BOOK I

PROEM

1.1

Mother of Rome, delight of Gods and men, Dear Venus that beneath the gliding stars Makest to teem the many-voyaged main And fruitful lands- for all of living things Through thee alone are evermore conceived, Through thee are risen to visit the great sun- Before thee, Goddess, and thy coming on, Flee stormy wind and massy cloud away, For thee the daedal Earth bears scented flowers, For thee waters of the unvexed deep Smile, and the hollows of the serene sky Glow with diffused radiance for thee!

For soon as comes the springtime face of day, And procreant gales blow from the West unbarred, First fowls of air, smit to the heart by thee, Foretoken thy approach, O thou Divine, And leap the wild herds round the happy fields Or swim the bounding torrents. Thus amain, Seized with the spell, all creatures follow thee Whithersoever thou walkest forth to lead, And thence through seas and mountains and swift streams, Through leafy homes of birds and greening plains, Kindling the lure of love in every breast, Thou bringest the eternal generations forth, Kind after kind. And since 'tis thou alone Guidest the Cosmos, and without thee naught Is risen to reach the shining shores of light, Nor aught of joyful or of lovely born, Thee do I crave co-partner in that verse Which I presume on Nature to compose For Memmius mine, whom thou hast willed to be Peerless in every grace at every hour- Wherefore indeed, Divine one, give my words Immortal charm. Lull to a timely rest O'er sea and land the savage works of war, For thou alone hast power with public peace To aid mortality; since he who rules The savage works of battle, puissant Mars, How often to thy bosom flings his strength O'er-mastered by the eternal wound of love- And there,

with eyes and full throat backward thrown, Gazing, my Goddess,
open-mouthed at thee, Pastures on love his greedy sight, his
breath Hanging upon thy lips. Him thus reclined Fill with thy
holy body, round, above!

Pour from those lips soft syllables to win Peace for the Romans,
glorious Lady, peace!

For in a season troublous to the state Neither may I attend this
task of mine With thought untroubled, nor mid such events The
illustrious scion of the Memmian house Neglect the civic cause.

1.50

And for the rest, summon to judgments true, Unbusied ears and
singleness of mind Withdrawn from cares; lest these my gifts,
arranged For thee with eager service, thou disdain Before thou
comprehendest: since for thee I prove the supreme law of Gods
and sky, And the primordial germs of things unfold, Whence
Nature all creates, and multiplies And fosters all, and whither
she resolves Each in the end when each is overthrown.

This ultimate stock we have devised to name Procreant atoms,
matter, seeds of things, Or primal bodies, as primal to the world.

1.62

Whilst human kind Throughout the lands lay miserably crushed
Before all eyes beneath Religion- who Would show her head
along the region skies, Glowering on mortals with her hideous
face- A Greek it was who first opposing dared Raise mortal eyes
that terror to withstand, Whom nor the fame of Gods nor
lightning's stroke Nor threatening thunder of the ominous sky
Abashed; but rather chafed to angry zest His dauntless heart to
be the first to rend The crossbars at the gates of Nature old.

And thus his will and hardy wisdom won; And forward thus he
fared afar, beyond The flaming ramparts of the world, until He
wandered the unmeasurable All.

Whence he to us, a conqueror, reports What things can rise to being, what cannot, And by what law to each its scope prescribed, Its boundary stone that clings so deep in Time.

Wherefore Religion now is under foot, And us his victory now exalts to heaven.

1.80

I fear perhaps thou deemest that we fare An impious road to realms of thought profane; But 'tis that same religion oftener far Hath bred the foul impieties of men: As once at Aulis, the elected chiefs, Foremost of heroes, Danaan counsellors, Defiled Diana's altar, virgin queen, With Agamemnon's daughter, foully slain.

She felt the chaplet round her maiden locks And fillets, fluttering down on either cheek, And at the altar marked her grieving sire, The priests beside him who concealed the knife, And all the folk in tears at sight of her.

With a dumb terror and a sinking knee She dropped; nor might avail her now that first 'Twas she who gave the king a father's name.

They raised her up, they bore the trembling girl On to the altar-hither led not now With solemn rites and hymeneal choir, But sinless woman, sinfully foredone, A parent felled her on her bridal day, Making his child a sacrificial beast To give the ships auspicious winds for Troy: Such are the crimes to which Religion leads.

1.102

And there shall come the time when even thou, Forced by the soothsayer's terror-tales, shalt seek To break from us. Ah, many a dream even now Can they concoct to rout thy plans of life, And trouble all thy fortunes with base fears.

I own with reason: for, if men but knew Some fixed end to ills, they would be strong By some device unconquered to withstand

Religions and the menacings of seers.

But now nor skill nor instrument is theirs, Since men must dread eternal pains in death.

For what the soul may be they do not know, Whether 'tis born, or enter in at birth, And whether, snatched by death, it die with us, Or visit the shadows and the vasty caves Of Orcus, or by some divine decree Enter the brute herds, as our Ennius sang, Who first from lovely Helicon brought down A laurel wreath of bright perennial leaves, Renowned forever among the Italian clans.

Yet Ennius too in everlasting verse Proclaims those vaults of Acheron to be, Though thence, he said, nor souls nor bodies fare, But only phantom figures, strangely wan, And tells how once from out those regions rose Old Homer's ghost to him and shed salt tears And with his words unfolded Nature's source.

Then be it ours with steady mind to clasp The purport of the skies- the law behind The wandering courses of the sun and moon; To scan the powers that speed all life below; But most to see with reasonable eyes Of what the mind, of what the soul is made, And what it is so terrible that breaks On us asleep, or waking in disease, Until we seem to mark and hear at hand Dead men whose bones earth bosomed long ago.

1.136

I know how hard it is in Latian verse To tell the dark discoveries of the Greeks, Chiefly because our pauper-speech must find Strange terms to fit the strangeness of the thing; Yet worth of thine and the expected joy Of thy sweet friendship do persuade me on To bear all toil and wake the clear nights through, Seeking with what of words and what of song I may at last most gloriously uncloud For thee the light beyond, wherewith to view The core of being at the centre hid.

SUBSTANCE IS ETERNAL

1.146

This terror, then, this darkness of the mind, Not sunrise with its flaring spokes of light, Nor glittering arrows of morning can disperse, But only Nature's aspect and her law, Which, teaching us, hath this exordium: Nothing from nothing ever yet was born.

Fear holds dominion over mortality Only because, seeing in land and sky So much the cause whereof no wise they know, Men think Divinities are working there.

Meantime, when once we know from nothing still Nothing can be create, we shall divine More clearly what we seek: those elements From which alone all things created are, And how accomplished by no tool of Gods.

Suppose all sprang from all things: any kind Might take its origin from any thing, No fixed seed required. Men from the sea Might rise, and from the land the scaly breed, And, fowl full fledged come bursting from the sky; The horned cattle, the herds and all the wild Would haunt with varying offspring tilth and waste; Nor would the same fruits keep their olden trees, But each might grow from any stock or limb By chance and change. Indeed, and were there not For each its procreant atoms, could things have Each its unalterable mother old?

But, since produced from fixed seeds are all, Each birth goes forth upon the shores of light From its own stuff, from its own primal bodies.

And all from all cannot become, because In each resides a secret power its own.

Again, why see we lavished o'er the lands At spring the rose, at summer heat the corn, The vines that mellow when the autumn lures, If not because the fixed seeds of things At their own

season must together stream, And new creations only be
revealed When the due times arrive and pregnant earth Safely
may give unto the shores of light Her tender progenies? But if
from naught Were their becoming, they would spring abroad
Suddenly, unforeseen, in alien months, With no primordial
germs, to be preserved From procreant unions at an adverse
hour.

1.185

Nor on the mingling of the living seeds Would space be needed
for the growth of things Were life an increment of nothing: then
The tiny babe forthwith would walk a man, And from the turf
would leap a branching tree- Wonders unheard of; for, by
Nature, each Slowly increases from its lawful seed, And through
that increase shall conserve its kind.

Whence take the proof that things enlarge and feed From out
their proper matter. Thus it comes That earth, without her
seasons of fixed rains, Could bear no produce such as makes us
glad, And whatsoever lives, if shut from food, Prolongs its kind
and guards its life no more.

Thus easier 'tis to hold that many things Have primal bodies in
common (as we see The single letters common to many words)

Than aught exists without its origins.

Moreover, why should Nature not prepare Men of a bulk to ford
the seas afoot, Or rend the mighty mountains with their hands,
Or conquer Time with length of days, if not Because for all
begotten things abides The changeless stuff, and what from that
may spring Is fixed forevermore? Lastly we see How far the
tilled surpass the fields untilled And to the labour of our hands
return Their more abounding crops; there are indeed Within
the earth primordial germs of things, Which, as the ploughshare
turns the fruitful clods And kneads the mould, we quicken into
birth.

Else would ye mark, without all toil of ours, Spontaneous generations, fairer forms.

1.205

Confess then, naught from nothing can become, Since all must have their seeds, wherefrom to grow, Wherefrom to reach the gentle fields of air.

Hence too it comes that Nature all dissolves Into their primal bodies again, and naught Perishes ever to annihilation.

For, were aught mortal in its every part, Before our eyes it might be snatched away Unto destruction; since no force were needed To sunder its members and undo its bands.

Whereas, of truth, because all things exist, With seed imperishable, Nature allows Destruction nor collapse of aught, until Some outward force may shatter by a blow, Or inward craft, entering its hollow cells, Dissolve it down. And more than this, if Time, That wastes with eld the works along the world, Destroy entire, consuming matter all, Whence then may Venus back to light of life Restore the generations kind by kind?

Or how, when thus restored, may daedal Earth Foster and plenish with her ancient food, Which, kind by kind, she offers unto each?

Whence may the water-springs, beneath the sea, Or inland rivers, far and wide away, Keep the unfathomable ocean full?

And out of what does Ether feed the stars?

For lapsed years and infinite age must else Have eat all shapes of mortal stock away: But be it the Long Ago contained those germs, By which this sum of things recruited lives, Those same infallibly can never die, Nor nothing to nothing evermore return.

1.238

And, too, the selfsame power might end alike All things, were they not still together held By matter eternal, shackled through its parts, Now more, now less. A touch might be enough To cause destruction. For the slightest force Would loose the weft of things wherein no part Were of imperishable stock. But now Because the fastenings of primordial parts Are put together diversely and stuff Is everlasting, things abide the same Unhurt and sure, until some power comes on Strong to destroy the warp and woof of each: Nothing returns to naught; but all return At their collapse to primal forms of stuff.

Lo, the rains perish which Ether-father throws Down to the bosom of Earth-mother; but then Upsprings the shining grain, and boughs are green Amid the trees, and trees themselves wax big And lade themselves with fruits; and hence in turn The race of man and all the wild are fed; Hence joyful cities thrive with boys and girls; And leafy woodlands echo with new birds; Hence cattle, fat and drowsy, lay their bulk Along the joyous pastures whilst the drops Of white ooze trickle from distended bags; Hence the young scamper on their weakling joints Along the tender herbs, fresh hearts afrisk With warm new milk. Thus naught of what so seems Perishes utterly, since Nature ever Upbuilds one thing from other, suffering naught To come to birth but through some other's death.

.....

And now, since I have taught that things cannot Be born from nothing, nor the same, when born, To nothing be recalled, doubt not my words, Because our eyes no primal germs perceive; For mark those bodies which, though known to be In this our world, are yet invisible: The winds infuriate lash our face and frame, Unseen, and swamp huge ships and rend the clouds, Or, eddying wildly down, bestrew the plains With mighty trees, or scour the mountain tops With forest-crackling blasts. Thus on they rave With uproar shrill and ominous moan.

The winds, 'Tis clear, are sightless bodies sweeping through The sea, the lands, the clouds along the sky, Vexing and whirling and seizing all amain; And forth they flow and pile destruction round, Even as the water's soft and supple bulk Becoming a river of abounding floods, Which a wide downpour from the lofty hills Swells with big showers, dashes headlong down Fragments of woodland and whole branching trees; Nor can the solid bridges bide the shock As on the waters whelm: the turbulent stream, Strong with a hundred rains, beats round the piers, Crashes with havoc, and rolls beneath its waves Down-toppled masonry and ponderous stone, Hurling away whatever would oppose.

Even so must move the blasts of all the winds, Which, when they spread, like to a mighty flood, Hither or thither, drive things on before And hurl to ground with still renewed assault, Or sometimes in their circling vortex seize And bear in cones of whirlwind down the world: The winds are sightless bodies and naught else- Since both in works and ways they rival well The mighty rivers, the visible in form.

Then too we know the varied smells of things Yet never to our nostrils see them come; With eyes we view not burning heats, nor cold, Nor are we wont men's voices to behold.

Yet these must be corporeal at the base, Since thus they smite the senses: naught there is Save body, having property of touch.

And raiment, hung by surf-beat shore, grows moist, The same, spread out before the sun, will dry; Yet no one saw how sank the moisture in, Nor how by heat off-driven. Thus we know, That moisture is dispersed about in bits Too small for eyes to see. Another case: A ring upon the finger thins away Along the under side, with years and suns; The drippings from the eaves will scoop the stone; The hooked ploughshare, though of iron, wastes Amid the fields insidiously. We view The rock-paved

highways worn by many feet; And at the gates the brazen
statues show Their right hands leaner from the frequent touch
Of wayfarers innumerable who greet.

We see how wearing-down hath minished these, But just what
motes depart at any time, The envious nature of vision bars our
sight.

Lastly whatever days and nature add Little by little,
constraining things to grow In due proportion, no gaze however
keen Of these our eyes hath watched and known. No more Can
we observe what's lost at any time, When things wax old with
eld and foul decay, Or when salt seas eat under beetling crags.

Thus Nature ever by unseen bodies works.

THE VOID

1.329

But yet creation's neither crammed nor blocked About by body:
there's in things a void- Which to have known will serve thee
many a turn, Nor will not leave thee wandering in doubt,
Forever searching in the sum of all, And losing faith in these
pronouncements mine.

There's place intangible, a void and room.

For were it not, things could in nowise move; Since body's
property to block and check Would work on all and at an times
the same.

Thus naught could evermore push forth and go, Since naught
elsewhere would yield a starting place.

But now through oceans, lands, and heights of heaven, By divers
causes and in divers modes, Before our eyes we mark how much
may move, Which, finding not a void, would fail deprived Of stir
and motion; nay, would then have been Nowise begot at all,
since matter, then, Had staid at rest, its parts together

crammed.

Then too, however solid objects seem, They yet are formed of matter mixed with void: In rocks and caves the watery moisture seeps, And beady drops stand out like plenteous tears; And food finds way through every frame that lives; The trees increase and yield the season's fruit Because their food throughout the whole is poured, Even from the deepest roots, through trunks and boughs; And voices pass the solid walls and fly Reverberant through shut doorways of a house; And stiffening frost seeps inward to our bones.

Which but for voids for bodies to go through 'Tis clear could happen in nowise at all.

Again, why see we among objects some Of heavier weight, but of no bulkier size?

Indeed, if in a ball of wool there be As much of body as in lump of lead, The two should weigh alike, since body tends To load things downward, while the void abides, By contrary nature, the imponderable.

Therefore, an object just as large but lighter Declares infallibly its more of void; Even as the heavier more of matter shows, And how much less of vacant room inside.

That which we're seeking with sagacious quest Exists, infallibly, commixed with things- The void, the invisible inane.

1.370

Right here I am compelled a question to expound, Forestalling something certain folk suppose, Lest it avail to lead thee off from truth: Waters (they say) before the shining breed Of the swift scaly creatures somehow give, And straightway open sudden liquid paths, Because the fishes leave behind them room To which at once the yielding billows stream.

Thus things among themselves can yet be moved, And change
their place, however full the Sum- Received opinion, wholly
false forsooth.

For where can scaly creatures forward dart, Save where the
waters give them room? Again, Where can the billows yield a
way, so long As ever the fish are powerless to go?

Thus either all bodies of motion are deprived, Or things contain
admixture of a void Where each thing gets its start in moving
on.

Lastly, where after impact two broad bodies Suddenly spring
apart, the air must crowd The whole new void between those
bodies formed; But air, however it stream with hastening gusts,
Can yet not fill the gap at once- for first It makes for one place,
ere diffused through all.

And then, if haply any think this comes, When bodies spring
apart, because the air Somehow condenses, wander they from
truth: For then a void is formed, where none before; And, too, a
void is filled which was before.

Nor can air be condensed in such a wise; Nor, granting it could,
without a void, I hold, It still could not contract upon itself And
draw its parts together into one.

Wherefore, despite demur and counter-speech, Confess thou
must there is a void in things.

And still I might by many an argument Here scrape together
credence for my words.

But for the keen eye these mere footprints serve, Whereby thou
mayest know the rest thyself.

As dogs full oft with noses on the ground, Find out the silent
lairs, though hid in brush, Of beasts, the mountain-rangers,
when but once They scent the certain footsteps of the way, Thus

thou thyself in themes like these alone Can hunt from thought
to thought, and keenly wind Along even onward to the secret
places And drag out truth. But, if thou loiter loth Or veer,
however little, from the point, This I can promise, Memmius, for
a fact: Such copious drafts my singing tongue shall pour From
the large well-springs of my plenished breast That much I dread
slow age will steal and coil Along our members, and unloose the
gates Of life within us, ere for thee my verse Hath put within
thine ears the stores of proofs At hand for one soever question
broached.

NOTHING EXISTS per se EXCEPT ATOMS AND THE VOID

1.418

But, now again to weave the tale begun, All nature, then, as
self-sustained, consists of twain of things: of bodies and of void
In which they're set, and where they're moved around.

For common instinct of our race declares That body of itself
exists: unless This primal faith, deep-founded, fail us not,
Naught will there be whereunto to appeal On things occult
when seeking aught to prove By reasonings of mind. Again,
without That place and room, which we do call the inane,
Nowhere could bodies then be set, nor go Hither or thither at
all- as shown before.

Besides, there's naught of which thou canst declare It lives
disjoined from body, shut from void- A kind of third in nature.
For whatever Exists must be a somewhat; and the same, If
tangible, however light and slight, Will yet increase the count of
body's sum, With its own augmentation big or small; But, if
intangible and powerless ever To keep a thing from passing
through itself On any side, 'twill be naught else but that Which
we do call the empty, the inane.

Again, whate'er exists, as of itself, Must either act or suffer
action on it, Or else be that wherein things move and be:
Naught, saving body, acts, is acted on; Naught but the inane can
furnish room. And thus, Beside the inane and bodies, is no third
Nature amid the number of all things- Remainder none to fall at
any time Under our senses, nor be seized and seen By any man
through reasonings of mind.

Name o'er creation with what names thou wilt, Thou'lt find but
properties of those first twain, Or see but accidents those twain
produce.

A property is that which not at all Can be disjoined and severed
from a thing Without a fatal dissolution: such, Weight to the
rocks, heat to the fire, and flow To the wide waters, touch to
corporal things, Intangibility to the viewless void.

But state of slavery, pauperhood, and wealth, Freedom, and war,
and concord, and all else Which come and go whilst nature
stands the same, We're wont, and rightly, to call accidents.

Even time exists not of itself; but sense Reads out of things what
happened long ago, What presses now, and what shall follow
after: No man, we must admit, feels time itself, Disjoined from
motion and repose of things.

Thus, when they say there "is" the ravishment Of Princess
Helen, "is" the siege and sack Of Trojan Town, look out, they
force us not To admit these acts existent by themselves, Merely
because those races of mankind (Of whom these acts were
accidents) long since Irrevocable age has borne away: For all
past actions may be said to be But accidents, in one way, of
mankind,- In other, of some region of the world.

Add, too, had been no matter, and no room Wherein all things
go on, the fire of love Upblown by that fair form, the glowing
coal Under the Phrygian Alexander's breast, Had ne'er

enkindled that renowned strife Of savage war, nor had the
wooden horse Involved in flames old Pergama, by a birth At
midnight of a brood of the Hellenes.

And thus thou canst remark that every act At bottom exists not
of itself, nor is As body is, nor has like name with void; But
rather of sort more fitly to be called An accident of body, and of
place Wherein all things go on.

CHARACTER OF THE ATOMS

1.483

Bodies, again, Are partly primal germs of things, and partly
Unions deriving from the primal germs.

And those which are the primal germs of things No power can
quench; for in the end they conquer By their own solidness;
though hard it be To think that aught in things has solid frame;
For lightnings pass, no less than voice and shout, Through
hedging walls of houses, and the iron White-dazzles in the fire,
and rocks will burn With exhalations fierce and burst asunder.

Totters the rigid gold dissolved in heat; The ice of bronze melts
conquered in the flame; Warmth and the piercing cold through
silver seep, Since, with the cups held rightly in the hand, We oft
feel both, as from above is poured The dew of waters between
their shining sides: So true it is no solid form is found.

But yet because true reason and nature of things Constrain us,
come, whilst in few verses now I disentangle how there still
exist Bodies of solid, everlasting frame- The seeds of things, the
primal germs we teach, Whence all creation around us came to
be.

First since we know a twofold nature exists, Of things, both
twain and utterly unlike- Body, and place in which an things go
on- Then each must be both for and through itself, And all

unmixed: where'er be empty space, There body's not; and so
where body bides, There not at all exists the void inane.

Thus primal bodies are solid, without a void.

But since there's void in all begotten things, All solid matter
must be round the same; Nor, by true reason canst thou prove
aught hides And holds a void within its body, unless Thou grant
what holds it be a solid. Know, That which can hold a void of
things within Can be naught else than matter in union knit.

Thus matter, consisting of a solid frame, Hath power to be
eternal, though all else, Though all creation, be dissolved away.

Again, were naught of empty and inane, The world were then a
solid; as, without Some certain bodies to fill the places held, The
world that is were but a vacant void.

And so, infallibly, alternate-wise Body and void are still
distinguished, Since nature knows no wholly full nor void.

There are, then, certain bodies, possessed of power To vary
forever the empty and the full; And these can nor be sundered
from without By beats and blows, nor from within be torn By
penetration, nor be overthrown By any assault soever through
the world- For without void, naught can be crushed, it seems,
Nor broken, nor severed by a cut in twain, Nor can it take the
damp, or seeping cold Or piercing fire, those old destroyers
three; But the more void within a thing, the more Entirely it
totters at their sure assault.

Thus if first bodies be, as I have taught, Solid, without a void,
they must be then Eternal; and, if matter ne'er had been
Eternal, long ere now had all things gone Back into nothing
utterly, and all We see around from nothing had been born- But
since I taught above that naught can be From naught created,
nor the once begotten To naught be summoned back, these
primal germs Must have an immortality of frame.

And into these must each thing be resolved, When comes its
supreme hour, that thus there be At hand the stuff for
plenishing the world.

.....

So primal germs have solid singleness Nor otherwise could they
have been conserved Through aeons and infinity of time For the
replenishment of wasted worlds.

Once more, if nature had given a scope for things To be forever
broken more and more, By now the bodies of matter would have
been So far reduced by breakings in old days That from them
nothing could, at season fixed, Be born, and arrive its prime and
top of life.

For, lo, each thing is quicker marred than made; And so
whate'er the long infinitude Of days and all fore-passed time
would now By this have broken and ruined and dissolved, That
same could ne'er in all remaining time Be builded up for
plenishing the world.

But mark: infallibly a fixed bound Remaineth stablished 'gainst
their breaking down; Since we behold each thing soever
renewed, And unto all, their seasons, after their kind, Wherein
they arrive the flower of their age.

1.551

Again, if bounds have not been set against The breaking down of
this corporeal world, Yet must all bodies of whatever things
Have still endured from everlasting time Unto this present, as
not yet assailed By shocks of peril. But because the same Are, to
thy thinking, of a nature frail, It ill accords that thus they could
remain (As thus they do) through everlasting time, Vexed
through the ages (as indeed they are)

By the innumerable blows of chance.

So in our programme of creation, mark How 'tis that, though
the bodies of all stuff Are solid to the core, we yet explain The
ways whereby some things are fashioned soft- Air, water, earth,
and fiery exhalations- And by what force they function and go
on: The fact is founded in the void of things.

But if the primal germs themselves be soft, Reason cannot be
brought to bear to show The ways whereby may be created
these Great crags of basalt and the during iron; For their whole
nature will profoundly lack The first foundations of a solid
frame.

But powerful in old simplicity, Abide the solid, the primeval
germs; And by their combinations more condensed, All objects
can be tightly knit and bound And made to show unconquerable
strength.

Again, since all things kind by kind obtain Fixed bounds of
growing and conserving life; Since Nature hath inviolably
decreed What each can do, what each can never do; Since
naught is changed, but all things so abide That ever the
variegated birds reveal The spots or stripes peculiar to their
kind, Spring after spring: thus surely all that is Must be
composed of matter immutable.

For if the primal germs in any wise Were open to conquest and
to change, 'twould be Uncertain also what could come to birth
And what could not, and by what law to each Its scope
prescribed, its boundary stone that clings So deep in Time. Nor
could the generations Kind after kind so often reproduce The
nature, habits, motions, ways of life, Of their progenitors.

1.599

And then again, Since there is ever an extreme bounding point .

.....

Of that first body which our senses now Cannot perceive: That
bounding point indeed Exists without all parts, a minimum Of

nature, nor was e'er a thing apart, As of itself,- nor shall hereafter be, Since 'tis itself still parcel of another, A first and single part, whence other parts And others similar in order lie In a packed phalanx, filling to the full The nature of first body: being thus Not self-existent, they must cleave to that From which in nowise they can sundered be.

So primal germs have solid singleness, Which tightly packed and closely joined cohere By virtue of their minim particles- No compound by mere union of the same; But strong in their eternal singleness, Nature, reserving them as seeds for things, Permitteth naught of rupture or decrease.

Moreover, were there not a minimum, The smallest bodies would have infinities, Since then a half-of-half could still be halved, With limitless division less and less.

Then what the difference 'twixt the sum and least?

None: for however infinite the sum, Yet even the smallest would consist the same Of infinite parts. But since true reason here Protests, denying that the mind can think it, Convinced thou must confess such things there are As have no parts, the minimums of nature.

And since these are, likewise confess thou must That primal bodies are solid and eterne.

Again, if Nature, creatress of all things, Were wont to force all things to be resolved Unto least parts, then would she not avail To reproduce from out them anything; Because whate'er is not endowed with parts Cannot possess those properties required Of generative stuff- divers connections, Weights, blows, encounters, motions, whereby things Forevermore have being and go on.

CONFUTATION OF OTHER PHILOSOPHERS

1.635

And on such grounds it is that those who held The stuff of things is fire, and out of fire Alone the cosmic sum is formed, are seen Mightily from true reason to have lapsed.

Of whom, chief leader to do battle, comes That Heraclitus, famous for dark speech Among the silly, not the serious Greeks Who search for truth. For dolts are ever prone That to bewonder and adore which hides Beneath distorted words, holding that true Which sweetly tickles in their stupid ears, Or which is rouged in finely finished phrase.

For how, I ask, can things so varied be, If formed of fire, single and pure? No whit 'Twould help for fire to be condensed or thinned, If all the parts of fire did still preserve But fire's own nature, seen before in gross.

The heat were keener with the parts compressed, Milder, again, when severed or dispersed- And more than this thou canst conceive of naught That from such causes could become; much less Might earth's variety of things be born From any fires soever, dense or rare.

This too: if they suppose a void in things, Then fires can be condensed and still left rare; But since they see such opposites of thought Rising against them, and are loath to leave An unmixed void in things, they fear the steep And lose the road of truth. Nor do they see, That, if from things we take away the void, All things are then condensed, and out of all One body made, which has no power to dart Swiftly from out itself not anything- As throws the fire its light and warmth around, Giving thee proof its parts are not compact.

But if perhaps they think, in other wise, Fires through their combinations can be quenched And change their substance, very well: behold, If fire shall spare to do so in no part, Then heat will perish utterly and all, And out of nothing would the

world be formed.

For change in anything from out its bounds Means instant death
of that which was before; And thus a somewhat must persist
unharm'd Amid the world, lest all return to naught, And, born
from naught, abundance thrive anew.

Now since indeed there are those surest bodies Which keep
their nature evermore the same, Upon whose going out and
coming in And changed order things their nature change, And
all corporeal substances transformed, 'Tis thine to know those
primal bodies, then, Are not of fire. For 'twere of no avail Should
some depart and go away, and some Be added new, and some be
changed in order, If still all kept their nature of old heat: For
whatsoever they created then Would still in any case be only
fire.

The truth, I fancy, this: bodies there are Whose clashings,
motions, order, posture, shapes Produce the fire and which, by
order changed, Do change the nature of the thing produced,
And are thereafter nothing like to fire Nor whatso else has
power to send its bodies With impact touching on the senses'
touch.

Again, to say that all things are but fire And no true thing in
number of all things Exists but fire, as this same fellow says,
Seems crazed folly. For the man himself Against the senses by
the senses fights, And hews at that through which is all belief,
Through which indeed unto himself is known The thing he calls
the fire. For, though he thinks The senses truly can perceive the
fire, He thinks they cannot as regards all else, Which still are
palpably as clear to sense- To me a thought inept and crazy too.

For whither shall we make appeal? for what More certain than
our senses can there be Whereby to mark asunder error and
truth?

Besides, why rather do away with all, And wish to allow heat only, then deny The fire and still allow all else to be?- Alike the madness either way it seems.

1.705

Thus whosoe'er have held the stuff of things To be but fire, and out of fire the sum, And whosoever have constituted air As first beginning of begotten things, And all whoever have held that of itself Water alone contrives things, or that earth Createth all and changes things anew To divers natures, mightily they seem A long way to have wandered from the truth.

Add, too, whoever make the primal stuff Twofold, by joining air to fire, and earth To water; add who deem that things can grow Out of the four- fire, earth, and breath, and rain; As first Empedocles of Acragas, Whom that three-cornered isle of all the lands Bore on her coasts, around which flows and flows In mighty bend and bay the Ionic seas, Splashing the brine from off their gray-green waves.

Here, billowing onward through the narrow straits, Swift ocean cuts her boundaries from the shores Of the Italic mainland. Here the waste Charybdis; and here Aetna rumbles threats To gather anew such furies of its flames As with its force anew to vomit fires, Belched from its throat, and skyward bear anew Its lightnings' flash. And though for much she seem The mighty and the wondrous isle to men, Most rich in all good things, and fortified With generous strength of heroes, she hath ne'er Possessed within her aught of more renown, Nor aught more holy, wonderful, and dear Than this true man. Nay, ever so far and pure The lofty music of his breast divine Lifts up its voice and tells of glories found, That scarce he seems of human stock create.

Yet he and those forementioned (known to be So far beneath him, less than he in all), Though, as discoverers of much goodly truth, They gave, as 'twere from out of the heart's own shrine,

Responses holier and soundlier based Than ever the Pythia pronounced for men From out the triped and the Delphian laurel, Have still in matter of first-elements Made ruin of themselves, and, great men, great Indeed and heavy there for them the fall: First, because, banishing the void from things, They yet assign them motion, and allow Things soft and loosely textured to exist, As air, dew, fire, earth, animals, and grains, Without admixture of void amid their frame.

Next, because, thinking there can be no end In cutting bodies down to less and less Nor pause established to their breaking up, They hold there is no minimum in things; Albeit we see the boundary point of aught Is that which to our senses seems its least, Whereby thou mayst conjecture, that, because The things thou canst not mark have boundary points, They surely have their minimums. Then, too, Since these philosophers ascribe to things Soft primal germs, which we behold to be Of birth and body mortal, thus, throughout, The sum of things must be returned to naught, And, born from naught, abundance thrive anew- Thou seest how far each doctrine stands from truth.

And, next, these bodies are among themselves In many ways poisons and foes to each, Wherefore their congress will destroy them quite Or drive asunder as we see in storms Rains, winds, and lightnings all asunder fly.

1.763

Thus too, if all things are create of four, And all again dissolved into the four, How can the four be called the primal germs Of things, more than all things themselves be thought, By retroversion, primal germs of them?

For ever alternately are both begot, With interchange of nature and aspect From immemorial time. But if percase Thou think'st the frame of fire and earth, the air, The dew of water can in such wise meet As not by mingling to resign their nature, From them for thee no world can be create- No thing of breath, no stock or

stalk of tree: In the wild congress of this varied heap Each thing
its proper nature will display, And air will palpably be seen
mixed up With earth together, unquenched heat with water.

But primal germs in bringing things to birth Must have a latent,
unseen quality, Lest some outstanding alien element Confuse
and minish in the thing create Its proper being.

But these men begin From heaven, and from its fires; and first
they feign That fire will turn into the winds of air, Next, that
from air the rain begotten is, And earth created out of rain, and
then That all, reversely, are returned from earth- The moisture
first, then air thereafter heat- And that these same ne'er cease
in interchange, To go their ways from heaven to earth, from
earth Unto the stars of the aethereal world- Which in no wise at
all the germs can do.

Since an immutable somewhat still must be, Lest all things
utterly be sped to naught; For change in anything from out its
bounds Means instant death of that which was before.

Wherefore, since those things, mentioned heretofore, Suffer a
changed state, they must derive From others ever
unconvertible, Lest an things utterly return to naught.

Then why not rather presuppose there be Bodies with such a
nature furnished forth That, if perchance they have created fire,
Can still (by virtue of a few withdrawn, Or added few, and
motion and order changed)

Fashion the winds of air, and thus all things Forevermore be
interchanged with all?

"But facts in proof are manifest," thou sayest, "That all things
grow into the winds of air And forth from earth are nourished,
and unless The season favour at propitious hour With rains
enough to set the trees a-reel Under the soak of bulking
thunderheads, And sun, for its share, foster and give heat, No

grains, nor trees, nor breathing things can grow."

True- and unless hard food and moisture soft Recruited man, his frame would waste away, And life dissolve from out his thews and bones; For out of doubt recruited and fed are we By certain things, as other things by others.

Because in many ways the many germs Common to many things are mixed in things, No wonder 'tis that therefore divers things By divers things are nourished. And, again, Often it matters vastly with what others, In what positions the primordial germs Are bound together, and what motions, too, They give and get among themselves; for these Same germs do put together sky, sea, lands, Rivers, and sun, grains, trees, and breathing things, But yet commixed they are in divers modes With divers things, forever as they move.

Nay, thou beholdest in our verses here Elements many, common to many worlds, Albeit thou must confess each verse, each word From one another differs both in sense And ring of sound- so much the elements Can bring about by change of order alone.

But those which are the primal germs of things Have power to work more combinations still, Whence divers things can be produced in turn.

1.830

Now let us also take for scrutiny The homeomeria of Anaxagoras, So called by Greeks, for which our pauper-speech Yieldeth no name in the Italian tongue, Although the thing itself is not o'erhard For explanation. First, then, when he speaks Of this homeomeria of things, he thinks Bones to be sprung from littlest bones minute, And from minute and littlest flesh all flesh, And blood created out of drops of blood, Conceiving gold compact of grains of gold, And earth concreted out of bits of earth, Fire made of fires, and water out of waters, Feigning the like with all the rest of stuff.

Yet he concedes not any void in things, Nor any limit to cutting
bodies down.

Wherefore to me he seems on both accounts To err no less than
those we named before.

1.847

Add too: these germs he feigns are far too frail- If they be germs
primordial furnished forth With but same nature as the things
themselves, And travail and perish equally with those, And no
rein curbs them from annihilation.

For which will last against the grip and crush Under the teeth of
death? the fire? the moist?

Or else the air? which then? the blood? the bones?

No one, methinks, when every thing will be At bottom as mortal
as whate'er we mark To perish by force before our gazing eyes.

But my appeal is to the proofs above That things cannot fall
back to naught, nor yet From naught increase. And now again,
since food Augments and nourishes the human frame, 'Tis thine
to know our veins and blood and bones And thews are formed of
particles unlike To them in kind; or if they say all foods Are of
mixed substance having in themselves Small bodies of thews,
and bones, and also veins And particles of blood, then every
food, Solid or liquid, must itself be thought As made and mixed
of things unlike in kind- Of bones, of thews, of ichor and of
blood.

Again, if all the bodies which upgrow From earth, are first
within the earth, then earth Must be compound of alien
substances.

Which spring and bloom abroad from out the earth.

Transfer the argument, and thou may'st use The selfsame
words: if flame and smoke and ash Still lurk unseen within the
wood, the wood Must be compound of alien substances Which

spring from out the wood.

1.875

Right here remains A certain slender means to skulk from truth,
Which Anaxagoras takes unto himself, Who holds that all things
lurk commixed with all While that one only comes to view, of
which The bodies exceed in number all the rest, And lie more
close to hand and at the fore- A notion banished from true
reason far.

For then 'twere meet that kernels of the grains Should oft, when
crunched between the might of stones, Give forth a sign of
blood, or of aught else Which in our human frame is fed; and
that Rock rubbed on rock should yield a gory ooze.

Likewise the herbs ought oft to give forth drops Of sweet milk,
flavoured like the uddered sheep's; Indeed we ought to find,
when crumbling up The earthy clods, there herbs, and grains,
and leaves, All sorts dispersed minutely in the soil; Lastly we
ought to find in cloven wood Ashes and smoke and bits of fire
there hid.

But since fact teaches this is not the case, 'Tis thine to know
things are not mixed with things Thuswise; but seeds, common
to many things, Commixed in many ways, must lurk in things.

"But often it happens on skiey hills" thou sayest, "That
neighbouring tops of lofty trees are rubbed One against other,
smote by the blustering south, Till all ablaze with bursting
flower of flame."

Good sooth- yet fire is not ingraft in wood, But many are the
seeds of heat, and when Rubbing together they together flow,
They start the conflagrations in the forests.

Whereas if flame, already fashioned, lay Stored up within the
forests, then the fires Could not for any time be kept unseen,
But would be laying all the wildwood waste And burning all the

bosage. Now dost see (Even as we said a little space above)

How mightily it matters with what others, In what positions
these same primal germs Are bound together? And what
motions, too, They give and get among themselves? how, hence,
The same, if altered 'mongst themselves, can body Both igneous
and ligneous objects forth- Precisely as these words themselves
are made By somewhat altering their elements, Although we
mark with name indeed distinct The igneous from the ligneous.
Once again, If thou suppose whatever thou beholdest, Among all
visible objects, cannot be, Unless thou feign bodies of matter
endowed With a like nature,- by thy vain device For thee will
perish all the germs of things: 'Twill come to pass they'll laugh
aloud, like men, Shaken asunder by a spasm of mirth, Or
moisten with salty tear-drops cheeks and chins.

THE INFINITY OF THE UNIVERSE

1.921

Now learn of what remains! More keenly hear!

And for myself, my mind is not deceived How dark it is: But the
large hope of praise Hath strook with pointed thyrsus through
my heart; On the same hour hath strook into my breast Sweet
love of the Muses, wherewith now instinct, I wander afield,
thriving in sturdy thought, Through unpathed haunts of the
Pierides, Trodden by step of none before. I joy To come on
undefiled fountains there, To drain them deep; I joy to pluck
new flowers, To seek for this my head a signal crown From
regions where the Muses never yet Have garlanded the temples
of a man: First, since I teach concerning mighty things, And go
right on to loose from round the mind The tightened coils of
dread religion; Next, since, concerning themes so dark, I frame
Songs so pellucid, touching all throughout Even with the Muses'
charm- which, as 'twould seem, Is not without a reasonable
ground: But as physicians, when they seek to give Young boys

the nauseous wormwood, first do touch The brim around the cup with the sweet juice And yellow of the honey, in order that The thoughtless age of boyhood be cajoled As far as the lips, and meanwhile swallow down The wormwood's bitter draught, and, though befooled, Be yet not merely duped, but rather thus Grow strong again with recreated health: So now I too (since this my doctrine seems In general somewhat woeful unto those Who've had it not in hand, and since the crowd Starts back from it in horror) have desired To expound our doctrine unto thee in song Soft-speaking and Pierian, and, as 'twere, To touch it with sweet honey of the Muse- If by such method haply I might hold The mind of thee upon these lines of ours, Till thou see through the nature of all things, And how exists the interwoven frame.

1.951

But since I've taught that bodies of matter, made Completely solid, hither and thither fly Forevermore unconquered through all time, Now come, and whether to the sum of them There be a limit or be none, for thee Let us unfold; likewise what has been found To be the wide inane, or room, or space Wherein all things soever do go on, Let us examine if it finite be All and entire, or reach unmeasured round And downward an illimitable profound.

Thus, then, the All that is is limited In no one region of its onward paths, For then 't must have forever its beyond.

And a beyond 'tis seen can never be For aught, unless still further on there be A somewhat somewhere that may bound the same- So that the thing be seen still on to where The nature of sensation of that thing Can follow it no longer. Now because Confess we must there's naught beside the sum, There's no beyond, and so it lacks all end.

It matters nothing where thou post thyself, In whatsoever regions of the same; Even any place a man has set him down Still leaves about him the unbounded all Outward in all

directions; or, supposing A moment the all of space finite to be, If some one farthest traveller runs forth Unto the extreme coasts and throws ahead A flying spear, is't then thy wish to think It goes, hurled off amain, to where 'twas sent And shoots afar, or that some object there Can thwart and stop it? For the one or other Thou must admit and take. Either of which Shuts off escape for thee, and does compel That thou concede the all spreads everywhere, Owning no confines. Since whether there be Aught that may block and check it so it comes Not where 'twas sent, nor lodges in its goal, Or whether borne along, in either view 'Thas started not from any end. And so I'll follow on, and whereso'er thou set The extreme coasts, I'll query, "what becomes Thereafter of thy spear?" 'Twill come to pass That nowhere can a world's-end be, and that The chance for further flight prolongs forever The flight itself. Besides, were all the space Of the totality and sum shut in With fixed coasts, and bounded everywhere, Then would the abundance of world's matter flow Together by solid weight from everywhere Still downward to the bottom of the world, Nor aught could happen under cope of sky, Nor could there be a sky at all or sun- Indeed, where matter all one heap would lie, By having settled during infinite time.

But in reality, repose is given Unto no bodies 'mongst the elements, Because there is no bottom whereunto They might, as 'twere, together flow, and where They might take up their undisturbed abodes.

In endless motion everything goes on Forevermore; out of all regions, even Out of the pit below, from forth the vast, Are hurtled bodies evermore supplied.

1.1002

The nature of room, the space of the abyss Is such that even the flashing thunderbolts Can neither speed upon their courses through, Gliding across eternal tracts of time, Nor, further,

bring to pass, as on they run, That they may bate their journeying one whit: Such huge abundance spreads for things around- Room off to every quarter, without end.

Lastly, before our very eyes is seen Thing to bound thing: air hedges hill from hill, And mountain walls hedge air; land ends the sea, And sea in turn all lands; but for the All Truly is nothing which outside may bound.

That, too, the sum of things itself may not Have power to fix a measure of its own, Great nature guards, she who compels the void To bound all body, as body all the void, Thus rendering by these alternates the whole An infinite; or else the one or other, Being unbounded by the other, spreads, Even by its single nature, ne'ertheless Immeasurably forth....

