to forsake the Roman alliance and join his party.

But he, vowing with many oaths that he would rather lose his life than change his opinion, received ample rewards, and returned to his kingdom with the retinue which he brought with him; and never ventured at any subsequent time to break any of his promises, being bound by many ties of gratitude to Constantius. The strongest tie of all being that the emperor had given him for a wife, Olympias, the daughter of Abladius, formerly prefect of the prætorium, who had once been betrothed to his own brother Constans.

And when Arsaces had been dismissed, Constantius left Cappadocia, and going by Melitina, a town of the lesser Armenia, and Lacotene, and Samosata, he crossed the Euphrates and arrived at Edessa. Stopping some time in each town, while waiting for divisions of soldiers who were flocking in from all quarters, and for sufficient supplies of provisions. And after the autumnal equinox, he proceeded onwards on his way to Amida.

When he approached the walls of that town, and saw everything buried in ashes, he groaned and wept, recollecting what sufferings the wretched city had suffered. And Ursulus, the treasurer, who happened to be present, was moved with indignation, and exclaimed, "Behold the courage with which cities are defended by our soldiers; men for whose pay the whole wealth of the empire is exhausted." This bitter

speech the crowd of soldiers afterwards recollected at Chalcedon, when they rose up and destroyed him.

Then proceeding onward in close column, he reached Bezabde, and having fixed his camp there, and fortified it with a rampart and a deep fosse, as he took a long ride round the camp, he satisfied himself, by the account which he received from several persons, that those places in the walls which the carelessness of ancient times had allowed to become decayed, had been repaired so as to be stronger than ever.

And, not to omit anything which was necessary to do before the heat of the contest was renewed, he sent prudent men to the garrison to offer them two conditions; either to withdraw to their own country, giving up what did not belong to them, without causing bloodshed by resistance, or else to become subjects of the Romans, in which case they should receive rank and rewards. But when they, with native obstinacy, resisted the demands as became men of noble birth, who had been hardened by dangers and labours, everything was prepared for the siege.

Therefore the soldiers with alacrity, in dense order, and cheered by the sound of trumpets, attacked every side of the town; and the legions, being protected by various kinds of defences, advanced in safety, endeavouring by slow degrees to overthrow the walls; and because all kinds of missiles were poured down upon them, which disjoined the union of their shields, they fell back, the signal for a retreat being given.

Then a truce was agreed upon for one day; but the day after, having protected themselves more skilfully, they again raised their war-cry, and tried on every side to scale the walls. And although the garrison, having stretched cloths before them not to be distinguished, lay concealed within the walls; still, as often as necessity required, they boldly put out their arms and hurled down stones and javelins on

their assailants below.

And while the wicker penthouses were advanced boldly and brought close to the walls, the besieged dropped upon them heavy casks and millstones, and fragments of pillars, by the overpowering weight of which the assailants were crushed, their defences torn to pieces, and wide openings made in them, so that they incurred terrible dangers, and were again forced to retreat.

Therefore, on the tenth day from the beginning of the siege, when the confidence of our men began to fill the town with alarm, we determined on bringing up a vast battering-ram, which, after having destroyed Antioch with it sometime before, the Persians had left at Carrhæ; and as soon as that appeared, and was begun to be skilfully set up, it cowed the spirits of the besieged, so that they were almost on the point of surrendering, when they again plucked up courage and prepared means for resisting this engine.

From this time neither their courage nor their ingenuity failed; for as the ram was old, and it had been taken to pieces for the facility of transporting it, so while it was being put together again, it was attacked with great exertions and vigour by the garrison, and defended with equal valour and firmness by the besiegers; and engines hurling showers of stones, and slings, and missiles of all sorts, slew numbers on each side. Meantime, high mounds rose up with speedy growth; and the siege grew fiercer and sterner daily; many of our men being slain because, fighting as they were under the eye of the emperor, and eager for reward, they took off their helmets in order to be the more easily recognized, and so with bare heads, were an easy mark for the skilful archers of the enemy.

The days and nights being alike spent in watching, made each side the more careful; and the Persians, being alarmed at the vast height to which the mounds were now carried, and at the enormous ram, which

was accompanied by others of smaller size, made great exertions to burn them, and kept continually shooting firebrands and incendiary missiles at them; but their labour was vain, because the chief part of them was covered with wet skins and cloths, and some parts also had been steeped in alum, so that the fire might fall harmless upon them.

But the Romans, driving these rams on with great courage, although they had difficulty in defending themselves, disregarded danger, however imminent, in the hope of making themselves masters of the town.

And on the other hand, when the enormous ram was brought against the tower to which it was applied, as if it could at once throw it down, the garrison, by a clever contrivance, entangled its projecting iron head, which in shape was like that of a ram, with long cords on both sides, to prevent its being drawn back and then driven forward with great force, and to hinder it from making any serious impression on the walls by repeated blows; and meanwhile they poured on it burning pitch, and for a long time these engines were fixed at the point to which they had been advanced, and exposed to all the stones and javelins which were hurled from the walls.

By this time the mounds were raised to a considerable height, and the garrison, thinking that unless they used extraordinary vigilance their destruction must be at hand, resorted to extreme audacity; and making an unexpected sally from the gates, they attacked our front rank, and with all their might hurled firebrands and iron braziers loaded with fire against the rams.

But after a fierce but undecided conflict, the bulk of them were driven within the walls, without having succeeded in their attempt; and presently the battlements were attacked from the mounds which the Romans had raised, with arrows and slings and lighted javelins, which flew over the roofs of the towers, but did no harm, means having been

prepared to extinguish any flames.

And as the ranks on both sides became thinner, and the Persians were now reduced to extremities unless some aid could be found, they prepared with redoubled energy a fresh sally from the camp: accordingly, they made a sudden sally, supported by increased numbers, and among the armed men were many bearing torches, and iron baskets full of fire, and faggots; and all kinds of things best adapted for setting fire to the works of the besiegers were hurled against them.

And because the dense clouds of smoke obscured the sight, when the trumpet gave the signal for battle, the legions came up with quick step; and as the eagerness of the conflict grew hotter, after they had engaged, suddenly all the engines, except the great ram, caught fire from the flames which were hurled at them; but the ropes which held the chief ram were broken asunder, and that the vigorous efforts of some gallant men saved, when it was half burnt.

When the darkness of night terminated the combat, only a short time was allowed to the soldiers for rest; but when they had been refreshed by a little food and sleep, they were awakened by their captains, and ordered to remove their works away from the walls of the town, and prepare to fight at closer quarters from the lofty mounds which were untouched by the flames, and now commanded the walls. And to drive the defenders from the walls, on the summit of the mounds they stationed two balistæ, in fear of which they thought that none of the enemy would venture even to look out.

After having taken these efficacious measures, a triple line of our men, having a more threatening aspect than usual from the nodding cones of their helmets (many of them also bearing ladders), attempted about twilight to scale the walls. Arms clashed and trumpets sounded, and both sides fought with equal boldness and ardour. The Romans,

extending their lines more widely, when they saw the Persians hiding from fear of the engines which had been stationed on the mounds, battered the wall with their ram, and with spades, and axes, and levers, and ladders, pressed fiercely on, while missiles from each side flew without ceasing.

But the Persians were especially pressed by the various missiles shot from the balistæ, which, from the artificial mounds, came down upon them in torrents; and having become desperate, they rushed on, fearless of death, and distributing their force as if at the last extremity, they left some to guard the walls, while the rest, secretly opening a postern gate, rushed forth valiantly with drawn swords, followed by others who carried concealed fire.

And while the Romans at one moment were pressing on those who retreated, at another receiving the assault of those who attacked them, those who carried the fire crept round by a circuitous path, and pushed the burning coals in among the interstices of one of the mounds, which was made up of branches of trees, and rushes, and bundles of reeds. This soon caught fire and was utterly destroyed, the soldiers themselves having great difficulty in escaping and saving their engines.

But when the approach of evening broke off the conflict, and the two sides separated to snatch a brief repose, the emperor, after due reflection, resolved to change his plans. Although many reasons of great urgency pressed him to force on the destruction of Phœnice, as of a fortress which would prove an impregnable barrier to the inroads of the enemy, yet the lateness of the season was an objection to persevering any longer. He determined, therefore, while he preserved his position, to carry on the siege for the future by slight skirmishes, thinking that the Persians would be forced to surrender from want of provisions, which, however, turned out very different.

For while the conflict was proceeding sharply, the heavens became moist, and watery clouds appeared with threatening darkness; and presently the ground got so wet from continual rain, that the whole country was changed into an adhesive mud (for the soil is naturally rich), and every plan was thrown into confusion; meantime, thunder with incessant crashes and ceaseless lightning filled men's minds with fear.

To these portents were added continual rainbows. A short explanation will serve to show how these appearances are formed. The vapours of the earth becoming warmer, and the watery particles gathering in clouds, and thence being dispersed in spray, and made brilliant by the fusion of rays, turn upwards towards the fiery orb of the sun, and form a rainbow, which sweeps round with a large curve because it is spread over our world, which physical investigations place on the moiety of a sphere.

Its appearance, as far as mortal sight can discern, is, in the first line yellow, in the second tawny, in the third scarlet, in the fourth purple, and in the last a mixture of blue and green.

And it is so tempered with this mixed beauty, as mankind believe, because its first portion is discerned in a thin diluted state, of the same colour as the air which surrounds it; the next line is tawny, that is a somewhat richer colour than yellow; the third is scarlet, because it is opposite to the bright rays of the sun, and so pumps up and appropriates, if one may so say, the most subtle portion of its beams; the fourth is purple, because the density of the spray by which the splendour of the sun's rays is quenched shines between, and so it assumes a colour near that of flame; and as that colour is the more diffused, it shades off into blue and green.

Others think that the rainbow is caused by the rays of the sun becoming infused into some dense cloud, and pouring into it a liquid light, which, as it can find no exit, falls back upon itself, and shines the

more brilliantly because of a kind of attrition; and receives those hues which are most akin to white from the sun above; its green hues from the cloud under which it lies, as often happens in the sea, where the waters which beat upon the shore are white, and those farther from the land, which, as being so, are more free from any admixture, are blue.

And since it is an indication of a change in the atmosphere (as we have already said), when in a clear sky sudden masses of clouds appear, or on the other hand, when the sky changed from a gloomy look to a joyful serenity, therefore we often read in the poets that Iris is sent from heaven when a change is required in the condition of any present affairs. There are various other opinions which it would be superfluous now to enumerate, since my narration must hasten back to the point from which it digressed.

By these and similar events the emperor was kept wavering between hope and fear, as the severity of winter was increasing, and he suspected ambuscades in the country, which was destitute of roads; fearing also, among other things, the discontent of the exasperated soldiers. And it further goaded his unquiet spirit to return balked of his purpose, after, as it were, the door of the rich mansion was opened to him.

However, giving up his enterprise as fruitless, he returned into the unwelcome Syria, to winter at Antioch, after having suffered a succession of melancholy disasters. For, as if some unfriendly constellation so governed events, Constantius himself, while warring with the Persians, was always attended by adverse fortune; on which account he hoped at least to gain victories by means of his generals; and this, as we remember, usually happened.

Book XXI

21.1

A.D. 360.

While Constantius was detained by this perplexing war beyond the Euphrates, Julian at Vienne devoted his days and nights to forming plans for the future, as far as his limited resources would allow; being in great suspense, and continually doubting whether to try every expedient to win Constantius over to friendship, or to anticipate his attack, with the view of alarming him.

And while anxiously considering these points he feared him, as likely to be in the one case a cruel friend, while in the other case he recollected that he had always been successful in civil disturbances. Above all things his anxiety was increased by the example of his brother Gallus, who had been betrayed by his own want of caution and the perjured deceit of certain individuals.

Nevertheless he often raised himself to ideas of energetic action, thinking it safest to show himself as an avowed enemy to him whose movements he could, as a prudent man, judge of only from his past actions, in order not to be entrapped by secret snares founded on pretended friendship.

Therefore, paying little attention to the letters which Constantius had sent by Leonas, and admitting none of his appointments with the exception of that of Nebridius, he now celebrated the Quinquennalia⁶ as emperor, and wore a splendid diadem inlaid with precious stones, though when first entering on that power he had worn but a paltry-looking crown like that of a president of the public games.

At this time also he sent the body of his wife Helen, recently deceased, to Rome, to be buried in the suburb on the road to Nomentum, where also Constantina, his sister-in-law, the wife of Gallus, had been buried.

His desire to march against Constantius, now that Gaul was tranquillized, was inflamed by the belief which he had adopted from many omens (in the interpretation of which he had great skill), and from dreams that the emperor would soon die.

And since malignant people have attributed to this prince, so erudite and so eager to acquire all knowledge, wicked practices for the purpose of learning future events, we may here briefly point out how this important branch of learning may be acquired by a wise man.

The spirit which directs all the elements, and which at all times and throughout all places exercises its activity by the movement of these eternal bodies, can communicate to us the capacity of foreseeing the future by the sciences which we attain through various kinds of discipline. And the ruling powers, when properly propitiated, as from everlasting springs, supply mankind with words of prophecy, over which the deity of Themis is said to preside, and which, because she teaches men to know what has been settled for the future by the law of Fate, has received that name from the Greek word τεθειμένα (“fixed”), and has been placed by ancient theologians in the bed and on the throne of Jupiter, who gives life to all the world.

Auguries and auspices are not collected from the will of birds who are themselves ignorant of the future (for there is no one so silly as to say they understand it); but God directs the flight of birds, so that the sound of their beaks, or the motion of their feathers, whether quiet or disturbed, indicates the character of the future. For the kindness of the deity, whether it be that men deserve it, or that he is touched by affection for them, likes by these acts to give information of what is impending.

Again, those who attend to the prophetic entrails of cattle, which often take all kinds of shapes, learn from them what happens. Of this

practice a man called Tages was the inventor, who, as is reported, was certainly seen to rise up out of the earth in the district of Etruria.

Men too, when their hearts are in a state of excitement, foretell the future, but then they are speaking under divine inspiration. For the sun, which is, as natural philosophers say, the mind of the world, and which scatters our minds among us as sparks proceeding from itself, when it has inflamed them with more than usual vehemence, renders them conscious of the future. From which the Sibyls often say they are burning and fired by a vast power of flames; and with reference to these cases the sound of voices, various signs, thunder, lightning, thunderbolts, and falling stars, have a great significance.

But the belief in dreams would be strong and undoubted if the interpreters of them were never deceived; and sometimes, as Aristotle asserts, they are fixed and stable when the eye of the person, being soundly asleep, turns neither way, but looks straight forward.

And because the ignorance of the vulgar often talks loudly, though ignorantly, against these ideas, asking why, if there were any faculty of foreseeing the future, one man should be ignorant that he would be killed in battle, or another that he would meet with some misfortune, and so on; it will be enough to reply that sometimes a grammarian has spoken incorrectly, or a musician has sung out of tune, or a physician been ignorant of the proper remedy for a disease; but these facts do not disprove the existence of the sciences of grammar, music, or medicine.

So that Tully is right in this as well as other sayings of his, when he says, "Signs of future events are shown by the gods; if any one mistakes them he errs, not because of the nature of the gods, but because of the conjectures of men." But lest this discussion, running on this point beyond the goal, as the proverb is, should disgust the reader, we will now return to relate what follows.

While Julian, still with the rank of Cæsar only, was at Paris one day, exercising himself in the camp-field, and moving his shield in various directions, the joints by which it was fastened gave way, and the handle alone remained in his hand, which he still held firmly, and when those present were alarmed, thinking it a bad omen, he said, "Let no one be alarmed, I still hold firmly what I had before."

And again, when one day after a slight dinner, he was sleeping at Vienne, in the middle of the darkness of the night a figure of unusual splendour appeared to him, and when he was all but awake, repeated to him the following heroic verses, reciting them over and over again; which he believed, so that he felt sure that no ill fortune remained for him:—

"When Jove has passed the water-carrier's sign,
And Saturn's light, for five-and-twenty days
Has lightened up the maid; the king divine
Of Asia's land shall enter on the ways
That painful lead to death and Styx's gloomy maze."

Therefore in the mean time he made no change in the existing condition of affairs, but arranged everything that occurred with a quiet and easy mind, gradually strengthening himself, in order to make the increase of his power correspond with the increase of his dignity.

And in order, without any hindrance, to conciliate the good-will of all men, he pretended to adhere to the Christian religion, which in fact he had long since secretly abandoned, though very few were aware of his private opinions, giving up his whole attention to soothsaying and divination, and the other arts which have always been practised by the worshippers of the gods.

But to conceal this for a while, on the day of the festival at the beginning of January, which the Christians call Epiphany, he went into their church, and offered solemn public prayer to their God.

While these events were proceeding, and spring was coming on, Julian was suddenly smitten with grief and sorrow by unexpected intelligence. For he learnt that the Allemanni had poured forth from the district of Vadomarius, in which quarter, after the treaty which had been made with him, no troubles had been anticipated, and were laying waste the borders of the Tyrol, pouring their predatory bands over the whole frontier, and leaving nothing unravaged.

He feared that if this were passed over it might rekindle the flames of war; and so at once sent a count named Libino, with the Celtic and Petulantes legions, who were in winter quarters with him, to put a decided and immediate end to this affair.

Libino marched with speed, and arrived at Seckingen; but was seen while at a distance by the barbarians, who had already hidden themselves in the valleys with the intention of giving him battle. His soldiers were inferior in number, but very eager for battle; and he, after haranguing them, rashly attacked the Germans, and at the very beginning of the fight was slain among the first. At his death the confidence of the barbarians increased, while the Romans were excited to avenge their general; and so the conflict proceeded with great obstinacy, but our men were overpowered by numbers, though their loss in killed and wounded was but small.

Constantius, as has been related, had made peace with this Vadomarius, and his brother Gundomadus, who was also a king. And when afterwards Gundomadus died, thinking that Vadomarius would be faithful to him, and a silent and vigorous executor of his secret orders (if one may believe what is only report), he gave him directions by letter to harass the countries on his borders, as if he had broken off the treaty of peace, in order to keep Julian, through his fears of him, from ever abandoning the protection of Gaul.

In obedience to these directions, it is fair to believe that Vadomarius committed this and other similar actions; being a man from his

earliest youth marvellously skilled in artifice and deceit, as he afterwards showed when he enjoyed the dukedom of Phœnice.⁷

But now, being discovered, he desisted from his hostilities. For one of his secretaries, whom he had sent to Constantius, was taken prisoner by Julian's outposts, and when he was searched to see if he was the bearer of anything, a letter was found on him, which contained these words among others, "Your Cæsar is not submissive." But when he wrote to Julian he always addressed him as lord, and emperor, and god.

21.4

These affairs were full of danger and doubt; and Julian considering them likely to lead to absolute destruction, bent all his mind to the one object of seizing Vadamarius unawares, through the rapidity of his movements, in order to secure his own safety and that of the provinces. And the plan which he decided on was this.

He sent to those districts Philagrius, one of his secretaries, afterwards count of the East, in whose proved prudence and fidelity he could thoroughly rely; and besides a general authority to act as he could upon emergencies, he gave him also a paper signed by himself, which he bade him not to open nor read unless Vadamarius appeared on the western side of the Rhine.

Philagrius went as he was ordered, and while he was in that district busying himself with various arrangements, Vadamarius crossed the river, as if he had nothing to fear, in a time of profound peace, and pretending to know of nothing having been done contrary to treaty, when he saw the commander of the troops who were stationed there, made him a short customary speech, and to remove all suspicion, of his own accord promised to come to a banquet to which Philagrius also had been invited.

As soon as Philagrius arrived, when he saw the king, he recollected Julian's words, and pretending some serious and urgent business, returned to his lodging, where having read the paper intrusted to him,

and learnt what he was to do, he immediately returned and took his seat among the rest.

But when the banquet was over he boldly arrested Vadomarius, and gave him to the commander of the forces, to be kept in strict custody in the camp, reading to him the commands he had received; but as nothing was mentioned about Vadomarius's retinue, he ordered them to return to their own country.

But the king was afterwards conducted to Julian's camp, and despaired of pardon when he heard that his secretary had been taken, and the letters which he had written to Constantius read; he was however not even reproached by Julian, but merely sent off to Spain, as it was an object of great importance that, while Julian was absent from Gaul, this ferocious man should not be able to throw into confusion the provinces which had been tranquillized with such great difficulty.

Julian, being much elated at this occurrence, since the king, whom he feared to leave behind him while at a distance, had been caught more quickly than he expected, without delay prepared to attack the barbarians who, as we have just related, had slain Count Libino and some of his soldiers in battle.

And to prevent any rumour of his approach giving them warning to retire to remoter districts, he passed the Rhine by night with great silence, with some of the most rapid of his auxiliary bands; and so came upon them while fearing nothing of the sort. And he at once attacked them the moment they were first roused by the sound of enemies, and while still examining their swords and javelins; some he slew, some he took prisoners, who sued for mercy and offered to surrender their booty; to the rest who remained and implored peace, and promised to be quiet for the future, he granted peace.

21.5

While these transactions were carried on in this spirited manner, Julian, considering to what great internal divisions his conduct had given rise, and that nothing is so advantageous for the success of

sudden enterprise as celerity of action, saw with his usual sagacity that if he openly avowed his revolt from the emperor, he should be safer; and feeling uncertain of the fidelity of the soldiers, having offered secret propitiatory sacrifices to Bellona, he summoned the army by sound of trumpet to an assembly, and standing on a tribune built of stone, with every appearance of confidence in his manner, he spoke thus with a voice unusually loud:—

“I imagine that you, my gallant comrades, exalted by the greatness of your own achievements, have long been silently expecting this meeting, in order to form a previous judgment of, and to take wise measures against the events which may be expected. For soldiers united by glorious actions ought to hear rather than speak; nor ought a commander of proved justice to think anything but what is worthy of praise and approbation. That therefore I may explain to you what I propose, I entreat you to listen favourably to what I will briefly set before you.

“From my earliest year, by the will of God, I have been placed among you, with whom I have crushed the incessant inroads of the Franks and Allemanni, and checked the endless licentiousness of their ravages; by our united vigour we have opened the Rhine to the Roman armies, whenever they choose to cross it; standing immovable against reports, as well as against the violent attacks of powerful nations, because I trusted to the invincibility of your valour.

“Gaul, which has beheld our labours, and which, after much slaughter and many periods of protracted and severe disasters, is at last replaced in a healthy state, will for ever bear witness to posterity of our achievements.

“But now since, constrained both by the authority of your judgment, and also by the necessity of the case, I have been raised to the rank of emperor, under the favour of God and of you, I aim at still greater things, if fortune should smile on my undertakings. Boasting at least

that I have secured to the army, whose equity and mighty exploits are so renowned, a moderate and merciful chief in time of peace, and in war a prudent and wary leader against the combined forces of the barbarians.

“In order therefore that by the cordial unanimity of our opinions we may prevent ill fortune by anticipating it, I beg you to follow my counsel, salutary, as I think it, since the state of our affairs corresponds to the purity of my intentions and wishes. And while the legions of Illyricum are occupied by no greater force than usual, let us occupy the further frontier of Dacia; and then take counsel from our success what is to be done next.

“But as brave generals, I entreat you to promise with an oath that you will adhere to me with unanimity and fidelity; while I will give my customary careful attention to prevent anything from being done rashly or carelessly; and if any one requires it, will pledge my own unsullied honour that I will never attempt nor think of anything but what is for the common good.

“This especially I request and beseech you to observe, that none of you let any impulse of sudden ardour lead you to inflict injury on any private individual; recollecting that our greatest renown is not derived so much from the numberless defeats of the enemy as from the safety of the provinces, and their freedom from injury, which is celebrated as an eminent example of our virtue.”

The emperor’s speech was approved as though it had been the voice of an oracle, and the whole assembly was greatly excited, and being eager for a change, they all with one consent raised a tremendous shout, and beat their shields with a violent crash, calling him a great and noble general, and, as had been proved, a fortunate conqueror and king.

And being all ordered solemnly to swear fidelity to him, they put their swords to their throats with terrible curses, and took the oath in the prescribed form, that for him they would undergo every kind of suffering, and even death itself, if necessity should require it; and their officers and all the friends of the prince gave a similar pledge with the same forms.

Nebridius the prefect alone, boldly and unshakenly refused, declaring that he could not possibly bind himself by an oath hostile to Constantius, from whom he had received many and great obligations.

When these words of his were heard, the soldiers who were nearest to him were greatly enraged, and wished to kill him; but he threw himself at the feet of Julian, who shielded him with his cloak. Presently, when he returned to the palace, Nebridius appeared before him, threw himself at his feet as a suppliant, and entreated him to relieve his fears by giving him his right hand. Julian replied, "Will there be any conspicuous favour reserved for my own friends if you are allowed to touch my hand? However, depart in peace as you will." On receiving this answer, Nebridius retired in safety to his own house in Tuscany.

By these preliminary measures, Julian having learnt, as the importance of the affair required, what great influence promptness and being beforehand has in a tumultuous state of affairs, gave the signal to march towards Pannonia, and advancing his standard and his camp, boldly committed himself to fickle fortune.

21.6

A.D. 361.

It is fitting now to retrace our steps and to relate briefly what (while these events just related were taking place in Gaul) Constantius, who passed the winter at Antioch, did, whether in peace or war.

Besides many others of high rank, some of the most distinguished tribunes generally come to salute an emperor on his arrival from distant lands. And accordingly, when Constantius, on his return from Mesopotamia, received this compliment, a Paphlagonian named Amphilocheus, who had been a tribune, and whom suspicion, not very far removed from the truth, hinted at as having, while serving formerly under Constans, sown the seeds of discord between him and his brother, now ventured, with no little audacity, to come forward as if he were to be admitted to pay his duty in this way, but was recognized and refused admittance. Many also raised an outcry against him, crying out that he, as a stubborn rebel, ought not to be permitted to see another day. But Constantius, on this occasion more merciful than usual, said, "Cease to press upon a man who, indeed, as I believe, is guilty, but who has not been convicted. And remember that if he has done anything of the kind, he, as long as he is in my sight, will be punished by the judgment of his own conscience, which he will not be able to escape." And so he departed.

The next day, at the Circensian games, the same man was present as a spectator, just opposite the usual seat of the emperor, when a sudden shout was raised at the moment of the commencement of the expected contest; the barriers, on which he with many others was leaning, were broken, and the whole crowd as well as he were thrown forward into the empty space; and though a few were slightly hurt, he alone was found to be killed, having received some internal injury. At which Constantius rejoiced, prognosticating from this omen protection from his other enemies.

About the same time (his wife Eusebia having died some time before) he took another wife, named Faustina. Eusebia's brothers were two men of consular rank, Hypatius and Eusebius. She had been a woman of pre-eminent beauty both of person and character, and for one of her high rank most courteous and humane. And to her favour and justice it was owing, as we have already mentioned, that Julian was saved from danger and declared Cæsar.

About the same time Florentius also was rewarded, who had quitted Gaul from fear of a revolution. He was now appointed to succeed Anatolius, the prefect of the prætorium in Illyricum, who had lately died. And in conjunction with Taurus, who was appointed to the same office in Italy, he received the ensigns of this most honourable dignity.

Nevertheless, the preparations for both foreign and civil wars went on, the number of the squadrons of cavalry was augmented, and reinforcements for the legions were enlisted with equal zeal, recruits being collected all over the provinces. Also every class and profession was exposed to annoyances, being called upon to furnish arms, clothes, military engines, and even gold and silver and abundant stores of provisions, and various kinds of animals.

And because, as the king of Persia had been compelled unwillingly to fall back on account of the difficulties of the winter, it was feared that as soon as the weather became open he would return with greater impetuosity than ever, ambassadors were sent to the kings and satraps across the Tigris, with splendid presents, to advise and entreat them all to join us, and abstain from all designs or plots against us.

But the most important object of all was to win over Arsaces and Meribanes, the kings of Armenia and Hiberia, who were conciliated by the gift of magnificent and honourable robes and by presents of all kinds, and who could have done great harm to the Roman interests if at such a crisis they had gone over to the Persians.

At this important time, Hermogenes died, and was succeeded in his prefecture by Helpidius, a native of Paphlagonia, a man of mean appearance and no eloquence, but of a frank and truthful disposition, humane and merciful. So much so that once when Constantius ordered an innocent man to be put to the torture before him, he calmly requested to be deprived of his office, and that such commissions might be given to others who would discharge them in a manner more in accordance with the emperor's sentence.

21.7

Constantius was perplexed at the danger of the crisis before him, and doubted what to do, being for some time in deep anxiety whether to march against Julian, who was still at a distance, or to drive back the Persians, who were already threatening to cross the Euphrates. And while he was hesitating, and often taking counsel with his generals, he at last decided that he would first finish, or at all events take the edge off, the war which was nearest, so as to leave nothing formidable behind him, and then penetrate through Illyricum and Italy, thinking to catch Julian at the very outset of his enterprise, as he might catch a deer with hounds. For so he used to boast, to appease the fears of those about him.

But that his purpose might not appear to cool, and that he might not seem to have neglected any side of the war, he spread formidable rumours of his approach in every direction. And fearing that Africa, which on all occasions seemed to invite usurpers, might be invaded during his absence, as if he had already quitted the eastern frontier, he sent by sea to that country his secretary Gaudentius, whom we have already mentioned as a spy upon the actions of Julian in Gaul.

He had two reasons for thinking that this man would be able with prompt obedience to do all that he desired, both because he feared the other side, which he had offended, and also because he was anxious to take this opportunity to gain the favour of Constantius, whom he expected beyond a doubt to see victorious. Indeed no one at that time had any other opinion.

When Gaudentius arrived in Africa, recollecting the emperor's orders, he sent letters to Count Cretio, and to the other officers, to instruct them what his object was; and having collected a formidable force from all quarters, and having brought over a light division of skirmishers from the two Mauritanias, he watched the coasts opposite to Italy and Gaul with great strictness.

Nor was Constantius deceived in the wisdom of this measure. For as long as Gaudentius lived none of the adverse party ever reached that country, although a vast multitude in arms was watching the Sicilian coast between Cape Boeo and Cape Passaro, and ready to cross in a moment if they could find an opportunity.

Having made these arrangements as well as the case admitted, in such a way as he thought most for his advantage, and having settled other things also of smaller importance, Constantius was warned by messengers and letters from his generals that the Persian army, in one solid body, and led by its haughty king, was now marching close to the banks of the Tigris, though it was as yet uncertain at what point they meant to cross the frontier.

And he, feeling the importance of this intelligence, in order, by being near them, to anticipate their intended enterprises, quitted his winter quarters in haste, having called in the infantry and cavalry on which he could rely from all quarters, crossed the Euphrates by a bridge of boats at Capessana, and marched towards Edessa, which was well provisioned and strongly fortified, intending to wait there a short time till he could receive from spies or deserters certain information of the enemy's motions.

21.8

In the mean time, Julian leaving the district of Basle, and having taken all the steps which we have already mentioned, sent Sallustius, whom he had promoted to be a prefect, into Gaul, and appointed Germanianus to succeed Nebridius. At the same time he gave Nevitta the command of the heavy cavalry, being afraid of the old traitor Gumoharius, who, when he was commander of the Scutarii, he heard had secretly betrayed his chief officer, Vetrano. The quæstorship he gave to Jovius, of whom we have spoken when relating the acts of Magnentius, and the treasury he allotted to Mamertinus. Dagalaiphus also was made captain of the household guard, and many others, with

whose merits and fidelity he was acquainted, received different commands at his discretion.

Being now about to march through the Black Forest, and the country lying on the banks of the Danube, he on a sudden conceived great doubt and fear whether the smallness of his force might not breed contempt, and encourage the numerous population of the district to resist his advance.

To prevent this, he took prudent precautions, and distributing his army into divisions, he sent some under Jovenius and Jovius to advance with all speed by the well-trodden roads of Italy; others under the command of Nevitta, the commander of the cavalry, were to take the inland road of the Tyrol. So that his army, by being scattered over various countries, might cause a belief that its numbers were immense, and might fill all nations with fear. Alexander the Great, and many other skilful generals, had done the same thing when their affairs required it.

But he charged them, when they set forth, to march with all speed, as if likely to meet at any moment with an enemy, and carefully to post watches and sentries and outposts at night, so as to be free from the danger of any sudden attack.

21.9

These things having been arranged according to the best of his judgment, Julian adhering to the maxim by which he had often forced his way through the countries of the barbarians, and trusting in his continued successes, proceeded in his advance.

And when he had reached the spot at which he had been informed that the river was navigable, he embarked on board some boats which good fortune had brought thither in numbers, and passed as secretly as he could down the stream, escaping notice the more because his habits of endurance and fortitude had made him indifferent to delicate food; so that, being contented with meagre and poor fare, he did not care to approach their towns or camps, forming his conduct in

this respect according to the celebrated saying of the ancient Cyrus, who, when he was introduced to a host who asked him what he wished to have got ready for supper, answered, “Nothing beyond bread, for that he hoped he should sup by the side of a river.”

But Fame, which, as they say, having a thousand tongues, always exaggerates the truth, at this time spread abroad a report among all the tribes of Illyricum that Julian, having overthrown a number of kings and nations in Gaul, was coming on flushed with success and with a numerous army.

Jovinus, the prefect of the prætorium, being alarmed at this rumour, fled in haste, as if from a foreign enemy; and going by the public conveyances with frequent relays, he crossed the Julian Alps, taking with him also Florentius the prefect.

But Count Lucillianus, who at that time had the command of the army in these districts, being at Sirmium, and having received some slight intelligence of Julian’s movements, collected the soldiers whom the emergency gave time for being quickly called from their several stations, and proposed to resist his advance.

Julian, however, like a firebrand or torch once kindled, hastened quickly to his object; and when, at the waning of the moon, he had reached Bonmunster, which is about nineteen miles from Sirmium,⁸ and when, therefore, the main part of the night was dark, he unexpectedly quitted his boats, and at once sent forward Dagalaiphus with his light troops to summon Lucillianus to his presence, and to drag him before him if he resisted.

He was asleep, and when he was awakened by the violence of this uproar, and saw himself surrounded by a crowd of strangers, perceiving the state of the case, and being filled with awe at the name of the emperor, he obeyed his orders, though sadly against his will. And though commander of the cavalry, a little while before proud and fierce, he now obeyed the will of another, and mounting a horse which

was brought him on a sudden, he was led before Julian, as an ignoble prisoner, and from fear was hardly able to collect his senses.

But as soon as he saw the emperor, and was relieved by receiving permission to offer his salutations to his purple robe, he recovered his courage, and feeling safe said, "You have been incautious and rash, O emperor, to trust yourself with but a few troops in the country of another." But Julian, with a sarcastic smile, replied, "Keep these prudent speeches for Constantius. I offered you the ensign of my royal rank to ease you of your fears, and not to take you for my counsellor."

21.10

So after he had got rid of Lucillianus, thinking no further delay or hesitation admissible, being bold and confident in all emergencies, and on the way, as he presumed, to a city inclined to surrender, he marched on with great speed. When he came near the suburbs, which are very large and much extended, a vast crowd of soldiers and of every class of the population came forth to meet him with lights and flowers and auspicious prayers, and after saluting him as emperor and lord, conducted him to the palace.

He, pleased at these favourable omens, and conceiving therefrom a sanguine hope of future success, concluded that the example of so populous and illustrious a metropolis would be followed as a guiding-star by other cities also, and therefore on the very next day exhibited a chariot race, to the great joy of the people. On the third day, unable to brook any delay, he proceeded by the public roads, and without any resistance seized upon Succi, and appointed Nevitta governor of the place, as one whom he could trust. It is fitting that I should now explain the situation of this place Succi.

The summits of the mountain chains of Hæmus⁹ and Rhodope, the first of which rises up from the very banks of the Danube, and the other from the southern bank of the river Axius, ending with swelling ridges at one narrow point, separate the Illyrians and the Thracians, being on the one side near the inland Dacians and Serdica, on the

other looking towards Thrace and the rich and noble city of Philippopolis. And, as if Nature had provided for bringing the surrounding nations under the dominion of the Romans, they are of such a form as to lead to this end. Affording at first only a single exit through narrow defiles, but at a later period they were opened out with roads of such size and beauty as to be passable even for waggons. Though still, when the passes have been blocked up, they have often repelled the attacks of great generals and mighty armies.

The part which looks to Illyricum is of a more gentle ascent, so as to be climbed almost imperceptibly; but the side opposite to Thrace is very steep and precipitous, in some places absolutely impassable, and in others hard to climb even where no one seeks to prevent it. Beneath this lofty chain a spacious level plain extends in every direction, the upper portion of it reaching even to the Julian Alps, while the lower portion of it is so open and level as to present no obstacles all the way to the straits and sea of Marmora.

Having arranged these matters as well as the occasion permitted, and having left there the commander of the cavalry, the emperor returned to Nissa, a considerable town, in order, without any hindrance, to settle everything in the way most suited to his interests.

While there he appointed Victor, an historical writer, whom he had seen at Sirmium, and whom he ordered to follow him from that city, to be consular governor of the second Pannonia; and he erected in his honour a brazen statue, as a man to be imitated for his temperance; and some time after he was appointed prefect of Rome.

And now, giving the rein to loftier ideas, and believing it to be impossible to bring Constantius to terms, he wrote a speech full of bitter invectives to the senate, setting forth many charges of disgrace and vice against him. And when this harangue, Tertullus still being prefect of the city, was read in the senate, the gratitude of the nobles, as well as their splendid boldness, was very conspicuous; for they all

cried out with one unanimous feeling, “We expect that you should show reverence to the author of your own greatness.”

Then he assailed the memory of Constantine also as an innovator and a disturber of established laws and of customs received from ancient times, accusing him of having been the first to promote barbarians to the fasces and robe of the consul. But in this respect he spoke with folly and levity, since, in the face of what he so bitterly reproved, he a very short time afterwards added to Mamertinus, as his colleague in the consulship, Nevitta, a man neither in rank, experience, or reputation at all equal to those on whom Constantine had conferred that illustrious magistracy, but who, on the contrary, was destitute of accomplishments and somewhat rude; and what was less easy to be endured, made a cruel use of his high power.

21.11

While Julian was occupied with these and similar thoughts, and was anxious about great and important affairs, a messenger came with terrible and unexpected news of the monstrous attempts of some persons which were likely to hinder his fiery progress, unless by prompt vigilance he could crush them, before they came to a head. I will briefly relate what they were.

Under pretence of urgent necessity, but in reality because he still suspected their fidelity to him, he had sent into Gaul two legions belonging to the army of Constantius, with a troop of archers which he had found at Sirmium. They, moving slowly, and dreading the length of the journey and the fierce and continual attacks of the hostile Germans, planned a mutiny, being prompted and encouraged by Nigrinus, a tribune of a squadron of cavalry, a native of Mesopotamia. And having arranged the matter in secret conferences, and kept it close in profound silence, when they arrived at Aquileia, a city important from its situation and wealth, and fortified with strong walls, they suddenly closed the gates in a hostile manner, the native population, by whom the name of Constantius was still beloved,

increasing the confusion and the terror. And having blockaded all the approaches, and armed the towers and battlements, they prepared measures to encounter the impending struggle, being in the mean time free and unrestrained. By this daring conduct they roused the Italian natives of the district to espouse the side of Constantius, who was still alive.

21.12

When Julian heard of this transaction, being then at Nissa, as he feared nothing unfriendly in his rear, and had read and heard that this city, though often besieged, had never been destroyed or taken, hastened the more eagerly to gain it, either by stratagem, or by some kind of flattery or other, before any more formidable event should arise.

Therefore he ordered Jovinus, the captain of his cavalry, who was marching over the Alps, and had entered Noricum, to return with all speed, to remedy by some means or other, the evil which had burst out. And, that nothing might be wanting, he bade him retain all the soldiers who were marching after his court or his standards and passing through that town, and to avail himself of their help to the utmost.

When he had made these arrangements, having soon afterwards heard of the death of Constantius, he crossed through Thrace, and entered Constantinople: and having been often assured that the siege would be protracted rather than formidable, he sent Immo with some other counts to conduct it; and removed Jovinus to employ him in other matters of greater importance.

Therefore, having surrounded Aquileia with a double line of heavy infantry, the generals all agreed upon trying to induce the garrison to surrender, using alternately threats and caresses; but after many proposals and replies had been interchanged, their obstinacy only

increased, and the conferences were abandoned, having proved wholly ineffectual.

And because there was now no prospect but that of a battle, both sides refreshed themselves with sleep and food; and at daybreak the trumpets sounded, and the two armies, arrayed for reciprocal slaughter, attacked one another with loud shouts, but with more ferocity than skill.

Therefore the besiegers, bearing wooden penthouses over them, and closely woven wicker defences, marched on slowly and cautiously, and attempted to undermine the walls with iron tools: many also bore ladders which had been made of the height of the walls, and came up close to them: when some were dashed down by stones hurled on their heads, others were transfixed by whizzing javelins, and falling back, dragged with them those who were in their rear; and others, from fear of similar mischances, shrank from the attack.

The besieged being encouraged by the issue of this first conflict, and hoping for still better success, disregarded the rest of the attacks made on them; and with resolute minds they stationed engines in suitable positions, and with unwearied toil discharged the duties of watching and of whatever else could tend to their safety.

On the other hand, the besiegers, though fearing another combat, and full of anxiety, still out of shame would not appear lazy or cowardly, and as they could make no way by open attacks, they also applied themselves to the various manœuvres employed in sieges. And because there was no ground favourable for working battering-rams or other engines, nor for making mines, since the river Natiso passed under the walls of the city, they contrived a plan worthy to be compared with any effort of ancient skill.

With great rapidity they built some wooden towers, higher than the battlements of the enemy, and then fastening their boats together,

they placed these towers on them. In them they stationed soldiers, who, with undaunted resolution, laboured to drive down the garrison from the walls; while under them were bodies of light infantry wholly unencumbered, who going forth from the hollow parts of the towers below, threw drawbridges across, which they had put together beforehand, and so tried to cross over to the bottom of the wall while the attention of the garrison was diverted from them; so that while those above them were attacking one another with darts and stones, those who crossed over on the drawbridges might be able without interruption to break down a portion of the wall and so effect an entrance.

But once more a clever design failed in its result. For when the towers came close to the walls, they were assailed with brands steeped in pitch, and reeds, and faggots, and every kind of food for flames, all kindled. The towers quickly caught fire, and yielding under the weight of the men who were mounted on them, fell into the river, while some of the soldiers on their summits, even before they fell, had been pierced with javelins hurled from the engines on the walls, and so died.

Meanwhile the soldiers at the foot of the wall, being cut off by the destruction of their comrades in the boats, were crushed with huge stones, with the exception of a few, who, in spite of the difficult ground over which their flight lay, escaped by their swiftness of foot. At last, when the contest had been protracted till evening, the usual signal for retreat was given, and the combatants parted to pass the night with very different feelings.

The losses of the besiegers, who had suffered greatly, encouraged the defenders of the town with hopes of victory, though they also had to mourn the deaths of some few of their number. Nevertheless, the preparations went on rapidly. Rest and food refreshed their bodies

during the night; and at dawn of day the conflict was renewed at the trumpet's signal.

Some, holding their shields over their heads, in order to fight with more activity; others, in front, bore ladders on their shoulders, and rushed on with eager vehemence, exposing their breasts to wounds from every kind of weapon. Some endeavoured to break down the iron bars of the gates; but were attacked with fire, or crushed under stones hurled from the walls. Some boldly strove to cross the fosses, but fell beneath the sudden sallies of soldiers rushing out from postern gates, or were driven back with severe wounds. For those who sallied forth had an easy retreat within the walls, and the rampart in front of the walls, strengthened with turf, saved those who lay in wait behind it from all danger.

Although the garrison excelled in endurance and in the arts of war, without any other aid than that of their walls, still our soldiers, being attacked as they were from a more numerous force, became impatient of the long delay, and moved round and round the suburbs, seeking diligently to discover by what force or what engines they could make their way out of the city.

But as, through the greatness of the difficulties in their way, they could not accomplish this, they began to slacken their exertions as to the siege itself, and leaving a few watches and outposts, ravaged the adjacent country, and thus obtained all kinds of supplies, dividing their booty with their comrades. The consequence was, that excessive eating and drinking proved injurious to their health.

When, however, Immo and his colleagues reported this to Julian, who was passing the winter at Constantinople, he applied a wise remedy to such a disorder, and sent thither Agilo, the commander of his infantry, an officer in great esteem, that when a man of his rank and reputation appeared there and took the intelligence of the death of Constantius to the army, the siege might be terminated in that way.

In the mean while, not to abandon the siege of Aquileia, as all other attempts had proved futile, the generals endeavoured to compel the citizens to surrender by want of water. So they cut the aqueducts; but as the garrison still resisted with undiminished courage, they, with vast valour, diverted the stream of the river. But this again was done in vain; for they reduced the allowance of water to each man; and contented themselves with the scanty supply they could procure from wells.

While these affairs were proceeding thus, Agilo arrived, as he had been commanded; and, being protected by a strong body of heavy infantry, came up boldly close to the walls; and in a long and veracious speech, told the citizens of the death of Constantius, and the confirmation of Julian's power; but was reviled and treated as a liar. Nor would any one believe his statement of what had occurred, till on promise of safety he was admitted by himself to the edge of the defences; where, with a solemn oath, he repeated what he had before related.

When his story was heard, they all, eager to be released from their protracted sufferings, threw open the gates and rushed out, admitting him in the joy as a captain who brought them peace; and excusing themselves, they gave up Nigrinus as the author of their mad resistance, and a few others; demanding that their punishment should be taken as an atonement for the treason and sufferings of the city.

Accordingly, a few days later, the affair was rigorously investigated; Mamertinus, the prefect of the prætorium, sitting as judge; and Nigrinus, as the cause of the war, was burnt alive. After him, Romulus and Sabostius, men who had held high office, being convicted of having sown discord in the empire without any regard to the consequences, were beheaded; and all the rest escaped unpunished, as men who had been driven to hostilities by necessity, and not by their

own inclination; this being the decision of the merciful and clement emperor, after a full consideration of justice. These things, however, happened some time afterwards.

But Julian, who was still at Nissa, was occupied in the graver cases, being full of fears on both sides. For he was apprehensive lest the defiles of the Julian Alps might be seized and barred against him by some sudden onset of the troops who had been shut up in Aquileia; by which he might lose the provinces beyond, and the supplies which he was daily expecting from that quarter.

And he also greatly feared the power of the East; hearing that the soldiers who were scattered over Thrace had been suddenly collected together to act against him, and were advancing towards the frontiers of the Succia, under command of Count Marcianus. But, devising measures suitable to this mass of pressing anxieties, he quickly assembled his Illyrian army, long inured to war, and eager to renew its martial labours under a warlike chief.

Nor even at this critical moment did he forget the interests of individuals; but devoted some time to hearing contested causes, especially those concerning municipal bodies, in whose favour he was too partial, so that he raised several persons who did not deserve such honour to public offices.

It was here that he found Symmachus and Maximus, two eminent senators, who had been sent by the nobles as envoys to Constantius, and had returned again. He promoted them with great honour; so that, preferring them to others more deserving, he made Maximus prefect of the eternal city, in order to gratify Rufinus Vulcatius, whose nephew he was. Under his administration the city enjoyed great plenty, and there was an end to the complaints of the common people, which had been so frequent.

Afterwards, in order to add security to those of his affairs which were still unsettled, and encourage the confidence of the loyal, he raised Mamertinus, the prefect of the prætorium in Illyricum, and Nevitta to the consulship; though he had so lately assailed the memory of Constantine as the person who had set the example of thus promoting low-born barbarians.

21.13

While Julian was thus carrying out new projects, and alternating between hope and fear, Constantius at Edessa, being made anxious by the various accounts brought him by his spies, was full of perplexity. At one time collecting his army for battle; at another, wishing to lay siege to Bezabde on two sides, if he could find an opportunity; taking at the same time prudent precautions not to leave Mesopotamia unprotected, while about to march into the districts of Armenia.

But while still undecided, he was detained by various causes. Sapor also remained on the other side of the Tigris till the sacrifices should become propitious to his moving. For if after crossing the river he found no resistance, he might without difficulty penetrate to the Euphrates. On the other hand, if he wished to keep his soldiers for the civil war, he feared to expose them to the dangers of a siege; having already experienced the strength of the walls and the vigour of the garrison.

However, not to lose time, and to avoid inactivity, he sent Arbetio and Agilo, the captains of his infantry and cavalry, with very large forces, to march with all speed; not to provoke the Persians to battle, but to establish forts on the nearest bank of the Tigris, which might be able to reconnoitre, and see in what direction the furious monarch broke forth; and with many counsels given both verbally and in writing, he charged them to retreat with celerity the moment the enemy's army began to cross the river.

While these generals were watching the frontier as they were ordered,

and spying out the secret designs of their most crafty enemy, he himself, with the main body of his army, made head against his most pressing foes, as if prepared for battle; and defended the adjacent towns by rapid movements. Meantime spies and deserters continually coming in, related to him opposite stories; being in fact ignorant of what was intended, because among the Persians no one knows what is decided on except a few taciturn and trusty nobles, by whom the god Silence is worshipped.

But the emperor was continually sent for by the generals whom I have mentioned, who implored him to send them aid. For they protested that unless the whole strength of the army was collected together, it would be impossible to withstand the onset of the furious Sapor.

And while things in this quarter were thus full of anxiety, other messengers arrived in numbers, by whose accurate statements he learnt that Julian had traversed Italy and Illyricum with great rapidity, had occupied the defiles of the Succi, and called in auxiliaries from all quarters, and was now marching through Thrace with a very large force.

Constantius, learning this, was overwhelmed with grief, but supported by one comfort, that he had always triumphed over internal commotions. Nevertheless, though the affair made it very difficult for him to decide on a line of action, he chose the best; and sent a body of troops on by public conveyances, in order as quickly as possible to make head against the impending danger.

And as that plan was universally approved, the troops went as they were commanded, in the lightest marching order. But the next day, while he was finally arranging these matters, he received intelligence that Sapor, with his whole army, had returned to his own country, because the auspices were unfavourable. So, his fears being removed, he called in all the troops except those who as usual were assigned for the protection of Mesopotamia, and returned to Hierapolis.

And still doubting what would be the final result of all his difficulties, when he had collected his army together he convened all the centuries and companies and squadrons by sound of trumpet; and the whole plain being filled with the host, he, standing on a lofty tribune, in order to encourage them the more readily to execute what he should direct, and being surrounded by a numerous retinue, spoke thus with great appearance of calmness and a studied look of confidence.

“Being always anxious never to do or say anything inconsistent with incorruptible honour, like a cautious pilot, who turns his helm this way or that way according to the movement of the waves, I am now constrained, my most affectionate subjects, to confess my errors to you, or rather, if I were to say the plain truth, my humanity, which I did think would be beneficial to our common interests. So now that you may the better understand what is the object of convoking this assembly, listen, I pray you, with impartiality and kindness.

“At the time when Magnentius, whom your bravery overcome, was obstinately labouring to throw all things into confusion, I sent Gallus my cousin, who had been lately raised to the rank of Cæsar, to guard the East. But he, having by many wicked and shameful arts departed from justice, was punished by a legal sentence.

“Would that Envy had then been contented, that most bitter exciter of troubles! And that we had nothing to grieve us but the single recollection of past sorrows, unaccompanied by any idea of present danger! But now a new circumstance, more grievous than any former one I will venture to say, has taken place, which the gods who aid us will put an end to by means of your innate valour.

“Julian, whom, while you were combating the nations which threaten Illyricum on all sides, I appointed to protect Gaul, presuming on the issue of some trifling battles which he has fought against the half-armed Germans, and full of silly elation, has taken a few auxiliary

battalions into his noble alliance, men from their natural ferocity and the desperateness of their situation ready for acts of the most mischievous audacity, and has conspired against the public safety, trampling down justice, the parent and nurse of the Roman world. That power I believe, both because I myself have experienced it, and because all antiquity assures me of its might, will, as an avenger of wickedness, soon trample down their pride like so many ashes.

“What then remains, except to hasten to encounter the whirlwind thus raised against us? so as by promptitude to crush the fury of this rising war before it comes to maturity and strength? Nor can it be questioned that, with the favour of the supreme deity, by whose everlasting sentence ungrateful men are condemned, the sword which they have wickedly drawn will be turned to their own destruction. Since never having received any provocation, but rather after having been loaded with benefits, they have risen up to threaten innocent men with danger.

“For as my mind augurs, and as justice, which will aid upright counsels, promises, I feel sure that when once we come to close quarters, they will be so benumbed with fear as neither to be able to stand the fire of your glancing eyes nor the sound of your battle cry.” This speech harmonized well with the feelings of the soldiers. In their rage they brandished their shields, and after answering him in terms of eager good-will, demanded to be led at once against the rebels. Their cordiality changed the emperor’s fear into joy; and having dismissed the assembly, as he knew by past experience that Arbetio was most eminently successful in putting an end to intestine wars, he ordered him to advance first by the road which he himself designed to take, with the spearmen and the legion of Mattium,¹⁰ and several battalions of light troops; he also ordered Gomoarius to take with him the Leti, to check the enemy on their arrival among the defiles of the Succi; he was selected for this service because he was unfriendly to Julian on account of some slight he had received from him in Gaul.

21.14

While the fortune of Constantius was now wavering and tottering in this tumult of adverse circumstances, it showed plainly by signs which almost spoke that a very critical moment of his life was at hand. For he was terrified by nocturnal visions, and before he was thoroughly asleep he had seen the shade of his father bringing him a beautiful child; and when he received it and placed it in his bosom, it struck a globe which he had in his right hand to a distance. Now this indicated a change of circumstances, although those who interpreted it gave favourable answers when consulted.

After this he confessed to his most intimate friends that, as if he were wholly forsaken, he had ceased to see a secret vision which sometimes he had fancied appeared to him in mournful guise; and he believed that the genius who had been appointed to watch over his safety had abandoned him, as one who was soon to leave the world.

For the opinion of theologians is, that all men when they are born (without prejudice to the power of destiny) are connected with a superior power of this kind, who, as it were, guides their actions; but who is seen by very few, and only by those who are endued with great and various virtues.

This may be collected both from oracles and from eminent writers. Among whom is the comic poet Menander, in whose works these two verses are found:—

“A spirit is assigned to every man
When born to guide him in the path of life.”

It may also be gathered from the immortal poetry of Homer, that they were not really the gods of heaven who conversed with his heroes, or stood by them and aided them in their combats; but the familiar genii who belonged to them; to whom also, as their principal support, Pythagoras owes his eminence, and Socrates and Numa Pompilius and the elder Scipio. And, as some fancy, Marius, and Octavianus the first, who took the name of Augustus. And Hermes Trismegistus, and

Apollonius of Tyana, and Plotinus, who ventured upon some very mystical discussions of this point; and endeavoured to show by profound reasoning what is the original cause why these genii, being thus connected with the souls of mortals, protect them as if they had been nursed in their own bosoms, as far as they are permitted; and, if they find them pure, preserving the body untainted by any connection with vice, and free from all taint of sin, instruct them in loftier mysteries.

21.15

Constantius therefore, having hastened to Antioch, according to his wont, at the first movement of a civil war which he was eager to encounter, as soon as he had made all his preparations, was in amazing haste to march, though many of his court were so unwilling as even to proceed to murmurs. For no one dare openly to remonstrate or object to his plan.

He set forth towards the end of autumn; and when he reached the suburb called Hippocephalus, which is about three miles from the town, as soon as it was daylight he saw on his right the corpse of a man who had been murdered, lying with his head torn off from the body, stretched out towards the west—and though alarmed at the omen, which seemed as if the Fates were preparing his end, he went on more resolutely, and came to Tarsus, where he caught a slight fever; and thinking that the motion of his journey would remove the distemper, he went on by bad roads; directing his course by Mopsucrenæ, the farthest station in Cilicia for those who travel from hence, at the foot of Mount Taurus.

But when he attempted to proceed the next day he was prevented by the increasing violence of his disorder, and the fever began gradually to inflame his veins, so that his body felt like a little fire, and could scarcely be touched; and as all remedies failed, he began in the last extremity to bewail his death; and while his mental faculties were still entire, he is said to have indicated Julian as the successor to his power.

Presently the last struggle of death came on, and he lost the power of speech. And after long and painful agony he died on the fifth of October, having lived and reigned forty years and a few months.

After bewailing his death with groans, lamentations, and mourning, those of the highest rank in the royal palace deliberated what to do or to attempt; and having secretly consulted a few persons about the election of an emperor, at the instigation, as it is said, of Eusebius, who was stimulated by his consciousness of guilt (since Julian was approaching who was prepared to oppose his attempts at innovation), they sent Theolaiphus and Aligildus, who at that time were counts, to him, to announce the death of his kinsman; and to entreat him to lay aside all delay and hasten to take possession of the East, which was prepared to obey him.

But fame and an uncertain report whispered that Constantius had left a will, in which, as we have already mentioned, he had named Julian as his heir; and had given commissions and legacies to his friends. But he left his wife in the family way, who subsequently had a daughter, who received the same name, and was afterwards married to Gratianus.

21.16

In accurately distinguishing the virtues and vices of Constantius, it will be well to take the virtues first. Always preserving the dignity of the imperial authority, he proudly and magnanimously disdained popularity. In conferring the higher dignities he was very sparing, and allowed very few changes to be made in the administration of the finances. Nor did he ever encourage the arrogance of the soldiers.

Nor under him was any general promoted to the title of most illustrious.¹¹ For there was also, as we have already mentioned, the title of most perfect.¹² Nor had the governor of a province occasion to court a commander of cavalry; as Constantius never allowed those officers to meddle with civil affairs. But all officers, both military and civil, were according to the respectful usages of old, inferior to that of

the prefect of the *prætorium*, which was the most honourable of all.

In taking care of the soldiers he was very cautious: an examiner into their merits, sometimes over-scrupulous, giving dignities about the palace as if with scales. Under him no one who was not well known to him, or who was favoured merely by some sudden impulse, ever received any high appointment in the palace. But only such as had served ten years in some capacity or other could look for such appointments as master of the ceremonies or treasurer. The successful candidates could always be known beforehand; and it very seldom happened that any military officer was transferred to a civil office; while on the other hand none but veteran soldiers were appointed to command troops.

He was a diligent cultivator of learning, but, as his blunted talent was not suited to rhetoric, he devoted himself to versification; in which, however, he did nothing worth speaking of.

In his way of life he was economical and temperate, and by moderation in eating and drinking he preserved such robust health that he was rarely ill, though when ill dangerously so. For repeated experience and proof has shown that this is the case with persons who avoid licentiousness and luxury.

He was contented with very little sleep, which he took when time and season allowed; and throughout his long life he was so extremely chaste that no suspicion was ever cast on him in this respect, though it is a charge which, even when it can find no ground, malignity is apt to fasten on princes.

In riding and throwing the javelin, in shooting with the bow, and in all the accomplishments of military exercises, he was admirably skilful. That he never blew his nose in public, never spat, never was seen to

change countenance, and that he never in all his life ate any fruit I pass over, as what has been often related before.

Having now briefly enumerated his good qualities with which we have been able to become acquainted, let us now proceed to speak of his vices. In other respects he was equal to average princes, but if he had the slightest reason (even if founded on wholly false information) for suspecting any one of aiming at supreme power, he would at once institute the most rigorous inquiry, trampling down right and wrong alike, and outdo the cruelty of Caligula, Domitian, or Commodus, whose barbarity he rivalled at the very beginning of his reign, when he shamefully put to death his own connections and relations.

And his cruelty and morose suspicions, which were directed against everything of the kind, were a cruel addition to the sufferings of the unhappy persons who were accused of sedition or treason.

And if anything of the kind got wind, he instituted investigations of a more terrible nature than the law sanctioned, appointing men of known cruelty as judges in such cases; and in punishing offenders he endeavoured to protract their deaths as long as nature would allow, being in such cases more savage than even Gallienus. For he, though assailed by incessant and real plots of rebels, such as Aureolus, Posthumus, Ingenuus, and Valens who was surnamed the Thessalonian, and many others, often mitigated the penalty of crimes liable to sentence of death; while Constantius caused facts which were really unquestionable to be looked upon as doubtful by the excessive inhumanity of his tortures.

In such cases he had a mortal hatred of justice, even though his great object was to be accounted just and merciful: and as sparks flying from a dry wood, by a mere breath of wind are sometimes carried on with unrestrained course to the danger of the country villages around, so he also from the most trivial causes kindled heaps of evils, being very unlike that wise emperor Marcus Aurelius, who, when Cassius in Syria

aspired to the supreme power, and when a bundle of letters which he had written to his accomplices, was taken with their bearer, and brought to him, ordered them at once to be burned, while he was still in Illyricum, in order that he might not know who had plotted against him, and so against his will be obliged to consider some persons as his enemies.

And, as some right-thinking people are of opinion, it was rather an indication of great virtue in Constantius to have quelled the empire without shedding more blood, than to have revenged himself with such cruelty.

As Cicero also teaches us, when in one of his letters to Nepos he accuses Cæsar of cruelty, "For," says he, "felicity is nothing else but success in what is honourable;" or to define it in another way, "Felicity is fortune assisting good counsels, and he who is not guided by such cannot be happy. Therefore in wicked and impious designs such as those of Cæsar there could be no felicity; and in my judgment Camillus when in exile was happier than Manlius at the same time, even if Manlius had been able to make himself king, as he wished."

The same is the language of Heraclitus of Ephesus, when he remarks that men of eminent capacity and virtue, through the caprice of fortune, have often been overcome by men destitute of either talent or energy. But that that glory is the best when power, existing with high rank, forces, as it were, its inclinations to be angry and cruel, and oppressive under the yoke, and so erects a glorious trophy in the citadel of its victorious mind.

But as in his foreign wars this emperor was unsuccessful and unfortunate, on the other hand in his civil contests he was successful; and in all those domestic calamities he covered himself with the horrid blood of the enemies of the republic and of himself; and yielding to his elation at these triumphs in a way neither right nor usual, he erected at a vast expense triumphal arches in Gaul and the

two Pannonias, to record his triumphs over his own provinces; engraving on them the titles of his exploits ... as long as they should last, to those who read the inscriptions.

He was preposterously addicted to listening to his wives, and to the thin voices of his eunuchs, and some of his courtiers, who applauded all his words, and watched everything he said, whether in approval or disapproval, in order to agree with it.

The misery of these times was further increased by the insatiable covetousness of his tax-collectors, who brought him more odium than money; and to many persons this seemed the more intolerable, because he never listened to any excuse, never took any measures for relief of the provinces when oppressed by the multiplicity of taxes and imposts; and in addition to all this he was very apt to take back any exemptions which he had granted.

He confused the Christian religion, which is plain and simple, with old women's superstitions; in investigating which he preferred perplexing himself to settling its questions with dignity, so that he excited much dissension; which he further encouraged by diffuse wordy explanations: he ruined the establishment of public conveyances by devoting them to the service of crowds of priests, who went to and fro to different synods, as they call the meetings at which they endeavour to settle everything according to their own fancy.

As to his personal appearance and stature, he was of a dark complexion with prominent eyes; of keen sight, soft hair, with his cheeks carefully shaved, and bright looking. From his waist to his neck he was rather long, his legs were very short and crooked, which made him a good leaper and runner.

When the body of the deceased emperor had been laid out, and placed in a coffin, Jovianus, at that time the chief officer of the guard, was ordered to attend it with royal pomp to Constantinople, to be buried

among his relations.

While he was proceeding on the vehicle which bore the remains, samples of the military provisions were brought to him as an offering, as is usual in the case of princes; and the public animals were paraded before him; and a concourse of people came out to meet him as was usual; which, with other similar demonstrations, seemed to portend to Jovianus, as the superintendent of his funeral, the attainment of the empire, but an authority only curtailed and shadowy.

Book XXII

22.1

A.D. 361.

While the variable events of fortune were bringing to pass these events in different parts of the world, Julian, amid the many plans which he was revolving while in Illyricum, was continually consulting the entrails of victims and watching the flight of birds in his eagerness to know the result of what was about to happen.

Aprunculus Gallus, an orator and a man of skill as a soothsayer, who was afterwards promoted to be governor of Narbonne, announced these results to him, being taught beforehand by the inspection of a liver, as he affirmed, which he had seen covered with a double skin. And while Julian was fearing that he was inventing stories to correspond with his desires, and was on that account out of humour, he himself beheld a far more favourable omen, which clearly predicted the death of Constantius. For at the same moment that that prince died in Cilicia, the soldier who, as he was going to mount his horse, had supported him with his right hand, fell down, on which Julian at once exclaimed, in the hearing of many persons, that he who had raised him to the summit had fallen.

But he did not change his plans, but remained within the border of Dacia, still being harassed with many fears. Nor did he think it prudent to trust to conjectures, which might perhaps turn out contrary to his expectations.

22.2

But while he was thus in suspense, the ambassadors, Theolaiphus and Aligildus, who had been despatched to him to announce the death of Constantius, suddenly arrived, adding that that prince with his last words had named him as his successor in his dignity.

As soon as he learnt this, being delighted at his deliverance from the turmoils of war and its consequent disorders, and fully relying on the prophecies he had received, having besides often experienced the advantages of celerity of action, he issued orders to march to Thrace. Therefore speedily advancing his standards, he passed over the high ground occupied by the Succi, and marched towards the ancient city of Eumolpias, now called Philippopolis, all his army following him with alacrity.

For they now saw that the imperial power which they were on their way to seize, in the face of imminent danger, was in a measure beyond their hopes put into their hands by the course of nature. And as report is wont marvellously to exaggerate events, a rumour got abroad that Julian, formidable both by sea and land, had entered Heraclea, called also Perinthus, borne over its unresisting walls on the chariot of Triptolemus, which from its rapid movements the ancients, who loved fables, had stated to be drawn by flying serpents and dragons.

When he arrived at Constantinople, people of every age and sex poured forth to meet him, as though he were some one dropped from heaven. On the eleventh of December he was received with respectful duty by the senate, and by the unanimous applause of the citizens, and was escorted into the city by vast troops of soldiers and civilians, marshalled like an army, while all eyes were turned on him, not only with the gaze of curiosity, but with great admiration.

For it seemed to them like a dream, that a youth in the flower of his age, of slight body, but renowned for great exploits, after many victories over barbarian kings and nations, having passed from city to city with unparalleled speed, should now, by an accession of wealth and power as rapid as the spread of fire, have become the unresisted master of the world; and the will of God itself having given him the empire, should thus have obtained it without any injury to the state.

22.3

His first step was to give to Secundus Sallustius, whom he promoted to be prefect of the prætorium, being well assured of his loyalty, a commission to conduct some important investigations, joining with him as colleagues Mamertinus, Arbetio, Agilo, and Nevitta, and also Jovinus, whom he had recently promoted to the command of the cavalry in Illyricum.

They all went to Chalcedon, and in the presence of the chiefs and tribunes, the Jovian and Herculian legions, they tried several causes with too much rigour, though there were some in which it was undeniable that the accused were really guilty.

They banished Palladius, the master of the ceremonies, to Britain, though there was but a suspicion that he had prejudiced Constantius against Gallus, while he was master of the ceremonies under that prince as Cæsar.

They banished Taurus, who had been prefect of the prætorium, to Vercelli, who, to all persons capable of distinguishing between right and wrong, will appear very excusable in respect to the act for which he was condemned. For his offence was only that, fearing a violent disturbance which had arisen, he fled to the protection of his prince. And the treatment inflicted on him could not be read without great horror, when the preamble of the public accusation began thus:—"In the consulship of Taurus and Florentius, Taurus being brought before the criers—"

Pentadius also was destined for a similar sentence; the charge against him being that, having been sent on a mission by Constantius, he had made notes of the replies given by Gallus when he was examined on several subjects before he was put to death. But as he defended himself with justice, he was at last discharged.

With similar iniquity, Florentius, at that time master of the ceremonies, the son of Nigrinianus, was banished to Boæ, an island on the coast of Dalmatia. The other Florentius, who had been prefect of the prætorium, and was then consul, being alarmed at the sudden change in the aspect of affairs, in order to save himself from danger, hid himself and his wife for some time, and never returned during Julian's life; still he was, though absent, condemned to death.

In the same way, Evagrius, the comptroller of the private demesnes of the emperor, and Saturninus, late superintendent of the palace, and Cyrinus, late secretary, were all banished. But Justice herself seems to have mourned over the death of Ursulus, the treasurer, and to accuse Julian of ingratitude to him. For when, as Cæsar, he was sent to the west, with the intent that he was to be kept in great poverty, and without any power of making presents to any of his soldiers, in order to make them less inclined to favour any enterprise which he might conceive, this same Ursulus gave him letters to the superintendent of the Gallic treasury, desiring him to give the Cæsar whatever he might require.

After his death, Julian, feeling that he was exposed to general reproach and execration, thinking that an unpardonable crime could be excused, affirmed that the man had been put to death without his being aware of it, pretending that he had been massacred by the fury of the soldiers, who recollected what he had said (as we mentioned before) when he saw the destruction of Amida.