Nor sea, nor earth, nor shining vaults of sky, Nor breed of mortals, nor holy limbs of gods Could keep their place least portion of an hour: For, driven apart from out its meetings fit, The stock of stuff, dissolved, would be borne Along the illimitable inane afar, Or rather, in fact, would ne'er have once combined And given a birth to aught, since, scattered wide, It could not be united. For of truth Neither by counsel did the primal germs 'Stablish themselves, as by keen act of mind, Each in its proper place; nor did they make, Forsooth, a compact how each germ should move; But since, being many and changed in many modes Along the All, they're driven abroad and vexed By blow on blow, even from all time of old, They thus at last, after attempting all The kinds of motion and conjoining, come Into those great arrangements out of which This sum of things established is create, By which, moreover, through the mighty years, It is preserved, when once it has been thrown Into the proper motions, bringing to pass That ever the streams refresh the greedy main With river-waves abounding, and that earth, Lapped in warm exhalations of the sun, Renews her broods, and that the lusty race Of breathing creatures bears and blooms, and

that The gliding fires of ether are alive- What still the primal
germs nowise could do, Unless from out the infinite of space
Could come supply of matter, whence in season They're wont
whatever losses to repair.

For as the nature of breathing creatures wastes, Losing its body,
when deprived of food: So all things have to be dissolved as soon
As matter, diverted by what means soever From off its course,
shall fail to be on hand.

Nor can the blows from outward still conserve, On every side,
whatever sum of a world Has been united in a whole. They can
Indeed, by frequent beating, check a part, Till others arriving
may fulfil the sum; But meanwhile often are they forced to
spring Rebounding back, and, as they spring, to yield, Unto
those elements whence a world derives, Room and a time for
flight, permitting them To be from off the massy union borne
Free and afar. Wherefore, again, again: Needs must there come a
many for supply; And also, that the blows themselves shall be
Unfailing ever, must there ever be An infinite force of matter all
sides round.

1.1052

And in these problems, shrink, my Memmius, far From yielding
faith to that notorious talk: That all things inward to the centre
press; And thus the nature of the world stands firm With never
blows from outward, nor can be Nowhere disparted- since all
height and depth Have always inward to the centre pressed (If
thou art ready to believe that aught Itself can rest upon itself);
or that The ponderous bodies which be under earth Do all press
upwards and do come to rest Upon the earth, in some way
upside down, Like to those images of things we see At present
through the waters. They contend, With like procedure, that all
breathing things Head downward roam about, and yet cannot
Tumble from earth to realms of sky below, No more than these
our bodies wing away Spontaneously to vaults of sky above;

That, when those creatures look upon the sun, We view the
constellations of the night; And that with us the seasons of the
sky They thus alternately divide, and thus Do pass the night
coequal to our days, But a vain error has given these dreams to
fools, Which they've embraced with reasoning perverse For
centre none can be where world is still Boundless, nor yet, if
now a centre were, Could aught take there a fixed position more
Than for some other cause 'tmight be dislodged.

For all of room and space we call the void Must both through
centre and non-centre yield Alike to weights where'er their
motions tend.

Nor is there any place, where, when they've come, Bodies can
be at standstill in the void, Deprived of force of weight; nor yet
may void Furnish support to any,- nay, it must, True to its bent
of nature, still give way.

Thus in such manner not at all can things Be held in union, as if
overcome By craving for a centre.

1.1083

But besides, Seeing they feign that not all bodies press To centre
inward, rather only those Of earth and water (liquid of the sea,
And the big billows from the mountain slopes, And whatsoever
are encased, as 'twere, In earthen body), contrariwise, they
teach How the thin air, and with it the hot fire, Is borne asunder
from the centre, and how, For this all ether quivers with bright
stars, And the sun's flame along the blue is fed (Because the
heat, from out the centre flying, All gathers there), and how,
again, the boughs Upon the tree-tops could not sprout their
leaves, Unless, little by little, from out the earth For each were
nurtiment...

.....

Lest, after the manner of the winged flames, The ramparts of
the world should flee away, Dissolved amain throughout the

mighty void, And lest all else should likewise follow after, Aye,
lest the thundering vaults of heaven should burst And splinter
upward, and the earth forthwith Withdraw from under our feet,
and all its bulk, Among its mingled wrecks and those of heaven,
With slipping asunder of the primal seeds, Should pass, along
the immeasurable inane, Away forever, and, that instant,
naught Of wrack and remnant would be left, beside The desolate
space, and germs invisible.

For on whatever side thou deemest first The primal bodies
lacking, lo, that side Will be for things the very door of death:
Wherethrough the throng of matter all will dash, Out and
abroad.

These points, if thou wilt ponder, Then, with but paltry trouble
led along...

.....

For one thing after other will grow clear, Nor shall the blind
night rob thee of the road, To hinder thy gaze on nature's
Farthest-forth.

Thus things for things shall kindle torches new.

BOOK II

PROEM

2.1

'Tis sweet, when, down the mighty main, the winds Roll up its
waste of waters, from the land To watch another's labouring
anguish far, Not that we joyously delight that man Should thus
be smitten, but because 'tis sweet To mark what evils we
ourselves be spared; 'Tis sweet, again, to view the mighty strife
Of armies embattled yonder o'er the plains, Ourselves no
sharers in the peril; but naught There is more goodly than to

hold the high Serene plateaus, well fortified by the wise,
Whence thou may'st look below on other men And see them
ev'rywhere wand'ring, all dispersed In their lone seeking for the
road of life; Rivals in genius, or emulous in rank, Pressing
through days and nights with hugest toil For summits of power
and mastery of the world.

O wretched minds of men! O blinded hearts!

In how great perils, in what darks of life Are spent the human
years, however brief!- O not to see that nature for herself Barks
after nothing, save that pain keep off, Disjoined from the body,
and that mind enjoy Delightsome feeling, far from care and fear!

Therefore we see that our corporeal life Needs little, altogether,
and only such As takes the pain away, and can besides Strew
underneath some number of delights.

More grateful 'tis at times (for nature craves No artifice nor
luxury), if forsooth There be no golden images of boys Along the
halls, with right hands holding out The lamps ablaze, the lights
for evening feasts, And if the house doth glitter not with gold
Nor gleam with silver, and to the lyre resound No fretted and
gilded ceilings overhead, Yet still to lounge with friends in the
soft grass Beside a river of water, underneath A big tree's
boughs, and merrily to refresh Our frames, with no vast outlay-
most of all If the weather is laughing and the times of the year
Besprinkle the green of the grass around with flowers.

Nor yet the quicker will hot fevers go, If on a pictured tapestry
thou toss, Or purple robe, than if 'tis thine to lie Upon the poor
man's bedding. Wherefore, since Treasure, nor rank, nor glory
of a reign Avail us naught for this our body, thus Reckon them
likewise nothing for the mind: Save then perchance, when thou
beholdest forth Thy legions swarming round the Field of Mars,
Rousing a mimic warfare- either side Strengthened with large
auxiliaries and horse, Alike equipped with arms, alike inspired;

Or save when also thou beholdest forth Thy fleets to swarm,
deploying down the sea: For then, by such bright circumstance
abashed, Religion pales and flees thy mind; O then The fears of
death leave heart so free of care.

But if we note how all this pomp at last Is but a drollery and a
mocking sport, And of a truth man's dread, with cares at heels,
Dreads not these sounds of arms, these savage swords But
among kings and lords of all the world Mingles undaunted, nor
is overawed By gleam of gold nor by the splendour bright Of
purple robe, canst thou then doubt that this Is aught, but power
of thinking?- when, besides The whole of life but labours in the
dark.

For just as children tremble and fear all In the viewless dark, so
even we at times Dread in the light so many things that be No
whit more fearsome than what children feign, Shuddering, will
be upon them in the dark.

This terror then, this darkness of the mind, Not sunrise with its
flaring spokes of light, Nor glittering arrows of morning can
disperse, But only nature's aspect and her law.

ATOMIC MOTIONS

2.62

Now come: I will untangle for thy steps Now by what motions
the begetting bodies Of the world-stuff beget the varied world,
And then forever resolve it when begot, And by what force they
are constrained to this, And what the speed appointed unto
them Wherewith to travel down the vast inane: Do thou
remember to yield thee to my words.

For truly matter coheres not, crowds not tight, Since we behold
each thing to wane away, And we observe how all flows on and
off, As 'twere, with age-old time, and from our eyes How eld
withdraws each object at the end, Albeit the sum is seen to bide

the same, Unharm'd, because these motes that leave each thing
Diminish what they part from, but endow With increase those
to which in turn they come, Constraining these to wither in old
age, And those to flower at the prime (and yet Biding not long
among them). Thus the sum Forever is replenish'd, and we live
As mortals by eternal give and take.

The nations wax, the nations wane away; In a brief space the
generations pass, And like to runners hand the lamp of life One
unto other.

2.80

But if thou believe That the primordial germs of things can stop,
And in their stopping give new motions birth, Afar thou
wanderest from the road of truth.

For since they wander through the void inane, All the
primordial germs of things must needs Be borne along, either
by weight their own, Or haply by another's blow without.

For, when, in their incessancy so oft They meet and clash, it
comes to pass amain They leap asunder, face to face: not
strange- Being most hard, and solid in their weights, And
naught opposing motion, from behind.

And that more clearly thou perceive how all These mites of
matter are darted round about, Recall to mind how nowhere in
the sum Of All exists a bottom,- nowhere is A realm of rest for
primal bodies; since (As amply shown and proved by reason
sure)

Space has no bound nor measure, and extends Unmetered forth
in all directions round.

Since this stands certain, thus 'tis out of doubt No rest is
rendered to the primal bodies Along the unfathomable inane;
but rather, Inveterately plied by motions mixed, Some, at their
jamming, bound aback and leave Huge gaps between, and some

from off the blow Are hurried about with spaces small between.

And all which, brought together with slight gaps, In more condensed union bound aback, Linked by their own all inter-tangled shapes,- These form the irrefragable roots of rocks And the brute bulks of iron, and what else Is of their kind...

The rest leap far asunder, far recoil, Leaving huge gaps between: and these supply For us thin air and splendour-lights of the sun.

And many besides wander the mighty void- Cast back from unions of existing things, Nowhere accepted in the universe, And nowise linked in motions to the rest.

And of this fact (as I record it here)

An image, a type goes on before our eyes Present each moment; for behold whenever The sun's light and the rays, let in, pour down Across dark halls of houses: thou wilt see The many mites in many a manner mixed Amid a void in the very light of the rays, And battling on, as in eternal strife, And in battalions contending without halt, In meetings, partings, harried up and down.

From this thou mayest conjecture of what sort The ceaseless tossing of primordial seeds Amid the mightier void- at least so far As small affair can for a vaster serve, And by example put thee on the spoor Of knowledge. For this reason too 'tis fit Thou turn thy mind the more unto these bodies Which here are witnessed tumbling in the light: Namely, because such tumblings are a sign That motions also of the primal stuff Secret and viewless lurk beneath, behind.

For thou wilt mark here many a speck, impelled By viewless blows, to change its little course, And beaten backwards to return again, Hither and thither in all directions round.

Lo, all their shifting movement is of old, From the primeval atoms; for the same Primordial seeds of things first move of self, And then those bodies built of unions small And nearest, as it were, unto the powers Of the primeval atoms, are stirred up By impulse of those atoms' unseen blows, And these thereafter goad the next in size: Thus motion ascends from the primevals on, And stage by stage emerges to our sense, Until those objects also move which we Can mark in sunbeams, though it not appears What blows do urge them.

2.142

Now what the speed to matter's atoms given Thou mayest in few, my Memmius, learn from this: When first the dawn is sprinkling with new light The lands, and all the breed of birds abroad Flit round the trackless forests, with liquid notes Filling the regions along the mellow air, We see 'tis forthwith manifest to man How suddenly the risen sun is wont At such an hour to overspread and clothe The whole with its own splendour; but the sun's Warm exhalations and this serene light Travel not down an empty void; and thus They are compelled more slowly to advance, Whilst, as it were, they cleave the waves of air; Nor one by one travel these particles Of the warm exhalations, but are all Entangled and enmassed, whereby at once Each is restrained by each, and from without Checked, till compelled more slowly to advance.

But the primordial atoms with their old Simple solidity, when forth they travel Along the empty void, all undelayed By aught outside them there, and they, each one Being one unit from nature of its parts, Are borne to that one place on which they strive Still to lay hold, must then, beyond a doubt, Outstrip in speed, and be more swiftly borne Than light of sun, and over regions rush, Of space much vaster, in the self-same time The sun's effulgence widens round the sky.

.....

Nor to pursue the atoms one by one, To see the law whereby each thing goes on.

But some men, ignorant of matter, think, Opposing this, that not without the gods, In such adjustment to our human ways, Can nature change the seasons of the years, And bring to birth the grains and all of else To which divine Delight, the guide of life, Persuades mortality and leads it on, That, through her artful blandishments of love, It propagate the generations still, Lest humankind should perish. When they feign That gods have stablished all things but for man, They seem in all ways mightily to lapse From reason's truth: for ev'n if ne'er I knew What seeds primordial are, yet would I dare This to affirm, ev'n from deep judgment based Upon the ways and conduct of the skies- This to maintain by many a fact besides- That in no wise the nature of the world For us was builded by a power divine- So great the faults it stands encumbered with: The which, my Memmius, later on, for thee We will clear up. Now as to what remains Concerning motions we'll unfold our thought.

2.184

Now is the place, meseems, in these affairs To prove for thee this too: nothing corporeal Of its own force can e'er be upward borne, Or upward go- nor let the bodies of flames Deceive thee here: for they engendered are With urge to upwards, taking thus increase, Whereby grow upwards shining grains and trees, Though all the weight within them downward bears.

Nor, when the fires will leap from under round The roofs of houses, and swift flame laps up Timber and beam, 'tis then to be supposed They act of own accord, no force beneath To urge them up. 'Tis thus that blood, discharged From out our bodies, spurts its jets aloft And spatters gore. And hast thou never marked With what a force the water will disgorge Timber and beam? The deeper, straight and down, We push them in, and, many though we be, The more we press with main and toil, the

more The water vomits up and flings them back, That, more than half their length, they there emerge, Rebounding. Yet we never doubt, meseems, That all the weight within them downward bears Through empty void. Well, in like manner, flames Ought also to be able, when pressed out, Through winds of air to rise aloft, even though The weight within them strive to draw them down.

Hast thou not seen, sweeping so far and high, The meteors, midnight flambeaus of the sky, How after them they draw long trails of flame Wherever Nature gives a thoroughfare?

How stars and constellations drop to earth, Seest not? Nay, too, the sun from peak of heaven Sheds round to every quarter its large heat, And sows the new-ploughed intervalles with light: Thus also sun's heat downward tends to earth.

Athwart the rain thou seest the lightning fly; Now here, now there, bursting from out the clouds, The fires dash zig-zag- and that flaming power Falls likewise down to earth.

2.216

In these affairs We wish thee also well aware of this: The atoms, as their own weight bears them down Plumb through the void, at scarce determined times, In scarce determined places, from their course Decline a little- call it, so to speak, Mere changed trend. For were it not their wont Thuswise to swerve, down would they fall, each one, Like drops of rain, through the unbottomed void; And then collisions ne'er could be nor blows Among the primal elements; and thus Nature would never have created aught.

But, if perchance be any that believe The heavier bodies, as more swiftly borne Plumb down the void, are able from above To strike the lighter, thus engendering blows Able to cause those procreant motions, far From highways of true reason they retire.

For whatsoever through the waters fall, Or through thin air,
must quicken their descent, Each after its weight- on this
account, because Both bulk of water and the subtle air By no
means can retard each thing alike, But give more quick before
the heavier weight; But contrariwise the empty void cannot, On
any side, at any time, to aught Oppose resistance, but will ever
yield, True to its bent of nature. Wherefore all, With equal
speed, though equal not in weight, Must rush, borne downward
through the still inane.

Thus ne'er at all have heavier from above Been swift to strike
the lighter, gendering strokes Which cause those divers
motions, by whose means Nature transacts her work. And so I
say, The atoms must a little swerve at times- But only the least,
lest we should seem to feign Motions oblique, and fact refute us
there.

For this we see forthwith is manifest: Whatever the weight, it
can't obliquely go, Down on its headlong journey from above, At
least so far as thou canst mark; but who Is there can mark by
sense that naught can swerve At all aside from off its road's
straight line?

Again, if ev'r all motions are co-linked, And from the old ever
arise the new In fixed order, and primordial seeds Produce not
by their swerving some new start Of motion to sunder the
covenants of fate, That cause succeed not cause from
everlasting, Whence this free will for creatures o'er the lands,
Whence is it wrested from the fates,- this will Whereby we step
right forward where desire Leads each man on, whereby the
same we swerve In motions, not as at some fixed time, Nor at
some fixed line of space, but where The mind itself has urged?
For out of doubt In these affairs 'tis each man's will itself That
gives the start, and hence throughout our limbs Incipient
motions are diffused. Again, Dost thou not see, when, at a point
of time, The bars are opened, how the eager strength Of horses

cannot forward break as soon As pants their mind to do? For it behooves That all the stock of matter, through the frame, Be roused, in order that, through every joint, Aroused, it press and follow mind's desire; So thus thou seest initial motion's gendered From out the heart, aye, verily, proceeds First from the spirit's will, whence at the last 'Tis given forth through joints and body entire.

Quite otherwise it is, when forth we move, Impelled by a blow of another's mighty powers And mighty urge; for then 'tis clear enough All matter of our total body goes, Hurried along, against our own desire- Until the will has pulled upon the reins And checked it back, throughout our members all; At whose arbitrament indeed sometimes The stock of matter's forced to change its path, Throughout our members and throughout our joints, And, after being forward cast, to be Reined up, whereat it settles back again.

So seest thou not, how, though external force Drive men before, and often make them move, Onward against desire, and headlong snatched, Yet is there something in these breasts of ours Strong to combat, strong to withstand the same?- Wherefore no less within the primal seeds Thou must admit, besides all blows and weight, Some other cause of motion, whence derives This power in us inborn, of some free act.- Since naught from nothing can become, we see.

For weight prevents all things should come to pass Through blows, as 'twere, by some external force; But that man's mind itself in all it does Hath not a fixed necessity within, Nor is not, like a conquered thing, compelled To bear and suffer,- this state comes to man From that slight swervement of the elements In no fixed line of space, in no fixed time.

2,294

Nor ever was the stock of stuff more crammed, Nor ever, again, sundered by bigger gaps: For naught gives increase and naught

takes away; On which account, just as they move to-day, The elemental bodies moved of old And shall the same hereafter evermore.

And what was wont to be begot of old Shall be begotten under selfsame terms And grow and thrive in power, so far as given To each by Nature's changeless, old decrees.

The sum of things there is no power can change, For naught exists outside, to which can flee Out of the world matter of any kind, Nor forth from which a fresh supply can spring, Break in upon the founded world, and change Whole nature of things, and turn their motions about.

2.308

Herein wonder not How 'tis that, while the seeds of things are all Moving forever, the sum yet seems to stand Supremely still, except in cases where A thing shows motion of its frame as whole.

For far beneath the ken of senses lies The nature of those ultimates of the world; And so, since those themselves thou canst not see, Their motion also must they veil from men- For mark, indeed, how things we can see, oft Yet hide their motions, when afar from us Along the distant landscape. Often thus, Upon a hillside will the woolly flocks Be cropping their goodly food and creeping about Whither the summons of the grass, begemmed With the fresh dew, is calling, and the lambs, Well filled, are frisking, locking horns in sport: Yet all for us seem blurred and blent afar- A glint of white at rest on a green hill.

Again, when mighty legions, marching round, Fill all the quarters of the plains below, Rousing a mimic warfare, there the sheen Shoots up the sky, and all the fields about Glitter with brass, and from beneath, a sound Goes forth from feet of stalwart soldiery, And mountain walls, smote by the shouting, send The voices onward to the stars of heaven, And hither and

thither darts the cavalry, And of a sudden down the midmost
fields Charges with onset stout enough to rock The solid earth:
and yet some post there is Up the high mountains, viewed from
which they seem To stand- a gleam at rest along the plains.

ATOMIC FORMS AND THEIR COMBINATIONS

2.333

Now come, and next hereafter apprehend What sorts, how
vastly different in form, How varied in multitudinous shapes
they are- These old beginnings of the universe; Not in the sense
that only few are furnished With one like form, but rather not at
all In general have they likeness each with each, No marvel:
since the stock of them's so great That there's no end (as I have
taught) nor sum, They must indeed not one and all be marked
By equal outline and by shape the same.

.....

Moreover, humankind, and the mute flocks Of scaly creatures
swimming in the streams, And joyous herds around, and all the
wild, And all the breeds of birds- both those that teem In
gladsome regions of the water-haunts, About the river-banks
and springs and pools, And those that throng, flitting from tree
to tree, Through trackless woods- Go, take which one thou wilt,
In any kind: thou wilt discover still Each from the other still
unlike in shape.

Nor in no other wise could offspring know Mother, nor mother
offspring- which we see They yet can do, distinguished one
from other, No less than human beings, by clear signs.

Thus oft before fair temples of the gods, Beside the
incense-burning altars slain, Drops down the yearling calf, from
out its breast Breathing warm streams of blood; the orphaned
mother, Ranging meanwhile green woodland pastures round,
Knows well the footprints, pressed by cloven hoofs, With eyes

regarding every spot about, For sight somewhere of youngling
gone from her; And, stopping short, filleth the leafy lanes With
her complaints; and oft she seeks again Within the stall, pierced
by her yearning still.

Nor tender willows, nor dew-quicken'd grass, Nor the loved
streams that glide along low banks, Can lure her mind and turn
the sudden pain; Nor other shapes of calves that graze thereby
Distract her mind or lighten pain the least- So keen her search
for something known and hers.

Moreover, tender kids with bleating throats Do know their
horned dams, and butting lambs The flocks of sheep, and thus
they patter on, Unfailingly each to its proper teat, As nature
intends. Lastly, with any grain, Thou'lt see that no one kernel in
one kind Is so far like another, that there still Is not in shapes
some difference running through.

By a like law we see how earth is pied With shells and conchs,
where, with soft waves, the sea Beats on the thirsty sands of
curving shores.

Wherefore again, again, since seeds of things Exist by nature,
nor were wrought with hands After a fixed pattern of one other,
They needs must flitter to and fro with shapes In types
dissimilar to one another.

2.381

.....

Easy enough by thought of mind to solve Why fires of lightning
more can penetrate Than these of ours from pitch-pine born on
earth.

For thou canst say lightning's celestial fire, So subtle, is formed
of figures finer far, And passes thus through holes which this
our fire, Born from the wood, created from the pine, Cannot.
Again, light passes through the horn On the lantern's side, while

rain is dashed away.

And why?- unless those bodies of light should be Finer than those of water's genial showers.

We see how quickly through a colander The wines will flow; how, on the other hand, The sluggish olive-oil delays: no doubt, Because 'tis wrought of elements more large, Or else more crook'd and intertangled. Thus It comes that the primordials cannot be So suddenly sundered one from other, and seep, One through each several hole of anything.

2.398

And note, besides, that liquor of honey or milk Yields in the mouth agreeable taste to tongue, Whilst nauseous wormwood, pungent centaury, With their foul flavour set the lips awry; Thus simple 'tis to see that whatsoever Can touch the senses pleasingly are made Of smooth and rounded elements, whilst those Which seem the bitter and the sharp, are held Entwined by elements more crook'd, and so Are wont to tear their ways into our senses, And rend our body as they enter in.

In short all good to sense, all bad to touch, Being up-built of figures so unlike, Are mutually at strife- lest thou suppose That the shrill rasping of a squeaking saw Consists of elements as smooth as song Which, waked by nimble fingers, on the strings The sweet musicians fashion; or suppose That same-shaped atoms through men's nostrils pierce When foul cadavers burn, as when the stage Is with Cilician saffron sprinkled fresh, And the altar near exhales Panchaeian scent; Or hold as of like seed the goodly hues Of things which feast our eyes, as those which sting Against the smarting pupil and draw tears, Or show, with gruesome aspect, grim and vile.

For never a shape which charms our sense was made Without some elemental smoothness; whilst Whate'er is harsh and irksome has been framed Still with some roughness in its

elements.

Some, too, there are which justly are supposed To be nor smooth nor altogether hooked, With bended barbs, but slightly angled-out, To tickle rather than to wound the sense- And of which sort is the salt tartar of wine And flavours of the gummed elecampane.

Again, that glowing fire and icy rime Are fanged with teeth unlike whereby to sting Our body's sense, the touch of each gives proof.

For touch- by sacred majesties of Gods!- Touch is indeed the body's only sense- Be't that something in-from-outward works, Be't that something in the body born Wounds, or delighteth as it passes out Along the procreant paths of Aphrodite; Or be't the seeds by some collision whirl Disordered in the body and confound By tumult and confusion all the sense- As thou mayst find, if haply with the hand Thyself thou strike thy body's any part.

On which account, the elemental forms Must differ widely, as enabled thus To cause diverse sensations.

And, again, What seems to us the hardened and condensed Must be of atoms among themselves more hooked, Be held compacted deep within, as 'twere By branch-like atoms- of which sort the chief Are diamond stones, despisers of all blows, And stalwart flint and strength of solid iron, And brazen bars, which, budging hard in locks, Do grate and scream. But what are liquid, formed Of fluid body, they indeed must be Of elements more smooth and round- because Their globules severally will not cohere: To suck the poppy-seeds from palm of hand Is quite as easy as drinking water down, And they, once struck, roll like unto the same.

But that thou seest among the things that flow Some bitter, as
the brine of ocean is, Is not the least a marvel...

For since 'tis fluid, smooth its atoms are And round, with painful
rough ones mixed therein; Yet need not these be held together
hooked: In fact, though rough, they're globular besides, Able at
once to roll, and rasp the sense.

And that the more thou mayst believe me here, That with
smooth elements are mixed the rough (Whence Neptune's salt
astringent body comes), There is a means to separate the twain,
And thereupon dividedly to see How the sweet water, after
filtering through So often underground, flows freshened forth
Into some hollow; for it leaves above The primal germs of
nauseating brine, Since cling the rough more readily in earth.

Lastly, whatso thou markest to disperse Upon the instant-
smoke, and cloud, and flame- Must not (even though not all of
smooth and round)

Be yet co-linked with atoms intertwined, That thus they can,
without together cleaving, So pierce our body and so bore the
rocks.

Whatever we see...

Given to senses, that thou must perceive They're not from
linked but pointed elements.

2.478

The which now having taught, I will go on To bind thereto a fact
to this allied And drawing from this its proof: these primal
germs Vary, yet only with finite tale of shapes.

For were these shapes quite infinite, some seeds Would have a
body of infinite increase.

For in one seed, in one small frame of any, The shapes can't vary
from one another much.

Assume, we'll say, that of three minim parts Consist the primal bodies, or add a few: When, now, by placing all these parts of one At top and bottom, changing lefts and rights, Thou hast with every kind of shift found out What the aspect of shape of its whole body Each new arrangement gives, for what remains, If thou percase wouldst vary its old shapes, New parts must then be added; follows next, If thou percase wouldst vary still its shapes, That by like logic each arrangement still Requires its increment of other parts.

Ergo, an augmentation of its frame Follows upon each novelty of forms.

Wherefore, it cannot be thou'lt undertake That seeds have infinite differences in form, Lest thus thou forcest some indeed to be Of an immeasurable immensity- Which I have taught above cannot be proved.

.....

And now for thee barbaric robes, and gleam Of Meliboean purple, touched with dye Of the Thessalian shell...

The peacock's golden generations, stained With spotted gaieties, would lie o'erthrown By some new colour of new things more bright; The odour of myrrh and savours of honey despised; The swan's old lyric, and Apollo's hymns, Once modulated on the many chords, Would likewise sink o'er-mastered and be mute: For, lo, a somewhat, finer than the rest, Would be arising evermore. So, too, Into some baser part might all retire, Even as we said to better might they come: For, lo, a somewhat, loathlier than the rest To nostrils, ears, and eyes, and taste of tongue, Would then, by reasoning reversed, be there.

Since 'tis not so, but unto things are given Their fixed limitations which do bound Their sum on either side, 't must be

confessed That matter, too, by finite tale of shapes Does differ.
Again, from earth's midsummer heats Unto the icy hoar-frosts
of the year The forward path is fixed, and by like law
O'ertravelled backwards at the dawn of spring.

For each degree of hot, and each of cold, And the half-warm, all
filling up the sum In due progression, lie, my Memmius, there
Betwixt the two extremes: the things create Must differ,
therefore, by a finite change, Since at each end marked off they
ever are By fixed point- on one side plagued by flames And on
the other by congealing frosts.

2.522

The which now having taught, I will go on To bind thereto a fact
to this allied And drawing from this its proof: those primal
germs Which have been fashioned all of one like shape Are
infinite in tale; for, since the forms Themselves are finite in
divergences, Then those which are alike will have to be Infinite,
else the sum of stuff remains A finite- what I've proved is not
the fact, Showing in verse how corpuscles of stuff, From
everlasting and to-day the same, Uphold the sum of things, all
sides around By old succession of unending blows.

For though thou view'st some beasts to be more rare, And
mark'st in them a less prolific stock, Yet in another region, in
lands remote, That kind abounding may make up the count;
Even as we mark among the four-foot kind Snake-handed
elephants, whose thousands wall With ivory ramparts India
about, That her interiors cannot entered be- So big her count of
brutes of which we see Such few examples. Or suppose, besides,
We feign some thing, one of its kind and sole With body born, to
which is nothing like In all the lands: yet now unless shall be An
infinite count of matter out of which Thus to conceive and bring
it forth to life, It cannot be created and- what's more- It cannot
take its food and get increase.

Yea, if through all the world in finite tale Be tossed the procreant bodies of one thing, Whence, then, and where in what mode, by what power, Shall they to meeting come together there, In such vast ocean of matter and tumult strange?- No means they have of joining into one.

But, just as, after mighty ship-wrecks piled, The mighty main is wont to scatter wide The rowers' banks, the ribs, the yards, the prow, The masts and swimming oars, so that afar Along all shores of lands are seen afloat The carven fragments of the rended poop, Giving a lesson to mortality To shun the ambush of the faithless main, The violence and the guile, and trust it not At any hour, however much may smile The crafty enticements of the placid deep: Exactly thus, if once thou holdest true That certain seeds are finite in their tale, The various tides of matter, then, must needs Scatter them flung throughout the ages all, So that not ever can they join, as driven Together into union, nor remain In union, nor with increment can grow- But facts in proof are manifest for each: Things can be both begotten and increase.

'Tis therefore manifest that primal germs, Are infinite in any class thou wilt- From whence is furnished matter for all things.

Nor can those motions that bring death prevail Forever, nor eternally entomb The welfare of the world; nor, further, can Those motions that give birth to things and growth Keep them forever when created there.

Thus the long war, from everlasting waged, With equal strife among the elements Goes on and on. Now here, now there, prevail The vital forces of the world- or fall.

Mixed with the funeral is the wildered wail Of infants coming to the shores of light: No night a day, no dawn a night hath followed That heard not, mingling with the small birth-cries, The wild laments, companions old of death And the black rites.

2.581

This, too, in these affairs 'Tis fit thou hold well sealed, and keep
consigned With no forgetting brain: nothing there is Whose
nature is apparent out of hand That of one kind of elements
consists- Nothing there is that's not of mixed seed.

And whatsoe'er possesses in itself More largely many powers
and properties Shows thus that here within itself there are The
largest number of kinds and differing shapes Of elements. And,
chief of all, the earth Hath in herself first bodies whence the
springs, Rolling chill waters, renew forevermore The
unmeasured main; hath whence the fires arise- For burns in
many a spot her flamed crust, Whilst the impetuous Aetna raves
indeed From more profounder fires- and she, again, Hath in
herself the seed whence she can raise The shining grains and
gladsome trees for men; Whence, also, rivers, fronds, and
gladsome pastures Can she supply for mountain-roaming
beasts.

Wherefore great mother of gods, and mother of beasts, And
parent of man hath she alone been named.

Her hymned the old and learned bards of Greece

Seated in chariot o'er the realms of air To drive her team of
lions, teaching thus That the great earth hangs poised and
cannot lie Resting on other earth. Unto her car They've yoked
the wild beasts, since a progeny, However savage, must be
tamed and chid By care of parents. They have girt about With
turret-crown the summit of her head, Since, fortified in her
goodly strongholds high, 'Tis she sustains the cities; now,
adorned With that same token, to-day is carried forth, With
solemn awe through many a mighty land, The image of that
mother, the divine.

Her the wide nations, after antique rite, Do name Idaean
Mother, giving her Escort of Phrygian bands, since first, they

say, From out those regions 'twas that grain began Through all the world. To her do they assign The Galli, the emasculate, since thus They wish to show that men who violate The majesty of the mother and have proved Ingrate to parents are to be adjudged Unfit to give unto the shores of light A living progeny. The Galli come: And hollow cymbals, tight-skinned tambourines Resound around to bangings of their hands; The fierce horns threaten with a raucous bray; The tubed pipe excites their maddened minds In Phrygian measures; they bear before them knives, Wild emblems of their frenzy, which have power The rabble's ingrate heads and impious hearts To panic with terror of the goddess' might.

And so, when through the mighty cities borne, She blesses man with salutations mute, They strew the highway of her journeyings With coin of brass and silver, gifting her With alms and largesse, and shower her and shade With flowers of roses falling like the snow Upon the Mother and her companion-bands.

Here is an armed troop, the which by Greeks Are called the Phrygian Curetes. Since Haply among themselves they use to play In games of arms and leap in measure round With bloody mirth and by their nodding shake The terrorizing crests upon their heads, This is the armed troop that represents The arm'd Dictaeon Curetes, who, in Crete, As runs the story, whilom did out-drown That infant cry of Zeus, what time their band, Young boys, in a swift dance around the boy, To measured step beat with the brass on brass, That Saturn might not get him for his jaws, And give its mother an eternal wound Along her heart. And 'tis on this account That armed they escort the mighty Mother, Or else because they signify by this That she, the goddess, teaches men to be Eager with armed valour to defend Their motherland, and ready to stand forth, The guard and glory of their parents' years.

A tale, however beautifully wrought, That's wide of reason by a long remove: For all the gods must of themselves enjoy Immortal aeons and supreme repose, Withdrawn from our affairs, detached, afar: Immune from peril and immune from pain, Themselves abounding in riches of their own, Needing not us, they are not touched by wrath They are not taken by service or by gift.

Truly is earth insensate for all time; But, by obtaining germs of many things, In many a way she brings the many forth Into the light of sun. And here, whoso Decides to call the ocean Neptune, or The grain-crop Ceres, and prefers to abuse The name of Bacchus rather than pronounce The liquor's proper designation, him Let us permit to go on calling earth Mother of Gods, if only he will spare To taint his soul with foul religion.

2.660

So, too, the wooly flocks, and horned kine, And brood of battle-eager horses, grazing Often together along one grassy plain, Under the cope of one blue sky, and slaking From out one stream of water each its thirst, All live their lives with face and form unlike, Keeping the parents' nature, parents' habits, Which, kind by kind, through ages they repeat.

So great in any sort of herb thou wilt, So great again in any river of earth Are the distinct diversities of matter.

Hence, further, every creature- any one From out them all- compounded is the same Of bones, blood, veins, heat, moisture, flesh, and thews- All differing vastly in their forms, and built of elements dissimilar in shape.

Again, all things by fire consumed ablaze, Within their frame lay up, if naught besides, At least those atoms whence derives their power To throw forth fire and send out light from under, To shoot the sparks and scatter embers wide.

If, with like reasoning of mind, all else Thou traverse through,
thou wilt discover thus That in their frame the seeds of many
things They hide, and divers shapes of seeds contain.

Further, thou markest much, to which are given Along together
colour and flavour and smell, Among which, chief, are most
burnt offerings.

.....

Thus must they be of divers shapes composed.

A smell of scorching enters in our frame Where the bright
colour from the dye goes not; And colour in one way, flavour in
quite another Works inward to our senses- so mayst see They
differ too in elemental shapes.

Thus unlike forms into one mass combine, And things exist by
intermixed seed.

But still 't must not be thought that in all ways All things can be
conjoined; for then wouldst view Portents begot about thee
every side: Hulks of mankind half brute astarting up, At times
big branches sprouting from man's trunk, Limbs of a sea-beast
to a land-beast knit, And nature along the all-producing earth
Feeding those dire Chimaeras breathing flame From hideous
jaws- Of which 'tis simple fact That none have been begot;
because we see All are from fixed seed and fixed dam
Engendered and so function as to keep Throughout their
growth their own ancestral type.

This happens surely by a fixed law: For from all food-stuff, when
once eaten down, Go sundered atoms, suited to each creature,
Throughout their bodies, and, conjoining there, Produce the
proper motions; but we see How, contrariwise, nature upon the
ground Throws off those foreign to their frame; and many With
viewless bodies from their bodies fly, By blows impelled- those
impotent to join To any part, or, when inside, to accord And to

take on the vital motions there.

But think not, haply, living forms alone Are bound by these laws: they distinguished all.

.....

For just as all things of creation are, In their whole nature, each to each unlike, So must their atoms be in shape unlike- Not since few only are fashioned of like form, But since they all, as general rule, are not The same as all. Nay, here in these our verses, Elements many, common to many words, Thou seest, though yet 'tis needful to confess The words and verses differ, each from each, Compounded out of different elements- Not since few only, as common letters, run Through all the words, or no two words are made, One and the other, from all like elements, But since they all, as general rule, are not The same as all. Thus, too, in other things, Whilst many germs common to many things There are, yet they, combined among themselves, Can form new wholes to others quite unlike.

Thus fairly one may say that humankind, The grains, the gladsome trees, are all made up Of different atoms. Further, since the seeds Are different, difference must there also be In intervening spaces, thoroughfares, Connections, weights, blows, clashings, motions, all Which not alone distinguish living forms, But sunder earth's whole ocean from the lands, And hold all heaven from the lands away.

ABSENCE OF SECONDARY QUALITIES

2.730

Now come, this wisdom by my sweet toil sought Look thou perceive, lest haply thou shouldst guess That the white objects shining to thine eyes Are gendered of white atoms, or the black Of a black seed; or yet believe that aught That's steeped in any hue should take its dye From bits of matter tinct with hue the

same.

For matter's bodies own no hue the least- Or like to objects or,
again, unlike.

But, if perchance it seem to thee that mind Itself can dart no
influence of its own Into these bodies, wide thou wand'rest off.

For since the blind-born, who have ne'er surveyed The light of
sun, yet recognise by touch Things that from birth had ne'er a
hue for them, 'Tis thine to know that bodies can be brought No
less unto the ken of our minds too, Though yet those bodies
with no dye be smeared.

Again, ourselves whatever in the dark We touch, the same we do
not find to be Tinctured with any colour.

Now that here I win the argument, I next will teach

Now, every colour changes, none except, And every...

Which the primordials ought nowise to do.

Since an immutable somewhat must remain, Lest all things
utterly be brought to naught.

For change of anything from out its bounds Means instant death
of that which was before.

Wherefore be mindful not to stain with colour The seeds of
things, lest things return for thee All utterly to naught.

But now, if seeds Receive no property of colour, and yet Be still
endowed with variable forms From which all kinds of colours
they beget And vary (by reason that ever it matters much With
what seeds, and in what positions joined, And what the motions
that they give and get), Forthwith most easily thou mayst devise
Why what was black of hue an hour ago Can of a sudden like the
marble gleam,- As ocean, when the high winds have upheaved
Its level plains, is changed to hoary waves Of marble whiteness:

for, thou mayst declare, That, when the thing we often see as black Is in its matter then commixed anew, Some atoms rearranged, and some withdrawn, And added some, 'tis seen forthwith to turn Glowing and white. But if of azure seeds Consist the level waters of the deep, They could in nowise whiten: for however Thou shakest azure seeds, the same can never Pass into marble hue. But, if the seeds- Which thus produce the ocean's one pure sheen- Be now with one hue, now another dyed, As oft from alien forms and divers shapes A cube's produced all uniform in shape, 'Twould be but natural, even as in the cube We see the forms to be dissimilar, That thus we'd see in brightness of the deep (Or in whatever one pure sheen thou wilt)

Colours diverse and all dissimilar.

Besides, the unlike shapes don't thwart the least The whole in being externally a cube; But differing hues of things do block and keep The whole from being of one resultant hue.

Then, too, the reason which entices us At times to attribute colours to the seeds Falls quite to pieces, since white things are not Create from white things, nor are black from black, But evermore they are create from things Of divers colours. Verily, the white Will rise more readily, is sooner born Out of no colour, than of black or aught Which stands in hostile opposition thus.

2.795

Besides, since colours cannot be, sans light, And the primordials come not forth to light, 'Tis thine to know they are not clothed with colour- Truly, what kind of colour could there be In the viewless dark? Nay, in the light itself A colour changes, gleaming variedly, When smote by vertical or slanting ray.

Thus in the sunlight shows the down of doves That circles, garlanding, the nape and throat: Now it is ruddy with a bright gold-bronze, Now, by a strange sensation it becomes

Green-emerald blended with the coral-red.

The peacock's tail, filled with the copious light, Changes its colours likewise, when it turns.

Wherefore, since by some blow of light begot, Without such blow these colours can't become.

And since the pupil of the eye receives Within itself one kind of blow, when said To feel a white hue, then another kind, When feeling a black or any other hue, And since it matters nothing with what hue The things thou touchest be perchance endowed, But rather with what sort of shape equipped, 'Tis thine to know the atoms need not colour, But render forth sensations, as of touch, That vary with their varied forms.

2.817

Besides, Since special shapes have not a special colour, And all formations of the primal germs Can be of any sheen thou wilt, why, then, Are not those objects which are of them made Suffused, each kind with colours of every kind?

For then 'twere meet that ravens, as they fly, Should dartle from white pinions a white sheen, Or swans turn black from seed of black, or be Of any single varied dye thou wilt.

Again, the more an object's rent to bits, The more thou see its colour fade away Little by little till 'tis quite extinct; As happens when the gaudy linen's picked Shred after shred away: the purple there, Phoenician red, most brilliant of all dyes, Is lost asunder, ravelled thread by thread; Hence canst perceive the fragments die away From out their colour, long ere they depart Back to the old primordials of things.

And, last, since thou concedest not all bodies Send out a voice or smell, it happens thus That not to all thou givest sounds and smells.

So, too, since we behold not all with eyes, 'Tis thine to know
some things there are as much Orphaned of colour, as others
without smell, And reft of sound; and those the mind alert No
less can apprehend than it can mark The things that lack some
other qualities.

2.842

But think not haply that the primal bodies Remain despoiled
alone of colour: so, Are they from warmth dissevered and from
cold And from hot exhalations; and they move, Both sterile of
sound and dry of juice; and throw Not any odour from their
proper bodies.

Just as, when undertaking to prepare A liquid balm of myrrh
and marjoram, And flower of nard, which to our nostrils
breathes Odour of nectar, first of all behooves Thou seek, as far
as find thou may and can, The inodorous olive-oil (which never
sends One whiff of scent to nostrils), that it may The least
debauch and ruin with sharp tang The odorous essence with its
body mixed And in it seethed. And on the same account The
primal germs of things must not be thought To furnish colour in
begetting things, Nor sound, since pow'rless they to send forth
aught From out themselves, nor any flavour, too, Nor cold, nor
exhalation hot or warm.

.....

The rest; yet since these things are mortal all- The pliant
mortal, with a body soft; The brittle mortal, with a crumbling
frame; The hollow with a porous-all must be Disjoined from the
primal elements, If still we wish under the world to lay
Immortal ground-works, whereupon may rest The sum of weal
and safety, lest for thee All things return to nothing utterly.