And therefore it seemed to be through fear, or else from a want of understanding what was proper, that he appointed Arbetio, a man

always vacillating and arrogant, to preside over these investigations, with others of the chief officers of the legions present for the look of the thing, when he knew that he had been one of the chief enemies to his safety, as was natural in one who had borne a distinguished share in the successes of the civil war.

And though these transactions which I have mentioned vexed those who wished him well, those which came afterwards were carried out with a proper vigour and severity.

It was only a deserved destiny which befel Apodemius, who had been the chief steward, and whose cruel machinations with respect to the deaths of Silvanus and Gallus we have already mentioned, and Paulus, the secretary, surnamed "The Chain," men who are never spoken of without general horror, and who were now sentenced to be burnt alive.

They also sentenced to death Eusebius, the chief chamberlain of Constantius, a man equally full of ambition and cruelty, who from the lowest rank had been raised so high as even almost to lord it over the emperor, and who had thus become wholly intolerable; and whom Nemesis, who beholds all human affairs, having often, as the saying is, plucked him by the ear, and warned to conduct himself with more moderation, now, in spite of his struggles, hurled headlong from his high position.

22.4

After this Julian directed his whole favour and affection to people of every description about the palace; not acting in this like a philosopher anxious for the discovery of truth.

For he might have been praised if he had retained a few who were moderate in their disposition, and of proved honesty and respectability. We must, indeed, confess that the greater part of them had nourished as it were such a seed-bed of all vices, which they

spread abroad so as to infect the whole republic with evil desires, and did even more injury by their example than by the impunity which they granted to crimes.

Some of them had been fed on the spoils of temples, had smelt out gain on every occasion, and having raised themselves from the lowest poverty to vast riches, had set no bounds to their bribery, their plunder, or their extravagance, being at all times accustomed to seize what belonged to others.

From which habit the beginnings of licentious life sprang up, with perjuries, contempt of public opinion, and an insane arrogance, sacrificing good faith to infamous gains.

Among which vices, debauchery and unrestrained gluttony grew to a head, and costly banquets superseded triumphs for victories. The common use of silken robes prevailed, the textile arts were encouraged, and above all was the anxious care about the kitchen. Vast spaces were sought out for ostentatious houses, so vast that if the consul Cincinnatus had possessed as much land, he would have lost the glory of poverty after his dictatorship.

To these shameful vices was added the loss of military discipline; the soldier practised songs instead of his battle-cry, and a stone would no longer serve him for a bed, as formerly, but he wanted feathers and yielding mattresses, and goblets heavier than his sword, for he was now ashamed to drink out of earthenware; and he required marble houses, though it is recorded in ancient histories that a Spartan soldier was severely punished for venturing to appear under a roof at all during a campaign.

But now the soldier was fierce and rapacious towards his own countrymen, but towards the enemy he was inactive and timid, by courting different parties, and in times of peace he had acquired riches, and was now a judge of gold and precious stones, in a manner wholly contrary to the recollection of very recent times.

For it is well known that when, in the time of the Cæsar Maximian, the camp of the king of Persia was plundered; a common soldier, after finding a Persian bag full of pearls, threw the gems away in ignorance of their value, and went away contented with the mere beauty of his bit of dressed leather.

In those days it also happened that a barber who had been sent for to cut the emperor's hair, came handsomely dressed; and when Julian saw him, he was amazed, and said, "I did not send for a superintendent, but for a barber." And when he was asked what he made by his business, he answered that he every day made enough to keep twenty persons, and as many horses, and also a large annual income, besides many sources of accidental gain.

And Julian, angry at this, expelled all the men of this trade, and the cooks, and all who made similar profits, as of no use to him, telling them, however, to go where they pleased.

22.5

And although from his earliest childhood he was inclined to the worship of the gods,¹³ and gradually, as he grew up, became more attached to it, yet he was influenced by many apprehensions which made him act in things relating to that subject as secretly as he could.

But when his fears were terminated, and he found himself at liberty to do what he pleased, he then showed his secret inclinations, and by plain and positive decrees ordered the temples to be opened, and victims to be brought to the altars for the worship of the gods.

And in order to give more effect to his intentions, he ordered the priests of the different Christian sects, with the adherents of each sect, to be admitted into the palace, and in a constitutional spirit expressed his wish that their dissensions being appeased, each without any hindrance might fearlessly follow the religion he preferred.

He did this the more resolutely because, as long licence increased their dissensions, he thought he should never have to fear the unanimity of the common people, having found by experience that no wild beasts are so hostile to men as Christian sects in general are to one another. And he often used to say, "Listen to me, to whom the Allemanni and Franks have listened;" imitating in this an expression of the ancient emperor Marcus Aurelius. But he omitted to notice that there was a great difference between himself and his predecessor.

For when Marcus was passing through Palestine, on his road to Egypt, he is said, when wearied by the dirt and rebellious spirit of the Jews, to have often exclaimed with sorrow, "O Marcomanni, O Quadi, O Sarmatians, I have at last found others worse than you!"

22.6

About the same time many Egyptians, excited by various rumours, arrived at Constantinople; a race given to controversy, and extremely addicted to habits of litigation, covetous, and apt to ask payment of debts due to them over and over again; and also, by way of escaping from making the payments due to them, to accuse the rich of embezzlement, and the tax-gatherers of extortion.

These men, collecting into one body, came screeching like so many jackdaws, claiming in a rude manner the attention of the emperor himself, and of the prefects of the prætorium, and demanding the restoration of the contributions which they had been compelled to furnish, justly or unjustly, for the last seventy years.

And as they hindered the transaction of any other business, Julian issued an edict in which he ordered them all to go to Chalcedon, promising that he himself also would soon come there, and settle all their business.

And when they had gone, an order was given to all the captains of ships which go to and fro, that none of them should venture to take an Egyptian for a passenger. And as this command was carefully

observed, their obstinacy in bringing false accusations came to an end, and they all, being disappointed in their object, returned home.

After which, as if at the dictation of justice herself, a law was published forbidding any one to exact from any officer the restitution of things which that officer had legally received.

22.7

A.D. 362.

At the beginning of the new year, when the consular records had received the names of Mamertinus and Nevitta, the prince humbled himself by walking in their train with other men of high rank; an act which some praised, while others blame it as full of affectation, and mean.

Afterwards, when Mamertinus was celebrating the Circensian games, Julian, following an ancient fashion, manumitted some slaves, who were introduced by the consul's officer; but afterwards, being informed that on that day the supreme jurisdiction belonged to another, he fined himself ten pounds of gold as an offender.

At the same time he was a continual attendant in the court of justice, settling many actions which were brought in all kinds of cases. One day while he was sitting as judge, the arrival of a certain philosopher from Asia named Maximus, was announced, on which he leapt down from the judgment seat in an unseemly manner, and forgetting himself so far as to run at full speed from the hall, he kissed him, and received him with great reverence, and led him into the palace, appearing by this unseasonable ostentation a seeker of empty glory, and forgetful of those admirable words of Cicero, which describe people like him.

"Those very philosophers inscribe their names on the identical books which they write about the contempt of glory, in order that they may

be named and extolled in that very thing in which they proclaim their contempt for mention and for praise.”¹⁴

Not long afterwards, two of the secretaries who had been banished came to him, boldly promising to point out the hiding-place of Florentius if he would restore them to their rank in the army; but he abused them, and called them informers; adding that it did not become an emperor to be led by underhand information to bring back a man who had concealed himself out of fear of death, and who perhaps would not long be left in his retreat unpardoned.

On all these occasions Prætextatus was present, a senator of a noble disposition and of old-fashioned dignity; who at that time had come to Constantinople on his own private affairs, and whom Julian by his own choice selected as governor of Achaia with the rank of proconsul.

Still, while thus diligent in correcting civil evils, Julian did not omit the affairs of the army: continually appointing over the soldiers officers of long-trying worth; repairing the exterior defences of all the cities throughout Thrace, and taking great care that the soldiers on the banks of the Danube, who were exposed to the attacks of the barbarians, and who, as he heard were doing their duty with vigilance and courage, should never be in want of arms, clothes, pay, or provisions.

And while superintending these matters he allowed nothing to be done carelessly: and when those about him advised him to attack the Gauls as neighbours who were always deceitful and perfidious, he said he wished for more formidable foes; for that the Gallic merchants were enough for them, who sold them at all times without any distinction of rank.

While he gave his attention to these and similar matters, his fame was spreading among foreign nations for courage, temperance, skill in war, and eminent endowments of every kind of virtue, so that he gradually became renowned throughout the whole world.

And as the fear of his approach pervaded both neighbouring and distant countries, embassies hastened to him with unusual speed from all quarters at one time; the people beyond the Tigris and the Armenians sued for peace. At another the Indian tribes vied with each other, sending nobles loaded with gifts even from the Maldive Islands and Ceylon; from the south the Moors offered themselves as subjects of the Roman empire; from the north, and also from those hot climates through which the Phasis passes on its way to the sea, and from the people of the Bosphorus, and from other unknown tribes came ambassadors entreating that on the payment of annual duties they might be allowed to live in peace within their native countries.

22.8

The time is now appropriate, in my opinion, since in treating of this mighty prince we are come to speak of these districts, to explain perspicuously what we have learnt by our own eyesight or by reading, about the frontiers of Thrace and the situation of the Black Sea.

The lofty mountains of Athos in Macedonia, once made passable for ships by the Persians, and the Eubœan rocky promontory of Caphareus, where Nauplius the father of Palamedes wrecked the Grecian fleet, though far distant from one another, separate the Ægean from the Thessalian Sea, which, extending as it proceeds, on the right, where it is widest, is full of the Sporades and Cyclades islands, which latter are so called because they lie round Delos, an island celebrated as the birthplace of the gods; on the left it washes Imbros, Tenedos, Lemnos, and Thasos; and when agitated by any gale it beats violently on Lesbos.

From thence, with a receding current, it flows past the temple of Apollo Sminthius, and Troas, and Troy, renowned for the adventures of heroes; and on the west it forms the Gulf of Melas, near the head of which is seen Abdera, the abode of Protagoras and Democritus; and the blood-stained seat of the Thracian Diomedes; and the valleys

through which the Maritza flows on its way to its waves; and Maronea, and Ænus, founded under sad auspices and soon deserted by Æneas, when under the guidance of the gods he hastened onwards to ancient Italy.

After this it narrows gradually, and, as if by a kind of natural wish to mingle with its waters, it rushes towards the Black Sea; and taking a portion of it forms a figure like the Greek Φ. Then separating the Hellespont from Mount Rhodope, it passes by Cynossema,¹⁵ where Hecuba is supposed to be buried, and Cæla, and Sestos, and Callipolis, and passing by the tombs of Ajax and Achilles, it touches Dardanus and Abydos (where Xerxes, throwing a bridge across, passed over the waters on foot), and Lampsacus, given to Themistocles by the king of Persia; and Parion, founded by Parius the son of Jason.

Then curving round in a semicircle and separating the opposite lands more widely in the round gulf of the sea of Marmora, it washes on the east Cyzicus, and Dindyma, the holy seat of the mighty mother Cybele, and Apamia, and Cius, and Astacus afterwards called Nicomedia from the King Nicomedes.

On the west it beats against the Chersonese, Ægospotami where Anaxagoras predicted that stones would fall from heaven, and Lysimachia, and the city which Hercules founded and consecrated to the memory of his comrade Perinthus. And in order to preserve the full and complete figure of the letter Φ, in the very centre of the circular gulf lies the oblong island of Proconnesus, and also Besbicus.

Beyond the upper end of this island the sea again becomes very narrow where it separates Bithynia from Europe, passing by Chalcedon and Chrysopolis, and some other places of no importance.

Its left shore is looked down upon by Port Athyras and Selymbria, and Constantinople, formerly called Byzantium, a colony of the Athenians,

and Cape Ceras, having at its extremity a lofty tower to serve as a lighthouse to ships—from which cape also a very cold wind which often arises from that point is called Ceratas.

The sea thus broken, and terminated by mingling with the seas at each end, and now becoming very calm, spreads out into wider waters, as far as the eye can reach both in length and breadth. Its entire circuit, if one should measure it as one would measure an island, sailing along its shores, is 23,000 furlongs according to Eratosthenes, Hecatæus, and Ptolemy, and other accurate investigators of subjects of this kind, resembling, by the consent of all geographers, a Scythian bow, held at both ends by its string.

When the sun rises from the eastern ocean, it is shut in by the marshes of the Sea of Azov. On the west it is bounded by the Roman provinces. On the north lie many tribes differing in language and manners; its southern side describes a gentle curve.

Over this extended space are dispersed many Greek cities, which have for the most part been founded by the people of Miletus, an Athenian colony, long since established in Asia among the other Ionians by Nileus, the son of the famous Codrus, who is said to have devoted himself to his country in the Doric war.

The thin extremities of the bow at each end are commanded by the two Bospori, the Thracian and Cimmerian, placed opposite to one another; and they are called Bospori because through them the daughter of Inachus,¹⁶ who was changed (as the poets relate) into a cow, passed into the Ionian sea.

The right curve of the Thracian Bosphorus is covered by a side of Bithynia, formerly called Mygdonia, of which province Thynia and Mariandena are districts; as also is Bebrycia, the inhabitants of which

were delivered from the cruelty of Amycus by the valour of Pollux; and also the remote spot in which the soothsayer Phineus was terrified by the threatening flight of the Harpies.

The shores are curved into several long bays, into which fall the rivers Sangarius, and Phyllis, and Bizes, and Rebas; and opposite to them at the lower end are the Symplegades, two rocks which rise into abrupt peaks, and which in former times were accustomed to dash against one another with a fearful crash, and then rebounding with a sharp spring, to recoil once more against the object already struck. Even a bird could by no speed of its wings pass between these rocks as they pass and meet again without being crushed to death.

These rocks, when the Argo, the first of all ships, hastening to Colchis to carry off the golden fleece, had passed unhurt by them, stood immovable for the future, the power of the whirlwind which used to agitate them being broken; and are now so firmly united that no one who saw them now would believe that they had ever been separated; if all the poems of the ancients did not agree on the point.

After this portion of Bithynia, the next provinces are Pontus and Paphlagonia, in which are the noble cities of Heraclea, and Sinope, and Polemonium, and Amisus, and Tios, and Amastris, all originally founded by the energy of the Greeks; and Cerasus, from which Lucullus brought the cherry, and two lofty islands which contain the famous cities of Trapezus and Pityus.

Beyond these places is the Acherusian cave, which the natives call Μυχοπόντιον; and the harbour of Acone, and several rivers, the Acheron, the Arcadius, the Iris, the Tiberis, and near to that the Parthenius, all of which proceed with a rapid stream into the sea. Close to them is the Thermodon, which rises in Mount Armonius, and flows through the forest of Themiscyra, to which necessity formerly compelled the Amazons to migrate.

The Amazons, as may be here explained, after having ravaged their neighbours by bloody inroads, and overpowered them by repeated defeats, began to entertain greater projects; and perceiving their own strength to be superior to their neighbours', and being continually covetous of their possessions, they forced their way through many nations, and attacked the Athenians. But they were routed in a fierce battle, and their flanks being uncovered by cavalry, they all perished.

When their destruction became known, the rest, who had been left at home as unwarlike, were reduced to the last extremities; and fearing the attacks of their neighbours, who would now retaliate on them, they removed to the more quiet district of the Thermodon. And after a long time, their posterity again becoming numerous, returned in great force to their native regions, and became in later ages formidable to the people of many nations.

Not far from hence is the gentle hill Carambis, on the north, opposite to which, at a distance of 2,500 furlongs, is the Criu-Metopon, a promontory of Taurica. From this spot the whole of the sea-coast, beginning at the river Halys, is like the chord of an arc fastened at both ends.

On the frontiers of this district are the Dahæ,¹⁷ the fiercest of all warriors; and the Chalybes, the first people who dug up iron, and wrought it to the use of man. Next to them lies a large plain occupied by the Byzares, the Saqires, the Tibareni, the Mosynæci, the Macrones and the Philyres, tribes with which we have no intercourse.

And at a small distance from them are some monuments of heroes, where Sthenelus, Idmon, and Tiphys are buried, the first being that one of Hercules's comrades who was mortally wounded in the war with the Amazons; the second the soothsayer of the Argonauts; the third the skilful pilot of the crew.

After passing by the aforesaid districts, we come to the cave Aulon, and the river of Callichorus, which derives its name from the fact that when Bacchus, having subdued the nations of India in a three years' war, came into those countries, he chose the green and shady banks of this river for the re-establishment of his ancient orgies and dances; and some think that such festivals as these were those called Trieterica.¹⁸

Next to these frontiers come the famous cantons of the Camaritæ, and the Phasis, which with its roaring streams reaches the Colchi, a race descended from the Egyptians; among whom, besides other cities, is one called Phasis from the name of the river; and Dioscurias,¹⁹ still famous, which is said to have been founded by the Spartans Amphitus and Cercius, the charioteers of Castor and Pollux; from whom the nation of Heniochi²⁰ derives its origin.

At a little distance from these are the Achæi, who after some earlier Trojan war, and not that which began about Helen, as some authors have affirmed, were driven into Pontus by foul winds, and, as all around was hostile, so that they could nowhere find a settled abode, they always stationed themselves on the tops of snowy mountains; and, under the pressure of an unfavourable climate they contracted a habit of living on plunder in contempt of all danger; and thus became the most ferocious of all nations. Of the Cercetæ, who lie next to them, nothing is known worth speaking of.

Behind them lie the inhabitants of the Cimmerian Bosphorus, living in cities founded by the Milesiani, the chief of which is Panticapæum, which is on the Bog a river of great size, both from its natural waters and the streams which fall into it.

Then for a great distance the Amazons stretch as far as the Caspian sea; occupying the banks of the Don, which rises in Mount Caucasus,

and proceeds in a winding course, separating Asia from Europe, and falls into the swampy sea of Azov.

Near to this is the Rha, on the banks of which grows a vegetable of the same name, which is useful as a remedy for many diseases.

Beyond the Don, taking the plain in its width, lie the Sauromatæ, whose land is watered by the never-failing rivers Maræcus, Rhombites, Theophanes, and Totordanes. And there is at a vast distance another nation also known as Sauromatæ, touching the shore at the point where the river Corax falls into the sea.

Near to this is the sea of Azov, of great extent, from the abundant sources of which a great body of water pours through the straits of Patares, near the Black Sea; on the right are the islands Phanagorus and Hermonassa, which have been settled by the industry of the Greeks.

Round the furthest extremity of this gulf dwell many tribes differing from one another in language and habits; the Jaxamatæ, the Mæotæ, the Jazyges, the Roxolani, the Alani, the Melanchlænæ, the Geloni, and the Agathyrsi, whose land abounds in adamant.

And there are others beyond, who are the most remote people of the whole world. On the left side of this gulf lies the Crimea, full of Greek colonies; the people of which are quiet and steady: they practise agriculture, and live on the produce of the land.

From them the Tauri, though at no great distance, are separated by several kingdoms, among which are the Arinchi, a most savage tribe, the Sinchi, and the Napæi, whose cruelty, being aggravated by continual licence, is the reason why the sea is called the Inhospitable,²¹ from which by the rule of contrary it gets the name of

the Euxine, just as the Greeks call a fool εὐήθης, and night εὐφρόνη, and the furies, the Εὐμενίδες.

For they propitiated the gods with human victims, sacrificing strangers to Diana, whom they call Oreiloche, and fix the heads of the slain on the walls of their temples, as perpetual monuments of their deeds.

In this kingdom of the Tauri lies the uninhabited island of Leuce, which is consecrated to Achilles; and if any ever visit it, as soon as they have examined the traces of antiquity, and the temple and offerings dedicated to the hero, they return the same evening to their ships, as it is said that no one can pass the night there without danger to his life.

There is water there, and white birds like kingfishers, the origin of which, and the battles of the Hellespont, we will discuss at a proper time. And there are some cities in this region of which the most eminent are Eupatoria, Dandaca, and Theodosia, and several others which are free from the wickedness of human sacrifices.

Up to this we reckon that one of the extremities of the arc extends. We will now follow, as order suggests, the rest of the curve which extends towards the north, along the left side of the Thracian Bosphorus, just reminding the reader that while the bows of all other nations bend along the whole of their material, those of the Scythians and Parthians have a straight rounded line in the centre, from which they curve their spreading horns so as to present the figure of the waning moon.

At the very beginning then of this district, where the Rhipæan mountains end, lie the Arimphæi, a just people known for their quiet character, whose land is watered by the rivers Chronius and Bisula; and next to them are the Massagetæ, the Alani, and the Sargetæ, and

several other tribes of little note, of whom we know neither the names nor the customs.

Then, a long way off, is the bay Carcinites, and a river of the same name, and a grove of Diana, frequented by many votaries in those countries.

After that we come to the Dnieper (Borysthenes), which rises in the mountains of the Neuri; a river very large at its first beginning, and which increases by the influx of many other streams, till it falls into the sea with great violence; on its woody banks is the town of Borysthenes, and Cephalonesus, and some altars consecrated to Alexander the Great and Augustus Cæsar.

Next, at a great distance, is an island inhabited by the Sindi, a tribe of low-born persons, who upon the overthrow of their lords and masters in Asia, took possession of their wives and properties. Below them is a narrow strip of coast called by the natives the Course of Achilles, having been made memorable in olden time by the exercises of the Thessalian chief, and next to that is the city of Tyros, a colony of the Phœnicians, watered by the river Dniester.

But in the middle of the arc which we have described as being of an extended roundness, and which takes an active traveller fifteen days to traverse, are the Europæan Alani, the Costoboci, and the countless tribes of the Scythians, who extend over territories which have no ascertained limit; a small part of whom live on grain. But the rest wander over vast deserts, knowing neither ploughtime nor seedtime; but living in cold and frost, and feeding like great beasts. They place their relations, their homes, and their wretched furniture on waggons covered with bark, and, whenever they choose, they migrate without hindrance, driving off these waggons wherever they like.

When one arrives at another point of the circuit where there is a harbour, which bounds the figure of the arc at that extremity, the

island Peuce is conspicuous, inhabited by the Troglodytæ, and Peuci, and other inferior tribes, and we come also to Histros, formerly a city of great power, and to Tomi, Apollonia, Anchialos, Odissos, and many others on the Thracian coast.

But the Danube, rising near Basle on the borders of the Tyrol, extending over a wider space, and receiving on his way nearly sixty navigable rivers, pours through the Scythian territory by seven mouths into the Black Sea.

The first mouth (according to the Greek interpretation of the names) is at the island of Peuce, which we have mentioned; the second is at Naracustoma, the third at Calonstoma, the fourth at Pseudostoma. The Boreonstoma and the Sthenostoma, are much smaller, and the seventh is large and black-looking like a bog.

But the whole sea, all around, is full of mists and shoals, and is sweeter than seas in general, because by the evaporation of moisture the air is often thick and dense, and its waters are tempered by the immensity of the rivers which fall into it; and it is full of shifting shallows, because the number of the streams which surround it pour in mud and lumps of soil.

And it is well known that fish flock in large shoals to its most remote extremities that they may spawn and rear their young more healthfully, in consequence of the salubrity of the water; while the hollow caverns, which are very numerous there, protect them from voracious monsters. For nothing of the kind is ever seen in this sea, except some small dolphins, and they do no harm.

Now the portions of the Black Sea which are exposed to the north wind are so thoroughly frozen that, while the rivers, as it is believed, cannot continue their course beneath the ice, yet neither can the foot

of beast or man proceed firmly over the treacherous and shifting ground; a fault which is never found in a pure sea, but only in one of which the waters are mingled with those of rivers. We have digressed more than we had intended, so now let us turn back to what remains to be told.

Another circumstance came to raise Julian's present joy, one which indeed had been long expected, but which had been deferred by all manner of delays. For intelligence was brought by Agilo and Jovius, who was afterwards quæstor, that the garrison of Aquileia, weary of the length of the siege, and having heard of the death of Constantius, had opened their gates and come forth, delivering up the authors of the revolt; and that, after they had been burnt alive, as has been related, the rest had obtained pardon for their offences.

22.9

But Julian, elated at his prosperity, began to aspire to greatness beyond what is granted to man: amid continual dangers he had learnt by experience that propitious fortune held out to him, thus peacefully governing the Roman world, a cornucopia as it were of human blessings and all kinds of glory and success: adding this also to his former titles of victory, that while he alone held the reins of empire he was neither disturbed by intestine commotions, nor did any barbarians venture to cross his frontiers; but all nations, eager at all times to find fault with what is past, as mischievous and unjust, were with marvellous unanimity agreed in his praises.

Having therefore arranged with profound deliberation all the matters which were required either by the circumstances of the state or by the time, and, having encouraged the soldiers by repeated harangues and by adequate pay to be active in accomplishing all that was to be done, Julian, being in great favour with all men, set out for Antioch, leaving Constantinople, which he had greatly strengthened and enriched; for he had been born there, and loved and protected it as his native city.

Then crossing the straits, and passing by Chalcedon and Libyssa, where Hannibal the Carthaginian is buried, he came to Nicomedia; a city of ancient renown, and so adorned at the great expense of former emperors, that from the multitude of its public and private buildings good judges look on it as a quarter, as it were, of the eternal city.

When Julian beheld its walls buried in miserable ashes, he showed the anguish of his mind by silent tears, and went slowly on towards the palace; especially lamenting its misfortunes, because the senators who came out to meet him were in poor-looking condition, as well as the people who had formerly been most prosperous; some of them he recognized having been brought up there by the bishop Eusebius, of whom he was a distant relation.

Having here made many arrangements for repairing the damage done by an earthquake, he passed through Nisæa to the frontier of Gallo-Græcia, and then turning to the right, he went to Pessinus, to see the ancient temple of Cybele; from which town in the second Punic war, in accordance with the warning of the Sibylline verses, the image of the goddess was removed to Rome by Scipio Nasica.

Of its arrival in Italy, with many other matters connected with it, we made mention in recording the acts of the emperor Commodus; but as to what the reason was for the town receiving this name writers differ.

For some have declared that the city was so called ἀπὸ τοῦ πεσεῖν, from falling; inventing a tale that the statue fell from heaven; others affirm that Ilus, the son of Tros, king of Dardania, gave the place this name, which Theopompus says it received not from this, but from Midas, formerly a most powerful king of Phrygia.

Accordingly, having paid his worship to the goddess, and propitiated her with sacrifices and prayers, he returned to Ancyra; and as he was proceeding on this way from thence he was disturbed by a multitude; some violently demanding the restoration of what had been taken

from them, others complaining that they had been unjustly attached to different courts; some, regardless of the risk they ran, tried to enrage him against their adversaries, by charging them with treason.

But he, a sterner judge than Cassius or Lycurgus, weighed the charges with justice, and gave each his due; never being swayed from the truth, but very severe to calumniators, whom he hated, because he himself, while still a private individual and of low estate, had often experienced the petulant frenzy of many in a way which placed him in great danger.

And though there are many other examples of his patience in such matters, it will suffice to relate one here. A certain man laid an information against his enemy, with whom he had a most bitter quarrel, affirming that he had been guilty of outrage and sedition; and when the emperor concealed his own opinion, he renewed the charge for several days, and when at last he was asked who the man was whom he was accusing, he replied, a rich citizen. When the emperor heard this he smiled and said, "What proof led you to the discovery of this conduct of his?" He replied, "The man has had made for himself a purple silk robe."

And on this, being ordered to depart in silence, and though unpunished as a low fellow who was accusing one of his own class of too difficult an enterprise to be believed, he nevertheless insisted on the truth of the accusation, till Julian, being wearied by his pertinacity, said to the treasurer, whom he saw near him, "Bid them give this dangerous chatterer some purple shoes to take to his enemy, who, as he gives me to understand, has made himself a robe of that colour; that so he may know how little a worthless piece of cloth can help a man, without the greatest strength."

But as such conduct as this is praiseworthy and deserving the imitation of virtuous rulers, so it was a sad thing and deserving of censure, that in his time it was very hard for any one who was accused

by any magistrate to obtain justice, however fortified he might be by privileges, or the number of his campaigns, or by a host of friends. So that many persons being alarmed bought off all such annoyances by secret bribes.

Therefore, when after a long journey he had reached Pylæ, a place on the frontiers of Cappadocia and Cilicia, he received the ruler of the province, Celsus, already known to him by his Attic studies, with a kiss, and taking him up into his chariot conducted him with him into Tarsus.

From hence, desiring to see Antioch, the splendid metropolis of the East, he went thither by the usual stages, and when he came near the city he was received as if he had been a god, with public prayers, so that he marvelled at the voices of the vast multitude, who cried out that he had come to shine like a star on the Eastern regions.

It happened that just at that time, the annual period for the celebration of the festival of Adonis, according to the old fashion, came round; the story being, as the poets relate, that Adonis had been loved by Venus, and slain by a boar's tusk, which is an emblem of the fruits of the earth being cut down in their prime. And it appeared a sad thing that when the emperor was now for the first time making his entrance into a splendid city, the abode of princes, wailing lamentations and sounds of mourning should be heard in every direction.

And here was seen a proof of his gentle disposition, shown indeed in a trifling, but very remarkable instance. He had long hated a man named Thalassius, an officer in one of the law courts, as having been concerned in plots against his brother Gallus. He prohibited him from paying his salutations to him and presenting himself among the men of rank; which encouraged his enemies against whom he had actions in the courts of law, the next day, when a great crowd was collected in the presence of the emperor, to cry out, "Thalassius, the enemy of

your clemency, has violently deprived us of our rights;" and Julian, thinking that this was an opportunity for crushing him, replied, "I acknowledge that I am justly offended with the man whom you mention, and so you ought to keep silence till he has made satisfaction to me who am his principal enemy." And he commanded the prefect who was sitting by him not to hear their business till he himself was recognized by Thalassius, which happened soon afterwards.

22.10

While wintering at Antioch, according to his wish, he yielded to none of the allurements of pleasure in which all Syria abounds; but under pretence of repose, he devoted himself to judicial affairs, which are not less difficult than those of war, and in which he expended exceeding care, showing exquisite willingness to receive information, and carefully balancing how to assign to every one his due. And by his just sentence the wicked were chastised with moderate punishments, and the innocent were maintained in the undiminished possession of their fortunes.

And although in the discussion of causes he was often unreasonable, asking at unsuitable times to what religion each of the litigants adhered, yet none of his decisions were found inconsistent with equity, nor could he ever be accused, either from considerations of religion or of anything else, of having deviated from the strict path of justice.

For that is a desirable and right judgment which proceeds from repeated examinations of what is just and unjust. Julian feared anything which might lead him away from such, as a sailor fears dangerous rocks; and he was the better able to attain to correctness, because, knowing the levity of his own impetuous disposition, he used to permit the prefects and his chosen counsellors to check, by timely admonition, his own impulses when they were inclined to stray; and he continually showed that he was vexed if he committed errors, and was desirous of being corrected.

And when the advocates in some actions were once applauding him greatly as one who had attained to perfect wisdom, he is said to have exclaimed with much emotion, "I was glad and made it my pride to be praised by those whom I knew to be competent to find fault with me, if I had said or done anything wrong."

But it will be sufficient out of the many instances of his clemency which he afforded in judging causes to mention this one, which is not irrelevant to our subject or insignificant. A certain woman being brought before the court, saw that her adversary, formerly one of the officers of the palace, but who had been displaced, was now, contrary to her expectation, re-established and girt in his official dress, complained in a violent manner of this circumstance; and the emperor replied, "Proceed, O woman, if you think that you have been injured in any respect; he is girt as you see in order to go more quickly through the mire; your cause will not suffer from it."

And these and similar actions led to the belief, as he was constantly saying, that that ancient justice which Aratus states to have fled to heaven in disgust at the vices of mankind, had returned to earth; only that sometimes he acted according to his own will rather than according to law, making mistakes which somewhat darkened the glorious course of his renown.

After many trials he corrected numerous abuses in the laws, cutting away circuitous proceedings, and making the enactments show more plainly what they commanded or forbade. But his forbidding masters of rhetoric and grammar to instruct Christians was a cruel action, and one deserving to be buried in everlasting silence.

22.11

At this time, Gaudentius the secretary, whom I have mentioned above as having been sent by Constantius to oppose Julian in Africa, and a man of the name of Julian, who had been a deputy governor, and who was an intemperate partisan of the late emperor, were brought back as prisoners, and put to death.

And at the same time, Artemius, who had been Duke of Egypt, and against whom the citizens of Alexandria brought a great mass of heavy accusations, was also put to death, and the son of Marcellus too, who had been commander both of the infantry and of the cavalry, was publicly executed as one who had aspired to the empire by force of arms. Romanus, too, and Vincentius, the tribunes of the first and second battalion of the Scutarii, being convicted of aiming at things beyond their due, were banished.

And after a short time, when the death of Artemius was known, the citizens of Alexandria who had feared his return, lest, as he threatened, he should come back among them with power, and avenge himself on many of them for the offences which he had received, now turned all their anger against George, the bishop, by whom they had, so to say, been often attacked with poisonous bites.

George having been born in a fuller's shop, as was reported, in Epiphania, a town of Cilicia, and having caused the ruin of many individuals, was, contrary both to his own interest and to that of the commonwealth, ordained bishop of Alexandria, a city which from its own impulses, and without any special cause, is continually agitated by seditious tumults, as the oracles also show.

Men of this irritable disposition were readily incensed by George, who accused numbers to the willing ears of Constantius, as being opposed to his authority; and, forgetting his profession, which ought to give no counsel but what is just and merciful, he adopted all the wicked acts of informers.

And among other things he was reported to have maliciously informed Constantius that in that city all the edifices which had been built by Alexander, its founder, at vast public expense, ought properly to be a source of emolument to the treasury.

To these wicked suggestions he added this also, which soon afterwards led to his destruction. As he was returning from court, and passing by the superb temple of the Genius, escorted by a large train, as was his custom, he turned his eyes towards the temple, and said, "How long shall this sepulchre stand?" And the multitude, hearing this, was thunderstruck, and fearing that he would seek to destroy this also, laboured to the utmost of their power to effect his ruin by secret plots.

When suddenly there came the joyful news that Artemius was dead; on which all the populace, triumphing with unexpected joy, gnashed their teeth, and with horrid outcries set upon George, trampling upon him and kicking him, and tearing him to pieces with every kind of mutilation.

With him also, Dracontius, the master of the mint, and a count named Diodorus, were put to death, and dragged with ropes tied to their legs through the street; the one because he had overthrown the altar lately set up in the mint, of which he was governor; the other because while superintending the building of a church, he insolently cut off the curls of the boys, thinking thus to affect the worship of the gods.

But the savage populace were not content with this; but having mutilated their bodies, put them on camels and conveyed them to the shore, where they burnt them and threw the ashes into the sea; fearing, as they exclaimed, lest their remains should be collected and a temple raised over them, as the relics of men who, being urged to forsake their religion, had preferred to endure torturing punishments even to a glorious death, and so, by keeping their faith inviolate, earning the appellation of martyrs. In truth the wretched men who underwent such cruel punishment might have been protected by the aid of the Christians, if both parties had not been equally exasperated by hatred of George.

When this event reached the emperor's ears, he roused himself to avenge the impious deed; but when about to inflict the extremity of

punishment on the guilty, he was appeased by the intercession of those about him, and contented himself with issuing an edict in which he condemned the crime which had been committed in stern language, and threatening all with the severest vengeance if anything should be attempted for the future contrary to the principles of justice and law.

22.12

In the mean time, while preparing the expedition against the Persians, which he had long been meditating with all the vigour of his mind, he resolved firmly to avenge their past victories; hearing from others, and knowing by his own experience, that for nearly sixty years that most ferocious people had stamped upon the East bloody records of massacre and ravage, many of our armies having often been entirely destroyed by them.

And he was inflamed with a desire for the war on two grounds: first, because he was weary of peace, and dreaming always of trumpets and battles; and secondly, because, having been in his youth exposed to the attacks of savage nations, the wishes of whose kings and princes were already turning against us, and whom, as was believed, it would be easier to conquer than to reduce to the condition of suppliants, he was eager to add to his other glories the surname of Parthicus.

But when his inactive and malicious detractors saw that these preparations were being pressed forward with great speed and energy, they cried out that it was an unworthy and shameful thing for such unseasonable troubles to be caused by the change of a single prince, and laboured with all their zeal to postpone the campaign; and they were in the habit of saying, in the presence of those whom they thought likely to report their words to the emperor, that, unless he conducted himself with moderation during his excess of prosperity, he, like an over-luxuriant crop, would soon be destroyed by his own fertility.

And they were continually propagating sayings of this kind, barking in vain at the inflexible prince with secret attacks, as the Pygmies or the clown Thiodamas of Lindus assailed Hercules.

But he, as more magnanimous, allowed no delay to take place, nor any diminution in the magnitude of his expedition, but devoted the most energetic care to prepare everything suitable for such an enterprise.

He offered repeated victims on the altars of the gods; sometimes sacrificing one hundred bulls, and countless flocks of animals of all kinds, and white birds, which he sought for everywhere by land, and sea; so that every day individual soldiers who had stuffed themselves like boors with too much meat, or who were senseless from the eagerness with which they had drunk, were placed on the shoulders of passers-by, and carried to their homes through the streets from the public temples where they had indulged in feasts which deserved punishment rather than indulgence. Especially the Petulantes and the Celtic legion, whose audacity at this time had increased to a marvellous degree.

And rites and ceremonies were marvellously multiplied with a vastness of expense hitherto unprecedented; and, as it was now allowed without hindrance, every one professed himself skilful in divination, and all, whether illiterate or learned, without any limit or any prescribed order, were permitted to consult the oracles, and to inspect the entrails of victims; and omens from the voice of birds, and every kind of sign of the future, was sought for with an ostentatious variety of proceeding.

And while this was going on, as if it were a time of profound peace, Julian, being curious in all such branches of learning, entered on a new path of divination. He proposed to reopen the prophetic springs of the fountain of Castalia, which Hadrian was said to have blocked up with a huge mass of stones, fearing lest, as he himself had attained the sovereignty through obedience to the predictions of these waters, others might learn a similar lesson; and Julian immediately ordered

the bodies which had been buried around it to be removed with the same ceremonies as those with which the Athenians had purified the island of Delos.

22.13

About the same time, on the 22nd of October, the splendid temple of Apollo, at Daphne, which that furious and cruel king Antiochus Epiphanes had built with the statue of the god, equal in size to that of Olympian Jupiter, was suddenly burnt down.

This terrible accident inflamed the emperor with such anger, that he instantly ordered investigations of unprecedented severity to be instituted, and the chief church of Antioch to be shut up. For he suspected that the Christians had done it out of envy, not being able to bear the sight of the magnificent colonnade which surrounded the temple.

But it was reported, though the rumour was most vague, that the temple had been burnt by means of Asclepiades the philosopher, of whom we have made mention while relating the actions of Magnentius. He is said to have come to the suburb in which the temple stood to pay a visit to Julian, and being accustomed to carry with him wherever he went a small silver statue of the Heavenly Venus, he placed it at the feet of the image of Apollo, and then, according to his custom, having lighted wax tapers in front of it, he went away. At midnight, when no one was there to give any assistance, some sparks flying about stuck to the aged timbers; and from that dry fuel a fire was kindled which burnt everything it could reach, however separated from it by the height of the building.

The same year also, just as winter was approaching, there was a fearful scarcity of water, so that some rivers were dried up, and fountains too, which had hitherto abounded with copious springs. But afterwards they all were fully restored.

And on the second of December, as evening was coming on, all that remained of Nicomedia was destroyed by an earthquake, and no small

portion of Nicæa.

22.14

These events caused great concern to the emperor; but still he did not neglect other affairs of urgency, till the time of entering on his intended campaign should arrive. But in the midst of his important and serious concerns, it appeared superfluous that, without any plausible reason, and out of a mere thirst for popularity, he took measures for producing cheapness; a thing which often proves contrary to expectation and produces scarcity and famine.

And when the magistrates of Antioch plainly proved to him that his orders could not be executed, he would not depart from his purpose, being as obstinate as his brother Gallus, but not bloodthirsty. On which account, becoming furious against them, as slanderous and obstinate, he composed a volume of invectives which he called “The Antiochean,” or “Misopogon,” enumerating in a bitter spirit all the vices of the city, and adding others beyond the truth; and when on this he found that many witticisms were uttered at his expense, he felt compelled to conceal his feelings for a time; but was full of internal rage.

For he was ridiculed as a Cercops;²² again, as a dwarf spreading out his narrow shoulders, wearing a beard like that of a goat, and taking huge strides, as if he had been the brother of Otus and Ephialtes,²³ whose height Horace speaks of as enormous. At another time he was “the victim-killer,” instead of the worshipper, in allusion to the numbers of his victims; and this piece of ridicule was seasonable and deserved, as once out of ostentation he was fond of carrying the sacred vessels before the priests, attended by a train of girls. And although these and similar jests made him very indignant, he nevertheless kept silence, and concealed his emotions, and continued to celebrate the solemn festivals.

At last, on the day appointed for the holiday, he ascended Mount Casius, a mountain covered with trees, very lofty, and of a round form;

from which at the second crowing of the cock²⁴ we can see the sun rise. And while he was sacrificing to Jupiter, on a sudden he perceived some one lying on the ground, who, with the voice of a suppliant, implored pardon and his life; and when Julian asked him who he was, he replied, that he was Theodotus, formerly the chief magistrate of Hierapolis, who, when Constantius quitted that city, had escorted him with other men of rank on his way; basely flattering him as sure to be victorious; and he had entreated him with feigned tears and lamentations to send them the head of Julian as that of an ungrateful rebel, in the same way as he recollected the head of Magnentius had been exhibited.

When Julian heard this, he said, "I have heard of this before, from the relation of several persons. But go thou home in security, being relieved of all fear by the mercy of the emperor, who, like a wise man, has resolved to diminish the number of his enemies, and is eager to increase that of his friends."

When he departed, having fully accomplished the sacrifices, letters were brought to him from the governor of Egypt, who informed him that after a long time he had succeeded in finding a bull Apis, which he had been seeking with great labour, a circumstance which, in the opinion of the inhabitants of those regions, indicates prosperity, abundant crops, and several other kinds of good fortune.

On this subject it seems desirable to say a few words. Among the animals which have been consecrated by the reverence of the ancients, Mnevis and Apis are the most eminent. Mnevis, concerning whom there is nothing remarkable related, is consecrated to the sun, Apis to the moon. But the bull Apis is distinguished by several natural marks; and especially by a crescent-shaped figure, like that of a new moon, on his right side. After living his appointed time, he is drowned in the sacred fountain (for he is not allowed to live beyond the time fixed by the sacred authority of their mystical books; nor is a cow brought to him more than once a year, who also must be distinguished

with particular marks); then another is sought amid great public mourning; and if one can be found distinguished by all the required marks, he is led to Memphis, a city of great renown, and especially celebrated for the patronage of the god Æsculapius.

And after he has been led into the city by one hundred priests, and conducted into a chamber, he is looked upon as consecrated, and is said to point out by evident means the signs of future events. Some also of those who come to him he repels by unfavourable signs; as it is reported he formally rejected Cæsar Germanicus when he offered him food; thus portending what shortly happened.

22.15

Let us then, since the occasion seems to require it, touch briefly on the affairs of Egypt, of which we have already made some mention in our account of the emperors Hadrian and Severus, where we related several things which we had seen.²⁵

The Egyptian is the most ancient of all nations, except indeed that its superior antiquity is contested by the Scythians: their country is bounded on the south²⁶ by the greater Syrtes, Cape Ras, and Cape Borion, the Garamantes, and other nations; on the east, by Elephantine, and Meroe, cities of the Ethiopians, the Catadupi, the Red Sea, and the Scenite Arabs, whom we now call Saracens. On the north it joins a vast track of land, where Asia and the Syrian provinces begin; on the west it is bounded by the Sea of Issus, which some call the Parthenian Sea.

We will also say a few words concerning that most useful of all rivers, the Nile, which Homer calls the Ægyptus; and after that we will enumerate other things worthy of admiration in these regions.

The sources of the Nile, in my opinion, will be as unknown to posterity as they are now. But since poets, who relate fully, and geographers who differ from one another, give various accounts of this hidden

matter, I will in a few words set forth such of their opinions as seem to me to border on the truth.

Some natural philosophers affirm that in the districts beneath the North Pole, when the severe winters bind up everything, the vast masses of snow congeal; and afterwards, melted by the warmth of the summer, they make the clouds heavy with liquid moisture, which, being driven to the south by the Etesian winds, and dissolved into rain by the heat of the sun, furnish abundant increase to the Nile.

Some, again, assert that the inundations of the river at fixed times are caused by the rains in Ethiopia, which fall in great abundance in that country during the hot season; but both these theories seem inconsistent with the truth—for rain never falls in Ethiopia, or at least only at rare intervals.

A more common opinion is, that during the continuance of the wind from the north, called the Precursor, and of the Etesian gales, which last forty-five days without interruption, they drive back the stream and check its speed, so that it becomes swollen with its waves thus dammed back; then, when the wind changes, the force of the breeze drives the waters to and fro, and the river growing rapidly greater, its perennial sources driving it forward, it rises as it advances, and covers everything, spreading over the level plains till it resembles the sea.

But King Juba, relying on the text of the Carthaginian books, affirms that the river rises in a mountain situated in Mauritania, which looks on the Atlantic Ocean, and he says, too, that this is proved by the fact that fishes, and herbs, and animals resembling those of the Nile are found in the marshes where the river rises.

But the Nile, passing through the districts of Ethiopia, and many different countries which give it their own names, swells its fertilizing stream till it comes to the cataracts. These are abrupt rocks, from

which in its precipitous course it falls with such a crash, that the Ati, who used to live in that district, having lost their hearing from the incessant roar, were compelled to migrate to a more quiet region.

Then proceeding more gently, and receiving no accession of waters in Egypt, it falls into the sea through seven mouths, each of which is as serviceable as, and resembles, a separate river. And besides the several streams which are derived from its channel, and which fall with others like themselves, there are seven navigable with large waves; named by the ancients the Heracleotic, the Sebennitic, the Bolbitic, the Phatnitic, the Mendesian, the Tanitic, and the Pelusian mouths.

This river, rising as I have said, is driven on from the marshes to the cataracts, and forms several islands; some of which are said to be of such extent that the stream is three days in passing them.

Among these are two of especial celebrity, Meroe and Delta. The latter derives its name from its triangular form like the Greek letter; but when the sun begins to pass through the sign of Cancer, the river keeps increasing till it passes into Libra; and then, after flowing at a great height for one hundred days, it falls again, and its waters being diminished it exhibits, in a state fit for riding on, fields which just before could only be passed over in boats.

If the inundation be too abundant it is mischievous, just as it is unproductive if it be too sparing; for if the flood be excessive, it keeps the ground wet too long; and so delays cultivation; while if it be deficient, it threatens the land with barrenness. No landowner wishes it to rise more than sixteen cubits. If the flood be moderate, then the seed sown in favourable ground sometimes returns seventy fold. The Nile, too, is the only river which does not cause a breeze.

Egypt also produces many animals both terrestrial and aquatic, and some which live both on the earth and in the water, and are therefore called amphibious. In the dry districts antelopes and buffaloes are

found, and sphinxes, animals of an absurd-looking deformity, and other monsters which it is not worth while to enumerate.

Of the terrestrial animals, the crocodile is abundant in every part of the country. This is a most destructive quadruped, accustomed to both elements, having no tongue, and moving only the upper jaw, with teeth like a comb, which obstinately fasten into everything he can reach. He propagates his species by eggs like those of a goose.

And as he is armed with claws, if he had only thumbs his enormous strength would suffice to upset large vessels, for he is sometimes ten cubits long. At night he sleeps under water; in the day he feeds in the fields, trusting to the stoutness of his skin, which is so thick that missiles from military engines will scarcely pierce the mail of his back.

Savage as these monsters are at all other times, yet as if they had concluded an armistice, they are always quiet, laying aside all their ferocity, during the seven days of festival on which the priests at Memphis celebrate the birthday of Apis.

Besides those which die accidentally, some are killed by wounds which they receive in their bellies from the dorsal fins of some fish resembling dolphins, which this river also produces.

Some also are killed by means of a little bird called the trochilus, which, while seeking for some picking of small food, and flying gently about the beast while asleep, tickles its cheeks till it comes to the neighbourhood of its throat. And when the hydrus, which is a kind of ichneumon, perceives this, it penetrates into its mouth, which the bird has caused to open, and descends into its stomach, where it devours its entrails, and then comes forth again.

But the crocodile, though a bold beast towards those who flee, is very timid when it finds a brave enemy. It has a most acute sight, and for

the four months of winter is said to do without food.

The hippopotamus, also, is produced in this country; the most sagacious of all animals destitute of reason. He is like a horse, with cloven hoofs, and a short tail. Of his sagacity it will be sufficient to produce two instances.

The animal makes his lair among dense beds of reeds of great height, and while keeping quiet watches vigilantly for every opportunity of sallying out to feed on the crops. And when he has gorged himself, and is ready to return, he walks backwards, and makes many tracks, to prevent any enemies from following the straight road and so finding and easily killing him.

Again, when he feels lazy from having his stomach swollen by excessive eating, it rolls its thighs and legs on freshly-cut reeds, in order that the blood which is discharged through the wounds thus made may relieve his fat. And then he smears his wounded flesh with clay till the wounds get scarred over.

This monster was very rare till it was first exhibited to the Roman people in the ædileship of Scaurus, the father of that Scaurus whom Cicero defended, when he charged the Sardinians to cherish the same opinion as the rest of the world of the authority of that noble family. Since that time, at different periods, many specimens have been brought to Rome, and now they are not to be found in Egypt, having been driven, according to the conjecture of the inhabitants, up to the Blemmyæ²⁷ by being incessantly pursued by the people.

Among the birds of Egypt, the variety of which is countless, is the ibis, a sacred and amiable bird, also valuable, because by heaping up the eggs of serpents in its nest for food it causes these fatal pests to diminish.

They also sometimes encounter flocks of winged snakes, which come laden with poison from the marshes of Arabia. These, before they can quit their own region, they overcome in the air, and then devour them. This bird, we are told, produces its young through its mouth.

Egypt also produces innumerable quantities of serpents, destructive beyond all other creatures. Basilisks, amphisbænas,²⁸ scytalæ, acontiaë, dipsades, vipers, and many others. The asp is the largest and most beautiful of all; but that never, of its own accord, quits the Nile.

There are also in this country many things exceedingly worthy of observation, of which it is a good time now to mention a few. Everywhere there are temples of great size. There are seven marvellous pyramids, the difficulty of building which, and the length of time consumed in the work, are recorded by Herodotus. They exceed in height anything ever constructed by human labour, being towers of vast width at the bottom and ending in sharp points.

And their shape received this name from the geometricians because they rise in a cone like fire (πῦρ). And huge as they are, as they taper off gradually, they throw no shadow, in accordance with a principle of mechanics.

There are also subterranean passages, and winding retreats, which, it is said, men skilful in the ancient mysteries, by means of which they divined the coming of a flood, constructed in different places lest the memory of all their sacred ceremonies should be lost. On the walls, as they cut them out, they have sculptured several kinds of birds and beasts, and countless other figures of animals, which they call hieroglyphics.

There is also Syene, where at the time of the summer solstice the rays surrounding upright objects do not allow the shadows to extend beyond the bodies. And if any one fixes a post upright in the ground, or sees a man or a tree standing erect, he will perceive that their

shadow is consumed at the extremities of their outlines. This also happens at Meroe, which is the spot in Ethiopia nearest to the equinoctial circle, and where for ninety days the shadows fall in a way just opposite to ours, on account of which the natives of that district are called Antiscii.²⁹

But as there are many other wonders which would go beyond the plan of our little work, we must leave these to men of lofty genius, and content ourselves with relating a few things about the provinces.

22.16

In former times Egypt is said to have been divided into three provinces: Egypt proper, the Thebais, and Libya, to which in later times two more have been added, Augustamnica, which has been cut off from Egypt proper, and Pentapolis, which has been detached from Libya.

Thebais, among many other cities, can boast especially of Hermopolis, Coptos, and Antinous, which Hadrian built in honour of his friend Antinous. As to Thebes, with its hundred gates, there is no one ignorant of its renown.

In Augustamnica, among others, there is the noble city of Pelusium, which is said to have been founded by Peleus, the father of Achilles, who by command of the gods was ordered to purify himself in the lake adjacent to the walls of the city, when, after having slain his brother Phocus, he was driven about by horrid images of the Furies; and Cassium, where the tomb of the great Pompey is, and Ostracine, and Rhinocolura.

In Libya Pentapolis is Cyrene, a city of great antiquity, but now deserted, founded by Battus the Spartan, and Ptolemais, and Arsinoë, known also as Teuchira, and Darnis, and Berenice, called also Hesperides.

And in the dry Libya, besides a few other insignificant towns, there are Parætonium, Chærecla, and Neapolis.

Egypt proper, which ever since it has been united to the Roman empire has been under the government of a prefect, besides some other towns of smaller importance, is distinguished by Athribis, and Oxyrynchus, and Thmuis, and Memphis.

But the greatest of all the cities is Alexandria, ennobled by many circumstances, and especially by the grandeur of its great founder, and the skill of its architect Dinocrates, who, when he was laying the foundation of its extensive and beautiful walls, for want of mortar, which could not be procured at the moment, is said to have marked out its outline with flour; an incident which foreshowed that the city should hereafter abound in supplies of provisions.

At Inibis the air is wholesome, the sky pure and undisturbed; and, as the experience of a long series of ages proves, there is scarcely ever a day on which the inhabitants of this city do not see the sun.

The shore is shifty and dangerous; and as in former times it exposed sailors to many dangers, Cleopatra erected a lofty tower in the harbour, which was named Pharos, from the spot on which it was built, and which afforded light to vessels by night when coming from the Levant or the Libyan sea along the plain and level coast, without any signs of mountains or towns or eminences to direct them, they were previously often wrecked by striking into the soft and adhesive sand.

The same queen, for a well-known and necessary reason, made a causeway seven furlongs in extent, admirable for its size and for the almost incredible rapidity with which it was made. The island of Pharos, where Homer in sublime language relates that Proteus used to amuse himself with his herds of seals, is almost a thousand yards from

the shore on which the city stands, and was liable to pay tribute to the Rhodians.

And when on one occasion the farmers of this revenue came to make exorbitant demands, she, being a wily woman, on a pretext of it being the season of solemn holidays, led them into the suburbs, and ordered the work to be carried on without ceasing. And so seven furlongs were completed in seven days, being raised with the soil of the adjacent shore. Then the queen, driving over it in her chariot, said that the Rhodians were making a blunder in demanding port dues for what was not an island but part of the mainland.

Besides this there are many lofty temples, and especially one to Serapis, which, although no words can adequately describe it, we may yet say, from its splendid halls supported by pillars, and its beautiful statues and other embellishments, is so superbly decorated, that next to the Capitol, of which the ever-venerable Rome boasts, the whole world has nothing worthier of admiration.

In it were libraries of inestimable value; and the concurrent testimony of ancient records affirm that 70,000 volumes, which had been collected by the anxious care of the Ptolemies, were burnt in the Alexandrian war when the city was sacked in the time of Cæsar the Dictator.

Twelve miles from this city is Canopus, which, according to ancient tradition, received its name from the prophet of Menelaus, who was buried there. It is a place exceedingly well supplied with good inns, of a most wholesome climate, with refreshing breezes; so that any one who resides in that district might think himself out of our world while he hears the breezes murmuring through the sunny atmosphere.

Alexandria itself was not, like other cities, gradually embellished, but at its very outset it was adorned with spacious roads. But after having been long torn by violent seditions, at last, when Aurelian was

emperor, and when the intestine quarrels of its citizens had proceeded to deadly strife, its walls were destroyed, and it lost the largest half of its territory, which was called Bruchion, and had long been the abode of eminent men.

There had lived Aristarchus, that illustrious grammarian; and Herodianus, that accurate inquirer into the fine arts; and Saccas Ammonius, the master of Plotinus, and many other writers in various useful branches of literature, among whom Didymus, surnamed Chalcenterus, a man celebrated for his writings on many subjects of science, deserves especial mention; who, in the six books in which he, sometimes incorrectly, attacks Cicero, imitating those malignant farce writers, is justly blamed by the learned as a puppy barking from a distance with puny voice against the mighty roar of the lion.

And although, besides those I have mentioned, there were many other men of eminence in ancient times, yet even now there is much learning in the same city; for teachers of various sects flourish, and many kinds of secret knowledge are explained by geometrical science. Nor is music dead among them, nor harmony. And by a few, observations of the motion of the world and of the stars are still cultivated; while of learned arithmeticians the number is considerable; and besides them there are many skilled in divination.

Again, of medicine, the aid of which in our present extravagant and luxurious way of life is incessantly required, the study is carried on with daily increasing eagerness; so that while the employment be of itself creditable, it is sufficient as a recommendation for any medical man to be able to say that he was educated at Alexandria. And this is enough to say on this subject.

But if any one in the earnestness of his intellect wishes to apply himself to the various branches of divine knowledge, or to the examination of metaphysics, he will find that the whole world owes this kind of learning to Egypt.

Here first, far earlier than in any other country, men arrived at the various cradles (if I may so say) of different religions. Here they still carefully preserve the elements of sacred rites as handed down in their secret volumes.

It was in learning derived from Egypt that Pythagoras was educated, which taught him to worship the gods in secret, to establish the principle that in whatever he said or ordered his authority was final, to exhibit his golden thigh at Olympia, and to be continually seen in conversation with an eagle.

Here it was that Anaxagoras derived the knowledge which enabled him to predict that stones would fall from heaven, and from the feeling of the mud in a well to foretell impending earthquakes. Solon too derived aid from the apophthegms of the priests of Egypt in the enactment of his just and moderate laws, by which he gave great confirmation to the Roman jurisprudence. From this source too Plato, soaring amid sublime ideas, rivalling Jupiter himself in the magnificence of his voice, acquired his glorious wisdom by a visit to Egypt.

The inhabitants of Egypt are generally swarthy and dark complexioned, and of a rather melancholy cast of countenance, thin and dry looking, quick in every motion, fond of controversy, and bitter exactors of their rights. Among them a man is ashamed who has not resisted the payment of tribute, and who does not carry about him wheals which he has received before he could be compelled to pay it. Nor have any tortures been found sufficiently powerful to make the hardened robbers of this country disclose their names unless they do so voluntarily.

It is well known, as the ancient annals prove, that all Egypt was formerly under kings who were friendly to us. But after Antony and

Cleopatra were defeated in the naval battle at Actium, it became a province under the dominion of Octavianus Augustus. We became masters of the dry Libya by the last will of king Apion. Cyrene and the other cities of Libya Pentapolis we owe to the liberality of Ptolemy. After this long digression, I will now return to my original subject.

Book XXIII

23.1

A.D. 363.

To pass over minute details, these were the principal events of the year. But Julian, who in his third consulship had taken as his colleague Sallustius, the prefect of Gaul, now entered on his fourth year, and by a novel arrangement took as his colleague a private individual; an act of which no one recollected an instance since that of Diocletian and Aristobulus.

And although, foreseeing in his anxious mind the various accidents that might happen, he urged on with great diligence all the endless preparations necessary for his expedition, yet distributing his diligence everywhere; and being eager to extend the recollection of his reign by the greatness of his exploits, he proposed to rebuild at a vast expense the once magnificent temple of Jerusalem, which after many deadly contests was with difficulty taken by Vespasian and Titus, who succeeded his father in the conduct of the siege. And he assigned the task to Alypius of Antioch, who had formerly been proprefect of Britain.

But though Alypius applied himself vigorously to the work, and though the governor of the province co-operated with him, fearful balls of fire burst forth with continual eruptions close to the foundations, burning several of the workmen and making the spot altogether inaccessible. And thus the very elements, as if by some fate, repelling the attempt, it was laid aside.

About the same time the emperor conferred various honours on the ambassadors who were sent to him from the Eternal City, being men of high rank and established excellence of character. He appointed Apronianus to be prefect of Rome, Octavianus to be proconsul of Africa, Venustus to be viceroy of Spain, and promoted Rufinus Aradius to be count of the East in the room of his uncle Julian, lately deceased.

When all this had been carried out as he arranged, he was alarmed by an omen which, as the result showed, indicated an event immediately at hand. Felix, the principal treasurer, having died suddenly of a hemorrhage, and Count Julian having followed him, the populace, looking on their public titles, hailed Julian as Felix and Augustus.

Another bad omen had preceded this, for, on the very first day of the year, as the emperor was mounting the steps of the temple of the Genius, one of the priests, the eldest of all, fell without any one striking him, and suddenly expired; an event which the bystanders, either out of ignorance or a desire to flatter, affirmed was an omen affecting Sallustius, as the elder consul; but it was soon seen that the death it portended was not to the elder man, but to the higher authority.

Besides these several other lesser signs from time to time indicated what was about to happen; for, at the very beginning of the arrangements for the Parthian campaign, news came that there had been an earthquake at Constantinople, which those skilful in divination declared to be an unfavourable omen to a ruler about to invade a foreign country; and therefore advised Julian to abandon his unreasonable enterprise, affirming that these and similar signs can only be disregarded with propriety when one's country is invaded by foreign armies, as then there is one everlasting and invariable law, to defend its safety by every possible means, allowing no relaxation nor delay. News also came by letter that at Rome the Sibylline volumes had been consulted on the subject of the war by Julian's order, and

that they had in plain terms warned him not to quit his own territories that year.

23.2

But in the mean time embassies arrived from several nations promising aid, and they were liberally received and dismissed; the emperor with plausible confidence replying that it by no means became the power of Rome to rely on foreign aid to avenge itself, as it was rather fitting that Rome should give support to its friends and allies if necessity drove them to ask it.

He only warned Arsaces, king of Armenia, to collect a strong force, and wait for his orders, as he should soon know which way to march, and what to do. Then, as soon as prudence afforded him an opportunity, hastening to anticipate every rumour of his approach by the occupation of the enemy's country, before spring had well set in, he sent the signal for the advance to all his troops, commanding them to cross the Euphrates.

As soon as the order reached them, they hastened to quit their winter quarters; and having crossed the river, according to their orders, they dispersed into their various stations, and awaited the arrival of the emperor. But he, being about to quit Antioch, appointed a citizen of Heliopolis, named Alexander, a man of turbulent and ferocious character, to govern Syria, saying that he indeed had not deserved such a post, but that the Antiochians, being covetous and insolent, required a judge of that kind.

When he was about to set forth, escorted by a promiscuous multitude who wished him a fortunate march and a glorious return, praying that he would be merciful and kinder than he had been, he (for the anger which their addresses and reproaches had excited in his breast was not yet appeased) spoke with severity to them, and declared that he would never see them again.

For he said that he had determined, after his campaign was over, to return by a shorter road to Tarsus in Cilicia, to winter there: and that

he had written to Memorius, the governor of the city, to prepare everything that he might require in that city. This happened not long afterwards; for his body was brought back thither and buried in the suburbs with a very plain funeral, as he himself had commanded.

As the weather was now getting warm he set out on the fifth of March, and by the usual stages arrived at Hieropolis; and as he entered the gates of that large city a portico on the left suddenly fell down, and as fifty soldiers were passing under it at that moment it wounded many, crushing them beneath the vast weight of the beams and tiles.

Having collected all his troops from thence, he marched with such speed towards Mesopotamia, that before any intelligence of his march could arrive (an object about which he was especially solicitous) he came upon the Assyrians quite unexpectedly. Then having led his whole army and the Scythian auxiliaries across the Euphrates by a bridge of boats, he arrived at Batnæ, a town of Osdroene, and there again a sad omen met him.

For when a great crowd of grooms was standing near an enormously high haystack, in order to receive their forage (for in this way those supplies used to be stored in that country), the mass was shaken by the numbers who sought to strip it, and falling down, overwhelmed fifty men.

23.3

Leaving this place with a heavy heart, he marched with great speed, and arrived at Carrhæ, an ancient town notorious for the disasters of Crassus and the Roman army. From this town two royal roads branch off, both leading into Persia; that on the left hand through Adiabene and along the Tigris, that on the right through the Assyrians and along the Euphrates.

There he stayed some days, preparing necessary supplies; and according to the custom of the district he offered sacrifices to the moon, which is religiously worshipped in that region; and it is said

that while before the altar, no witness to the action being admitted, he secretly gave his own purple robe to Procopius, and bade him boldly assume the sovereignty if he should hear that he had died among the Parthians.

Here while asleep his mind was agitated with dreams, and foresaw some sad event about to happen; on which account he and the interpreters of dreams considering the omens which presented themselves, pronounced that the next day, which was the nineteenth of March, ought to be solemnly observed. But, as was ascertained subsequently, that very same night, while Apronianus was prefect of Rome, the temple of the Palatine Apollo was burnt in the Eternal City; and if aid from all quarters had not come to the rescue the violence of the conflagration would have destroyed even the prophetic volumes of the Sibyl.

After these things had happened in this manner, and while Julian was settling his line of march, and making arrangements for supplies of all kinds, his scouts come panting in, and bring him word that some squadrons of the enemy's cavalry have suddenly passed the frontier in the neighbourhood of the camp, and have driven off a large booty.

Indignant at such atrocity and at such an insult, he immediately (as indeed he had previously contemplated) put thirty thousand chosen men under the orders of Procopius, who has been already mentioned, uniting with him in this command Count Sebastian, formerly Duke of Egypt; and he ordered them to act on this side of the Tigris, observing everything vigilantly, so that no danger might arise on any side where it was not expected, for such things had frequently happened. He charged them further, if it could be done, to join King Arsaces; and march with him suddenly through Corduena and Moxoëne, ravaging Chiliocomus, a very fertile district of Media, and other places; and then to rejoin him while still in Assyria, in order to assist him as he might require.

Having taken these measures, Julian himself, pretending to march by the line of the Tigris, on which road he had purposely commanded magazines of provisions to be prepared, turned towards the right, and after a quiet night, asked in the morning for the horse which he was accustomed to ride: his name was Babylonius. And when he was brought, being suddenly griped and starting at the pain, he fell down, and rolling about scattered the gold and jewels with which his trappings were decked. Julian, in joy at this omen, cried out, amid the applause of those around, that "Babylon had fallen, and was stripped of all her ornaments."

Having delayed a little that he might confirm the omen by the sacrifice of some victims, he advanced to Davana, where he had a garrison-fortress, and where the river Belias rises which falls into the Euphrates. Here he refreshed his men with food and sleep, and the next day reached Callinicus, a strong fortress, and also a great commercial mart, where, on the 27th of March (the day on which at Rome the annual festival in honour of Cybele is celebrated, and the car in which her image is borne is, as it is said, washed in the waters of the Almo), he kept the same feast according to the manner of the ancients, and then, retiring to rest, passed a triumphant, and joyful night.

The next day he proceeded along the bank of the river, which other streams began to augment, marching with an armed escort; and at night he rested in a tent, where some princes of the Saracenic tribes came as suppliants, bringing him a golden crown, and adoring him as the master of the world and of their own nations: he received them graciously, as people well adapted for surprises in war.

And while addressing them a fleet arrived equal to that of the mighty sovereign Xerxes, under the command of the tribune Constantianus, and Count Lucillianus; they threw a bridge over the broadest part of the Euphrates: the fleet consisted of one thousand transports, of various sorts and sizes, bringing large supplies of provisions, and

arms, and engines for sieges, and fifty ships of war, and as many more suitable for the construction of bridges.

23.4

I am reminded by the circumstances to explain instruments of this kind briefly, as far as my moderate talent may enable me to do, and first I will set forth the figure of the balista.

Between two axletrees a strong large iron bar is fastened, like a great rule, round, smooth, and polished; from its centre a square pin projects for some distance, hollowed out into a narrow channel down its middle. This is bound by many ligatures of twisted cords: to it two wooden nuts are accurately fitted, by one of which stands a skilful man who works it, and who fits neatly into the hollow of the pin or pole a wooden arrow with a large point; and as soon as this is done, some strong young men rapidly turn a wheel.

When the tip of the arrow's point has reached the extremity of the cords, the arrow is struck by a blow from the balista, and flies out of sight; sometimes even giving forth sparks by its great velocity, and it often happens that before the arrow is seen, it has given a fatal wound.

The scorpion, which they now call the wild-ass, is in the following form. Two axletrees of oak or box are cut out and slightly curved, so as to project in small humps, and they are fastened together like a sawing machine, being perforated with large holes on each side; and between them, through the holes, strong ropes are fastened to hold the two parts together, and prevent them from starting asunder.

From these ropes thus placed a wooden pin rises in an oblique direction, like the pole of a chariot, and it is so fastened by knotted cords as to be raised or depressed at pleasure. To its top, iron hooks are fastened, from which a sling hangs, made of either cord or iron. Below the pin is a large sack filled with shreds of cloth, fastened by

strong ties, and resting on heaped-up turves or mounds of brick. For an engine of this kind, if placed on a stone wall, would destroy whatever was beneath it, not by its weight, but by the violence of its concussion.