Now, too: whate'er we see possessing sense Must yet
confessedly be stablished all From elements insensate. And
those signs, So clear to all and witnessed out of hand, Do not

refute this dictum nor oppose; But rather themselves do lead us
by the hand, Compelling belief that living things are born Of
elements insensate, as I say.

Sooth, we may see from out the stinking dung Live worms
spring up, when, after soaking rains, The drenched earth rots;
and all things change the same: Lo, change the rivers, the
fronds, the gladsome pastures Into the cattle, the cattle their
nature change Into our bodies, and from our body, oft Grow
strong the powers and bodies of wild beasts And mighty-winged
birds. Thus nature changes All foods to living frames, and
procreates From them the senses of live creatures all, In
manner about as she uncoils in flames Dry logs of wood and
turns them all to fire.

And seest not, therefore, how it matters much After what order
are set the primal germs, And with what other germs they all
are mixed, And what the motions that they give and get?

2.886

But now, what is't that strikes thy sceptic mind, Constraining
thee to sundry arguments Against belief that from insensate
germs The sensible is gendered?- Verily, 'Tis this: that liquids,
earth, and wood, though mixed, Are yet unable to gender vital
sense.

And, therefore, 'twill be well in these affairs This to remember:
that I have not said Senses are born, under conditions all, From
all things absolutely which create Objects that feel; but much it
matters here Firstly, how small the seeds which thus compose
The feeling thing, then, with what shapes endowed, And lastly
what they in positions be, In motions, in arrangements. Of
which facts Naught we perceive in logs of wood and clods; And
yet even these, when sodden by the rains, Give birth to wormy
grubs, because the bodies Of matter, from their old
arrangements stirred By the new factor, then combine anew In
such a way as genders living things.

Next, they who deem that feeling objects can From feeling
objects be create, and these, In turn, from others that are wont
to feel

When soft they make them; for all sense is linked With flesh,
and thews, and veins- and such, we see, Are fashioned soft and
of a mortal frame.

Yet be't that these can last forever on: They'll have the sense
that's proper to a part, Or else be judged to have a sense the
same As that within live creatures as a whole.

But of themselves those parts can never feel, For all the sense in
every member back To something else refers- a severed hand,
Or any other member of our frame, Itself alone cannot support
sensation.

It thus remains they must resemble, then, Live creatures as a
whole, to have the power Of feeling sensation concordant in
each part With the vital sense; and so they're bound to feel The
things we feel exactly as do we.

If such the case, how, then, can they be named The primal
germs of things, and how avoid The highways of destruction?-
since they be Mere living things and living things be all One and
the same with mortal. Grant they could, Yet by their meetings
and their unions all, Naught would result, indeed, besides a
throng And hurly-burly all of living things- Precisely as men,
and cattle, and wild beasts, By mere conglomeration each with
each Can still beget not anything of new.

But if by chance they lose, inside a body, Their own sense and
another sense take on, What, then, avails it to assign them that
Which is withdrawn thereafter? And besides, To touch on proof
that we pronounced before, Just as we see the eggs of feathered
fowls To change to living chicks, and swarming worms To
bubble forth when from the soaking rains The earth is sodden,

sure, sensations all Can out of non-sensations be begot.

2.931

But if one say that sense can so far rise From non-sense by mutation, or because Brought forth as by a certain sort of birth, 'Twill serve to render plain to him and prove There is no birth, unless there be before Some formed union of the elements, Nor any change, unless they be unite.

In first place, senses can't in body be Before its living nature's been begot,- Since all its stuff, in faith, is held dispersed About through rivers, air, and earth, and all That is from earth created, nor has met In combination, and, in proper mode, Conjoined into those vital motions which Kindle the all-perceiving senses-they That keep and guard each living thing soever.

Again, a blow beyond its nature's strength Shatters forthwith each living thing soe'er, And on it goes confounding all the sense Of body and mind. For of the primal germs Are loosed their old arrangements, and, throughout, The vital motions blocked,- until the stuff, Shaken profoundly through the frame entire, Undoes the vital knots of soul from body And throws that soul, to outward wide-dispersed, Through all the pores. For what may we surmise A blow inflicted can achieve besides Shaking asunder and loosening all apart?

It happens also, when less sharp the blow, The vital motions which are left are wont Oft to win out- win out, and stop and still The uncouth tumults gendered by the blow, And call each part to its own courses back, And shake away the motion of death which now Begins its own dominion in the body, And kindle anew the senses almost gone.

For by what other means could they the more Collect their powers of thought and turn again From very doorways of destruction Back unto life, rather than pass whereto They be already well-nigh sped and so Pass quite away?

Again, since pain is there Where bodies of matter, by some force
stirred up, Through vitals and through joints, within their seats
Quiver and quake inside, but soft delight, When they remove
unto their place again: 'Tis thine to know the primal germs can
be Assaulted by no pain, nor from themselves Take no delight;
because indeed they are Not made of any bodies of first things,
Under whose strange new motions they might ache Or pluck the
fruit of any dear new sweet.

And so they must be furnished with no sense.

2.973

Once more, if thus, that every living thing May have sensation,
needful 'tis to assign Sense also to its elements, what then Of
those fixed elements from which mankind Hath been, by their
peculiar virtue, formed?

Of verity, they'll laugh aloud, like men, Shaken asunder by a
spasm of mirth, Or sprinkle with dewy tear-drops cheeks and
chins, And have the cunning hardihood to say Much on the
composition of the world, And in their turn inquire what
elements They have themselves,- since, thus the same in kind
As a whole mortal creature, even they Must also be from other
elements, And then those others from others evermore- So that
thou dardest nowhere make a stop.

Oho, I'll follow thee until thou grant The seed (which here thou
say'st speaks, laughs, and thinks)

Is yet derived out of other seeds Which in their turn are doing
just the same.

But if we see what raving nonsense this, And that a man may
laugh, though not, forsooth, Compounded out of laughing
elements, And think and utter reason with learn'd speech,
Though not himself compounded, for a fact, Of sapient seeds
and eloquent, why, then, Cannot those things which we
perceive to have Their own sensation be composed as well Of

intermixed seeds quite void of sense?

INFINITE WORLDS

2.991

Once more, we all from seed celestial spring, To all is that same father, from whom earth, The fostering mother, as she takes the drops Of liquid moisture, pregnant bears her broods- The shining grains, and gladsome shrubs and trees, And bears the human race and of the wild The generations all, the while she yields The foods wherewith all feed their frames and lead The genial life and propagate their kind; Wherefore she owneth that maternal name, By old desert. What was before from earth, The same in earth sinks back, and what was sent From shores of ether, that, returning home, The vaults of sky receive. Nor thus doth death So far annihilate things that she destroys The bodies of matter; but she dissipates Their combinations, and conjoins anew One element with others; and contrives That all things vary forms and change their colours And get sensations and straight give them o'er.

And thus may'st know it matters with what others And in what structure the primordial germs Are held together, and what motions they Among themselves do give and get; nor think That aught we see hither and thither afloat Upon the crest of things, and now a birth And straightway now a ruin, inheres at rest Deep in the eternal atoms of the world.

Why, even in these our very verses here It matters much with what and in what order Each element is set: the same denote Sky, and the ocean, lands, and streams, and sun; The same, the grains, and trees, and living things.

And if not all alike, at least the most- But what distinctions by positions wrought!

And thus no less in things themselves, when once Around are changed the intervals between, The paths of matter, its connections, weights, Blows, clashings, motions, order, structure, shapes, The things themselves must likewise changed be.

Now to true reason give thy mind for us.

Since here strange truth is putting forth its might To hit thee in thine ears, a new aspect Of things to show its front. Yet naught there is So easy that it standeth not at first More hard to credit than it after is; And naught so'er that's great to such degree, Nor wonderful so far, but all mankind Little by little abandon their surprise.

Look upward yonder at the bright clear sky And what it holds- the stars that wander o'er, The moon, the radiance of the splendour-sun: Yet all, if now they first for mortals were, If unforeseen now first asudden shown, What might there be more wonderful to tell, What that the nations would before have dared Less to believe might be?- I fancy, naught- So strange had been the marvel of that sight.

The which o'erwearied to behold, to-day None deigns look upward to those lucent realms.

Then, spew not reason from thy mind away, Beside thyself because the matter's new, But rather with keen judgment nicely weigh; And if to thee it then appeareth true, Render thy hands, or, if 'tis false at last, Gird thee to combat. For my mind-of-man Now seeks the nature of the vast Beyond There on the other side, that boundless sum Which lies without the ramparts of the world, Toward which the spirit longs to peer afar, Toward which indeed the swift elan of thought Flies unencumbered forth.

2,1048

Firstly, we find, Off to all regions round, on either side, Above, beneath, throughout the universe End is there none- as I have taught, as too The very thing of itself declares aloud, And as from nature of the unbottomed deep Shines clearly forth. Nor can we once suppose In any way 'tis likely, (seeing that space To all sides stretches infinite and free, And seeds, innumerable in number, in sum Bottomless, there in many a manner fly, Bestirred in everlasting motion there), That only this one earth and sky of ours Hath been create and that those bodies of stuff, So many, perform no work outside the same; Seeing, moreover, this world too hath been By nature fashioned, even as seeds of things By innate motion chanced to clash and cling- After they'd been in many a manner driven Together at random, without design, in vain- And as at last those seeds together dwelt, Which, when together of a sudden thrown, Should alway furnish the commencements fit Of mighty things- the earth, the sea, the sky, And race of living creatures. Thus, I say, Again, again, 't must be confessed there are Such congregations of matter elsewhere, Like this our world which vasty ether holds In huge embrace.

Besides, when matter abundant Is ready there, when space on hand, nor object Nor any cause retards, no marvel 'tis That things are carried on and made complete, Perforce. And now, if store of seeds there is So great that not whole life-times of the living Can count the tale...

And if their force and nature abide the same, Able to throw the seeds of things together Into their places, even as here are thrown The seeds together in this world of ours, 'T must be confessed in other realms there are Still other worlds, still other breeds of men, And other generations of the wild.

Hence too it happens in the sum there is No one thing single of its kind in birth, And single and sole in growth, but rather it is One member of some generated race, Among full many others

of like kind.

First, cast thy mind abroad upon the living: Thou'lt find the race of mountain-ranging wild Even thus to be, and thus the scions of men To be begot, and lastly the mute flocks Of scaled fish, and winged frames of birds.

Wherefore confess we must on grounds the same That earth, sun, moon, and ocean, and all else, Exist not sole and single-rather in number Exceeding number. Since that deeply set Old boundary stone of life remains for them No less, and theirs a body of mortal birth No less, than every kind which here on earth Is so abundant in its members found.

Which well perceived if thou hold in mind, Then Nature, delivered from every haughty lord, And forthwith free, is seen to do all things Herself and through herself of own accord, Rid of all gods. For- by their holy hearts Which pass in long tranquillity of peace Untroubled ages and a serene life!- Who hath the power (I ask), who hath the power To rule the sum of the immeasurable, To hold with steady hand the giant reins Of the unfathomed deep? Who hath the power At once to roll a multitude of skies, At once to heat with fires ethereal all The fruitful lands of multitudes of worlds, To be at all times in all places near, To stablish darkness by his clouds, to shake The serene spaces of the sky with sound, And hurl his lightnings,- ha, and overwhelm how oft In ruins his own temples, and to rave, Retiring to the wildernesses, there At practice with that thunderbolt of his, Which yet how often shoots the guilty by, And slays the honourable blameless ones!

2.1105

Ere since the birth-time of the world, ere since The risen first-born day of sea, earth, sun, Have many germs been added from outside, Have many seeds been added round about, Which the great All, the while it flung them on, Brought hither, that from them the sea and lands Could grow more big, and that the

house of heaven Might get more room and raise its lofty roofs
Far over earth, and air arise around.

For bodies all, from out all regions, are Divided by blows, each to
its proper thing, And all retire to their own proper kinds: The
moist to moist retires; earth gets increase From earthy body;
and fires, as on a forge, Beat out new fire; and ether forges
ether; Till nature, author and ender of the world, Hath led all
things to extreme bound of growth: As haps when that which
hath been poured inside The vital veins of life is now no more
Than that which ebbs within them and runs off.

This is the point where life for each thing ends; This is the point
where nature with her powers Curbs all increase. For
whatsoever thou seest Grow big with glad increase, and step by
step Climb upward to ripe age, these to themselves Take in
more bodies than they send from selves, Whilst still the food is
easily infused Through all the veins, and whilst the things are
not So far expanded that they cast away Such numerous atoms
as to cause a waste Greater than nutriment whereby they wax.

For 't must be granted, truly, that from things Many a body
ebbeth and runs off; But yet still more must come, until the
things Have touched development's top pinnacle; Then old age
breaks their powers and ripe strength And falls away into a
worsen part.

For ever the ampler and more wide a thing, As soon as ever its
augmentation ends, It scatters abroad forthwith to all sides
round More bodies, sending them from out itself.

Nor easily now is food disseminate Through all its veins; nor is
that food enough To equal with a new supply on hand Those
plenteous exhalations it gives off.

Thus, fairly, all things perish, when with ebbing They're made
less dense and when from blows without They are laid low;

since food at last will fail Extremest eld, and bodies from outside
Cease not with thumping to undo a thing And overmaster by
infesting blows.

2.1144

Thus, too, the ramparts of the mighty world On all sides round
shall taken be by storm, And tumble to wrack and shivered
fragments down.

For food it is must keep things whole, renewing; 'Tis food must
prop and give support to all,- But to no purpose, since nor veins
suffice To hold enough, nor nature ministers As much as
needful. And even now 'tis thus: Its age is broken and the earth,
outworn With many parturitions, scarce creates The little lives-
she who created erst All generations and gave forth at birth
Enormous bodies of wild beasts of old.

For never, I fancy, did a golden cord From off the firmament
above let down The mortal generations to the fields; Nor sea,
nor breakers pounding on the rocks Created them; but earth it
was who bore- The same to-day who feeds them from herself.

Besides, herself of own accord, she first The shining grains and
vineyards of all joy Created for mortality; herself Gave the sweet
fruitage and the pastures glad, Which now to-day yet scarcely
wax in size, Even when aided by our toiling arms.

We break the ox, and wear away the strength Of sturdy
farm-hands; iron tools to-day Barely avail for tilling of the
fields, So niggardly they grudge our harvestings, So much
increase our labour. Now to-day The aged ploughman, shaking
of his head, Sighs o'er and o'er that labours of his hands Have
fallen out in vain, and, as he thinks How present times are not as
times of old, Often he praises the fortunes of his sire, And
crackles, prating, how the ancient race, Fulfilled with piety,
supported life With simple comfort in a narrow plot, Since, man
for man, the measure of each field Was smaller far i' the old

days. And, again, The gloomy planter of the withered vine Rails
at the season's change and wearies heaven, Nor grasps that all
of things by sure degrees Are wasting away and going to the
tomb, Outworn by venerable length of life.

BOOK III

PROEM

3.1

O thou who first uplifted in such dark So clear a torch aloft, who
first shed light Upon the profitable ends of man, O thee I follow,
glory of the Greeks, And set my footsteps squarely planted now
Even in the impress and the marks of thine- Less like one eager
to dispute the palm, More as one craving out of very love That I
may copy thee!- for how should swallow Contend with swans or
what compare could be In a race between young kids with
tumbling legs And the strong might of the horse? Our father
thou, And finder-out of truth, and thou to us Suppliest a father's
precepts; and from out Those scriven leaves of thine, renowned
soul (Like bees that sip of all in flowery wolds), We feed upon
thy golden sayings all- Golden, and ever worthiest endless life.

For soon as ever thy planning thought that sprang From
god-like mind begins its loud proclaim Of nature's courses,
terrors of the brain Asunder flee, the ramparts of the world
Dispart away, and through the void entire I see the movements
of the universe.

Rises to vision the majesty of gods, And their abodes of
everlasting calm Which neither wind may shake nor rain-cloud
splash, Nor snow, congealed by sharp frosts, may harm With its
white downfall: ever, unclouded sky O'er roofs, and laughs with
far-diffused light.

And nature gives to them their all, nor aught May ever pluck
their peace of mind away.

But nowhere to my vision rise no more The vaults of Acheron,
though the broad earth Bars me no more from gazing down o'er
all Which under our feet is going on below Along the void. O,
here in these affairs Some new divine delight and trembling awe
Takes hold through me, that thus by power of thine Nature, so
plain and manifest at last, Hath been on every side laid bare to
man!

And since I've taught already of what sort The seeds of all things
are, and how, distinct In divers forms, they flit of own accord,
Stirred with a motion everlasting on, And in what mode things
be from them create, Now, after such matters, should my verse,
meseems, Make clear the nature of the mind and soul, And drive
that dread of Acheron without, Headlong, which so confounds
our human life Unto its deeps, pouring o'er all that is The black
of death, nor leaves not anything To prosper- a liquid and
unsullied joy.

3.41

For as to what men sometimes will affirm: That more than
Tartarus (the realm of death)

They fear diseases and a life of shame, And know the substance
of the soul is blood, Or rather wind (if haply thus their whim),
And so need naught of this our science, then Thou well may'st
note from what's to follow now That more for glory do they
braggart forth Than for belief. For mark these very same: Exiles
from country, fugitives afar From sight of men, with charges
foul attain, Abased with every wretchedness, they yet Live, and
where'er the wretches come, they yet Make the ancestral
sacrifices there, Butcher the black sheep, and to gods below
Offer the honours, and in bitter case Turn much more keenly to
religion.

Wherefore, it's surer testing of a man In doubtful perils- mark him as he is Amid adversities; for then alone Are the true voices conjured from his breast, The mask off-stripped, reality behind.

And greed, again, and the blind lust of honours Which force poor wretches past the bounds of law, And, oft allies and ministers of crime, To push through nights and days with hugest toil To rise untrammelled to the peaks of power- These wounds of life in no mean part are kept Festering and open by this fright of death.

For ever we see fierce Want and foul Disgrace Dislodged afar from secure life and sweet, Like huddling Shapes before the doors of death.

And whilst, from these, men wish to scape afar, Driven by false terror, and afar remove, With civic blood a fortune they amass, They double their riches, greedy, heapers-up Of corpse on corpse they have a cruel laugh For the sad burial of a brother-born, And hatred and fear of tables of their kin.

Likewise, through this same terror, envy oft Makes them to peak because before their eyes That man is lordly, that man gazed upon Who walks begirt with honour glorious, Whilst they in filth and darkness roll around; Some perish away for statues and a name, And oft to that degree, from fright of death, Will hate of living and beholding light Take hold on humankind that they inflict Their own destruction with a gloomy heart- Forgetful that this fear is font of cares, This fear the plague upon their sense of shame, And this that breaks the ties of comradry And oversets all reverence and faith, Mid direst slaughter. For long ere to-day Often were traitors to country and dear parents Through quest to shun the realms of Acheron.

For just as children tremble and fear all In the viewless dark, so even we at times Dread in the light so many things that be No whit more fearsome than what children feign, Shuddering, will

be upon them in the dark.

This terror, then, this darkness of the mind, Not sunrise with its
flaring spokes of light, Nor glittering arrows of morning sun
disperse, But only nature's aspect and her law.

NATURE AND COMPOSITION OF THE MIND

3.94

First, then, I say, the mind which oft we call The intellect,
wherein is seated life's Counsel and regimen, is part no less Of
man than hand and foot and eyes are parts Of one whole
breathing creature. [But some hold]

That sense of mind is in no fixed part seated, But is of body
some one vital state,- Named "harmony" by Greeks, because
thereby We live with sense, though intellect be not In any part:
as oft the body is said To have good health (when health,
however, 's not One part of him who has it), so they place The
sense of mind in no fixed part of man.

Mightily, diversly, meseems they err.

Often the body palpable and seen Sickens, while yet in some
invisible part We feel a pleasure; oft the other way, A miserable
in mind feels pleasure still Throughout his body- quite the same
as when A foot may pain without a pain in head.

Besides, when these our limbs are given o'er To gentle sleep and
lies the burdened frame At random void of sense, a something
else Is yet within us, which upon that time Bestirs itself in many
a wise, receiving All motions of joy and phantom cares of heart.

Now, for to see that in man's members dwells Also the soul, and
body ne'er is wont To feel sensation by a "harmony"

Take this in chief: the fact that life remains Oft in our limbs,
when much of body's gone; Yet that same life, when particles of
heat, Though few, have scattered been, and through the mouth

Air has been given forth abroad, forthwith Forever deserts the veins, and leaves the bones.

Thus mayst thou know that not all particles Perform like parts, nor in like manner all Are props of weal and safety: rather those- The seeds of wind and exhalations warm- Take care that in our members life remains.

Therefore a vital heat and wind there is Within the very body, which at death Deserts our frames. And so, since nature of mind And even of soul is found to be, as 'twere, A part of man, give over "harmony"- Name to musicians brought from Helicon,- Unless themselves they filched it otherwise, To serve for what was lacking name till then.

Whate'er it be, they're welcome to it- thou, Hearken my other maxims.

3.136

Mind and soul, I say, are held conjoined one with other, And form one single nature of themselves; But chief and regnant through the frame entire Is still that counsel which we call the mind, And that cleaves seated in the midmost breast.

Here leap dismay and terror; round these haunts Be blandishments of joys; and therefore here The intellect, the mind. The rest of soul, Throughout the body scattered, but obeys- Moved by the nod and motion of the mind.

This, for itself, sole through itself, hath thought; This for itself hath mirth, even when the thing That moves it, moves nor soul nor body at all.

And as, when head or eye in us is smit By assailing pain, we are not tortured then Through all the body, so the mind alone Is sometimes smitten, or livens with a joy, Whilst yet the soul's remainder through the limbs And through the frame is stirred by nothing new.

But when the mind is moved by shock more fierce, We mark the whole soul suffering all at once Along man's members: sweats and pallors spread Over the body, and the tongue is broken, And fails the voice away, and ring the ears, Mists blind the eyeballs, and the joints collapse,- Aye, men drop dead from terror of the mind.

Hence, whoso will can readily remark That soul conjoined is with mind, and, when 'Tis strook by influence of the mind, forthwith In turn it hits and drives the body too.

And this same argument establisheth That nature of mind and soul corporeal is: For when 'tis seen to drive the members on, To snatch from sleep the body, and to change The countenance, and the whole state of man To rule and turn,- what yet could never be Sans contact, and sans body contact fails- Must we not grant that mind and soul consist Of a corporeal nature?- And besides Thou markst that likewise with this body of ours Suffers the mind and with our body feels.

If the dire speed of spear that cleaves the bones And bares the inner thews hits not the life, Yet follows a fainting and a foul collapse, And, on the ground, dazed tumult in the mind, And whiles a wavering will to rise afoot.

So nature of mind must be corporeal, since From stroke and spear corporeal 'tis in throes.

Now, of what body, what components formed Is this same mind I will go on to tell.

First, I aver, 'tis superfine, composed Of tiniest particles- that such the fact Thou canst perceive, if thou attend, from this: ^{3.182} Nothing is seen to happen with such speed As what the mind proposes and begins; Therefore the same bestirs itself more swiftly Than aught whose nature's palpable to eyes.

But what's so agile must of seeds consist Most round, most tiny,
that they may be moved, When hit by impulse slight. So water
moves, In waves along, at impulse just the least- Being create of
little shapes that roll; But, contrariwise, the quality of honey
More stable is, its liquids more inert, More tardy its flow; for all
its stock of matter Cleaves more together, since, indeed, 'tis
made Of atoms not so smooth, so fine, and round.

For the light breeze that hovers yet can blow High heaps of
poppy-seed away for thee Downward from off the top; but,
contrariwise, A pile of stones or spiny ears of wheat It can't at
all. Thus, in so far as bodies Are small and smooth, is their
mobility; But, contrariwise, the heavier and more rough, The
more immovable they prove. Now, then, Since nature of mind is
movable so much, Consist it must of seeds exceeding small And
smooth and round. Which fact once known to thee, Good friend,
will serve thee opportune in else.

This also shows the nature of the same, How nice its texture, in
how small a space 'Twould go, if once compacted as a pellet:
When death's unvexed repose gets hold on man And mind and
soul retire, thou markest there From the whole body nothing
ta'en in form, Nothing in weight. Death grants ye everything,
But vital sense and exhalation hot.

Thus soul entire must be of smallmost seeds, Twined through
the veins, the vitals, and the thews, Seeing that, when 'tis from
whole body gone, The outward figuration of the limbs Is
unimpaired and weight fails not a whit.

Just so, when vanished the bouquet of wine, Or when an
unguent's perfume delicate Into the winds away departs, or
when From any body savour's gone, yet still The thing itself
seems minished naught to eyes, Thereby, nor aught abstracted
from its weight- No marvel, because seeds many and minute
Produce the savours and the redolence In the whole body of the

things.

3.228

And so, Again, again, nature of mind and soul 'Tis thine to know
created is of seeds The tiniest ever, since at flying-forth It
beareth nothing of the weight away.

Yet fancy not its nature simple so.

For an impalpable aura, mixed with heat, Deserts the dying, and
heat draws off the air; And heat there's none, unless commixed
with air: For, since the nature of all heat is rare, Athrough it
many seeds of air must move.

Thus nature of mind is triple; yet those all Suffice not for
creating sense- since mind Accepteth not that aught of these
can cause Sense-bearing motions, and much less the thoughts A
man revolves in mind. So unto these Must added be a
somewhat, and a fourth; That somewhat's altogether void of
name; Than which existeth naught more mobile, naught More
an impalpable, of elements More small and smooth and round.
That first transmits Sense-bearing motions through the frame,
for that Is roused the first, composed of little shapes; Thence
heat and viewless force of wind take up The motions, and
thence air, and thence all things Are put in motion; the blood is
strook, and then The vitals all begin to feel, and last To bones
and marrow the sensation comes- Pleasure or torment. Nor will
pain for naught Enter so far, nor a sharp ill seep through, But all
things be perturbed to that degree That room for life will fail,
and parts of soul Will scatter through the body's every pore.

Yet as a rule, almost upon the skin These motion all are stopped,
and this is why We have the power to retain our life.

Now in my eagerness to tell thee how They are commixed,
through what unions fit They function so, my country's
pauper-speech Constrains me sadly. As I can, however, I'll touch
some points and pass.

3.262

In such a wise Course these primordials 'mongst one another
With inter-motions that no one can be From other Sundered,
nor its agency Perform, if once divided by a space; Like many
powers in one body they work.

As in the flesh of any creature still Is odour and savour and a
certain warmth, And yet from all of these one bulk of body Is
made complete, so, viewless force of wind And warmth and air,
commingled, do create One nature, by that mobile energy
Assisted which from out itself to them Imparts initial motion,
whereby first Sense-bearing motion along the vitals springs.

For lurks this essence far and deep and under, Nor in our body is
aught more shut from view, And 'tis the very soul of all the soul.

And as within our members and whole frame The energy of
mind and power of soul Is mixed and latent, since create it is Of
bodies small and few, so lurks this fourth, This essence void of
name, composed of small, And seems the very soul of all the
soul, And holds dominion o'er the body all.

And by like reason wind and air and heat Must function so,
commingled through the frame, And now the one subside and
now another In interchange of dominance, that thus From all of
them one nature be produced, Lest heat and wind apart, and air
apart, Make sense to perish, by disseverment.

3.288

There is indeed in mind that heat it gets When seething in rage,
and flashes from the eyes More swiftly fire; there is, again, that
wind, Much, and so cold, companion of all dread, Which rouses
the shudder in the shaken frame; There is no less that state of
air composed, Making the tranquil breast, the serene face.

But more of hot have they whose restive hearts, Whose minds of
passion quickly seethe in rage- Of which kind chief are fierce
abounding lions, Who often with roaring burst the breast

o'erwrought, Unable to hold the surging wrath within; But the cold mind of stags has more of wind, And speedier through their inwards rouses up The icy currents which make their members quake.

But more the oxen live by tranquil air, Nor e'er doth smoky torch of wrath applied, O'erspreading with shadows of a darkling murk, Rouse them too far; nor will they stiffen stark, Pierced through by icy javelins of fear; But have their place half-way between the two- Stags and fierce lions. Thus the race of men: Though training make them equally refined, It leaves those pristine vestiges behind Of each mind's nature. Nor may we suppose Evil can e'er be rooted up so far That one man's not more given to fits of wrath, Another's not more quickly touched by fear, A third not more long-suffering than he should.

And needs must differ in many things besides The varied natures and resulting habits Of humankind- of which not now can I Expound the hidden causes, nor find names Enough for all the divers shapes of those Primordials whence this variation springs.

But this meseems I'm able to declare: Those vestiges of natures left behind Which reason cannot quite expel from us Are still so slight that naught prevents a man From living a life even worthy of the gods.

So then this soul is kept by all the body, Itself the body's guard, and source of weal: For they with common roots cleave each to each, Nor can be torn asunder without death.

Not easy 'tis from lumps of frankincense To tear their fragrance forth, without its nature Perishing likewise: so, not easy 'tis From all the body nature of mind and soul To draw away, without the whole dissolved.

With seeds so intertwined even from birth, They're dowered jointly with a partner-life; No energy of body or mind, apart, Each of itself without the other's power, Can have sensation; but our sense, enkindled Along the vitals, to flame is blown by both With mutual motions. Besides the body alone Is nor begot nor grows, nor after death Seen to endure. For not as water at times Gives off the alien heat, nor is thereby Itself destroyed, but unimpaired remains- Not thus, I say, can the deserted frame Bear the dissevering of its joined soul, But, rent and ruined, moulders all away.

Thus the joint contact of the body and soul Learns from their earliest age the vital motions, Even when still buried in the mother's womb; So no dissevering can hap to them, Without their bane and ill. And thence mayst see That, as conjoined is their source of weal, Conjoined also must their nature be.

3.350

If one, moreover, denies that body feel, And holds that soul, through all the body mixed, Takes on this motion which we title "sense,"

He battles in vain indubitable facts: For who'll explain what body's feeling is, Except by what the public fact itself Has given and taught us? "But when soul is parted, Body's without all sense." True!- loses what Was even in its life-time not its own; And much beside it loses, when soul's driven Forth from that life-time. Or, to say that eyes Themselves can see no thing, but through the same The mind looks forth, as out of opened doors, Is- a hard saying; since the feel in eyes Says the reverse. For this itself draws on And forces into the pupils of our eyes Our consciousness. And note the case when often We lack the power to see refulgent things, Because our eyes are hampered by their light- With a mere doorway this would happen not; For, since it is our very selves that see, No open portals undertake the toil.

Besides, if eyes of ours but act as doors, Methinks that, were our sight removed, the mind Ought then still better to behold a thing- When even the door-posts have been cleared away.

Herein in these affairs nowise take up What honoured sage, Democritus, lays down- That proposition, that primordials Of body and mind, each super-posed on each, Vary alternately and interweave The fabric of our members. For not only Are the soul-elements smaller far than those Which this our body and inward parts compose, But also are they in their number less, And scattered sparsely through our frame. And thus This canst thou guarantee: soul's primal germs Maintain between them intervals as large At least as are the smallest bodies, which, When thrown against us, in our body rouse Sense-bearing motions.

3.381

Hence it comes that we Sometimes don't feel alighting on our frames The clinging dust, or chalk that settles soft; Nor mists of night, nor spider's gossamer We feel against us, when, upon our road, Its net entangles us, nor on our head The dropping of its withered garmentings; Nor bird-feathers, nor vegetable down, Flying about, so light they barely fall; Nor feel the steps of every crawling thing, Nor each of all those footprints on our skin Of midges and the like. To that degree Must many primal germs be stirred in us Ere once the seeds of soul that through our frame Are intermingled 'gin to feel that those Primordials of the body have been strook, And ere, in pounding with such gaps between, They clash, combine and leap apart in turn.

But mind is more the keeper of the gates, Hath more dominion over life than soul.

For without intellect and mind there's not One part of soul can rest within our frame Least part of time; companioning, it goes With mind into the winds away, and leaves The icy members in the cold of death.

But he whose mind and intellect abide Himself abides in life.
However much The trunk be mangled, with the limbs lopped
off, The soul withdrawn and taken from the limbs, Still lives the
trunk and draws the vital air.

Even when deprived of all but all the soul, Yet will it linger on
and cleave to life,- Just as the power of vision still is strong, If
but the pupil shall abide unharmed, Even when the eye around
it's sorely rent- Provided only thou destroyest not Wholly the
ball, but, cutting round the pupil, Leavest that pupil by itself
behind- For more would ruin sight. But if that centre, That tiny
part of eye, be eaten through, Forthwith the vision fails and
darkness comes, Though in all else the unblemished ball be
clear.

'Tis by like compact that the soul and mind Are each to other
bound forevermore.

THE SOUL IS MORTAL

3.417

Now come: that thou mayst able be to know That minds and the
light souls of all that live Have mortal birth and death, I will go
on Verses to build meet for thy rule of life, Sought after long,
discovered with sweet toil.

But under one name I'd have thee yoke them both; And when,
for instance, I shall speak of soul, Teaching the same to be but
mortal, think Thereby I'm speaking also of the mind- Since both
are one, a substance inter-joined.

First, then, since I have taught how soul exists A subtle fabric, of
particles minute, Made up from atoms smaller much than those
Of water's liquid damp, or fog, or smoke, So in mobility it far
excels, More prone to move, though strook by lighter cause
Even moved by images of smoke or fog- As where we view,
when in our sleeps we're lulled, The altars exhaling steam and

smoke aloft- For, beyond doubt, these apparitions come To us from outward. Now, then, since thou seest, Their liquids depart, their waters flow away, When jars are shivered, and since fog and smoke Depart into the winds away, believe The soul no less is shed abroad and dies More quickly far, more quickly is dissolved Back to its primal bodies, when withdrawn From out man's members it has gone away.

For, sure, if body (container of the same Like as a jar), when shivered from some cause, And rarefied by loss of blood from veins, Cannot for longer hold the soul, how then Thinkst thou it can be held by any air- A stuff much rarer than our bodies be?

3.445

Besides we feel that mind to being comes Along with body, with body grows and ages.

For just as children totter round about With frames infirm and tender, so there follows A weakling wisdom in their minds; and then, Where years have ripened into robust powers, Counsel is also greater, more increased The power of mind; thereafter, where already The body's shattered by master-powers of eld, And fallen the frame with its enfeebled powers, Thought hobbles, tongue wanders, and the mind gives way; All fails, all's lacking at the selfsame time.

Therefore it suits that even the soul's dissolved, Like smoke, into the lofty winds of air; Since we behold the same to being come Along with body and grow, and, as I've taught, Crumble and crack, therewith outworn by eld.

Then, too, we see, that, just as body takes Monstrous diseases and the dreadful pain, So mind its bitter cares, the grief, the fear; Wherefore it tallies that the mind no less Partaker is of death; for pain and disease Are both artificers of death,- as well We've learned by the passing of many a man ere now.

Nay, too, in diseases of body, often the mind Wanders afield; for 'tis beside itself, And crazed it speaks, or many a time it sinks, With eyelids closing and a drooping nod, In heavy drowse, on to eternal sleep; From whence nor hears it any voices more, Nor able is to know the faces here Of those about him standing with wet cheeks Who vainly call him back to light and life.

Wherefore mind too, confess we must, dissolves, Seeing, indeed, contagions of disease Enter into the same. Again, O why, When the strong wine has entered into man, And its diffused fire gone round the veins, Why follows then a heaviness of limbs, A tangle of the legs as round he reels, A stuttering tongue, an intellect besoaked, Eyes all aswim, and hiccups, shouts, and brawls, And whatso else is of that ilk?- Why this?- If not that violent and impetuous wine Is wont to confound the soul within the body?

But whatso can confounded be and balked, Gives proof, that if a hardier cause got in, 'Twould hap that it would perish then, bereaved Of any life thereafter.

3.487

And, moreover, Often will some one in a sudden fit, As if by stroke of lightning, tumble down Before our eyes, and sputter foam, and grunt, Blither, and twist about with sinews taut, Gasp up in starts, and weary out his limbs With tossing round. No marvel, since distract Through frame by violence of disease.

.....

Confounds, he foams, as if to vomit soul, As on the salt sea boil the billows round Under the master might of winds. And now A groan's forced out, because his limbs are griped, But, in the main, because the seeds of voice Are driven forth and carried in a mass Outwards by mouth, where they are wont to go, And have a builded highway. He becomes Mere fool, since energy of mind and soul Confounded is, and, as I've shown, to-riven, Asunder thrown, and torn to pieces all By the same venom. But,

again, where cause Of that disease has faced about, and back
Retreats sharp poison of corrupted frame Into its shadowy lairs,
the man at first Arises reeling, and gradually comes back To all
his senses and recovers soul.

Thus, since within the body itself of man The mind and soul are
by such great diseases Shaken, so miserably in labour
distraught, Why, then, believe that in the open air, Without a
body, they can pass their life, Immortal, battling with the
master winds?

And, since we mark the mind itself is cured, Like the sick body,
and restored can be By medicine, this is forewarning too That
mortal lives the mind. For proper it is That whosoe'er begins
and undertakes To alter the mind, or meditates to change Any
another nature soever, should add New parts, or readjust the
order given, Or from the sum remove at least a bit.

But what's immortal willeth for itself Its parts be nor increased,
nor rearranged, Nor any bit soever flow away: For change of
anything from out its bounds Means instant death of that which
was before.

Ergo, the mind, whether in sickness fallen, Or by the medicine
restored, gives signs, As I have taught, of its mortality.

So surely will a fact of truth make head 'Gainst errors' theories
all, and so shut off All refuge from the adversary, and rout Error
by two-edged confutation.

3.548

And since the mind is of a man one part, Which in one fixed
place remains, like ears, And eyes, and every sense which pilots
life; And just as hand, or eye, or nose, apart, Severed from us,
can neither feel nor be, But in the least of time is left to rot,
Thus mind alone can never be, without The body and the man
himself, which seems, As 'twere the vessel of the same- or aught
Whate'er thou'lt feign as yet more closely joined: Since body

cleaves to mind by surest bonds.

Again, the body's and the mind's live powers Only in union prosper and enjoy; For neither can nature of mind, alone of self Sans body, give the vital motions forth; Nor, then, can body, wanting soul, endure And use the senses. Verily, as the eye, Alone, up-rended from its roots, apart From all the body, can peer about at naught, So soul and mind it seems are nothing able, When by themselves. No marvel, because, commixed Through veins and inwards, and through bones and thews, Their elements primordial are confined By all the body, and own no power free To bound around through interspaces big, Thus, shut within these confines, they take on Motions of sense, which, after death, thrown out Beyond the body to the winds of air, Take on they cannot- and on this account, Because no more in such a way confined.

For air will be a body, be alive, If in that air the soul can keep itself, And in that air enclose those motions all Which in the thews and in the body itself A while ago 'twas making. So for this, Again, again, I say confess we must, That, when the body's wrappings are unwound, And when the vital breath is forced without, The soul, the senses of the mind dissolve,- Since for the twain the cause and ground of life Is in the fact of their conjoined estate.

Once more, since body's unable to sustain Division from the soul, without decay And obscene stench, how canst thou doubt but that The soul, uprisen from the body's deeps, Has filtered away, wide-drifted like a smoke, Or that the changed body crumbling fell With ruin so entire, because, indeed, Its deep foundations have been moved from place, The soul out-filtering even through the frame, And through the body's every winding way And orifice? And so by many means Thou'rt free to learn that nature of the soul Hath passed in fragments out along the frame, And that 'twas shivered in the very body Ere ever it

slipped abroad and swam away Into the winds of air.

3.592

For never a man Dying appears to feel the soul go forth As one sure whole from all his body at once, Nor first come up the throat and into mouth; But feels it failing in a certain spot, Even as he knows the senses too dissolve Each in its own location in the frame.

But were this mind of ours immortal mind, Dying 'twould scarce bewail a dissolution, But rather the going, the leaving of its coat, Like to a snake. Wherefore, when once the body Hath passed away, admit we must that soul, Shivered in all that body, perished too.

Nay, even when moving in the bounds of life, Often the soul, now tottering from some cause, Craves to go out, and from the frame entire Loosened to be; the countenance becomes Flaccid, as if the supreme hour were there; And flabbily collapse the members all Against the bloodless trunk- the kind of case We see when we remark in common phrase, "That man's quite gone," or "fainted dead away"; And where there's now a bustle of alarm, And all are eager to get some hold upon The man's last link of life. For then the mind And all the power of soul are shook so sore, And these so totter along with all the frame, That any cause a little stronger might Dissolve them altogether.- Why, then, doubt That soul, when once without the body thrust, There in the open, an enfeebled thing, Its wrappings stripped away, cannot endure Not only through no everlasting age, But even, indeed, through not the least of time?

Then, too, why never is the intellect, The counselling mind, begotten in the head, The feet, the hands, instead of cleaving still To one sole seat, to one fixed haunt, the breast, If not that fixed places be assigned For each thing's birth, where each, when 'tis create, Is able to endure, and that our frames Have such complex adjustments that no shift In order of our

members may appear?

To that degree effect succeeds to cause, Nor is the flame once
wont to be create In flowing streams, nor cold begot in fire.

3.624

Besides, if nature of soul immortal be, And able to feel, when
from our frame disjoined, The same, I fancy, must be thought to
be Endowed with senses five,- nor is there way But this whereby
to image to ourselves How under-souls may roam in Acheron.

Thus painters and the elder race of bards Have pictured souls
with senses so endowed.

But neither eyes, nor nose, nor hand, alone Apart from body can
exist for soul, Nor tongue nor ears apart. And hence indeed
Alone by self they can nor feel nor be.

And since we mark the vital sense to be In the whole body, all
one living thing, If of a sudden a force with rapid stroke Should
slice it down the middle and cleave in twain, Beyond a doubt
likewise the soul itself, Divided, dissevered, asunder will be
flung Along with body. But what severed is And into sundry
parts divides, indeed Admits it owns no everlasting nature.

We hear how chariots of war, areek With hurly slaughter, lop
with flashing scythes The limbs away so suddenly that there,
Fallen from the trunk, they quiver on the earth, The while the
mind and powers of the man Can feel no pain, for swiftness of
his hurt, And sheer abandon in the zest of battle: With the
remainder of his frame he seeks Anew the battle and the
slaughter, nor marks How the swift wheels and scythes of ravin
have dragged Off with the horses his left arm and shield; Nor
other how his right has dropped away, Mounting again and on.
A third attempts With leg dismembered to arise and stand,
Whilst, on the ground hard by, the dying foot Twitches its
spreading toes. And even the head, When from the warm and
living trunk lopped off, Keeps on the ground the vital

countenance And open eyes, until 't has rendered up All
remnants of the soul. Nay, once again: If, when a serpent's
darting forth its tongue, And lashing its tail, thou gettest chance
to hew With axe its length of trunk to many parts, Thou'lt see
each severed fragment writhing round With its fresh wound,
and spattering up the sod, And there the fore-part seeking with
the jaws After the hinder, with bite to stop the pain.

So shall we say that these be souls entire In all those fractions?—
but from that 'twould follow One creature'd have in body many
souls.

Therefore, the soul, which was indeed but one, Has been divided
with the body too: Each is but mortal, since alike is each Hewn
into many parts. Again, how often We view our fellow going by
degrees, And losing limb by limb the vital sense; First nails and
fingers of the feet turn blue, Next die the feet and legs, then o'er
the rest Slow crawl the certain footsteps of cold death.

And since this nature of the soul is torn, Nor mounts away, as at
one time, entire, We needs must hold it mortal. But perchance If
thou supposest that the soul itself Can inward draw along the
frame, and bring Its parts together to one place, and so From all
the members draw the sense away, Why, then, that place in
which such stock of soul Collected is, should greater seem in
sense.

But since such place is nowhere, for a fact, As said before, 'tis
rent and scattered forth, And so goes under. Or again, if now I
please to grant the false, and say that soul Can thus be lumped
within the frames of those Who leave the sunshine, dying bit by
bit, Still must the soul as mortal be confessed; Nor aught it
matters whether to wrack it go, Dispersed in the winds, or,
gathered in a mass From all its parts, sink down to brutish
death, Since more and more in every region sense Fails the
whole man, and less and less of life In every region lingers.

3.670

And besides, If soul immortal is, and winds its way Into the body
at the birth of man, Why can we not remember something,
then, Of life-time spent before? why keep we not Some
footprints of the things we did of, old?

But if so changed hath been the power of mind, That every
recollection of things done Is fallen away, at no o'erlong remove
Is that, I trow, from what we mean by death.

Wherefore 'tis sure that what hath been before Hath died, and
what now is is now create.

Moreover, if after the body hath been built Our mind's live
powers are wont to be put in, Just at the moment that we come
to birth, And cross the sills of life, 'twould scarcely fit For them
to live as if they seemed to grow Along with limbs and frame,
even in the blood, But rather as in a cavern all alone.

(Yet all the body duly throngs with sense.)

But public fact declares against all this: For soul is so entwined
through the veins, The flesh, the thews, the bones, that even the
teeth Share in sensation, as proven by dull ache, By twinge from
icy water, or grating crunch Upon a stone that got in mouth
with bread.

Wherefore, again, again, souls must be thought Nor void of
birth, nor free from law of death; Nor, if, from outward, in they
wound their way, Could they be thought as able so to cleave To
these our frames, nor, since so interwove, Appears it that
they're able to go forth Unhurt and whole and loose themselves
unscathed From all the thews, articulations, bones.

But, if perchance thou thinkest that the soul, From outward
winding in its way, is wont To seep and soak along these
members ours, Then all the more 'twill perish, being thus With
body fused- for what will seep and soak Will be dissolved and

will therefore die.

For just as food, dispersed through all the pores Of body, and passed through limbs and all the frame, Perishes, supplying from itself the stuff For other nature, thus the soul and mind, Though whole and new into a body going, Are yet, by seeping in, dissolved away, Whilst, as through pores, to all the frame there pass Those particles from which created is This nature of mind, now ruler of our body, Born from that soul which perished, when divided Along the frame.

3.711

Wherefore it seems that soul Hath both a natal and funeral hour.

Besides are seeds of soul there left behind In the breathless body, or not? If there they are, It cannot justly be immortal deemed, Since, shorn of some parts lost, 'thas gone away: But if, borne off with members uncorrupt, 'Thas fled so absolutely all away It leaves not one remainder of itself Behind in body, whence do cadavers, then, From out their putrid flesh exhale the worms, And whence does such a mass of living things, Boneless and bloodless, o'er the bloated frame Bubble and swarm? But if perchance thou thinkest That souls from outward into worms can wind, And each into a separate body come, And reckonest not why many thousand souls Collect where only one has gone away, Here is a point, in sooth, that seems to need Inquiry and a putting to the test: Whether the souls go on a hunt for seeds Of worms wherewith to build their dwelling places, Or enter bodies ready-made, as 'twere.

But why themselves they thus should do and toil 'Tis hard to say, since, being free of body, They flit around, harassed by no disease, Nor cold nor famine; for the body labours By more of kinship to these flaws of life, And mind by contact with that body suffers So many ills. But grant it be for them However useful to construct a body To which to enter in, 'tis plain they

can't.

Then, souls for self no frames nor bodies make, Nor is there how they once might enter in To bodies ready-made- for they cannot Be nicely interwoven with the same, And there'll be formed no interplay of sense Common to each.

3.741

Again, why is't there goes Impetuous rage with lion's breed morose, And cunning with foxes, and to deer why given The ancestral fear and tendency to flee, And why in short do all the rest of traits Engender from the very start of life In the members and mentality, if not Because one certain power of mind that came From its own seed and breed waxes the same Along with all the body? But were mind Immortal, were it wont to change its bodies, How topsy-turvy would earth's creatures act!

The Hyrcan hound would flee the onset oft Of antlered stag, the scurrying hawk would quake Along the winds of air at the coming dove, And men would dote, and savage beasts be wise; For false the reasoning of those that say Immortal mind is changed by change of body- For what is changed dissolves, and therefore dies.

For parts are re-disposed and leave their order; Wherefore they must be also capable Of dissolution through the frame at last, That they along with body perish all.

But should some say that always souls of men Go into human bodies, I will ask: How can a wise become a dullard soul?

And why is never a child's a prudent soul?

And the mare's filly why not trained so well As sturdy strength of steed? We may be sure They'll take their refuge in the thought that mind Becomes a weakling in a weakling frame.

Yet be this so, 'tis needful to confess The soul but mortal, since,
so altered now Throughout the frame, it loses the life and sense
It had before. Or how can mind wax strong Coequally with body
and attain The craved flower of life, unless it be The body's
colleague in its origins?

Or what's the purport of its going forth From aged limbs?- fears
it, perhaps, to stay, Pent in a crumbled body? Or lest its house,
Outworn by venerable length of days, May topple down upon it?
But indeed For an immortal perils are there none.

3.776

Again, at parturitions of the wild And at the rites of Love, that
souls should stand Ready hard by seems ludicrous enough-
Immortals waiting for their mortal limbs In numbers
innumerable, contending madly Which shall be first and chief
to enter in!- Unless perchance among the souls there be Such
treaties stablished that the first to come Flying along, shall
enter in the first, And that they make no rivalries of strength!

Again, in ether can't exist a tree, Nor clouds in ocean deeps, nor
in the fields Can fishes live, nor blood in timber be, Nor sap in
boulders: fixed and arranged Where everything may grow and
have its place.

Thus nature of mind cannot arise alone Without the body, nor
exist afar From thews and blood. But if 'twere possible, Much
rather might this very power of mind Be in the head, the
shoulders or the heels, And, born in any part soever, yet In the
same man, in the same vessel abide.

But since within this body even of ours Stands fixed and appears
arranged sure Where soul and mind can each exist and grow,
Deny we must the more that they can have Duration and birth,
wholly outside the frame.

For, verily, the mortal to conjoin With the eternal, and to feign
they feel Together, and can function each with each, Is but to

dote: for what can be conceived Of more unlike, discrepant,
ill-assorted, Than something mortal in a union joined With an
immortal and a secular To bear the outrageous tempests?

Then, again, Whatever abides eternal must indeed Either repel
all strokes, because 'tis made Of solid body, and permit no
entrance Of aught with power to sunder from within The parts
compact- as are those seeds of stuff Whose nature we've
exhibited before; Or else be able to endure through time For
this: because they are from blows exempt, As is the void, the
which abides untouched, Unsmitten by any stroke; or else because
There is no room around, whereto things can, As 'twere, depart
in dissolution all,- Even as the sum of sums eternal is, Without
or place beyond whereto things may Asunder fly, or bodies
which can smite, And thus dissolve them by the blows of might.

3.819

But if perchance the soul's to be adjudged Immortal, mainly on
ground 'tis kept secure In vital forces- either because there
come Never at all things hostile to its weal, Or else because what
come somehow retire, Repelled or ere we feel the harm they
work,

For, lo, besides that, when the frame's diseased, Soul sickens
too, there cometh, many a time, That which torments it with
the things to be, Keeps it in dread, and wearies it with cares;
And even when evil acts are of the past, Still gnaw the old
transgressions bitterly.

Add, too, that frenzy, peculiar to the mind, And that oblivion of
the things that were; Add its submergence in the murky waves
Of drowse and torpor.

FOLLY OF THE FEAR OF DEATH

3.830

Therefore death to us Is nothing, nor concerns us in the least,
Since nature of mind is mortal evermore.

And just as in the ages gone before We felt no touch of ill, when
all sides round To battle came the Carthaginian host, And the
times, shaken by tumultuous war, Under the aery coasts of
arching heaven Shuddered and trembled, and all humankind
Doubted to which the empery should fall By land and sea, thus
when we are no more, When comes that sundering of our body
and soul Through which we're fashioned to a single state, Verily
naught to us, us then no more, Can come to pass, naught move
our senses then- No, not if earth confounded were with sea, And
sea with heaven. But if indeed do feel The nature of mind and
energy of soul, After their severance from this body of ours, Yet
nothing 'tis to us who in the bonds And wedlock of the soul and
body live, Through which we're fashioned to a single state.

And, even if time collected after death The matter of our frames
and set it all Again in place as now, and if again To us the light of
life were given, O yet That process too would not concern us
aught, When once the self-succession of our sense Has been
asunder broken. And now and here, Little enough we're busied
with the selves We were aforetime, nor, concerning them,
Suffer a sore distress. For shouldst thou gaze Backwards across
all yesterdays of time The immeasurable, thinking how
manifold The motions of matter are, then couldst thou well
Credit this too: often these very seeds (From which we are
to-day) of old were set In the same order as they are to-day- Yet
this we can't to consciousness recall Through the remembering
mind. For there hath been An interposed pause of life, and wide
Have all the motions wandered everywhere From these our
senses. For if woe and ail Perchance are toward, then the man to
whom The bane can happen must himself be there At that same
time. But death precludeth this, Forbidding life to him on whom
might crowd Such irk and care; and granted 'tis to know:

Nothing for us there is to dread in death, No wretchedness for him who is no more, The same estate as if ne'er born before, When death immortal hath ta'en the mortal life.

3.870

Hence, where thou seest a man to grieve because When dead he rots with body laid away, Or perishes in flames or jaws of beasts, Know well: he rings not true, and that beneath Still works an unseen sting upon his heart, However he deny that he believes.

His shall be aught of feeling after death.

For he, I fancy, grants not what he says, Nor what that presupposes, and he fails To pluck himself with all his roots from life And cast that self away, quite unawares Feigning that some remainder's left behind.

For when in life one pictures to oneself His body dead by beasts and vultures torn, He pities his state, dividing not himself Therefrom, removing not the self enough From the body flung away, imagining Himself that body, and projecting there His own sense, as he stands beside it: hence He grieves that he is mortal born, nor marks That in true death there is no second self Alive and able to sorrow for self destroyed, Or stand lamenting that the self lies there Mangled or burning. For if it an evil is Dead to be jerked about by jaw and fang Of the wild brutes, I see not why 'twere not Bitter to lie on fires and roast in flames, Or suffocate in honey, and, reclined On the smooth oblong of an icy slab, Grow stiff in cold, or sink with load of earth Down-crushing from above.

3.894

"Thee now no more The joyful house and best of wives shall welcome, Nor little sons run up to snatch their kisses And touch with silent happiness thy heart.

Thou shalt not speed in undertakings more, Nor be the warder of thine own no more.

Poor wretch," they say, "one hostile hour hath ta'en Wretchedly from thee all life's many guerdons,"

But add not, "yet no longer unto thee Remains a remnant of desire for them"

If this they only well perceived with mind And followed up with maxims, they would free Their state of man from anguish and from fear.

"O even as here thou art, aslumber in death, So shalt thou slumber down the rest of time, Released from every harrying pang. But we, We have bewept thee with insatiate woe, Standing beside whilst on the awful pyre Thou wert made ashes; and no day shall take For us the eternal sorrow from the breast."

But ask the mourner what's the bitterness That man should waste in an eternal grief, If, after all, the thing's but sleep and rest?

For when the soul and frame together are sunk In slumber, no one then demands his self Or being. Well, this sleep may be forever, Without desire of any selfhood more, For all it matters unto us asleep.

Yet not at all do those primordial germs Roam round our members, at that time, afar From their own motions that produce our senses- Since, when he's startled from his sleep, a man Collects his senses. Death is, then, to us Much less- if there can be a less than that Which is itself a nothing; for there comes Hard upon death a scattering more great Of the throng of matter, and no man wakes up On whom once falls the icy pause of life.

This too, O often from the soul men say, Along their couches holding of the cups, With faces shaded by fresh wreaths awry: "Brief is this fruit of joy to paltry man, Soon, soon departed, and thereafter, no, It may not be recalled."- As if, forsooth, It were

their prime of evils in great death To parch, poor tongues, with
thirst and arid drought, Or chafe for any lack.

3.931

Once more, if Nature Should of a sudden send a voice abroad,
And her own self inveigh against us so: "Mortal, what hast thou
of such grave concern That thou indulgest in too sickly complaints?

Why this bemoaning and beweeeping death?

For if thy life aforesaid and behind To thee was grateful, and
not all thy good Was heaped as in sieve to flow away And perish
unavailingly, why not, Even like a banqueter, depart the halls,
Laden with life? why not with mind content Take now, thou
fool, thy unafflicted rest?

But if whatever thou enjoyed hath been Lavished and lost, and
life is now offence, Why seekest more to add- which in its turn
Will perish foully and fall out in vain?

O why not rather make an end of life, Of labour? For all I may
devise or find To pleasure thee is nothing: all things are The
same forever. Though not yet thy body Wrinkles with years, nor
yet the frame exhausts Outworn, still things abide the same,
even if Thou goest on to conquer all of time With length of days,
yea, if thou never diest"- What were our answer, but that
Nature here Urges just suit and in her words lays down True
cause of action? Yet should one complain, Riper in years and
elder, and lament, Poor devil, his death more sorely than is fit,
Then would she not, with greater right, on him Cry out,
inveighing with a voice more shrill: "Off with thy tears, and
choke thy whines, buffoon!

Thou wrinklest- after thou hast had the sum Of the guerdons of
life; yet, since thou cravest ever What's not at hand,
contemning present good, That life has slipped away,
unperfected And unavailing unto thee. And now, Or ere thou
guessed it, death beside thy head Stands- and before thou canst

be going home Sated and laden with the goodly feast.

But now yield all that's alien to thine age,- Up, with good grace!
make room for sons: thou must."

Justly, I fancy, would she reason thus, Justly inveigh and gird:
since ever the old Outcrowded by the new gives way, and ever
The one thing from the others is repaired.

Nor no man is consigned to the abyss Of Tartarus, the black. For
stuff must be, That thus the after-generations grow,- Though
these, their life completed, follow thee; And thus like thee are
generations all- Already fallen, or some time to fall.

So one thing from another rises ever; And in fee-simple life is
given to none, But unto all mere usufruct.

Look back: Nothing to us was all fore-passed eld Of time the
eternal, ere we had a birth.

And Nature holds this like a mirror up Of time-to-be when we
are dead and gone.

And what is there so horrible appears?

Now what is there so sad about it all?

Is't not serener far than any sleep?

3.978

And, verily, those tortures said to be In Acheron, the deep, they
all are ours Here in this life. No Tantalus, benumbed With
baseless terror, as the fables tell, Fears the huge boulder
hanging in the air: But, rather, in life an empty dread of Gods
Urges mortality, and each one fears Such fall of fortune as may
chance to him.

Nor eat the vultures into Tityus Prostrate in Acheron, nor can
they find, Forsooth, throughout eternal ages, aught To pry
around for in that mighty breast.

However hugely he extend his bulk- Who hath for outspread
limbs not acres nine, But the whole earth- he shall not able be
To bear eternal pain nor furnish food From his own frame
forever. But for us A Tityus is he whom vultures rend Prostrate
in love, whom anxious anguish eats, Whom troubles of any
unappeased desires Asunder rip. We have before our eyes Here
in this life also a Sisyphus In him who seeketh of the populace
The rods, the axes fell, and evermore Retires a beaten and a
gloomy man.

For to seek after power- an empty name, Nor given at all- and
ever in the search To endure a world of toil, O this it is To shove
with shoulder up the hill a stone Which yet comes rolling back
from off the top, And headlong makes for levels of the plain.

Then to be always feeding an ingrate mind, Filling with good
things, satisfying never- As do the seasons of the year for us,
When they return and bring their progenies And varied charms,
and we are never filled With the fruits of life- O this, I fancy, 'tis
To pour, like those young virgins in the tale, Waters into a sieve,
unfilled forever.

.....

Cerberus and Furies, and that Lack of Light

Tartarus, out-belching from his mouth the surge Of horrible
heat- the which are nowhere, nor Indeed can be: but in this life
is fear Of retributions just and expiations For evil acts: the
dungeon and the leap From that dread rock of infamy, the
stripes, The executioners, the oaken rack, The iron plates,
bitumen, and the torch.

And even though these are absent, yet the mind, With a
fore-fearing conscience, plies its goads And burns beneath the
lash, nor sees meanwhile What terminus of ills, what end of
pine Can ever be, and feareth lest the same But grow more

heavy after death. Of truth, The life of fools is Acheron on earth.

3.1024

This also to thy very self sometimes Repeat thou mayst: "Lo, even good Ancus left The sunshine with his eyes, in divers things A better man than thou, O worthless hind; And many other kings and lords of rule Thereafter have gone under, once who swayed O'er mighty peoples. And he also, he- Who whilom paved a highway down the sea, And gave his legionaries thoroughfare Along the deep, and taught them how to cross The pools of brine afoot, and did contemn, Trampling upon it with his cavalry, The bellows of ocean- poured his soul From dying body, as his light was ta'en.

And Scipio's son, the thunderbolt of war, Horror of Carthage, gave his bones to earth, Like to the lowliest villein in the house.

Add finders-out of sciences and arts; Add comrades of the Heliconian dames, Among whom Homer, sceptered o'er them all, Now lies in slumber sunken with the rest.

Then, too, Democritus, when ripened eld Admonished him his memory waned away, Of own accord offered his head to death.

Even Epicurus went, his light of life Run out, the man in genius who o'er-topped The human race, extinguishing all others, As sun, in ether arisen, all the stars.

Wilt thou, then, dally, thou complain to go?- For whom already life's as good as dead, Whilst yet thou livest and lookest?- who in sleep Wastest thy life- time's major part, and snoorest Even when awake, and ceapest not to see The stuff of dreams, and bearest a mind beset By baseless terror, nor discoverest oft What's wrong with thee, when, like a sotted wretch, Thou'rt jostled along by many crowding cares, And wanderest reeling round, with mind aswim."

3.1053

If men, in that same way as on the mind They feel the load that wearies with its weight, Could also know the causes whence it comes, And why so great the heap of ill on heart, O not in this sort would they live their life, As now so much we see them, knowing not What 'tis they want, and seeking ever and ever A change of place, as if to drop the burden.

The man who sickens of his home goes out, Forth from his splendid halls, and straight- returns, Feeling i'faith no better off abroad.

He races, driving his Gallic ponies along, Down to his villa, madly,- as in haste To hurry help to a house afire.- At once He yawns, as soon as foot has touched the threshold, Or drowsily goes off in sleep and seeks Forgetfulness, or maybe bustles about And makes for town again. In such a way Each human flees himself- a self in sooth, As happens, he by no means can escape; And willy-nilly he cleaves to it and loathes, Sick, sick, and guessing not the cause of ail.

Yet should he see but that, O chiefly then, Leaving all else, he'd study to divine The nature of things, since here is in debate Eternal time and not the single hour, Mortal's estate in whatsoever remains After great death.

3.1076

And too, when all is said, What evil lust of life is this so great Subdues us to live, so dreadfully distraught In perils and alarms? one fixed end Of life abideth for mortality; Death's not to shun, and we must go to meet.

Besides we're busied with the same devices, Ever and ever, and we are at them ever, And there's no new delight that may be forged By living on. But whilst the thing we long for Is lacking, that seems good above all else; Thereafter, when we've touched it, something else We long for; ever one equal thirst of life Grips us agape. And doubtful 'tis what fortune The future times may

carry, or what be That chance may bring, or what the issue next
Awaiting us. Nor by prolonging life Take we the least away from
death's own time, Nor can we pluck one moment off, whereby
To minish the aeons of our state of death.

Therefore, O man, by living on, fulfil As many generations as
thou may: Eternal death shall there be waiting still; And he who
died with light of yesterday Shall be no briefer time in death's
No-more Than he who perished months or years before.

BOOK IV

PROEM

4.1

I wander afield, thriving in sturdy thought, Through unpathed
haunts of the Pierides, Trodden by step of none before. I joy To
come on undefiled fountains there, To drain them deep; I joy to
pluck new flowers, To seek for this my head a signal crown
From regions where the Muses never yet Have garlanded the
temples of a man: First, since I teach concerning mighty things,
And go right on to loose from round the mind The tightened
coils of dread religion; Next, since, concerning themes so dark, I
frame Song so pellucid, touching all throughout Even with the
Muses' charm- which, as 'twould seem, Is not without a
reasonable ground: For as physicians, when they seek to give
Young boys the nauseous wormwood, first do touch The brim
around the cup with the sweet juice And yellow of the honey, in
order that The thoughtless age of boyhood be cajoled As far as
the lips, and meanwhile swallow down The wormwood's bitter
draught, and, though befooled, Be yet not merely duped, but
rather thus Grow strong again with recreated health: So now I
too (since this my doctrine seems In general somewhat woeful
unto those Who've had it not in hand, and since the crowd
Starts back from it in horror) have desired To expound our

doctrine unto thee in song Soft-speaking and Pierian, and, as
'twere, To touch it with sweet honey of the Muse- If by such
method haply I might hold The mind of thee upon these lines of
ours, Till thou dost learn the nature of all things And
understandest their utility.

EXISTENCE AND CHARACTER OF THE IMAGES

4.26

But since I've taught already of what sort The seeds of all things
are, and how distinct In divers forms they flit of own accord,
Stirred with a motion everlasting on, And in what mode things
be from them create, And since I've taught what the mind's
nature is, And of what things 'tis with the body knit And thrives
in strength, and by what mode upturn That mind returns to its
primordials, Now will I undertake an argument- One for these
matters of supreme concern- That there exist those somewhats
which we call The images of things: these, like to films Scaled off
the utmost outside of the things, Flit hither and thither through
the atmosphere, And the same terrify our intellects, Coming
upon us waking or in sleep, When oft we peer at wonderful
strange shapes And images of people lorn of light, Which oft
have horribly roused us when we lay In slumber- that haply
nevermore may we Suppose that souls get loose from Acheron,
Or shades go floating in among the living, Or aught of us is left
behind at death, When body and mind, destroyed together, each
Back to its own primordials goes away.

And thus I say that effigies of things, And tenuous shapes from
off the things are sent, From off the utmost outside of the
things, Which are like films or may be named a rind, Because
the image bears like look and form With whatso body has shed
it fluttering forth- A fact thou mayst, however dull thy wits, ^{4.54}
Well learn from this: mainly, because we see Even 'mongst
visible objects many be That send forth bodies, loosely some

diffused- Like smoke from oaken logs and heat from fires- And some more interwoven and condensed- As when the locusts in the summertime Put off their glossy tunics, or when calves At birth drop membranes from their body's surface, Or when, again, the slippery serpent doffs Its vestments 'mongst the thorns- for oft we see The breres augmented with their flying spoils: Since such takes place, 'tis likewise certain too That tenuous images from things are sent, From off the utmost outside of the things.

For why those kinds should drop and part from things, Rather than others tenuous and thin, No power has man to open mouth to tell; Especially, since on outsides of things Are bodies many and minute which could, In the same order which they had before, And with the figure of their form preserved, Be thrown abroad, and much more swiftly too, Being less subject to impediments, As few in number and placed along the front.

For truly many things we see discharge Their stuff at large, not only from their cores Deep-set within, as we have said above, But from their surfaces at times no less- Their very colours too. And commonly The awnings, saffron, red and dusky blue, Stretched overhead in mighty theatres, Upon their poles and cross-beams fluttering, Have such an action quite; for there they dye And make to undulate with their every hue The circled throng below, and all the stage, And rich attire in the patrician seats.

And ever the more the theatre's dark walls Around them shut, the more all things within Laugh in the bright suffusion of strange glints, The daylight being withdrawn. And therefore, since The canvas hangings thus discharge their dye From off their surface, things in general must Likewise their tenuous effigies discharge, Because in either case they are off-thrown From off the surface. So there are indeed Such certain prints and vestiges of forms Which flit around, of subtlest texture

made, Invisible, when separate, each and one.

4.90

Again, all odour, smoke, and heat, and such Streams out of things diffusedly, because, Whilst coming from the deeps of body forth And rising out, along their bending path They're torn asunder, nor have gateways straight Wherethrough to mass themselves and struggle abroad.

But contrariwise, when such a tenuous film Of outside colour is thrown off, there's naught Can rend it, since 'tis placed along the front Ready to hand. Lastly those images Which to our eyes in mirrors do appear, In water, or in any shining surface, Must be, since furnished with like look of things, Fashioned from images of things sent out.

There are, then, tenuous effigies of forms, Like unto them, which no one can divine When taken singly, which do yet give back, When by continued and recurrent discharge Expelled, a picture from the mirrors' plane.

Nor otherwise, it seems, can they be kept So well conserved that thus be given back Figures so like each object.

4.110

Now then, learn How tenuous is the nature of an image.

And in the first place, since primordials be So far beneath our senses, and much less E'en than those objects which begin to grow Too small for eyes to note, learn now in few How nice are the beginnings of all things- That this, too, I may yet confirm in proof: First, living creatures are sometimes so small That even their third part can nowise be seen; Judge, then, the size of any inward organ- What of their sphered heart, their eyes, their limbs, The skeleton?- How tiny thus they are!

And what besides of those first particles Whence soul and mind must fashioned be?- Seest not How nice and how minute? Besides, whatever Exhales from out its body a sharp smell- The

nauseous absinth, or the panacea, Strong southernwood, or bitter centaury- If never so lightly with thy [fingers] twain Perchance [thou touch] a one of them

Then why not rather know that images Flit hither and thither, many, in many modes, Bodiless and invisible?

But lest Haply thou holdest that those images Which come from objects are the sole that flit, Others indeed there be of own accord Begot, self-formed in earth's aery skies, Which, moulded to innumerable shapes, Are borne aloft, and, fluid as they are, Cease not to change appearance and to turn Into new outlines of all sorts of forms; As we behold the clouds grow thick on high And smirch the serene vision of the world, Stroking the air with motions. For oft are seen The giants' faces flying far along And trailing a spread of shadow; and at times The mighty mountains and mountain-sundered rocks Going before and crossing on the sun, Whereafter a monstrous beast dragging amain And leading in the other thunderheads.

4.143

Now [hear] how easy and how swift they be Engendered, and perpetually flow off From things and gliding pass away....

.

For ever every outside streams away From off all objects, since discharge they may; And when this outside reaches other things, As chiefly glass, it passes through; but where It reaches the rough rocks or stuff of wood, There 'tis so rent that it cannot give back An image. But when gleaming objects dense, As chiefly mirrors, have been set before it, Nothing of this sort happens. For it can't Go, as through glass, nor yet be rent- its safety, By virtue of that smoothness, being sure.

'Tis therefore that from them the images Stream back to us; and howso suddenly Thou place, at any instant, anything Before a mirror, there an image shows; Proving that ever from a body's

surface Flow off thin textures and thin shapes of things.

Thus many images in little time Are gendered; so their origin is named Rightly a speedy. And even as the sun Must send below, in little time, to earth So many beams to keep all things so full Of light incessant; thus, on grounds the same, From things there must be borne, in many modes, To every quarter round, upon the moment, The many images of things; because Unto whatever face of things we turn The mirror, things of form and hue the same Respond. Besides, though but a moment since Serenest was the weather of the sky, So fiercely sudden is it foully thick That ye might think that round about all murk Had parted forth from Acheron and filled The mighty vaults of sky- so grievously, As gathers thus the storm-clouds' gruesome night, Do faces of black horror hang on high- Of which how small a part an image is There's none to tell or reckon out in words.

4.176

Now come; with what swift motion they are borne, These images, and what the speed assigned To them across the breezes swimming on- So that o'er lengths of space a little hour Alone is wasted, toward whatever region Each with its divers impulse tends- I'll tell In verses sweeter than they many are; Even as the swan's slight note is better far Than that dispersed clamour of the cranes Among the southwind's aery clouds. And first, One oft may see that objects which are light And made of tiny bodies are the swift; In which class is the sun's light and his heat, Since made from small primordial elements Which, as it were, are forward knocked along And through the interspaces of the air To pass delay not, urged by blows behind; For light by light is instantly supplied And gleam by following gleam is spurred and driven.

Thus likewise must the images have power Through unimaginable space to speed Within a point of time,- first, since

a cause Exceeding small there is, which at their back Far forward drives them and propels, where, too, They're carried with such winged lightness on; And, secondly, since furnished, when sent off, With texture of such rareness that they can Through objects whatsoever penetrate And ooze, as 'twere, through intervening air.

4.199

Besides, if those fine particles of things Which from so deep within are sent abroad, As light and heat of sun, are seen to glide And spread themselves through all the space of heaven Upon one instant of the day, and fly O'er sea and lands and flood the heaven, what then Of those which on the outside stand prepared, When they're hurled off with not a thing to check Their going out? Dost thou not see indeed How swifter and how farther must they go And speed through manifold the length of space In time the same that from the sun the rays O'erspread the heaven? This also seems to be Example chief and true with what swift speed The images of things are borne about: That soon as ever under open skies Is spread the shining water, all at once, If stars be out in heaven, upgleam from earth, Serene and radiant in the water there, The constellations of the universe— Now seest thou not in what a point of time An image from the shores of ether falls Unto the shores of earth? Wherefore, again, And yet again, 'tis needful to confess With wondrous...

.....

THE SENSES AND MENTAL PICTURES

4.217

Bodies that strike the eyes, awaking sight.

From certain things flow odours evermore, As cold from rivers, heat from sun, and spray From waves of ocean, eater-out of walls Around the coasts. Nor ever cease to flit The varied voices, sounds athrough the air.

Then too there comes into the mouth at times The wet of a salt taste, when by the sea We roam about; and so, where'er we watch The wormword being mixed, its bitter stings.

To such degree from all things is each thing Borne streamingly along, and sent about To every region round; and nature grants Nor rest nor respite of the onward flow, Since 'tis incessantly we feeling have, And all the time are suffered to descry And smell all things at hand, and hear them sound.

4.230

Besides, since shape examined by our hands Within the dark is known to be the same As that by eyes perceived within the light And lustrous day, both touch and sight must be By one like cause aroused. So, if we test A square and get its stimulus on us Within the dark, within the light what square Can fall upon our sight, except a square That images the things? Wherefore it seems The source of seeing is in images, Nor without these can anything be viewed.

Now these same films I name are borne about And tossed and scattered into regions all.

But since we do perceive alone through eyes, It follows hence that whitherso we turn Our sight, all things do strike against it there With form and hue. And just how far from us Each thing may be away, the image yields To us the power to see and chance to tell: For when 'tis sent, at once it shoves ahead And drives along the air that's in the space Betwixt it and our eyes. And thus this air All glides athrough our eyeballs, and, as 'twere, Brushes athrough our pupils and thuswise Passes across. Therefore it comes we see How far from us each thing may be away, And the more air there be that's driven before, And too the longer be the brushing breeze Against our eyes, the farther off removed Each thing is seen to be: forsooth, this work With mightily swift order all goes on, So that upon one instant we may see What kind the object and how far away.

Nor over-marvellous must this be deemed In these affairs that,
though the films which strike Upon the eyes cannot be singly
seen, The things themselves may be perceived. For thus When
the wind beats upon us stroke by stroke And when the sharp
cold streams, 'tis not our wont To feel each private particle of
wind Or of that cold, but rather all at once; And so we see how
blows affect our body, As if one thing were beating on the same
And giving us the feel of its own body Outside of us. Again,
whene'er we thump With finger-tip upon a stone, we touch But
the rock's surface and the outer hue, Nor feel that hue by
contact- rather feel The very hardness deep within the rock.

4.269

Now come, and why beyond a looking-glass An image may be
seen, perceive. For seen It soothly is, removed far within.

'Tis the same sort as objects peered upon Outside in their true
shape, whene'er a door Yields through itself an open
peering-place, And lets us see so many things outside Beyond
the house. Also that sight is made By a twofold twin air: for first
is seen The air inside the door-posts; next the doors, The twain
to left and right; and afterwards A light beyond comes brushing
through our eyes, Then other air, then objects peered upon
Outside in their true shape. And thus, when first The image of
the glass projects itself, As to our gaze it comes, it shoves ahead
And drives along the air that's in the space Betwixt it and our
eyes, and brings to pass That we perceive the air ere yet the
glass.

But when we've also seen the glass itself, Forthwith that image
which from us is borne Reaches the glass, and there thrown
back again Comes back unto our eyes, and driving rolls Ahead of
itself another air, that then 'Tis this we see before itself, and
thus It looks so far removed behind the glass.

Wherefore again, again, there's naught for wonder

In those which render from the mirror's plane A vision back,
since each thing comes to pass By means of the two airs. Now, in
the glass The right part of our members is observed Upon the
left, because, when comes the image Hitting against the level of
the glass, 'Tis not returned unshifted; but forced off Backwards
in line direct and not oblique,- Exactly as whoso his
plaster-mask Should dash, before 'twere dry, on post or beam,
And it should straightway keep, at clinging there, Its shape,
reversed, facing him who threw, And so remould the features it
gives back: It comes that now the right eye is the left, The left
the right.

4.302

An image too may be From mirror into mirror handed on, Until
of idol-films even five or six Have thus been gendered. For
whatever things Shall hide back yonder in the house, the same,
However far removed in twisting ways, May still be all brought
forth through bending paths And by these several mirrors seen
to be Within the house, since nature so compels All things to be
borne backward and spring off At equal angles from all other
things.

To such degree the image gleams across From mirror unto
mirror; where 'twas left It comes to be the right, and then again
Returns and changes round unto the left.

Again, those little sides of mirrors curved Proportionate to the
bulge of our own flank Send back to us their idols with the right
Upon the right; and this is so because Either the image is passed
on along From mirror unto mirror, and thereafter, When twice
dashed off, flies back unto ourselves; Or else the image wheels
itself around, When once unto the mirror it has come, Since the
curved surface teaches it to turn To usward. Further, thou
might'st well believe That these film-idols step along with us
And set their feet in unison with ours And imitate our carriage,
since from that Part of a mirror whence thou hast withdrawn

Straightway no images can be returned.

Further, our eye-balls tend to flee the bright And shun to gaze thereon; the sun even blinds, If thou goest on to strain them unto him, Because his strength is mighty, and the films Heavily downward from on high are borne Through the pure ether and the viewless winds, And strike the eyes, disordering their joints.

So piecing lustre often burns the eyes, Because it holdeth many seeds of fire Which, working into eyes, engender pain.

Again, whatever jaundiced people view Becomes wan-yellow, since from out their bodies Flow many seeds wan-yellow forth to meet The films of things, and many too are mixed Within their eye, which by contagion paint All things with sallowness.

4.337

Again, we view From dark recesses things that stand in light, Because, when first has entered and possessed The open eyes this nearer darkling air, Swiftly the shining air and luminous Followeth in, which purges then the eyes And scatters asunder of that other air The sable shadows, for in large degrees This air is nimbler, nicer, and more strong.

And soon as ever 'thas filled and oped with light The pathways of the eyeballs, which before Black air had blocked, there follow straightaway Those films of things out-standing in the light, Provoking vision- what we cannot do From out the light with objects in the dark, Because that denser darkling air behind Followeth in, and fills each aperture And thus blockades the pathways of the eyes That there no images of any things Can be thrown in and agitate the eyes.

And when from far away we do behold The squared towers of a city, oft Rounded they seem,- on this account because Each distant angle is perceived obtuse, Or rather it is not perceived at all; And perishes its blow nor to our gaze Arrives its stroke, since through such length of air Are borne along the idols that

the air Makes blunt the idol of the angle's point By numerous collidings. When thuswise The angles of the tower each and all Have quite escaped the sense, the stones appear As rubbed and rounded on a turner's wheel- Yet not like objects near and truly round, But with a semblance to them, shadowily.

Likewise, our shadow in the sun appears To move along and follow our own steps And imitate our carriage- if thou thinkest Air that is thus bereft of light can walk, Following the gait and motion of mankind.

For what we use to name a shadow, sure Is naught but air deprived of light. No marvel: Because the earth from spot to spot is reft Progressively of light of sun, whenever In moving round we get within its way, While any spot of earth by us abandoned Is filled with light again, on this account It comes to pass that what was body's shadow Seems still the same to follow after us In one straight course. Since, evermore pour in New lights of rays, and perish then the old, Just like the wool that's drawn into the flame.

Therefore the earth is easily spoiled of light And easily refilled and from herself Washeth the black shadows quite away.

4.379

And yet in this we don't at all concede That eyes be cheated. For their task it is To note in whatsoever place be light, In what be shadow: whether or no the gleams Be still the same, and whether the shadow which Just now was here is that one passing thither, Or whether the facts be what we said above, 'Tis after all the reasoning of mind That must decide; nor can our eyeballs know The nature of reality. And so Attach thou not this fault of mind to eyes, Nor lightly think our senses everywhere Are tottering. The ship in which we sail Is borne along, although it seems to stand; The ship that bides in roadstead is supposed There to be passing by. And hills and fields Seem fleeing fast astern, past which we urge The ship and fly under the bellying

sails.

The stars, each one, do seem to pause, affixed To the ethereal caverns, though they all Forever are in motion, rising out And thence revisiting their far descents When they have measured with their bodies bright The span of heaven. And likewise sun and moon Seem biding in a roadstead,- objects which, As plain fact proves, are really borne along.

Between two mountains far away aloft From midst the whirl of waters open lies A gaping exit for the fleet, and yet They seem conjoined in a single isle.

When boys themselves have stopped their spinning round, The halls still seem to whirl and posts to reel, Until they now must almost think the roofs Threaten to ruin down upon their heads.

And now, when nature begins to lift on high The sun's red splendour and the tremulous fires, And raise him o'er the mountain-tops, those mountains- O'er which he seemeth then to thee to be, His glowing self hard by atingeing them With his own fire- are yet away from us Scarcely two thousand arrow-shots, indeed Oft scarce five hundred courses of a dart; Although between those mountains and the sun Lie the huge plains of ocean spread beneath The vasty shores of ether, and intervene A thousand lands, possessed by many a folk And generations of wild beasts. Again, ^{4.414} A pool of water of but a finger's depth, Which lies between the stones along the pave, Offers a vision downward into earth As far, as from the earth o'erspread on high The gulfs of heaven; that thus thou seemest to view Clouds down below and heavenly bodies plunged Wondrously in heaven under earth.

Then too, when in the middle of the stream Sticks fast our dashing horse, and down we gaze Into the river's rapid waves, some force Seems then to bear the body of the horse, Though standing still, reversely from his course, And swiftly push

up-stream. And wheresoe'er We cast our eyes across, all objects
seem Thus to be onward borne and flow along In the same way
as we. A portico, Albeit it stands well propped from end to end
On equal columns, parallel and big, Contracts by stages in a
narrow cone, When from one end the long, long whole is seen,-
Until, conjoining ceiling with the floor, And the whole right side
with the left, it draws Together to a cone's nigh-viewless point.

To sailors on the main the sun he seems From out the waves to
rise, and in the waves To set and bury his light- because indeed
They gaze on naught but water and the sky.

Again, to gazers ignorant of the sea, Vessels in port seem, as
with broken poops, To lean upon the water, quite agog; For any
portion of the oars that's raised Above the briny spray is
straight, and straight The rudders from above. But other parts,
Those sunk, immersed below the water-line, Seem broken all
and bended and inclined Sloping to upwards, and turned back to
float Almost atop the water. And when the winds Carry the
scattered drifts along the sky In the night-time, then seem to
glide along The radiant constellations 'gainst the clouds And
there on high to take far other course From that whereon in
truth they're borne. And then, ^{4.447} If haply our hand be set
beneath one eye And press below thereon, then to our gaze
Each object which we gaze on seems to be, By some sensation
twain- then twain the lights Of lampions burgeoning in flowers
of flame, And twain the furniture in all the house, Two-fold the
visages of fellow-men, And twain their bodies. And again, when
sleep Has bound our members down in slumber soft And all the
body lies in deep repose, Yet then we seem to self to be awake
And move our members; and in night's blind gloom We think to
mark the daylight and the sun; And, shut within a room, yet still
we seem To change our skies, our oceans, rivers, hills, To cross
the plains afoot, and hear new sounds, Though still the austere
silence of the night Abides around us, and to speak replies,

Though voiceless. Other cases of the sort Wondrously many do we see, which all Seek, so to say, to injure faith in sense- In vain, because the largest part of these Deceives through mere opinions of the mind, Which we do add ourselves, feigning to see What by the senses are not seen at all.

For naught is harder than to separate Plain facts from dubious, which the mind forthwith Adds by itself.

4.469

Again, if one suppose That naught is known, he knows not whether this Itself is able to be known, since he Confesses naught to know. Therefore with him I waive discussion- who has set his head Even where his feet should be. But let me grant That this he knows,- I question: whence he knows What 'tis to know and not-to-know in turn, And what created concept of the truth, And what device has proved the dubious To differ from the certain?- since in things He's heretofore seen naught of true. Thou'lt find That from the senses first hath been create Concept of truth, nor can the senses be Rebutted. For criterion must be found Worthy of greater trust, which shall defeat Through own authority the false by true; What, then, than these our senses must there be Worthy a greater trust? Shall reason, sprung From some false sense, prevail to contradict Those senses, sprung as reason wholly is From out the senses?- For lest these be true, All reason also then is falsified.

Or shall the ears have power to blame the eyes, Or yet the touch the ears? Again, shall taste Accuse this touch or shall the nose confute Or eyes defeat it? Methinks not so it is: For unto each has been divided off Its function quite apart, its power to each; And thus we're still constrained to perceive The soft, the cold, the hot apart, apart All divers hues and whatso things there be Conjoined with hues. Likewise the tasting tongue Has its own power apart, and smells apart And sounds apart are known. And thus it is That no one sense can e'er convict another.

Nor shall one sense have power to blame itself, Because it always must be deemed the same, Worthy of equal trust. And therefore what At any time unto these senses showed, The same is true.

4.500

And if the reason be Unable to unravel us the cause Why objects, which at hand were square, afar Seemed rounded, yet it more availeth us, Lacking the reason, to pretend a cause For each configuration, than to let From out our hands escape the obvious things And injure primal faith in sense, and wreck All those foundations upon which do rest Our life and safety. For not only reason Would topple down; but even our very life Would straightaway collapse, unless we dared To trust our senses and to keep away From headlong heights and places to be shunned Of a like peril, and to seek with speed Their opposites! Again, as in a building, If the first plumb-line be askew, and if The square deceiving swerve from lines exact, And if the level waver but the least In any part, the whole construction then Must turn out faulty- shelving and askew, Leaning to back and front, incongruous, That now some portions seem about to fall, And falls the whole ere long- betrayed indeed By first deceiving estimates: so too Thy calculations in affairs of life Must be askew and false, if sprung for thee From senses false. So all that troop of words Marshalled against the senses is quite vain.

4.522

And now remains to demonstrate with ease How other senses each their things perceive.