Then when a conflict begins, a round stone is placed on the sling, and four youths on each side, loosening the bar to which the cords are attached, bend the pin back till it points almost upright into the air; then the worker of the engine, standing by on high ground, frees by a blow with the heavy hammer the bolt which keeps down the whole engine; and the pin being set free by the stroke, and striking against the mass of cloth shreds, hurls forth the stone with such force as to crush whatever it strikes.

This engine is called a *tormentum*, because all its parts are twisted (*torquetur*); or a scorpion, because it has an erect sting; but modern times have given it the name of the wild-ass, because when wild asses are hunted, they throw the stones behind them by their kicks so as to pierce the chests of those who pursue them, or to fracture their skulls.

Now let us come to the battering ram. A lofty pine or ash is chosen, the top of which is armed with a long and hard head of iron, resembling a ram, which form has given the name to the engine. It is suspended from iron beams running across on each side, like the top of a pair of scales, and is kept in its place by ropes hanging from a third beam. A number of men draw it back as far as there is room, and then again drive it forward to break down whatever opposes it by mighty blows, like a ram which rises up and butts.

By the frequent blows of this rebounding thunderbolt, buildings are torn asunder and walls are loosened and thrown down. By this kind of engine, if worked with proper vigour, garrisons are deprived of their defences, and the strongest cities are laid open and sieges rapidly brought to a conclusion.

Instead of these rams, which from their common use came to be despised, a machine was framed called in Greek the helepolis, by the frequent use of which Demetrius, the son of king Antigonus, took Rhodes and other cities, and earned the surname of Poliorcetes.

It is constructed in this manner. A vast testudo is put together, strengthened with long beams and fastened with iron nails; it is covered with bullocks' hides and wicker-work made of freshly cut twigs, and its top is smeared over with clay to keep off missiles and fiery darts.

Along its front very sharp spears with three points are fastened, heavy with iron, like the thunderbolts represented by painters or sculptors, and strong enough with the projecting points to tear to pieces whatever it strikes.

A number of soldiers within guide this vast mast with wheels and ropes, urging with vehement impulse against the weaker parts of the wall, so that, unless repelled by the strength of the garrison above, it breaks down the wall and lays open a great breach.

The firebolts, which are a kind of missile, are made thus. They take an arrow of cane, joined together between the point and the reed with jagged iron, and made in the shape of a woman's spindle, with which linen threads are spun; this is cunningly hollowed out in the belly and made with several openings, and in the cavity fire and fuel of some kind is placed.

Then if it be shot slowly from a slack bow (for if it be shot with too much speed the fire is extinguished), so as to stick anywhere, it burns obstinately, and if sprinkled with water it creates a still fiercer fire, nor will anything but throwing dust upon it quench it. This is enough to say of mural engines; let us now return to our original subject.

Having received the reinforcements of the Saracens which they so cheerfully offered, the emperor advanced with speed, and at the beginning of April entered Circesium, a very secure fortress, and skilfully built: it is surrounded by the two rivers Aboras (or Chaboras) and Euphrates, which make it as it were an island.

It had formerly been small and insecure, till Diocletian surrounded it with lofty towers and walls when he was strengthening his inner frontier within the very territories of the barbarians, in order to prevent the Persians from overrunning Syria, as had happened a few years before to the great injury of the province.

For it happened one day at Antioch, when the city was in perfect tranquillity, a comic actor being on the stage with his wife, acting some common play, while the people were delighted with his acting, the wife suddenly exclaimed, "Unless I am dreaming, here are the Persians;" and immediately the populace turning round, were put to flight, and driven about in every direction while seeking to escape the darts which were showered upon them; and so the city being burnt and numbers of the citizens slain, who, as is usual in time of peace, were strolling about carelessly, and all the places in the neighbourhood being burnt and laid waste, the enemy loaded with booty returned in safety to their own country after having burnt Mareades alive, who had wickedly guided them to the destruction of his fellow-citizens. This event took place in the time of Gallienus.

But Julian, while remaining at Circesium to give time for his army and all its followers to cross the bridge of boats over the Aboras, received letters with bad news from Sallust, the prefect of Gaul, entreating him to suspend his expedition against the Parthians, and imploring him not in such an unseasonable manner to rush on irrevocable destruction before propitiating the gods.

But Julian disregarded his prudent adviser, and advanced boldly; since

no human power or virtue can ever avail to prevent events prescribed by the order of the Fates. And immediately, having crossed the river, he ordered the bridge to be taken to pieces, that the soldiers might have no hope of safety by quitting their ranks and returning.

Here also a bad omen was seen; the corpse of an officer who had been put to death by the executioner, whom Sallust, the prefect, while in this country had condemned to death, because, after having promised to deliver an additional supply of provisions by an appointed day, he disappointed him through some hindrance. But after the unhappy man had been executed, the very next day there arrived, as he had promised, another fleet heavily laden with corn.

Leaving Circesium, we came to Zaitha, the name of the place meaning an olive-tree. Here we saw the tomb of the emperor Gordian, which is visible a long way off, whose actions from his earliest youth, and whose most fortunate campaigns and treacherous murder we related at the proper time,³⁰ and when, in accordance with his innate piety he had offered due honours to this deified emperor, and was on his way to Dura, a town now deserted, he stood without moving on beholding a large body of soldiers.

And as he was doubting what their object was, they brought him an enormous lion which had attacked their ranks and had been slain by their javelins. He, elated at this circumstance, which he looked on as an omen of success in his enterprise, advanced with increased exultation; but so uncertain is fortune, the event was quite contrary to his expectation. The death of a king was certainly foreshown, but who was the king was uncertain.

For we often read of ambiguous oracles, never understood till the results interpreted them; as, for instance, the Delphic prophecy, which foretold that after crossing the Halys, Cræsus would overthrow a mighty kingdom; and another, which by hints pointed out the sea to the Athenians as the field of combat against the Medes; and another,

later than these, but not less ambiguous:—

“O son of Æacus,
I say that you the Romans can subdue.”

The Etrurian soothsayers who accompanied him, being men skilful in portents, had often warned him against this campaign, but got no credit; so now they produced their books of such signs, and showed that this was an omen of a forbidding character, and unfavourable to a prince who should invade the country of another sovereign however justly.

But he spurned the opposition of philosophers, whose authority he ought to have revered, though at times they were mistaken, and though they were sometimes obstinate in cases which they did not thoroughly understand. In truth, they brought forward as a plausible argument to secure credit to their knowledge, that in time past, when Cæsar Maximianus was about to fight Narses, king of the Persians, a lion and a huge boar which had been slain were at the same time brought to him, and after subduing that nation he returned in safety; forgetting that the destruction which was now portended was to him who invaded the dominions of another, and that Narses had given the offence by being the first to make an inroad into Armenia, a country under the Roman jurisdiction.

On the next day, which was the 7th of April, as the sun was setting, suddenly the air became darkened, and all light wholly disappeared, and after repeated claps of thunder and flashes of lightning, a soldier named Jovianus was struck by the lightning and killed, with two horses which he was leading back from the river to which he had taken them to drink.

When this was seen, the interpreters of such things were sent for and questioned, and they with increased boldness affirmed that this event forbade the campaign, demonstrating it to be a monitory lightning

(for this term is applied to signs which advise or discourage any line of action). And this, as they said, was to be the more guarded against, because it had killed a soldier of rank, with war-horses; and the books which explain lightnings pronounce that places struck in this manner should not be trodden on, nor even looked upon.

On the other hand, the philosophers declared that the brilliancy of this sacred fire thus suddenly presented to the eye had no special meaning, but was merely the course of a fiercer breath descending by some singular power from the sky to the lower parts of the world; and that if any foreknowledge were to be derived from such a circumstance, it was rather an increase of renown which was portended to the emperor now engaged in a glorious enterprise; since it is notorious that flame, if it meet with no obstacle, does of its own nature fly upwards.

The bridge then, as has been narrated, having been finished, and all the troops having crossed it, the emperor thought it the most important of all things to address his soldiers who were advancing resolutely, in full reliance on their leader and on themselves. Accordingly, a signal having been given by the trumpets, the centurions, cohorts, and maniples assembled, and he, standing on a mound of earth, and surrounded by a ring of officers of high rank, spoke thus with a cheerful face, being favourably heard with the unanimous good will of all present.

“Seeing, my brave soldiers, that you are full of great vigour and alacrity, I have determined to address you, to prove to you by several arguments that the Romans are not, as spiteful grumblers assert, now for the first time invading the kingdom of Persia. For, to say nothing of Lucullus or of Pompey, who, having forced his way through the Albani and Massagetæ, whom we call Alani, penetrated through this nation also so as to reach the Caspian lake; we know that Ventidius, the lieutenant of Antony, gained many victories in these regions.

“But to leave those ancient times, I will enumerate other exploits of more recent memory. Trajan, and Verus, and Severus have all gained victories and trophies in this country; and the younger Gordian, whose monument we have just been honouring, would have reaped similar glory, having conquered and routed the king of Persia at Resaina, if he had not been wickedly murdered in this very place by the faction of Philip, the prefect of the prætorium, with the assistance of a few other impious men.

“But his shade was not long left to wander unavenged, since, as if Justice herself had laboured in the cause, all those who conspired against him have been put to death with torture. Those men, indeed, ambition prompted to the atrocious deed; but we are exhorted by the miserable fate of cities recently taken, by the unavenged shades of our slaughtered armies, by the heaviness of our losses, and the loss of many camps and fortresses, to the enterprise which we have undertaken. All men uniting in their wishes that we may remedy past evils, and having secured the honour and safety of the republic on this side, may leave posterity reason to speak nobly of us.

“By the assistance of the eternal deity, I, your emperor, will be always among you as a leader and a comrade, relying, as I well believe, on favourable omens. But if variable fortune shall defeat me in battle, it will still be sufficient for me to have devoted myself for the welfare of the Roman world, like ancient Curtii and Mucii, and the illustrious family of the Decii. We have to abolish a most pernicious nation, on whose swords the blood of our kindred is not yet dry.

“Our ancestors have before now devoted ages to cause the destruction of enemies who harassed them. Carthage was overthrown after a long and distressing war; and its great conqueror feared to let it survive his victory. After a long and often disastrous siege, Scipio utterly destroyed Numantia. Rome destroyed Fidenæ, that it might not grow

up as a rival to the empire; and so entirely laid waste Falisci and Veii, that it is not easy to attach so much faith to ancient records as to believe that those cities ever were powerful.

“These transactions I have related to you as one acquainted with ancient history. It follows that all should lay aside, as unworthy of him, the love of plunder, which has often been the insidious bane of the Roman soldier, and that every one should keep steadily to his own troop and his own standard, when the necessity for fighting arises, knowing that should he loiter anywhere he will be hamstrung and left to his fate. I fear nothing of our over-crafty enemies but their tricks and perfidy.

“Finally, I promise you all, that when our affairs have met with success, without entrenching myself behind my imperial prerogative, so as to consider all my own decisions and opinions irrefragably just and reasonable because of my authority, I will give, if required, a full explanation of all that I have done, that you may be able to judge whether it has been wise or not.

“Therefore, I entreat you, now summon all your courage, in full reliance on your good fortune, sure at all events that I will share all dangers equally with you, and believing that victory ever accompanies justice.”

When he had ended his harangue with this pleasant peroration, the soldiers, exulting in the glory of their chief, and elated with the hopes of success, lifted up their shields on high, and cried out that they should think nothing dangerous nor difficult under an emperor who imposed more toil on himself than on his common soldiers.

And above all the rest his Gallic troops showed this feeling with triumphant shouts, remembering how often while he as their leader

was marshalling their ranks, they had seen some nations defeated and others compelled to sue for mercy and peace.

23.6

Our history here leads us to a digression explanatory of the situation of Persia. It has been already dilated upon by those who describe different nations, though but few of them have given a correct account; if my story should be a little longer, it will contribute to a better knowledge of the country. For whoever affects excessive conciseness while speaking of things but little known, does not so much consider how to explain matters intelligibly, as how much he may omit.

This kingdom, formerly but small, and one which had been known by several names, from causes which we have often mentioned, after the death of Alexander at Babylon received the name of Parthia from Arsaces, a youth of obscure birth, who in his early youth was a leader of banditti, but who gradually improved his condition, and rose to high renown from his illustrious actions.

After many splendid and gallant exploits he defeated Nicator Seleucus, the successor of the above-named Alexander, who had received the surname of Nicator³¹ from his repeated victories; and having expelled the Macedonian garrisons, he lived for the remainder of his life in peace, like a merciful ruler of willing subjects.

At last, after all the neighbouring districts had been brought under his power, either by force or by fear, or by his reputation for justice, he died a peaceful death in middle age, after he had filled all Persia with flourishing cities and well-fortified camps and fortresses, and had made it an object of terror to its neighbours whom previously it used to fear. And he was the first of these kings who had by the unanimous consent of all his countrymen of all ranks, in accordance with the tenets of their religion, had his memory consecrated as one now

placed among the stars.

And it is from his era that the arrogant sovereigns of that nation have allowed themselves to be entitled brothers of the sun and moon. And, as the title of Augustus is sought for and desired by our emperors, so now the additional dignities first earned by the fortunate auspices of Arsaces are claimed by all the Parthian kings, who were formerly abject and inconsiderable.

So that they still worship and honour Arsaces as a god, and down to our day have given him so much honour that, in conferring the royal power, one of his race has been always preferred to any one else. And also in intestine quarrels, such as are common in that nation, every one avoids as sacrilege wounding any descendant of Arsaces, whether in arms or living as a private individual.

It is well known that this nation, after subduing many others by force, extended its dominions as far as the Propontis and Thrace; but that it subsequently became diminished and suffered great disasters, owing to the arrogance of its ambitious monarchs, who carried their licentious inroads into distant countries. First, in consequence of the conduct of Cyrus, who crossed the Bosphorus with a fabulous host, but was wholly destroyed by Tomyris, queen of the Scythians, who thus terribly avenged her sons.

After him, when Darius, and subsequently Xerxes, changed the use³² of the elements and invaded Greece, they had nearly all their forces destroyed by land and sea, and could scarcely escape in safety themselves. I say nothing of the wars of Alexander, and of his leaving the sovereignty over the whole nation by will to his successor.

Then, a long time after these events, while our republic was under consuls, and was afterwards brought under the power of the Cæsars,

that nation was constantly warring with us, sometimes with equal fortune; being at one time defeated, and at another victorious.

Now I will in a few words describe the situation and position of the country as well as I can. It is a region of great extent both in length and breadth, entirely surrounding on all sides the famous Persian gulf with its many islands. The mouth of this gulf is so narrow that from Harmozon, the promontory of Carmania, the opposite headland, which the natives call Maces, is easily seen.

When the strait between these capes is passed, and the water becomes wider, they are navigable up to the city Teredon, where, after having suffered a great diminution of its waters, the Euphrates falls into the sea. The entire gulf, if measured round the shore, is 20,000 furlongs, being of a circular form as if turned in a lathe. And all round its coasts are towns and villages in great numbers; and the vessels which navigate its waters are likewise very numerous.

Having then passed through this strait we come to the gulf of Armenia on the east, the gulf of Cantichus on the south, and on the west to a third, which they call Chalites.³³ These gulfs, after washing many islands, of which but few are known, join the great Indian Ocean, which is the first to receive the glowing rising of the sun, and is itself of an excessive heat.

As the pens of geographers delineate it, the whole of the region which we have been speaking of is thus divided. From the north to the Caspian gates it borders on the Cadusii, and on many Scythian tribes, and on the Arimaspi, a fierce one-eyed people. On the west it is bounded by the Armenians, and Mount Niphates, the Asiatic Albani, the Red Sea, and the Scenite Arabs, whom later times have called the Saracens. To the south it looks towards Mesopotamia, on the east it reaches to the Ganges, which falls into the Southern Ocean after intersecting the countries of the Indians.

The principal districts of Persia, under command of the Vitaxæ, that is to say of the generals of the cavalry, and of the king's Satraps, for the many inferior provinces it would be difficult and superfluous to enumerate, are Assyria, Susiana, Media, Persia, Parthia, the greater Carmania, Hyrcania, Margiana, the Bactrians, the Sogdians, the Sacæ, Scythia beyond Mount Emodes, Serica, Aria, the Paropanisadæ, Drangiana, Arachosia, and Gedrosia.

Superior to all the rest is that which is the nearest to us, Assyria, both in renown, and extent, and its varied riches and fertility. It was formerly divided among several peoples and tribes, but is now known under one common name as Assyria. It is in that country that amid its abundance of fruits and ordinary crops, there is a lake named Sosingites, near which bitumen is found. In this lake the Tigris is for a while absorbed, flowing beneath its bed, till, at a great distance, it emerges again.

Here also is produced naphtha, an article of a pitchy and glutinous character, resembling bitumen: on which if ever so small a bird perches, it finds its flight impeded and speedily dies. It is a species of liquid, and when once it has taken fire, human ingenuity can find no means of extinguishing it except that of heaping dust on it.

In the same district is seen an opening in the earth from which a deadly vapour arises, which by its foul odour destroys any animal which comes near it. The evil arises from a deep well, and if that odour spread beyond its wide mouth before it rose higher, it would make all the country around uninhabitable by its fetid effect.

There used, as some affirm, to be a similar chasm near Hierapolis in Phrygia; from which a noxious vapour rose in like manner with a fetid smell which never ceased, and destroyed everything within the reach

of its influence, except eunuchs; to what this was owing we leave natural philosophers to determine.

Also near the temple of the Asbamæan Jupiter, in Cappadocia (in which district that eminent philosopher Apollonius is said to have been born near the town of Tyana), a spring rises from a marsh, which, however swollen with its rising floods, never overflows its banks.

Within this circuit is Adiabene, which was formerly called Assyria, but by long custom has received its present name from the circumstance, that being placed between the two navigable rivers the Ona and the Tigris, it can never be approached by fording; for in Greek we use διαβαίνειν for to “cross:” this was the belief of the ancients.

But we say that in this country there are two rivers which never fail, which we ourselves have crossed, the Diabas, and the Adiabas: both having bridges of boats over them; and that Adiabene has received its name from this last, as Homer tells us Egypt received its name from its great river, and India also, and Commagena which was formerly called Euphratensis, as did the country now called Spain, which was formerly called Iberia from the Iberus.³⁴ And the great Spanish province of Bœtica from the river Bœtis.³⁵

In this district of Adiabene is the city of Nineveh, named after Ninus, a most mighty sovereign of former times, and the husband of Semiramis, who was formerly queen of Persia, and also the cities of Ecbatana, Arbela, and Gaugamela, where Alexander, after several other battles, gave the crowning defeat to Darius.

In Assyria there are many cities, among which one of the most eminent is Apamia, surnamed Mesene, and Teredon, and Apollonia, and Vologesia, and many others of equal importance. But the most splendid and celebrated are these three, Babylon, the walls of which

Semiramis cemented with pitch; for its citadel indeed was founded by that most eminent monarch Belus. And Ctesiphon which Vardanes built long ago, and which subsequently King Pacorus enlarged by an immigration of many citizens, fortifying it also with walls, and giving it a name, made it the most splendid place in Persia—next to it Seleucia, the splendid work of Seleucus Nicator.

This, however, as we have already related, was stormed by the generals of Verus Cæsar, who carried the image of the Cumæan Apollo to Rome, and placed it in the temple of the Palatine Apollo, where it was formally dedicated to that god by his priests. But it is said that after this statue was carried off, and the city was burnt, the soldiers, searching the temple, found a narrow hole, and when this was opened in the hope of finding something of value in it, from some deep gulf which the secret science of the Chaldæans had closed up, issued a pestilence, loaded with the force of incurable disease, which in the time of Verus and Marcus Antoninus polluted the whole world from the borders of Persia to the Rhine and Gaul with contagion and death.

Near to this is the region of the Chaldæans, the nurse of the ancient philosophy, as the Chaldæans themselves affirm; and where the art of true divination has most especially been conspicuous. This district is watered by the noble rivers already mentioned, by the Marses, by the Royal river, and by that best of all, the Euphrates, which divides into three branches, and is navigable in them all, having many islands, and irrigating the fields around in a manner superior to any industry of cultivators, making them fit both for the plough and for the production of trees.

Next to these come the Susians, in whose province there are not many towns; though Susa itself is celebrated as a city which has often been the home of kings, and Arsiana, and Sele, and Aracha. The other towns in this district are unimportant and obscure. Many rivers flow

through this region, the chief of which are the Oroates, the Harax, and the Meseus, passing through the narrow sandy plain which separates the Caspian from the Red Sea, and then fall into the sea.

On the left, Media is bounded by the Hyrcanian Sea;³⁶ a country which, before the reign of the elder Cyrus and the rise of Persia, we read was the supreme mistress of all Asia after the Assyrians had been conquered; the greater part of whose cantons had their name changed into one general appellation of Acrapatena, and fell by right of war under the power of the Medes.

They are a warlike nation, and the most formidable of all the eastern tribes, next to the Parthians, by whom alone they are conquered. The region which they inhabit is in the form of a square. All the inhabitants of these districts extend over great breadth of country, reaching to the foot of a lofty chain of mountains known by the names of Zagrus, Orontes, and Jasonium.

There is another very lofty mountain called Coronus; and those who dwell on its western side abound in corn land and vineyards, being blessed with a most fertile soil, and one enriched by rivers and fountains.

They have also green meadows, and breeds of noble horses, on which (as ancient writers relate, and as we ourselves have witnessed) their men when going to battle mount with great exultation. They call them Nesæi.³⁷

They have also as many cities as Media, and villages as strongly built as towns in other countries, inhabited by large bodies of citizens. In short, it is the richest quarter of the kingdom.

In these districts the lands of the Magi are fertile; and it may be as

well to give a short account of that sect and their studies, since we have occasion to mention their name. Plato, that most learned deliverer of wise opinions, teaches us that Magiæ is by a mystic name Machagistia,³⁸ that is to say, the purest worship of divine beings; of which knowledge in olden times the Bactrian Zoroaster derived much from the secret rites of the Chaldæans; and after him Hystaspes, a very wise monarch, the father of Darius.

Who while boldly penetrating into the remoter districts of upper India, came to a certain woody retreat, of which with its tranquil silence the Brahmans, men of sublime genius, were the possessors. From their teaching he learnt the principles of the motion of the world and of the stars, and the pure rites of sacrifice, as far as he could; and of what he learnt he infused some portion into the minds of the Magi, which they have handed down by tradition to later ages, each instructing his own children, and adding to it their own system of divination.

From his time, through many ages to the present era, a number of priests of one and the same race has arisen, dedicated to the worship of the gods. And they say, if it can be believed, that they even keep alive in everlasting fires a flame which descended from heaven among them; a small portion of which, as a favourable omen, used to be borne before the kings of Asia.

Of this class the number among the ancients was small, and the Persian sovereigns employed their ministry in the solemn performance of divine sacrifices, and it was profanation to approach the altars, or to touch a victim before a Magus with solemn prayers had poured over it a preliminary libation. But becoming gradually more numerous they arrived at the dignity and reputation of a substantial race; inhabiting towns protected by no fortifications, allowed to live by their own laws, and honoured from the regard borne to their religion.

It was of this race of Magi that the ancient volumes relate that after the death of Cambyses, seven men seized on the kingdom of Persia, who were put down by Darius, after he obtained the kingdom through the neighing of his horse.

In this district a medical oil is prepared with which if an arrow be smeared, and it be shot gently from a loose bow (for it loses its effect in a rapid flight), wherever it sticks it burns steadily, and if any one attempts to quench it with water it only burns more fiercely, nor can it be put out by any means except by throwing dust on it.

It is made in this manner. Those skilful in such arts mix common oil with a certain herb, keep it a long time, and when the mixture is completed they thicken it with a material derived from some natural source, like a thicker oil. The material being a liquor produced in Persia, and called, as I have already said, naphtha in their native language.

In this district there are many cities, the most celebrated of which are Zombis, Patigran, and Gazaca; but the richest and most strongly fortified are Heraclia, Arsacia, Europos, Cyropolis, and Ecbatana, all of which are situated in the Syromedian region at the foot of Mount Jasonius.

There are many rivers in this country, the principal of which are the Choaspes, the Gyndes, the Amardus, the Charinda, the Cambyses, and the Cyrus, to which, on account of its size and beauty, the elder Cyrus, that amiable king, gave its present name, abolishing that which it used to bear, when he was proceeding on his expedition against Scythia; his reason being that it was strong, as he accounted himself to be, and that making its way with great violence, as he proposed to do, it falls into the Caspian Sea.

Beyond this frontier ancient Persia, stretching towards the south, extends as far as the sea, and is very thickly peopled, being also rich in grain and date-trees, and well supplied with excellent water. Many of its rivers fall into the gulf already mentioned, the chief of which are the Vatrachites, the Rogomanis, the Brisoana, and the Bagrada.

Its inland towns are very considerable; it is uncertain why they built nothing remarkable on the sea-coast. Those of most note are Persepolis, Ardea, Obroatis, and Tragonice. The only islands visible from that coast are these:—Tabiana, Fara, and Alexandria.

On the borders of this ancient Persia towards the north is Parthia, a country subject to snow and frost; the principal river which intersects that region is the Choatres; the chief towns are Genonia, Mœsia, Charax, Apamia, Artacana, and Hecatompylos; from its frontier along the shores of the Caspian Sea to the Caspian gates is a distance of 1040 furlongs.

The inhabitants of all the countries in that district are fierce and warlike, and they are so fond of war and battle that he who is slain in battle is accounted the happiest of men, while those who die a natural death are reproached as degenerate and cowardly.

These tribes are bounded on the east and the south by Arabia Felix, so called because it abounds equally in corn, cattle, vines, and every kind of spice: a great portion of that country reaches on the right down to the Red Sea, and on its left extends to the Persian Gulf; so that the inhabitants reap the benefits of both.

There are in that country many havens and secure harbours, and well-frequented marts; many spacious and splendid abodes for their kings, and wholesome springs of water naturally warm, and a great number of rivers and streams; the climate is temperate and healthy, so that if

one considers the matter rightly, the natives seem to want nothing to perfect their happiness.

There are in it very many cities both on the coast and inland; many fertile hills and valleys. The chief cities are Geapolis, Nascon, Baraba, Nagara, Mephra, Taphra, and Dioscurias. And in both seas it possesses several islands lying off the coast, which it is not worth while to enumerate. But the most important of them is Turgana, in which there is said to be a magnificent temple of Serapis.

Beyond the frontier of this nation is the greater Carmania, lying on high ground, and stretching to the Indian Sea; fertile in fruit and timber trees, but neither so productive nor so extensive as Arabia. With rivers it is as well supplied, and in grass and herbage scarcely inferior.

The most important rivers are the Sagareus, the Saganis, and the Hydriacus. The cities are not numerous, but admirably supplied with all the necessities and luxuries of life; the most celebrated of them all are Carmania the metropolis, Portospana, Alexandria, and Hermopolis.

Proceeding inland, we next come to the Hyrcanians, who live on the coast of the sea of that name. Here the land is so poor that it kills the seed crops, so that agriculture is not much attended to; but they live by hunting, taking wonderful pleasure in every kind of sport. Thousands of tigers are found among them, and all kinds of wild beasts; we have already mentioned the various devices by which they are caught.

Not indeed that they are ignorant of the art of ploughing, and some districts where the soil is fertile are regularly sown; nor are trees wanting to plant in suitable spots: many of the people too support

themselves by commerce.

In this province are two rivers of universal celebrity the Oxus and the Maxera, which tigers sometimes, when urged by hunger, cross by swimming, and unexpectedly ravage the neighbouring districts. It has also besides other smaller towns some strong cities, two on the sea-shore named Socunda and Saramanna; and some inland, such as Azmorna and Sole, and Hyrcana, of higher reputation than either.

Opposite to this tribe, towards the north, live the Abii, a very devout nation, accustomed to trample under foot all worldly things, and whom, as Homer somewhat fabulously says, Jupiter keeps in view from Mount Ida.

The regions next to the Hyrcaneans are possessed by the Margiani, whose district is almost wholly surrounded by high hills, by which they are separated from the sea; and although the greater part of this province is deserted from want of water, still there are some towns in it; the best known of which are Jasonium, Antiochia, and Nisæa.

Next to them are the Bactrians, a nation formerly very warlike and powerful, and always hostile to the Persians, till they drew all the nations around under their dominion, and united them under their own name; and in old time the Bactrian kings were formidable even to Arsaces.

The greater part of their country, like that of the Margiani, is situated far from the sea-shore, but its soil is fertile, and the cattle which feed both on the plains and on the mountains in that district are very large and powerful; of this the camels which Mithridates brought from thence, and which were first seen by the Romans at the siege of Cyzicus, are a proof.

Many tribes are subject to the Bactrians, the most considerable of

which are the Tochari: their country is like Italy in the number of its rivers, some of which are the Artemis and the Zariaspes, which were formerly joined, and the Ochus and Orchomanes, which also unite and afterwards fall into the Oxus, and increase that large river with their streams.

There are also cities in that country, many of them on the border of different rivers, the best of which are Chatra, Charte, Alicodra, Astacea, Menapila, and Bactra itself, which has given its name both to the region and to the people.

At the foot of the mountains lie a people called the Sogdians, in whose country are two rivers navigable for large vessels, the Araxates and the Dymas, which, flowing among the hills and through the valleys into the open plain, form the extensive Oxian marsh. In this district the most celebrated towns are Alexandria, Cyreschata, and Drepsa the metropolis.

Bordering on these are the Sacæ, a fierce nation dwelling in a gloomy-looking district, only fit for cattle, and on that account destitute of cities. They are at the foot of Mount Ascanimia and Mount Comedus, along the bottom of which, and by a town called the Stone Tower, is the long road much frequented by merchants which leads to China.

Around the glens at the bottom of the Imauian and Tapurian mountains, and within the Persian frontier, is a tribe of Scythians, bordering on the Asiatic Sarmatians, and touching the furthest side of the Allemanni, who, like dwellers in a secluded spot, and made for solitude, are scattered over the regions at long distances from one another, and live on hard and poor food.

And various tribes inhabit these districts, which, as I am hastening to other topics, I think superfluous to enumerate. But this is worth

knowing, that among these tribes, which are almost unapproachable on account of their excessive ferocity, there are some races of gentle and devout men, as the Jaxartæ and the Galactophagi, whom Homer mentions in his verses:—

Γλακτοφάγων, Ἀβίων τε, δικαιοτάτων ἀνθρώπων.³⁹

Among the many rivers which flow through this land, either uniting at last with larger streams, or proceeding straight to the sea, the most celebrated are the Rœmnus, the Jaxartes, and the Talicus. There are but three cities there of any note, Aspabota, Chauriana, and Saga.

Beyond the districts of the two Scythias, on the eastern side, is a ring of mountains which surround Serica, a country considerable both for its extent and the fertility of its soil. This tribe on their western side border on the Scythians, on the north and the east they look towards snowy deserts; towards the south they extend as far as India and the Ganges. The best known of its mountains are Annib, Nazavicium, Asmira, Emodon, and Opurocarra.

The plain, which descends very suddenly from the hills, and is of considerable extent, is watered by two famous rivers, the Æcharde and the Bautis, which is less rapid than the other. The character too of the different districts is very varied. One is extensive and level, the other is on a gentle slope, and therefore very fertile in corn, and cattle, and trees.

The most fertile part of the country is inhabited by various tribes, of which the Alitrophagi, the Annibi, the Sisgyes, and the Chardi lie to the north, exposed to the frost; towards the east are the Rabannæ, the Asmiræ, and the Essedones, the most powerful of all, who are joined on the west by the Athagoræ, and the Aspacaræ; and on the south by the Betæ, who live on the highest slopes of the mountains. Though they have not many cities they have some of great size and wealth; the

most beautiful and renowned of which are Asmira, Essedon, Asparata, and Sera.

The Seres themselves live quietly, always avoiding arms and battles; and as ease is pleasant to moderate and quiet men, they give trouble to none of their neighbours. Their climate is agreeable and healthy; the sky serene, the breezes gentle and delicious. They have numbers of shining groves, the trees of which through continued watering produce a crop like the fleece of a sheep, which the natives make into a delicate wool, and spin into a kind of fine cloth, formerly confined to the use of the nobles, but now procurable by the lowest of the people without distinction.

The natives themselves are the most frugal of men, cultivating a peaceful life, and shunning the society of other men. And when strangers cross their river to buy their cloth, or any other of their merchandise, they interchange no conversation, but settle the price of the articles wanted by nods and signs; and they are so moderate that, while selling their own produce, they never buy any foreign wares.

Beyond the Seres, towards the north, live the Ariani; their land is intersected by a navigable river called the Arias, which forms a huge lake known by the same name. This district of Asia is full of towns, the most illustrious of which are Bitaxa, Sarmatina, Sotera, Nisibis, and Alexandria, from which last down the river to the Caspian Sea is a distance of fifteen hundred furlongs.

Close to their border, living on the slopes of the mountains, are the Paropanisatæ, looking on the east towards India, and on the west towards Mount Caucasus. Their principal river is Ortogordomaris, which rises in Bactria. They have some cities, the principal being Agazaca, Naulibus, and Ortopana, from which if you coast along the shore to the borders of Media which are nearest to the Caspian gates, the distance is two thousand two hundred furlongs.

Next to them, among the hills, are the Drangiani, whose chief river is the Arabis, so called because it rises in Arabia; and their two principal towns are Prophthasia and Aniaspe, both wealthy and well known.

Next to them is Arachosia, which on the right extends as far as India. It is abundantly watered by a river much smaller than the Indus, that greatest of rivers, which gives its name to the surrounding regions; in fact their river flows out of the Indus, and passes on till it forms the marsh known as Arachotoscrene. Its leading cities are Alexandria, Arbaca, and Choaspa.

In the most inland districts of Persia is Gedrosia; which on its right touches the frontier of India, and is fertilized by several rivers, of which the greatest is the Artabius. There the Barbitani mountains end, and from their lowest parts rise several rivers which fall into the Indus, losing their own names in the greatness of that superior stream. They have several islands, and their principal cities are Sedratyra and Gynæcon.

We need not detail minutely every portion of the sea-coast on the extremity of Persia, as it would lead us into too long a digression. It will suffice to say that the sea which stretches from the Caspian mountains along the northern side to the straits above mentioned, is nine thousand furlongs in extent; the southern frontier, from the mouth of the Nile to the beginning of Carmania, is fourteen thousand furlongs.