Firstly, a sound and every voice is heard, When, getting into ears, they strike the sense With their own body. For confess we must Even voice and sound to be corporeal, Because they're able on the sense to strike.

Besides voice often scrapes against the throat, And screams in going out do make more rough The wind-pipe- naturally enough, methinks, When, through the narrow exit rising up In larger throng, these primal germs of voice Have thus begun to issue forth. In sooth, Also the door of the mouth is scraped against [By air blown outward] from distended [cheeks].

.....

And thus no doubt there is, that voice and words Consist of elements corporeal, With power to pain. Nor art thou unaware Likewise how much of body's ta'en away, How much from very thews and powers of men May be withdrawn by steady talk, prolonged Even from the rising splendour of the morn To shadows of black evening,- above all If 't be outpoured with most exceeding shouts.

Therefore the voice must be corporeal, Since the long talker loses from his frame A part.

Moreover, roughness in the sound Comes from the roughness in the primal germs, As a smooth sound from smooth ones is create; Nor have these elements a form the same When the trump rumbles with a hollow roar, As when barbaric Berecynthian pipe Buzzes with raucous boomings, or when swans By night from icy shores of Helicon With wailing voices raise their liquid dirge.

4.549

Thus, when from deep within our frame we force These voices, and at mouth expel them forth, The mobile tongue, artificer of words, Makes them articulate, and too the lips By their formations share in shaping them.

Hence when the space is short from starting-point To where that voice arrives, the very words Must too be plainly heard, distinctly marked.

For then the voice conserves its own formation, Conserves its shape. But if the space between Be longer than is fit, the words must be Through the much air confounded, and the voice Disordered in its flight across the winds- And so it haps, that thou canst sound perceive, Yet not determine what the words may mean; To such degree confounded and encumbered The voice approaches us. Again, one word, Sent from the crier's mouth, may rouse all ears Among the populace. And thus one voice Scatters asunder into many voices, Since it divides itself for separate ears, Imprinting form of word and a clear tone.

But whatso part of voices fails to hit The ears themselves perishes, borne beyond, Idly diffused among the winds. A part, Beating on solid porticoes, tossed back Returns a sound; and sometimes mocks the ear With a mere phantom of a word.

4.572

When this Thou well hast noted, thou canst render count Unto thyself and others why it is Along the lonely places that the rocks Give back like shapes of words in order like, When search we after comrades wandering Among the shady mountains, and aloud Call unto them, the scattered. I have seen Spots that gave back even voices six or seven For one thrown forth- for so the very hills, Dashing them back against the hills, kept on With their reverberations. And these spots The neighbouring country-side doth feign to be Haunts of the goat-foot satyrs and the nymphs; And tells ye there be fauns, by whose night noise And antic revels yonder they declare The voiceless silences are broken oft, And tones of strings are made and wailings sweet Which the pipe, beat by players' finger-tips, Pours out; and far and wide the farmer-race Begins to hear, when, shaking the garmentings Of pine upon his half-beast head, god-Pan With puckered lip oft runneth o'er and o'er The open reeds,- lest flute should cease to pour The woodland music! Other prodigies And wonders of this ilk they love to tell, Lest they be thought to

dwell in lonely spots And even by gods deserted. This is why
They boast of marvels in their story-tellings; Or by some other
reason are led on- Greedy, as all mankind hath ever been, To
prattle fables into ears.

4.595

Again, One need not wonder how it comes about That through
those places (through which eyes cannot View objects manifest)
sounds yet may pass And assail the ears. For often we observe
People conversing, though the doors be closed; No marvel
either, since all voice unharmed Can wind through bended
apertures of things, While idol-films decline to- for they're rent,
Unless along straight apertures they swim, Like those in glass,
through which all images Do fly across. And yet this voice itself,
In passing through shut chambers of a house, Is dulled, and in a
jumble enters ears, And sound we seem to hear far more than
words.

Moreover, a voice is into all directions Divided up, since off
from one another New voices are engendered, when one voice
Hath once leapt forth, outstarting into many- As oft a spark of
fire is wont to sprinkle Itself into its several fires. And so, Voices
do fill those places hid behind, Which all are in a hubbub round
about, Astir with sound. But idol-films do tend, As once sent
forth, in straight directions all; Wherefore one can inside a wall
see naught, Yet catch the voices from beyond the same.

4.615

Nor tongue and palate, whereby we flavour feel, Present more
problems for more work of thought.

Firstly, we feel a flavour in the mouth, When forth we squeeze
it, in chewing up our food,- As any one perchance begins to
squeeze With hand and dry a sponge with water soaked.

Next, all which forth we squeeze is spread about Along the
pores and intertwined paths Of the loose-textured tongue. And

so, when smooth The bodies of the oozy flavour, then
Delightfully they touch, delightfully They treat all spots, around
the wet and trickling Enclosures of the tongue. And
contrariwise, They sting and pain the sense with their assault,
According as with roughness they're supplied.

Next, only up to palate is the pleasure Coming from flavour; for
in truth when down 'Thas plunged along the throat, no pleasure
is, Whilst into all the frame it spreads around; Nor aught it
matters with what food is fed The body, if only what thou take
thou canst Distribute well digested to the frame And keep the
stomach in a moist career.

Now, how it is we see some food for some, Others for others....

.....

I will unfold, or wherefore what to some Is foul and bitter, yet
the same to others Can seem delectable to eat,- why here So
great the distance and the difference is That what is food to one
to some becomes Fierce poison, as a certain snake there is
Which, touched by spittle of a man, will waste And end itself by
gnawing up its coil.

Again, fierce poison is the hellebore To us, but puts the fat on
goats and quails.

That thou mayst know by what devices this Is brought about, in
chief thou must recall What we have said before, that seeds are
kept Commixed in things in divers modes. Again, As all the
breathing creatures which take food Are outwardly unlike, and
outer cut And contour of their members bounds them round,
Each differing kind by kind, they thus consist Of seeds of
varying shape. And furthermore, Since seeds do differ, divers
too must be The interstices and paths (which we do call The
apertures) in all the members, even In mouth and palate too.
Thus some must be More small or yet more large,

three-cornered some And others squared, and many others round, And certain of them many-angled too In many modes. For, as the combination And motion of their divers shapes demand, The shapes of apertures must be diverse And paths must vary according to their walls That bound them. Hence when what is sweet to some, Becomes to others bitter, for him to whom 'Tis sweet, the smoothest particles must needs Have entered caressingly the palate's pores.

And, contrariwise, with those to whom that sweet Is sour within the mouth, beyond a doubt The rough and barbed particles have got Into the narrows of the apertures.

Now easy it is from these affairs to know Whatever...

.....

Indeed, where one from o'er-abundant bile Is stricken with fever, or in other wise Feels the roused violence of some malady, There the whole frame is now upset, and there All the positions of the seeds are changed,- So that the bodies which before were fit To cause the savour, now are fit no more, And now more apt are others which be able To get within the pores and gender sour.

Both sorts, in sooth, are intermixed in honey- What oft we've proved above to thee before.

4.673

Now come, and I will indicate what wise Impact of odour on the nostrils touches.

And first, 'tis needful there be many things From whence the streaming flow of varied odours May roll along, and we're constrained to think They stream and dart and sprinkle themselves about Impartially. But for some breathing creatures One odour is more apt, to others another- Because of differing forms of seeds and pores.

Thus on and on along the zephyrs bees Are led by odour of
honey, vultures too By carcasses. Again, the forward power Of
scent in dogs doth lead the hunter on Whithersoever the
splay-foot of wild beast Hath hastened its career; and the white
goose, The saviour of the Roman citadel, Forescents afar the
odour of mankind.

Thus, diversly to divers ones is given Peculiar smell that leadeth
each along To his own food or makes him start aback From
loathsome poison, and in this wise are The generations of the
wild preserved.

Yet is this pungence not alone in odours Or in the class of
flavours; but, likewise, The look of things and hues agree not all
So well with senses unto all, but that Some unto some will be, to
gaze upon, More keen and painful. Lo, the raving lions, They
dare not face and gaze upon the cock Who's wont with wings to
flap away the night From off the stage, and call the beaming
morn With clarion voice- and lions straightway thus Bethink
themselves of flight, because, ye see, Within the body of the
cocks there be Some certain seeds, which, into lions' eyes
Injected, bore into the pupils deep And yield such piercing pain
they can't hold out Against the cocks, however fierce they be-
Whilst yet these seeds can't hurt our gaze the least, Either
because they do not penetrate, Or since they have free exit from
the eyes As soon as penetrating, so that thus They cannot hurt
our eyes in any part By there remaining.

To speak once more of odour; Whatever assail the nostrils, some
can travel A longer way than others. None of them, However, 's
borne so far as sound or voice- While I omit all mention of such
things As hit the eyesight and assail the vision.

For slowly on a wandering course it comes And perishes sooner,
by degrees absorbed Easily into all the winds of air;- And first,
because from deep inside the thing It is discharged with labour

(for the fact That every object, when 'tis shivered, ground, Or crumbled by the fire, will smell the stronger Is sign that odours flow and part away From inner regions of the things). And next, Thou mayest see that odour is create Of larger primal germs than voice, because It enters not through stony walls, wherethrough Unfailingly the voice and sound are borne; Wherefore, besides, thou wilt observe 'tis not So easy to trace out in whatso place The smelling object is. For, dallying on Along the winds, the particles cool off, And then the scurrying messengers of things Arrive our senses, when no longer hot.

So dogs oft wander astray, and hunt the scent.

4.722

Now mark, and hear what objects move the mind, And learn, in few, whence unto intellect Do come what come. And first I tell thee this: That many images of objects rove In many modes to every region round- So thin that easily the one with other, When once they meet, uniteth in mid-air, Like gossamer or gold-leaf. For, indeed, Far thinner are they in their fabric than Those images which take a hold on eyes And smite the vision, since through body's pores They penetrate, and inwardly stir up The subtle nature of mind and smite the sense.

Thus, Centaurs and the limbs of Scyllas, thus The Cerberus-visages of dogs we see, And images of people gone before- Dead men whose bones earth bosomed long ago; Because the images of every kind Are everywhere about us borne- in part Those which are gendered in the very air Of own accord, in part those others which From divers things do part away, and those Which are compounded, made from out their shapes.

For soothly from no living Centaur is That phantom gendered, since no breed of beast Like him was ever; but, when images Of horse and man by chance have come together, They easily cohere, as aforesaid, At once, through subtle nature and fabric

thin.

In the same fashion others of this ilk Created are. And when they're quickly borne In their exceeding lightness, easily (As earlier I showed) one subtle image, Compounded, moves by its one blow the mind, Itself so subtle and so strangely quick.

That these things come to pass as I record, From this thou easily canst understand: So far as one is unto other like, Seeing with mind as well as with the eyes Must come to pass in fashion not unlike.

Well, now, since I have shown that I perceive Haply a lion through those idol-films Such as assail my eyes, 'tis thine to know Also the mind is in like manner moved, And sees, nor more nor less than eyes do see (Except that it perceives more subtle films)

The lion and aught else through idol-films.

And when the sleep has overset our frame, The mind's intelligence is now awake, Still for no other reason, save that these- The self-same films as when we are awake- Assail our minds, to such degree indeed That we do seem to see for sure the man Whom, void of life, now death and earth have gained Dominion over. And nature forces this To come to pass because the body's senses Are resting, thwarted through the members all, Unable now to conquer false with true; And memory lies prone and languishes In slumber, nor protests that he, the man Whom the mind feigns to see alive, long since Hath been the gain of death and dissolution.

And further, 'tis no marvel idols move And toss their arms and other members round In rhythmic time- and often in men's sleeps It haps an image this is seen to do; In sooth, when perishes the former image, And other is gendered of another pose, That former seemeth to have changed its gestures.

Of course the change must be conceived as speedy; So great the swiftness and so great the store Of idol-things, and (in an instant brief As mind can mark) so great, again, the store Of separate idol-parts to bring supplies.

It happens also that there is supplied Sometimes an image not of kind the same; But what before was woman, now at hand Is seen to stand there, altered into male; Or other visage, other age succeeds; But slumber and oblivion take care That we shall feel no wonder at the thing.

4.777

And much in these affairs demands inquiry, And much, illumination- if we crave With plainness to exhibit facts. And first, Why doth the mind of one to whom the whim To think has come behold forthwith that thing?

Or do the idols watch upon our will, And doth an image unto us occur, Directly we desire- if heart prefer The sea, the land, or after all the sky?

Assemblies of the citizens, parades, Banquets, and battles, these and all doth she, Nature, create and furnish at our word?- Maugre the fact that in same place and spot Another's mind is meditating things All far unlike. And what, again, of this: When we in sleep behold the idols step, In measure, forward, moving supple limbs, Whilst forth they put each supple arm in turn With speedy motion, and with eyeing heads Repeat the movement, as the foot keeps time?

Forsooth, the idols they are steeped in art, And wander to and fro well taught indeed,- Thus to be able in the time of night To make such games! Or will the truth be this: Because in one least moment that we mark- That is, the uttering of a single sound- There lurk yet many moments, which the reason Discovers to exist, therefore it comes That, in a moment how so brief ye will, The divers idols are hard by, and ready Each in its place diverse?

So great the swiftness, So great, again, the store of idol-things,
And so, when perishes the former image, And other is gendered
of another pose, The former seemeth to have changed its
gestures.

And since they be so tenuous, mind can mark Sharply alone the
ones it strains to see; And thus the rest do perish one and all,
Save those for which the mind prepares itself.

Further, it doth prepare itself indeed, And hopes to see what
follows after each- Hence this result. For hast thou not observed
How eyes, essaying to perceive the fine, Will strain in
preparation, otherwise Unable sharply to perceive at all?

Yet know thou canst that, even in objects plain, If thou
attendest not, 'tis just the same As if 'twere all the time
removed and far.

What marvel, then, that mind doth lose the rest, Save those to
which 'thas given up itself?

So 'tis that we conjecture from small signs Things wide and
weighty, and involve ourselves In snarls of self-deceit.

SOME VITAL FUNCTIONS

4.823

In these affairs We crave that thou wilt passionately flee The
one offence, and anxiously wilt shun The error of presuming
the clear lights Of eyes created were that we might see; Or
thighs and knees, apropos upon the feet, Thuswise can bended be,
that we might step With goodly strides ahead; or forearms
joined Unto the sturdy uppers, or serving hands On either side
were given, that we might do Life's own demands. All such
interpretation Is aft-for-fore with inverse reasoning, Since
naught is born in body so that we May use the same, but birth
engenders use: No seeing ere the lights of eyes were born, No

speaking ere the tongue created was; But origin of tongue came long before Discourse of words, and ears created were Much earlier than any sound was heard; And all the members, so meseems, were there Before they got their use: and therefore, they Could not be gendered for the sake of use.

But contrariwise, contending in the fight With hand to hand, and rending of the joints, And fouling of the limbs with gore, was there, O long before the gleaming spears ere flew; And nature prompted man to shun a wound, Before the left arm by the aid of art Opposed the shielding targe. And, verily, Yielding the weary body to repose, Far ancients than cushions of soft beds, And quenching thirst is earlier than cups.

These objects, therefore, which for use and life Have been devised, can be conceived as found For sake of using. But apart from such Are all which first were born and afterwards Gave knowledge of their own utility- Chief in which sort we note the senses, limbs: Wherefore, again, 'tis quite beyond thy power To hold that these could thus have been create For office of utility.

4.858

Likewise, 'Tis nothing strange that all the breathing creatures Seek, even by nature of their frame, their food.

Yes, since I've taught thee that from off the things Stream and depart innumerable bodies In modes innumerable too; but most Must be the bodies streaming from the living- Which bodies, vexed by motion evermore, Are through the mouth exhaled innumerable, When weary creatures pant, or through the sweat Squeezed forth innumerable from deep within.

Thus body rarefies, so undermined In all its nature, and pain attends its state.

And so the food is taken to underprop The tottering joints, and by its interfusion To re-create their powers, and there stop up The longing, open-mouthed through limbs and veins, For

eating. And the moist no less departs Into all regions that demand the moist; And many heaped-up particles of hot, Which cause such burnings in these bellies of ours, The liquid on arriving dissipates And quenches like a fire, that parching heat No longer now can scorch the frame. And so, Thou seest how panting thirst is washed away From off our body, how the hunger-pang It, too, appeased.

4.877

Now, how it comes that we, Whene'er we wish, can step with strides ahead, And how 'tis given to move our limbs about, And what device is wont to push ahead This the big load of our corporeal frame, I'll say to thee- do thou attend what's said.

I say that first some idol-films of walking Into our mind do fall and smite the mind, As said before. Thereafter will arises; For no one starts to do a thing, before The intellect previsions what it wills; And what it there pre-visioneth depends On what that image is. When, therefore, mind Doth so bestir itself that it doth will To go and step along, it strikes at once That energy of soul that's sown about In all the body through the limbs and frame- And this is easy of performance, since The soul is close conjoined with the mind.

Next, soul in turn strikes body, and by degrees Thus the whole mass is pushed along and moved.

Then too the body rarefies, and air, Forsooth as ever of such nimbleness, Comes on and penetrates aboundingly Through opened pores, and thus is sprinkled round Unto all smallest places in our frame.

Thus then by these twain factors, severally, Body is borne like ship with oars and wind.

Nor yet in these affairs is aught for wonder That particles so fine can whirl around So great a body and turn this weight of ours; For wind, so tenuous with its subtle body, Yet pushes,

driving on the mighty ship Of mighty bulk; one hand directs the same, Whatever its momentum, and one helm Whirls it around, whither ye please; and loads, Many and huge, are moved and hoisted high By enginery of pulley-blocks and wheels, With but light strain.

4.907

Now, by what modes this sleep Pours through our members waters of repose And frees the breast from cares of mind, I'll tell In verses sweeter than they many are; Even as the swan's slight note is better far Than that dispersed clamour of the cranes Among the southwind's aery clouds. Do thou Give me sharp ears and a sagacious mind,- That thou mayst not deny the things to be Whereof I'm speaking, nor depart away With bosom scorning these the spoken truths, Thyself at fault unable to perceive.

Sleep chiefly comes when energy of soul Hath now been scattered through the frame, and part Expelled abroad and gone away, and part Crammed back and settling deep within the frame- Whereafter then our loosened members droop.

For doubt is none that by the work of soul Exist in us this sense, and when by slumber That sense is thwarted, we are bound to think The soul confounded and expelled abroad- Yet not entirely, else the frame would lie Drenched in the everlasting cold of death.

In sooth, where no one part of soul remained Lurking among the members, even as fire Lurks buried under many ashes, whence Could sense amain rekindled be in members, As flame can rise anew from unseen fire?

4.929

By what devices this strange state and new May be occasioned, and by what the soul Can be confounded and the frame grow faint, I will untangle: see to it, thou, that I Pour forth my words not unto empty winds.

In first place, body on its outer parts- Since these are touched by neighbouring airy gusts- Must there be thumped and strook by blows of air Repeatedly. And therefore almost all Are covered either with hides, or else with shells, Or with the horny callus, or with bark.

Yet this same air lashes their inner parts, When creatures draw a breath or blow it out.

Wherefore, since body thus is flogged alike Upon the inside and the out, and blows Come in upon us through the little pores Even inward to our body's primal parts And primal elements, there comes to pass By slow degrees, along our members then, A kind of overthrow; for then confounded Are those arrangements of the primal germs Of body and of mind. It comes to pass That next a part of soul's expelled abroad, A part retreateth in recesses hid, A part, too, scattered all about the frame, Cannot become united nor engage In interchange of motion. Nature now So hedges off approaches and the paths; And thus the sense, its motions all deranged, Retires down deep within; and since there's naught, As 'twere, to prop the frame, the body weakens, And all the members languish, and the arms And eyelids fall, and, as ye lie abed, Even there the houghs will sag and loose their powers.

Again, sleep follows after food, because The food produces same result as air, Whilst being scattered round through all the veins; And much the heaviest is that slumber which, Full or fatigued, thou takest; since 'tis then That the most bodies disarrange themselves, Bruised by labours hard. And in same wise, This three-fold change: a forcing of the soul Down deeper, more a casting-forth of it, A moving more divided in its parts And scattered more.

4.962

And to whate'er pursuit A man most clings absorbed, or what the affairs On which we theretofore have tarried much, And

mind hath strained upon the more, we seem In sleep not rarely
to go at the same.

The lawyers seem to plead and cite decrees, Commanders they
to fight and go at frays, Sailors to live in combat with the winds,
And we ourselves indeed to make this book, And still to seek the
nature of the world And set it down, when once discovered,
here In these my country's leaves. Thus all pursuits, All arts in
general seem in sleeps to mock And master the minds of men.
And whosoever Day after day for long to games have given
Attention undivided, still they keep (As oft we note), even when
they've ceased to grasp Those games with their own senses,
open paths Within the mind wherethrough the idol-films Of just
those games can come. And thus it is For many a day thereafter
those appear Floating before the eyes, that even awake They
think they view the dancers moving round Their supple limbs,
and catch with both the ears The liquid song of harp and
speaking chords, And view the same assembly on the seats, And
manifold bright glories of the stage- So great the influence of
pursuit and zest, And of the affairs wherein 'thas been the wont
Of men to be engaged- nor only men, But soothly all the animals.
Behold, Thou'lt see the sturdy horses, though outstretched, Yet
sweating in their sleep, and panting ever, And straining utmost
strength, as if for prize, As if, with barriers opened now...

And hounds of huntsmen oft in soft repose Yet toss asudden all
their legs about, And growl and bark, and with their nostrils
sniff The winds again, again, as though indeed They'd caught
the scented foot-prints of wild beasts, And, even when wakened,
often they pursue The phantom images of stags, as though They
did perceive them fleeing on before, Until the illusion's shaken
off and dogs Come to themselves again. And fawning breed Of
house-bred whelps do feel the sudden urge To shake their
bodies and start from off the ground, As if beholding
stranger-visages.

And ever the fiercer be the stock, the more In sleep the same is
ever bound to rage.

But flee the divers tribes of birds and vex With sudden wings by
night the groves of gods, When in their gentle slumbers they
have dreamed Of hawks in chase, aswooping on for fight.

Again, the minds of mortals which perform With mighty
motions mighty enterprises, Often in sleep will do and dare the
same In manner like. Kings take the towns by storm, Succumb
to capture, battle on the field, Raise a wild cry as if their throats
were cut Even then and there. And many wrestle on And groan
with pains, and fill all regions round With mighty cries and wild,
as if then gnawed By fangs of panther or of lion fierce.

Many amid their slumbers talk about Their mighty enterprises,
and have often Enough become the proof of their own crimes.

Many meet death; many, as if headlong From lofty mountains
tumbling down to earth With all their frame, are frenzied in
their fright; And after sleep, as if still mad in mind, They scarce
come to, confounded as they are By ferment of their frame. The
thirsty man, Likewise, he sits beside delightful spring Or river
and gulpeth down with gaping throat Nigh the whole stream.
And oft the innocent young, By sleep o'ermastered, think they
lift their dress By pail or public jordan and then void The water
filtered down their frame entire And drench the Babylonian
coverlets, Magnificently bright. Again, those males Into the
surging channels of whose years Now first has passed the seed
(engendered Within their members by the ripened days)

Are in their sleep confronted from without By idol-images of
some fair form- Tidings of glorious face and lovely bloom,
Which stir and goad the regions turgid now With seed
abundant; so that, as it were With all the matter acted duly out,
They pour the billows of a potent stream And stain their
garment.

4.1037

And as said before, That seed is roused in us when once ripe age
Has made our body strong...

As divers causes give to divers things Impulse and irritation, so
one force In human kind rouses the human seed To spurt from
man. As soon as ever it issues, Forced from its first abodes, it
passes down In the whole body through the limbs and frame,
Meeting in certain regions of our thews, And stirs amain the
genitals of man.

The goaded regions swell with seed, and then Comes the delight
to dart the same at what The mad desire so yearns, and body
seeks That object, whence the mind by love is pierced.

For well-nigh each man falleth toward his wound, And our
blood spurts even toward the spot from whence The stroke
wherewith we are strook, and if indeed The foe be close, the red
jet reaches him.

Thus, one who gets a stroke from Venus' shafts- Whether a boy
with limbs effeminate Assault him, or a woman darting love
From all her body- that one strains to get Even to the thing
whereby he's hit, and longs To join with it and cast into its
frame The fluid drawn even from within its own.

For the mute craving doth presage delight.

THE PASSION OF LOVE

4.1058

This craving 'tis that's Venus unto us: From this, engender all
the lures of love, From this, O first hath into human hearts
Trickled that drop of joyance which ere long Is by chill care
succeeded. Since, indeed, Though she thou lovest now be far
away, Yet idol-images of her are near And the sweet name is
floating in thy ear.

But it behooves to flee those images; And scare afar whatever feeds thy love; And turn elsewhere thy mind; and vent the sperm, Within thee gathered, into sundry bodies, Nor, with thy thoughts still busied with one love, Keep it for one delight, and so store up Care for thyself and pain inevitable.

For, lo, the ulcer just by nourishing Grows to more life with deep inveteracy, And day by day the fury swells aflame, And the woe waxes heavier day by day- Unless thou dost destroy even by new blows The former wounds of love, and curest them While yet they're fresh, by wandering freely round After the freely-wandering Venus, or Canst lead elsewhere the tumults of thy mind.

4.1073

Nor doth that man who keeps away from love Yet lack the fruits of Venus; rather takes Those pleasures which are free of penalties.

For the delights of Venus, verily, Are more unmixed for mortals sane-of-soul Than for those sick-at-heart with love-pining.

Yea, in the very moment of possessing, Surges the heat of lovers to and fro, Restive, uncertain; and they cannot fix On what to first enjoy with eyes and hands.

The parts they sought for, those they squeeze so tight, And pain the creature's body, close their teeth Often against her lips, and smite with kiss Mouth into mouth,- because this same delight Is not unmixed; and underneath are stings Which goad a man to hurt the very thing, Whate'er it be, from whence arise for him Those germs of madness. But with gentle touch Venus subdues the pangs in midst of love, And the admixture of a fondling joy Doth curb the bites of passion. For they hope That by the very body whence they caught The heats of love their flames can be put out.

But nature protests 'tis all quite otherwise; For this same love it is the one sole thing Of which, the more we have, the fiercer burns The breast with fell desire. For food and drink Are taken within our members; and, since they Can stop up certain parts, thus, easily Desire of water is gluttled and of bread.

But, lo, from human face and lovely bloom Naught penetrates our frame to be enjoyed Save flimsy idol-images and vain- A sorry hope which oft the winds disperse.

As when the thirsty man in slumber seeks To drink, and water ne'er is granted him Wherewith to quench the heat within his members, But after idols of the liquids strives And toils in vain, and thirsts even whilst he gulps In middle of the torrent, thus in love Venus deludes with idol-images The lovers. Nor they cannot sate their lust By merely gazing on the bodies, nor They cannot with their palms and fingers rub Aught from each tender limb, the while they stray Uncertain over all the body. Then, At last, with members intertwined, when they Enjoy the flower of their age, when now Their bodies have sweet presage of keen joys, And Venus is about to sow the fields Of woman, greedily their frames they lock, And mingle the slaver of their mouths, and breathe Into each other, pressing teeth on mouths- Yet to no purpose, since they're powerless To rub off aught, or penetrate and pass With body entire into body- for oft They seem to strive and struggle thus to do; So eagerly they cling in Venus' bonds, Whilst melt away their members, overcome By violence of delight. But when at last Lust, gathered in the thews, hath spent itself, There come a brief pause in the raging heat- But then a madness just the same returns And that old fury visits them again, When once again they seek and crave to reach They know not what, all powerless to find The artifice to subjugate the bane.

In such uncertain state they waste away With unseen wound.

4.1121

To which be added too, They squander powers and with the travail wane; Be added too, they spend their futile years Under another's beck and call; their duties Neglected languish and their honest name Reeleveth sick, sick; and meantime their estates Are lost in Babylonian tapestries; And unguents and dainty Sicyonian shoes Laugh on her feet; and (as ye may be sure)

Big emeralds of green light are set in gold; And rich sea-purple dress by constant wear Grows shabby and all soaked with Venus' sweat; And the well-earned ancestral property Becometh head-bands, coifs, and many a time The cloaks, or garments Alidensian Or of the Cean isle. And banquets, set With rarest cloth and viands, are prepared- And games of chance, and many a drinking cup, And unguents, crowns and garlands. All in vain, Since from amid the well-spring of delights Bubbles some drop of bitter to torment Among the very flowers- when haply mind Gnaws into self, now stricken with remorse For slothful years and ruin in baudels, Or else because she's left him all in doubt By launching some sly word, which still like fire Lives wildly, cleaving to his eager heart; Or else because he thinks she darts her eyes Too much about and gazes at another,- And in her face sees traces of a laugh.

4.1141

These ills are found in prospering love and true; But in crossed love and helpless there be such As through shut eyelids thou canst still take in- Uncounted ills; so that 'tis better far To watch beforehand, in the way I've shown, And guard against enticements. For to shun A fall into the hunting-snares of love Is not so hard, as to get out again, When tangled in the very nets, and burst The stoutly-knotted cords of Aphrodite.

Yet even when there enmeshed with tangled feet, Still canst thou scape the danger-lest indeed Thou standest in the way of thine own good, And overlookest first all blemishes Of mind and body of thy much preferred, Desirable dame. For so men do,

Eyeless with passion, and assign to them Graces not theirs in fact. And thus we see Creatures in many a wise crooked and ugly The prosperous sweethearts in a high esteem; And lovers gird each other and advise To placate Venus, since their friends are smit With a base passion- miserable dupes Who seldom mark their own worst bane of all.

The black-skinned girl is "tawny like the honey"; The filthy and the fetid's "negligee"; The cat-eyed she's "a little Pallas," she; The sinewy and wizened's "a gazelle"; The pudgy and the pigmy is "piquant, One of the Graces sure"; the big and bulky O she's "an Admiration, imposante"; The stuttering and tongue-tied "sweetly lisps"; The mute girl's "modest"; and the garrulous, The spiteful spit-fire, is "a sparkling wit"; And she who scarcely lives for scrawniness Becomes "a slender darling"; "delicate"

Is she who's nearly dead of coughing-fit; The pousy female with protuberant breasts She is "like Ceres when the goddess gave Young Bacchus suck"; the pug-nosed lady-love "A Satyress, a feminine Silenus"; The blubber-lipped is "all one luscious kiss"- A weary while it were to tell the whole.

But let her face possess what charm ye will, Let Venus' glory rise from all her limbs,- Forsooth there still are others; and forsooth We lived before without her; and forsooth She does the same things- and we know she does- All, as the ugly creature, and she scents, Yes she, her wretched self with vile perfumes; Whom even her handmaids flee and giggle at Behind her back. But he, the lover, in tears Because shut out, covers her threshold o'er Often with flowers and garlands, and anoints Her haughty door-posts with the marjoram, And prints, poor fellow, kisses on the doors- Admitted at last, if haply but one whiff Got to him on approaching, he would seek Decent excuses to go out forthwith; And his lament, long pondered, then would fall Down at his heels; and there he'd damn himself For his fatuity, observing how He had assigned to that same lady more- Than it

is proper to concede to mortals.

And these our Venuses are 'ware of this.

Wherefore the more are they at pains to hide All the-behind-the-scenes of life from those Whom they desire to keep in bonds of love- In vain, since ne'ertheless thou canst by thought Drag all the matter forth into the light And well search out the cause of all these smiles; And if of graceful mind she be and kind, Do thou, in thy turn, overlook the same, And thus allow for poor mortality.

4.1192

Nor sighs the woman always with feigned love, Who links her body round man's body locked And holds him fast, making his kisses wet With lips sucked into lips; for oft she acts Even from desire, and, seeking mutual joys, Incites him there to run love's race-course through.

Nor otherwise can cattle, birds, wild beasts, And sheep and mares submit unto the males, Except that their own nature is in heat, And burns abounding and with gladness takes Once more the Venus of the mounting males.

And seest thou not how those whom mutual pleasure Hath bound are tortured in their common bonds?

How often in the cross-roads dogs that pant To get apart strain eagerly asunder With utmost might?- When all the while they're fast In the stout links of Venus. But they'd ne'er So pull, except they knew those mutual joys- So powerful to cast them unto snares And hold them bound. Wherefore again, again, Even as I say, there is a joint delight.

4.1209

And when perchance, in mingling seed with his, The female hath o'erpowered the force of male And by a sudden fling hath seized it fast, Then are the offspring, more from mothers' seed, More like their mothers; as, from fathers' seed, They're like to

fathers. But whom seest to be Partakers of each shape, one equal blend Of parents' features, these are generate From fathers' body and from mothers' blood, When mutual and harmonious heat hath dashed Together seeds, aroused along their frames By Venus' goads, and neither of the twain Mastereth or is mastered. Happens too That sometimes offspring can to being come In likeness of their grandsires, and bring back Often the shapes of grandsires' sires, because Their parents in their bodies oft retain Concealed many primal germs, commixed In many modes, which, starting with the stock, Sire handeth down to son, himself a sire; Whence Venus by a variable chance Engenders shapes, and diversely brings back Ancestral features, voices too, and hair.

A female generation rises forth From seed paternal, and from mother's body Exist created males: since sex proceeds No more from singleness of seed than faces Or bodies or limbs of ours: for every birth Is from a twofold seed; and what's created Hath, of that parent which it is more like, More than its equal share; as thou canst mark,- Whether the breed be male or female stock.

4.1233

Nor do the powers divine grudge any man The fruits of his seed-sowing, so that never He be called "father" by sweet children his, And end his days in sterile love forever.

What many men suppose; and gloomily They sprinkle the altars with abundant blood, And make the high platforms odorous with burnt gifts, To render big by plenteous seed their wives- And plague in vain godheads and sacred lots.

For sterile are these men by seed too thick, Or else by far too watery and thin.

Because the thin is powerless to cleave Fast to the proper places, straightaway It trickles from them, and, returned again, Retires abortively. And then since seed More gross and solid

than will suit is spent By some men, either it flies not forth
amain With spurt prolonged enough, or else it fails To enter
suitably the proper places, Or, having entered, the seed is
weakly mixed With seed of the woman: harmonies of Venus
Are seen to matter vastly here; and some Impregnate some more
readily, and from some Some women conceive more readily and
become Pregnant. And many women, sterile before In several
marriage-beds, have yet thereafter Obtained the mates from
whom they could conceive The baby-boys, and with sweet
progeny Grow rich. And even for husbands (whose own wives,
Although of fertile wombs, have borne for them No babies in the
house) are also found Concordant natures so that they at last
Can bulwark their old age with goodly sons.

A matter of great moment 'tis in truth, That seeds may mingle
readily with seeds Suited for procreation, and that thick Should
mix with fluid seeds, with thick the fluid.

And in this business 'tis of some import Upon what diet life is
nourished: For some foods thicken seeds within our members,
And others thin them out and waste away.

And in what modes the fond delight itself Is carried on- this too
importeth vastly.

For commonly 'tis thought that wives conceive More readily in
manner of wild-beasts, After the custom of the four-foot breeds,
Because so postured, with the breasts beneath And buttocks
then upreared, the seeds can take Their proper places. Nor is
need the least For wives to use the motions of blandishment;
For thus the woman hinders and resists Her own conception, if
too joyously Herself she treats the Venus of the man With
haunches heaving, and with all her bosom Now yielding like the
billows of the sea- Aye, from the ploughshare's even course and
track She throws the furrow, and from proper places Deflects
the spurt of seed. And courtesans Are thuswise wont to move

for their own ends, To keep from pregnancy and lying in, And
all the while to render Venus more A pleasure for the men- the
which meseems Our wives have never need of.

4.1278

Sometimes too It happens- and through no divinity Nor arrows
of Venus- that a sorry chit Of scanty grace will be beloved by
man; For sometimes she herself by very deeds, By her
complying ways, and tidy habits, Will easily accustom thee to
pass With her thy life-time- and, moreover, lo, Long habitude
can gender human love, Even as an object smitten o'er and o'er
By blows, however lightly, yet at last Is overcome and wavers.
Seest thou not, Besides, how drops of water falling down
Against the stones at last bore through the stones?

BOOK V

PROEM

5.1

O who can build with puissant breast a song Worthy the majesty
of these great finds?

Or who in words so strong that he can frame The fit laudations
for deserts of him Who left us heritors of such vast prizes, By his
own breast discovered and sought out?- There shall be none,
methinks, of mortal stock.

For if must needs be named for him the name Demanded by the
now known majesty Of these high matters, then a god was he,-
Hear me, illustrious Memmius- a god; Who first and chief found
out that plan of life Which now is called philosophy, and who By
cunning craft, out of such mighty waves, Out of such mighty
darkness, moored life In havens so serene, in light so clear.

Compare those old discoveries divine Of others: lo, according to
the tale, Ceres established for mortality The grain, and Bacchus

juice of vine-born grape, Though life might yet without these things abide, Even as report saith now some peoples live.

But man's well-being was impossible Without a breast all free. Wherefore the more That man doth justly seem to us a god, From whom sweet solaces of life, afar Distributed o'er populous domains, Now soothe the minds of men. But if thou thinkest Labours of Hercules excel the same, Much farther from true reasoning thou farest.

For what could hurt us now that mighty maw Of Nemeaeon Lion, or what the Boar Who bristled in Arcadia? Or, again, O what could Cretan Bull, or Hydra, pest Of Lerna, fenced with vipers venomous?

Or what the triple-breasted power of her The three-fold Geryon...

The sojourners in the Stymphalian fens So dreadfully offend us, or the Steeds Of Thracian Diomedes breathing fire From out their nostrils off along the zones Bistonian and Ismarian? And the Snake, The dread fierce gazer, guardian of the golden And gleaming apples of the Hesperides, Coiled round the tree-trunk with tremendous bulk, O what, again, could he inflict on us Along the Atlantic shore and wastes of sea? - Where neither one of us approacheth nigh Nor no barbarian ventures. And the rest Of all those monsters slain, even if alive, Unconquered still, what injury could they do?

None, as I guess. For so the glutted earth Swarms even now with savage beasts, even now Is filled with anxious terrors through the woods And mighty mountains and the forest deeps- Quarters 'tis ours in general to avoid.

But lest the breast be purged, what conflicts then, What perils, must bosom, in our own despite!

O then how great and keen the cares of lust That split the man distraught! How great the fears!

And lo, the pride, grim greed, and wantonness- How great the slaughters in their train! and lo, Debaucheries and every breed of sloth!

Therefore that man who subjugated these, And from the mind expelled, by words indeed, Not arms, O shall it not be seemly him To dignify by ranking with the gods?- And all the more since he was wont to give, Concerning the immortal gods themselves, Many pronouncements with a tongue divine, And to unfold by his pronouncements all The nature of the world.

ARGUMENT OF THE BOOK AND NEW PROEM AGAINST A TELEOLOGICAL CONCEPT

5.55

And walking now In his own footprints, I do follow through His reasonings, and with pronouncements teach The covenant whereby all things are framed, How under that covenant they must abide Nor ever prevail to abrogate the aeons' Inexorable decrees,- how (as we've found), In class of mortal objects, o'er all else, The mind exists of earth-born frame create And impotent unscathed to abide Across the mighty aeons, and how come In sleep those idol-apparitions, That so befool intelligence when we Do seem to view a man whom life has left.

Thus far we've gone; the order of my plan Hath brought me now unto the point where I Must make report how, too, the universe Consists of mortal body, born in time, And in what modes that congregated stuff Established itself as earth and sky, Ocean, and stars, and sun, and ball of moon; And then what living creatures rose from out The old telluric places, and what ones Were never born at all; and in what mode The human race began to name its things And use the varied speech from man to man; And in what

modes hath bosomed in their breasts That awe of gods, which halloweth in all lands Fanes, altars, groves, lakes, idols of the gods.

Also I shall untangle by what power The steersman nature guides the sun's courses, And the meanderings of the moon, lest we, Percase, should fancy that of own free will They circle their perennial courses round, Timing their motions for increase of crops And living creatures, or lest we should think They roll along by any plan of gods.

For even those men who have learned full well That godheads lead a long life free of care, If yet meanwhile they wonder by what plan Things can go on (and chiefly yon high things Observed o'erhead on the ethereal coasts), Again are hurried back unto the fears Of old religion and adopt again Harsh masters, deemed almighty,- wretched men, Unwitting what can be and what cannot, And by what law to each its scope prescribed, Its boundary stone that clings so deep in Time.

5.91

But for the rest,- lest we delay thee here Longer by empty promises- behold, Before all else, the seas, the lands, the sky: O Memmius, their threefold nature, lo, Their bodies three, three aspects so unlike, Three frames so vast, a single day shall give Unto annihilation! Then shall crash That massive form and fabric of the world Sustained so many aeons! Nor do I Fail to perceive how strange and marvellous This fact must strike the intellect of man,- Annihilation of the sky and earth That is to be,- and with what toil of words 'Tis mine to prove the same; as happens oft When once ye offer to man's listening ears Something before unheard of, but may not Subject it to the view of eyes for him Nor put it into hand- the sight and touch, Whereby the opened highways of belief Lead most directly into human breast And regions of intelligence. But yet I will speak out. The fact itself, perchance, Will force belief in these my

words, and thou Mayst see, in little time, tremendously With
risen commotions of the lands all things Quaking to pieces-
which afar from us May she, the steersman Nature, guide: and
may Reason, O rather than the fact itself, Persuade us that all
things can be o'erthrown And sink with awful-sounding
breakage down!

5.110

But ere on this I take a step to utter Oracles holier and soundlier
based Than ever the Pythian pronounced for men From out the
tripod and the Delphian laurel, I will unfold for thee with
learned words Many a consolation, lest perchance, Still bridled
by religion, thou suppose Lands, sun, and sky, sea,
constellations, moon, Must dure forever, as of frame divine-
And so conclude that it is just that those, (After the manner of
the Giants), should all Pay the huge penalties for monstrous
crime, Who by their reasonings do overshadow The ramparts of
the universe and wish There to put out the splendid sun of
heaven, Branding with mortal talk immortal things- Though
these same things are even so far removed From any touch of
deity and seem So far unworthy of numbering with the gods,
That well they may be thought to furnish rather A goodly
instance of the sort of things That lack the living motion, living
sense.

For sure 'tis quite beside the mark to think That judgment and
the nature of the mind In any kind of body can exist- Just as in
ether can't exist a tree, Nor clouds in the salt sea, nor in the
fields Can fishes live, nor blood in timber be, Nor sap in
boulders: fixed and arranged Where everything may grow and
have its place.

Thus nature of mind cannot arise alone Without the body, nor
have its being far From thews and blood. Yet if 'twere possible?-
Much rather might this very power of mind Be in the head, the
shoulders, or the heels, And, born in any part soever, yet In the

same man, in the same vessel abide But since within this body
even of ours Stands fixed and appears arranged sure Where soul
and mind can each exist and grow, Deny we must the more that
they can dure Outside the body and the breathing form In
rotting clods of earth, in the sun's fire, In water, or in ether's
skiey coasts.

Therefore these things no whit are furnished With sense divine,
since never can they be With life-force quickened.

5.146

Likewise, thou canst ne'er Believe the sacred seats of gods are
here In any regions of this mundane world; Indeed, the nature
of the gods, so subtle, So far removed from these our senses,
scarce Is seen even by intelligence of mind.