In these varied districts of different languages, the races of men are as different as the places. But to describe their persons and customs in general terms, they are nearly all slight in figure, swarthy or rather of a pale livid complexion; fierce-looking, with goat-like eyes, and eyebrows arched in a semicircle and joined, with handsome beards,

and long hair. They at all times, even at banquets and festivals, wear swords; a custom which that excellent author Thucydides tells us the Athenians were the first of the Greeks to lay aside.

They are generally amazingly addicted to amatory pleasures; each man scarcely contenting himself with a multitude of concubines: from unnatural vices they are free. Each man marries many or few wives, as he can afford them, so that natural affection is lost among them because of the numerous objects of their licence. They are frugal in their banquets, avoiding immoderate indulgence and especially hard drinking, as they would the plague.

Nor, except at the king's table, have they any settled time for dining, but each man's stomach serves as his sun-dial; nor does any one eat after he is satisfied.

They are marvellously temperate and cautious, so that when sometimes marching among the gardens and vineyards of enemies, they neither desire nor touch anything, from fear of poison or witchcraft.

They perform all the secret functions of nature with the most scrupulous secrecy and modesty.

But they are so loose in their gait, and move with such correct ease and freedom, that you would think them effeminate, though they are most vigorous warriors; still they are rather crafty than bold, and are most formidable at a distance. They abound in empty words, and speak wildly and fiercely; they talk big, are proud, unmanageable, and threatening alike in prosperity and adversity; they are cunning, arrogant, and cruel, exercising the power of life and death over their slaves, and all low-born plebeians. They flay men alive, both piecemeal, and by stripping off the whole skin. No servant while waiting on them, or standing at their table, may gape, speak, or spit,

so that their mouths are completely shut.

Their laws are remarkably severe: the most stringent are against ingratitude and against deserters; some too are abominable, inasmuch as for the crime of one man they condemn all his relations.

But as those only are appointed judges who are men of proved experience and uprightness, and of such wisdom as to stand in no need of advice, they laugh at our custom of sometimes appointing men of eloquence and skill in public jurisprudence as guides to ignorant judges. The story that one judge was compelled to sit on the skin of another, who had been condemned for his injustice, is either an ancient fable, or else, if ever there was such a custom, it has become obsolete.

In military system and discipline, by continual exercises in the business of the camp, and the adoption of the various manœuvres which they have learnt from us, they have become formidable even to the greatest armies; they trust chiefly to the valour of their cavalry, in which all their nobles and rich men serve. Their infantry are armed like mirmillos,⁴⁰ and are as obedient as grooms; and they always follow the cavalry like a band condemned to everlasting slavery, never receiving either pay or gratuity. This nation, besides those whom it has permanently subdued, has also compelled many others to go under the yoke; so brave is it and so skilful in all warlike exercises, that it would be invincible were it not continually weakened by civil and by foreign wars.

Most of them wear garments brilliant with various colours, so completely enveloping the body that even though they leave the bosoms and sides of their robes open so as to flutter in the wind, still from their shoes to their head no part of their person is exposed. After conquering Crœsus and subduing Lydia, they learnt also to wear

golden armlets and necklaces, and jewels, especially pearls, of which they had great quantities.

It only remains for me to say a few words about the origin of this stone. Among the Indians and Persians pearls are found in strong white sea-shells, being created at a regular time by the admixture of dew. For the shells, desiring as it were a kind of copulation, open so as to receive moisture from the nocturnal aspersion. Then becoming big they produce little pearls in triplets, or pairs, or unions, which are so called because the shells when scaled often produce only single pearls, which then are larger.

And a proof that this produce arises from and is nourished by some aërial derivation rather than by any fattening power in the sea, is that the drops of morning dew when infused into them make the stones bright and round; while the evening dew makes them crooked and red, and sometimes spotted. They become either small or large in proportion to the quality of the moisture which they imbibe, and other circumstances. When they are shaken, as is often the case by thunder, the shells either become empty, or produce only weak pearls, or such as never come to maturity.

Fishing for them is difficult and dangerous, and this circumstance increases their value; because, on account of the snares of the fishermen they are said to avoid the shores most frequented by them, and hide around rocks which are difficult of access and the hiding places of sharks.

We are not ignorant that the same species of jewel is also produced and collected in the remote parts of the British sea; though of an inferior value.

Book XXIV

24.1

A.D. 363.

After having ascertained the alacrity of his army, which with ardour and unanimity declared with their customary shout that their fortunate emperor was invincible, Julian thinking it well to put an early end to his enterprise, after a quiet night ordered the trumpets to sound a march; and everything being prepared which the arduous difficulties of the war required, he at daybreak entered the Assyrian territory in high spirits, riding in front of his ranks, and exciting all to discharge the duties of brave men in emulation of his own courage.

And as a leader of experience and skill, fearing lest his ignorance of the country might lead to his being surprised by secret ambuscades, he began his march in line of battle. He ordered fifteen hundred skirmishers to precede him a short distance, who were to march slowly looking out on each side and also in front, to prevent any sudden attack. The infantry in the centre were under his own command, they being the flower and chief strength of the whole army, while on the right were some legions under Nevitta, who was ordered to march along the banks of the Euphrates. The left wing with the cavalry he gave to Arinthæus and Hormisdas, with orders to lead them in close order through the level and easy country of the plain. The rear was brought up by Dagalaiphus and Victor, and the last of all was Secundinus, Duke of Osdruenta.

Then in order to alarm the enemy by the idea of his superior numbers, should they attack him anywhere, or perceive him from a distance, he opened his ranks so as to spread both horses and men over a larger space, in such a way that the rear was distant from the van nearly ten miles; a manœuvre of great skill which Pyrrhus of Epirus is said to have often put in practice, extending his camp, or his lines, and

sometimes on the other hand compressing them all, so as to present an appearance of greater or lesser numbers than the reality, according to the circumstances of the moment.

The baggage, the sutlers, all the camp-followers, and every kind of equipment, he placed between the two flanks of troops as they marched, so as not to leave them unprotected and liable to be carried off by any sudden attack, as has often happened. The fleet, although the river was exceedingly winding, was not allowed either to fall behind or to advance before the army.

After two days' march we came near a deserted town called Dura, on the bank of the river, where many herds of deer were found, some of which were slain by arrows, and others knocked down with the heavy oars, so that soldiers and sailors all had plenty of food; though the greater part of the animals, being used to swimming, plunged into the rapid stream and could not be stopped till they had reached their well known haunts.

Then after an easy march of four days, as evening came on, he embarked a thousand light-armed troops on board his boats, and sent the Count Lucillianus to storm the fortress of Anatha, which, like many other forts in that country, is surrounded by the waters of the Euphrates; Lucillianus having, as he was ordered, placed his ships in suitable places, besieged the island, a cloudy night favouring a secret assault.

But as soon as it became light, one of the garrison going out to get water, saw the enemy, and immediately raised an outcry, which roused the awakened garrison to arm in their defence. And presently, from a high watch-tower, the emperor examined the situation of the fort, and came up with all speed escorted by two vessels, and followed by a considerable squadron laden with engines for the siege.

And as he approached the walls, and considered that the contest could not be carried on without great risk, he tried both by conciliatory and threatening language to induce the garrison to surrender; and they, having invited Hormisdas to a conference, were won over by his promises and oaths to rely on the mercy of the Romans.

At last, driving before them a crowned ox, which among them is a sign of peace, they descended from the fort as suppliants; the fort was burnt, and Pusæus, its commander, who was afterwards Duke of Egypt, was appointed to the rank of tribune. The rest of the garrison with their families and property were conducted with all kindness to the Syrian city of Chalcis.

Among them was found a certain soldier, who formerly, when Maximian invaded Persia, had been left in this district as an invalid, though a very young man, but who was now bent with age, and according to his own account had several wives, as is the custom of that country, and a numerous offspring. He now full of joy, professing to have been a principal cause of the surrender, was led to our camp, calling many of his comrades to witness that he had long foreseen and often foretold that, though nearly a hundred years' old, he should be buried in Roman ground. After this event, the Saracens brought in some skirmishers of the enemy whom they had taken; these were received with joy by the emperor, the Saracens rewarded, and sent back to achieve similar exploits.

The next day another disaster took place; a whirlwind arose, and made havoc in many places, throwing down many buildings, tearing in pieces the tents, and throwing the soldiers on their backs or on their faces, the violence of the wind overpowering their steadiness of foot. And the same day another equally perilous occurrence took place. For the river suddenly overflowed its banks, and some of the ships laden with provisions were wrecked, the piers and dams which had been constructed of stone to check and repress the waters being

swept away; and whether that was done by treachery or through the weight of the waters could not be known.

After having stormed and burnt the chief city, and sent away the prisoners, the army with increased confidence raised triumphant shouts in honour of the emperor, thinking that the gods were evidently making him the object of their peculiar care.

And because in these unknown districts they were forced to be on unusual guard against hidden dangers, the troops especially feared the craft and exceeding deceitfulness of the enemy; and therefore the emperor was everywhere, sometimes in front, sometimes with his light-armed battalions protecting the rear, in order to see that no concealed danger threatened it, reconnoitring the dense jungles and valleys, and restraining the distant sallies of his soldiers, sometimes with his natural gentleness, and sometimes with threats.

But he allowed the fields of the enemy which were loaded with every kind of produce to be burnt with their crops and cottages, after his men had collected all that they could themselves make use of. And in this way the enemy were terribly injured before they were aware of it; for the soldiers freely used what they had acquired with their own hands, thinking that they had found a fresh field for their valour; and joyful at the abundance of their supplies, they saved what they had in their own boats.

But one rash soldier, being intoxicated, and having crossed over to the opposite bank of the river, was taken prisoner before our eyes by the enemy, and was put to death.

24.2

After this we arrived at a fort called Thilutha, situated in the middle of the river on a very high piece of ground, and fortified by nature as if by the art of man. The inhabitants were invited gently, as was best, to surrender, since the height of their fort made it impregnable; but they

refused all terms as yet, though they answered that when the Romans had advanced further so as to occupy the interior of the country, they also as an appendage would come over to the conqueror.

Having made this reply they quietly looked down upon our boats as they passed under the very walls without attempting to molest them. When that fort was passed we came to another called Achaiacala, also defended by the river flowing round it, and difficult to scale, where we received a similar answer, and so passed on. The next day we came to another fort which had been deserted because its walls were weak; and we burnt it and proceeded.

In the two next days we marched two hundred furlongs, and arrived at a place called Paraxmalcha. We then crossed the river, and seven miles further on we entered the city of Diacira, which we found empty of inhabitants but full of corn and excellent salt, and here we saw a temple placed on the summit of a lofty height. We burnt the city and put a few women to death whom we found there, and having passed a bituminous spring, we entered the town of Ozogardana, which its inhabitants had deserted for fear of our approaching army; in that town is shown a tribunal of the emperor Trajan.

This town also we burnt after we had rested there two days to refresh our bodies. On the second day just at nightfall, the Surena (who is the officer next in rank to the king among the Persians), and a man named Malechus Podosaces, the chief of the Assanite Saracens, who had long ravaged our frontiers with great ferocity, laid a snare for Hormisdas, whom by some means or other they had learnt was about to go forth on a reconnoitring expedition, and only failed because the river being very narrow at that point, was so deep as to be unfordable.

And so at daybreak, when the enemy were now in sight, the moment that they were discovered by their glittering helmets and bristling armour, our men sprang up vigorously to the conflict, and dashed at

them with great courage; and although the enemy wielded their huge bows with great strength, and the glistening of their weapons increased the alarm of our soldiers, yet their rage, and the compactness of their ranks, kept alive and added fuel to their courage.

Animated by their first success, our army advanced to the village of Macepracta, where were seen vestiges of walls half destroyed, which had once been of great extent, and had served to protect Assyria from foreign invasion.

At this point a portion of the river is drawn off in large canals which convey it to the interior districts of Babylonia, for the service of the surrounding country and cities. Another branch of the river known as the Nahamalca, which means “the river of kings,” passes by Ctesiphon; at the beginning of this stream there is a lofty tower like a lighthouse, by which our infantry passed on a carefully constructed bridge.

The cavalry and cattle then took the stream where it was less violent, and swam across obliquely; another body was suddenly attacked by the enemy with a storm of arrows and javelins, but our light-armed auxiliaries as soon as they reached the other side, supported them, and put the enemy to flight, cutting them to pieces as they fled.

After having successfully accomplished this exploit, we arrived at the city of Pirisabora, of great size and populousness, and also surrounded with water. But the emperor having ridden all round the walls and reconnoitred its position, began to lay siege to it with great caution, as if he would make the townsmen abandon its defence from mere terror. But after several negotiations and conferences with them, as they would yield neither to promises nor to threats, he set about the siege in earnest, and surrounded the walls with three lines of soldiers. The whole of the first day the combat was carried on with missiles till nightfall.

But the garrison, full of courage and vigour, spreading cloths loose everywhere over the battlements to weaken the attacks of our weapons, and protected by shields strongly woven of osier, made a brave resistance, looking like figures of iron, since they had plates of iron closely fitting over every limb, which covered their whole person with a safe defence.

Sometimes also they earnestly invited Hormisdas as a countryman and a prince of royal blood to a conference; but when he came they reviled him with abuse and reproaches as a traitor and deserter; and after a great part of the day had been consumed in this slow disputing, at the beginning of night many kinds of engines were brought against the walls, and we began to fill up the ditches.

But before it was quite dawn, the garrison perceived what was being done, with the addition that a violent stroke of a battering-ram had broken down a tower at one corner; so they abandoned the double city wall, and occupied a citadel close to the wall, erected on the level summit of a ragged hill, of which the centre, rising up to a great height in its round circle, resembled an Argive shield, except that in the north it was not quite round, but at that point it was protected by a precipice which ran sheer down into the Euphrates; the walls were built of baked bricks and bitumen, a combination which is well known to be the strongest of all materials.

And now the savage soldiery, having traversed the city, which they found empty, were fighting fiercely with the defenders who poured all kinds of missiles on them from the citadel. Being hard pressed by the catapults and balistæ of our men, they also raised on the height huge bows of great power, the extremities of which, rising high on each side, could only be bent slowly; but the string, when loosed by violent exertion of the fingers, sent forth iron-tipped arrows with such force as to inflict fatal wounds on any one whom they struck.

Nevertheless, the fight was maintained on both sides with showers of stones thrown by the hand, and as neither gained any ground a fierce contest was protracted from daybreak to nightfall with great obstinacy; and at last they parted without any advantage to either side. The next day the fight was renewed with great violence, and numbers were slain on each side, and still the result was even; when the emperor, being eager amid this reciprocal slaughter to try every chance, being guarded by a solid column, and defended from the arrows of the enemy by their closely packed shields, rushed forward with a rapid charge up to the enemy's gates, which were faced with stout iron.

And although he was still in some danger, being hard pressed with stones and bullets and other weapons, still he cheered on his men with frequent war-cries while they were preparing to force in the gates in order to effect an entrance, and did not retreat till he found himself on the point of being entirely overwhelmed by the mass of missiles which were poured down on him.

However, he came off safe with only a few of his men slightly wounded; not without feeling some modest shame at being repulsed. For he had read that Scipio Æmilianus, with the historian Polybius, a citizen of Megalopolis in Arcadia, and thirty thousand soldiers, had, by a similar attack, forced the gate of Carthage.

But the account given by the old writers may serve to defend this modern attempt; for Æmilianus approached a gate protected by a stone-covered testudo, under which he safely forced his way into the city while the garrison was occupied in demolishing this stone roof. But Julian attacked a place completely exposed, while the whole face of heaven was darkened by the fragments of rock and weapons which were showered upon him, and was even then with great difficulty repulsed and forced to retire.

After this hasty and tumultuous assault, as the vast preparations of sheds and mounds which were carried on were attended with much difficulty, through the hindrances offered by the garrison, Julian ordered an engine called helepolis to be constructed with all speed; which, as we have already mentioned, King Demetrius used, and earned the title of Poliorcetes by the number of cities which he took.

The garrison, anxiously viewing this engine, which was to exceed the height of their lofty towers, and considering at the same time the determination of the besiegers, suddenly betook themselves to supplications, and spreading over the towers and walls, imploring the pardon and protection of the Romans with outstretched hands.

And when they saw that the works of the Romans were suspended, and that those who were constructing them were doing nothing, which seemed a sure token of peace, they requested an opportunity of conferring with Hormisdas.

And when this was granted, Mamersides, the commander of the garrison, was let down by a rope, and conducted to the emperor as he desired; and having received a promise of his own life, and of impunity to all his comrades, he was allowed to return to the city. And when he related what had been done, the citizens unanimously agreed to follow his advice and accept the terms; and peace was solemnly made with all the sanctions of religion, the gates were thrown open, and the whole population went forth proclaiming that a protecting genius had shone upon them in the person of the great and merciful Cæsar.

The number of those who surrendered was two thousand five hundred, for the rest of the citizens, expecting the siege beforehand, had crossed the river in small boats and abandoned the city. In the citadel a great store of arms and provisions was found; and after they

had taken what they required, the conquerors burnt the rest as well as the place itself.

24.3

The day after these transactions, serious news reached the emperor as he was quietly taking his dinner, that the Surena, the Persian general, had surprised three squadrons of our advanced guard, and slain a few, among whom was one tribune; and had also taken a standard.

Immediately Julian became violently exasperated, and flew to the spot with an armed band, placing much hope of success in the rapidity of his movements: he routed the assailants disgracefully, cashiered the other two tribunes as blunderers and cowards, and in imitation of the ancient laws of Rome disbanded ten of the soldiers who had fled, and then condemned them to death.

Then, having burnt the city as I have already mentioned, he mounted a tribunal which he had caused to be erected, and having convoked his army, he thanked them, and counted upon their achieving other similar exploits. He also promised them each a hundred pieces of silver; but seeing that they were inclined to murmur, as being disappointed at the smallness of the sum, he became most indignant and said:—

“Behold the Persians who abound in wealth of every kind; their riches may enrich you if we only behave gallantly with one unanimous spirit of resolution. But after having been very rich, I assure you that the republic is at this moment in great want, through the conduct of those men who, to increase their own wealth, taught former emperors to return home after buying peace of the barbarians with gold.

“The treasury is empty, the cities are exhausted, the finances are stripped bare. I myself have neither treasures, nor, noble as I am by birth, do I inherit anything from my family but a heart free from all fear. Nor shall I be ashamed to place all my happiness in the

cultivation of my mind, while preferring an honourable poverty. For the Fabricii also conducted great wars while poor in estate and rich only in glory.

“Of all these things you may have plenty, if, discarding all fear, you act with moderation, obeying the cautious guidance of God and myself, as far as human reason can lead you safely; but if you disobey, and choose to return to your former shameful mutinies, proceed.

“As an emperor should do, I by myself, having performed the important duties which belong to me, will die standing, despising a life which any fever may take from me: or else I will abdicate my power, for I have not lived so as to be unable to descend to a private station. I rejoice in, and feel proud of the fact that there are with me many leaders of proved skill and courage, perfect in every kind of military knowledge.”

By this modest speech of their emperor, thus unmoved alike by prosperity and adversity, the soldiers were for a time appeased, regaining confidence with an expectation of better success; and unanimously promised to be docile and obedient, at the same time extolling Julian’s authority and magnanimity to the skies; and, as is their wont when their feelings are genuine and cordial, they showed them by a gentle rattling of their arms.

Then they returned to their tents, and refreshed themselves with food, for which they had abundant means, and with sleep during the night. But Julian encouraged his army not by the idea of their families, but by the thoughts of the greatness of the enterprises in which they were embarked: continually making vows—“So might he be able to make the Persians pass under the yoke.” “So might he restore the Roman power which had been shaken in those regions,”—in imitation of Trajan, who was accustomed frequently to confirm anything he had said by the imprecations—“So may I see Dacia reduced to the

condition of a province; so may I bridge over the Danube and Euphrates,”—using many similar forms of attestation.

Then after proceeding fourteen miles further we came to a certain spot where the soil is fertilized by the abundance of water. But as the Persians had learnt that we should advance by this road, they removed the dams, and allowed the waters to flood the country.

The ground being thereby, for a great distance, reduced to the state of a marsh, the emperor gave the soldiers the next day for rest, and advancing in front himself, constructed a number of little bridges of bladders, and coracles⁴¹ made of skins, and rafts of palm-tree timber, and thus led his army across, though not without difficulty.

In this region many of the fields are planted with vineyards and various kinds of fruit trees; and palm-trees grow there over a great extent of country, reaching as far as Mesene and the ocean, forming great groves. And wherever any one goes he sees continual stocks and suckers of palms, from the fruit of which abundance of honey and wine is made, and the palms themselves are said to be divided into male and female, and it is added that the two sexes can be easily distinguished.

They say further that the female trees produce fruit when impregnated by the seeds of the male trees, and even that they feel delight in their mutual love: and that this is clearly shown by the fact that they lean towards one another, and cannot be bent back even by strong winds—and if by any unusual accident a female tree is not impregnated by the male seed, it produces nothing but imperfect fruit, and if they cannot find out with what male tree any female tree is in love, they smear the trunk of some tree with the oil which proceeds from her, and then some other tree naturally conceives a fondness for the odour; and these proofs create some belief in the story of their copulation.

The army then, having sated itself with these fruits, passed by several islands, and instead of the scarcity which they apprehended, the fear arose that they would become too fat. At last, after having been attacked by an ambuscade of the enemy's archers, but having avenged themselves well, they came to a spot where the larger portion of the Euphrates is divided into a number of small streams.

24.4

In this district a city, which on account of the lowness of its walls, had been deserted by its Jewish inhabitants, was burnt by our angry soldiers. And afterwards the emperor proceeded further on, being elated at the manifest protection, as he deemed it, of the Deity.

And when he had reached Maogamalcha, a city of great size and surrounded with strong walls, he pitched his tent, and took anxious care that his camp should not be surprised by any sudden attack of the Persian cavalry; whose courage in the open plains is marvellously dreaded by the surrounding nations.

And when he had made his arrangements, he himself, with an escort of a few light troops, went forth on foot to reconnoitre the position of a city by a close personal examination; but he fell into a dangerous snare from which he with difficulty escaped with his life.

For ten armed Persians stole out by a gate of the town of which he was not aware, and crawled on their hands and knees along the bottom of the hill, till they got within reach so as to fall silently upon our men, and two of them distinguishing the emperor by his superior appearance, made at him with drawn swords; but he encountered them with his shield raised, and protecting himself with that, and fighting with great and noble courage, he ran one of them through the body, while his guards killed the other with repeated blows. The rest, of whom some were wounded, were put to flight, and the two who were slain were stripped of their arms, and the emperor led back his

comrades in safety, laden with their spoils, into the camp, where he was received with universal joy.

Torquatus took a golden necklace from one of the enemy whom he had slain. Valerius by the aid of a crow defeated a haughty Gaul and earned the surname of Corvinus, and by this glory these heroes were recommended to posterity. We do not envy them, but let this gallant exploit be added to those ancient memorials.

The next day a bridge was laid across the river, and the army passed over it, and pitched their camp in a fresh and more healthy place, fortifying it with a double rampart, since, as we have said, the open plains were regarded with apprehension. And then he undertook the siege of the town, thinking it too dangerous to march forward while leaving formidable enemies in his rear.

While he was making great exertions to complete his preparations, the Surena, the enemy's general, fell upon the cattle which were feeding in the palm groves, but was repulsed by those of our squadrons who were appointed to that service, and, having lost a few men, he retired.

And the inhabitants of two cities which are made islands by the rivers which surround them, fearing to trust in their means of defence, fled for refuge to Ctesiphon, some fleeing through the thick woods, others crossing the neighbouring marshes on canoes formed out of hollowed trees, and thus made a long journey to the principal or indeed the only shelter which existed for them, intending to proceed to still more distant regions.

Some of them were overtaken, and on their resistance were put to death by our soldiers, who, traversing various districts in barks and small boats, brought in from time to time many prisoners. For it had been cleverly arranged that, while the infantry was besieging the

town, the squadrons of cavalry should scour the country in small bands in order to bring in booty. And by this system, without doing any injury to the inhabitants of the provinces, the soldiers fed on the bowels of the enemy.

And by this time the emperor was besieging with all his might and with a triple line of heavily armed soldiers this town which was fortified with a double wall; and he had great hope of succeeding in his enterprise. But if the attempt was indispensable, the execution was very difficult. For the approach to the town lay everywhere over rocks of great height and abruptness; across which there was no straight road; and dangers of two kinds seemed to render the place inaccessible. In the first place there were towers formidable both for their height and for the number of their garrison; equalling in height the natural mountain on which the citadel was built; and secondly, a sloping plain reached down to the river, which again was protected by stout ramparts.

There was a third difficulty not less formidable that the numerous garrison of picked men which defended the place could not be won over by any caresses to surrender, but resisted the enemy as if resolved either to conquer or to perish amid the ashes of their country. The soldiers, who desired to attack at once, and also insisted upon a pitched battle in a fair field, could hardly be restrained, and when the retreat was sounded they burnt with indignation, being eager to make courageous onsets on the enemy.

But the wisdom of our leaders overcame the eagerness of mere courage; and the work being distributed, every one set about his allotted task with great alacrity. For on one side high mounds were raised; on another other parties were raising the deep ditches to the level of the ground; in other quarters hollow pitfalls were covered over with long planks; artisans also were placing mural engines soon intended to burst forth with fatal roars.

Nevitta and Dagalaiphus superintended the miners and the erection of the vineæ, or penthouses; but the beginning of the actual conflict, and the defence of the machines from fire or from sallies of the garrison, the emperor took to himself. And when all the preparations for taking the city had been completed by this variety of labour, and the soldiers demanded to be led to the assault, a captain named Victor returned, who had explored all the roads as far as Ctesiphon, and now brought word that he had met with no obstacles.

At this news all the soldiers became wild with joy, and being more elated and eager for the contest than ever, they waited under arms for the signal.

And now on both sides the trumpets sounded with martial clang, and the Roman vanguard, with incessant attacks and threatening cries, assailed the enemy, who were covered from head to foot with thin plates of iron like the feathers of a bird, and who had full confidence that any weapons that fell on this hard iron would recoil; while our close-packed shields with which our men covered themselves as with a testudo, opened loosely so as to adapt themselves to their continual motion. On the other hand the Persians, obstinately clinging to their walls, laboured with all their might to avoid and frustrate our deadly attacks.

But when the assailants, pushing the osier fences before them, passed up to the walls, the archers, slingers and others, rolling down huge stones, with firebrands and fire-pots, repelled them to a distance. Then the balistæ, armed with wooden arrows, were bent and loosened with a horrid creak, and poured forth incessant storms of darts. And the scorpions hurled forth round stones under the guidance of the skilful hands of their workers.

The combat was repeated and redoubled in violence, till the heat increasing up to midday, and the sun burning up everything with its

evaporation, recalled from the battle the combatants on both sides, equally intent as they were on the works and on the fray, but thoroughly exhausted by fatigue and dripping with sweat.

The same plan was followed the next day, the two parties contending resolutely in various modes of fighting, and again they parted with equal valour, and equal fortune. But in every danger the emperor was foremost among the armed combatants, urging on the destruction of the city lest, by being detained too long before its walls, he should be forced to abandon other objects which he had at heart.

But in times of emergency nothing is so unimportant as not occasionally to influence great affairs, even contrary to all expectation. For when, as had often happened, the two sides were fighting slackly, and on the point of giving over, a battering-ram which had just been brought up, being pushed forward awkwardly, struck down a tower which was higher than any of the others, and was very strongly built of baked brick, and its fall brought down all the adjacent portion of the wall with a mighty crash.

Then in the variety of incidents which arose, the exertions of the besiegers and the gallantry of the besieged were equally conspicuous with noble exploits. For to our soldiers, inflamed with anger and indignation, nothing appeared difficult. To the garrison, fighting for their safety, nothing seemed dangerous or formidable. At last, when the fierce contest had raged a long time and was still undecided, great slaughter having been made on both sides, the close of day broke it off, and both armies yielded to fatigue.

While these matters were thus going on in broad daylight, news was brought to the emperor, who was full of watchful care, that the legionary soldiers to whom the digging of the mines had been intrusted, having hollowed out their subterranean paths and supported them with stout stakes, had now reached the bottom of the

foundations of the walls, and were ready to issue forth if he thought fit.

When therefore a great part of the night was passed, the brazen trumpets sounded the signal for advancing to battle, and the troops ran to arms; and as had been planned, the wall was attacked on both its faces, in order that while the garrison were running to and fro to repel the danger, and while the noise of the iron tools of the miners digging at the foundations was overpowered by the din of battle, the miners should come forth on a sudden without any one being at the mouth of the mine to resist them.

When these plans had all been arranged, and the garrison was fully occupied, the mine was opened, and Exsuperius, a soldier of the Victorian legion, sprung out, followed by a tribune named Magnus, and Jovianus, a secretary, and an intrepid body of common soldiers, who, after slaughtering all the men found in the temple into which the mine opened, went cautiously forward and slew the sentinels, who were occupying themselves after the fashion of their country in singing the praises, the justice, and good fortune of their king.

It was believed that Mars himself (if indeed the gods are permitted to mingle with men) aided Luscinius when he forced the camp of the Lucanians. And it was the more believed because in the height of the conflict there was seen an armed figure of enormous size carrying ladders, who the next day, when the roll was called over, though sought for very carefully, could not be found anywhere; when if he had really been a soldier he would have come forward of his own accord from a consciousness of his gallant action. But though on that occasion it was never known who performed that splendid achievement, yet those who now behaved bravely were not unknown, but received obsidional crowns, and were publicly praised according to the ancient fashion.

At last the fated city, its numerous entrances being laid open, was entered by the Romans, and the furious troops destroyed all whom they found, without regard to age or sex. Some of the citizens, from dread of impending destruction, threatened on one side with fire, on the other with the sword, weeping threw themselves headlong over the walls, and being crippled in all their limbs, led for a few hours or days a life more miserable than any death, till they were finally killed.

But Nabdates, the captain of the garrison, was taken alive with eighty of his guards; and when he was brought before the emperor, that magnanimous and merciful prince ordered him to be kept in safety. The booty was divided according to a fair estimate of the merits and labours of the troops. The emperor, who was contented with very little, took for his own share of the victory he had thus gained three pieces of gold and a dumb child who was brought to him, and who by elegant signs and gesticulations explained all he knew, and considered that an acceptable and sufficient prize.

But of the virgins who were taken prisoners, and who, as was likely in Persia, where female beauty is remarkable, were exceedingly beautiful, he would neither touch nor even see one; imitating Alexander and Scipio, who refused similar opportunities, in order, after having proved themselves unconquered by toil, not to show themselves the victims of desire.

While the battle was going on, an engineer on our side, whose name I do not know, who happened to be standing just behind a scorpion, was knocked down and killed by the recoil of a stone, which the worker of the engine had fitted to the sling carelessly, his whole body being so dislocated and battered that he could not even be recognized.

After the town was taken intelligence was brought to the emperor that a troop was lying in ambuscade in some concealed pits around

the walls of the town just taken (of which pits there are many in those districts), with the intention of surprising the rear of our army by a sudden attack.

A body of picked infantry of tried courage was therefore sent to take the troop prisoners. But as they could neither force their way into the pits, nor induce those concealed in them to come forth to fight, they collected some straw and faggots, and piled them up before the mouths of the caves, and then set them on fire, from which the smoke penetrated into the caverns through the narrow crevice, being the more dense because of the small space through which it was forced, and so suffocated some of them; others the fire compelled to come forth to instant destruction; and in this manner they were destroyed by sword or by fire, and our men returned with speed to their camp. Thus was this large and populous city, with its powerful garrison, stormed by the Romans, and the city itself reduced to ruins.

After this glorious exploit the bridges which led over several rivers were crossed in succession, and we reached two forts, constructed with great strength and skill, where the son of the king endeavoured to prevent Count Victor, who was marching in the van of the army, from crossing the river, having advanced for that purpose from Ctesiphon with a large body of nobles and a considerable armed force; but when he saw the numbers which were following Victor, he retreated.

24.5

So we advanced and came to some groves, and also to some fields fertile with a great variety of crops, where we found a palace built in the Roman fashion, which, so pleased were we with the circumstance, we left unhurt.

There was also in this same place a large round space, enclosed, containing wild beasts, intended for the king's amusement; lions with shaggy manes, tusked boars, and bears of amazing ferocity (as the

Persian bears are), and other chosen beasts of vast size. Our cavalry, however, forced the gates of this enclosure, and killed all the beasts with hunting-spears and clouds of arrows.

This district is rich and well cultivated: not far off is Coche, which is also called Seleucia; where we fortified a camp with great celerity, and rested there two days to refresh the army with timely supplies of water and provisions. The emperor himself in the meanwhile proceeded with his advanced guard and reconnoitred a deserted city which had been formerly destroyed by the Emperor Verus, where an everlasting spring forms a large tube which communicates with the Tigris. Here we saw, hanging on gallows, many bodies of the relations of the man whom we have spoken of above as having betrayed Pirisabora.

Here also Nabdates was burnt alive, he whom I have mentioned above as having been taken with eighty of his garrison while hiding among the ruins of the city which we had taken; because at the beginning of the siege he had secretly promised to betray it, but afterwards had resisted us vigorously, and after having been unexpectedly pardoned had risen to such a pitch of violence as to launch all kinds of abuse against Hormisdas.

Then after advancing some distance we heard of a sad disaster: for while three cohorts of the advanced guard, who were in light marching order, were fighting with a Persian division which had made a sally out of the city gates, another body of the enemy cut off and slew our cattle, which were following us on the other side of the river, with a few of our foragers who were straggling about in no great order.

The emperor was enraged and indignant at this; he was now near the district of Ctesiphon, and had just reached a lofty and well-fortified castle. He went himself to reconnoitre it, being, as he fancied, concealed, as he rode with a small escort close to the walls; but as

from too much eagerness he got within bowshot, he was soon noticed, and was immediately assailed by every kind of missile, and would have been killed by an arrow shot from an engine on the walls, if it had not struck his armour-bearer, who kept close by his side, and he himself, being protected by the closely-packed shields of his guards, fell back, after having been exposed to great danger.

At this he was greatly enraged, and determined to lay siege to the fort; but the garrison was very resolute to defend it, believing the place to be nearly inaccessible, and that the king, who was advancing with great speed at the head of a large army, would soon arrive to their assistance.

And now, the vineæ and everything else required for the siege being prepared, at the second watch, when the night, which happened to be one of very bright moonlight, made everything visible to the defenders on the battlements, suddenly the whole multitude of the garrison formed into one body, threw open the gates and sallied out, and attacking a division of our men who were not expecting them, slew numbers, among whom one tribune was killed as he was endeavouring to repel the attack.