And since they've ever eluded touch and thrust Of human
hands, they cannot reach to grasp Aught tangible to us. For
what may not Itself be touched in turn can never touch.

Wherefore, besides, also their seats must be Unlike these seats
of ours,- even subtle too, As meet for subtle essence- as I'll
prove Hereafter unto thee with large discourse.

Further, to say that for the sake of men They willed to prepare
this world's magnificence, And that 'tis therefore duty and
behoof To praise the work of gods as worthy praise, And that 'tis
sacrilege for men to shake Ever by any force from out their seats
What hath been stablished by the Forethought old To
everlasting for races of mankind, And that 'tis sacrilege to
assault by words And overtopple all from base to beam,-
Memmius, such notions to concoct and pile, Is verily- to dote.
Our gratefulness, O what emoluments could it confer Upon
Immortals and upon the Blessed That they should take a step to
manage aught For sake of us? Or what new factor could, After so
long a time, inveigle them- The hitherto reposeful- to desire To
change their former life? For rather he Whom old things chafe

seems likely to rejoice At new; but one that in fore-passed time
Hath chanced upon no ill, through goodly years, O what could
ever enkindle in such an one Passion for strange experiment?
Or what The evil for us, if we had ne'er been born?- As though,
forsooth, in darkling realms and woe Our life were lying till
should dawn at last The day-spring of creation! Whosoever Hath
been begotten wills perforce to stay In life, so long as fond
delight detains; But whoso ne'er hath tasted love of life, And
ne'er was in the count of living things, What hurts it him that
he was never born?

Whence, further, first was planted in the gods The archetype for
gendering the world And the fore-notion of what man is like, So
that they knew and pre-conceived with mind Just what they
wished to make? Or how were known Ever the energies of
primal germs, And what those germs, by interchange of place,
Could thus produce, if nature's self had not Given example for
creating all?

For in such wise primordials of things, Many in many modes,
astir by blows From immemorial aeons, in motion too By their
own weights, have evermore been wont To be so borne along
and in all modes To meet together and to try all sorts Which, by
combining one with other, they Are powerful to create, that
thus it is No marvel now, if they have also fallen Into
arrangements such, and if they've passed Into vibrations such,
as those whereby This sum of things is carried on to-day By
fixed renewal.

5.195

But knew I never what The seeds primordial were, yet would I
dare This to affirm, even from deep judgments based Upon the
ways and conduct of the skies- This to maintain by many a fact
besides- That in no wise the nature of all things For us was
fashioned by a power divine- So great the faults it stands
encumbered with.

First, mark all regions which are overarched By the prodigious reaches of the sky: One yawning part thereof the mountain-chains And forests of the beasts do have and hold; And cliffs, and desert fens, and wastes of sea (Which sunder afar the beaches of the lands)

Possess it merely; and, again, thereof Well-nigh two-thirds intolerable heat And a perpetual fall of frost doth rob From mortal kind. And what is left to till, Even that the force of nature would o'errun With brambles, did not human force oppose,- Long wont for livelihood to groan and sweat Over the two-pronged mattock and to cleave The soil in twain by pressing on the plough.

.....

Unless, by the ploughshare turning the fruitful clods And kneading the mould, we quicken into birth, [The crops] spontaneously could not come up Into the free bright air. Even then sometimes, When things acquired by the sternest toil Are now in leaf, are now in blossom all, Either the skiey sun with baneful heats Parches, or sudden rains or chilling rime Destroys, or flaws of winds with furious whirl Torment and twist. Beside these matters, why Doth nature feed and foster on land and sea The dreadful breed of savage beasts, the foes Of the human clan? Why do the seasons bring Distempers with them? Wherefore stalks at large Death, so untimely? Then, again, the babe, Like to the castaway of the raging surf, Lies naked on the ground, speechless, in want Of every help for life, when nature first Hath poured him forth upon the shores of light With birth-pangs from within the mother's womb, And with a plaintive wail he fills the place,- As well befitting one for whom remains In life a journey through so many ills.

But all the flocks and herds and all wild beasts Come forth and grow, nor need the little rattles, Nor must be treated to the

humouring nurse's Dear, broken chatter; nor seek they divers clothes To suit the changing skies; nor need, in fine, Nor arms, nor lofty ramparts, wherewithal Their own to guard- because the earth herself And nature, artificer of the world, bring forth Aboundingly all things for all.

THE WORLD IS NOT ETERNAL

5.235

And first, Since body of earth and water, air's light breath, And fiery exhalations (of which four This sum of things is seen to be compact)

So all have birth and perishable frame, Thus the whole nature of the world itself Must be conceived as perishable too.

For, verily, those things of which we see The parts and members to have birth in time And perishable shapes, those same we mark To be invariably born in time And born to die. And therefore when I see The mightiest members and the parts of this Our world consumed and begot again, 'Tis mine to know that also sky above And earth beneath began of old in time And shall in time go under to disaster.

And lest in these affairs thou deemest me To have seized upon this point by sleight to serve My own caprice- because I have assumed That earth and fire are mortal things indeed, And have not doubted water and the air Both perish too and have affirmed the same To be again begotten and wax big- Mark well the argument: in first place, lo, Some certain parts of earth, grievously parched By unremitting suns, and trampled on By a vast throng of feet, exhale abroad A powdery haze and flying clouds of dust, Which the stout winds disperse in the whole air.

A part, moreover, of her sod and soil Is summoned to inundation by the rains; And rivers graze and gouge the banks away.

Besides, whatever takes a part its own In fostering and increasing [aught]...

.....

Is rendered back; and since, beyond a doubt, Earth, the all-mother, is beheld to be Likewise the common sepulchre of things, Therefore thou seest her minished of her plenty, And then again augmented with new growth.

5.261

And for the rest, that sea, and streams, and springs Forever with new waters overflow, And that perennially the fluids well, Needeth no words- the mighty flux itself Of multitudinous waters round about Declareth this. But whatso water first Streams up is ever straightway carried off, And thus it comes to pass that all in all There is no overflow; in part because The burly winds (that over-sweep amain)

And skiey sun (that with his rays dissolves)

Do minish the level seas; in part because The water is diffused underground Through all the lands. The brine is filtered off, And then the liquid stuff seeps back again And all regathers at the river-heads, Whence in fresh-water currents on it flows Over the lands, adown the channels which Were cleft erstwhile and erstwhile bore along The liquid-footed floods.

5.273

Now, then, of air I'll speak, which hour by hour in all its body Is changed innumably. For whatso'er Streams up in dust or vapour off of things, The same is all and always borne along Into the mighty ocean of the air; And did not air in turn restore to things Bodies, and thus recruit them as they stream, All things by this time had resolved been And changed into air. Therefore it never Ceases to be engendered off of things And to return to things, since verily In constant flux do all things stream.

5.281

Likewise, The abounding well-spring of the liquid light, The ethereal sun, doth flood the heaven o'er With constant flux of radiance ever new, And with fresh light supplies the place of light, Upon the instant. For whatever effulgence Hath first streamed off, no matter where it falls, Is lost unto the sun. And this 'tis thine To know from these examples: soon as clouds Have first begun to under-pass the sun, And, as it were, to rend the rays of light In twain, at once the lower part of them Is lost entire, and earth is overcast Where'er the thunderheads are rolled along- So know thou mayst that things forever need A fresh replenishment of gleam and glow, And each effulgence, foremost flashed forth, Perisheth one by one. Nor otherwise Can things be seen in sunlight, lest alway The fountain-head of light supply new light.

Indeed your earthly beacons of the night, The hanging lampions and the torches, bright With darting gleams and dense with livid soot, Do hurry in like manner to supply With ministering heat new light amain; Are all alive to quiver with their fires,- Are so alive, that thus the light ne'er leaves The spots it shines on, as if rent in twain: So speedily is its destruction veiled By the swift birth of flame from all the fires.

Thus, then, we must suppose that sun and moon And stars dart forth their light from under-births Ever and ever new, and whatso flames First rise do perish always one by one- Lest, haply, thou shouldst think they each endure Inviolable.

5.306

Again, perceivest not How stones are also conquered by Time?- Not how the lofty towers ruin down, And boulders crumble?- Not how shrines of gods And idols crack outworn?- Nor how indeed The holy Influence hath yet no power There to postpone the Terminals of Fate, Or headway make 'gainst Nature's fixed decrees?

Again, behold we not the monuments Of heroes, now in ruins,
asking us, In their turn likewise, if we don't believe They also
age with eld? Behold we not The rended basalt ruining amain
Down from the lofty mountains, powerless To dure and dree the
mighty forces there Of finite time?- for they would never fall
Rended asudden, if from infinite Past They had prevailed
against all engin'ries Of the assaulting aeons, with no crash.

5.318

Again, now look at This, which round, above, Contains the
whole earth in its one embrace: If from itself it procreates all
things- As some men tell- and takes them to itself When once
destroyed, entirely must it be Of mortal birth and body; for
whate'er From out itself giveth to other things Increase and
food, the same perforce must be Minished, and then recruited
when it takes Things back into itself.

5.324

Besides all this, If there had been no origin-in-birth Of lands and
sky, and they had ever been The everlasting, why, ere Theban
war And obsequies of Troy, have other bards Not also chanted
other high affairs?

Whither have sunk so oft so many deeds Of heroes? Why do
those deeds live no more, Ingrafted in eternal monuments Of
glory? Verily, I guess, because The Sum is new, and of a recent
date The nature of our universe, and had Not long ago its own
exordium.

Wherefore, even now some arts are being still Refined, still
increased: now unto ships Is being added many a new device;
And but the other day musician-folk Gave birth to melic sounds
of organing; And, then, this nature, this account of things Hath
been discovered latterly, and I Myself have been discovered
only now, As first among the first, able to turn The same into
ancestral Roman speech.

Yet if, perchance, thou deemest that ere this Existed all things even the same, but that Perished the cycles of the human race In fiery exhalations, or cities fell By some tremendous quaking of the world, Or rivers in fury, after constant rains, Had plunged forth across the lands of earth And whelmed the towns- then, all the more must thou Confess, defeated by the argument, That there shall be annihilation too Of lands and sky. For at a time when things Were being taxed by maladies so great, And so great perils, if some cause more fell Had then assailed them, far and wide they would Have gone to disaster and supreme collapse.

And by no other reasoning are we Seen to be mortal, save that all of us Sicken in turn with those same maladies With which have sickened in the past those men Whom nature hath removed from life.

5.351

Again, Whatever abides eternal must indeed Either repel all strokes, because 'tis made Of solid body, and permit no entrance Of aught with power to sunder from within The parts compact- as are those seeds of stuff Whose nature we've exhibited before; Or else be able to endure through time For this: because they are from blows exempt, As is the void, the which abides untouched, Unsmitten by any stroke; or else because There is no room around, whereto things can, As 'twere, depart in dissolution all,- Even as the sum of sums eternal is, Without or place beyond whereto things may Asunder fly, or bodies which can smite, And thus dissolve them by the blows of might.

But not of solid body, as I've shown, Exists the nature of the world, because In things is intermingled there a void; Nor is the world yet as the void, nor are, Moreover, bodies lacking which, perchance, Rising from out the infinite, can fell With fury-whirlwinds all this sum of things, Or bring upon them other cataclysm Of peril strange; and yonder, too, abides The

infinite space and the profound abyss- Whereinto, lo, the
ramparts of the world Can yet be shivered. Or some other power
Can pound upon them till they perish all.

Thus is the door of doom, O nowise barred Against the sky,
against the sun and earth And deep-sea waters, but wide open
stands And gloats upon them, monstrous and agape.

Wherefore, again, 'tis needful to confess That these same things
are born in time; for things Which are of mortal body could
indeed Never from infinite past until to-day Have spurned the
multitudinous assaults Of the immeasurable aeons old.

5.380

Again, since battle so fiercely one with other The four most
mighty members the world, Aroused in an all unholy war, Seest
not that there may be for them an end Of the long strife?- Or
when the skiey sun And all the heat have won dominion o'er
The sucked-up waters all?- And this they try Still to accomplish,
though as yet they fail,- For so aboundingly the streams supply
New store of waters that 'tis rather they Who menace the world
with inundations vast From forth the unplumbed chasms of the
sea.

But vain- since winds (that over-sweep amain)

And skiey sun (that with his rays dissolves)

Do minish the level seas and trust their power To dry up all,
before the waters can Arrive at the end of their endeavouring.

Breathing such vasty warfare, they contend In balanced strife
the one with other still Concerning mighty issues,- though
indeed The fire was once the more victorious, And once- as goes
the tale- the water won A kingdom in the fields. For fire
o'ermastered And licked up many things and burnt away, What
time the impetuous horses of the Sun Snatched Phaethon
headlong from his skiey road Down the whole ether and over all

the lands.

But the omnipotent Father in keen wrath Then with the sudden
smite of thunderbolt Did hurl the mighty-minded hero off
Those horses to the earth. And Sol, his sire, Meeting him as he
fell, caught up in hand The ever-blazing lampion of the world,
And drave together the pell-mell horses there And yoked them
all a-tremble, and amain, Steering them over along their own
old road, Restored the cosmos,- as forsooth we hear From songs
of ancient poets of the Greeks- A tale too far away from truth,
meseems.

For fire can win when from the infinite Has risen a larger
throng of particles Of fiery stuff; and then its powers succumb,
Somehow subdued again, or else at last It shrivels in torrid
atmospheres the world.

And whilom water too began to win- As goes the story- when it
overwhelmed The lives of men with billows; and thereafter,
When all that force of water-stuff which forth From out the
infinite had risen up Did now retire, as somehow turned aside,
The rain-storms stopped, and streams their fury checked.

FORMATION OF THE WORLD AND ASTRONOMICAL QUESTIONS

5.416

But in what modes that conflux of first-stuff Did found the
multitudinous universe Of earth, and sky, and the unfathomed
depths Of ocean, and courses of the sun and moon, I'll now in
order tell. For of a truth Neither by counsel did the primal
germs 'Stablish themselves, as by keen act of mind, Each in its
proper place; nor did they make, Forsooth, a compact how each
germ should move; But, lo, because primordials of things, Many
in many modes, astir by blows From immemorial aeons, in
motion too By their own weights, have evermore been wont To

be so borne along and in all modes To meet together and to try
all sorts Which, by combining one with other, they Are powerful
to create: because of this It comes to pass that those
primordials, Diffused far and wide through mighty aeons, The
while they unions try, and motions too, Of every kind, meet at
the last amain, And so become oft the commencements fit Of
mighty things- earth, sea, and sky, and race Of living creatures.

5.432

In that long-ago The wheel of the sun could nowhere be
discerned Flying far up with its abounding blaze, Nor
constellations of the mighty world, Nor ocean, nor heaven, nor
even earth nor air.

Nor aught of things like unto things of ours Could then be seen-
but only some strange storm And a prodigious hurly-burly mass
Compounded of all kinds of primal germs, Whose battling
discords in disorder kept Interstices, and paths, coherencies,
And weights, and blows, encounterings, and motions, Because,
by reason of their forms unlike And varied shapes, they could
not all thuswise Remain conjoined nor harmoniously Have
interplay of movements. But from there Portions began to fly
asunder, and like With like to join, and to block out a world, And
to divide its members and dispose Its mightier parts- that is, to
set secure The lofty heavens from the lands, and cause The sea
to spread with waters separate, And fires of ether separate and
pure Likewise to congregate apart.

5.449

For, lo, First came together the earthy particles (As being heavy
and intertangled) there In the mid-region, and all began to take
The lowest abodes; and ever the more they got One with
another intertangled, the more They pressed from out their
mass those particles Which were to form the sea, the stars, the
sun, And moon, and ramparts of the mighty world- For these
consist of seeds more smooth and round And of much smaller

elements than earth.

And thus it was that ether, fraught with fire, First broke away
from out the earthen parts, Athrough the innumerable pores of
earth, And raised itself aloft, and with itself Bore lightly off the
many starry fires; And not far otherwise we often see

And the still lakes and the perennial streams Exhale a mist, and
even as earth herself Is seen at times to smoke, when first at
dawn The light of the sun, the many-rayed, begins To redden
into gold, over the grass Begemmed with dew. When all of these
are brought Together overhead, the clouds on high With now
concreted body weave a cover Beneath the heavens. And
thuswise ether too, Light and diffusive, with concreted body On
all sides spread, on all sides bent itself Into a dome, and, far and
wide diffused On unto every region on all sides, Thus hedged all
else within its greedy clasp.

Hard upon ether came the origins Of sun and moon, whose
globes revolve in air Midway between the earth and mightiest
ether,- For neither took them, since they weighed too little To
sink and settle, but too much to glide Along the upmost shores;
and yet they are In such a wise midway between the twain As
ever to whirl their living bodies round, And ever to dure as
parts of the wide Whole; In the same fashion as certain
members may In us remain at rest, whilst others move.

When, then, these substances had been withdrawn, Amain the
earth, where now extend the vast Cerulean zones of all the level
seas, Caved in, and down along the hollows poured The
whirlpools of her brine; and day by day The more the tides of
ether and rays of sun On every side constrained into one mass
The earth by lashing it again, again, Upon its outer edges (so
that then, Being thus beat upon, 'twas all condensed About its
proper centre), ever the more The salty sweat, from out its body
squeezed, Augmented ocean and the fields of foam By seeping

through its frame, and all the more Those many particles of heat and air Escaping, began to fly aloft, and form, By condensation there afar from earth, The high refulgent circuits of the heavens.

The plains began to sink, and windy slopes Of the high mountains to increase; for rocks Could not subside, nor all the parts of ground Settle alike to one same level there.

5.495

Thus, then, the massy weight of earth stood firm With now concreted body, when (as 'twere)

All of the slime of the world, heavy and gross, Had run together and settled at the bottom, Like lees or bilge. Then ocean, then the air, Then ether herself, the fraught-with-fire, were all Left with their liquid bodies pure and free, And each more lighter than the next below; And ether, most light and liquid of the three, Floats on above the long aerial winds, Nor with the brawling of the winds of air Mingles its liquid body. It doth leave All there- those under-realms below her heights- There to be overset in whirlwinds wild,- Doth leave all there to brawl in wayward gusts, Whilst, gliding with a fixed impulse still, Itself it bears its fires along. For, lo, That ether can flow thus steadily on, on, With one unaltered urge, the Pontus proves- That sea which floweth forth with fixed tides, Keeping one onward tenor as it glides.

5.509

Now let us sing what makes the stars to move.

In first place, if the mighty sphere of heaven Revolveth round, then needs we must aver That on the upper and the under pole Presses a certain air, and from without Confines them and encloseth at each end; And that, moreover, another air above Streams on athwart the top of the sphere and tends In same direction as are rolled along The glittering stars of the eternal

world; Or that another still streams on below To whirl the sphere from under up and on In opposite direction- as we see The rivers turn the wheels and water-scoops.

It may be also that the heavens do all Remain at rest, whilst yet are borne along The lucid constellations; either because Swift tides of ether are by sky enclosed, And whirl around, seeking a passage out, And everywhere make roll the starry fires Through the Summanian regions of the sky; Or else because some air, streaming along From an eternal quarter off beyond, Whileth the driven fires, or, then, because The fires themselves have power to creep along, Going wherever their food invites and calls, And feeding their flaming bodies everywhere Throughout the sky. Yet which of these is cause In this our world 'tis hard to say for sure; But what can be throughout the universe, In divers worlds on divers plan create, This only do I show, and follow on To assign unto the motions of the stars Even several causes which 'tis possible Exist throughout the universal All; Of which yet one must be the cause even here Which maketh motion for our constellations.

Yet to decide which one of them it be Is not the least the business of a man Advancing step by cautious step, as I.

5.534

And that the earth may there abide at rest In the mid-region of the world, it needs Must vanish bit by bit in weight and lessen, And have another substance underneath, Conjoined to it from its earliest age In linked unison with the vasty world's Realms of the air in which it roots and lives.

On this account, the earth is not a load, Nor presses down on winds of air beneath; Even as unto a man his members be Without all weight- the head is not a load Unto the neck; nor do we feel the whole Weight of the body to centre in the feet.

But whatso weights come on us from without, Weights laid upon us, these harass and chafe, Though often far lighter. For to such degree It matters always what the innate powers Of any given thing may be. The earth Was, then, no alien substance fetched amain, And from no alien firmament cast down On alien air; but was conceived, like air, In the first origin of this the world, As a fixed portion of the same, as now Our members are seen to be a part of us.

Besides, the earth, when of a sudden shook By the big thunder, doth with her motion shake All that's above her- which she ne'er could do By any means, were earth not bounden fast Unto the great world's realms of air and sky: For they cohere together with common roots, Conjoined both, even from their earliest age, In linked unison. Aye, seest thou not That this most subtle energy of soul Supports our body, though so heavy a weight,- Because, indeed, 'tis with it so conjoined In linked unison? What power, in sum, Can raise with agile leap our body aloft, Save energy of mind which steers the limbs?

Now seest thou not how powerful may be A subtle nature, when conjoined it is With heavy body, as air is with the earth Conjoined, and energy of mind with us?

5.564

Nor can the sun's wheel larger be by much Nor its own blaze much less than either seems Unto our senses. For from whatso spaces Fires have the power on us to cast their beams And blow their scorching exhalations forth Against our members, those same distances Take nothing by those intervals away From bulk of flames; and to the sight the fire Is nothing shrunk. Therefore, since the heat And the outpoured light of skiey sun Arrive our senses and caress our limbs, Form too and bigness of the sun must look Even here from earth just as they really be, So that thou canst scarce nothing take or add.

And whether the journeying moon illuminate The regions
round with bastard beams, or throw From off her proper body
her own light,- Whichever it be, she journeys with a form
Naught larger than the form doth seem to be Which we with
eyes of ours perceive. For all The far removed objects of our
gaze Seem through much air confused in their look Ere
minished in their bigness. Wherefore, moon, Since she presents
bright look and clear-cut form, May there on high by us on
earth be seen Just as she is with extreme bounds defined, And
just of the size. And lastly, whatso fires Of ether thou from earth
beholdest, these Thou mayst consider as possibly of size The
least bit less, or larger by a hair Than they appear- since whatso
fires we view Here in the lands of earth are seen to change From
time to time their size to less or more Only the least, when more
or less away, So long as still they bicker clear, and still Their
glow's perceived.

5.592

Nor need there be for men Astonishment that yonder sun so
small Can yet send forth so great a light as fills Oceans and all
the lands and sky aflood, And with its fiery exhalations steeps
The world at large. For it may be, indeed, That one vast-flowing
well-spring of the whole Wide world from here hath opened and
out-gushed, And shot its light abroad; because thuswise The
elements of fiery exhalations From all the world around
together come, And thuswise flow into a bulk so big That from
one single fountain-head may stream This heat and light. And
seest thou not, indeed, How widely one small water-spring may
wet The meadow-lands at times and flood the fields?

'Tis even possible, besides, that heat From forth the sun's own
fire, albeit that fire Be not a great, may permeate the air With
the fierce hot- if but, perchance, the air Be of condition and so
tempered then As to be kindled, even when beat upon Only by
little particles of heat- Just as we sometimes see the standing

grain Or stubble straw in conflagration all From one lone spark.
And possibly the sun, Agleam on high with rosy lampion,
Possesses about him with invisible heats A plenteous fire, by no
effulgence marked, So that he maketh, he, the
Fraught-with-fire, Increase to such degree the force of rays.

5.614

Nor is there one sure cause revealed to men How the sun
journeys from his summer haunts On to the mid-most winter
turning-points In Capricorn, the thence reverting veers Back to
solstitial goals of Cancer; nor How 'tis the moon is seen each
month to cross That very distance which in traversing The sun
consumes the measure of a year.

I say, no one clear reason hath been given For these affairs. Yet
chief in likelihood Seemeth the doctrine which the holy thought
Of great Democritus lays down: that ever The nearer the
constellations be to earth The less can they by whirling of the
sky Be borne along, because those skiey powers Of speed aloft
do vanish and decrease In under-regions, and the sun is thus
Left by degrees behind amongst those signs That follow after,
since the sun he lies Far down below the starry signs that blaze;
And the moon lags even tardier than the sun: In just so far as is
her course removed From upper heaven and nigh unto the
lands, In just so far she fails to keep the pace With starry signs
above; for just so far As feebler is the whirl that bears her on,
(Being, indeed, still lower than the sun), In just so far do all the
starry signs, Circling around, o'ertake her and o'errpass.

Therefore it happens that the moon appears More swiftly to
return to any sign Along the Zodiac, than doth the sun, Because
those signs do visit her again More swiftly than they visit the
great sun.

It can be also that two streams of air Alternately at fixed periods
Blow out from transverse regions of the world, Of which the one
may thrust the sun away From summer-signs to mid-most

winter goals And rigors of the cold, and the other then May cast him back from icy shades of chill Even to the heat-fraught regions and the signs That blaze along the Zodiac. So, too, We must suppose the moon and all the stars, Which through the mighty and sidereal years Roll round in mighty orbits, may be sped By streams of air from regions alternate.

Seest thou not also how the clouds be sped By contrary winds to regions contrary, The lower clouds diversely from the upper?

Then, why may yonder stars in ether there Along their mighty orbits not be borne By currents opposite the one to other?

5.650

But night o'erwhelms the lands with vasty murk Either when sun, after his diurnal course, Hath walked the ultimate regions of the sky And wearily hath panted forth his fires, Shivered by their long journeying and wasted By traversing the multitudinous air, Or else because the self-same force that drave His orb along above the lands compels Him then to turn his course beneath the lands.

Matuta also at a fixed hour Spreadeth the roseate morning out along The coasts of heaven and deploys the light, Either because the self-same sun, returning Under the lands, aspires to seize the sky, Striving to set it blazing with his rays Ere he himself appear, or else because Fires then will congregate and many seeds Of heat are wont, even at a fixed time, To stream together- gendering evermore New suns and light. Just so the story goes That from the Idaean mountain-tops are seen Dispersed fires upon the break of day Which thence combine, as 'twere, into one ball And form an orb. Nor yet in these affairs Is aught for wonder that these seeds of fire Can thus together stream at time so fixed And shape anew the splendour of the sun.

For many facts we see which come to pass At fixed time in all things: burgeon shrubs At fixed time, and at a fixed time They cast their flowers; and Eld commands the teeth, At time as surely fixed, to drop away, And Youth commands the growing boy to bloom With the soft down and let from both his cheeks The soft beard fall. And lastly, thunder-bolts, Snow, rains, clouds, winds, at seasons of the year Nowise unfixed, all do come to pass.

For where, even from their old primordial start Causes have ever worked in such a way, And where, even from the world's first origin, Thuswise have things befallen, so even now After a fixed order they come round In sequence also.

5.680

Likewise, days may wax Whilst the nights wane, and daylight minished be Whilst nights do take their augmentations, Either because the self-same sun, coursing Under the lands and over in two arcs, A longer and a briefer, doth dispart The coasts of ether and divides in twain His orbit all unequally, and adds, As round he's borne, unto the one half there As much as from the other half he's ta'en, Until he then arrives that sign of heaven Where the year's node renders the shades of night Equal unto the periods of light.

For when the sun is midway on his course Between the blasts of northwind and of south, Heaven keeps his two goals parted equally, By virtue of the fixed position old Of the whole starry Zodiac, through which That sun, in winding onward, takes a year, Illumining the sky and all the lands With oblique light- as men declare to us Who by their diagrams have charted well Those regions of the sky which be adorned With the arranged signs of Zodiac.

Or else, because in certain parts the air Under the lands is denser, the tremulous Bright beams of fire do waver tardily, Nor easily can penetrate that air Nor yet emerge unto their

rising-place: For this it is that nights in winter time Do linger long, ere comes the many-rayed Round Badge of the day. Or else because, as said, In alternating seasons of the year Fires, now more quick, and now more slow, are wont To stream together,- the fires which make the sun To rise in some one spot- therefore it is That those men seem to speak the truth [who hold A new sun is with each new daybreak born].

5.705

The moon she possibly doth shine because Strook by the rays of sun, and day by day May turn unto our gaze her light, the more She doth recede from orb of sun, until, Facing him opposite across the world, She hath with full effulgence gleamed abroad, And, at her rising as she soars above, Hath there observed his setting; thence likewise She needs must hide, as 'twere, her light behind By slow degrees, the nearer now she glides, Along the circle of the Zodiac, From her far place toward fires of yonder sun,- As those men hold who feign the moon to be Just like a ball and to pursue a course Betwixt the sun and earth. There is, again, Some reason to suppose that moon may roll With light her very own, and thus display The varied shapes of her resplendence there.

For near her is, percase, another body, Invisible, because devoid of light, Borne on and gliding all along with her, Which in three modes may block and blot her disk.

Again, she may revolve upon herself, Like to a ball's sphere- if perchance that be- One half of her dyed o'er with glowing light, And by the revolution of that sphere She may beget for us her varying shapes, Until she turns that fiery part of her Full to the sight and open eyes of men; Thence by slow stages round and back she whirls, Withdrawing thus the luminiferous part Of her sphered mass and ball, as, verily, The Babylonian doctrine of Chaldees, Refuting the art of Greek astrologers, Labours, in opposition, to prove sure- As if, forsooth, the thing for which

each fights, Might not alike be true,- or aught there were
Wherefore thou mightest risk embracing one More than the
other notion. Then, again, Why a new moon might not
forevermore Created be with fixed successions there Of shapes
and with configurations fixed, And why each day that bright
created moon Might not miscarry and another be, In its stead
and place, engendered anew, 'Tis hard to show by reason, or by
words To prove absurd- since, lo, so many things Can be create
with fixed successions: Spring-time and Venus come, and
Venus' boy, The winged harbinger, steps on before, And hard on
Zephyr's foot-prints Mother Flora, Sprinkling the ways before
them, filleth all With colours and with odours excellent;
Whereafter follows arid Heat, and he Companioned is by Ceres,
dusty one, And by the Etesian Breezes of the north; Then
cometh Autumn on, and with him steps Lord Bacchus, and then
other Seasons too And other Winds do follow- the high roar Of
great Volturnus, and the Southwind strong With thunder-bolts.
At last earth's Shortest-Day Bears on to men the snows and
brings again The numbing cold. And Winter follows her, His
teeth with chills a-chatter. Therefore, 'tis The less a marvel, if at
fixed time A moon is thus begotten and again At fixed time
destroyed, since things so many Can come to being thus at fixed
time.

Likewise, the sun's eclipses and the moon's Far occultations
rightly thou mayst deem ^{5.751} As due to several causes. For,
indeed, Why should the moon be able to shut out Earth from the
light of sun, and on the side To earthward thrust her high head
under sun, Opposing dark orb to his glowing beams- And yet, at
same time, one suppose the effect Could not result from some
one other body Which glides devoid of light forevermore?

Again, why could not sun, in weakened state, At fixed time
for-lose his fires, and then, When he has passed on along the air
Beyond the regions, hostile to his flames, That quench and kill

his fires, why could not he Renew his light? And why should
earth in turn Have power to rob the moon of light, and there,
Herself on high, keep the sun hid beneath, Whilst the moon
glideth in her monthly course Athrough the rigid shadows of
the cone?- And yet, at same time, some one other body Not have
the power to under-pass the moon, Or glide along above the orb
of sun, Breaking his rays and outspread light asunder?

And still, if moon herself refulgent be With her own sheen, why
could she not at times In some one quarter of the mighty world
Grow weak and weary, whilst she passeth through Regions
unfriendly to the beams her own?

ORIGINS OF VEGETABLE AND ANIMAL LIFE

5.772

And now to what remains!- Since I've resolved By what
arrangements all things come to pass Through the blue regions
of the mighty world,- How we can know what energy and cause
Started the various courses of the sun And the moon's goings,
and by what far means They can succumb, the while with
thwarted light, And veil with shade the unsuspecting lands,
When, as it were, they blink, and then again With open eye
survey all regions wide, Resplendent with white radiance- I do
now Return unto the world's primeval age And tell what first
the soft young fields of earth With earliest parturition had
decreed To raise in air unto the shores of light And to entrust
unto the wayward winds.

In the beginning, earth gave forth, around The hills and over all
the length of plains, The race of grasses and the shining green;
The flowery meadows sparkled all aglow With greening colour,
and thereafter, lo, Unto the divers kinds of trees was given An
emulous impulse mightily to shoot, With a free rein, aloft into
the air.

As feathers and hairs and bristles are begot The first on
members of the four-foot breeds And on the bodies of the
strong-y-winged, Thus then the new Earth first of all put forth
Grasses and shrubs, and afterward begat The mortal
generations, there upsprung- Innumerable in modes
innumerable- After diverging fashions. For from sky These
breathing-creatures never can have dropped, Nor the
land-dwellers ever have come up Out of sea-pools of salt. How
true remains, How merited is that adopted name Of earth- "The
Mother!"- since from out the earth Are all begotten. And even
now arise From out the loams how many living things-
Concreted by the rains and heat of the sun.

Wherefore 'tis less a marvel, if they sprang In Long Ago more
many, and more big, Matured of those days in the fresh young
years Of earth and ether. First of all, the race Of the winged ones
and parti-coloured birds, Hatched out in spring-time, left their
eggs behind; As now-a-days in summer tree-crickets Do leave
their shiny husks of own accord, Seeking their food and living.
Then it was This earth of thine first gave unto the day The
mortal generations; for prevailed Among the fields abounding
hot and wet.

And hence, where any fitting spot was given, There 'gan to grow
womb-cavities, by roots Affixed to earth. And when in ripened
time The age of the young within (that sought the air And fled
earth's damps) had burst these wombs, O then Would Nature
thither turn the pores of earth And make her spurt from open
veins a juice Like unto milk; even as a woman now Is filled, at
child-bearing, with the sweet milk, Because all that swift stream
of aliment Is thither turned unto the mother-breasts.

There earth would furnish to the children food; Warmth was
their swaddling cloth, the grass their bed Abounding in soft
down. Earth's newness then Would rouse no dour spells of the
bitter cold, Nor extreme heats nor winds of mighty powers- For

all things grow and gather strength through time In like proportions; and then earth was young.

5.821

Wherefore, again, again, how merited Is that adopted name of Earth- The Mother!- Since she herself begat the human race, And at one well-nigh fixed time brought forth Each breast that ranges raving round about Upon the mighty mountains and all birds Aerial with many a varied shape.

But, lo, because her bearing years must end, She ceased, like to a woman worn by eld.

For lapsing aeons change the nature of The whole wide world, and all things needs must take One status after other, nor aught persists Forever like itself. All things depart; Nature she changeth all, compelleth all To transformation. Lo, this moulders down, A-slack with weary eld, and that, again, Prospers in glory, issuing from contempt.

In suchwise, then, the lapsing aeons change The nature of the whole wide world, and earth Taketh one status after other. And what She bore of old, she now can bear no longer, And what she never bore, she can to-day.

In those days also the telluric world Strove to beget the monsters that upsprung With their astounding visages and limbs- The Man-woman- a thing betwixt the twain, Yet neither, and from either sex remote- Some gruesome Boggles orphaned of the feet, Some widowed of the hands, dumb Horrors too Without a mouth, or blind Ones of no eye, Or Bulks all shackled by their legs and arms Cleaving unto the body fore and aft, Thuswise, that never could they do or go, Nor shun disaster, nor take the good they would.

And other prodigies and monsters earth Was then begetting of this sort- in vain, Since Nature banned with horror their increase, And powerless were they to reach unto The coveted

flower of fair maturity, Or to find aliment, or to intertwine In
works of Venus. For we see there must Concur in life conditions
manifold, If life is ever by begetting life To forge the
generations one by one: First, foods must be; and, next, a path
whereby The seeds of impregnation in the frame May ooze,
released from the members all; Last, the possession of those
instruments Whereby the male with female can unite, The one
with other in mutual ravishments.

5.855

And in the ages after monsters died, Perforce there perished
many a stock, unable By propagation to forge a progeny.

For whatsoever creatures thou beholdest Breathing the breath
of life, the same have been Even from their earliest age
preserved alive By cunning, or by valour, or at least By speed of
foot or wing. And many a stock Remaineth yet, because of use to
man, And so committed to man's guardianship.

Valour hath saved alive fierce lion-breeds And many another
terrorizing race, Cunning the foxes, flight the antlered stags.

Light-sleeping dogs with faithful heart in breast, However, and
every kind begot from seed Of beasts of draft, as, too, the woolly
flocks And horned cattle, all, my Memmius, Have been
committed to guardianship of men.

For anxiously they fled the savage beasts, And peace they
sought and their abundant foods, Obtained with never labours
of their own, Which we secure to them as fit rewards For their
good service. But those beasts to whom Nature has granted
naught of these same things- Beasts quite unfit by own free will
to thrive And vain for any service unto us In thanks for which
we should permit their kind To feed and be in our protection
safe- Those, of a truth, were wont to be exposed, Enshackled in
the gruesome bonds of doom, As prey and booty for the rest,
until Nature reduced that stock to utter death.

5.878

But Centaurs ne'er have been, nor can there be Creatures of twofold stock and double frame, Compact of members alien in kind, Yet formed with equal function, equal force In every bodily part- a fact thou mayst, However dull thy wits, well learn from this: The horse, when his three years have rolled away, Flowers in his prime of vigour; but the boy Not so, for oft even then he gropes in sleep After the milky nipples of the breasts, An infant still. And later, when at last The lusty powers of horses and stout limbs, Now weak through lapsing life, do fail with age, Lo, only then doth youth with flowering years Begin for boys, and clothe their ruddy cheeks With the soft down. So never deem, percase, That from a man and from the seed of horse, The beast of draft, can Centaurs be composed Or e'er exist alive, nor Scyllas be- The half-fish bodies girdled with mad dogs- Nor others of this sort, in whom we mark Members discordant each with each; for ne'er At one same time they reach their flower of age Or gain and lose full vigour of their frame, And never burn with one same lust of love, And never in their habits they agree, Nor find the same foods equally delightful- Sooth, as one oft may see the bearded goats Batten upon the hemlock which to man Is violent poison. Once again, since flame Is wont to scorch and burn the tawny bulks Of the great lions as much as other kinds Of flesh and blood existing in the lands, How could it be that she, Chimaera lone, With triple body- fore, a lion she; And aft, a dragon; and betwixt, a goat- Might at the mouth from out the body belch Infuriate flame? Wherefore, the man who feigns Such beings could have been engendered When earth was new and the young sky was fresh (Basing his empty argument on new)

May babble with like reason many whims Into our ears: he'll say, perhaps, that then Rivers of gold through every landscape flowed, That trees were wont with precious stones to flower, Or that in those far aeons man was born With such gigantic length

and lift of limbs As to be able, based upon his feet, Deep oceans
to bestride or with his hands To whirl the firmament around his
head.

For though in earth were many seeds of things In the old time
when this telluric world First poured the breeds of animals
abroad, Still that is nothing of a sign that then Such hybrid
creatures could have been begot And limbs of all beasts
heterogeneous Have been together knit; because, indeed, The
divers kinds of grasses and the grains And the delightful
trees- which even now Spring up abounding from within the
earth- Can still ne'er be begotten with their stems Begrafted
into one; but each sole thing Proceeds according to its proper
wont And all conserve their own distinctions based In nature's
fixed decree.

ORIGINS AND SAVAGE PERIOD OF MANKIND

5.925

But mortal man Was then far hardier in the old champaign, As
well he should be, since a hardier earth Had him begotten;
builded too was he Of bigger and more solid bones within, And
knit with stalwart sinews through the flesh, Nor easily seized by
either heat or cold, Or alien food or any ail or irk.

And whilst so many lustrums of the sun Rolled on across the
sky, men led a life After the roving habit of wild beasts.

Not then were sturdy guiders of curved ploughs, And none
knew then to work the fields with iron, Or plant young shoots in
holes of delved loam, Or lop with hooked knives from off high
trees The boughs of yester-year. What sun and rains To them
had given, what earth of own accord Created then, was boon
enough to glad Their simple hearts. Mid acorn-laden oaks
Would they refresh their bodies for the nonce; And the wild
berries of the arbutue-tree, Which now thou seest to ripen

purple-red In winter time, the old telluric soil Would bear then more abundant and more big.

And many coarse foods, too, in long ago The blooming freshness of the rank young world Produced, enough for those poor wretches there.

And rivers and springs would summon them of old To slake the thirst, as now from the great hills The water's down-rush calls aloud and far The thirsty generations of the wild.

So, too, they sought the grottos of the Nymphs- The woodland haunts discovered as they ranged- From forth of which they knew that gliding rills With gush and splash abounding laved the rocks, The dripping rocks, and trickled from above Over the verdant moss; and here and there Welled up and burst across the open flats.

As yet they knew not to enkindle fire Against the cold, nor hairy pelts to use And clothe their bodies with the spoils of beasts; But huddled in groves, and mountain-caves, and woods, And 'mongst the thickets hid their squalid backs, When driven to flee the lashings of the winds And the big rains. Nor could they then regard The general good, nor did they know to use In common any customs, any laws: Whatever of booty fortune unto each Had proffered, each alone would bear away, By instinct trained for self to thrive and live.

And Venus in the forests then would link The lovers' bodies; for the woman yielded Either from mutual flame, or from the man's Impetuous fury and insatiate lust, Or from a bribe- as acorn-nuts, choice pears, Or the wild berries of the arbutue-tree.

And trusting wondrous strength of hands and legs, They'd chase the forest-wanderers, the beasts; And many they'd conquer, but some few they fled, A-skulk into their hiding-places...

.....

With the flung stones and with the ponderous heft Of gnarled branch. And by the time of night O'ertaken, they would throw, like bristly boars, Their wildman's limbs naked upon the earth, Rolling themselves in leaves and fronded boughs.

Nor would they call with lamentations loud Around the fields for daylight and the sun, Quaking and wand'ring in shadows of the night; But, silent and buried in a sleep, they'd wait Until the sun with rosy flambeau brought The glory to the sky. From childhood wont Ever to see the dark and day begot In times alternate, never might they be Wildered by wild misgiving, lest a night Eternal should possess the lands, with light Of sun withdrawn forever. But their care Was rather that the clans of savage beasts Would often make their sleep-time horrible For those poor wretches; and, from home y-driven, They'd flee their rocky shelters at approach Of boar, the spumy-lipped, or lion strong, And in the midnight yield with terror up To those fierce guests their beds of out-spread leaves.

5.988

And yet in those days not much more than now Would generations of mortality Leave the sweet light of fading life behind.

Indeed, in those days here and there a man, More oftener snatched upon, and gulped by fangs, Afforded the beasts a food that roared alive, Echoing through groves and hills and forest-trees, Even as he viewed his living flesh entombed Within a living grave; whilst those whom flight Had saved, with bone and body bitten, shrieked, Pressing their quivering palms to loathsome sores, With horrible voices for eternal death- Until, forlorn of help, and witless what Might medicine their wounds, the writhing pangs Took them from life. But not in those far times Would one lone day give over unto doom A soldiery in thousands marching on Beneath the battle-banners, nor would then The ramping breakers of the main seas dash Whole

argosies and crews upon the rocks.

But ocean uprisen would often rave in vain, Without all end or outcome, and give up Its empty menacings as lightly too; Nor soft seductions of a serene sea Could lure by laughing billows any man Out to disaster: for the science bold Of ship-sailing lay dark in those far times.