And while this was going on, the Persians, having attacked a portion of our men in the same manner as before from the opposite side of the river, slew some and took others prisoners. And our men, in alarm, and because they believed the enemy had come into the field in very superior numbers, behaved at first with but little spirit; but presently, when they recovered their courage, they flew again to arms, and being roused by the sound of the trumpets, they hastened to the charge with threatening cries, upon which the Persians retired to the garrison without further contest.

And the emperor, being terribly angry, reduced those of the cavalry who had shown a want of courage when attacked to serve in the infantry, which is a severer service and one of less honour.

Then, being very eager to take a castle where he had incurred so much danger, he devoted all his own labour and care to that end, never himself retiring from the front ranks of his men, in order that by fighting in the van he might be an example of gallantry to his soldiers, and might be also sure to see, and therefore able to reward, every gallant action. And when he had exposed himself a long time to imminent danger, the castle, having been assailed by every kind of manœuvre, weapon, and engine, and by great valour on the part of the besiegers, was at length taken and burnt.

After this, in consideration of the great labour of the exploits which they had performed, and which were before them, he granted rest to his army, exhausted with its excessive toil, and distributed among them provisions in abundance. Then a rampart was raised round the camp, with dense rows of palisades, and a deep fosse, as sudden sallies and various formidable manœuvres were dreaded, since they were very near Ctesiphon.

24.6

From this place they advanced to a canal known as Naharmalcha, a name which means "The River of Kings." It was then dry. Long ago Trajan, and after him Severus, had caused the soil to be dug out, and had given great attention to constructing this as a canal of great size, so that, being filled with water from the Euphrates, it might enable vessels to pass into the Tigris.

And for every object in view it appeared best that this should now be cleaned out, as the Persians, fearing such an operation, had blocked it up with a mass of stones. After it had been cleared and the dams removed, a large body of water was let in, so that our fleet, after a safe voyage of thirty furlongs, passed into the Tigris. There the army at once threw bridges across the river, and passing over to the other side, marched upon Coche.

And that after our fatigue we might enjoy seasonable rest, we encamped in an open plain, rich with trees, vines, and cypresses, in the middle of which was a shady and delicious pavilion, having all over it, according to the fashion of the country, pictures of the king slaying wild beasts in the chase; for they never paint or in any way represent anything except different kinds of slaughter and war.

Having now finished everything according to his wish, the emperor, rising higher in spirit as his difficulties increased, and building such hopes on Fortune, which had not yet proved unfavourable to him, that he often pushed his boldness to the verge of temerity, unloaded some of the strongest of the vessels which were carrying provisions and warlike engines, and put on board of them eight hundred armed men; and keeping the main part of the fleet with him, which he divided into three squadrons, he settled that one under the command of Count Victor should start at nightfall, in order to cross the river with speed, and so seize on the bank in possession of the enemy.

The generals were greatly alarmed at this plan, and unanimously entreated him to forego it; but as they could not prevail, the signal for sailing was raised, as he commanded, and at once five ships hastened onwards out of sight; and when they drew near to the bank they were attacked with an incessant storm of fire-pots and every kind of contrivance to handle flames, and they would have been burnt soldiers and all if the emperor, being roused, had not with great energy hastened to the spot, shouting out that our men, as they were ordered, had made him a signal that they were now masters of the bank of the river, and ordering the whole fleet to hasten forward with all speed.

In consequence of which vigour the ships were saved, and the soldiers, though harassed by the enemy from their commanding ground with stones and every kind of missile, nevertheless after a fierce conflict made good their footing on the high bank of the river, and established themselves immovably.

History marvels that Sertorius swam across the Rhone with his arms and his breastplate; but on this occasion, some soldiers, though disordered, fearing to remain behind after the signal for battle was raised, clinging firmly to their shields, which are broad and concave, and guiding them, though without much skill, kept pace with the speed of the vessels through a river full of currents.

The Persians resisted this attack with squadrons of cuirassier cavalry in such close order that their bodies dazzled the eye, fitting together, as it seemed, with their brilliant armour; while their horses were all protected with a covering of stout leather. As a reserve to support them several maniples of infantry were stationed, protected by crooked, oblong shields, made of wicker-work and raw hides, behind which they moved in compact order. Behind them were elephants, like so many walking hills, which by every motion of their huge bodies threatened destruction to all who came near them, and our men had been taught to fear them by past experience.

On this the emperor, according to the arrangement of the Greek army as mentioned by Homer,⁴² allotted the centre space between his two lines to his weakest infantry, lest if they were placed in the front rank, and should then misbehave, they should disorder the whole of his line; or lest, on the other hand, if posted in the rear, behind all the other centuries, they should flee without shame, since there would be no one to check them: he with his light-armed auxiliaries moving as might be required between the lines.

Therefore when the two armies beheld each other, the Romans glittering with their crested helmets, and brandishing their shields, proceeded slowly, their bands playing an anapæstic measure; and after a preliminary skirmish, carried on by the missiles of the front rank, they rushed to battle with such vehemence that the earth trembled beneath them.

The battle-shout was raised on all sides, as was usual, the braying trumpets encouraged the eagerness of the men: all fought in close combat with spears and drawn swords, so that the soldiers were free from all danger of arrows the more rapidly they pressed onwards. Meanwhile, Julian, like a gallant comrade, at the same time that he was a skilful general, hasten to support his hardly-pressed battalions with reserves, and to cheer on the laggards.

So the front line of the Persians wavered, having been never very fierce; and at last, no longer able to support the heat of their armour, they retreated in haste to their city, which was near: they were pursued by our soldiers, weary as they were with having fought in those torrid plains from daybreak to sunset; and we, pressing close on their heels, drove them, with their choicest generals, Pigranes, the Surena, and Narses, right up to the walls of Ctesiphon, inflicting many wounds on their legs and backs.

And we should have forced our entrance into the city if a general named Victor had not, by lifting up his hands and his voice, checked us, being himself pierced through the shoulder with an arrow, and fearing lest if the soldiers allowed themselves to be hurried within the walls without any order, and could then find no means of returning, they might be overwhelmed by the mass of their enemies.

Let the poets celebrate the ancient battles of Hector, or extol the valour of the Thessalian Achilles; let past ages tell the praises of Sophanes, and Aminias, and Callimachus, and Cynægirus, those thunderbolts of war in the struggles of the Greeks against Persia; but it is evident by the confession of all men that the gallantry displayed by some of our troops on that day was equal to any of their exploits.

After having laid aside their fears, and trampled on the carcasses of their enemies, the soldiers, still stained with the blood so justly shed, collected round the tent of the emperor, loading him with praises and thanks, because, while behaving with such bravery that it was hard to

say whether he had been more a general or a soldier, he had conducted the affair with such success that not above seventy of our men had fallen, while nearly two thousand five hundred of the Persians had been slain. And he in his turn addressed by name most of those whose steady courage and gallant actions he had witnessed, presenting them with naval, civic, and military crowns.

Thinking that this achievement would surely be followed by other similar successes, he prepared a large sacrifice to Mars the Avenger. Ten most beautiful bulls were brought for the purpose, nine of which, even before they reached the altars, lay down of their own accord with mournful countenances, but the tenth broke his bonds and escaped, and was with difficulty brought back at all; and when sacrificed displayed very unfavourable omens; but when he saw this, Julian became very indignant, and exclaimed, calling Jupiter to witness, that henceforth he would offer no sacrifices to Mars. Nor did he recall his vow, being cut off by a speedy death.

24.7

Julian, having discussed with his chief officers the plan for the siege of Ctesiphon, it appeared to some of them that it would be an act of unseasonable temerity to attack that city, both because its situation made it almost impregnable, and also because King Sapor was believed to be hastening to its protection with a formidable army.

The better opinion prevailed; and the sagacious emperor being convinced of its wisdom, sent Arinthæus with a division of light infantry, to lay waste the surrounding districts, which were rich both in herds and in crops, with orders also to pursue the enemy with equal energy, for many of them were wandering about, concealed amid overgrown by-ways, and lurking-places known only to themselves. The booty was abundant.

But Julian himself, being always eager to extend his conquests, disregarded the advice of those who remonstrated against his

advance; and reproaching his chiefs, as men who out of mere laziness and a love of ease advised him to let go the kingdom of Persia when he had almost made himself master of it, left the river on his left hand, and led by unlucky guides, determined to proceed towards the inland parts of the country by forced marches.

And he ordered all his ships to be burnt, as if with the fatal torch of Bellona herself, except twelve of the smaller vessels, which he arranged should be carried on waggons, as likely to be of use for building bridges. And he thought this a most excellently conceived plan, to prevent his fleet if left behind from being of any use to the enemy, or on the other hand to prevent what happened at the outset of the expedition, nearly twenty thousand men being occupied in moving and managing the vessels.

Then, as the men began in their alarm to grumble to themselves (as indeed manifest truth pointed out), that the soldiers if hindered from advancing by the height of the mountains or the dryness of the country, would have no means of returning to get water, and when the deserters, on being put to the torture openly confessed that they had made a false report, he ordered all hands to labour to extinguish the flames. But the fire, having got to a great head, had consumed most of them, so that only the twelve could be preserved unhurt, which were set apart to be taken care of.

In this way the fleet being unseasonably destroyed, Julian, relying on his army which was now all united, having none of its divisions diverted to other occupations, and so being strong in numbers, advanced inland, the rich district through which he marched supplying him with an abundance of provisions.

When this was known, the enemy, with a view to distressing us by want of supplies, burnt up all the grass and the nearly ripe crops; and we, being unable to advance by reason of the conflagration, remained stationary in our camp till the fire was exhausted. And the Persians, insulting us from a distance, sometimes spread themselves widely on

purpose, sometimes offered us resistance in a compact body; so that to us who beheld them from a distance it might seem that the reinforcements of the king had come up, and we might imagine that it was on that account that they had ventured on their audacious sallies and unwonted enterprises.

Both the emperor and the troops were greatly vexed at this, because they had no means of constructing a bridge, since the ships had been inconsiderately destroyed, nor could any check be offered to the movements of the strange enemy, whom the glistening brilliancy of their arms showed to be close at hand; this armour of theirs being singularly adapted to all the inflections of their body. There was another evil of no small weight, that the reinforcements which we were expecting to arrive under the command of Arsaces and some of our own generals, did not make their appearance, being detained by the causes already mentioned.

24.8

The emperor, to comfort his soldiers who were made anxious by these events, ordered the prisoners who were of slender make, as the Persians usually are, and who were now more than usually emaciated, to be brought before the army; and looking at our men he said, "Behold what those warlike spirits consider men, little ugly dirty goats; and creatures who, as many events have shown, throw away their arms and take to flight before they can come to blows."

And when he had said this, and had ordered the prisoners to be removed, he held a consultation on what was to be done; and after many opinions of different kinds had been delivered, the common soldiers inconsiderately crying out that it was best to return by the same way they had advanced, the emperor steadily opposed this idea, and was joined by several officers who contended that this could not be done, since all the forage and crops had been destroyed throughout the plain, and the remains of the villages which had been burnt were all in complete destitution, and could afford no supplies; because also

the whole soil was soaked everywhere from the snows of winter, and the rivers had overflowed their banks and were now formidable torrents.

There was this further difficulty, that in those districts where the heat and evaporation are great, every place is infested with swarms of flies and gnats, and in such numbers that the light of the sun and of the stars is completely hidden by them.

And as human sagacity was of no avail in such a state of affairs, we were long in doubt and perplexity; and raising altars and sacrificing victims we consulted the will of the gods; inquiring whether it was their will that we should return through Assyria, or advancing slowly along the foot of the mountain chain, should surprise and plunder Chiliocomum near Corduena; but neither of these plans was conformable to the omens presented by an inspection of the sacrifices.

However it was decided, that since there was no better prospect before us, to seize on Corduena; and on the 16th June we struck our camp, and at daybreak the emperor set forth, when suddenly was seen either smoke or a great cloud of dust; so that many thought it was caused by herds of wild asses, of which there are countless numbers in those regions, and who were now moving in a troop, in order by their compactness to ward off the ferocious attacks of lions.

Some, however, fancied that it was caused by the approach of the Saracen chieftains, our allies, who had heard that the emperor was besieging Ctesiphon in great force: some again affirmed that the Persians were lying in wait for us on our march.

Therefore amid all these doubtful opinions, the trumpets sounded a halt, in order to guard against any reverse, and we halted in a grassy valley near a stream, where, packing our shields in close order and in a circular figure, we pitched our camp and rested in safety. Nor, so

dark did it continue till evening, could we distinguish what it was that had so long obscured the view.

Book XXV

25.1

A.D. 363.

The night was dark and starless, and passed by us as nights are passed in times of difficulty and perplexity; no one out of fear daring to sit down, or to close his eyes. But as soon as day broke, brilliant breastplates surrounded with steel fringes, and glittering cuirasses, were seen at a distance, and showed that the king's army was at hand.

The soldiers were roused at this sight, and hastened to engage, since only a small stream separated them from the Persians, but were checked by the emperor; a sharp skirmish did indeed take place between our outposts and the Persians, close to the rampart of our camp, in which Machamæus, the captain of one of our squadrons, was stricken down: his brother Maurus, afterwards Duke of Phoenicia, flew to his support, and slew the man who had killed Machamæus, and crushed all who came in his way, till he himself was wounded in the shoulder by a javelin; but he still was able by great exertions to bring off his brother, who was now pale with approaching death.

Both sides were nearly exhausted with the intolerable violence of the heat and the repeated conflicts, but at last the hostile battalions were driven back in great disorder. Then while we fell back to a greater distance, the Saracens were also compelled to retreat from fear of our infantry, but presently afterwards joining themselves to the Persian host, they attacked us again, with more safety to themselves for the purpose of carrying off the Roman baggage. But when they saw the emperor they again retreated upon their reserve.

After leaving this district we reached a village called Hucumbra, where we rested two days, procuring all kinds of provisions and abundance of corn, so that we moved on again after being refreshed beyond our hopes; all that the time would not allow us to take away we burnt.

The next day the army was advancing more quietly, when the Persians unexpectedly fell upon our last division, to whom that day the duty fell of bringing up the rear, and would easily have slain all the men, had not our cavalry, which happened to be at hand, the moment that they heard what was going on, hastened up, though scattered over the wide valley, and repulsed this dangerous attack, wounding all who had thus surprised them.

In this skirmish fell Adaces, a noble satrap, who had formerly been sent as ambassador to the emperor Constantius, and had been kindly received by him. The soldier who slew him brought his arms to Julian, and received the reward he deserved.

The same day one of our corps of cavalry, known as the third legion, was accused of having gradually given way, so that when the legions were on the point of breaking the enemy's line, they nearly broke the spirit of the whole army.

And Julian, being justly indignant at this, deprived them of their standards, broke their spears, and condemned all those who were convicted of having misbehaved of marching among the baggage and prisoners; while their captain, the only one of their number who had behaved well, was appointed to the command of another squadron, the tribune of which was convicted of having shamefully left the field.

And four other tribunes of companies were also cashiered for similar misconduct; for the emperor was contented with this moderate degree of punishment out of consideration for his impending difficulties.

Accordingly, having advanced seventy furlongs with very scanty supplies, the herbage and the corn being all burnt, each man saved for himself just as much of the grain or forage as he could snatch from the flames and carry.

And having left this spot, when the army had arrived at the district called Maranx, near daybreak an immense multitude of Persians appeared, with Merenes, the captain of their cavalry, and two sons of the king, and many nobles.

All the troops were clothed in steel, in such a way that their bodies were covered with strong plates, so that the hard joints of the armour fitted every limb of their bodies; and on their heads were effigies of human faces so accurately fitted, that their whole persons being covered with metal, the only place where any missiles which fell upon them could stick, was either where there were minute openings to allow of the sight of the eyes penetrating, or where holes for breathing were left at the extremities of the nostrils.

Part of them who were prepared to fight with pikes stood immovable, so that you might have fancied they were held in their places by fastenings of brass; and next to them the archers (in which art that nation has always been most skilful from the cradle) bent their supple bows with widely extended arms, so that the strings touched their right breasts, while the arrows lay just upon their left hands; and the whistling arrows flew, let loose with great skill of finger, bearing deadly wounds.

Behind them stood the glittering elephants in formidable array, whose grim looks our terrified men could hardly endure; while the horses were still more alarmed at their growl, odour, and unwonted aspect.

Their drivers rode on them, and bore knives with handles fastened to their right hands, remembering the disaster which they had

experienced at Nisibis; and if the ferocious animal overpowered his overseer, they pierced the spine where the head is joined to the neck with a vigorous blow, that the beast might not recoil upon their own ranks, as had happened on that occasion, and trample down their own people; for it was found out by Hasdrubal, the brother of Hannibal, that in this way these animals might be very easily deprived of life.

The sight of these beasts caused great alarm; and so this most intrepid emperor, attended with a strong body of his armed cohorts and many of his chief officers, as the crisis and the superior numbers of the enemy required, marshalled his troops in the form of a crescent with the wings bending inwards to encounter the enemy.

And to hinder the onset of the archers from disordering our columns, by advancing with great speed he baffled the aim of their arrows; and after he had given the formal signal for fighting, the Roman infantry, in close order, beat back the front of the enemy with a vigorous effort.

The struggle was fierce, and the clashing of the shields, the din of the men, and the doleful whistle of the javelins, which continued without intermission, covered the plains with blood and corpses, the Persians falling in every direction; and though they were often slack in fighting, being accustomed chiefly to combat at a distance by means of missiles, still now foot to foot they made a stout resistance; and when they found any of their divisions giving way, they retreated like rain before the wind, still with showers of arrows seeking to deter their foes from pursuing them. So the Parthians were defeated by prodigious efforts, till our soldiers, exhausted by the heat of the day, on the signal for retreat being sounded, returned to their camp, encouraged for the future to greater deeds of daring.

In this battle, as I have said, the loss of the Persians was very great—ours was very slight. But the most important death in our ranks was

that of Vetrano, a gallant soldier who commanded the legion of Zianni.⁴³

25.2

After this there was an armistice for three days, while the men attended to their own wounds or those of their friends, during which we were destitute of supplies, and distressed by intolerable hunger; and since, as all the corn and forage was burnt, both men and cattle were in extreme danger of starvation, a portion of the food which the horses of the tribunes and superior officers were carrying was distributed among the lower classes of the soldiers, who were in extreme want.

And the emperor, who had no royal dainties prepared for himself, but who was intending to sup under the props of a small tent on a scanty portion of pulse, such as would often have been despised by a prosperous common soldier, indifferent to his own comfort, distributed what was prepared for him among the poorest of his comrades.

He gave a short time to anxious and troubled sleep; and when he awoke, and, as was his custom, began to write something in his tent, in imitation of Julius Cæsar, while the night was still dark, being occupied with the consideration of the writings of some philosophers, he saw, as he told his friends, in mournful guise, the vision of the Genius of the Empire, whom, when he first became emperor, he had seen in Gaul, sorrowfully departing through the curtains of his tent with the cornucopia, which he bore in his hand veiled, as well as his head.

And although for a moment he stood stupefied, yet being above all fear, he commended the future to the will of heaven; and leaving his bed, which was made on the ground, he rose, while it was still but little past midnight, and supplicating the deities with sacred rites to avert misfortune, he thought he saw a bright torch, falling, cut a passage through the air and vanish from his sight; and then he was

horror-stricken, fearing that the star of Mars had appeared openly threatening him.

For this brightness was of the kind which we call διαίссοντα, not falling down or reaching the ground. Indeed, he who thinks that solid substances can fall from heaven is rightly accounted profane and mad. But these occurrences take place in many ways, of which it will be enough to enumerate a few.

Some think that sparks falling off from the ethereal fire, as they are able to proceed but a short distance, soon become extinguished; or, perhaps, that rays of fire coming against the dense clouds, sparkle from the suddenness of the contact; or that some light attaches itself to a cloud, and taking the form of a star, runs on as long as it is supported by the power of the fire; but being presently exhausted by the magnitude of the space which it traverses, it becomes dissolved into air, passing into that substance from the excessive attrition of which it originally derived its heat.

Therefore, without loss of time, before daybreak, he sent for the Etruscan soothsayers, and consulted them what this new kind of star portended; who replied, that he must cautiously avoid attempting any new enterprise at present, showing that it was laid down in the works of Tarquiti^{us},⁴⁴ “on divine affairs,” that when a light of this kind is seen in heaven, no battle ought to be engaged in, or any similar measure be undertaken.

But as he despised this and many other similar warnings, the diviners at least entreated him to delay his march for some hours; but they could not prevail even to this extent, as the emperor was always opposed to the whole science of divination. So at break of day the camp was struck.

25.3

When we set forward, the Persians, who had learnt by their frequent defeats to shun pitched battles, laid secret ambuscades on our road, and, occupying the hills on each side, continually reconnoitred our

battalions as they marched, so that our soldiers, being kept all day on the watch, could neither find time to erect ramparts round their camp, or to fortify themselves with palisades.

And while our flanks were strongly guarded, and the army proceeded onward in as good order as the nature of the ground would allow, being formed in squares, though not quite closed up, suddenly news was brought to the emperor, who had gone on unarmed to reconnoitre the ground in front, that our rear was attacked.

He, roused to anger by this mishap, without stopping to put on his breastplate, snatched up his shield in a hurry, and while hastening to support his rear, was recalled by fresh news that the van which he had quitted was now exposed to a similar attack.

Without a thought of personal danger, he now hastened to strengthen this division, and then, on another side, a troop of Persian cuirassiers attacked his centre, and pouring down with vehemence on his left wing, which began to give way, as our men could hardly bear up against the foul smell and horrid cries of the elephants, they pressed us hard with spears and clouds of arrows.

The emperor flew to every part of the field where the danger was hottest; and our light-armed troops dashing out wounded the backs of the Persians, and the hocks of the animals, which were turned the other way.

Julian, disregarding all care for his own safety, made signs by waving his hands, and shouted out that the enemy were fleeing in consternation; and cheering on his men to the pursuit, threw himself eagerly into the conflict. His guards called out to him from all sides to beware of the mass of fugitives who were scattered in consternation, as he would beware of the fall of an ill-built roof, when suddenly a cavalry spear, grazing the skin of his arm, pierced his side, and fixed

itself in the bottom of his liver.

He tried to pull it out with his right hand, and cut the sinews of his fingers with the double-edged point of the weapon; and, falling from his horse, he was borne with speed by the men around him to his tent; and the physician tried to relieve him.

Presently, when his pain was somewhat mitigated, so that his apprehensions were relieved, contending against death with great energy, he asked for arms and a horse, in order that, by revisiting his troops, who were still engaged, he might restore their confidence, and appear so secure of his own recovery as to have room for anxiety for the safety of others; with the same energy, though with a different object, with which the celebrated leader, Epaminondas, when he was mortally wounded at Mantinea, and had been borne out of the battle, asked anxiously for his shield; and when he saw it he died of his wound cheerfully, having been in fear for the loss of his shield, while quite fearless about the loss of his life.

But as Julian's strength was inferior to his firmness, and as he was weakened by the loss of blood, he remained without moving; and presently he gave up all hope of life; because, on inquiry, he found that the place where he had fallen was called Phrygia; for he had been assured by an oracle that he was destined to die in Phrygia.

When he was brought back to his tent, it was marvellous with what eagerness the soldiers flew to avenge him, agitated with anger and sorrow; and striking their spears against their shields, determined to die if Fate so willed it. And although vast clouds of dust obscured their sight, and the burning heat hindered the activity of their movements, still, as if they were released from all military discipline by the loss of their chief, they rushed unshrinking on the enemy's swords.

On the other hand the Persians, fighting with increased spirit, shot forth such clouds of arrows, that we could hardly see the shooters

through them; while the elephants, slowly marching in front, by the vast size of their bodies, and the formidable appearance of their crests, terrified alike our horses and our men.

And far off was heard the clashing of armed men, the groans of the dying, the snorting of the horses, and the clang of swords, till both sides were weary of inflicting wounds, and the darkness of night put an end to the contest.

Fifty nobles and satraps of the Persians, with a vast number of the common soldiers, were slain; and among them, two of their principal generals, Merena and Nohodares. Let the grandiloquence of antiquity marvel at the twenty battles fought by Marcellus in different places; let it add Sicinius Dentatus, adorned with his mass of military crowns; let it further extol Sergius, who is said to have received twenty-three wounds in his different battles, among whose posterity was that last Catiline, who tarnished the glories of his distinguished family by everlasting infamy.

But sorrow now overpowered the joy at this success. While the conflict was thus carried on after the withdrawal of the emperor, the right wing of the army was exhausted by its exertions; and Anatolius, at that time the master of the offices, was killed; Sallust the prefect was in imminent danger, and was saved only by the exertions of his attendant, so that at last he escaped, while Sophorius his counsellor was killed; and certain soldiers, who, after great danger, had thrown themselves into a neighbouring fort, were unable to rejoin the main army till three days afterwards.

And while these events were taking place, Julian, lying in his tent, thus addressed those who stood around him sorrowing and mourning: "The seasonable moment for my surrendering this life, O comrades, has now arrived, and, like an honest debtor, I exult in preparing to restore what nature reclaims; not in affliction and sorrow, since I have

learnt, from the general teaching of philosophers, how much more capable of happiness the mind is than the body; and considering that when the better part is separated from the worse, it is a subject of joy rather than of mourning. Reflecting, also, that there have been instances in which even the gods have given to some persons of extreme piety, death as the best of all rewards.

“And I well know that it is intended as a gift of kindness to me, to save me from yielding to arduous difficulties, and from forgetting or losing myself; knowing by experience that all sorrows, while they triumph over the weak, flee before those who endure them manfully.

“Nor have I to repent of any actions; nor am I oppressed by the recollection of any grave crime, either when I was kept in the shade, and, as it were, in a corner, or after I arrived at the empire, which, as an honour conferred on me by the gods, I have preserved, as I believe, unstained. In civil affairs I have ruled with moderation, and, whether carrying on offensive or defensive war, have always been under the influence of deliberate reason; prosperity, however, does not always correspond to the wisdom of man’s counsels, since the powers above reserve to themselves the regulation of results.

“But always keeping in mind that the aim of a just sovereign is the advantage and safety of his subjects, I have been always, as you know, inclined to peace, eradicating all licentiousness—that great corruptress of things and manners—by every part of my own conduct; and I am glad to feel that in whatever instances the republic, like an imperious mother, has exposed me deliberately to danger, I have stood firm, inured to brave all fortuitous disturbing events.

“Nor am I ashamed to confess that I have long known, from prophecy, that I should fall by the sword. And therefore do I venerate the everlasting God that I now die, not by any secret treachery, nor by a long or severe disease, or like a condemned criminal, but I quit the world with honour, fairly earned, in the midst of a career of

flourishing glory. For, to any impartial judge, that man is base and cowardly who seeks to die when he ought not, or who avoids death when it is seasonable for him.

“This is enough for me to say, since my strength is failing me; but I designedly forbear to speak of creating a new emperor, lest I should unintentionally pass over some worthy man; or, on the other hand, if I should name one whom I think proper, I should expose him to danger in the event of some one else being preferred. But, as an honest child of the republic, I hope that a good sovereign will be found to succeed me.”

After having spoken quietly to this effect, he, as it were with the last effort of his pen, distributed his private property among his dearest friends, asking for Anatolius, the master of the offices. And when the prefect Sallust replied that he was now happy, he understood that he was slain, and bitterly bewailed the death of his friend, though he had so proudly disregarded his own.

And as all around were weeping, he reproved them with still undiminished authority, saying that it was a humiliating thing to mourn for an emperor who was just united to heaven and the stars.

And as they then became silent, he entered into an intricate discussion with the philosophers Maximus and Priscus on the sublime nature of the soul, while the wound of his pierced side was gaping wide. At last the swelling of his veins began to choke his breath, and having drank some cold water, which he had asked for, he expired quietly about midnight, in the thirty-first year of his age. He was born at Constantinople, and in his childhood lost his father, Constantius, who, after the death of his brother Constantine, perished amid the crowd of competitors for the vacant crown. And at the same early age he lost his mother, Basilina, a woman descended from a long line of noble ancestors.

25.4

Julian was a man to be classed with heroic characters, and conspicuous for the brilliancy of his exploits and his innate majesty. For since, as wise men lay it down, there are four cardinal virtues,—temperance, prudence, justice, and fortitude,—with corresponding external accessories, such as military skill, authority, prosperity, and liberality, he eagerly cultivated them all as if they had been but one.

And in the first place, he was of a chastity so inviolate that, after the loss of his wife he never indulged in any sexual pleasures, recollecting what is told in Plato of Sophocles the tragedian, that being asked when he was a very old man whether he still had any commerce with women, he said “No,” with this further addition, that “he was glad to say that he had at all times avoided such indulgence as a tyrannous and cruel master.”

And to strengthen this resolution he often called to mind the words of the lyric poet Bacchylides, whom he used to read with pleasure, and who said that as a fine painter makes a handsome face, so chastity adorns a life that aims at greatness. And even when in the prime of life he so carefully avoided this taint that there was never the least suspicion of his becoming enamoured even of any of his household, as has often happened.

And this kind of temperance increased in him, being strengthened by a sparing indulgence in eating and sleeping, to which he rigidly adhered whether abroad or at home. For in time of peace his frugal allowance of food was a marvel to all who knew him, as resembling that of a man always wishing to resume the philosopher’s cloak. And in his various campaigns he used commonly only to take a little plain food while standing, as is the custom of soldiers.

And when after being fatigued by labour he had refreshed his body with a short rest, as soon as he awoke he would go by himself round all

the sentries and outposts; after which he retired to his serious studies.

And if any voice could bear witness to his use of the nocturnal lamp, by which he pursued his lucubrations, it would show that there was a vast difference between some emperors and him, who did not even indulge himself in those pleasures permitted by the necessities of human nature.

Of his prudence there were also many proofs, of which it will be sufficient to recount a few. He was profoundly skilled in war, and also in the arts of peace. He was very attentive to courtesy, claiming just so much respect as he considered sufficient to mark the difference between contempt and insolence. He was older in virtue than in years, being eager to acquire all kinds of knowledge. He was a most incorruptible judge, a rigid censor of morals and manners, mild, a despiser of riches, and indeed of all mortal things. Lastly, it was a common saying of his, "That it was beneath a wise man, since he had a soul, to aim at acquiring praise by his body."

Of his justice there are many conspicuous proofs: first, because, with all proper regard to circumstances and persons, he inspired awe without being cruel; secondly, because he repressed vice by making examples of a few, and also because he threatened severe punishment more frequently than he employed it.

Lastly, to pass over many circumstances, it is certain that he treated with extreme moderation some who were openly convicted of plotting against him, and mitigated the rigour of the punishment to which they were sentenced with genuine humanity.

His many battles and constant wars displayed his fortitude, as did his endurance of extreme cold and heat. From a common soldier we require the services of the body, from an emperor those of the mind. But having boldly thrown himself into battle, he would slay a

ferocious foe at a single blow; and more than once he by himself checked the retreat of our men at his own personal risk. And when he was putting down the rule of the furious Germans, and also in the scorching sands of Persia, he encouraged his men by fighting in the front ranks of his army.

Many well-known facts attest his skill in all that concerns a camp; his storming of cities and castles amid the most formidable dangers; the variety of his tactics for battles, the skill he showed in choosing healthy spots for his camps, the safe principles on which his lines of defence and outposts were managed.

So great was his authority, that while he was feared he was also greatly loved as his men's comrade in their perils and dangers. And in the hottest struggles he took notice of cowards for punishment. And while he was yet only Cæsar, he kept his soldiers in order while confronting the barbarians, and destitute of pay as I have mentioned before. And haranguing his discontented troops, the threat which he used was that he would retire into private life if they continued mutinous.

Lastly, this single instance will do as well as many, by haranguing the Gallic legions, who were accustomed to the frozen Rhine, in a simple address, he persuaded them to traverse vast regions and to march through the warm plains of Assyria to the borders of Media.

His good fortune was so conspicuous that, riding as it were on the shoulders of Fortune, who was long his faithful guide, he overcame enormous difficulties in his victorious career. And after he quitted the regions of the west, they all remained quiet during his life-time, as if under the influence of a wand powerful enough to tranquillize the world.

Of his liberality there are many and undoubted proofs. Among which are his light exactions of tribute, his remission of the tribute of

crowns, and of debts long due, his putting the rights of individuals on an equal footing with those of the treasury, his restoration of their revenues and their lands to different cities, with the exception of such as had been lawfully sold by former princes; and also the fact that he was never covetous of money, which he thought was better kept by its owners, often quoting the saying, “that Alexander the Great, when he was asked where he kept his treasures, kindly answered ‘Among my friends.’”

Having discussed those of his good qualities which have come within our knowledge, let us now proceed to unfold his faults, though they have been already slightly noticed. He was of an unsteady disposition; but this fault he corrected by an excellent plan, allowing people to set him right when guilty of indiscretion.

He was a frequent talker, rarely silent. Too much devoted to divination, so much so as in this particular to equal the emperor Adrian. He was rather a superstitious than a legitimate observer of sacred rites, sacrificing countless numbers of victims; so that it was reckoned that if he had returned from the Parthians there would have been a scarcity of cattle. Like the celebrated case of Marcus Cæsar,⁴⁵ about whom it was written, as it is said, “The white cattle to Marcus Cæsar, greeting. If you conquer there is an end of us.”

He was very fond of the applause of the common people, and an immoderate seeker after praise even in the most trifling matters; often, from a desire of popularity, indulging in conversation with unworthy persons.

But in spite of all this he deserved, as he used to say himself, to have it thought that that ancient Justice, whom Aratus says fled to heaven from disgust with the vices of men, had in his reign returned again to the earth; only that sometimes he acted arbitrarily and inconsistently.

For he made some laws which, with but few exceptions, were not offensive, though they very positively enforced or forbade certain actions. Among the exceptions was that cruel one which forbade Christian masters of rhetoric and grammar to teach unless they came over to the worship of the heathen gods.

And this other ordinance was equally intolerable, namely one which allowed some persons to be unjustly enrolled in the companies of the municipal guilds, though they were foreigners, or by privilege or birth wholly unconnected with such companies.

As to his personal appearance it was this. He was of moderate stature, with soft hair, as if he had carefully dressed it, with a rough beard ending in a point, with beautiful brilliant eyes, which displayed the subtlety of his mind, with handsome eyebrows and a straight nose, a rather large mouth, with a drooping lower lip, a thick and stooping neck, large and broad shoulders. From head to foot he was straight and well proportioned, which made him strong and a good runner.