Again, 'twas then that lack of food gave o'er Men's fainting limbs to dissolution: now 'Tis plenty overwhelms. Unwary, they Oft for themselves themselves would then outpour The poison; now, with nicer art, themselves They give the drafts to others.

BEGINNINGS OF CIVILIZATION

5.1011

Afterwards, When huts they had procured and pelts and fire,
And when the woman, joined unto the man, Withdrew with him
into one dwelling place,

Were known; and when they saw an offspring born From out themselves, then first the human race Began to soften. For 'twas now that fire Rendered their shivering frames less staunch to bear, Under the canopy of the sky, the cold; And Love reduced their shaggy hardness; And children, with the prattle and the kiss, Soon broke the parents' haughty temper down.

Then, too, did neighbours 'gin to league as friends, Eager to wrong no more or suffer wrong, And urged for children and the womankind Mercy, of fathers, whilst with cries and gestures They stammered hints how meet it was that all Should have compassion on the weak. And still, Though concord not in every wise could then Begotten be, a good, a goodly part Kept faith inviolate- or else mankind Long since had been unutterably cut off, And propagation never could have brought The species down the ages.

5.1028

But nature 'twas Urged men to utter various sounds of tongue
And need and use did mould the names of things, About in same
wise as the lack-speech years Compel young children unto
gesturings, Making them point with finger here and there At
what's before them. For each creature feels By instinct to what
use to put his powers.

Ere yet the bull-calf's scarce begotten horns Project above his
brows, with them he 'gins Enraged to butt and savagely to
thrust.

But whelps of panthers and the lion's cubs With claws and paws
and bites are at the fray Already, when their teeth and claws be
scarce As yet engendered. So again, we see All breeds of winged
creatures trust to wings And from their fledgling pinions seek to
get A fluttering assistance. Thus, to think That in those days
some man apportioned round To things their names, and that
from him men learned Their first nomenclature, is foolery.

For why could he mark everything by words And utter the
various sounds of tongue, what time The rest may be supposed
powerless To do the same? And, if the rest had not Already one
with other used words, Whence was implanted in the teacher,
then, Fore-knowledge of their use, and whence was given To
him alone primordial faculty To know and see in mind what
'twas he willed?

Besides, one only man could scarce subdue An overmastered
multitude to choose To get by heart his names of things. A task
Not easy 'tis in any wise to teach And to persuade the deaf
concerning what 'Tis needful for to do. For ne'er would they
Allow, nor ne'er in anywise endure Perpetual vain dingdong in
their ears Of spoken sounds unheard before. And what, At last,
in this affair so wondrous is, That human race (in whom a voice
and tongue Were now in vigour) should by divers words Denote
its objects, as each divers sense Might prompt?- since even the

speechless herds, aye, since The very generations of wild beasts
Are wont dissimilar and divers sounds To rouse from in them,
when there's fear or pain, And when they burst with joys. And
this, forsooth, 'Tis thine to know from plainest facts: when first
Huge flabby jowls of mad Molossian hounds, Baring their hard
white teeth, begin to snarl, They threaten, with infuriate lips
peeled back, In sounds far other than with which they bark And
fill with voices all the regions round.

And when with fondling tongue they start to lick Their puppies,
or do toss them round with paws, Feigning with gentle bites to
gape and snap, They fawn with yelps of voice far other than
Than when, alone within the house, they bay, Or whimpering
slink with cringing sides from blows.

Again the neighing of the horse, is that Not seen to differ
likewise, when the stud In buoyant flower of his young years
raves, Goaded by winged Love, amongst the mares, And when
with widening nostrils out he snorts The call to battle, and
when haply he Whinnies at times with terror-quaking limbs?

Lastly, the flying race, the dappled birds, Hawks, ospreys,
sea-gulls, searching food and life Amid the ocean billows in the
brine, Utter at other times far other cries Than when they fight
for food, or with their prey Struggle and strain. And birds there
are which change With changing weather their own raucous
songs- As long-lived generations of the crows Or flocks of rooks,
when they be said to cry For rain and water and to call at times
For winds and gales. Ergo, if divers moods Compel the brutes,
though speechless evermore, To send forth divers sounds, O
truly then How much more likely 'twere that mortal men In
those days could with many a different sound Denote each
separate thing.

5.1091

Lest, perchance, Concerning these affairs thou ponderest In
silent meditation, let me say 'Twas lightning brought

primevally to earth The fire for mortals, and from thence hath spread O'er all the lands the flames of heat. For thus Even now we see so many objects, touched By the celestial flames, to flash aglow, When thunderbolt has dowered them with heat.

Yet also when a many-branched tree, Beaten by winds, writhes swaying to and fro, Pressing 'gainst branches of a neighbour tree, There by the power of mighty rub and rub Is fire engendered; and at times out-flares The scorching heat of flame, when boughs do chafe Against the trunks. And of these causes, either May well have given to mortal men the fire.

Next, food to cook and soften in the flame The sun instructed, since so oft they saw How objects mellowed, when subdued by warmth And by the raining blows of fiery beams, Through all the fields.

5.1105

And more and more each day Would men more strong in sense, more wise in heart, Teach them to change their earlier mode and life By fire and new devices. Kings began Cities to found and citadels to set, As strongholds and asylums for themselves, And flocks and fields to portion for each man After the beauty, strength, and sense of each- For beauty then imported much, and strength Had its own rights supreme. Thereafter, wealth Discovered was, and gold was brought to light, Which soon of honour stripped both strong and fair; For men, however beautiful in form Or valorous, will follow in the main The rich man's party. Yet were man to steer His life by sounder reasoning, he'd own Abounding riches, if with mind content He lived by thrift; for never, as I guess, Is there a lack of little in the world.

But men wished glory for themselves and power Even that their fortunes on foundations firm Might rest forever, and that they themselves, The opulent, might pass a quiet life- In vain, in vain; since, in the strife to climb On to the heights of honour, men do

make Their pathway terrible; and even when once They reach them, envy like the thunderbolt At times will smite, O hurling headlong down To murkiest Tartarus, in scorn; for, lo, All summits, all regions loftier than the rest, Smoke, blasted as by envy's thunderbolts; So better far in quiet to obey, Than to desire chief mastery of affairs And ownership of empires. Be it so; And let the weary sweat their life-blood out All to no end, battling in hate along The narrow path of man's ambition; Since all their wisdom is from others' lips, And all they seek is known from what they've heard And less from what they've thought. Nor is this folly Greater to-day, nor greater soon to be, Than' twas of old.

5.1136

And therefore kings were slain, And pristine majesty of golden thrones And haughty sceptres lay o'erturned in dust; And crowns, so splendid on the sovereign heads, Soon bloody under the proletarian feet, Groaned for their glories gone- for erst o'er-much Dreaded, thereafter with more greedy zest Trampled beneath the rabble heel. Thus things Down to the vilest lees of brawling mobs Succumbed, whilst each man sought unto himself Dominion and supremacy. So next Some wiser heads instructed men to found The magisterial office, and did frame Codes that they might consent to follow laws.

For humankind, o'er wearied with a life Fostered by force, was ailing from its feuds; And so the sooner of its own free will Yielded to laws and strictest codes. For since Each hand made ready in its wrath to take A vengeance fiercer than by man's fair laws Is now conceded, men on this account Loathed the old life fostered by force. 'Tis thence That fear of punishments defiles each prize Of wicked days; for force and fraud ensnare Each man around, and in the main recoil On him from whence they sprung. Not easy 'tis For one who violates by ugly deeds The bonds of common peace to pass a life Composed and tranquil.

For albeit he 'scape The race of gods and men, he yet must dread 'Twill not be hid forever- since, indeed, So many, oft babbling on amid their dreams Or raving in sickness, have betrayed themselves (As stories tell) and published at last Old secrets and the sins.

5.1161

And now what cause Hath spread divinities of gods abroad Through mighty nations, and filled the cities full Of the high altars, and led to practices Of solemn rites in season- rites which still Flourish in midst of great affairs of state And midst great centres of man's civic life, The rites whence still a poor mortality Is grafted that quaking awe which rears aloft Still the new temples of gods from land to land And drives mankind to visit them in throngs On holy days- 'tis not so hard to give Reason thereof in speech. Because, in sooth, Even in those days would the race of man Be seeing excelling visages of gods With mind awake; and in his sleeps, yet more- Bodies of wondrous growth. And, thus, to these Would men attribute sense, because they seemed To move their limbs and speak pronouncements high, Befitting glorious visage and vast powers.

And men would give them an eternal life, Because their visages forevermore Were there before them, and their shapes remained, And chiefly, however, because men would not think Beings augmented with such mighty powers Could well by any force o'ermastered be.

And men would think them in their happiness Excelling far, because the fear of death Vexed no one of them at all, and since At same time in men's sleeps men saw them do So many wonders, and yet feel therefrom Themselves no weariness. Besides, men marked How in a fixed order rolled around The systems of the sky, and changed times Of annual seasons, nor were able then To know thereof the causes. Therefore 'twas Men would take refuge in consigning all Unto divinities, and in

feigning all Was guided by their nod. And in the sky They set the
seats and vaults of gods, because Across the sky night and the
moon are seen To roll along- moon, day, and night, and night's
Old awesome constellations evermore, And the
night-wandering fireballs of the sky, And flying flames, clouds,
and the sun, the rains, Snow and the winds, the lightnings, and
the hail, And the swift rumblings, and the hollow roar Of mighty
menacings forevermore.

5.1194

O humankind unhappy!- when it ascribed Unto divinities such
awesome deeds, And coupled thereto rigours of fierce wrath!

What groans did men on that sad day beget Even for
themselves, and O what wounds for us, What tears for our
children's children! Nor, O man, Is thy true piety in this: with
head Under the veil, still to be seen to turn Fronting a stone,
and ever to approach Unto all altars; nor so prone on earth
Forward to fall, to spread upturned palms Before the shrines of
gods, nor yet to dew Altars with profuse blood of four-foot
beasts, Nor vows with vows to link. But rather this: To look on
all things with a master eye And mind at peace. For when we
gaze aloft Upon the skiey vaults of yon great world And ether,
fixed high o'er twinkling stars, And into our thought there come
the journeyings Of sun and moon, O then into our breasts,
O'erburdened already with their other ills, Begins forthwith to
rear its sudden head One more misgiving: lest o'er us, perchance, It
be the gods' immeasurable power That rolls, with varied
motion, round and round The far white constellations. For the
lack Of aught of reasons tries the puzzled mind: Whether was
ever a birth-time of the world, And whether, likewise, any end
shall be How far the ramparts of the world can still Outstand
this strain of ever-roused motion, Or whether, divinely with
eternal weal Endowed, they can through endless tracts of age
Glide on, defying the o'er-mighty powers Of the immeasurable

ages. Lo, What man is there whose mind with dread of gods
Cringes not close, whose limbs with terror-spell Crouch not
together, when the parched earth Quakes with the horrible
thunderbolt amain, And across the mighty sky the rumblings
run?

Do not the peoples and the nations shake, And haughty kings do
they not hug their limbs, Strook through with fear of the
divinities, Lest for aught foully done or madly said The heavy
time be now at hand to pay?

When, too, fierce force of fury-winds at sea Sweepeth a navy's
admiral down the main With his stout legions and his elephants,
Doth he not seek the peace of gods with vows, And beg in
prayer, a-tremble, lulled winds And friendly gales?- in vain,
since, often up-caught In fury-cyclones, is he borne along, For
all his mouthings, to the shoals of doom.

Ah, so irrevocably some hidden power Betramples forevermore
affairs of men, And visibly grindeth with its heel in mire The
lictors' glorious rods and axes dire, Having them in derision!
Again, when earth From end to end is rocking under foot, And
shaken cities ruin down, or threaten Upon the verge, what
wonder is it then That mortal generations abase themselves,
And unto gods in all affairs of earth Assign as last resort
almighty powers And wondrous energies to govern all?

5.1241

Now for the rest: copper and gold and iron Discovered were, and
with them silver's weight And power of lead, when with
prodigious heat The conflagrations burned the forest trees
Among the mighty mountains, by a bolt Of lightning from the
sky, or else because Men, warring in the woodlands, on their
foes Had hurled fire to frighten and dismay, Or yet because, by
goodness of the soil Invited, men desired to clear rich fields And
turn the countryside to pasture-lands, Or slay the wild and
thrive upon the spoils.

(For hunting by pit-fall and by fire arose Before the art of hedging the covert round With net or stirring it with dogs of chase.)

Howso the fact, and from what cause soever The flamy heat with awful crack and roar Had there devoured to their deepest roots The forest trees and baked the earth with fire, Then from the boiling veins began to ooze O rivulets of silver and of gold, Of lead and copper too, collecting soon Into the hollow places of the ground.

And when men saw the cooled lumps anon To shine with splendour-sheen upon the ground, Much taken with that lustrous smooth delight, They 'gan to pry them out, and saw how each Had got a shape like to its earthy mould.

Then would it enter their heads how these same lumps, If melted by heat, could into any form Or figure of things be run, and how, again, If hammered out, they could be nicely drawn To sharpest points or finest edge, and thus Yield to the forgers tools and give them power To chop the forest down, to hew the logs, To shave the beams and planks, besides to bore And punch and drill. And men began such work At first as much with tools of silver and gold As with the impetuous strength of the stout copper; But vainly- since their over-mastered power Would soon give way, unable to endure, Like copper, such hard labour. In those days Copper it was that was the thing of price; And gold lay useless, blunted with dull edge.

Now lies the copper low, and gold hath come Unto the loftiest honours. Thus it is That rolling ages change the times of things: What erst was of a price, becomes at last A discard of no honour; whilst another Succeeds to glory, issuing from contempt, And day by day is sought for more and more, And, when 'tis found, doth flower in men's praise, Objects of wondrous honour.

5.1281

Now, Memmius, How nature of iron discovered was, thou mayst
Of thine own self divine. Man's ancient arms Were hands, and
nails and teeth, stones too and boughs- Breakage of forest trees-
and flame and fire, As soon as known. Thereafter force of iron
And copper discovered was; and copper's use Was known ere
iron's, since more tractable Its nature is and its abundance
more.

With copper men to work the soil began, With copper to rouse
the hurly waves of war, To straw the monstrous wounds, and
seize away Another's flocks and fields. For unto them, Thus
armed, all things naked of defence Readily yielded. Then by
slow degrees The sword of iron succeeded, and the shape Of
brazen sickle into scorn was turned: With iron to cleave the soil
of earth they 'gan, And the contentions of uncertain war Were
rendered equal.

And, lo, man was wont Armed to mount upon the ribs of horse
And guide him with the rein, and play about With right hand
free, oft times before he tried Perils of war in yoked chariot; And
yoked pairs abreast came earlier Than yokes of four, or scythed
chariots Whereinto clomb the men-at-arms. And next The Punic
folk did train the elephants- Those curst Lucanian oxen,
hideous, The serpent-handed, with turrets on their bulks- To
dure the wounds of war and panic-strike The mighty troops of
Mars. Thus Discord sad Begat the one Thing after other, to be
The terror of the nations under arms, And day by day to horrors
of old war She added an increase.

5.1308

Bulls, too, they tried In war's grim business; and essayed to send
Outrageous boars against the foes. And some Sent on before
their ranks puissant lions With armed trainers and with masters
fierce To guide and hold in chains- and yet in vain, Since fleshed
with pell-mell slaughter, fierce they flew, And blindly through
the squadrons havoc wrought, Shaking the frightful crests upon

their heads, Now here, now there. Nor could the horsemen calm
Their horses, panic-breasted at the roar, And rein them round
to front the foe. With spring The infuriate she-lions would
up-leap Now here, now there; and whoso came apace Against
them, these they'd rend across the face; And others unwitting
from behind they'd tear Down from their mounts, and twining
round them, bring Tumbling to earth, o'ermastered by the
wound, And with those powerful fangs and hooked claws Fasten
upon them. Bulls would toss their friends, And trample under
foot, and from beneath Rip flanks and bellies of horses with
their horns, And with a threat'ning forehead jam the sod; And
boars would gore with stout tusks their allies, Splashing in fury
their own blood on spears Splintered in their own bodies, and
would fell In rout and ruin infantry and horse.

For there the beasts-of-saddle tried to scape The savage thrusts
of tusk by shying off, Or rearing up with hoofs a-paw in air.

In vain- since there thou mightest see them sink, Their sinews
severed, and with heavy fall Bestrew the ground. And such of
these as men Supposed well-trained long ago at home, Were in
the thick of action seen to foam In fury, from the wounds, the
shrieks, the flight, The panic, and the tumult; nor could men
Aught of their numbers rally. For each breed And various of the
wild beasts fled apart Hither or thither, as often in wars to-day
Flee those Lucanian oxen, by the steel Grievously mangled, after
they have wrought Upon their friends so many a dreadful doom.

(If 'twas, indeed, that thus they did at all: But scarcely I'll
believe that men could not With mind foreknow and see, as sure
to come, Such foul and general disaster.- This We, then, may
hold as true in the great All, In divers worlds on divers plan
create,- Somewhere afar more likely than upon One certain
earth.) But men chose this to do Less in the hope of conquering
than to give Their enemies a goodly cause of woe, Even though
thereby they perished themselves, Since weak in numbers and

since wanting arms.

5.1350

Now, clothes of roughly inter-plaited strands Were earlier than loom-wove coverings; The loom-wove later than man's iron is, Since iron is needful in the weaving art, Nor by no other means can there be wrought Such polished tools- the treadles, spindles, shuttles, And sounding yarn-beams. And nature forced the men, Before the woman kind, to work the wool: For all the male kind far excels in skill, And cleverer is by much- until at last The rugged farmer folk jeered at such tasks, And so were eager soon to give them o'er To women's hands, and in more hardy toil To harden arms and hands.

5.1361

But nature herself, Mother of things, was the first seed-sower And primal grafter; since the berries and acorns, Dropping from off the trees, would there beneath Put forth in season swarms of little shoots; Hence too men's fondness for ingrafting slips Upon the boughs and setting out in holes The young shrubs o'er the fields. Then would they try Ever new modes of tilling their loved crofts, And mark they would how earth improved the taste Of the wild fruits by fond and fostering care.

And day by day they'd force the woods to move Still higher up the mountain, and to yield The place below for tilth, that there they might, On plains and uplands, have their meadow-plats, Cisterns and runnels, crops of standing grain, And happy vineyards, and that all along O'er hillocks, intervalles, and plains might run The silvery-green belt of olive-trees, Marking the plotted landscape; even as now Thou seest so marked with varied loveliness All the terrain which men adorn and plant With rows of goodly fruit-trees and hedge round With thriving shrubberies sown.

5.1379

But by the mouth To imitate the liquid notes of birds Was earlier far 'mongst men than power to make, By measured song, melodious verse and give Delight to ears. And whistlings of the wind Athrough the hollows of the reeds first taught The peasantry to blow into the stalks Of hollow hemlock-herb. Then bit by bit They learned sweet plainings, such as pipe out-pours, Beaten by finger-tips of singing men, When heard through unpathed groves and forest deeps And woodsy meadows, through the untrod haunts Of shepherd folk and spots divinely still.

Thus time draws forward each and everything Little by little unto the midst of men, And reason uplifts it to the shores of light.

These tunes would soothe and glad the minds of mortals When sated with food,- for songs are welcome then.

And often, lounging with friends in the soft grass Beside a river of water, underneath A big tree's branches, merrily they'd refresh Their frames, with no vast outlay- most of all If the weather were smiling and the times of the year Were painting the green of the grass around with flowers.

Then jokes, then talk, then peals of jollity Would circle round; for then the rustic muse Was in her glory; then would antic Mirth Prompt them to garland head and shoulders about With chaplets of intertwined flowers and leaves, And to dance onward, out of tune, with limbs Clownishly swaying, and with clownish foot To beat our mother earth- from whence arose Laughter and peals of jollity, for, lo, Such frolic acts were in their glory then, Being more new and strange. And wakeful men Found solaces for their unsleeping hours In drawing forth variety of notes, In modulating melodies, in running With puckered lips along the tuned reeds, Whence, even in our day do the watchmen guard These old traditions, and have learned

well To keep true measure. And yet they no whit Do get a larger fruit of gladness Than got the woodland aborigines In olden times. For what we have at hand- If theretofore naught sweeter we have known- That chiefly pleases and seems best of all; But then some later, likely better, find Destroys its worth and changes our desires Regarding good of yesterday.

5.1416

And thus Began the loathing of the acorn; thus Abandoned were those beds with grasses strewn And with the leaves beladen. Thus, again, Fell into new contempt the pelts of beasts- Erstwhile a robe of honour, which, I guess, Aroused in those days envy so malign That the first wearer went to woeful death By ambuscades,- and yet that hairy prize, Rent into rags by greedy foemen there And splashed by blood, was ruined utterly Beyond all use or vantage. Thus of old 'Twas pelts, and of to-day 'tis purple and gold That cark men's lives with cares and weary with war.

Wherefore, methinks, resides the greater blame With us vain men to-day: for cold would rack, Without their pelts, the naked sons of earth; But us it nothing hurts to do without The purple vestment, brodered with gold And with imposing figures, if we still Make shift with some mean garment of the Plebs.

So man in vain futilities toils on Forever and wastes in idle cares his years- Because, of very truth, he hath not learnt What the true end of getting is, nor yet At all how far true pleasure may increase.

And 'tis desire for better and for more Hath carried by degrees mortality Out onward to the deep, and roused up From the far bottom mighty waves of war.

5.1436

But sun and moon, those watchmen of the world, With their own lanterns traversing around The mighty, the revolving

vault, have taught Unto mankind that seasons of the years
Return again, and that the Thing takes place After a fixed plan
and order fixed.

Already would they pass their life, hedged round By the strong
towers; and cultivate an earth All portioned out and
boundaried; already Would the sea flower and sail-winged ships;
Already men had, under treaty pacts, Confederates and allies,
when poets began To hand heroic actions down in verse; Nor
long ere this had letters been devised- Hence is our age unable
to look back On what has gone before, except where reason
Shows us a footprint.

Sailings on the seas, Tillings of fields, walls, laws, and arms, and
roads, Dress and the like, all prizes, all delights Of finer life,
poems, pictures, chiselled shapes Of polished sculptures- all
these arts were learned By practice and the mind's experience,
As men walked forward step by eager step.

Thus time draws forward each and everything Little by little
into the midst of men, And reason uplifts it to the shores of
light.

For one thing after other did men see Grow clear by intellect,
till with their arts They've now achieved the supreme pinnacle.

BOOK VI

PROEM

6.1

'Twas Athens first, the glorious in name, That whilom gave to
hapless sons of men The sheaves of harvest, and re-ordered life,
And decreed laws; and she the first that gave Life its sweet
solaces, when she begat A man of heart so wise, who whilom
poured All wisdom forth from his truth-speaking mouth; The
glory of whom, though dead, is yet to-day, Because of those

discoveries divine Renowned of old, exalted to the sky.

For when saw he that well-nigh everything Which needs of man most urgently require Was ready to hand for mortals, and that life, As far as might be, was established safe, That men were lords in riches, honour, praise, And eminent in goodly fame of sons, And that they yet, O yet, within the home, Still had the anxious heart which vexed life Unpausingly with torments of the mind, And raved perforce with angry complaints, then he, Then he, the master, did perceive that 'twas The vessel itself which worked the bane, and all, However wholesome, which from here or there Was gathered into it, was by that bane Spoilt from within,- in part, because he saw The vessel so cracked and leaky that nowise 'T could ever be filled to brim; in part because He marked how it polluted with foul taste Whate'er it got within itself. So he, The master, then by his truth-speaking words, Purged the breasts of men, and set the bounds Of lust and terror, and exhibited The supreme good whither we all endeavour, And showed the path whereby we might arrive Thereunto by a little cross-cut straight, And what of ills in all affairs of mortals Upsprang and flitted deviously about (Whether by chance or force), since nature thus Had destined; and from out what gates a man Should sally to each combat. And he proved That mostly vainly doth the human race Roll in its bosom the grim waves of care.

For just as children tremble and fear all In the viewless dark, so even we at times Dread in the light so many things that be No whit more fearsome than what children feign, Shuddering, will be upon them in the dark.

This terror then, this darkness of the mind, Not sunrise with its flaring spokes of light, Nor glittering arrows of morning can disperse, But only nature's aspect and her law.

Wherefore the more will I go on to weave In verses this my undertaken task.

6.43

And since I've taught thee that the world's great vaults Are mortal and that sky is fashioned Of frame e'en born in time, and whatsoe'er Therein go on and must perforce go on

The most I have unravelled; what remains Do thou take in, besides; since once for all To climb into that chariot' renowned .

.

Of winds arise; and they appeased are So that all things again...

.

Which were, are changed now, with fury stilled; All other movements through the earth and sky Which mortals gaze upon (O anxious oft In quaking thoughts!), and which abase their minds With dread of deities and press them crushed Down to the earth, because their ignorance Of cosmic causes forces them to yield All things unto the empery of gods And to concede the kingly rule to them.

For even those men who have learned full well That godheads lead a long life free of care, If yet meanwhile they wonder by what plan Things can go on (and chiefly yon high things Observed o'erhead on the ethereal coasts), Again are hurried back unto the fears Of old religion and adopt again Harsh masters, deemed almighty,- wretched men, Unwitting what can be and what cannot, And by what law to each its scope prescribed, Its boundary stone that clings so deep in Time.

Wherefore the more are they borne wandering on By blindfold reason. And, Memmius, unless From out thy mind thou spuest all of this And casteth far from thee all thoughts which be Unworthy gods and alien to their peace, Then often will the holy majesties Of the high gods be harmful unto thee, As by thy

thought degraded,- not, indeed, That essence supreme of gods
could be by this So outraged as in wrath to thirst to seek
Revenge keen; but even because thyself Thou plaguest with the
notion that the gods, Even they, the Calm Ones in serene repose,
Do roll the mighty waves of wrath on wrath; Nor wilt thou enter
with a serene breast Shrines of the gods; nor wilt thou able be In
tranquil peace of mind to take and know Those images which
from their holy bodies Are carried into intellects of men, As the
announcers of their form divine.

What sort of life will follow after this 'Tis thine to see. But that
afar from us Veriest reason may drive such life away, Much yet
remains to be embellished yet In polished verses, albeit hath
issued forth So much from me already; lo, there is The law and
aspect of the sky to be By reason grasped; there are the tempest
times And the bright lightnings to be hymned now- Even what
they do and from what cause soe'er They're borne along- that
thou mayst tremble not, Marking off regions of prophetic skies
For auguries, O foolishly distraught Even as to whence the flying
flame hath come, Or to which half of heaven it turns, or how
Through walled places it hath wound its way, Or, after proving
its dominion there, How it hath speeded forth from thence
again- Whereof nowise the causes do men know, And think
divinities are working there.

Do thou, Calliope, ingenious Muse, Solace of mortals and delight
of gods, Point out the course before me, as I race On to the white
line of the utmost goal, That I may get with signal praise the
crown, With thee my guide!

GREAT METEOROLOGICAL PHENOMENA, ETC.

6.96

And so in first place, then, With thunder are shaken the blue
deeps of heaven, Because the ethereal clouds, scudding aloft,
Together clash, what time 'gainst one another The winds are

battling, For never a sound there comes From out the serene regions of the sky; But wheresoever in a host more dense The clouds foregather, thence more often comes A crash with mighty rumbling. And, again, Clouds cannot be of so condensed a frame As stones and timbers, nor again so fine As mists and flying smoke; for then perforce They'd either fall, borne down by their brute weight, Like stones, or, like the smoke, they'd powerless be To keep their mass, or to retain within Frore snows and storms of hail. And they give forth O'er skiey levels of the spreading world A sound on high, as linen-awning, stretched O'er mighty theatres, gives forth at times A cracking roar, when much 'tis beaten about Betwixt the poles and cross-beams. Sometimes, too, Asunder rent by wanton gusts, it raves And imitates the tearing sound of sheets Of paper- even this kind of noise thou mayst In thunder hear- or sound as when winds whirl With lashings and do buffet about in air A hanging cloth and flying paper-sheets.

For sometimes, too, it chances that the clouds Cannot together crash head-on, but rather Move side-wise and with motions contrary Graze each the other's body without speed, From whence that dry sound grateth on our ears, So long drawn-out, until the clouds have passed From out their close positions.

6.121

And, again, In following wise all things seem oft to quake At shock of heavy thunder, and mightiest walls Of the wide reaches of the upper world There on the instant to have sprung apart, Riven asunder, what time a gathered blast Of the fierce hurricane hath all at once Twisted its way into a mass of clouds, And, there enclosed, ever more and more Compelleth by its spinning whirl the cloud To grow all hollow with a thickened crust Surrounding; for thereafter, when the force And the keen onset of the wind have weakened That crust, lo, then the cloud, to-split in twain, Gives forth a hideous crash with bang and

boom.

No marvel this; since oft a bladder small, Filled up with air, will,
when of sudden burst, Give forth a like large sound.

There's reason, too, Why clouds make sounds, as through them
blow the winds: We see, borne down the sky, oft shapes of
clouds Rough-edged or branched many forky ways; And 'tis the
same, as when the sudden flaws Of north-west wind through the
dense forest blow, Making the leaves to sough and limbs to
crash.

It happens too at times that roused force Of the fierce hurricane
to-rends the cloud, Breaking right through it by a front assault;
For what a blast of wind may do up there Is manifest from facts
when here on earth A blast more gentle yet uptwists tall trees
And sucks them madly from their deepest roots.

Besides, among the clouds are waves, and these Give, as they
roughly break, a rumbling roar; As when along deep streams or
the great sea Breaks the loud surf. It happens, too, whenever
Out from one cloud into another falls The fiery energy of
thunderbolt, That straightaway the cloud, if full of wet,
Extinguishes the fire with mighty noise; As iron, white from the
hot furnaces, Sizzles, when speedily we've plunged its glow
Down the cold water. Further, if a cloud More dry receive the
fire, 'twill suddenly Kindle to flame and burn with monstrous
sound, As if a flame with whirl of winds should range Along the
laurel-tressed mountains far, Upburning with its vast assault
those trees; Nor is there aught that in the crackling flame
Consumes with sound more terrible to man Than Delphic laurel
of Apollo lord.

Oft, too, the multitudinous crash of ice And down-pour of swift
hail gives forth a sound Among the mighty clouds on high; for
when The wind hath packed them close, each mountain mass Of
rain-cloud, there congealed utterly And mixed with hail-stones,

breaks and booms...

.....

6.160

Likewise, it lightens, when the clouds have struck, By their collision, forth the seeds of fire: As if a stone should smite a stone or steel, For light then too leaps forth and fire then scatters The shining sparks. But with our ears we get The thunder after eyes behold the flash, Because forever things arrive the ears More tardily than the eyes- as thou mayst see From this example too: when markest thou Some man far yonder felling a great tree With double-edged ax, it comes to pass Thine eye beholds the swinging stroke before The blow gives forth a sound athrough thine ears: Thus also we behold the flashing ere We hear the thunder, which discharged is At same time with the fire and by same cause, Born of the same collision.

6.173

In following wise The clouds suffuse with leaping light the lands, And the storm flashes with tremulous elan: When the wind hath invaded a cloud, and, whirling there, Hath wrought (as I have shown above) the cloud Into a hollow with a thickened crust, It becomes hot of own velocity: Just as thou seest how motion will o'erheat And set ablaze all objects,- verily A leaden ball, hurtling through length of space, Even melts. Therefore, when this same wind a-fire Hath split black cloud, it scatters the fire-seeds, Which, so to say, have been pressed out by force Of sudden from the cloud;- and these do make The pulsing flashes of flame; thence followeth The detonation which attacks our ears More tardily than aught which comes along Unto the sight of eyeballs. This takes place- As know thou mayst- at times when clouds are dense And one upon the other piled aloft With wonderful upheavings- nor be thou Deceived because we see how broad their base From underneath, and not

how high they tower.

For make thine observations at a time When winds shall bear athwart the horizon's blue Clouds like to mountain-ranges moving on, Or when about the sides of mighty peaks Thou seest them one upon the other massed And burdening downward, anchored in high repose, With the winds sepulchred on all sides round: Then canst thou know their mighty masses, then Canst view their caverns, as if builded there Of beetling crags; which, when the hurricanes In gathered storm have filled utterly, Then, prisoned in clouds, they rave around With mighty roarings, and within those dens Bluster like savage beasts, and now from here, And now from there, send growlings through the clouds, And seeking an outlet, whirl themselves about, And roll from 'mid the clouds the seeds of fire, And heap them multitudinously there, And in the hollow furnaces within Wheel flame around, until from bursted cloud In forked flashes they have gleamed forth.

6.204

Again, from following cause it comes to pass That yon swift golden hue of liquid fire Darts downward to the earth: because the clouds Themselves must hold abundant seeds of fire; For, when they be without all moisture, then They be for most part of a flamy hue And a resplendent. And, indeed, they must Even from the light of sun unto themselves Take multitudinous seeds, and so perforce Redden and pour their bright fires all abroad.

And therefore, when the wind hath driven and thrust, Hath forced and squeezed into one spot these clouds, They pour abroad the seeds of fire pressed out, Which make to flash these colours of the flame.

Likewise, it lightens also when the clouds Grow rare and thin along the sky; for, when The wind with gentle touch unravels them And breaketh asunder as they move, those seeds Which make the lightnings must by nature fall; At such an hour the

horizon lightens round Without the hideous terror of dread
noise And skiey uproar.

6.219

To proceed apace, What sort of nature thunderbolts possess Is
by their strokes made manifest and by The brand-marks of their
searing heat on things, And by the scorched scars exhaling
round The heavy fumes of sulphur. For all these Are marks, O
not of wind or rain, but fire.

Again, they often enkindle even the roofs Of houses and inside
the very rooms With swift flame hold a fierce dominion.

Know thou that nature fashioned this fire Subtler than fires all
other, with minute And dartling bodies,- a fire 'gainst which
there's naught Can in the least hold out: the thunderbolt, The
mighty, passes through the hedging walls Of houses, like to
voices or a shout,- Through stones, through bronze it passes,
and it melts Upon the instant bronze and gold; and makes,
Likewise, the wines sudden to vanish forth, The wine-jars
intact,- because, ye see, Its heat arriving renders loose and
porous Readily all the wine- jar's earthen sides, And winding its
way within, it scattereth The elements primordial of the wine
With speedy dissolution- process which Even in an age the fiery
steam of sun Could not accomplish, however puissant he With
his hot coruscations: so much more Agile and overpowering is
this force.

.....

Now in what manner engendered are these things, How
fashioned of such impetuous strength As to cleave towers
asunder, and houses all To overtopple, and to wrench apart
Timbers and beams, and heroes' monuments To pile in ruins
and upheave amain, And to take breath forever out of men, And
to o'erthrow the cattle everywhere,- Yes, by what force the
lightnings do all this, All this and more, I will unfold to thee, Nor

longer keep thee in mere promises.

6.246

The bolts of thunder, then, must be conceived As all begotten in those crasser clouds Up-piled aloft; for, from the sky serene And from the clouds of lighter density, None are sent forth forever. That 'tis so Beyond a doubt, fact plain to sense declares: To wit, at such a time the densed clouds So mass themselves through all the upper air That we might think that round about all murk Had parted forth from Acheron and filled The mighty vaults of sky- so grievously, As gathers thus the storm-clouds' gruesome might, Do faces of black horror hang on high- When tempest begins its thunderbolts to forge.

Besides, full often also out at sea A blackest thunderhead, like cataract Of pitch hurled down from heaven, and far away Bulging with murkiness, down on the waves Falls with vast uproar, and draws on amain The darkling tempests big with thunderbolts And hurricanes, itself the while so crammed Tremendously with fires and winds, that even Back on the lands the people shudder round And seek for cover. Therefore, as I said, The storm must be conceived as o'er our head Towering most high; for never would the clouds O'erwhelm the lands with such a massy dark, Unless up-built heap on lofty heap, To shut the round sun off. Nor could the clouds, As on they come, engulf with rain so vast As thus to make the rivers overflow And fields to float, if ether were not thus Furnished with lofty-piled clouds. Lo, then, Here be all things fulfilled with winds and fires- Hence the long lightnings and the thunders loud.

For, verily, I've taught thee even now How cavernous clouds hold seeds innumerable Of fiery exhalations, and they must From off the sunbeams and the heat of these Take many still. And so, when that same wind (Which, haply, into one region of the sky Collects those clouds) hath pressed from out the same The many fiery seeds, and with that fire Hath at the same time

inter-mixed itself, O then and there that wind, a whirlwind now,
Deep in the belly of the cloud spins round In narrow confines,
and sharpens there inside In glowing furnaces the thunderbolt.

For in a two-fold manner is that wind Enkindled all: it trembles
into heat Both by its own velocity and by Repeated touch of fire.
Thereafter, when The energy of wind is heated through And the
fierce impulse of the fire hath sped Deeply within, O then the
thunderbolt, Now ripened, so to say, doth suddenly Splinter the
cloud, and the aroused flash Leaps onward, lumining with forky
light All places round. And followeth anon A clap so heavy that
the skiey vaults, As if asunder burst, seem from on high To
engulf the earth. Then fearfully a quake Pervades the lands, and
'long the lofty skies Run the far rumblings. For at such a time
Nigh the whole tempest quakes, shook through and through,
And roused are the roarings,- from which shock Comes such
resounding and abounding rain, That all the murky ether seems
to turn Now into rain, and, as it tumbles down, To summon the
fields back to primeval floods: So big the rains that be sent down
on men By burst of cloud and by the hurricane, What time the
thunder-clap, from burning bolt That cracks the cloud, flies
forth along. At times The force of wind, excited from without,
Smiteth into a cloud already hot With a ripe thunderbolt.

6.295

And when that wind Hath splintered that cloud, then down
there cleaves forthwith Yon fiery coil of flame which still we
call, Even with our fathers' word, a thunderbolt.

The same thing haps toward every other side Whither that force
hath swept. It happens, too, That sometimes force of wind,
though hurtled forth Without all fire, yet in its voyage through
space Igniteth, whilst it comes along, along,- Losing some larger
bodies which cannot Pass, like the others, through the bulks of
air,- And, scraping together out of air itself Some smaller bodies,
carries them along, And these, commingling, by their flight

make fire: Much in the manner as oft a leaden ball Grows hot upon its aery course, the while It loseth many bodies of stark cold And taketh into itself along the air New particles of fire. It happens, too, That force of blow itself arouses fire, When force of wind, a-cold and hurtled forth Without all fire, hath strook somewhere amain- No marvel, because, when with terrific stroke 'Thas smitten, the elements of fiery-stuff Can stream together from out the very wind And, simultaneously, from out that thing Which then and there receives the stroke: as flies The fire when with the steel we hack the stone; Nor yet, because the force of steel's a-cold, Rush the less speedily together there Under the stroke its seeds of radiance hot.

And therefore, thuswise must an object too Be kindled by a thunderbolt, if haply 'Thas been adapt and suited to the flames.

Yet force of wind must not be rashly deemed As altogether and entirely cold- That force which is discharged from on high With such stupendous power; but if 'tis not Upon its course already kindled with fire, It yet arriveth warmed and mixed with heat.

6.323

And, now, the speed and stroke of thunderbolt Is so tremendous, and with glide so swift Those thunderbolts rush on and down, because Their roused force itself collects itself First always in the clouds, and then prepares For the huge effort of their going-forth; Next, when the cloud no longer can retain The increment of their fierce impetus, Their force is pressed out, and therefore flies With impetus so wondrous, like to shots Hurl'd from the powerful Roman catapults.

Note, too, this force consists of elements Both small and smooth, nor is there aught that can With ease resist such nature. For it darts Between and enters through the pores of things; And so it never falters in delay Despite innumerable collisions, but Flies shooting onward with a swift elan.

Next, since by nature always every weight Bears downward, doubled is the swiftness then And that elan is still more wild and dread, When, verily, to weight are added blows, So that more madly and more fiercely then The thunderbolt shakes into shivers all That blocks its path, following on its way.

Then, too, because it comes along, along With one continuing elan, it must Take on velocity anew, anew, Which still increases as it goes, and ever Augments the bolt's vast powers and to the blow Gives larger vigour; for it forces all, All of the thunder's seeds of fire, to sweep In a straight line unto one place, as 'twere,- Casting them one by other, as they roll, Into that onward course. Again, perchance, In coming along, it pulls from out the air Some certain bodies, which by their own blows Enkindle its velocity. And, lo, It comes through objects leaving them unharmed, It goes through many things and leaves them whole, Because the liquid fire flieth along Athrough their pores. And much it does transfix, When these primordial atoms of the bolt Have fallen upon the atoms of these things Precisely where the intertwined atoms Are held together. And, further, easily Brass it unbinds and quickly fuseth gold, Because its force is so minutely made Of tiny parts and elements so smooth That easily they wind their way within, And, when once in, quickly unbind all knots And loosen all the bonds of union there.

6.357

And most in autumn is shaken the house of heaven, The house so studded with the glittering stars, And the whole earth around- most too in spring When flowery times unfold themselves: for, lo, In the cold season is there lack of fire, And winds are scanty in the hot, and clouds Have not so dense a bulk. But when, indeed, The seasons of heaven are betwixt these twain, The divers causes of the thunderbolt Then all concur; for then both cold and heat Are mixed in the cross-seas of the year, So that a discord rises among things And air in vast

tumultuosity Billows, infuriate with the fires and winds- Of which the both are needed by the cloud For fabrication of the thunderbolt.

For the first part of heat and last of cold Is the time of spring; wherefore must things unlike Do battle one with other, and, when mixed, Tumultuously rage. And when rolls round The latest heat mixed with the earliest chill- The time which bears the name of autumn- then Likewise fierce cold-spells wrestle with fierce heats.

On this account these seasons of the year Are nominated "cross-seas."- And no marvel If in those times the thunderbolts prevail And storms are roused turbulent in heaven, Since then both sides in dubious warfare rage Tumultuously, the one with flames, the other With winds and with waters mixed with winds.

6.379

This, this it is, O Memmius, to see through The very nature of fire-fraught thunderbolt; O this it is to mark by what blind force It maketh each effect, and not, O not To unwind Etrurian scrolls oracular, Inquiring tokens of occult will of gods, Even as to whence the flying flame hath come, Or to which half of heaven it turns, or how Through walled places it hath wound its way, Or, after proving its dominion there, How it hath speeded forth from thence amain, Or what the thunderstroke portends of ill From out high heaven. But if Jupiter And other gods shake those refulgent vaults With dread reverberations and hurl fire Whither it pleases each, why smite they not Mortals of reckless and revolting crimes, That such may pant from a transpierced breast Forth flames of the red levin- unto men A drastic lesson?- why is rather he- O he self-conscious of no foul offence- Involved in flames, though innocent, and clasped Up-caught in skiey whirlwind and in fire?

Nay, why, then, aim they at eternal wastes, And spend themselves in vain?- perchance, even so To exercise their arms and strengthen shoulders?

Why suffer they the Father's javelin To be so blunted on the earth? And why Doth he himself allow it, nor spare the same Even for his enemies? O why most oft Aims he at lofty places? Why behold we Marks of his lightnings most on mountain tops?

Then for what reason shoots he at the sea?- What sacrilege have waves and bulk of brine And floating fields of foam been guilty of?

Besides, if 'tis his will that we beware Against the lightning-stroke, why feareth he To grant us power for to behold the shot?