And since his detractors have accused him of provoking new wars, to the injury of the commonwealth, let them know the unquestionable truth, that it was not Julian but Constantius who occasioned the hostility of the Parthians by greedily acquiescing in the falsehoods of Metrodorus, as we have already set forth.

In consequence of this conduct our armies were slain, numbers of our soldiers were taken prisoners, cities were rased, fortresses were stormed and destroyed, provinces were exhausted by heavy expenses, and in short the Persians, putting their threats into effect, were led to seek to become masters of everything up to Bithynia and the shores of the Propontis.

While the Gallic wars grew more and more violent, the Germans overrunning our territories, and being on the point of forcing the

passes of the Alps in order to invade Italy, there was nothing to be seen but tears and consternation, the recollection of the past being bitter, the expectation of the future still more woeful. All these miseries, this youth, being sent into the West with the rank of Cæsar, put an end to with marvellous celerity, treating the kings of those countries as base-born slaves.

Then in order to re-establish the prosperity of the east, with similar energy he attacked the Persians, and would have gained in that country both a triumph and a surname, if the will of heaven had been in accordance with his glorious plans and actions.

And as we know by experience that some men are so rash and hasty that if conquered they return to battle, if shipwrecked, to the sea, in short, each to the difficulties by which he has been frequently overcome, so some find fault with this emperor for returning to similar exploits after having been repeatedly victorious.

25.5

After these events there was no time for lamentation or weeping. For after he had been laid out as well as the circumstances and time permitted, that he might be buried where he himself had formerly proposed, at daybreak the next morning, which was on the 27th of June, while the enemy surrounded us on every side, the generals of the army assembled, and having convened the chief officers of the cavalry and of the legions, deliberated about the election of an emperor.

There were great and noisy divisions. Arinthæus and Victor, and the rest of those who had been attached to the court of Constantius, sought for a fit man of their own party. On the other hand, Nevitta and Dagalaiphus, and the nobles of the Gauls, sought for a man among their own ranks.

While the matter was thus in dispute, they all unanimously agreed upon Sallustius. And when he pleaded ill health and old age, one of the soldiers of rank observing his real and fixed reluctance said, "And what would you do if the emperor while absent himself, as has often happened, had intrusted you with the conduct of this war? Would you not have postponed all other considerations and applied yourself to extricating the soldiers at once from the difficulties which press on them? Do so now: and then, if we are allowed to reach Mesopotamia, it will be time enough for the united suffrages of both armies to declare a lawful emperor."

Amid these little delays in so important a matter, before opinions were justly weighed, a few made an uproar, as often happens in critical circumstances, and Jovian was elected emperor, being the chief officer of the guards, and a man of fair reputation in respect of his father's services. For he was the son of Varronianus, a distinguished count,⁴⁶ who had not long since retired from military service to lead a private life.

And immediately he was clothed in the imperial robes, and was suddenly led forth out of the tent and passed at a quick pace through the army as it was preparing to march.

And as the line extended four miles, those in the van hearing some persons salute Jovian as Augustus, raised the same cry still more loudly, for they were caught by the relationship, so to say, of the name, which differed only by one letter from that of Julian, and so they thought that Julian was recovered and was being led forth with great acclamations as had often been the case. But when the new emperor, who was both taller and less upright, was seen, they suspected what had happened, and gave vent to tears and lamentations.

And if any lover of justice should find fault with what was done at this extreme crisis as imprudent, he might still more justly blame sailors who, having lost a skilful pilot when both winds and waves are

agitated by a storm, commit the helm of their vessel to some one of their comrades.

This affair having been thus settled by a blind sort of decision of Fortune, the standard-bearer of the Jovian legion, which Varronianus had formerly commanded, having had a quarrel with the new emperor while he was a private individual, because he had been a violent disparager of his father, now fearing danger at his hand, since he had risen to a height exceeding any ordinary fortune, fled to the Persians. And having been allowed to tell what he knew, he informed Sapor, who was at hand, that the prince whom he dreaded was dead, and that Jovian, who had hitherto been only an officer of the guards, a man of neither energy nor courage, had been raised by a mob of camp drudges to a kind of shadow of the imperial authority.

Sapor hearing this news, which he had always anxiously prayed for, and being elated by this unexpected good fortune, having reinforced the troops who had fought against us with a strong body of the royal cavalry, sent them forward with speed to attack the rear of our army.

25.6

And while these arrangements were being made, the victims and entrails were inspected on behalf of Jovian, and it was pronounced that he would ruin everything if he remained in the camp, as he proposed, but that if he quitted it he would have the advantage.

And just as we were beginning our march, the Persians attacked us, preceded by their elephants. Both our horses and men were at first disordered by their roaring and formidable onset; but the Jovian and Herculean legions slew a few of the monsters, and made a gallant resistance to the mounted cuirassiers.

Then the legions of the Jovii and Victores coming up to aid their comrades, who were in distress, also slew two elephants and a great number of the enemy's troops. And on our left wing three most gallant men were slain, Julian, Macrobius, and Maximus, all tribunes

of the legions which were then the chief of the whole army.

When they were buried as well as circumstances permitted, as night was drawing on, and as we were pressing forward with all speed towards a fort called Sumere, the dead body of Anatolius was recognized and buried with a hurried funeral. Here also we were rejoined by sixty soldiers and a party of the guards of the palace, whom we have mentioned as having taken refuge in a fort called Vaccatum.

Then on the following day we pitched our camp in a valley in as favourable a spot as the nature of the ground permitted, surrounding it with a rampart like a wall, with sharp stakes fixed all round like so many swords, with the exception of one wide entrance.

And when the enemy saw this they attacked us with all kinds of missiles from their thickets, reproaching us also as traitors and murderers of an excellent prince. For they had heard by the vague report of some deserters that Julian had fallen by the weapon of a Roman.

And presently, while this was going on, a body of cavalry ventured to force their way in by the Prætorian gate, and to advance almost up to the emperor's tent. But they were vigorously repulsed with the loss of many of their men killed and wounded.

Quitting this camp, the next night we reached a place called Charcha, where we were safe, because the artificial mounds of the river had been broken to prevent the Saracens from overrunning Armenia, so that no one was able to harass our lines as they had done before.

Then on the 1st of July we marched thirty furlongs more, and came to a city called Dura, where our baggage-horses were so jaded, that their drivers, being mostly recruits, marched on foot till they were hemmed in by a troop of Saracens; and they would all have been killed if some

squadrons of our light cavalry had not gone to their assistance in their distress.

We were exposed to the hostility of these Saracens because Julian had forbidden that the presents and gratuities, to which they had been accustomed, should be given to them; and when they complained to him, they were only told that a warlike and vigilant emperor had iron, not gold.

Here, owing to the obstinate hostility of the Persians, we lost four days. For when we advanced they followed us, compelling us to retrace our steps by their incessant attacks. When we halted gradually to fight, they retired, tormenting us by their long delay. And now (for when men are in great fear even falsehoods please them) a report being spread that we were at no great distance from our own frontier, the army raised an impatient shout, and demanded to be at once led across the Tigris.

But the emperor and his officers opposed this demand, and showed them that the river, now just at the time of the rising of the Dogstar, was much flooded, entreated them not to trust themselves to its dangerous currents, reminding them that most of them could not swim, and adding likewise that the enemy had occupied the banks of the river, swoln as it was at many parts.

But when the demand was repeated over and over again in the camp, and the soldiers with shouts and great eagerness began to threaten violence, the order was given very unwillingly that the Gauls, mingled with the northern Germans, should lead the way into the river, in order that if they were carried away by the violence of the stream the obstinacy of the rest might be shaken; or on the other hand, if they accomplished the passage in safety the rest might attempt it with more confidence.

And men were selected suited to such an enterprise, who from their childhood had been accustomed in their native land to cross the greatest rivers. And when the darkness of night presented an opportunity for making the attempt unperceived, as if they had just escaped from a prison, they reached the opposite bank sooner than could have been expected; and having beaten down and slain numbers of the Persians whom, though they had been placed there to guard the passage, their fancied security had lulled into a gentle slumber, they held up their hands, and shook their cloaks so as to give the concerted signal that their bold attempt had succeeded.

And when the signal was seen, the soldiers became eager to cross, and could only be restrained by the promise of the engineers to make them bridges by means of bladders and the hides of slaughtered animals.

25.7

While these vain attempts were going on, king Sapor, both while at a distance, and also when he approached, received from his scouts and from our deserters a true account of the gallant exploits of our men, of the disgraceful slaughter of his own troops, and also of his elephants in greater numbers than he ever remembered to have lost before. And he heard also that the Roman army, being hardened by its continual labours since the death of its glorious chief, did not now think so much, as they said, of safety as of revenge; and were resolved to extricate themselves from their difficulties either by a complete victory or by a glorious death.

He looked on this news as formidable, being aware by experience that our troops who were scattered over these provinces could easily be assembled, and knowing also that his own troops after their heavy losses were in a state of the greatest alarm; he also heard that we had in Mesopotamia an army little inferior in numbers to that before him.

And besides all this, his courage was damped by the fact of five hundred men having crossed that swollen river by swimming in perfect safety, and having slain his guards, and so emboldening the rest of their comrades to similar hardihood.

In the mean time, as the violence of the stream prevented any bridges from being constructed, and as everything which could be eaten was consumed, we passed two days in great misery, and the starving soldiers began to be furious with rage, thinking it better to perish by the sword than by hunger, that most degrading death.

But the eternal providence of God was on our side, and beyond our hopes the Persians made the first overtures, sending the Surena and another noble as ambassadors to treat for peace, and they themselves being in a state of despondency, as the Romans, having proved superior in almost every battle, weakened them daily.

But the conditions which they proposed were difficult and intricate, since they pretended that, out of regard for humanity, their merciful monarch was willing to permit the remains of our army to return home, provided the Cæsar, with his officers, would satisfy his demands.

In reply, we sent as ambassadors on our part, Arinthæus and Sallustius; and while the proper terms were being discussed with great deliberation, we passed four more days in great suffering from want of provisions, more painful than any kind of torture.

And in this truce, if before the ambassadors were sent, the emperor, being disabused, had retired slowly from the territories of the enemy, he would have reached the forts of Corduena, a rich region belonging to us, only one hundred miles from the spot where these transactions were being carried on.

But Sapor obstinately demanded (to use his own language) the

restoration of those territories which had been taken from him by Maximian; but as was seen in the progress of the negotiation, he in reality required, as the price of our redemption, five provinces on the other side of the Tigris,—Arzanena, Moxœna, Zabdicena, Rehemena, and Corduena, with fifteen fortresses, besides Nisibis, and Singara, and the important fortress called the camp of the Moors.

And though it would have been better to fight ten battles than to give up one of them, still a set of flatterers harassed our pusillanimous emperor with harping on the dreaded name of Procopius, and affirmed that unless we quickly recrossed the river, that chieftain, as soon as he heard of the death of Julian, would easily bring about a revolution which no one could resist, by means of the fresh troops which he had under his command.

Jovian, being wrought upon by the constant reiteration of these evil counsels, without further delay gave up everything that was demanded, with this abatement, which he obtained with difficulty, that the inhabitants of Nisibis and Singara should not be given up to the Persians as well as the cities themselves; and that the Roman garrisons in the forts about to be surrendered should be permitted to retire to fortresses of our own.

To which another mischievous and unfair condition was added, that after this treaty was concluded we were not to be at liberty to assist Arsaces against the Persians, if he implored our aid, though he had always been our friend and trusty ally. And this was insisted on by Sapor for two reasons, in order that the man might be punished who had laid waste Chiliocomum at the emperor's command, and also that facility might be given for invading Armenia without a check. In consequence of this it fell out subsequently that Arsaces was taken prisoner, and that, amid different dissensions and disturbances, the Parthians laid violent hands on the greater portion of Armenia, where it borders on Media, and on the town of Artaxata.

This ignoble treaty being made, that nothing might be done during the armistice, in contravention of its terms, some men of rank were given as hostages on each side: on ours, Remora, Victor, and Bellovædius, tribunes of distinguished legions: and on that of the enemy, one of their chief nobles named Bineses, and three other satraps of note.

So peace was made for thirty years, and ratified by solemn oaths; and we, returning by another line of march, because the parts near the river were rugged and difficult, suffered severely for want of water and provisions.

25.8

The peace which had been granted on pretence of humanity was turned to the ruin of many who were so exhausted by want of food as to be at the last gasp, and who in consequence could only creep along, and were either carried away by the current of the river from not being able to swim, or if able to overcome the force of the stream so far as to reach the bank, were either slain like sheep by the Saracens or Persians (because, as we stated some time back, the Germans had driven them out), or sent to a distance to be sold for slaves.

But when the trumpets openly gave the signal for crossing the river, it was dreadful to see with what ardour every individual hastened to rush into this danger, preferring himself to all his comrades, in the desire of avoiding the many dangers and distresses behind him. Some tried to guide the beasts who were swimming about at random, with hurdles hurriedly put together; others, seated on bladders, and others, being driven by necessity to all kinds of expedients, sought to pass through the opposing waves by crossing them obliquely.

The emperor himself with a few others crossed over in the small boats, which we said were saved when the fleet was burnt, and then sent the same vessels backwards and forwards till our whole body was brought across. And at length all of us, except such as were drowned,

reached the opposite bank of the river, being saved amid our difficulties by the favour of the Supreme Deity.

While we were still oppressed with the fear of impending disasters, we learnt from information brought in by our outposts that the Persians were throwing a bridge over the river some way off, at a point out of our sight, in order that while all ideas of war were put an end to on our side by the ratification of the treaty of peace, they might come upon our invalids as they proceeded carelessly onwards, and on the animals exhausted with fatigue. But when they found their purpose discovered, they relinquished their base design.

Being now relieved from this suspicion, we hastened on by rapid marches, and approached Hatra, an ancient town in the middle of a desert, which had been long since abandoned, though at different times those warlike emperors, Trajan and Severus, had attacked it with a view to its destruction, but had been almost destroyed with their armies, as we have related in our history of their exploits.

And as we now learnt that over the vast plain before us for seventy miles in that arid region no water could be found but such as was brackish and fetid, and no kind of food but southernwood, wormwood, dracontium, and other bitter herbs, we filled the vessels which we had with sweet water, and having slain the camels and the rest of the beasts of burden, we thus sought to insure some kind of supplies, though not very wholesome.

For six days the army marched, till at last even grass, the last comfort of extreme necessity, could not be found; when Cassianus, Duke of Mesopotamia, and the tribune Mauricius, who had been sent forward with this object, came to a fort called Ur, and brought some food from the supplies which the army under Procopius and Sebastian, by living sparingly, had managed to preserve.

From this place another person of the name of Procopius, a secretary, and Memoridus, a military tribune, was sent forward to Illyricum and Gaul to announce the death of Julian, and the subsequent promotion of Jovian to the rank of emperor.

And Jovian deputed them to present his father-in-law Lucillianus (who, after giving up military service, had retired to the tranquillity of private life, and who was at that time dwelling at Sirmium) with a commission as captain of the forces of cavalry and infantry, and to urge him at the same time to hasten to Milan, to support him there in any difficulties which might arise, or (what he feared most) to oppose any attempts which might be made to bring about a revolution.

And he also gave them still more secret letters, in which he warned Lucillianus to bring him some picked men of tried energy and fidelity, of whose aid he might avail himself according as affairs should turn out.

He also made a wise choice, and selected Malarichus, who was at that time in Italy on his own private affairs, sending him the ensigns of office that he might succeed Jovinus as commander of the forces in Gaul, in which appointment he had an eye on two important objects; first, to remove a general of especial merit who was an object of suspicion on that very account, and also by the promotion to so high a position of a man whose hopes were not set on anything so lofty to bind him to exert all his zeal in supporting the doubtful position of the maker of his fortunes.

And the officers who went to perform these commands were also enjoined to extol the emperor's conduct, and wherever they went to agree in reporting that the Parthian campaign had been brought to an honourable termination; they were also charged to prosecute their journey with all speed by night and day, delivering as they went letters from the new emperor to all the governors of provinces and commanders of the forces on their road; and when they had secretly

learnt the opinions of them all, to return to him with all speed, in order that when he knew what was being done in the distant provinces, he might be able to frame well-digested and wise plans for strengthening himself in his government.

But Fame (being alway the most rapid bearer of bad news), outstripping these couriers, flew through the different provinces and nations; and above all others struck the citizens of Nisibis with bitter sorrow when they heard that their city was surrendered to Sapor, whose anger and enmity they dreaded, from recollecting the havoc and slaughter which he had made in his frequent attempts to take the place.

For it was clear that the whole eastern empire would have fallen under the power of Persia long before if it had not been for the resistance which this city, strong in its admirable position and its mighty walls, had been able to offer. But miserable as they now were, and although they were filled with a still greater fear of what might befall them hereafter, they were supported by this slender hope, that, either from his own inclination or from being won over by their prayers, the emperor might consent to keep their city in its existing state, as the strongest bulwark of the east.

While different reports were flying about of what had taken place, the scanty supplies which I have spoken of as having been brought, were consumed, and necessity might have driven the men to eat one another, if the flesh of the animals slain had not lasted them a little longer; but the consequence of our destitute condition was, that the arms and baggage were thrown away; for we were so worn out with this terrible famine, that whenever a single bushel of corn was found (which seldom happened), it was sold for ten pieces of gold at the least.

Marching on from thence, we come to Thilsaphata where Sebastian and Procopius, with the tribunes and chief officers of the legions

which had been placed under their command for the protection of Mesopotamia, came to meet the emperor as the solemn occasion required, and being kindly received, accompanied us on our march.

After this, proceeding with all possible speed, we rejoiced when we saw Nisibis, where the emperor pitched a standing camp outside the walls; and being most earnestly entreated by the whole population to come to lodge in the palace according to the custom of his predecessors, he positively refused, being ashamed that an impregnable city should be surrendered to an enraged enemy while he was within its walls.

But as the evening was getting dark, Jovian, the chief secretary, was seized while at supper, the man who at the siege of the city Maogamalcha we have spoken of as escaping with others by a subterranean passage, and being led to an out-of-the-way place, was thrown headlong down a dry well, and overwhelmed with a heap of stones which were thrown down upon him, because after the death of Julian he also had been named by a few persons as fit to be made emperor; and after the election of his namesake had not behaved with any modesty, but had been heard to utter secret whispers concerning the business, and had from time to time invited some of the leading soldiers to entertainments.

25.9

The next day Bineses, one of the Persians of whom we have spoken as the most distinguished among them, hastening to execute the commission of his king, demanded from Jovian the immediate performance of his promise; and by his permission he entered the city of Nisibis, and raised the standard of his nation on the citadel, announcing to the citizens a miserable emigration from their native place.

Immediately they were all commanded to expatriate themselves, in vain stretching forth their hands in entreaty not to be compelled to

depart, affirming that they by themselves, without drawing on the public resources for either provisions or soldiers, were sufficient to defend their own home in full confidence that Justice would be on their side while fighting for the place of their birth, as they had often found her to be before. Both nobles and common people joined in this supplication; but they spoke in vain as to the winds, the emperor fearing the crime of perjury, as he pretended, though in reality the object of his fear was very different.

Then a man of the name of Sabinus, eminent among his fellow-citizens both for his fortune and birth, replied with great fluency that Constantius too was at one time defeated by the Persians in the terrible strife of fierce war, that afterwards he fled with a small body of comrades to the unguarded station of Hibita, where he lived on a scanty and uncertain supply of bread which was brought him by an old woman from the country; and yet that to the end of his life he lost no territory; while Jovian, at the very beginning of his reign, was yielding up the wall of his provinces, by the protection of which barrier they had hitherto remained safe from the earliest ages.

But as he could not prevail on the emperor, who persisted obstinately in alleging the obligation of his oath, presently, when Jovian, who had for some time refused the crown which was offered to him, accepted it under a show of compulsion, an advocate, named Silvanus, exclaimed boldly, "May you, O emperor, be so crowned in the rest of your cities." But Jovian was offended at his words, and ordered the whole body of citizens to quit the city within three days, in despair as they were at the existing state of affairs.

Accordingly, men were appointed to compel obedience to this order, with threats of death to every one who delayed his departure; and the whole city was a scene of mourning and lamentation, and in every quarter nothing was heard but one universal wail, matrons tearing their hair when about to be driven from their homes, in which they had been born and brought up, the mother who had lost her children,

or the wife her husband, about to be torn from the place rendered sacred by their shades, clinging to their doorposts, embracing their thresholds, and pouring forth floods of tears.

Every road was crowded, each person straggling away as he could. Many, too, loaded themselves with as much of their property as they thought they could carry, while leaving behind them abundant and costly furniture, for this they could not remove for want of beasts of burden.

Thou in this place, O fortune of the Roman world, art justly an object of accusation, who, while storms were agitating the republic, didst strike the helm from the hand of a wise sovereign, to intrust it to an inexperienced youth, whom, as he was not previously known for any remarkable actions in his previous life, it is not fair either to blame or praise.

But it sunk into the heart of all good citizens, that while, out of fear of a rival claimant of his power, and constantly fancying some one in Gaul or in Illyricum might have formed ambitious designs, he was hastening to outstrip the intelligence of his approach, he should have committed, under pretence of reverence for an oath, an act so unworthy of his imperial power as to abandon Nisibis, which ever since the time of Mithridates had been the chief hindrance to the encroachments of the Persians in the East.

For never before since the foundation of Rome, if one consults all its annals, I believe has any portion of our territories been surrendered by emperor or consul to an enemy. Nor is there an instance of a triumph having been celebrated for the recovery of anything that had been lost, but only for the increase of our dominions.

On this principle, a triumph was refused to Publius Scipio for the recovery of Spain, to Fulvius for the acquisition of Capua after a long struggle, and to Opimius after many battles with various results,

because the people of Fregellæ, who at that time were our implacable enemies, had been compelled to surrender.

For ancient records teach us that disgraceful treaties, made under the pressure of extreme necessity, even after the parties to them have sworn to their observance in set terms, have nevertheless been soon dissolved by the renewal of war; as in the olden time, after the legions had been made to pass under the yoke at the Caudine Forks, in Samnium; and also when an infamous peace was contemplated by Albinus in Numidia; and when Mancinus, the author of a peace which was concluded in disgraceful haste, was surrendered to the people of Numantia.

Accordingly, when the citizens had been withdrawn, the city surrendered, and the tribune Constantius had been sent to deliver up to the Persian nobles the fortresses and districts agreed upon, Procopius was sent forward with the remains of Julian, to bury them in the suburbs of Tarsus, according to his directions while alive. He departed, I say, to fulfil this commission, and as soon as the body was buried, he quitted Tarsus, and though sought for with great diligence, he could not be found anywhere, till long afterwards he was suddenly seen at Constantinople invested with the purple.

25.10

These transactions having been thus concluded, after a long march we arrived at Antioch, where for several days in succession many terrible omens were seen, as if the gods were offended, since those who were skilled in the interpretation of prodigies foretold that impending events would be melancholy.

For the statue of Maximian Cæsar, which was placed in the vestibule of the palace, suddenly lost the brazen globe, formed after the figure of the heavens, which it bore in its hand. Also the beams in the council chamber sounded with an ominous creak; comets were seen in the daytime, respecting the nature of which natural philosophers differ.

For some think they have received the name because they scatter fire wreathed like hair⁴⁷ by a number of stars being collected into one mass; others think that they derive their fire from the dry evaporation of the earth rising gradually to a greater height; some fancy that the sunbeams as they rapidly pass, being prevented by dense clouds from descending lower, by infusing their brilliancy into a dense body show a light which, as it were, seems spotted with stars to the eyes of mortals. Some again have a fixed opinion that this kind of light is visible when some cloud, rising to a greater height than usual, becomes illuminated by its proximity to the eternal fires; or, that at all events there are some stars like the rest, of which the special times of their rising and setting are not understood by man. There are many other suggestions about comets which have been put forth by men skilled in mundane philosophy, but I must pass over them, as my subject calls me in another direction.

The emperor remained a short time at Antioch, distracted by many important cares, but desirous above all things to proceed. And so, sparing neither man nor beast, he started from that city in the depth of winter, though, as I have stated, many omens warned him from such a course, and made his entrance into Tarsus, a noble city of Cilicia, the origin of which I have already related.

Being in excessive haste to depart from thence, he ordered decorations for the tomb of Julian, which was placed in the suburb, in the road leading to the defiles of Mount Taurus. Though a sound judgment would have decided that the ashes of such a prince ought not to lie within sight of the Cydnus, however beautiful and clear that river is, but, to perpetuate the glory of his achievements, ought rather to be placed where they might be washed by the Tiber as it passes through the Eternal City and winds round the monuments of the ancient gods.

Then quitting Tarsus, he reached by forced marches Tyana, a town of Cappadocia, where Procopius the secretary and Memoridus the

tribune met him on their return, and related to him all that occurred; beginning, as the order of events required, at the moment when Lucillianus (who had entered Milan with the tribunes Seniauchus and Valentinian, whom he had brought with him, as soon as it was known that Malarichus had refused to accept the post which was offered to him) hastened on with all speed to Rheims.

There, as if it had been a time of profound tranquillity, he went quite beside the mark, as we say, and while things were still in a very unsettled state, he most unseasonably devoted his attention to scrutinizing the accounts of the commissary, who, being conscious of fraud and guilt, fled to the standards of the soldiers, and pretended that while Julian was still alive some one of the common people had attempted a revolution. By this false report the army became so greatly excited that they put Lucillianus and Seniauchus to death. For Valentinian, who soon afterwards became emperor, had been concealed by his host Primitivus in a safe place, overwhelmed with fear and not knowing which way to flee.

This disastrous intelligence was accompanied by one piece of favourable news,—that the soldiers who had been sent by Jovian were approaching (men known in the camp as the heads of the classes), who brought word that the Gallic army had cordially embraced the cause of Jovian.

When this was known, the command of the second class of the Scutarii was given to Valentinian, who had returned with those men; and Vitalianus, who had been a soldier of the Heruli, was placed among the body-guards, and afterwards, when raised to the rank of count, met with very ill success in Illyricum. And at the same time Arinthæus was despatched into Gaul with letters for Jovinus, with an injunction to maintain his ground and act with resolution and constancy; and he was further charged to make an example of the

author of the disturbance which had taken place, and to send the ringleaders of the sedition as prisoners to the court.

When these matters had been arranged as seemed most expedient, the Gallic soldiers obtained an audience of the emperor at Aspuna, a small town of Galatia, and having been admitted into the council chamber, after the message which they brought had been listened to with approval, they received rewards and were ordered to return to their standards.

A.D. 364.

When the emperor had made his entry into Ancyra, everything necessary for his procession having been prepared as well as the time permitted, Jovian entered on the consulship, and took as his colleague his son Varronianus, who was as yet quite a child, and whose cries as he obstinately resisted being borne in the curule chair, according to the ancient fashion, was an omen of what shortly happened.

Here also the appointed termination of life carried off Jovian with rapidity. For when he had reached Dadastana, a place on the borders of Bithynia and Galatia, he was found dead in the night; and many uncertain reports were spread concerning his death.

It was said that he had been unable to bear the unwholesome smell of the fresh mortar with which his bedchamber had been plastered. Also that his head had swollen in consequence of a great fire of coals, and that this had been the cause of his death; others said that he had died of a surfeit from over eating. He was in the thirty-third year of his age. And though he and Scipio Æmilianus both died in the same manner, we have not found out that any investigation into the death of either ever took place.

Jovian was slow in his movements, of a cheerful countenance, with blue eyes; very tall, so much so that it was long before any of the royal

robes could be found to fit him. He was anxious to imitate Constantius, often occupying himself with serious business till after midday, and being fond of jesting with his friends in public.

He was given to the study of the Christian law, sometimes doing it marked honour; he was tolerably learned in it, very well inclined to its professors, and disposed to promote them to be judges, as was seen in some of his appointments. He was fond of eating, addicted to wine and women, though he would perhaps have corrected these propensities from a sense of what was due to the imperial dignity.

It was said that his father, Varronianus, through the warning of a dream, had long since foreseen what happened, and had foretold it to two of his most faithful friends, with the addition that he himself also should become consul. But though part of his prophecy became true, he could not procure the fulfilment of the rest. For though he heard of his son's high fortune, he died before he could see him.

And because the old man had it foretold to him in his sleep that the highest office was destined for his name, his grandson Varronianus, while still an infant, was made consul with his father Jovian, as we have related above.

Notes

¹ “The minute interval which may be interposed between the *hyeme adultâ* and the *primo vere* of Ammianus, instead of allowing a sufficient space for a march of three thousand miles, would render the orders of Constantius as extravagant as they were unjust; the troops of Gaul could not have reached Syria till the end of autumn. The memory of Ammianus must have been inaccurate, and his language incorrect.”—Gibbon, c. xxii.

² According to Erdfurt, this legion was so named from its contumacious and mutinous disposition.

³ The Gentiles were body-guards of the emperor, or of the Cæsar, of barbarian extraction, whether Scythians, Goths, Franks, Germans, &c.

⁴ It may be remarked that Ammianus continually uses the words Persian and Parthian as synonymous.

⁵ Santon is near Cleves.

⁶ The Quinquennalia (games under which title had been previously instituted in honour of Julius Cæsar and Augustus) were revived by Nero, A.D. 60, again fell into disuse, and were again revived by Domitian.—Cf. Tacit. An. xiv. 20.

⁷ V. infra, Lib. xxvi. c. 8.

⁸ Sirmium was very near the existing town of Peterwaradin.

⁹ Now the Balkan.

¹⁰ It is believed that Mattium is the same as Marburg; it is not quite certain.

¹¹ These and other titles, such as “respectable” (spectabiles), “illustrious” (egregie, illustres), were invented by the emperors of this century. They none of them appear to have conferred any substantive power.

¹² This office had been first established by Augustus, who created two prefects of the prætorian cohorts, under whose command also all the soldiers in Italy were placed. Commodus raised the number to three, and Constantine to four, whom (when he abolished the prætorian cohort), he made, in fact, governors of provinces. There was one præfectus prætorio for Gaul, one for Italy, one for Illyricum, and one for the East.

¹³ Ammianus uses the phrase “worship of *the gods*,” in opposition to Christianity.

¹⁴ Pro Archias Poeta, cap. xxii.

¹⁵ The fable was that Hecuba was turned into a bitch, from which this place was called κυνὸς σῆμα, a dog’s tomb.

¹⁶ Io—the name Βόσπορος is derived from Βοὸς πόρος, the passage of the Cow.

¹⁷ So Virgil calls them Indomitique Dahæ. In the Georgics, also, he speaks of the Chalybes as producers of iron. At Chalybes nudi ferrum.

¹⁸ Or triennial, from τρεῖς, three; and ἔτος, a year.

¹⁹ From Διόσκουροι, the sons of Jupiter, i.e., Castor and Pollux.

²⁰ From ἡνίοχος, a charioteer.

²¹ The old name was ἸΑΞΙΝΟΣ, inhospitable; turned into ΕὐΞΕΙΝΟΣ, friendly to strangers—εὐήθης, according to etymology, would mean “of a good disposition:” εὐφρόνη, “the time when people have happy thoughts;” Εὐμενίδες, “deities of propitious might.”

²² A people living in one of the islands near Sicily, and changed by Jupiter as related, Ov. Met. xiv., into monkeys.

²³ Two of the chief giants, Hom. Od. xi.

²⁴ A time spoken of by Pliny as before the fourth watch.

²⁵ These books are lost.

²⁶ We must remark here Ammianus’s complete ignorance of comparative geography and the bearings of the different countries of which he speaks. The Syrtes and Cape Ras are due *west*, not south of Egypt, The Ethiopians and Catadupi are on the north; while the Arabs, whom he places in the same line, are on the south-east. The Sea of Issus, on the Levant, which he places on the west, is on the north.

²⁷ The Blemmyæ were an Ethiopian tribe to the south of Egypt.

²⁸ These names seem derived from the real or fancied shape of the snakes mentioned: the amphibæna, from ἀμφὶ and βαίνω, to go both ways, as it was believed to have a head at each end. The scytalas was like “a staff;” the acontias, like “a javelin;” the dipsas was a thirsty snake.

²⁹ From ἀντί, opposite; and σκιά, shadow.

³⁰ The book containing this account is lost.

³¹ From νικάω, to conquer.

³² As the Greek epigram has it—

Τὸν γαίης καὶ πόντου ἀμειφθεΐσαισι κελεύθοις
Ναύτην ἠπεύρου, πεζοπόρον πελάγους.

Thus translated in Bohn’s ‘Greek Anthology,’ p. 25:—

Him, who reversed the laws great Nature gave,
Sail’d o’er the continent and walk’d the wave,
Three hundred spears from Sparta’s iron plain
Have stopp’d. Oh blush, ye mountains and thou main!

³³ The probability is that all these names are corrupt. Ammianus’s ignorance of the relative bearings of countries makes it difficult to decide what they ought to be. If the proper reading of the last name be, as Valesius thinks, Sarbaletes, that is the

name given by Ptolemy to a part of the Red Sea. A French translator of the last century considers the Gulf of Armenia a portion of the Caspian Sea.

³⁴ The Ebro.

³⁵ The Guadalquivir.

³⁶ Ammianus seems to distinguish between the Hyrcanian and Caspian Sea, which are only different names for the same sea or inland lake.

³⁷ A name not very unlike Nejid, to this day the most celebrated Arab breed.

³⁸ There is evidently some corruption here; there is no such Greek word as Machagistia.

³⁹ Il. xiii. 10.

⁴⁰ A kind of gladiator.

⁴¹ Small boats made of wicker and covered with hide; still used in Wales, where they are also called thorricle, truckle, or cobble.

⁴² See Il. iv. 297:—

Ἴππῆας μὲν πρῶτα σὺν ἵπποισιν καὶ ὄχεσφιν
 πεζοὺς δ' ἐξόπιθεν στήσεν πολέας τε καὶ ἐσθλοὺς
 ἔρκος ἔμεν πολέμοιο, κακοὺς δ' εἰς μέσσον ἔλασσεν.

Thus translated by Pope:—

“The horse and chariots to the front assigned,
 The foot (the strength of war) he placed behind;
 The middle space suspected troops supply,
 Enclosed by both, nor left the power to fly.”

⁴³ The Zianni were an Armenian tribe. The legion belonged to the Thracian establishment.

⁴⁴ Tarquitius was an ancient Etruscan soothsayer, who had written on the subject of his art.

⁴⁵ That is Marcus Aurelius.

⁴⁶ It must be remembered that throughout Ammianus's history a count is always spoken of as of higher rank than a duke.

⁴⁷ From κόμη, hair.