And, contrariwise, if wills he to o'erwhelm us, Quite off our guard, with fire, why thunders he Off in yon quarter, so that we may shun?

Why rouseth he beforehand darkling air And the far din and rumblings? And O how Canst thou believe he shoots at one same time Into diverse directions? Or darest thou Contend that never hath it come to pass That divers strokes have happened at one time?

But oft and often hath it come to pass, And often still it must, that, even as showers And rains o'er many regions fall, so too Dart many thunderbolts at one same time.

Again, why never hurtles Jupiter A bolt upon the lands nor pours abroad Clap upon clap, when skies are cloudless all?

Or, say, doth he, so soon as ever the clouds Have come thereunder, then into the same Descend in person, that from thence he may Near-by decide upon the stroke of shaft?

And, lastly, why, with devastating bolt Shakes he asunder holy shrines of gods And his own thrones of splendour, and to-breaks The well-wrought idols of divinities, And robs of glory his own images By wound of violence?

6.423

But to return apace, Easy it is from these same facts to know In just what wise those things (which from their sort The Greeks have named "bellows") do come down, Discharged from on high, upon the seas.

For it haps that sometimes from the sky descends Upon the seas a column, as if pushed, Round which the surges seethe, tremendously Aroused by puffing gusts; and whatso'er Of ships are caught within that tumult then Come into extreme peril, dashed along.

This haps when sometimes wind's aroused force Can't burst the cloud it tries to, but down-weighs That cloud, until 'tis like a column from sky Upon the seas pushed downward- gradually, As if a Somewhat from on high were shoved By fist and nether thrust of arm, and lengthened Far to the waves. And when the force of wind Hath rived this cloud, from out the cloud it rushes Down on the seas, and starts among the waves A wondrous seething, for the eddying whirl Descends and downward draws along with it That cloud of ductile body. And soon as ever 'Thas shoved unto the levels of the main That laden cloud, the whirl suddenly then Plunges its whole self into the waters there And rouses all the sea with monstrous roar, Constraining it to seethe. It happens too That very vortex of the wind involves Itself in clouds, scraping from out the air The seeds of cloud, and counterfeits, as 'twere, The "bellows" pushed from heaven. And when this shape Hath dropped upon the lands and burst apart, It belches forth immeasurable might Of whirlwind and of blast. Yet since 'tis formed At most but rarely, and on land the hills Must block its way, 'tis seen more oft out there On the

broad prospect of the level main Along the free horizons.

6.443

Into being The clouds condense, when in this upper space Of the high heaven have gathered suddenly, As round they flew, unnumbered particles- World's rougher ones, which can, though interlinked With scanty couplings, yet be fastened firm, The one on other caught. These particles First cause small clouds to form; and, thereupon, These catch the one on other and swarm in a flock And grow by their conjoining, and by winds Are borne along, along, until collects The tempest fury. Happens, too, the nearer The mountain summits neighbour to the sky, The more unceasingly their far crags smoke With the thick darkness of swart cloud, because When first the mists do form, ere ever the eyes Can there behold them (tenuous as they be), The carrier-winds will drive them up and on Unto the topmost summits of the mountain; And then at last it happens, when they be In vaster throng upgathered, that they can By this very condensation lie revealed, And that at same time they are seen to surge From very vertex of the mountain up Into far ether. For very fact and feeling, As we up-climb high mountains, proveth clear That windy are those upward regions free.

6.470

Besides, the clothes hung-out along the shore, When in they take the clinging moisture, prove That nature lifts from over all the sea Unnumbered particles. Whereby the more 'Tis manifest that many particles Even from the salt upheavings of the main Can rise together to augment the bulk Of massed clouds. For moistures in these twain Are near akin. Besides, from out all rivers, As well as from the land itself, we see Up-rising mists and steam, which like a breath Are forced out from them and borne aloft, To curtain heaven with their murk, and make, By slow foregathering, the skiey clouds.

For, in addition, lo, the heat on high Of constellated ether
burdens down Upon them, and by sort of condensation Weaveth
beneath the azure firmament The reek of darkling cloud. It
happens, too, That hither to the skies from the Beyond Do come
those particles which make the clouds And flying thunderheads.
For I have taught That this their number is innumerable And
infinite the sum of the Abyss, And I have shown with what
stupendous speed Those bodies fly and how they're wont to
pass Amain through incommunicable space.

Therefore, 'tis not exceeding strange, if oft In little time
tempest and darkness cover With bulking thunderheads
hanging on high The oceans and the lands, since everywhere
Through all the narrow tubes of yonder ether, Yea, so to speak,
through all the breathing-holes Of the great upper-world
encompassing, There be for the primordial elements Exits and
entrances.

6.495

Now come, and how The rainy moisture thickens into being In
the lofty clouds, and how upon the lands 'Tis then discharged in
down-pour of large showers, I will unfold. And first
triumphantly Will I persuade thee that up-rise together, With
clouds themselves, full many seeds of water From out all things,
and that they both increase- Both clouds and water which is in
the clouds- In like proportion, as our frames increase In like
proportion with our blood, as well As sweat or any moisture in
our members.

Besides, the clouds take in from time to time Much moisture
risen from the broad marine,- Whilst the winds bear them o'er
the mighty sea, Like hanging fleeces of white wool. Thuswise,
Even from all rivers is there lifted up Moisture into the clouds.
And when therein The seeds of water so many in many ways
Have come together, augmented from all sides, The
close-jammed clouds then struggle to discharge Their

rain-storms for a two-fold reason: lo, The wind's force crowds them, and the very excess Of storm-clouds (massed in a vaster throng)

Giveth an urge and pressure from above And makes the rains out-pour. Besides when, too, The clouds are winnowed by the winds, or scattered Smitten on top by heat of sun, they send Their rainy moisture, and distil their drops, Even as the wax, by fiery warmth on top, Wasteth and liquefies abundantly.

But comes the violence of the bigger rains When violently the clouds are weighted down Both by their cumulated mass and by The onset of the wind. And rains are wont To endure awhile and to abide for long, When many seeds of waters are aroused, And clouds on clouds and racks on racks outstream In piled layers and are borne along From every quarter, and when all the earth Smoking exhales her moisture. At such a time When sun with beams amid the tempest-murk Hath shone against the showers of black rains, Then in the swart clouds there emerges bright The radiance of the bow.

And as to things Not mentioned here which of themselves do grow Or of themselves are gendered, and all things Which in the clouds condense to being- all, Snow and the winds, hail and the hoar-frosts chill, And freezing, mighty force- of lakes and pools The mighty hardener, and mighty check Which in the winter curbeth everywhere The rivers as they go- 'tis easy still, Soon to discover and with mind to see How they all happen, whereby gendered, When once thou well hast understood just what Functions have been vouchsafed from of old Unto the procreant atoms of the world.

6.535

Now come, and what the law of earthquakes is Hearken, and first of all take care to know That the under-earth, like to the earth around us, Is full of windy caverns all about; And many a pool and many a grim abyss She bears within her bosom, ay, and

cliffs And jagged scarps; and many a river, hid Beneath her chine, rolls rapidly along Its billows and plunging boulders. For clear fact Requires that earth must be in every part Alike in constitution. Therefore, earth, With these things underneath affixed and set, Trembleth above, jarred by big down-tumblings, When time hath undermined the huge caves, The subterranean. Yea, whole mountains fall, And instantly from spot of that big jar There quiver the tremors far and wide abroad.

And with good reason: since houses on the street Begin to quake throughout, when jarred by a cart Of no large weight; and, too, the furniture Within the house up-bounds, when a paving-block Gives either iron rim of the wheels a jolt.

It happens, too, when some prodigious bulk Of age-worn soil is rolled from mountain slopes Into tremendous pools of water dark, That the reeling land itself is rocked about By the water's undulations; as a basin Sometimes won't come to rest until the fluid Within it ceases to be rocked about In random undulations.

And besides, When subterranean winds, up-gathered there In the hollow deeps, bulk forward from one spot, And press with the big urge of mighty powers Against the lofty grottos, then the earth Bulks to that quarter whither push amain The headlong winds. Then all the builded houses Above ground- and the more, the higher up-reared Unto the sky- lean ominously, careening Into the same direction; and the beams, Wrenched forward, over-hang, ready to go.

Yet dread men to believe that there awaits The nature of the mighty world a time Of doom and cataclysm, albeit they see So great a bulk of lands to bulge and break!

And lest the winds blew back again, no force Could rein things in nor hold from sure career On to disaster. But now because those winds Blow back and forth in alternation strong, And, so to say, rallying charge again, And then repulsed retreat, on this

account Earth oftener threatens than she brings to pass
Collapses dire. For to one side she leans, Then back she sways;
and after tottering Forward, recovers then her seats of poise.

Thus, this is why whole houses rock, the roofs More than the
middle stories, middle more Than lowest, and the lowest least of
all.

6.577

Arises, too, this same great earth-quaking, When wind and some
prodigious force of air, Collected from without or down within
The old telluric deeps, have hurled themselves Amain into those
caverns sub-terrene, And there at first tumultuously chafe
Among the vasty grottos, borne about In mad rotations, till
their lashed force Aroused out-bursts abroad, and then and
there, Riving the deep earth, makes a mighty chasm- What once
in Syrian Sidon did befall, And once in Peloponnesian Aegium,
Twain cities which such out-break of wild air And earth's
convulsion, following hard upon, O'erthrew of old. And many a
walled town, Besides, hath fall'n by such omnipotent
Convulsions on the land, and in the sea Engulfed hath sunken
many a city down With all its populace. But if, indeed, They
burst not forth, yet is the very rush Of the wild air and
fury-force of wind Then dissipated, like an ague-fit, Through the
innumerable pores of earth, To set her all a-shake- even as a
chill, When it hath gone into our marrow-bones, Sets us
convulsively, despite ourselves, A-shivering and a-shaking.
Therefore, men With two-fold terror bustle in alarm Through
cities to and fro: they fear the roofs Above the head; and
underfoot they dread The caverns, lest the nature of the earth
Suddenly rend them open, and she gape, Herself asunder, with
tremendous maw, And, all confounded, seek to chock it full
With her own ruins. Let men, then, go on Feigning at will that
heaven and earth shall be Inviolable, entrusted evermore To an
eternal weal: and yet at times The very force of danger here at

hand Prods them on some side with this goad of fear- This among others- that the earth, withdrawn Abruptly from under their feet, be hurried down, Down into the abyss, and the Sum-of-Things Be following after, utterly fordone, Till be but wrack and wreckage of a world.

.....

EXTRAORDINARY AND PARADOXICAL TELLURIC PHENOMENA

6.608

In chief, men marvel nature renders not Bigger and bigger the bulk of ocean, since So vast the down-rush of the waters be, And every river out of every realm Cometh thereto; and add the random rains And flying tempests, which spatter every sea And every land bedew; add their own springs: Yet all of these unto the ocean's sum Shall be but as the increase of a drop.

Wherefore 'tis less a marvel that the sea, The mighty ocean, increaseth not. Besides, Sun with his heat draws off a mighty part: Yea, we behold that sun with burning beams To dry our garments dripping all with wet; And many a sea, and far out-spread beneath, Do we behold. Therefore, however slight The portion of wet that sun on any spot Culls from the level main, he still will take From off the waves in such a wide expanse Abundantly. Then, further, also winds, Sweeping the level waters, can bear off A mighty part of wet, since we behold Oft in a single night the highways dried By winds, and soft mud crusted o'er at dawn.

Again, I've taught thee that the clouds bear off Much moisture too, up-taken from the reaches Of the mighty main, and sprinkle it about O'er all the zones, when rain is on the lands And winds convey the aery racks of vapour.

Lastly, since earth is porous through her frame, And neighbours
on the seas, girdling their shores, The water's wet must seep
into the lands From briny ocean, as from lands it comes Into the
seas. For brine is filtered off, And then the liquid stuff seeps
back again And all re-poureth at the river-heads, Whence in
fresh-water currents it returns Over the lands, adown the
channels which Were cleft erstwhile and erstwhile bore along
The liquid-footed floods.

6.639

And now the cause Whereby athrough the throat of Aetna's
Mount Such vast tornado-fires out-breathe at times, I will
unfold: for with no middling might Of devastation the flamy
tempest rose And held dominion in Sicilian fields: Drawing upon
itself the upturned faces Of neighbouring clans, what time they
saw afar The skiey vaults a-fume and sparkling all, And filled
their bosoms with dread anxiety Of what new thing nature were
travailing at.

In these affairs it much behooveth thee To look both wide and
deep, and far abroad To peer to every quarter, that thou mayst
Remember how boundless is the Sum-of-Things, And mark how
infinitely small a part Of the whole Sum is this one sky of ours-
O not so large a part as is one man Of the whole earth. And
plainly if thou viewest This cosmic fact, placing it square in
front, And plainly understandest, thou wilt leave Wondering at
many things. For who of us Wondereth if some one gets into his
joints A fever, gathering head with fiery heat, Or any other
dolorous disease Along his members? For anon the foot Grows
blue and bulbous; often the sharp twinge Seizes the teeth,
attacks the very eyes; Out-breaks the sacred fire, and, crawling
on Over the body, burneth every part It seizeth on, and works
its hideous way Along the frame. No marvel this, since, lo, Of
things innumerable be seeds enough, And this our earth and sky
do bring to us Enough of bane from whence can grow the

strength Of maladies uncounted. Thuswise, then, We must suppose to all the sky and earth Are ever supplied from out the infinite All things, O all in stores enough whereby The shaken earth can of a sudden move, And fierce typhoons can over sea and lands Go tearing on, and Aetna's fires o'erflow, And heaven become a flame-burst. For that, too, Happens at times, and the celestial vaults Glow into fire, and rainy tempests rise In heavier congregation, when, percase, The seeds of water have foregathered thus From out the infinite. "Aye, but passing huge The fiery turmoil of that conflagration!"

So sayst thou; well, huge many a river seems To him that erstwhile ne'er a larger saw; Thus, huge seems tree or man; and everything Which mortal sees the biggest of each class, That he imagines to be "huge"; though yet All these, with sky and land and sea to boot, Are all as nothing to the sum entire Of the all-Sum.

6.680

But now I will unfold At last how yonder suddenly angered flame Out-blows abroad from vasty furnaces Aetnaean. First, the mountain's nature is All under-hollow, propped about, about With caverns of basaltic piers. And, lo, In all its grottos be there wind and air- For wind is made when air hath been uproused By violent agitation. When this air Is heated through and through, and, raging round, Hath made the earth and all the rocks it touches Horribly hot, and hath struck off from them Fierce fire of swiftest flame, it lifts itself And hurtles thus straight upwards through its throat Into high heav'n, and thus bears on afar Its burning blasts and scattereth afar Its ashes, and rolls a smoke of pitchy murk And heaveth the while boulders of wondrous weight- Leaving no doubt in thee that 'tis the air's Tumultuous power. Besides, in mighty part, The sea there at the roots of that same mount Breaks its old billows and sucks back its surf.

And grottos from the sea pass in below Even to the bottom of
the mountain's throat.

Herethrough thou must admit there go...

.....

And the conditions force [the water and air]

Deeply to penetrate from the open sea, And to out-blow abroad,
and to up-bear Thereby the flame, and to up-cast from deeps
The boulders, and to rear the clouds of sand.

For at the top be "bowls," as people there Are wont to name
what we at Rome do call The throats and mouths.

6.703

There be, besides, some thing Of which 'tis not enough one only
cause To state- but rather several, whereof one Will be the true:
lo, if thou shouldst espy Lying afar some fellow's lifeless corse,
'Twere meet to name all causes of a death, That cause of his
death might thereby be named: For prove thou mayst he
perished not by steel, By cold, nor even by poison nor disease,
Yet somewhat of this sort hath come to him We know- And thus
we have to say the same In divers cases.

Toward the summer, Nile Waxeth and overfloweth the
champaign, Unique in all the landscape, river sole Of the
Aegyptians. In mid-season heats Often and oft he waters Aegypt
o'er, Either because in summer against his mouths Come those
northwinds which at that time of year Men name the Etesian
blasts, and, blowing thus Upstream, retard, and, forcing back his
waves, Fill him o'erfull and force his flow to stop.

For out of doubt these blasts which driven be From icy
constellations of the pole Are borne straight up the river. Comes
that river From forth the sultry places down the south, Rising
far up in midmost realm of day, Among black generations of
strong men With sun-baked skins. 'Tis possible, besides, That a

big bulk of piled sand may bar His mouths against his onward waves, when sea, Wild in the winds, tumbles the sand to inland; Whereby the river's outlet were less free, Likewise less headlong his descending floods.

It may be, too, that in this season rains Are more abundant at its fountain head, Because the Etesian blasts of those northwinds Then urge all clouds into those inland parts.

And, soothly, when they're thus foregathered there, Urged yonder into midmost realm of day, Then, crowded against the lofty mountain sides, They're massed and powerfully pressed. Again, Perchance, his waters wax, O far away, Among the Aethiopians' lofty mountains, When the all-beholding sun with thawing beams Drives the white snows to flow into the vales.

6.738

Now come; and unto thee I will unfold, As to the Birdless spots and Birdless tarns, What sort of nature they are furnished with.

First, as to name of "birdless,"- that derives From very fact, because they noxious be Unto all birds. For when above those spots In horizontal flight the birds have come, Forgetting to oar with wings, they furl their sails, And, with down-drooping of their delicate necks, Fall headlong into earth, if haply such The nature of the spots, or into water, If haply spreads thereunder Birdless tarn.

Such spot's at Cumae, where the mountains smoke, Charged with the pungent sulphur, and increased With steaming springs. And such a spot there is Within the walls of Athens, even there On summit of Acropolis, beside Fane of Tritonian Pallas bountiful, Where never cawing crows can wing their course, Not even when smoke the altars with good gifts,- But evermore they flee- yet not from wrath Of Pallas, grieved at that espial old, As poets of the Greeks have sung the tale; But very nature of the place compels.

In Syria also- as men say- a spot Is to be seen, where also
four-foot kinds, As soon as ever they've set their steps within,
Collapse, o'ercome by its essential power, As if there
slaughtered to the under-gods.

Lo, all these wonders work by natural law, And from what
causes they are brought to pass The origin is manifest; so, haply,
Let none believe that in these regions stands The gate of Orcus,
nor us then suppose, Haply, that thence the under-gods draw
down Souls to dark shores of Acheron- as stags, The
wing-footed, are thought to draw to light, By sniffing nostrils,
from their dusky lairs The wriggling generations of wild snakes.

How far removed from true reason is this, Perceive thou
straight; for now I'll try to say Somewhat about the very fact.

6.769

And, first, This do I say, as oft I've said before: In earth are
atoms of things of every sort; And know, these all thus rise from
out the earth- Many life-giving which be good for food, And
many which can generate disease And hasten death, O many
primal seeds Of many things in many modes- since earth
Contains them mingled and gives forth discrete.

And we have shown before that certain things Be unto certain
creatures suited more For ends of life, by virtue of a nature, A
texture, and primordial shapes, unlike For kinds alike. Then too
'tis thine to see How many things oppressive be and foul To
man, and to sensation most malign: Many meander miserably
through ears; Many in-wind athrough the nostrils too, Malign
and harsh when mortal draws a breath; Of not a few must one
avoid the touch; Of not a few must one escape the sight; And
some there be all loathsome to the taste; And many, besides,
relax the languid limbs Along the frame, and undermine the
soul In its abodes within. To certain trees There hath been given
so dolorous a shade That often they gender achings of the head,
If one but be beneath, outstretched on the sward.

There is, again, on Helicon's high hills A tree that's wont to kill a man outright By fetid odour of its very flower.

And when the pungent stench of the night-lamp, Extinguished but a moment since, assails The nostrils, then and there it puts to sleep A man afflicted with the falling sickness And foamings at the mouth. A woman, too, At the heavy castor drowns back in chair, And from her delicate fingers slips away Her gaudy handiwork, if haply she Hath got the whiff at menstruation-time.

Once more, if thou delayest in hot baths, When thou art over-full, how readily From stool in middle of the steaming water Thou tumblest in a fit! How readily The heavy fumes of charcoal wind their way Into the brain, unless beforehand we Of water 've drunk. But when a burning fever, O'ermastering man, hath seized upon his limbs, Then odour of wine is like a hammer-blow.

And seest thou not how in the very earth Sulphur is gendered and bitumen thickens With noisome stench?- What direful stench, too, Scaptensula out-breathes from down below, When men pursue the veins of silver and gold, With pick-axe probing round the hidden realms Deep in the earth?- Or what of deadly bane The mines of gold exhale? O what a look, And what a ghastly hue they give to men!

And seest thou not, or hearest, how they're wont In little time to perish, and how fail The life-stores in those folk whom mighty power Of grim necessity confineth there In such a task? Thus, this telluric earth Out-streams with all these dread effluvia And breathes them out into the open world And into the visible regions under heaven.

6.818

Thus, too, those Birdless places must up-send An essence bearing death to winged things, Which from the earth rises into

the breezes To poison part of skiey space, and when Thither the winged is on pennons borne, There, seized by the unseen poison, 'tis ensnared, And from the horizontal of its flight Drops to the spot whence sprang the effluvium.

And when 'thas there collapsed, then the same power Of that effluvium takes from all its limbs The relics of its life. That power first strikes The creatures with a wildering dizziness, And then thereafter, when they're once down-fallen Into the poison's very fountains, then Life, too, they vomit out perforce, because So thick the stores of bane around them fume.

Again, at times it happens that this power, This exhalation of the Birdless places, Dispels the air betwixt the ground and birds, Leaving well-nigh a void. And thither when In horizontal flight the birds have come, Forthwith their buoyancy of pennons limps, All useless, and each effort of both wings Falls out in vain. Here, when without all power To buoy themselves and on their wings to lean, Lo, nature constrains them by their weight to slip Down to the earth, and lying prostrate there Along the well-nigh empty void, they spend Their souls through all the openings of their frame.

.....

6.840

Further, the water of wells is colder then At summer time, because the earth by heat Is rarefied, and sends abroad in air Whatever seeds it peradventure have Of its own fiery exhalations.

The more, then, the telluric ground is drained Of heat, the colder grows the water hid Within the earth. Further, when all the earth Is by the cold compressed, and thus contracts And, so to say, concretes, it happens, lo, That by contracting it expresses then Into the wells what heat it bears itself.

'Tis said at Hammon's fane a fountain is, In daylight cold and hot in time of night.

This fountain men be-wonder over-much, And think that suddenly it seethes in heat By intense sun, the subterranean, when Night with her terrible murk hath cloaked the lands- What's not true reasoning by a long remove: I' faith when sun o'erhead, touching with beams An open body of water, had no power To render it hot upon its upper side, Though his high light possess such burning glare, How, then, can he, when under the gross earth, Make water boil and glut with fiery heat?- And, specially, since scarcely potent he Through hedging walls of houses to inject His exhalations hot, with ardent rays.

What, then's, the principle? Why, this, indeed: The earth about that spring is porous more Than elsewhere the telluric ground, and be Many the seeds of fire hard by the water; On this account, when night with dew-fraught shades Hath whelmed the earth, anon the earth deep down Grows chill, contracts; and thuswise squeezes out Into the spring what seeds she holds of fire (As one might squeeze with fist), which render hot The touch and steam of the fluid. Next, when sun, Up-risen, with his rays has split the soil And rarefied the earth with waxing heat, Again into their ancient abodes return The seeds of fire, and all the Hot of water Into the earth retires; and this is why The fountain in the daylight gets so cold.

Besides, the water's wet is beat upon By rays of sun, and, with the dawn, becomes Rarer in texture under his pulsing blaze; And, therefore, whatso seeds it holds of fire It renders up, even as it renders oft The frost that it contains within itself And thaws its ice and looseneth the knots.

6.879

There is, moreover, a fountain cold in kind That makes a bit of tow (above it held)

Take fire forthwith and shoot a flame; so, too, A pitch-pine torch will kindle and flare round Along its waves, wherever 'tis impelled Afloat before the breeze. No marvel, this: Because full many seeds of heat there be Within the water; and, from earth itself Out of the deeps must particles of fire Athrough the entire fountain surge aloft, And speed in exhalations into air Forth and abroad (yet not in numbers enow As to make hot the fountain). And, moreo'er, Some force constrains them, scattered through the water, Forthwith to burst abroad, and to combine In flame above. Even as a fountain far There is at Aradus amid the sea, Which bubbles out sweet water and disparts From round itself the salt waves; and, behold, In many another region the broad main Yields to the thirsty mariners timely help, Belching sweet waters forth amid salt waves.

Just so, then, can those seeds of fire burst forth Athrough that other fount, and bubble out Abroad against the bit of tow; and when They there collect or cleave unto the torch, Forthwith they readily flash aflame, because The tow and torches, also, in themselves Have many seeds of latent fire. Indeed, And seest thou not, when near the nightly lamps Thou bringest a flaxen wick, extinguished A moment since, it catches fire before 'Thas touched the flame, and in same wise a torch?

And many another object flashes aflame When at a distance, touched by heat alone, Before 'tis steeped in veritable fire.

This, then, we must suppose to come to pass In that spring also.

6.906

Now to other things!

And I'll begin to treat by what decree Of nature it came to pass that iron can be By that stone drawn which Greeks the magnet call After the country's name (its origin Being in country of Magnesian folk).

This stone men marvel at; and sure it oft Maketh a chain of rings, depending, lo, From off itself! Nay, thou mayest see at times Five or yet more in order dangling down And swaying in the delicate winds, whilst one Depends from other, cleaving to under-side, And ilk one feels the stone's own power and bonds- So over-masteringly its power flows down.

In things of this sort, much must be made sure Ere thou account of the thing itself canst give, And the approaches roundabout must be; Wherefore the more do I exact of thee A mind and ears attent.

First, from all things We see soever, evermore must flow, Must be discharged and strewn about, about, Bodies that strike the eyes, awaking sight.

From certain things flow odours evermore, As cold from rivers, heat from sun, and spray From waves of ocean, eater-out of walls Along the coasts. Nor ever cease to seep The varied echoings athrough the air.

Then, too, there comes into the mouth at times The wet of a salt taste, when by the sea We roam about; and so, whene'er we watch The wormwood being mixed, its bitter stings.

To such degree from all things is each thing Borne streamingly along, and sent about To every region round; and nature grants Nor rest nor respite of the onward flow, Since 'tis incessantly we feeling have, And all the time are suffered to descry And smell all things at hand, and hear them sound.

6.936

Now will I seek again to bring to mind How porous a body all things have- a fact Made manifest in my first canto, too.

For, truly, though to know this doth import For many things, yet for this very thing On which straightway I'm going to discourse, 'Tis needful most of all to make it sure That naught's

at hand but body mixed with void.

A first ensample: in grottos, rocks o'erhead Sweat moisture and distil the oozy drops; Likewise, from all our body seeps the sweat; There grows the beard, and along our members all And along our frame the hairs. Through all our veins Disseminates the foods, and gives increase And aliment down to the extreme parts, Even to the tiniest finger-nails. Likewise, Through solid bronze the cold and fiery heat We feel to pass; likewise, we feel them pass Through gold, through silver, when we clasp in hand The brimming goblets. And, again, there flit Voices through houses' hedging walls of stone; Odour seeps through, and cold, and heat of fire That's wont to penetrate even strength of iron.

Again, where corselet of the sky girds round

And at same time, some Influence of bane, When from Beyond 'thas stolen into [our world].

And tempests, gathering from the earth and sky, Back to the sky and earth absorbed retire- With reason, since there's naught that's fashioned not With body porous.

6.959

Furthermore, not all The particles which be from things thrown off Are furnished with same qualities for sense, Nor be for all things equally adapt.

A first ensample: the sun doth bake and parch The earth; but ice he thaws, and with his beams Compels the lofty snows, up-reared white Upon the lofty hills, to waste away; Then, wax, if set beneath the heat of him, Melts to a liquid. And the fire, likewise, Will melt the copper and will fuse the gold, But hides and flesh it shrivels up and shrinks.

The water hardens the iron just off the fire, But hides and flesh (made hard by heat) it softens.

The oleaster-tree as much delights The bearded she-goats,
verily as though 'Twere nectar-steeped and shed ambrosia;
Than which is naught that burgeons into leaf More bitter food
for man. A hog draws back For marjoram oil, and every unguent
fears Fierce poison these unto the bristled hogs, Yet unto us
from time to time they seem, As 'twere, to give new life. But,
contrariwise, Though unto us the mire be filth most foul, To
hogs that mire doth so delightful seem That they with
wallowing from belly to back Are never cloyed.

6.979

A point remains, besides, Which best it seems to tell of, ere I go
To telling of the fact at hand itself.

Since to the varied things assigned be The many pores, those
pores must be diverse In nature one from other, and each have
Its very shape, its own direction fixed.

And so, indeed, in breathing creatures be The several senses, of
which each takes in Unto itself, in its own fashion ever, Its own
peculiar object. For we mark How sounds do into one place
penetrate, Into another flavours of all juice, And savour of smell
into a third. Moreover, One sort through rocks we see to seep,
and, lo, One sort to pass through wood, another still Through
gold, and others to go out and off Through silver and through
glass. For we do see Through some pores form-and-look of
things to flow, Through others heat to go, and some things still
To speedier pass than others through same pores.

Of verity, the nature of these same paths, Varying in many
modes (as aforesaid)

Because of unlike nature and warp and woof Of cosmic things,
constrains it so to be.

Wherefore, since all these matters now have been Established
and settled well for us As premises prepared, for what remains
'Twill not be hard to render clear account By means of these,

and the whole cause reveal Whereby the magnet lures the strength of iron.

6.1002

First, stream there must from off the lode-stone seeds
Innumerable, a very tide, which smites By blows that air
asunder lying betwixt The stone and iron. And when is emptied
out This space, and a large place between the two Is made a
void, forthwith the primal germs Of iron, headlong slipping, fall
conjoined Into the vacuum, and the ring itself By reason thereof
doth follow after and go Thuswise with all its body. And naught
there is That of its own primordial elements More thoroughly
knit or tighter linked coheres Than nature and cold roughness
of stout iron.

Wherefore, 'tis less a marvel what I said, That from such
elements no bodies can From out the iron collect in larger
throng And be into the vacuum borne along, Without the ring
itself do follow after.

And this it does, and followeth on until 'Thath reached the
stone itself and cleaved to it By links invisible. Moreover,
likewise, The motion's assisted by a thing of aid (Whereby the
process easier becomes),- Namely, by this: as soon as rarer
grows That air in front of the ring, and space between Is
emptied more and made a void, forthwith It happens all the air
that lies behind Conveys it onward, pushing from the rear.

For ever doth the circumambient air Drub things unmoved, but
here it pushes forth The iron, because upon one side the space
Lies void and thus receives the iron in.

This air, whereof I am reminding thee, Winding athrough the
iron's abundant pores So subtly into the tiny parts thereof,
Shoves it and pushes, as wind the ship and sails.

The same doth happen in all directions forth: From whatso side
a space is made a void, Whether from crosswise or above,

forthwith The neighbour particles are borne along Into the vacuum; for of verity, They're set a-going by poundings from elsewhere, Nor by themselves of own accord can they Rise upwards into the air. Again, all things Must in their framework hold some air, because They are of framework porous, and the air Encompasses and borders on all things.

Thus, then, this air in iron so deeply stored Is tossed evermore in vexed motion, And therefore drubs upon the ring sans doubt And shakes it up inside....

.....

In sooth, that ring is thither borne along To where 'thas once plunged headlong- thither, lo, Unto the void whereto it took its start.

6.1042

It happens, too, at times that nature of iron Shrinks from this stone away, accustomed By turns to flee and follow. Yea, I've seen Those Samothracian iron rings leap up, And iron filings in the brazen bowls Seethe furiously, when underneath was set The magnet stone. So strongly iron seems To crave to flee that rock. Such discord great Is gendered by the interposed brass, Because, forsooth, when first the tide of brass Hath seized upon and held possession of The iron's open passage-ways, thereafter Cometh the tide of the stone, and in that iron Findeth all spaces full, nor now hath holes To swim through, as before. 'Tis thus constrained With its own current 'gainst the iron's fabric To dash and beat; by means whereof it spues Forth from itself- and through the brass stirs up- The things which otherwise without the brass It sucks into itself. In these affairs Marvel thou not that from this stone the tide Prevails not likewise other things to move With its own blows: for some stand firm by weight, As gold; and some cannot be moved forever, Because so porous in their framework they That there the tide streams through without a break, Of which sort stuff of wood is seen to be.

Therefore, when iron (which lies between the two)

Hath taken in some atoms of the brass, Then do the streams of
that Magnesian rock Move iron by their smittings.

6.1065

Yet these things Are not so alien from others, that I Of this same
sort am ill prepared to name Ensamples still of things
exclusively To one another adapt. Thou seest, first, How lime
alone cementeth stones: how wood Only by glue-of-bull with
wood is joined- So firmly too that oftener the boards Crack open
along the weakness of the grain Ere ever those taurine bonds
will lax their hold.

The vine-born juices with the water-springs Are bold to mix,
though not the heavy pitch With the light oil-of-olive. And
purple dye Of shell-fish so uniteth with the wool's Body alone
that it cannot be ta'en Away forever- nay, though thou gavest
toil To restore the same with the Neptunian flood, Nay, though
all ocean willed to wash it out With all its waves. Again, gold
unto gold Doth not one substance bind, and only one?

And is not brass by tin joined unto brass?

And other ensamples how many might one find!

What then? Nor is there unto thee a need Of such long ways and
roundabout, nor boots it For me much toil on this to spend.
More fit It is in few words briefly to embrace Things many:
things whose textures fall together So mutually adapt, that
cavities To solids correspond, these cavities Of this thing to the
solid parts of that, And those of that to solid parts of this- Such
joinings are the best. Again, some things Can be the one with
other coupled and held, Linked by hooks and eyes, as 'twere;
and this Seems more the fact with iron and this stone.

6.1090

Now, of diseases what the law, and whence The Influence of
bane upgathering can Upon the race of man and herds of cattle

Kindle a devastation fraught with death, I will unfold. And, first, I've taught above That seeds there be of many things to us Life-giving, and that, contrariwise, there must Fly many round bringing disease and death.

When these have, haply, chanced to collect And to derange the atmosphere of earth, The air becometh baneful. And, lo, all That Influence of bane, that pestilence, Or from Beyond down through our atmosphere, Like clouds and mists, descends, or else collects From earth herself and rises, when, a-soak And beat by rains unseasonable and suns, Our earth hath then contracted stench and rot.

Seest thou not, also, that whoso arrive In region far from fatherland and home Are by the strangeness of the clime and waters Distempered?- since conditions vary much.

For in what else may we suppose the clime Among the Britons to differ from Aegypt's own (Where totters awry the axis of the world), Or in what else to differ Pontic clime From Gades' and from climes adown the south, On to black generations of strong men With sun-baked skins? Even as we thus do see Four climes diverse under the four main-winds And under the four main-regions of the sky, So, too, are seen the colour and face of men Vastly to disagree, and fixed diseases To seize the generations, kind by kind: There is the elephant-disease which down In midmost Aegypt, hard by streams of Nile, Engendered is- and never elsewhere.

In Attica the feet are oft attacked, And in Achaean lands the eyes. And so The divers spots to divers parts and limbs Are noxious; 'tis a variable air That causes this. Thus when an atmosphere, Alien by chance to us, begins to heave, And noxious airs begin to crawl along, They creep and wind like unto mist and cloud, Slowly, and everything upon their way They disarrange and force to change its state.

It happens, too, that when they've come at last Into this atmosphere of ours, they taint And make it like themselves and alien.

Therefore, asudden this devastation strange, This pestilence, upon the waters falls, Or settles on the very crops of grain Or other meat of men and feed of flocks.

Or it remains a subtle force, suspense In the atmosphere itself; and when therefrom We draw our inhalations of mixed air, Into our body equally its bane Also we must suck in. In manner like, Oft comes the pestilence upon the kine, And sickness, too, upon the sluggish sheep.

Nor aught it matters whether journey we To regions adverse to ourselves and change The atmospheric cloak, or whether nature Herself import a tainted atmosphere To us or something strange to our own use Which can attack us soon as ever it come.

THE PLAGUE ATHENS

6.1138

'Twas such a manner of disease, 'twas such Mortal miasma in Cecropian lands Whilom reduced the plains to dead men's bones, Unpeopled the highways, drained of citizens The Athenian town. For coming from afar, Rising in lands of Aegypt, traversing Reaches of air and floating fields of foam, At last on all Pandion's folk it swooped; Whereat by troops unto disease and death Were they o'er-given. At first, they'd bear about A skull on fire with heat, and eyeballs twain Red with suffusion of blank glare. Their throats, Black on the inside, sweated oozy blood; And the walled pathway of the voice of man Was clogged with ulcers; and the very tongue, The mind's interpreter, would trickle gore, Weakened by torments, tardy, rough to touch.

Next when that Influence of bane had chocked, Down through the throat, the breast, and streamed had E'en into sullen heart of those sick folk, Then, verily, all the fences of man's life Began to topple. From the mouth the breath Would roll a noisome stink, as stink to heaven Rotting cadavers flung unburied out.

And, lo, thereafter, all the body's strength And every power of mind would languish, now In very doorway of destruction.

And anxious anguish and ululation (mixed With many a groan) companioned alway The intolerable torments. Night and day, Recurrent spasms of vomiting would rack Alway their thews and members, breaking down With sheer exhaustion men already spent.

And yet on no one's body couldst thou mark The skin with o'er-much heat to burn aglow, But rather the body unto touch of hands Would offer a warmish feeling, and thereby Show red all over, with ulcers, so to say, Inbranded, like the "sacred fires" o'erspread Along the members. The inward parts of men, In truth, would blaze unto the very bones; A flame, like flame in furnaces, would blaze Within the stomach. Nor couldst aught apply Unto their members light enough and thin For shift of aid- but coolness and a breeze Ever and ever. Some would plunge those limbs On fire with bane into the icy streams, Hurling the body naked into the waves; ^{6.1174} Many would headlong fling them deeply down The water-pits, tumbling with eager mouth Already agape. The insatiable thirst That whelmed their parched bodies, lo, would make A goodly shower seem like to scanty drops.

Respite of torment was there none. Their frames Forspent lay prone. With silent lips of fear Would Medicine mumble low, the while she saw So many a time men roll their eyeballs round, Staring wide-open, unvisited of sleep, The heralds of old death. And in those months Was given many another sign of death:

The intellect of mind by sorrow and dread Deranged, the sad brow, the countenance Fierce and delirious, the tormented ears Beset with ringings, the breath quick and short Or huge and intermittent, soaking sweat A-glisten on neck, the spittle in fine gout Tainted with colour of crocus and so salt, The cough scarce wheezing through the rattling throat.

Aye, and the sinews in the fingered hands Were sure to contract, and sure the jointed frame To shiver, and up from feet the cold to mount Inch after inch: and toward the supreme hour At last the pinched nostrils, nose's tip A very point, eyes sunken, temples hollow, Skin cold and hard, the shuddering grimace, The pulled and puffy flesh above the brows!- O not long after would their frames lie prone In rigid death. And by about the eighth Resplendent light of sun, or at the most On the ninth flaming of his flambeau, they Would render up the life. If any then Had 'scaped the doom of that destruction, yet Him there awaited in the after days A wasting and a death from ulcers vile And black discharges of the belly, or else Through the clogged nostrils would there ooze along Much fouled blood, oft with an aching head: Hither would stream a man's whole strength and flesh.

6.1205

And whoso had survived that virulent flow Of the vile blood, yet into thews of him And into his joints and very genitals Would pass the old disease. And some there were, Dreading the doorways of destruction So much, lived on, deprived by the knife Of the male member; not a few, though lopped Of hands and feet, would yet persist in life, And some there were who lost their eyeballs: O So fierce a fear of death had fallen on them!

And some, besides, were by oblivion Of all things seized, that even themselves they knew No longer. And though corpse on corpse lay piled Unburied on ground, the race of birds and beasts Would or spring back, scurrying to escape The virulent

stench, or, if they'd tasted there, Would languish in approaching death. But yet Hardly at all during those many suns Appeared a fowl, nor from the woods went forth The sullen generations of wild beasts- They languished with disease and died and died.

In chief, the faithful dogs, in all the streets Outstretched, would yield their breath distressfully For so that Influence of bane would twist Life from their members. Nor was found one sure And universal principle of cure: For what to one had given the power to take The vital winds of air into his mouth, And to gaze upward at the vaults of sky, The same to others was their death and doom.

6.1230

In those affairs, O awfulest of all, O pitiable most was this, was this: Whoso once saw himself in that disease Entangled, ay, as damned unto death, Would lie in wanhope, with a sullen heart, Would, in fore-vision of his funeral, Give up the ghost, O then and there. For, lo, At no time did they cease one from another To catch contagion of the greedy plague,- As though but woolly flocks and horned herds; And this in chief would heap the dead on dead: For who forbore to look to their own sick, O these (too eager of life, of death afeard)

Would then, soon after, slaughtering Neglect Visit with vengeance of evil death and base- Themselves deserted and forlorn of help.

But who had stayed at hand would perish there By that contagion and the toil which then A sense of honour and the pleading voice Of weary watchers, mixed with voice of wail Of dying folk, forced them to undergo.

This kind of death each nobler soul would meet.

The funerals, uncompanioned, forsaken, Like rivals contended to be hurried through.

.....

And men contending to ensepulchre Pile upon pile the throng
of their own dead: And weary with woe and weeping wandered
home; And then the most would take to bed from grief.

Nor could be found not one, whom nor disease Nor death, nor
woe had not in those dread times Attacked.

6.1247

By now the shepherds and neatherds all, Yea, even the sturdy
guiders of curved ploughs, Began to sicken, and their bodies
would lie Huddled within back-corners of their huts, Delivered
by squalor and disease to death.

O often and often couldst thou then have seen On lifeless
children lifeless parents prone, Or offspring on their fathers',
mothers' corpse Yielding the life. And into the city poured O not
in least part from the countryside That tribulation, which the
peasantry Sick, sick, brought thither, thronging from every
quarter, Plague-stricken mob. All places would they crowd, All
buildings too; whereby the more would death Up-pile a-heap
the folk so crammed in town.

Ah, many a body thirst had dragged and rolled Along the
highways there was lying strewn Besides Silenus-headed
water-fountains,- The life-breath choked from that too dear
desire Of pleasant waters. Ah, everywhere along The open
places of the populace, And along the highways, O thou
mightest see Of many a half-dead body the sagged limbs, Rough
with squalor, wrapped around with rags, Perish from very
nastiness, with naught But skin upon the bones, well-nigh
already Buried- in ulcers vile and obscene filth.

All holy temples, too, of deities Had Death becrammed with the
carcasses; And stood each fane of the Celestial Ones Laden with
stark cadavers everywhere- Places which warders of the shrines
had crowded With many a guest. For now no longer men Did

mightily esteem the old Divine, The worship of the gods: the woe at hand Did over-master. Nor in the city then Remained those rites of sepulture, with which That pious folk had evermore been wont To buried be. For it was wildered all In wild alarms, and each and every one With sullen sorrow would bury his own dead, As present shift allowed. And sudden stress And poverty to many an awful act Impelled; and with a monstrous screaming they Would, on the frames of alien funeral pyres, Place their own kin, and thrust the torch beneath Oft brawling with much bloodshed round about Rather than quit dead bodies loved in life.
